Selecting and Measuring Pipe & Fittings

Pipe Basics

Have you ever tried to order fittings, pipe, nipples, or valves and had difficulty determining the size? If so, you're not alone. Even experienced maintenance people are sometimes confused by the industry's terminology and method of sizing. Before joining a pipe with a fitting or valve, you need to know the *pipe size*, *thread style*, and *thread type*—the pipe sizes must be the same and the thread types must be compatible in order for two components to fit properly.

Pipe Size and Thread Size

When we provide the size of a pipe or fitting in our catalog, we will call it a pipe size or a thread size.

Pipe size, which is the most common, is not an actual measured size, but rather an industry designation. When people refer to pipe size, they sometimes call it IPS or nominal size. You can determine pipe size by using the sizing guides at the bottom of this page. You can also use a sizing gauge or kit sold separately below.

Thread size is the actual measured diameter of the threads. The most common connections that have a thread size are UN/UNF and metric threads; for these, you can use a ruler to measure the threads.

Thread Style

There are two thread styles: tapered and straight.

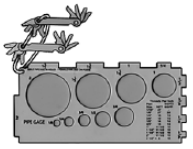
Tapered threads, which are the most common type, have a slight taper toward the end of the fitting. When threads are mated and tightened together, they hold the fitting in place and seal the connection.

Straight (parallel) threads maintain the same diameter along their entire length. They're used for mechanical joining and serve one purpose—to hold a fitting in place. Straight threads require a seal to make a tight connection.

Pipe Size Measuring Gauges and Kits

Accurately determine the size of your pipe and fittings with one of these kits. For more gauges, see pages 2278-2280.

Pipe Size Measuring Gauges



Quickly measure your pipe and fittings. This plastic gauge measures male and female threads in NPT and BSPT pipe sizes 1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, and 2. It includes two metal gauges for measuring NPT and BSPT thread pitch.

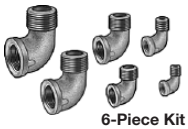
5887T1 ..... $8.13

Thread Pitch Measuring Kits

You'll get four gauges that measure the pitch of BSPT, BSPP, metric, NPT, and UN/UNF threads; a caliper; and an instruction manual. The gauges and caliper are metal. Furnished in a folding plastic case.

7863K1 ..... $38.58

Pipe Size Kits



6-Piece Kit

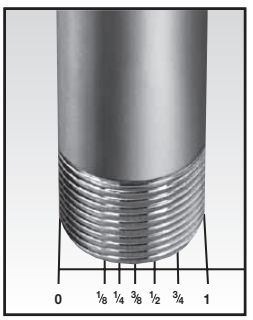
Kits include Type 304 stainless steel 90° elbows that have male threads on one end and female threads on the other end.

No. of Pieces	For Pipe Sizes	NPT Kits		BSPT Kits	
6	1/8, 1/4, 3/8, 1/2, 3/4, 1	7843K5	$19.80	7843K7	$21.40
9	1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, 2	7843K6	56.89	7843K8	61.44

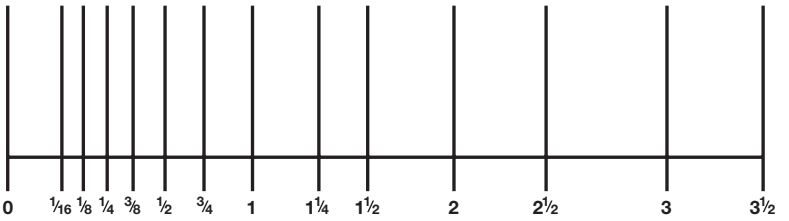
How to Measure Threaded Pipe and Fittings

ⓘ To measure larger pipe and fittings up to pipe size 8, go to mcmaster.com and search for **4464KAC**.

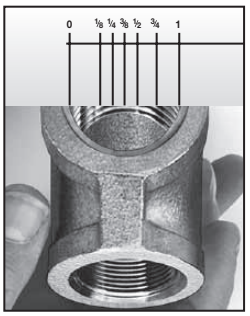
How To Measure Pipe and Fittings with Male (External) Threads



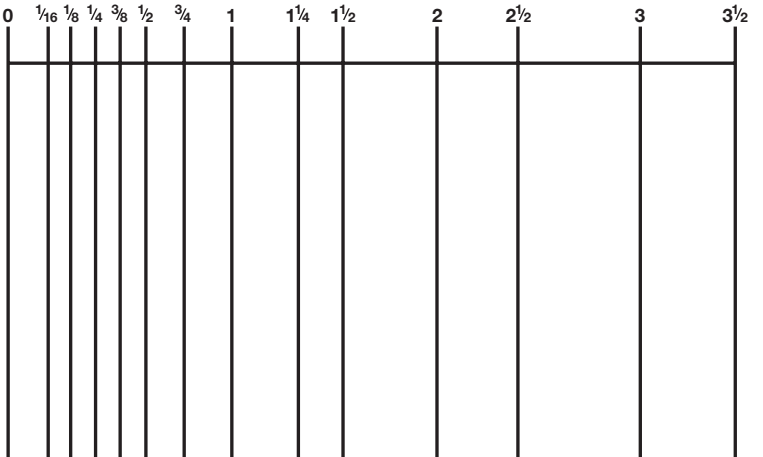
Place the outside edge of the pipe or fitting on the "0" line. The line on the opposite edge gives the pipe size.



How To Measure Fittings with Female (Internal) Threads



Align the top of the threads on one wall (not the wall itself) with the "0" line. The line that aligns with the top of the threads on the opposite side gives the pipe size.



Thread Type Compatibility

In order for two components to fit properly, thread types must be compatible. See the list below for thread types that can be used together.

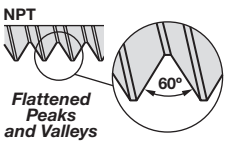
Thread Type	Compatibility
Tapered Threads	
NPT—National Pipe Taper (Also known as MPT and FPT threads)	Male threads work with female NPT, NPTF, NPSM, NPSH, NPSL, and NPSC. Female threads work with male NPT and NPTF.
NPTF—National Pipe Tapered Fuel (Also known as Dryseal)	Male threads work with female NPTF, NPT, NPSM, and NPSH. Female threads work with male NPTF and NPT.
BSPT—British Standard Pipe Taper (Also known as R threads and 55° Whitworth)	Male threads work with female BSPT and BSPP. Female threads work with male BSPT.
Straight (Parallel) Threads	
BSPP—British Standard Pipe Parallel (Also known as G threads and 55° Whitworth)	Male threads work with female BSPP. Female threads work with male BSPP and BSPT.
NPSM—National Pipe Straight Mechanical	Male threads work with female NPSM and NPSH. Female threads work with male NPSM, NPT, and NPTF.
NPSH—National Pipe Straight Hose	Male threads work with female NPSH. Female threads work with male NPSH, NPT, NPTF, and NPSM.
NPSL—National Pipe Straight Locknut	Threads are female and work with male NPT.
NPSC—National Pipe Straight Coupling	Threads are female and work with male NPT.
NH/NST—National Hose/National Standard Thread	Work with other NH/NST threads.
GHT—Garden Hose Thread	Work with other GHT threads.
UN/UNF—Unified	Work with other UN/UNF threads.
Metric Thread DIN 3852	Work with other DIN 3852 threads.
Metric Thread DIN 3901/3902	Work with other DIN 3901/3902 threads.

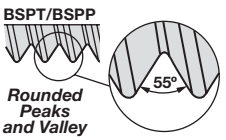
NPT (National Pipe Taper) and BSP (British Standard Pipe) Threads

NPT threads are common in the United States, while BSP threads are widely used in many other countries. NPT threads are tapered, while BSP threads come in both tapered (BSPT) and straight/parallel (BSPP) styles.

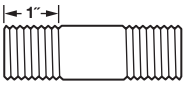
NPT and BSP threads are not compatible; however, when placed side-by-side, you may not be able to tell them apart. There are two ways to determine if you have NPT threads or BSPT threads.

The first way is by examining the shape and angle of the threads. NPT threads are set at a 60° angle and have flattened peaks and valleys; BSP threads are set at a 55° angle and have rounded peaks and valleys.





The second way is to find the pitch, which is also known as threads per inch. Either count the number of threads that fall into a 1″ span or use a thread gauge (sold on page 2) for a precise measurement.



8 Threads per Inch

Pipe Size	Pitch (Threads/Inch) NPT	BSP
1/16	27	___
1/8	27	28
1/4	18	19
3/8	18	19
1/2	14	14
5/8	___	14
3/4	14	14
1	11 1/2	11
1 1/4	11 1/2	11
1 1/2	11 1/2	11
2	11 1/2	11
2 1/2	8	11
3	8	11
3 1/2	8	11
4	8	11
5	8	11
6	8	11
8	8	___

Unthreaded Pipe Dimensions and Schedule

Metal pipe, plastic pipe, and plastic pipe fittings are generally rated by schedule, which refers to the wall thickness. As the Schedule increases, the walls get thicker towards the center for any given pipe size.

Metal pipe fittings are not usually rated by schedule; they are instead rated by the amount of pressure (psi) they can withstand.

Pipe Size	Actual Unthreaded Pipe OD	Thin Wall (Schedule 10) — Our lightest weight pipe.		Standard Wall (Schedule 40) — Most popular choice for all around use.		Thick Wall (Schedule 80) — Designed for high-pressure applications.		Extra-Thick Wall (Schedule 160) — Hefty construction for extreme pressures.		Super-Thick Wall (Schedule XXH) — Use for your most demanding applications.	
		Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-8)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Don't confuse these with poor-quality fittings that don't make the grade—these are the highest quality Class 150 low-pressure stainless steel fittings available. Their high quality is proven by the standards they meet: ANSI/MSS SP-114 (for heat treating, material thickness, and marking) and ASTM A351, except hex-socket plugs.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: NPT, except locknuts are NPSL (National Pipe Straight Locknut) and hex-socket plugs are NPTF (Dryseal); both NPSL and NPTF threads are compatible with NPT threads.

Elbows, Tees, Crosses, and Unions

The ***90° female×male elbows*** are also known as street elbows.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Type 304/304L Stainless Steel Threaded Pipe Nipples and Pipe

CAD

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

You may know these as Schedule 40 threaded nipples and pipe—they're made of Type 304/304L stainless steel, which offers very good corrosion resistance for an economical alternative to Type 316/316L. They have welded construction, so there's a weld bead on the inside, except 1/8-3/8 pipe sizes are seamless. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Type 316/316L Stainless Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Made from Type 316/316L stainless steel, which contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L, these threaded nipples and pipe are known as Schedule 40. They have welded construction, so there's a weld bead on the inside, except 1/8-3/8 pipe sizes are seamless. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Stainless Steel Pipe Nipples & Flanges

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Stainless Steel Threaded-On-One-End Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see below)

One end of these Schedule 40 nipples is threaded for a quick connection, while the other end is unthreaded for a welded connection. They have welded construction so there is a weld bead on the inside, except 1/8-3/8 pipe sizes are seamless. Meet ASTM A312, ASTM A733, and ANSI/ASME B1.20.1.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT on one end, unthreaded on the other end.

Low-Pressure Stainless Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-7 and above)
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)

Create a flange connection to gain easy access to your pipe. Bolt two same-size flanges together with a gasket (not included) to form a tight seal. For gaskets, see pages 3529-3534; for bolts, see pages 3161-3163.

Forged Flanges—These high-strength flanges are also called ANSI flanges and raised-face flanges. Match with another ANSI/raised-face flange of the same size for connection. They meet ASTM A182 and ANSI/ASME B16.5.

Cast Flanges—Also called MSS flanges and flat-face flanges. Match with another MSS/flat-face flange of the same size for connection. Flanges meet ASTM A351 and conform to MSS SP-42 for diameter and bolt holes and MSS SP-51 for thickness.

Types 304 and ***304/304L stainless steel*** offer very good corrosion resistance for an economical alternative to Types 316 and 316/316L.

Types 316 and ***316/316L stainless steel*** contain more nickel and have molybdenum for better resistance to corrosion than Types 304 and 304/304L.

Connections: NPT.

Forged Flanges—Raised surface on the back.

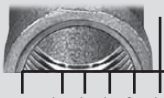
How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Threaded Reducing Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pgs. 6-8)
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)

The connecting point is reduced, so you can transition your piping system to a smaller pipe size. Also known as Class 150 and raised-face flanges, bolt one of these forged flanges to your flange (be sure the flange pipe size, flange OD, and number of bolt holes are the same). A gasket is required, but not included. For gaskets, see pages 3531-3534; for bolts, see pages 3161-3163. Meet ASTM A182 and ANSI/ASME B16.5.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

Ultra-Corrosion-Resistant Alloy 20 Threaded Pipe Fittings

- Use with air, water, steam
- Maximum Pressure: Fittings: 300 psi @ 72° F; 150 psi @ 366° F for steam Pipe Nipples: Not rated

Able to resist sulfuric acid, pitting, and stress cracking, Alloy 20 is the superhero of stainless steel fittings. Also called Carpenter 20, it contains more nickel than Type 316, so it is suited for especially corrosive environments.

Fittings—Also known as Class 150 fittings. Meet ANSI/MSS SP-114, ASTM B351, ASTM B473, and ANSI/ASME B1.20.1.

Pipe Nipples—Also known as Schedule 40 and standard-wall threaded nipples. All have seamless construction for unrestricted flow. *Fully threaded* nipples are also called close nipples; they are threaded on each end to the center. Meet ASTM B729 and ANSI/ASME B36.10 and SB729.

Connections: NPT.

Miniature Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 500 psi @ 72° F; 100 psi @ 350° F for steam

Our compact fittings are ideal for cramped spaces. All are Type 303 stainless steel, which offers very good corrosion resistance. Meet ASTM A314, A320, and A582.

Connections: NPT (1/16, 1/8, 1/4); metric straight threads (M3 × 0.5, M5 × 0.8, M6 × 1.0, M8 × 1.0); and UN/UNF straight threads (10-32, 1/4″-28). All male straight threads include a fluoroelastomer gasket.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Stainless Steel Pipe Fittings

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe and Pipe Nipples: Use British standard threaded Schedule 40 stainless steel (see below)

Connect to BSPT pipe with fittings threaded for the job. Also known as Class 150 fittings, they're made from Type 304 stainless steel, which offers very good corrosion resistance. These high-quality fittings, with the exception of hex adapters, meet MSS SP-114 for heat treating, material thickness, and marking.

90° female×male elbows are also known as street elbows. ***Plugs*** are hollow, except 1/8–3/8 pipe sizes are solid.

Connections: BSPT (British Standard Pipe Taper); hex adapters have NPT threads on one end.

British Standard Threaded Stainless Steel Pipe Nipples and Pipe

CAD

- Use with air, water, oil, natural gas, steam
- Fittings: Use British standard threaded Class 150 low-pressure stainless steel (see above)

You'll get BSPT threads on one or both ends of this Schedule 40 pipe. Made of Type 304/304L stainless steel, which offers very good corrosion resistance. All have welded construction, so there's a weld bead on the inside. Meet ASTM A312.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center.

Connections: BSPT (British Standard Pipe Taper) or NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 1,000 psi @ 72° F; 650 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-8)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Choose these fittings when you want the same high quality found in our low-pressure fittings, but need more strength to handle higher pressures. Also known as Class 1000, these fittings meet ANSI/MSS SP-114 (for heat treating, material thickness, and marking) and ASTM A182.

Type 304 stainless steel offers very good corrosion resistance. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded. Connections: NPT.

Mil. Spec. Stainless Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F; 600 psi @ 220° F for steam

Made to the stringent military standards of MS-27769, these high-quality plugs are the best you can buy. They are made from Type 347 stainless steel, which offers resistance to corrosion and prolonged heat exposure. Plugs also meet SAE AS4842 and AS71051.

Connections: ANPT (Aeronautical National Pipe Threads), which are more precise than NPT and NPTF threads, yet compatible.

Pipe Size	Hex Key Size		
1/16	5/32"	1725K11	$2.67
1/8	3/16"	1725K12	3.33
1/4	1/4"	1725K13	4.17
3/8	5/16"	1725K14	11.36
1/2	3/8"	1725K15	21.43

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Stainless Steel Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure:
  Type 304 SS: 2,570 psi @ 72° F;
  1,965 psi @ 350° F for steam, unless noted
  Type 316 SS: 3,000 psi @ 72° F;
  2,810 psi @ 350° F for steam, unless noted
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

It's no wonder these heavy duty fittings are called Class 3000—they have extra-strong forged or bar stock construction that stands up to high-pressure applications. Meet ASTM A182 and ANSI/ASME B16.11, unless noted.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: NPT.

Elbows, Tees, Crosses, and Unions

90° female×male elbows are also known as street elbows.

High-Pressure Stainless Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

Commonly called Class 300, ANSI, and raised-face flanges, these high-strength forged flanges provide easy access to your pipe. Bolt two same-size flanges together with a gasket (not included) to form a tight seal. For gaskets, see pages 3531-3534; for bolts, see pages 3161-3163. Flanges meet ASTM A182 and ANSI/ASME B16.5.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Stainless Steel Threaded Pipe Nipples and Pipe CAD

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 3000 high-pressure stainless steel (see pages 12-13)
- Flanges: Use threaded high-pressure stainless steel (see page 13)

The thick-wall design, which is often called Schedule 80, gives these threaded nipples and pipe the strength to handle high-pressure applications. All have seamless construction for unrestricted flow. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Thick-Wall Smooth-Flow Stainless Steel Threaded Reducing Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded medium-pressure stainless steel (see page 11)
- Flanges: Use threaded high-pressure stainless steel (see page 13)

Also known as swage nipples and Schedule 80 nipples, the walls reduce gradually to provide smoother flow than other types of reducing connections. They're made of Type 304/304L stainless steel, which offers very good corrosion resistance, and have seamless construction for unrestricted flow. Meet MSS SP-95 and ASTM 403 WP.

Connections: NPT.

Pipe Size (A)	(B)	Lg.

High-Strength Lightweight Titanium Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 3,000 psi @ 72° F

With excellent strength-to-weight ratio, titanium fittings are approximately 40% lighter than steel. Titanium offers superior corrosion resistance and will stand up to most salt water and chloride applications. Fittings meet ASTM B348. Dimensions conform to ANSI/ASME B16.11.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded.

Connections: NPT.

Pipe Size	Couplings		Half Couplings		Square-Head Plugs		Hex-Head Plugs	
1/4	1961K22	$71.27	1961K27	$62.13	1961K16	$73.37	1961K11	$60.75

Stainless Steel Pipe Fittings

For technical drawings and 3-D models, go to mcmaster.com.

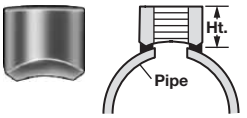
How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Stainless Steel Threaded Pipe Outlets



- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table; 600 psi @ 220° F for steam
- Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

Also known as branch connectors, use these to create a threaded outlet anywhere on your pipe. Comparable to Thredolet. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97 and ANSI/ASME B16.11.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

To Order: Please specify pipe size within the range shown below.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.	Max. psi @ 72° F	Type 304/304L Stainless Steel		Type 316/316L Stainless Steel

Extreme-Pressure Stainless Steel Threaded Pipe Fittings

- Use with water, oil, steam
- Maximum Pressure: See table; steam is rated @ 300° F

Built tough to handle the pressure of nearly any job. Made of Type 316 stainless steel for excellent resistance to heat and corrosion.

Connections: NPTF (Dryseal), unless noted. NPTF threads are compatible with NPT threads.

Elbows, Tees, and Crosses

Meet ASTM A182. The ***90° female×male elbows*** are also known as street elbows.

Pipe Size	90° Elbows, Female: Max. psi @ 72° F			90° Elbows, Male: Max. psi @ 72° F			90° Elbows, Female×Male: Max. psi @ 72° F			45° Elbows, Female×Male: Max. psi @ 72° F

Extreme-Pressure Stainless Steel Threaded Adapters

- Use with water, oil, steam
- Maximum Pressure: See table; steam is 3,000 psi @ 300° F

Change the thread configuration in your extreme-pressure pipe system. Made from Type 316 stainless steel, which offers excellent corrosion resistance.

Connections: BSPP (British Standard Pipe Parallel), NPT, metric, NPTF (Dryseal), or UN/UNF straight threads. Male BSPP threads have a rubber seal bonded to a metal washer; UN/UNF threads have a fluoroelastomer seal.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Precision Extreme-Pressure Stainless Steel Threaded Pipe Fittings CAD

- Use with water, hydraulic oil, natural gas, steam, cryogenic gases (liquid nitrogen), unless noted
- Maximum Pressure: See table; steam is rated @ 300° F, unless noted

While you may know these as instrumentation fittings, we call them precision fittings because they have the most precise threads, tightest tolerances, and highest pressure ratings of all the stainless steel fittings we offer. Plus, the male threads are rolled for extra strength. They're Type 316 stainless steel, which offers excellent resistance to heat and corrosion. Meet ANSI/ASME B1.20.1, B31.1, and B31.3, unless otherwise stated.

Connections: NPT, unless noted.

Elbows, Tees, and Crosses

90° female×male and ***reducing 90° male×female elbows*** are also known as street elbows.

90° Elbows, Female

Pipe Size	Max. psi @ 72° F		
1/16	7,000	48805K121	$35.34

Adapters with a British Standard Connection

All have NPT threads on one end and British standard threads on the other end. BSPT (British Standard Pipe Taper) threads meet ISO 7/1 and BS21. BSPP (British Standard Pipe Parallel) threads meet ISO 228/1, 228/2, and BS2779. The fittings with male BSPP threads include a rubber seal bonded to a metal washer. *Note:* The ends of the fittings that have BSPT and BSPP threads do not meet ANSI/ASME B1.20.1.

★ Not for use with cryogenic gases (liquid nitrogen). Max. psi for steam is rated at 230° F.

Stainless Steel Threaded Locknuts with PTFE Seal

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

A built-in seal eliminates the need for PTFE tape and sealants. Thread one of these locknuts onto the male end of your fitting before making a connection. They are Type 303 stainless steel, which offers very good corrosion resistance. Temperature range is –300° to +500° F.

Connections: NPT.

Pipe Size	Max. psi @ 72° F	Width	Thick.		
1/8	10,000	5/8″	3/16″	5530K37	$4.66

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thin-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas
- Pipe: Use unthreaded Schedule 10 thin-wall stainless steel (see page 21)

Choose thin-wall fittings, which are also known as Schedule 10, when you need a fitting that's lighter in weight than standard wall. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet MSS SP-43, ASTM A403/403M, and ANSI/ASME B16.9.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Stub ends are for use with the low-pressure easy-access flanges shown on page 24. ***Reducing couplings*** are also known as concentric reducers.

Connections: Butt weld (unthreaded).

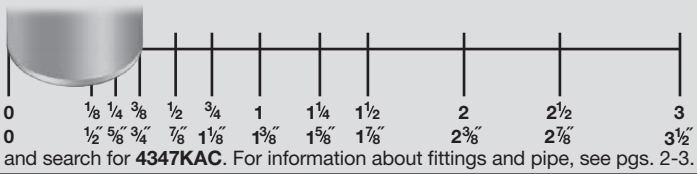
How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thin-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 10 thin-wall stainless steel (see page 20 and above)

Thin walls make this pipe, which is also called Schedule 10, lighter in weight than standard-wall pipe. Furnished unthreaded for welded connections, which are less likely to leak than threaded connections. Pipe has welded construction, so there is a weld bead on the inside. Meets ASTM A312 and ANSI/ASME B36.19.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size	*Type 304/304L Stainless Steel* 1 ft.	3 ft.	6 ft.	*Type 316/316L Stainless Steel* 1 ft.	3 ft.	6 ft.

Marine-Rated Butt-Weld Copper-Nickel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas

Other materials may cower to sea water, but not 90/10 copper-nickel—this corrosion-resistant material is tough enough to handle marine applications. Also known as Class 200 fittings and pipe, all proudly carry the military designation of NAVSEA rated. They are unthreaded for a welded connection, which is less likely to leak than a threaded connection.

Pipe has seamless construction for unrestricted flow. Meets MIL-T-16402K. **To Order:** Please specify 1-, 3-, or 6-ft. length. Connections: Butt weld (unthreaded).

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

CAD

- Use with air, water, oil, natural gas
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

A great choice when you need fittings with thicker walls than thin-wall pipe fittings, yet still want the leak resistance of a welded connection. These fittings, also known as Schedule 40, have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet MSS SP-43, ASTM A403, and ANSI/ASME B16.9. For butt-weld tube fittings, please see pages 232-233.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Stub ends are for use with the low-pressure easy-access flanges shown on page 24. ***Reducing couplings*** are also known as concentric reducers.

Connections: Butt weld (unthreaded).

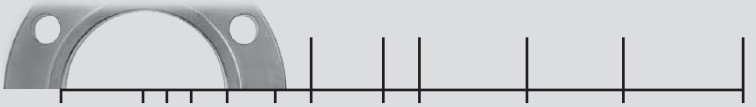
How to Measure Unthreaded Flanges—*Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Stainless Steel Unthreaded Pipe Nipples

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22) and socket-weld low-pressure stainless steel (see page 26)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

We've cut pipe into short lengths so you won't have to. Also known as Schedule 40 nipples, they have welded construction, so there's a weld bead on the inside. Made of Type 304/304L stainless steel, a low-carbon material that's favorable for welding and offers very good corrosion resistance. Meet ASTM A312.

Standard-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22) and socket-weld low-pressure stainless steel (see page 26)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

Also called Schedule 40, this pipe is unthreaded for welded connections, which are less likely to leak than threaded connections.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Welded pipe is constructed with a weld bead on the inside. Meets ASTM A312 and ANSI/ASME B36.19.

Seamless pipe has a smooth interior for unrestricted flow. Meets ASTM A312.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size	Type 304/304L Stainless Steel 1 ft.	3 ft.	6 ft.	Type 316/316L Stainless Steel 1 ft.	3 ft.	6 ft.

Low-Pressure Stainless Steel Unthreaded Reducing Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see above)
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22)

A reduced connecting point allows you to transition to a smaller pipe size. These are also known as slip-on style, Class 150, raised-face flanges. You must weld the flange to your pipe on both sides. To connect, bolt one of these forged flanges to your flange (be sure the flange pipe size, flange OD, and number of bolt holes are the same). A gasket is required, but not included; see pages 3531-3534. For bolts, see pages 3161-3163.

Come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Slip on (unthreaded).

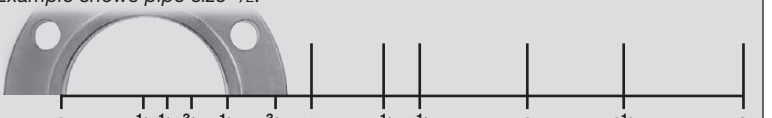
How to Measure Unthreaded Flanges—*Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Unthreaded Flanges CAD

- Use with air, water, oil, natural gas
- Maximum Pressure: 150 psi @ 72° F
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22)

Raised Surface on Back (Forged Flanges, except Easy Access) | **Flat Surface on Back (Cast Flanges and Forged Easy Access)**

Gain quick access to your pipe by creating a flange connection. Also called Class 150 flanges, they connect by bolting two same-size flanges together with a gasket (not included). For gaskets, see pages 3529-3534; for bolts, see pages 3161-3163.

Forged flanges are also known as ANSI flanges and raised-face flanges. Match with another ANSI flange of the same size for connection. Meet ASTM A182 and ANSI/ASME B16.5, unless noted. All forged flanges come with a traceable lot number and a material test report.

Cast flanges are also called MSS flanges and flat-face flanges. Match with another MSS flange of the same size for connection. Meet ASTM A341; the *caps* also meet MSS SP-42.

Types 304 and ***304/304L stainless steel*** offer very good corrosion resistance for an economical alternative to Types 316 and 316/316L. ***Types 316*** and ***316/316L stainless steel*** contain more nickel and have molybdenum for better resistance to corrosion than Types 304 and 304/304L. *Types 304/304L* and *316/316L stainless steel* are low-carbon materials that are favorable for welding.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access—Commonly called lap-joint flanges. Use these flanges with a stub-end fitting (required, but not included; see page 22). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Forged Flanges—Raised surface on back, unless noted.

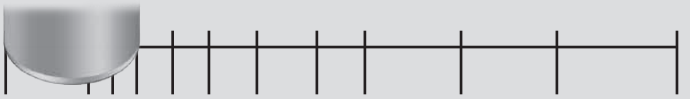
How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see below)
- Flanges: Use unthreaded high-pressure stainless steel (see page 28)

The strongest butt-weld fittings we offer, these are also known as Schedule 80 fittings. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A403.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Butt weld (unthreaded).

Thick-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 80 thick-wall stainless steel (see above) and socket-weld high-pressure stainless steel (see pgs. 26-27)
- Flanges: Use unthreaded high-pressure stainless steel (see page 28)

Also known as Schedule 80 pipe, this pipe has thick walls for superior strength and is seamless for unrestricted flow. It comes unthreaded so you can make welded connections, which are less likely to leak than threaded connections. Meets ASTM A312.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

To Order: Please specify 1-, 3-, or 6-ft. length.

High-Pressure Stainless Steel Butt-Weld Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table; 600 psi @ 220° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see above)

Create a tap-off anywhere along your pipe. These outlets are also known as branch connectors and are comparable to Weldolet. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97 and ANSI/ASME B16.11.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Butt weld (unthreaded).

To Order: Please specify pipe size within the range shown below.

How to Measure Socket-Weld Unthreaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

Unthreaded Socket-Weld Connection

- Use with air, water, oil, natural gas
- Maximum Pressure: 150 psi @ 72° F
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

You can be sure these are the highest quality Class 150 fittings available because they all meet ANSI/MSS SP-114 for heat treating, material thickness, and marking. They also meet ASTM A351. They have socket ends that support the pipe during installation; slide your pipe into the fitting and you are ready to weld.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: Socket weld (unthreaded).

High-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

Unthreaded Socket-Weld Connection

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: Type 304 SS: 2,570 psi @ 72° F; 1,965 psi @ 350° F for steam
- Type 316 SS: 2,915 psi @ 72° F; 1,965 psi @ 350° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see page 25)

Also known as Class 3000 fittings, these heavy duty forged fittings stand up to high-pressure applications. They have socket ends that support the pipe during installation; just slide your pipe into the fitting and you are ready to weld. All meet ASTM A182. Meet ANSI/ASME B16.11.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Socket weld (unthreaded).

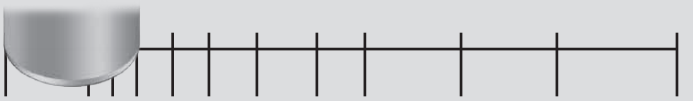
How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

High-Strength Socket-Weld Chrome-Moly Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: Fittings: 2,310 psi @ 72° F; 1,595 psi @ 350° F for steam; Pipe: Not rated

Stronger and easier to weld than stainless steel and steel, choose high-strength chrome-moly F22 fittings and P22 pipe when you need a material that resists scaling, even in steam applications.

Fittings—Also known as Class 3000, these heavy duty fittings have socket ends that support the pipe during installation; slide the pipe into the fittings and you are ready to weld. Meet ANSI/ASME B16.11.

Pipe—Also called Schedule 80 and thick-wall pipe, all have seamless construction for unrestricted flow.

Connections: Socket weld (unthreaded).

Pipe Size	90° Elbows	Couplings	Caps	Pipe 1-ft. Lengths	Pipe 3-ft. Lengths
1/2	1982K11 $20.30	1982K16 $10.70	1982K22 $10.70	1982K27 $32.28	1982K33 $91.36
3/4	1982K12 25.73	1982K17 16.96	1982K23 16.96	1982K28 38.60	1982K34 99.83

1 1/2	1982K14 86.84	1982K19 55.77	1982K25 55.77	1982K31 70.59	1982K36 186.21
2	1982K15 138.50	1982K21 83.41	1982K26 83.41	1982K32 83.08	1982K37 216.36

Extreme-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table
- Pipe: Use unthreaded Schedule 160 extra-thick-wall stainless steel (see pg. 28)

Sometimes only the strongest will do—that's where Class 6000 fittings come in. The heavy duty forged construction gives these fittings the highest pressure rating of all the stainless steel fittings we offer. Fittings have socket ends that support the pipe during installation; slide your pipe into the fitting and you are ready to weld. Meet ASTM A182 and ANSI/ASME B16.11.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Socket weld (unthreaded).

How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange, or inside diameter (ID) of your slip-on, socket-weld, and easy-access flange, then select the pipe size on the scale that corresponds to your measurement.

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Extra-Thick-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use socket-weld extreme-pressure stainless steel (see page 27)

The extra-thick-wall construction, which is often called Schedule 160, makes this the strongest stainless steel pipe we offer. Pipe is seamless for unrestricted flow. It comes unthreaded so you can make welded connections, which are less likely to leak than threaded connections. Meets ASTM A312.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better corrosion resistance than Type 304.

Pipe Size	1-ft. Lengths		3-ft. Lengths		6-ft. Lengths	
Type 304 Stainless Steel						
1/2	2053K11	$20.58	2053K16	$51.46	2053K22	$85.76
3/4	2053K12	35.76	2053K17	89.40	2053K23	149.00
1	2053K13	46.20	2053K18	115.50	2053K24	192.50

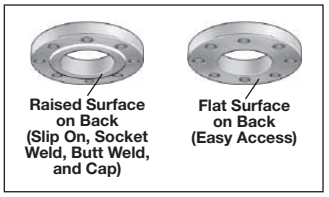
2	2057K15	109.59	2057K21	288.92	2057K26	498.14

High-Pressure Stainless Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam, unless noted
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see page 25)



Forged for high strength, these heavy duty flanges are often called Class 300, ANSI, and raised-face flanges (except easy-access, which are called flat-face flanges). Bolt two same-size flanges together with a gasket (not included). For gasket, see pages 3529-3533. For bolts, see pages 3161-3163. Flanges meet MSS SP-6 and SP-25, ASTM A182, and ANSI/ASME B16.5, unless noted. All come with a traceable lot number and a material test report.

Flanges come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents it from sliding all the way through.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access—Commonly called lap-joint flanges. Use these flanges with a stub-end fitting (required, but not included; see page 22). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

♠ Does not meet ANSI/ASME B16.5 and is not rated for steam.

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Brass Threaded Pipe Fittings with Sealant

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see below and page 32)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

You don't need to search for your thread sealant—it is already applied to the male threads. Also known as Class 125 fittings, they meet ASTM B584 or B927, as well as ANSI/ASME B16.15 and B1.20.1.

90° female×male elbows are also known as street elbows.

Connections: NPT.

Standard-Wall Brass Threaded Pipe Nipples with Sealant

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see above and pages 30-31)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

The thread sealant is already applied, so these nipples are ready to get to work. Also known as Schedule 40 threaded nipples and regular nipples, they have seamless construction for unrestricted flow. They meet ASTM B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Brass Threaded Pipe Fittings CAD

- Use with air, drinking (potable) water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32)

These low-pressure fittings, also known as Class 125 fittings, meet NSF/ANSI Standard 61 for use with drinking (potable) water, except where noted. They also meet ASTM B584 or B927, as well as ANSI/ASME B16.15 and B1.20.1, except flanges and where noted.

The ***90° female×male elbows*** are also called street elbows. ***Reducing bushings*** are also known as face bushings.

Connections: NPT, except locknuts have NPSL (National Pipe Straight Locknut) threads, which are compatible with NPT threads.

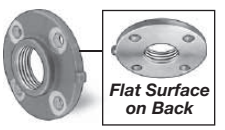
Flanges

Also known as Class 150 flanges, these have a flat surface on the back. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. They meet ANSI/ASME B16.24. For gaskets, see pages 3529-3530; for bolts, see page 3168.



Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.

4	9"	8	5/8"	4429K559	294.73

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Brass Threaded Pipe Nipples and Pipe CAD

Fully Threaded

Threaded on Both Ends

- Use with air, drinking (potable) water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see pages 29-31)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

Our threaded brass nipples and pipe are also known as Schedule 40 and regular nipples and pipe. Pipe nipples and pipe meet NSF/ANSI 61 Standard for use with drinking (potable) water. They have seamless construction for unrestricted flow. Meet ASTM B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Chrome-Plated Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples: Use threaded Schedule 40 standard-wall chrome-plated brass (see below)

The polished chrome plating not only looks great but also improves corrosion resistance. Commonly called Class 125, these brass fittings meet ASTM B456. They also meet ASTM B584 or B16 (except reducing bushings), as well as ANSI/ASME B16.15 (except unions and locknuts).

The ***90° female×male elbows*** are also known as street elbows. ***Square-head plugs*** are solid. ***Reducing bushings*** are also known as face bushings.

Connections: NPT.

Standard-Wall Chrome-Plated Brass Threaded Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure chrome-plated brass (see above)

Also known as Schedule 40 and regular nipples, these are brass with a polished chrome plating that provides extra corrosion resistance. They are threaded and have seamless construction for unrestricted flow. Meet ASTM B43, B456, and B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Thick-Wall Brass Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 400 psi @ 72° F; 250 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32) or threaded Schedule 80 thick-wall brass (see below)

Also known as Class 250 fittings, these threaded brass fittings have thicker walls to withstand higher pressures than the low-pressure fittings on pages 30-31. All meet ASTM B584, as well as ANSI/ASME B.16.15 and B1.20.1.

Connections: NPT.

Thick-Wall Brass Threaded Pipe Nipples and Pipe CAD

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 250 low-pressure brass (see above)

You may know these as Schedule 80 and extra-heavy pipe nipples and pipe—they have thicker walls than standard-wall pipe to handle high-pressure applications. All have seamless construction for unrestricted flow. Meet ASTM B43. Lengths up to 12" also meet ASTM B687 and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

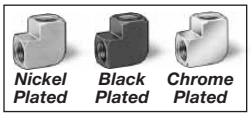
Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Plated Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 1,000 psi @ 72° F



Plating offers more than just good looks—it also provides long life in corrosive environments.

The ***90° female×male elbows*** are also called street elbows. ***Hex-head plugs*** are hollow. ***Hex-socket plugs*** are hollow, except chrome-plated plugs, which are solid. ***Fully threaded nipples*** are also called close nipples; they are threaded on each end to the center.

Nickel plating has better corrosion resistance than unplated brass. ***Black zinc plating*** has a shiny finish that offers more corrosion resistance than nickel plating and stands up to salt spray applications. ***Chrome plating*** is applied over a nickel base coat, giving these fittings a mirror-like finish that has better corrosion resistance than nickel- and black-plated fittings. **To Order:** Please specify nickel, black, or chrome plating.

Connections: NPTF (Dryseal), which are compatible with NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 1,000 psi @ 72° F

A great choice when you want brass fittings that can handle moderate pressure, but you don't want to break the bank.

90° female×male elbows are also called street elbows. ***Reducing bushings*** are also called face bushings. ***Through-wall couplings*** are also called bulkhead fittings and panel-mount couplings; they include a nut and a lockwasher. ***Fully threaded nipples***, also called close nipples, are threaded on each end to the center.

Connections: NPT.

British Standard Threaded Medium-Pressure Nickel-Plated Brass Pipe Fittings

CAD

- Use with air and water
- Maximum Pressure: See table

Use these fittings for an easy connection to other British Standard threads. All are nickel-plated brass (unless noted), which offers more resistance to corrosion than unplated brass. Meet ISO 7.1 and ISO 228 Class A, (unless noted). ***90° female×male elbows*** are also called street elbows. ***Hex-socket plugs*** are solid.

Connections: BSPP (British Standard Pipe Parallel) or BSPT (British Standard Pipe Taper). The male BSPP threads have a rubber seal bonded to a metal washer.

British Standard Threaded Medium-Pressure Brass Pipe Fittings

CAD

- Use with air and water
- Maximum Pressure: See table

Take the challenge out of connecting different thread styles. All are brass and meet ISO 7.1 and ISO 228 Class A.

Square-head plugs are hollow.

Connections: BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), or NPT.

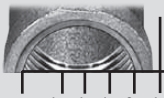
How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

Not your average brass pipe fittings—these have the strength to handle high-pressure applications. All meet SAE J476 and ANSI/ASME B1.20.3; they also meet ASTM B16 and B453, or ASTM B124.

90° female×male elbows are also known as street elbows. ***Hex-head plugs*** are hollow, except the 1/8 pipe size is solid.

Connections: NPTF (Dryseal), which are compatible with NPT.

Precision High-Pressure Brass Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam, oxygen, nitrogen, argon
- Maximum Pressure: See table; 1,560 psi @ 300° F for steam

Also called instrumentation fittings, precision fittings have the most precise threads and tightest tolerances of all the brass fittings we offer. Plus, the male threads are rolled for extra strength. All have extra-strong forged or bar stock construction to handle high-pressure applications. Meet ANSI/ASME B1.20.1, B31.1, and B31.3.

Connections: NPT, BSPT (British Standard Pipe Taper), or BSPP (British Standard Pipe Parallel).

Elbows, Tees, and Crosses

90° female×male elbows are also known as street elbows.

90° Elbows, Female

Pipe Size	Max. psi @ 72° F

Easy-Install Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 1,000 psi @ 72° F; 1,000 psi @ 250° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32)

Keep your pipe wrench in your tool chest—you can install and remove these brass fittings with your socket wrench or hex key. And because they're compact, they require less clearance than traditional elbows.

Connections: NPTF (Dryseal), which is compatible with NPT.

Socket-Wrench Elbows

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Miniature Brass Threaded Pipe Fittings

- Use with air and water
- Maximum Pressure: See table

At less than an inch long, you won't find a better fitting for your miniature pipe system. ***Nickel-plated brass*** fittings offer better corrosion resistance than unplated brass. For miniature brass barbed fittings, see page 172.

Swivel elbows, ***swivel tees***, and ***swivel adapters*** rotate 360° for tightening in confined spaces.

Connections: UN/UNF (10-32 straight thread size) and NPT (1/16, 1/8, and 1/4 pipe sizes). Male ends with 10-32 thread size have a Buna-N gasket, except the through-wall couplings where all have a locknut and washer. ***Also Available:*** Replacement Buna-N gaskets in packages of 25; please ask for 5454K21.

Super-Corrosion-Resistant Copper-Nickel Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: Fittings: 400 psi @ 72° F; 200 psi @ 425° F for steam; Pipe Nipples: Not rated

Need a pipe fitting that can stand up to salt water better than brass? Our corrosion-resistant 90/10 copper-nickel has what it takes to handle marine applications.

Elbows and ***tees*** meet ANSI/ASME B16.3.

Fully threaded nipples are also called Schedule 40, standard-wall, and close nipples; they are threaded on each end to the center. All have seamless construction for unrestricted flow. Meet ASTM B466 and B1.20.1.

Connections: NPT.

Bronze Pipe Fittings & Brass Nipples

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

i To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Bronze Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples: Use British Standard threaded Schedule 40 standard-wall brass (see below)

BSPT threads on these fittings and flanges allow easy connection to other BSPT threads. Also known as Class 125 fittings or Class 150 flanges, they're made of bronze, which is compatible with brass. All meet ASTM B584. They also meet ANSI/ASME B16.15, except unions and flanges. The threads meet BS21.

Connections: BSPT (British Standard Pipe Taper).

British Standard Threaded Brass Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings and Flanges: Use British Standard threaded low-pressure bronze (see above)

Connect BSPT threads to other BSPT threads or adapt BSPT threads to NPT threads. They're also known as Schedule 40, standard-wall, and regular pipe nipples. They have seamless construction for unrestricted flow. Meet ASTM B687. The BSPT threads also meet BS21; NPT threads also meet ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: BSPT (British Standard Pipe Taper) or NPT.

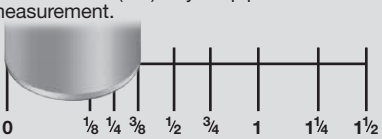
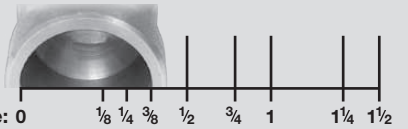
How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Socket-End Bronze Unthreaded Pipe Fittings CAD

Unthreaded Socket-End Connection

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 200 psi @ 425° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall brass (see below)

You may know these as Silbraze fittings—snap a silver ring (required, sold separately) into the fitting and braze them to your brass pipe for a strong, leak-resistant connection. These fittings have socket ends that support the pipe during installation. They are made of bronze, which is compatible with brass. Meet MIL-F-1183.

Connections: Socket end (unthreaded).

Fittings

Pipe Size	90° Elbows, Long Radius (C)			90° Elbows, Short Radius (C)			45° Elbows

2	2190K49	5.91

Standard-Wall Brass Threaded-On-One-End Pipe Nipples CAD

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see pages 29-31) and socket-end bronze (see above)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31) and socket-end bronze (see above)

One end of these Schedule 40 nipples is threaded, while the other is unthreaded. They're brass and have seamless construction for unrestricted flow. Meet ASTM B687.

Connections: NPT on one end; unthreaded on the other end.

Standard-Wall Brass Unthreaded Pipe CAD

- Use with air, water, oil, natural gas, steam
- Fittings and Flanges: Use socket-end bronze (see above)

Also called Schedule 40 and regular pipe, this brass pipe has seamless construction for unrestricted flow. It's unthreaded for brazed connections, which are less likely to leak than threaded connections. Meet ASTM B43.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	4501K11	$6.11	$16.88	$29.10

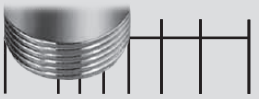
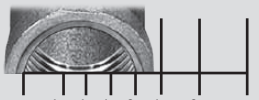
Aluminum Pipe Fittings & Nipples

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Aluminum Threaded Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: 500 psi @ 72° F

A blue anodized finish on these aluminum fittings provides more corrosion resistance and a harder surface than plain aluminum.

90° female×male elbows are also known as street elbows.

Connections: NPT.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows, Female×Male		Tees		Hex Couplings		Hex Nipples	
1/8	3861T11	$19.47	3861T21	$19.47	3861T41	$19.47	3861T51	$4.56	3861T61	$4.56	3861T81	$3.49

High-Pressure Aluminum Threaded Pipe Fittings

- Use with air and water
- Maximum Pressure: 3,000 psi @ 72° F, except unions are 1,500 psi @ 72° F
- Pipe Nipples: Use threaded Schedule 80 thick-wall aluminum (see below)

Don't let the light weight fool you—these aluminum fittings have super-strong forged or bar stock construction for the highest pressure ratings of all the aluminum fittings we offer. They're also known as Class 3000 fittings. All meet Fed. Spec. QQ-A-200/8 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.11, except wyes and unions.

Connections: NPT.

Elbows, Wyes, Tees, and Crosses

All meet ASTM B247. The ***90° female×male elbows*** are also known as street elbows.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows		Tees	
1/4	3867T11	$16.39	3867T31	$40.96	3867T21	$19.65	3867T41	$19.67
1/2	3867T12	28.11	3867T32	61.20	3867T22	32.73	3867T42	35.60

Thick-Wall Aluminum Threaded Pipe Nipples

- Use with air, water, oil
- Fittings: Use threaded Class 3000 high-pressure aluminum (see above)

Also known as Schedule 80 nipples, these are made of aluminum for a high strength-to-weight ratio. They have seamless construction for unrestricted flow. Meet ASTM B241 and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

FULLY THREADED

Pipe Size	Lg.		
1/4	7/8"	2155K11	$3.19

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Aluminum Threaded Pipe Fittings CAD

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F for fittings; 125 psi @ 72° F for flanges
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall aluminum (see page 48)

The lightweight champion of low-pressure pipelines, aluminum offers a high strength-to-weight ratio along with excellent corrosion resistance. For best performance, do not tighten more than a 1/4-turn past hand tight.

Connections: NPT, except locknuts are NPSL (National Pipe Straight Locknut); NPSL threads are compatible with NPT threads.

Fittings

Also known as Class 150 fittings. The ***90° female x male elbows*** are also called street elbows. ***Half couplings*** are threaded and have a square cut end that can be welded. ***Square-head plugs*** and ***square-socket plugs*** are solid.

British Standard Threaded Low-Pressure Aluminum Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F

The BSPT threads on these lightweight aluminum fittings allow easy connection to other BSPT threads. For best performance, do not tighten more than a 1/4-turn past hand tight.

90° female×male elbows are also known as street elbows. ***Square-head plugs*** are solid.

Connections: BSPT (British Standard Pipe Taper).

Also Available: Pipe nipples with BSPT threads on one end and NPT threads on the other. For fully threaded nipples, which are also called close nipples, please ask for 2744K1 and specify pipe size from the list below. For nipples that are threaded on both ends, please ask for 2744K2 and specify pipe size from the list below and nipple length: 1 1/2″, 2″, or 3″.

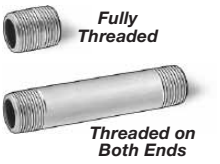
How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Aluminum Threaded Pipe Nipples and Pipe CAD



- Use with air, water, oil
- Fittings: Use threaded Class 150 low-pressure aluminum (see pages 46-47)
- Flanges: Use threaded low-pressure aluminum (see page 47)

They're so light, it's hard to believe these are Schedule 40 nipples and pipe. They're made of aluminum, which offers a high strength-to-weight ratio and very good corrosion resistance. They have seamless construction for unrestricted flow. Meet ASTM B241.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

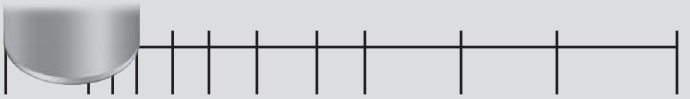
How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

i To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thin-Wall Quick-Weld Aluminum Unthreaded Pipe Fittings

Unthreaded Quick-Weld Connection

- Use with air, water, oil
- Pipe: Use unthreaded Schedule 10 thin-wall aluminum (see below)

Often called bell-end fittings, these are made of 6061 or 6063 aluminum and have bell-shaped ends that support the pipe for quicker and easier welding than butt-weld fittings. Meet ASTM B361.

Couplings are designed to slip over pipe, so they do not have bell-shaped ends. Connections: Quick weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows (C)		45° Elbows		Tees		Couplings

Thin-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings

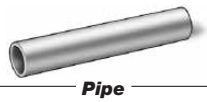
- Use with air, water, oil

Commonly called Schedule 10, here are the thinnest and lightest aluminum fittings and pipe we offer. All are unthreaded so you can make welded connections, which are less likely to leak than threaded connections.

Elbows and ***reducing couplings*** are 6061 aluminum and have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM B361 and ANSI/ASME B16.9. *Reducing couplings* are also called concentric reducers.

Pipe is 6061 or 6063 aluminum and has seamless construction for unrestricted flow. Meets ASTM B241. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Connections: Butt weld (unthreaded).



Pipe Size	Wall Thick.▲	90° Elbows (C)		45° Elbows		Reducing Couplings (A)	(B)		Pipe 1 ft.	3 ft.	6 ft.

▲Wall thickness is measured at the beveled ends.

Standard-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings

- Use with air, water, oil
- Pipe: Use unthreaded Schedule 40 standard-wall aluminum (see page 50)
- Flanges: Use unthreaded low-pressure aluminum (see page 50)

Choose these fittings when you need thicker walls than the thin-wall fittings, yet still want the leak resistance of a welded connection. Also known as Schedule 40, they have beveled ends that, when connected to a pipe, create a trough for a strong weld. All are 6061 aluminum and meet ANSI/ASME B16.9.

Reducing couplings are also called concentric reducers.

Connections: Butt weld (unthreaded).

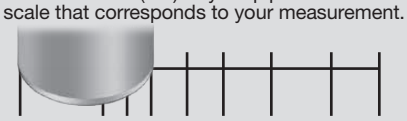
How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange, or inside diameter (ID) of your slip-on flange, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC.** For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Aluminum Unthreaded Pipe

- Use with air, water, oil
- Fittings: Use butt-weld Schedule 40 standard-wall aluminum (see pg. 49)
- Flanges: Use unthreaded low-pressure aluminum (see below)

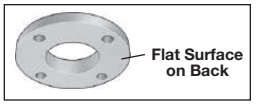
Also known as Schedule 40, this is the most popular style of pipe. This 6061 aluminum pipe is unthreaded so you can make welded connections, which are less likely to leak than threaded connections. It has seamless construction for unrestricted flow. Meets ASTM B241.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	5038K151	$6.30	$14.54	$24.23
1/4	5038K161	7.09	16.36	27.27
3/8	5038K171	14.54	33.55	55.91
1/2	5038K181	16.73	38.60	64.33
3/4	5038K221	$17.82	$41.13	$68.55
1	5038K261	19.92	42.68	71.14
1 1/4	5038K271	20.95	48.35	80.59
1 1/2	5038K281	23.96	55.30	92.17
2	5038K321	$30.75	$70.95	$118.25
2 1/2	5038K331	47.43	85.69	153.01
3	5038K341	63.73	115.12	205.58
4	5038K351	84.47	152.60	272.50

Low-Pressure Aluminum Unthreaded Flanges

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F
- Pipe: Use unthreaded Schedule 40 standard-wall aluminum (see above)
- Fittings: Use butt-weld Schedule 40 standard-wall aluminum (see page 49)



Aluminum flanges, which are also known as Class 125, allow easy access to your pipe. Bolt two same-size flanges together with a gasket (not included). They're made of 356 aluminum and have a flat surface on back. Flanges meet the dimensional requirements of ANSI/ASME B16.1. For gaskets, see pages 3529-3530; for bolts, see page 3169.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Butt Weld—Also known as weld-neck flanges. Butt up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Pipe Size	Flange OD	Bolts Required Qty.	Bolts Required Dia.	Slip On		Butt Weld		Cap	
1/2	3 1/2"	4	1/2"	44705K37	$15.22	44705K543	$35.20	44705K531	$20.72

Thick-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings

- Use with air, water, oil

The thick walls, which are also known as Schedule 80, ensure you're getting the strongest unthreaded aluminum fittings and pipe we offer. All are made of 6061 aluminum.

Elbows, ***tees***, and ***reducing couplings*** have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM B361 and ANSI/ASME B16.9. The *reducing couplings* are also called concentric reducers.

Pipe has seamless construction for unrestricted flow. **To Order:** Please specify 1-, 3-, or 6-ft. length. Connections: Butt weld (unthreaded).

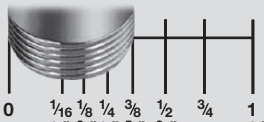
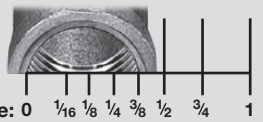
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

FM-Approved Low-Pressure Black Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A strike of a hammer is all it takes to break open a water line in an emergency. Also called Class 125, these black cast iron fittings are a great choice for fire protection applications because they're more brittle than malleable iron and steel fittings. All are FM approved, UL and C-UL listed, and meet ASTM A126 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.4 or B16.14, except off-center reducing couplings. They can be used interchangeably with black malleable iron and black steel.

Off-center reducing couplings, also called eccentric reducers, connect one pipe to another of a smaller diameter with the centers offset.

Connections: NPT.

Pipe Size	90° Elbows		45° Elbows		Tees

Low-Pressure Black Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Also known as Class 125, these fittings are made of black cast iron and can be used interchangeably with black malleable iron and black steel; however, cast iron is the most brittle of the three. Fittings are UL listed and meet ASTM A126 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.4 or B16.14.

Square-head plugs are hollow; ***square-socket plugs*** are solid.

Connections: NPT.

Low-Pressure Steel Threaded Pipe Plugs with Magnet

- Use with air, water, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 250° F for steam

A bar or disc magnet is bonded to one end of these steel plugs to grab metal shavings before they become a problem. Plugs are solid.

Connections: ***Square-head*** and ***hex-socket plugs*** have NPTF (Dryseal) threads, which are compatible with NPT threads. ***Hex-head plugs*** have metric straight threads.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Black Iron and Steel Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A popular choice for low-pressure plumbing applications, these Class 150 fittings are black malleable iron or black steel. They can be used interchangeably with low-pressure black cast iron.

Connections: NPT compatible or NPT. The fittings with NPT-compatible threads are fully threaded couplings in pipe sizes 1/8-2, which have NPSC (National Pipe Straight Coupling) threads, and locknuts, which have NPSL (National Pipe Straight Locknut) threads.

Elbows, Wyes, Tees, Crosses, Unions, Couplings, and Adapters

UL listed (unless noted) and meet ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.3 or B16.39, except adapters. The ***90° female × male elbows*** are also known as street elbows. ***180° bends*** are also called U-bends. ***Unions*** have a brass seal, which is also called a seat, that conforms to uneven surfaces. ***Couplings*** are threaded on each end with an unthreaded space in the middle.

Low-Pressure Black Iron and Steel Threaded Pipe Fittings CAD

(Continued from previous page)

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A popular choice for low-pressure plumbing applications, these Class 150 fittings are black malleable iron or black steel. They can be used interchangeably with low-pressure black cast iron.

Connections: NPT for all of the fittings listed below.

Reducing Elbows and Couplings

All are UL listed and meet ANSI/ASME B16.3 and B1.20.1. ***90° female×male elbows*** are also known as street elbows.

Standard-Wall Steel Threaded Pipe Nipple Assortments

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pg. 52-above)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Each assortment includes a range of different pipe nipple lengths in both fully threaded and threaded-on-both-ends styles. All meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center and vary in length from 7/8″ to 2″ depending on the pipe size.

Galvanized steel offers better corrosion resistance than black steel.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Black Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Black steel is the most popular choice for pipe nipples and pipe in low-pressure plumbing applications. Also known as Schedule 40, all have a welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Black Steel Pipe Nipples, Pipe & Flanges

For technical drawings and 3-D models, go to mcmaster.com. CAD

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Black Steel Threaded-On-One-End Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)
- Flanges: Use threaded low-pressure black iron and steel (see below)

Turn to these nipples and pipe when you need a threaded connection on one end and an unthreaded connection on the other. Also known as Schedule 40, they are made of black steel, which is the most common material for low-pressure plumbing applications. All have welded construction, so there's a weld bead on the inside. They meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Connections: NPT on one end, unthreaded on the other end.

Low-Pressure Black Iron and Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure:
  Steel: 150 psi @ 72° F; 150 psi @ 350° F for steam
  Iron: 125 psi @ 72° F; 125 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see page 55 and above)
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)

A flange connection allows easy access to your pipe. Bolt two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3534. For gaskets, see pages 3529-3534; for bolts, see pages 3150-3153.

Steel flanges are forged for extra strength. Also called raised-face flanges, they have a raised surface on the back. Meet MSS SP-25, ASTM A105, and ANSI/ASME B16.5.

Iron flanges are brittle, so they can be quickly opened in a fire emergency with the strike of a sledge hammer. Also known as flat-face flanges, these have a flat surface on the back. They're FM approved and meet ASTM A126, as well as ANSI/ASME B16.1 and B1.20.1. They are also UL listed, except the flange in 3/4 pipe size.

Connections: NPT.

Pipe Nipples and Couplings with Right-Hand and Left-Hand Threads

- Use with air, water, oil, natural gas, steam

Threads run clockwise (right hand) on one end and counterclockwise (left hand) on the other. When you use your wrench to turn, connections on both ends draw in at the same time.

Pipe nipples are also known as right/left pipe nipples and Schedule 40 pipe nipples. They're made of steel and have welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Couplings are malleable iron. Meet ASTM A197, as well as ANSI/ASME B16.3 and B1.20.1.

Connections: NPT.

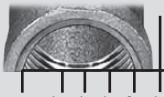
BSPT Iron Pipe Fittings & Steel Pipe

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Iron Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples: Use British standard threaded Schedule 40 steel (see below)

Also known as Class 150, these malleable iron fittings have BSPT threads for connecting to BSPT pipe. They come in your choice of black iron, which is the most popular material for low-pressure plumbing applications, and galvanized iron for increased corrosion resistance. They meet ASTM A197 and EN 10226.

Unions have a brass seal, which is also called a seat, that conforms to uneven surfaces. ***Square-head plugs*** are hollow. ***BSPT×NPT adapters*** allow you to connect BSPT threads to NPT threads. The end with BSPT threads meets ASME BS21 and is marked with paint. The end with NPT threads meets ANSI/ASME B1.20.1.

Connections: BSPT (British Standard Pipe Taper); adapters also have NPT threads on one end.

British Standard Threaded Steel Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use British standard threaded Class 150 low-pressure iron (see above)

BSPT threads on both ends allow quick connections to BSPT fittings. Also called Schedule 40, these nipples are black steel. They have welded construction, so there's a weld bead on the inside, except the fully threaded nipples in 2″ pipe size, which are seamless. Meet ASTM A53 and A733, as well as EN 10226.

Fully threaded nipples are also called close nipples.

Connections: BSPT (British Standard Pipe Taper).

Also Available: Galvanized steel nipples, which offer increased corrosion resistance over black steel. Please ask for 4859K1 and specify nipple style (fully threaded or threaded on both ends), pipe size, and length from the choices below.

Fully Threaded

Threaded on Both Ends

FULLY THREADED

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Galvanized Iron and Steel Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanizing provides the extra rust and corrosion resistance you need. Also known as Class 150, these fittings are malleable iron or steel and can be used interchangeably with low-pressure zinc-plated iron.

Connections: NPT compatible or NPT. The fittings with NPT-compatible threads are fully threaded couplings in pipe sizes 1/8-2, which have NPSC (National Pipe Straight Coupling) threads, and locknuts, which have NPSL (National Pipe Straight Locknut) threads.

Elbows, Wyes, Tees, Crosses, Unions, Couplings, and Adapters

UL listed (unless noted) and meet ASTM A197 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.3 or B16.39, except adapters. The ***90° female×male elbows*** are also known as street elbows. ***180° bends*** are also called U-bends. ***Unions*** have a brass or copper seal, which is also called a seat, that conforms to uneven surfaces. ***Couplings*** are threaded on each end with an unthreaded space in the middle.

★ Not UL listed.

Caps and Fully Threaded Couplings

Caps in pipe sizes 1-6 are UL listed and meet ASTM A153, as well as ANSI/ASME B16.3 and B1.20.1. ***Fully threaded couplings*** are also known as merchant couplings; they meet ASTM A53, A865, and B633.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Galvanized Iron and Steel Threaded Pipe Fittings

(Continued from previous page)

Locknuts, Plugs, and Bushings

Locknuts are not rated for pressure; they meet ANSI/ASME B16.14. ***Square-head***, ***square-socket***, and ***hex-socket plugs*** are solid and meet SAE J531. ***Reducing bushings*** are also known as face bushings; they meet ANSI/ASME B16.14.

Pipe Size	Locknuts		Square-Head Plugs		Square-Socket Plugs		Hex-Socket Plugs (Hex Key Size)

Low-Pressure Galvanized Iron and Steel Threaded Pipe Fittings CAD

(Continued from previous page)

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanizing provides the extra rust and corrosion resistance you need. Also known as Class 150, these fittings are malleable iron or steel and can be used interchangeably with low-pressure zinc-plated iron.

Connections: NPT for all of the fittings listed below.

Reducing Elbows and Couplings

All are UL listed and meet ASTM A153, as well as ANSI/ASME B16.3 and B1.20.1. The ***90° female×male elbows*** are also known as street elbows.

Low-Pressure Zinc-Plated Iron Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Zinc plating on these cast iron fittings provides better rust and corrosion resistance than you'll get with black iron and steel. Also called Class 125 fittings, they can be used interchangeably with galvanized iron and steel. They're UL listed and meet ASTM A126 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.4 or B16.14.

Square-head plugs are hollow; ***square-socket plugs*** are solid.

Connections: NPT.

Galvanized Steel Pipe Nipples & Pipe

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Galvanized Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure galvanized iron and steel (see pages 58-60)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanized steel pipe nipples and pipe provide very good corrosion resistance in low-pressure plumbing applications. Also known as Schedule 40, all have welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Zinc-Plated Steel Threaded Pipe Fittings with Sealant CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see below)

Save yourself the time and trouble it takes to apply sealant—these fittings come with it already applied to the male threads. Also known as Class 150, they have a zinc-plated finish for extra protection from corrosion.

Plugs are solid and meet SAE J531. ***Hex reducing bushings*** meet ANSI/ASME B16.14.

Connections: NPTF (Dryseal), which are compatible with NPT threads.

Low-Pressure Galvanized Steel Threaded Flanges CAD

Raised Surface on Back

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Fittings: Use threaded Class 150 low-pressure galvanized iron and steel (see pages 58-60)

Galvanized for extra protection from corrosion, these steel flanges are also known as Class 150. Use them to create easy access to your pipe by bolting two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3534. For gaskets, see pages 3531-3534; for bolts, see pages 3150-3153. Flanges meet ASTM A105 and A123, as well as ANSI/ASME B16.5.

Connections: NPT.

Standard-Wall Threaded Pipe Nipples for Joining Dissimilar Metals CAD

- Use in water applications where copper meets iron or steel
- Maximum Pressure: 150 psi @ 72° F
- Maximum Temperature: 225° F

A nonconductive plastic sleeve prevents destructive electrolytic corrosion (the electrical current generated between dissimilar metals that causes corrosion) when connecting different metals. Made of galvanized steel, these threaded nipples have welded construction, so there's a weld bead on the inside. Not for use in heating systems that use hot liquids or gas. Meet ANSI/ASME B1.20.1.

Connections: NPT.

Note: When connecting iron pipe to copper tube, use a socket-end to pipe adapter (see 5520K21 to K26 on page 241).

Medium-Pressure Threaded Pipe Unions for Joining Dissimilar Metals CAD

- Use with air, water, oil, natural gas
- Maximum Pressure: 250 psi @ 72° F
- Maximum Temperature: 180° F

Need to connect different metals in your piping or plumbing system? These unions have a Buna-N gasket with a plastic insulator that inhibits destructive electrolytic corrosion (electrical current generated between dissimilar metals that causes corrosion).

Connections: NPT (threaded) or female solder (tube).

Female Threaded End×Female Solder End

Pipe Size (A)	Tube Size (B)♣	Actual Tube OD		
Iron to Copper

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 550° F for steam, except unions are 230 psi @ 550° F
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pages 64-65)
- Flanges: Use threaded medium-pressure steel (see page 67)

Also known as Class 300 pipe fittings, these black malleable iron fittings have thicker walls than low-pressure fittings, so they can withstand higher pressures. They are UL listed and meet ANSI/ASME B.1.20.1. They also meet ASTM A126 or A197, as well as ANSI/ASME B16.3, B16.14, or B16.39.

90° female×male elbows are also known as street elbows. Connections: NPT.

Easy-Alignment Steel Threaded Pipe Couplings

- Use with air, water, oil, natural gas
- Maximum Pressure: 300 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pages 64-65) and threaded Schedule 160 extra-thick-wall steel or galvanized steel (see pages 67-68)

Each end has a short unthreaded space before the threads start—this space acts as a pilot when threading onto long lengths of pipe. Also known as API (American Petroleum Institute) line couplings, they meet API 5-L standards, as well as ASTM A53 and A105.

Galvanized steel offers better corrosion resistance than black steel.

Connections: NPT.

Pipe Size	Black Steel		Galvanized Steel	
1/8	43245K121	$5.16	43245K361	$5.57
1/4	43245K122	6.79	43245K362	7.33

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Smooth-Flow Steel Threaded Reducing Pipe Nipples CAD

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

The walls reduce gradually to provide smoother flow than other types of reducing connections. Also called swage nipples and Schedule 80 nipples, they're zinc-plated steel and have seamless construction for unrestricted flow. They meet MSS SP-95, ASTM A234-WPB, and ANSI/ASME B1.20.1.

Connections: NPT.

Thick-Wall Welded Steel Threaded Pipe Nipples and Pipe CAD

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

Also known as Schedule 80 nipples and pipe, these are made of black steel, which is the most popular material for low-pressure plumbing applications. All have a welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

i To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Seamless Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

Seamless construction provides unrestricted flow. Also known as Schedule 80, these nipples and pipe are made of black steel, which is the most popular material for low-pressure plumbing applications. Meet ASTM A53, A106, and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Thick-Wall Steel Threaded-On-One-End Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

These handy black steel nipples have one threaded end and one unthreaded end. All have welded construction, so there's a weld bead on the inside. They meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Connections: NPT on one end, unthreaded on the other end.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Black Steel Threaded Pipe Fittings CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F, except plugs are rated 6,000 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)
- Flanges: Use threaded extreme-pressure steel (see page 70)

The thick walls on these Class 3000 forged steel fittings stand up to high pressures. All meet ASTM A105 and ANSI/ASME B1.20.1; also meet ANSI/ASME B16.11, except the unions, lug unions, and low-profile couplings.

90° female×male elbows are also called street elbows. ***Unions*** meet MSS SP-83. ***Lug unions*** have two, three, or four lugs depending on their size. ***Half couplings*** are partially threaded; one end has an unthreaded portion that can be welded. ***Plugs*** are solid.

Connections: NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4	3/8	1/2	5/8	3/4	1	1 1/4	1 5/8	1 3/4	2 3/8	2 3/4	3 3/8

i To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Steel Threaded Pipe Plugs

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see below)

The hollow center allows fluid to put pressure on the threads for a tight seal. Also called bull plugs, these heavy duty plugs are made from Schedule 80 pipe and are galvanized for corrosion resistance. Meet MSS SP-95 and ASTM A234-WPB, as well as ANSI/ASME B1.20.1, B31.1, and B31.3.

Connections: NPT.

Pipe Size	Lg.		
1/8	2"	1109T11	$10.15
1/4	2"	1109T12	9.38
3/8	2 1/4"	1109T13	10.15

1 1/2	3 1/2"	1109T18	19.46
2	4"	1109T19	37.51

Pipe Sizes 1/2 to 1

Pipe Sizes 1/8 to 3/8 and 1 1/4 to 2

Medium-Pressure Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pgs. 64-65)

Forged for strength, these black steel flanges are also called Class 300 and raised-face flanges. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. For gaskets, see pages 3531-3533; for bolts, see pages 3150-3153. Meet ASTM A105 and ANSI/ASME B16.5.

Connections: NPT.

Raised Surface on Back

Extra-Thick-Wall Black Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 3000 high-pressure black steel (see page 66)
- Flanges: Use threaded extreme-pressure steel (see page 70)

Ready for rugged service, these strong steel nipples and pipe are also known as Schedule 160. They have seamless construction for unrestricted flow. Meet ASTM A53, A106, and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Galvanized Steel Pipe Fittings & Nipples

For technical drawings and 3-D models, go to mcmaster.com. CAD

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Galvanized Steel Threaded Pipe Fittings

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe Nipples: Use threaded Schedule 160 extra-thick-wall galvanized steel (see below)

Forged for strength, these thick-wall fittings are also known as Class 3000. They are galvanized, so they have better corrosion resistance than black steel. All meet ASTM A105 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.11, except the unions.

90° female×male elbows are also called street elbows. ***Unions*** meet MSS SP-83. ***Half couplings*** are partially threaded; one end has an unthreaded portion that can be welded. ***Hex-head plugs*** are solid.

Connections: NPT.

Steel Plugs, Unions, Locknuts & Outlets

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Zinc-Plated Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table

Put an end to costly, messy leaks. An O-ring seal provides a dependable no-leak connection. Use in hydraulic systems and where vibration, temperature variations, and pressure spikes are a concern. Plugs are made of zinc-plated steel and are solid. They're interchangeable with standard SAE J514 straight-thread fittings. Meet SAE J1926 and ASTM B633.

Plugs with a ***Buna-N seal*** have a temperature range of –20° to 200° F. Plugs with a ***fluoroelastomer seal*** have a temperature range of –4° to 400° F.

Connections: UN/UNF straight threads.

Thread Size (Actual OD)	Max. psi @ 72° F	Hex Key Size	*With Buna-N Seal*		*With Fluoroelastomer Seal*	
5/16″-24	5,500	1/8″	4835K21	$1.68	4835K41	$1.93
7/16″-20	5,000	3/16″	4835K23	1.80	4835K43	2.04
9/16″-18	4,000	1/4″	4835K25	1.96	4835K45	2.18
3/4″-16	3,500	5/16″	4835K26	2.32	4835K46	2.43
7/8″-14	2,750	3/8″	4835K27	2.44	4835K47	2.53
1 1/16″-12	2,250	9/16″	4835K28	2.57	4835K48	2.62
1 5/16″-12	2,000	5/8″	4835K31	5.32	4835K51	5.71
1 5/8″-12	1,625	3/4″	4835K32	14.20	4835K52	18.21
1 7/8″-12	1,250	3/4″	4835K33	19.23	4835K53	24.75

Flush-Mount High-Pressure Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 5,000 psi @ 72° F

Precision machined with a 7/8″ taper, these steel plugs not only install flush, but also withstand higher pressure than standard steel plugs. Plugs are solid. Meet ASTM A574 and ANSI/ASME B1.20.3. Temperature range is –100° to 450° F.

Choose ***PTFE-coated*** plugs for corrosion resistance.

Connections: NPTF (Dryseal), which is compatible with NPT.

Pipe Size	Hex Key Size	*Uncoated*		*PTFE Coated*	
1/16	5/32″	4534K39	$0.37	4534K29	$1.17
1/8	3/16″	4534K41	.43	4534K11	1.22
1/4	1/4″	4534K42	.60	4534K12	1.96
3/8	5/16″	4534K43	.93	4534K13	2.19
1/2	3/8″	4534K44	$1.67	4534K14	$5.78
3/4	9/16″	4534K45	3.21	4534K15	7.52
1	5/8″	4534K46	13.29	—	—
1 1/4	3/4″	4534K47	18.20	—	—

Seal-Tight High-Pressure Steel Threaded Pipe Unions

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 100° F; 1,500 psi @ 700° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)

Rather than the standard metal-to-metal seal you get on other pipe unions, these heavy duty forged steel unions have a special gasket that provides a seal-tight joint in high-pressure applications. The gasket is Type 304 stainless steel with a graphite filler. A Type 316 stainless steel retainer protects the seal from overtightening during installation. Meet MSS SP-83, ASTM A105, and ANSI/ASME B1.20.1. Temperature range is –20° to 700° F.

Connections: NPT.

Pipe Size			Pipe Size		
1/2	4690K11	$62.63	1 1/4	4690K14	$147.98
3/4	4690K12	71.13	1 1/2	4690K15	166.86
1	4690K13	92.20	2	4690K16	203.60

High-Pressure Steel Threaded Locknuts with PTFE Seal

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

No need for PTFE tape and sealants—these locknuts have a built-in seal for high-pressure applications. They're made of zinc-plated steel for corrosion resistance. Screw one onto your fitting before making a connection. Rounded corners prevent overtightening during installation. Temperature range is –100° to 500° F.

Connections: NPT.

Pipe Size	Max. psi @ 72° F	Width	Thick.		
1/8	10,000	5/8″	3/16″	5530K14	$2.12
1/4	10,000	3/4″	5/16″	5530K16	2.66
3/8	10,000	7/8″	5/16″	5530K18	2.90

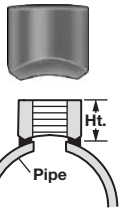
1 1/2	3,000	2 1/4″	3/8″	5530K27	11.24
2	3,000	2 3/4″	7/16″	5530K29	33.20

High-Pressure Steel Threaded Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)



Create a threaded outlet anywhere on your pipe. Also known as branch connectors, they're made of heavy duty forged steel. Comparable to Thredolet. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97, ASTM A105, and ANSI/ASME B16.9, B16.11, and B31.

Connections: NPT.

To Order: Please specify pipe size within the range shown.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.			
1/4 to 36	1/4	3/4″		4587K51	$5.87
3/8 to 36	3/8	13/16″		4587K52	5.87

Steel Pipe Fittings, Nipples & Flanges

For technical drawings and 3-D models, go to mcmaster.com. CAD

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Extreme-Pressure Steel Threaded Pipe Fittings

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 6,000 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule XXH super-thick-wall steel (see below)
- Flanges: Use threaded extreme-pressure steel (see below)

With the thickest walls of all our threaded fittings, these super-tough Class 6000 forged black steel fittings handle the highest pressure. They meet ASTM A105 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.11, except unions.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded.

Connections: NPT.

Pipe Size	90° Elbows		Tees		Unions		Couplings		Half Couplings		Caps

Super-Thick-Wall Steel Pipe Nipples and Pipe

CAD

Fully Threaded

Threaded on Both Ends

Threaded on One End

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 6000 extreme-pressure steel (see above)
- Flanges: Use threaded extreme-pressure steel (see below)

Super duty nipples and pipe, also known as Schedule XXH, have the thickest walls available. They are black steel and have seamless construction for unrestricted flow. Meet ASTM A106B and A733, as well as ANSI/ASME B1.20.1

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

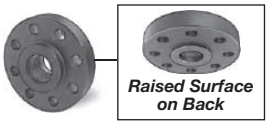
Extreme-Pressure Steel Threaded Flanges

CAD



Raised Surface on Back

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,700 psi @ 72° F; 3,200 psi @ 350° F for steam
- Fittings: Use threaded Class 6000 extreme-pressure steel (see above)
- Pipe Nipples and Pipe: Use threaded Schedule XXH super-thick-wall steel (see above)

Take one look at these hefty flanges and you'll have no doubt they are the strongest available. Also called Class 1500 flanges, they're made of heavy duty forged black steel and have a raised surface on the back. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. For gaskets, see page 3533; for bolts, see pages 3150-3153. Flanges meet MSS SP-6, MSS SP-25, ASTM A105, and ANSI/ASME B16.5.

Connections: NPT.

Pipe Size	Flange OD	Bolts Required Qty.	Bolts Required Dia.		
1/2	4 3/4"	4	3/4"	1153T41	$103.50

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard and Metric Threaded High-Pressure Steel Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: See table

Make high-pressure connections between BSPT, BSPP, NPT, and metric threads. Fittings are made of zinc-plated steel for corrosion resistance.

Swivel adapters rotate 360° for tightening in confined spaces. ***Through-wall nipples*** are also called panel-mount couplings and bulkhead fittings. ***Hex-head plugs*** with BSPT threads are solid; plugs with BSPP threads are hollow.

Connections: BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), NPT, or metric straight threads. Male BSPP threads have a rubber seal.

Adapters and Pipe Nipples

Pipe Size (A)	Pipe Size (B)	BSPT Male×NPT Male Max. psi @ 72° F			BSPT Male×BSPT Male Max. psi @ 72° F			BSPP Male×NPT Male Max. psi @ 72° F			BSPP Male×BSPP Male Max. psi @ 72° F

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

i To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Compact Extreme-Pressure Steel Threaded Pipe Fittings CAD

- Use with air, water, hydraulic oil
- Maximum Pressure: See table

Heavy duty forged or bar stock construction gives these little fittings a lot of might. Made of zinc-plated steel for corrosion resistance. Meet ASTM A108 or A576.

Connections: NPTF (Dryseal), which are compatible with NPT threads, or UN/UNF straight threads.

NPTF Connections

90° female×male elbows are also known as street elbows. ***Square-head plugs*** are hollow. ***Hex-head plugs*** are solid, except pipe sizes 3/4 and 1 are hollow. ***Hex-socket plugs*** are solid.

