Inline Pumps for Coolants and Lubricating Oils

Install these pumps right in your line, and engage the lever handle to start pumping. With few moving parts that can fail, they can handle abrasive liquids with solids up to 1/8″ dia. Housing is acetal. Maximum discharge pressure is 35 feet of head (15 psi). Intake and discharge connections are barbed.

About Pump Performance

Choosing the best pump for your application depends primarily on:

- How high you're pumping your liquid
- How much your liquid slows down as it flows through your pipe

These two factors create your total feet of head—the amount of pressure working against your pump.

A pump's flow rate in gallons per minute (gpm) at a given pressure in feet of head is known as **max. flow @ feet of head**. As pressure increases, flow decreases. When the liquid reaches a height where the pressure is greater than the pump's power, flow stops entirely. This point is called **max. ft. of head**. Pumps generally operate most efficiently at around 80% of the max. ft. of head.

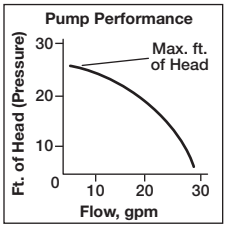
How to Calculate Max. Flow @ Feet of Head

To select a pump, you must know how much vertical pipe you have and the flow resistance of your system.

In small applications without much pipe, flow resistance is generally low, so the actual number of feet of vertical pipe is usually a good estimate of the feet of head you need. You can also add a few feet to account for the minimal flow resistance.

For large applications, you need to know your pipe size, flow rate, and the total length of pipe in your system. Find your pipe size in the chart below, and read across to the flow resistance value that corresponds with your flow rate. Then add the flow resistance value to your number of vertical feet of pipe for the feet of head required.

Example Pump Performance Curve



The curve shows how the flow rate changes for this pump as pressure increases. It pumps approximately:

- 25 gpm @ 10 ft. of head
- 15 gpm @ 20 ft. of head
- 0 gpm @ 25 ft. of head

This pump operates most efficiently at 20 ft. of head, or 80% of the max. ft. of head (25 ft. of head).

Flow Resistance Values for 100 Feet of PVC Pipe

Pipe Size	Flow Rate, gpm 5	10	15	20	25
3/4	5.66	20.40	43.30	73.50	___
1	1.75	6.31	13.50	22.80	34.60
1 1/4	0.46	1.67	3.53	6.00	9.06
1 1/2	0.22	0.79	1.67	2.83	4.26
2	___	0.23	0.49	0.84	1.27

For 50 feet of PVC pipe, split these values in half; for 200 feet, double the values. Metal pipe has about twice as much flow resistance as PVC, so double these values for 100 feet of metal pipe. Fittings and valves can also add up to 3% additional resistance.

Pumping Flammable Liquids—When using a pump approved for flammable liquids, always bond and ground your application for static control. For more information about bonding and grounding, see Sections 1910.106 and 1910.107 of the Federal OSHA Code. For bonding and grounding equipment, see pages 980-981.

About Sump, Water-Removal, Condensate, and Submersible Pumps

Sump pumps drain accumulated water from a sump pit. Be sure to choose the right capacity pump for your application. A pump that doesn't have enough flow won't be able to keep up with water flowing into your sump pit. But a pump that is too powerful and has too high a flow rate will start and stop too fast. Both situations can cause premature pump failure.

Water-removal pumps move water out of flooded open areas. Generally, they are not used with a sump pit.

Condensate pumps typically have a tank in which condensate accumulates from HVAC or refrigeration systems.

Submersible pumps are compact and have low horsepower motors. They're often used to circulate liquids in small tanks and baths.

When selecting a pump, choose from several activation options:

Plug-In Activation—Pumps do not have a switch. Plug in to turn on.

Separate Float-Switch Activation—The piggyback float switch has a separate cord and is not wired to the pump, so you can replace it without replacing the whole pump.

Integrated Float-Switch Activation—The float switch is part of the pump, which provides a smaller footprint than a separate float switch.

Pressure-Switch Activation—The pressure switch design has no external moving parts to catch on sump walls.

Piggyback Switch

Sump Pumps for Water

Sump Pumps for Water

Integrated Float-Switch Activation

Separate Float-Switch Activation

Pressure-Switch Activation

Remove accumulated water from sump pits, loading docks, and cooling towers. Pumps have a continuous duty, single-phase motor with thermal overload protection and a cord with plug. A minimum open area of 18″ Dia. x 24″ Dp. is required for operation. Use with debris-free water. Submerge pumps while in use and do not run dry. Intake is screened and discharge has a 1 1/2 NPT female connection, except discharge for light duty pumps has a 1 1/4 NPT female connection. Temperature range is 33° to 120° F. All pumps are CSA certified.

Light duty pumps have a zinc housing.

Heavy duty pumps have a cast iron housing that stands up to demanding environments.

Extended-life heavy duty pump has a rugged bronze housing for a long service life.

Clog-Resistant Sump Pumps for Water

Intake is 2″ from the base of the pump to prevent dirt at the bottom of your sump pit from clogging the pump. Pumps have a 400 series stainless steel housing. Motor is intermittent duty and single phase with thermal overload protection and an 8-ft. cord with plug. Pumps have an integrated float switch for activation. A minimum open area of 11″ Dia. × 18″ Dp. is required for operation. Intake is screened and discharge has a 1½ NPT female connection. Temperature range is 40° to 120° F. All pumps are CSA certified.

High-Flow Sump Pumps for Water

Keep up with high water volumes—a high-horsepower motor accommodates twice the flow of standard sump pumps. This pump has an epoxy-coated cast iron housing. It has an intermittent duty, single-phase motor with thermal overload protection and a cord with plug. Pump has a separate (piggyback) float switch for activation. A minimum open area of 24″ Dia. × 30″ Dp. is required for operation. For use with solids up to ¾″ dia., it has a screenless, nonclogging design. Discharge has a 1½ NPT connection. Temperature range is 33° to 130° F. CSA certified.

Water-Powered Backup Sump Pumps

Don't let a power outage cause flooding. Powered by water flow in your supply line, this pump works as a backup to your primary sump pump. It operates on water pressure of 30 to 100 psi. The water inlet has ¾ NPT female threads and comes with a push-to-connect fitting for ¾″ ID tubing so you can make either connection. Housing is plastic. Pump has an integrated float switch for activation. A minimum open area of 18″ Dia. × 22″ Dp. is required for operation. Use with debris-free water. Intake is screened and has a foot valve to prevent debris from entering your line. Discharge has a 1½ unthreaded socket weld female connection for use with Schedule 40 pipe. Maximum temperature is 130° F.

Easy-Maintenance Sump Pumps for High-Temperature Water

A pedestal-mounted motor design provides easy access for maintenance. And since the motor never comes into contact with water, these pumps can be used with hot water. Housing is Type 316 stainless steel. Motor is continuous duty and single phase with thermal overload protection. Pumps have an integrated float switch for activation.

Pumps with totally enclosed fan-cooled (TEFC) motor are ideal for dusty environments. They have an 8-ft. cord with plug. A minimum open area of 18″ Dia. × 24″ Dp. is required for operation. Discharge has a 1½ NPT female connection. Temperature range is 40° to 200° F. Pumps are UL listed. *Float-switch repair kit* includes a switch, a float, and a float rod.

Pump with hazardous-location motor has a NEMA 56C-face totally enclosed fan-cooled (TEFC) motor that is UL listed and CSA certified for Class I, Group D and Class II; Groups F and G, Division I and II hazardous locations. Motor has screw terminals and a ½ NPT female conduit connection. A minimum open area of 17″ Dia. × 12″ Dp. is required for operation. Discharge has a 1¼ NPT female connection. Temperature range is 40° to 300° F.

Heavy Duty Battery-Operated Water-Removal Pumps

This pump has an impact-resistant aluminum housing and handles larger solids than other battery-operated water-removal pumps. Attach it to a 12-volt vehicle battery to remove water down to 1/4″ in locations without power. Pump has an intermittent duty motor with thermal overload protection that can handle up to one hour on. Battery cable has an on/off switch for activation and is 30 feet long. Do not run dry. Pump handles solids up to 1/4″ dia. Intake is screened. Discharge has an NPT female connection. Temperature range is 35° to 190° F.

Sump Pumps for Water

For information about pump performance and sump pumps, see page 364.

Sump Pumps with Basin

For Debris-Free Water and Water with Solids, View Inside Basin

For Sewage Water

Convenient for applications where a sump pit is impractical, these pumps include a basin. They have a cast iron housing. Motor is continuous duty and single phase with thermal overload protection and a cord with plug. Basin has a vent on top with 2 NPT female threads.

Pumps for debris-free water have a pressure switch for activation. Basin is polypropylene. Intake and discharge have a 1½ NPT female connection. Temperature range is 33° to 125° F.

Pump for water with solids handles solids up to ¾″ dia. It has a separate (piggyback) float switch for activation. Basin is polypropylene. Intake and discharge have a 1½ NPT female connection. Temperature range is 33° to 125° F.

Pumps for sewage water handle solids up to 2″ dia. They have a separate (piggyback) float switch for activation. Basin is polyethylene. Intake is unthreaded; it has a 4″ OD. Discharge has a 2 NPT female connection. Temperature range is 33° to 104° F.

Sump Pumps for Sewage Water

Equipped with a large intake and rugged impeller, these pumps transfer sewage water with solids up to 2″ dia. They have a heavy duty cast iron housing that stands up to demanding environments. Discharge has a 2 NPT female connection, unless noted. All pumps are CSA certified.

Standard pumps have a continuous duty, single-phase motor with thermal overload protection. A minimum open area of 18″ Dia. × 24″ Dp. is required for operation. Submerge pumps while in use and do not run dry. Temperature range is 33° to 140° F.

High-flow pumps have an intermittent duty (10 starts per hour; 15 seconds between starts), single-phase motor with thermal overload protection. A minimum open area of 24″ Dia. × 30″ Dp. is required for operation. Pumps can run dry. Temperature range is 33° to 104° F, except 5143K37 has a temperature range of 33° to 77° F.

★ Discharge has a 3 NPT female connection.

Energy-Efficient Sump Pumps for Sewage Water

Move waste water using less power. A heavy duty motor with sealed bearings generates a flow rate similar to our other sump pumps for sewage water while using fewer amps. Housing is Type 304 stainless steel. Pumps have a continuous duty motor with thermal overload protection. Pumps with integrated float-switch activation have a single-phase motor. Pumps with plug-in activation have a three-phase motor. A minimum open area of 24″ Dia. × 24″ Dp. is required for operation; pumps can handle solids up to 2″ dia. Submerge pumps while in use and do not run dry. Discharge has a 2 NPT female connection. Temperature range is 34° to 104° F.

Integrated Float-Switch Activation

Clog-Resistant Sump Pumps for Sewage Water

Also known as grinder pumps, these have stainless steel blades that prevent clogs by breaking down sewage into an easy-to-transfer slurry. Housing is epoxy-coated cast iron. A minimum open area of 24″ Dia. × 48″ Dp. is required for operation. Do not use with metal particles or debris that could damage blades. Submerge pumps while in use and do not run dry. Discharge has a 1¼ NPT female connection. Pumps are CSA certified.

Pump with separate float-switch activation has an intermittent duty (two hours on; one hour off), single-phase motor with thermal overload protection. Temperature range is 33° to 140° F.

Pump with integrated float-switch activation has an intermittent duty (eight starts per hour), single-phase motor with thermal overload protection. Maximum temperature is 130° F. Pump is UL listed.

Separate Float-Switch Activation

Max. Flow, gpm @ 20 ft. of Head	@ 60 ft. of Head	@ 100 ft. of Head	Max. ft. of Head	Switch Level Turns On	Turns Off	hp	Volts AC @ 60 Hz	Amps	Ht.	Wd.	Dp.

Pump Accessories & Water-Removal Pumps

For information about pump performance, pump switches, and water-removal pumps, see page 364.

Sump Pump Switches

Replace an existing switch, or convert a pump with plug-in activation to switch activation. *120-volt* switches have a piggyback plug. *240-volt* switches have no plug, except the 240-volt separate float switch has a piggyback plug.

Separate Float Switches

Hang these switches in a sump pit to detect rising water level. They can be used with up to ½ hp motors. Switches have a polypropylene housing and come with a stainless steel clamp. Maximum temperature is 140° F.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	13	15	5142K68	$40.00
240	13	15	5142K72	54.00

Separate Dual Float Switch with Alarm

If the primary float fails, the backup float kicks in and an alarm sounds to indicate float malfunction. The floats are enclosed in a mounting cage to minimize false switch activation. The switch can be used with motors that operate on up to 15 amps. It has an ABS housing and comes with a stainless steel clamp. Maximum temperature is 104° F.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	12	4	2506K15	$74.38

Heavy Duty Sewage Switch

Activate your pump in dirty water that contains sludge and sewage. This switch senses level changes through its plastic housing, and it has no moving parts for a longer life than float switches. It can be used with up to ½ hp motors. Temperature range is 33° to 122° F. Switch is UL listed.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	12	15	9382T86	$198.84

Pressure Switches

Since these switches activate on increasing pressure caused by rising water levels, they have no floats to catch on sump pit walls. They can be used with up to ½ hp motors. Housing is nylon. Temperature range is 33° to 120° F.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	10	18	9326T11	$89.60
240	10	8	9326T12	76.49

Oil-Detection Switches

To prevent contamination, these switches won't activate if they sense oil in your sump pit. Switches have a probe to detect the liquid level—it activates when it senses water and deactivates when it senses oil. They can be used with up to 1 hp motors. Housing is plastic. Temperature range is 33° to 170° F. Switches are UL listed and CE certified.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	16	20	9391T11	$651.43
240	16	20	9391T12	617.14

Pump-Saver Adjustable-Cycle Switch

Extend your pump's service life by limiting its running time to the needs of your application. Set the dial to a time interval. Switch has a probe to detect the liquid level for activation. It can be used with up to 1 hp motors. Housing is plastic. Temperature range is 33° to 170° F. Switch is UL listed and CE certified.

Volts AC @ 60 Hz	Amps	Cord Lg., ft.		
120	16	20	9394T11	$384.00

Sump Pump Accessories

1¼ and 1½ NPT Drain Hose Kits

Kits include 24 feet of flexible polyethylene tubing, a polypropylene male adapter, a stainless steel clamp, and an ABS check valve with NPT male threads. Temperature is not rated.

Pipe Size		
1¼	5142K92	$10.22
1½	5142K93	13.56

Suction Strainer

An unthreaded SBR rubber fitting on this polypropylene strainer fits ¾ NPT male and garden hose connections.

5142K81 ..... $14.47

NPT-to-Socket Adapter

Connect a 1¼ NPT female discharge to 1½″ unthreaded Schedule 40 PVC pipe. Max. temp. is 140° F.

5142K95 ..... $2.71

High Liquid-Level Alarm

An 85-decibel alarm and a red light alert you when water level rises too high. A float with a 20-ft. cord detects water level and activates the alarm. It operates on 120 volts AC @ 60 Hz. Alarm has a thermoplastic enclosure that meets NEMA 3R for indoor/outdoor use and light splashing.

9323T11 ..... $204.00

Basin

Place your pump inside this basin for ground-level applications and below-ground use without a sump pit. It measures 18″ Dia. × 30″ Dp. and is made of structural foam. Discharge connection is 2 NPT female. Basin has a vent on top with 2 NPT female threads. Maximum temperature is 130° F.

5142K11 ..... $257.37

Pumps for Water Removal

Clean up water in flooded open areas without a sump pit. Pumps have an intermittent duty, single-phase motor with thermal overload protection and a cord with plug. Use with debris-free water that's at least 2″ deep. Plug in pumps to activate. Submerge pumps while in use and do not run dry. Intake is screened and discharge has a 1¼ NPT female connection and comes with a garden hose adapter. Temperature range is 33° to 120° F. All pumps are UL listed and CSA certified.

Standard pumps have a polypropylene housing. *¼-hp pump* removes water down to ⅛″ deep. *⅓-hp pump* removes water down to ⅝″ deep.

Impact-resistant pumps have a heavy duty painted aluminum housing. They remove water down to ⅛″ deep.

Max. Flow, gpm @ 5 ft. of Head	@ 10 ft. of Head	@ 15 ft. of Head	@ 20 ft. of Head	Max. ft. of Head	hp	Volts AC @ 60 Hz	Amps	Ht.	Wd.	Dp.	Cord Lg., ft.

For information about pump performance and water-removal pumps, see page 364.

Easy-Carry Pumps for Water Removal

Handy for on-the-go cleanup in flooded open areas, these pumps have a lightweight epoxy-coated aluminum housing with a handle. They remove water down to 1/8″ deep. Motor is single phase with thermal overload protection and has a cord with plug. Pumps are intermittent duty when partially submerged (three hours on; 30 minutes off). They are continuous duty when completely submerged. Use in debris-free water that's at least 3/4″ deep. Do not run dry. Intake is screened and discharge has a 1 NPT female connection and includes a garden hose adapter. Temperature range is 33° to 120° F. All pumps are CSA certified.

Battery-Operated Pumps for Water Removal

Transfer water in locations without power—pumps include battery cables with clamps for connection to a 12-volt vehicle battery. They remove water down to 7/8″ deep. Housing is acetal. Pumps have an intermittent duty motor with thermal overload protection that can handle up to one hour on. Battery cables have an on/off switch for activation and are 25 feet long. Do not run dry. Pumps handle solids up to 1/8″ dia. Intake is screened. Discharge is unthreaded; use a hose clamp (not included) for connection. 9331T11 also comes with a garden hose adapter. All pumps have a temperature range of 33° to 85° F.

High-Flow Pumps for Water Removal

Quickly remove large volumes of water from flooded open areas. Housing is Type 304 stainless steel and has a top-discharge design that routes water through the pump to cool the motor. Pumps have a single-phase motor with thermal overload protection and a cord with plug. They handle solids up to 3/8″ dia. Do not run dry. Intake is screened. Temperature range is 33° to 120° F.

High-Flow Pumps—All have an intermittent duty motor (eight hours on completely submerged). They are UL listed.

1/3 hp pumps remove water down to 1″ deep. Use in water that's at least 2″ deep. When partially submerged, motor handles up to 10 starts per hour. Discharge has a 1 1/4 NPT female connection.

1/2 hp pumps remove water down to 2″ deep. Use in water that's at least 4″ deep. When partially submerged, motor handles up to 20 starts per hour. Discharge has a 1 1/2 NPT female connection. Pumps are also CSA certified.

Ultra High-Flow Pumps—These remove water down to 4″ deep. Use in water that's at least 10″ deep. Motor is continuous duty when completely submerged. When partially submerged, motor is intermittent duty (one hour on; 30 minutes off). Discharge has a 1 1/2 NPT female connection.

Water-Removal Pumps

For information about pump performance and water-removal pumps, see page 364.

Miniature Pumps with Hose for Water Removal

Complete with a suction strainer and 6 feet of garden hose, this little pump comes ready to clean up small open spaces. Housing is reinforced plastic and has six 1/4″ mounting holes (fasteners not included). Pump has an intermittent duty, single-phase motor with thermal overload protection and a 6-ft. cord with plug. It turns on when you plug it in, removing water down to 1/8″ deep. Use with debris-free water and do not run dry. Intake and discharge have a garden hose connection. Temperature range is 33° to 77° F. Pump is CSA certified.

Repair kit includes an impeller, a seal, and an O-ring.

Compact Pumps with Internal Sensor for Water Removal

12 Volts DC

120 Volts AC

Also known as bilge pumps, these remove fresh and salt water from spots where other pumps don't fit. Pumps have an internal sensor, so they turn on when they detect water and turn off when the water is removed. The sensor checks for water at 2 1/2-minute intervals. Pumps are fully submersible. Use in debris-free water. Horsepower is not rated. Temperature range is 40° to 140° F.

Pumps for 12 volts DC turn on when water is 1 3/4″ deep. Housing is plastic. Pumps have a battery cabling connector for use with a 12-volt vehicle battery. Intake is screened and discharge has a barbed connection.

Pumps for 120 volts AC turn on when water is 1″ deep. They have a plastic housing and a cord with plug. Pumps come with a 1 NPT male adapter and a garden hose adapter. They are UL listed.

Pumps for Sewage Water Removal

Vertical Discharge

Transfer waste water that contains solids up to 2″ dia. Pumps have a Type 304 stainless steel housing and remove water down to 4″ deep. Motor is single phase with thermal overload protection and has wire leads. Pumps are intermittent duty when partially submerged (five minutes on; 25 minutes off) and continuous duty when completely submerged. They have a separate (piggyback) float switch for activation. A minimum open area of 22″ Dia. × 24″ Dp. is required for operation. Use in water that's at least 4″ deep and do not run dry. All pumps are CSA certified.

Pumps with horizontal discharge have a 2 NPT male discharge connection. Temperature range is 33° to 104° F.

Pumps with vertical discharge have a 2 NPT female discharge connection. Temperature range is 33° to 131° F. Pumps are also UL listed.