(Continued on following page)

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4	3/8	1/2	5/8	3/4	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

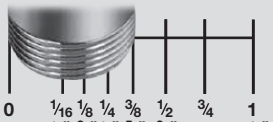
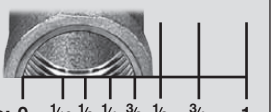
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Precision Compact Extreme-Pressure Steel Threaded Pipe Fittings

- Use with air, water, hydraulic oil, natural gas
- Maximum Pressure: See table

Also called instrumentation fittings, these have precise threads, tight tolerances, and high pressure ratings. Plus, the male threads are rolled for extra strength. They have heavy duty forged or bar stock steel construction and are zinc plated for corrosion resistance. Meet ASTM A108 or A576, as well as ANSI/ASME B31.1, B31.3, and B1.20.1. ***90° female x male elbows*** are also called street elbows. ***Hex-head plugs*** are solid. ***Hex-socket plugs*** are hollow. Connections: NPT.

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Butt-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see below and page 76)
- Flanges: Use unthreaded low-pressure steel (see page 76)

Get the leak resistance of a welded connection combined with the strength of black steel. Also known as Schedule 40, these fittings have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A234 and ANSI/ASME B16.9.

180° bends are also known as U-bends. ***Stub ends*** are for use with the low-pressure easy-access flanges on page 76. ***Centered reducing couplings***, also called concentric reducers, connect one pipe to another pipe of a smaller diameter with the centers lined up. ***Off-center reducing couplings***, also known as eccentric reducers, connect one pipe to another pipe of a smaller diameter with the centers offset.

Connections: Butt weld (unthreaded).

Standard-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see above)
- Flanges: Use unthreaded low-pressure steel (see page 76)

Also called Schedule 40, this unthreaded black steel pipe has welded construction, so there's a weld bead on the inside. Meets ASTM A53 and A733.

To Order: Please specify 1-, 3-, or 5-ft. length.

Pipe Size		1 ft.	3 ft.	5 ft.	Pipe Size		1 ft.	3 ft.	5 ft.	Pipe Size		1 ft.	3 ft.	5 ft.

Steel Pipe Nipples, Flanges & Fittings

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Unthreaded Flanges—*Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″
ID (nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Steel Unthreaded Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)
- Flanges: Use unthreaded low-pressure steel (see below)

Keep these nipples on hand for those times when a short piece of pipe is all you need. Also called Schedule 40 nipples, they're black steel and have welded construction, so there's a weld bead on the inside. Meet ASTM A733.

Pipe Size	1″ Lengths		1 1/2″ Lengths		2″ Lengths		3″ Lengths		4″ Lengths		6″ Lengths		8″ Lengths	
1/8	1120T11	$2.12	1120T12	$2.15	1120T13	$2.15	1120T14	$2.48	1120T15	$2.98	1120T16	$6.23	1120T17	$8.60

Low-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam (unless noted)
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see page 75 and above)
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)

For easy access to your pipe, create a flange connection. Also called Class 150 flanges, they connect by bolting two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3534. For gaskets, see pages 3529-3534; for bolts, see pages 3150-3153. Flanges are black steel and meet MSS SP-25, ASTM A105, and ANSI/ASME B16.5, unless noted. All come with a traceable lot number and a material test report.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld—Also called weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access—Commonly called lap-joint flanges. Use these flanges with stub-end fittings (required, but not included; see page 75). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.	Slip On		Socket Weld		Butt Weld		Easy Access		Cap	
1/2	3 1/2″	4	1/2″	68095K398	$16.49	68095K412	$17.50	68095K415	$20.80	68095K422	$16.49	68095K418	$16.49

■ Does not meet ANSI/ASME B16.5 and is not rated for use with steam.

Low-Pressure Iron Pipe Fittings with Flanged Ends

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see page 75 and above)
- Flanges: Use unthreaded low-pressure steel (see above)

Get rid of the middleman in your pipeline—these black cast iron fittings give you the shape and connection you want with fewer pieces to join. They're UL listed and FM approved, and because cast iron is brittle, they can be quickly opened in a fire emergency with the strike of a sledge hammer. Bolt the flanged end to another same-size flange, pump, or valve; a gasket is required, but not included. For an installation set that includes a gasket and bolts, see page 3534. For gaskets, see pages 3529-3534; for bolts see pages 3150-3153. Fittings meet Fed. Spec. WW-F-406, ASTM A126 and B307, and ANSI/ASME B1.20.1 and B16.1.

Centered reducing couplings are also known as concentric reducers.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.	90° Elbows		45° Elbows		Tees

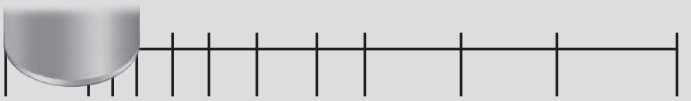
How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Butt-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)
- Flanges: Use unthreaded medium-pressure steel (see below)

Also known as Schedule 80 fittings, these are the strongest butt-weld black steel fittings we offer. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A234.

Centered reducing couplings are also known as concentric reducers.

Connections: Butt weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows, Long Radius (C)		90° Elbows, Short Radius (C)		45° Elbows		180° Bends (C)		Tees

Medium-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Max. Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)
- Fittings: Use butt-weld Schedule 80 thick-wall steel (see above) and socket-weld high-pressure steel (see page 78)

Gain access to your pipe without disassembling your line. Also called Class 300 flanges, they have heavy duty forged construction for superior strength. Connect by bolting two same-size flanges together with a gasket (not included). For gaskets, see pages 3529-3534; for bolts, see pages 3150-3153. Flanges are black steel and meet ASTM A105 and ANSI/ASME B16.5. All come with a traceable lot number and a material test report.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access—Commonly called lap-joint flanges. Use these flanges with stub-end fittings (required, but not included; see page 75). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange neck, or inside diameter (ID) of your slip-on, socket-weld, and easy-access flange, then select the pipe size on the scale that corresponds to your measurement.

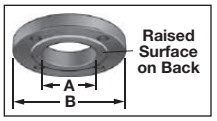
Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

DIN Steel Unthreaded Flange Adapters

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 230 psi @ 72° F; 180 psi @ 300° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see pgs. 75-76)
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)



Made to DIN EN standards, these flanges provide a smooth transition between your standard-wall (Schedule 40) pipe or fittings and another DIN EN flange connection. Flanges have heavy duty forged construction for superior strength. Bolt two same-size flanges together with a gasket (not included). For gaskets, see page 3534; for bolts, see pages 3157-3159. Meet DIN 2527, 2633, or 86030, as well as EN 1092-1.

Slip On—Slip the flange onto your pipe and weld on both sides of your pipe.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Flange Size	Pipe Size (A)	Flange OD (B)	Bolts Req'd Qty.	Bolts Req'd Dia.	Slip On		Butt Weld		Cap	
DIN 25	1	115 mm	4	M12	1132T19	$16.57	1132T11	$16.87	1132T15	$17.93
DIN 50	2	165 mm	4	M16	1132T21	35.52	1132T12	37.44	1132T16	42.00
DIN 80	3	200 mm	8	M16	1132T22	50.62	1132T13	49.28	1132T17	62.60
DIN 100	4	220 mm	8	M16	1132T23	57.28	1132T14	55.94	1132T18	74.16

High-Pressure Socket-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)

Also known as Class 3000, these heavy duty black steel pipe fittings have forged construction that stands up to high pressures. Meet ASTM A105; also meet ANSI/ASME B16.11, except unions meet MSS SP-83 and reducing bushings meet MSS SP-79.

Connections: Socket weld (unthreaded).

Pipe Size	90° Elbows		45° Elbows		Tees		Crosses		Unions		Caps

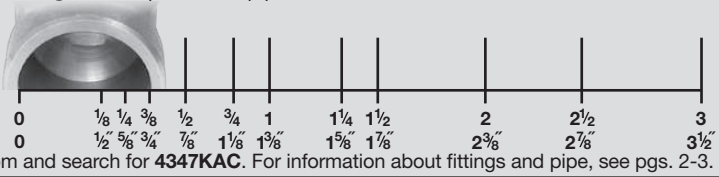
How to Measure Socket-Weld Unthreaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 80 thick-wall steel (see page 77) and socket-weld high-pressure steel (see page 78)
- Flanges: Use unthreaded medium-pressure steel (see page 77)

Thick walls and seamless construction result in superior strength and unrestricted flow. Also known as Schedule 80, this black steel pipe meets ASTM A53, A106, and A733.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	7972K31	$22.69	$67.03	$103.13
1/4	7972K32	26.25	77.55	119.30
3/8	7972K33	28.88	85.34	131.29
1/2	7972K34	18.56	54.83	84.36
3/4	7972K35	$18.61	$55.00	$84.61
1	7972K36	25.40	75.06	115.47

4	7972K43	115.45	341.10	524.77

Extreme-Pressure Socket-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 6,000 psi @ 72° F
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see below)
- Flanges: Use unthreaded extreme-pressure steel (see below)

Looking for the strongest steel fittings we offer? Also known as Class 6000, these heavy duty forged black steel fittings handle extreme pressure. Meet ASTM A105; they also meet ANSI/ASME B16.11, except unions.

Connections: Socket weld (unthreaded).

Unthreaded Socket-Weld Connection

Pipe Size	90° Elbows	Tees	Unions	Couplings	Caps
1/2	43665K114 $6.49	43665K154 $10.14	43665K254 $17.81	43665K194 $4.00	43665K234 $5.35

Super-Thick-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use socket-weld Class 6000 extreme-pressure steel (see above)
- Flanges: Use unthreaded extreme-pressure steel (see below)

The strongest black steel pipe we offer, this pipe is also known as Schedule XXH. It has seamless construction for unrestricted flow. Meets ASTM A106B and A733.

Pipe Size	1-ft. Lengths	2-ft. Lengths	3-ft. Lengths
1/2	1155T11 $29.03	1155T16 $52.34	1155T22 $77.14
3/4	1155T12 40.89	1155T17 73.76	1155T23 110.60
1	1155T13 55.68	1155T18 100.40	1155T24 150.60
1 1/2	1155T14 82.47	1155T19 148.70	1155T25 202.76
2	1155T15 96.66	1155T21 184.55	1155T26 225.71

Extreme-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,700 psi @ 72° F; 3,200 psi @ 350° F for steam
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see above)
- Fittings: Use unthreaded socket-weld extreme-pressure (Class 6000) steel (see above)

Raised Surface on Back

Flange connections give you access to your pipe without having to disassemble the line. Also called Class 1500 flanges, they are black steel and have heavy duty forged construction for superior strength. Connect by bolting two same-size flanges together with a gasket (not included). For gaskets, see pg. 3533; for bolts, see pgs. 3150-3153. Flanges meet MSS SP-6 and SP-25, as well as ASTM A105 and ANSI/ASME B16.5. All come with a traceable lot number and a material test report.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld—Also called weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.	Slip On	Socket Weld	Butt Weld	Cap
1/2	4 3/4"	4	3/4"	1139T45 $96.86	1139T58 $101.62	1139T38 $80.06	1139T52 $100.59

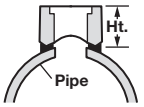
ID (to nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Steel Socket-Weld Pipe Outlets

CAD



- Use with air, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use unthreaded Schedule 80 thick-wall black steel (see page 79)

Also called branch connectors, these outlets create a tap off anywhere along your pipe. They're comparable to Sockolet. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. They're heavy duty forged steel and meet MSS SP-97 and ASTM A105, as well as ANSI/ASME B16.9, B16.11, and B31.

Connections: Socket weld (unthreaded).

To Order: Please specify pipe size within the range shown.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.		
1/4 to 36	1/4	3/4"	4587K61	$9.29
3/8 to 36	3/8	7/8"	4587K62	8.57

3/4 to 36	3/4	1 1/8"	4587K64	8.34
1 to 36	1	1 3/8"	4587K65	9.17
1 1/4 to 36	1 1/4	1 3/8"	4587K66	13.62
1 1/2 to 36	1 1/2	1 3/8"	4587K67	13.62
2 to 36	2	1 1/2"	4587K68	14.05

Seal-Tight High-Pressure Steel Socket-Weld Pipe Unions

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 100° F; 1,500 psi @ 700° F for steam
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see page 79)

A Type 304 stainless steel gasket with a graphite filler gives these forged steel unions a tight seal under high pressures. They also have a Type 316 stainless steel retainer that protects the seal from overtightening during installation. Meet MSS SP-83, ASTM A105, and ANSI/ASME B1.20.1. Temperature range is –20° to 700° F.

Connections: Socket weld (unthreaded).

Pipe Size		
1/2	4690K17	$62.63
3/4	4690K18	71.13
1	4690K19	92.20
1 1/4	4690K21	147.98
1 1/2	4690K22	166.86
2	4690K23	203.60

Grooved-End Iron Unthreaded Pipe Fittings and Pipe

CAD

- Use with air and water, unless otherwise stated
- Maximum Pressure: Fittings and Couplings: 750 psi @ 72° F; Pipe: Not rated

Grooved ends on these fittings connect with a coupling for an easy way to install and maintain piping systems. All are UL listed and FM approved.

Elbows, tees, caps, and ***adapters*** are ductile iron and covered with orange enamel. Meet ASTM A536.

Couplings have a two-piece housing that can remain intact for installation. Housings are covered with orange enamel. They have zinc-plated nuts and bolts. Meet ASTM A536. Couplings *with EPDM gasket* are for use with water. Temperature range is –30° to 250° F. Couplings *with nitrile gasket* are for use with air and oil. Temperature range is –20° to 180° F.

Standard-wall pipe is also known as Schedule 40. It is black steel and has welded construction, so there's a weld bead on the inside.

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

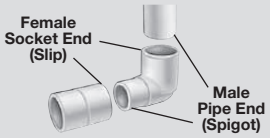
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

About Plastic Pipe Fittings and Pipe



Unthreaded pipe fittings generally come with either a female socket end (slip) or a male pipe end (spigot) connection.

Both primer and cement (sold on page 3466) are required to connect unthreaded plastic pipe fittings to pipe. After applying the primer and cement, slide the pipe end into the socket end.

Plastic pipe fittings are not rated for pressure; however, you can use the pressure rating for the plastic pipe as a reference.

Applications	Fittings	Pages
Cold Drinking Water	Standard-Wall White PVC	82-84
	Thick-Wall Dark Gray PVC	88-90, 92-94
Cold and Hot Drinking Water	Thick-Wall Light Gray CPVC	96-99
Water Drainage	Drain, Waste, and Vent Standard-Wall White PVC	85-86
Gasoline	High-Strength White Nylon	95
Chemicals	Thick-Wall Black Polypropylene	100-102
	Chemical-Resistant Thick-Wall Red PVDF	102
	Corrosion-Resistant Thick-Wall White PFA	102-103
High Temperatures	High-Temperature Thick-Wall White PTFE	103
Outdoor Use	UV-Resistant Standard-Wall PVC	81

Warning: Never use plastic pipe fittings and pipe with compressed air or gas.

UV-Resistant Standard-Wall PVC Pipe Fittings and Pipe

Pipe Fittings:
- Meet NSF/ANSI 61 Standard for use with drinking (potable) water
- Maximum Temperature: 140° F

Pipe:
- Use with water; does not meet NSF/ANSI Standard 61
- Maximum Temperature: 140° F

Go ahead and use these Schedule 40 pipe fittings and pipe outdoors—the PVC has an additive that protects it from the damaging effects of ultraviolet light. PVC is rigid and corrosion resistant; it is the most popular choice for low-pressure plumbing applications.

Fittings meet ASTM D2466.

Pipe meets ASTM D1784.

Connections: Fittings are unthreaded socket end (female), unthreaded pipe end (male), or threaded (NPT); pipe is unthreaded. Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

Cut-to-Angle Standard-Wall White PVC Unthreaded Pipe Elbows

- Use with water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 40 standard-wall white PVC (see page 84)

These two-piece elbows can be cut to any angle you need, so you'll always have the right one on hand. They have molded cutting guides at 22 1/2°, 33 3/4°, 45°, 56 1/4°, 67 1/2°, 78 3/4°, and 90° angles; they also come with a template for custom angles. After cutting, bond the removable socket end to the cut piece with a PVC primer and cement (see series 74605A on page 3466). Elbows are PVC, which is strong and corrosion resistant. They meet ASTM D2466.

Connections: Socket end (female).

Pipe Size		
1 1/2	4747T11	$5.35
2	4747T12	6.71
3	4747T13	18.88
4	4747T14	24.69

How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

ID (to nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about pipe size, see pgs. 2-3.

Standard-Wall White PVC Pipe Fittings CAD

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 40 standard-wall white PVC (see page 84)

Offering corrosion resistance, strength, and rigidity, these Schedule 40 PVC pipe fittings are the most common choice for plastic fittings in low-pressure plumbing applications. All meet ASTM D1784; they also meet ASTM D2466, except the pipe extenders and inside connectors.

Connections: Unthreaded socket end (female), unthreaded pipe end (male), or threaded (NPT). Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on pg. 3466).

Unthreaded Socket End (Female)

Unions have a Buna-N (nitrile) O-ring, except pipe sizes 2 1/2, 4, and 6 have an EPDM O-ring.

■ Fitting is thick-wall (Schedule 80); it is compatible with standard-wall and thick-wall pipe.
★ Not hex shaped; end is round.

Unthreaded Pipe End (Male)

Plugs are hollow and fit inside fittings with a female socket end. **Pipe extenders** are handy when your pipe is too short to accept a fitting. One end slides into the pipe, while the other end adds length to the pipe. **Inside connectors** allow you to connect two lengths of pipe.

■ Fitting is thick-wall (Schedule 80); it is compatible with standard-wall and thick-wall pipe.

(Continued on following page)

How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"
ID (to nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about pipe size, see pgs. 2-3.

Standard-Wall White PVC Pipe Fittings *(Continued from previous page)*

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 40 standard-wall white PVC (see below)

Offering corrosion resistance, strength, and rigidity, these Schedule 40 PVC pipe fittings are the most common choice for plastic fittings in low-pressure plumbing applications. All meet ASTM D1784 and D2466.

Connections: Unthreaded socket end (female), unthreaded pipe end (male), or threaded (NPT). Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on pg. 3466).

Standard-Wall White PVC Unthreaded Pipe

- Meets NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Fittings: Use Schedule 40 standard-wall white PVC (see pages 82-83 and above)

PVC is good for low-pressure plumbing applications. It offers good corrosion resistance, strength, and rigidity. Also known as Schedule 40 pipe, it meets ASTM D1784 and D1785. 1/4" and 3/8" pipe are dark gray.

Connect pipe to fittings using a PVC primer and cement (see series 74605A on page 3466).

Also Available: Standard-wall black ABS unthreaded pipe for drain, waste, and vent applications. Please ask for 1608T2 and specify pipe size (1 1/2, 2, or 3) and length (5 ft. or 10 ft.). For standard-wall black ABS pipe fittings, see page 85.

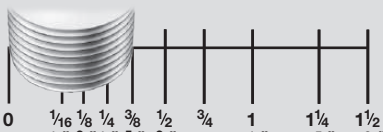
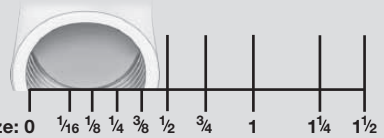
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Drain, Waste, and Vent Standard-Wall White PVC Pipe Fittings

- Use with water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 40 standard-wall white PVC (see page 84)

When it comes to gravity-flow applications, these are our most popular fittings. They're also known as Schedule 40 fittings and can be used with other standard-wall pipe fittings and pipe. All meet ASTM D1784 and D2665.

Connections: Unthreaded socket end (female), unthreaded pipe end (male), threaded (NPT), or unthreaded tube end. Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

Also Available: Standard-wall black ABS pipe fittings for drain, waste, and vent applications. They offer good resistance to chemicals, such as ammonium chloride and sodium hydroxide. Please ask for 1608T1 and specify the equivalent part number from the choices listed below. For standard-wall black ABS pipe, see page 84.

Standard-Wall Clear PVC Pipe Fittings

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 40 standard-wall clear PVC (see page 87)

Just as strong, rigid, and corrosion resistant as white PVC, but these fittings are clear so you can see what's flowing through your line. Standard-wall fittings are also known as Schedule 40. They are made from FDA-compliant resins and meet ASTM D2466 and D2467.

Connections: Unthreaded socket end (female) or threaded (NPT). Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

Unthreaded Socket End (Female)

♣ Fitting is thick-wall (Schedule 80); it is compatible with standard-wall and thick-wall pipe.

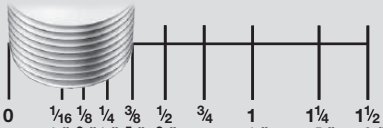
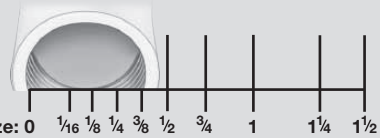
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Clear PVC Unthreaded Pipe

- Meets NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Fittings: Use unthreaded Schedule 40 standard-wall clear PVC (see page 86)

Clear pipe offers optimum visibility, so you can see what is flowing through your line. Also called Schedule 40 pipe, this PVC pipe is strong and corrosion resistant. It is made from FDA-compliant resins and meets ASTM D1784 and D1785.

Connect pipe to unthreaded fittings using a PVC primer and cement (see series 74605A on page 3466).

Pipe Size	Max. psi @ 73° F	2 ft.		4 ft.		8 ft.

Flexible Standard-Wall Clear PVC Unthreaded Pipe

- Use with water
- Maximum Temperature: 140° F
- Fittings: Use unthreaded Schedule 40 standard-wall clear PVC (see page 86)

Bend this pipe around objects—fewer connections reduces installation time and also reduces turbulence in pipelines. Also known as Schedule 40, this corrosion-resistant PVC pipe is clear, so you can see what's flowing through your line. It's made from FDA-compliant resins and meets 3-A sanitary requirements.

Connect pipe to unthreaded fittings using a PVC primer and cement (see series 74605A on page 3466).

Pipe Size	Max. psi @ 72° F	5 ft.		10 ft.	
1/2	65	4805K51	$11.91	4805K61	$20.53

1 1/2	45	4805K54	$37.91	4805K64	$65.37
2	40	4805K55	50.76	4805K65	87.52

Underground Sewer and Drain PVC Pipe Fittings and Pipe

- Use with water
- Maximum Temperature: 140° F

With thinner walls than Schedule 40 fittings and pipe, these are lighter in weight and have more space on the inside for greater flow. Commonly used underground for gravity-flow sewer and drain applications, but can be used above ground as well. They are made of PVC, which is strong and corrosion resistant.

Fittings are only compatible with the 2426K series pipe. Also known as SDR 35, fittings are white and meet ASTM D2729 and D3034.

Pipe is only compatible with the 9102K series fittings. It is white and meets ASTM D2729. The *4 1/2-ft. lengths* have plain ends; *10-ft. lengths* are belled on one end for easy connection.

Connections: Fittings are unthreaded socket end (female) or threaded (NPT); pipe is unthreaded. Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

Unthreaded Socket End (Female)

How to Measure Unthreaded Socket-End Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Dark Gray PVC Unthreaded Pipe Fittings and Flanges

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Pipe: Use unthreaded Schedule 80 thick-wall dark gray PVC (see page 90)

With thicker walls than standard-wall fittings, these Schedule 80 fittings have more strength to handle heavy duty applications. PVC is a durable material that's rigid and corrosion resistant.

Connections: Unthreaded socket end (female) or unthreaded pipe end (male). Connect fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

Socket End (Female)

All meet ASTM D2467. **Unions** have a fluoroelastomer O-ring, except it is EPDM on pipe sizes 2 1/2, 4, and 6. **Union adapters** have an EPDM O-ring. **Centered reducing couplings** are also known as concentric reducers. **Off-center reducing couplings** are also known as eccentric reducers.

Flanges

Flanges are also known as Class 150 flanges. Bolt two same-size flanges together with a rubber flange gasket to form a tight seal. For gaskets see page 3529; for bolts, see page 3170.

Socket end flanges meet ASTM D2467.

Easy-align flanges are also called Van Stone flanges; they have a ring that swivels for easy bolt hole alignment. They meet ASTM D2467.

Cap flanges are also called blind flanges; they close off the end of a pipe.

UV-Resistant Thick-Wall Black PVC Unthreaded Pipe

- Use with water
- Maximum Temperature: 140° F

This PVC pipe is made with a UV inhibitor, so you can use it outdoors. Also called Schedule 80 pipe, it has thicker walls than standard-wall pipe to handle heavy duty applications. PVC is a durable material that's rigid and corrosion resistant. Pipe meets ASTM D1784.

Connect pipe to unthreaded fittings using a PVC primer and cement (see series 74605A on page 3466).

Pipe Size	Max. psi @ 72° F	4 ft.			8 ft.

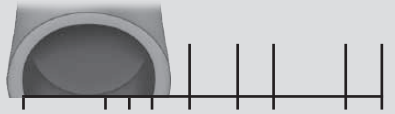
How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"



Pipe Size: 0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (nearest 1/8"): 0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Dark Gray PVC Unthreaded Pipe

- Meets NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140°F
- Fittings and Flanges: Use unthreaded Schedule 80 thick-wall dark gray PVC (see pages 88-89)

The thick walls make this Schedule 80 pipe stronger than standard-wall PVC pipe. Use it in heavy duty applications. PVC is a durable material that's rigid and corrosion resistant. Pipe meets ASTM D1784 and D1785.

Connect pipe to unthreaded fittings using a PVC primer and cement (see series 74605A on page 3466).

Thick-Wall Clear PVC Unthreaded Pipe

- Meets NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140°F
- Fittings and Flanges: Use unthreaded Schedule 80 thick-wall dark gray PVC (see pages 88-89)

See what's flowing through your pipe at a glance—this PVC pipe is clear for optimum visibility. Also known as Schedule 80 pipe, it has thicker walls than standard-wall PVC pipe, so it is stronger to handle heavy duty applications. Pipe is made from FDA-compliant resins. It meets ASTM D1784 and D1785.

Connect pipe to unthreaded fittings using a PVC primer and cement (see series 74605A on page 3466).

Barbed Dark Gray PVC Pipe Fittings

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140°F
- Pipe: Use flexible polyethylene (see page 91)

Easier to connect than other types of plastic pipe fittings, these fittings have a barbed end that slides into flexible polyethylene pipe. Secure fittings with a worm-drive clamp (sold on page 302). Also called insert fittings, all are made of rigid, corrosion-resistant PVC and meet ASTM D1784 and D2609.

Connections: Barbed or threaded (NPT).

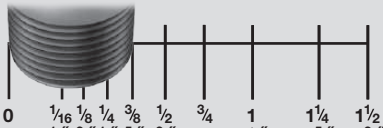
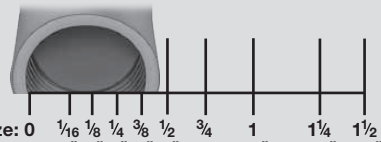
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Barbed Light Gray Polypropylene and White Nylon Pipe Fittings

- Meet NSF/ANSI Standard 14 for use with drinking (potable) water
- Maximum Temperature: Polypropylene: 120° F; Nylon: 150° F
- Pipe: Use flexible polyethylene (see below)

Also known as insert fittings, these are easier to connect than other types of plastic pipe fittings. Slide the barbed end into flexible polyethylene pipe and secure with a worm-drive clamp (sold on page 302). For polypropylene and nylon barbed tube fittings, see pages 162-165 and 168-169; for barbed hose fittings, see page 318. These fittings meet ASTM D2609.

Polypropylene has good strength and is more flexible than PVC and nylon. Do not use oil-based sealants on the threads.

Nylon is a great choice when your application requires excellent strength and resistance to impact. Connections: Barbed or threaded (NPT).

Flexible Black Polyethylene Unthreaded Pipe for Barbed Fittings

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Fittings: Use barbed fittings (see page 90 and above)

You'll get the flexibility of tubing in this strong and bendable pipe. Made of high-density polyethylene (HDPE), it meets ASTM D2239 and D3350, and it's BOCA approved. Pipe can be cut to length with a knife.

Connect pipe to barbed pipe fittings with a worm-drive clamp (sold on page 302).

★ Cannot be coiled; comes straight.

Thick-Wall Dark Gray PVC Pipe Fittings with Reinforced Threads

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 140° F
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall dark gray PVC (see page 94)

Take the worry out of over-tightening PVC pipe fittings—these have a stainless steel collar to support the female threads and keep them from cracking. Also known as Schedule 80 fittings, they meet ASTM D1784 and D2467. **Unions** have an EPDM O-ring.

Connections: Threaded (NPT) or unthreaded socket end (female). Connect socket-end fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

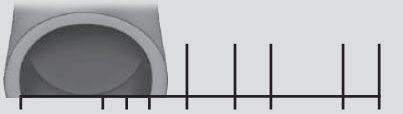
How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"



Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Dark Gray PVC Pipe Fittings and Flanges CAD

- Meet NSF/ANSI Standard 61 for use with drinking (potable) water, except where noted
- Maximum Temperature: 140° F, except reducing pipe nipples are 110° F
- Pipe Nipples and Pipe: Use unthreaded and threaded Schedule 80 thick-wall PVC (see pages 90 and 94)

Choose threaded PVC fittings for quick connections without the need for primer and cement. Also known as Schedule 80 fittings and flanges, they have thicker walls than the standard-wall versions to handle heavy duty applications. PVC is a durable material that's rigid and corrosion resistant. All meet ASTM D1784 and D2467.

Connections: Threaded (NPT), unthreaded pipe end (male), or unthreaded socket end (female). Connect unthreaded fittings to pipe using a PVC primer and cement (see series 74605A on page 3466).

NPT Threaded

Unions have a fluoroelastomer O-ring, except pipe sizes 1/4, 3/8, 2 1/2, and 6 have an EPDM O-ring. **Hex-head** plugs are hollow.

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Dark Gray PVC Pipe Fittings and Flanges *(Continued from previous page)*

Unthreaded Socket End (Female) to NPT Threaded (Cont.)

Unions have a fluoroelastomer O-ring, except pipe sizes 1/4, 2 1/2, 3, 4, and 6 have an EPDM O-ring. **PVC-to-brass adapters** meet ANSI/ASME B1.20.1. They have a molded-in brass threaded insert that allows you to transition your pipeline from PVC to brass or copper; the female threads also have a stainless steel reinforcement collar.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Dark Gray PVC Threaded Pipe Nipples

- Maximum Temperature: 110° F
- Fittings and Flanges: Use threaded Schedule 80 thick-wall dark gray PVC (see pages 92-93)

With threads at one or both ends, these pipe nipples quickly connect to threaded fittings and flanges without the need for primer and cement. Also known as Schedule 80 nipples, they have thicker walls than the standard-wall nipples to handle heavy duty applications. All meet ASTM D1784, D1785, and D2467.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: Threaded (NPT) or unthreaded.

Thick-Wall Dark Gray PVC Threaded Pipe

- Maximum Temperature: 110° F
- Fittings and Flanges: Use threaded Schedule 80 thick-wall dark gray PVC (see pages 92-93)

This Schedule 80 pipe comes threaded on both ends, so you can quickly connect it to fittings and flanges without the need for primer and cement. They have thicker walls than the standard-wall pipe to handle heavy duty applications. All meet ASTM D1784, D1785, and D2467.

Connections: Threaded (NPT).

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Clear PVC Threaded Pipe Nipples

- Maximum Temperature: 110° F
- Fittings and Flanges: Use threaded Schedule 80 thick-wall dark gray PVC (see pages 92-93)

See what's flowing through your line with these clear PVC pipe nipples. Also called Schedule 80 nipples, they're thicker than the standard-wall versions to handle heavy duty applications. They meet ASTM D1784, D1785, and D2467.

Fully threaded nipples are also known as close nipples; they're threaded on each end to the center.

Connections: Threaded (NPT).

High-Strength White Nylon Threaded Pipe Fittings

- Use with water, oil, soap solutions, acetone, gasoline (unless noted)
- Temperature Range: 32° to 167° F, unless noted

Choose nylon for its high strength and impact resistance. These fittings are semi-clear white, unless indicated otherwise.

High-pressure hex-reducing bushings are red. *Note:* Do not use PTFE tape with these bushings.

Connections: Threaded (NPT).

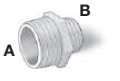
■ Not hex shaped; center is square.



Miniature High-Strength White Nylon Threaded Pipe Fittings

- Use with water, oil, soap solutions, acetone
- Temperature Range: 0° to 175° F

These tiny fittings fit into tight spaces. They're made of nylon, which offers high strength and impact resistance.

Connections: 10-32 and 1/4″-28 are UNF straight threads; 1/16 is a threaded pipe size (NPT).

Thread/ Pipe Size	Max. psi @ 72° F	Couplings		Hex-Head Plugs		Hex Nipples

How to Measure Unthreaded Socket-End Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

i To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Light Gray CPVC Unthreaded Pipe Fittings and Flanges

- Use with hot water; meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 200° F
- Pipe: Use unthreaded Schedule 80 thick-wall light gray CPVC (see page 97)

CPVC is a durable, corrosion-resistant material that handles higher temperatures than PVC in heavy duty applications. These are also known as Schedule 80 fittings and flanges. They meet ASTM D1784 and F439.

Connections: Unthreaded socket end (female) or unthreaded pipe end (male). Connect fittings to pipe using a CPVC primer and cement (see series 74605A on page 3466).

Socket End (Female)

Unions have a fluoroelastomer O-ring, except pipe sizes 3/8, 2 1/2, 4, and 6 have an EPDM O-ring. **Off-center reducing couplings** are also known as eccentric reducers. **Centered reducing couplings** are also known as concentric reducers.

Flanges

Also known as Class 150 flanges, bolt two same-size flanges together with a rubber flange gasket to form a tight seal. For gaskets see page 3529; for bolts see page 3170.

Easy-align flanges are also called Van Stone flanges; they have a ring that swivels for easy bolt hole alignment.

Cap flanges are also called blind flanges; they close off the end of a pipe.

Thick-Wall Light Gray CPVC Unthreaded Pipe

- Use with hot water; meets NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 200° F
- Fittings and Flanges: Use unthreaded Schedule 80 thick-wall light gray CPVC (see page 96 and above)

Choose this CPVC pipe over PVC for high-temperature, heavy duty applications. CPVC is a durable material that's rigid and corrosion resistant. Also called Schedule 80 pipe, it meets ASTM D1784 and F441.

Connect pipe to unthreaded fittings using a CPVC primer and cement (see series 74605A on page 3466).

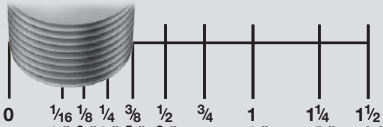
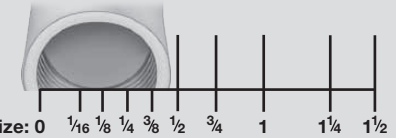
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Light Gray CPVC Pipe Fittings and Flanges CAD

- Use with hot water; meet NSF/ANSI Standard 61 for use with drinking (potable) water
- Maximum Temperature: 200° F
- Pipe Nipples: Use threaded Schedule 80 thick-wall light gray CPVC (see page 99)

Because the threaded ends don't require primer and cement, you'll get fast connections with these Schedule 80 fittings and flanges. They're made of CPVC, a material that's rigid and corrosion resistant. CPVC can handle higher temperatures than PVC in heavy duty applications. All meet ASTM D1784 and F439.

Connections: Threaded (NPT), unthreaded pipe end (male), or unthreaded socket end (female). Connect unthreaded fittings to pipe using a CPVC primer and cement (see series 74605A on page 3466).

NPT Threaded

Unions have a fluoroelastomer O-ring, except pipe sizes 1/4, 2 1/2, 3, 4, and 6 have an EPDM O-ring. **Hex-head plugs** are hollow.

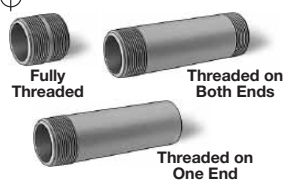
Thick-Wall Light Gray CPVC Threaded Pipe Nipples and Pipe

- Use with hot water
- Maximum Temperature: 200° F
- Fittings and Flanges: Use threaded Schedule 80 thick-wall light gray CPVC (see pages 98 and above)

CPVC is rigid and corrosion-resistant like PVC, but CPVC can stand up to higher temperatures in heavy duty applications. Also known as Schedule 80 pipe nipples and pipe, they're threaded, so they don't require a primer and cement to make a connection. All meet ASTM D1784, D2467, and F439.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center.

Connections: Threaded (NPT) or unthreaded.



Fully Threaded

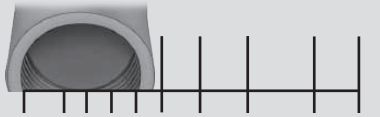
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Black Polypropylene Threaded Pipe Fittings and Flanges

- Use with water, fertilizers, soap solutions, calcium chloride, sodium chloride, except unions are for use with water only
- Temperature Range: –20° to 150° F, except unions are 40° to 180° F
- Pipe: Use threaded Schedule 80 thick-wall black polypropylene (see page 101)

Excellent strength and chemical resistance are only part of this story—these Schedule 80 fittings and flanges also resist UV light and are inert to moisture. They're made of lightweight fiberglass-reinforced polypropylene.

Unions have Type 316 stainless steel reinforcing collars to support the threads and a fluoroelastomer O-ring. **Hex-head plugs** are hollow. **Hex nipples** have a hex in the center, except pipe size 3 has grip ridges. **Flanges** are also called Class 150 flanges; bolt two same-size flanges together with a gasket to form a tight seal (see pages 3529-3530 for gaskets and page 3170 for bolts).

Connections: Threaded (NPT). The use of thread sealant is recommended (see 4586K9 on page 3470); use of pipe tape is not recommended.

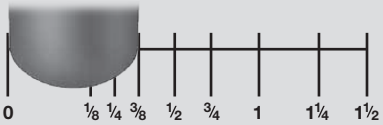
How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Black Polypropylene Threaded Pipe

- Use with water, oil, fertilizers, calcium chloride, sodium chloride
- Maximum Temperature: 180° F
- Fittings and Flanges: Use threaded Schedule 80 thick-wall black polypropylene (see page 100)

Not only does polypropylene offer excellent strength and chemical resistance, it's also resistant to UV light and inert to moisture. Also known as Schedule 80 pipe, it meets ASTM D4101 and ANSI B1.20.1.

Connections: Threaded (NPT).

Pipe Size	Max. psi @ 73° F	2 ft.		3 ft.	
1/4	20	8798T11	$14.61	8798T31	$21.80

CPVC Laboratory Pipe Fittings and Pipe for Corrosive Waste

- Use with water, ammonium hydroxide, sulfuric acid, hydrochloric acid, nitric acid, salt water
- Temperature Range: 40° to 200° F

Before you pour anything down the drain, be sure your gravity-flow system can handle it. These drain, waste, and vent fittings are made of specially formulated, corrosion-resistant CPVC. The material is IAPMO (International Association of Plumbing and Mechanical Officials) approved, ABS (American Bureau of Shipping) listed, and meets UL 94V0 for flame retardance. Fittings and pipe meet ASTM F2618 standards.

Connections: Unthreaded socket end (female), unthreaded pipe (male), and threaded (NPT). Connect unthreaded fittings to pipe using the cement sold separately below; cement is yellow and is IAPMO approved to ASTM F2618 and F493 standards.

Unthreaded Socket End (Female)

Snap-Lock Black Polyethylene Pipe Fittings and Pipe

- Use for water drainage
- Temperature: Not rated

The snap-together design makes it easy to connect fittings to pipe for gravity-flow drainage applications. Made of high-density polyethylene, these stand up to freeze/thaw cycles and won't corrode, crack, or crumble unless exposed to direct sunlight or driven over by heavy equipment. All meet ASTM F405 and exceed specifications contained in the Soil Conservation Service (SCS) Engineering Practice Standard for subsurface drains.

Pipe is corrugated inside and out, making it strong and bendable. **Off-center adapter** has a tapered opening that can be adjusted to fit both pipe sizes 3 and 4. **Nonperforated pipe** is ideal for flowing drainage to one area, while the **perforated pipe** has slits along its entire length that allow drainage to be dispersed.

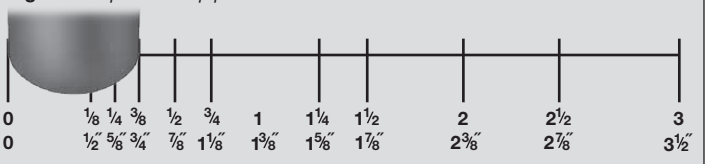
How to Measure Unthreaded Pipe and Pipe-End Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.



i To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Black Polypropylene Unthreaded Pipe

- Use with water, alkalies, solvents
- Temperature Range: –20° to 180° F

This Schedule 80 polypropylene pipe has excellent strength and chemical resistance. It's also resistant to UV light and inert to moisture. It meets ASTM D4101.

Also Available: Polypropylene pipe in metric sizes: 20, 25, 32, 50, and 63 mm. The metric size is the actual OD. Pipe is light gray and comes in 8-ft. lengths. It has a maximum pressure of 150 psi @ 73° F and a temperature range of 32° to 212° F. Please ask for 45435K2 and specify metric size.

Chemical-Resistant Thick-Wall Red PVDF Threaded Pipe Fittings and Pipe

- Use with water, salt water, solvents, chlorine, bromine
- Temperature Range: Fittings and Flanges: 40° to 280° F; Pipe and Nipples: Up to 280° F

These fittings are an excellent choice for corrosive chemicals. All are made of PVDF (polyvinylidene fluoride), which is comparable to Kynar. The material meets UL 94V0 for flame retardance, as well as ASTM D3222.

Unions have a fluoroelastomer O-ring. **Flanges** are also called Class 150 flanges; bolt two same-size flanges together with a gasket to form a tight seal (see pgs. 3529-3524 for gaskets; see page 3170 for bolts).

Connections: Fittings and pipe nipples are threaded (NPT); pipe is unthreaded.

Corrosion-Resistant Thick-Wall White PFA Threaded Pipe Fittings

- Use with water, acetic acid, salt water, alcohols, oil
- Maximum Temperature: 200° F for 1/8 and 1/4 pipe sizes; 150° F for 3/8, 1/2, and 3/4 pipe sizes

PFA (perfluoroalkoxy) is nonreactive to most chemicals and solvents. It offers a super-smooth surface for swift flow. These crack-resistant fittings are an alternative to PTFE when you want a high-purity material but don't require the extreme temperature range. The material is made with FDA-compliant resins and meets 3-A (dairy) requirements.

90° female × male elbows are also known as street elbows. **Unions** have a PVDF locknut; 3/4 pipe size also has a fluoroelastomer O-ring.

Connections: Threaded (NPT). The use of PTFE tape is recommended (see page 3470).

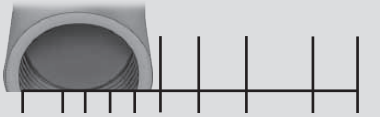
How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"



Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Temperature Thick-Wall White PTFE Threaded Pipe Fittings

- Use with water, deionized water, oil, hydrochloric acid, solvents, methylene chloride
- Temperature Range: –450° to 550°F

When high purity and extreme temperature resistance are critical, rely on PTFE. These fittings have a super-smooth surface and superior corrosion resistance. They're nonreactive to most chemicals and meet ASTM D1710.

Flanges are also known as Class 150 flanges. Bolt two same-size flanges together to create a tight seal (see pages 3529-3530 for gaskets; see page 3170 for bolts). **Fully threaded pipe nipples**, also called close nipples, are threaded on each end to the center.

Connections: Threaded (NPT), barbed, or unthreaded.

Flexible Couplings and Fittings for Pipe

- Use with air and water in drain, waste, and vent applications
- Temperature Range: –40° to +120° F
- Maximum Pressure @ 72° F: 4.3 psi
- Pipe: Use on unthreaded aluminum, cast iron, rigid PVC, rigid CPVC, ductile iron, steel, and stainless steel

Use these couplings and fittings to connect rigid pipes of the same or different materials. Body is flexible PVC and bands are 300 series stainless steel bands. All couplings and fittings meet ASTM D5926 and the codes set by ICC-ES (International Code Council Evaluation Service).

Couplings and ***reducing couplings*** are CSA certified and meet ASTM C1173 for underground use. Vacuum rating is 30″ Hg @ 72° F.

90° elbows, ***tees***, and ***caps*** are not for underground use. Not rated for vacuum.

Also Available: Fittings with Type 316 stainless steel bands where marked with a ◆. They offer extra corrosion resistance. Please ask for 4693K1 and the specify corresponding part number from the table.

Flexible Couplings for Plastic Pipe and Fittings

- Use with air and water in drain, waste, and vent applications
- Temperature Range: –40° to +120° F
- Maximum Pressure @ 72° F: 4.3 psi
- Pipe and Fittings: Use on rigid PVC pipe and fittings and corrugated polyethylene pipe

Here are easy solutions to difficult connections. These couplings have a flexible PVC body with 300 series stainless steel bands. They meet ASTM D5926.

Socket End to Socket End and ***Pipe End to Socket End***—If your rigid plastic pipe becomes damaged, these couplings allow you to create a new hassle-free connection without disassembling your entire system. *Socket-end to socket-end couplings* connect two socket-end (female) fittings without using a pipe. *Pipe-end to socket-end couplings* connect a pipe to a socket-end (female) fitting. To install both styles, simply cut out the damaged pipe, slide the coupling over the ends of the fittings or pipe, and tighten the bands. For installation in close quarters, you can cut the length down to either 3″ or 2″. Vacuum rating is 30″ Hg @ 72° F.

Pipe End to Corrugated Pipe—Ideal for storm and drainage systems, use these couplings to connect a rigid plastic pipe to a corrugated polyethylene pipe. To install, slide the coupling over the ends of the two pipes and tighten the bands; a groove in the coupling matches the groove in corrugated pipe. Not rated for vacuum.

Low-Pressure Cut-to-Length Couplings for Pipe

Coupling with Clamp

- Use with water in drain, waste, and vent applications; not for use with compressed air or gas
- Temperature Range: –13° to +140° F
- Maximum Pressure: See table
- Pipe: Use on steel and rigid PVC

Connect two pipes that are up to 100 feet apart—simply cut the coupling to the length you need and attach a clamp (sold separately) to each end. Use couplings to connect rigid pipes of the same or different materials. They fit standard-wall (Schedule 40) and thick-wall (Schedule 80) pipe.

Couplings are flexible PVC. They're weatherproof and ozone resistant. **To Order:** Please order in increments of 5 ft. up to the full coil length of 100 ft.

Clamps are corrosion-resistant galvanized steel. You'll need one clamp for each connecting point.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Low-Pressure Type 304 Stainless Steel Couplings for Pipe

- Use with air and water; also use in drain, waste, and vent applications
- Temperature Range: 0° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe: Use on aluminum, cast iron, steel, stainless steel, and rigid PVC

Also known as no-hub couplings, these couplings are rigid and corrosion resistant. They're made from Type 304 stainless steel with a one-piece molded neoprene sleeve; the sleeve has a stop in the center. Connect rigid pipes of the same or different materials. Couplings meet ASTM A666 and C564 and the 94-20 codes set by ICC-ES (International Code Council Evaluation Service).

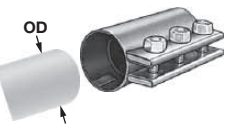
▲ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Low-Pressure Couplings for Pipe and Tubing



- Use with air, glass, plastic pellets, resins, and wood chips; not for use with liquids
- Temperature Range: With Neoprene Gasket: –50° to +180° F With Silicone Gasket: –103° to +500° F
- Maximum Pressure @ 72° F: 20 psi
- Pipe and Tubing: Use on aluminum, copper, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

Join two pieces of rigid pipe or tubing of the same or different materials for use in low-pressure air and vacuum conveying systems, as well as in gravity-flow systems. Couplings are galvanized steel with zinc-plated steel nuts and bolts; the gasket is protected by a Type 304 stainless steel inner sleeve (unless noted) and a stainless steel strip that provides an escape route for electrostatic buildup when used in a fully grounded system. Vacuum rating is 29.9" Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that's closest in size to the OD dimension below.

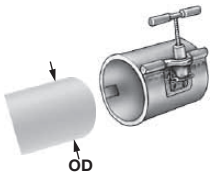
■ Does not include a stainless steel inner sleeve to protect the gasket.

Low-Pressure Quick-Lock Couplings for Pipe and Tubing



- Use with air, dust, grains, pellets, and powders; not for use with liquids
- Temperature Range: –30° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe and Tubing: Use on aluminum, copper, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

A simple turn of the T-handle will tighten and loosen these couplings, so you can quickly disassemble and reassemble your lines without tools. Use couplings to connect pieces of rigid pipe or tubing of the same or different materials. They're ideal for use in gravity-flow systems and low-pressure air and vacuum conveying systems. Couplings are Type 304 stainless steel with a tan gum rubber gasket that's FDA compliant. They also have a metal strip that provides an escape route for electrostatic buildup when used in a fully grounded system. Vacuum rating is 29.9" Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that's closest in size to the OD dimension below.

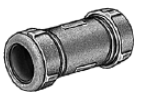
Medium-Pressure Compression Couplings for Copper Tubing



- Use with water; not for use with air or gas
- Temp. Range: 32° to 180° F
- Max. Pressure @ 72° F: 125 psi

For leak-resistant connections on copper tubing without threading or soldering, try these brass couplings. Simply slide your tube into the coupling and turn the end nuts until hand tight plus a quarter turn—this compresses the gasket for a tight seal. You may need to tighten over time. All have an EPDM gasket that permits moderate movement and misalignment of tube ends. Not rated for vacuum.

▲ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Medium-Pressure Compression Couplings for Pipe

Stainless Steel and Carbon Steel

- Use with air, antifreeze, and water; not for natural gas or steam
- Temperature Range: –60° to +260° F
- Maximum Pressure @ 72° F: 200 psi
- Pipe: Use on aluminum, steel, stainless steel, and rigid CPVC

Black and Galvanized Malleable Iron

- Use with water; not for compressed air, gas, or steam
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: 125 psi
- Pipe: Use on steel and rigid PVC

PVC

- Use with water; not for compressed air, gas, or steam
- Temperature Range: –20° to +125° F
- Maximum Pressure @ 72° F: 150 psi
- Pipe: Use on steel and rigid PVC

Get quick, liquid-tight connections on rigid pipe of the same or different material without threading, welding, or gluing. Simply slide pipe into the coupling and turn the end nuts until hand tight. You may need to tighten over time. Not rated for vacuum.

All have a Buna-N (nitrile) gasket that permits moderate movement and misalignment of pipe ends.

Type 304 stainless steel couplings provide excellent corrosion resistance. They meet ASTM A312-03 and ANSI B36.19.

Carbon steel couplings are strong and durable with poor corrosion resistance. They meet ASTM A53-04 and ANSI B36.10.

Malleable iron couplings have fair corrosion resistance. *Black malleable iron* couplings meet ASTM A197; *galvanized malleable iron* couplings meet ASTM A153 and A197.

PVC couplings are light in weight and more economical than the metal couplings.

Medium-Pressure Vibration-Resistant Couplings for Pipe

- Use with air, alkalies, diluted acids, salts, and water
- Temperature Range: –4° to +200° F
- Maximum Pressure @ 72° F: 232 psi
- Pipe: Use on aluminum, steel, stainless steel, and rigid PVC

Perfect for high-vibration areas, these couplings have teeth that bite into the pipe's surface to prevent the pipe from pulling out. They can also accommodate up to 5° misalignment between pipes. Use them to connect rigid pipes of the same or different materials. Couplings are Type 316 stainless steel with an EPDM gasket that's FDA compliant. Meet ASTM 1476 (Type 2, Class 2). Vacuum rating is 28″ Hg @ 72° F.

High-Pressure Couplings for Pipe

Coupling with Two Bolts

Coupling with Four Bolts

- Use with drinking (potable) water, bases, mild acids, and salt solutions
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: 500 psi
- Pipe: Use on cast iron, steel, and rigid PVC

Choose these heavy duty steel couplings for high-pressure applications. Use them to connect rigid pipes of the same or different materials. To install, center the coupling over two pipe ends and tighten the bolts with a wrench. Couplings allow limited expansion and contraction; they do not restrain side-to-side movement. Vacuum rating is 15″ Hg @ 72° F.

All couplings have a Buna-N (nitrile) gasket and meet AWWA (American Water Works Association) C-219 standards. Those ***with two bolts*** also meet ASTM A307 and A536, and those ***with three to six bolts*** also meet ASTM A53, A513, and A715. All couplings meet NSF/ANSI Standard 61 for use with drinking (potable) water in all states as of January 1, 2010.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Deep-Freeze Plug Kits for Pipe

Create a temporary ice plug in your pipe so you can make repairs without draining the line—great for sprinkler systems and anywhere draining is not practical. These kits freeze the standing water (or other fluid with a similar freezing point) that's in your line, eliminating the need to refill or reheat and preventing air-lock problems that can occur.

Simply wrap a jacket (included) around your pipe at an upstream location near the point of repair and inject CO_2 (not included) into the jacket. After use, the CO_2 evaporates and the ice plug melts, so there's little to clean up. Use on steel, iron, copper, and plastic pipe.

Kits include up to three jackets, one or two unfilled cylinders for CO_2, a 10-ft. high-pressure hose, fittings, insulated work gloves, rubber mallet, timing log, safety glasses, carrying case, and instructions.

Kits

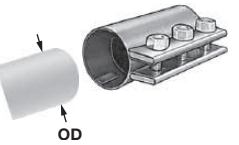
Low-Pressure Repair Clamps for Pipe and Tubing

- Use with air, water, and waste water
- Temperature Range: –50° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe and Tubing: Use on aluminum, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC



Repair pinholes, punctures, and cracks in low-pressure systems. Couplings are Type 304 stainless steel with a neoprene gasket and zinc-plated steel nuts, bolts, and washers. They also have a zinc-plated steel strip that bridges the opening between the bolts to provide complete coverage. Vacuum rating is 29.9" Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that is closest in size to the OD dimension below.

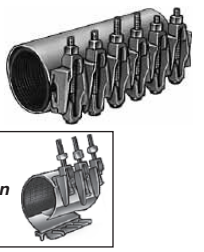
Medium-Pressure Adjustable-Diameter Repair Clamps for Pipe

- Use with: See table
- Temperature Range: –20° to +180° F
- Maximum Pressure: See table
- Pipe:
  For Water: Use on aluminum, stainless steel, and rigid PVC;
  For Natural Gas: Use on ductile iron and steel



If your pipe's OD has changed over time due to corrosion or build up, these clamps are adjustable to accommodate the variance. They have one-piece Type 304 stainless steel construction and a full-circle Buna-N (nitrile) gasket. Vacuum rating is 15" Hg @ 72° F for pinholes; vacuum is not rated for other repairs.

With Type 304 Stainless Steel Lugs, Bolts, and Nuts— Repair pinholes, cracks, and full-circle breaks in your water pipe. Use these under water and anywhere corrosion is a concern; also use them with air. Clamps meet NSF/ANSI Standard 61 for use with drinking (potable) water.

With Ductile Iron Lugs and Alloy Steel Bolts and Nuts— Use clamps *for water* to repair pinholes, cracks, and full-circle breaks; they meet NSF/ANSI Standard 61 for use with drinking (potable) water. Use clamps *for natural gas* to repair holes and cracks (do not use for full-circle breaks).

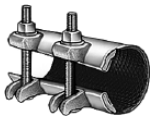
Repair Clamps

For information about selecting and measuring pipe and fittings, see pages 2-3.

Medium-Pressure Single-Hole Repair Clamps for Pipe



- Use with air, drinking (potable) water, and natural gas
- Temperature Range: –20° to +180° F
- Maximum Pressure: See table
- Pipe: Use on aluminum, cast iron, and steel; also rigid PVC for water applications only

Also called patch clamps, use to repair pinholes, punctures, and small splits in a pipe without having to disassemble your system. All have one-piece construction, unless noted, and meet NSF/ANSI Standard 61 for use with drinking (potable) water. They are Type 304 stainless steel with a Buna-N (nitrile) gasket, ductile iron lugs, and steel nuts and bolts. Vacuum rating is 15″ Hg @ 72° F for pinholes; vacuum is not rated for other repairs.

Also Available: Items marked with a ♠ can also be furnished with an EPDM gasket for hot water and steam applications up to 300° F. Please ask for 4570K1 and specify the pipe size.

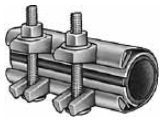
★ Two-piece design.

Medium-Pressure Multi-Hole Repair Clamps for Pipe and Copper Tube



- Use with air and drinking (potable) water
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: Air: 100 psi; Water: 150 psi
- Pipe: Use on steel and rigid PVC

Repair multiple pinholes, punctures, splits, and full-circle breaks on air and water lines. These clamps are also a great choice when you want to add support to corroded pipe. Clamps slip over pipe, so there's no need to disassemble your system. All have one-piece Type 304 stainless steel construction with ductile iron lugs and galvanized steel nuts and bolts. They also have a full-circle Buna-N (nitrile) gasket that meets NSF/ANSI Standard 61 for use with drinking (potable) water as of October 1, 2010. Vacuum rating is 15″ Hg @ 72° F.

High-Pressure Hinged Repair Clamps for Pipe

- Use with water, antifreeze, diesel fuel, natural gas, and oil
- Temperature Range: –20° to +250° F
- Maximum Pressure: See table
- Pipe: Use on cast iron and steel

Often called emergency clamps, use these high-pressure clamps to repair pinholes, punctures, and splits in pipe. Not for full-circle breaks. Clamps have a hinged design that opens wide and closes over the pipe, so there's no need to disassemble your system. They are ductile iron with a Buna-N (nitrile) gasket and electroplated steel bolts. Not rated for vacuum.

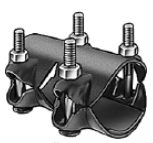
High-Pressure Two-Piece Repair Clamps for Pipe

4″ Length



8″ Length

- Use with water, antifreeze, diesel fuel, natural gas, and oil
- Temperature Range: –20° to +250° F
- Maximum Pressure: See table
- Pipe: Use on cast iron and steel

Providing the highest pressure rating of all the repair clamps we offer, these also have a two-piece design that makes installation easy. Just position the two clamp halves over the damaged pipe and secure the bolts—there's no need to disassemble your system. Clamps are 3/16″ thick steel plate with zinc-plated steel nuts and bolts. Not rated for vacuum. Not for full-circle breaks.

4″ Length— Repair small holes caused by pitting. Furnished with a cone-shaped Buna-N (nitrile) gasket.

8″ Length— Use to repair corrosion spots and splits. Furnished with a Buna-N (nitrile) strip gasket that runs the full length of the clamp.

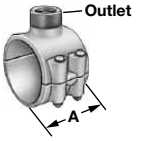
For information about selecting and measuring pipe and fittings, see pages 2-3.

Saddle Taps for Metal-to-Plastic Pipe

- Use with drinking (potable) water; not for use with compressed air or gas
- Maximum Temperature: 140° F
- Maximum Pressure @ 72° F: 2″, 3″, and 4″ pipe sizes: 235 psi; 6″ pipe size: 200 psi
- Pipe: Use on aluminum, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC



With Threaded NPT Outlet

Create additional outlets, connections, and transitions from metal pipe to PVC pipe. Saddles are PVC with an EPDM gasket and zinc-plated steel nuts, bolts, and washers. They have a two-piece design for quick, easy installation and come with your choice of a socket end (unthreaded) outlet or a threaded NPT outlet. All meet NSF/ANSI Standard 61 for use with drinking (potable) water. Vacuum rating is 26″ Hg @ 72° F.

To install, shut down your line and drill a hole in the pipe where you want to create a connection. Position the saddle over the hole so the gasket and lip are fully engaged with the hole, and secure with the nuts, bolts, and washers.

Flexible Saddle Taps for Pipe

- Use with drain, waste, and vent applications
- Temperature Range: –4° to +110° F

Easily tap-off a new connection on a wide range of pipe sizes. These flexible saddles are PVC with three 300 series stainless steel clamps. To install, shut down your line and drill a hole in the pipe where you want to create a connection. Position the saddle over the hole and tighten the clamps to a minimum of 60 in./lbs. torque. Not rated for pressure or vacuum.

Saddle Taps for Steel Pipe

- Use with air and drinking (potable) water
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: Air: 100 psi; Water: 150 psi
- Pipe: Use on steel

Quickly tap into existing pipelines for branch lines, air and vacuum valves, and other equipment. Saddles have a taper-seal gasket with wraparound bands that provide nearly 360° contact with pipe. As bands are tightened, pressure is uniformly distributed around the pipe for maximum support. Clamps are ductile iron with a blue epoxy coating; they have a Buna-N (nitrile) gasket and galvanized steel threaded bands, nuts, and washers. They meet NSF/ANSI Standard 61 for use with drinking (potable) water. Vacuum rating is 15″ Hg @ 72° F.

To install, shut down your line and position the saddle over the area where you want to create a connection. Secure with the bands, nuts, and washers, then drill a hole in the pipe.

Note: The required hole size (the hole size you will need to drill) is the same size as the threaded outlet pipe size.

■ Also fits 1¼″ pipe size with a pipe OD of 1.660″. ♣ Length is 4¼″. ▲ Length is 5⁵⁄₁₆″.

Pipe Blinds

Also called paddle blinds, just slip a blind between two Class 150 flanges to temporarily block the flow while you work downstream.

Steel blinds have a 7″ long handle and meet ASTM A36.

PTFE-coated blinds have a Type 304 stainless steel core and are ideal for corrosive applications. Handle length varies from 2¾″ long for 4739K21 to 5″ long for 4739K26. Blinds meet ASTM D4894 and are FDA compliant.

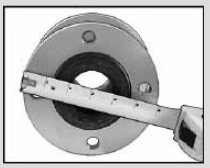
About Expansion Joints

Reduce stress, vibration, and noise in piping systems by providing a point of flexibility to absorb movement.

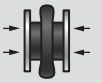
How to Measure Your Expansion Joint: If you are replacing an existing expansion joint in your piping system and do not know the pipe size you need, there are two methods for determining size.



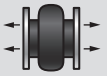
First, look for an etched stamp on the edge of the flange that indicates pipe size. If etching is unreadable, use the second method—measure the outside diameter of the flange and match it to the Flange OD specification in the table. Each pipe size has a standard flange OD. The example shows a 6″ flange OD, which corresponds to a pipe size 2.

If you do not have a flange on your existing joint, measure the outside diameter of your pipe and match it to the For Pipe OD specification listed in the tables.

Expansion Joint Movement: Expansion joints are rated for three types of movement; however, they can only move one way at a time. For example, if the expansion joint has moved to an offset position, it must go back to its original position before it can compress or expand.



Compress is when the distance between the connections is shortened.



Expand is when the distance between the connections is lengthened

Offset is the distance when connections are moved off center.

Expansion Joints with Easy-Align Flanged Ends

Standard

High Vibration

General Purpose Neoprene:
- Use with water, grain alcohol, non-abrasive slurry
- Temperature Range: –10° to 225°F
- Maximum Pressure: 225 psi @ 72°F
- Vacuum: 26″ Hg @ 72°F

High-Temperature EPDM:
- Use with water, alcohol
- Temperature Range: –20° to 250°F
- Maximum Pressure: 225 psi @ 72°F
- Vacuum: 26″ Hg @ 72°F

The flanged ends on these expansion joints rotate for easy bolt hole alignment during installation. The flanges are made of zinc-plated steel; they'll mate with a same-size flat-surface Class 150 flange without the need for a gasket. All have a flexible neoprene or EPDM body that's nylon-reinforced for added strength.

Standard joints have a single-bulb design, which is the most popular.

High-vibration joints have a double-bulb design, which handles more vibration and movement than standard joints.

General Purpose Neoprene:
- Use with water, grain alcohol, non-abrasive slurry
- Temp. Range: –20° to 225°F
- Max. Pressure: 190 psi @ 72°F
- Vacuum: 26″ Hg @ 72°F

Easy-Flex EPDM:
- Use with water, alcohol
- Temp. Range: –20° to 250°F
- Max. Pressure: 225 psi @ 72°F
- Vacuum: 24″ Hg @ 72°F

You'll get a tighter seal than with other expansion joints because the flanges on these are molded into the body for a wide sealing surface. Each flange is supported by a zinc-plated steel split-ring backup plate. Flanges will mate with a same-size Class 150 flange. The joint bodies have a single-bulb design.

Grease-resistant neoprene with Buna-N liner and **general purpose neoprene** joints are for use on metal pipe systems. The body is reinforced with cord for added strength.

Easy-flex EPDM joints are specially designed for use on plastic pipe systems. They have a softer construction that takes less force to move than joints for metal pipe systems.

Flange OD	Pipe Size	O'all Lg.	Unthreaded Bolt Holes: No.	Size	Maximum Movement: Compress	Expand	Offset	Grease-Resistant Neoprene/Buna-N		General Purpose Neoprene		Easy-Flex EPDM

Chemical-Resistant Expansion Joints with Flanged Ends

- Use with water, ethylene glycol, hydrochloric acid
- Temperature Range: 0° to 400° F
- Maximum Pressure: 138 psi @ 72° F
- Vacuum: 29.9″ Hg @ 72° F

The PTFE body on these expansion joints has a super-smooth surface that stands up to corrosive chemicals and higher temperatures better than a rubber body. The triple-bulb design provides excellent vibration absorption. Made of iron and coated with a rust inhibitor, the flanges mate with a same-size, Class 150 flange without the need for a gasket. Limit rods attached to the flanges prevent overextension.

Flange OD	Pipe Size	O'all Lg.	Threaded Bolt Holes No.	Threaded Bolt Holes Size	Maximum Movement Compress	Maximum Movement Expand	Maximum Movement Offset

High-Temperature Expansion Joints with Easy-Align Flanged Ends

- Use with water, air, steam, natural gas, oil
- Temperature Range: –20° to 800° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 29″ Hg @ 72° F

These joints have a corrosion-resistant Type 304 stainless steel body and steel flanges for higher heat tolerance than other joints. The flanges rotate for easy bolt hole alignment during installation; they'll mate with a same-size, flat-surface Class 150 flange (gasket required, but not included; see pages 3529-3534).

Liners are Type 304 stainless steel. Slide one into the expansion joint to provide a smooth interior for unobstructed flow.

High-Temperature Expansion Joints with Butt-Weld Ends

- Use with water, oil, air, steam, natural gas
- Temperature Range: –20° to 800° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 29″ Hg @ 72° F

The high-temperature tolerance of Type 321 stainless steel is combined with a leak-resistant welded connection. These joints have steel butt-weld ends that can be welded to unthreaded pipe or another butt-weld fitting.

For Pipe OD	Pipe Size	O'all Lg.	Maximum Movement Compress	Maximum Movement Expand	Maximum Movement Offset		
3.5″	3	5″	⅜″	3/16″	1/16″	5254K11	$269.50

Slip-On Expansion Joints with Clamps

- Use with water, oil, petroleum, sewage, sludge, calcium chloride, sodium carbonate (20% in water)
- Temperature Range: Abrasion-Resistant Neoprene: –20° to 225° F High-Temperature Silicone: –75° to 500° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 20″ Hg @ 72° F

Slip these joints over your pipe ends and tighten the band clamps. A triple-bulb design provides excellent vibration absorption and reinforcing rings support the joints during pressure surges and vacuum applications. The band clamps are 300 series stainless steel with steel bolts.

Abrasion-resistant neoprene joints are reinforced with nylon.

High-temperature silicone joints are reinforced with fiberglass.

Low-Pressure Slip-On Expansion Joints with Clamps

- Use with water and air in drain, waste, and vent systems
- Temperature Range: –30° to 130° F intermittent
- Maximum Pressure: 4.3 psi @ 72° F

Designed for vertical use in drain, waste, and vent systems, these PVC joints slip over the ends of pipes. They have a single-bulb design and internal stops that ensure pipe is in the proper position. The band clamps are corrosion-resistant Type 301 stainless steel.

For Pipe OD	Pipe Size	O'all Lg.	Maximum Movement Compress	Maximum Movement Expand

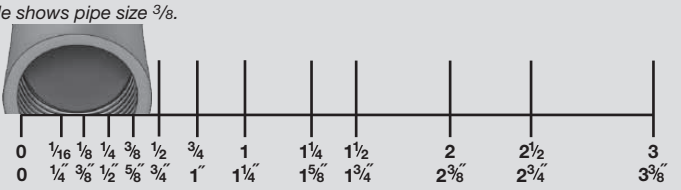
How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your female threaded fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

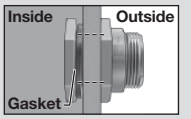


Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

About Through-Wall Fittings

Through-wall fittings, also known as bulkhead fittings, allow you to make inlets and outlets in walls, tanks, and panels for faucets, pipes, and spigots. To install in a tank, first depressurize and drain the tank. Cut a hole, then slide the fitting into the hole from the inside of the tank, and tighten the nut from the outside. If the fitting has a gasket, it should be on the inside of the tank.



Through-Wall Fittings

Cold Water PVC:
- Temp. Range: 40° to 140°F

Hot Water CPVC:
- Temp. Range: 40° to 180°F

Chemical-Resistant Polypropylene:
- Use with hydrochloric and phosphoric acid
- Temp. Range: 40° to 180°F

Oil-Resistant Polyethylene:
- Use with water, ethylene glycol, hydraulic oil
- Temp. Range: –20° to 140°F

High-Temperature PTFE:
- Use with oil, gasoline, diesel
- Temp. Range: –75° to 400°F

Corrosion-Resistant Type 316 Stainless Steel:
- Use with water, fertilizers (not rated for steam)
- Temp. Range: –20° to 300°F

Mount these fittings through a hole in your wall, tank, or panel to serve as an inlet or outlet for faucets, pipes, and spigots. They're for use on curved and flat surfaces. Each comes with an EPDM gasket, except the PTFE fittings have an FEP-encapsulated silicone O-ring. They are vacuum rated to 29" Hg @ 72°F, except polyethylene and Type 316 stainless steel are not rated for vacuum.

Connections: NPT threaded or unthreaded socket end (female).

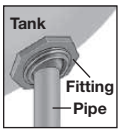
Swivel Through-Wall Fittings



- Use with water and ethylene glycol
- Temperature Range: 40° to 140°F

Fittings swivel to compensate for misaligned and angled connections. Mount them through a hole in your wall, tank, or panel to serve as an inlet or outlet. Use them on curved and flat surfaces. They adjust from the outside of the tank, so there is no need to drain your tank to make adjustments. Fittings are PVC and come with a PTFE seal and an EPDM gasket. They are vacuum rated to 29" Hg @ 72°F.

Connections: NPT threaded.

Pipe Size	Wall Requirements: Hole Size	Wall Requirements: Max. Thick.	Lg.	Max. psi @ 72°F		
3/4	3 1/4"	7/8"	2 9/16"	75	3766K21	$135.22

2	4 1/2"	1 1/8"	2 1/2"	75	3766K14	212.57
3	5 3/4"	1 11/16"	3 1/4"	75	3766K15	328.96

How to Measure Unthreaded Socket-End Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your unthreaded socket-end fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Through-Wall Fittings for Drinking (Potable) Water

Cold Water PVC:
- Temperature Range: 40° to 140° F

Hot Water CPVC:
- Temperature Range: 40° to 200° F

All of these fittings meet NSF/ANSI Standard 61 so you can create an inlet or outlet for drinking water on your wall, tank, or panel. They come with a neoprene gasket and are for use on curved and flat surfaces.

Connections: NPT threaded or unthreaded socket end (female).

Pipe Size	Wall Requirements: Hole Size	Max. Thick.	Lg.	Max. psi @ 72° F		
NPT Threaded Female on Both Ends

Miniature Through-Wall Fittings

General Purpose Acetal:
- Use with air, water, ethylene glycol
- Temp. Range: –40° to 180° F

Abrasion-Resistant Nylon:
- Use with air, water
- Temp. Range: –40° to 200° F

High-Temperature PTFE:
- Use with oil, hydraulic oil, gasoline, diesel
- Temp. Range: –75° to 400° F

High-Pressure Brass:
- Use with air, water, hydraulic oil
- Temp. Range: –65° to 250° F

Create a small inlet or outlet. Fittings do not have a gasket, unless otherwise noted.

General purpose acetal fittings are vacuum rated to 25" Hg @ 72° F. Mount them through a hole in your curved wall or panel. *White* fittings are made from FDA-compliant resins.

Abrasion-resistant nylon fittings can be mounted through a hole in your curved wall or panel.

High-temperature PTFE fittings are vacuum rated to 29.9" Hg @ 72° F. They come with an FEP-encapsulated silicone gasket. Mount them through a hole in your flat or curved wall or panel.

High-pressure brass fittings come with a steel lock washer. Mount them through a hole in your flat or curved wall or panel.

Connections: Thread sizes 10-32 and 1/4"-28 are UNF female straight threads; pipe sizes are NPT female.

Through-Wall Fittings with Compression Pipe Connections

- Use with water, hydraulic oil, lye, ethylene glycol
- Temperature Range: –35° to 180° F

For use with unthreaded pipe, these fittings have compression connections for a liquid-tight seal. To make a connection, insert the pipe and turn the end nuts until hand tight. Mount them through a hole in your tank, panel, or wall to serve as an inlet or outlet. They absorb vibration and provide flexibility to reduce stress. Fittings are black glass-filled polypropylene and come with two rubber gaskets.

Connections: Compression.

Pipe Size	Wall Requirements: Hole Size	Max. Thick.	Lg.	For Curved Walls		For Flat Walls

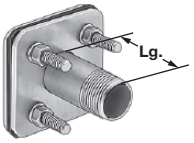
How to Measure Male Threaded Fittings—*Example shows pipe size 3/8.*

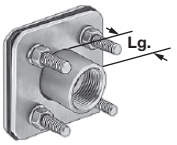
Pipe size is an industry designation, not the actual size. Place your male threaded fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Type 316 Stainless Steel Bolt-On Through-Wall Fittings



Male Connection



Female Connection

- Use with water, air, ethylene glycol, sodium carbonate, seawater
- Temperature Range: –40° to 225° F

Bolt these corrosion-resistant fittings through your wall, tank, or panel to create an inlet or outlet. Once installed, they can be tightened and adjusted from the outside—no need to drain contents to make adjustments. They have four Type 316 stainless steel bolts and an EPDM gasket.

Connections: NPT.

Weld-On Fittings for Flat Tanks

Surface Weld

Easy Weld

Weld these fittings onto the flat surface of any tank, pressure vessel, or drum to create a permanent inlet or outlet connection.

Surface Weld—Fittings have a flat mounting surface that can be positioned freely over the hole.

Easy Weld—An extended lip fits tightly into the hole to keep the fitting steady during welding.

Steel fittings are for use with water, oil, hydraulic oil, gasoline, and diesel fuel. *Surface-weld* fittings meet ASME SA105 and SA181-70. *Easy-weld* fittings conform to ASME Boiler and Pressure Vessel Code, Section II; they also meet ASTM A181 and ANSI/ASME B1.20.1.

Type 316 stainless steel fittings offer excellent corrosion resistance. Use them with water, oil, hydraulic oil, gasoline, and diesel.

Lightweight aluminum fittings are made from 6061 aluminum. Use with water. They meet ASTM B221.

Marine-grade aluminum fittings are made from 5086 aluminum. They're tough enough to handle salt water. Also use them with water, oil, hydraulic oil, gasoline, and diesel. They meet ASTM B221.

Connections: NPT.

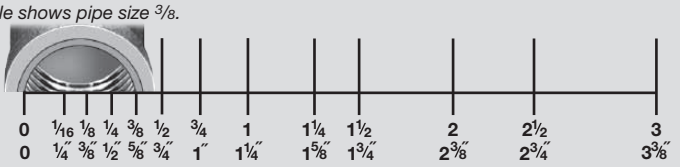
How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your female threaded fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Reducing Tank Fittings

- Use with water, air, steam, oil, hydraulic oil, gasoline, diesel fuel

Screw one of these fittings into a threaded hole on a wall, tank, or panel to reduce the size of an inlet or outlet. You can also use these as a reducer in piping installations.

Connections: NPT.

Weld-On Fittings for Curved Tanks

- Use with water, oil, hydraulic oil, diesel fuel, gasoline

These fittings are curved to fit the contour of a rounded tank.

Connections: NPTF, except steel fittings with pipe sizes 1 1/4 to 2 are NPSC; both NPTF and NPSC threads are compatible with NPT.

Quick-Access Swivel Joints

- Use with air, hydraulic fluid, mineral oils, lubrication oils, ethylene glycol
- Temperature Range: –20° to 225° F

By unscrewing the nut, you can perform maintenance on these steel joints without removing them from your line. They swivel 360° for occasional rotation, but are not designed for continuous rotational movement. Joints come with a Buna-N seal.

Connections: NPT.

Pipe Size	Max. psi @ 72° F	Straight Lg.			90° Elbow

Compact Swivel 90° Elbows

A B C D

- Temperature Range: –20° to 250° F

Smaller than our other swivel joints, these 90° elbows are designed for tight spaces. They swivel 360° for occasional rotation, but are not designed for continuous rotational movement. All come with a Buna-N seal. Vacuum rating is 28" Hg @ 72° F for steel and 29" Hg @ 72° F for Type 316 stainless steel and brass, unless noted. Connections: NPT female, except *Style A* is NPT male × female.

	Pipe Size	Lg.	Max. psi @ 72° F

★ Vacuum rating is 28" Hg @ 72° F.

Swivel Joints

- Temperature Range: –20° to 225° F

Allow movement to your rigid metal piping system. These joints swivel 360° for occasional rotation, but are not designed for continuous rotational movement. They come with two rows of ball bearings, a Buna-N O-ring, and a pressure grease fitting. Vacuum rating is 29" Hg @ 72° F.

Connections: NPT.

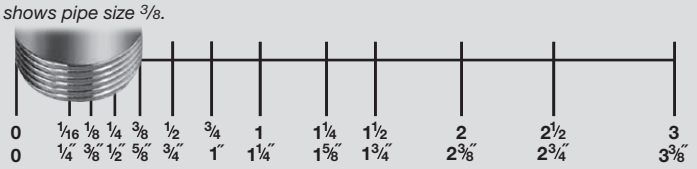
Rotating Joints

How to Measure Male Pipe Size Threads—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place the male threads of your joint on the scale to determine the pipe size. You can also measure the outside diameter (OD) of the male threads, then select the pipe size on the scale that corresponds to your measurement.

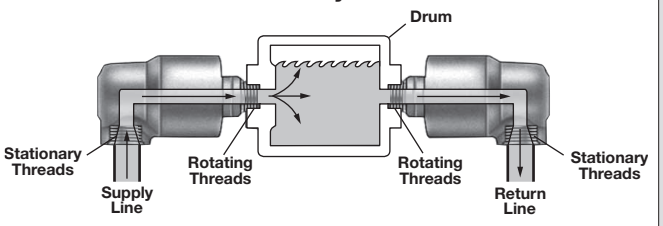


ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about selecting pipe size, see pages 2-3.

About Rotating Joints

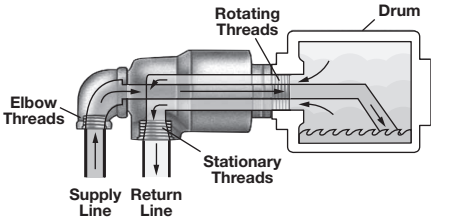
Rotating joints transfer hot and cold materials from your supply line to a continuously revolving drum, roller, or other rotating equipment.

One-Way Flow



Use one-way joints in pairs; one joint serves as a supply line, while the other serves as a return line.

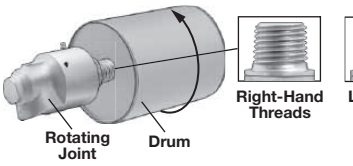
Two-Way Flow



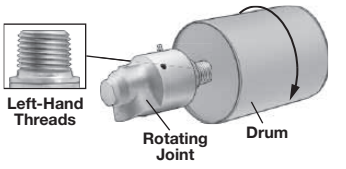
Use two-way joints when you need the supply line and return line to be on the same side of the drum.

For Counterclockwise Rotating Drums

If your drum rotates counterclockwise as you face the connecting end, you should select a rotating joint with right-hand threads.



For Clockwise Rotating Drums



If your drum rotates clockwise as you face the connecting end, you should select a rotating joint with left-hand threads.

One-Way Flow Rotating Joints

General Purpose Iron and High-Speed Brass

General Purpose Iron:
- Use with water, oil, steam
- Temperature Range: –20° to 375°F
- Maximum Pressure: Water: 250 psi @ 72°F; Oil: 100 psi @ 72°F; Steam: 150 psi @ 365°F

High-Speed Brass:
- Use with water, oil, intermittent steam (up to 20% of operating time)
- Max. Temperature: 250°F
- Maximum Pressure: Water: 750 psi @ 72°F; Oil: 100 psi @ 72°F; Steam: 15 psi @ 250°F

Corrosion-Resistant 300 Series Stainless Steel:
- Use with water, air, oil, steam
- Temperature Range: Water: –40° to 300°F; Oil: –40° to 395°F; Steam: up to 350°F
- Maximum Pressure: Water: 750 psi @ 72°F; Air: 300 psi @ 72°F; Oil: 100 psi @ 72°F; Steam: 120 psi @ 350°F
- Vacuum: 25" Hg @ 72°F

Corrosion-Resistant 300 Series Stainless Steel

Use these joints in pairs—one joint serves as the supply line while the other serves as the return. All have right-hand rotating threads for drums and rollers that rotate counterclockwise. They have one or two precision ball bearings, a seal, and a stainless steel rotating shaft, except the general purpose iron joints have a steel rotating shaft.

Connections: NPT, except 5/8"-18 threads are UNF straight threads.

Also Available: Rotating joints with left-hand rotating threads for drums and rollers that rotate clockwise. Please ask for 5275K2 and specify the corresponding joint part number below.

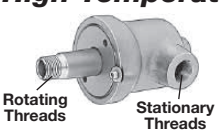
★ Maximum speed is 550 rpm for air.

High-Temperature One-Way Flow Rotating Joints



- Use with oil, steam
- Temperature Range: Oil: –20° to 600°F; Steam: Up to 450°F
- Maximum Pressure: Oil: 100 psi @ 72°F; Steam: 175 psi @ 377°F

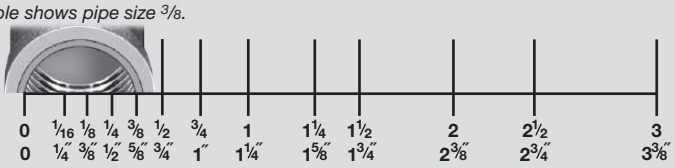
These iron joints are built to handle hot oil or steam. They have right-hand rotating threads for drums and rollers that rotate counterclockwise. They're painted with a high-temperature gold enamel and include a bearing, seal, and nickel-plated steel rotating shaft.

Connections: NPT.

Threads, Pipe Size: Rotating	Stationary	Max. rpm	Body Dia.	Lg.	For Oil		For Steam	
1	1	600	4 1/2"	7 1/8"	9189K142	$369.97	9189K442	$283.93

How to Measure Female Pipe Size Threads—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place the female threads of your joint on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your joint, then select the pipe size on the scale that corresponds to your measurement.



ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about selecting pipe size, see pgs. 2-3.

Compact One-Way Flow Rotating Joints

- Use with air, hydraulic oil
- Temperature Range: –20° to 250° F
- Vacuum: 28″ Hg @ 72° F

Bigger is not always better—especially when you need a rotating joint for small air and hydraulic applications. These aluminum joints have right-hand rotating threads for drums and rollers that rotate counterclockwise. They come with a seal and a steel rotating shaft.

Connections: NPT or UNF straight threads.

Threads, Pipe/Thread Size Rotating	Stationary	Max. rpm	Max. psi @ 72° F for Oil■	Body Dia.	Lg.		
With NPT Rotating Threads

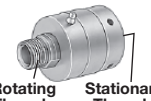
■ Maximum pressure for air is 150 psi @ 72° F.

High-Pressure One-Way Flow Rotating Joints

- Use with water, hydraulic oil
- Temperature Range: –4° to 248° F

Designed for slow-speed, high-pressure hydraulic applications, these joints are made of nickel-plated steel. All have right-hand rotating threads for drums and rollers that rotate counterclockwise. They come with a bearing, seal, and nickel-plated steel rotating shaft.

Connections: NPT.



Threads, Pipe Size Rotating	Stationary	Max. rpm	Max. psi @ 72° F	Body Dia.	Lg.		
1/4	1/4	80	5,075	1 3/8″	2 5/8″	1122K101	$138.34

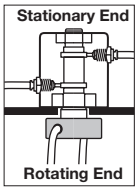
Rotating Joint Manifolds

- Use with air
- Temperature Range: –30° to 250° F
- Maximum Pressure: 220 psi @ 72° F
- Vacuum: 28″ Hg @ 72° F

Supply air to two different rotating objects from a stationary supply with this manifold. The connections are sealed with a Buna-N O-ring to allow different pressures and/or vacuum to be supplied simultaneously through the outlets.

Connections: NPT.



Threads, Pipe Size Rotating	Stationary	Max. rpm	Body Dia.	Lg.		
1/8	1/8	100	2 7/16″	3 1/16″	9233K12	$326.84

Two-Way Flow Rotating Joints

General Purpose Iron:
- Use with water, oil, steam
- Temperature Range: –20° to 375° F
- Maximum Pressure: Water: 250 psi @ 72° F; Oil: 100 psi @ 72° F; Steam: 150 psi @ 365° F

High-Speed Brass:
- Use with water, oil, intermittent steam (up to 20% of operating time)
- Max. Temperature: 250° F
- Maximum Pressure: Water: 750 psi @ 72° F; Oil: 100 psi @ 72° F; Steam: 15 psi @ 250° F

Corrosion-Resistant 300 Series SS:
- Use with water, air, oil, steam
- Temperature Range: Water: –40° to 300° F; Oil: –40° to 395° F; Steam: up to 350° F
- Maximum Pressure: Water: 750 psi @ 72° F; Air: 300 psi @ 72° F; Oil: 100 psi @ 72° F; Steam: 120 psi @ 350° F
- Vacuum: 25″ Hg @ 72° F

General Purpose Iron and High-Speed Brass

Corrosion-Resistant 300 Series SS

One joint serves as both the supply line and the return. All have right-hand rotating threads for drums and rollers that rotate counterclockwise. They have one or two precision ball bearings, a seal, and a stainless steel rotating shaft, except the general purpose iron joints have a steel rotating shaft.

Connections: NPT.

Also Available: Rotating joints with left-hand rotating threads for drums and rollers that rotate clockwise. Please ask for 5275K3 and specify the corresponding joint part number below.

About Plastic and Rubber Tubing

Clarity—An indicator of how easy it is to see what's flowing inside of your tubing.

Clear—You can see through the tubing.

Semi-Clear—You can see there's something in the tubing, but the view is limited.

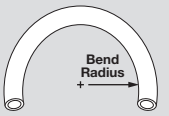
Opaque—You cannot see what's in the tubing.

Flexibility—A general indicator of how bendable tubing is, this characteristic takes many factors into account, including bend radius, wall hardness, material, and diameter. Tubing can have a hard wall and still be flexible.

Very Flexible—Bends easily.

Flexible—Good for gradual bends.

Rigid—Does not bend.



Bend Radius—A specific indicator of how bendable tubing is, bend radius is the point to which you can bend tubing without damaging it. It is measured from the center of the bend to the edge of the tubing. The smaller the measurement, the better the bend.

We've put together a **bend radius sample pack** that includes seven pieces of tubing, each labeled with its bend radius: 5/8", 1 3/4", 3 1/8", 5", 6", 8", and unbendable.

3077K4 ..... $24.85

Material Sample Packs—Contain 3" long pieces of tubing for each of the materials listed.

Polyurethane, PVC, Polypropylene, Polyethylene, and EVA **3077K1** $3.58
Nylon, PTFE, PVDF, and PEEK **3077K2** 10.65
Latex, Silicone, Buna-N, Viton® Fluoroelastomer, Neoprene, Gum, and Blended Rubber **3077K3** 7.30

Hardness—Hardness indicates the firmness of tubing. It is measured on a Durometer A, Durometer D, or Rockwell R scale. The higher the number, the harder the tubing.

We've assembled a **tubing hardness sample pack** that includes nine pieces of 3" long tubing, each labeled with its hardness; Durometer 35A, 40A, 55A, 65A, 74A, 85A, 43D-55D, 65D, and Rockwell R120.

3077K5 ..... $11.41

Tubing Application Guide

	Soft Tubing	Firm Tubing	Hard Tubing
	 • Use with barbed fittings. • Durometer is 30-74A.	 • Use with barbed, compression, and push-to-connect fittings. • Durometer is 75-95A or 22-44D.	 • Use with compression and push-to-connect fittings. • Hardness is Durometer 96-110A, Durometer 45-81D, or Rockwell R50-130.

Masterkleer PVC Clear Tubing

- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -40° to 160° F
- Use with barbed fittings

This general purpose PVC tubing is an economical choice for air and water applications. Tubing can be sterilized with steam (autoclaving) and gas.

Choose-a-color tubing is clear with a tint, so you can identify different lines in your system.

PVC Clear Tubing for Food, Beverage, and Dairy

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -10° to 170° F
- Use with barbed fittings

With a nonabsorbing surface, this tubing is easy to clean and won't impart tastes or odors to the fluid passing through it. It is made of FDA listed materials, is 3-A certified, and meets NSF/ANSI Standard 51 for food contact. Tubing can be sterilized with steam (autoclaving), gas, and chemicals.

Tygon PVC Clear Tubing

Air and Water
- Formulation: B-44-3
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -30° to 160° F
- Use with barbed fittings

Food, Beverage, and Dairy
- Formulation: B-44-4X
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -30° to 160° F
- Use with barbed fittings

The nonabsorbing surface provides improved flow and drainage. It can be sterilized with steam (autoclaving) and gas.

Food, beverage, and dairy tubing is made from FDA listed materials. Material is 3-A certified and meets NSF/ANSI Standard 51 for food contact.

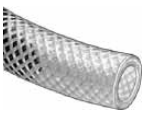
High-Pressure Tygon PVC Clear Tubing for Food, Beverage, and Dairy



- Formulation: B-44-4X I.B.
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -30° to 160° F
- Use with barbed fittings

This tubing has a polyester braid reinforcement for extra strength in high-pressure applications. It also holds up under lower temperatures than standard PVC tubing. It is made of FDA listed materials, is 3-A certified, and meets NSF/ANSI Standard 51 for food contact. It can be sterilized with gas.

High-Pressure PVC Tubing

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: 25° to 150° F
- Use with barbed fittings

A polyester braid is embedded into the walls of this tubing, giving it the strength to withstand higher pressures than other PVC tubing. Use with air and water. It can be sterilized with steam (autoclaving) and gas.

High-Pressure/Vacuum-Rated PVC Clear Tubing for Food, Beverage, and Dairy

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: 15° to 150° F
- Use with barbed fittings

A combination of yarn reinforcement and steel wire prevents tubing walls from collapsing under vacuum up to 29" Hg @ 72° F, and provides support in high-pressure applications. Tubing is made of FDA listed materials and is 3-A certified. It meets NSF/ANSI Standard 51 for food contact. It can be sterilized with steam (autoclaving) and gas.

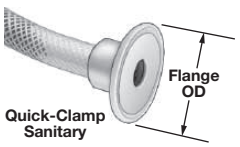
PVC Clear Tubing with Fittings Attached for Food, Beverage, and Dairy

Male NPT Threaded



Quick-Clamp Sanitary

- Flexible
- Soft (Durometer 70A)
- Temperature Range: -20° to 150° F

A fitting is attached to one or both ends of this tubing for sanitary flange or pipe connections. Tubing ends that have no fitting attached can be used with a barbed fitting (sold separately on pages 165-167). Tubing has a nylon braid reinforcement that provides extra strength in high-pressure applications. It is nonabsorbing, so it will not impart tastes or odors to your product. It is 3-A certified and made of FDA listed materials. It can be sterilized with gas and radiation.

To Order: Please specify 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, or 60″ length.

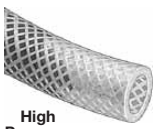
Smooth-Flow Tygon Clear Tubing for Food and Beverage

Standard



High Pressure

- Formulation: Standard: 2475 High Pressure: 2475 I.B.
- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -90° to 120° F
- Use with barbed fittings

The tubing's smooth interior resists material buildup and is easy to clean. It is nonabsorbing, so it won't impart tastes or odors to your product. It is made of FDA listed materials. Tubing can be sterilized with gas and radiation. Vacuum rating is 29″ Hg @ 72° F, unless noted.

High-pressure tubing has a polyester-braid reinforcement for extra strength to handle higher pressures than nonreinforced tubing.

★ Vacuum rating is 25″ Hg @ 72° F.

For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

Clear Yellow PVC Tubing for Fuels and Lubricants

- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -10° to 120° F
- Use with barbed fittings

This economical tubing can be used intermittently with petroleum-based products without becoming hard or brittle. Use with gasoline, heating oil, diesel fuel, and fuel oil; it is not for use with ethanol-based gasoline. Tubing is clear with a yellow tint, so you can easily monitor flow.

Yellow Tygon PVC Tubing for Fuels and Lubricants

- Formulation: F-4040-A
- Very flexible
- Soft (Durometer 55A)
- Temperature Range: -30° to 160° F
- Use with barbed fittings

Not only will this tubing stay flexible when used with gasoline and other petroleum-based products, it also withstands lower temperatures than other fuel and lubricant tubing. It is also for use with hydraulic fluid and other oils. Tubing is semi-clear yellow, so it gives you a limited view of what's flowing through your line.

Laboratory Tygon PVC Clear Tubing for Chemicals

- Formulation: E-3603
- Very flexible
- Soft (Durometer 55A)
- Temperature Range: -20° to 160° F
- Use with barbed fittings

The super-smooth interior resists product buildup better than standard PVC tubing. Use with acetic acid, chlorine, coolant, deionized water, hydrogen peroxide, nitric acid, and sulfuric acid. It can be used with metering (peristaltic) pumps. Tubing can be sterilized with steam (autoclaving) and gas.

PVC Clear Tubing for Chemicals

- Very flexible
- Soft (Durometer 60A)
- Temperature Range: -20° to 160° F
- Use with barbed fittings

Use this general purpose PVC tubing with a wide range of chemicals, including bleach, deionized water, and nitric acid. It can be used in metering (peristaltic) pump applications. Tubing can be sterilized with gas and chemicals.

Low-Temperature Tygon Clear Tubing for Chemicals

- Formulation: 2375
- Very flexible
- Firm (Durometer 75A)
- Temperature Range: -100° to 130° F
- Use with barbed fittings

Use this tubing for low-temperature applications reaching -100° F. Use with acetic acid, bleach, hydrochloric acid, hydrogen peroxide, and isopropyl alcohol. It can be sterilized with gas and radiation.

Ultra-Chemical-Resistant Versilon PVC Clear Tubing

- Formulation: SE-200
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -30° to 160° F
- Use with barbed fittings

Formerly known as Tygon, this tubing is lined with FEP (fluorinated ethylene propylene) for better chemical resistance than PVC alone. Use with acetic acid, bleach, hydraulic fluid, isopropyl alcohol, and gasoline. Sterilize with gas.

ID	OD	Wall	Max. psi @ 72° F	Lengths, ft.		Per Ft.

Gray PVC Tubing for Water Drain Lines

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: 25° to 150° F
- Use with barbed fittings

Commonly used in ice machines and other water applications, this tubing is treated to protect against degradation caused by bacteria, yeast, fungi, and mold. Tubing is semi-clear gray. It can be sterilized with steam (autoclaving).

ID	OD	Wall	Bend Radius	Lengths, ft.		Per Ft.

UV-Resistant PVC Clear Tubing

- Very flexible
- Firm (Durometer 85A)
- Temperature Range: -10° to 220° F
- Use with barbed fittings

A rare combination of UV resistance and clarity means this tubing protects light-sensitive fluid while allowing you to monitor flow. Use with air and water. Tubing can be sterilized with gas and chemicals.

ID	OD	Wall	Bend Radius	Max. psi @ 72° F	Lengths, ft.		Per Ft.

UV-Resistant Black PVC Tubing

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -10° to 170° F
- Use with barbed fittings

This tubing won't degrade when exposed to UV light. Use with air and water. It can be sterilized with steam (autoclaving) and gas.

UV-Resistant Black Versilon PVC Tubing

- Formulation: R-3400
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -5° to 160° F
- Use with barbed fittings

Formerly known as Tygon, this tubing is more flexible than standard PVC tubing. It withstands exposure to UV light without deteriorating. Use with air and water.

Static-Dissipative PVC Clear Tubing

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: 25° to 150° F
- Use with barbed fittings

Protect sensitive equipment—a metal coil wire is embedded into the tubing walls to dissipate static electricity up to 10^{13} ohms/sq. without the need for grounding. Use with air and water. Vacuum rating is 29" Hg @ 72° F.

PVC Tubing

For information about tubing, see page 118.

For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

High-Purity White Versilon Tubing

- Formulation: 2001
- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -100° to 130° F
- Use with barbed fittings

Formerly known as Tygon, this tubing is made without a plasticizer additive that can leach tastes and odors into the fluid passing through it. It is semi-clear white. Use with food, pharmaceuticals, dairy, deionized water, and beverage. Tubing is made from FDA listed materials. It can be sterilized with steam (autoclaving), gas, and radiation.

High-Flex White PVC Tubing for Food and Beverage

- Very flexible
- Soft (Durometer 50A)
- Temperature Range: -60° to 180° F
- Use with barbed fittings

An economical alternative to silicone rubber, this PVC tubing has excellent flexibility and will stand up to the demands of metering (peristaltic) pumps. Tubing is semi-clear white and is made of FDA listed materials. It can be sterilized with gas and radiation.

High-Flex Tygon PVC Clear Tubing

Ultra-Soft High Flex
- Formulation: E-1000
- Very flexible
- Soft (Durometer 40A)
- Temperature Range: -60° to 120° F
- Use with barbed fittings

High Flex
- Formulation: E-LFL
- Very flexible
- Soft (Durometer 55A)
- Temperature Range: -50° to 160° F
- Use with barbed fittings

Monitor the flow in your line with an exceptionally soft and flexible tubing.

Ultra-Soft High Flex—The softest Tygon PVC tubing we offer, this tubing bends easily. It is commonly used in applications requiring continuous flexing, such as metering (peristaltic) pumps. Tubing is made of FDA listed materials for use with food and beverage. Sterilize with gas.

High Flex—This tubing can handle continuous bending and flexing in metering (peristaltic) pump applications. Use with air and water. Sterilize with steam (autoclaving) and gas.

Ultra-Soft High Flex

Low-Temperature Tygon PVC Clear Tubing for Chemicals

- Formulation: ND-100-65
- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -40° to 160° F
- Use with barbed fittings

Run chemicals through this tubing at temperatures as low as -40° F. Tubing has excellent kink resistance for restriction-free flow. Use with acetic acid, bleach, hydrogen peroxide, sulfuric acid, and hydrochloric acid. It can be sterilized with steam (autoclaving), radiation, and gas.

Super-Soft Latex Rubber Tubing

- Very flexible
- Soft (Durometer 40A)
- Temperature Range: 0° to 150° F
- Use with barbed fittings

Stretch it, bend it, compress it—this tubing will spring back to its original shape. It has a soft texture and excellent abrasion resistance. Use with air and water. Material meets DOD A-A-52047C. Tubing can be sterilized with steam (autoclaving) and gas.

To Order: Please specify opaque black or semi-clear amber.

Abrasion-Resistant Gum Rubber Tubing

- Very flexible
- Soft (Durometer 45A)
- Temperature Range: -70° to 180° F
- Use with barbed fittings

Thick walls give this tubing excellent abrasion resistance. Use with air and water. Material meets DOD A-A-52047C. It can be sterilized with chemicals.

Vacuum-rated tubing withstands vacuum up to 29" Hg @ 72° F.

High-Temperature Silicone Rubber Tubing

Opaque

Semi-Clear

- Very flexible
- Soft
- Temperature Range: -90° to 390° F
- Use with barbed fittings

More resilient than latex rubber, this silicone rubber tubing withstands temperatures up to 390° F. It maintains its flexibility over time and is commonly used in metering (peristaltic) pump applications. The higher the durometer number, the harder the wall. Use with air and water. Material meets ASTM D2000. Tubing can be sterilized with steam (autoclaving) and radiation.

Durometer 70A and **Durometer 50A**—**To Order:** Please specify opaque black, opaque red, semi-clear blue, or semi-clear white.

Durometer 35A—Tubing is opaque white.

High-Temperature White Silicone Rubber Tubing for Food and Beverage

- Very flexible
- Soft (Durometer 50A)
- Temperature Range: -90° to 390° F
- Use with barbed fittings

Hot processes won't harm this tubing—it can handle temperatures up to 390° F. Tubing is made of FDA listed materials and meets ASTM D2000 and NSF/ANSI Standard 51 for food contact. Tubing won't impart tastes or odors on your product. It maintains its flexibility over time and is commonly used in metering (peristaltic) pump applications. Tubing is semi-clear white. It can be sterilized with steam (autoclaving) and gas.

Crush-Resistant White Silicone Rubber Tubing for Food, Beverage, and Dairy

- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -60° to 450° F
- Use with barbed fittings

Silicone rubber is inherently flexible, but it's the thick walls that allow this tubing to bounce back to shape. Tubing is made of FDA listed materials, is 3-A certified, and meets ASTM D2000. Tubing won't impart tastes or odors and will maintain its flexibility over time. It is also weather and ozone resistant, making it good for outdoor use. Tubing is semi-clear white. It can be sterilized with steam (autoclaving) and radiation.

High-Pressure White Silicone Rubber Tubing for Food and Beverage

- Flexible
- Soft (Durometer 60A)
- Temperature Range: -60° to 350° F
- Use with barbed fittings

A polyester braid reinforcement supports the tubing walls and withstands higher pressures than other silicone rubber tubing. It is made of FDA listed materials and meets NSF/ANSI Standard 51 for food contact. Tubing won't impart tastes or odors, maintains its flexibility over time, and resists UV exposure. Tubing is semi-clear white. It can be sterilized with steam (autoclaving) and radiation.

Large-Diameter White Gum Rubber Tubing for Food and Beverage

- Very flexible
- Soft (Durometer 45A)
- Temperature Rating: -60° to 180° F
- Use with clamps

This tubing has the girth to handle big jobs, such as those in food processing plants. It is made of FDA listed materials. Tubing has excellent abrasion and tear resistance.

For information about the chemical compatibility of silicone rubber tubing, go to mcmaster.com and search for the part number.

Lightweight Blue Polypropylene Tubing for Food, Beverage, and Dairy

- Flexible
- Soft (Durometer 70A)
- Temperature Range: -60° to 180° F
- Use with barbed fittings

Lighter than silicone rubber, but just as tough, this polypropylene tubing stands up to the wear and tear of daily use. It won't impart tastes or odors to your product and maintains its flexibility over time. It is 3-A certified and made of FDA listed materials. Tubing can be sterilized with steam (autoclaving), chemicals, and gas. It can withstand vacuum up to 27″ Hg @ 72° F, except the 3/4″ ID tubing is not rated for vacuum.

High-Purity White Silicone Rubber Tubing for Metering Pumps

- Very flexible
- Soft (Durometer 50A)
- Temperature Range: -70° to 450° F
- Use with barbed fittings

No measuring required—just reference the pump tube number to find the tubing you need. Tubing is cured with platinum for high purity. It is made with a nonleaching plasticizer, so it won't impart tastes or odors to your product. Use with beverage, dairy, deionized water, food, and pharmaceuticals. Tubing is made of FDA listed materials. It is 3-A certified and meets NSF/ANSI Standard 51 for food contact. Tubing is semi-clear white. It can be sterilized with steam (autoclaving) and radiation.

High-Temperature and High-Purity White Silicone Rubber Tubing

Nonreinforced
- Very flexible
- Soft (Durometer 55A)
- Temperature Range: -80 to 420° F
- Use with barbed fittings

Braid Reinforced
- Very flexible
- Soft (Durometer 60A)
- Temperature Range: -80° to 350° F
- Use with barbed fittings

Not only is this tubing cured with platinum for high purity, it can be used at higher temperatures than other silicone rubber tubing. Tubing is made without a plasticizer additive, so it won't impart tastes or odors to the fluid passing through it. It is made of FDA listed materials for use with food, pharmaceuticals, dairy, and beverage. It is semi-clear white. It can be sterilized with steam (autoclaving).

Tubing **with polyester braid reinforcement** has extra strength and can handle higher pressures than nonreinforced tubing.

Nonreinforced

Cleaned and Bagged High-Purity White Silicone Rubber Tubing

- Very flexible
- Soft (Durometer 50A)
- Temperature Range: -60° to 400° F
- Use with barbed fittings

Cleaned with isopropyl alcohol then bagged and sealed in a clean room, this is the highest-purity silicone tubing we offer. Tubing is cured with platinum and is made with a nonleaching plasticizer that won't impart tastes or odors. It is made of FDA listed materials for use with beverage, deionized water, food, and pharmaceuticals. It is semi-clear white. Tubing can be sterilized with steam (autoclaving), radiation, and gas.

Odor-Resistant White Silicone Rubber Tubing for Food and Beverage

- Very flexible
- Soft (Durometer 50A)
- Temperature Range: -60° to 400° F
- Use with barbed fittings

Silver ions are blended into the walls of this tubing to inhibit the growth of odor-causing microbes. Tubing is cured with platinum and made of FDA listed materials. It can be sterilized with steam (autoclaving), gas, and radiation.

Insulated Gray Silicone Rubber Tubing

- Very flexible
- Soft (Durometer 65A)
- Temperature Range: -70° to 450° F
- Use with barbed fittings

The lightweight, spongy walls provide more thermal insulation than standard silicone tubing, so it won't produce condensation when cold fluid runs through it. Use with air and water. It can be sterilized with steam (autoclaving) and radiation.

Static-Dissipative Black Silicone Rubber Tubing

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -70° to 450° F
- Use with barbed fittings

Carbon is embedded into the walls of this tubing to help eliminate static buildup. Use with air and water. Material meets ASTM D2000.

Flame-Retardant Beige Silicone Rubber Tubing

- Very flexible
- Soft (Durometer 60A)
- Temperature Range: -70° to 450° F
- Use with barbed fittings

This tubing self-extinguishes, so it has an extra level of flame retardance not found in our other silicone rubber tubing. Use with air and water. It can be sterilized with steam (autoclaving) and radiation. Material meets ASTM D2000.

High-Temperature Blue Fluorosilicone Rubber Tubing for Fuels

- Very flexible
- Soft (Durometer 60A)
- Temperature Range: -80° to 450° F
- Use with barbed fittings

Use this tubing with a wide range of fuels such as diesel fuel, biodiesel, gasoline, and hydraulic fluid at temperatures up to 450° F. Material meets MIL-R-25988B and ASTM D2000.

High-Flex Rubber Tubing

For Chemicals

For Food and Beverage

- Very flexible
- For Chemicals: Soft (Durometer 65A)
  For Food and Beverage: Firm (Durometer 80A)
- Temperature Range: -70° to 270° F
- Use with barbed fittings

This resilient tubing is commonly used with metering (peristaltic) pumps. It can be sterilized with steam (autoclaving), gas, and chemicals.

Tubing for chemicals has the ability to handle continuous flexing and bending. It is made of black Santoprene rubber and resists ozone and UV light. Use with acetic acid, hydrogen peroxide, isopropyl alcohol, sodium hydroxide, and sulfuric acid.

Tubing for food and beverage combines EPDM rubber and polypropylene plastic to create highly resilient tubing that stands up to repeated flexing and ozone. It is beige and made of FDA listed materials.

Durable Tygon Rubber Tubing

Long Life

High Flex and High Pressure

- Formulation:
  Long Life for Chemicals: A-60-G
  High Flex for Food, Beverage, and Dairy: A-60-F
  High Pressure for Food and Beverage: A-60-F I.B.
- Flexible
- Soft (Durometer 60A)
- Temperature Range: -70° to 270° F
- Use with barbed fittings

Formerly known as Norprene, this highly durable tubing has a long flex life. Tubing withstands vacuum up to 29" Hg @ 72° F, unless noted. It can be sterilized with steam (autoclaving) and chemicals.

Long Life for Chemicals—This highly durable tubing is compatible with a wider range of chemicals than standard rubber tubing, including acetic acid, bleach, hydrogen peroxide, phosphoric acid, and sodium hydroxide. Tubing is black and is resistant to ozone and UV light. Tubing can handle repeated flexing, such as those found in metering (peristaltic) pump applications.

High Flex for Food, Beverage, and Dairy—Stretch and bend this tubing and it will spring back to its original shape. It is commonly used in metering (peristaltic) pump applications. This beige tubing is made of FDA listed materials, is 3-A certified, and meets NSF/ANSI Standard 51 for food contact.

High Pressure for Food and Beverage—Reinforced with a polyester braid, this beige tubing has the strength to withstand higher pressures than other rubber tubing. This tubing is made of FDA listed materials.

♣ Vacuum rating is 25" Hg @ 72° F.

Durable Beige Rubber Tubing for Food and Beverage

- Flexible
- Soft (Durometer 65A)
- Temperature Range: -60° to 270° F
- Use with barbed fittings

Made from a special blend of rubber, this tubing lasts longer than silicone and other blended materials. It is commonly used in metering (peristaltic) pump applications. It is made of FDA listed materials and meets NSF/ANSI Standard 51 for food contact. It can be sterilized with steam (autoclaving), gas, and radiation.

Vacuum-rated tubing withstands vacuum up to 29″ Hg @ 72° F.

Oil-Resistant Black Buna-N Rubber Tubing

- Very flexible
- Soft (Durometer 60A)
- Temperature Range: -20° to 212° F
- Use with barbed fittings

Oil won't cause this tubing to deteriorate or become brittle. Use with fuel oil, gasoline, kerosene, mineral oil, and vegetable oil. Meets ASTM 2000. Sterilize with steam (autoclaving).

Weather-Resistant Black EPDM Rubber Tubing

- Flexible
- Soft (Durometer 60A)
- Temperature Range: -40° to 300° F
- Use with barbed fittings

More durable than PVC and silicone rubber, EPDM can stand up to harsh outdoor environments and has excellent resistance to ozone and UV light. Use with water. Material meets ASTM D2000.

High-Pressure Black Buna-N Rubber Tubing

- Very flexible
- Firm (Durometer 80A)
- Temperature Range: -20° to 200° F
- Use with barbed fittings

A braided nylon cover gives this tubing the strength to withstand pressures up to 250 psi. The cover also protects against abrasion and tearing. Use with air and water.

High-Temperature Viton® Fluoroelastomer Tubing for Chemicals

- Very flexible
- Soft: Durometer 60A
  Firm: Durometer 75A
- Temperature Range: -10° to 400° F
- Use with barbed fittings

This synthetic rubber tubing resists ozone, even at temperatures up to 400° F. Use with bleach, hydrochloric acid, hydrogen peroxide, and diesel fuel. It can be sterilized with steam (autoclaving).

Soft tubing is flexible and commonly used with metering (peristaltic) pumps. Color is black.

Firm tubing comes in a choice of colors that allow you to color-code your system. To Order: Please specify opaque black, beige, or green.

Abrasion-Resistant Black Neoprene Rubber Tubing

- Flexible
- Firm (Durometer 80A)
- Temperature Range: -20° to 212° F
- Use with barbed fittings

This synthetic rubber tubing is firmer and more abrasion resistant than Buna-N rubber and plastic. Use with air and water. Material meets ASTM D2000 and E162. It can be sterilized with steam (autoclaving).

Durable Clear PVC Tubing for Food and Beverage

- Very flexible
- Firm (Durometer 80A)
- Temperature Range: -30° to 120° F
- Use with barbed fittings

Not only does this tubing have the highest strength of any PVC tubing we offer, it also remains flexible at low temperatures. Tubing is made of FDA listed materials.

Abrasion-Resistant PVC/Polyurethane Clear Tubing for Food and Beverage

- Very flexible
- Firm (Durometer 80A)
- Temperature Range: -10° to 170° F
- Use with barbed fittings

PVC and polyurethane join forces to create tubing that's resistant to abrasion and tearing. It is made of FDA listed materials.

For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

Abrasion-Resistant Clear Blue Polyurethane Tubing for Fuels

- Very flexible
- Soft (Durometer 70A)
- Temperature Range: -40° to 180° F
- Use with barbed fittings

This polyurethane tubing is soft and flexible, yet is tough enough to stand up to abrasion. It can be used in metering (peristaltic) pump applications. Use with diesel fuel and kerosene. Tubing is clear with a blue tint. It can be sterilized with gas and radiation.

Abrasion-Resistant Polyurethane Clear Tubing for Air

- Flexible
- Firm (Durometer 85A)
- Temperature Range: -70° to 170° F
- Use with barbed fittings

Don't worry about tearing this tubing—it's made of polyurethane, which has excellent abrasion and tear resistance. Tubing is ester based, so it should not be used with water or in wet environments. Use with air.

Abrasion-Resistant Versilon Polyurethane Clear Tubing for Air

- Formulation: C-210-A
- Flexible
- Firm (Durometer 80A)
- Temperature Range: -100° to 170° F
- Use with barbed fittings

Formerly known as Tygothane, this tubing not only resists abrasion and tearing, but also performs well at lower temperatures than standard polyurethane tubing. It is ester based, so it should not be used with water or in wet environments.

Abrasion-Resistant/Self-Retracting Choose-a-Color Polyurethane Tubing for Water

- Very flexible
- Firm (Durometer 95A)
- Temperature Range: -40° to 120° F
- Use with compression fittings

Keep your work site safe and clutter free—this coiled tubing extends when you need it and retracts out of the way when you don't. The material is ether based, so it has excellent abrasion and tear resistance and can be used in wet and humid environments. Vacuum rating is 28" Hg @ 72° F.

Comes in clear with a blue tint as well as the following opaque colors: blue, fluorescent green, red, and yellow. **To Order:** Please specify color.

Clear with a Blue Tint

Opaque

Choose-a-Color Polyurethane Tubing for Water

- Very flexible
- Firm (Durometer 95A)
- Temperature Range: -40° to 160° F
- Use with push-to-connect fittings; inch tubing can also be used with barbed fittings

Multiple colors allow you to color-code your lines for easy identification. Tubing is made of ether-based polyurethane, which has excellent tear and abrasion resistance, along with the ability to handle wet and humid environments. Vacuum is 28″ Hg @ 72° F.

Clear and **tinted** tubing allows you to easily monitor flow; choose from clear as well as the following tinted colors: blue, green, red, and yellow. **Opaque** tubing comes in black, blue, green, red, white, and yellow. **To Order:** Please specify color.

Joined Polyurethane Tubing for Water

- Very flexible
- Firm (Durometer 85A)
- Temperature Range: -40° to 160° F
- Use with barbed fittings

This multiple-line tubing holds together on its own, so there's no need for cable ties or tape. Made of ether-based polyurethane, it has excellent resistance to abrasion and tearing and can be used in wet and humid environments. Vacuum rating is 28″ Hg @ 72° F.

To Order: For single color tubing, please specify color.

High-Pressure Polyurethane Clear Tubing for Water

- Very flexible
- Firm (Durometer 85A)
- Temperature Range: -40° to 160° F
- Use with barbed fittings

This tubing is reinforced with a polyester braid for good strength in high-pressure applications. It has excellent resistance to abrasion and tearing, and is ether based for use in wet and humid environments.

Reinforced tubing is clear and has a vacuum rating of 28″ Hg @ 72° F.

Extra-flex reinforced tubing has thinner walls for better flexibility than tubing with thicker walls. It's clear with a blue tint.

High-Pressure Versilon Polyurethane Clear Tubing for Drinking Water

- Formulation: C-544-A I.B.
- Very flexible
- Firm (Durometer 85A)
- Temperature Range: -100° to 180° F
- Use with barbed fittings

Formerly known as Tygothane, this tubing has a polyester-braid reinforcement that allows it to withstand higher pressures than other polyurethane tubing. Tubing offers excellent abrasion and tear resistance. It is ether based, so it performs well in wet and humid environments. Made without a plasticizer, this tubing will remain flexible over time and won't impart tastes or odors to your product. Meets NSF/ANSI Standard 61 for drinking water.

Abrasion-Resistant Polyurethane Clear Tubing for Water

Inch:
- Flexible
- Firm (Durometer 85A)
- Temperature Range: -70° to 170° F
- Use with barbed fittings

Metric:
- Flexible
- Hard (Durometer 50D)
- Temperature Range: -31° to 140° F
- Use with push-to-connect fittings

Unlike ester-based polyurethane, this ether-based polyurethane tubing can be used with water. Tubing offers excellent abrasion and tear resistance. It can be sterilized with gas.

Weld-Spatter-Resistant Polyurethane Tubing

Inch:
- Flexible
- Firm (Durometer 90A)
- Temperature Range: -40° to 180° F
- Use with push-to-connect fittings

Metric:
- Flexible
- Firm (Durometer 90A)
- Temperature Range: 0° to 140° F
- Use with push-to-connect fittings

Designed for welding applications, this tubing is specially formulated to self-extinguish to meet UL 94V2 for flame retardance. It is ether based, so it will hold up in wet and humid environments. Tubing has excellent resistance to abrasion and tearing. Use with air and water. Vacuum rating is 28" Hg @ 72° F.

Inch tubing has one layer of material. **To Order:** Please specify black, blue, green, or white.

Metric tubing has three layers of material. To attach fittings, use a cutting tool to strip the outer layer of tubing, then attach a flame-retardant cap (both sold separately). The OD dimension does not include the outer layer of tubing. **To Order:** Please specify black, blue, green, red, white, and yellow. For cap, please specify tube OD size.

Large-Diameter Thin-Wall Polyurethane Clear Tubing for Food, Beverage, and Dairy

- Very flexible
- Firm (Durometer 80A)
- Temperature Range: -40° to 190° F
- Use with worm-drive clamps

Sized for vibrating sifters, screeners, hoppers, and packaging equipment, this polyurethane tubing has a large diameter to handle a variety of food processing applications. It has excellent resistance to abrasion and tearing, plus it won't allow static electricity to build up. It is 3-A certified and made of FDA listed materials.

Static-Dissipative White Polyurethane Tubing

- Very flexible
- Firm (Durometer 85A)
- Temperature Range: -40° to 160° F
- Use with barbed fitting

Static electricity will not build up in this tubing, so you can use it near sensitive equipment. Surface resistivity is 10^{11} ohms/sq. Tubing has excellent abrasion and tear resistance and is ether based for use in wet or humid environments. Use with air and water. Vacuum rating is 28" Hg @ 72° F.

Crack-Resistant Polyethylene Tubing for Food and Beverage

Semi-Clear White

- Flexible
- Firm (Durometer 45D)
- Temperature Range: -100° to 170°F
- Use with compression fittings

This tubing offers superior resistance to stress cracking, even at low temperatures. It won't impart tastes or odors to the fluid passing through. Made of FDA listed materials.

Durable White Polyethylene Tubing for Food and Beverage

- Flexible
- Firm (Durometer 80A)
- Temperature Range: -60° to 120°F
- Use with barbed fittings and a worm-drive clamp

Reinforced with a polyester braid, this tubing is surprisingly strong, yet softer and more flexible than our other polyethylene tubing. It is semi-clear white. Tubing is made of FDA listed materials.

ID	OD	Wall	Bend Radius	Max. psi @ 72°F	Lengths, ft.		Per Ft.

Odor-Resistant Blue Polyethylene Tubing for Water

- Flexible
- Firm (Durometer 90A)
- Temperature Range: -40° to 170°F
- Use with barbed fittings

An inner liner releases silver ions to inhibit the growth of bacteria, mold, fungi, and other odor-causing microbes.

Vacuum-Rated Polyethylene Tubing for Food and Beverage

Opaque

- Flexible
- Hard (Durometer 50D)
- Temperature: -40° to 150°F
- Use with compression fittings and push-to-connect fittings

Strong, hard walls give this tubing extra support to handle high-vacuum applications up to 28" Hg @ 72°F. It is moisture resistant and will not impart tastes or odors to the fluid passing through it. Tubing is made of FDA listed materials.

Inch tubing comes in your choice of semi-clear white or the following opaque colors: black, blue, green, red, and yellow.

Metric tubing comes in your choice of semi-clear white or opaque black.

To Order: Please specify color.

For information about tubing, see page 118.

Polyethylene Tubing for Drinking Water

- Flexible
- Hard (Durometer Not Rated)
- Temperature Range: 72° to 180° F
- Use with push-to-connect fittings

Compatible with Viega PEX, this tubing is a lightweight alternative to copper tubing. It connects to fittings with no soldering or cement required, so it's easier to install than copper and CPVC tubing. Material is IAPMO (International Association of Plumbing and Mechanical Officials) approved to ASTM F876 and F877 standards.

To Order: Please specify opaque blue, red, or white, except 1/4" ID comes only in white, and 1" ID comes only in red and white.

Miniature EVA Clear Tubing

- Flexible
- Firm (Durometer 90A)
- Temperature Range: -30° to 250° F
- Use with barbed fittings

Use this micro-sized tubing for delicate, precision applications. Use with air and water. It can be sterilized with steam (autoclaving), gas, radiation, and chemicals.

High-Pressure White EVA Tubing

- Flexible
- Firm (Durometer 75A)
- Temperature Range: -30° to 120° F
- Use with barbed fittings

The tubing walls are reinforced with a polyester braid to handle higher pressures than other EVA tubing. Tubing has excellent resistance to stress cracking. It is semi-clear white. Use with air and water.

Low-Temperature White EVA Tubing

- Flexible
- Firm (Durometer 95A)
- Temperature Range: -100° to 160° F
- Use with compression fittings

This tubing remains flexible even when temperatures drop to -100° F. Tubing has excellent resistance to impact and stress cracking and also resists grease and UV light. Use with air and water. Tubing is semi-clear white. It can be sterilized with gas.

High-Flex White Polyethylene-Lined Tubing for Food and Beverage

- Flexible
- Firm (Durometer 90A)
- Temperature Range:
  Standard: -50° to 170° F
  High Temperature: -60° to 200° F
- Use with barbed fittings

Made of pliable EVA, this tubing can handle continuous bending and flexing better than polyethylene tubing. It is resistant to impact and stress cracking. Tubing has a polyethylene liner that won't leach tastes or odors into the fluid passing through. It is made of FDA listed materials. It is semi-clear white. Tubing can be sterilized with steam (autoclaving) and radiation.

Nylon Tubing

For information about tubing, see page 118.

Choose-a-Color Flexible Nylon Tubing

Opaque

- Flexible
- Hard (Rockwell R80)
- Temperature Range: -60° to 200° F
- Use with compression fittings

With slightly softer walls than other hard tubing, this tubing is more flexible and impact absorbent. Use with air and water. Vacuum rating is 28″ Hg @ 72° F. The white tubing is semi-clear; all others are opaque.

Semi-Clear White

Self-Retracting Nylon Tubing

Opaque

- Flexible
- Hard (Rockwell R80)
- Temperature Range: -40° to 180° F
- Use with compression fittings and push-to-connect fittings

Keep your work area tidy with this coiled tubing that extends when you need it and retracts out of the way when you don't. Tubing is tough and abrasion resistant. Use with air and water. Vacuum rating is 28″ Hg @ 72° F.

To Order: Please specify opaque black, blue, green, orange, red, or semi-clear white.

High-Pressure Nylon Tubing

Semi-Clear White

- Flexible
- Hard (Rockwell R110)
- Temperature Range: -40° to 225° F
- Use with compression fittings

Exceptionally hard walls give this tubing the strength to handle high-pressure applications and vacuum applications up to 29″ Hg @ 72° F. Tubing has excellent abrasion resistance. Use with air and water. It can be sterilized with gas.

To Order: Please specify opaque black or semi-clear white.

Flexible High-Pressure White Nylon Tubing

- Flexible
- Hard (Rockwell R110)
- Temperature Range: -60° to 200° F
- Use with compression fittings and push-to-connect fittings

A small bend radius makes this tubing extra flexible. It has exceptionally hard walls for use in high-pressure applications. Tubing is semi-clear white. Use with air and water. Vacuum rating is 28" Hg @ 72° F.

ID	OD	Wall	Bend Radius	Max. psi @ 72° F	Lengths, ft.		Per Ft.

Nylon Clear Tubing for Fuels

- Flexible
- Hard (Durometer 80D)
- Temperature Range: -40° to 212° F
- Use with compression fittings

Hard walls give this tubing excellent strength and abrasion resistance, as well as the ability to handle high pressures. It is clear, so you can easily monitor flow. Use with diesel fuel, fuel oil, and gasoline. It can be sterilized with gas.

D.O.T. Choose-a-Color Nylon Tubing for Air

- Flexible
- Hard (Durometer 65D)
- Temperature Range: -40° to 200° F
- Use with compression fittings and push-to-connect fittings

Color-code your lines for easy identification. This tubing is for use with compressed air up to 150 psi @ 72° F. It meets the Department of Transportation FMVSS 106 criteria for air brake tubing, unless noted. The **nonreinforced** tubing also meets SAE J844 A standards, while the **reinforced** tubing also meets SAE J844 B standards.

To Order: Please specify opaque black, blue, green, red, gray, or yellow (unless noted).

★ Comes in black and green only.
■ Comes in blue only. Does not meet D.O.T. FMVSS 106.
▲ Comes in black only.

Flexible Nylon Tubing

- Flexible
- Hard (Durometer 55D)
- Temperature Range: -40° to 180° F
- Use with compression fittings and push-to-connect fittings

Semi-Clear White

With slightly softer walls than other hard tubing, this tubing is more flexible and impact absorbent. Use with air and water. Vacuum rating is 28" Hg @ 72° F.

To Order: Please specify opaque black or semi-clear white.

Flame-Retardant Nylon Tubing

- Flexible
- Hard (Durometer 50D)
- Temperature Range: 32° to 140° F
- Use with push-to-connect fittings

Designed for use in spot-welding applications, this tubing meets UL 94V0 for flame retardance. It stays flexible longer than other types of nylon tubing. Use with air and water. Maximum pressure is 170 psi @ 72° F.

To Order: Please specify opaque black, blue, green, red, or white (unless noted).

■ Comes in black, blue, and white only.

Flame-Retardant Polyethylene Tubing for Air

- Flexible
- Hard (Durometer: Not rated)
- Temperature Range: -70° to 175° F
- Use with compression fittings and push-to-connect fittings

This tubing meets UL 94V2 and UL 1820 for flame retardance and is self-extinguishing. Use in air control systems. Tubing stays flexible and resists stress cracks, even at low temperatures.

Tubing **with stripes** allows you to color-code your lines for easy identification.

To Order: Please specify stripe color: blue, green, orange, red, violet, white, or yellow.

ⓘ For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

High-Pressure/Vacuum Polyethylene Tubing for Chemicals

Semi-Clear White

- Flexible
- Hard (Durometer 65D)
- Temperature Range: -100° to 180° F
- Use with compression fittings

Even without reinforcement, this tubing can withstand high pressures and will not collapse in vacuum applications up to 29" Hg @ 72° F. Tubing is high-density polyethylene (HDPE). Use with acetone, bleach, coolant, hydrochloric acid, hydrogen peroxide, and diesel fuel. It can be sterilized with gas and chemicals.

Crack-Resistant White Polypropylene Tubing

- Flexible
- Hard (Durometer 65D)
- Temperature Range: Not rated
- Use with compression fittings

This resilient tubing won't crack due to stress or impact. Use with air and water. It can be sterilized with steam (autoclaving) and radiation.

ID	OD	Wall	Max. psi @ 72° F	Lengths, ft.		Per Ft.

Crack-Resistant Black Polypropylene Tubing for Food and Beverage

- Flexible
- Hard (Durometer 65D)
- Temperature Range: -40° to 180° F
- Use with compression fittings

Polypropylene tubing is more durable and resistant to stress cracking than polyethylene. Tubing is made of FDA listed materials and meets NSF/ANSI Standard 51 for food contact. It can be sterilized with gas and radiation.

Low-Pressure White Polypropylene Tubing

- Flexible
- Hard (Rockwell R90)
- Temperature Range: 40° to 200° F
- Use with compression fittings and push-to-connect fittings

Use this flexible tubing in low-pressure applications. Use with air and water. It is semi-clear white. Tubing can be sterilized with steam (autoclaving) and gas.

Durable Polycarbonate Clear Tubing

- Rigid
- Hard (Rockwell R120)
- Temperature Range: 32° to 250° F
- Use adhesives to connect

Excellent strength and durability allow this tubing to handle high-pressure applications. It is resistant to UV light. Use with air and water.

Moisture-Resistant White Acetal Tubing

- Rigid
- Hard (Rockwell R120)
- Temperature Range: -20° to 180° F
- Use with compression fittings

Acetal offers comparable strength and durability to nylon, but is more moisture resistant. Use with air and water. Tubing can be sterilized with steam (autoclaving).

Hard PVC Clear Tubing for Food and Beverage

- Rigid
- Hard (Durometer 80D)
- Temperature Range: -50° to 140° F
- Use cement to connect

Unlike other plastic tubing for food and beverage, this tubing is nonbendable and straight. Tubing is made of FDA listed materials. It is 3-A certified and meets NSF/ANSI Standard 51 for food contact. Tubing can be sterilized with chemicals and gas. Vacuum rating is 29" Hg @ 72° F.

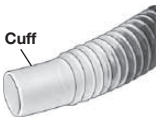
Flexible White Extreme-Temperature Teflon® PTFE Tubing for Chemicals

- Very flexible
- Hard (Durometer 60D)
- Temperature Range: -454° to 500° F
- Use with worm-drive clamps



This convoluted tubing handles a wide temperature range, plus the spiral design provides good flexibility and a smooth flow. The cuff enables easy connections to fittings. Use with acetic acid, hydrochloric acid, biodiesel, sulfuric acid, and gasoline. Material meets UL 94V0 for flame retardance and Mil. Spec. AMS-T-81914/2. Tubing is semi-clear white. It can be sterilized with steam (autoclaving) and gas.

To Order: Please specify length in 1-ft. increments up to the maximum continuous length of 10 ft. Length includes both cuffs.

Light-Transmitting Clear THV Tubing

- Flexible
- Firm (Durometer 45D)
- Temperature Range: -40° to 200° F
- Use with compression fittings

Often used in UV purification systems, this tubing is clearer and transmits UV light better than other tubing. Use with air and water.

Abrasion-Resistant White ETFE Tubing for Chemicals

- Flexible
- Hard (Durometer 65D)
- Temperature Range: -60° to 300° F
- Use with compression fittings

Made of tough ETFE, this tubing is more abrasion resistant than other types of hard tubing. It is also impact resistant and has a super-smooth interior for unrestricted flow. Use with acetic acid, bleach, hydrochloric acid, hydrogen peroxide, and sodium hydroxide. Material meets ASTM D3159. It is semi-clear white. Tubing can be sterilized with steam (autoclaving), gas, and chemicals. Vacuum rating is 29" Hg @ 72° F.

Extreme-Pressure PEEK Tubing for Chemicals

- Flexible
- Hard (Durometer: Not rated)
- Temperature Range: -328° to 482° F
- Use with compression fittings

An excellent substitute for stainless steel, this tubing is lightweight but can handle extreme-pressure applications. It also has excellent impact resistance. Use with acetic acid, biodiesel, diesel fuel, hydrogen peroxide, and isopropyl alcohol. It can be sterilized with steam (autoclaving) and gas.

Note: The walls of this tubing will permanently collapse if bent too far.

PTFE & FEP-Lined Polyethylene Tubing

For information about tubing, see page 118.

For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

Extreme-Temperature PTFE and Teflon® PTFE Tubing for Chemicals

Choose a Color

- Flexible
- Hard (Durometer 60D)
- Temperature Range: -450° to 500° F
- Use with compression fittings

Semi-Clear White with Choose-a-Color Stripe

This tubing can handle a wide range of temperatures. It has a smooth interior for unrestricted flow and easy cleaning. Use with acetic acid, hydrogen peroxide, isopropyl alcohol, diesel fuel, and gasoline. It can be sterilized with gas.

Teflon® PTFE Semi-Clear White Tubing—Meets UL 94V0 for flame retardance.

PTFE Choose-a-Color Tubing—This tubing is rated for vacuum to 29″ Hg @ 72° F. **To Order:** Please specify opaque black, blue, green, red, or yellow.

PTFE Semi-Clear White Tubing—Tubing is rated for vacuum to 29″ Hg @ 72° F. *Inch tubing* has a stripe that allows you to color-code your lines for easy identification. **To Order:** Please specify stripe color: black, blue, green, red, or yellow.

Flexible White FEP-Lined Polyethylene Tubing for Chemicals

- Flexible
- Firm (Durometer 45D)
- Temperature Range: -20° to 170° F
- Use with compression fittings

Repeated bending and flexing won't harm this tubing. It is lined with FEP (fluorinated ethylene propylene) to ensure excellent chemical resistance. The liner has a smooth surface, which reduces product buildup and acts as an electrical insulator. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. Tubing is semi-clear white. It can be sterilized with steam (autoclaving), gas, and chemicals.

ID	OD	Wall	Bend Radius	Max. psi @ 72° F	Lengths, ft.		Per Ft.

ⓘ For information about the chemical compatibility of tubing, go to mcmaster.com and search for the part number.

White Teflon® FEP Tubing for Chemicals

- Flexible (unless noted)
- Hard (Durometer 55D)
- Temperature Range: -300° to 400° F
- Use with compression fittings

This tubing withstands a wider temperature range than standard FEP tubing. It is resistant to abrasion and UV light. Tubing is semi-clear white. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and gas.

Inch sizes have a vacuum rating of 29″ Hg @ 72° F, unless noted.
Metric sizes meet UL 94V0 for flame retardance.

♠ Tubing is rigid. ★Not rated for vacuum.

Choose-a-Color FEP Tubing for Chemicals

- Flexible
- Hard (Durometer 55D)
- Temperature Range: 32° to 212° F
- Use with compression fittings and push-to-connect fittings

Color-code your lines for easy identification. Tubing is highly durable and resists abrasion and UV light. Use with acetic acid, bleach, hydrochloric acid, hydrogen peroxide, and sulfuric acid. Material meets UL 94V0 for flame retardance. It can be sterilized with steam (autoclaving) and chemicals.

To Order: Please specify opaque black, semi-clear blue, or semi-clear red.

Self-Retracting White FEP Tubing for Chemicals

- Very flexible
- Hard (Durometer 55D)
- Temperature Range: -400° to 200° F
- Use with compression fittings and push-to-connect fittings

Keep your work area tidy with this coiled tubing that extends when you need it and retracts out of the way when you don't. Tubing is resistant to abrasion and UV light, and it meets UL 94V0 for flame retardance. It is semi-clear white. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and gas. Vacuum rating is 27″ Hg @ 72° F.

FEP Clear Tubing for Chemicals

- Flexible
- Hard (Durometer 60D)
- Temperature Range: -100° to 400° F
- Use with compression fittings and push-to-connect fittings

This tubing is highly resilient and durable, and has excellent resistance to abrasion and UV light. It is clear, so you can easily monitor flow. Use with acetic acid, acetone, isopropyl alcohol, and sodium hydroxide. Tubing can be sterilized with steam (autoclaving), gas, and chemicals. Meets ASTM D2116 and D3296.

High-Flex White Teflon® FEP Tubing for Chemicals

- Very flexible
- Hard (Durometer 55D)
- Temperature Range: -110° to 200° F
- Use with compression fittings

The corrugated design allows this tubing to extend and compress just like an accordion. It also bends easily without kinking. Tubing is durable and resistant to abrasion and UV light. It has a cuff on each end for easy connections to compression fittings. It is semi-clear white. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and gas.

To Order: Please specify length in 1-ft. increments up to the maximum continuous length of 12 feet. Length includes both cuffs.

Crack-Resistant Teflon® PFA Tubing for Chemicals

- Flexible (unless noted)
- Inch: Hard (Durometer 60D) Metric: Hard (Durometer 55D)
- Temperature Range: -320° to 500° F
- Use with compression fittings

Not only does this tubing resist stress cracking, it stays strong and flexible over a wider range of temperatures than standard PFA tubing. Tubing is resistant to abrasion. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and gas.

Inch sizes are semi-clear white. Vacuum rated at 29″ Hg @ 72° F, unless noted.
Metric sizes are clear.

High-Purity Hard PFA Clear Tubing

- Flexible
- Hard (Durometer 60D)
- Temperature Range: -320° to 500° F
- Use with compression fittings

The material of this tubing contains extremely low levels of additives, so it won't contaminate the fluid passing through it. It can stand up to extreme temperatures, so it's a preferred material for semiconductor applications. Tubing is resistant to UV light. It is made of FDA listed materials and meets UL 94V0 for flame retardance. Use with beverage, food, and deionized water. It can be sterilized with steam (autoclaving) and gas.

Crack-Resistant PFA Clear Tubing for Chemicals

- Flexible
- Hard (Durometer 55D)
- Temperature Range: -320° to 450° F
- Use with compression fittings

You don't have to worry about this tubing cracking due to stress or impact. Also known as Chemfluor, it is smoother than other PFA tubing, so it's easier to clean. Use with acetic acid, bleach, hydrochloric acid, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and gas.

Super-Smooth MFA Clear Tubing for Chemicals

- Flexible
- Hard (Durometer 60D)
- Temperature Range: -100° to 485° F
- Use with compression fittings

The smoothest chemical tubing we offer, this tubing is very easy to clean and provides unrestricted flow. It is resistant to UV light. Use with isopropyl alcohol, phosphoric acid, acetone, and sulfuric acid. It can be sterilized with steam (autoclaving), gas, and chemicals.

Flexible White PVDF Tubing for Food, Beverage, and Dairy

- Flexible
- Hard (Durometer 60D)
- Temperature Range: -40° to 212° F
- Use with compression fittings

Strong, yet pliable, this tubing can stand up to repeated flexing. It is also known as Kynar. It resists abrasion and UV light and won't impart tastes or odors to your product. Tubing is semi-clear white. It is made of FDA listed materials, is 3-A certified, and meets NSF/ANSI Standard 51 for food contact. It can be sterilized with gas. Vacuum rating is 28" Hg @ 72° F.

High-Strength White PVDF Tubing for Chemicals

- Flexible
- Temperature Range: -40° to 250° F
- Inch: Hard (Durometer 75D)
  Metric: Hard (Durometer 65D)
- Use with compression fittings

Enhanced strength gives this tubing excellent impact resistance, as well as the ability to handle high-pressure applications. Tubing is also known as Kynar. It resists abrasion and UV light. It is semi-clear white. Use with acetic acid, hydrochloric acid, hydrogen peroxide, diesel fuel, and gasoline. It can be sterilized with steam (autoclaving) and chemicals.

Inch sizes meet UL 94V0 for flame retardance.

About Metal Tubing

While metal tubing is often called pipe, tubing is actually lighter than pipe and easier to work with. It can, in most cases, be bent into shape without the need for elbows or other fittings. Tubing is also thinner than pipe, so it cannot be threaded; connect tubing to pumps, valves, and other components with tube fittings.

Construction

Welded—With a weld bead on the inside, use this tubing when your application does not require a smooth interior. For some tubing, the weld bead is smoothed (also known as drawn), which reduces the chance of particle buildup and makes it an economical alternative to seamless tubing.

Seamless—Formed from a cylinder, this tubing has no weld, so it is smooth on the inside for unrestricted flow. It is stronger than welded tubing and can be flared without splitting.

Wall Thickness

Each tubing OD comes in a variety of wall-thickness choices. As the walls get thicker, the amount of pressure the tubing can withstand increases and the amount of flow decreases. The illustrations below show how the wall thickness affects the ID of the tubing.

1/4″ OD Tubing (Actual OD)

1/2″ OD Tubing (Actual OD)

Tubing Application Guide

Stainless Steel Tubing

Smooth-Bore Seamless Stainless Steel Tubing

- Temperature Range:
  304 Stainless Steel: -425° to 1500°F
  316 Stainless Steel: -325° to 1500°F
- Bend with a tube bender
- Use with compression fittings (see pages 181-187), flared fittings (see pages 190-193), and butt-weld fittings (see page 232)

Seamless construction with no weld bead gives this tubing a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Use with water, air, natural gas, and oil. Tubing meets ASTM A213 and A269. It has a Rockwell hardness of B90 and a soft temper. OD tolerance is ±0.006″ for tubing ODs 3/8″ and smaller; ±0.01″ for 1/2″ to 1 3/8″; and ±0.03″ for 1 1/2″ and larger, unless noted. Tubing can be sterilized with chemicals.

304 stainless steel has very good corrosion resistance.

316 stainless steel offers excellent corrosion resistance.

Stainless Steel Tubing

For information about metal tubing, see page 148.

Welded Stainless Steel Tubing

Straight Length

Coil

- Temperature Range:
  304 Stainless Steel:
  -420° to 1500°F
  316 Stainless Steel:
  -320° to 1500°F
- Bend with a tube bender
- Use with stainless steel compression fittings (see pgs. 181-186) and butt-weld fittings (see pg. 232)

When your application does not require a smooth interior, this tubing is an economical choice. It has a weld bead on the inside. Use with water, deionized water, air, natural gas, oil, and hydraulic fluid. Tubing meets ASTM A269. It has a Rockwell hardness of B90 and a soft temper. OD tolerance is ±0.006″ for tubing ODs 7/16″ and smaller; ±0.01″ for 1/2″ to 1 1/4″; and ±0.03″ for 1 1/2″ and larger, unless noted. Tubing can be sterilized with chemicals.

304 stainless steel has very good corrosion resistance.
316 stainless steel offers excellent corrosion resistance.

High-Polish Stainless Steel Tubing for Food, Beverage, and Dairy

- Temperature Range: -420° to 1500°F
- Bend with a tube bender
- Use with high-polish quick-clamp fittings (see pages 228-230) and butt-weld fittings (see page 232)

The interior and exterior of this tubing are polished to a high-luster finish to resist particle buildup and allow for easy cleaning. Tubing is welded with a smoothed weld bead on the inside. The interior is polished to a 20 Ra finish; the exterior is polished to a 30 Ra finish. Note: Ra measures the smoothness of the tubing; the lower the Ra value, the smoother and more polished the surface. Tubing is 3-A certified and meets ASTM A269 and A270. It has a Rockwell hardness of B90 and a soft temper. It can be sterilized with steam (autoclaving) and gas.

304L stainless steel has very good corrosion resistance.

316L stainless steel has excellent corrosion resistance.

High-Polish Stainless Steel Tubing

- Temperature Range: -420° to 1500°F
- Bend with a tube bender
- Use with high-polish tube fittings (see pages 234-235)

This premium-grade 316L stainless steel tubing is polished to a high-luster finish to reduce particle buildup and allow for easy cleaning. It is welded with a smoothed weld bead on the inside. Use with deionized water and pharmaceuticals, unless noted. Tubing has excellent corrosion resistance. It is 3-A certified and meets ASTM A269 and A270. Tubing has a Rockwell hardness of B90 and a soft temper. It can be sterilized with steam (autoclaving) and gas.

Smooth— Meets ASME BPE. The ID is polished to a 20 Ra finish. The OD is polished to a 30 Ra finish. Tubing is capped, put in a plastic sleeve, then sealed in a cardboard tube.

Super Smooth— The ID is polished to a 10 Ra finish, except tubing with a 1½″ and larger OD are polished to a 15 Ra finish. The OD is polished to a 30 Ra finish. Comes in a plastic sleeve.

Note: Ra measures the smoothness of the tubing; the lower the Ra value, the smoother and more polished the surface.

★ Not for use with pharmaceuticals. Can also be used with air, dairy, hydraulic fluid, and water.

Stainless Steel Tubing

For information about metal tubing, see page 148.

Extra-Hard Stainless Steel Tubing

- Temperature Range: -320° to 800° F
- Bend with a tube bender
- Use with flared fittings (see pages 190-193)

Compared to other 304 stainless steel tubing, this tubing is harder, stronger, and more durable. It is seamless, which provides a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. It can be used with hydraulic fluid, water, deionized water, air, natural gas, and oil. Tubing is not suitable for welding or brazing. It has very good corrosion resistance. Tubing has a 1/8 hard temper and meets AMS T-6845. OD tolerance is ±0.003″. Tubing can be sterilized with steam (autoclaving), gas, and chemicals.

Cleaned and Capped Stainless Steel Tubing

- Temperature Range: -320° to 1500° F
- Bend with a tube bender
- Use with compression fittings (see pages 181-187), flared fittings (see pages 190-193), and butt-weld fittings (see page 232)

This tubing comes cleaned and capped to prevent moisture and dirt from contaminating the inside. It's made from 316 stainless steel and has a soft temper. It is seamless, which provides a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Tubing has excellent corrosion resistance. Use with water, air, natural gas, and oil. It meets ASTM A213 and A269. OD tolerance is ±0.005″. It can be sterilized with steam (autoclaving) and chemicals.

Stainless Steel Tubing with Plastic Exterior

- Temperature Range: -35° to 220° F
- Bend with a tube bender
- Use with compression fittings (see pages 181-186)

The outside of this 316L stainless steel tubing is covered with PVC for extra protection against external corrosion. It is straight and welded with a smoothed weld bead on the inside to reduce particle buildup. Use with water, air, natural gas, and mineral oil. Tubing meets UL 94V2 for flame retardance. It has a Rockwell hardness of B90 and a soft temper. OD tolerance is ±0.064″.

Metric Smooth-Bore Seamless Stainless Steel Tubing

- Temperature Range: -325° to 1500° F
- Bend with a tube bender

Seamless construction with no weld bead gives this tubing a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Tubing is made of 316 stainless steel and has a soft temper. Use with water, air, natural gas, hydraulic fluid, and oil. OD tolerance is ±0.13 mm, except 14 mm tubing is ±0.26 mm. Tubing can be sterilized with steam (autoclaving), gas, and chemicals.

Tubing **for compression fittings** meets ASTM A269.

Metric Welded Stainless Steel Tubing

- Temperature Range: -420° to 600° F
- Bend with a tube bender

When your application does not require a smooth interior, this tubing is an economical choice. It has a weld bead on the inside. It is made of 316 stainless steel and has a hard temper. Use with water, air, natural gas, and oil. Tubing meets ASTM A908 and Fed. Spec. GG-N-196. OD tolerance is ±0.1 mm. Tubing can be sterilized with steam (autoclaving) and chemicals.

Extreme-Pressure Stainless Steel Tubing

- Temperature Range: -420° to 1200° F
- Bend with a tube bender
- Use with 5892K extreme-pressure compression fittings (see page 182)

This 316L stainless steel tubing has the highest pressure rating of any tubing we offer. It is seamless, which provides a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Tubing has excellent corrosion resistance. It has a 1/8 hard temper. Use with water, air, natural gas, oil, and hydraulic fluid. OD tolerance is ±0.003″. It can be sterilized with steam (autoclaving), gas, and chemicals.

Precision Stainless Steel Tubing

- Temperature Range: -420° to 600° F
- Bend with a tube bender
- Connect by welding

This 304 stainless steel tubing is made to tighter tolerances than other stainless steel tubing. It is welded with a smoothed weld bead on the inside to reduce particle buildup. Use with water, air, natural gas, oil, and hydraulic fluid. Tubing meets ASTM A908 and Fed. Spec. GG-N-196.

Straight lengths have a hard temper and an OD tolerance of +0.004″/-0.002″. They can be sterilized with steam (autoclaving) and radiation.

Coils have a soft temper and an OD tolerance of ±0.002″. They can be sterilized with steam (autoclaving), gas, and chemicals.

Also Available: Precision 316 stainless steel tubing in straight lengths and coils. Please ask for 1800T1 and specify the tubing OD, wall thickness, and length from the choices below.

Extreme-Pressure Miniature Stainless Steel Tubing

Welded:
- Temperature Range: -420° to 600° F
- Bend with a tube bender

Seamless:
- Temperature Range: -140° to 750° F
- Bend with a tube bender

Also known as capillary tubing, this small-diameter tubing stands up to high-pressure applications. It has thin walls and is made to tight tolerances for use in precision applications. Tubing can be sterilized with steam (autoclaving).

Welded tubing is more economical than seamless tubing; it has a smoothed weld bead on the inside to reduce particle buildup. It is 304 stainless steel for very good corrosion resistance. It has a hard temper. Use with water, air, natural gas, and oil. Tubing meets ASTM A269 and A908, as well as Fed. Spec. GG-N-196. OD tolerance is +0.004″/-0.002″.

Seamless tubing is smoother and stronger than welded tubing and can be flared without splitting. It is 316 stainless steel for excellent corrosion resistance. It has a Rockwell hardness of B95 and a soft temper. Use with air, natural gas, hydraulic fluid, and oil. Tubing meets ASTM A213 and A269. OD tolerance is +0.002″/-0.000″.

Miniature Stainless Steel Tubing

90° Bend

- Temperature Range: Not rated (90° Bend and Short Straight Lengths) -420° to 600° F (Straight Lengths)
- Bend with a tube bender
- Connect by welding

Also known as hypodermic or needle tubing, this tubing has thin walls and is made to tight tolerances for use in precision applications. It is welded with a smoothed weld bead on the inside to reduce particle buildup. Use with water, air, natural gas, and oil. Tubing meets ASTM 908. It has a hard temper. Tubing can be sterilized with steam (autoclaving).

90° bend and **short straight lengths** are not rated for pressure. **Straight lengths** also meet Fed. Spec. GG-N-196.

304 stainless steel has very good corrosion resistance.

316 stainless steel has excellent corrosion resistance.

Miniature Stainless Steel Tubing with Polished Exterior

- Temperature Range: -420° to 600°F
- Bend with a tube bender
- Connect by welding

The outside of this small-diameter 304 stainless steel tubing is polished to a high-luster finish for a shiny appearance. Also known as hypodermic or needle tubing, it is made to tight tolerances for use in precision applications. It is welded with a smoothed weld bead on the inside to reduce particle buildup. Use with water, air, food, beverage, natural gas, and oil. Tubing has a hard temper and meets ASTM A908 and Fed. Spec. GG-N-196. OD tolerance is ±0.005″ for 19 to 15 gauge tubing; ±0.001″ for 14 to 11 gauge. It can be sterilized with steam (autoclaving) and radiation.

Stainless Steel Tubing for Corrosive Gases

- Temperature Range: -340° to 800°F
- Bend with a tube bender
- Use with compression fittings (see pages 181-187)

A thin layer of silicone on the interior provides a smooth surface and offers protection against corrosive gases. Use with ammonia, nitrogen oxide, and sulphur oxide. Tubing meets ASTM A269. It has a soft temper. OD tolerance is ±0.005″.

Welded tubing is more economical than seamless tubing; it has a smoothed weld bead on the inside to reduce particle buildup. It is 304 stainless steel for very good corrosion resistance.

Seamless tubing is smoother and stronger than welded tubing and can be flared without splitting. It is 316 stainless steel for excellent corrosion resistance.

High-Performance Tubing

For information about metal tubing, see page 148.

Mil. Spec. Stainless Steel Tubing

- Temperature Range: -420° to 1500° F
- Bend with a tube bender
- Use with compression and Yor-Lok fittings (see pgs. 181-187), flared fittings (see pages 190-193), and butt-weld fittings (see page 232)

A titanium additive gives this 321 stainless steel tubing excellent strength and superior corrosion resistance. It is seamless, which provides a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Use with water, air, natural gas, and oil. Tubing meets MIL-T-8808B and has a soft temper. OD tolerance is ±0.004″ for tubing ODs ⅜″ and smaller; ±0.02″ for ½″ and larger. Tubing can be sterilized with steam (autoclaving), gas, and chemicals.

High-Temperature Nickel Tubing

- Temperature Range: -320° to 1200° F
- Bend with a tube bender
- Connect by welding

This 600 nickel tubing has the highest temperature rating of all the non-stainless steel tubing we offer. It is also known as Inconel. Tubing has excellent corrosion and chemical resistance. It is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Use with water, air, natural gas, oil, sodium sulfide, and abietic acid. Tubing meets ASTM B163. It has a Rockwell hardness of B92 and a soft temper. OD tolerance is ±0.008″ for tubing ODs ⅜″ and smaller; ±0.02″ for ½″ and larger. Tubing can be sterilized with chemicals.

Titanium Tubing

- Temperature Range: -20° to 600° F
- Bend with a tube bender
- Connect by welding

Tubing is lightweight with excellent corrosion resistance. Use with water, salt water, air, oil, and sodium chloride. Tubing is Grade 2 titanium and meets ASTM B338. It has a Rockwell hardness of B80 and a soft temper. OD tolerance is ±0.005″.

Welded tubing is an economical choice for when your application does not require a smooth interior. It has a weld bead on the inside.

Seamless tubing has a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting

Super-Corrosion-Resistant Nickel Tubing

- Temperature Range: 0° to 1000° F
- Bend with a tube bender
- Use with compression fittings (see page 186)

Run corrosive substances through this C276 nickel tubing without worrying about pitting and stress cracking. Also known as Hastelloy, it stands up to solvents, chlorine, salt water, and hydrochloric acid. Tubing meets ASTM B622.

Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Tubing has a Rockwell hardness of B85 and a soft temper. OD tolerance is ±0.005″. It can be sterilized with steam (autoclaving), gas, and chemicals.

Acid-Resistant Nickel Tubing

- Temperature Range: -320° to 900° F
- Bend with a tube bender
- Connect by welding

This 400 nickel tubing won't degrade, even when used with harsh acids. It is also known as Monel. Tubing has excellent corrosion resistance. Use it with hydrofluoric acid, sulfuric acid, salt water, and alkalies. It is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Tubing has a soft temper and meets ASTM B163. OD tolerance is ±0.008″ for tubing ODs ⅜″ and smaller; ±0.015″ for ½″ and larger. Tubing can be sterilized with steam (autoclaving), gas, and chemicals.

Copper Tubing for Drinking Water

- Temperature Range: 32° to 180° F
- Bend coils with a tube bender; straight lengths not bendable
- Use with copper push-to-connect (see page 219) and solder-connect fittings (see pages 239-242)

This 122 copper tubing meets NSF/ANSI Standard 61 for drinking water. It is also known as copper pipe. Tubing has good corrosion resistance and excellent heat transfer qualities. It meets ASTM B88. Tubing is seamless, so it has a smooth interior for unrestricted flow.

The thicker the walls, the more pressure tubing can withstand. When comparing the same size tubing, **Type K** tubing has the thickest walls to handle the highest pressures. **Type L** tubing has thinner walls, and **Type M** tubing has the thinnest walls.

Straight lengths have a hard temper. OD tolerance is ±0.002″.

Coiled tubing can be flared without splitting. They have a soft temper. OD tolerance is ±0.004″.

Cleaned and Capped Copper Tubing

- Temperature Range: 32° to 400° F
- Bend with a tube bender
- Use with copper solder-connect fittings (see pages 239-242)

This 122 copper tubing comes cleaned and capped to prevent moisture and dirt from contaminating the inside. It is also known as refrigeration and air conditioning tubing. Use with water, natural gas, oil, and R22 refrigerant. Tubing meets ASTM B280. It is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Tubing has a soft temper. OD tolerance is ±0.005″.

Copper Tubing

For information about metal tubing, see page 148.

General Purpose Copper Tubing

Straight Length

Coil

- Temperature Range: -420° to 400° F
- Bend coils by hand; straight lengths not bendable
- Use with copper solder-connect fittings (see pages 239-242) and brass compression fittings (see pgs. 176-178)

This 122 copper tubing has good corrosion resistance and excellent heat transfer qualities. Use with water, air, oil, and hydraulic fluid. It meets ASTM B75. Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Tubing can be sterilized with steam (autoclaving).

Straight lengths have a hard temper; OD tolerance is ±0.004″. **Coils** have a soft temper.

Copper Tubing with Coated Interior

- Temperature Range: -100° to 400° F
- Bend by hand
- Use with brass compression fittings (see pages 176-178)

The inside of this tubing is lined with 99% pure tin for added corrosion resistance. Use with natural gas. Tubing meets ASTM B75. It is seamless, so it has a smooth interior for unrestricted flow. Tubing has a soft temper. OD tolerance is ±0.002″.

Copper Tubing with Coated Exterior for Natural and LP Gas

- Temperature Range: -90° to 210° F
- Bend with a tube bender
- Use with flared brass fittings (see page 196)

Copper offers good corrosion resistance, and the yellow polyethylene coating provides an additional protective layer. Tubing has markings to identify it as a gas line. Use with natural gas and LP gas. Tubing meets ASTM B837 and B88, as well as NFPA 54 and 58. It is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Tubing comes in a coil and has a soft temper. OD tolerance is ±0.003″. The tube OD dimension does not include the coating; you must remove the coating to attach fittings.

Copper Tubing with Coated Exterior for Air and Water

- Temperature Range: -35° to 220° F
- Bend with a tube bender
- Use with brass compression fittings (see pages 176-178)

Copper offers good corrosion resistance, and the black PVC coating provides an additional protective layer. Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Use with air and water. Tubing meets ASTM B68 and B75. The coating also meets UL 94V2 for flame retardance. It comes in a coil and has a soft temper. OD tolerance is ±0.002″. The tube OD dimension does not include the coating; you must remove the coating to attach fittings.

Metric Copper Tubing

- Temperature Range: -20° to 400° F
- Bend coils with a tube bender; straight lengths not bendable
- Use with metric solder-connect copper fittings (see 9395T on page 238)

This 122 copper tubing has good corrosion resistance and excellent heat transfer qualities. Use with water, air, oil, and hydraulic fluid. Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. It meets ASTM B75. Straight lengths have a hard temper; coils have a soft temper. OD tolerance is ±0.055 mm.

Brass Tubing

- Temperature Range: -40° to 200° F
- Not bendable
- Connect by soldering

Frequently used in a wide range of plumbing applications, this 260 brass tubing holds up well in mildly corrosive environments. Use with air, natural gas, propane, and gasoline. It meets ASTM B135. Tubing is seamless, so it has a smooth interior for unrestricted flow. It has a ½ hard (H58) temper. OD tolerance is ±0.004″. Tubing can be sterilized with steam (autoclaving).