Gasoline-Powered Pumps for Water Removal

Lightweight

High Flow

Remove water at sites without power. Pumps have a pull-start four-cycle engine that's self-priming up to 20 feet. Pumps are not submersible. Intake and discharge have NPT female connections.

Lightweight pumps have a polypropylene housing. Temperature range is 40° to 130° F.

High-flow pumps have a cast iron housing and a steel frame. Temperature range is 40° to 180° F.

High-flow pump for dredging handles up to 25% sand by volume in fresh and salt water. It's built with high-chromium stainless steel components that resist wear caused by abrasive particles. Housing is cast iron and frame is steel. Temperature range is 40° to 160° F.

For information about pump performance, water-removal pumps, and condensate pumps, see page 364.

Mobile Gasoline-Powered Pumps for Sewage Water Removal

Wheel these pumps to remote areas with no power. They can handle sewage water with thick sludge, silt, and debris up to 2″ dia. Pumps have a pull-start four-cycle engine that's self-priming up to 20 feet. They also have an integral check valve and suction strainer. Pumps are not submersible. Housing is aluminum. Intake and discharge have 4 NPT female connections. Temperature range is 40° to 180° F. 43925K39 includes an electric starter that operates on a 12-volt battery (sold separately).

Hose Kits for Water-Removal Pumps

Use these kits with gasoline-powered water-removal pumps. They include a 20-ft. PVC suction hose, a suction strainer, and a 50-ft. PVC lay-flat discharge hose. Hose fittings are NPS (straight) threads; kits include two steel adapters to connect NPT female pump connections to NPS hose fittings.

Condensate Pumps

Compact

Miniature

Standard

Low Profile

High Capacity and High Flow

High Temperature

Collect and remove condensate from air conditioners, refrigerators, dehumidifiers, and other equipment. Pumps have an intermittent duty, single-phase motor with thermal overload protection. They turn on and off automatically. 120-volt pumps have a cord with plug and 240-volt pumps have wire leads, unless otherwise stated. Min. temp. is 32° F.

Without Tank—Compact pumps are designed for installation inside your condensate collection tank or drain pan. They are fully submersible. Housing is aluminum. Intake is screened and discharge has a ¼ NPT male connection. Pumps are CSA certified.

With Tank—Equipped with a built-in container for condensate, these pumps work alongside your system. They are not submersible. Each has a safety switch that turns off your equipment in case of pump failure. The safety switch has wire leads for electrical connection. Pumps have a plastic housing.

Miniature pumps have a two-piece body so you can install the pump up to 3 feet away from the condensate reservoir. They have a cord with no plug and come with mounting brackets. Discharge has a ¼ NPT male connection. CSA certified.

Standard pumps are often used with medium tonnage air conditioning and refrigerating units. They have an integral check valve to prevent backward flow. Discharge has a barbed connection for ⅜″ ID tubing; pumps come with 20 ft. of ⅜″ ID vinyl tubing. CSA certified.

Low-profile pumps are for use in areas with limited clearance. They have an integral check valve to prevent backward flow. Discharge has a barbed connection for ⅜″ ID tubing. CSA certified.

High-capacity pumps handle heavy condensate accumulation. Discharge has a barbed connection for ⅜″ ID tubing. CSA certified.

High-flow pumps move condensate to greater heights than standard condensate pumps. Discharge has a compression fitting for ⅜″ OD copper tubing. CSA certified.

High-temperature pumps have screw terminals for electrical connection. They come with a check valve on the discharge to prevent backward flow. 1/20 hp pumps have a discharge with a compression fitting for ⅜″ OD copper tubing. ¼ and 1/5 hp pumps have a discharge with a compression fitting for ½″ OD copper tubing. All pumps are UL and C-UL listed.

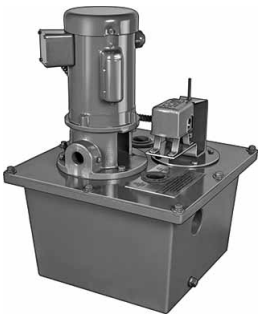
Condensate & Submersible Pumps

For information about pump performance, condensate pumps, and submersible pumps, see page 364.

Steam Condensate Pumps with Tank



Standard

Increase efficiency in low-pressure steam systems—these pumps capture hot condensate and return it to the boiler or feed unit. Motors are continuous duty and single phase with an open dripproof (ODP) enclosure. Pumps have screw terminals for electrical connection. Standard pumps have an integrated float switch for activation, and extended-life pump has a mechanical alternator for activation.

Tank is cast iron. It has a 1¼ NPT female vent on top and a ½ NPT female drain on the side. Intake has a 2 NPT female connection and discharge has a 1 NPT female connection. Temperature range is 160° to 200° F. *Repair kit* includes a shaft, a bushing, a thrust washer, a spring washer, an oil seal, and snap rings. Purchase two kits to repair the extended-life pump.

Extended Life—To handle high condensate volume, the workload is distributed between two pumps for a longer service life than standard pumps. The second pump also provides redundancy so one pump can operate while you work on the other. The first pump turns on and off at the switch-level values listed in the table; the second pump turns on at 7½″ and off at 5¼″.

High-Flow Steam Condensate Pumps with Tank

Standard

Extended Life

Accommodate high flow in your low-pressure steam system. Use these pumps to capture hot condensate and return it to your boiler or feed unit. They have continuous duty, single-phase motors with an open dripproof (ODP) enclosure. Pumps have screw terminals for electrical connection. They turn on when the tank is ⅔ full and turn off when condensate drops to 6″ deep. Standard pumps have an integrated float switch for activation, and extended-life pumps have a mechanical alternator for activation.

Six- and 15-gallon tanks are cast iron. Twenty-gallon tank is steel. All tanks have a 1 NPT female vent on top and a ¾ NPT female drain on the side. Intake has a 2 NPT female connection and discharge has a 1 NPT female connection. Temp. range is 33° to 210° F. *Replacement seal kit* includes a carbon seal with spring, a fiber gasket, a ceramic seal with vibration ring, and a rubber sleeve. Purchase two kits to replace seals on extended-life pumps.

Extended Life—To handle high condensate volume, the workload is distributed between two pumps for a longer service life than standard pumps. The second pump also provides redundancy so one pump can operate while you work on the other.

Compact Submersible Pumps for Water

A

B

C

D

E

Circulate fresh water in small tanks, cooling baths, fountains, and other low-flow applications. Housing is plastic. Pumps have a continuous duty, single-phase motor with thermal overload protection, except Style B does not have thermal overload protection. 120-volt pumps have a cord with plug; 240-volt pump has wire leads. Plug in pumps to activate and do not run dry. Not for use with salt water or flammable liquids. All pumps have a minimum temperature of 33° F.

Submersible pumps must be submerged for use. They have a screened intake.

Submersible/open-air pump can be submerged or connected inline for open-air applications. Intake has ¼ NPT female and ½ NPT male threads for either connection.

For information about pump performance and submersible pumps, see page 364.

Impact-Resistant Compact Submersible Pumps for Water

Ready for hard knocks in rough waters, these pumps have a durable epoxy-coated aluminum housing. Motor is continuous duty and single phase with thermal overload protection. 120-volt pumps have a cord with plug; 240-volt pumps have wire leads. Plug in pumps to activate and do not run dry. Do not use with salt water or flammable liquids. Discharge has an NPT male connection. Temperature range is 33° to 120° F.

Submersible pumps must be submerged for use. They have a screened intake.

Submersible/open-air pumps can be submerged or connected inline for open-air applications. Intake has an NPT female connection. *Low-flow pump* has an intake with 1/4 NPT female and 1/2 NPT male threads for either connection. *Standard pumps* have a removable screen to cover the intake for use in submerged applications.

Extended-Life Compact Submersible Pumps for Water

Spend less time on maintenance—these pumps use magnets to turn the impeller so there's no shaft seal to wear out. They remove water down to 3" deep. Housing is polypropylene. Pumps have a continuous duty, single-phase motor and a 6-ft. cord with plug. Plug in pumps to activate and do not run dry. Temperature range is 33° to 160° F. Pumps are UL recognized.

Submersible pump must be submerged for use. It has a screened intake.

Submersible/open-air pumps can be submerged or connected inline for open-air applications.

Compact Submersible/Open-Air Pumps for Salt Water

Circulate fresh and salt water in both submerged and open-air applications. Housing is plastic. Pumps have a continuous duty, single-phase motor and a 6-ft. cord with plug. Plug in pumps to activate and do not run dry. Intake and discharge have NPT female connections. Pumps come with barbed adapters for connection to tubing. Temperature range is 40° to 95° F. Pumps are UL listed and CSA certified.

Compact Submersible Pumps for Parts Washers and Machine Oil

Keep liquids moving in your machine shop. Housing is aluminum. Motor is continuous duty and single phase with thermal overload protection, unless noted. Plug in pumps to activate and do not run dry. Discharge has a 1/4 NPT male connection. Temperature range is 32° to 120° F.

Pumps for parts washers circulate solvent-based parts-washing solutions that are UL classified as PJQU (flash point no lower than 100° F). Submerge while in use. Intake is screened. Pumps have 6-ft. wire leads.

Pump for machine oil must be submerged for use with machine and cutting oils up to 9 centipoise. Connect inline for use with weak acids and cleaning solvents; do not submerge. Intake has a 3/8 NPT female connection. Pump has a 6-ft. cord with plug.

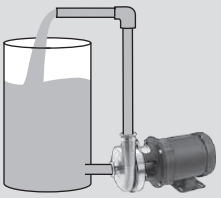
About Process Pumps

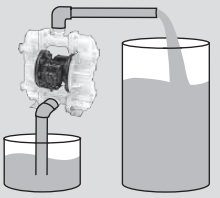
Circulation Pumps—Also known as centrifugal pumps, these send a high flow of liquid through a pipeline or a closed circuit. They are the most common process pump. See pages 374-380.

- Frequently used for heating and cooling and tank filling and emptying
- For use with thin liquids, such as water and coolants
- Some pumps are self-priming for installation above your liquid source
- Do not run dry; this can damage the pump and cause failure



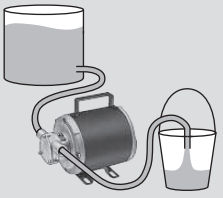
Air-Powered Transfer Pumps—Also known as air-operated diaphragm pumps, these operate on compressed air for pumping liquid in harsh and hazardous environments. See pages 381-384.

- Common applications include chemical handling, waste removal, and transporting coatings and slurries
- Excellent for caustic chemicals and thick liquids with solids
- All are self-priming for installation above your liquid source
- Can run dry



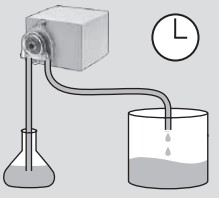
Dispensing Pumps—Also known as positive displacement pumps, these maintain a fixed flow rate. They have the widest variety of styles to support many applications. See pages 385-388.

- Suitable for engine lubrication, water delivery, and point-of-use transfer
- Can move thick liquids, such as hydraulic oil and motor oil
- Some pumps are self-priming for installation above your liquid source
- Do not run dry; this can damage the pump and cause failure



Metering Pumps—Also known as peristaltic and diaphragm metering pumps, these inject a minute amount of liquid within a specified time frame. See pages 388-390.

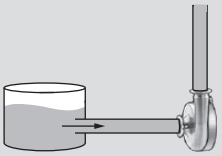
- Often used for applications such as water treatment, pH control, and chemical processing
- Designed for use with harsh chemicals as well as thin and thick liquids
- All are self-priming for installation above your liquid source
- Can run dry



When to Choose a Self-Priming Pump—To begin pumping, your pump must be primed by filling the pump chamber with liquid. Your system's setup determines whether you need a self-priming pump.

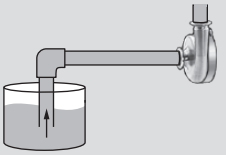
Not a Self-Priming Setup

When your liquid source is above or at the same level as the pump, liquid flows into the pump chamber by gravity. All pumps will work in this setup.



Self-Priming Setup

When your liquid source is below the pump, only a self-priming pump will create a vacuum that can draw liquid upward to fill the pump chamber.



For more information about pump performance, see page 364. For information about liquid viscosity, see page 356.

Standard and High Flow

Heavy Duty Self-Priming

Move water in boiler feed systems, cooling towers, and heat exchangers. These pumps have a bronze housing. Do not run dry. Temperature range is 40° to 180° F. Connections are NPT female.

All pumps have a continuous-duty motor. *Single-phase motors* have thermal overload protection and screw terminals for electrical connection, except standard pumps have spade terminals for electrical connection. *Three-phase motors* have wire leads for electrical connection.

Standard and **high-flow pumps** are not self-priming or for use with solids. *Standard pumps* have a stainless steel impeller. Maximum viscosity is 1 centipoise. *High-flow pumps* have a more powerful motor than standard pumps for twice the flow rate. Impeller is bronze. Maximum viscosity is 20 centipoise.

Heavy duty self-priming pumps are self-priming up to 6 feet and provide protection in dusty and dirty environments. All have a Type 316 stainless steel impeller that can handle solids up to 3/8″ dia. Maximum viscosity is 20 centipoise.

For information about circulation pumps, see page 374.

Self-Priming Circulation Pumps for Water and Coolants

Drain underground tanks and process wastewater with these pumps that can be installed up to 20 feet above your liquid source. Housing is cast iron. Do not run dry. Maximum viscosity is 1 centipoise, and temperature range is 40° to 180° F. Connections are NPT female.

Motor is continuous duty. *Single-phase motors* have thermal overload protection and spade terminals for electrical connection. *Three-phase motors* have wire leads for electrical connection.

Standard pumps have a cast iron impeller.

Heavy duty and **heavy duty high-flow pumps** provide protection in dusty and dirty environments. *Heavy duty pumps* have a cast iron impeller. *Heavy duty high-flow pumps* have twice the flow rate of standard and heavy duty pumps. Impeller is Type 316 stainless steel.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

High-Efficiency Circulation Pumps for Water and Coolants

Use less electricity to achieve the same flow rates as our other circulation pumps. These pumps are not self-priming. The discharge rotates to direct flow. Housing is cast iron. Do not run dry. Maximum viscosity is 17 centipoise, and temperature range is 0° to 250° F. Connections are NPT female.

Pumps have a continuous-duty motor with wire leads for electrical connection. Motor has a totally enclosed fan-cooled (TEFC) enclosure, except 9923K41 has a totally enclosed nonventilated (TENV) enclosure.

Standard pumps have a cast iron impeller.

High-head pumps transfer liquid to greater vertical heights than standard pumps. Impeller is bronze.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

High-Head Circulation Pumps for Water

Also known as booster pumps, these have a multistage impeller that boosts pressure from your water supply for applications such as high-volume water delivery, irrigation, and pressure washing. Housing and impeller are Type 316 stainless steel. Motor is continuous duty with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 50 centipoise, and temperature range is 33° to 194° F. Connections are NPT female. Pumps are UL and C-UL listed for use with water.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Extreme-Head Circulation Pumps for Water and Coolants

A specialized impeller generates twice the pressure of other high-head pumps for propelling liquid to great heights. Also called turbine pumps, these are commonly used with chillers, heat exchangers, and boiler feed systems. Housing and impeller are bronze. Pumps are not self-priming. Do not run dry or against a closed valve and do not use with solids. Maximum viscosity is 54 centipoise, and temperature range is –20° to 230° F. Connections are NPT female.

Motor is continuous duty with an open dripproof enclosure. *Single-phase motors* have thermal overload protection and screw terminals for electrical connection. *Three-phase motors* have wire leads for electrical connection.

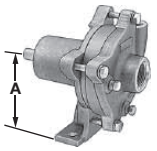
Circulation Pumps without Motor for Water



Customize these pumps with your own motor. Connect a spark-free air motor for hazardous locations, or use an electric motor with a speed reducer or belt pulley to alter pump rpm (max. rpm is 3,450). Recommended for use with a NEMA 56C frame motor (see page 1075 for air-powered motors and page 1068 for electric motors). Housing and impeller are bronze. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 23 centipoise, and maximum temperature is 200° F. Connections are NPT female.

Circulation Pumps for Fuel

Pump gasoline, diesel fuel, kerosene, isopropyl alcohol, and other flammable liquids in hazardous environments with flammable gases and combustible dust. These pumps have a motor that's UL listed and CSA certified for use in Class I, Group D; Class II, Groups F and G hazardous locations, unless noted. Motor is continuous duty with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Housing and impeller are Type 316 stainless steel. Pumps are not self-priming. Do not run dry. Maximum viscosity is 264 centipoise, and maximum temperature is 250° F or the boiling point of the liquid being pumped, whichever is lower. Connections are NPT female.

Corrosion-Resistant Circulation Pumps

For use in harsh conditions, these pumps have a Type 316 stainless steel housing and a totally enclosed fan-cooled (TEFC) motor enclosure for protection in dusty and dirty environments. Motor is continuous duty with wire leads for electrical connection. Pipe connections are NPT female.

Pumps for coolants and lubricating oils have a Type 316 stainless steel impeller. They are not self-priming. Do not run dry. Maximum viscosity is 50 centipoise, and temperature range is –20° to 300° F.

Self-priming pumps for acids and alkalies are rated for chemicals such as ammonia and detergents as well as harsh solvents including methyl ethyl ketone. They have a 300 series stainless steel impeller for resistance to a wide range of chemicals. Pumps are self-priming up to 6 feet. Do not run dry. Maximum viscosity is 20 centipoise, and temperature range is 40° to 250° F.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Circulation Pumps for Hot Oil

Transfer hot oil in demanding applications, such as plastic mold injecting and chemical processing. Pumps have a ductile iron housing and a steel impeller. Motor is continuous duty, three phase with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 32 centipoise, and maximum temperature is 650° F. Connections are NPT female.

Food and Beverage Circulation Pumps

Commonly used in food, beverage, and dairy processing, these pumps are 3-A certified. To facilitate cleaning, they have quick-clamp intake and discharge connections and a Type 316 stainless steel housing and impeller. The discharge rotates 360° for easy connection to your line. Motor is continuous duty with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Temperature range is –40° to 275° F.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Self-Priming Plastic Circulation Pumps for Water Sprinklers

Self-priming up to 25 feet, these pumps have high flow rates for irrigation and landscaping. Housing is polypropylene and impeller is Noryl. Motor is continuous duty, single phase with an open dripproof (ODP) enclosure, and it has screw terminals for electrical connection. Do not run dry or use with solids. Maximum viscosity is 1 centipoise, and temperature range is 40° to 140° F. Connections are NPT female. Pumps are CSA certified.

Plastic Circulation Pumps for Detergents and Coolants

Often used for circulating mild caustics, these pumps have a plastic housing that's compatible with liquids such as salt water and antifreeze. The discharge rotates at 90° intervals to direct flow. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 23 centipoise. Connections are NPT female.

Pumps have a continuous-duty motor with a totally enclosed fan-cooled (TEFC) enclosure. *Single-phase motors* have thermal overload protection and screw terminals for electrical connection. *Three-phase motors* have wire leads for electrical connection.

Standard pumps have a polypropylene housing and impeller. Temperature range is 33° to 140° F.

High-temperature pumps have a Noryl housing and impeller that can withstand temperatures up to 180° F. Minimum temperature is 33° F.

Extended-Life Plastic Circulation Pumps for Water and Coolants

Low Flow

High Flow

Eliminate seal wear and leakage with these sealless pumps that turn the impeller with magnets for a long service life. Compatible with antifreeze and water, they're often used with electroplating and photographic solutions. Pumps have a plastic housing and impeller. Motor is continuous duty and has thermal overload protection. Pumps have a 6-ft. cord with plug, unless noted. They are not self-priming. Do not run dry or use with solids. Maximum viscosity is 20 centipoise, unless noted. Temperature range is 32° to 150° F.

Heavy duty pumps provide protection in dusty and dirty environments.

★ Has a 6-ft. cord without plug. ■ Has a junction box; maximum viscosity is 9 centipoise. ▲ Has wire leads.

For information about circulation pumps, see page 374.

Ultra-Quiet Plastic Circulation Pumps for Water

Instead of a fan-cooled motor, these pumps have an integrated motor that's cooled by the liquid being pumped for virtually silent operation and a long service life. Also known as canned motor pumps, they're commonly used in chiller systems and aquariums. Housing is nylon, and impeller is nylon and Type 316 stainless steel. Motor is continuous duty, single phase and has thermal overload protection. Mount horizontally or vertically; motor must always be below the impeller. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 1 centipoise, and temperature range is 40° to 140° F. Connections are NPT male. 9907T401 has wire leads for electrical connection and is CE marked and CSA certified. 9907T302 has a 6-ft. cord with plug and is CE marked and ETL listed.

Circulation Pumps for Coolant Tanks

In-Tank Immersion

Remote Mount

A universal mounting plate lets you replace coolant pumps on machine tools from manufacturers such as Fuji, Mitsubishi, Toshiba, Hitachi, and Yasukawa. All pumps have a cast iron housing. Maximum solid dia. is 3/32". Maximum viscosity is 90 centipoise. Connections are NPT female. *1/8 and 1/4 hp pumps* have a polyacetal impeller; *1/2, 3/4, and 1 hp pumps* have an aluminum impeller.