Rigid Aluminum Tubing

- Temperature Range: -110° to 300° F
- Not bendable
- Connect by welding

Unlike other aluminum tubing, this 3003 aluminum tubing is rigid and will not bend. It contains manganese for good corrosion resistance, strength, and weldability. It is seamless, so it has a smooth interior for unrestricted flow. Use with water, air, oil, and hydraulic fluid. It meets ASTM B210 and Fed. Spec. WW-T-700/2. Tubing has a hard (H14) temper. OD tolerance is ±0.005″. Tubing can be sterilized with steam (autoclaving).

Ultra-Corrosion-Resistant Aluminum Tubing

- Temperature Range: -450° to 400° F
- Bend with a tube bender
- Use with flared fittings (see page 195)

Commonly used in marine applications, this 5052 aluminum tubing contains magnesium for excellent corrosion resistance. Use with salt water and hydraulic fluid. It is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. It has a soft temper. OD tolerance is ±0.024″.

Aluminum Tubing

- Temperature Range: -450° to 400° F
- Bend with a tube bender
- Use with flared fittings (see page 195)

This 6061 aluminum tubing is lightweight with good corrosion resistance and weldability. It has magnesium and silicon added for strength. Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Use with water, air, hydraulic fluid, gasoline, diesel fuel, and fuel oil. Tubing has a hard (T6) temper. OD tolerance is ±0.008″ for tubing ODs 1″ and smaller; ±0.012″ for 1⅛″ to 2½″; and ±0.048″ for 3″ and larger. Tubing can be sterilized with steam (autoclaving).

General purpose tubing meets ASTM B210 and SAE AMS-WW-T-700/6.

Mil. spec. tubing meets MIL-T-7081.

Easy-Bend Aluminum Tubing

- Temperature Range: -40° to 180° F
- Bend by hand
- Use with flared fittings (see page 195)

Bend this 3003 aluminum tubing into the shape you need without special tools or elbow fittings. It contains manganese for good corrosion resistance, strength, and weldability. Tubing is seamless, which provides a smooth interior for unrestricted flow. It can be flared without splitting. Use with water, air, alcohol, and oil. Tubing meets ASTM B483 and has a soft temper. OD tolerance is ±0.004″.

Precision Steel Tubing

- Temperature Range: -40° to 250° F
- Bend with a tube bender
- Use with compression fittings (see page 181)

With the lowest OD tolerance of all our steel tubing, this tubing is designed for precision applications. Also known as Bundyweld tubing, it is plated with copper and rolled into a tube, then the copper is melted to form a strong cohesive bond. For added corrosion resistance, tubing is finished with a coat of aluminum-based paint or zinc. Use with hydraulic fluid or R22 refrigerant. Tubing meets ASTM A254 and SAE J527. It has a soft temper. OD tolerance is ±0.003″.

OD	Wall	ID	Max. psi @ 72° F		25 ft.

Vacuum-Rated Large-Diameter Steel Tubing

- Temperature Range: Up to 150°F
- Bend with a tube bender
- Use with vacuum fittings (see page 238)

This tubing has the strength to withstand vacuum applications up to 29″ Hg. Use with air and plastic pellets. Tubing is welded and has a weld bead on the inside. It meets ASTM A513. OD tolerance is ±0.02″.

Steel tubing has a Rockwell hardness of B50.

Galvanized steel tubing offers better corrosion resistance than unfinished steel.

Smooth-Bore Seamless Steel Tubing

- Temperature Range: -65° to 800°F
- Bend with a tube bender
- Use with compression fittings (see pages 188-189) and flared fittings (see page 194)

Seamless construction with no weld bead gives this tubing a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Use with natural gas and hydraulic fluid. Tubing meets ASTM A179 and SAE J524. It has a soft temper. OD tolerance is ±0.004″. Do not use in corrosive environments.

Metric Smooth-Bore Seamless Steel Tubing

- Temperature Range: -5° to 570°F, unless noted
- Bend with a tube bender
- Use with compression fittings (see page 180)

Seamless construction with no weld bead gives this tubing a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Use with air, oil, and hydraulic fluid. Tubing meets DIN 2391. It has a Rockwell hardness of B75, unless noted, and a soft temper. OD tolerance is ±0.08 mm. Do not use in corrosive environments.

Also Available: Zinc-plated steel tubing. Please ask for 50295K1 and specify the tubing OD, wall thickness, and length from the choices below.

★ Temperature range is -40° to 480°F. Rockwell hardness is B72. ■ Not available in zinc-plated steel.

Corrosion-Resistant Steel Tubing

- Temperature Range: -20° to 800°F
- Bend with a tube bender
- Use with compression fittings (see pages 188-189) and flared fittings (see page 194)

A thin layer of zinc yellow-chromate gives this tubing extra corrosion resistance, making it an economical alternative to stainless steel. Tubing is seamless, which provides a smooth interior for unrestricted flow. It is stronger than welded tubing and can be flared without splitting. Use with water, salt water, oil, and hydraulic fluid. Tubing meets ASTM A179 and B633, as well as SAE J524. It has a soft temper. OD tolerance is ±0.006″.

Welded Steel Tubing

- Temperature Range: -65° to 800°F
- Bend with a tube bender
- Connect by welding

A strong, high-pressure alternative to seamless tubing, this tubing is also known as DOM (drawn over mandrel). It is welded with a smoothed weld bead on the inside to reduce particle buildup. Use with natural gas and hydraulic fluid. Tubing meets ASTM A513. It has a soft temper. OD tolerance is ±0.005″. Do not use in corrosive environments.

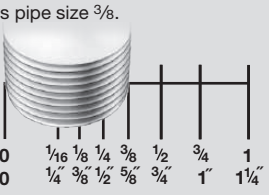
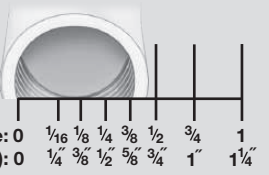
About Tube Fittings

Fitting Style	Advantages	Recommended Tubing	Pressure	Pages
Barbed	Slide into tubing and secure with a clamp. The large contact area provides a secure grip.	Soft plastic and rubber	Low	162-172
Compression	A sleeve bites and forms around the outside of rigid tubing as you tighten the nut.	Hard plastic and metal	Medium to high	173-182
Yor-Lok	Similar to compression fittings, but has two sleeves for more gripping power at higher pressures.	Metal	High	184-189
Flared	The nose of the fitting mates with tubing that has a flared end. Secure with a nut for the tightest metal-to-metal seal we offer.	Metal	High	190-196
Push-to-Connect	The tubing slides into the fitting, and an internal gripping ring holds it in place.	Plastic and soft metal	Low	197-221
Quick Disconnect	Choose these fittings if you frequently connect and disconnect your line.	Plastic	Low	222-226

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Durable Nylon Extra-Grip Barbed Tube Fittings

- Maximum Pressure: 75 psi @ 72° F
- Temperature Range: 32° to 167° F
- Tubing: Use with soft and firm (Shore A45-A80) PVC and polyurethane, unless noted

Ensure a tight, secure connection with these fittings. They have multiple barbs, which provide additional contact between the fitting and the tubing for extra gripping power except straight female pipe adapters for 3/16" tube ID have a single barb. Use with water and air. Fittings are made of nylon for excellent impact and abrasion resistance.

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads, unless otherwise stated.

Metric Nylon and Acetal Barbed Tube Fittings

- Maximum Pressure: 100 psi @ 72° F
- Temperature Range: 32° to 95° F
- Tubing: Use with soft and firm (Shore A40-A80) PVC and polyurethane

The multiple barbs on these fittings form an extra-tight seal. Use with water, air, gasoline, and solvents. **Nylon fittings** are strong and durable with excellent impact and abrasion resistance. **Acetal fittings** have comparable impact and abrasion resistance to nylon fittings, and absorb less moisture. **Inline tees** are also known as branch tees.

Connections: Barbed or NPT threads.

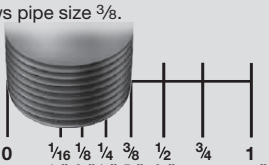
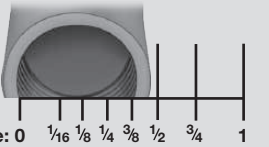
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Durable Nylon Tight-Seal Barbed Tube Fittings

- Maximum Pressure @ 72° F: 150 psi, except straights with female threads are 125 psi
- Temp. Range: –40° to 175° F
- Tubing: Use with firm (Shore A75-A80) PVC and polyurethane

Minimize leaks in your lines—these single-barbed fittings have a smooth surface that creates snug tubing connections. Use with water, air, and hydraulic fluid, unless noted. These durable nylon fittings are also very impact and abrasion resistant. Fittings can be sterilized with steam (autoclaving), unless noted.

Through-wall straights are also known as bulkhead couplings. They require a 1/2" hole size. **Inline tees** are also known as branch tees.

Connections: Barbed or NPT threads, except 10-32 are UNF straight threads, and through-wall straights have an NPSM (National Pipe Straight Mechanical) connection.

Food and Beverage White Polypropylene Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: 32° to 150° F
- Tubing: Use with soft and firm (Shore A45-A90) PVC, polyurethane, and silicone

Often used in food and beverage applications, these semi-clear white fittings are made of FDA-compliant resins. They can also be used with water and air. They have a single barb and are constructed of impact- and abrasion-resistant polypropylene. Sterilize fittings with radiation.

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads, except 10-32 are UNF straight threads.

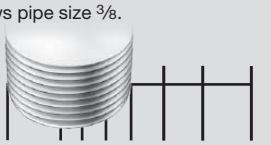
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Sanitary White PVDF Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –80° to 225° F
- Tubing: Use with soft and firm (Shore A50-A90) PVC, polyurethane, and polyethylene

Made of FDA-compliant resins, these semi-clear white fittings are USDA compliant and meet 3-A sanitary standard requirements for use in dairy, food, and beverage applications. Also known as Kynar, PVDF (polyvinylidene fluoride) offers good chemical resistance and excellent strength. Fittings have a single barb and can be sterilized with ethylene oxide, radiation, and steam (autoclaving).

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads.

Also Available: Fittings produced in a clean room. They are cleaned and double bagged. Please ask for 53055K1 and specify the corresponding part number from the choices listed below.

Odor-Resistant Blue Polyethylene Barbed Tube Fittings

- Maximum Pressure: 120 psi @ 72° F
- Temperature Range: –40° to 153° F
- Tubing: Use with Odor-Resistant Polyethylene (see page 138)

Keep lines clean between sterilization treatments with these single-barbed fittings. The polyethylene has silver ions blended into it, which inhibit the growth of microbes and prevent degradation. Fittings are made of FDA-compliant resins and are for use with water and air. Polyethylene has high impact strength and offers better chemical resistance than nylon. Fittings can be sterilized with ethylene oxide and radiation.

Connections: Barbed or NPT threads.

Super-Flow White Polyethylene Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –25° to 130° F
- Tubing: Use with soft and firm (Shore A50-A90) PVC, polyurethane, and rubber

A smooth interior surface reduces friction and prevents particle buildup, ensuring efficient flow through tubing lines. Made of FDA-compliant resins, these white, single-barbed fittings are for use with food and beverage, water, and air. Polyethylene offers better chemical resistance than nylon.

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads.

Clear Polycarbonate Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –211° to 275° F
- Tubing: Use with soft and firm (Shore A45-A90) PVC and polyurethane

Monitor flow with these transparent, impact-resistant fittings that offer a clear view of your lines. Fittings are made of FDA-compliant resins and are for use with food and beverage, water, and air. They have a single barb and can be sterilized with radiation and steam (autoclaving).

Reducing inline tees are also known as branch tees.

Connections: Barbed or NPT threads, except 10-32 are UNF straight threads.

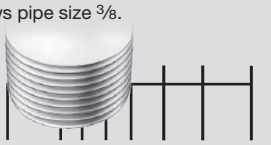
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Chemical-Resistant White Polypropylene Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72°F
- Temp. Range: Standard: 32° to 150°F
  High Temperature: 32° to 250°F
- Tubing: Use with firm (Shore A75-A80) PVC and polyurethane

Choose these semi-clear white polypropylene fittings when you need excellent chemical resistance combined with good strength and durability. Fittings have a single barb and can be used with water, air, ethylene glycol, alcohol, and mild bases. Sterilize *standard fittings* with radiation, and *high temperature fittings* with steam (autoclaving).

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads, except 10-32 and 1/4"-28 are UNF straight threads.

Moisture-Resistant White Acetal Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –20° to 280° F
- Tubing: Use with soft and firm (Shore A50-A90) PVC and polyurethane

Because these fittings resist moisture absorption, they are good for use in high-humidity environments. Made of FDA-compliant resins, they can be used with water, air, food and beverage, oil, and hydraulic fluid. Fittings are made of semi-clear white acetal and have a single barb. Sterilize fittings with steam (autoclaving), radiation, and ethylene oxide.

Inline tees are also known as branch tees.

Connections: Barbed or NPT threads, except 10-32 and 1/4"-28 are UNF straight threads.

Type 316 Stainless Steel Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –50° to 850° F
- Tubing: Use with soft and firm (Shore A50-A90) PVC and polyurethane

With better corrosion resistance than other types of stainless steel, these single-barbed fittings can stand up to harsh physical elements. Use with water, air, gasoline, and acetic acids. Sterilize fittings with steam (autoclaving) and radiation. Material meets ASTM A240 and ASME SA-240.

Inline tees are also known as branch tees.

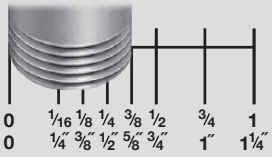
Barbed Tube Fittings

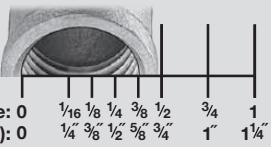
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about barbed tube fittings, see page 162.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Miniature Stainless Steel Barbed Tube Fittings

- Maximum Pressure: 500 psi @ 72° F
- Temperature Range: –40° to 1200° F
- Tubing: Use with firm (Shore A75-A95) PVC, polyethylene, and polypropylene

Use these single-barbed miniature fittings to connect small-diameter tubing. Fittings are for use with water, air, and food and beverage. They are made of Type 303 stainless steel, which is more corrosion resistant than brass. Material is FDA compliant. Male fittings with 10-32 threads also come with a gasket. Sterilize with radiation, ethylene oxide, and steam (autoclaving). Vacuum rating is 27″ Hg @ 72° F.

Connections: Barbed, NPT, BSPT, or UNF straight threads.

■ Has a straight stem with no barb.

Type 303 Stainless Steel Barbed Tube Fittings

- Maximum Pressure: 275 psi @ 72° F
- Temperature Range: –20° to 750° F
- Tubing: Use with soft and firm (Shore A65-A90) PVC and polyurethane

Made of Type 303 stainless steel, these multi-barbed fittings have a surface treatment for enhanced corrosion resistance. They are for use with water, air, oil, hydraulic fluid, and food and beverage. Material is FDA compliant and meets ASTM A581/A582 or AMS 5640.

Inline tees are also known as branch tees.

Connections: Barbed, NPT threads, or 45° flare.

Choose-a-Color Aluminum Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –40° to 230° F
- Tubing: Use with firm (Shore A75-A95) polyethylene and polyurethane

Lightweight aluminum allows for easy handling, while an anodized finish provides good corrosion resistance. Use with water, air, hydraulic fluid, and oil. Fittings have a single barb and do not require a clamp. Vacuum rating is 27″ Hg @ 72° F.

Through-wall straights are also known as bulkhead couplings.

Connections: Barbed or NPT threads, except 10-32 and 1/4″-28 are UNF straight threads, and M5 and M6 are metric straight threads. All straight threads come with a gasket.

To Order: Please specify black, blue, red, or silver, unless noted.

Nickel-Plated Brass Barbed Vacuum Tube Fittings

- Maximum Pressure @ 75° F: 150 psi, except swivel elbows and tees are 120 psi
- Temperature Range: –20° to 160° F
- Tubing: Use with firm (Shore A85) polyurethane

A nickel coating protects against corrosive environments. Plus, the plating won't peel or chip, so fittings maintain a bright, polished appearance. Use with water, air, and oil. Fittings have either a single barb or a double barb. They do not require a clamp. Vacuum rating is 28″ Hg @ 75° F.

Tube-to-threaded pipe adapters come with a Buna-N O-ring. **Swivel 90° elbows** and **swivel inline tees** permit easy adjustments in tight spaces. **Inline tees** are also known as branch tees.

Connections: Barbed or UNF straight threads.

Brass Barbed Tube Fittings for Drinking Water

- Maximum Pressure: 160 psi @ 73° F
- Temperature Range: –30° to 180° F
- Tubing: Use with 51275K (PEX) polyethylene for drinking water (see page 139)

When it comes to drinking water applications, these multi-barbed fittings are a handy alternative to solder-joint copper tube fittings. They connect to tubing with a ring and a crimping tool for a quick installation, with no heat or solvents required. Compatible with Viega PEX fittings, they meet NSF/ANSI Standard 61 for use with hot and cold drinking (potable) water. Material meets ASTM F1807.

Connections: Barbed or NPT threads.

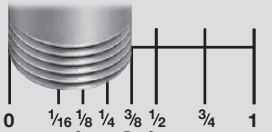
Barbed Tube Fittings

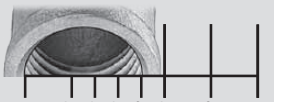
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about barbed tube fittings, see page 162.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Miniature Brass Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: 32° to 180° F
- Tubing: Use with firm (Shore A85) polyethylene and polyurethane

A good choice for small-diameter tubing, these compact fittings are for use with water, air, and oil. They are made of corrosion-resistant brass with a bright finish and come with a clamp, unless noted. Fittings with 10-32 threads also come with a Buna-N O-ring. Vacuum rating is 28" Hg @ 72° F.

Connections: Barbed or UNF straight threads, except 1/16 and 1/8 pipe sizes are NPT threads.

High-Pressure Miniature Brass Barbed Tube Fittings

- Maximum Pressure: 750 psi @ 125° F
- Temperature Range: –40° to 250° F
- Tubing: Use with soft and firm (Shore A65-A90) polyurethane

When space is at a premium and withstanding pressure is a must, choose the highest pressure miniature barbed fittings we sell. The edge of a single barb bites into tubing for a tight seal that minimizes leaks. Fittings are for use with water, air, oil, and freon. They have a corrosion-resistant brass body with a Type 321 stainless steel barb.

Connections: Barbed or NPT threads.

Brass Barbed Tube Fittings for Vacuum

- Max. Pressure: 100 psi @ 73° F
- Temp. Range: –65° to 75° F
- Tubing: Use with firm (Shore A95) polyurethane

The two-barb design on these fittings provides more contact with tubing, achieving a tight grip without clamps for full-vacuum applications. Fittings are for use with water and air. Vacuum rating is 29.9" Hg @ 72° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Connections: Barbed or NPTF (Dryseal) threads, which are compatible with NPT threads.

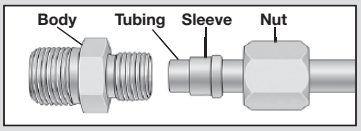
About Compression Tube Fittings



Compression fittings form a tight seal around the outside of hard plastic and soft metal tubing, without the need for flaring or soldering. Most compression fittings consist of a body and nut, as well as a sleeve (ferrule) or gripping ring. To install, insert the tubing into the body and tighten the nut.

Application	Fitting	Page
Air	Polypropylene	173
Air and Water	Brass	176-177
Food and Beverage	Sanitary PVDF	175
Fuel and Oil	Vibration-Resistant Brass	179
Chemicals	Chemical-Resistant PFA	174
High Temperature	Type 316 Stainless Steel	181
High Pressure	Extreme-Pressure Type 316 SS	182

Polypropylene Compression Tube Fittings for Air

- Maximum Pressure: 220 psi @ 70° F
- Temperature Range: –30° to 215° F
- Tubing: Use with firm and hard polypropylene, polyethylene, and nylon

A built-in sleeve (ferrule) means you won't have to disassemble these fittings to install them. Fittings are white and also include a nut. Sterilize with ethylene oxide and steam (autoclaving).

Inline tees are also known as branch tees. **Tube supports** (sold separately) are recommended for polypropylene, polyethylene, and nylon tubing with a hardness of Shore A70 or less.

Connections: Compression or NPT threads.

Moisture-Resistant Acetal Compression Tube Fittings

Good for humid environments, these fittings are made of acetal, which won't absorb moisture. Maximum pressure is 220 psi @ 70° F. Temperature range is –40° to 200° F. Use with firm and hard polypropylene, polyethylene, and nylon tubing.

For pricing, specifications such as pipe size, and a list of common applications, go to mcmaster.com and search for the part number below.

To Order: Please specify tube OD, pipe size, and male or female pipe (where applicable).

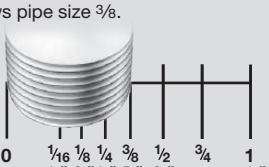
Compression Tube Fittings

For technical drawings and 3-D models, go to mcmaster.com.

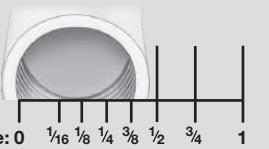
For information about selecting pipe size, see pages 2-3. For information about compression tube fittings, see page 173.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Durable Nylon Compression Tube Fittings

- Maximum Pressure (with copper tubing):
  1/4" and 5/16" OD: 300 psi @ 73° F
  3/8" OD: 250 psi @ 73° F
  1/2" OD: 200 psi @ 73° F
- Temperature Range: –40° to 200° F
- Tubing: Use with copper, firm and hard polyurethane (Shore A85-A95), polypropylene, polyethylene, and nylon

When it comes to durability, you can't beat the excellent impact and abrasion resistance of these semi-clear white nylon fittings. They are for use with water, air, and food and beverage. They include a nut, a sleeve (ferrule), a Type 302 stainless steel gripping ring for securing the tubing, and a Buna-N O-ring. Fittings are made of FDA-compliant resins and meet NSF/ANSI Standard 51. Vacuum rating is 25" Hg @ 72° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Nuts include a sleeve, a Type 302 stainless steel gripping ring, and a Buna-N O-ring. Note: The nuts for these fittings have a unique thread style that allows them to work only with the fittings shown below.

Tube supports (sold separately) are recommended for soft polyurethane tubing.

Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

Chemical-Resistant PFA Compression Tube Fittings

- Maximum Pressure: 125 psi @ 70° F
- Temperature Range: 0° to 350° F
- Tubing: Use with hard PFA (Shore D60) and PTFE (Shore D50-D65)

Made of PFA (perfluoroalkoxy), these fittings have the best chemical resistance of all the compression fittings we offer. Use with hydrochloric and sulfuric acids, as well as with water, air, and oil. Fittings are semi-clear white and are made of FDA-compliant resins. They include a nut, an ETFE gripping ring, and a PTFE sleeve (ferrule).

Inline tees are also known as branch tees, and **through-wall straights** are also known as bulkhead couplings.

Connections: Compression or NPT threads.

Sanitary PVDF Compression Tube Fittings

- Maximum Pressure: 50 psi @ 70° F
- Temperature Range: –40° to 275° F
- Tubing: Use with soft, firm, and hard polypropylene, polyethylene, and nylon

These fittings are made of FDA and USDA compliant resins, which makes them a good choice for food and beverage. You can also use them with air and oil. Fittings are made of semi-clear white PVDF (polyvinylidene fluoride), which is also known as Kynar. They include a nut with a built-in sleeve (ferrule), so there's no need to disassemble the fittings for installation. Sterilize with steam (autoclaving).

Inline tees are also known as branch tees. **Tube supports** (sold separately) are recommended for polypropylene, polyethylene, and nylon tubing with a hardness of Shore A70 or less.

Connections: Compression or NPT threads.

D.O.T. Brass Compression Fittings for Nylon Tubing

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –40° to 200° F
- Tubing: Use with hard nylon

These fittings meet Department of Transportation FMVSS 571 criteria for air brake lines. Use with air only. Fittings come with a nut and a brass sleeve (ferrule).

Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

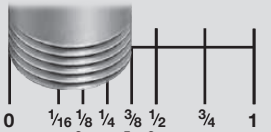
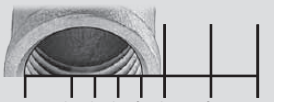
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Brass Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –65° to 250° F
- Tubing: Use with copper, aluminum, firm and hard polypropylene, polyethylene, and nylon

Also known as flareless fittings, these brass fittings are the most commonly used compression tube fitting. They are UL listed for flammable liquids, and can also be used with air, water, oil, and drinking water (where noted).

Standard fittings must be disassembled for installation. They meet SAE J512 and include a nut and a sleeve (ferrule). **Plastic sleeves** (sold separately) are required for plastic tubing.

Easy-align fittings have a sleeve built into the nut, so they are always positioned for correct installation. They do not have to be disassembled to install and can be used on plastic tubing without changing the sleeve material.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees.

Long nuts have extra surface area contacting the tubing for high-vibration applications. **Tube supports** (sold separately) are recommended for soft polypropylene and polyethylene tubing.

Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

3/8"	5220K212	2.52

Metric Brass Compression Tube Fittings

- Maximum Pressure: 1,087 psi @ 72° F
- Temperature Range: –40° to 212° F
- Use with copper and firm and hard polypropylene, polyethylene, and nylon

Sized for metric tubing, these brass fittings must be disassembled for installation. A nut and sleeve are included. Use with water, air, and oil.

Connections: Compression or NPT threads.

Tube-to-Threaded Pipe Adapters

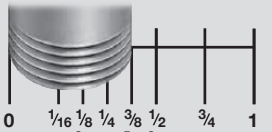
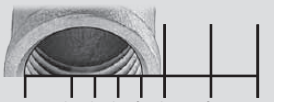
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Quick-Assembly Brass Compression Tube Fittings

- Maximum Pressure @ 72° F:
  With Plastic Tubing: 150 psi
  With Copper Tubing: 300 psi
- Temperature Range:
  With Plastic Tubing: 0° to 150° F
  With Copper Tubing: 0° to 175° F
- Tubing: Use with firm and hard polypropylene and polyethylene, except where noted; fittings with brass sleeves are also for use with copper and hard nylon

When convenience is key, choose these fittings that have the sleeve (ferrule) built into the nut. There's no need to remove the nut for assembly, and the sleeve is always positioned correctly for installation. Use with water, air, and oil. Fittings have a black acetal sleeve and also come with a tube support, except the fittings with 1/8" tube OD have a brass sleeve and no tube support.

Inline tees are also known as branch tees. **Tube supports** (sold separately) are for use with soft polypropylene and polyethylene tubing.

Connections: Compression or NPTF (Dryseal) threads, except 10-32 are UNF straight threads. NPTF threads are compatible with NPT threads.

High-Pressure Quick-Assembly Brass Compression Tube Fittings

- Maximum Pressure: 800 psi @ 72° F
- Temperature Range: –65° to 250° F
- Tubing: Use with copper, aluminum, and firm and hard polypropylene, polyethylene, and nylon

All the benefits of a quick-assembly fitting, plus the ability to withstand high pressure. The sleeve (ferrule) is built into the nut, so you don't have to disassemble the fitting for installation. Use with water, air, and oil.

Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

Brass Compression Tube Fittings with Tube Supports

- Maximum Pressure: 90 psi @ 73° F
- Temperature Range: –65° to 250° F
- Tubing: Use with firm (Shore A95) polyethylene

A built-in stainless steel tube support slips inside your tubing to prevent collapsing. Suitable for water, air, and oil, these fittings also meet SAE J512 standards for use in automotive air brake systems. In addition to the tube support, fittings include a brass nut and an acetal sleeve (ferrule).

Inline tees are also known as branch tees. **45° flared straights** connect to tubing flared to 45°.

Connections: Compression, NPT threads, or 45° flare.

Vibration-Resistant Brass Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –30° to 275° F
- Tubing: Use with copper, aluminum, steel, and stainless steel

For increased shock absorbency in high-vibration applications, reach for these brass fittings. They have a Buna-N rubber sleeve, which cushions the tubing and absorbs harsh vibrations over a wide temperature range. The sleeve aligns the tubing during installation and protects it from surface damage. Use with water, air, oil, lubricants, gasoline, and diesel fuel. Fittings also include a nut. Vacuum rating is 29.9" Hg @ 73° F.

Buna-N sleeves are black with a green stripe. For higher temperatures, use fittings with **fluoroelastomer sleeves.** They are black with a red stripe and withstand temperatures of –15° to 450° F.

Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

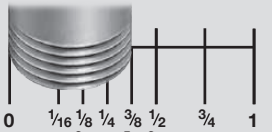
Compression Tube Fittings

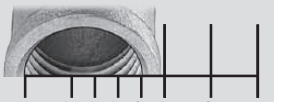
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about compression tube fittings, see page 173.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Metric Vibration-Resistant Steel Compression Tube Fittings

- Maximum Pressure: 4,500 psi @ 71°F, unless noted
- Temperature Range: –30° to 250°F
- Tubing: Use with seamless steel (DIN 2391) on page 161

When your application is causing unwanted vibrations, these fittings are your solution. Designed for metric tubing, they have a Buna-N rubber sleeve to absorb shock. Use with diesel fuel, cutting oil, and petroleum oil. Fittings are made of forged or bar stock steel with a zinc-plated finish. They include a nut with a gripping ring that bites into the tubing for a secure hold, and a Buna-N O-ring on the threaded end for a leak-tight connection. Fittings with BSPP (British Standard Pipe Parallel) threads also include a washer. Fittings meet DIN 3861. Vacuum rating is 28" Hg @ 72°F.

Easy-access 90° elbows are also known as banjo-style elbows; they have a hex head for easy adjustments in tight spaces. **Through-wall straights** are also known as bulkhead couplings.

Connections: Compression, BSPP, or metric straight threads.

Metric Steel Compression Tube Fittings

- Maximum Pressure: 3,600 psi @ 68°F
- Temperature Range: –40° to 390°F
- Tubing: Use with seamless carbon steel (DIN 2391) on page 161

Connect metric tubing to pipe with NPT, BSPT (British Standard Pipe Tapered), and metric tapered threads. Fittings are for use with hydraulic fluid, and are made of zinc-plated forged or bar stock steel. They include a nut and a sleeve (ferrule) that bites into the tubing for a secure, leak-resistant seal. Fittings meet DIN 2401, as well as ISO 8434 criteria for fluid power.

Through-wall straights are also known as bulkhead couplings.

Connections: Compression, NPT, BSPT, or metric tapered threads.

Steel and Type 316 Stainless Steel Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: Steel: –65° to 400° F Type 316 Stainless Steel: –425° to 1200° F
- Tubing: Use steel fittings with welded steel; use stainless steel fittings with welded and smoothed (drawn) and seamless Types 304 and 316 annealed stainless steel that meets ASTM A269

The leading edge of the sleeve (ferrule) bites into your tubing, creating a strong, leak-resistant seal—even in high-vibration applications. Use with water, air, and hydraulic fluid. Fittings meet SAE J514. They also include a nut.

Steel fittings are made of zinc-plated forged or bar stock 12L14 carbon steel. Connections: Compression or NPTF (Dryseal) threads, which are compatible with NPT threads.

Type 316 stainless steel fittings have a body and nut that are made of corrosion-resistant Type 316 stainless steel. The sleeve is made of 17-4 PH stainless steel. Connections: Compression or NPT threads.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

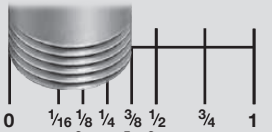
Compression & O-Ring Tube Fittings

For technical drawings and 3-D models, go to mcmaster.com.

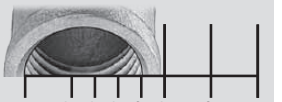
For information about selecting pipe size, see pages 2-3. For information about compression tube fittings, see page 173.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Miniature Compression Tube Fittings

- Maximum Pressure: See below
- Temperature Range: Brass: –40° to 250° F; Stainless Steel: –4° to 400° F
- Tubing: Use with welded and seamless stainless steel

The small thread size makes these fittings a good choice for compact applications. Plus, the fittings are sturdy enough to handle high-pressure conditions. Use with water, air, and hydraulic fluid. Fittings include a nut, sleeve (ferrule), and a synthetic rubber O-ring, which creates a tight connection. Vacuum rating is 25" Hg @ 72° F.

Nickel-plated brass fittings offer better corrosion resistance than unplated brass. O-ring is Buna-N. **Type 303 stainless steel fittings** offer good corrosion resistance. O-ring is fluoroelastomer.

Connections: Compression, UNF straight threads, or metric straight threads.

Extreme-Pressure Type 316 Stainless Steel Compression Tube Fittings

- Maximum Pressure: 15,000 psi @ 72° F
- Temperature Range: –425° to 1000° F
- Tubing: Use with 9926T extreme-pressure stainless steel (see page 153)

Made of extruded Type 316 stainless steel, these are the highest rated compression fittings we offer. Use with water, air, natural gas, oil, and hydraulic fluid. Fittings come with the sleeves (ferrules) built into the nut, so there's no need to remove the nut during installation. After inserting your tubing, finger tighten the nut, then wrench-tighten 1 1/2 turns. The nut has a molybdenum disulfide coating, which acts as a lubricant for easy installation. Fittings meet ANSI B31.3.

Connections: Compression or NPT threads.

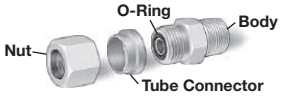
High-Pressure/Vacuum O-Ring Steel Tube Fittings

- Maximum Pressure: 6,000 psi @ 72° F
- Temperature Range: –30° to 250° F
- Tubing: Use with welded and seamless steel and stainless steel



A Buna-N O-ring minimizes leaks in high-pressure and vacuum applications. Also known as O-ring face seal fittings, they are for use with water, air, and hydraulic fluid. To install, weld the tube connector to the tubing, then mate the tube connector to the body and screw on the nut. As the nut is tightened, the tube connector compresses the O-ring, creating a tight seal. The flat face-to-O-ring connection allows you easy access to your line. Fittings are made of zinc-plated forged steel and include a Buna-N O-ring; the tube connector and nut are sold separately. Fittings meet ANSI/ASME B31.3 and SAE J1453. Vacuum rating is 28" Hg @ 72° F.

Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

Also Available: Type 316 stainless steel fittings. Please ask for 6407T1 and specify the corresponding part number from the choices listed below.

Quick-Assembly Instrumentation Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –425° to 1200° F
- Tubing: Use with welded and seamless Types 304 and 316 stainless steel that meets ASTM A213, A249, or A269

Save yourself time and hassle—these stainless steel fittings have one sleeve (ferrule) instead of two for faster assembly. Plus, the nut has a molybdenum disulfide coating that acts as a lubricant for easy installation. Use with air, water, steam, oil, natural gas, gasoline, hydraulic fluid, and alcohol. Fittings are made of forged or bar stock Type 316 stainless steel for excellent strength and corrosion resistance. They are compatible with Parker CPI fittings.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Tube stems insert into the end of your tube fitting.

Connections: Compression or NPT threads.

Quick-Assembly Brass Instrumentation Tube Fittings

Brass fittings offer good corrosion resistance. Pressure range is 800 to 3,800 psi @ 72° F. Temperature range is –40° to 350° F. Use with seamless copper tubing that meets ASTM B68, B75, or B88.

For pricing, specifications such as pipe size, and a list of common applications, please go to mcmaster.com and search for 7473T1.

To Order: Please ask for 7473T1 and specify the corresponding part number from the stainless steel choices listed above.

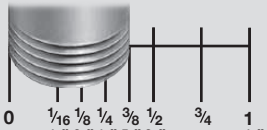
Yor-Lok Tube Fittings

For technical drawings and 3-D models, go to mcmaster.com.

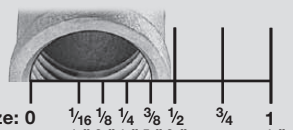
For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

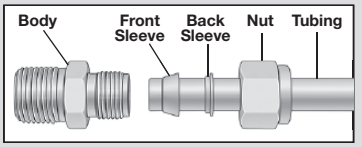


Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

About Yor-Lok Tube Fittings



Also known as instrumentation fittings, Yor-Lok fittings are designed to handle higher pressures than other types of compression fittings. Use them with metal tubing. They come with a body, nut, and front and back sleeves (double ferrules); two sleeves provide extra gripping power and ensure a leak-free, gas-tight seal. To install, insert your tubing into the body until the tubing bottoms out, then finger-tighten the nut. Continue tightening the nut using a wrench. For 1/16", 1/8", and 3/16" fittings, a 3/4 wrench turn is all you need; all other sizes need a 1 1/4 wrench turn.

Type 316 Stainless Steel Yor-Lok Tube Fittings

- Maximum Pressure: See chart at right, unless otherwise stated
- Temperature Range: –425° to 1200° F
- Tubing: Use with welded and seamless Types 304, 304L, 316, and 316L stainless steel that meets ASTM A213, A249, or A269

When you need excellent corrosion resistance choose these fittings. They have front and back sleeves (double ferrules) that form a leak-resistant seal. Use with air, water, steam, oil, natural gas, gasoline, and hydraulic fluid. Fittings are made of forged or bar stock Type 316 stainless steel and include a nut. They are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Sterilize with steam (autoclaving).

Cleaned and Bagged Fittings—Individually bagged to prevent moisture and dirt from contaminating the inside.

Tube-to-Flange Pipe Adapters—Maximum pressure @ 72° F is 275 psi.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees. **Through-wall straights** are also known as bulkhead couplings and require a hole through the wall that is 1/4" larger than the tube OD. **Flange end straights** connect with ANSI Class 150 flanges. **Sanitary straights** are also known as tri-clamps. Max. pressure @ 72° F is 2,200 psi for 1/2" and 3/4" flange OD and 1,500 psi for 1" and 1 1/2" flange OD.

Tube stems insert into the end of your tube fitting. **Tube stems with sleeve** allow you to connect two fittings closely together by replacing the sleeves in one fitting.

Connections: Compression or NPT threads, unless noted.

(Continued on following page)

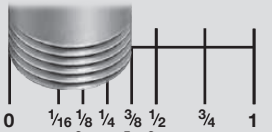
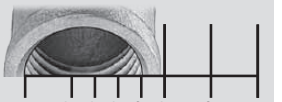
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Type 316 Stainless Steel Yor-Lok Tube Fittings *(Continued from previous page)*

- Maximum Pressure: See chart on page 184, unless noted
- Temperature Range: –425° to 1200° F, unless noted
- Tubing: Use with welded and seamless Types 304, 304L, 316, and 316L stainless steel that meets ASTM A213, A249, or A269

When you need excellent corrosion resistance choose these fittings. They have front and back sleeves (double ferrules) that form a leak-resistant seal. Use with air, water, steam, oil, natural gas, gasoline, and hydraulic fluid. Fittings are made of forged or bar stock Type 316 stainless steel and include a nut. They are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Sterilize with steam (autoclaving).

Inline tees are also known as branch tees. **Tube stems** insert into the end of your tube fitting. **Tube supports** are not rated for pressure. They are recommended for soft plastic tubing.

★Maximum pressure is 350 psi. Temperature range is -320° to 1200° F

Super-Corrosion-Resistant and Acid-Resistant Yor-Lok Tube Fittings

Hastelloy (Alloy C-276) is more corrosion resistant than Type 316 stainless steel. Monel (Alloy 400) is suitable for hydrofluoric and sulfuric acids.

For pricing, specifications such as pipe size, and a list of common applications, go to mcmaster.com and search for the part number below.

British Standard Yor-Lok Tube Fittings

- Maximum Pressure: See below; based on 0.035″ tube wall thickness
- Temperature Range: BSPT: –425° to 1200° F; BSPP: –15° to 400° F
- Tubing: Use with seamless Types 304 and 316 annealed stainless steel that meets ASTM A269

Use these fittings to connect tubing to BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel) threads. Also known as instrumentation fittings, they have front and back sleeves (double ferrules), which create a tight, leak-resistant seal against high pressure conditions. Fittings include a nut, and the male BSPP threads also have a fluoroelastomer O-ring. Use with air, water, oil, natural gas, solvents, and gasoline; all BSPT fittings and BSPP female fittings can also be used with steam. Fittings are made of forged or bar stock Type 316 stainless steel and offer excellent strength and durability in corrosive environments. They are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Straights meet ASTM A479 and elbows meet ASTM A182.

Connections: Compression, BSPT, or BSPP threads.

For Tube OD	Pipe Size	Max. psi @ 72°F	BSPT Threads: Straights, Male Pipe		BSPT Threads: Straights, Female Pipe		BSPT Threads: 90° Elbows, Male Pipe		BSPP Threads: Straights, Male Pipe		BSPP Threads: Straights, Female Pipe		BSPP Threads: 90° Elbows, Male Pipe

Metric Yor-Lok Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –425° to 1200° F
- Tubing: Use with seamless or welded Types 304, 304L, 316 and 316L stainless steel that meets ASTM A213, A249, or A269

Sized specifically for metric tubing, these stainless steel fittings have excellent strength and corrosion resistance. The two-sleeve (double ferrule) design ensures a leak-tight connection in high pressure and high vacuum applications. Use with air, water, steam, oil, natural gas, solvents, and gasoline. Also known as instrumentation fittings, they are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Fittings include a nut and are made of forged or bar stock Type 316 stainless steel. Sterilize with steam (autoclaving). Vacuum rating is 29.8″ Hg @ 70° F.

Connections: Compression or NPT threads.

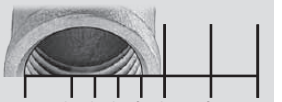
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Brass and Steel Yor-Lok Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: Brass: –40° to 400° F Steel: –20° to 800° F
- Tubing: Brass: Use with seamless copper that meets ASTM B68, B75, or B88 Steel: Use with seamless carbon steel that meets ASTM A179

With the highest pressure ratings of any brass or steel compression fittings we offer, these fittings have front and back sleeves (double ferrules) that form a strong, leak-tight seal around the outside of your tubing. Use with air, oil, hydraulic fluid, gasoline, and diesel fuel; brass fittings can also be used with water. Also known as instrumentation fittings, they are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Fittings include a nut. They meet ANSI/ASME B31.3.

Brass fittings are made of forged or bar stock yellow brass and offer good corrosion resistance.

Steel fittings are made of zinc-plated steel that is forged or bar stock. They have a higher pressure rating than stainless steel and brass fittings and provide good strength and durability in noncorrosive environments.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Connections: Compression or NPT threads.

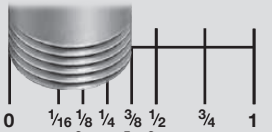
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

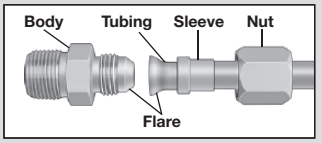
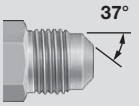
About Flared Tube Fittings

Flared tube fittings provide a tight seal on metal tubing that has been flared with a flaring tool. A complete fitting consists of a body, nut, and sleeve (ferrule). To install, slide the nut and sleeve onto the tubing, flare the end of the tubing, then tighten the nut onto the body and sleeve.





Flared tube fittings come with a 37° flare or a 45° flare.

37° Flare—The most popular style of flare, these fittings are often used in hydraulic applications. They withstand higher pressure than 45° flared fittings.

45° Flare—Commonly used in refrigeration applications, these fittings are made of brass and are for lower-pressure applications than 37° flared fittings.

Gauge for 37° and 45° Flared Tube Fittings—Use this pocket-size gauge to determine the angle of your flared fitting.

50715K2 ..... $11.28

Precision AN Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure: 3,000 psi @ 72° F
- Temperature Range: –320° to 1200° F, except Type 316 Stainless Steel with PTFE Seal are –320° to 500° F
- Tubing: Use with flareable stainless steel

Tighter tolerances set these fittings apart from other 37° flared fittings. The tube end/nut threads are 3A and 3B threads, which adhere to higher tolerances than all other tube end/nut threads. Use with water, air, oil, and hydraulic fluid. Fittings are made to exact AS (formerly AN) specifications and meet SAE AS4841 and ASTM A380, unless noted. They are made of forged or bar stock stainless steel. The nuts and sleeves are sold separately.

Type 304 offers good corrosion resistance, and **Type 316** provides excellent corrosion resistance. **Inline tees** are also known as branch tees, and **through-wall fittings** are also known as bulkhead couplings. **Tube end reducers** require two nuts for assembly.

Threaded Connections: Tube end/nut threads are UNJF straight threads, except 1 1/16"-12 and 1 5/16"-12 are UNJ straight threads. Pipe ends have ANPT threads, which are compatible with NPT threads.

For Tube OD	Tube End/Nut Thread

Type 316 Stainless Steel Fittings with PTFE Seal

The seal on these fittings provides an extra-strong connection in high-vibration applications. Fittings do not meet SAE AS4841.

British Standard Type 316 Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: BSPT: –425° to 1200° F BSPP: –15° to 400° F
- Tubing: Use with flareable seamless and welded Type 304 and Type 316 stainless steel that meets ASTM A213, A249, or A269

Connect to 37° flared tubing with BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel) threads. Fittings are for use with water, air, natural gas, oil, and solvents. Also known as JIC (Joint Industrial Council) fittings and hydraulic fittings, they are made of forged or bar stock Type 316 stainless steel for use in corrosive environments. Fittings meet SAE J514 and MIL-F-18866. The nuts and sleeves are sold separately on page 193, unless noted.

Straights with BSPP threads include a rubber seal bonded to a metal washer. **90° elbows with BSPP threads** include an O-ring seal, metal washers, and a nut.

Threaded Connections: Tube end/nut threads are UNF straight threads. Pipe ends have BSPT or BSPP threads.

For Tube OD	Pipe Size	Tube End/Nut Thread	BSPT Threads: Max. psi @ 72° F	Straights, Male Pipe		90° Elbows, Male Pipe		BSPP Threads: Max. psi @ 72° F	Straights, Male Pipe		90° Elbows, Male Pipe

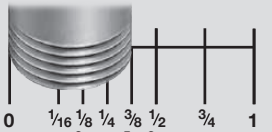
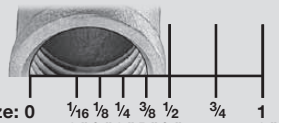
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Type 316 Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –425° to 1200°F
- Tubing: Use with flareable seamless and welded Type 304 and Type 316 stainless steel that meets ASTM A213, A249, or A269

Achieve a tight metal-to-metal seal in highly corrosive environments. Fittings are for use with water, air, natural gas, isopropyl alcohol, and phosphoric acid. Also known as JIC (Joint Industrial Council) fittings, they are made of forged or bar stock Type 316 stainless steel. Fittings meet SAE J514 and ISO 8434. The nuts and sleeves are sold separately, unless noted.

Cleaned and Bagged Fittings—Individually bagged to prevent moisture and dirt contamination.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings. Fittings with **swivel nut** have an adjustable nut attached that rotates 360° until tightened. **Tube end reducers** require two nuts for assembly.

Threaded Connections: Tube end/nut threads are UNF straight threads. Pipe ends have NPT threads, unless noted.

Also Available: Tube-to-threaded male pipe straights, 45° elbows, and 90° elbows with PTFE thread sealant. Available in the sizes shown below for 3/4" tube OD and smaller. Temperature range is –425° to 450°F. Please ask for 50715K888 and specify shape, tube OD, and pipe size.

British Standard and Metric Steel 37° Flared Tube Fittings

- Maximum Pressure: 4,500 psi @ 72°F
- Temperature Range: –40° to 212°F
- Tubing: Use with flareable SAE seamless carbon steel

Connect flared tubing to BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), and metric straight threads. Also known as JIC (Joint Industrial Council) fittings and hydraulic fittings, these are for use with oil and hydraulic fluid. They are made of forged or bar stock zinc-plated steel and meet SAE J514 and DIN 3852. The nuts and sleeves are sold separately on page 194, unless noted.

Fittings with BSPP threads and **metric straight threads** include an O-ring seal and a washer. **90° elbows with BSPP threads** also include a nut.

Threaded Connections: Tube end/nut threads are UNF straight threads. Pipe ends have BSPT, BSPP, or metric straight threads.

For Tube OD	Tube End/Nut Thread	BSPT Threads: Pipe Size	Straights, Male Pipe		BSPP Threads: Pipe Size	Straights, Male Pipe		90° Elbows, Male Pipe		Metric Straight Threads: Thread Size	Straights, Male Pipe

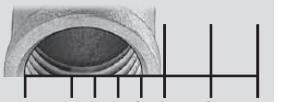
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Brass and Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: Brass: –40° to 400° F Steel: –60° to 400° F
- Tubing: Use brass with flareable seamless copper made to ASTM B75; use steel with flareable welded and seamless steel

Choose brass when you need good corrosion resistance, and steel for good strength and durability. These fittings mate with 37° flared tubing for a tight metal-to-metal seal. They are also known as JIC (Joint Industrial Council) fittings and hydraulic fittings. The nuts and sleeves are sold separately.

Brass fittings are made of forged or bar stock yellow brass. They meet SAE J514, ISO 8434, and MIL-F-18866. Use with air, water, acetone, fuel oil, and mineral oil.

Threaded Connections: Tube end/nut threads are UNF straight threads. Pipe ends have NPT threads.

Steel fittings are made of forged or bar stock zinc-plated steel. They meet SAE J514. Vacuum rating is 28" Hg @ 72° F. Use with air, acetone, fuel oil, and mineral oil.

Threaded Connections: Tube end/nut threads are UNF straight threads, except 1 1/16"-12 and 1 5/16"-12 are UN straight threads. Pipe ends have NPTF (Dryseal) threads, which are compatible with NPT threads.

Lightweight Aluminum 37° Flared Tube Fittings

- Maximum Pressure @ 72° F: 3,000 psi, except fittings for 1″ tube OD are 1,500 psi
- Temperature Range: –60° to 400° F
- Tubing: Use with aluminum

Made of aluminum, these fittings are lighter than other 37° flared fittings. Also known as JIC (Joint Industrial Council) fittings, they are for use with water, air, hydraulic fluid, coolants, and gasoline. They have a blue anodized finish, except plugs, which have a red finish. The nuts and sleeves are sold separately.

Inline tees are also known as branch tees.

Threaded Connections: Tube end/nut threads are UNJ straight threads. Pipe ends have NPT threads.

Aluminum Banjo 37° Flared Tube Fittings

- Maximum Pressure: Not rated
- Temperature Range: Not rated
- Tubing: Use with flareable aluminum, stainless steel, and steel

The hex head on these fittings permits easy connections in cramped spaces. Plus, the adapter swivels until tightened. Use with water, air, oil, and hydraulic fluid. Fittings are made of lightweight aluminum with a blue anodized finish, except bolts are red and washers are not anodized.

Fitting assemblies include adapter, bolt, sleeve, and nut with two washers.

Threaded Connections: UNF straight threads.

Supported 45° Brass Flared Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –65° to 250° F
- Tubing: Use with flareable aluminum, brass, copper, and welded steel

The flared end of the fitting nests inside the fitting body, providing extra support to your tubing. To assemble, place the nut on the tubing, flare the end of the tubing, then insert the tubing into the fitting and tighten the nut. Also known as inverted 45° flared fittings, they are for use with water, air, methane, oil, diesel fuel, and refrigerant. Fittings are UL listed for flammable liquid and gas and meet SAE J512, unless noted. Nuts are sold separately.

Threaded Connections: Tube end/nut threads are UN straight threads. Pipe ends have NPTF (Dryseal) threads, which are compatible with NPT threads.

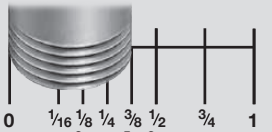
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Quick-Assembly Brass 45° Flared Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –65° to 250°F
- Tubing: Use with flareable aluminum, brass, copper, and welded steel

No sleeve is required to assemble these fittings, which makes for a faster, more convenient installation compared to 37° flared tube fittings. Also known as refrigeration or SAE fittings, these fittings are for use with water, air, oil, methane, diesel fuel, and refrigerant. They meet SAE J512 and J513 and are UL listed for flammable liquid and gas, unless noted. Fittings are made of brass for good corrosion resistance. The nuts are sold separately.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees. **Caps** come with a copper flare gasket. **Long nuts** have extra surface area contacting the tubing for high-vibration applications.

Threaded Connections: Tube end/nut threads are UN straight threads. Pipe ends have NPTF (Dryseal) threads, which are compatible with NPT threads.

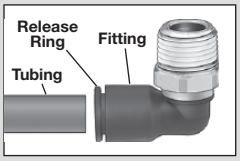
About Push-to-Connect Tube Fittings



Also known as instant fittings, these fittings provide a quick and easy way to connect and disconnect plastic and soft metal tubing. To install, insert the tubing into the fitting until it stops. An internal gripping ring and O-ring hold the fitting secure and form a tight seal around the outside of the tubing. To disconnect, push on the release ring and pull the tubing out of the fitting.

Applications

	Pg.		Pg.
Air	197-207	For Copper Tubing	218-219
Air and Water	208-211	Food and Beverage	220
Gases	212-213	Chemicals	221
Oil	213-214	High Pressure	221
Drinking Water	215-218		

Push-to-Connect Tube Fittings for Air

- Maximum Pressure: 290 psi @ 70°F, unless noted
- Temperature Range: –4° to 175°F, unless noted
- Tubing: Use with firm (Shore A95) polyurethane, firm (Shore D44) polyethylene, and hard (Shore D62) nylon

The most popular choice for air applications, these fittings are lightweight, yet offer excellent strength. They have a black, glass-filled nylon body, unless noted, and a black release ring. The threads are nickel-plated brass, unless noted. Tapered male threads (NPT and BSPT) have a PTFE thread sealant, and straight male threads (UNF and metric) have an O-ring. Vacuum rating is 28″ Hg @ 70°F. Fittings meet ISO 14743.

Easy-access 90° elbows are also known as banjo-style elbows; they have a hex head for easy adjustment in tight spaces.

Threaded Connections: NPT threads, except 10-32 are UNF straight threads and M7 are metric straight threads.

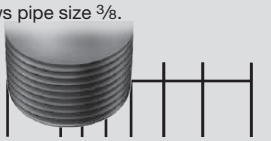
(Continued on following page)

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Push-to-Connect Tube Fittings for Air *(Continued from previous page)*

- Maximum Pressure: 290 psi @ 70° F, unless noted
- Temperature Range: –4° to 175° F, unless noted
- Tubing: Use with firm (Shore A95) polyurethane, firm (Shore D44) polyethylene, and hard (Shore D62) nylon

The most popular choice for air applications, these fittings are lightweight, yet offer excellent strength. They have a black, glass-filled nylon body, unless noted, and a black release ring. The threads are nickel-plated brass, except manifolds have aluminum threads. Tapered male threads (NPT and BSPT) have a PTFE thread sealant, and straight male threads (UNF and metric) have an O-ring. Vacuum rating is 28" Hg @ 70° F. Fittings meet ISO 14743.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall fittings** are also known as bulkhead couplings.

Tube stems insert into the end of your tube fitting. **Straights with shut-off** have a check valve that shuts off the flow when the tubing is separated from the fitting. **Plug-in through-wall straights** can be inserted directly into a drilled hole with no need for a nut.

Threaded Connections: NPT threads, except 10-32 are UNF straight threads and the tube-to-threaded pipe adapters on page 199 are BSPT threads.

- Temperature Range: –4° to 175° F, unless noted
- Tubing: Use with firm (Shore A95) polyurethane, firm (Shore D44) polyethylene, and hard (Shore D62) nylon

The most popular choice for air applications, these fittings are lightweight, yet offer excellent strength. They have a black, glass-filled nylon body and a black release ring, except the plugs are red. The threads are nickel-plated brass. Tapered male threads (NPT and BSPT) have a PTFE thread sealant, and straight male threads (UNF and metric) have an O-ring. Vacuum rating is 28" Hg @ 70° F. Fittings meet ISO 14743.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees. **Tube stems** insert into the end of your tube fitting.

Fittings with DIN rail mount attach to 35 mm DIN 3 rails. Use **tube and fitting clips** to align your tubing and fittings.

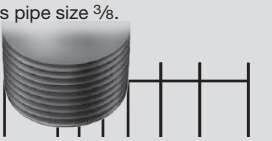
(Continued on following page)

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Metric Push-to-Connect Tube Fittings for Air *(Continued from previous page)*

- Maximum Pressure: 290 psi @ 70° F
- Temperature Range: –4° to 175° F
- Tubing: Use with firm (Shore A95) polyurethane, firm (Shore D44) polyethylene, and hard (Shore D62) nylon

Not only are these fittings the top choice for air applications, they're also designed for use with metric tubing. Fittings are lightweight, yet strong. They have a black, glass-filled nylon body and a black release ring, unless noted. The threads are nickel-plated brass, except manifolds have aluminum threads. Tapered male threads (NPT and BSPT) have a PTFE thread sealant, and straight male threads (BSPP and metric) have an O-ring. Vacuum rating is 28" Hg @ 70° F. Fittings meet ISO 14743.

Tube stems insert into the end of your tube fitting. **Easy-access 90° elbows** are also known as banjo-style elbows; they have a hex head for easy adjustment in tight spaces, except metric straight threads which have a screwdriver slot.

Inline tees are also known as branch tees, **through-wall fittings** are also known as bulkhead couplings, and **right angle tees** are also known as run tees.

Threaded Connections: BSPT, BSPP, metric straight, or NPT threads.

(Continued on following page)

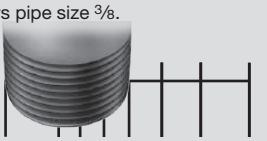
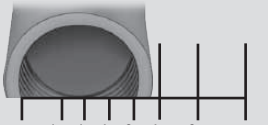
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Metric Push-to-Connect Tube Fittings for Air *(Continued from previous page)*

- Maximum Pressure: 290 psi @ 70° F
- Temperature Range: –4° to 175° F
- Tubing: Use with firm (Shore A95) polyurethane, firm (Shore D44) polyethylene, and hard (Shore D62) nylon

Not only are these fittings the top choice for air applications, they're also designed for use with metric tubing. Fittings are lightweight, yet strong. They have a black, glass-filled nylon body and a black release ring, unless otherwise stated. The threads are nickel-plated brass. Tapered male threads (NPT and BSPT) have a PTFE thread sealant, and straight male threads (BSPP and metric) have an O-ring. Vacuum rating is 28" Hg @ 70° F. Fittings meet ISO 14743, except 16 mm plug.

Tube stems insert into the end of your tube fitting. **Inline tees** are also known as branch tees, and **right angle tees** are also known as run tees. **Plugs** are red, except 16 mm is nickel-plated brass.

High-Pressure D.O.T. Push-to-Connect Tube Fittings for Air

- Maximum Pressure: 250 psi @ 70° F
- Temperature Range: –40° to 200° F
- Tubing: Use with D.O.T. nylon that meets SAE J844 (see page 141)

The combination of brass and glass-filled nylon gives these fittings excellent strength—and the ability to withstand higher pressures than other push-to-connect D.O.T. fittings. Commonly used in air brake systems, these fittings meet Department of Transportation FMVSS 571 criteria for low-temperature applications. Fittings have brass threads and a black, glass-filled nylon body, unless noted. Fittings also have an internal tube support to ensure maximum flow. Vacuum rating is 28" Hg @ 70° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Threaded Connections: NPT threads.

D.O.T. Brass Push-to-Connect Tube Fittings for Air

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –40° to 212° F
- Tubing: Use with D.O.T. nylon that meets SAE J844 (see page 141)

Commonly used in air brake lines, these fittings meet Department of Transportation FMVSS 571 criteria for low-temperature applications. Fittings are made of brass; plugs are nylon. Fittings have an internal tube support to ensure maximum flow. The threads have a sealant applied to resist leaks. Vacuum rating is 28" Hg @ 72° F.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees.

Threaded Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

Manifolds with Push-to-Connect Tube Fittings for Air

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –10° to 200° F
- Tubing: Use with firm and hard polyethylene and nylon, and firm (Shore A95) polyurethane

Run multiple lines from one distribution point. Manifolds have an anodized aluminum body for excellent corrosion resistance, and the fittings are made of brass. Block off any unused outlets with a plug.

Threaded Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

6 Outlets

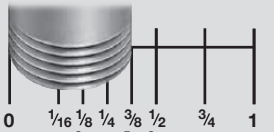
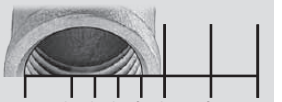
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8″): 0 1/4″ 3/8″ 1/2″ 5/8″ 3/4″ 1″ 1 1/4″



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8″): 0 1/4″ 3/8″ 1/2″ 5/8″ 3/4″ 1″ 1 1/4″

Brass and Nylon Push-to-Connect Tube Fittings for Air

- Maximum Pressure @ 73° F:
  Brass: 300 psi
  Nylon: 150 psi
- Temperature Range:
  Brass: 0° to 200° F
  Nylon: 0° to 150° F
- Tubing: Use with firm and hard polyethylene, polypropylene, and nylon

Choose these fittings when you need good corrosion resistance, as well as exceptional strength. The tube stem straights and plugs are made of black nylon (unless noted), and are designed for use with brass fittings. All fittings have a green acetal release ring. The threads have a sealant applied to minimize leaks, except the 10-32 size has no sealant.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: NPTF (Dryseal) threads, except 10-32 are UNF straight threads. NPTF threads are compatible with NPT threads.

Metric Push-to-Connect Tube Fittings with Shut-Off for Air

- Maximum Pressure @ 70° F: 145 psi
- Temperature Range: 25° to 140° F
- Tubing: Use with firm and hard (Shore A91-A97) polyurethane and hard (Shore D60-95) nylon

A built-in shut-off valve stops airflow when the fittings are disconnected from tubing. Fittings have a black polybutylene body, unless noted. The release ring is blue. Threads and tube stems are nickel-plated brass. The threads have a sealant applied to minimize leaks, except the M5 size has an O-ring.

Through-wall straights are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: BSPT (British Standard Pipe Taper) threads, except M5 are metric straight threads.

Rotating Push-to-Connect Tube Fittings for Air

- Maximum Pressure: 145 psi @ 72° F
- Temperature Range: 23° to 140° F
- Tubing: Use with firm and hard (Shore A88-A97) polyurethane and hard nylon

Steel ball bearings allow these fittings to rotate 360° degrees—even after they're tightened. A special seal reduces friction to allow continuous rotation. Fittings have a light gray polybutylene body, which offers excellent strength. Fittings with inch sizes have a red release ring, and fittings with metric sizes have a blue release ring. Threads are nickel-plated brass. The NPT and BSPT threads have a PTFE thread sealant applied to minimize leaks. Vacuum rating is 29.5" Hg @ 72° F.

Threaded Connections: NPT, BSPT (British Standard Pipe Taper), or metric tapered threads, except 10-32 are UNF straight threads.

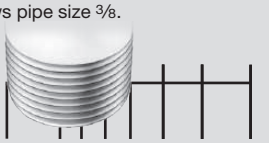
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Push-to-Connect Tube Fittings for Air and Water

- Maximum Pressure: 145 psi @ 72° F
- Temperature Range: 32° to 104° F
- Tubing: Use with firm and hard (Shore A88-A95) polyurethane and hard nylon

Because these fittings won't absorb moisture, they're a good fit for both air and water applications. Fittings have a light gray polybutylene body, unless noted. Inch sizes have an orange release ring, and metric sizes have a gray release ring, unless noted. Vacuum rating is 29.53" Hg @ 72° F, except tube-to-tube metric manifolds are not rated for vacuum. NPT and BSPT male threads have a PTFE thread sealant, and UNF and metric male threads have an O-ring.

Straights with hex socket have an internal socket, so you can tighten the threads with a hex key.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Threaded Connections: NPT, BSPT, UNF straight, or metric straight threads.

To Order: For tube-to-threaded pipe adapters, please specify brass or nickel-plated brass threads.

(Continued on following page)

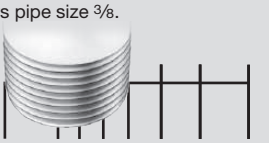
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8″): 0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1

Push-to-Connect Tube Fittings for Air and Water *(Continued from previous page)*

- Maximum Pressure: 145 psi @ 72° F
- Temperature Range: 32° to 104° F
- Tubing: Use with firm and hard (Shore A88-A95) polyurethane and hard nylon

Because these fittings won't absorb moisture, they're a good fit for both air and water applications. Fittings have a light gray polybutylene body, unless noted. Inch sizes have an orange release ring, and metric sizes have a gray release ring, unless noted. Vacuum rating is 29.53″ Hg @ 72° F, except metric manifolds are not rated for vacuum.

Through-wall straights are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Weld-Spatter-Resistant Push-to-Connect Tube Fittings for Air and Water

- Maximum Pressure: 145 psi @ 72° F
- Temperature Range: 32° to 105° F
- Tubing: Use with hard flame-retardant nylon (see 51185K on page 141) and firm polyurethane (see 9149T on page 137)

Designed for use in welding applications, these polybutylene fittings are flame resistant. They have a black polybutylene body, except the tube-to-threaded pipe straights and the through-wall straights have a brass body. All fittings have a green release ring. The threads are brass and have a PTFE thread sealant. Plugs are green. Vacuum rating is 29.53″ Hg @ 72° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings. **Protective covers** prevent spatter from getting between the tubing and fitting.

Threaded Connections: NPT or BSPT threads.

Universal Thread Push-to-Connect Tube Fittings for Air and Water

- Maximum Pressure: 145 psi @ 72° F
- Temperature Range: 32° to 104° F
- Tubing: Use with firm and hard (Shore A88-A97) polyurethane and hard nylon

A unique male thread allows these fittings to mate with NPT, NPTF (Dryseal), and British Standard (BSPT and BSPP) threads. The fittings have a gray polybutylene body, except the straights have a brass body. Inch sizes have an orange release ring, and metric sizes have a gray release ring. Threads are brass and come with an O-ring. Vacuum rating is 29.53" Hg @ 72° F.

Inline tees are also known as branch tees, and **right angle tees** are also known as run tees.

For antistatic metric fittings: Please ask for 5787K1 and specify the corresponding part number from the metric straights, elbows, and tees below. Fittings are flame resistant.

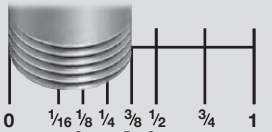
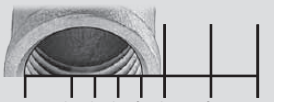
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Push-to-Connect Tube Fittings for Air and Gases

- Maximum Pressure @ 72° F: 260 psi, except plastic straights and plastic plugs are 150 psi
- Temperature Range: 0° to 175° F, except plastic straights and plastic plugs are 32° to 140° F
- Tubing: Use with firm (Shore D44) polyethylene, firm (Shore A95) polyurethane, and hard (Rockwell R78) nylon

The all-brass body allows for extra-strong connections, while the nickel plating provides increased corrosion resistance. Use with air and noncombustible, nonreactive gases. Fittings are made of nickel-plated brass, except the plastic straights and plastic plugs are made of black polybutylene. The NPT and BSPT male threads have a thread sealant. Vacuum rating is 29.5" Hg @ 72° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Tube stems insert into the end of your tube fitting. **Easy-access 90° elbows** and **inline tees** are also known as banjo-style fittings; they have a hex head for easy adjustment in tight spaces.

Threaded Connections: NPT or BSPT threads, except 10-32 are UNF straight threads.

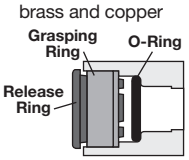
Drill-and-Install Push-to-Connect Inserts for Air, Water, and Oil

- Maximum Pressure @ 72° F:
  1/4" Tube OD: 230 psi
  3/8" and 1/2" Tube ODs: 150 psi
- Temperature Range: 33° to 150° F
- Tubing:
  Inserts for Plastic Surfaces: Use with firm and hard polyethylene and hard nylon
  Inserts for Metal Surfaces: Use with brass and copper



Insert shown fully installed

Create a push-to-connect junction in equipment and other plastic and metal surfaces with these inserts. They consist of a gray acetal release ring, a grasping ring for securing the tubing, and an O-ring. To install, drill a stepped hole in your surface, then push the insert components into place (complete installation instructions are included).

Inserts for plastic surfaces have an acetal grasping ring with stainless steel teeth on the outer diameter for extra gripping power. Acetal is moisture resistant, so these inserts are a good choice for high-humidity environments.

Inserts for metal surfaces have a brass grasping ring, which provides good corrosion resistance.

For Tube OD	Inserts for Plastic Surfaces		Inserts for Metal Surfaces

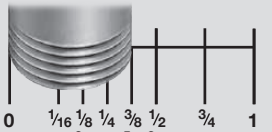
Push-to-Connect Tube Fittings

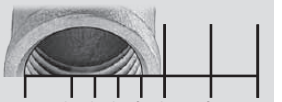
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about push-to-connect tube fittings, see pg. 197.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Push-to-Connect Tube Fittings for Air, Water, and Oil

- Maximum Pressure: 290 psi @ 70° F
- Temperature Range: 5° to 230° F
- Tubing: Use with firm (Shore A95) polyurethane, hard (Shore D45) polyethylene, and hard (Shore D62) nylon

Made of Type 316 stainless steel, these fittings have the best corrosion resistance of all the push-to-connect fittings we offer. Use with air, water, deionized water, oil, and ethyl alcohol. Fittings have a Type 303 stainless steel release ring.

Straights with hex socket are great for tight spaces; they have an internal socket, so you can tighten the threads with a hex key. **Through-wall straights** are also known as bulkhead couplings.

Threaded Connections: NPT threads, except 10-32 are UNF straight threads.

Clean Room Push-to-Connect Tube Fittings

- Maximum Pressure:
  Inch: 100 psi @ 68° F
  Metric: 140 psi @ 68° F
- Temperature Range: 32° to 104° F
- Tubing: Use with polypropylene

Double bagged and packed in a Class 1,000 clean room, these fittings are ready for use in applications where cleanliness is key. Use with air, water, and nitrogen. Fittings are made of white polypropylene and are semi-clear, so you can see into the fitting and monitor flow. Inch sizes have a semi-clear white release ring, and metric sizes have a green release ring. Vacuum rating is 29.52" Hg @ 72° F.

Inline tees are also known as branch tees.

Threaded Connections: BSPT (British Standard Pipe Taper) threads.

Metric Push-to-Connect Tube Fittings for Drinking Water

- Maximum Pressure:
  4 mm to 8 mm: 230 psi @ 68° F
  10 mm and 12 mm: 150 psi @ 68° F
- Temperature Range:
  33° to 150° F
- Tubing: Use with firm and hard polyethylene, hard nylon, brass, and copper

Not only do these fittings meet NSF/ANSI Standard 61 for use with drinking (potable) water, they also meet NSF/ANSI Standard 51 for use with food and beverage. The acetal material won't absorb moisture, so you can use these fittings in environments with high humidity. Sterilize fittings with non-acidic chemicals. Fittings are black, except plugs are red. The fittings with BSPP threads come with an O-ring to minimize leaks.

Inline tees are also known as branch tees, and **through-wall straights** are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: BSPT (British Standard Pipe Taper) or BSPP (British Standard Pipe Parallel) threads.

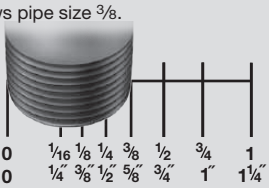
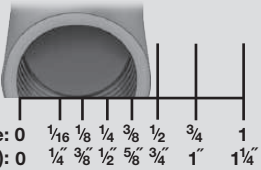
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Push-to-Connect Tube Fittings for Drinking Water

- Maximum Pressure @ 68° F: 5/32" to 5/16": 230 psi 3/8" to 5/8": 150 psi
- Temperature Range: 33° to 150° F
- Tubing: Use with nylon, polyethylene, brass, and copper

The most popular push-to-connect fittings for drinking (potable) water, these acetal fittings meet NSF/ANSI Standard 61. They also meet NSF/ANSI Standard 51 for use with food and beverage. Fittings are gray, except those marked with a ♣ come in your choice of gray or white. Gray fittings have a gray release ring, and white fittings have a white release ring.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Male 45° flared fittings connect to tubing or fittings that are flared to 45°. **Female 45° flared fittings** are also known as faucet connectors; they attach directly to a faucet threaded inlet or water line. **Tube supports** are recommended for soft nylon and polyethylene tubing. **Locking clips** secure the release ring to prevent the fitting from disconnecting. Color is red.

Threaded Connections: NPTF (Dryseal), BSPT (British Standard Pipe Taper), or UNF straight threads. NPTF threads are compatible with NPT threads.

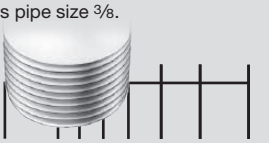
Push-to-Connect Tube Fittings

For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about push-to-connect tube fittings, see pg. 197.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Push-to-Connect Tube Fittings for Hot Drinking Water

- Maximum Pressure @ 73° F:
  1/4" Tube OD: 230 psi
  3/8" Tube OD: 190 psi
  1/2" Tube OD: 160 psi
- Temperature Range: 35° to 200° F
- Tubing: Use with firm (Shore D44) polyethylene

Not only do these glass-filled nylon fittings meet NSF/ANSI Standard 61 for drinking (potable) water, they are also formulated to withstand high temperatures. Fitting materials are FDA listed and meet NSF/ANSI Standard 51 for food and beverage. Fittings can also be used with air. They are white with a gray release ring. Vacuum rating is 28" Hg @ 72° F.

Threaded Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

Brass Push-to-Connect Tube Fittings for Copper Tubing

- Maximum Pressure: 200 psi @ 72° F
- Temperature Range: 32° to 200° F
- Tubing: Use with copper (Types K, L, and M), CPVC, and PEX

No need for flux, solder, or heat—these fittings connect to copper, CPVC, and PEX tubing with a single push. Fittings meet NSF/ANSI Standard 61 for use with drinking (potable) water, and can also be used with air. They are made of brass and have a black plastic release ring. Fittings come with a tube support for use with PEX tubing. Fittings are comparable with SharkBite® and TecTite™ fittings. A release clip or wrench (sold separately) is required to disconnect the fittings from the tubing.

Threaded Connections: NPT threads.

Lightweight Push-to-Connect Tube Fittings for Copper Tubing

- Maximum Pressure: 250 psi @ 75° F
- Temperature Range: 33° to 180° F
- Tubing: Use with copper (Types K, L, and M), CPVC, and PEX

Lighter and easier to handle than brass fittings for copper tubing, these fittings are made of polysulfone plastic. They connect to copper, CPVC, and PEX tubing with no flux, solder, or heat required. Fittings meet NSF/ANSI Standard 61 for drinking (potable) water. They come with a tube support for use with PEX tubing. Fittings have a white body and release ring.

Threaded Connections: NPT threads.

Push-to-Connect Tube Fittings for Stainless Steel Tubing

- Maximum Pressure @ 68° F:
  1/4" and 5/16": 230 psi
  3/8": 150 psi
- Temperature Range: 33° to 150° F
- Tubing: Use with stainless steel, nylon, polyethylene, and polyurethane

The hand-tightened nut and double O-ring work together to provide a strong seal on stainless steel tubing. Fittings are made of acetal. They meet NSF/ANSI Standard 61 for drinking (potable) water and NSF/ANSI Standard 51 for food and beverage. They can also be used with air. Fittings have a gray body and release ring. Sterilize with steam (autoclaving).

Washdown Push-to-Connect Tube Fittings

- Maximum Pressure: 290 psi @ 72° F
- Temperature Range: –4° to 250° F
- Tubing: Use with firm (Shore D44) polyethylene, firm (Shore A95) polyurethane, and hard (Shore D62) nylon

The nickel-plated coating allows these fittings to withstand repeated washdowns in food and beverage environments. Use with air and water. Nickel-plated brass offers better corrosion resistance than plain brass.

Inline tees are also known as branch tees. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: NPT or BSPT (British Standard Pipe Taper) threads.

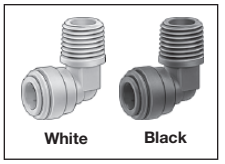
Push-to-Connect Tube Fittings for Food and Beverage



- Maximum Pressure: 150 psi @ 70° F
- Temperature Range: 33° to 140° F
- Tubing: Use with hard (Shore D50-D70) nylon, polyethylene, brass, and copper

Made of FDA-listed materials, these polypropylene fittings are the most commonly used push-to-connect fittings for food and beverage applications. Sterilize with non-acidic chemicals.

White Fittings—Meet NSF/ANSI Standard 51 for food and beverage.

Black Fittings—Are UV resistant.

Inline tees are also known as branch tees, and **through-wall straights** are also known as bulkhead couplings. **Straights with female UNS straight threads** are also known as faucet connectors; they attach directly to a faucet threaded inlet or water line. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: NPTF (Dryseal) threads, unless otherwise noted. NPTF threads are compatible with NPT threads.

To Order: Please specify white or black fittings.

- Temperature Range: –40° to 200° F
- Tubing: Use with nylon, polyethylene, and firm (Shore A90) polyurethane

By pairing an all-metal body with a built-in tube support, these fittings deliver the highest pressure rating of all our push-to-connect fittings. Fittings are made of nickel-plated brass for excellent corrosion resistance. Use with air, water, mineral oil, and grease. Vacuum rating is 29″ Hg @ 72° F.

Inline tees are also known as branch tees, **right angle tees** are also known as run tees, and **through-wall straights** are also known as bulkhead couplings.

Threaded Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

Chemical-Resistant Push-to-Connect Tube Fittings

- Maximum Pressure: 300 psi @ 73° F
- Temperature Range: 0° to 275° F
- Tubing: Use with polyethylene, firm (Shore A95) polypropylene, and nylon

When your line needs to handle harsh chemicals, choose these fittings—they have a PVDF (also known as Kynar) body and fluoroelastomer O-ring for excellent chemical resistance. Fittings can also be used with air and water. They have a semi-clear white body and gray release ring. Vacuum rating is 28″ Hg @ 72° F.

Inline tees are also known as branch tees, and **through-wall straights** are also known as bulkhead couplings. **Tube stems** insert into the end of your tube fitting.

Threaded Connections: NPTF (Dryseal) threads, which are compatible with NPT threads.

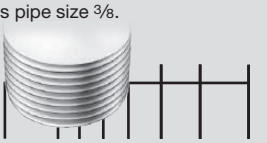
Quick-Disconnect Tube Couplings

For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

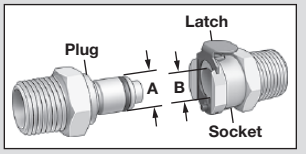
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

About Quick-Disconnect Tube Couplings



A complete quick-disconnect coupling consists of a plug and a socket with the same coupling size. To connect, insert the plug into the socket. This connection also permits 360° swiveling, so your tubing won't twist and kink. To disconnect, press the latch and remove the plug. All couplings have an O-ring.

Coupling size is the accepted industry designation, not the actual measured size. You can determine the actual dimension of the plug and socket by measuring the OD of the plug (A) and the ID of the socket (B).

Air and Water Quick-Disconnect Tube Couplings

- Maximum Pressure: 100 psi @ 70° F
- Temperature Range: –40° to 180° F
- Tubing: Compression Couplings: Use with firm and hard (Shore A82-D60) polyethylene and nylon Barbed Couplings: Use with soft and firm (Shore A68-A80) polyurethane

Because they're made of moisture-resistant acetal, these couplings are commonly used for air and water applications. Couplings are white. The sockets have a Type 316 stainless steel latch, except the food and beverage sockets have an acetal latch. Sterilize with chemicals. Vacuum rating is 24" Hg @ 70° F.

Plugs and sockets **with shut-off** have a valve that stops the flow when the coupling is separated. **Through-wall** couplings are also known as bulkhead couplings.

Miniature Couplings—Are twist-lock style. The sockets do not have a latch.
Food and Beverage Couplings—Materials are NSF/ANSI 169 listed.
Threaded Couplings—Have NPT threads.
Compression Couplings—Insert your tubing into the plug or socket and tighten the nut to form a seal.
Barbed Couplings—Insert the barbed end into your tubing and secure with a clamp (see pages 302-308). The couplings for 1/16" tube ID have a collar that limits the size of the tubing to a maximum 1/8" OD.

Note: For a complete coupling, order a set or a plug and a socket with the same coupling size.

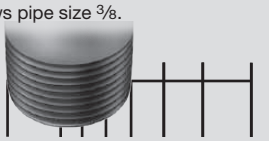
Quick-Disconnect Tube Couplings

For technical drawings and 3-D models, go to mcmaster.com.

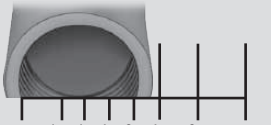
For information about selecting pipe size, see pgs. 2-3. For information about quick-disconnect tube couplings, see pg. 222.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Chemical-Resistant Quick-Disconnect Tube Couplings

- Maximum Pressure @ 70° F: 1/8 and 1/4 Coupling Sizes: 120 psi 3/8 Coupling Size: 60 psi
- Temperature Range: 32° to 160° F
- Tubing: Use with soft and firm (Shore A68-A80) polyurethane for barbed couplings

Choose these polypropylene couplings over acetal when running harsh substances through your line; they have better chemical resistance than our other plastic quick-disconnect couplings. Use with ammonia, ethanol, sodium carbonate, and 70% phosphoric acid, as well as air and water. Standard couplings have an EPDM O-ring, and food and beverage couplings have a Buna-N O-ring. Plugs and sockets with 1/8 and 1/4 coupling sizes are off-white, and the sockets have a stainless steel latch. Plugs and sockets with 3/8 coupling size are gray, and the sockets have a polypropylene latch. Sterilize with chemicals. Vacuum rating is 24" Hg @ 70° F.

Plugs and sockets **with shut-off** have a valve that stops the flow when the coupling is separated. **Through-wall** couplings are also known as bulkhead couplings.

Food and Beverage Couplings—Materials are NSF/ANSI 169 listed.

Threaded Couplings—Have NPT threads.

Barbed Couplings—Insert the barbed end into your tubing and secure with a clamp (see pages 302-308). Note: For a complete coupling, order a plug and a socket with the same coupling size.

Standard Plugs

High-Pressure Quick-Disconnect Tube Couplings

- Maximum Pressure: 250 psi @ 70° F
- Temperature Range: –40° to 180° F
- Tubing: Compression Couplings: Use with firm and hard (Shore A82-D60) polyethylene and nylon Barbed Couplings: Use with soft and firm (Shore A68-A80) polyurethane

Couplings are made of chrome-plated brass to withstand higher pressures than other quick-disconnect tube couplings. Use with air, oxygen, methanol, and ethylene glycol. Sockets have a stainless steel latch. Sterilize with chemicals. Vacuum rating is 24″ Hg @ 70° F.

Plugs and sockets **with shut-off** have a valve that stops the flow when the coupling is separated. **Through-wall** couplings are also known as bulkhead couplings.

Threaded Couplings— Have NPT threads.

Compression Couplings— Insert your tubing into the plug or socket and tighten the nut to form a seal.

Barbed Couplings— Insert the barbed end into your tubing and secure with a clamp (see pages 302-308).

Note: For a complete coupling, order a plug and a socket with the same coupling size.

Sanitary Plastic Quick-Disconnect Tube Couplings

- Maximum Pressure: 60 psi @ 72° F
- Temperature Range: –40° to 300° F
- Tubing: Use with silicone

Connect the flanged end of these couplings to quick-clamp stainless steel sanitary fittings and the barbed end to your tubing. Couplings are packed in a clean room and are bagged to prevent contamination. They are USP Class VI rated and are for use with food, beverage, and dairy. Couplings are disposable and are clear polysulfone plastic with an amber tint. They have a universal connection, so any of these plugs will connect to any of these sockets, regardless of tube size. Couplings do not have a shut-off valve. Vacuum rating is 29″ Hg @ 72° F.

Note: For a complete coupling, order a plug and a socket.

Plugs

For Tube OD	Flanged: Flange OD		Flanged

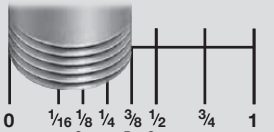
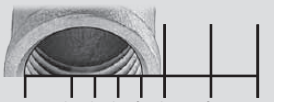
3/8″	9201T19	5.50

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"



Pipe Size: 0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"): 0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Corrosion-Resistant Quick-Disconnect Tube Couplings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: 0° to 150° F
- Tubing: Use with polyethylene and polypropylene

Protect your line from rust and deterioration with these all-metal fittings. *Type 316 stainless steel* couplings offer excellent corrosion resistance and are for use with oil, gasoline, caustic soda, water, and air. They have a fluorocarbon O-ring. *Chrome-plated brass* couplings have good corrosion resistance and are for use with enamel and air. They have a Buna-N O-ring.

Plugs and sockets **with shut-off** have a valve that stops the flow when the coupling is separated. **Through-wall** couplings are also known as bulkhead couplings.

Compression Couplings—Insert your tubing into the plug or socket and tighten the nut to form a seal.

Threaded Couplings—Have NPT threads.

Note: For a complete coupling, order a plug and a socket with the same coupling size. For these couplings, the coupling size is the same as the actual OD or ID.

Miniature Quick-Disconnect Tube Couplings

- Maximum Pressure: 700 psi @ 72° F
- Temperature Range: –30° to 250° F
- Tubing: Use with flexible plastic and rubber

A great solution for small, cramped spaces, these compact couplings don't have a latch, so they connect and disconnect with a push or a pull. Use with air. Couplings are made of nickel-plated brass. They have a universal connection, so any of these plugs will connect to any of these sockets, regardless of pipe or tube size.

Sockets **with shut-off** have a valve that stops the flow when the coupling is separated. **Through-wall** couplings are also known as bulkhead couplings.

Threaded Couplings—1/8 pipe size has NPT threads; 10-32 has UNF straight threads.

Barbed Couplings—Insert the barbed end into your tubing and secure with a clamp (see pages 302-308).

Note: For a complete coupling, order a plug and a socket.

Lightweight Quick-Turn Tube Couplings

- Maximum Pressure: 48 psi @ 72° F
- Temperature Range: Impact-Resistant and Clear Couplings: –20° to 200° F Semi-Clear Couplings: 35° to 150° F Chemical-Resistant Couplings: –8° to 248° F
- Tubing: Use with soft (Shore A40-A65) PVC and silicone

All couplings are lightweight plastic, so they're easier to handle than their metal counterparts. Also known as luer lock fittings, they connect with a half turn. They have a universal connection, so any of these plugs will connect to any of these sockets, regardless of thread or tube size. Couplings are open flow and do not have a shut-off valve, except caps are not open flow.

Impact-resistant couplings are white nylon. Use with air and water. **Semi-clear** couplings are white polypropylene and are for use with water. **Clear** couplings are polycarbonate and are for use with air. **Chemical-resistant** couplings are white PVDF (Kynar). Use with acetic acid, nitric acid, and bleach.

Threaded Couplings—Have UNF straight threads.

Barbed Couplings—Insert the barbed end into your tubing.

Note: For a complete coupling, order a plug and a socket.

Other Couplings: We offer impact-resistant nylon couplings with a shut-off valve. They are not compatible with the open flow couplings below. Please ask for 9198T1.

High-Strength Quick-Turn Tube Couplings

- Maximum Pressure: 30 psi @ 72° F
- Temperature Range: –100° to 350° F, except compression couplings are 32° to 350° F
- Tubing: Use with polyurethane, PVC, and silicone, except compression couplings are for use with stainless steel

The all-metal body gives these couplings better strength than plastic quick-turn tube couplings. Use with air. Also known as luer lock fittings, these connect with a half turn. They have a universal connection, so any of these plugs will connect to any of these sockets, regardless of pipe or tube size. Couplings are open flow and do not have a shut-off valve, except caps are not open flow.

Threaded Couplings—1/8 and 1/4 pipe sizes have NPT threads; 10-32 and 1/4"-28 have UNF straight threads.

Barbed Couplings—Insert the barbed end into your tubing and secure with a clamp (see pages 302-308).

Note: For a complete coupling, order a plug and a socket.

Other Couplings: We offer Type 316 stainless steel compression couplings for 1/64" to 5/64" tube ODs. Please ask for 5194K2.

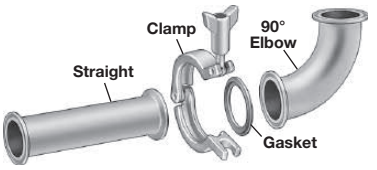
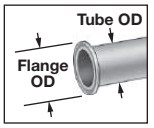
High-Polish Quick-Clamp Sanitary Tube Fittings

- Maximum Pressure: See clamps below
- Temperature Range: See gaskets below
- Tubing: Use with 4466K on page 151





The smooth finish on these fittings makes it easy to remove residue. Fittings are polished to a 23-32Ra finish on the ID and a 35Ra finish on the OD. They are 3-A certified for dairy (where noted) and can also be used with food, beverage, air, and water. Also known as tri-clamps, they disconnect by hand or wrench for quick access to your line. Choose *Type 304 stainless steel* for good corrosion resistance, and *Type 316L stainless steel* for excellent corrosion resistance. Sterilize with steam (autoclaving).

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket.

Clamps—Tighten *low* and *medium pressure clamps* by hand, and *high pressure clamps* with a wrench. *Low pressure* clamps can only use Buna-N gaskets, and *spring loaded clamps* can only use Buna-N and fluoroelastomer gaskets.

Quick-clamp to butt-weld tube adapters are also known as ferrules. To assemble, weld the butt-weld end to your tubing. Thick-wall butt-weld tube adapters are also known as tank ferrules. They have an extra-thick wall for welding to pressure vessels and tanks.

Quick-clamp to hose adapters connect flexible hose or tubing to your system. Secure with a hose clamp (sold separately on pages 302-308).

Quick-clamp to grooved-ID adapters are also known as nonrecess or roll-on ferrules. They have a series of serrations on the interior that grasp the outside of your tubing. To connect, insert metal tubing inside the fitting and use an expansion tool to press the tubing into the fitting wall.

ⓘ For information on how to measure Quick-Clamp Tube Fittings, go to mcmaster.com and search for **4322KAC**.

(Continued on following page)

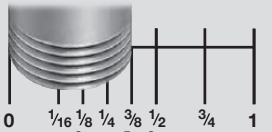
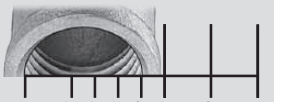
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

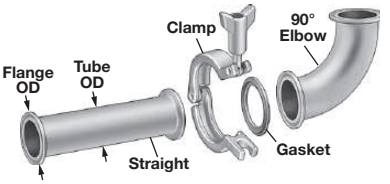
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





High-Polish Quick-Clamp Sanitary Tube Fittings *(Continued from previous page)*

- Maximum Pressure: See clamps on page 228
- Temperature Range: See gaskets on page 228
- Tubing: Use with 4466K on page 151



The smooth finish on these fittings makes it easy to remove residue. Fittings are polished to a 23-32Ra finish on the ID and a 35Ra finish on the OD. They are 3-A certified for dairy (where noted) and can also be used with food, beverage, air, and water. Also known as tri-clamps, they disconnect by hand or wrench for quick access to your line. Choose *Type 304 stainless steel* for good corrosion resistance, and *Type 316L stainless steel* for excellent corrosion resistance. Sterilize with steam (autoclaving).

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket.

Quick-clamp to butt-weld tube adapters are also known as ferrules. To assemble, weld the butt-weld end to your tubing.

Thick-wall butt-weld tube adapters are also known as tank ferrules. They have an extra-thick wall for welding to pressure vessels and tanks.

Quick-clamp to hose adapters connect flexible hose or tubing to your system. Secure with a hose clamp (sold separately on pages 302-308).

Quick-clamp to grooved-ID adapters are also known as nonrecess or roll-on ferrules. They have a series of serrations on the interior that grasp the outside of your tubing. To connect, insert metal tubing inside the fitting and use an expansion tool to press the tubing into the fitting wall.

Quick-Clamp to Butt-Weld Tube Adapters (Cont.)—3-A certified for dairy, unless noted.

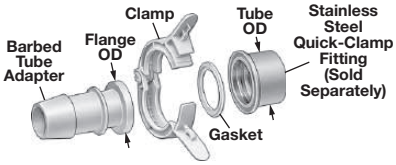
Disposable Plastic Quick-Clamp Sanitary Tube Fittings

- Maximum Pressure: 80 psi @ 72° F
- Temperature Range: 0° to 140° F
- Tubing: Use with silicone



Avoid the hassle of sterilizing your line with these economical, single-use fittings. They have a smooth tube ID to reduce contamination and are for use with water, dairy, and food and beverage. *Clamps* are made of white, glass-filled nylon. They allow you to quickly install and dismantle your line as needed. *Fittings* are made of white PVDF (Kynar). The flanged end connects to any plastic or stainless steel quick-clamp tube fitting.

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket.

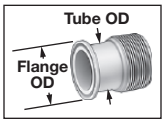
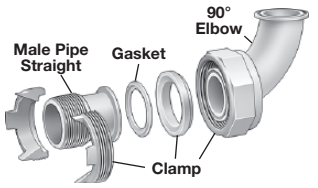
Plastic Sanitary Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –40° to 175° F





Have no doubts about their purity—not only are these fittings 3-A certified for dairy, they are made of FDA-listed materials. Fittings are white PVDF (Kynar). Position the clamp components around the fittings, then tighten with a spanner wrench (sold below) for a secure connection. Sterilize with steam (autoclaving) and radiation.

Straights have NPT threads.

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket (sold separately on page 228).

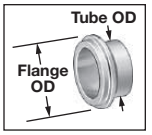
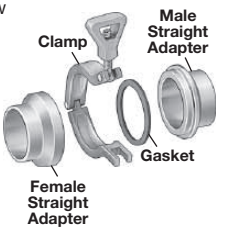
Extra-Support Quick-Clamp Sanitary Tube Fittings

- Maximum Pressure: See clamps below
- Temperature Range: –30° to 200°F
- Tubing: Use with 4466K on page 151





The flanged ends of the male and female adapters interlock to provide extra support. Fittings are also known as I-line fittings. To assemble, butt-weld the adapters to your tubing, then clamp the flanged ends together for a strong, leak-tight seal. Fittings and clamps are made of Type 304 stainless steel. They are 3-A certified for dairy and can also be used with water. Sterilize with steam (autoclaving) and chemicals.

Clamps have a wing nut and tighten by hand.

Butt-weld adapters and **caps** are polished to a 32Ra finish on the ID and OD. *Male caps* connect to female adapters, and *female caps* connect to male adapters.

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket.

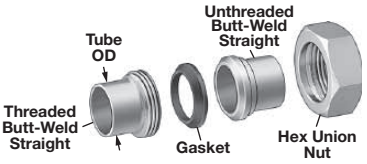
Compact Threaded Sanitary Tube Fittings

- Maximum Pressure: 400 psi @ 72°F
- Temperature Range: With Buna-N Gasket: –30° to 200°F; With PTFE Gasket: –100° to 500°F
- Tubing: Use with 4466K on page 151



You'll notice these fittings don't have a clamp—they join with a threaded nut for a low-profile connection that's great for tight spaces. Also known as bevel seat fittings, the slanted butt-weld straights fit snugly around the gasket, creating a sturdy, vibration-resistant seal. Fittings are made of Type 304 stainless steel. They are 3-A certified for dairy and are polished to a 20-30Ra finish on the ID and a 25-35Ra finish on the OD. Fittings can also be used with air and water. Sterilize with chemicals.

Threaded butt-weld straights and **hex union nuts** have Acme standard threads.

Note: For a complete connection, you'll need a threaded butt-weld straight, an unthreaded butt-weld straight, a gasket, and a hex union nut.

For Tube OD	Threaded Butt-Weld Straights		Unthreaded Butt-Weld Straights		Buna-N Gaskets		PTFE Gaskets		Hex Union Nuts		Caps

Polished and Unpolished Butt-Weld Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –65° to 250°F, except long elbows are 35° to 250°F
- Tubing: Use with seamless or welded stainless steel (see pages 148-152)

Weld these fittings to tubing for a flush connection that permits smooth flow through your line. Vacuum rating is 1×10^{-6} torr (10^{-6} mm Hg) @ 72°F, except long elbows are not rated. Sterilize with steam (autoclaving) and chemicals.

Polished Fittings—3-A certified for use in dairy applications, except caps are not certified. *Type 304L stainless steel fittings* have a 32Ra finish on the ID and OD. *Type 316L stainless steel fittings* have a finer 25Ra finish on the ID, except the long elbows have a 32Ra finish.

Unpolished Fittings—Use with water and air.

Centered reducing straights allow you to connect one tube to another smaller diameter tube and have the centers align. They are also known as concentric reducers.

Off-center reducing straights allow you to connect one tube to another smaller diameter tube and have the centers offset. Also known as eccentric reducers, they allow your line to self drain.

To Order Please specify Type 304L stainless steel or Type 316L stainless steel, except all ½″ and ¾″ sizes and long elbows are Type 316L stainless steel. The prices shown are for Type 304L stainless steel; the prices for Type 316L stainless steel are approximately 25% higher.

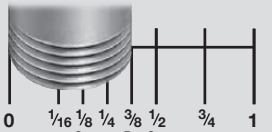
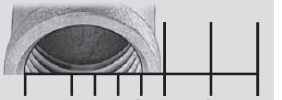
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

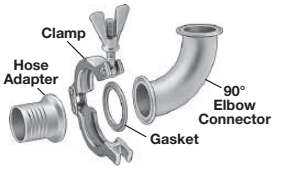
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

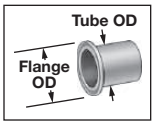




Extra-High-Polish Quick-Clamp Tube Fittings

- Maximum Pressure: 725 psi @ 72° F
- Temperature Range: See gaskets on page 228
- Tubing: Use with 3334K on page 151





Polished to a mirror finish, these fittings have an extra-smooth surface that won't promote bacteria growth. They meet ASME BPE (Bioprocessing Equipment Standard) requirements, except clamps and adapters do not. Use with air, water, deionized water, and hydraulic oil. Fittings are polished to a 20Ra finish on the ID and a 30Ra finish on the OD. They are made of Type 316L stainless steel. Sterilize with steam (autoclaving) and chemicals.

Clamps tighten or loosen by hand for quick access to your line.

Quick-clamp to butt-weld tube adapters are also known as ferrules. Weld the butt-weld end to your tubing.

Quick-clamp to hose adapters connect flexible hose or tubing to your system. Secure with a hose clamp (sold separately on pages 302-308).

Note: To complete a connection between two flanged ends, you'll need a clamp and a gasket (sold separately on page 228).

For information on how to measure Quick-Clamp Tube Fittings, go to mcmaster.com and search for **4322KAC**.

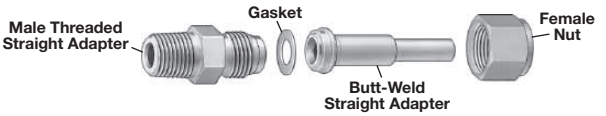
Ultra-High-Polish Tube Fittings

- Maximum Pressure: See below
- Temperature Range: -425° to 1000°F
- Tubing: Use with Type 316L stainless steel
- Vacuum Rating: 10^{-11} torr @ 72°F

These fittings are polished to a smooth 15Ra finish on the interior to prevent particle buildup. Also known as ultra-high-purity fittings, they are often used in semiconductor applications. Use with argon, helium, and nitrogen. Fittings are comparable to Swagelok® VCR fittings. They use a metal gasket, which creates a strong seal in high-pressure and extreme-vacuum applications. Fittings are 316 stainless steel for excellent corrosion resistance.

Note: For a complete connection, you'll need two adapters, a gasket, and a nut (all sold separately).



Shown Assembled

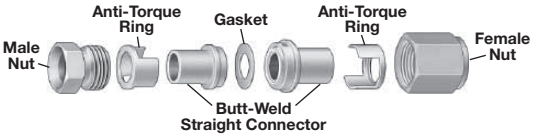
Vibration-Resistant Ultra-High-Polish Tube Fittings

- Maximum Pressure: See below
- Temperature Range: -420° to 1000°F
- Tubing: Use with Type 316L stainless steel
- Vacuum Rating: 10^{-11} torr @ 72°F

Fittings have two anti-torque rings that compress the gasket to prevent rotation and reduce particle generation in high-vibration applications. Also known as ultra-high-purity fittings, they are polished to a 7Ra finish on the interior—the smoothest surface finish we offer. They are often used in semiconductor applications. Use with argon, helium, and nitrogen. Fittings are 316 stainless steel for excellent corrosion resistance.

Fittings include a male nut, two anti-torque rings, two butt-weld straight connectors, a gasket, and a female nut. The gasket is metal, which creates a strong seal in high-pressure and extreme-vacuum applications.



Shown Assembled

For Tube OD	Max. psi @ 72°F	Overall Lg.		
1/4"	4,000	1 13/16"	9066N81	$70.50
1/4"	4,000	2 13/16"	9066N82	68.68
3/8"	2,700	2 5/8"	9066N83	90.08
1/2"	2,800	2 15/16"	9066N84	128.33

Socket-Weld Tube Fittings

- Maximum Pressure: 4,300 psi @ 72°F, except medium-pressure fittings are 1,500 psi @ 65°F
- Temperature Range: -425° to 1200°F, except medium-pressure fittings are not rated
- Tubing: Use with seamless or welded Types 304 and 316 stainless steel that meets ASTM A269

Socket-weld fittings are easier to weld than butt-weld fittings because they don't need to align perfectly to your tubing. Insert the tubing into the socket end and weld to create a strong, leak-tight connection. Fittings are machined from forged or bar stock Type 316L stainless steel to withstand extreme temperatures and pressures. Use with air, water, and hydraulic oil.

Other Socket-Weld Tube Fittings: We offer medium-pressure socket-weld tube fittings with thin walls. They are made from Type 316L stainless steel tubing. Please ask for 4048K91 and specify shape (straight, 90° elbow, tee, or 180° bend) and tube OD (1/4", 3/8", 1/2", 3/4", or 1").

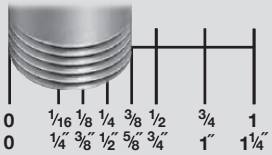
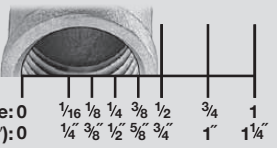
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

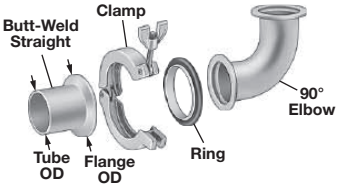
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Ultra-High-Vacuum Tube Fittings

- Vacuum Rating @ 72° F: 10^{-7} torr
- Temperature Range: 0° to 300° F, except valves are 0° to 195° F
- Tubing: Use with Types 304, 304L, 316, and 316L stainless steel



Instead of a regular gasket, these fittings have a special center ring that creates an extra-strong seal for industrial vacuum applications. Use in vacuum coating and packaging, leak testing, and analyzing gases. Fittings are also known as KF, QF, and NW fittings. They are made of Type 304 stainless steel, except the clamps and the flange-end to hose adapters are aluminum. Fittings with flanged ends meet ISO 2861. Sterilize with steam (autoclaving).

Rings have a stainless steel centering ring covered by a fluoroelastomer O-ring. *Rings with screen* have a stainless steel screen to filter out large particles. *Pressure-rated rings* have an aluminum outer ring to withstand extra pressure.

Flange-end to threaded pipe adapters have NPT threads. They require PTFE tape (see page 3470) for sealing the threaded ends.

Flange-end to hose adapters secure with a hose clamp (see pages 302-310).

Shut-off valves are also known as vacuum isolation valves. They connect to your vacuum system so you can install gauges, release gases, and remove air. Valves operate manually. They have a compact body that fits easily into tight spaces.

Note: To complete a connection between two flanged ends, you'll need a clamp and a ring.

Ultra-High-Vacuum Tube Flanges

- Vacuum Rating @ 72° F: Flanges: 10^{-13} torr Gaskets: Not rated
- Temperature Range: Flanges: –300° to 800° F Gaskets: Not rated
- Tubing: Use with seamless Types 304, 304L, 316, and 316L stainless steel

Weld these flanges to tubing to achieve an extra-strong seal, or bolt two same-size flanges together with a gasket to gain easy access to your line. Also known as CF, Conflat, and UHV flanges, these are used in applications such as vacuum coating, drying, and analyzing gases. Flanges are polished Type 304 stainless steel. They meet ASTM A240, E45, and E12.

Easy-align flanges have a rotating outer ring so you can easily match up the bolt holes with another flange. **Caps** are also known as blind flanges; they are solid and close off the end of your tubing. **Gaskets** are made of OFE (oxygen-free, electronic-grade) copper. They meet ASTM F68-77 and B152-179.

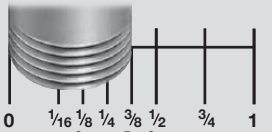
Vacuum, Plastic & Copper Tube Fittings

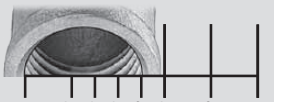
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

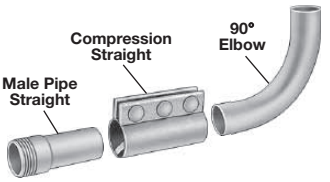
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Vacuum Tube Fittings

- Maximum Pressure: 15 psi @ 72° F
- Vacuum Rating: 15" Hg @ 72° F
- Temperature Range: –10° to 180° F
- Tubing: Use with 3094K steel or 4935K galvanized steel (see page 161)



Use these fittings in your air vacuum system to avoid the hassle of brazing and welding. Insert two connectors or adapters into the compression straight and tighten the bolts to form a secure seal.

Compression straights are galvanized steel. They come with a neoprene gasket and a stainless steel gasket protector.

Capped straights are cast zinc with a zinc-plated steel lid. Lift the lid and insert your tubing to create a temporary connection.

Elbows, wyes, reducing straights, and the **male** and **female pipe adapters** come in your choice of steel or corrosion-resistant galvanized steel. Wall thickness is 0.065" (16 gauge). **To Order:** Please specify steel or galvanized steel. The prices below are for galvanized steel; prices for steel are approximately 20% lower.

Threaded Connections: NPT threads.

Tube-to-Tube Connectors

For Tube OD	90° Elbows		45° Elbows		90° Wyes		45° Wyes		Compression Straights	
2 1/8"	4935K212	$12.08	4935K241	$10.50	4935K258	$23.62	4935K274	$21.42	4487K54	$21.67

Flexible Plastic Tube Fittings

- Maximum Pressure: See table
- Temperature Range: 0° to 140° F
- Tubing: Use with plastic

Made of soft PVC, these fittings withstand vibration. Use them in place of rigid fittings to create a more flexible system. Slide fittings onto tubing and secure with a clamp (sold separately on page 302). Use with air and dairy. Sterilize with radiation or chemicals. *Elbows* are clear and *wyes* are blue.

90° Elbows

For Tube OD	Max. psi @ 68° F		
3/8"	66	5074K11	$8.85

Metric Solder-Connect Copper Tube Fittings

- Maximum Pressure: 500 psi @ 86° F when used with 95/5 solder
- Temperature Range: 32° to 200° F
- Tubing: Use with 9935K metric copper tubing (see page 159)

Solder these fittings to metric tubing for a permanent, leak-tight connection. Also known as sweat fittings, they are made of seamless, wrot (99.9% pure) copper tubing. Use with air and water. Sterilize with steam (autoclaving) and chlorine.

Straights with center stop have a small bump that prevents the tubing from sliding all the way through the fitting.

Female Socket-End to Female Socket-End

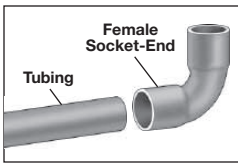
Solder-Connect Copper Tube Fittings for Drinking Water

- Maximum Pressure @ 100° F (when used with 95/5 Solder): 1/8 to 2 Tube Size: 400 psi, 2 1/2 to 3 Tube Size: 300 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with copper tubing for drinking water (see 5175K and 50475K on page 157)



To make a connection, insert tubing or the tube-end of a fitting into the socket-end of a fitting and solder together.

The most common type of fittings used for drinking water applications, these solder together to form permanent, leak-resistant connections. Also known as sweat fittings, they are made of seamless, wrot (99.9% pure) copper, except the unions have a brass nut, and the fittings marked with a ★ are cast bronze. Fittings meet ANSI B16.22 and MSS-SP104, except the cast bronze elbows, unions, and straights meet ASME B16.18, and the cast bronze flanges meet ANSI B16.18.

Cleaned and Bagged Fittings—Individually cleaned and bagged to prevent moisture and dirt contamination.

Straights with center stop have a small bump that prevents the tubing from sliding through the fitting. **Off-center reducing straights** allow you to connect one tube to another smaller diameter tube and have the centers offset. Also known as eccentric reducers, they allow your line to self drain.

Flanges grant you easy access to your line.

Note: Copper tube size is the accepted designation of the copper tubing industry, not the actual tube OD.

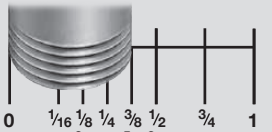
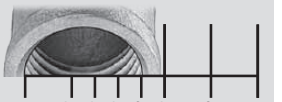
(Continued on following page)

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

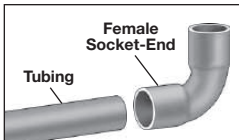




Solder-Connect Copper Tube Fittings for Drinking Water

(Continued from previous page)

- Maximum Pressure @ 100° F (when used with 95/5 Solder): 1/8 to 2 Tube Size: 400 psi; 2 1/2 to 3 Tube Size: 300 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with copper tubing for drinking water (see 5175K and 50475K on page 157)



To make a connection, insert tubing or the tube-end of a fitting into the socket-end of a fitting and solder together.

The most common type of fittings used for drinking water applications, these solder together to form permanent, leak-resistant connections. Also known as sweat fittings, they are made of seamless, wrot (99.9% pure) copper, except the unions have a brass nut, and the fittings marked with a ★ are cast bronze. Fittings meet ANSI B16.22 and MSS-SP104, except the cast bronze elbows, unions, and straights meet ASME B16.18, and the cast bronze flanges meet ANSI B16.18.

Cleaned and Bagged Fittings—Individually cleaned and bagged to prevent moisture and dirt contamination.

Straights with center stop have a small bump that prevents the tubing from sliding through the fitting. **Off-center reducing straights** allow you to connect one tube to another smaller diameter tube and have the centers offset. Also known as eccentric reducers, they allow your line to self drain.

Flanges grant you easy access to your line.

Note: Copper tube size is the accepted designation of the copper tubing industry, not the actual tube OD.

(Continued on following page)

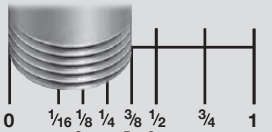
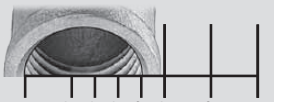
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

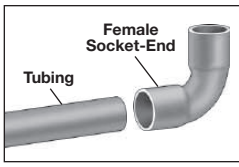


Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Solder-Connect Copper Tube Fittings for Drinking Water

(Continued from previous page)

- Maximum Pressure @ 100° F (when used with 95/5 Solder): 1/8 to 2 Tube Size: 400 psi, 2 1/2 to 3 Tube Size: 300 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with copper tubing for drinking water (see 5175K and 50475K on page 157)



To make a connection, insert tubing or the tube-end of a fitting into the socket-end of a fitting and solder together.

The most common type of fittings used for drinking water applications, these solder together to form permanent, leak-resistant connections. Also known as sweat fittings, they are made of seamless, wrot (99.9% pure) copper, except the unions have a brass nut, and the fittings marked with a ★ are cast bronze. Fittings meet ANSI B16.22 and MSS-SP104, except the cast bronze elbows, unions, and straights meet ASME B16.18, and the cast bronze flanges meet ANSI B16.18.

Cleaned and Bagged Fittings—Individually cleaned and bagged to prevent moisture and dirt contamination.

Straights with center stop have a small bump that prevents the tubing from sliding through the fitting. **Off-center reducing straights** allow you to connect one tube to another smaller diameter tube and have the centers offset. Also known as eccentric reducers, they allow your line to self drain.

Flanges grant you easy access to your line.

Dissolvable plugs are also known as plumbers' bread. They temporarily block the flow in your tubing system to keep moisture away from an area that's being soldered.

Note: Copper tube size is the accepted designation of the copper tubing industry, not the actual tube OD.

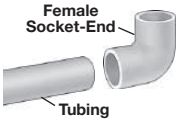
Plastic Tube Fittings for Drinking Water

- Maximum Pressure: 400 psi @ 72° F
- Temperature Range: 40° to 180° F
- Tubing: See table



Although they're sized the same as our solder-connect copper fittings, these CPVC fittings weigh less and are easier to install. They connect with CPVC cement (sold separately on page 3466). Fittings and tubing meet NSF/ANSI Standard 61 for use with drinking (potable) water. They meet ASTM D2846, National Standard Plumbing Code, and Uniform Plumbing Code. Vacuum rating is 26" Hg @ 72° F.

Threaded Connections: NPT threads.

Manifolds with British Standard Threads

- Maximum Pressure @ 72° F:
  Air: 1,000 psi
  Water and Nonshock Hydraulics: 3,000 psi
- Temperature Range: –10° to 200° F

Connect BSPT (British Standard Pipe Taper) or BSPP (British Standard Pipe Parallel) threaded fittings to these manifolds to run multiple lines from one distribution source. Use with water, air, and hydraulic oil. Also known as headers, they have an inlet on both ends. Manifolds are aluminum. Vacuum rating is 29.9″ Hg @ 72° F. Block off unused inlets or outlets with a plug (see page 47).

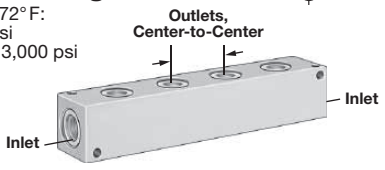
Manifolds with Straight Threads

- Maximum Pressure @ 72° F:
  Air and Water: 1,000 psi
  Nonshock Hydraulics: 3,000 psi
- Temperature Range:
  –50° to 200° F



The outlets on these manifolds attach to fittings with UNF straight threads. Straight-thread fittings seal with a gasket, achieving a tighter connection than fittings with tapered threads. Use with water, air, and hydraulic oil. Also known as headers, these manifolds have an inlet on both ends. They are made of aluminum, except the manifolds with 1/8 inlets are black anodized aluminum.

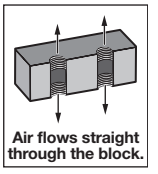
★ NPT threads.

Multiline Blocks

- Maximum Pressure @ 72° F:
  Air: 1,000 psi
  Water and Nonshock Hydraulics: 3,000 psi
- Temperature Range: –10° to 200° F



Organize and separate multiple lines in your system. Also known as junction blocks, these don't have inlets like a manifold—instead they have threaded holes that allow air or fluid to flow straight through the block. Use with air, water, and hydraulic oil. Blocks are black anodized aluminum. Vacuum rating is 29″ Hg @ 72° F. Block off unused holes with a plug (see page 245).

Threaded Connections: NPT, except 10-32 are UNF straight threads.

No. of Holes	Pipe Size	Overall Size Lg.	Overall Size Wd.	Overall Size Ht.	Holes, Ctr.-to-Ctr.

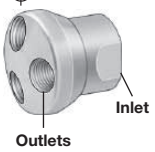
Three-Way Manifolds for Air

- Maximum Pressure: 300 psi @ 72° F
- Temperature Range: –40° to 360° F



Run three lines from a single supply source with these compact manifolds. The round shape lets you mount the manifold on the end of a hose line. Manifolds are aluminum. Block off unused outlets with a plug (see page 245).

Threaded Connections: NPT threads.

No. of Outlets	Pipe Size Inlet	Pipe Size Outlet	Overall Size Dia.	Overall Size Lg.	Outlets, Ctr.-to-Ctr.

Miniature Manifolds

- Maximum Pressure: 250 psi @ 72° F
- Temperature Range: –60° to 300° F

Don't let their small size fool you—these manifolds have four outlets on three sides to supply up to 12 lines from one distribution point. Use with air, water, and hydraulic oil. Also known as headers, they have an inlet on one end. To block off unused outlets, use plug 5454K81 on page 42. Manifolds are brass.

Threaded Connections: Inlet has NPT threads; outlets have UNF straight threads.

12	1/8	10-32	2 7/8″	9/16″	5/8″	1/2″	5454K97	$9.37

Straight Flow Manifolds

- Maximum Pressure @ 72° F:
  Air and Water: 1,000 psi
  Nonshock Hydraulics: 3,000 psi
- Temperature Range:
  –10° to 200° F

Unlike other manifolds, which have an inlet on both ends, these have one inlet on the opposite side of the outlets. This design allows fluid or air to follow a straight path, improving flow through your system. It also frees up the ends of your manifold so you can mount in corners and narrow spaces. Use with water, air, and hydraulic oil. Manifolds are also known as headers. They are made of black anodized aluminum. Block off unused outlets with a plug (see page 245).

Threaded Connections: NPT threads.

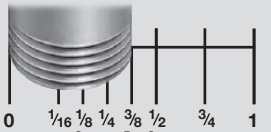
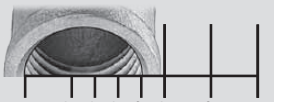
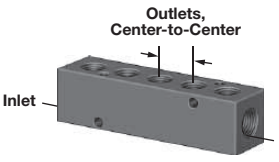
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

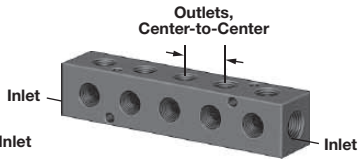




Manifolds



Outlets on One Side



Outlets on Two Sides with Extra-Wide Space

Distribute air or fluid to multiple locations from a single supply source. Also known as headers, these have an inlet on both ends and four mounting holes so you can mount from the top or side.

Manifolds with outlets on two sides have two sides of outlets set at 90°.

Manifolds with extra-wide-space outlets have more room between the outlets to accommodate valves or gauges.

Plugs (sold separately) close off any unused outlets or inlets. They are not rated for temperature.

Threaded Connections: NPT threads.

Material	Maximum Pressure @ 72° F	Temperature Range	Corrosion Resistance	Chemical Resistance	Durability	For Use With
Black Anodized Aluminum	1,000 psi for water and air; 3,000 psi for nonshock hydraulics	–10° to 200° F	Good	Fair	Good	Water, Air, Hydraulic Oil

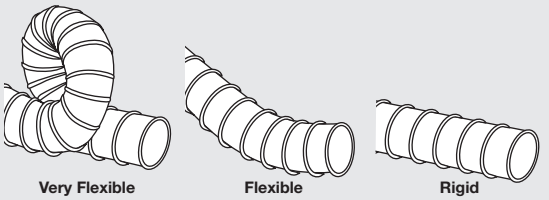
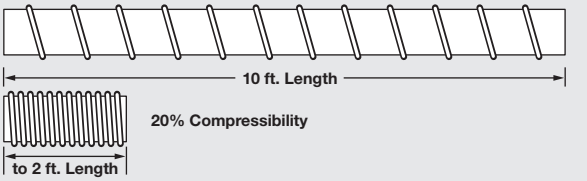
About Duct Hose

Duct hose is designed for use in blowing and venting applications. While it is typically used to exhaust air and fumes, some types of duct hose can carry materials such as dust, chips, shavings, and liquids.

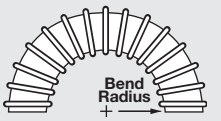
Flexibility—Flexibility takes into account several factors, including bend radius, material, and hose diameter. We've rated the flexibility for each hose in general terms:



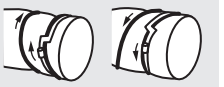
Compressibility—Compressibility is listed as a percentage. The lower the percentage, the more compressible the hose. For example, if a 10-ft. hose compresses to 20%, the hose compresses to 2 ft. Hose lengths given are the extended length, unless otherwise stated.



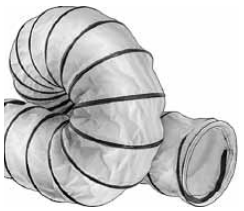
Bend Radius—An indicator of how much you can bend a hose without damaging it, bend radius is measured from the center of the bend to the inside edge of the hose. The smaller the measurement, the more flexible the hose.



Spiral Direction—The direction of the hose spiral determines whether you need a right-hand clamp or a left-hand clamp. When looking at the end of the hose, a right-hand spiral will twist away from you clockwise; a left-hand spiral will twist away from you counterclockwise.



Blo-N-Vent Duct Hose for Air



Hose with Wear Strip and Embedded Wire Ends

- Very flexible
- Temperature Range: –65° to 250° F
- Color: Yellow; wear strip is black
- Clamps: Use worm-drive clamps (see pages 302-306)

Our most versatile duct hose for blowing and venting air, this 0.013″ thick neoprene-coated polyester hose is lightweight and very flexible. It has a right-hand metal spiral, a ribbed interior, and can be used outdoors. Hose with a 4″ to 5″ ID compresses to 20% of its length; 6″ to 24″ ID compresses to 10%. Meets UL 94V0 for flame retardance. Not rated for vacuum. Maximum continuous length is 25 feet.

Hose with Wear Strip—The wear strip protects against damage caused by dragging. *Hose with embedded wire ends* has a wire rope sewn into each end that lets you connect lengths of hose without a duct hose connector or clamp. Squeeze the end on one hose and slip it into the opening of another.

Insulated Blo-N-Vent Duct Hose with Wear Strip for Air

- Very flexible
- Temperature Range: –40° to 250° F
- Color: Yellow with a black wear strip
- Clamps: Use worm-drive and quick-release clamps (see pages 302-306)

A layer of fiberglass insulation helps maintain the temperature inside the hose. Use for heating and cooling applications in outdoor environments. Insulation is 1″ thick and has an R value of 4. Hose has a wear strip that protects against damage caused by dragging. The ends are cuffed for easy attachment to duct hose connectors. Hose is made from 0.008″ thick neoprene-coated polyester with a right-hand metal spiral and a ribbed interior. Hose with a 4″ to 5″ ID compresses to 35% of its length; 6″ to 24″ ID compresses to 20%. The liner meets UL 94V0 for flame retardance.

Insulated Duct Hose for Indoor Air

- Very flexible
- Temperature Range: –20° to 200° F (Black Cover); –20° to 250° F (Silver Cover)
- Color: Black or silver
- Clamps: Use worm-drive clamps (see pages 302-306)

Silver Cover

Insulated with a layer of fiberglass, this ultra-thin, lightweight hose keeps air at a constant temperature. Insulation is 1⅛″ thick and has an R value of 4. Use scissors or a utility knife to cut the hose to length. Hose has a left-hand metal spiral and a ribbed interior. It compresses to 10% of its length. Meets UL 181 Class 1 and NFPA 90A and 90B. Not rated for vacuum or pressure.

Black Cover—Hose is made from 0.003″ thick polyethylene with a polyethylene cover. Max. airflow is 5,000 ft./min.

Silver Cover—Hose is made from 0.003″ thick fiberglass with a metalized film cover. Max. airflow is 6,000 ft./min.

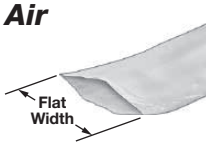
Disposable Duct Hose for Air

- Very flexible
- Temperature Range: 32° to 120° F
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 302-306)



Super thin and lightweight, this hose is economical and rolls up for easy disposal. Hose is made from 0.004″ thick polyethylene and has a smooth interior for unrestricted flow. It is for blowing applications only. Not rated for vacuum or pressure.

Bend-and-Stay Metal Duct Hose for Air

- Very flexible
- Temperature Range: –100° to 435° F
- Clamps: Use worm-drive clamps (see pages 302-306)

Unlike fabric duct hose, this lightweight aluminum hose can bend around corners and hold its shape. Hose is not for continuous flexing. One end of the hose is crimped; insert the crimped end into another piece of duct hose and secure with a clamp to create longer lengths. The hose may need support once the length exceeds 6 feet. It is made from 0.004″ thick aluminum and has a ribbed interior. Hose compresses to 35% of its length. Not rated for vacuum or pressure.

ID	OD	Bend Radius	Length, ft.

Heat-Reflective Duct Hose for Air

- Flexible
- Temperature Range: –65° to 625° F
- Color: Silver
- Clamps: Use worm-drive and quick-release clamps (see pages 302-306)

A metalized polyester cover reflects heat so the temperature inside the hose won't rise. Hose has a smooth interior for unrestricted flow. It is made from 0.027″ thick fiberglass with a right-hand metal spiral and can be used outdoors. Hose with a 1″ to 2″ ID compresses to 35% of its length; 3″ to 5″ ID compresses to 25%; 6″ ID compresses to 20%. Maximum continuous length is 12 feet.

Quick-Attach Duct Hose with Wear Strip for Air

- Very flexible
- Temperature Range: –20° to 180° F
- Color: Yellow with a black wear strip

The ends of this hose have a belt-and-buckle connection that eliminates the need for clamps. To connect hose, slip a duct hose connector into one end and cinch the belt for a secure hold. Hose has a wear strip that protects against damage caused by dragging. It is made from 0.014″ thick PVC-coated polyester with a right-hand metal spiral and a ribbed interior. It compresses to 10% of its length and can be used outdoors. Hose meets UL 94V0 for flame retardance and NFPA 701.

Easy-Store Duct Hose for Air

- Very flexible
- Temperature Range: 0° to 200° F
- Color: Silver
- Clamps: Use worm-drive clamps (see pages 302-306)

The most compressible hose we offer, this duct hose collapses to 5% of its length for easy storage. It is made from 0.001″ thick polyester with a metalized film cover and a left-hand metal spiral. Hose interior is ribbed. Meets UL 181 Class 1 and NFPA 90A and 90B. Not rated for pressure or vacuum.

High-Temperature Duct Hose with Wear Strip for Air

- Very flexible
- Temperature Range: –20° to 325° F
- Color: Yellow with a black wear strip
- Clamps: Use worm-drive clamps (see pages 302-306)

An acrylic coating allows this polyester hose to hold up under higher temperatures than other fabric hose. It has a wear strip that protects against damage caused by dragging. Material is 0.018″ thick with a right-hand metal spiral and a ribbed interior. It can be used outdoors. Hose with a 4″ ID compresses to 15% of its length; 6″ to 14″ ID compresses to 10%. Meets UL 94V0 for flame retardance. Not rated for vacuum. Maximum continuous length is 25 feet.

Crush-Resistant Duct Hose for Air

- Flexible
- Temperature Range: –40° to 225° F
- Color: Blue
- Clamps: Use worm-drive clamps (see pages 302-306)

Step on this polypropylene hose and the flexible plastic spiral will pop back up unharmed. Hose is 0.011″ thick, except the 6″ to 8″ ID hose is 0.014″ thick. It has a right-hand spiral, a ribbed interior, and can be used outdoors. Hose with a 1″ to 1 1/2″ ID compresses to 60% of its length; 2″ to 2 1/2″ ID compresses to 50%; 3″ to 8″ ID compresses to 45%. Not rated for vacuum. Maximum continuous length is 50 feet.

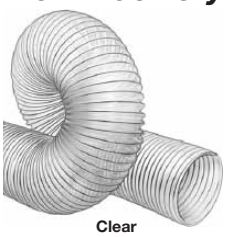
Blo-R-Vac Very Flexible Duct Hose for Fumes



Clear

- Very flexible
- Temperature Range: 20° to 160° F
- Color: Blue or clear
- Clamps: Use worm-drive clamps (see pages 302-306)

Rugged, yet pliable PVC makes this a good general purpose hose for venting smoke, propane fumes, and water-based paint fumes. Hose is 0.020″ thick with a right-hand metal spiral and a ribbed interior. It can be used outdoors. Hose with a 1 1/4″ to 2″ ID compresses to 50% of its length; 2 1/2″ to 3″ ID compresses to 35%; 4″ to 18″ ID compresses to 20%.

Blue hose is also for use with welding fumes. It meets UL 94V0 for flame retardance. **Clear hose** lets you see inside your line.

Bend-and-Stay Very Flexible Metal Duct Hose for Fumes

- Very flexible
- Temperature Range: –100° to 400° F (Aluminum); –400° to 800° F (304 Stainless Steel)
- Clamps: Use worm-drive clamps (see pages 302-306) and twin-ring hose clamps (see page 310)

Form elbows and bends with this crimped-seam hose and it will hold its shape without support. Hose is not for continuous flexing. Use with smoke, sparks, paint fumes, welding fumes, and oil fumes. Hose has a ribbed interior and can be used outdoors. Not rated for compression, vacuum, or pressure.

Aluminum is lighter than stainless steel and has good corrosion resistance. It is 0.008″ thick.

304 stainless steel is more durable than aluminum and has very good corrosion resistance. It is 0.005″ thick.

Lightweight Very Flexible Duct Hose for Fumes

- Very flexible
- Temperature Range: –20° to 150° F
- Color: Blue
- Clamps: Use worm-drive clamps (see pages 302-306) and twin-ring hose clamps (see page 310)

With the smallest bend radius of all the fume hose we offer, this lightweight hose can handle tight turns around equipment. Hose has a smooth interior for unrestricted flow. It is for use with smoke, paint fumes, welding fumes, and oil fumes. Hose is made from 0.018″ thick PVC with a right-hand metal spiral. It compresses to 20% of its length and can be used outdoors. Meets UL 94HB for flame retardance. Maximum continuous length is 50 feet.

Easy-Store Very Flexible Duct Hose for Fumes

- Very flexible
- Temperature Range: –65° to 550° F
- Color: Orange
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

If you're tight on storage space, this hose compresses down to a small size. It compresses to 20% of its length for 2″ to 3″ ID hose and 15% for 4″ to 12″ ID hose. It is for use with smoke, water-based paint fumes, welding fumes, and oil fumes. Hose is made from 0.01″ thick silicone-coated fiberglass with a right-hand metal spiral and a ribbed interior. It can be used outdoors. Maximum continuous length is 25 feet.

Retracting Very Flexible Duct Hose with Wear Strip for Fumes

- Very flexible
- Temperature Range: –40° to 250° F
- Color: Yellow with a black wear strip
- Clamps: Use worm-drive clamps (see pages 302-306)

Let go of this hose and it will spring back out of your way. The wear strip protects the hose from damage caused by dragging. It is for use with smoke and water-based paint fumes. Hose is made from 0.016″ thick neoprene-coated polyester with a right-hand metal spiral and a ribbed interior. It compresses to 25% of its length and can be used outdoors. Meets UL 94HB and UL 94V0 for flame retardance.

Economical Very Flexible Duct Hose for Fumes

- Very flexible
- Temperature Range: –20° to 200° F
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 302-306)

Hose has a single 0.005″ thick layer of PVC-coated fiberglass for venting smoke, water-based paint fumes, and welding fumes. Hose has a right-hand metal spiral and a ribbed interior. It can be used outdoors. Hose with a 2″ ID compresses to 25% of its length; 3″-6″ ID compresses to 20%; 7″-14″ ID compresses to 10%. Meets UL 94HB and UL 94V0 for flame retardance. Maximum continuous length is 25 feet.

Duct Hose

For information about duct hose, see page 246.

Crush-Resistant Flexible Duct Hose for Exhaust Fumes

- Flexible
- Temperature Range: –40° to 400° F
- Color: Black

Commonly used in garages, this thick rubber hose will bounce back when stepped on or driven over. Use to vent carbon monoxide exhaust fumes while engine idling. Hose is also for use with smoke and water-based paint fumes. Hose is made from 0.156″ thick EPDM rubber and has a ribbed interior. It can be used outdoors. Not rated for compression, vacuum, or pressure.

Hose

2″ to 4″ ID hose has one end that is slightly larger than the other end. To make longer lengths, screw the smaller end of one hose into the larger end of another hose of the same size—no need for a straight connector or clamp.

5″ and 6″ ID hose has two ends that are the same size. To make longer lengths, screw the ends of the hose into a straight connector.

Accessories

EPDM Wye Connector

Straight Connector

Universal Straight Adapter

Oval Straight Adapter

Diesel Straight Adapter

Aluminum Through-Wall Door Port

Wye Connectors—Thread duct hose into all three sides of these connectors to vent two exhausts through one outlet.

Straight Connectors—Thread duct hose onto these connectors to create longer lengths.

Universal Straight Adapters—Connect these adapters to tailpipes that are 5″ dia. and smaller.

Oval Straight Adapters—Use on vehicles with oval or twin-tip exhaust pipes. The 3″×6″ adapter fits oval tailpipes that are 2 1/2″×5 1/2″ and smaller, or twin tailpipes up to 2 1/2″ dia. each. The 3 1/2″×8 1/2″ adapter fits oval tailpipes that are 3″×8″ and smaller, or twin tailpipes up to 3″ dia. each.

Diesel Straight Adapters—Connect to diesel exhaust pipes that are 5 1/2″ dia. and smaller.

Through-Wall Door Ports—Run your duct hose through a door.

All-Plastic Flexible Duct Hose for Fumes

- Flexible
- Temperature Range: 0° to 150° F
- Color: Green
- Clamps: Use worm-drive clamps (see pages 302-306) and twin-ring hose clamps (see page 310)

Unlike other duct hose that has a metal spiral, this PVC hose has a plastic spiral that will not rust. Hose is for use with smoke, water-based paint fumes, and welding fumes. It has a smooth interior for unrestricted flow and a right-hand spiral. It compresses to 50% of its length and can be used outdoors. Not rated for pressure.

Flexible Duct Hose for Corrosive Fumes

Hose with Unfinished Ends

- Flexible
- Temperature Range: –75° to 400° F
- Color: Red
- Clamps: Use worm-drive clamps (see pages 302-306)

A nonstick PTFE liner gives this hose the ability to handle corrosive fumes such as smoke, paint fumes, hydrochloric acid fumes, and toluene fumes. Hose is made from 0.028″ thick silicone-coated fiberglass with a right-hand metal spiral. It has a ribbed interior and can be used outdoors. Meets UL 94HB and UL 94V0 for flame retardance. Not rated for compression.

Hose with cuffed ends has finished edges for easy attachment to duct hose connectors.

High-Temperature Flexible Duct Hose for Fumes

- Flexible
- Temperature Range: –65° to 300°F (Neoprene Coated); –75° to 500°F (Silicone Coated)
- Color: Black (Neoprene Coated); Red (Silicone Coated)
- Clamps: Use worm-drive clamps (see pages 302-306)

Combining the heat resistance of metal with the flexibility of fabric, this fiberglass hose has a special coating that stands up to high temperatures. Hose can be used outdoors and is for use with smoke, water-based paint fumes, and welding fumes. It is 0.023″ thick with a right-hand metal spiral and a ribbed interior. Hose with a ¾″ to 3½″ ID compresses to 75% of its length; 4″ to 12″ ID compresses to 50%.

Neoprene-coated hose meets UL 94HB and UL 94V0 for flame retardance and can also handle sparks.

Silicone-coated hose handles a wider temperature range than neoprene-coated hose.

Hose with cuffed ends has finished edges for easy attachment to duct hose connectors.

Hose with Unfinished Ends

Hose with Unfinished Ends

Clear Flexible Duct Hose with Wear Strip for Fumes

- Flexible
- Temperature Range: –13° to 140°F
- Color: Clear with a black wear strip
- Clamps: Use twin-ring hose clamps (see page 310)

Vent smoke, water-based paint fumes, and welding fumes with this hose that gives you a clear view inside your line. It has a smooth interior for unrestricted flow and a wear strip to protect against damage caused by dragging. Hose should not be compressed. It is PVC with a right-hand plastic spiral and can be used outdoors. Not rated for vacuum. Maximum continuous length for 2½″ to 7″ ID hose is 100 feet; for 8″ ID hose it is 50 feet.

Extreme-Temperature Flexible Duct Hose with Wear Strip for Fumes

- Flexible
- Temperature Range: –100° to 800°F
- Color: Gray with a silver wear strip
- Clamps: Use worm-drive clamps (see page 306)

Wire-reinforced glass fabric withstands extreme temperatures like stainless steel metal duct hose, but is much more flexible. Hose has a left-hand metal spiral that acts as a wear strip to protect against damage. It is for use with smoke and water-based paint fumes. Hose is 0.02″ thick, has a ribbed interior, and compresses to 25% of its length. It can be used outdoors. Maximum continuous length is 25 feet.

High-Temperature Rigid Metal Duct Hose for Fumes

- Rigid
- Maximum Temperature:
  555° F (Galvanized Steel);
  450° F (Aluminum);
  1000° F (304 Stainless Steel)
- Clamps: Use U-bolt clamps (see pages 1588-1590)

Metal interlocked strips create a rigid, durable hose that stays strong under high temperatures. Hose is for use with smoke, welding fumes, and oil fumes. It has a ribbed interior and can be used outdoors, except the galvanized steel hose is for indoor use only. Not rated for compression, vacuum, or pressure. Maximum continuous length is 25 feet.

Galvanized steel offers fair corrosion resistance.
Aluminum is lighter than steel and has good corrosion resistance.
304 stainless steel has very good corrosion resistance. Meets ASTM A240 and A240M.

General Purpose Galvanized Steel

Flexible Duct Hose with Wear Strip for Corrosive Fumes

- Flexible
- Temperature Range: –65° to 500° F
- Color: Gray or clear; wear strip is silver
- Clamps: Use worm-drive clamps (see page 306)

Not only does this hose stand up to corrosive fumes, it has a left-hand metal spiral on the outside that acts as a wear strip to protect against damage. Hose has a ribbed interior and can be used outdoors.

PTFE-coated fiberglass hose is for use with smoke, butyl acetate fumes, and nitric acid fumes. Hose is gray, 0.016″ thick, and compresses to 25% of its length.

PFA plastic hose is clear so you can see inside your line. Use with smoke, paint fumes, sodium hydroxide fumes, and sulfuric acid fumes. Hose is 0.005″ thick and compresses to 20% of its length. Meets UL 94V0 for flame retardance.

Adjustable-Diameter Rigid Duct Hose for Fumes

- Rigid
- Temperature Range: –10° to 150° F
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 302-306)

Increase or decrease the hose diameter by up to 25% with a two-handed twist. Connect lengths of hose by interlocking two ends together. Hose is made from 0.187″ thick PVC with a ribbed interior and is for use with smoke and water-based paint fumes. It can be used outdoors. Not rated for compression.

Very Flexible Duct Hose for Dust

- Very Flexible
- Temperature Range: –20° to 180° F (Clear); –40° to 250° F (Black)
- Color: Clear or black
- Clamps: Use worm-drive clamps (see pages 302-306)

The small bend radius makes this hose easy to wrap around corners and install in tight spaces. It is for use with lint, dust, and sawdust. It can be used outdoors. Maximum continuous length is 25 feet.

Clear hose lets you monitor flow. It is 0.015″ thick PVC, with a left-hand metal spiral and a ribbed interior. Hose compresses to 35% of its length.

Black hose meets UL 94V0 for flame retardance. It is 0.03″ thick neoprene-coated polyester, with a right-hand metal spiral and a ribbed interior. Hose with 1″ to 1 1/2″ ID compresses to 30% of its length; 2″ to 3″ ID compresses to 25%; 4″ to 8″ ID compresses to 20%; 10″ to 24″ ID compresses to 15%.

Warning: Hose should not be used for applications that generate a static charge.

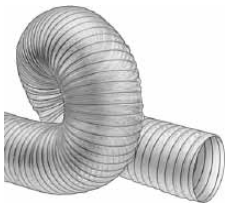
Abrasion-Resistant Very Flexible Duct Hose for Dust



Clear

- Very Flexible
- Temperature Range: –40° to 200° F
- Color: Clear or black
- Clamps: Use worm-drive clamps (see pages 302-306)

A blend of rubber and plastic creates a hose that's flexible, yet tough enough to handle abrasive particles such as grinding dust and sawdust. Hose is 0.02″ thick, unless noted. It can be used outdoors. Maximum continuous length is 25 feet.

Clear hose lets you see what's running through your line. It has a smooth interior for unrestricted flow and a left-hand metal spiral. It compresses to 50% of its length.

Black hose has a ribbed interior and a right-hand metal spiral. Hose with a 2″ ID compresses to 35% of its length; 3″ to 6″ ID compresses to 25%; 7″ to 18″ ID compresses to 20%.

Warning: Hose should not be used for applications that generate a static charge.

Bend-and-Stay Very Flexible Duct Hose for Dust

Screw-On Fitting

- Very Flexible
- Temperature Range: –4° to 175° F
- Color: Brown or white
- Clamps: Use worm-drive clamps (see pages 302-306)

Bend this hose in any direction and it will hold its shape without support. Create longer lengths by twisting one end of the hose into another—no need for a duct hose connector or clamp. Hose is 0.015″ thick polypropylene with a left-hand metal spiral and a ribbed interior. It compresses to 35% of its length. Maximum continuous length is 20 feet.

Screw-on fittings screw over the end of duct hose to connect equipment. They are EPDM rubber.

Warning: Hose should not be used for applications that generate a static charge.

Static-Control Very Flexible Duct Hose for Dust

- Very Flexible
- Temperature Range: –40° to 250° F
- Color: Black
- Clamps: Use worm-drive clamps (see pages 302-306)

The neoprene coating on this hose contains carbon to dissipate static when hose is installed in a grounded system. Hose is for use with lint, dust, and sawdust.

Hose is 0.03″ thick polyester with a right-hand metal spiral and a ribbed interior. Surface resistivity is 10^3 ohms. It can be used outdoors. It meets UL 94V0 for flame retardance.

Blo-R-Vac Flexible Duct Hose for Dust

- Flexible
- Temperature Range: –40° to 250° F
- Color: Black or white, unless noted
- Clamps: Use worm-drive clamps (see pages 302-306)

A good general purpose hose for blowing and vacuum applications, this hose is for use with grinding dust, sawdust, and lint. It meets UL 94HB and UL 94V0 for flame retardance, unless noted.

Hose is TPR rubber with a left-hand metal spiral and a ribbed interior, unless noted. It can be used outdoors.

Warning: Hose should not be used for applications that generate a static charge.

★ Hose is blue neoprene-coated cotton, with a right-hand spiral. Not UL listed.

Blo-R-Vac Flexible Duct Hose with Wear Strip for Dust

- Flexible
- Temperature Range: –40° to 180° F
- Color: Black with orange wear strip
- Clamps: Use worm-drive clamps (see pages 302-306)

This general purpose hose for blowing and vacuum applications has a thick PVC wear strip that protects against damage caused by dragging. Hose is for use with lint, dust, and sawdust. It meets UL 94HB and UL 94V0 for flame retardance.

Hose is 0.03″ thick PVC-coated polyester with a right-hand metal spiral and a ribbed interior. Hose with 3″ ID compresses to 85% of its length; 4″ to 5″ ID compresses to 75%; 6″ to 12″ ID compresses to 50%. It can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

Flexible Duct Hose for Clean Environments

- Flexible
- Temperature Range: –20° to 325° F
- Color: White
- Clamps: Use worm-drive clamps (see pages 302-306)

This white hose makes dirt and other contaminants easy to spot, plus the materials are FDA listed for use with dry food such as flour and sugar. Hose is for use with lint, dust, and sawdust and can also be used in pharmaceutical applications.

Hose is 0.03" thick acrylic-coated polyester with a right-hand metal spiral and a ribbed interior. Hose with 1" to 2½" ID compresses to 35% of its length; 3" to 8" ID compresses to 25%; 10" to 12" ID compresses to 20%; 14" to 16" ID compresses to 15%. It can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

High-Temperature Flexible Duct Hose for Dust

- Flexible
- Temperature Range: –60° to 300° F
- Color: Black
- Clamps: Use worm-drive clamps (see pages 302-306)

The neoprene coating on this hose holds up under high heat. Hose meets UL 94HB and UL 94V0 for flame retardance. It is for use with lint, dust, and sawdust.

Hose is made of 0.024″ thick fiberglass with a left-hand metal spiral. It has a smooth interior for unrestricted flow. Hose with 1″ to 2¾″ ID compresses to 75% of its length; 3″ to 5½″ ID compresses to 60%; 6″ to 12″ ID compresses to 50%. It can be used outdoors. Maximum continuous length is 12 feet.

Warning: Hose should not be used for applications that generate a static charge.

Crush-Resistant Flexible Duct Hose with Wear Strip for Dust

Black with Gray Wear Strip

- Flexible
- Temperature Range: –60° to 275° F
- Color: Black with gray wear strip or white with white wear strip
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

Hose has a flexible plastic spiral that bounces back to its original shape when stepped on. The spiral acts as a wear strip to protect the hose from damage caused by dragging. Spiral direction is left hand. Hose is TPR rubber and has a smooth interior for unrestricted flow. It is for use with lint, dust, and sawdust. Hose can be used outdoors.

Black hose meets UL 94HB for flame retardance.

White hose is made of FDA listed material and is for use with dry food such as flour and sugar.

Warning: Hose should not be used for applications that generate a static charge.

★ Max. continuous length is 25 feet for white hose.

Flame-Resistant Flexible Duct Hose with Wear Strip for Dust

- Flexible
- Temperature Range: –60° to 275° F
- Color: Black with orange wear strip
- Clamps: Use worm-drive clamps (see pages 302-306)

In addition to offering excellent abrasion resistance, this hose meets UL 94HB and UL 94V0 for flame retardance. Hose is TPR rubber and has a wear strip that protects against damage caused by dragging. It is for use with lint, dust, and sawdust.

Hose has a left-hand metal spiral and a ribbed interior. Hose compresses to 70% of its length. It can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

Smooth-Flow Flexible Duct Hose for Dust

- Flexible
- Temperature Range: –40° to 150° F
- Color: Gray
- Clamps: Use worm-drive clamps (see page 306) and twin-ring hose clamps (see page 310)

The smooth interior prevents dust from getting trapped and building up inside the hose. Hose is for use with lint, dust, and sawdust.

Hose is polyethylene with a left-hand plastic spiral. It compresses to 90% of its length. Hose can be used outdoors. Maximum continuous length is 50 feet.

Warning: Hose should not be used for applications that generate a static charge.

Blo-R-Vac Duct Hose for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: 20° to 160° F
- Color: Blue or clear
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

A thick layer of PVC with a metal spiral lets this hose handle particles heavier than dust, including cardboard fibers. It has a right-hand spiral and a ribbed interior. Hose with 1¼″ to 3″ ID is 0.035″ thick; hose with 4″ to 16″ ID is 0.045″ thick. Hose compresses to 50% of its length, except hose with ID of 10″ and up compresses to 40%. It can be used outdoors.

Blue hose meets UL 94V0 for flame retardance.

Clear hose lets you monitor flow. The materials are FDA listed for use with dry food such as rice and grain.

Warning: Hose should not be used for applications that generate a static charge.

Continuous-Flex Duct Hose for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –40° to 250° F
- Color: Black
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

The neoprene coating on this hose withstands continuous motion without weakening. Hose is also for use with cardboard fibers. It meets UL 94V0 for flame retardance.

Hose is 0.026″ thick nylon with a right-hand metal spiral and a ribbed interior. Hose compresses to 25% of its length, except hose with 1″ to 1½″ ID and 4″ to 5″ ID compresses to 35%, and hose with 6″ to 8″ ID compresses to 30%. Hose can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

Bend-and-Stay Metal Duct Hose for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –100° to 500° F
- Clamps: Use worm-drive clamps (see pages 302-306)

Lightweight, yet strong, this crimped-seam aluminum hose bends and maintains its shape without support. Hose is also for use with cardboard fibers. Hose is 0.005″ thick, has a ribbed interior, and compresses to 20% of its length. It meets UL 181 Class 0. Hose can be used outdoors. It is not rated for vacuum.

Warning: Hose should not be used for applications that generate a static charge.

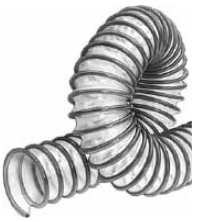
Crush-Resistant Duct Hose for Wood Chips and Plastic Pellets

- Very Flexible
- Temperature Range: –40° to 195° F
- Color: Clear with a blue wear strip
- Clamps: Use worm-drive clamps (see pages 302-306)



Don't worry about crushing this hose if you step on it—it has a flexible, right-hand plastic spiral that springs back to its original shape. Hose is 0.028″ thick clear polyurethane so you can monitor flow. It is also for use with cardboard fibers. It has a ribbed interior. Not rated for compression. It can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

- Temperature Range: –40° to 170°F
- Color: Black

Position this hose in any direction and it will hold its shape. To make longer lengths, snap one end of the hose into the end of another—no need for a duct hose connector or clamp. Hose requires support once the length exceeds 3 feet. It is also for use with cardboard fibers. Not rated for compression.

Hose is 0.47″ thick acetal, and has a ribbed interior. Surface resistivity is 10^3 ohms.

Nozzles snap onto the end of the hose. They are acetal. *Round nozzle* has a 4.32″ opening.

Adapter connects your hose to 3″ dia. duct in an existing vacuum system. It is PVC.

Abrasion-Resistant Duct Hose with Wear Strip for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –20° to 250°F
- Color: Black with silver wear strip
- Clamps: Use worm-drive clamps and bolt clamps (see pages 306-307)

Tough both inside and out, this durable urethane hose has a metal spiral that acts as a wear strip to protect against damage. Spiral direction is left hand. Hose is made of FDA listed materials and is for use with dry food such as rice and grain. It is also for use with cardboard fibers.

Hose is 0.03″ thick with a ribbed interior. Hose compresses to 25% of its length. It can be used outdoors.

Warning: Hose should not be used for applications that generate a static charge.

Static-Dissipative Duct Hose with Fittings Attached for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –60° to 180°F
- Color: Clear with black fittings

The hose's embedded metal spiral along with carbon-filled fittings divert static electricity when hose is grounded and used with a metal suction tube. Hose is also for use with cardboard fibers. Surface resistivity is 10^6 ohms. The walls are clear so you can monitor flow. Hose is 0.032″ thick urethane; the attached fittings are vinyl. It has a left-hand spiral and a ribbed interior. It can be used outdoors. Not rated for compression.

Duct Hose with Wear Strip for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –20° to 180°F
- Color: Clear with off-white wear strip

Not only is polyurethane tough enough to handle heavy particles and cardboard fibers, the material is clear so you can monitor flow. Hose has a wear strip that protects against damage and a copper wire that dissipates static buildup when used in a grounded system. Surface resistivity is 10^8 ohms.

Hose is 0.025″ thick, except 1½″ ID hose is 0.026″ thick. It has a left-hand plastic spiral and a ribbed interior. Hose compresses to 70% of its length, except 4″ ID hose compresses to 60%. It can be used outdoors.

Screw-on fittings screw over the end of your duct hose so you can make connections to equipment. They are white PVC.

Flame-Resistant Duct Hose for Wood Chips and Plastic Pellets

- Flexible
- Temperature Range: –65° to 225° F
- Color: Semi-clear
- Clamps: Use worm-drive clamps (see pages 302-306)

Hose meets UL 94V2 for flame retardance. The walls are semi-clear so you get a glimpse of what's running through your line. Hose is also for use with cardboard fibers.

Hose is 0.03″ thick polyurethane with a right-hand metal spiral and a ribbed interior. It compresses to 35% of its length. Hose can be used outdoors. Maximum continuous length is 50 feet.

Warning: Hose should not be used for applications that generate a static charge.

Duct Hose with Wear Strip for Metal Chips and Shavings

- Flexible
- Temperature Range: –40° to 200° F
- Color: Clear with yellow wear strip
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

Hose has a left-hand plastic spiral that acts as a wear strip to protect against damage. The interior is smooth for unrestricted flow and the walls are clear so you can see inside your line.

Hose is 0.033″ thick polyurethane, except 1 1/2″ ID hose is 0.022″ thick, and 6″ to 10″ ID hose is 0.035″ thick. It compresses to 50% of its length. Hose can be used outdoors. Maximum continuous length is 25 feet.

Warning: Hose should not be used for applications that generate a static charge.

Impact-Resistant Duct Hose for Metal Chips and Shavings

- Flexible
- Temperature Range: –65° to 140° F
- Color: Gray

Tough, resilient EVA plastic offers excellent impact resistance and is long lasting.

Hose is 0.038" thick. It has a left-hand plastic spiral, and a smooth interior for unrestricted flow. Hose can be used outdoors. Not rated for compression.

Screw-on fittings connect duct hose to equipment. They are PVC and screw over the end of your hose.

Warning: Hose should not be used for applications that generate a static charge.

Super-Abrasion-Resistant Metal Duct Hose for Metal Chips and Shavings

- Rigid
- Maximum Temperature: 550° F (Galvanized Steel); 1000° F (304 Stainless Steel)
- Clamps: Use bolt clamps (see page 307)

Formed by metal interlocked strips, this hose has the strength to stand up to sharp, abrasive materials. Also known as smooth-bore metal hose, it has a lining that bridges the gaps in the interlocked design, creating a smooth interior for unrestricted flow. Hose is 0.015" thick and compresses to 80% of its length. It is not rated for vacuum or pressure.

Galvanized steel has fair corrosion resistance and is for indoor use only. It meets ASTM A653 and ASTM A924.

304 stainless steel has very good corrosion resistance. It meets ASTM A240/A240M. It can be used outdoors.

Warning: Hose should not be used for applications that generate a static charge.

Puncture- and Abrasion-Resistant Duct Hose for Metal Chips and Shavings

Clear

- Flexible
- Temperature Range:
  –65° to 200° F (Clear)
  –65° to 225° F (Black)
- Color: Clear or black
- Clamps: Use worm-drive clamps (see pages 302-306)

Blow jagged, abrasive materials through this hose without worrying about punctures or tears. It's made of extra-thick polyurethane. Hose has a metal spiral and a ribbed interior. It can be used outdoors. Maximum continuous length is 25 feet.

Clear hose lets you monitor flow. Hose with 0.035″ material thickness compresses to 50% of its length; 0.06″ thick hose compresses to 70%, except 2″ and 3″ ID compresses to 75%. Spiral direction is left hand.

Black hose compresses to 50% of its length, except 0.03″ thick hose compresses to 30%. Spiral direction is right hand.

Warning: Hose should not be used for applications that generate a static charge.

Extra-Strength High-Vacuum Duct Hose for Metal Chips and Shavings

- Rigid
- Temperature Range: –40° to 160° F
- Color: Black
- Clamps: Use bolt clamps (see page 307)

The strongest nonmetal duct hose we offer, this SBR rubber hose is reinforced with yarn and has a right-hand metal spiral. Hose has a smooth interior for unrestricted flow. Hose can be used outdoors. It is not rated for pressure or compression.

Warning: Hose should not be used for applications that generate a static charge.

High-Pressure Duct Hose for Metal Chips and Shavings

- Flexible
- Temperature Range: 0° to 158° F
- Color: Blue
- Clamps: Use twin-ring hose clamps (see page 310) or worm-drive clamps (see page 306)

A polyurethane liner gives this hose extra strength to handle high pressure and vacuum applications. It has a smooth interior for unrestricted flow. Hose is PVC with a right-hand plastic spiral. It compresses to 75% of its length. It can be used outdoors.

Warning: Hose should not be used for applications that generate a static charge.

Static-Control Duct Hose for Metal Chips and Shavings

- Flexible
- Temperature Range: –40° to 140° F
- Color: Black

SBR rubber is blended with carbon, which dissipates static electricity without the need for a grounding wire. Surface resistivity is 10^3 ohms. Hose has a ribbed interior and a right-hand plastic spiral. It can be used outdoors. Hose is not rated for compression.

ID	OD	Bend Radius	Vacuum @ 72° F	Max. psi @ 72° F	Material Thick.	Max. Cont. Lg., ft.		Per Ft. 1-99	Per Ft. 100-Up

Easy-Clamp Duct Hose for Metal Chips and Shavings

- Flexible
- Temperature Range: –20° to 180° F (Natural Rubber); 0° to 212° F (Neoprene Rubber)
- Color: Amber, white, or black
- Clamps: Use worm-drive clamps and quick-release clamps (see pages 302-306)

These short lengths of hose have a collar on each end to prevent the clamp from slipping off. Use them to connect vibratory equipment such as sifters and screeners.

Hose is 0.125" thick and has a ribbed interior. Hose compresses to 50% of its length. It is not rated for pressure.

Natural rubber hose is made of FDA listed materials and is for use with dry food such as rice and grain.

Neoprene rubber hose is harder than natural rubber but less durable.

Warning: Hose should not be used for applications that generate a static charge.

		Natural Rubber			Neoprene Rubber

Static-Dissipative Duct Hose for Dry Food

- Flexible
- Temperature Range: –20° to 200° F
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 302-306)

Blow grain, sugar, flour, and powders through this polyurethane hose—it's made of FDA listed materials. Hose has a right-hand metal spiral that dissipates static when used in a grounded system. The walls are clear so you can monitor flow.

Hose is 0.035" thick and has a ribbed interior. Surface resistivity is 10^8 ohms. Hose compresses to 50% of its length. It can be used outdoors.

Very Flexible Duct Hose for Liquids

- Very Flexible
- Temperature Range: –20° to 150° F
- Color: Gray

A small bend radius lets this hose twist and turn to fit in cramped spaces. Use with water and oil. Hose is 0.032″ thick PVC with a left-hand metal spiral and a ribbed interior. Hose with 1¼″ to 2½″ ID compresses to 50% of its length; 3″ to 4″ ID hose compresses to 45%. It can be used outdoors.

Screw-on fittings and **connector** are PVC. Screw fittings over the end of your duct hose to make connections to equipment. Thread connector over the end of your hose to create longer lengths without the need for clamps.

Duct Hose for Liquids

Hose with Unfinished Ends

- Flexible
- Temperature Range: –20° to 300° F (Hose with Unfinished Ends); –20° to 212° F (Fittings and Hose with Fittings Attached)
- Color: Blue or green

Run water, oil, hydraulic oil, and chemicals such as citric and acetic acid through this hose. Hose is 3/16″ thick PVC with a metal spiral. It has a smooth interior for unrestricted flow. It is not rated for compression. Hose can be used outdoors. Maximum continuous length is 50 feet.

Fittings are gray vinyl-coated steel. They slide over the end of your hose and secure with set screws (included). **Hose with fittings attached** lets you connect to pumps, vacuum systems, and other equipment.