Motor is totally enclosed with sealed bearings. All pumps must be hardwired. They have wire leads for electrical connection.

In-tank immersion pumps remove liquid to 1" above the inlet. They are self-priming and can run dry. Temperature range is 50° to 180° F.

Remote-mount pumps connect to a pipe from your tank in areas with limited clearance. Mount above or below the liquid level. After first use, pumps are self-priming in a minimum of 8" of liquid. Do not run dry. Temperature range is 50° to 140° F.

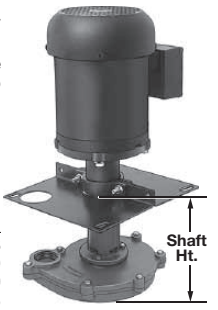
Heavy Duty Circulation Pumps for Coolant Tanks



The durable motor and stainless steel impeller can handle dirty coolant and machine lubricants with solids up to 1/4" dia. These pumps have a cast iron housing. Motor is continuous duty, three phase with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Pumps can run dry but are not self-priming. They remove liquid down to approximately 2 1/4" above the inlet. Maximum viscosity is 108 centipoise, and temperature range is 40° to 200° F. Mounting plate is 9 1/2" x 10 3/4" and has four 5/16" x 13/16" holes on 8 5/8" x 9 3/8" centers. Connections are NPT female.

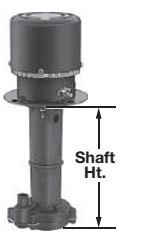
Extended-Life Plastic Circulation Pumps for Coolant Tanks



Sealless construction means these pumps have few moving parts that can fail. They have a durable acetal housing and impeller. Motor is continuous duty, single phase with a totally enclosed fan-cooled (TEFC) enclosure, and it has a 4-ft. cord with plug. Pumps are self-priming and can run dry. They remove liquid down to 1" above the inlet. Maximum solid dia. is 3/32". Maximum viscosity is 70 centipoise, and temperature range is 50° to 150° F. Mounting bracket has four 9/32" holes on 4 1/2" centers. Intake is screened; discharge connection is slip-on for 5/8" OD tubing.

Circulation Pumps

For information about circulation pumps, see page 374.

Inline Circulation Pumps for Water

Compact (Shown with Required Pipe Connectors)

Easy Maintenance (Shown with Required Pipe Connectors)

Install these pumps directly in your pipeline for applications such as hot-water circulation and hydronic heating and cooling. They have a cast iron housing and a plastic impeller. Motor is continuous duty, single phase and has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Max. viscosity is 1 centipoise. Pumps mount horizontally or vertically and have flanges with two 1/2″ dia. holes. Connections are NPT female.

Compact pumps are often used in pipelines with limited clearance. Motor can never face downward; it's cooled by the water being pumped. Temperature range is 40° to 230° F. Pumps are UL and C-UL listed.

Easy-maintenance pumps have a detachable motor assembly, so you can leave them inline when servicing or repairing the motor. Motor has an open dripproof (ODP) enclosure. Maximum temperature is 225° F.

To Order: For the required pipe connectors, please specify pipe size of 3/4, 1, 1 1/4, or 1 1/2.

★ Not available in 3/4 NPT.

Adjustable-Flow Inline Circulation Pumps for Water

Shown with Required Pipe Connectors

Accommodate performance changes in your system with a three-speed switch that adjusts flow rate. These pumps adjust flow by ±10%, except 1/4 hp pumps adjust flow by ±6%. Impeller is nylon. Motor is continuous duty, single phase with an open dripproof (ODP) enclosure, and it has terminals for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 1 centipoise, and temperature range is 33° to 230° F. Pumps mount horizontally and have mounting flanges with two 1/2″ dia. holes. Connections are NPT female.

Standard pumps have a cast iron housing.

Lead-free pumps have a stainless steel housing.

To Order: For the required pipe connectors for 1/8, 1/6, and 1/4 hp pumps, please specify pipe size of 3/4, 1, 1 1/4, or 1 1/2. For the required pipe connectors for 1/3 hp pumps, please specify pipe size of 1, 1 1/4, or 1 1/2.

Extended-Life Inline Circulation Pumps for Water

Standard

High Flow (Shown with Required Pipe Connectors)

Use these pumps for a long life in applications such as hot-water circulation and solar heating. They have a bronze housing and are not self-priming. Do not run dry or use with solids. Maximum viscosity is 1 centipoise.

Standard pumps turn the impeller with magnets, so they have no mechanical seal that can wear down and leak. Impeller is Ryton, glass, and PTFE. Mount vertically or horizontally; electrical conduit box must be placed on the bottom. Motor is continuous duty, single phase and fan cooled with thermal overload protection. Pumps have wire leads for electrical connection. Temperature range is 33° to 250° F. Pump components are UL recognized.

High-flow pump is cooled by the liquid being pumped to extend the life of the motor. Impeller is Noryl. Motor is continuous duty, single phase and has wire leads for electrical connection. Mount horizontally. Temperature range is 40° to 230° F. Pump is UL and C-UL listed.

To Order: For the required pipe connectors, please specify pipe size of 3/4, 1, 1 1/4, or 1 1/2.

High-Flow Inline Circulation Pumps for Water

A high-horsepower motor lets these pumps handle four times the flow and twice the pressure of other inline circulation pumps. Housing is cast iron and impeller is Type 304 stainless steel. Motor is continuous duty with a totally enclosed fan-cooled (TEFC) enclosure, and it has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Mount horizontally or vertically; motor can never face downward. Maximum viscosity is 1 centipoise, and temperature range is 33° to 284° F. Connections are NPT female. *3/4 hp pump flanges* have two 5/8″ dia. holes. *1 1/2 hp pump flanges* have four 9/16″ dia. holes. *3 hp pump flanges* have four 3/4″ dia. holes.

For information about air-powered transfer pumps, see page 374.

Plastic Air-Powered Transfer Pumps

Also known as air-operated diaphragm pumps, these connect to an air compressor for operation in harsh environments without electricity. Designed to stand up to thick sludges and slurries, all pumps are self-priming. They are submersible and can also run dry. Maximum air pressure is 100 psi, and maximum discharge pressure is 231 feet of head (100 psi). Fluid connection is NPT female, and air connection is ¼ NPT female.

Fluid-side repair kits include diaphragms, check valve balls, and seals. **Air-motor repair kits** include seals, O-rings, gaskets, retaining rings, and an air valve spool.

Standard Polypropylene Housing—Provides good resistance to many common chemicals. *Pumps for coolants, acids, and alkalies* are often used with antifreeze, ammonia, detergents, and cleaning fluids. Choose a pump with a Santoprene diaphragm to resist cracking for a long service life. Choose a pump with a PTFE diaphragm for compatibility with a wider range of harsh chemicals, such as phosphoric acid and 75% sulfuric acid.

Conductive Acetal Housing—These pumps can be grounded to dissipate static electricity. They're rated for gasoline, kerosene, isopropyl alcohol, and mineral spirits.

Extended-Life PVDF Housing—Our most durable plastic housing has excellent chemical, impact, and temperature resistance for a long service life. *Pumps for acids and alkalies* are often used with ammonia, electropolishing solutions, detergents, and cleaning fluids. *Pumps for concentrated acids and alkalies* are also compatible with stronger chemicals, such as pure hydrochloric acid, nitric acid, and sodium hypochlorite.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Compact Plastic Air-Powered Transfer Pumps

Fit in tight spaces. These pumps are self-priming and can run dry for short amounts of time. Do not use with solids. Maximum air pressure is 125 psi, and maximum discharge pressure is 288 feet of head (125 psi). Fluid connection is NPTF female and air connection is PTF female. Temperature range is 40° to 175° F. Max. viscosity is not rated.

Standard Polypropylene Housing—Provides good resistance to many common chemicals. Pump is often used with detergents and cleaning solutions.

Conductive Acetal Housing—With metallic fibers embedded in the housing, this pump can be grounded to dissipate static electricity. It's resistant to many fuels and flammable liquids, such as gasoline, lacquer thinner, mineral spirits, and xylene.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Flanged High-Flow Plastic Air-Powered Transfer Pumps

These pumps can handle four times the flow of standard air-powered transfer pumps. They have flanged fluid connections that fit large-diameter pipe for transferring thick sludges and slurries. Pumps are self-priming, submersible, and can run dry. Maximum air pressure is 100 psi, and maximum discharge pressure is 231 feet of head (100 psi). Pumps have a Class 125 flange fluid connection and an NPT female air connection.

Fluid-side repair kits include diaphragms, check valve balls, and seals. **Air-motor repair kits** include seals, O-rings, gaskets, retaining rings, an air valve spool, and a pilot valve assembly.

Standard Polypropylene Housing—Provides good resistance to many common chemicals. *Pumps for acids and alkalies* are often used with ammonia, detergents, and cleaning solutions. *Pumps for coolants, acids, and alkalies* can be used with antifreeze as well as harsh chemicals, such as electropolishing and acid-washing solutions.

Extended-Life PVDF Housing—Our most durable plastic housing has excellent chemical, impact, and temperature resistance for a long service life. It's rated for very corrosive chemicals, such as pure hydrochloric acid, nitric acid, and sodium hypochlorite.

High-Flow Metal Air-Powered Transfer Pumps

Move large volumes of thick sludges and slurries in demanding environments—these pumps have a rugged metal housing. They are self-priming, submersible, and can run dry. Maximum air pressure is 125 psi, and maximum discharge pressure is 289 feet of head (125 psi). Fluid and air connections are NPT female. Pumps include a grounding strap.

Fluid-side repair kits include diaphragms, check valve balls, and seals. **Air-motor repair kits** include seals, O-rings, gaskets, retaining rings, an air valve spool, and a pilot valve assembly.

Standard Aluminum Housing—A lightweight yet durable option. *Pumps for deionized water* have a temperature range of –10° to 190° F. *Pumps for water and ammonium hydroxide* have a temperature range of –40° to 275° F. *Pumps for fuels and lubricating oils* are often used with diesel fuel, gasoline, kerosene, and mineral spirits as well as hydraulic oil and motor oil. Temperature range is –35° to 220° F.

Chemical-Resistant Type 316 Stainless Steel Housing—Choose these pumps for excellent resistance to a wide variety of corrosive chemicals. They are rated for use with acids, alkalies, and flammable liquids, such as phosphoric acid, acetone, and methyl ethyl ketone. Temperature range is –35° to 220° F.

For information about air-powered transfer pumps, see page 374.

High-Flow Metal Air-Powered Transfer Pumps for Solids

Large internal pathways and check valves with flaps accommodate thick sewage, abrasive slurries, and industrial waste with large solids that would damage standard air-powered transfer pumps. These pumps are self-priming, submersible, and can run dry. Maximum air pressure is 125 psi, and maximum discharge pressure is 289 feet of head (125 psi). Viscosity is not rated. Fluid and air connections are NPT female, except 260 gpm pump has a flanged fluid connection; the flange measures 7½″ OD, ⅞″ thick and has four ¾″ diameter holes on a 6″ bolt circle.

Fluid-side repair kits include diaphragms, check valve flaps, and seals. **Air-motor repair kits** include seals, O-rings, gaskets, retaining rings, an air valve spool, and a pilot valve assembly.

Standard Aluminum Housing—A lightweight yet durable option. *Pumps for lubricating oils* have a temperature range of –10° to 200° F. *Pumps for fuels and lubricating oils* can be used with diesel fuel, gasoline, and kerosene as well as hydraulic oil and motor oil. Temperature range is –40° to 350° F.

Chemical-Resistant Type 316 Stainless Steel Housing—Choose this pump for resistance to a wide variety of corrosive chemicals. It's rated for phosphoric acid and nitric acid as well as fuels and lubricating oils. Temperature range is –40° to 350° F.

Aluminum Air-Powered Transfer Pumps for Fuel

UL listed for pumping petroleum products, these pumps can be grounded for use with diesel fuel, gasoline, kerosene, and mineral spirits. They have a pressure-relief valve set at 50 psi per UL 79 safety standard. Housing is aluminum and diaphragm is fluoroelastomer. Pumps are self-priming, submersible, and can run dry. Maximum air pressure is 50 psi, and maximum discharge pressure is 115 feet of head (50 psi). Maximum viscosity is 1,000 centipoise. Fluid and air connections are NPT female. Temperature range is 10° to 180° F.

Fluid-side repair kits include diaphragms, check valve balls, and seals. **Air-motor repair kits** include seals, O-rings, and gaskets.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Smooth-Flow Plastic Air-Powered Transfer Pumps

Convenient for on-demand operation of sprayers and dispensers, these pumps automatically turn on when you open the outlet valve for uniform flow. Often used in soap dispensing, agricultural spraying, and chemical transferring, they have a polypropylene housing. Pumps are self-priming and come with a mounting bracket. Do not run dry. Maximum air pressure is 60 psi, and maximum discharge pressure is 135 feet of head (58 psi). Fluid and air connections are barbed. Temperature range is 34° to 120° F.

All pumps can be used with antifreeze and water. *Buna-N diaphragm* is often used with detergents. *Santoprene diaphragm* is rated for salt water. *Fluoroelastomer diaphragm* is compatible with etching and cleaning solutions that have a low concentration of nitric acid.

For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Food and Beverage Air-Powered Transfer Pumps

Made of FDA-listed materials for use with food and beverage, these pumps have a sanitary quick-clamp fluid connection for easy cleaning. They are commonly used with sauces, concentrates, and other thick liquids with solids. Housing is Type 316 stainless steel and diaphragm is PTFE. Pumps are self-priming, submersible, and can run dry. Maximum air pressure is 100 psi, and maximum discharge pressure is 227 feet of head (100 psi). Air connection is NPT female. Temperature range is 40° to 220° F.

Repair kits include diaphragms, check valve balls, and seals.

Repair Kits for Air-Powered Transfer Pumps

Everything you need to keep your air-powered transfer pump in working order. Use the manufacturer's kit number to match your pump to a compatible kit.

Kits for Sandpiper Pumps—Fluid-side repair kits include diaphragms, balls, and seals. Air-motor repair kits include gaskets and seals.

Kits for Wilden Pumps—Fluid-side repair kits include diaphragms, gaskets, and O-rings. Air-motor repair kits include an air-valve assembly, gaskets, O-rings, and bushings.

Kits for ARO Pumps—Fluid-side repair kits include diaphragms, balls, and seals. Air-motor repair kits include gaskets and seals.

Dispensing Pumps

Also known as gear pumps, these produce a smooth flow of liquid for applications such as cooling engines, powering hydraulic equipment, and extracting liquid from holding tanks. Motor is continuous duty and has a relief valve to prevent pressure buildup. Pumps have screw terminals for electrical connection. They are self-priming. Do not run dry or use with solids. Pumps have a maximum viscosity of 88 centipoise. Connections are NPT female.

Pumps for water have a bronze housing and PPS gears, except ½ hp pumps have bronze gears. *Single-phase motors* have thermal overload protection and an open dripproof (ODP) enclosure. *Three-phase motors* have a totally enclosed fan-cooled (TEFC) enclosure.

Pumps for lubricating oils have a cast iron housing and steel gears. All motors have an open dripproof (ODP) enclosure. *Single-phase motors* have thermal overload protection.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Dispensing Pumps without Motor

Select your own motor to tailor these pumps to your application. Use a NEMA 56C frame electric motor with a coupling and belt/pulley drive (see page 1069 for electric motors). Maximum rpm is 1,725. Pumps provide a smooth flow of liquid and are self-priming. Do not run dry or use with solids. Connections are NPT female.

Pumps for water have a bronze housing and brass gears. Max. viscosity is 151 centipoise.

Pumps for lubricating oils have a cast iron housing and steel gears. Max. viscosity is 118 centipoise.

Pumps for cleaning solutions and paint have a corrosion-resistant Type 316 stainless steel housing and PPS gears, so they're compatible with ammonia as well as paint, pigments, and other coatings. Max. viscosity is 88 centipoise.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Dispensing Pumps for Thick Lubricating Oils

A high-horsepower motor moves oil with a viscosity up to 880 centipoise that would damage other dispensing pumps. These pumps are often used to lubricate equipment and blend oils. Housing and gears are cast iron. Pumps have a continuous-duty, three-phase motor with an open dripproof (ODP) enclosure and wire leads for electrical connection. They deliver a smooth flow of liquid and are not self-priming. Do not run dry or use with solids. Temperature range is –20° to 240° F. Connections are NPT female.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Miniature Dispensing Pumps

Standard

Harsh Environment

Designed to fit into small equipment such as bar-code printers and lens washers, these pumps have miniature gears and a subfractional horsepower motor for low-flow applications. Commonly used with antifreeze, paint, and fresh and salt water, they have an acetal housing and gears. Motor is continuous duty and has wire leads for electrical connection. Pumps are not self-priming. Do not run dry or use with solids. Maximum viscosity is 800 centipoise, and temperature range is 10° to 180° F. Connections are barbed.

Harsh-environment pumps have an aluminum enclosure around the motor that provides protection in dusty and dirty environments.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Clog-Resistant Portable Dispensing Pumps for Water and Lubricating Oils

Commonly called flexible impeller pumps, these can pass solids up to 1/4" dia. without clogging, so there's no need to filter sediment and debris. A handle makes them convenient for draining liquid from holding tanks, but they're also used for on-the-go removal of bilge water, waste oil, and spills as well as for cooling marine engines. Housing is bronze, and impeller is Buna-N. Pumps have an intermittent-duty, single-phase motor with thermal overload protection and an 8-ft. cord with plug. They are self-priming to the height listed in the table. Do not run dry. Temperature range is 60° to 180° F. Pumps are dual threaded with an NPT female and a 3/4" male garden hose (GHT) connection, except 23 gpm pump has NPT female connections only.

Harsh-environment pump provides protection in dusty and dirty environments. The motor is cooled by the liquid being pumped.

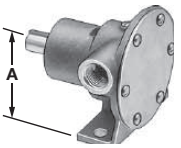
Clog-Resistant Dispensing Pumps without Motor



With the motor choice left up to you, these pumps can be customized for a variety of applications. Select a spark-free air motor for hazardous environments or attach an electric motor with a speed reducer or a belt pulley to alter the pump rpm. Use a NEMA 56C frame motor (see page 1075 for air-powered motors and page 1068 for electric motors). To dispense liquid with solids up to 1/4" dia., these pumps have a flexible rubber impeller that resists clogging and wear. Housing is bronze. Pumps are self-priming up to 10 feet. Do not run dry. Maximum viscosity is not rated, and temperature range is 50° to 180° F. Connections are NPT female.

Portable Drill-Driven Dispensing Pumps for Water

Pump

Pump with Intake and Discharge Tubes

Convenient to keep in your toolkit for on-site cleanup, these pumps attach to your drill for small liquid extraction jobs as well as draining water from clogged sinks and emptying tanks. They are self-priming. Do not run dry or use with solids. Housing is polyester, and impeller is Buna-N. Maximum viscosity is 1 centipoise, and temperature range is 40° to 110° F. Connections are 3/4" male garden hose thread (GHT).

Pump with intake and discharge tubes has a 30" slip-on intake tube and a 34" discharge tube with a 3/4" male garden hose thread (GHT) connection.

Max. Flow, gpm	Motor Speed, rpm	Max. ft. of Head	Shaft Dia.	Shaft Lg.	Ht.	Wd.	Dp.	Pump		Pump with Intake and Discharge Tubes	
3.75	1,200	90	1/4"	3/4"	3"	4 1/2"	3"	99705K21	$11.71	99705K25	$13.95

Versa-Mount Compact Dispensing Pumps

Install these small pumps in any position for low-flow spraying, draining, and washdown applications. Also called diaphragm pumps, they have a Santoprene diaphragm. Motor is single phase with thermal overload protection and a 6-ft. cord with plug, except 8080K42 has wire leads. Pumps are self-priming and can run dry. Do not use with solids. They have a pressure switch that automatically shuts off the pump at the maximum pressure, unless noted. Pumps are UL listed, unless noted.

Intermittent-Duty Pumps—These have a subfractional horsepower motor rated for intermittent use (90 minutes on; return to room temperature before restarting). Maximum viscosity is not rated.

Continuous-Duty Pump—Rated for antifreeze as well as fresh and salt water, this pump has a maximum viscosity of 250 centipoise. Motor is 3/16 hp. Pump has barbed connections and also includes two 1/2"-14 straight male thread adapters. CSA certified.

★ Pump has UL-recognized components. ■ Pump is not UL listed or recognized. Does not have a pressure switch.

Battery-Operated Versa-Mount Compact Dispensing Pumps

Get the same small size and mounting versatility as our versa-mount compact dispensing pumps without being tethered to electrical hookups. These intermittent-duty pumps have a polypropylene housing and a Santoprene diaphragm. Rated for water, they are commonly used with agricultural sprayers and washers. Pumps have a subfractional horsepower motor that operates on a 12-volt battery and has wire leads for electrical connection. Pumps are self-priming to the height listed in the table. Do not use with solids. Maximum viscosity is not rated.