Smooth-Flow Duct Hose for Liquids

Hose

Screw-On Fitting

- Flexible
- Temperature Range: 15° to 125° F
- Color: White

A smooth interior allows for unrestricted flow and makes this hose easy to clean. Hose is for use with water. It is PVC, with a right-hand plastic spiral. Hose compresses to 50% of its length. It can be used outdoors.

Screw-on fittings screw over the end of your duct hose to make connections to equipment. They are gray PVC.

Abrasion-Resistant Duct Hose for Liquids

- Flexible
- Temperature Range: –40° to 300° F
- Color: Black or gray

If your liquid contains some solid particles, this tough EPDM rubber hose can handle the extra abrasion. Hose is for use with water and noncorrosive acids. Hose is 1/8″ thick with a ribbed interior and cuffed ends. Hose can be used outdoors. Not rated for pressure or compression.

Push the small end of the push-on fitting into your duct hose to connect to a portable vacuum or other equipment.

Duct Hose Connectors

Slide these connectors into the ends of duct hose and secure with a clamp. Can be used outdoors.

Aluminum is lightweight. Temperature range is –100° to 400° F for straights; –100° to 550° F for wyes.

304 stainless steel offers very good corrosion resistance. Temperature range is –400° to 800° F.

Galvanized steel has fair corrosion resistance. Temperature range is –100° to 550° F for inch sizes; –40° to 392° F for metric.

Quick-Lock Duct Hose Connectors

If you need frequent access to your line, these connectors join with a twist. They are also known as J-lock connectors. You'll need a male and a female connector to make a connection. Lugs on male side slide into slot on female side. Connectors are 0.035″ thick 304 stainless steel. Temperature range is –400° to 800° F. They can be used outdoors.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

About Hose

Hose generally has two layers of material and is reinforced for extra strength. It can be used in higher pressure applications than tubing.

All of our hose lists bend radius, which is an indicator of flexibility. This is the most you can bend a hose without damaging it or shortening its life. Bend radius is measured from the center of the bend to the inside edge of the hose. The smaller the measurement, the more flexible the hose.

Application	Pages
Air	264-272
Water	273-279
Fire Fighting	280-281
Garden Hose	2107
Steam	275
High Temperature	282-284
Coolant and Chemicals	286-292
Petroleum	293-294
Hydraulic	295-296
Food	297-299
Natural and LP Gas	300-301

Air Hose

For information about pipe size and threads, see pages 2-3.

Air Hose

- Temperature Range: –40° to 200° F
- Hose: EPDM rubber
- Color: Black or red

Hose is made of EPDM rubber, which is the most common material for air applications. It has a smooth interior and is reinforced with yarn. Hose can be used outdoors.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 100 ft.

Hose with Male Threaded Fittings

Fittings are brass. Those with pipe sizes of 1/8 to 1 have NPTF (Dryseal) threads; those with pipe sizes of 1 1/4 to 2 have NPT threads. Both NPTF and NPT threads are compatible with NPSM (National Pipe Straight Mechanical) threads.

To Order: Please specify black or red hose.

Hose with Male and Female Threaded Fittings

Male threaded fittings are brass. Those with pipe sizes of 1/8 to 1 have NPTF Dryseal threads; those with pipes sizes of 1 1/4 to 1 1/2 have NPT threads. Male NPTF and NPT threads are compatible with NPSM (National Pipe Straight Mechanical) threads.

Easy-install female threaded fittings swivel 360° until tightened. They are brass and have NPSM threads, except M16, M18, and M22 are steel and have metric straight threads. Fittings with pipe sizes of 1/8 to 3/4 have a ball-and-socket (ball seat) seat; those with pipe sizes of 1 to 1 1/2 have a rubber gasket. Fittings with metric straight threads have a rubber gasket.

To Order: Please specify black or red hose.

Hose with Industrial Quick-Disconnect Fittings

Quick-disconnect sockets and **plugs** are steel, except sockets with coupling sizes of 1/4 and 3/4 are brass. For information about quick-disconnect couplings, see page 326. **Easy-install male threaded fittings** swivel 360° until tightened. They are brass and have NPTF (Dryseal) threads, which are compatible with NPT and NPSM (National Pipe Straight Mechanical) threads.

To Order: Please specify black or red hose.

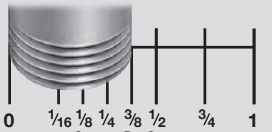
(Continued on following page)

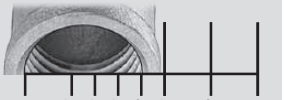
Air Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Air Hose *(Continued from previous page)*

- Temperature Range: –40° to 200° F
- Hose: EPDM rubber
- Color: Black or red

Hose is made of EPDM rubber, which is the most common material for air applications. It has a smooth interior and is reinforced with yarn. Hose can be used outdoors.

To Order: Please specify black or red hose.

Hose with ARO Quick-Disconnect Fittings

Quick-disconnect sockets and **plugs** are steel, except the sockets with a coupling size of 1/4 are brass. For information about quick-disconnect couplings, see page 326. **Male threaded fittings** are brass and have NPTF (Dryseal) threads, which are compatible with NPT and NPSM (National Pipe Straight Mechanical) threads.

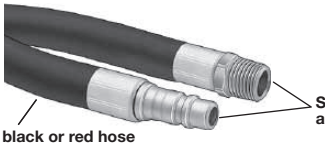
Hose with Other Fittings

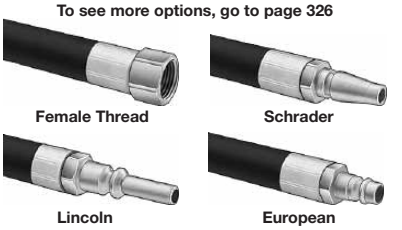
You can order any combination of hose length and fittings (male fittings, female fittings, quick-disconnect fittings, etc.).



Hose with Other Fittings 5138K999

Examples of Fittings

To see more options, go to page 326



For information about pipe size and threads, see pages 2-3.

Lubricated-Air Hose

- Temperature Range: –20° to 160° F
- Hose: Blended rubber
- Color: Red

Hose is oil resistant for use with power tools that use lubricated air. The material meets RMA (Rubber Manufacturers Association) Class A for oil resistance. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use.

Male threaded fittings are brass and have NPTF (Dryseal) threads, unless otherwise stated. NPTF threads are compatible with NPT and NPSM (National Pipe Straight Mechanical) threads. 1½″ hose with male fittings has NPT fittings.

Easy-install female threaded fittings swivel 360° until tightened. They are brass and have NPSM threads. The fittings with pipe sizes of ¼ to ¾ have a ball-and-socket (ball-seat) seal; fittings with pipe sizes of 1 to 1½ have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).
Maximum continuous length is 100 ft.

Abrasion-Resistant Lightweight Air Hose

- Temperature Range: –40° to 185° F
- Hose: Polyurethane
- Color: Blue, red, or semi-clear turquoise

Lighter than rubber and more flexible than PVC, this polyurethane hose stands up to the wear and tear of daily use. It comes in multiple colors so you can differentiate your air lines. Hose has a nonmarking cover, smooth interior, and is reinforced with yarn. Suitable for outdoor use.

Male threaded fittings are brass and have NPTF (Dryseal) threads, which are compatible with NPT and NPSM (National Pipe Straight Mechanical) threads.

Easy-install female threaded fittings swivel 360° until tightened. They're brass and have NPSM threads. They have a ball-and-socket (ball-seat) seal.

To Order: Please specify blue, red, or semi-clear turquoise hose.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).
Maximum continuous length is 100 ft.

Air Hose Whip Checks

Stop your hose from whipping when couplings are accidentally disconnected. These whip checks are steel cable and meet MSHA (Mine Safety and Health Administration) standards. Maximum working pressure is 200 psi.

Hose-to-hose whip checks have two spring-loaded loops that slip over the ends of hose.

Hose-to-tool whip checks have a spring-loaded loop on one end that goes over the hose, and a choker on the other end for the tool.

For Hose ID	Cable Dia.	Lg.	Hose-to-Hose		Hose-to-Tool

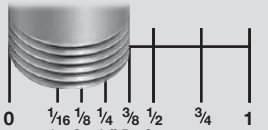
Hose-to-Tool

Air Hose

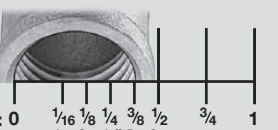
For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"



Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4"

Lightweight Air Hose

- Temperature Range: 25° to 150° F
- Hose: PVC
- Color: Blue, gray, red, or yellow

Hose is PVC, so it's lighter and less cumbersome than rubber hose. The multiple color options let you easily identify your different air lines. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use.

To Order: Please specify blue, gray, red, or yellow hose.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313). Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Hose with Male and Easy-Install Female Threaded Fittings

Fittings are brass and have NPT threads. **Easy-install female threaded fittings** swivel 360° until tightened; they have a ball-and-socket (ball-seat) seal.

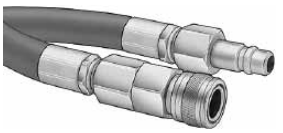
Choose a Pipe Size × Hose OD	Length, ft.	
1/4 × 1/2", 1/4 × 5/8", 1/2 × 13/16", 3/4 × 1 1/8"	1 to 100	54075K3

Hose with Easy-Install Female Threaded Fittings

Fittings are brass and have NPT threads. They swivel 360° until tightened. Fittings have a ball-and-socket (ball-seat) seal.

Choose a Pipe Size	Length, ft.	
1/4, 1/2, 3/4	1 to 100	54075K6

Hose with Industrial Quick-Disconnect Socket and Plug



Sockets are brass with a steel sleeve, except for 3/4 coupling, which is brass. *Plugs* are steel.

Choose a Coupling Size × Hose OD	Length, ft.	
1/4 × 1/2", 1/4 × 5/8", 1/2 × 13/16", 3/4 × 1 1/8"	1 to 100	54075K7

Hose with ARO Quick-Disconnect Socket and Plug

Sockets are brass. *Plugs* are steel.

Coupling Size	Max. psi @ 72° F	Length, ft.	
1/4	300	1 to 100	54075K8

Hose with Tru-Flate Quick-Disconnect Socket and Plug

Sockets with a coupling size of 1/4 are brass; those with a coupling size of 1/2 are steel. *Plugs* are steel.

Choose a Coupling Size	Max. psi @ 72° F	Length, ft.	
1/4, 1/2	300	1 to 100	54075K9

Hose Supports

Elevating your hose off the ground not only protects it from damage, it also lets water on the floor reach a drain. The two-piece design allows for easy installation. Supports are zinc-plated steel with a yellow PVC coating. They come with a white polypropylene insert that fits snugly around your hose.

For Hose OD	Dia.	Hose Supports		Replacement Inserts	
1 3/8" to 1 5/8"	8"	1049N11	$125.33	1049N17	$19.81
2 1/16" to 2 1/8"	8"	1049N12	125.33	1049N18	19.81

4 11/16" to 5"	10"	1049N16	145.92	1049N23	39.62

For information about pipe size and threads, see pages 2-3.

High-Pressure Air Hose

- Temperature Range: –20° to 190° F
- Hose: Buna-N rubber
- Color: Yellow

An extra-strong yarn reinforcement gives this hose excellent durability to handle high pressures. The material meets RMA (Rubber Manufacturers Association) Class A for oil resistance and MSHA (Mine Safety and Health Administration) standards for flame resistance. Hose has a smooth interior. It is suitable for outdoor use.

Male threaded fittings have NPT threads. The fittings with pipe sizes of 1/4 to 3/4 are brass, and the fittings with pipe sizes of 1 to 2 are steel.

Easy-install female threaded fittings swivel 360° until tightened. The fittings with pipe sizes of 1/4 to 3/4 are brass, and the fittings with pipe sizes of 1 to 2 are steel. Fittings have NPSM (National Pipe Straight Mechanical) threads, which are compatible with NPT and NPTF (Dryseal) threads. They have a ball-and-socket (ball-seat) seal.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Vacuum Air Hose

- Temperature Range: –20° to 170° F
- Hose: Buna-N rubber
- Color: Yellow

This hose handles full vacuum, so it's often used to remove air and reduce humidity in vacuum bagging applications. The material meets RMA (Rubber Manufacturers Association) Class A for oil resistance and MSHA (Mine Safety and Health Administration) standards for flame resistance. Hose has a smooth interior and is reinforced with yarn. It can be used outdoors. Vacuum rating is 29" Hg @ 72° F.

Fittings are brass and have NPT threads.

Pipe Size	Hose OD	Bend Radius	Max. psi @ 72° F	Hose with Male Threaded Fittings:	10 ft.	25 ft.	50 ft.	Other Lg., ft.	Hose with Male and Female Threaded Fittings:	10 ft.	25 ft.	50 ft.	Other Lg., ft.

Air Hose Impact Absorbers

Often called snubber hose, these short lengths of hose attach to your tool to absorb vibration and reduce stress on your source hose. Hose has a smooth interior and is reinforced with yarn. Vacuum rating is 28" Hg @ 72° F. Not suitable for outdoor use.

Fittings are brass and have NPT threads. The *easy-install* styles swivel 360° until tightened. *Female threaded fittings* have a ball-and-socket (ball-seat) seal.

Abrasion Resistant—Hose is polyurethane, so it stands up to the wear and tear of daily use. Temperature range is -40° to 165° F.

Lightweight—Hose is PVC, so it's light and easy to handle. Temperature range is -20° to 150° F.

High Temperature—Hose is neoprene, so it withstands high temperatures. Temperature range is -40° to 210° F.

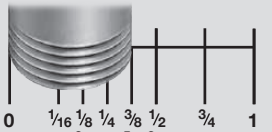
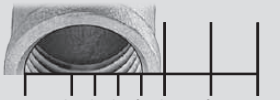
Air Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Retracting Air Hose

- Temperature Range: –40° to 200° F
- Hose: Nylon
- Color: Yellow

Hose is flexible nylon, so it retracts back to its original coiled shape when you let go. It has spring guards on the ends to prevent kinking and a smooth interior. Hose can be used outdoors and in suction applications. Vacuum rating is 28" Hg @ 72° F.

Male threaded fittings are brass with NPT threads. The *easy-install* style swivels 360° until tightened.

Quick-disconnect sockets are brass, except those with coupling sizes of 3/8 and 1/2 are zinc-plated steel. **Quick-disconnect plugs** are zinc-plated steel. For information about quick-disconnect couplings, see page 326.

Dual-Line Retracting Air Hose

- Temperature Range: –40° to 200° F
- Hose: Nylon
- Color: Red

Supply air to two power tools without worrying about your lines getting tangled. The two flexible nylon lines are bonded and have spring guards on the ends that prevent kinking. Hoses come with brass easy-install male threaded fittings attached to each end. Fittings have NPT threads and swivel 360° until tightened. Hose has a smooth interior. It can be used outdoors and in suction applications. Vacuum rating is 27" Hg @ 72° F.

Pipe Size	Hose OD	Max. psi @ 72° F	Coil OD	6-ft. Lengths		12-ft. Lengths		25-ft. Lengths	
1/8	3/16"	385	2 3/8"	5612K42	$56.20	5612K43	$86.23	5612K44	$126.40

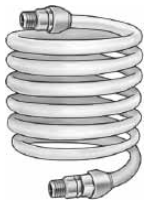
Flexible Retracting Air Hose

- Temperature Range:
  –40° to 125° F (Low Temperature);
  –40° to 165° F (Medium Temperature);
  –40° to 180° F (High Temperature)
- Hose: Polyurethane
- Color: Please see below

Hose is polyurethane so it stretches and flexes more than nylon retracting hose. It has a smooth interior. Hose can be used outdoors and in suction applications. Vacuum rating is 27″ Hg @ 72° F.

Fittings are brass. The *easy-install* style swivels 360° until tightened. Threads are NPT and have a sealant, except the fittings on the high-temperature hose do not have a thread sealant.



Low-Temperature Hose with Easy-Install Male Threaded Fittings

Assemble-Your-Own Retracting Air Hose

- Temperature Range:
  –40° to 200° F
- Hose: Nylon
- Color: Red or yellow

Create a retracting air line that meets your needs. The hose and fittings are sold separately.

Hose is nylon for flexibility and has a smooth interior. Suitable for outdoor use.

Fittings are brass and have NPT threads. They come with everything you need to assemble, plus a spring guard to prevent kinking, except the fitting for the 3/4″ hose ID does not include a spring guard. The *easy-install* style swivels 360° until tightened.

ID (to nearest 1/8"): 0 1/4" 3/8" 1/2" 5/8" 3/4" 1" 1 1/4" 1 1/2" 2"

High-Pressure Retracting Air Hose

- Temperature Range: –40° to 200° F
- Hose: Nylon
- Color: Blue

Made of thick, rigid nylon, this hose has excellent durability and the highest pressure rating of the retracting hose we offer. It has a smooth interior. Hose can be used outdoors and in suction applications. Vacuum rating is 27" Hg @ 72° F. Hose has a brass easy-install male threaded fitting attached to each end. Fittings swivel 360° until tightened. They have NPT threads with a sealant.

Pipe Size	Hose OD	Max. psi @ 72° F	Coil OD	5-ft. Lengths		10-ft. Lengths		21-ft. Lengths		42-ft. Lengths		50-ft. Lengths

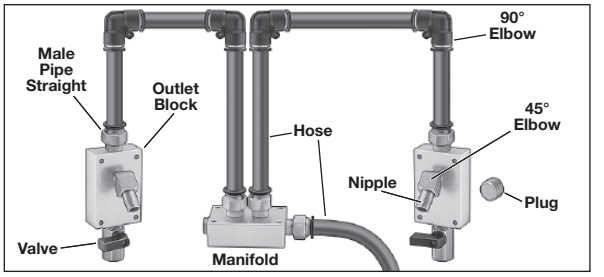
Build-Your-Own Air Hose System

- Temperature Range: –40° to 180° F
- Hose: Nylon
- Color: Blue

With an easy-to-cut nylon hose and push-to-connect fittings, you can install a compressed air line system in just a few hours. Surface-mount the system to your walls and ceiling and run your lines exactly where you need them. Hose ID is 3/8", OD is 1/2", and bend radius is 4". Hose has a smooth interior. Maximum pressure is 150 psi @ 72° F. Not suitable for outdoor use.

System



System includes 100 feet of hose with a 1/2" OD, an aluminum manifold with one inlet and three outlets, two aluminum outlet blocks, six male pipe straights, four 90° elbows, two valves, two 1/4 NPT brass nipples, two 1/4 NPT brass 45° elbows, and three 3/8 NPT brass plugs.

Additional outlet block comes with a male pipe straight, a 90° elbow, a valve, a 1/4 NPT brass nipple, a 1/4 NPT brass 45° elbow, and a 3/8 NPT brass plug.

System	5594K11	$120.37
Additional 100-ft. Air Hose	5594K13	46.88
Additional Outlet Block	5594K12	25.49

Additional Fittings

Fittings are push-to-connect style, except the quick-disconnect female socket is industrial shape, sleeve-lock style. The **straights**, **90° elbows**, and **tee** have a black plastic body and release ring, except the male pipe straight has a nickel-plated brass body.

Fittings with *male pipe threads* have nickel-plated brass 3/8 NPT threads with a PTFE thread sealant. The quick-disconnect female socket is brass with a coupling size of 1/4. For information about quick-disconnect couplings, see page 326.

Straight, Male Pipe
5594K21 $5.68

Straight
5594K25 $5.10

90° Elbow, Male Pipe
5594K24 $7.62

90° Elbow
5594K23 $5.04

Tee
5594K22 $6.56

Quick-Disconnect Female Socket
6536K28 $5.67

Bend-and-Stay Air Hose

- Temperature Range: –40° to 140° F
- Hose: Polyethylene
- Color: Blue

Create a slight bend in this hose and the aluminum tube reinforcement allows it to hold its shape. Hose is polyethylene and has a smooth interior. It can be used outdoors. Fittings are sold separately. They are nickel-plated brass and have NPT threads. To attach fittings to the hose, make a clean cut with the cutting tool, then use the deburring tool to bevel the inside of the hose.

Hose

Water Hose

- Temperature Range: 10° to 150° F
- Hose: Blended rubber, except low-pressure hose is EPDM rubber
- Color: Yellow, unless otherwise stated

Wash down processing equipment or attach this hose to a pump for water-transfer applications. Hose has a smooth interior. Suitable for outdoor use. Garden hose threads are only compatible with other garden hose threads. Female NPSM (National Pipe Straight Mechanical) threads are compatible with NPT and NPTF (Dryseal) threads.

Easy-install female threaded fittings swivel 360° until tightened and have a ball-and-socket (ball-seat) seal, except those with garden hose threads have a rubber gasket.

Low Pressure—Hose is durable EPDM rubber, which has excellent UV and ozone resistance, and is reinforced with yarn. Fittings are brass.

Medium Pressure—Hose is reinforced with yarn. Fittings are brass.

High Pressure—The steel wire reinforcement gives this hose extra strength in high-pressure conditions. *Hose with fittings* has a PVC cover, which is nonmarking and is oil and abrasion resistant. Fittings are zinc-plated steel.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).
Maximum continuous length is 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 150° F	Max. psi @ 72° F		Per Ft. 1-49	Per Ft. 50-Up

Low-Pressure Water Hose for Clean Environments

- Temperature Range: –25° to 200° F
- Hose: SBR rubber
- Color: White

Because the white cover on this hose makes dirt and other contaminants easy to spot, it is often used as a washdown hose in creamery and paper-mill applications. Hose has a smooth interior and is reinforced with yarn. Not suitable for outdoor use.

Male threaded fittings are brass and have NPT threads, except the fittings with a pipe size of 1 1/4 have NPSM (National Pipe Straight Mechanical) threads.

Easy-install female threaded fittings swivel 360° until tightened. They are brass and have NPSM threads with a rubber gasket. Female NPSM threads are compatible with NPT and NPTF (Dryseal) threads.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).
Maximum continuous length is 50 ft.

Water Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Low-Pressure Water Hose with Stainless Steel Fittings

- Temperature Range: 25° to 150° F
- Hose: PVC
- Color: Gray

Keep water free of contaminants with this high-purity PVC hose with stainless steel fittings. It has a smooth interior and is reinforced with yarn. Hose is suitable for outdoor use.

Hose with Male Threaded Fittings—Has 316 stainless steel fittings with NPTF (Dryseal) threads.

Hose with Male and Easy-Install Female Threaded Fittings—Has 303 stainless steel fittings with garden hose threads, which are only compatible with other garden hose threads. The *easy-install female threaded fitting* swivels 360° until tightened; it has a rubber gasket.

Hose with Male Threaded Fittings

Pipe Size, NPTF	Hose OD	Bend Radius	Max. psi @ 72° F		10 ft.	50 ft.	Other Lg., ft.
1/2	3/4"	4"	200	5043T43	$63.27	$111.21	1 to 200

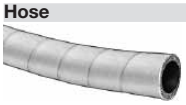
Fire-Resistant High-Pressure Water Hose

- Temperature Range: –20° to 200° F
- Hose: Blended rubber
- Color: Yellow

Because the cover on this hose meets MSHA (Mine Safety and Health Administration) standards for flame resistance, it is commonly used to control dust in mines. Hose is also abrasion and ozone resistant. It has a smooth interior and is reinforced with steel wire. Suitable for outdoor use.

Fittings are also known as ground-joint couplings. They have NPT threads. The fittings with pipe sizes of 3/4 and 1 are zinc-plated steel; those with pipe sizes of 1 1/2 and 2 are zinc-plated iron. *Female threaded fittings* have a rubber gasket.

Hose



To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313), or a steam hose fitting (see page 324).

Maximum continuous length is 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-49	Per Ft. 50-Up

Hot-Water Hose

- Temperature Range: –40° to 210° F
- Hose: Neoprene rubber
- Color: Black

When your process requires hot-water washdowns reach for this neoprene rubber hose that withstands high temperatures. Hose meets SAE 100R3. It has a smooth interior and is reinforced with yarn. Suitable for outdoor use.

Fittings are zinc-plated steel and have NPT threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a ball-and-socket (ball-seat) seal.

Extreme-Pressure Water Hose

- Temperature Range: –20° to 200° F (Water); –20° to 325° F (Steam)
- Hose: Rubber
- Color: Black

Power away dirt with this heavy duty rubber hose that can handle high pressures and temperatures. A protective sleeve covers the fittings where they attach to prevent surfaces from getting scratched. Hose meets ARPM (Association of Rubber Products Manufacturers) Class B for oil resistance. It has a smooth interior. Suitable for outdoor use.

For Use with Water— Hose is Buna-N rubber with a blended rubber cover. Hose with a 1,500 psi rating has yarn reinforcement; hose with a 3,000 psi rating has steel wire reinforcement.

For Use with Water and Steam— Hose is blended rubber with a steel wire reinforcement.

Fittings are zinc-plated steel and have NPT threads. *Swivel male threaded fittings* rotate 360° before and after installation to prevent twisting and kinking. They are also known as live swivel fittings.

Hose

Maximum continuous length is 100 ft.

High-Temperature Steam Hose

- Temperature Range: –40° to 450° F
- Hose: EPDM rubber
- Color: Black or red

Made of EPDM rubber reinforced with steel wire so it handles high temperatures, this hose is often used to clean hard-to-reach areas or supply heat and moisture to processing equipment. Hose interior is smooth. Suitable for outdoor use. The red hose meets ARPM (Association of Rubber Product Manufacturers) Class C for oil resistance.

Fittings are also known as ground-joint couplings. They have NPT threads. The fittings with pipe sizes of 1/2 to 1 are zinc-plated steel; those with pipe sizes of 1 1/4 to 2 are zinc-plated iron. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a steam hose fitting (see page 324).

Maximum continuous length is 50 ft.

Water Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Abrasion-Resistant Low-Pressure Water Hose

- Temperature Range: –25° to 180° F
- Hose: SBR rubber
- Color: Black

Hose is SBR rubber, so it stands up to the wear and tear of daily use. It has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Not rated for bend radius.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push levers down.

Male and **easy-install female threaded fittings** are aluminum and have NPSM (National Pipe Straight Mechanical) threads. Female NPSM threads are compatible with NPT and NPTF (Dryseal) threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Abrasion-Resistant Suction Water Hose

- Temperature Range: –10° to 140° F
- Hose: EPDM (Black); PVC (Clear)
- Color: Please see below

Spiral reinforcement on the outside of the hose acts as a wear strip to protect against damage caused by dragging. Hose is designed for vacuum applications such as removing accumulated water from pits, loading docks, and other flooded areas. Vacuum rating is 28" Hg @ 72° F, except the black hose with 6 7/8" OD has a vacuum rating of 20" Hg @ 72° F. *Black* hose has an EPDM rubber spiral reinforcement; *clear* hose has a PVC spiral reinforcement. Hose interior is smooth. Suitable for outdoor use.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft., except black hose with 3", 4", and 6" ID and clear hose with 6" ID have a maximum continuous length of 50 ft.

For information about pipe size and threads, see pages 2-3.

Suction Water Hose

- Temperature Range: –10° to 130° F
- Hose: PVC
- Color: Clear or green

Remove accumulated water from pits, loading docks, and other flooded areas with this general purpose suction hose. It is made of PVC, which is economical yet durable. Vacuum rating is 28″ Hg @ 72° F. Hose has a smooth interior and a PVC external spiral reinforcement. Suitable for outdoor use.

Male and **easy-install female threaded fittings** are aluminum, except the easy-install female fittings have a brass nut, and the fittings with pipe sizes of 1 and 1¼ are all brass. Fittings have NPSM (National Pipe Straight Mechanical) threads; female NPSM threads are compatible with NPT and NPTF (Dryseal) threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Cam-and-groove sockets and **plugs** come in your choice of aluminum or black polypropylene. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or an easy-fit barbed fitting (see page 317).

Maximum continuous length is 100 ft., except 6″ ID hose has a maximum continuous length of 50 ft.

Weather-Resistant Suction Water Hose

- Temperature Range: –25° to 200° F
- Hose: EPDM rubber
- Color: Black with blue spiral stripe

Offering excellent UV and ozone resistance, this EPDM rubber hose is a good fit for outdoor applications, such as emptying tanks and trucks and cleaning up standing water and spills. Hose has a smooth interior and is reinforced with yarn and steel wire. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push the levers down.

Male and **easy-install female threaded fittings** are brass, except the male fitting with a pipe size of 6 is aluminum, and the easy-install female threaded fitting with a pipe size of 6 is aluminum with a brass nut. Fittings have NPSM (National Pipe Straight Mechanical) threads; female NPSM threads are compatible with NPT and NPTF (Dryseal) threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or an easy-fit barbed fitting (see page 317).

Maximum continuous length is 100 ft.

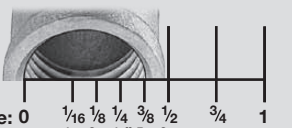
1, 1 1/4, 1 1/2, 2, 2 1/2, 3, 4, 6	1 to 100	1548N2

Water Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



High-Pressure Suction Water Hose

- Temperature Range: –20° to 180° F
- Hose: Blended rubber
- Color: Blue

Transfer large volumes of water in high-vacuum or high-pressure operations. Vacuum rating is 29″ Hg @ 72° F. Hose has a smooth interior and is reinforced with yarn and steel wire for excellent strength. Suitable for outdoor use.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push levers down.

Male and **easy-install female threaded fittings** are aluminum, except the female fittings have a brass nut. Fittings have NPSM (National Pipe Straight Mechanical) threads; female NPSM threads are compatible with NPT and NPTF (Dryseal) threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or an easy-fit barbed fitting (see page 317).

Maximum continuous length is 50 ft.

Low-Temperature Easy-Store Discharge Water Hose

- Temperature Range: –58° to 170° F
- Hose: Polyurethane
- Color: Blue

Run water through this discharge hose. Hose lays flat when not in use, so it's easy to carry and store. Hose has a smooth interior and is reinforced with yarn. It can be used outdoors.

Cam-and-groove sockets and plugs are 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Male and easy-install female threaded fittings are anodized aluminum and have NPSH (National Pipe Straight Hose) threads. Female NPSH threads are compatible with NPT, NPTF, and NPSM (National Pipe Straight Mechanical) threads. *Easy-install female threaded fittings* swivel 360° until tightened and have a rubber gasket.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or an easy-fit barbed fitting (see page 317).

Maximum continuous length is 100 ft.

Easy-Store Discharge Water Hose

Low-Pressure and Medium-Pressure Red Hose
- Temperature Range: –5° to 170° F
- Hose: PVC

Medium-Pressure White Hose
- Temperature Range: -40° to 180° F
- Hose: SBR rubber with a polyester cover

High-Pressure Hose
- Temperature Range: -5° to 200° F
- Hose: Buna-N rubber

Move water from one place to another. Hose lays flat and folds up for carrying and storage. It can be used outdoors. Hose has a smooth interior and is reinforced with yarn, except the medium-pressure white hose is not reinforced. *Medium-pressure white hose* is also known as mill hose; it resists rot and mildew.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push the levers down.

Male threaded fittings are aluminum, except the fittings with a pipe size of 1 on the medium-pressure white hose are brass. Fittings have NPSM (National Pipe Straight Mechanical) threads.

Easy-install female threaded fittings swivel 360° until tightened. They are aluminum with a brass nut, except the fittings on the high-pressure yellow hose are all aluminum, and the fittings with a pipe size of 1 on the medium-pressure white hose are all brass. Fittings have NPSM threads, which are compatible with NPT and NPTF (Dryseal) threads. They have a rubber gasket, except the fittings on the medium-pressure white hose have a ball-and-socket (ball-seat) seal.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or an easy-fit barbed fitting (see page 317).

Maximum continuous length is 100 ft., except medium pressure white hose with 4″ ID has a maximum continuous length of 50 ft.

Fire-Fighting Hose

For information about pipe size and threads, see pages 2-3.

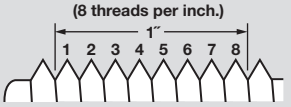
About Fire-Fighting Hose Threads and Fittings

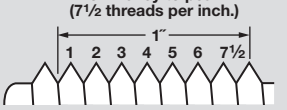
There are two main types of fire-fighting hose threads: **NH** (National Hose), which is also known as NST (National Standard Thread), and **NPSH** (National Pipe Straight Hose).

If you don't know the type or size of your threads, measure the ID or OD of your fitting and count the threads per inch.

How to Choose Fire-Fighting Hose Threads

Fitting ID Female	Fitting OD Male	Threads per Inch	NH/NST Threads	NPSH Threads
1″	1″	14		3/4″ NPSH
1 1/8″	1 1/4″	11 1/2		1″ NPSH
1 1/4″	1 3/8″	8	1″ NH/NST	
1 3/4″	1 7/8″	11 1/2		1 1/2″ NPSH
1 7/8″	2″	9	1 1/2″ NH/NST	
2 5/8″	2 7/8″	8		2 1/2″ NPSH
3″	3 1/16″	7 1/2	2 1/2″ NH/NST	
3 1/2″	3 5/8″	6	3″ NH/NST	

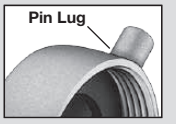


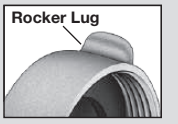


Once you determine which threads you have, use the chart below to see which threads will mate with them.

Thread Type	Compatibility
NH/NST	Work with other NH/NST threads.
NPSH	Male threads work with female NPSH threads. Female threads work with male NPSH, NPT, NPTF, and NPSM threads.

Next, select from two styles of fire-fighting hose fittings: pin lug and rocker lug. Both lug styles provide a quick connection to hydrants and washdown equipment. Tighten with a hook-style spanner wrench (see Hydrant Wrenches on page 2756).





Note: Some of our fire-fighting hose adapters on page 281 have NPT threads. NPT is the accepted industry designation for pipe, not an actual size.

Fire-Fighting Hose

Hose meets NFPA (National Fire Protection Association) standards. It has a smooth interior and is suitable for outdoor use. Hose has one male threaded fitting and one easy-install female threaded fitting that swivels 360° until tightened. *Brass fittings* are more durable than aluminum fittings. *Aluminum fittings* are lighter than brass fittings.

Lightweight Hose—Also known as pin-rack hose, this hose can be folded to fit in a rack. Hose is polyurethane with a polyester cover. It is FM approved. Temperature range is -40° to 180° F.

Choose-a-Color Abrasion-Resistant Hose—Differentiate your hose by color. The abrasion-resistant polyester cover on this hose comes in red, white, or yellow. Hose is EPDM rubber. It is UL listed and FM approved. Temperature range is -40° to 150° F.

Abrasion-Resistant Hose—Lightweight yet tough, this hose is EPDM rubber with an abrasion-resistant polyester cover. It is UL listed and FM approved, unless noted. Temperature range is -40° to 150° F.

Extra-Tough Hose—Two heavy duty polyester covers protect this hose. Hose is EPDM rubber. It is UL listed and FM approved, unless noted. Temperature range is -40° to 180° F.

★Has combination pin/rocker-lug fittings. ■Not UL listed or FM approved.

Racks and Reels for Fire-Fighting Hose

Rack (Hose Not Included)

Reel

A pivoting mounting bracket allows racks and reels to swing as the hose is released to prevent kinking. Material is steel. Color is red. Fasteners are not included.

Racks are for use with foldable lightweight fire-fighting hose (also known as pin-rack hose). The mounting bracket has four 1/2″ dia. mounting holes. **Reels** allow quick winding and unwinding of hose; the mounting bracket has four 3/8″ dia. mounting holes. **Covers** are red vinyl-coated nylon and have "Fire Hose Keep Clear" printed on them.

For information about pipe size and threads, see pages 2-3. For more information about fire-fighting hose, see page 280.

Fire-Fighting Hose Fittings

Fittings are brass. **Rocker lugs** and **pin lugs** provide a quick connection to hydrants and washdown equipment. Tighten with a hook-style spanner wrench. *Easy-install fittings* swivel until tightened to prevent twisting and kinking.

Rocker- and Pin-Lug Fire Hydrant Plugs and Caps

Rocker-lug plugs are brass. They have male threads and a 9″ chain. *Chicago Fire Department* plug fits holes with a maximum OD of 2.99″.

Rocker-lug caps are brass. They have female threads and a 9″ chain.

Pin-lug cap is aluminum. It has an adjustable bracket that snaps into 2½″ female hose threads. Tap on one end to remove quickly in an emergency. UL listed.

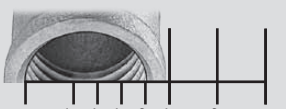
Air & Steam Hose

For information about pipe size and threads, see pages 2-3

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



About Pressure Reductions for Extreme-Temperature Air and Steam Hose

We list the maximum pressure rating (max. psi) for constant flow at room temperature. If your application requires higher temperatures or different flow conditions you will need to adjust the maximum pressure rating of your hose.

1. To calculate the maximum pressure rating, first account for temperature. As the temperature increases, the amount of pressure a hose can withstand decreases. Multiply the max. psi listed for your hose by the factors below.

Temperature	Multiply Max. psi by
≤ 200° F	No change
201° to 400° F	0.93
401° to 800° F	0.74
801° to 1200° F	0.30

2. Adjust the pressure rating again based on your flow conditions. Round the final digit down to the nearest whole number.

Flow Conditions	Divide Max. psi by
Constant (no variations in pressure)	No change
Pulsating (periodic variations in pressure)	2
Shock (sharp spikes in pressure)	6

For example, if the max. psi listed is 3,000, and you are using the hose at 400° F under pulsating conditions, your calculation would be (3,000 × 0.93) ÷ 2 = 1,395 max. psi.

Extreme-Temperature Air and Steam Hose

- Use with air, steam, and mineral oil
- Temperature Range: -325° to 1200° F

Braided stainless steel construction gives this hose flexibility and makes it tough enough to handle extreme temperatures, as well as vibration. Vacuum rating is 29" Hg @ 72° F. Hose has a ribbed interior. Suitable for outdoor use.

Corrosion Resistant—Hose is 321 stainless steel with 304 stainless steel braid and fittings.

Chemical Resistant—Hose is 316 stainless steel with a 304 stainless steel braid and 316 stainless steel fittings. It offers a wider range of chemical compatibility than corrosion-resistant hose. Use with chemicals such as phosphoric acid (25%), sodium hydroxide (10%), and isopropyl alcohol.

High-Pressure Corrosion Resistant—Hose is 321 stainless steel with a 321 stainless steel braid and 304 stainless steel fittings. It is double-braided to withstand higher pressures.

Extra-flexible hose allows for misalignment and is easy to bend.

For information about chemical compatibility, go to mcmaster.com and search for the part number.

Hose with Male Threaded Fittings

Fittings have NPT threads.

Hose with Male and 37° Flared Easy-Install Female Threaded Fittings

Male threaded fittings have NPT threads. *37° flared easy-install female threaded fittings* are also known as JIC (Joint Industrial Council) fittings; they swivel 360° until tightened and have UNF straight threads.

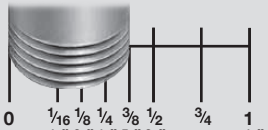
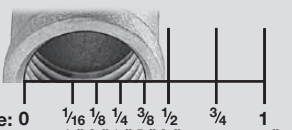
How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

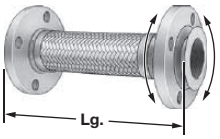
Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Extreme-Temperature Air and Steam Hose with Flanges CAD

- Use with air, steam, and mineral oil
- Temperature Range:
  -20° to 950° F (Corrosion Resistant);
  -325° to 1200° F (Chemical Resistant)



Hose with fixed flange and easy-install flange.

Braided stainless steel construction gives this hose moderate flexibility and makes it tough enough to handle extreme temperatures, as well as vibration. Bolt the flanged ends to pumps and tanks. You'll need a gasket to seal the connection. For gaskets, see pages 3529-3534; for bolts, see pages 3179-3181. Flanges are unthreaded ANSI Class 150. *Easy-install flanges* rotate 360° for easy alignment to bolt holes. Vacuum rating is 29" Hg @ 72° F. Hose has a ribbed interior. Suitable for outdoor use.

Corrosion Resistant—Hose is 321 stainless steel with a 304 stainless steel braid and steel fittings, except male fittings are 304 stainless steel.

Chemical Resistant—Hose is 316 stainless steel with a 304 stainless steel braid and 316 stainless steel fittings. It offers a wider range of chemical compatibility than corrosion-resistant hose. Use with chemicals such as phosphoric acid (25%), sodium hydroxide (10%), and isopropyl alcohol.

For information about chemical compatibility, go to mcmaster.com and search for the part number.

Hose with Quick-Connect Fittings

- Temperature Range:
  -20° to 400° F (with fluoroelastomer gasket)
  -30° to 200° F (with Buna-N rubber gasket);
- Hose: 316 stainless steel with a 304 stainless steel braid

If you need to access your line frequently, the fittings on this hose connect and disconnect quickly. Braided stainless steel construction gives this hose moderate flexibility and makes it tough enough to handle extreme temperatures, as well as vibration. Hose has a ribbed interior. Not suitable for outdoor use. Fittings are 316 stainless steel.

Extreme-Temperature Steam Hose with Quick-Clamp Sanitary Fittings—This hose is often installed to temporarily replace sanitary hose during maintenance and cleaning cycles. The fittings are also known as tri-clamp fittings and attach to other quick-clamp fittings with a gasket and a clamp. Steam applications require a fluoroelastomer gasket. For gaskets, clamps, and information about quick-clamp sanitary fittings, see page 228.

Vibration-Resistant Medium-Pressure Water Hose with Cam-and-Groove Socket and Plug— To connect fittings, insert the plug into the socket and push the levers down. Sockets have a Buna-N rubber gasket. Vacuum rating is 29" Hg @ 72° F.

Vibration-Resistant Water Hose

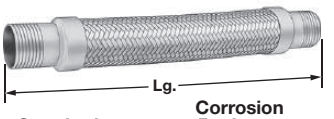
- Temperature Range: –50° to 800° F
- Hose: 304 stainless steel

Also known as pump connectors, hose is sized to specific lengths for attaching to pumps. Its flexible braided construction absorbs vibration to reduce wear on equipment. Vacuum rating is 28″ Hg @ 72° F. Hose has a ribbed interior. Suitable for outdoor use.

Standard hose has steel fittings. **Corrosion-resistant hose** has 304 stainless steel fittings.

Hose with Male Threaded Fittings

Fittings have NPT threads.



Pipe Size	Hose OD	Bend Radius	Max. psi @ 72° F	Length	Standard		Corrosion Resistant

Hose with Flanges

Flanges are unthreaded ANSI Class 150. To connect hose, bolt two same-size flanges together. You will need a gasket to complete the seal. For gaskets, see pages 3529-3534; for bolts, see pages 3179-3181.

Pipe Size	Hose OD	Flange OD	Bolt Circle Dia.	No. of Bolt Holes	Bend Radius	Max. psi @ 72° F	Length	Standard		Corrosion Resistant

Vibration-Resistant Water Hose with Solder-Connect Tube Fittings

- Temperature Range: –420° to 450° F
- Hose: Bronze

Flexible braided construction allows this hose to absorb vibration to reduce wear on equipment. To make a connection, insert the copper tube on the ends of this hose into the socket end of a tube fitting and solder together for a permanent connection. Hose is bronze, which is compatible with copper and offers good corrosion resistance. Copper tube size is the accepted designation of the copper tube industry, not the actual tube OD. Vacuum rating is 29″ Hg @ 72° F. Hose has a ribbed interior. Suitable for outdoor use. Hose is UL and C-UL recognized, except the hose with a copper tube size of 2 is not.

Copper Tube Size	Actual Tube OD	Hose OD	Bend Radius	Max. psi @ 72° F	Length

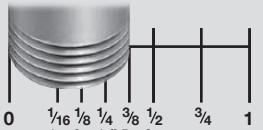
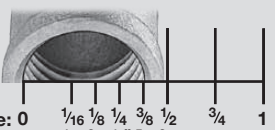
Coolant Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Coolant Hose

- Temperature Range: 0° to 210° F
- Hose: Blended rubber
- Color: Black with green stripe

Commonly known as radiator hose, this hose is for low-pressure coolant applications. It has a smooth interior and is reinforced with yarn. Hose can be used outdoors. It is not rated for vacuum or bend radius. Attach fittings with a worm-drive clamp (see pages 302-306).

Maximum continuous length is 25 ft.

Hose ID	Hose OD	Max. psi @ 72° F		Per Ft. 1-24	Per Ft. 25-Up

High-Temperature Coolant Hose

- Temperature Range: -65° to 350° F
- Hose: Silicone rubber
- Color: Blue

Silicone rubber gives this hose, often called radiator hose, the ability to handle high-heat conditions. Hose has a smooth interior. Suitable for outdoor use. Not rated for vacuum. Maximum continuous length is 12 ft., unless noted. Attach fittings with a worm-drive clamp (see pages 302-306).

Standard hose is reinforced with yarn. Meets SAE J20R1 Class A.

Kink-resistant hose is reinforced with steel wire. Meets SAE J20R2 Class A.

★Maximum continuous length is 3 ft.

High-Temperature Vacuum-Rated Coolant Hose

- Temperature Range: -65° to 350° F
- Hose: Silicone rubber
- Color: Blue

Not only can this hose withstand high temperatures, it won't collapse in low-vacuum applications. It's also known as radiator hose. Hose meets SAE J20R3 Class A. It has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Attach fittings with a worm-drive clamp (see pages 302-306).

Maximum continuous length is 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. 1-49	Per Ft. 50-Up

Flexible Coolant Hose

- Temperature Range: -20° to 210° F
- Hose: Buna-N rubber
- Color: Black with yellow stripe

With a tighter bend radius than other coolant hose, this hose can easily twist and turn around equipment. It meets USCG (United States Coast Guard) Type A2. Hose has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29″ Hg @ 72° F. Attach fittings with a worm-drive clamp (see pages 302-306).

Maximum continuous length is 25 ft.

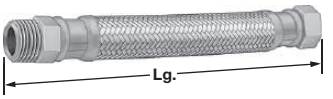
High-Pressure Braided Coolant Hose

- Temperature Range: 5° to 200° F
- Hose: EPDM rubber with 304 stainless steel braid

Instead of a rubber cover, this hose has a stainless steel braid for excellent strength in high-pressure applications. Hose has a smooth interior. Suitable for outdoor use. Not rated for vacuum.

Hose comes with a male threaded fitting and an easy-install female threaded fitting attached. *Male threaded fittings* are brass and have NPT threads. *Easy-install female threaded fittings* swivel 360° until tightened. They are brass and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with NPT and NPTF (Dryseal) threads. They have a fiber gasket.



Pipe Size	Hose OD	Bend Radius	Max. psi @ 72° F		12″	18″	24″	30″	36″
1/2	11/16″	2 5/8″	350	5308K6	$13.26	$15.53	$19.43	$19.99	$22.70

Low-Pressure Chemical Hose

- Use with acetone, ethanol, methyl ethyl ketone (MEK), and xylene
- Temperature Range: -25° to 150° F
- Hose: Polyethylene with an EPDM rubber cover
- Color: Green with light green stripe

For excellent resistance against a wide range of chemicals, this polyethylene hose can't be beat. It has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and **plugs** come in aluminum or 316 stainless steel. *Aluminum couplings* are lightweight and have good corrosion resistance; *316 stainless steel couplings* have excellent corrosion resistance. To connect fittings, insert the plug into the socket and push the levers down.

ⓘ For information about chemical compatibility, go to mcmaster.com and search for the part number.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 50 ft.

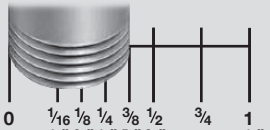
■Socket has one lever.

Chemical Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



For information about chemical compatibility, go to mcmaster.com and search for the part number.

Flexible Low-Pressure Chemical Hose

- Use with acetone, carbon dioxide, ethanol, isopropyl alcohol and sodium hydroxide
- Temperature Range: -40° to 220° F
- Hose: EPDM rubber
- Color: Purple with yellow stripe

You don't need a lot of force to bend this hose. The extra flexibility makes it good for offset connections and tight spaces. Hose has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29" Hg @ 72° F.

Male threaded fittings are 316 stainless steel and have NPT threads.

Cam-and-groove sockets and **plugs** are 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313), or a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Medium-Pressure Chemical Hose

- Use with acetone and isopropyl alcohol
- Temperature Range: -30° to 160° F
- Hose: Nylon with a blended rubber cover
- Color: Red

Yarn reinforcement gives this hose good strength under pressure. Hose meets ARPM (Association of Rubber Products Manufacturers) Class B for oil resistance. It has a smooth interior. Suitable for outdoor use. Hose is not rated for vacuum.

Male threaded fittings are 316 stainless steel and have NPT threads.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-49	Per Ft. 50-Up

Crush-Resistant Low-Pressure Chemical Hose

- Use with acetone, isopropyl alcohol, phosphoric acid, sodium hydroxide, toluene, and xylene
- Temperature Range: -40° to 180° F
- Hose: Polyethylene with an EPDM cover
- Color: Green with red stripe

Step on this hose and it springs back to its original shape. Multiple layers of polyethylene plus plastic spiral reinforcement gives it excellent crush and kink resistance. Hose has a smooth interior. Suitable for outdoor use. Vacuum rating is 29" Hg @ 72° F.

Cam-and-groove sockets and **plugs** are 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft., except 3/4" and 3" ID hose, which have a maximum continuous length of 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

ⓘ For information about chemical compatibility, go to mcmaster.com and search for the part number.

High-Temperature Medium-Pressure Chemical Hose

- Use with acetone, isopropyl alcohol, toluene, and xylene
- Temperature Range: -40° to 350° F
- Hose: FEP with an EPDM rubber cover
- Color: Green with yellow stripe

Made of FEP (fluorinated ethylene propylene), this hose can stand up to chemicals at high temperatures. It has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29″ Hg @ 72° F.

Male threaded fittings have NPT threads. *316 stainless steel fittings* have excellent corrosion resistance; *steel fittings* have excellent strength. Hose with steel fittings is approximately 20% less expensive than the hose with 316 stainless steel fittings.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).
Maximum continuous length is 50 ft.

Wear-Resistant Low-Pressure Chemical Hose

- Use with acetone, isopropyl alcohol, sodium hydroxide, toluene, and xylene
- Temperature Range: -40° to 160° F
- Hose: UHMW polyethylene with an EPDM rubber cover
- Color: Green with purple stripe

Expose this UHMW (ultra-high molecular weight) polyethylene hose to harsh physical conditions without worrying about it deteriorating or becoming brittle. It has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 28″ Hg @ 72° F.

Cam-and-groove sockets and **plugs** are 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).
Maximum continuous length is 50 ft.

Extra-Flexible High-Pressure Braided Chemical Hose

- Use with liquid ammonia, acetone, isopropyl alcohol, methyl ethyl ketone (MEK), mineral oil and toluene
- Temperature Range: -65° to 400° F
- Hose: PTFE with a 304 stainless steel braid

The ribbed interior provides more flexibility than other chemical hose for applications involving frequent flexing and vibration. This heavy duty hose is PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. Suitable for outdoor use.

Male threaded fittings have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened and have UNF threads.

Zinc-plated steel fittings have fair corrosion resistance; *316 stainless steel fittings* have excellent corrosion resistance.

High-Pressure Braided Chemical Hose

- Use with acetone, ethanol, isopropyl alcohol, methyl ethyl ketone (MEK), mineral oil, toluene, and xylene
- Temperature Range: -65° to 450° F
- Hose: PTFE with a 304 stainless steel braid

This heavy duty hose is PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. Hose meets SAE 100R14. The interior is smooth. Hose can be used outdoors.

Male threaded fittings have NPT threads.

Easy-install threaded fittings swivel 360° until tightened. **37° flared easy-install female threaded fittings** are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened and have UNF straight threads.

Brass fittings have good corrosion resistance; *303 stainless steel fittings* have very good corrosion resistance.

High-Pressure Braided Chemical Hose with Abrasion-Resistant Cover

- Use with acetone, isopropyl alcohol, and mineral oil
- Temperature Range: -65° to 325° F
- Hose: PTFE with a 304 stainless steel braid and a blended rubber cover
- Color: Blue

A blended rubber cover protects the braid so abrasive applications won't harm the hose. Hose is heavy duty PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. It can handle high pressures, as well as frequent bending and vibration. A cover surrounds the braid to protect it from damage. Hose has a smooth interior. Suitable for outdoor use.

Male threaded fittings come in brass for good corrosion resistance or 303 stainless steel for very good corrosion resistance. They have NPT threads.

Easy-install male threaded fittings swivel 360° until tightened. They come in brass for good corrosion resistance or 316 stainless steel for excellent corrosion resistance. They have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened and have UNF threads. They come in brass for good corrosion resistance or 303 stainless steel for very good corrosion resistance.

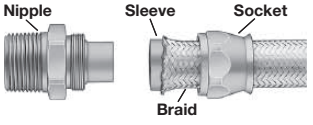
Build-Your-Own High-Pressure Braided Chemical Hose

- Use with mineral oil and toluene
- Temperature Range: -40° to 350° F
- Hose: PTFE with a 304 stainless steel braid



Cut the hose to your desired length and attach the fittings. You don't need any special equipment to install. After you attach the fittings, be sure to test the hose for required pressure prior to using. Suitable for outdoor use.

To attach fittings to hose, push the socket over the stainless steel braid, then wedge the sleeve under the braid. Next, insert the nipple into the hose and hand-tighten the socket onto the nipple. Finish by wrench-tightening the hex nipple until it is flush against the socket.

Hose is heavy duty PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. It has a smooth interior.

Male threaded fittings have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened and have UNF threads.

Brass fittings with zinc-plated steel nut have fair corrosion resistance; *303 stainless steel fittings* have very good corrosion resistance.

Hose

Maximum continuous length is 100 ft., except 7/8″ ID hose has a maximum continuous length of 50 ft.

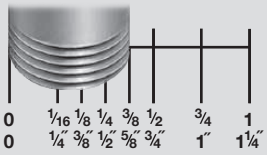
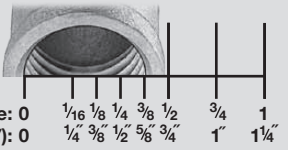
Chemical Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Static-Dissipative High-Pressure Braided Chemical Hose

- Use with acetone, isopropyl alcohol, and mineral oil
- Temperature Range: -65° to 450° F
- Hose: PTFE with a 304 stainless steel braid

Use this conductive hose in a grounded system to eliminate static buildup. The material is blended with carbon black, which conducts static charges away from the hose walls. This heavy duty hose is PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. It has a smooth interior. Suitable for outdoor use.

Hose has one male threaded fitting and one easy-install male threaded fitting, which swivels 360° until tightened. Fittings have NPT threads.

Brass fittings offer good corrosion resistance; *303 stainless steel fittings* offer very good corrosion resistance.

High-Pressure Braided Chemical Hose with Precision Threaded Fittings

- Use with acetone, methyl ethyl ketone (MEK), and mineral oil
- Temperature Range: -65° to 400° F
- Hose: PTFE with a 304 stainless steel braid

For a more precise fit, hose has a 37° flare fitting on one end that has threads that adhere to tighter tolerances than other types of threads. This heavy duty hose is PTFE with a stainless steel braid for more chemical resistance and better strength than other chemical hose. It meets SAE 100R14. The interior is smooth. Suitable for outdoor use. Vacuum rating is 28″ Hg @ 72° F.

Male threaded fittings are 303 stainless steel and have NPT threads.

37° flared male threaded fittings are 304 stainless steel and have 3A threads. They are made to AS specifications.

37° flared easy-install female threaded fittings swivel 360° until tightened. They are 303 stainless steel and have 3B threads.

Heated Braided Chemical Hose

- Use with adhesives and paraffins (wax)
- Temperature Range: 50° to 450° F
- Hose: PTFE with a 304 stainless steel braid and a polyester cover
- Color: Black

Plug this hose into a temperature controller and the hose's heating wire will keep the interior warm for use with materials that need heat in order to flow, such as adhesives and paraffin wax. Hose is PTFE with a stainless steel braid. A cover surrounds the braid to protect it from damage. The heating wire is laminated with silicone rubber. Hose includes a 6-ft. shielded power cord with a 9-pin electrical connector. Hose has a smooth interior. Not suitable for outdoor use.

Male threaded fittings are 304 stainless steel and have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened. They are 304 stainless steel and have UNF threads.

Temperature controller (sold separately) has an RTD thermocouple with a temperature-adjustment dial that ranges from 50° to 450° F. It has an electrical connector for attaching to the hose and comes with a 7-ft. power cord with a three-prong plug. Controller operates on 120 volts AC.

Low-Pressure Petroleum Hose

- Use with diesel fuel, fuel oil, and gasoline (up to 10% ethanol)
- Temperature Range: -20° to 175° F
- Hose: Buna-N rubber with a neoprene rubber cover
- Color: Black

Made of tough Buna-N rubber, this hose has the durability to stand up to gasoline, fuel oil, and other petroleum-based products. Hose is reinforced with steel wire that provides an escape route for electrostatic buildup when used in a grounded system. The interior is smooth. Hose can be used outdoors; it is not for use on a reel. Not rated for vacuum.

Male threaded fittings are brass. Fittings with a pipe size of 3/4 have NPT threads. Fittings with a pipe size of 1 have NPSH (National Pipe Straight Hose) threads, which are only compatible with other NPSH threads. Fittings with a pipe size of 1 1/4 and larger have NPSM (National Pipe Straight Mechanical) threads, which are compatible with NPSH threads.

Easy-install female threaded fittings swivel 360° until tightened. They are brass and have NPSM threads, except the fittings with a pipe size of 1 have NPSH threads. Female NPSM threads are compatible with NPT and NPTF (Dryseal) threads. Female NPSH threads are compatible with NPT, NPTF, and NPSM threads.

Cam-and-groove sockets and **plugs** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313), or a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 50 ft.

Flexible Low-Pressure Petroleum Hose

- Use with diesel fuel, ethanol, fuel oil, gasoline (up to 10% ethanol), and kerosene
- Temperature Range: -35° to 200° F
- Hose: Buna-N rubber with a blended rubber cover
- Color: Black with red stripe

With a tighter bend radius than other petroleum hose, this hose can easily twist and turn around equipment. The steel wire reinforcement provides an escape route for electrostatic buildup when used in a grounded system. Hose has a smooth interior. Suitable for outdoor use. Vacuum rating is 29" Hg @ 72° F.

Male threaded fittings are zinc-plated steel. They have NPT threads.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up
1 1/2"	2 1/16"	4"	150	56315K51	$11.75	$9.40

UL-Listed Low-Pressure Gasoline Hose

- Use with diesel fuel and gasoline (up to 10% ethanol)
- Temperature Range: -40° to 140° F
- Hose: Buna-N rubber with a blended rubber cover
- Color: Black

Commonly used to transfer gasoline, this hose is also known as curb pump hose. It has a static control wire that provides an escape route for electrostatic buildup when used in a grounded system. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Not rated for vacuum. Hose comes with male threaded fittings attached; they are zinc and have NPT threads.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		5 ft.	10 ft.	12 ft.	20 ft.	25 ft.	50 ft.

Petroleum & Paint-Spray Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Medium-Pressure Fuel Oil Hose

- Use with fuel oil and kerosene
- Temperature Range: -20° to 140° F
- Hose: Buna-N rubber with a blended rubber cover
- Color: Brown, except the 1 1/4" and 1 1/2" sizes are red

Multi-spiral yarn reinforcement gives this hose strength. Hose is not for use with gasoline. It meets ARPM (Association of Rubber Products Manufacturers) Class A for oil resistance. The interior is smooth. Suitable for outdoor use. Not rated for vacuum.

Male threaded fittings are brass and have NPT threads.

Easy-install female threaded fittings swivel 360° until tightened. They are brass and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with NPT and NPTF (Dryseal) threads.

Hose

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Low-Pressure Petroleum Hose with Vacuum Rating

- Use with diesel fuel, fuel oil, and gasoline (up to 10% ethanol)
- Temperature Range: -30° to 160° F
- Hose: Buna-N rubber with a blended rubber cover
- Color: Black

Made of tough Buna-N rubber, this hose has the durability to stand up to gasoline, fuel oil, and other petroleum-based products. Vacuum rating is 24" Hg @ 72° F. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use.

To attach your own fittings to the hose, you'll need a barbed hose fitting (see pages 314-318) and a clamp (see pages 302-313).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. 1-99	Per Ft. 100-Up

Hose for Paint-Spray Systems

Paint Hose for Air-Operated Systems
- Temperature Range: 0° to 190° F
- Hose: Nylon with a blended rubber cover
- Color: Black

Air Hose for Air-Operated Systems
- Temperature Range: -40° to 200° F
- Hose: Buna-N rubber with a neoprene rubber cover
- Color: Red

Paint Hose for Airless Systems
- Temperature Range: 0° to 180° F
- Hose: Nylon with a polyurethane cover
- Color: Blue

To transfer air or oil- and water-based paints, attach this hose to a paint-spray system. Hose has a smooth interior. Not rated for vacuum. Hose comes with two easy-install female threaded fittings attached that swivel 360° until tightened. Fittings have NPSM (National Pipe Straight Mechanical) threads, which are compatible with NPT and NPTF (Dryseal) threads.

Hose for Air-Operated Paint-Spray Systems

Paint Hose

Use with systems that have separate hoses for air and paint. Hoses are for indoor use only. *Paint hose* is reinforced with yarn and has zinc-plated steel fittings with spring guards to prevent kinking. *Air hose* has brass fittings.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		5 ft.	10 ft.	15 ft.	25 ft.	50 ft.	Other Lg., ft.
Paint Hose											
1/4	1/4"	1/2"	2 1/2"	750	7859T71	$29.10	$42.30	$51.77	$78.39	$147.90	5 to 50

Hydraulic Hose

- Temperature Range: -40° to 210° F
- Hose: Buna-N rubber with a blended rubber cover
- Color: Black

Use this hose to transfer fluid between pumps, cylinders, and other parts of your hydraulic system. It has a smooth interior. Suitable for outdoor use.

Medium Pressure—Hose is reinforced with steel wire and meets SAE 100R1-AT. Vacuum rating is 24″ Hg @ 72° F.

High Pressure—Hose is reinforced with two steel wire braids for extra strength under pressure. It meets SAE 100R2-AT. Vacuum rating is 28″ Hg @ 72° F, except hose with a pipe size of 3/4 and 1 has a vacuum rating of 24″ Hg @ 72° F.

Male threaded fittings are zinc-plated steel and have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings. They swivel 360° until tightened. They are zinc-plated steel and have UNF threads.

Hose

Use **medium-pressure hose** only with Parker Series 42 screw-on hydraulic fittings. Use **high-pressure hose** only with Parker Series 30 screw-on hydraulic fittings. See page 323 for fittings.

Maximum continuous length is 100 ft.

Hydraulic Hose with Quick-Disconnect Couplings

- Temperature Range: -40° to 210° F
- Hose: Blended rubber
- Color: Black

When you need access to your line, don't waste time threading and unthreading your fittings. This hose has a quick-disconnect fitting on one or both ends. Use this hose to transfer fluid between pumps, cylinders, and other parts of your hydraulic system. It is reinforced with two steel wire braids for excellent strength and to meet ISO 11237-1. Hose has a smooth interior. Bend radius is 3 1/2″. Suitable for outdoor use. Not rated for vacuum.

Quick-disconnect sockets and **plugs** are sleeve-lock style. They are compatible with all couplings that meet ISO 7241-1 series B, such as Parker 60 series on page 337. To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. Sockets and plugs are zinc-plated steel. They have a shut-off valve that stops the flow when the coupling is disconnected. For more information about quick-disconnect couplings, see page 326.

Male threaded fittings are zinc-plated steel and have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings and swivel 360° until tightened. They are zinc-plated steel and have UNF threads.

Hydraulic Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Lightweight Hydraulic Hose

- Temperature Range: -40° to 210° F
- Hose: Nylon with a polyurethane cover
- Color: Black

Made of nylon, this hose is lighter and easier to maneuver than rubber hydraulic hose. It meets SAE100R7. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Vacuum rating is 28" Hg @ 72° F.

Male threaded fittings are steel with a corrosion-resistant plating. They have NPT threads.

37° flared easy-install female threaded fittings are also known as JIC (Joint Industrial Council) fittings and swivel 360° until tightened. They are steel with a corrosion-resistant plating and have UNF threads.

Hose

To attach your own fittings to the hose, you'll need a crimp-on hydraulic hose fitting (see page 323). Maximum continuous length is 100 ft.

Low-Pressure Hydraulic Hose

- Temperature Range: -40° to 200° F
- Color: Black

Rated for low-pressure applications up to 500 psi, this hose works well as a return line in your hydraulic system. It has a smooth interior. Suitable for outdoor use.

SAE 30R2 hose is Buna-N rubber with a blended rubber cover. It is reinforced with yarn. Hose is not rated for vacuum.

SAE 30R3 hose is blended rubber reinforced with yarn. Vacuum rating is 20" Hg @ 72° F.

SAE 100R4 hose is Buna-N rubber with a blended rubber cover. It is reinforced with yarn and steel wire. Vacuum rating is 29" Hg @ 72° F.

Maximum continuous length is 100 ft.

Dry-Food Hose

- Temperature Range: 0° to 150° F
- Hose: PVC
- Color: Clear

Hose is clear PVC so you can easily monitor flow. Use it with flour, grain, rice, and sugar. Hose is made from FDA listed materials for use with dry food. It has a smooth interior and is reinforced with a PVC spiral. Suitable for outdoor use.

Hose with Static Control Wire—The wire provides an escape route for electrostatic buildup when used in a grounded system. Surface resistivity is 10^3 -10^6 ohms.

Cam-and-groove sockets and **plugs** are aluminum. They are not FDA listed. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Hose has a maximum continuous length of 100 ft., except 5″, 6″, and 8″ ID have a maximum continuous length of 20 ft. **Hose with static control wire** has a maximum continuous length of 50 ft.

Wet-Food and Beverage Hose

- Temperature Range: -15° to 155° F
- Hose: PVC
- Color: Clear with white spiral

The PVC construction means this hose won't impart tastes or odors on your product. The hose is clear, so you can monitor flow. Hose and fittings are made from FDA listed materials for use with wet food, such as juice, meat, poultry, and syrup. Hose and fittings are 3-A certified for use with dairy, except the cam-and-groove sockets and plugs are not 3-A certified. Hose has a smooth interior and is reinforced with a PVC spiral. Suitable for outdoor use. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and **plugs** are 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Quick-clamp sanitary fittings are 304 stainless steel. Also known as tri-clamp fittings, they attach to other quick-clamp fittings with a gasket and a clamp. For gaskets and clamps, see page 228.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or a quick-clamp sanitary fitting (see pages 228-234).

Maximum continuous length is 100 ft.

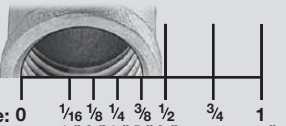
Food & Beverage Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Abrasion-Resistant Dry-Food Hose

- Temperature Range: -40° to 180°F
- Hose: Gum rubber with an SBR rubber cover
- Color: Tan

The most durable dry-food hose we offer, this hose is made of gum rubber for excellent resistance to cuts and tears. Use it with flour, grain, rice, and sugar. A static control wire provides an escape route for electrostatic buildup when used in a grounded system. Hose is made from FDA listed materials for use with dry food. It has a smooth interior and is reinforced with yarn and steel wire. Hose is not rated for surface resistivity. Suitable for outdoor use. Vacuum rating is 29" Hg @ 72°F.

Cam-and-groove sockets and **plugs** are aluminum. They are not FDA listed. To connect, insert the plug into the socket and push the levers down.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72°F		Per Ft. 1-99	Per Ft. 100-Up

High-Temperature Wet-Food and Beverage Hose

- Temperature Range: -65° to 350°F
- Hose: Silicone rubber
- Color: Semi-clear white

Made of peroxide-cured silicone, this hose stays strong and flexible across a wide temperature range. Hose is made from FDA listed materials for use with wet food, such as juice, meat, milk, poultry, and syrup. Hose and fittings meet NSF/ANSI Standard 51 for food contact. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Not rated for vacuum.

Quick-clamp sanitary fittings are 316L stainless steel and are 3-A certified for use with dairy. Also known as tri-clamp fittings, they attach to other quick-clamp fittings with a gasket and a clamp. For gaskets and clamps, see page 228.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349) or a quick-clamp sanitary fitting (see pages 228-234).

Maximum continuous length is 100 ft., except 1" ID hose has a maximum continuous length of 50 ft.

Wet-Food and Beverage Hose with Abrasion-Resistant Cover

- Temperature Range: -40° to 225°F
- Hose: Butyl rubber with an EPDM rubber cover
- Color: Gray with blue stripe

A tough EPDM rubber cover protects the hose from damage. Use it with juice, meat, milk, poultry, and syrup. Hose and fittings are 3-A certified for use with dairy. It has a smooth interior and is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29" Hg @ 72°F.

Quick-clamp sanitary fittings are 316 stainless steel. Also known as tri-clamp fittings, they attach to other quick-clamp fittings with a gasket and a clamp. For gaskets and clamps, see page 228.

Hose

To attach your own fittings to the hose, you'll need a quick-clamp sanitary fitting (see pages 228-234).

High-Pressure Wet-Food and Beverage Hose

- Temperature Range: –40° to 240°F
- Material: Chlorobutyl rubber with an EPDM rubber cover
- Color: Gray

Strong yarn reinforces this hose to give it a higher pressure rating than other food and beverage hose. Also known as brewer's and vintner's hose, the hose material is FDA listed for use with beer and wine. The interior is smooth for unrestricted flow. Hose can be used outdoors. It is not for continuous steam service. Vacuum rating is 29″ Hg @ 72°F.

Hose

To attach your own fittings to the hose, you'll need a cam-and-groove hose fitting (see pages 339-349).

Maximum continuous length is 100 ft.

Hose with Quick-Clamp Sanitary Fittings

This hose has the same dimensions as the hose above, except it has 316 stainless steel quick-clamp sanitary fittings. Also known as tri-clamp fittings, they attach to other quick-clamp fittings with a gasket and a clamp. For gaskets and clamps, see page 228.

Choose a Hose OD	Choose a Length

Ultrasmooth-Interior Wet-Food and Beverage Hose

- Temperature Range: –25° to 230°F
- Hose: Blended rubber
- Color: White

The super-smooth interior of this hose prevents product buildup. Use it with juice, milk, and syrup. Hose is 3-A certified for use with dairy and is made from FDA listed materials for use with wet food. Hose is reinforced with yarn and steel wire. Suitable for outdoor use. Vacuum rating is 29″ Hg @ 72°F.

Quick-clamp sanitary fittings are 304 stainless steel. They are 3-A certified for use with dairy. Also known as tri-clamp fittings, they attach to other quick-clamp fittings with a gasket and a clamp. For gaskets and clamps, see page 228.

Hose

To attach your own fittings to the hose, you'll need a quick-clamp sanitary fitting (see pages 228-234).

Maximum continuous length is 100 ft.

Abrasive-Material Hose

- Temperature Range: –20° to 175°F
- Hose: Gum rubber with a blended rubber cover
- Color: Black

This hose is made of tough gum rubber that stands up to sand, steel shot, and other abrasives. The hose and cover materials are conductive to dissipate static buildup. Surface resistivity is 10^3-10^6 ohms. Hose has a smooth interior and is reinforced with yarn. Suitable for outdoor use. Not rated for vacuum or bend radius.

Abrasive quick-connect couplings are aluminum. They have a unique head style that connects only to other abrasive quick-connect couplings. To connect, push the couplings together and twist for a leak-tight seal.

Hose

Maximum continuous length is 100 ft.

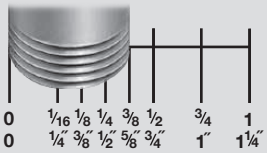
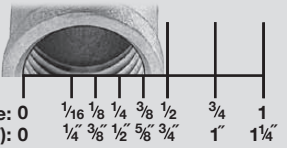
Natural & LP Gas Hose

For information about pipe size and threads, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size of 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





LP Gas Hose

- Temperature Range: -40° to 140° F
- Hose: Buna-N rubber with a neoprene rubber cover
- Color: Black

Also known as propane hose, this hose is for outdoor use only. It should not be used underground. Hose is CSA certified and UL recognized for use with liquefied-petroleum gas. Hose has a smooth interior and is reinforced with yarn. Not rated for vacuum.

Hose comes with male NPT fittings attached. Fittings with a pipe size of 1/4 and 3/8 are brass; those with a pipe size of 1/2 and larger are steel.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		5 ft.	10 ft.	15 ft.	25 ft.	Other Lg., ft.

Natural and LP Gas Hose

Run gas through this heavy duty hose that's flexible enough for routing through walls and ceilings. Hose has a ribbed interior. Suitable for outdoor use. Not rated for vacuum.

For Natural and LP Gas

- Temperature Range: -40° to 200° F
- Hose: 304 stainless steel with a polyethylene cover
- Color: Yellow

Hose is not for use underground or with moveable appliances such as dryers and ranges. Fittings meet ANSI LC1 and CSA 6.26.

Male threaded fittings are brass and have NPT threads. They have a silicone O-ring and graphite gasket.

Hose with Male Threaded Fittings

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		10 ft.	15 ft.	25 ft.	50 ft.	75 ft.	100 ft.

For Natural and LP Gas Appliances

- Temperature Range: -40° to 150° F
- Hose: 304 stainless steel

Special appliance fittings on this hose let you connect dryers and ranges to your gas supply. Fittings meet ANSI Z2 and CSA 6a.

Easy-install male and **easy-install female threaded fittings** swivel 360° until tightened. They are zinc-plated steel and have NPT threads.

Hose with Easy-Install Male Threaded Fittings

Argon, Nitrogen, and Oxygen Hose

- Temperature Range: -65° to 450° F
- Hose: PTFE with a 304 stainless steel cover

This hose is often called pigtail hose. It comes cleaned, capped, and bagged to meet CGA (Compressed Gas Association) G4.1. Interior is smooth. Hose is suitable for outdoor use; it should not be used underground. Vacuum rating is 28″ Hg @ 72° F.

Male and **female threaded fittings** are brass and have NPT threads.

Hose with Female Threaded Fittings

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		2 ft.	5 ft.	Other Lg., ft.

1/4	1/4″	5/8″	3 1/2″	3,600	5665K61	$67.04	$111.93	1 1/2 to 25

High-Temperature Gas and Liquid Nitrogen Hose

Transfer industrial gases or liquid nitrogen across a wide temperature range with this hose. The braided reinforcement provides good flexibility in high-vibration applications. A cover surrounds the braid to protect it from damage, except 54935K62 does not have a cover. Hose interior is ribbed. Hose is suitable for outdoor use; it should not be used underground. Vacuum rating is 29″ Hg @ 72° F.

Hose for Argon, Nitrogen Gas, and Oxygen

- Temperature Range: -320° to 1500° F
- Hose: 316 stainless steel with a 304 stainless steel braid and cover

Hose comes cleaned, capped, and bagged to meet CGA (Compressed Gas Association) G4.1. It comes with female threaded fittings attached. They are 316 stainless steel and have NPT threads.

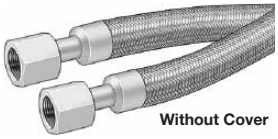
Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		2 ft.	3 ft.	4 ft.	Other Lg., ft.
1/4	1/4″	13/16″	6 1/4″	3,600	5665K11	$123.98	$148.78	$199.75	1 1/2 to 25

Hose for Liquid Nitrogen

- Temperature Range: -320° to 1500° F
- Hose: 321 stainless steel with a 304 stainless steel braid

Hose comes cleaned, capped, and bagged to meet CGA (Compressed Gas Association) G4.1. It has 45° flared easy-install female threaded fittings attached that swivel 360° until tightened. Fittings are 316 stainless steel and have UNF threads.

Hose with Cover—A 304 stainless steel cover surrounds the braid to protect it from damage.



Without Cover

Hose with Tube Fittings for Liquid Nitrogen

- Temperature Range: -325° to 1250° F
- Hose: 316 stainless steel with a 304 stainless steel braid

Make connections to tubing and Yor-Lok tube fittings. Hose is air cleaned.

Yor-Lok tube fittings are 316 stainless steel. Also known as an instrumentation fitting, they have two sleeves (double ferrules) that bite into metal tubing for a strong seal.

Male threaded fittings are 316 stainless steel and have NPT threads.

Tube stem fittings are 316 stainless steel. They are a short length of tubing that inserts into the end of another tube fitting.

About Measuring Hose and Tube Clamps

The best way to measure the clamp size you need is to measure the outside diameter of your hose with the fitting installed. Some clamps accommodate a range of sizes, so be sure the size you need falls in the middle of that range.

Note: It is your responsibility to test and monitor clamps to ensure they are appropriate for your application.

General Purpose Worm-Drive Clamps for Firm Hose and Tube

So easy to install, it's no wonder these are the most frequently used style of hose clamps. Clamps are reusable. The banding is 0.023″ thick. Temperature range is -50° to 250° F. Clamps meet SAE J1508. Clamps are for firm plastic and rubber hose and tube. Do not exceed the maximum torque or clamps may be damaged.

5/16″ band width clamps tighten with a wrench, slotted screwdriver, or 1/4″ external hex nutdriver. Maximum torque is 15 in.-lbs.

1/2″ band width clamps tighten with a wrench, slotted screwdriver, or 5/16″ external hex nutdriver. Maximum torque is 35 in.-lbs.

9/16″ band width clamps tighten with a wrench, slotted screwdriver, or 5/16″ external hex nutdriver. Maximum torque is 35 in.-lbs.

301 Stainless Steel Clamps— Have a 301 stainless steel housing and band for very good corrosion resistance. The *zinc-plated screws* have fair corrosion resistance. The *410 stainless steel screws* offer good corrosion resistance. The *305 stainless steel screws* have very good corrosion resistance.

316 Stainless Steel Clamps with 316 Stainless Steel Screw— Have excellent corrosion resistance.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Assortments

Clamps come packed in a metal box with individual compartments for each clamp size. Each assortment includes a total of 100 clamps—10 of each size shown above with a ★. You'll also get two external hex nutdrivers (1/4″ and 5/16″ sizes).