High-Pressure Fixed-Flow Rate Pumps

Commonly called rotary vane pumps, these are for use with water. They can withstand pressures up to 240 psi (554 ft. of head) and have a built-in bypass relief valve to prevent pressure buildup. Vanes are carbon graphite. Pumps are not self-priming. Do not run dry or use with solids. Maximum rpm is 1,750, and temperature range is 28° to 195°F. Connections are NPT female.

Pumps with motor have a continuous-duty, single-phase motor with thermal overload protection and an open dripproof (ODP) enclosure. Electrical connection is wire leads. Pumps have a built-in mesh filter.

Pumps without motor leave the motor choice up to you—attach an electric motor with a speed reducer or a belt pulley to alter the pump rpm. Use a NEMA 56C frame motor (see page 1068 for electric motors). Choose a pump with a Type 303 stainless steel housing for more corrosion resistance than brass.

High-Pressure Air-Powered Dispensing Pumps

Commonly called piston pumps, these are often used in high-pressure applications such as hydrostatic testing of pipelines, tanks, and valves. They operate on air pressure from 15-145 psi instead of electricity to reduce the risk of sparking and excessive heat. Pumps have an intermittent-duty air motor (20 minutes on; 20 minutes off). Flow and outlet liquid pressure can be controlled by varying the inlet air pressure. To calculate outlet liquid pressure, multiply the inlet air pressure by the ratio shown in the table. Pumps have a Type 303 stainless steel housing and a stainless steel piston. They are self-priming. Do not run dry or use with solids. Maximum viscosity is 100 centipoise, and temperature range is –4° to 176° F. Air and fluid connections are NPT female.

Pumps for coolants and fuels stand up to antifreeze as well as diesel fuel, isopropyl alcohol, and kerosene.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

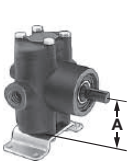
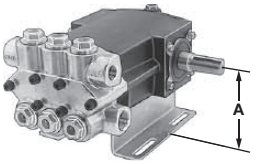
Dispensing Pumps without Motor for Pressure Washing



Standard



High Pressure

Use these pumps for washdowns, drain jetting, and other pressurized water-spraying applications. They don't include a motor, so you can choose one that suits your needs. Connect an electric motor with a speed reducer or belt pulley to alter the pump rpm (see page 1066 for electric motors). Pumps are not self-priming. Do not run dry or use with solids. Connections are NPT female.

Standard pumps have a temperature range of 35° to 140° F.

High-pressure pumps have a temperature range of 35° to 160° F.

Fixed-Flow Chemical Metering Pumps

Also known as peristaltic pumps and tubing pumps, these are often used with chemicals such as ammonia, bleach, and electropolishing solutions. Pumps have a continuous-duty, single-phase, subfractional-horsepower motor and a 6-ft. cord with plug. They come with 9″ lengths of 1/16″, 1/8″, 3/16″, and 1/4″ ID soft tubing (Shore A55-60). Tubing is Tygon, except 1/8″ ID tubing is Santoprene. Pumps are self-priming up to 29 feet and can run dry. Do not use with solids. Maximum viscosity is 10,000 centipoise, and temperature range is 32° to 77° F.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

High-Flow Chemical Metering Pumps

For high-volume chemical sampling and draining, this pump has a 1/4 hp motor and large tubing. It's commonly used with ammonia, acid-washing solutions, detergents, and cleaning fluids. Pump has a continuous-duty, single-phase motor with an open dripproof (ODP) enclosure and an 8-ft. cord with plug. It comes with 10 5/8″ of 1/2″ ID soft Tygon tubing (Shore A61). Pump is self-priming up to 15 feet and can run dry. Do not use with solids. Maximum viscosity is 1,000 centipoise, and temperature range is 35° to 160° F. Connections are barbed and fit 1/2″ ID tubing.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Adjustable-Flow Chemical Metering Pumps

Standard

High Viscosity (43205K51)

High Pressure

An adjustment control lets you increase or decrease flow rate without the hassle of changing tubing. Often used in boiler feed systems and water treatment, these pumps are compatible with chemicals such as detergents, cleaning fluids, and acid-washing solutions. Motor is continuous duty, single phase and has a 6-ft. cord with plug. Pumps are self-priming and can run dry.

Standard—Alter flow with the adjustment screw. Pumps come with 9″ of soft Tygon tubing (Shore A70). Max. viscosity is 300 centipoise.

High Viscosity—Rated for liquids up to 10,000 centipoise, these pumps can be used with very thick chemicals such as electropolishing solutions. Use the adjustment dial to alter flow rate in 2.5% increments of the maximum flow. Pumps have a reverse switch that allows flow in either direction. 43205K51 comes with 9″ lengths of 1/16″, 1/8″, 3/16″, and 1/4″ ID soft tubing (Shore A55-60). Tubing is Tygon, except 1/8″ ID tubing is Santoprene. 43205K52 comes with 14″ of 3/8″ ID soft Tygon tubing (Shore A60).

High Pressure—These can be used with pressures four times higher than standard pumps. Use the adjustment dial to alter flow rate in 2.5% increments of the maximum flow. Pumps have a firm Santoprene internal tube (Shore A80) and also come with 20 feet of LDPE suction and discharge tubing. Maximum viscosity is 1,500 centipoise. Pumps are UL listed, CSA certified, and CE marked.

High-Accuracy Chemical Metering Pumps

These pumps meter a consistent amount of liquid within ±2% of the maximum flow. Often used to pump water-treatment chemicals, cleaning fluids, and electropolishing solutions, they have an adjustment dial that alters flow rate in 2% increments of the maximum flow. Diaphragm has a PTFE face, a Hypalon backing, and a brass core. Motor is continuous duty, single phase and has a 6-ft. cord with plug. Pumps can run dry but are not for use with solids. Maximum viscosity is 1,000 centipoise. All pumps are ETL listed.

Repair kits include a pump head assembly, a diaphragm, valves, and seals.

Standard—Pump head is polypropylene. Pumps are self-priming. They include a 4-ft. intake tube, an 8-ft. discharge tube, a foot/valve strainer, a ball check valve, and a bleed valve, except 82695K62 does not include a bleed valve.

Extended Life—A Type 316 stainless steel head provides corrosion resistance for a long life in harsh environments. Pumps are self-priming. They include a strainer and a ball check valve.

Remote Adjustment—Automatically control output from a distance using 4-20 mA or external-pulse signals. View the flow rate on the backlit LCD. Pump head is polypropylene. Pumps are not self-priming. They include a 4-ft. intake tube and an 8-ft. discharge tube.

Metering Pumps

For information about metering pumps, see page 374.

Chemical Metering Pumps

Also known as diaphragm metering pumps, these are often used for general purpose dispensing of chemicals such as ammonia, detergents, and acid-washing solutions. They have an adjustment dial with a locking lever that alters flow rate in 5% increments of the maximum flow. Diaphragm is Hypalon. Motor is continuous duty, single phase with thermal overload protection and has a 6-ft. cord with plug. Pumps include a 4-ft. 5/16″ ID × 7/16″ OD PVC intake tube and an 8-ft. 3/8″ ID × 1/2″ OD polyethylene discharge tube. They are self-priming. Do not run dry or use with solids. Maximum viscosity is 300 centipoise, and temperature range is 32° to 125° F. Pumps are ETL listed.

Repair kits include a pump head assembly, valves, a diaphragm, and fasteners.

ⓘ For common compatible chemicals and a list of wetted parts, go to mcmaster.com and search by part number.

Low-Flow Metering Pumps for Alkalies

Meter small amounts of liquid in applications such as pH control and circulating detergents and cleaning fluids. These pumps have a purge/prime switch for quick emptying and filling and a reverse switch to drain the tubing. Use the adjustment dial to alter flow rate in 0.25% increments of the maximum flow. Pumps have a continuous-duty, subfractional-horsepower motor and include a single-phase adapter that has a 6-ft. cord with plug. Pumps come with 4″ lengths of 1/50″, 1/16″, 3/32″, 3/16″, and 1/4″ ID silicone soft tubing (Shore A50), except 4049K88 does not come with 1/50″ ID tubing. Pumps are self-priming and can run dry. Do not use with solids. Maximum viscosity is 5,000 centipoise, and temperature range is –80° to 500° F.

Inline Water-Powered Chemical Metering Pumps

Inject chemicals into your water supply without using electricity—these pumps install directly in your pipeline and activate when water flows into the pump head. They provide consistent metering regardless of pressure and flow changes and have an adjustment dial for altering dosing concentration. Commonly used with bleach, detergents, cleaning solutions, and water-treatment chemicals, these pumps come with a 6-ft. PVC intake tube. They are self-priming and can run dry. Do not use with solids. Maximum temperature is 104° F. Connections are NPT male.

High-Pressure Metering Pumps for Coolants and Lubricating Oils

Use these pumps for high-pressure output of antifreeze, hydraulic oil, and motor oil. They have an internal relief valve to prevent pressure buildup. The adjustment dial alters flow rate in 1% increments of the maximum flow. Diaphragm is PTFE. Motor is continuous duty, single phase with a totally enclosed fan-cooled (TEFC) enclosure and thermal overload protection. Pumps have an 8-ft. cord with plug. They are not self-priming. Do not run dry or use with solids. Maximum viscosity is 1,500 centipoise, and temperature range is 40° to 200° F. Connections are NPT male.

Extreme-Accuracy Metering Pumps for Water

Dispense water with ±1% accuracy. These pumps have an ABS housing and a bellows-style polypropylene diaphragm. The adjustment dial alters flow in 2.5% increments of the maximum flow, and check valves protect against backflow. Motor is continuous duty, single phase with thermal overload protection and has a 6-ft. cord with plug. Pumps are self-priming and can run dry. Do not use with solids. Temperature range is 33° to 104° F. Connections are barbed.

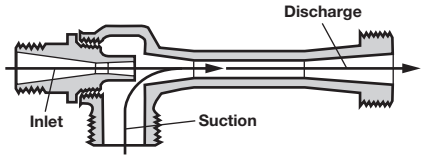
Maintenance-Free Jet Pumps



Eliminate downtime for lubrication and repairs—these pumps have no moving parts or seals, and they operate on pressurized liquid or steam instead of electricity. They're also known as eductors, ejectors, and injectors. When high-pressure liquid or steam enters the inlet, it creates suction that draws a second liquid or gas into the pump body and discharges a pressurized blend of the two. The discharge pressure is greater than the suction flow but lower than the inlet pressure.

Liquid-Operated Pumps

Blend liquids and slurries, circulate and pump solutions, produce emulsions, elevate water, and transport grains and other small particles. Maximum suction lift is 27 feet.

Metal pumps have NPT male connections. *Cast iron pumps* operate on pressures up to 80 psi. *Bronze* and *Type 316 stainless steel pumps* operate on 15 to 200 psi. *Cast iron* and *bronze pumps* have a temperature range of –20° to 150° F. *Bronze* is more corrosion resistant than cast iron. *Type 316 stainless steel pumps* are the most corrosion-resistant metal option; they have a temperature range of –150° to 150° F.

PVC pumps are highly corrosion resistant and lightweight. They operate on pressures up to 100 psi. Maximum temperature is 70° F. Inlet and suction connections are NPT female and discharge connections are NPT male.

Suction Flow for Liquid-Operated Pumps with 1½ NPT Suction/Discharge Connections

Calculate suction flow for other pipe sizes by multiplying the suction flow by the sizing factor listed in the table for your pump's pipe size.

Steam-Operated Pumps

Use plant steam to pump liquids and gases, prime pumps, and remove fumes. When pumping liquids, the inlet pressure range is 35 to 150 psi. Maximum suction lift is 20 feet. When pumping air, vapor, and gases, the inlet pressure ranges from 20 to 80 psi.

All pumps have NPT male connections. *Cast iron* and *bronze pumps* have a temperature range of –20° to 150° F. *Bronze* is more corrosion resistant than cast iron. *Type 316 stainless steel pumps* provide the most corrosion resistance; temperature range is –150° to 150° F.

Suction Flow for Steam-Operated Pumps with 1½ NPT Suction/Discharge Connections

Calculate suction flow for other pipe sizes by multiplying the suction flow by the sizing factor listed in the table for your pump's pipe size.

Hand-Operated Vacuum Pumps

Convenient for one-handed liquid sampling and extraction, this pump is often used for vacuum filtration and bleeding hydraulic and liquid lines. It can also be used for pressure applications up to 30 psi. Housing is zinc and aluminum. Temperature range is –10° to 190° F.

Pump comes with a diagnostic kit that includes a vacuum/pressure gauge, tubing adapters and plugs, a reservoir jar, a cup adapter, and a plastic carrying case. It also includes clear PVC tubing in the following sizes: two 24" lengths, one 1½" length, and one 3⅝" length of ¼" ID tubing; one 3" length of 5/32" ID tubing.

Max. Vacuum, Inches of Hg	Volume per Stroke	Lg.	Wd.	Ht.		
25	1 cu. in.	8"	2½"	10"	9963K21	$88.11

Vacuum Pumps

About Vacuum Pumps

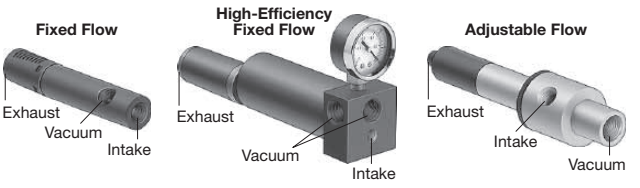
When selecting a vacuum pump, consider your application. For medium-vacuum operations, such as air extraction, leak testing, and lifting, grabbing, and moving small parts, choose an **air-operated vacuum pump**. Choose an **electric vacuum pump** for demanding applications that require a powerful vacuum and continuous flow, such as filtration systems, drying chambers, distillation, and refrigeration service.

Additional factors, such as the vacuum strength your application requires and how quickly you want to form a vacuum, can also help you to select a vacuum pump that will meet your needs.

Vacuum Strength—Vacuum is measured in inches of mercury (Hg) up to 29.9″ Hg. Above 29.9″ Hg, it's measured in microns of Hg. When vacuum is measured in inches of Hg, higher values indicate a stronger vacuum. But when vacuum is measured in microns of Hg, lower values indicate a stronger vacuum.

Free Air—Measured in cubic feet per minute, free air is the initial pull required to create a vacuum. Determine how long a pump will take to form a vacuum by dividing your tank's capacity (measured in cubic feet) by the pump's free air requirement. The larger the tank, the longer it will take to form a vacuum. Tube and fitting ID will also affect flow.

Maintenance-Free Air-Operated Vacuum Pumps



Also known as venturi pumps, these compressed-air-powered pumps are commonly used in vacuum packaging, pick-and-place operations, and end-of-arm robotic tooling. They have no seals or moving parts that can wear down or overheat, and they don't require lubrication, so there's no downtime for maintenance. The compact body allows inline installation close to your vacuum point. Pumps have a muffler. Connections are NPT female.

High-efficiency fixed-flow pumps have a multistage design to generate high vacuum flow with less air consumption than other air-operated vacuum pumps. They include a 2″ vacuum gauge.

Adjustable-flow pumps have a rotating diffuser to alter flow rate.

Oil-Free Electric Vacuum Pumps

Since these pumps don't require lubrication and run entirely on electricity, there's no risk of oil contamination. They have a continuous-duty, single-phase motor with thermal overload protection and a 6-ft. cord with plug. Temperature range is 32° to 104°F.

Base Mount—Often used for air and gas sampling, controlling compressed air flow, and vacuum filtration, this pump can also be used in pressure applications up to 18 psi. Housing is polyester and diaphragm is fluorocarbon elastomer. Pump comes with barbed hose adapters that fit 3/8″ ID tubing. **Repair kit** includes a replacement diaphragm.

Portable—This pump weighs only 16 pounds and has a handle, so it's convenient for on-site sampling, atomizing, and vacuum filtration. It's also for use in pressure applications up to 60 psi. Housing is aluminum and diaphragm is EPDM/Nomex. Pump comes with an on/off switch. Connections are barbed and fit 3/8″ ID tubing. **Repair kit** includes seals, a filter cartridge, and replacement valve components.

Oil-Free Electric Vacuum Pumps with Tank

Generate a vacuum on demand with this pump that comes mounted on a 10-gal. ASME code vacuum tank for quick startup. It's often used in vacuum-forming applications such as product packaging. Pump includes a vacuum gauge, a three-position switch, and a shutoff valve. It needs no lubrication, so oil won't contaminate your process.

Motor is continuous duty, single phase with thermal overload protection, and it has a 6-ft. cord with plug. Housing is aluminum. Temperature range is 41° to 104°F. Pump has a barbed inlet connection that fits 3/8″ ID tubing and a 3/8 NPT female discharge connection with a muffler.

26	7.1	58	1/3	120 (1)	4	30″	12⅜″	24½″	6419K31	$2,186.79

For information about vacuum pumps, see page 392.

Oil-Free Electric High-Vacuum Pumps

Achieve a higher vacuum than our oil-free electric vacuum pumps with the same lubrication-free operation. Motor is continuous duty, single phase with thermal overload protection. Pumps have a 10-ft. cord with plug, except 1½ hp pump has wire leads for electrical connection. Housing is cast iron. Temperature range is 32° to 104° F. Connections are NPT female.

Standard pump is commonly used for aeration, leak detection, and liquid-level control. It has an internal muffler. Maximum air pressure is 10 psi. Pump is CE marked.

Corrosion-resistant pumps can withstand harsh operating conditions. They're frequently used to service machinery and refrigeration and circulation systems. Maximum air pressure is 125 psi. Pumps are CSA certified.

Extended-Life Oil-Free Electric High-Vacuum Pumps

Also known as liquid-ring vacuum pumps, these use a constant supply of liquid to create a vacuum, so they have few moving parts that can wear out. A good choice for applications such as siphon priming and distillation, they commonly use water as the sealing fluid. Motor is continuous duty, three phase with thermal overload protection, and it has screw terminals for electrical connection. Housing is cast iron and impeller is cast aluminum bronze. Temperature range is 41° to 104° F. All pumps have BSPP female sealing fluid intake connections. They are CSA certified.

Pumps with flanged intake/discharge connections have flanges with four ¾″ holes on a 4 13⁄16″ bolt circle.

Electric Ultra-High Vacuum Pumps

Use these pumps when you need a vacuum above 29″ Hg. They produce a very high vacuum for applications such as degassing and servicing refrigeration and freezer systems. Housing is aluminum. Motor is continuous duty, single phase with thermal overload protection. All pumps have a 6-ft. cord with plug. *120-volt pumps* have a standard NEMA 5-15 plug. *120/240-volt pumps* have a NEMA 6-15 plug. Pumps have an oil-level sight, an on/off switch, and a handle. They come with vacuum pump oil. Intake ports have ½″ × ¼″ × ⅜″ male flared cross fitting connections. Temperature range is 30° to 180° F. Pump components are UL recognized.

Electric Extreme-Vacuum Pumps

Get a near-perfect vacuum for applications such as vacuum drying, solvent evaporation, and distillation. These pumps have a cast iron housing and a continuous-duty, single-phase motor. They come with vacuum pump oil. Temperature range is 50° to 104° F.

Extreme-vacuum pumps have an oil-level sight, an on/off switch, a handle, and a hose adapter. Motor has thermal overload protection and an 8-ft. cord with plug. Pumps are CSA certified.

Extended-life extreme vacuum pumps have lower rpm and fewer moving parts than other extreme-vacuum pumps, so they're less prone to wear and overheating. A large oil capacity dilutes contaminants that can damage the pump. Pumps have a 6-ft. cord with plug. They come with a fully enclosed belt guard, a contaminant evacuation valve, a dust cap, and an on/off switch.

Mufflers

For information about pipe size, see pages 2-3.

About Noise, Filtration, and Flow Ratings

Consider noise, filtration, and flow ratings when selecting mufflers, breather vents, and filters.

Noise—Measured in decibels (dB), the rating indicates how much a product reduces exhaust noise from your tool or equipment. OSHA recommends hearing protection for exposure to 80 dB and greater. Some common noise levels include an air-powered riveter @ 125 dB, air-powered drill @ 120 dB, and an impact wrench @ 103 dB.

Filtration—Products trap particles to clean the air exhausting to the environment or going into your process and equipment. The size of particles is measured in microns; the lower the number of microns, the smaller the particles that are removed from the air. For examples of common particle sizes, see page 412.

Flow—Measured in standard cubic feet per minute (scfm), this rating is the maximum air flow a product can withstand.

Mufflers

A ***B*** ***C*** ***D***

Our most popular mufflers, use these with air-powered tools, valves, and cylinders to reduce noise and filter exhaust air. All have a porous bronze body.

Styles A&D have hex wrench flats. Mufflers reduce noise by 15-20 dB. They trap particles down to 40 microns, except mufflers with 1¼-2 pipe size, which trap particles down to 90 microns. Use with air and inert gas. Fitting is plated steel. Max. temp. is 300°F.

Style B are high temperature; max. temp. is 500°F. They have a slotted head for installation with a screwdriver. Mufflers reduce noise by 10-20 dB and trap particles down to 100 microns. Use with air and inert gas. Fitting is porous bronze.

Style C are knurled for an easy grip. Mufflers reduce noise by 13-21 dB and trap particles down to 100 microns. Use with air. Fitting is plated bronze. Max. temp. is 302°F.

Corrosion-Resistant Mufflers

E&G

F

All-stainless construction stands up to harsh environments—body is porous Type 316 stainless steel. Use with air and inert gas.

High-temperature mufflers withstand temperatures up to 400°F. They reduce noise by 15-20 dB and trap particles down to 50 microns. Fitting is Type 304 stainless steel. Max. pressure is 175 psi.

Extreme-temperature mufflers withstand temperatures up to 1000°F. They trap particles down to 100 microns. Fitting is Type 316 stainless steel. Max. pressure is 150 psi. *Style F* reduce noise by 10-20 dB; *Style G* reduce noise by 13-29 dB.

For information about mufflers, see page 394. For information about pipe size, see pages 2-3.

Push-to-Connect Mufflers

Decrease noise from manifolds with tubing connections—these have an unthreaded stem to slide into tube fittings and collets. Use with air. Filtration is not rated.

Plastic mufflers are more corrosion resistant than bronze. They reduce noise by 17-20 dB. Max. pressure is 145 psi. Max. temp. is 140°F.

Bronze mufflers withstand higher temperatures than plastic; max. temp. is 300°F. They reduce noise by 20 dB. Body is porous bronze and fitting is nickel-plated brass. Max. pressure is 175 psi.

Mufflers for Tubing

Make the right connection in applications that use tubing. Use with air.

Muffler with barbed fitting is for use with soft tubing. It reduces noise by 10-20 dB and traps particles down to 80 microns. Body is porous bronze and fitting is copper. Max. pressure is 170 psi. Max. temp. is 500°F.

Muffler with push-to-connect fitting is for use with semi-rigid tubing such as nylon, polyurethane, and FEP. It reduces noise by up to 16 dB. Filtration is not rated. Body is zinc-plated brass and fitting is bronze. Max. pressure is 145 psi. Max. temp. is 140°F.

Clog-Resistant Mufflers

Replace your muffler less often—these have a filter design that stays clean longer than porous mufflers. They're often used in air-powered circuits.

Style A— A screw on top adjusts air flow. Mufflers reduce noise by 12-15 dB and trap particles down to 900 microns. Max. pressure is 150 psi. Max. temp. is 400°F.

Styles B&C— Mufflers reduce noise by 17-20 dB and trap particles down to 250 microns. Filter is wire mesh. ***Aluminum mufflers*** have a max. pressure of 300 psi. Max. temp. is 160°F. ***Nylon mufflers*** have a max. pressure of 150 psi. Max. temp. is 120°F.

Clog-Indicating Mufflers

Don't let an unexpected clog interrupt your work. These mufflers have a filter that slides up slowly as it clogs to indicate when the muffler should be replaced. Mufflers reduce noise by 30-35 dB and trap particles down to 70 microns. Use with air. Filter and fitting are plastic. Max. pressure is 100 psi. Max. temp. is 158°F. Max. scfm is not rated. Connection is NPT male.

Flame-Resistant High Noise-Reducing Mufflers

Suitable for use with welding equipment, these mufflers are made of flame-resistant materials and reduce noise by 35-42 dB. They trap particles down to 100 microns. Use with air. Filter is PVF (polyvinyl fluoride) and fitting is PBT (polybutylene terephthalate). Max. pressure is 145 psi. Max. temp. is 140°F. Connection is NPT male.

Pipe Size	Max. scfm @ 100 psi	Ht.	Hex Size

Mufflers & Tank Flame Arresters

For information about mufflers, see page 394. For information about pipe size, see pages 2-3.

High-Flow Mufflers

With Male Connection

Install a muffler that reduces noise without restricting air flow. Commonly used with high-flow air-powered equipment, such as diaphragm pumps and valves. Mufflers reduce noise by 17-22 dB and trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel; filter is cellulose fiber. Max. pressure is 125 psi. Max. temp. is 290° F.

Oil-Mist-Recycling Mufflers

With Female Connection

Capture oil mist for reuse. Also known as reclassifiers, mufflers have a clear reservoir with a drain plug to hold and remove oil. They reduce noise by 35 dB and trap particles down to 0.3 micron. Use with air. Housing is aluminum and steel; filter is PET (polyethylene terephthalate). Reservoir is plastic. Max. pressure is 15 psi. Max. temp. is 140° F. Mufflers must be mounted vertically.

Parts-Ejecting End-Exhaust Mufflers

Use air to eject items from your conveyor—mufflers exhaust through narrow holes to provide a concentrated blast. They're also good for directing exhaust away from delicate applications. Mufflers reduce noise by up to 21 dB. Filtration is not rated. Use with air and inert gas. Body is steel and filter is acetal. Max. pressure is 175 psi. Max. temp. is 300° F. Connection is NPT male.

Pipe Size	Max. scfm @ 100 psi	Lg.	Hex Size

Oil-Mist-Eliminating Mufflers

With Male Connection

Keep oil mist under control. In addition to a cellulose fiber filter, these mufflers have a wool felt disc to trap oil. Often used with vacuum pumps and suction devices, they reduce noise by 17-23 dB without restricting flow. Mufflers trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel. Max. pressure is 150 psi. Max. temp. is 290° F.

Easy-to-Clean Mufflers

A

B

C

Get more from your muffler—these can be cleaned for an extended service life. Mufflers reduce noise by 20-30 dB. Use with air and inert gas. Max. pressure is 150 psi. Connection is NPT male.

Style A trap particles down to 80 microns. Body and filter are polyethylene. Max. temp. is 150° F.

Styles B&C trap particles down to 75 microns. Body is glass-filled polypropylene. Max. temp. is 175° F.

To Order: For *Styles B&C*, please specify filter material: polyethylene, brass, or stainless steel.

Tank Flame Arresters

Minimize fire hazard from flammable vapors. Mount an arrester to your vent pipe to stop flames from traveling back into your tank. If the ambient temperature reaches 165° F, fusible links melt, and the cover closes to block flames from the arrester. To reuse the arrester, replace the fusible links (sold separately). Flame arrester is cast iron and aluminum. It's UL listed. Connection is 2 NPT female.

Tank Flame Arrester	1206K81	$766.67
Replacement Fusible Link	1206K85	8.00

For information about mufflers and vents, see page 394. For information about pipe size, see pages 2-3.

High-Flow Inline Mufflers

Maintain air flow while reducing exhaust noise from diaphragm pumps, valves, and other air-powered equipment. Mufflers reduce noise by 17-22 dB and trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel; filter is cellulose fiber. Max. pressure is 125 psi. Max. temp. is 290° F. Connections are NPT male.

Heavy Duty Inline Mufflers

With Male Connections

Heavy duty steel construction provides durability for rugged environments. Mufflers have layered polyester packing to reduce noise by up to 30 dB with minimal pressure drop. They're ideal for large blowers, compressors, and vacuum pumps. Use with air and inert gas. Filtration is not rated. Max. temp. is 212° F. Max. pressure is not rated.

Inline Mufflers for High-Frequency Noise

Designed to minimize noise from rotary and centrifugal blowers, vacuum pumps, and low-pressure vents, these mufflers reduce noise by up to 45 dB with minimal pressure drop. Use with air and inert gas. Filtration is not rated. Mufflers have a steel body and thick polywool packing. Max. pressure is 15 psi. Max. temp. is 325° F. Connections are NPT female.

Breather Vents

With Male Connection

With Female Connection

Protect against excess vacuum and pressure in cylinders, gear boxes, and tanks. You can also use these vents to block dirt from entering equipment; they trap particles down to 90 microns. Use with air and inert gas. Body is porous bronze with a plated steel fitting, except ***vent with UNF male connection*** has a brass fitting. Max. pressure is 150 psi. Max. temp. is 300° F.

Corrosion-Resistant Breather Vents

Type 316 Stainless Steel

Polypropylene

Avoid corrosion in damp environments. These vents are often used to prevent excess pressure in cylinders, gear boxes, and tanks. They trap particles down to 100 microns. Use with air and inert gas. Connection is NPT male.

Type 316 stainless steel vents have a porous Type 316 stainless steel body with a Type 304 stainless steel fitting. Max. pressure is 150 psi. Max. temp. is 400° F.

Polypropylene vents can be cleaned with mineral spirits. Body is polypropylene and fitting is polyethylene. Max. pressure is 100 psi. Max. temp. is 150° F.

Miniature Breather Vents

Brass

Type 316 Stainless Steel

Prevent excess pressure in enclosures and manifolds. Use with air and inert gas. Connection is male.

Brass vent has a Buna-N rubber O-ring above the threads for a tight seal. Vent traps particles down to 40 microns. Body is porous bronze with a brass fitting. Max. pressure is 125 psi. Max. temp. is 200° F.

Type 316 stainless steel vents have a slotted head for installation with a screwdriver. Vents trap particles down to 10 microns. Body is porous Type 316 stainless steel. Max. pressure is 100 psi. Max. temp. is 750° F.

Breather Vents

For information about vents, see page 394. For information about pipe size, see pages 2-3.

Moisture-Eliminating Breather Vents

Keep rust and corrosion from forming inside your tank—vents contain silica gel that absorbs moisture. They also trap particles down to 3 microns. Use with air and inert gas. Body is nylon and clear polycarbonate; filter is polyester. Replace vents when the silica gel reaches maximum absorption, changing from blue to pink. Max. flow is 16 scfm @ 1 psi. Max. pressure is not rated. Max. temp. is 200° F. Connection is NPT male.

Pipe Size	For Tank Size, gals.	Ht.	Dia.		
1	5 to 200	6 1/8"	4"	3297T31	$68.56
1	5 to 350	8 1/8"	4"	3297T33	79.08
1	5 to 500	10 1/8"	4"	3297T35	90.38

Weather-Resistant Breather Vents

Shield outdoor pipe and tank openings from the environment. Also known as vent caps, these have screens to allow air flow while blocking debris. Use with air. Flow, pressure, and temperature are not rated.

Style A trap particles down to 140 microns. Screen is Type 304 stainless steel 100 mesh.

Style B trap particles down to 880 microns. Screen is Type 304 stainless steel 30 mesh.

Style C have two outlets for greater flow. They trap particles down to 1,190 microns. Screen is brass 16 mesh.

Style D have a set screw to secure in place. Screen is zinc-plated steel with 1/8" perforations. Filtration is not rated.

★ Traps particles down to 864 microns; screen is Type 304 stainless steel 20 mesh.

Breather Vents with Splash Guard

Steel

Polyamide

Vent oil containers for easier dispensing—a guard blocks splashing oil from the vent to prevent clogs. Ideal for containers that are often filled and drained. Max. flow is not rated. Connection is NPT male.

Steel vents have a max. pressure of 125 psi. Max. temp. is 400° F. Filtration is not rated.

Polyamide vents trap particles down to 40 microns. Max. pressure is not rated. Max. temp. is 210° F.

Submersible Breather Vents

Polycarbonate

Aluminum

Stainless Steel

Rated NEMA 6 to withstand periodic submersion in water, install these vents in enclosures to stop the build up of pressure and vacuum. They trap particles down to 3 microns. Use with air. Filter is acrylic. Max. flow is not rated. Max. pressure is 4 psi. Max. temp. is 158° F. Vents are also for use with enclosures that are rated NEMA 4, 12, and 13 for washdown environments and splashing oil and coolant. Connection is male.

Self-Draining Breather Vents

Minimize moisture buildup in enclosures. Also known as drain plugs, these have a small outlet that allows condensation to drain. Vents also have a silicone O-ring above the threads for a tight seal. Use with air. Filter is porous bronze. Max. flow and pressure are not rated. Max. temp. is 320° F. Install at the lowest point of the enclosure. Vents meet IP66 for protection from dust and washdown environments. Connection is NPT male.

Breather Vents with Lockable Cap

Secure access to vented openings in pipe and tanks—the cap can be locked to prevent tampering; it accepts a padlock (not included) with a 3/8" shackle diameter. Use with water and air. Body and cover are aluminum; screen is brass. Max. flow and pressure are not rated. Max. temp. is 200° F. Connection is NPT male.

Pipe Size	Ht.	Dia.		
2	4 1/2"	5 5/8"	4906K11	$41.12

Flange-Mount Breather Vents with Cap

Nylon

Stainless Steel

Lockable Stainless Steel

Add a convenient filling port to your hydraulic tank while also protecting against excess pressure and vacuum. Vents also stop dirt from entering your tank; they trap particles down to 40 microns. Use with oil and air. Max. pressure is not rated. Mount on top of standard tank openings with included hardware. Flange has six 3/16" bolt holes; bolt hole circle is 2 7/8".

Lockable stainless steel vent prevents tampering; it accepts a padlock (not included) with a 3/8" shackle diameter.

Air-Intake Filters

Stop dust and other contaminants from entering your process and equipment. These air-intake filters come with a polyester element that removes 99% of particles down to 5 microns. They're commonly used on blowers, compressors, engines, and in hydraulic systems. Use with air and inert gas. Filters have a steel housing. Max. temp. is 220° F.

Filters with silencer reduce intake noise by up to 15 dB while maximizing air flow.

Replacement elements are sold separately. *Polyester elements* remove 99% of particles down to 5 microns. *Paper elements* remove 99% of particles down to 2 microns. *HEPA elements* have greater efficiency for high-purity applications. They remove 99.9% of particles down to 0.3 micron but reduce the max. scfm of your filter.

★ Diameter is 10″. ▲ Has a larger element than other pipe size 3 filter for greater dirt-holding capacity. ■ Diameter is 16″.

Compact Air-Intake Filters

Clean the air going into small blowers and air-powered equipment in tight spaces. Use with air and inert gas. Max. temp. is 220° F. Connection is NPT male.

Filters without silencer remove 99% of particles down to 5 microns. Element is polyester. Filters do not have a housing.

Filters with silencer reduce intake noise by up to 15 dB. They remove 99% of particles down to 2 microns. Housing is steel; element is paper.

Air-Intake Filters & Vacuum Filters

For information about filters, see page 394. For information about pipe size, see pages 2-3.

Corrosion-Resistant Air-Intake Filters

The polypropylene housing withstands damp environments and is impact resistant. Filters come with a polyester element that removes 99% of particles down to 10 microns. Use with air and inert gas. Max. temp. is 200° F. Connection is NPT male.

Filters with silencer reduce noise by up to 10 dB.

Replacement elements are sold separately. They remove 99% of particles down to 10 microns. *Polyester elements* have 50% more dust-holding capacity than paper.

Vacuum Filters

Female Connections

Ensure clean air going in and coming out of vacuum pumps. Housing is steel. Max. temp. is 220° F. Connections are NPT.

For Air Intake—Install these on the inlet to stop dust from entering your system. They come with a polyester element that removes 99% of particles down to 5 microns. Use with air and inert gas. Max. vacuum is 29.9" Hg. Inlet is on the side and outlet is on the bottom.

Replacement elements for air intake are sold separately. *Polyester elements* remove 99% of particles down to 5 microns. *Paper elements* remove 99% of particles down to 2 microns. *HEPA elements* have greater efficiency for high-purity applications. They remove 99.9% of particles down to 0.3 micron but reduce the max. scfm of your filter.

For Air Exhaust—Install these on the outlet to prevent oil mist from escaping into your environment. They come with a fiberglass element that removes particles down to 0.3 micron. Use with air. Inlet is on the bottom and outlet is on the side. *Filters with 1 and 1 1/2 pipe size* have a max. pressure of 3 psi; *2 pipe size* has a max. pressure of 14.7 psi.

Replacement elements for air exhaust are sold separately. They are fiberglass and remove particles down to 0.3 micron.

■ Element is fiberglass.

High-Flow Vacuum Filters

Accommodate the flow capacity of large pipe for air and inert gas. Filters remove particles down to 5 microns. Housing is aluminum and steel; element is polyester. Max. vacuum is 29.9" Hg. Max. temp. is 220° F. Connections are NPT female. 9825K11 is 13" Ht. x 9" Dia.; 9825K14 is 18 7/8" Ht. x 13 1/2" Dia.

Pipe Size	Max. scfm @ 14.7 psi	Filters		Replacement Element	
2	175	9825K11	$459.82	5169K93	$42.85
4	520	9825K14	815.48	4399K55	71.35

Extended-Life Vacuum Filters

Spend less time on maintenance. These filters combine the long service life of a durable steel housing with high dirt-holding capacity. They remove particles down to 10 microns. Use with air and inert gas. Element is polyester. Max. vacuum is 29.9" Hg. Max. temp. is 200° F. Filters are 12 3/4" Ht. x 3 5/8" Dia. Connections are NPT female.

Pipe Size	Max. scfm @ 14.7 psi	Filters		Replacement Element	
1/2	15	4392K51	$310.92	4392K41	$65.38
3/4	26	4392K52	316.24	4392K41	65.38
1	40	4392K53	321.74	4392K41	65.38

Easy-View Vacuum Filters

Monitor the amount of debris in your filter—housing is a clear styrene blend. Filters remove particles down to 50 microns. Use with air, inert gas, and water. Element is Type 304 stainless steel. Max. vacuum is 29.9" Hg. Max. temp. is 125° F. Connections are NPT female. 6201K7 is 9 1/4" Ht. x 5 1/2" Dia.; 6201K8 is 14 1/8" Ht. x 5 1/2" Dia.

Pipe Size	Max. scfm @ 14.7 psi	Filters		Replacement Element	
3/4	4	6201K7	$152.80	6201K5	$45.98
3/4	15	6201K8	175.33	6201K6	53.86

Miniature Vacuum Filters

Use one of these filters in a tight spot or combine up to ten for a manifold application. They remove particles down to 30 microns. Use with air and nitrogen. Housing is aluminum; element is polyester. Max. vacuum is 29.8" Hg. Max. temp. is 140° F. Connections are NPT female. 6689K36 is 2 3/4" Lg. x 11/16" Wd.; 6689K37 is 2 3/4" Lg. x 1 1/8" Wd.

Pipe Size	Max. scfm @ 14.7 psi	Filters		Replacement Element	
1/8	1.8	6689K36	$31.75	6689K39	$10.07
1/4	7.1	6689K37	38.12	6689K41	10.90

For information about pipe size, see pages 2-3.

About Strainers and Selecting Screen Size

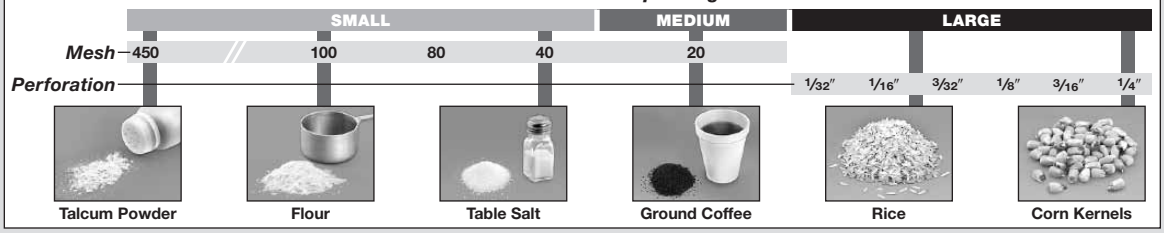
Install strainers before valves, pumps, and instrumentation to prevent damage from debris in your pipeline. They have a screen that is sized to trap the particles you wish to remove. Unthread the plug to clear debris without detaching pipe connections.

Selecting Screen Size

For Small or Medium Particles—Strainers have screens made of wire cloth. Screen size is determined by mesh size, which is the number of openings in a linear inch of the screen. For more information about wire cloth and mesh size, see page 433. ***20 mesh*** traps medium particles. It is the most commonly used screen size and is considered the industry standard.

For Large Particles—Strainers have screens made of perforated metal. Screen size is determined by perforation size, which is the actual diameter of the holes in the screen. Perforated screens are more rigid and durable than mesh screens for a longer service life in harsh environments. They are also good for maintaining flow when straining thick liquids.

Common Particle Sizes and Corresponding Screen Sizes



Bronze Y-Strainers

- Max. Pressure: Water, Oil, Inert Gas, and Diesel Fuel: 200 psi @ 70° F
  Steam: 125 psi @ 400° F
- Temp. Range: –20° to 400° F

Safeguard against damage to valves, pumps, nozzles, and steam traps from debris in your pipeline. Body is bronze and screen is Type 304 stainless steel. Connections are NPT female.

To Order: For *small and large particles*, please specify screen size: mesh or perforations.