Clamps with Zinc-Plated Steel Screw Assortment	5419K17	$99.37
Clamps with 410 Stainless Steel Screw Assortment	5419K19	122.13
Clamps with 305 Stainless Steel Screw Assortment	5419K21	147.92
Clamps with 316 Stainless Steel Screw Assortment	5419K22	171.47

Mil. Spec. Worm-Drive Clamps for Firm Hose and Tube

Just like the worm-drive clamps on the previous page, except these clamps meet MS-35842 and have that military spec stamped into the band. They also meet Fed. Spec. A-A52506 and SAE J1508. Clamps are reusable. The band and housing are 301 stainless steel, which offers very good corrosion resistance; the screws are 410 stainless steel, which offers good corrosion resistance. The band is 9/16" wide and 0.023" thick. Tighten with a wrench, slotted screwdriver, or 5/16" external hex nutdriver. Maximum torque is 40 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -50° to 250°F. Clamps are for firm plastic and rubber hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Worm-Drive Clamps with Thumb Screw for Firm Hose and Tube

A thumb screw instead of a slotted screw allows you to install these clamps without any tools. Clamps are reusable. The band and housing are 301 stainless steel, which offers very good corrosion resistance; the thumb screws are 410 stainless steel, which offers good corrosion resistance. The band is 9/16" wide and 0.023" thick. Temperature range is -50° to 250°F. Clamps meet SAE J1508. Clamps are for firm plastic and rubber hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Worm-Drive Clamps with Nonslip Screw for Firm Hose and Tube

A raised safety collar around the head of the screw prevents your screwdriver from slipping and damaging the hose or tube. Clamps are reusable. The band and housing are 201 stainless steel, which offers good corrosion resistance; the screws are zinc-plated steel, which offers fair corrosion resistance. The band is 9/16" wide and 0.022" thick. Tighten with a wrench, slotted screwdriver, or 3/8" external hex nutdriver. Maximum torque is 30 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -40° to 375°F. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B. Clamps are for firm plastic and rubber hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

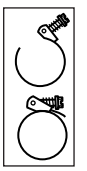
Quick-Release Clamps for Firm Hose and Tube



Clamps have a slotted hex-head screw that flips up to release the band for quick opening. Clamps are reusable. All have a 201 stainless steel band and housing, which has good corrosion resistance. The band is 9/16" wide and 0.022" thick. Clamps are for firm plastic and rubber hose and tube. Do not exceed the maximum torque or clamps may be damaged.

Clamps with Zinc-Plated Steel Screw—Screws offer fair corrosion resistance. Tighten with a wrench, slotted screwdriver, or 5/16" external hex nutdriver. Maximum torque is 35 in.-lbs. Temperature range is -40° to 375°F.

Clamps with 410 Stainless Steel Screw—Screws have good corrosion resistance. Tighten with a wrench, slotted screwdriver, or 3/8" external hex nutdriver. Maximum torque is 35 in.-lbs. Temperature range is -40° to 800°F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

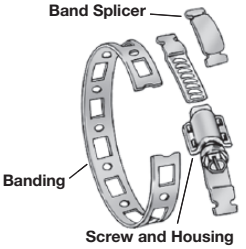
Build-Your-Own Worm-Drive Clamps for Firm Hose and Tube



Here's everything you need to make your own 3″ diameter and larger custom-length worm-drive clamps. Cut a length of band from the continuous roll and attach a housing and a screw. Use a band splicer to attach two lengths of band for an even larger clamp. Clamps are reusable. The bands, band splicers, and housing are 301 stainless steel, which offers very good corrosion resistance; the screws are 410 stainless steel, which offers good corrosion resistance. The band is ½″ wide and 0.023″ thick. Tighten with a wrench, slotted screwdriver, or 5/16″ external hex nutdriver. Maximum torque is 40 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -50° to 250° F. Clamps are for firm plastic and rubber hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Band Lg., ft.	No. of Band Splicers	No. of Screws and Housings		Each
8½	1	3	5426K1	$14.16
50	5	10	5426K2	45.50
100	10	25	5426K4	97.10

		Box
Box of 10 Band Splicers	5426K6	$0.99
Box of 10 Screws and Housings	5426K3	20.42
Box of 10 Band Splicers and 100 ft. Banding	5426K7	48.99

Vibration-Resistant Worm-Drive Clamps for Firm Hose and Tube

Unlike vibration-resistant pinch clamps, these have a torque rating for extra holding power in high-vibration applications. They are also known as high-torque clamps. Clamps are reusable. The band is 5/8″ wide and 0.028″ thick. Tighten with a slotted screwdriver, 5/16″ socket, or 5/16″ external hex nutdriver. Clamps meet SAE J1508. Clamps are for firm plastic and rubber hose and tube. Maximum torque is 80 in.-lbs. Do not exceed the maximum torque or clamps may be damaged.

304 Stainless Steel Clamps with 410 Stainless Steel Screw—Temperature range is -40° to 800° F.

316 Stainless Steel Clamps with 316 Stainless Steel Screw—Have excellent corrosion resistance. Band and housing are 316 stainless steel. Temperature range is -50° to 250° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Worm-Drive Clamps for Soft Hose and Tube

An extended tail acts as a liner to protect soft hose and tube, such as silicone, from being cut by the slots in the band. Clamps are reusable. Tighten with a slotted screwdriver, 5/16″ socket, or 5/16″ external hex nutdriver. Maximum torque is 35 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B.

201 Stainless Steel Clamps with Zinc-Plated Steel Screw—The band and housing are 201 stainless steel for very good corrosion resistance; the screw is zinc-plated steel for fair corrosion resistance. The band is ½″ wide and 0.022″ thick. Temperature range is -40° to 375° F.

301 Stainless Steel Clamps with 305 Stainless Steel Screw—The band and housing are 301 stainless steel for very good corrosion resistance; the screw is 305 stainless steel, which also has very good corrosion resistance. The band is 9/16″ wide and 0.022″ thick. Temperature range is -40° to 800° F.

316 Stainless Steel Clamps with 316 Stainless Steel Screw—Have excellent corrosion resistance. The band is ½″ wide and 0.024″ thick. Temperature range is -40° to 800° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Worm-Drive Clamps with Smooth Bands for Soft Hose and Tube

Clamps have a smooth band with rolled edges to prevent them from cutting into your hose or tube. Clamps are reusable. The band is 3/8″ wide and 0.024″ thick. Temperature range is -40° to 350° F. Clamps meet DIN 3017. Clamps are for use with soft hose and tube, such as silicone. Do not exceed maximum torque or clamps may be damaged.

430 stainless steel clamps have a 430 stainless steel band and housing for good corrosion resistance. Clamps have a zinc-plated steel screw, which has fair corrosion resistance. Tighten with a slotted or Phillips screwdriver, or a 9/32″ (7mm) external hex nutdriver. Maximum torque is 20 in.-lbs.

304 stainless steel clamps have a 304 stainless steel band, housing, and screw, which has very good corrosion resistance. Tighten with a slotted screwdriver or a 9/32″ (7mm) external hex nutdriver. Maximum torque is 26.5 in.-lbs, unless noted.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

316 Stainless Steel Worm-Drive Clamps with Smooth Bands for Soft Hose and Tube

Excellent corrosion resistance is only one reason to use these all-316 stainless steel clamps—they also have a smooth band with rolled edges to prevent them from cutting into hoses and tubes. Clamps are reusable. The band is 1/2″ wide (unless noted) and 0.031″ thick. Tighten with a 9/32″ (7 mm) external hex nutdriver. Temperature range is -40° to 1200° F. Clamps meet SAE J1508. Clamps are for use with soft hose and tube, such as silicone. Do not exceed the maximum torque or clamps may be damaged.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

70-Clamp Assortment—Clamps come packed in a metal box with individual compartments for each clamp size. Includes 10 each of SAE Nos. 4-10 and 5 each of SAE Nos. 12-32 from the list above; sizes range from 7/16″ to 2 1/2″ (11 mm to 64 mm). You'll also get a 9/32″ (7 mm) external hex nutdriver.

54265K17 $246.06

140-Clamp Assortment—Clamps come packed in a metal box with individual compartments for each clamp size. Includes 20 each of SAE Nos. 4-10 and 10 each of SAE Nos. 12-32 from the list above; sizes range from 7/16″ to 2 1/2″ (11 mm to 64 mm). You'll also get a 9/32″ (7 mm) external hex nutdriver.

54265K14 $436.05

Build-Your-Own Worm-Drive Clamps for Soft Hose and Tube

Screw and Housing

Banding

Build your own 2″ diameter and larger smooth-band worm-drive clamps for soft hose and tube, such as silicone. To install, cut the banding to your desired length with wire snips, feed it through the housing (sold separately) and attach a screw. Clamps are reusable. The banding and housing are 200/300 series stainless steel for very good corrosion resistance. The screw is 410 stainless steel, which offers good corrosion resistance. The band is 3/8″ wide and 0.015″ thick. Tighten with a slotted screwdriver or a 5/16″ external hex nutdriver. Maximum torque is not rated. Temperature range is -100° to 500° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Band Lg., ft.	No. of Screws and Housings		
100	25	5540K11	$182.66
Repl. Screws and Housings (Pkg. of 5)		5540K14	25.92

Constant-Tension Clamps for Soft Hose and Tube

Don't worry about your hose and tube expanding and contracting when temperatures fluctuate—these clamps have a Belleville spring that automatically increases and decreases the clamp's diameter. Clamps have an extended tail on the band, which acts as a liner to protect soft hose and tube, such as silicone, from being cut. Clamps are reusable. The band is 0.028" thick. Temperature range is -50° to 250°F. Clamps meet SAE J1508. Do not exceed the maximum torque or clamps may be damaged.

9/16" Band Width—Band and spring are 301 stainless steel and the housing is 302 stainless steel, which both offer very good corrosion resistance. The screw is 410 stainless steel, which offers good corrosion resistance. Tighten with a wrench or 5/16" external hex nutdriver. Maximum torque is 45 in.-lbs.

5/8" Band Width—The band and housing are 304 stainless steel and the spring is 301 stainless steel, which both offer very good corrosion resistance. The *zinc-plated steel screw* has fair corrosion resistance; the *410 stainless steel* screw has good corrosion resistance. Tighten with a wrench or 3/8" external hex nutdriver. Maximum torque is 90 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Work-Load-Rated Quick-Release Duct Hose Clamps

Unlike other duct hose clamps, these are rated for maximum work load (the maximum force the latch can withstand without affecting its operation or appearance). Clamps have a quick-release latch that lets you access your line frequently while maintaining your original clamp size. Clamps are reusable. The band, housing, and latch are 304 stainless steel, which offers very good corrosion resistance. The screw is 410 stainless steel, which offers good corrosion resistance. The band is 5/8" wide and 0.031" thick. Tighten with a slotted screwdriver, 8 mm socket, or 8 mm external hex nutdriver. Maximum torque is 130 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -4° to 428°F.

220-lb. clamps have a latch that is 7/8" wide. **450-lb. clamps** have a latch that is 15/16" wide.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Also Available: All zinc-plated steel clamps offered in the same sizes marked with a ★ below. Work load limit is 150 lbs. Temperature range is 33° to 400°F. Please ask for 5588K1 and specify clamp ID range.

Quick-Release Duct Hose Clamps

Flip the toggle latch to install and remove these clamps in seconds. Clamps open completely for easy installation around blower hose and ventilation duct. Clamps are reusable. They are galvanized steel with a zinc-plated steel latch and have fair corrosion resistance. The band is 7/8" wide and 0.035" thick. Temperature range is -250° to 500°F.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Clamp ID Range Inch	Clamp ID Range mm

Duct Hose Clamps for Spiral Duct

Right-Hand Spiral

Right-Hand Spiral

Left-Hand Spiral

Also known as bridge clamps, these worm-drive clamps align with the spiral support on wire duct hose to provide a tight seal. Clamps are reusable. The band and housing are 301 stainless steel and the screw is 305 stainless steel; they have very good corrosion resistance. The band is 1/2" wide and 0.025" thick. Tighten with a slotted screwdriver, 5/16" socket, or 5/16" external hex nutdriver. Maximum torque is 35 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -250° to 500°F.

To Order: Please specify right-hand or left-hand spiral. When looking at the end of your hose, a **right-hand spiral** twists away from you clockwise; a **left-hand spiral** twists away from you counterclockwise.

Miniature Tight-Seal Bolt Clamps for Soft Hose and Tube

Stainless Steel

Sized perfectly for small-diameter hose and tube. The bolt design creates a 360° seal to prevent leaks. Clamps have rolled edges to protect soft hose and tube, such as silicone. Clamps are reusable and meet SAE J1508. The band is 3/8" wide and 0.02" thick. Maximum torque is 13.3 in.-lbs. Do not exceed or clamps may be damaged. Temperature range is -40° to 450°F.

Galvanized steel clamps have fair corrosion resistance. Tighten with a slotted screwdriver or 9/32" hex nutdriver.

304 stainless steel clamps have very good corrosion resistance. Tighten with a Phillips screwdriver or 9/32" hex nutdriver.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Constant-Tension Bolt Clamps for Firm Hose and Tube

The T-bolt design provides excellent strength and creates a 360° seal. Clamps have a spring that automatically adjusts the clamp diameter to compensate for the expansion and contraction of hose and tube when temperatures fluctuate. Clamps are for firm plastic and rubber hose and tube. They are reusable. The band is 3/4" wide and 0.025" thick. The locknut has a nylon insert. Tighten with a 7/16" wrench or hex nutdriver. Maximum torque is 75 in.-lbs. Do not exceed or clamps may be damaged. Maximum temperature is 250°F.

301 Stainless Steel Clamps with Zinc-Plated Steel Bolt—T-bolt, spring, and locknut are zinc-plated steel, which has fair corrosion resistance.

316 Stainless Steel Clamps with 316 Stainless Steel Bolt—Excellent corrosion resistance.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Tight-Seal Easy-Install Bolt Clamps for Soft Hose and Tube

Remove the bolt and flip open the hinged bridge to install. The bolt design provides good strength and creates a 360° seal to prevent leaks. Clamps have rolled edges to protect soft hose and tube, such as silicone. They are reusable. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -40° to 122°F.

430 Stainless Steel Clamps with Zinc-Plated Steel Bolt—The nut and bolt are zinc-plated steel for fair corrosion resistance. Clamps meet DIN 1.4016.

304 Stainless Steel Clamps with 304 Stainless Steel Bolt—Have very good corrosion resistance. Clamps meet DIN 1.4301.

45/64" band width clamps can be tightened with an 8 mm hex nutdriver; maximum torque is 46 in.-lbs. **25/32" band width** clamps can be tightened with an 11 mm hex nutdriver; maximum torque is 106 in.-lbs. **63/64" band width** clamps can be tightened with a 13 mm hex nutdriver; maximum torque is 166 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Tight-Seal Bolt Clamps

The T-bolt design provides excellent strength and creates a 360° seal to prevent leaks. The band is 3/4" wide and 0.025" thick. The locknut has a nylon insert. Tighten with a 7/16" wrench; do not exceed the maximum torque or clamps may be damaged. Clamps are reusable. Temperature range is -100° to 250°F.

For Soft Hose and Tube—Clamps have rolled edges to protect soft hose and tube, such as silicone. Clamps are 300 series stainless steel. The T-bolt and locknut are zinc-plated steel, which has fair corrosion resistance. Maximum torque is 90 in.-lbs.

For Firm Hose and Tube—Clamps are for firm plastic and rubber hose and tube. Clamps, T-bolt, and locknut are 316 stainless steel, which has excellent corrosion resistance. Maximum torque is 75 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Clamp ID Range Inch	mm	For Soft Hose and Tube		For Firm Hose and Tube

Tight-Seal High-Torque Bolt Clamps for Firm Hose

Single Bolt

Double Bolt

Double Bolt with Saddles

Clamps offer extra holding power in high-torque applications. The bolt design provides good strength and creates a 360° seal to prevent leaks. Clamps have fair corrosion resistance; they're zinc-plated iron and have zinc-plated steel bolts and nuts. They are for firm plastic and rubber hose. They are not recommended for use with helix wire hose and hydraulic hose. Because the bolts bend when tightened, these clamps are not reusable. Tighten with a wrench or torque wrench. Do not exceed the maximum torque or clamps may be damaged. Not rated for temperature.

Single Bolt—One bolt makes these clamps quicker to install than double-bolt clamps.

Double Bolt—The tightening force is equally distributed between both sides of the clamp. These clamps open completely for easy installation and have reinforced bolt lugs to prevent the clamp from bending out of alignment.

Double Bolt with Saddles—Same as the double-bolt clamps, except these have two saddles to maintain even pressure around large-diameter hose.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Easy-Install Snap-Grip Clamps for Firm Hose and Tube

Single Snap-Grip

Double Snap-Grip

Installing these clamps is a snap—push their interlocking teeth together with your fingers, then squeeze tight with pliers. To remove, use pliers to push sideways and separate the teeth. Clamps are nylon, which is lightweight with excellent corrosion and chemical resistance. They are for firm plastic and rubber hose and tube.

Single Snap-Grip—Clamps have a single row of interlocking teeth. Temperature range is -5° to 150° F.

Double Snap-Grip—Clamps have two rows of interlocking teeth for extra gripping strength. They meet ASTM D149, D150, and D257. Temperature range is -40° to 255° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Vibration-Resistant Pinch Clamps

Single Pinch for Soft Hose and Tube

Single Pinch for Firm Hose and Tube

Double Pinch for Firm Hose and Tube

These clamps are easier to install than worm-drive clamps—crimp the pinch points with pinch clamp pincers (sold separately on page 310) for a secure hold. Clamps withstand vibration and temperature changes without loosening. They are for one-time use. Clamps meet SAE J1508.

Clamps for Soft Hose and Tube—A dimple in the ear creates spring-like action to withstand vibration. Clamps have a 302 stainless steel insert that bridges the gap in the ear to create a 360° seal. Use with soft hose and tube, such as silicone.

Clamps for Firm Hose and Tube—Also known as ear clamps. They are for firm plastic and rubber hose and tube.

Zinc-plated steel clamps have fair corrosion resistance. **304 stainless steel** clamps have very good corrosion resistance.

Single-pinch clamps are perfect for tight spots; they install quickly because only one side needs to be crimped. **Double-pinch** clamps accommodate a greater variation in hose diameters than single-pinch clamps, and can be used on thicker-walled hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Tight-Seal Vibration-Resistant Pinch Clamps for Firm Hose and Tube

Unlike other pinch clamps, these have a unique tongue-and-groove design that creates a gap-free seal to reduce leaks. A reinforcing dimple in the ear creates a spring-like action that allows these clamps to withstand vibration and temperature changes without loosening. Also known as ear clamps, they install by crimping the pinch point with pinch-clamp pincers. Clamps are for firm plastic and rubber hose and tube. They're for one-time use. They are 304 stainless steel for very good corrosion resistance. Clamps meet SAE J1508.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Pinch Clamp Pincers

Use these steel pincers to simplify the installation of pinch (ear) clamps (shown on page 309).

Straight-jaw pincer must be used perpendicular to the hose. **Side-jaw pincer** is good for tight spaces because you can use it parallel or perpendicular to the hose.

	O'all Lg.		
Straight-Jaw Pincer	9″	6541K67	$20.64
Side-Jaw Pincer	9″	6541K69	30.74

Constant-Tension Spring-Band Clamps for Firm Hose and Tube

These clamps have a wider band than other constant-tension clamps, which provides more coverage and reduces the chance of leaks. The spring-action band lets the clamps automatically expand and contract with your hose or tube as temperatures fluctuate. Clamps are for firm plastic and rubber hose and tube. They are zinc-plated steel for fair corrosion resistance. They are for one-time use and require the use of pliers (sold separately at right) for installation and removal. Clamps meet SAE J1508. Temperature range is -100° to 400° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Constant Tension Spring Band Hose and Tube Clamp Pliers				7329K21 Each	$37.48

Constant-Tension Spring Clamps for Firm Hose and Tube

Not as bulky as our other constant-tension clamps, these round-wire clamps easily fit in cramped spaces. Use in low-pressure applications. Clamps automatically expand and contract with your hose or tube in response to fluctuations in temperature. They are for firm plastic and rubber hose and tube. Clamps are for one-time use and require the use of pliers (sold separately below) for installation and removal. Temperature range is -100° to 400° F.

Zinc-plated steel clamps have fair corrosion resistance. Clamps meet SAE J1508.

17-7 PH stainless steel clamps have good corrosion resistance. They are heat treated, so they are stronger than steel to better retain their hold. They meet AISI 631, ASTM 313, and AMS 5678.

Note: When choosing a clamp, measure the outside diameter of your hose or tube without the fitting installed.

Spring-Hose-Clamp Pliers

Jaws have grooves that grip the ends of the spring clamps (shown at left) to prevent slipping and twisting. Pliers are made of forged steel and are 8 1/16″ long.

5324K97 ..... $23.69

Tight-Seal Twin-Ring Bolt Clamps for Firm Hose

A double ring of thick wire provides a complete seal around large-diameter hose. Clamps are zinc-plated steel, which has fair corrosion resistance. They are for firm plastic and rubber hose and are reusable. Clamps with **1/4″ wire diameter** install with a 9/16″ socket wrench; clamps with **5/16″ wire diameter** install with an 11/16″ socket wrench. Maximum torque is 720 in.-lbs. Do not exceed or clamps may be damaged. Clamps are not rated for temperature.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Low-Profile Band Clamps for Firm Hose

Easier to install than our Extra-Strength Low-Profile Band Clamps, these clamps seal with a quick hammer blow to the buckle. They are also known as center-punch clamps. Unlike worm-drive clamps and bolt clamps, these have a low profile with no protruding parts to get in your way during installation. The banding is double wrapped for extra strength. Use them to secure firm plastic and rubber hose, coaxial cable, and rope. Clamps are for one-time use. They require an installation tool (sold separately below).

Galvanized Steel Band with 201 Stainless Steel Buckle—Band has fair corrosion resistance; buckle has good corrosion resistance. Temperature range is -100° to 300° F.

201 Stainless Steel Band and Buckle—Have good corrosion resistance. Temperature range is -100° to 500° F.

Ratchet-Handle Installation Tools—Use to tighten 3/8″ and 5/8″ wide clamps, then break off the excess banding. All are made of steel. The *light duty* tool has a punch lever on each end. The *medium duty* tool is longer than the light duty tool for increased leverage. The *heavy duty* tool has the most leverage and has a ball handle that makes it easier to ratchet.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

For instructions on how to install these clamps using the installation tools, go to mcmaster.com and search for **5657KAC**.

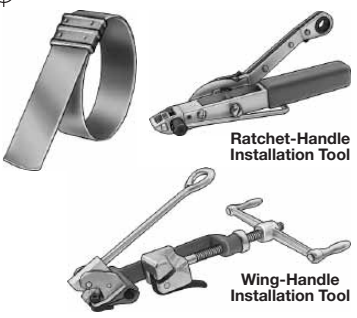
Extra-Strength Low-Profile Band Clamps for Firm Hose



The end of the band curls back into the buckle—this gives these clamps up to 25% more strength than other low-profile clamps. They are also known as JS-style clamps. Unlike worm-drive clamps and bolt clamps, these have a low profile with no protruding parts. A smooth interior prevents damage to the hose. Clamps are for firm plastic and rubber hose. They are for one-time use. They require an installation tool (sold separately below). Clamps meet SAE J1508.

Galvanized Steel Band with 201 Stainless Steel Buckle—Band has fair corrosion resistance; buckle has good corrosion resistance. Temperature range is -100° to 300° F.

201 Stainless Steel Band and Buckle—Have good corrosion resistance. Temperature range is -100° to 500° F.

316 Stainless Steel Band and Buckle—Have excellent corrosion resistance. Temperature range is -100° to 600° F.

Installation Tools—Made of zinc-plated steel.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

For instructions on how to install these clamps using the installation tools, go to mcmaster.com and search for **5423KAC.**

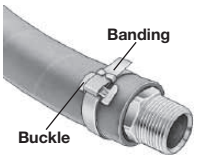
Build-Your-Own Low-Profile Band Clamps for Firm Hose CAD



Create your own low-profile hose clamps for permanent connections and emergency repairs. All you need is a roll of banding, a package of buckles, and an installation tool. Use with firm plastic and rubber hose.

Banding and Buckles

Banding—Comes in a dispenser carton. It has smooth, rounded edges to protect your hose from cuts.

Note: The breaking strength listed is the maximum tension that can be applied to the banding. For an extra-strong clamp, wrap the banding around twice, threading it through the buckle each time.

Clip-On Buckles—Buckles have ears for strong, reliable clamping. They also have teeth for extra gripping power, unless otherwise noted. All are for one-time use.

Set-Screw Buckles—All are made of 201 stainless steel. Secure by tightening the set screw with the included hex key. Buckles are reusable.

Galvanized steel has fair corrosion resistance. Temperature range is -100° to 500° F.
201 stainless steel has good corrosion resistance. Temperature range is -100° to 500° F.
304 stainless steel has very good corrosion resistance. Temperature range is -200° to 1300° F.
316 stainless steel has excellent corrosion resistance. Temperature range is -100° to 500° F.
Also Available: Black polyester-coated 201 stainless steel banding in 100-ft. lengths. It has excellent abrasion and UV resistance. Please ask for 5422K1 and specify 1/2″ or 3/4″ band width.

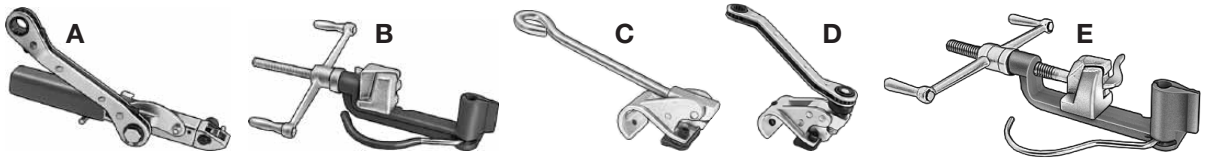
■ Buckle does not have teeth.

Installation Tools and Cutting Adapters



(A) Ratchet-Handle Tool—Has a ratchet-action handle to tighten the band. Made of zinc-plated steel with a vinyl-coated handle. You can also use this tool to install 1/4″ and 3/8″ wide Extra-Strength Low-Profile Band Clamps (see page 311).

(B) Wing-Handle Tool—Comes with a built-in cutter and a tension wing handle, as well as a tension nut that can be used instead of the handle in confined spaces. Tool is steel with a blue epoxy finish. You can also use this tool to install Extra-Strength Low-Profile Band Clamps (see page 311)—just fit a cutting adapter (sold separately below, see Styles C and D) over the tool.

(C&D) Cutting Adapters for Wing-Handle Tool—Made of zinc-plated steel. The *press-cut* adapter cuts the banding when you press down the handle. The *screw-cut* adapter cuts the banding when you turn a screw with the included ratchet handle.

(E) Vise-Mount Tool—Made of zinc-plated steel.

ⓘ For information about how to use these tools, go to mcmaster.com and search for **5424KAC.**

General Purpose Bolt Clamps for Firm Hose

One clamp fits a wide range of diameters, so you can always have the right size on hand. Clamps are for one-time use. The screw tightens with a slotted screwdriver, 5/16" socket wrench, or 5/16" external hex nutdriver. Maximum torque is 20 in.-lbs. Do not exceed the maximum torque or clamps may be damaged. Temperature range is -40° to 375° F. Clamps are for firm plastic and rubber hose.

Galvanized Steel Smooth Band—Have fair corrosion resistance. The band is galvanized steel; the buckle and screw are zinc-plated steel. Clamps lock with a screw on the banding.

Stainless Steel Slotted Band—Have very good corrosion resistance. The band and buckle are 301 stainless steel; the screw is zinc-plated 305 stainless steel. Clamps lock with a screw on the banding and a notch in the slot. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B, and they are Uniform Plumbing Code Listed.

Wide-Seal Plastic Clamps for Firm Hose

Slide these clamps over your hose and heat-shrink them with a heavy duty heat gun (sold separately, see page 2725). This process lets them conform to any shape hose. Clamps never need tightening because when the hose contracts with cold temperatures, the clamps adjust themselves to maintain tension. Use clamps with firm plastic and rubber coolant hose; however, they are not recommended for use with wire-reinforced coolant hose. They are for one-time use. Temperature range is -40° to 302° F.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

For detailed installation instructions, go to mcmaster.com and search for **5470KAC.**

Clamp ID Range Inch	Clamp ID Range mm	Band Wd.	Band Thick.

High-Strength Cut-to-Length Polypropylene Cable Ties

Create custom-length cable ties for large bundles and heavy materials. Cut the strap and attach a buckle—no tool required. Use the optional tensioning tool (sold separately) to get more tension than with hand tightening. A great choice for packaging applications, attaching flexible duct, and securing insulation to pipe. These straps can be used multiple times. Polypropylene is chemical and moisture resistant. Temperature range is -30° to 200° F.

Straps are 1/2" wide and 0.05" thick. They have interlocking ridges on the top for secure holding and a smooth back to reduce the chance of damage. The breaking strength is 150 lbs.

Tensioning tool is stainless steel.

	Straps			Buckles		
Color	O'all Lg.			Pkg. Qty.		Pkg.

UV-Resistant Black	100 ft.	5188K45	13.14	25	5188K56	9.49
Tensioning Tool					5188K33	$55.38

High-Temperature Build-Your-Own Worm-Drive Clamps for Soft Hose and Tube

Use this banding to create 4" diameter and larger worm-drive clamps for high-temperature applications. It has ridges on one side for the housing to ride upon—this leaves the reverse side smooth with no sharp edges to worry about. Banding is for use with soft hose and tube, such as silicone. It can also be used to clamp pipe, attach signs, and connect tubing. It is furnished in a dispenser carton. To install, cut the banding to your desired length with wire snips, feed it through the housing (sold separately), and tighten the screw with a slotted screwdriver or 9/32" external hex nutdriver. Clamps are reusable.

Banding is 15/32" wide and 0.031" thick.

Zinc-Plated Steel—Has fair corrosion resistance. Temperature range is -22° to 392° F.

430 Stainless Steel—Has good corrosion resistance. Temperature range is -22° to 572° F.

Note: The breaking strength listed is the maximum tension that can be applied to the banding.

Breaking Strength, lbs.	Banding Band Lg.			Housings with Screws Pkg. Qty.		Pkg.
Zinc-Plated Steel						
350	98 1/2 ft.	6542K63	$50.40	20	6542K73	$9.81
430 Stainless Steel						
550	98 1/2 ft.	6542K64	57.91	10	6542K74	8.10

Pipe-Covering Metal Banding

Use this lightweight metal banding for securing pipe coverings as well as for packaging applications. To install, cut the banding to your desired length with wire cutters, feed it through the buckle, and secure with a tensioner (see page 1615 for tensioners). Clamps are for one-time use. Maximum temperature is 300° F.

The breaking strength listed is the maximum tension that can be applied to the banding.

Aluminum—An economical choice for noncorrosive applications. Meets ASTM B209.

Type 304 Stainless Steel—Offers very good corrosion resistance.

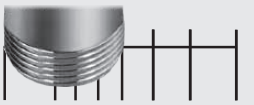
How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Brass Barbed Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 250 psi, except as noted
- Temperature Range: -40° to 160° F
- Hose: Use reinforced rubber
- Clamps: Use hose ferrules (see page 318) for hose smaller than 1/2" dia.; use band clamps (see pages 311-313) for hose 1/2" dia. and larger

Also known as hose nipples, these fittings are made from brass, which offers good corrosion resistance and is softer and easier to thread than steel. Fittings meet SAE J476. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Hose-to-Threaded Pipe Adapters—Barbed on one end and threaded on the other.

Hose-to-Threaded Pipe Easy-Install Adapters—Also barbed on one end and threaded on the other, but these swivel until they are tightened. They are furnished with a Buna-N seal.

Hose-to-45° Flare Tube Adapters—Connect hose to 45° flared tubing. The flared ends have UNF straight threads.

Hose-to-Hose Connectors—Also known as hose menders and splicers, use these fittings to repair damaged hose and connect two lengths of hose.

Also Available: Fittings with BSPT (British Standard Pipe Taper) threads where indicated with a ♦. Please ask for 1075T1 and specify the hose ID and pipe size.

Straight-Thread Brass Barbed Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: -40° to 195° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use band clamps (see pages 311-313)

The straight threads combined with an SBR rubber gasket in the female adapters provide a better seal than other fittings with a threaded connection—they're a great choice if you repeatedly connect and disconnect your hose line. The *easy-install adapters* swivel until they are tightened.

Also known as hose nipples, these fittings connect hose to threaded pipe. Brass fittings have good corrosion resistance. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) and NPSH (National Pipe Straight Hose) threads are compatible with male NPT threads.

For Hose ID	Pipe Size	Adapters, Male Pipe		Easy-Install Adapters, Female Pipe	
NPSM Threads

Bronze Barbed Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 100 psi
- Temperature Range: 32° to 212° F
- Hose: Use reinforced rubber
- Clamps: Use worm-drive clamps (see pages 302-305) and band clamps (see pages 311-313)

Also known as hose nipples, these elbows connect hose to threaded pipe. They have good corrosion resistance, and can be used with salt water. They meet ASTM B584 and are UL 1121 listed for marine applications. Not rated for vacuum.

For Hose ID	Pipe Size, NPT	Straight Adapters, Male Pipe		90° Elbow Adapters, Male Pipe

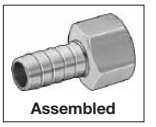
Tight-Seal Straight-Thread Brass Barbed Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: -40° to 160° F
- Hose: Use reinforced rubber
- Clamps: Use hose ferrules (see page 318) for hose smaller than 1/2" dia.; use band clamps (see pages 311-313) for hose 1/2" dia. and larger



Often called ball-seat hose nipples, these fittings consist of a barbed stem that seats inside a nut for a better seal than fittings with a thread-to-thread connection. The nut swivels until tightened to make installation easier. Fittings are made of corrosion-resistant brass. They meet SAE J476. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Straight-Thread Aluminum Barbed Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 1 1/2" to 4": 50 psi; 6": 25 psi
- Temperature Range: -20° to 180° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use bolt clamps (see pages 307-308) and band clamps (see pages 311-313)

Also known as hose nipples, these fittings connect hose to threaded pipe. Made of aluminum, they are lightweight with good corrosion resistance. A neoprene gasket in the female adapter provides a better seal than other fittings with a threaded connection. They have lugs for better gripping, unless noted. *Easy-install adapters* swivel until they are tightened. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

★Does not have lugs.

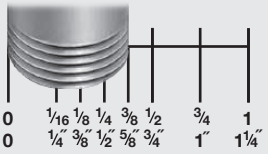
Barbed Hose Fittings

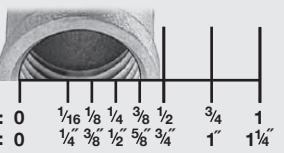
For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





Barbed Hose Fittings for Chemicals and Petroleum

- Max. Pressure @ 72° F: 300 psi
- Temp. Range: -40° to 200° F
- Hose: Use reinforced plastic
- Clamps: Use low-profile band clamps (see pages 311-312)

Fittings are 316 stainless steel for excellent corrosion and chemical resistance. Use with acetone, boric acid, citric acid, diesel fuel, ethanol, gasoline, mineral spirits, and oil. Not rated for vacuum.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples.

Hose-to-Hose Connectors—Also known as hose menders and splicers, use these fittings to repair damaged hose and connect two lengths of hose.

Barbed Hose Fittings for Air and Water

- Max. Pressure @ 72° F: 150 psi
- Temp. Range: -40° to 350° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use worm-drive clamps (see pages 302-305) and band clamps (see pages 311-313)

Hose-to-Threaded Pipe Connectors—Also known as hose nipples, these fittings are barbed on one end and threaded on the other. Vacuum rating is 29" Hg @ 72° F.

Hose-to-Hose Connectors—Also known as hose menders and splicers, use these fittings to repair damaged hose and connect two lengths of hose. Not rated for vacuum.

High-strength adapters have thicker walls and more barbs to give them better strength and gripping power than other barbed fittings.

Zinc-plated steel fittings have fair corrosion resistance. *Aluminum fittings* are lightweight with good corrosion resistance. *304 stainless steel fittings* offer very good corrosion resistance.

Easy-Fit Barbed Hose Fittings

- Maximum Pressure @ 72° F:
  125 psi (1/2" to 4");
  100 psi (5" to 8")
- Temperature Range:
  -20° to 200° F
- Hose: Use reinforced rubber
- Clamps: Use low-profile band clamps (see pgs. 311-312), T-bolt clamps (see pg. 307), and worm-drive hose clamps (see pgs. 302-305)

Low-profile barbs and a longer first barb allow for a smoother installation than with other barbed hose fittings. All meet ANSI/ASME B1.20.1. Vacuum rating is 26" Hg @ 72° F.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples, they connect hose to threaded pipe.

Hose-to-Hose Connectors—Also known as hose menders and splicers, use these fittings to repair damaged hose and connect lengths of hose.

Steel and **zinc-plated steel** fittings meet ASTM A53. Zinc-plated steel offers fair corrosion resistance. **Aluminum** fittings are lightweight with good corrosion resistance. Meet ASTM B241. **Brass** fittings have good corrosion resistance and are softer and easier to thread than steel fittings. Meet ASTM B43. **316 stainless steel** fittings offer excellent chemical and corrosion resistance. They can also be used with acetone, isopropyl alcohol, mineral oil, and sodium hydroxide. Meet ASTM A312.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Plastic Barbed Hose Fittings

- Maximum Pressure: See below
- Temperature Range: See descriptions
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use worm-drive hose clamps (see pages 302-305) and T-bolt clamps (see page 307)

Light in weight, these plastic fittings are not rated for vacuum.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples.

Hose-to-Hose Connectors—Also known as hose menders and splicers, use these fittings to repair damaged hose and connect two lengths of hose.

Fittings **for water** are black polypropylene. Temperature range is 10° to 150° F.

Fittings **for coolant** are yellow nylon. Temperature range is -30° to 200° F.

Fittings **for food and beverage** are white polypropylene. They are made of FDA listed materials. Temperature range is 10° to 180° F.

Fittings **for chemicals** are white PVDF. Use with mineral oil, citric acid, nitric acid, and phosphoric acid. Temperature range is -20° to 300° F.

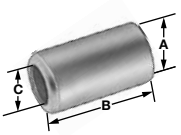
Crimp-On Ferrules for Air and Water Hose



Use ferrules to create a permanent connection between your air- and water-hose and barbed hose fittings. You will need a hose crimper (please see page 319) for installation.

Brass and **aluminum** ferrules have good corrosion resistance. Choose a ferrule with an ID no more than 0.025" larger than your hose OD (measured with the fitting installed); also make sure the ferrule is at least as long as the barbed end of your fitting. **304 stainless steel** ferrules offer very good corrosion resistance. Choose a ferrule with an ID no more than 0.031" larger than the hose OD (measured with the fitting installed).

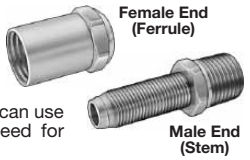
Screw-On Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: -40° to 160° F
- Hose: Use reinforced rubber
- Clamps: Not required



Also called reusable hose fittings, you can use these fittings repeatedly without the need for clamps or crimping tools.

You'll need a female end (ferrule) and a male end (stem) with the same hose ID to make a connection. Twist the female end into your hose, then lubricate the male end and thread it into the female end. Not rated for vacuum.

Brass fittings have good corrosion resistance. They meet SAE J476. Connections are NPTF (Dryseal), which are compatible with NPT threads. **303 stainless steel** fittings have very good corrosion resistance. Connections are NPT.

Hose Crimpers

Use with ferrules on pg. 318 to secure barbed fittings onto your hose.

Hammer-Operated Crimper

Use a hammer strike or a vise to crimp ferrules onto your 7/16", 9/16", and 11/16" OD hose. Has three jaw holes. Made of steel. Crimper is 9" Lg. × 1 1/4" Wd.

5551K13 ..... $29.61

Hose-Crimping Pliers

As you squeeze the handles, the vise-like jaws lock tightly onto the ferrule for a secure crimp on air hose. All are 1/2" wide and made of steel with a chrome-plated finish, except 9" long two-hole jaw has a nickel-plated finish.

Two-Hole Jaw

	For Hose OD	Lg.		
Two-Hole Jaw	7/16", 9/16"	9"	54215K11	$28.36
Two-Hole Jaw	5/8", 11/16"	8 3/4"	54215K22	54.39
Three-Hole Jaw	5/16", 11/32", 27/64"	9"	54215K24	57.99

Lever-Operated Crimpers with Dies

Furnished with five removable dies that crimp 0.484" to 0.703" OD air hose (without the fittings installed). Base is iron; handle is steel. Crimper is 12" long and has two 1/4" dia. mounting holes (fasteners not included).

5531K41 ..... $246.01

Lever-Operated Crimper and Dies

Individual dies (sold separately) allow you to crimp air and water hose from 3/4" to 1 3/8" OD (without the fittings installed). Base is iron and handle is zinc-plated steel. Crimper is 12" long and has two 1/8" dia. mounting holes (fasteners not included).

To Order: For dies, please specify size: 3/4", 0.781", 0.813", 7/8", 0.906", 0.938", 0.969", 1", 1 1/8", or 1 3/8".

Crimper	7986K1	$206.00
Dies	7986K2	32.08

Swivel Hose Fittings for Air

- Maximum Pressure at 72° F: 150 psi
- Temperature Range: -20° to 200° F
- Hose: Use reinforced rubber
- Clamps: Use worm-drive clamps (see pages 302-305) for fittings with a barbed end.

Threaded Pipe-to-Threaded Pipe Adapters

Use fittings to connect hose to portable air tools. They are not rated for vacuum.

90° Elbows with One Swivel— Elbows swivel on one axis to allow your hose to extend horizontally away from the tool. They have an aluminum body; the female threads are aluminum, the male threads are steel.

90° Elbows with Two Swivels— Elbows swivel on two axes to allow your hose to extend horizontally as well as vertically to the floor regardless of how the tool is held. They have an aluminum body; the female threads are aluminum, the male threads are steel.

Nonmarring 90° Elbows with Two Swivels—Also swivel on two axes, but these have a plastic body or plastic coating to protect delicate surfaces from scratching. For fittings with 1/4 NPT female threads, the female threads are nylon, the male threads are steel. For fittings with 3/8 NPT female threads, the threads are zinc-plated steel. For fitting with 1/2 NPT female threads, threads are aluminum.

Straight Pivot—Fitting pivots 10° from the center as needed to prevent kinking. Made of steel.

Straight 360° Swivel—Fittings are brass and swivel 360° before and after installation as needed to prevent kinking.

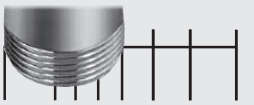
Push-On Hose & Fittings

For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.



Air and Water Hose for Push-On Fittings

- Maximum Pressure @ 72° F: 200 psi (Lightweight); 250 psi (Choose-a-Color); 300 psi (High Pressure)
- Temperature Range: -20° to 150° F
- Fittings: Use push-on barbed style (see below and pg. 321)

The unique braid-reinforced design means no clamps or banding are needed to secure fittings to this hose. The more you pull on the fittings, the tighter the hose will grip. Hose has a smooth interior and is reinforced with yarn. Not rated for vacuum. Not suitable for outdoor use.

Lightweight for Water

Hose is Buna-N rubber blended with PVC so it's light and easy to handle. Color is black.

To Order: Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50 ft., or any length you choose up to 100 feet.

Hose ID	Hose OD	Bend Radius		Per Ft.
1/4"	1/2"	2 1/2"	5633K21	$2.04
5/16"	9/16"	3 1/8"	5633K22	2.30
3/8"	5/8"	3 3/4"	5633K23	2.62
1/2"	3/4"	5"	5633K24	3.16
5/8"	7/8"	6 1/4"	5633K25	3.96
3/4"	1 1/16"	7 1/2"	5633K26	4.63

Choose-a-Color for Air

Identify your air lines by color. Hose is Buna-N rubber; cover is blended rubber. Hose meets RMA Class A for oil resistance.

To Order: Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50 ft., or any length you choose up to 100 feet; also specify color: black, blue, gray, green, red, or yellow.

Hose ID	Hose OD	Bend Radius		Per Ft.
1/4"	1/2"	1 1/2"	5288K11	$1.24
3/8"	5/8"	2 1/4"	5288K12	1.54
1/2"	3/4"	3"	5288K13	1.78

3/4"	1 1/16"	4 1/2"	5288K35★	3.03

★Color is black.

High Pressure for Air

Hose is Buna-N rubber for durability to withstand high pressures. It meets MSHA (Mine Safety and Health Administration) standards for flame resistance. Color is black.

To Order: Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50 ft., or any length you choose up to 100 feet.

Hose ID	Hose OD	Bend Radius		Per Ft.
1/4"	1/2"	1 1/2"	5283K31	$1.20
3/8"	5/8"	2 1/4"	5283K12	1.48

Brass Push-On Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 350 psi
- Temperature Range: -20° to 150° F
- Hose: Use reinforced rubber push-on (see above)
- Clamps: None required

You don't need a clamp or ferrule to attach these fittings to hose—push them in until the yellow plastic ring covers the hose end. Fittings are made from brass, which has good corrosion resistance. Not rated for vacuum.

Note: These fittings are only for use with hose for push-on fittings. To ensure proper operation, the barbed end has to be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples, they connect hose to threaded pipe. *Easy-install straights* swivel until tightened. NPTF (Dryseal) threads are compatible with NPT threads; female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Hose-to-Threaded Flared Tube Adapters—Use these fittings to connect to flared tubing. Female straights have a dual angle seat that accepts both 37° JIC and 45° SAE male flared fittings. All have UNF straight threads.

Hose-to-Hose Connectors—Also known as hose menders and splicers, these fittings can be used to repair damaged hose and to connect two pieces of hose.

316 Stainless Steel Push-On Hose Fittings for Air and Water

- Maximum Pressure @ 72° F: 350 psi
- Temperature Range: -20° to 150° F
- Hose: Use reinforced rubber push-on (see page 320)
- Clamps: Not required

You don't need a clamp or ferrule to attach these fittings to hose—push them in until the blue plastic ring covers the hose end. These 316 stainless steel fittings have excellent corrosion resistance. Not rated for vacuum.

Note: These fittings are only for use with hose for push-on fittings. To ensure proper operation, the barbed end has to be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples, they connect hose to threaded pipe.

Hose-to-Threaded Flared Tube Adapters—Also known as easy-install fittings, the threaded end swivels until tightened for easy connection to 37° JIC male flared fittings. All have UNF straight threads.

Hose-to-Hose Connectors—Also known as hose menders and splicers, these fittings can be used to repair damaged hose and to connect two pieces of hose.

Plastic Push-On Hose Fittings for Water

- Maximum Pressure @ 72° F: 90 psi
- Temperature Range: 0° to 150° F
- Hose: Use reinforced rubber push-on (see page 320)
- Clamps: Not required

You don't need a clamp or ferrule to attach these fittings to hose—push them in until the ring covers the hose end. They are made of lightweight white nylon. Not rated for vacuum.

Note: These fittings are only for use with hose for push-on fittings. To ensure proper operation, the barbed end has to be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Adapters—Also known as hose nipples, they connect hose to threaded pipe.

Hose-to-Hose Connectors—Also known as hose menders and splicers, these fittings can be used to repair damaged hose and to connect two pieces of hose.

Push-On Hose Fitting Installation Tools

Use the built-in cutter to squarely cut 1/4"-3/4" push-on style hose without fraying. Then, clamp the hose into the tool's vise and apply light pressure on the handle to drive in the fitting. Tool has four 7/16" mounting holes (fasteners not included). Overall size is 13 1/2" Lg. x 7" Ht. x 2 3/8" Dp.

53685K11 ..... $326.25

Hose Fittings & Gasket Washers

For information about selecting pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"

Brass Straight-to-Taper Thread Hose Fittings

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: –40° to 160° F
- Hose: Use rubber, EPDM, and PVC
- Clamps: Not required

Convert your hose with NPSM (National Pipe Straight Mechanical) threads to NPTF (Dryseal) threads. NPTF threads are compatible with NPT threads. Fittings are made from yellow brass for good corrosion resistance. Use with air, water, natural gas, gasoline, oil, and petroleum products. Not rated for vacuum.

Pipe Size, NPSM x NPTF	Adapters, Male Pipe		Adapters, Female Pipe	
1/4	4685T11	$1.50	4685T33	$2.71

1/2	4685T13	3.06	4685T35	3.71

Swivel Hose Fittings for Water

- Maximum Pressure @ 72° F: 3,500 psi
- Temperature Range: 38° to 180° F
- Hose: Use hydraulic
- Clamps: Not required

Also known as live swivels, these fittings swivel 360° before and after installation and can swivel continuously. Fittings are 416 stainless steel for good corrosion resistance and include a Buna-N rubber seal. Not rated for vacuum.

Hose Fittings for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -425° to 1200° F for 316 stainless steel; not rated for zinc-plated steel
- Hose: Use hydraulic
- Clamps: Not required

These fittings swivel until tightened for easy installation. They meet SAE J514. Not rated for vacuum. Female NPSM threads are compatible with male NPT threads.

Zinc-plated steel fittings have fair corrosion resistance and high wear resistance. The nonswiveling end has NPTF threads; NPTF (Dryseal) threads are compatible with NPT threads.

316 stainless steel fittings offer excellent corrosion resistance and high wear resistance. The nonswiveling end has NPT threads.

Swivel Hose Fittings for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -40° to 250° F
- Hose: Use hydraulic
- Clamps: Not required

Also known as live swivels, these fittings swivel 360° before and after installation and can swivel continuously. This not only makes installation easier, but also eliminates the twisting that can cause premature hose failure. Fittings are zinc-plated steel for fair corrosion resistance and high wear resistance. They have a Buna-N rubber seal. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Screw-On Hose Fittings and Hose for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -40° to 212° F
- Hose: Use hose shown below
- Clamps: Not required

These two-piece fittings screw directly onto hose without the need for a separate adapter. They're made of zinc-plated steel, which has fair corrosion resistance and high wear resistance. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

To install fittings, you'll need a vise and wrench. Separate the two pieces of the fitting and secure the socket portion of the fitting in the vise. Lubricate the end of the hose and screw it into the socket counterclockwise until it bottoms out, then back out a half turn. Lubricate the nipple portion of the fitting and screw it into the other end of the socket using a wrench until the hex shoulder is against the socket.

Hose comes in a maximum continuous length of 100 ft.

Also Available: Fittings marked with ▲ also come in 316 stainless steel, which offers excellent corrosion resistance and high wear resistance. Please ask for 5333K1 and specify the corresponding part number from the listing below.

Note: Fittings are only for use with the hose sold below.

For Hose ID	Max. psi @ 72° F	Hose x Male Pipe: Pipe Size, NPTF			Hose x Female 37° Flare Tube: Thread Size			Hydraulic Hose: Per Ft.

Permanent Crimp-On Hose Fittings and Hose for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -40° to 212° F
- Hose: Use hose shown below
- Clamps: Not required

Attach these fittings to the hose using the swage installation tool (sold separately). These fittings, pushers, and dies are zinc-plated steel for fair corrosion resistance and high wear resistance. Vacuum is 28" Hg @ 72° F.

Note: Fittings are only for use with the hose sold below.

Hose comes in a maximum continuous length of 100 ft.

Installation Tool—Made from aluminum, this swage installation tool is 15¾" Ht. x 5" Wd. and has two 7/16" dia. mounting holes (fasteners not included). For operation, you'll need a 1½" open-end box wrench, plus a pusher and a die that both correspond to the fitting size you want to install.

ⓘ For instructions on how to install these fittings with the swage tool, go to mcmaster.com and search for **5243KAC.**

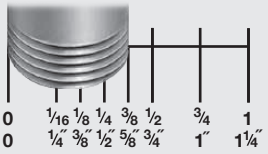
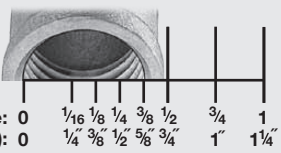
Hose Couplings

For information about pipe size, see pages 2-3.

How to Measure Threaded Pipe Size—Example shows pipe size 3/8.

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.





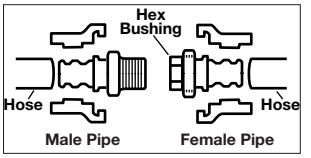
Steam Hose Fittings

- Maximum Pressure @ 72° F: 600 psi
- Temperature Range: -20° to 450° F
- Hose: Use steam hose
- Clamps: Use interlocking clamps (included)

Also known as ground-joint couplings and boss couplings, these are designed for high-pressure applications. They combine a barbed hose fitting with an interlocking clamp that firmly grips your hose as it locks into the ring of the barbed fitting. The interlocking clamps are not reusable. Vacuum rating is 29″ Hg @ 72° F. Male NPSM threads are compatible with female NPSM and NPSH threads; they are not compatible with NPT threads.

Couplings

Couplings are zinc-plated steel for fair corrosion resistance and high wear resistance. Couplings with a *female pipe* connection also have a zinc-plated malleable iron wing nut and a zinc-plated steel hex bushing.



For Hose ID	For Hose OD	Pipe Size, NPT	Male Pipe		Female Pipe	
1/2″	15/16″-1 1/16″	1/2	5360K23	$12.38	5360K43	$29.35
1/2″	1 1/16″-1 3/16″	1/2	5360K26	14.00	5360K41	30.70
3/4″	1 5/32″-1 5/16″	3/4	5360K27	15.61	5360K42	35.79
3/4″	1 5/16″-1 1/2″	3/4	5360K24	16.85	5360K44	37.02
1″	1 11/16″-1 15/16″	1	5360K25	26.50	5360K45	43.58

Hex Nipples

Also called double spuds. Use these to connect two female couplings—just replace the hex bushing from the female coupling with one of these. Made from zinc-plated steel with a polymer seal on both ends.

Straight, Male Pipe (NPSM) x Male Pipe (NPSM)

For Hose ID		
1/2″	5360K51	$25.10
3/4″, 1″	5360K52	24.34

Replacement Hex Bushings and Interlocking Clamps

Hex bushings are also called female spuds. Made of zinc-plated steel with a polymer seal that grips onto the rounded head of the barbed fittings.

Interlocking clamps are zinc-plated iron.

Hex Bushings, Female Pipe (NPT) x Male Pipe (NPSM)

Pipe Size		
1/2	5360K61	$12.55
3/4	5360K62	10.93
1	5360K63	11.34

Interlocking Clamps

For Hose OD		
15/16″-1 1/16″	5417K61	$6.71
1 1/16″-1 3/16″	5417K62	8.67
1 5/32″-1 5/16″	5417K63	8.42
1 5/16″-1 1/2″	5417K64	9.95
1 11/16″-1 15/16″	5417K65	16.75

Grip-Lock Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range:
  -40° to 250° F (Zinc-Plated Steel and 303 Stainless Steel);
  -20° to 175° F (Brass)
- Hose: Use nylon and rubber
- Clamps: Use interlocking clamps (included)

Also known as Bowes couplings. To connect, push a plug and a socket together with a quarter twist. The grip-lock ends are all 3/4″ diameter and are compatible with Dixon Dix-Lock series and Perfecting N-series couplings.

Couplings include a Buna-N rubber seal. All grip-lock plugs are compatible with any of the grip-lock sockets, regardless of the pipe or barb size. Couplings meet the dimensional requirements of MIL-A-A-50431A and MIL-C-3486B. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel plugs have fair corrosion resistance. Vacuum rating is 22″ Hg @ 72° F.

Brass plugs have good corrosion resistance, and are softer and easier to thread than stainless steel plugs. Not rated for vacuum.

303 stainless steel plugs have very good corrosion resistance. Vacuum rating is 22″ Hg @ 72° F.

Replacement Gaskets

Made of Buna-N rubber, these gaskets fit all of the grip-lock hose couplings in this presentation. Package quantity is 10.

5280K59	Pkg.	$13.40

Warning: ***There is no valve in these couplings. Flow should be stopped before disconnecting your hose line.***

Double Grip-Lock Hose Couplings for Air and Water

- Maximum Pressure @ 72°F: 300 psi
- Temperature Range: -40° to 250°F
- Hose: Use rubber
- Clamps: For couplings with a barbed end, use hose ferrules (see pg. 318) and low-profile band clamps (see pgs. 311-312)

Also known as Thor couplings, these have two locking points to give you twice the gripping power of standard grip-lock couplings. To connect, push a plug and a socket together with a quarter twist. Attach an optional locking ring (sold separately) to the socket for extra protection against accidental disconnection. All are compatible with Dixon Dual Lock series couplings. Couplings are zinc-plated steel for fair corrosion resistance, and include a Buna-N rubber seal. Vacuum rating is 22″ Hg @ 72°F. NPTF (Dryseal) threads are compatible with NPT threads.

All double grip-lock plugs are compatible with any of the double grip-lock sockets, regardless of the pipe or barb size. **Sockets** have a spring-loaded locking sleeve to prevent accidental disconnection; spring is bronze.

Double Grip-Lock Plugs

Pipe Size, NPTF	Male Pipe		Female Pipe	
3/8	6539K66	$10.27	6539K76	$12.13
1/2	6539K67	10.27	6539K77	12.82

For Hose ID	Barbed	
3/8″	6539K56	$18.72
1/2″	6539K57	17.15
3/4″	6539K58	18.21
1″	6539K59	23.41

Optional Locking Rings and Replacement Gaskets

Optional locking rings attach to the socket for extra protection against accidental disconnection.

6539K82 ..... Pkg. of 5 $2.50

Replacement gaskets are Buna-N rubber. They fit all of the double grip-lock hose couplings shown above.

6539K83 ..... Pkg. of 10 $8.50

Universal Twist-Claw Hose Couplings for Air and Water

- Maximum Pressure @ 72°F: 150 psi
- Temperature Range: -20° to 160°F
- Hose: Use rubber
- Clamps: For adapters with a barbed end, use low-profile band clamps (see pgs. 311-312) or interlocking clamps (see pg. 324)

Also known as Chicago couplings, these have an identical claw-style head that allows you to connect to any other universal twist-claw hose coupling. To connect, push two couplings together with a quarter twist. Use included safety clip with lanyard to prevent accidental disconnection. Couplings have an SBR rubber seal. They are compatible with Dixon Air King couplings. Vacuum is 29″ Hg @ 72°F.

Iron couplings are stronger than brass couplings but have poor corrosion resistance. **Brass** couplings have good corrosion resistance and are softer and easier to thread than stainless steel couplings. **316 stainless steel** couplings have excellent corrosion resistance.

Also Available: Universal spring-lock twist-claw hose couplings. They have a spring-loaded lock to prevent accidental connection. Made of iron, they come in male pipe and barbed styles in 1/2, 3/4, and 1 pipe sizes, as well as female pipe style 1/2 and 3/4 sizes. Please ask for 7149K1 and specify the style and size.

Accessories

Wye Connector—Connect one inlet to two outlets with these couplings. Made of iron.

5344K53 ..... $15.18

Cap—Use these caps to temporarily close off an outlet. Made of iron. A safety clip and lanyard are included.

5344K51 ..... $8.52

Replacement Parts

Gaskets—Made of SBR rubber, these gaskets fit all of the 5344K series couplings. Package quantity is 10.

5344K44 ..... Pkg. $3.93

Safety Clip with Lanyard

5344K81 ..... $0.71

Large Twist-Claw Hose Couplings for Air and Water

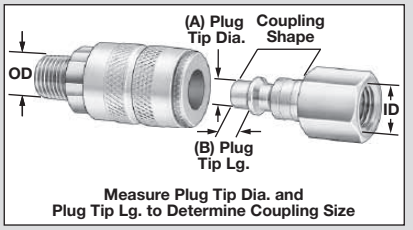
- Maximum Pressure @ 72°F: 100 psi
- Temperature Range: -20° to 160°F
- Hose: Use rubber
- Clamps: Not required

Couplings have an identical claw-style head that allows you to connect to any other large twist-claw hose coupling. The 1 1/4 and 1 1/2 pipe sizes mate interchangeably; the 2 pipe sizes only mate with other size 2 couplings. To connect, push two couplings together with a quarter twist. Couplings are iron with a black painted finish, which provides good corrosion resistance. They have a rubber seal and a safety clip. Not rated for vacuum.

Pipe Size, NPT	Male Pipe		Female Pipe		Gaskets	
1 1/4	5368K21	$47.84	5368K11	$44.40	5368K18	$19.17
1 1/2	5368K22	47.84	5368K12	44.40	5368K18	19.17
2	5368K23	61.21	5368K13	56.90	5368K29	19.17

Warning: ***There is no valve in these couplings. Flow should be stopped before disconnecting your hose line.***

How to Order Quick-Disconnect Hose Couplings



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

1. Determine the coupling shape. To make a connection, you'll need a plug and a socket with the same shape; however, the coupling's shape is determined by the plug's end. Compare your plug's end to the illustrations below.

2. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the "A" and "B" dimensions as shown at left, and match the measurements to those found in the individual presentations for your specific coupling shape.

3. For threaded connections, determine the pipe size. Pipe size is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16", the next highest OD is 1 3/8" and the corresponding pipe size is 1.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4

Quick-Disconnect Hose Coupling Shape Selection Chart

While many of the quick-disconnect couplings are named after their original manufacturer, they're now made by most coupling manufacturers.

Industrial-Shape Size-Identification Kits

Kits contain industrial-shape plugs in four coupling sizes (1/4, 3/8, 1/2, and 3/4), so you can determine the size of your couplings without the need for measuring.

The plugs in this kit are steel and the size is clearly labeled on each plug.

5597K12 ..... $11.37

Industrial-Shape Hose Coupling Sets with Threaded Ends for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 250° F
- Hose: Use flexible PVC and rubber

Set includes one plug and one socket. Plug shown has male pipe connection; socket has female pipe connection.

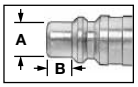
Sets include an industrial-shape zinc-plated steel plug, and a brass socket with a zinc-plated steel sleeve. They are also known as industrial interchange couplings. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. They meet the dimensional requirements of Fed Spec. A-A-59439. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs are also known as nipples. They meet ISO 6150/B and ANSI T3.20.14.

Sockets are sleeve-lock style. To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. They have a Buna-N rubber seal.

Pipe Size, NPTF	Male Pipe Plug × Male Pipe Socket	Female Pipe Plug × Female Pipe Socket	Male Pipe Plug × Female Pipe Socket	Female Pipe Plug × Male Pipe Socket
Coupling Size: 1/4				
1/4	**5602K11** $7.40	**5602K14** $7.79	**5602K12** $7.47	**5602K13** $7.74

Industrial-Shape Hose Couplings for Air



Coupling Size	(A)	(B)
1/4	5/16"	3/16"
3/8	7/16"	5/16"
1/2	9/16"	3/8"
3/4	13/16"	5/16"

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 250° F

- Hose: Use flexible PVC and rubber, except push-on barbed must be used with reinforced rubber push-on hose (see page 320)
- Clamps: For barbed couplings, use brass ferrules for hose smaller than 1/2" dia. (see page 318); use low-profile band clamps for hose 1/2" dia. and larger

These quick-disconnect couplings are also known as industrial interchange couplings. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. All 1/4 and 1/2 coupling sizes meet the dimensional requirements of Fed. Spec. A-A-59439. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Brass couplings have good corrosion resistance and low wear resistance. They are softer and easier to thread than steel couplings.

Zinc-plated steel couplings have fair corrosion resistance and high wear resistance.

Plugs

Also known as nipples. 1/4, 3/8, and 1/2 coupling sizes meet ISO 6150/B, except 6534K67.

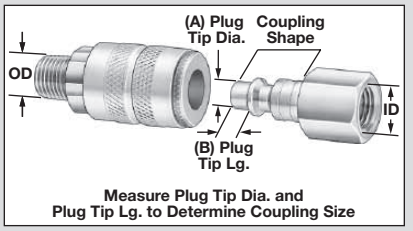
(Continued on following page)

Quick-Disconnect Hose Couplings

For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

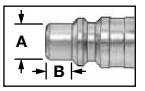
Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8	1/4	3/8	1/2

Industrial-Shape Hose Couplings for Air *(Continued from previous page)*

- Maximum Pressure @ 72° F: 300 psi, except 145 psi for chrome-plated steel plugs
- Temperature Range: -40° to 250° F, except 20° to 140° F for chrome-plated steel plugs
- Hose: Use flexible PVC and rubber

Coupling Size	(A)	(B)
1/4	5/16"	3/16"
3/8	7/16"	5/16"
1/2	9/16"	3/8"
3/4	13/16"	5/16"



The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. All 1/4 and 1/2 coupling sizes meet the dimensional requirements of Fed. Spec. A-A-59439. Not rated for vacuum.

Zinc- and **chrome-plated steel** couplings have fair corrosion resistance; **brass** has good corrosion resistance and low wear resistance.

Also Available: Aluminum industrial-shape hose manifolds. Please ask for 5595K22 for a round manifold with three sockets; please ask for 5595K11 for an inline manifold with four sockets.

Swivel Plugs

The pipe end swivels before and after installation as needed to eliminate hose kinking and unnecessary wrist strain. Also known as nipples. **Zinc-plated steel** plugs have a Buna-N rubber seal. 3/8 plugs meet ISO 6150/B. **Chrome-plated steel** plugs pivot back and forth at a 45° angle. They have a PTFE sealant on the threads and a chrome-plated steel dust cover on the rotating joint. They meet ISO 6150/B.

Coupling Size	Pipe Size, NPT	Threaded, Male Pipe	
Zinc-Plated Steel with Brass Threads			
1/4	1/8	4342K26	$4.42
1/4	1/4	4342K27	4.03
1/4	3/8	4342K24	4.42
3/8	1/4	4342K25	7.30
3/8	3/8	4342K28	5.78
1/2	1/2	4342K29	7.88

Coupling Size	Pipe Size, NPT	Threaded, Male Pipe	
Chrome-Plated Steel			
1/4	1/8	52435K31	$31.08
1/4	1/4	52435K25	26.92
1/4	3/8	52435K21	32.23
3/8	1/4	52435K19	32.17
3/8	3/8	52435K28	33.29

Plugs with British Standard Threads

Plugs are also known as nipples. This plug meets ISO 6150/B. It has BSPP (British Standard Pipe Parallel) threads.

Coupling Size	Pipe Size, BSPP	Threaded, Female Pipe	
Zinc-Plated Steel			
1/4	1/4	1283T24	$1.53

Sleeve-Lock Sockets with British Standard Threads

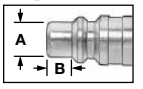
To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. All have a zinc-plated steel sleeve and a Buna-N rubber seal.

Coupling Size	Pipe Size, BSPT	Threaded, Male Pipe	
Brass			
1/4	1/4	1283T17	$6.49
1/4	3/8	1283T18	7.64

Coupling Size	Pipe Size, BSPP	Threaded, Female Pipe	
Brass			
1/4	1/4	1283T12	$6.49
1/4	3/8	1283T13	7.64

Nickel-Plated Industrial-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 250° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pages 304-305) or hose ferrules (see page 318)



Nickel plating provides better corrosion resistance than plain steel or brass. Also known as industrial interchange couplings. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Not rated for vacuum. The 1/4 coupling size meets the dimensional requirements of Fed. Spec. A-A-59439; the 3/8 coupling size meets ISO 6150/B. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs

Also known as nipples.

Pipe Size, NPTF	Threaded Male Pipe		Threaded Female Pipe		Barbed For Hose ID		
Nickel-Plated Steel							
Coupling Size: 1/4 (A: 5/16"; B: 3/16")							
1/4	6050T14	$2.51	6050T15	$2.73	1/4"	6050T16	$3.60

Coupling Size: 3/8 (A: 7/16"; B: 5/16")							
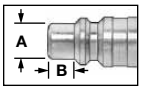
1/4	6050T21	20.27	6050T22	20.04	—	—	—

Stainless Steel Industrial-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 250° F
- Hose: Use flexible PVC and rubber
- Clamps: For barbed couplings, use hose ferrules (see pg. 318) for hose smaller than 1/2" dia.; use low-profile band clamps (see pgs. 311-312) for hose 1/2" dia. and larger



Made from 303 stainless steel, these couplings offer very good corrosion resistance and high wear resistance. They are also known as industrial interchange couplings. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. The 1/4 and 1/2 coupling sizes meet the dimensional requirements of Fed. Spec. A-A-59439. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Sleeve-Lock Sockets

To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug.

Pipe Size, NPTF	Male Pipe		Female Pipe		For Hose ID	
Coupling Size: 1/4 (A: 5/16"; B: 3/16")						
1/4"	6718K81	$27.52	6718K84	$25.21	1/4"	6718K87 $29.06
3/8"	6718K68	28.10	6718K66	26.04	3/8"	6718K71 29.62
Coupling Size: 3/8 (A: 7/16"; B: 5/16")						
3/8"	6718K82	40.06	6718K85	47.67	3/8"	6718K88 45.19

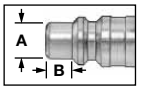
1/2"	6718K93	58.75	6718K96	61.31	1/2"	6718K99 60.62

Industrial-Shape Push-Button Hose Sockets for Air

- Maximum Pressure @ 72° F: 175 psi
- Temperature Range: 5° to 160° F
- Hose: Use PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



Sockets are single-shut-off style, so they have a valve that stops the flow when the coupling is separated. They are also known as industrial interchange couplings. All industrial-shape sockets are compatible with any of the industrial-shape plugs of the same coupling size, regardless of the pipe or barb size. They are nylon, which is nonmarring and offers good corrosion resistance and high wear resistance. They have zinc-plated steel threads or barbs, unless noted, and a Buna-N rubber seal. Sockets meet ISO 6150/B; the 1/4 coupling size also meets the dimensional requirements of Fed. Spec. A-A-59439. Not rated for vacuum.

Standard Push-Button Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect sockets, push the button and the plug will eject.

Pipe Size, NPT	Male Pipe		Female Pipe		For Hose ID	
Coupling Size: 1/4 (A: 5/16"; B: 3/16")						
1/4"	5136T13	$25.66	5136T11	$23.16	1/4"	5136T15 $25.66
3/8"	5136T14	25.66	5136T12	25.66	3/8"	5136T16 25.66
Coupling Size: 3/8 (A: 7/16"; B: 5/16")						
3/8"	5136T19	47.86	5136T17	47.23	3/8"	5136T22 47.86
1/2"	5136T21	47.86	5136T18	47.23	—	— —

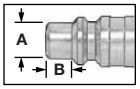
Safety Push-Button Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect sockets, push the button to purge the compressed air, which will release the plug. Barbs are aluminum.

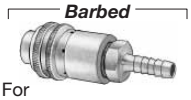
Pipe Size, NPT	Male Pipe		Female Pipe		For Hose ID	
Coupling Size: 1/4 (A: 5/16"; B: 3/16")						
1/4"	9585K11	$30.01	9585K17	$29.37	1/4"	9585K24 $31.15
3/8"	9585K12	30.01	9585K18	30.01	3/8"	9585K25 31.15
Coupling Size: 3/8 (A: 7/16"; B: 5/16")						
1/4"	9585K14	48.76	9585K21	47.07	—	— —
3/8"	9585K15	48.76	9585K22	47.07	3/8"	9585K26 53.16
1/2"	9585K16	48.76	9585K23	47.07	1/2"	9585K27 53.16

Industrial-Shape Twist-Disconnect Hose Sockets for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive hose clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



To connect, insert the plug into the socket and slide the sleeve forward until it locks in place. To disconnect, slide the sleeve back while twisting it left and right; the twisting action vents the downstream air to release pressure. It is now safe to remove the plug. Also known as industrial interchange couplings, these sockets are single-shut-off style, so they have a valve that stops the flow when the coupling is separated. All industrial-shape sockets are compatible with any of the industrial-shape plugs of the same coupling size, regardless of the pipe or barb size. Sockets are zinc-plated steel, which has fair corrosion resistance and high wear resistance. They have a Buna-N rubber seal. The 1/4 and 1/2 coupling sizes meet the dimensional requirements of Fed. Spec. A-A-59439. Vacuum is 26" Hg @ 72° F.

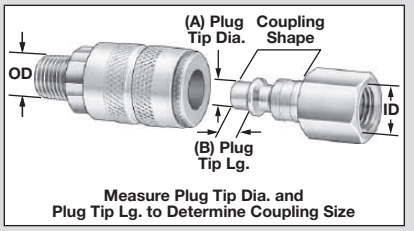


Pipe Size, NPT	Male Pipe		Female Pipe		For Hose ID	
Coupling Size: 1/4 (A: 5/16"; B: 3/16")						
1/4"	9582K14	$17.07	9582K33	$17.00	1/4"	9582K54 $18.26
Coupling Size: 3/8 (A: 7/16"; B: 5/16")						
3/8"	9582K17	20.53	9582K39	20.13	3/8"	9582K56 21.63
Coupling Size: 1/2 (A: 9/16"; B: 3/8")						
1/2"	9582K22	23.49	9582K41	23.74	1/2"	9582K58 23.78

Quick-Disconnect Hose Couplings

For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

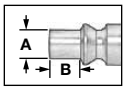
Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8	1/4	3/8	1/2

ARO-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive hose clamps (see pages 302-305) and hose ferrules (see page 318)



All ARO-shape plugs are compatible with any of the ARO-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Vacuum rating is 26" Hg @ 72° F.

Zinc-plated steel has fair corrosion resistance and high wear resistance. **Brass** has good corrosion resistance and low wear resistance. It is softer and easier to thread than stainless steel. **303 stainless steel** offers very good corrosion resistance and high wear resistance.

Also Available: Nickel-plated steel plugs and nickel-plated brass sockets. Please ask for 5621K1 and specify plug or socket; also specify the corresponding part number from the zinc-plated steel plugs or brass sockets.

Plugs

Plugs are also known as nipples. They are open-flow style, so there is no valve to stop the flow when the plug is disconnected.

Pipe Size, NPT	Threaded: Male Pipe		Threaded: Female Pipe		Barbed: For Hose ID		
Zinc-Plated Steel							
Coupling Size: 1/4 (A: 5/16"; B: 5/16")							
1/8	**5343K12**	$1.75			1/4"	**5343K18**	$1.93

Coupling Size: 3/8 (A: 7/16"; B: 9/16")							
3/8	**5343K82**	3.35	**5343K83**	4.11	3/8"	**5343K84**	3.50
303 Stainless Steel							
Coupling Size: 1/4 (A: 5/16"; B: 5/16")							
1/4	**6026T13**	7.03	**6026T14**	6.73			

Sleeve-Lock Sockets

To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. All have a zinc-plated steel sleeve and a Buna-N rubber seal.

Pipe Size, NPT	Threaded: Male Pipe		Threaded: Female Pipe		Barbed: For Hose ID		
Brass							
Coupling Size: 1/4 (A: 5/16"; B: 5/16")							
1/8	**5343K26**	$7.40	**5343K27**	$7.40			
1/4	**5343K28**	7.40	**5343K29**	7.45	1/4"	**5343K32**	$7.67
Coupling Size: 3/8 (A: 7/16"; B: 9/16")							
3/8	**5343K74**	12.90	**5343K75**	13.69			
303 Stainless Steel							
Coupling Size: 1/4 (A: 5/16"; B: 5/16")							
1/4	**6026T21**	30.90	**6026T22**	22.47	1/4"	**6026T23**	24.67

Push-to-Connect Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. All sockets have a zinc-plated steel sleeve and a Buna-N rubber seal.

Pipe Size, NPT	Threaded: Male Pipe		Threaded: Female Pipe		Barbed: For Hose ID		
Brass							
Coupling Size: 1/4 (A: 5/16"; B: 5/16")							
1/8	**5343K22**	$8.79	**5343K15**	$9.72			
1/4	**5343K23**	8.10	**5343K11**	8.03	1/4"	**5343K25**	$8.41
Coupling Size: 3/8 (A: 7/16"; B: 9/16")							
3/8	**5343K71**	15.27	**5343K73**	14.73	3/8"	**5343K72**	15.10
303 Stainless Steel

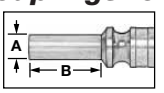
1/4	**6026T11**	25.35	**6026T12**	26.12	1/4"	**6026T15**	38.17

Lincoln-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 240° F
- Hose: Use flexible PVC, nylon, and rubber



All Lincoln-shape plugs are compatible with any of the Lincoln-shape sockets of the same coupling size, regardless of the pipe size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. They are zinc-plated steel, which has fair corrosion resistance and high wear resistance, except 1/8" NPT sleeve-lock sockets have brass sockets and zinc-plated steel sleeves. Brass has good corrosion resistance and low wear resistance. Not rated for vacuum.

Plugs

Plugs are also known as nipples.

Pipe Size, NPT	Threaded: Male Pipe		Threaded: Female Pipe	
Coupling Size: 1/4 (A: 9/32"; B: 3/4")				
1/8	**91455K51**	$3.00	**91455K54**	$2.85
1/4	**91455K31**	2.19	**91455K36**	2.68

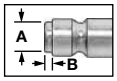
Sleeve-Lock Sockets

To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. They have a Buna-N rubber seal.

Pipe Size, NPT	Threaded: Male Pipe		Threaded: Female Pipe	
Coupling Size: 1/4 (A: 9/32"; B: 3/4")				
1/8	**91455K52**	$13.54	**91455K53**	$13.20
1/4	**91455K42**	9.53	**91455K47**	8.56

Tru-Flate-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi, except 175 psi for push-button sockets
- Temperature Range: -40° to 250° F, except 5° to 160° F for push-button sockets
- Hose: Use flexible PVC and rubber
- Clamps: For barbed couplings, use hose ferrules (see page 318) for hose smaller than ½″ dia.; use band clamps (see pages 311-313) for hose ½″ dia. and larger



Also known as automotive couplings, all Tru-Flate-shape plugs are compatible with any of the Tru-Flate-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Vacuum rating is 26″ Hg @ 72° F, unless noted. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance. **Brass** has good corrosion resistance and low wear resistance. It is softer and easier to thread than steel. **Nylon** is nonmarring and offers good corrosion resistance and high wear resistance.

Plugs

Plugs are also known as nipples.

Pipe Size, NPTF	Male Pipe		Female Pipe		For Hose ID		
Zinc-Plated Steel							
Coupling Size: ¼ (A: ⅜″; B: 1⁄16″)							
⅛	95815K41	$3.00	95815K51	$3.87			
¼	95815K69	2.47	95815K71	2.78	¼″	95815K76	$3.94

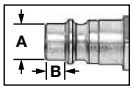
⅜	5732T15★	47.86	5732T22★	47.86	⅜″	5732T27★	$49.47
½			5732T23★	47.86			

★Not rated for vacuum.

European-Shape Hose Couplings for Air

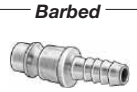
- Maximum Pressure @ 72° F: 230 psi
- Temperature Range: -4° to 212° F
- Hose: Use flexible PVC and rubber
- Clamps: For barbed couplings, use worm-drive clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



With a virtually unobstructed internal air path, these couplings provide a higher flow rate than other coupling shapes of the same size. All European-shape plugs are compatible with any of the European-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Not rated for vacuum.

Plugs

Also known as nipples, plugs are zinc-plated steel, which has fair corrosion resistance and high wear resistance.



Pipe Size, NPT	Male Pipe		Female Pipe		For Hose ID		
Coupling Size: ¼ (A: ⅜″; B: 3⁄16″)							
¼	53445K16	$3.76	53445K21	$4.62	¼″	53445K94	$4.67
⅜	53445K18	2.93	53445K92	5.93	⅜″	53445K96	4.76
½	53445K24	9.78	53445K98	8.82	½″	53445K85	5.49

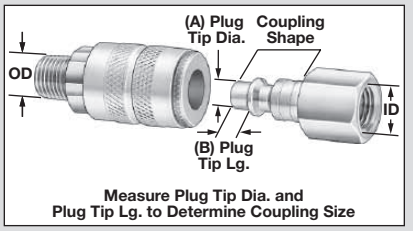
Push-to-Connect Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. Sockets are zinc-plated brass, which has good corrosion resistance and low wear resistance. They have a Buna-N rubber seal.