Bronze Y-Strainers with Magnetic Plug

- Max. Pressure: Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 400 psi @ 70° F
  Steam: 235 psi @ 400° F
- Temp. Range: –20° to 400° F

Catch small ferrous particles—strainers have a magnet in the plug and a 40 mesh screen. Body is bronze and screen is Type 304 stainless steel. Connections are NPT female.

Pipe Size	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen	
1	4 1/8″	4 1/16″	1/4	4495K43	$231.70	4385K25	$38.76

Cast Iron Y-Strainers

- Max. Pressure: Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 400 psi @ 70° F
  Steam: 250 psi @ 406° F
- Temp. Range: –20° to 406° F

A rugged cast iron body provides strength and durability while protecting valves, pumps, and steam traps from debris. Screen is Type 304 stainless steel. Connections are NPT female.

To Order: For *small and large particles*, please specify screen size: mesh or perforations.

Brass Y-Strainers for Drinking Water

- Max. Pressure: 400 psi @ 70° F
- Temp. Range: 33° to 353° F

Trap and remove debris from pipelines. Strainers are for use with drinking (potable) water. Screen size is 20 mesh. Body is brass and screen is Type 304 stainless steel. Connections are NPT female.

Pipe Size	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen

High-Pressure Stainless Steel Y-Strainers

- Max. Pressure:
  High Pressure: Water, Oil, Inert Gas, Natural Gas, and Diesel Fuel: 1,400 psi @ 70° F
  Steam: 600 psi @ 1125° F
  Extreme Pressure:
  Water, Oil, and Diesel Fuel: 3,000 psi @ 70° F
  Steam: Not Rated
- Temp. Range:
  High Pressure: 33° to 1125° F
  Extreme Pressure: –20° to 450° F

Get exceptional corrosion resistance in a strainer built to withstand high pressure. Body is Type 316 stainless steel and screen is Type 304 stainless steel. Connections are NPT female.

To Order: Please specify screen size: mesh or perforations.

Bronze Y-Strainers with Solder-End Connections

- Max. Pressure:
  Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 400 psi @ 70° F
  Steam: 235 psi @ 400° F
- Temp. Range: –20° to 400° F

Block debris in applications that use copper tubing—connections are solder end (unthreaded) female. Body is bronze and screen is Type 304 stainless steel.

To Order: Please specify screen size: 20 or 40 mesh.

Tube Size★	Actual Tube OD	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen

★ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Compact Bronze T-Strainers

- Max. Pressure: Water: 250 psi @ 70° F
- Temp. Range: 32° to 180° F

With a smaller overall size than Y-strainers of the same pipe size, these are well suited to applications in close quarters. Body is bronze and screen is Type 304 stainless steel. Unthread the retainer cap to remove debris. Connections are NPT female.

To Order: Please specify screen size: 40 or 100 mesh.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
1/4	2 1/16"	1 11/16"	9998K32	$46.25	9998K22	$13.07

1/2	2 3/4"	2 5/8"	9998K34	66.87	9998K24	24.83

For information about strainers, see page 401. For information about pipe size, see pages 2-3.

Flanged Y-Strainers

- Max. Pressure for Water, Oil, Inert Gas, Acetone, and Diesel Fuel:
  Cast Iron: 200 psi @ 70° F
  Type 316 Stainless Steel: 275 psi @ 70° F
  Max. Pressure for Steam:
  Cast Iron: 125 psi @ 450° F
  Type 316 Stainless Steel: 150 psi @ 565° F
- Temp. Range:
  Cast Iron: –20° to 450° F
  Type 316 Stainless Steel: –20° to 565° F

Trap debris in high-flow lines with flanged pipe connections. Bolt strainers between two flanges of the same pipe size. Screen is Type 304 stainless steel.

Type 316 stainless steel strainers are more corrosion resistant than cast iron.

To Order: Please specify screen perforation size from those listed in the table.

Bronze Inline Strainers

- Max. Pressure for Water, Oil, and Inert Gas: 250 psi @ 70° F
- Temp. Range: 32° to 180° F

Use these strainers in place of regular fittings to catch debris in your pipelines. A union fitting on one end allows you to remove debris without detaching the pipe connection. Screen size is 40 mesh. Body is bronze, screen is Type 304 stainless steel, and seal is Buna-N. Connections are NPT female.

Pipe Size	Lg.	Strainer		Replacement Screen

Temporary Pipeline Strainers

- Max. Pressure for Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 285 psi @ 100° F
- Temp. Range: –45° to 800° F

Remove debris from new pipelines before installing equipment. Sandwich strainers between two flanges with the cone pointing in the direction of flow. Screen has 1/8" perforations. Body and screen are Type 304 stainless steel.

Polypropylene Y-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –20° to 150° F

Match the material of the pipe and fittings in your polypropylene system. Body is black fiberglass-reinforced polypropylene, screen is Type 316 stainless steel, and seal is EPDM. Connections are NPT female.

To Order: Please specify screen size: For 1/2, 3/4, 1, and 1 1/4 pipe sizes, specify 20, 40, or 80 mesh. For 1 1/2 and 2 pipe sizes, specify 6, 12, 20, 30, 50, 80, or 120 mesh.

Easy-Maintenance Plastic Y-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 40° to 140° F

A unique two-piece threaded body comes apart for cleaning without disconnecting your pipeline. Connections are NPT male.

Polypropylene strainer is more chemical resistant than acetal. Screen is polyester and seal is fluoroelastomer. Color is blue.

Acetal strainers have a threaded drain with a ball valve to control flow while cleaning. Seal is Buna-N. Screen is Type 316 stainless steel, except strainers with 20 and 450 mesh screens, which have a polyester screen. Color is black.

To Order: Please specify screen size: 20, 50, 75, 120, 200, or 450 mesh.

Compact Acetal Y-Strainers

- Max. Pressure for Water, Oil, Inert Gas, and Acetone: 125 psi @ 70° F
- Temp. Range: 32° to 180° F

Strain particles from pipelines in tight spaces. Screen size is 100 mesh. Body is acetal, screen is Type 304 stainless steel, and seal is EPDM. Color is black. Connections are NPT female.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
1/4	1 13/16"	2 1/4"	44305K25	$12.62	44305K19	$4.28

Corrosion-Resistant PVC and CPVC Y-Strainers

PVC with NPT Female Connections

- Max. Pressure for Water and Diesel Fuel: 150 psi @ 70° F
- Temp. Range: PVC: 40° to 140° F; CPVC: 40° to 190° F

All-plastic construction makes these strainers corrosion resistant and lightweight. Use with Schedule 80 pipe and fittings. Seal is fluoroelastomer. All have a threaded hex cap to access the screen for cleaning.

PVC strainers have a PVC screen. Color is dark gray. ***CPVC strainers*** withstand higher temperatures than PVC. Screen is CPVC. Color is light gray.

To Order: Please specify screen size: 1/32" or 1/16" perforations.

Easy-View PVC Y-Strainers

With PVC Screen

With Type 316 Stainless Steel Screen

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 40° to 120° F

A clear PVC body lets you monitor debris without disconnecting the pipeline.

Strainers with PVC screen are more corrosion resistant than strainers with Type 316 stainless steel screen. Seal is EPDM. They come with a set of NPT female and socket weld (unthreaded) union fittings for each pipe connection.

Strainers with Type 316 stainless steel screen are more durable than strainers with PVC screen. Seal is fluoroelastomer. Connections are NPT female.

To Order: Please specify screen size: 20 or 40 mesh.

High-Capacity Polypropylene T-Strainers with Drain Plug

1 1/4 and 1 1/2 Pipe Sizes

- Max. Pressure for Water, Ethylene Glycol, Acetone, and Sodium Nitrate: 150 psi @ 70° F
- Temp. Range: –20° to 150° F

Well suited for high-flow applications, an extra-long bowl and screen provide greater dirt-holding capacity than our other T-strainers. These strainers also have a threaded drain with plug for cleaning. Head and bowl are glass-reinforced black polypropylene, screen is Type 316 stainless steel, and seal is EPDM. Connections are NPT female.

Strainers with 3/4 and 1 pipe size have two tubes on top for mounting to provide extra stability.

To Order: Please specify screen size: 16, 30, 50, 80, or 100 mesh.

Polypropylene T-Strainers

With Clear Bowl

With Black Bowl

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

Clean out your strainer less often—a T-shape body provides greater dirt-holding capacity than Y-strainers. Strainers have a black glass-filled polypropylene head. Screen is Type 304 stainless steel and seal is EPDM. Connections are NPT female.

Strainers with clear bowl allow you to monitor debris without disconnecting your pipeline. Bowl is nylon.

Strainers with black bowl have a polypropylene bowl.

Optional fluoroelastomer seals are for use in oil applications.

To Order: For strainers and replacement screens, please specify screen size: 20, 50, or 80 mesh.

Chemical-Resistant Polypropylene T-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

With Polypropylene Screen

Made entirely of plastic to withstand exposure to mineral acids and salt solutions that corrode stainless steel. The T-shape body also provides greater dirt-holding capacity than Y-strainers. They have a clear nylon bowl so you can monitor debris without disconnecting your pipeline. Head is black glass-filled polypropylene and seal is EPDM. Connections are NPT female.

Strainers with polyethylene screen trap fine particles. They're also good for use in vacuum applications.

To Order: For strainers with polypropylene screen and replacement polypropylene screens, please specify screen mesh size.

Polypropylene T-Strainers with Push-to-Connect Tube Fittings

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

Filter debris from tubing lines. Push-to-connect fittings make a tight seal around flexible tubing. Strainers have a clear nylon bowl so you can view debris without disconnecting your pipeline. Head is black polypropylene, screen is Type 304 stainless steel, and seal is EPDM.

To Order: Please specify screen size: 20, 50, or 80 mesh.

Impact-Resistant Nylon T-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 0° to 125° F

With Clear Bowl

Combine the durability of an all-nylon body with the dirt-holding capacity of a T-strainer. Screen is Type 304 stainless steel and seal is Buna-N. Strainers have a white head. Connections are NPT female.

Strainers with clear bowl allow you to monitor debris without disconnecting your pipeline.

Optional fluoroelastomer seals are for use in oil applications.

To Order: For strainers and replacement screens, please specify screen size: 20, 50, or 80 mesh.

Easy-View Bronze Basket Strainers

- Max. Pressure for Water, Salt Water, and Diesel Fuel: 25 psi @ 70° F
- Temp. Range: 33° to 140° F

A clear plastic bowl allows you to monitor the collection of debris without stopping flow in your system. Basket has 3/32" perforations. Strainers have a bronze head, Type 304 stainless steel basket, and Buna-N seals. Use the drain at the bottom of the bowl for cleaning. Strainers come with brass brackets for wall mounting. UL listed. Connections are NPT female.

Replacement Basket

- Max. Pressure for Water, Oil, and Diesel Fuel: 200 psi @ 100° F
- Temp. Range: 20° to 200° F

A fundamental component of high-flow industrial processes, basket strainers hold considerably more debris than Y- and T-strainers. They have a removable cover and a threaded drain with plug for cleaning. Basket is Type 316 stainless steel.

Cast iron strainers have a Buna-N seal.

Bronze strainers are stronger and more corrosion resistant than cast iron. Seal is Buna-N.

Type 316 stainless steel strainers are more corrosion resistant than bronze or cast iron. Seal is chemical-resistant fluoroelastomer.

Strainers with ANSI Flange Connections— Have brackets on the bottom so you can bolt them to the floor for stability. *Cast iron strainers* have Class 125 flanges. *Bronze* and *Type 316 stainless steel strainers* have Class 150 flanges.

To Order: For strainers and replacement baskets, please specify screen size: 20, 40, or 100 mesh or 1/16″, 1/8″, or 3/16″ perforations. For replacement seals, please specify Buna-N or fluoroelastomer.

Easy-Swap Dual-Basket Strainers

With NPT Female Connections

With ANSI Flange Connections

Replacement Basket

- Max. Pressure for Water, Oil, and Diesel Fuel: 150 psi @ 70° F
- Temp. Range: 20° to 150° F

Don't shut down your operation to service your strainer. These have a dual-basket body so you can divert flow to one basket while you work on the other. Strainers have a removable cover and threaded drains with plugs for cleaning. Baskets are Type 316 stainless steel. Strainers have brackets on the bottom, so you can bolt them to the floor for stability.

Cast iron strainers have a Buna-N seal.

Bronze strainers are stronger and more corrosion resistant than cast iron. Seal is Buna-N.

Type 316 stainless steel strainers are more corrosion resistant than bronze or cast iron. Seal is chemical-resistant fluoroelastomer.

Strainers with ANSI Flange Connections— *Cast iron strainers* have Class 125 flanges. *Bronze* and *Type 316 stainless steel strainers* have Class 150 flanges.

To Order: For strainers and replacement baskets, please specify screen size: 1/32″ or 1/16″ perforations. For replacement seals, please specify Buna-N or fluoroelastomer.

Flanged Cast Iron Basket Strainers

- Max. Pressure for Water and Oil: 200 psi @ 100° F
- Temp. Range: –20° to 150° F

Capture and remove particles from flanged pipelines. Strainers have a removable cover and a threaded drain with plug for cleaning. Basket has 1/8" perforations. Body is cast iron; meets ASTM A126, Class B. Basket is Type 304 stainless steel and seals are Buna-N. Connections are ANSI Class 125 flanges. For ANSI flange dimensions, see page 406.

Pipe Size	Lg.	Ht.	Strainer		Replacement Basket

ASME-Code Stainless Steel Basket Strainers

- Max. Pressure for Water, Oil, Inert Gas, Diesel Fuel, and Natural Gas: 200 psi @ 100° F
- Temp. Range: –20° to 150° F

Constructed for use with boilers and pressure vessels, these strainers meet ASME Code Section VIII and ANSI B16.5. Body is Type 316 stainless steel for excellent corrosion resistance. Strainers have a removable cover and a threaded drain with plug for cleaning. Basket is Type 304 stainless steel and seals are fluoroelastomer. Connections are NPT female.

To Order: Please specify screen size: 1/16" or 1/8" perforations.

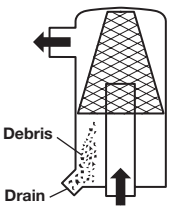
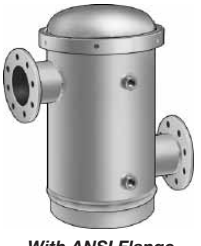
Self-Cleaning Stainless Steel Basket Strainers



With NPT Male Connections



With ANSI Flange Connections

- Max. Pressure for Water:
  NPT Male Connections: 125 psi @ 70° F
  ANSI Class 150 Flange Connections: 150 psi @ 70° F
- Temp. Range: 32° to 135° F

Spend less time on maintenance—these strainers have an inverted basket design that allows debris to fall into the drain as it collects. They also create a minimal pressure drop, which saves energy. Body is Type 304 stainless steel, basket is Type 316 stainless steel, and seals are EPDM. Strainers have two 1/4 NPT female gauge ports so you can measure differential pressure, which indicates when the basket needs to be cleaned or replaced. Drain is 1 1/2 NPT male. For ANSI flange dimensions, see page 406.

To Order: Please specify screen size: 16, 30, 40, 60, 100, or 200 mesh.

Easy-to-Install Plastic Basket Strainers

Single Basket
Easy-View Polyester

Dual Basket

- Max. Pressure for Water, Oil, and Diesel Fuel:
  PVC and CPVC: 150 psi @ 70° F
  Polyester: 100 psi @ 70° F
- Temp. Range: PVC: 40° to 140° F
  CPVC: 40° to 180° F
  Polyester: 34° to 120° F

Union fittings make these strainers easy to install and allow for maintenance without detaching your pipe connections. They have two outlets for installation in inline or parallel pipe connections. Cover and drain are threaded for easy access for cleaning. Seals are fluoroelastomer. Strainers come with a set of NPT female and socket weld (unthreaded) union fittings for each pipe connection.

Single-basket strainers come with a plug for the unused outlet.

Dual-basket strainers allow for maintenance without interrupting flow. Baskets are connected with a diverting valve. Turn the valve handle to direct flow to one basket while you clean the other.

PVC strainers have a PVC body and basket. ***CPVC strainers*** handle higher temperatures than PVC and polyester. Body and basket are CPVC. ***Easy-view polyester strainers*** have a clear polyester body. Basket is PVC.

To Order: Please specify screen size: 1/32", 1/16", 1/8", or 3/16" perforations.

Slimline Cast Iron Suction Strainers

- Use with oil and diesel fuel
- Max. Temp.: 225° F

Designed for installation through a tank wall, these strainers have a narrow diameter and both male and female threads. You can also install at the top of a tank for connection to a standpipe. They're often used in hydraulic systems. Body is cast iron and steel; screen is Type 304 stainless steel. Connections are NPT; tank connection is male and pipe connection is female.

To Order: Please specify screen mesh size from those listed in the table.

Suction Strainers

A

B&C

D

E

- Use with:
  Styles A and B: Oil and diesel fuel
  Styles C and D: Oil
  Style E: Water and oil
- Max. Temp.: 270°F

Filter hydraulic fluids from a reservoir, tank, or other small container. Screen is Type 304 stainless steel. Connection is NPT female.

Styles A-C—Connection is aluminum, which is lighter in weight than steel or stainless steel.

Style D—Connection is steel, which is stronger than aluminum.

Style E—Connection is Type 304 stainless steel for greater corrosion resistance than aluminum or steel.

To Order: Please specify screen mesh size from those listed in the table.

High-Capacity Nylon Suction Strainers

Female Connection

Male Connection

- Use with oil
- Max. Temp.: 225°F

The tallest of our suction strainers, these have a large surface area to retain more dirt for use in high-flow applications. Also known as sump strainers, they're often used in hydraulic applications. Connection is black glass-reinforced nylon, screen is Type 304 stainless steel, and end cap is aluminum.

To Order: Please specify screen mesh size from those listed in the table.

■ Has a pleated screen for higher flow.

Large-Particle Suction Strainers

F

G

H

J

K

- Use with water
- Max. Temp.: Not rated

Keep debris from entering your line. Strainers have heavy duty construction that withstands a high suction force. Connection is female. Strainers with NPS, NPSM, and NPSC thread types are compatible with NPT male threads.

For information about strainers, see page 401. For information about pipe size, see pages 2-3.

Miniature Nylon Suction Strainers

- Use with water, oil, and diesel fuel
- Max. Temp.: 275° F

A glass-filled black nylon connection is combined with a Type 304 stainless steel screen for good corrosion resistance.

To Order: Please specify screen mesh size from those listed in the table.

Miniature PVC Suction Strainers

- Use with water
- Max. Temp.: 120° F

Use these strainers with water softeners, pressure washers, and in hydraulic systems. A black PVC connection is paired with a Type 304 stainless steel screen for good corrosion resistance. Connection is female; it fits NPT male threads.

To Order: Please specify screen mesh size from those listed in the table.

For Pipe Size	Ht.	Dia.	Available Screen Mesh Sizes		
1/4	1 1/8"	1 1/2"	20, 30, 40, 50, 80	98755K11	$2.57
3/8	1 1/4"	1 1/2"	20, 30, 40, 50, 80	98755K12	2.57

All-Nylon Suction Strainers

- Use with water, salt water, oil, and paint
- Max. Temp.: 225° F

For applications that corrode metal, use one of these all-nylon strainers. Screen size is 30 mesh. Color is black.

Bronze Suction Strainers with Check Valve

- Use with water
- Temp. Range: 32° to 190° F

Often used in water-delivery applications, these strainers block particles from entering your line and stop backward flow. They're also known as foot valves. Screen has 7/64" perforations. Body is bronze and screen is Type 430 stainless steel. Check valve has a Buna-N seal. Max. pressure is 400 psi. Connection is NPT.

Cast Iron Suction Strainers with Check Valve

- Use with water and oil
- Temp. Range: 32° to 150° F

Also known as foot valves, use these rugged strainers to stop debris from entering your pipeline and prevent backward flow. Screen has 5/16" Dia. holes. Body is cast iron. Check valve has a leather flapper. Max. pressure is 10 psi. Connection is NPT female.

Pipe Size	Ht.	Dia.	Strainer		Replacement Flapper

PVC Suction Strainers with Check Valve

- Use with water, oil, and diesel fuel
- Temp. Range: 40° to 140° F

Stop large particles from entering your line while preventing backward flow. Also known as foot valves. Screen has 3/16" perforations. Body and screen are PVC. Check valve has a fluoroelastomer seal. Max. pressure is 150 psi.

Strainers with 1/2 to 2 pipe size come with an NPT female and a socket weld (unthreaded) union fitting for each pipe connection; *3 and 4 pipe size* come with an NPT female union fitting.