Pipe Size, NPT	Male Pipe		Female Pipe		For Hose ID		
Coupling Size: ¼ (A: ⅜″; B: 3⁄16″)							
¼	53445K15	$20.27	53445K19	$17.78	¼″	53445K93	$17.78
⅜	53445K17	20.33	53445K91	20.33	⅜″	53445K95	17.78
½	53445K86	24.44	53445K97	24.89	½″	53445K99	17.78

Quick-Disconnect Hose Couplings

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8	1/4	3/8	1/2

Universal Push-to-Connect Hose Sockets for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 250° F
- Hose: For *threaded* sockets, use flexible PVC and rubber hose; *push-on barbed* sockets must be used with hose for push-on fittings (see pg. 320)

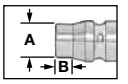
One socket accommodates five common plug shapes: Industrial, ARO, Lincoln, Tru-Flate, and European. To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. They are single-shut-off-style, so they have a valve that stops the flow when the coupling is separated. Sockets are brass, which has good corrosion resistance and low wear resistance. They have a Buna-N rubber seal. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Push-on barbed sockets are only for use with hose for push-on fittings. To ensure proper operation, the barbed end has to be pushed in all the way, with the hose end completely concealed by the plastic ring.

Pipe Size, NPTF	Threaded: Male Pipe	Threaded: Female Pipe	Push-On Barbed: For Hose ID
Coupling Size: 1/4			
1/4	**53475K31** $10.15	**53475K21** $10.15	1/4" **53475K39** $12.01
3/8	**53475K33** 11.13	**53475K23** 11.13	3/8" **53475K41** 10.71

Japanese-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 230 psi
- Temperature Range: -4° to 212° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive hose clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



All Japanese-shape plugs are compatible with any of the Japanese-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. They are zinc-plated steel, which has fair corrosion resistance and high wear resistance. Not rated for vacuum.

Plugs

Plugs are also known as nipples.

Pipe Size, NPT	Threaded: Male Pipe	Threaded: Female Pipe	Barbed: For Hose ID
Coupling Size: 1/4 (A: 7/16"; B: 7/32")			
1/4	**53425K63** $3.41	**53425K73** $3.97	1/4" **53425K78** $3.41
3/8	**53425K65** 4.12	**53425K75** 9.91	3/8" **53425K79** 3.41

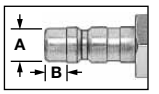
Push-to-Connect Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. They have a Buna-N rubber seal.

Pipe Size, NPT	Threaded: Male Pipe	Threaded: Female Pipe	Barbed: For Hose ID
Coupling Size: 1/4 (A: 7/16"; B: 7/32")			
1/4	**53425K23** $22.88	**53425K33** $22.88	1/4" **53425K76** $17.71
3/8	**53425K25** 22.88	**53425K35** 21.80	3/8" **53425K77** 17.71

Compact Hose Couplings for Air and Water

- Maximum Pressure @ 72° F: 500 psi
- Temperature Range: -40° to 250° F
- Hose: Use flexible PVC and rubber
- Clamps: For barbed couplings, use hose ferrules (see pg. 318)



A slim body allows these plugs to fit in tight spaces. All compact plugs are compatible with any of the compact sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Brass has good corrosion resistance and low wear resistance. It is softer and easier to thread than steel. **Zinc-plated steel** has fair corrosion resistance and high wear resistance.

Plugs

Plugs are also known as nipples.

Pipe Size, NPTF	Threaded: Male Pipe	Threaded: Female Pipe	Barbed: For Hose ID
Brass			
Coupling Size: 1/8 (A: 7/32"; B: 3/32")			
1/8	**53465K22** $4.80	**53465K42** $5.22	1/8" **53465K62** $5.56
Zinc-Plated Steel			
Coupling Size: 1/4 (A: 5/16"; B: 7/32")			
1/4	**53465K24** 1.99	**53465K44** 2.40	1/4" **53465K64** 3.90

Push-to-Connect Sockets

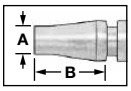
To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. They have a Buna-N rubber seal.

Pipe Size, NPTF	Threaded: Male Pipe	Threaded: Female Pipe	Barbed: For Hose ID
Brass			
Coupling Size: 1/8 (A: 7/32"; B: 3/32")			
1/8	**53465K12** $14.26	**53465K32** $14.26	1/8" **53465K52** $15.78
Coupling Size: 1/4 (A: 5/16"; B: 7/32")			
1/4	**53465K14** 15.78	**53465K34** 15.78	1/4" **53465K54** 16.80

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.

Schrader-Shape Hose Couplings for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: -40° to 225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive hose clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



All Schrader-shape plugs are compatible with any of the Schrader-shape sockets of the same coupling size, regardless of the pipe or barb size. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. The valve stops the flow when the coupling is separated. Vacuum rating is 26″ Hg @ 72° F.

Zinc-plated steel has fair corrosion resistance. **303 stainless steel** offers very good corrosion resistance. **Aluminum** is lightweight with good corrosion resistance and low wear resistance.

Plugs

Also known as nipples.

Pipe Size, NPT	Threaded Male Pipe	Threaded Female Pipe	Barbed For Hose ID
Zinc-Plated Steel			
Coupling Size: 1/4 (A: 5/16″; B: 3/4″)			
1/4	3124K46 $1.87	3124K52 $2.09	1/4″ 3124K74 $3.19

3/8	—	3124K61 4.22	3/8″ 3124K78 4.46
1/2	3124K64 3.64	—	1/2″ 3124K76 5.00
303 Stainless Steel			
Coupling Size: 1/4 (A: 5/16″; B: 3/4″)			
1/4	5606T13 5.13	5606T14 5.94	— — —

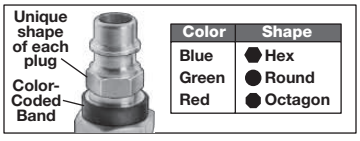
Push-to-Connect Sockets

To connect, push the plug into the socket until you hear a "click". To disconnect, twist the sleeve and pull out the plug; this twist-to-disconnect feature reduces the chance of accidental disconnection if the hose gets snagged. They have a Buna-N rubber seal. *Aluminum* sockets have a zinc-plated steel sleeve.

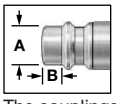
Pipe Size, NPT	Threaded Male Pipe	Threaded Female Pipe	Barbed For Hose ID
Aluminum			
Coupling Size: 1/4 (A: 5/16″; B: 3/4″)			
1/4	3124K59 $12.98	3124K55 $11.90	1/4″ 3124K75 $13.49
Coupling Size: 1/2 (A: 1/2″; B: 7/8″)			
3/8	3124K67 19.57	3124K66 18.90	3/8″ 3124K79 20.29
1/2	3124K73 18.86	3124K68 19.76	1/2″ 3124K77 20.58
303 Stainless Steel			
Coupling Size: 1/4 (A: 5/16″; B: 3/4″)			
1/4	5606T11 40.82	5606T12 38.31	1/4″ 5606T15 46.58

Color/Shape-Match Hose Couplings for Air and Water

- Maximum Pressure @ 72° F: 500 psi
- Temperature Range: -4° to 210° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive hose clamps (see pgs. 302-305) or hose ferrules (see pg. 318)



Color	Shape
Blue	Hex
Green	Round
Red	Octagon



Each color has its own unique shape, so you can't mix hose lines. Only plugs and sockets of the same color and coupling size will fit together. The couplings are single-shut-off style, so there is a valve in the socket but not the plug. They are brass, which has good corrosion resistance and low wear resistance. Vacuum rating is 28″ Hg @ 72° F.

To Order: Please specify blue, green, or red, unless noted.

Plugs

Plugs are also known as nipples. They have an aluminum band.

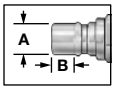
Quick-Disconnect Hose Couplings for Natural and LP Gas

- Maximum Pressure @ 72° F: 0.5 psi
- Temperature Range: -40° to 200° F
- Hose: Use hose for natural and LP gas



Push the plug into the socket to quickly link welding hoses, torches, and regulators. Couplings are brass for good corrosion resistance. They are single-shut-off style, so there is a valve in the socket but not the plug. They meet CSA 6.9-M98 and ANSI Z21.41. Not rated for vacuum. These couplings can only be used with quick-disconnect hose couplings for natural and LP gas of the same coupling size; they are not compatible with any other style of coupling.

Plugs—Also known as nipples. They have a heat-sensitive fuse that will stop gas flow in the event of a fire.

Sockets—To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. All have a fluoroelastomer seal.

Plugs

Pipe Size, NPTF	Female Pipe
Coupling Size: 3/8 (A=9/16″; B=25/64″)	
3/8	6053T12 $11.18

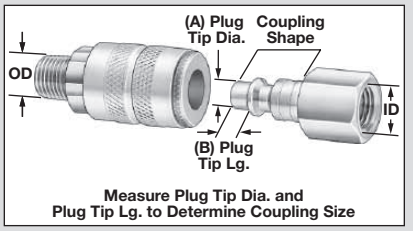
Quick-Disconnect Hose Couplings

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

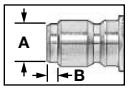
Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4

Open-Flow Hose Couplings for Air and Water

- Maximum Pressure: See table
- Temperature Range: -40° to 250° F
- Hose: Use nylon and rubber



There is no valve in either the plug or the sockets, so these straight couplings allow for maximum flow. All open-flow plugs are compatible with any of the open-flow sockets of the same coupling size, regardless of the pipe or barb size. They are compatible with Parker ST series, Hansen ST series, and Perfecting E series. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance. **Brass** has good corrosion resistance and low wear resistance. It is softer and easier to thread than steel. **303 stainless steel** offers very good corrosion resistance and high wear resistance.

Plugs—Also known as nipples.

Sleeve-Lock Sockets—To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. All have a Buna-N rubber seal.

Warning: Flow should be stopped before you disconnect your line.

Also Available: Replacement Buna-N rubber seals for brass sockets. Please ask for 6537K87 and specify coupling size.

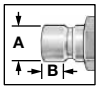
Open-Flow Hose Couplings for Coolant

- Maximum Pressure @ 72° F: 200 psi
- Temperature Range: -90° to 400° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use low-profile band clamps (see page 311) and worm-drive hose clamps (see pages 302-305)



Also known as coolant-line mold couplings, these couplings are open-flow style with no valve in either the plug or socket to allow maximum flow. All open-flow plugs are compatible with any of the open-flow sockets of the same coupling size, regardless of the pipe size. Unless otherwise indicated, they are brass for good corrosion resistance and low wear resistance. All are compatible with Parker Moldmate, Foster FP and FS series, and Hansen FT series couplings. Vacuum rating is 27" Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads. Female NPSM threads are compatible with male NPT and NPTF (Dryseal) threads.

Plugs

Plugs are also known as nipples. The *female pipe plugs* are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance.

Sleeve-Lock Sockets

To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. All have a silicone seal.

Threaded

Coupling Size	(A)	(B)	Pipe Size, NPTF	Male Pipe		Female Pipe

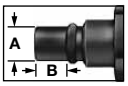
Warning: ***There is no valve in these couplings. Flow should be stopped before disconnecting your hose line.***

Plastic Hose Couplings

- Maximum Pressure @ 72° F:
  145 psi (Air and Water);
  100 psi (Food and Beverage)
- Temperature Range:
  -4° to 175° F (Air and Water);
  -4° to 250° F (Food and Beverage)
- Hose: Use flexible PVC and rubber



These plugs have all the benefits of a quick-disconnect coupling, but are made of lightweight plastic. All plastic plugs are compatible with any of the plastic sockets, regardless of the pipe size. They are not compatible with any other style of coupling. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Vacuum rating is 28" Hg @ 72° F.

Couplings **for air and water** are black acetal plastic.

Couplings **for food and beverage** are white PVDF plastic. They are made of FDA listed materials.

Plugs

Plugs are also known as nipples.

Coupling Size	(A)	(B)	Pipe Size, NPT	Male Pipe		Female Pipe	
For Air and Water

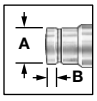
International Standard ISO Minimal-Spill Hose Couplings for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -20° to 212° F
- Hose: Use hydraulic SAE 100R7, high-pressure reinforced rubber, hydraulic SAE 100R1, and hydraulic SAE 100R2



Also known as flush-face couplings, these couplings have a flat face that ensures minimal fluid loss when connecting and disconnecting your hose line. They're double-shut-off style, so they have a valve in both the plug and the socket that stops the flow when the coupling is separated. All international standard ISO minimal-spill plugs are compatible with any of the international standard ISO minimal-spill sockets of the same coupling size, regardless of the pipe size. They are compatible with all couplings that meet ISO 16028 standards, such as Parker FEM, Perfecting HT, and Snap-Tite 74 series. Not rated for vacuum. Couplings are zinc-plated steel for fair corrosion resistance and high wear resistance. Female NPSF threads are compatible with male NPT and NPTF (Dryseal) threads.

Plugs—Also known as nipples, these plugs have a bonded Buna-N/PTFE seal.

Push-to-Connect Sockets—To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. All sockets have a Buna-N rubber seal.

Caps and Plugs—Made from black rubber, use these to keep contaminants out of your hose line.

Note: Pressure ratings are given for static (constant) pressure conditions.

Warning: Never attempt to connect or disconnect couplings when operating at maximum pressure.

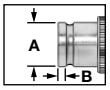
High-Pressure Minimal-Spill Hose Couplings for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -40° to 200° F
- Hose: Use rubber



These couplings have the highest pressure rating of all the minimal-spill couplings we offer. Also known as flush-face couplings, they have a flat face that ensures minimal fluid loss when connecting and disconnecting your hose line. They are double-shut-off style, so there is a valve that stops the flow when the coupling is separated in both the plug and the socket. All high-pressure minimal-spill plugs are compatible with any of the high-pressure minimal-spill sockets of the same coupling size, regardless of the pipe size. These couplings are compatible with Snap-Tite 71 series. Not rated for vacuum. Female NPTF (Dryseal) threads are compatible with male NPT threads. Female NPSF threads are compatible with male NPT and NPTF (Dryseal) threads.

Zinc-plated steel couplings have fair corrosion resistance and high wear resistance.

316 stainless steel couplings have excellent corrosion resistance and high wear resistance.

Plugs—Also known as nipples, these plugs have a Buna-N rubber seal.

Push-to-Connect Sockets—To connect, push the plug into the socket until you hear a "click". To disconnect, slide the sleeve forward until the plug ejects. They have a Buna-N rubber seal.

Note: Pressure ratings are given for static (constant) pressure conditions.

Warning: Never attempt to connect or disconnect couplings when operating at maximum pressure.

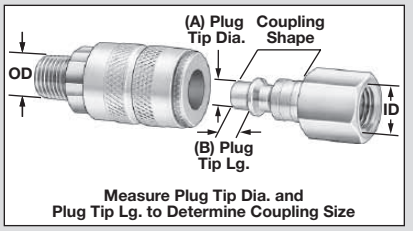
★Connection is NPT. ■ Connection is NPSF.

Warning: ***Flow should be stopped before disconnecting your hose line.***

Quick-Disconnect Hose Couplings

For technical drawings and 3-D models, go to mcmaster.com.

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

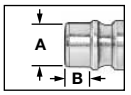
Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2.

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"	1"	1 5/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1

Snap-Tite H-Shape Hose Couplings for Hydraulic Fluid

- Maximum Pressure: See below
- Temperature Range: -40° to 200° F
- Hose: Use rubber
- Clamps: For barbed hose couplings, use worm-drive hose clamps (see pgs. 302-305)



All Snap-Tite H-shape plugs are compatible with any of the Snap-Tite H-shape sockets of the same coupling size, regardless of the pipe size. They are double-shut-off style, so both the plug and the socket have a valve that stops the flow when the coupling is separated. All come with a Buna-N rubber seal and meet MIL-C-51234. Not rated for vacuum. NPTF (Dryseal) threads are compatible with male NPT threads.

Note: Pressure ratings are given for static (constant) pressure conditions.

Zinc-plated steel plugs have fair corrosion resistance and high wear resistance.

Brass and **aluminum** plugs have good corrosion resistance and low wear resistance.

316 stainless steel plugs have excellent corrosion resistance and high wear resistance.

Warning: Never attempt to connect or disconnect couplings when operating at maximum pressure.

Plugs—Also known as nipples.

Dust Caps and Plugs—Made of black plastic, use these to keep contaminants out of your hose line. *Dust cap and plug sets* come with one plug and one cap.

Warning: ***Flow should be stopped before disconnecting your hose line.***

International Standard (ISO A and B) Hose Couplings

- Max. Pressure: See below
- Temp. Range: -40° to 250° F (Zinc-Plated Steel, Brass, and 303 Stainless Steel); -4° to 195° F (Acetal Plastic)
- Hose: See material descriptions

All international standard ISO A plugs are compatible with any of the international standard ISO A sockets of the same coupling size, regardless of the pipe size. Couplings are double-shut-off style, so both the plug and the socket have a valve to stop the flow when your hose line is disconnected. Vacuum rating is 27″ Hg @ 72° F, except acetal plastic is 28″ Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads.

Note: Pressure ratings reflect static (constant) pressure conditions.

Zinc-plated steel has fair corrosion resistance and high wear resistance. Use hydraulic hose.

Brass has good corrosion resistance and low wear resistance. Use hydraulic hose.

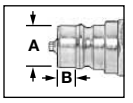
303 stainless steel has very good corrosion resistance and high wear resistance. Use hydraulic hose.

Acetal plastic has excellent corrosion resistance and low wear resistance. It is made from FDA listed materials. Use with hydraulic and rubber hose. Color is white.

Plugs—Also known as nipples, all have a Buna-N rubber seal.

Sleeve-Lock Sockets—To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug. Sockets made of zinc-plated steel and 303 stainless steel also have a PTFE backup ring.

ISO Series A



Compatible with all couplings that meet ISO 7241-1 series A, such as Parker 660 series and Aeroquip 5600 series.

Zinc-Plated Steel for Hydraulic Fluid

Coupling Size	(A)	(B)	Pipe Size, NPTF	Max. psi @ 72° F	Plugs, Female Pipe		Sleeve-Lock Sockets, Female Pipe	
1/4	7/16″	1/4″	1/8	5,000	51335K59	$9.60	51335K49	$24.20

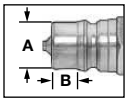
1	1 3/8″	13/16″	1	4,000	51335K65	30.45	51335K55	64.47

ISO Series B



Compatible with all couplings that meet ISO 7241-1 series B, such as Parker 60 series.

Also Available: ISO Series B 316 stainless steel couplings with fluoroelastomer rubber seals. The maximum pressure is 27″ Hg @ 72° F; temperature range is -15° to 400° F. Please ask for 5247K68 and specify coupling size and plug or socket.

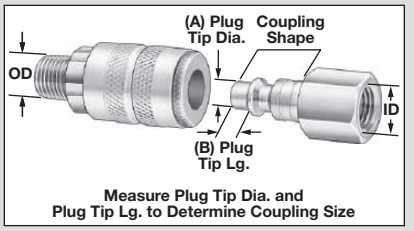
★Combination dust cap/plug.

Warning: Flow should be stopped before disconnecting your hose line.

Quick-Disconnect Hose Couplings

For information about selecting pipe size, see pages 2-3. For information about quick-disconnect couplings, see pg. 326.



Measure Plug Tip Dia. and Plug Tip Lg. to Determine Coupling Size

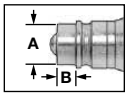
Please Read Before Ordering: To determine the **shape** of your coupling, compare the end of your plug to the illustrations shown on page 326. You'll also find an illustration of the plug's shape in each presentation. **Coupling size** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the ″A″ and ″B″ dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD is 3/4″ and the corresponding pipe size is 1/2.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 5/8″
Pipe Size	1/4	3/8	1/2	3/4	1

Pioneer-Shape Hose Couplings for Hydraulic Fluid

- Maximum Pressure @ 72° F: 3,000 psi
- Temperature Range: -40° to 250° F
- Hose: Use high-pressure reinforced-rubber and hydraulic steel tubing



All Pioneer-shape plugs are compatible with any of the Pioneer-shape sockets of the same coupling size, regardless of the pipe size. Couplings are double-shut-off style, so both the plugs and the sockets have a valve that stops the flow when the coupling is separated. Plugs and sockets with a seal have a Buna-N rubber O-ring, which offers extra protection against leaks. Couplings are zinc-plated steel, which has fair corrosion resistance and high wear resistance. Vacuum rating is 27″ Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads.

Note: Pressure ratings are given for static (constant) pressure conditions.

Warning: Never attempt to connect or disconnect couplings when operating at maximum pressure.

Plugs

Also known as nipples, these plugs are compatible with Parker 4000 and 4200 series, as well as SafeWay S20 and S40 series.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Female Pipe		Female Pipe with Seal	
1/4	9/16″	5/16″	1/4	5341K57	$6.79	5341K91	$7.39
3/8	3/4″	11/32″	3/8	5341K53	8.49	5341K92	9.34
1/2	13/16″	3/8″	1/2	5341K54	8.18	5341K93	9.10
1/2	13/16″	3/8″	3/4	5341K55	13.28	5341K94	13.94
1	1 7/32″	5/8″	1	———	———	5341K56	29.89

Push-to-Connect Sockets

Compatible with Parker 4200 series and SafeWay S40 series. To connect, push the plug into the socket until you hear a ″click″. To disconnect, slide the sleeve forward until the plug ejects.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Female Pipe	
1/4	9/16″	5/16″	1/4	5341K61	$19.04
3/8	3/4″	11/32″	3/8	5341K47	20.00
1/2	13/16″	3/8″	1/2	5341K62	21.15
1/2	13/16″	3/8″	3/4	5341K49	27.15

Sleeve-Lock Sockets

Compatible with Parker 4000 series and SafeWay S20 series. To connect, slide back the sleeve on the socket, insert the plug, and release the sleeve. To disconnect, slide back the sleeve and pull out the plug.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Female Pipe		Female Pipe with Seal	
1/4	9/16″	5/16″	1/4	5341K45	$15.52	5341K24	$16.37
3/8	3/4″	11/32″	3/8	5341K63	18.79	5341K25	19.76
1/2	13/16″	3/8″	1/2	5341K48	19.46	5341K26	19.76
1	1 7/32″	5/8″	1	———	———	5341K51	66.50

Optional Dust Caps for Plugs

Made from rubber, these caps keep contaminants out of your hose line. Color is black, unless noted.

Coupling Size		
1/4	5341K71	$3.14
3/8	5341K72	4.00
1/2	5341K73★	3.49
1	5341K75	8.49

★Available in your choice of colors. Please specify black, blue, green, red, or yellow.

Optional Dust Plugs for Sockets

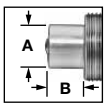
Made from rubber, these plugs keep contaminants out of your hose line. Color is black, unless noted.

Coupling Size		
1/4	5341K81	$3.74
3/8	5341K96	4.23
1/2	5341K97★	3.46
1	5341K85	8.03

★Available in your choice of colors. Please specify black, blue, green, red, or yellow.

High-Pressure Thread-Lock Hose Couplings for Hydraulic Fluid

- Maximum Pressure @ 72° F: 10,000 psi
- Temperature Range: -40° to 250° F
- Hose: Use reinforced rubber



Plugs thread into socket sleeve, allowing you to connect and disconnect couplings while operating at maximum working pressure. They're double-shut-off style, so both the plug and the socket have a valve to stop the flow when your hose line is disconnected. They are zinc-plated steel, which has fair corrosion resistance and high wear resistance. They are compatible with Enerpac series and Parker 3000 series couplings. All high-pressure thread-lock plugs are compatible with any of the high-pressure thread-lock sockets of the same coupling size, regardless of the pipe size. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs are also known as nipples.

Sockets have a Buna-N rubber seal. To connect, insert the plug into the socket, then slide the sleeve forward and thread it onto the plug. To disconnect, unthread the plug from the sleeve, then slide the sleeve back and pull out the plug.

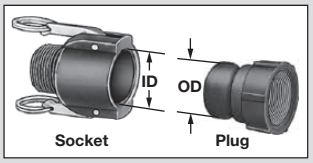
Note: Pressure ratings reflect static (constant) pressure conditions.

Also Available: 316 stainless steel couplings with a 3/8 coupling size × 3/8 pipe connection. Please ask for 5622K1 and specify plug or socket.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Plugs, Female Pipe		Sockets, Male Pipe	
1/4	5/8″	7/16″	1/4	53455K36	$11.06	53455K24	$16.03
3/8	3/4″	5/8″	3/8	53455K55	11.89	53455K28	17.77

Warning: Flow should be stopped before disconnecting your line.

How to Order Cam-and-Groove Hose Couplings



1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝", the coupling size is 3.

Actual ID or OD	15/16"	1¼"	1 7/16"	1 13/16"	2⅛"	2½"	3"	3⅝"	4¾"	5¾"	6 15/16"
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

2. **Determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 1 3/16", the next highest OD is 1⅜" and the corresponding pipe size is 1.

Threaded OD	¾"	1"	1⅜"	1⅝"	1⅞"	2⅜"	2⅞"	3½"	4½"	5⅝"	6⅝"
Pipe Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

Metal Cam-and-Groove Hose Couplings

- Maximum Pressure: See below
- Temperature Range: -65° to 250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

Metal cam-and-groove couplings are stronger and more durable than the plastic versions. They provide quick access to medium- and large-diameter hose lines. All couplings meet Fed. Spec. A-A-59326. They're compatible with PT Coupling, Dixon, Andrews, and Ever-Tite cam-and-groove couplings.

Sockets must be used with a plug of the same coupling size; see pages 343-345 for plugs. To connect, insert the plug into the socket and press the levers down. The levers fit snugly into the groove on the plug's body and force the plug down against the gasket to form a tight seal. To disconnect, lift both levers and pull out the plug.

Material	Features	Applications
Aluminum	Good abrasion resistance. Fair corrosion and chemical resistance. Lightweight.	Use with diesel fuel, ethylene glycol, gasoline, hydraulic fluid, and petroleum.
Anodized Aluminum	Lightweight with good abrasion and corrosion resistance.	Use with water.
Brass	Good corrosion resistance. Fair abrasion resistance.	Use with water.
316 Stainless Steel	Excellent abrasion, corrosion, and chemical resistance.	Use with citric acid, diesel fuel, ethylene glycol, gasoline, hydraulic fluid, and petroleum.

Sockets with Threaded Male Pipe Connection

Also known as B-couplers, these sockets have a Buna-N rubber seal and zinc-plated steel pull rings, except 316 stainless steel sockets have 304 stainless steel pull rings. Sockets **with locking levers** prevent accidental disconnection.

With Nonlocking Levers

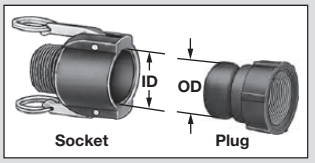
(Continued on following page)

Warning: *It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.*

Metal Cam-and-Groove Hose Couplings

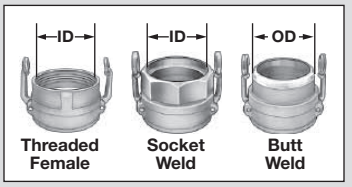
For information about pipe size, see pages 2-3. For information about cam-and-groove couplings, see pg. 339.

How to Order Cam-and-Groove Hose Couplings



1. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1¼″	1 7/16″	1 13/16″	2⅛″	2½″	3″	3⅝″	4¾″	5¾″	6 15/16″
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6



2. For all couplings (except those with a barbed end), determine the pipe size. Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at left. For **threaded** couplings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest ID or OD is 1⅜″ and the corresponding pipe size is 1. For **unthreaded** couplings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	¾″	1″	1⅜″	1⅝″	1 7/8″	2⅜″	2 7/8″	3½″	4½″	5⅝″	6⅝″
Unthreaded ID or OD	—	—	—	—	1.90″	2.375″	—	3.50″	4.50″	—	6.625″
Pipe Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: -65° to 250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All sockets have a Buna-N rubber seal and zinc-plated steel pull rings, except the 316 stainless steel sockets have 304 stainless steel pull rings. For plugs, see pages 343-345; for replacement gaskets, see page 346.

Sockets with Threaded Female Pipe Connection

Also known as D couplers. Sockets **with locking levers** prevent accidental disconnection.

(Continued on following page)

Warning: *It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.*

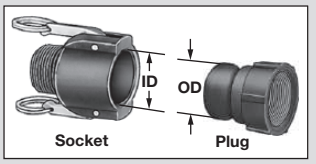
Metal Cam-and-Groove Hose Couplings

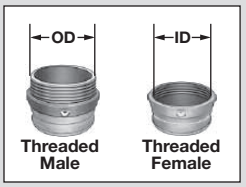
For information about pipe size, see pages 2-3. For information about cam-and-groove couplings, see pg. 339.

How to Order Cam-and-Groove Hose Couplings



1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝", the coupling size is 3.

Actual ID or OD	15/16"	1¼"	17/16"	1 13/16"	2⅛"	2½"	3"	3⅝"	4¾"	5¾"	6 15/16"
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6



2. **Determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. For **threaded** couplings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16", the next highest OD or ID is 1⅜" and the corresponding pipe size is 1. For **unthreaded** couplings, take the actual measurement and select the corresponding pipe size.

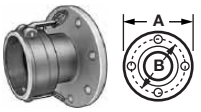
Threaded OD or ID	¾"	1"	1⅜"	1⅝"	1⅞"	2⅜"	2⅞"	3½"	4½"	5⅝"	6⅝"
Unthreaded ID	—	—	—	—	—	2.375"	—	3.50"	4.50"	—	6.625"
Pipe Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: -65° to 250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All **sockets** and **caps** have a Buna-N rubber seal and zinc-plated steel pull rings, except 316 stainless steel sockets have 304 stainless steel pull rings. For more sockets, see pages 339-341. For replacement gaskets, see page 346.

Sockets with Flanged Connection



Also known as PFC couplers, these have an unthreaded flanged end that bolts to a flanged connection of the same size for easy access to your line. **Aluminum** flanges have a flat face. **316 stainless steel** flanges have a raised face.

Coupling Size	Pipe Size	Flange OD (A)	Bolt Circle Dia. (B)	No. of Bolt Holes	Recom'd Bolt Size	Max. psi @ 72° F	Aluminum with Brass Levers		316 Stainless Steel with 316 Stainless Steel Levers

(Continued on following page)

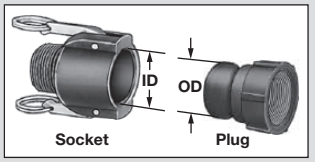
Warning: *It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.*

Metal Cam-and-Groove Hose Couplings

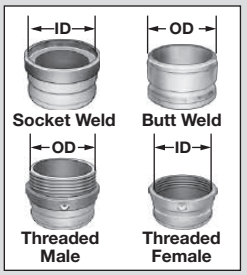
For information about pipe size, see pages 2-3. For information about cam-and-groove couplings, see pg. 339.

How to Order Cam-and-Groove Hose Couplings



1. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1¼″	1 7/16″	1 13/16″	2⅛″	2½″	3″	3⅝″	4¾″	5¾″	6 15/16″
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6



2. For all couplings (except those with a barbed end), determine the pipe size. Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at left. For **threaded** couplings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest ID or OD is 1⅜″ and the corresponding pipe size is 1. For **unthreaded** couplings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	1″	1⅜″	1⅞″	2⅜″	3½″	4½″	6⅝″
Unthreaded ID or OD	—	—	1.90″	2.375″	3.50″	4.50″	6.625″
Pipe Size	¾	1	1½	2	3	4	6

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: -65° to 250°F, unless noted.
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All sockets have a Buna-N rubber seal and zinc-plated steel pull rings, except 316 stainless steel sockets have 304 stainless steel pull rings. For sockets, see pages 339-343; for replacement gaskets, see page 346.

Plugs with Barbed Connection Hose

Also known as E adapters. Secure hose to the barbed end with low-profile band clamps (see page 311).

4	4	150	51415K343	51.70	53015K343	167.06

(Continued on following page)

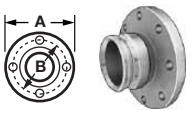
Warning: *It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.*

For information about pipe size, see pages 2-3. For information about cam-and-groove couplings, see pg. 339.

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

Plugs with Flanged Connection

Also known as PFA adapters, these have an unthreaded flanged end that bolts to a flanged connection of the same size for easy access to your line. **Aluminum** and **anodized aluminum** flanges have a flat face. **316 stainless steel** flanges have a raised face, except *coupling size 6* has a flat face.



Coupling Size	Pipe Size	Flange OD (A)	Bolt Circle Dia. (B)	No. of Bolt Holes	Recom'd Bolt Size	Max. psi @ 72°F	Aluminum		Anodized Aluminum		316 Stainless Steel

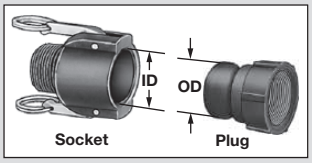
Warning: ***It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.***

Cam-and-Groove Hose Couplings

For technical drawings and 3-D models, go to mcmaster.com.

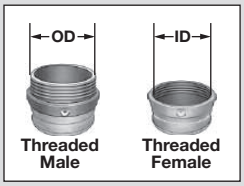
For information about pipe size, see pages 2-3.

How to Order Cam-and-Groove Hose Couplings



1. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝", the coupling size is 3.

Actual ID or OD	15/16"	1¼"	17/16"	1 13/16"	2⅛"	2½"	3"	3⅝"	4¾"	5¾"	6 15/16"
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6



2. Determine the pipe size. Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. For **threaded** couplings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16", the next highest OD or ID is 1⅜" and the corresponding pipe size is 1. For **unthreaded** couplings, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	¾"	1"	1⅜"	1⅝"	1⅞"	2⅜"	2⅞"	3½"	4½"	5⅝"	6⅝"
Unthreaded ID	—	—	—	—	—	2.375"	—	3.50"	4.50"	—	6.625"
Pipe Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

Gaskets for Cam-and-Groove Hose Couplings

Buna-N—Gaskets resist water, salt water, waste water, ethylene glycol, hydraulic oil, petroleum oil, gasoline, diesel fuel, and citric acid. Not rated for pressure. Temperature range is -65° to 275° F. Color is black.

Viton® Fluoroelastomer—Gaskets resist water, salt, detergents, varnish, ethanol, and biodiesel. Not rated for pressure. Temperature range is -40° to 400° F. Color is green.

FEP-Encapsulated Silicone—Made of FDA-listed material, these gaskets resist vegetable and mineral oils, as well as acids and detergents. Maximum pressure is 150 psi. Temperature range is -75° to 400° F. Color is red.

FEP-Encapsulated Viton® Fluoroelastomer—Gaskets resist acids and solvents. Maximum pressure is 125 psi. Temperature range is -15° to 400° F. Color is black.

Metal Cam-and-Groove Hose Couplings with Shut-Off Valve

- Maximum Pressure: See below
- Temperature Range: -65° to 250° F (Aluminum); -40° to 400° F (316 Stainless Steel)
- Hose: Use rubber. Aluminum couplings also can use polyethylene, polyurethane, and PVC.

Also known as dry disconnects, both the sockets and the plugs have a shut-off valve for minimal fluid loss when disconnecting your hose line. They can only be used with our cam-and-groove hose couplings with shut-off valve; they are not compatible with any other style of coupling.

To connect, insert the plug into the socket, press the levers down, and turn the handle to the "open" position. To disconnect, turn the handle to the "closed" position, lift the levers, and pull out the plug. Couplings cannot be disconnected when the valve is open. Connections are NPT female.

Aluminum couplings are for use with water. They are lightweight with good abrasion and corrosion resistance. **316 stainless steel** couplings are for use with citric acid, hydraulic fluid, gasoline, and diesel fuel. They have excellent abrasion, corrosion, and chemical resistance.

Lightweight Cam-and-Groove Hose Couplings with Shut-Off Valve

- Maximum Pressure: See below
- Temperature Range: -20° to 150° F
- Hose: Use polyethylene, PVC, and EPDM rubber

These two-piece couplings are lighter in weight and more economical than metal cam-and-groove couplings.

Also known as dry disconnects, they have a shut-off valve in each end for minimal fluid loss when disconnecting your hose line. Couplings cannot be disconnected when the valves are open. They also have PTFE seats and a fluoroelastomer rubber seal between the two halves. They are polypropylene plastic for very good corrosion and chemical resistance. Use with acetic acid and magnesium chloride. Connections are NPT female.

Pipe Size, NPT	Max. psi @ 72° F	O'all Lg.		
1½	100	7¾"	5064K11	$309.58
2	100	7¾"	5064K12	309.58

Warning: ***It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.***

Plastic Cam-and-Groove Hose Couplings

- Maximum Pressure: See below
- Temperature Range: See below
- Hose: Use rubber, except black polypropylene couplings are also for use with polyethylene, polyurethane, and PVC

Plastic cam-and-groove couplings are lighter in weight than those made from metal. They provide quick access to medium- and large-diameter hose lines. They meet Fed. Spec. A-A-59326, except FDA polypropylene couplings, which are made of FDA listed materials.

Sockets must be used with a plug of the same coupling size. To connect, insert the plug into the socket and press the levers down. The levers fit snugly into the groove on the plug's body and force the plug down against the gasket to form a tight seal. To disconnect, lift both levers and pull out the plug. For plugs and replacement gaskets, see page 349.

Material	Features/Applications	Color	Seal Material	Temperature Range
Polypropylene	Lightweight with good corrosion and abrasion resistance. Use with water.	Black	EPDM Rubber	–20° to 150°F
FDA Polypropylene	Made of FDA listed material. Lightweight with good abrasion resistance.	White	Buna-N Rubber	10° to 180°F
Nylon	Reinforced with glass fiber for strength. Good abrasion, corrosion, and chemical resistance. Use with diesel fuel, gasoline, and varnish.	Yellow	EPDM Rubber	–30° to 200°F
PVDF	Excellent abrasion, corrosion, and chemical resistance. Use with diesel fuel, gasoline, nitric acid, and phosphoric acid.	White	EPDM Rubber	–20° to 250°F

Sockets with Threaded Male Pipe Connection

Also known as B couplers. They have two 304 stainless steel levers (unless noted) with stainless steel pull rings, except the polypropylene sockets with locking levers have zinc-plated steel pull rings, and the PVDF sockets have zinc-plated steel pins instead of rings.

Sockets **with locking levers** prevent accidental disconnection.

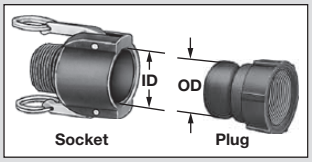
(Continued on following page)

Warning: *It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.*

Plastic Cam-and-Groove Hose Couplings

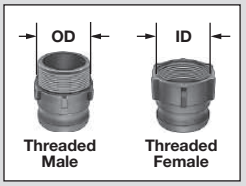
For information about pipe size, see pages 2-3. For information about cam-and-groove couplings, see pg. 347.

How to Order Cam-and-Groove Hose Couplings



1. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	1¼″	1 7/16″	2⅛″	2½″	3⅝″	4¾″
Coupling Size	¾	1	1½	2	3	4



2. For all couplings (except those with a barbed end), determine the pipe size. Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1⅜″ and the corresponding pipe size is 1.

Threaded OD or ID	¾″	1″	1⅜″	1⅝″	1⅞″	2⅜″	3½″	4½″
Pipe Size	½	¾	1	1¼	1½	2	3	4

Plastic Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: See page 347
- Hose: Use polyethylene, polyurethane, PVC, and rubber

Sockets and caps have two 304 stainless steel levers (unless noted) with stainless steel pull rings, except the polypropylene with locking levers have zinc-plated steel rings, and the PVDF have zinc-plated steel pins instead of rings.

Sockets **with locking levers** prevent accidental disconnection.

Sockets with Barbed Hose Connection

Also known as C couplers. Secure hose to the barbed end with worm-drive hose clamps (see page 302) or low-profile band clamps (see page 311).

Replacement Gaskets

EPDM gaskets are for polypropylene, nylon, and PVDF cam-and-groove hose couplings. Temperature range is -30° to 250° F. Color is black. **Buna-N** gaskets are made of FDA-listed material. Temperature range is 10° to 180° F. Color is white.

For Coupling Size	ID	OD	EPDM Pkg. of 10		Buna-N Pkg. of 10

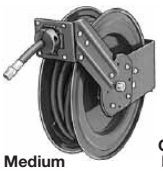
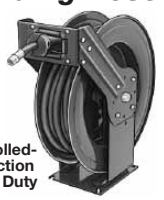
4	4"	4.87"	5647K66	20.31		

Warning: ***It is important to relieve all pressure before disconnecting the couplings. Do not use cam-and-groove couplings with compressed air or gas.***

Automatic-Winding Hose Reels



Medium Duty



Controlled-Retraction Heavy Duty

Super Duty

Hose locks in place when pulled out; a quick tug causes it to retract. Reels are steel with a blue powder-coated finish.

Versa-Mount Reels—Mount on the floor, wall, or ceiling. Reels have a 1/4″ thick support bracket and four 1/2″ dia. mounting holes (fasteners not included). Additional mounting brackets (sold separately) allow reels to pivot or to mount to beams. Reels have a brass female inlet (unless noted) with a Buna-N rubber gasket, except reels *with 316 stainless steel fittings* have a stainless steel inlet instead of brass. The hose end has a brass male fitting, except reels with industrial-shape quick-disconnect coupling and reels with 316 stainless steel male fitting.

The *medium duty* reels are for use in applications where the hose is pulled straight out of the reel. The *heavy duty* reels have more support, so you can pull the hose out at an angle. The *controlled-retraction* reels are also known as safety reels, these have a retraction speed that's up to 80% slower than other automatic-winding hose reels.

Floor-Mount Super Duty Reels—Strong and well-supported to handle large-diameter hose, these reels can be used in high-vibration applications. Reels have six 1/2″ dia. mounting holes (fasteners not included). The reel with 3/4″ ID hose has a brass female inlet with a Buna-N rubber gasket; the outlet has a brass male threaded fitting. Reels with 1″ ID hose have a nickel-plated steel female inlet with a fluoroelastomer gasket; the hose end has a zinc-plated steel male fitting.

Lightweight air hose is PVC, so it's lighter and less cumbersome than rubber hose. It is reinforced with yarn. Temperature range is -15° to 150°F. To Order: Please specify hose color: blue, red, or yellow.

General purpose air hose is EPDM rubber, which is the most common material for air applications. It is reinforced with yarn. Temperature range is -40° to 200°F, unless noted. To Order: Please specify hose color: black or red.

Lubricated-air hose is oil resistant for use with power tools that require lubricated air. The tube is Buna-N rubber and the cover is neoprene with yarn reinforcement. Temperature range is -20° to 200°F. Hose color is black.

Reels without hose have a female outlet that is the same size as the inlet. Connect your hose with NPT threads to the reel outlet; connect your supply line to the reel inlet. Temperature range is -40° to 250°F.

★Female inlet is nickel-plated steel. ■ Temperature range is -7° to 200°F.

Optional Mounting Brackets for all Versa-Mount Reels

Made of steel, all have four 1/2″ dia. mounting holes. Fasteners not included.

Floor-mount brackets swivel 345°.

Wall-mount brackets pivot 180°.

Beam-mount brackets easily mount overhead on 3″-8 1/2″ I-beams or H-beams.

Automatic-Winding Reels for Hydraulic Hose

Medium Duty

Heavy Duty

Hose locks in place when pulled out of the reel and retracts with a quick tug. Reels are steel with a blue powder-coated finish and have a 1/4″ thick support bracket. They also have a brass inlet (unless noted) with a Buna-N rubber gasket. Reels mount to the floor, wall, or ceiling; they have four 1/2″ dia. mounting holes (fasteners not included). See page 350 for optional mounting brackets.

Versa-Mount Medium Duty Reels—Use in applications where the hose is pulled straight out of the reel.

Versa-Mount Heavy Duty Reels—These reels have more support, so you can pull the hose out at an angle.

Reels with hose are for use with hydraulic oil. Hose is nitrile with a black blended rubber cover and steel wire reinforcement. The hose end has a zinc-plated steel fitting. Hose rated 2,750 and 3,000 psi meets SAE 100R1; hose rated 5,000 and 5,800 psi meets SAE 100R16. Temperature range is -40° to 212° F.

Reels without hose have a female outlet that is the same size as the inlet. Connect your hose with NPT threads to the reel outlet; connect your supply line to the reel inlet. Temperature range is -40° to 250° F.

♣ The inlet is zinc-plated steel.

Medium Duty Corrosion-Resistant Automatic-Winding Hose Reels

Glass-Filled Polypropylene

Aluminum

Hose locks in place when pulled out; a quick tug causes it to retract. Mount to the floor, wall, or ceiling; mounting fasteners are not included.

Glass-filled polypropylene reels have very good corrosion resistance. They are black with a red powder-coated steel base. Reels have an adjustable hose guide, a steel inlet, and four 5/16″ dia. mounting holes.

Aluminum reels have good corrosion resistance. Reels have a blue powder-coated finish. They have a brass inlet with a Buna-N rubber gasket and four 1/2″ dia. mounting holes.

Lightweight air hose is PVC with yarn reinforcement. Color is red. The hose end has a brass fitting. Temperature range is 32° to 150° F.

Reels without hose have a female outlet that is the same size as the inlet. Temperature range is 32° to 150° F for the glass-filled polypropylene reels; -65° to 250° F for the aluminum reels. Connect your hose with NPT threads to the reel outlet; connect your supply line to the reel inlet.

Heavy Duty Corrosion-Resistant Automatic-Winding Hose Reels

Heavy Duty

Super Duty

Not only do these 304 stainless steel reels have very good corrosion resistance, they also have more support than medium duty reels, so you can pull the hose out at an angle. Hose locks in place when pulled out; a quick tug causes it to retract.

Versa-Mount Heavy Duty Reels—Mount to the floor, wall, or ceiling. Reels have four 7/16″ wide mounting holes, except reels with 316 stainless steel fittings have 1/2″ dia. mounting holes (fasteners not included). 316 stainless steel female inlets include a Buna-N rubber gasket.

Floor/Wall-Mount Super Duty Reels—The frame-style construction provides extra strength to handle large-diameter hose. Mount to the floor or wall. Reels have four 1/2″ dia. mounting holes (fasteners not included). Female inlet includes a fluoroelastomer gasket.

Chemical hose is nylon with a red blended rubber cover and yarn reinforcement, except 5132K21 has a black neoprene rubber cover. Temperature range is -30° to 160° F.

Water hose is EPDM rubber with yarn reinforcement. Color is white. Temperature range is -40° to 180° F.

Reels without hose have a female outlet that is the same size as the inlet. Connect your hose with NPT threads to the reel outlet; connect your supply line to the reel inlet. Temperature range is -20° to 200° F.

Compact Reels with Air Hose

Designed for areas where space is limited, these reels have the smallest overall size of all our reels. Hose locks in place when pulled out of the reel, and it retracts with a quick tug. Reels are steel with a red powder-coated finish. They have four 3/8" dia. mounting holes (except 3/16" hose ID reel has six holes) and can be mounted to the floor or wall (fasteners not included). Reels have an 18" inlet hose with a brass swivel fitting. Hose is red PVC, except hose with 3/16" ID is black Buna-N rubber. Hose has a smooth interior and is reinforced with yarn. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. The hose end has a brass rigid fitting. Temperature range is -15° to 150° F. For replacement hose see pages 264-265.

Enclosed Reels with Air Hose

Protect your hose when it's not in use. Hose locks in place when pulled out of the reel, and retracts with a quick tug. Reels have four 1/2" dia. mounting holes. They can be mounted to the floor, wall, or ceiling (fasteners not included). Reels are steel with a blue powder-coated finish. They have a brass inlet with a Buna-N rubber gasket and include an EDPM rubber hose, which is the most common hose for air applications. Hose has a smooth interior and is reinforced with yarn. Hose color is red. The hose end has a brass rigid fitting. Temperature range is -40° to 212° F. For replacement hose see pages 264-265.

Enclosed Reels with Lightweight Hose

Made from black polypropylene with a carrying handle, these reels are lighter in weight and easier to transport than the enclosed reels above. Hose locks in place when pulled out of the reel, and retracts with a quick tug. Reels can be mounted to the floor, wall or ceiling. They have four 9/32" dia. mounting holes (fasteners not included). Hose is made of PVC which is lighter and less cumbersome than rubber hose. It has a smooth interior and is reinforced with yarn. The hose end has a brass rigid fitting. Temperature range is 40° to 140° F.

Reels with Lightweight Air Hose—Inlet hose is 3 ft. long with rigid brass fittings. Reel with 1/2" hose ID comes with a 1/2 NPT x 3/4 GHT (garden hose thread) adapter for use with water. Hose is red.

Reel with Low-Pressure Water Hose—Reel has a 5-ft. inlet hose with a swivel brass fitting. Hose is white.

Optional floor/bench mounting bracket is 3" Wd. x 5 3/4" Dp. Includes a 15" long mounting tube that attaches to the bracket with four 1/4" dia. mounting holes (fasteners not included). Made of steel.

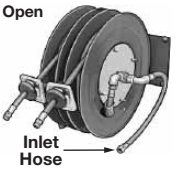
Reels with Double Lightweight Air Hose



Two reels are attached to a single mounting base so you have access to two independently operating hoses. Hose is PVC, so it's lighter and less cumbersome than rubber hose. It locks in place when pulled out of the reel, and retracts with a quick tug. Reels have four mounting holes and can be mounted to the floor, wall, or ceiling (fasteners not included). Reels come with an 18" long inlet hose with a brass swivel inlet. Hose has a smooth interior and is reinforced with yarn. Color is red. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. The hose end has a brass rigid fitting. Temperature range is -5° to 150° F.

Open reels are steel with a red powder-coated finish.

Enclosed reels protect the hose when not in use. They are steel with a white powder-coated finish.

Reels with Lightweight Air Hose and Electric Cord

One reel does the job of two—each reel comes with an air hose and an electric cord. Both the hose and cord lock in place when pulled out of the reel, and retract with a quick tug. The two sides can be operated independently. Reels are steel with a red powder-coated finish; they have an 18″ long inlet with a brass swivel fitting and a 5-ft. inlet electric cord for 115V AC, 60 Hz, single phase operation. Reels have four 1/2″ dia. mounting holes and can be mounted to the floor, wall, or ceiling (fasteners not included). Temperature range is -15° to 150° F.

Hose is PVC, so it's lighter and less cumbersome than rubber hose. It has a smooth interior and is reinforced with yarn. Color is red. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. The hose end has a brass rigid fitting.

Enclosed reels protect the air hose and electric cord when not in use.

Economy Manual-Winding Hose Reels

Turn the hand crank to rewind your hose. Reels are steel with a black finish. The mounting base is 7″ Lg. × 3″ Wd. and has four 3/8″ dia. mounting holes. Reels can be mounted to the floor, wall, or ceiling (fasteners not included).

Reels with lightweight air hose include a 3-ft. long inlet hose with a brass fitting. Hose is PVC, so it's lighter and less cumbersome than rubber hose. Hose has a smooth interior and is reinforced with yarn. The hose end has a brass fitting. Hose is red for 6868K2; orange for 6868K3. Temperature range is 0° to 140° F.

Reels without hose let you connect your own hose with an NPT male fitting to the reel. Use with any length hose up to 100 ft.

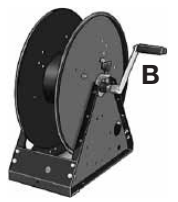
Manual-Winding Hose Reels



Turn the hand crank to rewind your hose. Reels are steel and have a locking pin assembly that prevents accidental unwinding. All can be mounted to the floor or wall. Fasteners not included.

Style A is compact and fits in small, confined spaces. It has a black painted finish. Reels have a brass female inlet with a Buna-N rubber gasket and a male outlet. Temperature range is 40° to 200° F. Mounting base has four 1/2″ dia. mounting holes.

Style B has a black painted finish. Reels have a brass female inlet with a Buna-N rubber gasket and a male outlet. Temperature range is 40° to 200° F. Mounting base has eight 1/2″ dia. mounting holes.

Style C has a blue painted finish. Temperature range is -20° to 225° F. 5332K65 has a brass female inlet and outlet with Buna-N rubber gaskets and six 1/2″ dia. mounting holes. 5332K66 and K67 have a nickel-plated steel female inlet and outlet with fluoroelastomer rubber gaskets and eight 1/2″ dia. mounting holes. 5332K68 has an aluminum female inlet and outlet with Buna-N rubber gaskets and ten 1/2″ wide mounting slots.

Note: Reel width includes hand crank.

Wheel attachment kits (sold separately) allow for easy portability and fit Style C reels 5332K65 and K67. They contain a steel handle, slip-resistant rubber-capped front legs, and two 8″ dia. solid rubber tires.

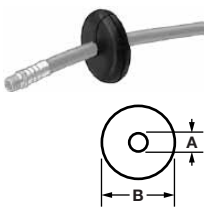
Hose Stops



Also known as bumper stops or ball stops, these two-piece rubber hose stops prevent your hose from completely rewinding onto the reel. Position the stop anywhere along your hose and secure with the included stainless steel screws. Hose not included.

To Order: Please specify color: black, red, or yellow.

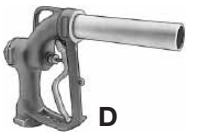
Hose Nozzles & Swivels

For information about pipe size, see pages 2-3.

Dispensing Hose Nozzles



These nozzles allow you to control the flow while dispensing liquids. All have a threaded female NPT connection, except Style H has a barbed connection.

Nozzles with **automatic shut-off** will shut off automatically when the tank is full. They will also shut off if the nozzle falls from the tank, except Style B. They have a three-position hold-open clip, so you can dispense without holding the trigger, except Style A.

Nozzles with **manual shut-off** will stop the flow when you release the trigger or close the lever. Note: Do not leave nozzles unattended when in use.

Style A—Also known as a service-station-style nozzle, these nozzles have a red scuff guard. UL listed. Attach an optional splash guard (sold separately) to protect your hands from spray; splash guard is red.

Styles B and **C**—Commonly called truck-stop nozzles. UL listed. *Style B* has a black scuff guard. *Style C* has a green scuff guard.

Styles G and **H**—Nozzles are black. *Style G* has the highest flow rate of all the nozzles we offer; it has a lever to turn flow on and off. *Style H* has a trigger to turn flow on and off.

45° Offset Swivels for Hose Nozzles

- Maximum Pressure @ 72° F: 50 psi
- Temperature Range: -20° to 120° F

Connect these swivels to a dispensing hose nozzle to relieve tension on your hose and nozzle. They rotate at the male connection and at the elbow before and after installation as needed; this prevents hose from twisting, kinking, and wearing prematurely. Swivels are aluminum with a Buna-N rubber seal. Use with gasoline and diesel fuel. UL listed.

Pipe Size, NPT Male	Pipe Size, NPT Female	O'all Lg.		
¾	¾	4 1⁄8″	5538K52	$43.79

Swivels for Hose Nozzles

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: -65° to 250° F
- Clamps: For swivel barb, use low-profile band clamps (see page 311)

Prevent twisting, kinking, and premature hose wear by connecting these swivels to your dispensing hose nozzle. They rotate before and after installation as needed to reduce tension on your hose and nozzles. Also known as inline swivels. Use with coolant, gasoline, hydraulic oil, mineral oil, and water.

About Drum Pumps

Drum pumps dispense and transfer liquid from drums, pails, and other containers. To select the pump that's best suited for your application, consider the amount of liquid you need to move. Hand-operated drum pumps are best for small quantities of liquid. Electric and air-powered drum pumps can quickly empty a container. If you choose an air-powered pump, install an air line filter/lubricator to ensure efficiency and reduce wear on the pump. For filter/lubricators, see page 1027.

Chemical Compatibility—Our pumps are organized by the liquids they are most commonly used with. Metal drum pumps are generally used with coolants, lubricating oils, and fuels. Many plastic drum pumps are compatible with water as well as a wide range of chemicals, so they are often used with acidic and alkaline solutions. For information about the compatibility of specific liquids, go to mcmaster.com and search by pump part number for common compatible chemicals and a list of wetted parts.

Viscosity—Also known as liquid thickness, viscosity is measured in centipoise (cp). Your liquid's thickness depends on temperature—liquids get thicker as temperature drops. For proper pump performance, select a pump that's rated for a higher viscosity than your liquid; a pump not strong enough to move your liquid is prone to wear and failure.

Viscosity of Common Liquids at Room Temperature

	Viscosity, cp		Viscosity, cp
Water	1 to 5	SAE 40 Oil	250 to 500
Antifreeze	15	Honey	2,000 to 3,000
SAE 30 Oil	150 to 200	Molasses	5,000 to 10,000

Pumping Flammable Liquids—When using a pump approved for flammable liquids, always bond and ground your application for static control. For more information about bonding and grounding, see Sections 1910.106 and 1910.107 of the Federal OSHA Code. For bonding and grounding equipment, see pages 980-981.

Metal Drum Pumps for Coolants and Lubricating Oils

The metal housing provides durability for tough pumping jobs. Pumps come with a 2 NPT drum connector.
Standard pumps have a steel housing and a removable spout. The spout can be replaced with a garden hose.
Corrosion-resistant pumps have a Type 316 stainless steel housing.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **2520KAC.**

Metal Drum Pumps for Flammable Liquids

Pump Class I and II flammable and combustible liquids such as fuels, cleaning solvents, and lacquer thinners with these FM-approved pumps. They have an internal flame arrester and bonding and grounding wires. Housing is steel, and pumps have a telescoping intake tube. Temperature range is not rated.

Pump for 5-gallon containers has a clamped connector (fits Rieke Flex Spout) and four threaded screw cap adapters: 1¾″, 2⅛″, 2¼″, and 2⅞″. Pump for 15- to 55-gallon containers has a 2 NPT drum connector.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **4259KAC.**

Easy-Stroke Metal Drum Pumps

A lever handle allows you to dispense liquid with less effort than standard hand pumps. All pumps come with a 2 NPT drum connector.

For Lubricating Oils—These pumps have a removable spout that can be replaced with a garden hose. Pumps have a steel housing and a telescoping intake tube.

For High-Viscosity Motor Oils—Rated for liquids up to 4,000 centipoise, this pump is often used with very thick motor oils. A 1″ ID discharge tube can be attached to the spout with a clamp. Pump has a zinc alloy housing and a telescoping intake tube.

For Fuels—Designed for use with diesel fuel, gasoline, kerosene, and mineral spirits, these pumps have a lever handle that delivers fluid on both the forward and backward strokes to quickly move drum contents. Lock the handle with a padlock (not included); maximum shackle diameter is ¼″. Flow is reversible. Pumps have an aluminum housing and are UL listed. *Pump with hose and metering nozzle* records flow rate up to 99.9 gallons per delivery (resettable) and totals up to 99,999.9 gallons (nonresettable).

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9906KAC.**

Smooth-Flow Metal Drum Pumps

Rotate the handle to dispense a continuous flow of liquid. Pumps come with a 2 NPT drum connector.

For Lubricating Oils—Housing is cast iron, except high-flow pump has an aluminum housing.

Precise-flow pump dispenses exactly one quart of liquid with each rotation of the handle. The removable spout can be replaced with a 3/4" ID discharge tube for transfer applications. Pump has a telescoping intake tube.

For Fuels and Lubricating Oils—These pumps are for use with diesel fuel, gasoline, kerosene, and mineral spirits as well as hydraulic oil and motor oil. They have a cast iron housing.

Standard pump has a removable spout that can be replaced with a 1" ID discharge tube for transfer applications. **FM-approved pumps** are rated for use with Class I and II flammable and combustible fuels. They have a telescoping intake tube. *Pump with spout* has a strainer, internal flame arrester, and drip pan. *Pump with hose and nozzle* has a 3/4" ID antistatic discharge hose, nozzle hanger, strainer, internal flame arrester, and vacuum breaker to prevent siphoning.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9182KAC.**

High-Flow Plastic Drum Pumps for Fuels and Lubricating Oils

Move twice as much diesel fuel, gasoline, ethanol, hydraulic oil, and motor oil as other plastic drum pumps. These pumps come with a 2 NPT drum connector.

Standard—These pumps have a PVC housing and a 1 1/4" ID discharge tube.

Quick Dispensing—A lever handle delivers fluid on both the forward and backward strokes for faster dispensing than standard pumps. The pump handle can be mounted above or below the body. Lock the handle with a padlock (not included); maximum shackle diameter is 1/4". Housing is polyester.

Pump with spout has a rigid discharge spout that can be replaced with a 3/4" ID discharge hose for transfer applications. *Pump with hose and nozzle* has a 3/4" ID discharge hose and vacuum breaker that drains the hose to prevent siphoning.

Easy-Stroke Plastic Drum Pumps

For low-effort dispensing, a lever handle maximizes output with each stroke. These pumps have a telescoping intake tube.

For Coolants—This pump has a polypropylene housing. It does not include a drum connector.

For Fuels and Lubricating Oils—Compatible with diesel fuel, kerosene, hydraulic oil, and motor oil, this pump has a polypropylene housing and a built-in 2 NPT drum connector.

For Motor Oils—This pump has a selectable flow rate, so you can adjust flow for different dispensing applications. The removable spout can be replaced with a 1" ID discharge tube. Pump has a PPS housing and comes with a 1 1/2 and 2 NPT drum connector.

Smooth-Flow Plastic Drum Pumps for Detergents and Coolants

Uniformly dispense water-based chemicals with a rotating handle. Often used with detergents and cleaning fluids, antifreeze, and deionized water, these pumps have a corrosion-resistant polypropylene housing. Both include a 2 NPT drum connector.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **67515KAC.**

Plastic Drum Pumps with Nondrip Nozzle

Eliminate leaks and waste with a faucet-style nondrip nozzle that quickly starts and stops flow. Pressurize your container with a few pumps of the plunger handle, and use the one-touch nozzle to manage flow. Hold down the nozzle for intermittent dispensing, open the nozzle fully for continuous flow, and close the nozzle to stop flow entirely. Pumps include a 2 NPT drum connector. **Remote tap kits** extend your pump's reach for transferring liquid to tanks, mixers, and sprayers. They include a splash guard, a 6-ft. PVC tube, and hardware.

Pump for Coolants and Lubricating Oils—This pump has a polypropylene housing.

Pump for Fuels—Compatible with diesel fuel, gasoline, kerosene, and mineral spirits, this pump has a polypropylene housing.

NFPA-Approved Pump for Flammable Liquids—Rated for use with Class I and II flammable and combustible liquids such as fuels, alcohols, and acetone, this pump includes bonding and grounding wires and has a carbon-filled plastic housing.

Remote Tap Kit

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9743TAC.**

Plastic Drum Pumps for Acids and Alkalies

Pump caustic liquids such as acid-washing solutions and bleach. These pumps have a corrosion-resistant PVC housing and come with a 2 NPT drum connector. Pumps with a tube have a 7/16″ ID discharge tube, unless noted.

High-viscosity pumps are designed to dispense thick acidic and alkaline solutions. The 28-oz./stroke pumps have a 1¼″ ID discharge tube.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9975KAC.**

Plastic Small-Container Pumps for Acids and Alkalies

Use these pumps to transfer caustic chemicals from carboys, jugs, pails, and other small containers. Often used with detergents and etching and cleaning fluids, they have a corrosion-resistant PVC housing.

They have a 7/16″ ID discharge tube, except 2578K25 has a spout. Pumps are designed for container mounting and come with a connector, except 4938K11 is often used as a hand pump and does not come with a connector. To attach 4938K11 to a container, select an optional connector.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **4938KAC.**

Compact Plastic Drum Pumps for Acids and Alkalies

Designed to dispense low volumes of caustic liquids in confined areas, these pumps have a thin intake tube and a small handle. They are often used to pump cleaning fluids, acid-washing solutions, and bleach.

Precise Flow—To dispense exact amounts of liquid, these pumps have a selectable flow rate. Housing is polypropylene. Pumps include ¾ and 2 NPT drum connectors.

Low Flow—For pumping concentrated chemicals such as pure hydrochloric acid, this pump has a corrosion-resistant polyethylene housing. It has a flexible discharge spout and includes a 2 NPT drum connector.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **4277KAC.**

Pumps for Confined Spaces

Remove liquid from hard-to-reach areas with specialized intakes that fit in tight spots. All pumps can be used with fresh water and salt water.

Syringe-Tip Pump for Water—Extract water from valve boxes, meter pits, and other small spaces. Pump has a PVC housing and a 3/8″ ID discharge tube.

Deep-Reach Pump for Fuels and Lubricating Oils—For very deep reservoirs of diesel fuel, kerosene, motor oil, and hydraulic oil, this pump has a flexible 72″ intake tube. When the pump handle is fully extended, it acts as a siphon. Housing is PVC. Pump has a 7/16″ ID discharge tube.

Deep-Reach Pump for Diesel Fuel and Coolants—A long, flexible intake tube extends into hard-to-access tanks. Housing is brass. Pump has a ½″ discharge tube and comes with 5/16″ and ¼″ ID dipstick probes for engine and gear box use.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9911KAC.**

Siphon Plastic Drum Pumps for Acids and Alkalies

Since these pumps use suction to draw liquid out of your container, they continue dispensing once you get them started. Pumps are often used with ammonia, antifreeze, and deionized water. They have a polyethylene housing. Pumps for large containers include a 2 NPT drum connector.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **4270KAC.**

Battery-Operated Siphon Plastic Drum Pumps

For Water | For Kerosene

For more efficient operation than hand-operated siphon pumps, these quickly generate suction with battery power. They require two D batteries.

Pump for water has a polycarbonate housing. Intake tube fits in a 55 mm unthreaded hole.

Pump for kerosene has an acetal housing and a 1/2″ ID discharge tube. Intake tube fits in a 1 13/16″ unthreaded hole.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **9967KAC.**

Electric Drum Pumps

Low Flow for Lubricating Oils

Adjustable Flow for Diesel Fuel and Coolants

Adjustable Flow for Lubricating Oils, Acids, and Alkalies

Precise Flow for Acids and Alkalies

High Flow for Lubricating Oils, Acids, and Alkalies

High Flow Hazardous Location for Flammable Liquids

A single-phase electric motor drains and transfers liquid more quickly and easily than hand-operated pumps. These pumps have a cord with plug (unless otherwise stated) and operate on 120 volts AC @ 60 Hz.

Repair parts include components such as couplings, seals, and impellers. Please specify individual parts or a complete repair kit.

Low-Flow Pump—This pump has an intermittent-duty motor (30 minutes on; 5 minutes off), an aluminum housing, and a Type 316 stainless steel intake tube. Pump has a 1″ ID discharge tube and comes with a 2 NPT drum connector.

Adjustable-Flow Pumps—Alter the flow rate for versatile dispensing. Pumps have a motor with thermal overload protection. They do not include a drum connector.

Pumps for diesel fuel and coolants have a continuous-duty motor, a polyamide housing, and a polypropylene intake tube. They come with a wall bracket for storage. Discharge tube has a 3/4″ ID.

Pumps for lubricating oils, acids, and alkalies are rated for hydraulic oil and motor oil as well as caustics such as detergents and etching and cleaning solutions. They have an intermittent-duty motor (30 minutes on; 20 minutes off). Housing and intake tube are polypropylene, unless noted. Discharge connection is barbed and fits a 1″ ID tube (not included).

Pumps for concentrated acids and alkalies have a chemically resistant PVDF housing and intake tube to stand up to aggressive chemicals such as 100% sulfuric acid. They have an intermittent-duty motor (30 minutes on; 20 minutes off). Discharge connection is barbed and fits a 1″ ID tube (not included).

Precise-Flow Pumps—For accurate dispensing in extremely low-flow applications, adjust flow in 2% increments. These pumps are compatible with chemicals such as ammonia and etching and cleaning solutions. They have a continuous-duty motor, a zinc housing, and a polypropylene intake tube. Discharge tube has a 3/16″ ID. Pumps include an unthreaded 2″ drum connector.

High-Flow Pumps—Designed to move at least 40 gpm, these pumps quickly empty drum contents.

Pumps for lubricating oils, acids, and alkalies can be used with hydraulic oil and motor oil as well as with chemicals such as detergents and etching and cleaning solutions. They have a continuous-duty motor and a nylon housing. Intake tube is polypropylene, unless noted. Discharge tube has a 1″ ID. Pumps include a 2 NPT drum connector.

Hazardous-location pump for flammable liquids is UL listed for use in environments with flammable gases and combustible dust. It meets Class I, Groups C and D; and Class II, Groups F and G. Pump has an intermittent-duty motor with thermal overload protection, an aluminum housing, and a Type 316 stainless steel intake tube. Discharge connection is barbed and fits a 1″ ID tube (not included). Has a cord without plug.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search for **2850KAC.**

★ Housing and intake tube are Type 316 stainless steel. ■ Intake tube is Type 316 stainless steel.

Electric Drum Pump Systems

Everything you need to start pumping. Systems include a single-phase, continuous-duty motor, pump assembly, 1″ ID hose, dispensing nozzle, 2 NPT drum connector, and storage bracket. They have a cord with plug, except hazardous-location pump systems for flammable liquids do not have a plug. Pumps with a 39″ intake tube are for 55-gallon drums. Pumps with a 47″ intake tube are for large totes and tanks.

For Lubricating Oils and Coolants—These pumps have an aluminum housing and intake tube.

For Acids and Alkalies—Often used with corrosives such as acid-washing solutions and cleaning and etching fluids, these pumps have a polypropylene housing and intake tube.

For Concentrated Acids and Alkalies—Rated for use with aggressive chemicals such as 98% nitric acid, hydrofluoric acid, and sulfuric acid, these pumps have a chemically resistant PVDF housing and intake tube.

Hazardous Location for Flammable Liquids—CSA certified for use in Class I, Group D hazardous environments with flammable gases and vapors, these pumps are often used with fuels, acetone, methyl ethyl ketone, xylene, and mineral spirits. They have a Type 316 stainless steel housing and intake tube.

Compact Electric Pumps for Acids and Alkalies

Drain and transfer corrosive liquids from 1- to 5-gallon containers with this handheld pump. It is often used to pump ammonia, deionized water, and etching and cleaning fluids. Pump has a dual-speed, single-phase, continuous-duty motor with thermal overload protection and a cord with plug. Housing is nylon, and intake tube is polypropylene. Discharge tube has a ¾″ ID.

Food and Beverage Electric Drum Pumps

With a quick-clamp discharge connection that meets 3-A sanitary standard requirements and a Type 316 stainless steel intake tube, these pumps are often used in dairy, food, and beverage applications. The discharge connection can be easily disassembled for cleaning. Pumps with a 39″ intake tube are for 55-gallon drums. Pumps with a 47″ intake tube are for large totes and tanks.

All pumps have a single-phase, continuous-duty motor with thermal overload protection and a cord with plug. Housing is polypropylene. Pumps do not include a drum connector. Discharge connection is a 1½″ quick clamp (see pages 228-231 for quick-clamp fittings).

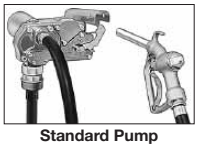
Electric Pumps with Nozzle for Fuel



Standard Pump

Pump with Metering Nozzle

Pump with Metering Nozzle and Protective Housing with Pedestal Kit (Sold Separately)

Often used to pump gasoline, diesel fuel, and kerosene in environments with flammable gases and vapors, these pumps are rated for Class I, Group D hazardous locations. All have a single-phase, intermittent-duty motor (30 minutes on; 30 minutes off) with thermal overload protection and a ½ NPT female conduit connection. Pumps have a 12-ft. Lg. × ¾″ ID discharge hose with a nozzle and grounding wires. They come with a 2 NPT drum connector for drum mounting.

Standard pumps have an aluminum housing, a circuit breaker to prevent overload, and a 1 7/16″ OD intake hose that can be adjusted from 22″ to 40″. UL listed and CSA certified. *Pump with automatic shutoff nozzle* turns off when the tank is full.

Pumps with metering nozzle register up to 99,999.9 gallons and include a built-in strainer, check valve, and bypass valve to prevent pressure buildup when the nozzle is closed. Lock the nozzle with a padlock (not included); maximum shackle diameter is ⅜″. Pumps have a cast iron housing and a 1¼ NPT female intake connection. UL and C-UL listed. *Pump with protective housing* has a steel enclosure around the motor for use in aboveground tank systems.

Anti-siphon kit prevents reverse flow with a vacuum breaker and includes all hose, fittings, and seals required for installation.

Pedestal kit converts your pump from a drum mount to a pedestal mount. Pedestal height is 32½″. Kit includes pipe, base, and coupler. Base has four 9/16″ dia. holes for mounting (fasteners not included).

For information about drum pumps, see page 356.

Battery-Operated Pumps with Nozzle for Fuel

Transfer and drain gasoline, diesel fuel, and kerosene. These pumps have an intermittent-duty motor (30 minutes on; 30 minutes off) with thermal overload protection and operate on a 12-volt battery. They have a cast iron housing and a 12-ft. discharge hose with antistatic wire. Pumps come with a 2 NPT drum connector.

Standard pumps have a 1″ OD intake hose that adjusts from 20″ to 34¾″. Lock the nozzle with a padlock (not included); maximum shackle diameter is ⅜″. They have an 18-ft. battery cable. Pumps are UL and C-UL listed. *Pump with metering nozzle* registers up to 99,999.9 gallons.

High-flow pumps are UL and C-UL listed for Class I, Division 1, Group D hazardous locations with flammable gases and vapors. Lock the nozzle with a padlock (not included); maximum shackle diameter is 5⁄16″. Pumps have a 15-ft. battery cable, a ¾ NPT female conduit connection, and a 1 NPT female intake connection (hose not included). *Pump with automatic shutoff nozzle* turns off when the tank is full.

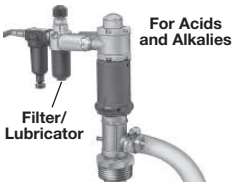
Shutoff Nozzle	Flow Rate, gpm	Discharge Pressure, psi	Temperature Range, °F	hp	Volts DC	Amps	Max. Lift	Max. Viscosity, cp		
Standard										
Manual	15	12	–15° to 150°	1⁄4	12	20	8 ft.	30	**9972K18**	$362.84
Standard with Metering Nozzle										
Manual	15	12	–15° to 150°	1⁄4	12	20	8 ft.	30	**9972K19**	540.17
High Flow										
Manual	25	20	–20° to 125°	2⁄5	12	35	15 ft.	10	**2651K24**	599.76
Automatic	25	20	–20° to 125°	2⁄5	12	35	15 ft.	10	**2651K44**	696.67

Portable Battery-Operated Pumps for Diesel Fuel

For on-site diesel fuel dispensing at construction sites, on boats, and in other environments without electrical hookups, attach these portable pumps to any 12-volt battery. They have an intermittent-duty motor (30 minutes on; 30 minutes off), bypass relief valve, and 6½-ft. battery cable with clamps. Pumps have a cast iron housing with a handle. Connections are barbed and fit a ¾″ ID hose. *Pump with hose and nozzle* has a garden hose.

Flow Rate, gpm	Discharge Pressure, psi	Temperature Range, °F	hp	Volts DC	Amps	Max. Lift	Max. Viscosity, cp	Discharge Style		
13	21	–4° to 140°	Not Rated	12	18	6 ft.	5.3	Barbed Conn.	**99155K33**	$262.34
13	14	–4° to 140°	Not Rated	12	22	6 ft.	5.3	13-ft. Hose & Nozzle	**99155K55**	418.72

Air-Powered Drum Pumps



In applications where electricity is unavailable or dangerous, use these pumps with a nonsparking air-powered motor. They have an NPT female air connection and come with a 2 NPT drum connector.

For Lubricating Oils—Pump has an aluminum body and an NPT female discharge connection.

For Acids and Alkalies—Often used with ammonia, etching and cleaning solutions, and other caustics, these pumps have a cast iron housing. They have a 15-ft. air hose assembly and a ¾″ ID discharge tube.

For Acids, Alkalies, and Lubricating Oils with Filter/Lubricator—Chemically resistant seals make these pumps compatible with hydraulic oil and motor oil in addition to acidic and alkaline liquids such as ammonia and etching and cleaning solutions. They have a cast iron housing with an attached air line filter/lubricator. Pumps include a 15-ft. air hose assembly, muffler, ball valve, and 1″ ID discharge tube.

Hazardous Location for Flammable Liquids—These pumps are rated for Zone 0 hazardous locations with flammable gases and vapors, so they can be used with liquids such as acetone, ethanol, methyl ethyl ketone, xylene, and mineral spirits. Pumps have an aluminum housing, and they include bonding and grounding wires and a hanger. Discharge connection is barbed and fits a 1″ ID tube (not included).

For Food and Beverage—With wetted parts made of FDA-compliant materials, this pump can be used with food, water, and beverage. Housing is aluminum. Discharge connection is barbed and fits a 1″ ID tube (not included).

Air-Powered Drum-Pressurizing Pumps for Fuels and Lubricating Oils

Since these pumps move liquid by pressurizing your 55-gallon drum, they have few moving parts prone to wear and tear. They are often used with fuel and lubricating oil. The air regulator is adjustable from 1 to 7 psi; it comes set at 6 psi. Pumps have an aluminum housing and a telescoping intake tube. They have an NPT female air connection with a quick-connect coupling and are threaded for 2 NPT drum connections.

Pump with hose and nozzle has a ¾″ ID hose.

Low-Flow Air-Powered Drum Pumps

Using less air than standard air-powered pumps, these are designed for low-flow applications. They have an NPT female discharge connection and come with a 2 NPT drum connector.

For Lubricating Oils—Choose a pump with a telescoping intake tube to fit a range of container sizes. Pumps have an aluminum housing and an NPT female air connection, except 4262K52 has a steel housing and an NPTF (Dryseal) female air connection.

For Flammable Liquids—Rated for use with acetone, ethanol, gasoline, and other flammable alcohols and solvents, this pump has a Type 316 stainless steel housing. Air connection is NPT female.

Extended-Life Air-Powered Drum Pumps

Also known as diaphragm pumps, these have few moving parts that can fail for a long service life. Pumps fit 55-gallon drums and include a 2 NPT drum connector. All pumps have an NPT female air connection. Choose a pump with a PTFE diaphragm for superior resistance to a wider variety of concentrated chemicals than Santoprene or Buna-N. **Repair kits** include diaphragms, valves, and seals.

For Lubricating Oils—Pump has an aluminum housing and NPT female intake and discharge connections.

For Fuels and Lubricating Oils—For use with diesel fuel, gasoline, kerosene, and mineral spirits as well as hydraulic oil and motor oil, this pump has an aluminum housing. Intake and discharge connections are NPT female.

For Flammable Liquids—Compatible with acetone, ethanol, gasoline, and other flammable alcohols and solvents, this pump has a Type 316 stainless steel housing. Intake and discharge connections are NPT female.

For Food and Beverage—Constructed from FDA-compliant materials, this pump is designed for use in food and beverage applications. Housing is Type 316 stainless steel. Pump has sanitary quick-clamp intake and discharge connections and includes a quick-clamp fitting.

For Acids and Alkalies—Often used with caustics such as ammonia, electropolishing solutions, and detergents and cleaning fluids, these pumps have a polypropylene housing. Intake and discharge connections are NPT female.