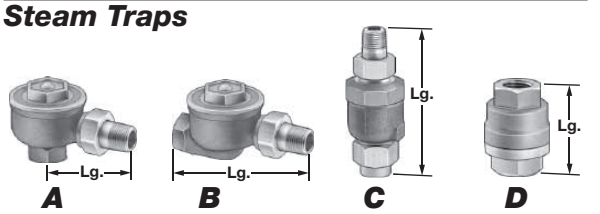
Cut-to-Size Acetal Suction Strainer with Check Valve

- Use with water
- Temp. Range: 32° to 180° F

A convenient replacement part to keep on-hand, this strainer has NPT male threads for 3/4, 1, 1 1/4, and 1 1/2 pipe sizes. Use a hacksaw to remove the pipe sizes that are smaller than you need. Also known as a foot valve, the strainer has a check valve to stop backward flow. Screen has 3/32″ perforations. Body is white acetal. Check valve has a neoprene seal. Overall size is 1 15/16″ Dia. x 7″ Ht.

4492K121 ..... $25.00

Steam Traps



Increase the efficiency of your radiator by venting cool air—these compact steam traps open and close based on temperature. Also known as thermostatic steam traps, they are often used with convection heaters, drip lines, and risers. Connections are NPT.

Style A are for 90° pipe connections. Inlet is male and outlet is female; install with the outlet pointing down.

Style B are for horizontal pipe. Inlet is male and outlet is female.

Styles C&D are for vertical pipe; install with the outlet pointing down. *Style C* have a male inlet and female outlet. *Style D* have a female inlet and outlet.

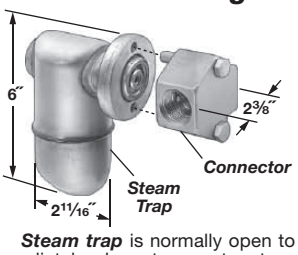
Versa-Mount High-Flow Steam Traps



Get near-continuous condensate discharge in vertical or horizontal pipe. Install the connector in either direction—steam trap swivels on the connector so it can be positioned vertically.

Connector and steam trap are sold separately. Choose the connector that fits your line, and attach the steam trap with the included bolts. Position steam trap vertically after mounting.

Steam trap is normally open to release condensate; it closes immediately when steam enters to prevent energy loss. Also known as an inverted-bucket steam trap. Body is Type 304 stainless steel. Max. pressure is 200 psi. Max. temp. is 800° F. Condensate capacity is 500 lbs./hr.

Connectors are Type 304 stainless steel.

Steam Trap	**4382K31**	$333.05

3/4 NPT Female Connector	**4382K33**	157.19

High-Flow Steam Traps

Cast Iron

Type 304 Stainless Steel

Also known as inverted-bucket steam traps, these provide near-continuous discharge to accommodate high condensate levels. Traps are normally open to release condensate. They close immediately when steam enters to prevent energy loss. Install in a horizontal pipeline. Connections are NPT female.

Type 304 stainless steel steam traps are more corrosion resistant than cast iron.

Super-Energy-Saving Steam Traps

E&G

F

Maximize the energy from your steam line. Also known as thermodynamic steam traps, these discharge condensate when it's close to steam temperature for minimal energy loss. They also minimize noisy water hammer. Often used with tanks and vats, steam mains, steam tracers, presses, and heating equipment. Body is stainless steel. Max. temp. is 800° F. Install in a horizontal pipeline. Connections are NPT female.

(F) Steam traps with strainer stop debris from moving down the pipeline. Screen has 1/32″ perforations.

(G) Zero-steam-loss steam traps are insulated to increase energy efficiency.

For information about pipe size, see pages 2-3.

Energy-Saving High-Flow Steam Traps

Vent cool air and condensate to increase energy efficiency in your steam lines. The vent on these steam traps is normally open, allowing condensate and air to flow out. It closes immediately when steam enters to prevent energy loss. Also known as thermostatic steam traps, they're ideal for use with heat exchangers, air-heating coils, and drip stations in steam lines. Traps are cast iron. Connections are NPT female.

Steam traps for inline or parallel pipe connection have an inlet and an outlet on each side to connect inline or parallel steam and condensate lines. Include two plugs for the unused ports.

Steam traps for parallel pipe connection have an inlet and outlet on the same side to connect parallel steam and condensate lines.

Steam traps for inline pipe connection have an inlet and outlet on opposite sides to connect inline steam and condensate lines.

Sanitary Steam Filters with Reusable Cartridge

Follow health and safety practices for food and dairy applications. These steam filters meet 3-A sanitary standard requirements. They have a carbon cartridge that removes 95% of particles down to 2 microns. Cartridge can be cleaned for reuse. Max. pressure is 100 psi. Max. temp. is 360° F. Connections are NPT female.

Pipe Size	Steam Capacity @100 psi, lbs./hr.	Lg.	Ht.	Filter		Replacement Cartridge	
1/2	160	9 3/16"	8 11/16"	44105K71	$535.38	44105K11	$163.02

Maintenance-Free Moisture/Particle Separators for Air and Steam Lines

Get nothing but clean dry air, inert gas, or steam—separators remove 99% of moisture and particles down to 10 microns. Plus they have no baskets or cartridges to clean or replace. Particles fall to the bottom of the separator and are discharged through the drain trap with minimal pressure loss.

Body is cast iron. Max. temp. is 450° F. Separators meet ASME Code Section VIII for pressure vessels. Connections are NPT female.

For Low Pressure— Smaller and more efficient than separators for medium pressure, a baffle separates contaminants from your media.

For Medium Pressure— Separators use centrifugal flow to remove contaminants from your media. They have a 1/4 NPT female vent on top.

Oil-Mist-Eliminating Filters

Stop oil and smoke from exhausting into your environment. Often used with small oil-sealed vacuum pumps, these remove 99% of particles down to 0.3 micron. Filters have a nickel-plated steel housing and a fiberglass element that's reinforced with epoxy-coated steel wire. Max. pressure is not rated. Max. temp. is 220° F. Connection is NPT male.

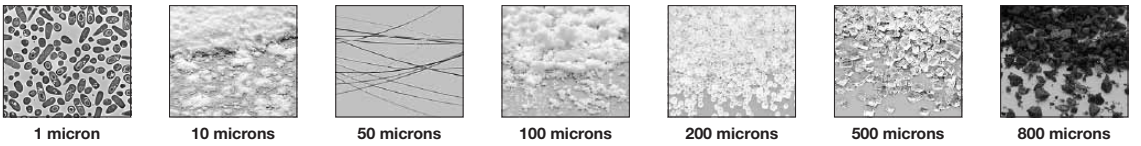
About Filters and Particle Sizes

Use a filter to reduce contaminants in your process media. Filters trap particles of a specific size and larger. Contaminants are so small that the particle size is measured in microns—a unit of length equal to one millionth of a meter or 0.0000394 of an inch.

Common Particle Sizes in Microns



Water Filters

For information about pipe size, see pages 2-3.

High-Temperature Water Filters

Remove particles from hot water lines. Water filters have a max. temperature of 160° F. Housing is glass-reinforced nylon. Water filters with a 1/2 pipe size have a black housing; 3/4 pipe size have an orange/red housing. Connections are NPT female.

Pipe Size	Max. Flow, gpm	Overall Dia.	Overall Ht.	Max. psi	Particle Size, microns	Water Filters		Replacement Cartridges OD	Replacement Cartridges Ht.		
Reduces Particles											
1/2	2	4 3/8"	12"	125	5	5190K62	$82.40	2 1/2"	9 7/8"	8147K52	$6.00

Quick-Change Water Filters

Swap cartridges with a turn of your wrist—filters come with a cartridge that connects directly to the filter head. Water flow stops automatically when the cartridge is disconnected. Filter head is white polypropylene. Maximum temperature is 100° F. Connections are push-to-connect tube fittings.

For Tube OD	Max. Flow, gpm	Overall Dia.	Overall Ht.	Max. psi	Particle Size, microns	Water Filters		Replacement Cartridges OD	Replacement Cartridges Ht.

Easy-to-Clean Water Filters

3/4 and 1 Pipe Size

2 Pipe Size

There's no need to stop your water supply and disassemble these filters for cleaning. Turn the handle to flush debris from the cartridge and purge dirty water through the drain at the bottom; drain is threaded for connection to pipe or hose. Bowl is clear polycarbonate so you can monitor debris collecting in the cartridge without stopping flow.

Water filters for 3/4 and 1 pipe size have NPT male threaded connections. Maximum temperature is 120° F.

Water filter for 2 pipe size has a female unthreaded socket end. Connect to pipe using a PVC primer and cement (see series 74605A on pg. 3466). Maximum temperature is 73° F.

Drinking Water Filters

Prepare water for use in beverages, food preparation, and ice production. Both the water filter and replacement cartridge meet NSF/ANSI Standard 61 for use with drinking (potable) water. They also prevent scale formation, which can damage equipment. Housing is polypropylene and has two 1/4" slots for mounting. Maximum temperature is 100° F. Filter comes with a flow-control valve, adapters, and a 5-ft. length of 3/8" tubing for under-sink installation between a water line and faucet. Pipe connections are NPT female.

Pipe Size	Max Flow, gpm	Overall Dia.	Overall Ht.	Max. psi	Particle Size, microns	Water Filter		Replacement Cartridge OD	Replacement Cartridge Ht.		
Reduces Algae, Taste, Odor, Lead, and Iron—Meets NSF/ANSI Standards 42 and 53

Deionized Water Filters

Made from pure polypropylene, this filter housing doesn't contain fillers, colorants, or plasticizers that can leach into deionized water. It comes with a cartridge that filters particles from your deionized water line. Filter housing is opaque white so it blocks light to minimize algae growth. Maximum temperature is 100° F. Connections are NPT female.

Pipe Size	Max Flow, gpm	Overall Dia.	Overall Ht.	Max. psi	Particle Size, microns	Water Filter		Replacement Cartridge OD	Replacement Cartridge Ht.		
Reduces Particles

For information about pipe size, see pages 2-3. For information about particle size, see page 412.

Water Filters

Reduce undesirable substances in your water. Filters have a pressure release so you can replace cartridges safely. Max. temperature is 125° F, unless noted. Connections are NPT female.

Filters with Easy-View Bowl—A clear styrene bowl lets you monitor debris collecting in the cartridge without stopping flow.

Filters with flow-control valve allow you to stop flow to replace the cartridge. 4496K51 comes with adapters for 3/4" compression tube fittings so you can route flow around a clogged cartridge.

Filters with Light-Blocking Blue Bowl—An opaque polypropylene bowl minimizes algae growth.

Filters with clog indicator have a differential pressure gauge that shows when it's time to replace a dirty cartridge. They include a mounting bracket. This product cannot be sold in California, Iowa, and Wisconsin.

Under-the-Sink Drinking Water Filters with Tank

Four-Stage Filter

Also known as reverse osmosis water filters, these meet NSF/ANSI Standard 58 to reduce particles, Total Dissolved Solids (TDS), fluoride, lead, selenium, and copper. Filters come with a tank to store filtered water, as well as a faucet, tubing, wrench, and fittings for installation.

Cartridge housings are polypropylene. First-, second-, and third-stage cartridges are 2 1/2″ OD × 9 3/4″ Ht. Pressure range is 40- 90 psi. Max. temp. is 100° F.

Three-stage filter produces up to 7.5 gallons per day. The housing has an overall size of 14″ Wd. × 5″ Dp. × 13″ Ht.; tank is 12″ Dia. × 17″ Ht. Reverse osmosis cartridge is 2″ OD × 12″ Ht.

Four-stage filter has an additional 0.5 micron cartridge to protect the reverse osmosis cartridge from damage caused by particles and chlorine. The filter produces up to 9.5 gallons per day. Housing has an overall size of 13 1/2″ Wd. × 5 1/2″ Dp. × 17 1/4″ Ht.; tank is 9″ Dia. × 13 1/2″ Ht. Reverse osmosis cartridge is 2 1/4″ OD × 9 3/4″ Ht. This product cannot be sold in California.

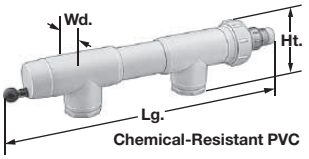
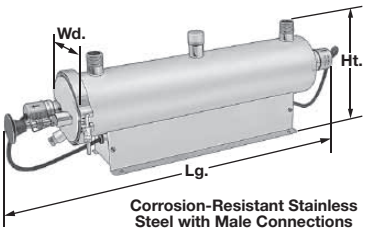
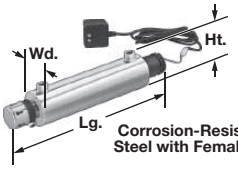
UV-Light Water Purifiers



Chemical-Resistant PVC



Corrosion-Resistant Stainless Steel with Male Connections



Corrosion-Resistant Stainless Steel with Female Connections

Treat water without using heat or chemicals—purifiers use ultraviolet light. All come with a UV bulb that's rated for 10,000 hours of service. They operate on 120 volts AC @ 60 Hz and have a 5 1/2-ft. cord with a three-prong plug, except stainless steel purifiers with female connections have an 8-ft. cord. Connections are NPT, except pipe size 2 PVC filter has socket weld connections.

Chemical-resistant PVC purifiers have a maximum temperature of 150° F.

Corrosion-resistant stainless steel purifiers have a maximum temperature of 105° F.

Water Softeners

Protect food-service appliances and process equipment from damage caused by hard water—softeners remove calcium chloride, which is the primary cause of scale formation. Water softeners have polypropylene housing and come with a bracket for mounting. Max. temperature is 100° F. Connections are NPT female.

Pipe Size	Max. Flow, gpm	*Overall* Dia.	*Overall* Ht.	Max. psi	Max. Calcium Chloride, grains	Water Softeners		Replacement Cartridges OD	Replacement Cartridges Ht.

Water Deionizers

Improve water quality for use in critical applications and sensitive equipment. Deionizers remove dissolved ions, which reduces the electrical conductivity and scale-forming minerals in water. Bowl is clear polypropylene so you can see the cartridge; replace your cartridge when the media changes color. Deionizers have a pressure release so you can replace cartridges safely. Maximum temperature is 100° F. Connections are NPT female.

Disposable Water Deionizers

Shown with Mounting Bracket

Designed for use in low-flow applications without back pressure, these have barbs on each end for connection with tubing. Housing is clear polypropylene so you can see the media; replace your cartridge when the media changes color. Maximum temperature is 120° F. Pressure is not rated.

Extended-life deionizer produces a larger quantity of water than the high-purity deionizer for a longer service life. Water quality has an average resistivity of 50,000 ohms.

High-purity deionizer produces a higher water quality than the extended-life deionizer; water quality has an average resistivity of 1,000,000 ohms.

Quick-Change Water Deionizers

One-Cartridge Deionizer

A quarter turn releases the cartridge in these deionizers for speedy replacement. Cartridges have a polypropylene housing. Maximum temperature is 120° F.

Extended-life deionizers produce a larger quantity of water than the high-purity deionizer for a longer service life. Water quality has an average resistivity of 50,000 ohms. *Two-cartridge deionizer* comes with a faucet and a digital meter that indicates when to replace the cartridge. Meter operates on 120 volts AC @ 60 Hz and has a 6-ft. cord with a three-prong plug.

High-purity deionizer produces a higher water quality than the extended-life deionizers; water quality has an average resistivity of 1,000,000 ohms.

Wall-Mount Water Deionizers with Indicating Light

The sensor on this deionizer gives a clear signal when it's time to replace the cartridge—an indicating light turns from green to red when the water quality rises above a Total Dissolved Solids (TDS) measurement of 50 ppm. One cartridge can process an average of 600 gallons, depending on your water quality. The deionizer comes with everything you need for operation including a 10-ft. inlet hose, a 20-ft. outlet hose, and a bracket with two 3/8" dia. holes for wall mounting. The indicating light operates on two D batteries (included). Maximum temperature is 90° F. Connections are garden hose thread (GHT) male.

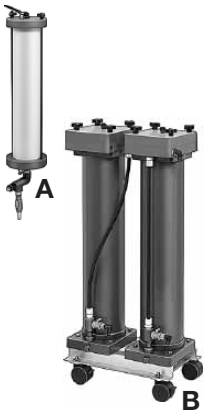
High-Capacity Water Deionizers with Indicating Light



Generate a large supply of deionized water on demand. Deionizers have a light that indicates when you should replace the filter media. Housing is PVC. Maximum temperature is 100° F. Deionizers come with two lengths of tubing for the inlet and outlet connections. They operate on 120 volts AC @ 60 Hz and have an 8 1/2-ft. cord with a two-prong plug. Connections are for tubing; inlet is a compression fitting and outlet is barbed.

Style A come with one pack of filter media, unless noted, and a bracket for wall mounting. **Style B** comes with four packs of filter media and has casters on the bottom for mobility.

Extended-life deionizers produce a larger quantity of water than the ultrapure deionizers for a longer service life. Water quality has an average resistivity of 4,000,000 ohms.

Ultrapure deionizers produce a higher water quality than the extended-life deionizers; water quality has an average resistivity of 10,000,000 ohms.

Pipe- & Tube-Fitting Filters

For information about pipe size, see pages 2-3. For information about particle size, see page 412.

Disposable Tube-Fitting Filters

A&B

C

D

Ensure samples are contaminant-free for consistent, accurate quality analysis. Filters are also used to protect sensitive process components, such as flow controls and valves.

(A-C) With Easy-View Housing—Clear nylon housing allows you to monitor dirt accumulation. Max. temperature is 230°F. *Style B* is good for trapping oil in air lines; when the filter becomes saturated, it changes from white to red to indicate that it should be replaced.

(D) With Chemical-Resistant Housing—Housing is PVDF, which is more chemical resistant than nylon and withstands higher temperatures. Max. temperature is 275°F. Color is blue.

Lab-Testing Disposable Tube-Fitting Filters

Use these filters with liquids and inert gases in sample testing applications. Housing is polypropylene. Max. temperature is 265°F. Connections are barbed for tubing.

High-purity filters are sterilized and come sealed and packaged individually.

Solvent-resistant filters withstand reagents and organic solvents, making them good for use in research testing.

High-flow filters are good for processing water-based and solvent samples.

Super-High-Flow Filter Cartridge Housings and Cartridges

Accommodate flow in high-volume water filtering applications. Housing and cartridges are sold separately.

Housing is Type 316L stainless steel for excellent corrosion resistance. It has two pressure gauges to indicate when it's time to replace a dirty cartridge. Housing also has an easy-access clamp cover and two ½ NPT female drains. Cover seal is Buna-N. Pipe connections are NPT male.

Cartridges are pleated to provide a large surface for high dirt retention. Made of polyester, they can be cleaned and used again.

Plastic Filter Cartridge Housings

With Easy-View Bowl

With Light-Blocking Blue Bowl

Filter contaminants from water lines. Housings have a pressure release (unless noted) so you can replace cartridges safely. Use cartridges that are open on both ends and have a 1″ ID, unless otherwise stated. Connections are NPT female.

With Easy-View Bowl—A clear styrene bowl lets you monitor debris collecting in the cartridge without stopping flow.

With Light-Blocking Bowl—An opaque bowl minimizes algae growth. **Blue bowl** is polypropylene; **black bowl** is glass-reinforced nylon, which withstands higher temperatures than polypropylene.

With High-Purity Bowl—Often used in semiconductor applications, housings are made of pure polypropylene without any fillers or additives. Color is translucent white. 44195K12 and **K22** use cartridges with an O-ring end cap.

■ Uses 3¾″ high cartridges. ▲ Drain is ¼ NPT female. ♣ Cover seal is EPDM.

High-Flow Multiple-Filter-Cartridge Housings

With Easy-Access Clamp Cover

With Tight-Seal Bolt Cover

Designed for use in high-volume pipe lines, housings are Type 304 stainless steel for good corrosion resistance. Use with cartridges that are open on both ends and have a 1″ ID. Connections are NPT male.

Housings with easy-access clamp cover can be used with a variety of cartridge types. Cover seal is Buna-N. Drain is ½ NPT female. Pipe connections are on the sides.

Housings with tight-seal bolt cover are for use with high-capacity pleated cartridges for high dirt retention. Cover seal is EPDM. Drain is 1 NPT male. Connections are on the bottom.

High-Temperature Filter Cartridges

Reduce particles and rust in applications with high- temperature liquids. Also known as string-wound cartridges, these have good dirt-holding capacity. Cartridges are open on both ends and have a 1″ ID.

Rayon and **bleached cotton** cartridges are made from FDA-compliant materials.

Extended-Life Filter Cartridges

Replace filter cartridges less frequently. Also known as string-wound cartridges, these have a sheet of filter media between the layers of string for greater dirt-holding capacity than other string-wound cartridges. Use them to trap particles and rust in your pipeline. All are made from FDA-compliant materials. Cartridges are open on both ends and have a 1″ ID.

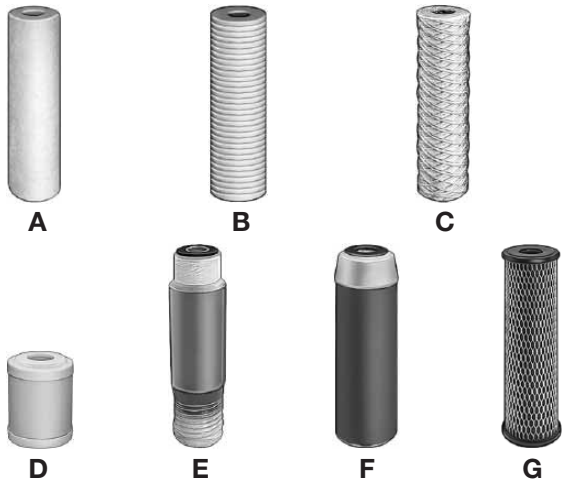
Water Filter Cartridges



Use these cartridges in water filters to reduce contaminants in your line. All have a 1″ ID.

Styles A-C are made of polypropylene. They're commonly used as the first stage of water filtration. Cartridges are open on both ends.

Styles D-G use carbon to treat water quality. *Styles D, E,* and *G* are open on both ends, unless noted. *Style F* is open on one end and closed on the other.

Extra-Tall Filter Cartridges

H

J

Sized to fit tall housings, use these cartridges to remove particles and rust from liquid process lines. Cartridges are open on both ends and have a 1″ ID.

(H) Rayon cartridges are made from FDA-compliant materials.

(J) High-capacity cartridges are pleated, which creates a large surface area for high particle retention. They're made from FDA-compliant materials.

Scale- and Corrosion-Inhibiting Filter Cartridges

Prolong the service life of water-processing and food service equipment—the phosphate in these cartridges dissolves slowly in water to prevent the formation of scale and rust particles of 25 microns and larger. Cartridges are made from FDA-compliant materials. They're open on both ends and have a 1″ ID.

Deionizing Water Filter Cartridges

Remove ions from your water supply for use in high-purity electronics and manufacturing applications. Max. temperature is 90° F. Cartridges are open on both ends and have a 1″ ID.

High-capacity cartridges have a longer service life than the ultrapure cartridges—they produce a larger quantity of water, but at a lower quality. Water quality has a resistivity of at least 20,000 ohms.

Ultrapure cartridges produce a higher water quality than the high-capacity cartridges; water quality has a resistivity of at least 14,000,000 ohms.

High-Capacity Filter Cartridges with O-Ring End Cap

Closed Bottom

Closed Bottom with Fin

Ensure high-efficiency filtration in your high-purity applications. These cartridges have an O-ring end cap for a tight seal that prevents liquids from moving through the filter housing without passing through the filter cartridge. They only fit in housings designed for cartridges with O-ring end caps. O-rings are EPR rubber. Cartridges are made from FDA-compliant materials. They have an open top, closed bottom, and a 1″ ID.

Closed bottom with fin cartridges are designed for multi-cartridge housings; the fin helps you align the cartridge for a secure fit in the housing.

For information about particle size, see page 412.

High-Capacity Filter Cartridges

Replace filter cartridges less frequently—a pleated surface provides a large area for high dirt retention. All are open on both ends. Cartridges with a 2½"-4½" OD have a 1" ID; cartridges with a 7¾" OD have a 2¾" ID.

Cartridges used for drinking water meet NSF/ANSI Standard 61.

Plastic Filter Bag Housings and Filter Bags

With Easy-View Bowl

With Light-Blocking Bowl

Choose plastic for a lightweight, corrosion-resistant housing to filter contaminants from liquid process lines. Housings come with a pressure gauge and a polypropylene strainer basket that supports the filter bag. Filter bags are sold separately. Pipe connections are NPT female. Housings with two pipe sizes are dual threaded for connection to either size.

With Easy-View Bowl—A clear styrene bowl lets you monitor debris collecting in the cartridge without stopping flow. Cover seal is Buna-N.

With Light-Blocking Bowl—An opaque bowl minimizes algae growth. Cover seal is Buna-N. **Blue bowl** is polypropylene; **black bowl** is glass-reinforced nylon, which withstands higher temperatures than polypropylene.

With High-Purity Bowl—Housings are made of virgin polypropylene without additives or fillers to ensure filtered liquids remain free from contamination. Cover seal is silicone. Color is translucent white.

High-Flow Plastic Filter Bag Housings and Filter Bags

Standard

High Strength

Designed for use in high-volume pipelines, polypropylene construction keeps these filter housings free from corrosion. They come with a polypropylene strainer basket that supports the filter bag. Filter bags are sold separately. Connections are NPT female.

Standard housing is blue. Strainer basket has 9⁄64″ perforations. Cover seal is Buna-N.

High-strength housings are made of gray glass-reinforced polypropylene for durability in harsh environments. They have union fittings for easy installation and maintenance without detaching your pipe connections. Housings have an inlet and an outlet on each side to connect inline or parallel lines; they include two plugs for the unused ports. Strainer basket has 5⁄16″ × 1″ openings. Cover seal is fluoroelastomer. Base has mounting slots so you can bolt it to the floor for stability.

Filter Bag Housings and Strainer Baskets

The most popular of our filter bag housings, these have a large flow capacity and heavy duty construction. Both steel and stainless steel housings come with a Type 304 stainless steel strainer basket to support the filter bag; basket has 9/64" perforations. Housings have a drain with plug and three 1/4 NPT female gauge ports, unless noted. Cover seal is fluoroelastomer. Max. temperature is 400°F. Bolt legs to the floor for stability. Connections are NPT female. Type 304 stainless steel housings are more corrosion resistant than steel.

Replacement strainer baskets cannot be used with a filter bag, except baskets with 9/64" perforations. Made of Type 304 stainless steel.

Baskets for large particles are made from perforated metal. They're available in a range of perforations from 1/4" (corn kernels) to 1/16" (rice).

Baskets for small particles are made from wire mesh. They're available in a range of mesh sizes from 20 mesh (ground coffee) to 150 mesh (flour).

Also Available: Replacement cover kit. Please ask for 5168K888 and specify housing dimensions and cover style.

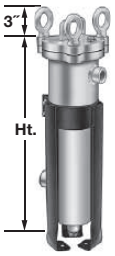
■ Housing has two 1/4 NPT female gauge ports.

Lightweight Filter Bag Housings



Use an aluminum housing for good corrosion resistance at a lighter weight than steel or stainless steel. They come with a Type 304 stainless steel strainer basket that supports the filter bag; it has 9/64″ perforations. Housings have a threaded drain with plug and two 1/4 NPT female gauge ports, unless noted. Cover seal is fluoroelastomer. Max. temperature is 250° F. Bolt legs to the floor for stability. Connections are NPT female.

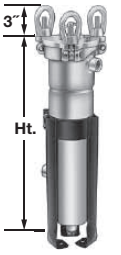
★ Housing has one 1/4 NPT female gauge port.

Corrosion-Resistant Filter Bag Housings



A Type 316 stainless steel housing and strainer basket provide exceptional corrosion resistance for a long service life in harsh environments. Strainer basket supports the filter bag; it has 9/64″ perforations. Housings have a threaded drain with plug and one 1/4 NPT female gauge port, unless noted. Cover seal is fluoroelastomer. Max. temperature is 250° F. Bolt legs to the floor for stability. Connections are NPT female.

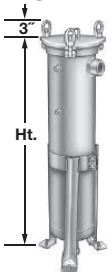
▲ Housing has three 1/4 NPT female gauge ports.

High-Flow Filter Bag/Cartridge Housings



Filter high-volume pipelines. Housings use a Trade Size 2 filter bag or one of the optional cartridges sold separately below. They come with a Type 304 stainless steel strainer basket that supports the filter bag; it has 9/64″ perforations. Housings have a threaded drain with plug and two 1/4 NPT female gauge ports. Cover seal is fluoroelastomer. Max. temperature is 400° F. Bolt legs to the floor for stability. Connections are NPT female.

Type 316 stainless steel housing is more corrosion resistant than Type 304.

Optional cartridges are high efficiency; also known as absolute rated, they remove 99.9% of debris down to the micron size you choose. Cartridges are polypropylene and have an EPR seal. Max. temperature is 225° F.

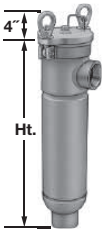
ASME-Code Filter Bag Housings



Stainless Steel

Constructed for use with liquids and gases in boilers and pressure vessels, these housings meet ASME Code Section VIII, Division 1, UM stamp. Housings have a side inlet and bottom outlet. They come with a Type 316 stainless steel strainer basket that supports the filter bag. Max. temperature is 250° F. Connections are NPT female.

Steel housing has legs that you can bolt to the floor for stability and a basket with 1/8″ perforations.

Stainless steel housings have a basket with 9/64″ perforations. Type 316 stainless steel is more corrosion resistant than Type 304.

Compact Filter Bag Housings and Filter Bags

Designed for high-pressure low-flow applications in tight spaces, housing and filter bags are Type 304 stainless steel for good corrosion resistance. Seal is PTFE-encapsulated fluoroelastomer. Filter bags are sold separately; they can be cleaned and used again. Connections are NPT female.

About Filter Bags

Use filter bags to trap and remove particles of a specific size and larger from liquids. For information about particle size, see page 412. Select the best material for your application using the chart below.

Felt and fiber filter bags have high dirt-holding capacity. They trap particles throughout the thickness of the fabric, which prevents clogs and pressure drops. Fiber filter bags hold more dirt than felt bags.

Mesh filter bags are often used as the first stage of filtration and to strain small batches of liquids. They trap particles on the surface of the fabric.

Felt Filter Bags

Our most popular felt filter bags, use these in a housing to remove contaminants from liquids. All have a sewn seam. They have a metal retaining ring, unless noted.

Tear-resistant polyester bags are reinforced with a layer of polyester mesh.

★ Bag has a plastic flange.

Extended-Life Felt Filter Bags

Replace bags less frequently—these have two to three times the dirt-holding capacity than our other felt filter bags for a long service life. Made of two separate bags, the inside bag traps large particles and then the outside bag traps small particles. All have a sewn seam and a metal retaining ring.

Seamless Felt Filter Bags

Trap small particles that can pass through pinholes in a seam. These bags are made of molded felt for more uniform filtration than bags with a seam. All have a plastic flange.

Extended-life filter bags have extra-thick felt for greater dirt-holding capacity than standard bags.

Filter Bags

For information about filter bags, see page 425. For information about particle size, see page 412.

High-Performance Filter Bags

Also known as absolute rated, these bags provide more consistent particle removal than our other filter bags. They have high dirt-holding capacity for a long service life. All have a sewn seam.

Polyester bags remove 99% of particles down to the micron size you choose.

Polypropylene bags remove 92% of particles down to the micron size you choose.

Pipe-Fitting Hydraulic Oil Filters

Trap small particles in high-pressure hydraulic oil lines. Filters are aluminum and have a porous bronze filter element. Seal is fluoroelastomer. Twist the 1⅜″ hex to open filters and replace the filter element. All connections are female.

Elbow filters have an overall length of 3³⁄₁₆″.

Hydraulic Oil Filters

Clean hydraulic oil in return lines and lubrication systems. Also known as spin-on filters, cartridges thread directly onto the filter head. Filters have a relief valve to protect against excess pressure in case of a clogged cartridge. The relief valve opens at the set pressure listed in the table. Filter head is aluminum and seals are Buna-N. Cartridge housing is steel. Pipe connections are NPT female. *Two-cartridge filters* also have 2″ SAE flange connections. Flanges have four ⅜″-16 UNC bolt holes. Horizontal holes are 3¹⁄₁₆″ center-to-center; vertical holes are 1¹¹⁄₁₆″ center-to-center.

High-performance filters remove 98% of particles down to the micron size you choose. They're also known as absolute rated.

Use the **optional pressure gauge** with 44185K65, 44185K66, 44185K67, and 44185K68 to indicate when it's time to replace a dirty cartridge. Pressure range is 0-60 psi.

Hydraulic Oil Filters

For information about pipe size, see pages 2-3. For information about particle size, see page 412.

High-Pressure Hydraulic Oil Filters

Remove particles from hydraulic fluids, lubricating oils, and coolants under pressure. Filters come with a cleanable cartridge made of Type 304 stainless steel wire cloth. They have a relief valve to protect against excess pressure in case of a clogged cartridge; valve opens at 25 psi. Housing is aluminum and has a magnetic plug to catch small ferrous particles. Seals are Buna-N. Connections are NPT female.

Extreme-Pressure Hydraulic Oil Filters

With NPT Connections

Often installed between a pump and a hydraulic press or machine tool, these filters can take the pressure. Use them to remove particles in hydraulic fluids and lubricating oils. Filters have a relief valve to protect against excess pressure in case of a clogged cartridge. The valve opens at the set pressure listed in the table. All have Buna-N seals. Connections are female.

Filters with NPT connections have a cast iron housing with a mounting plate. Plate has two 13/32" bolt holes that are 1 1/2" center-to-center. **Filters with SAE connections** have a steel and iron housing.

Standard filter comes with a paper cartridge. **High-performance filters** come with an absolute-rated fiberglass cartridge that removes 98% of particles down to the size listed in the table.

Mobile Electric Hydraulic Oil Filters

Secured to a cart, move these filters where you need them to clean hydraulic, gear, and lubricating oils. They're also good for transferring oil. Filters come with two cartridges; one on the inlet removes particles of 40 microns and larger and a second on the outlet removes particles of 10 microns and larger.

Housings are steel and aluminum and seals are Buna-N. Filters come with two 8-ft. lengths of black EPDM hose and two 3-ft. PVC wands. Motor operates on 120 volts AC and has a 6-ft. cord with a three-prong plug. Overall size is 41" Ht.×26" Wd.×20" Dp. Weight is 116 lbs.

Optional water-removal cartridge is for removing water from oil.

Max. Flow, gpm	Motor, hp	Max. psi	Max. Temp.		
5	1/2	50	150° F	9815K52	$1,865.75
10	3/4	50	150° F	9815K32	1,973.91
Replacement 40 micron Synthetic Cartridge				9815K13	75.82
Replacement 10 micron Fiberglass Cartridge				9815K14	135.37
Optional 20 micron Water-Removal Cartridge				9815K25	115.77

Portable Electric Hydraulic Oil Filters

Clean hydraulic oil anywhere—filter weighs 24 lbs. and has a 16"×8" footprint for portability. It's often used to condition and transfer petroleum-based liquids and water emulsion fluids. It's also good for use with diesel fuel. Filter comes with a paper cartridge that removes particles of 10 microns and larger.

Housing is aluminum and seals are Buna-N. Filter comes with two 5-ft. lengths of wire-reinforced PVC hose and two 3-ft. PVC wands. Motor operates on 120 volts AC and has a 1-ft. cord with a three-prong plug.

Note: Do not use with gasoline or other flammable liquids.

Optional water-removal cartridge is for removing water from oil. *Carrying case* is 24" Lg.×19" Wd.×10" Dp. and has wheels.

High-Capacity Hydraulic Oil Filters

Filter large quantities of hydraulic oil, quenching oil, compressor lubricating oil, and coolants. Housings and cartridges are sold separately.

Housings are steel and have a tight-seal bolt cover with a Buna-N seal. They have a 3/4 NPT male drain. Bolt legs to the floor for stability. All connections are NPT male.

Cartridges are pleated to provide a large surface for high dirt retention. They're made of steel and paper.

Replacement Hydraulic Oil Filter Cartridges

Use these cartridges in Schroeder and Parker filters to clean petroleum-based hydraulic fluids. They have stainless steel end caps that will not corrode or separate from the cartridge.

Standard cartridges have paper filter media.

High-performance cartridge removes 99.5% of particles down to 10 microns in size; it's also known as absolute rated. It has fiberglass filter media.

Easy-View Gasoline and Diesel Fuel Filters

A clear polymer bowl allows you to monitor collecting debris without stopping flow. Use filters to remove dirt, rust, sand, and scale from diesel, leaded gas, unleaded gas, and fuels with ethanol. They have a drain with a ball valve to control flow for cleaning. Filter head is die cast zinc and seals are Buna-N. Max. pressure is 150 psi. Max. temperature is 150° F. Connections are NPT female.

Replacement cartridges are pleated paper.

Optional Type 304 stainless steel cartridges can be cleaned and used again.

Optional water-removal cartridge removes water from fuel. It's not for use with fuels that contain alcohol.

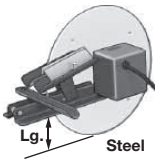
Compact Oil Skimmers



Remove oil and grease from machine coolant sumps, parts washers, and other tanks. Skimmers have a wheel that picks up oil, which requires less space than skimmers with a belt. Motor operates on 120 volts AC and has an 8-ft. cord with a three-prong plug. Your tank opening must fit the wheel diameter and width. Nylon housing has 5/16″ mounting holes; steel housings have 1/4″ mounting holes.

Skimmers for intermittent use can be used for up to two hours per day.

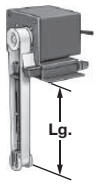
Oil Skimmers



Extract oil from water and coolant. Skimmers have a 1″ wide rubber belt and a nylon housing. Motor is continuous duty and operates on 120 volts AC. It has an 8-ft. cord with a three-prong plug. Max. temperature is 140° F. Attach the included 3-ft. length of 3/4″ ID PVC tubing for discharge. Skimmers require a minimum tank opening of 2″ dia. They have two 5/16″ mounting holes.

Replacement belts come with a pair of replacement scrapers.

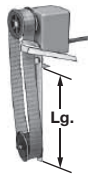
Oil Skimmers with Timer



Set your skimmer to operate at specific times. These come with a time-activated on/off switch that can be set in 15 minute increments. Belt is 1″ wide. Housing is Type 304 stainless steel and plastic. Motor is continuous duty and operates on 120 volts AC. It has a 6-ft. cord with a three-prong plug. Skimmers include a 2-ft. length of 5/8″ ID PVC tubing for discharge. **Standard skimmers** require a minimum tank opening of 2″×3″. **Skimmers for 55-gallon drums** fit a 2″ bung hole.

Oil Skimmers for Hard-to-Reach Areas

Reach water and coolants located under conveyors and in enclosed sumps—skimmers have a loop of flexible polyurethane tubing that drifts into hard-to-access areas. Housing is steel. Motor is continuous duty and operates on 120 volts AC. It has an 8-ft. cord with a three-prong plug. Skimmers include a 10″ length of 1 1/4″ ID vinyl tubing for discharge. Max. temperature is 90° F. Clamp skimmers to a tank edge or mount with three 7/32″ holes. Minimum tank opening is 1/2″×3″.

Adjustable-Angle Oil Skimmers

Accommodate shallow and odd-shaped tanks—skimmer has a 1″ wide polyurethane belt that you can position at an angle. Belt circumference is 53″. Housing is steel and plastic. Motor is continuous duty and operates on 120 volts AC. It has a 3-ft. cord with a three-prong plug. Skimmer includes a 3-ft. length of 1/2″ ID PVC tubing for discharge. Max. temperature is 120° F.

Skimmer requires a minimum tank opening of 3″ dia. It comes with three mounting brackets to fit a barrel, a flanged tank wall, and a straight tank wall. Mount with 1/4″ holes; fasteners are included. Install vertically.

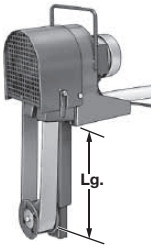
Optional Type 301 Stainless Belt				43635K35	30.69

High-Capacity Oil Skimmers



A wide stainless steel belt provides a large surface area so you can remove large quantities of oil. Housing is steel. Motor is continuous duty and operates on 120 volts AC. It has an 8-ft. cord with a three-prong plug and an on/off switch. Skimmers include a 4-ft. length of 1 1/4″ ID PVC tubing for discharge. Max. temperature is 180° F. All have two 3/4″×7/16″ mounting slots.

Skimmers with 6 gph oil-removal capacity have a 2″ wide belt and require a minimum tank opening of 4 1/2″×5″. **Skimmers with 12 gph oil-removal capacity** have a 4″ wide belt and require a minimum tank opening of 5″×7″.

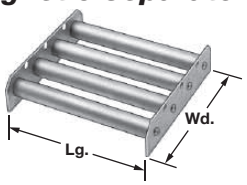
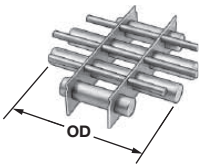
Magnetic Separators



Rectangular Separator; For Sticky Materials



Round Separator; For Dry Materials

Pull ferrous metal scrap and particles out of your process media. Mount separators inside gravity hoppers, chutes, drawers, housings, and surge-and-catch bins. Magnets are sealed in 1″ dia. rods; gap between rods is 1″.

Separators for large particles catch nails, bolts, washers, staples, and other ferrous metal objects. Magnets are ceramic; rods and frame are Type 304 stainless steel. Max. magnetic pull on contact is 1 lb.

Separators for small particles catch metal filings, shavings, residue from metal wear, and other fine particles. Magnets are rare-earth (neodymium-iron-boron); rods and frame are Type 316 stainless steel. Max. magnetic pull on contact is 11.2 lbs.

For Sticky Materials—Separators are designed without guide rods to prevent material from sticking and blocking flow.

For Dry Materials—Separators have guide rods to direct flow to the magnetic rods. They're helpful in removing particles from fine powder and low-flow applications.

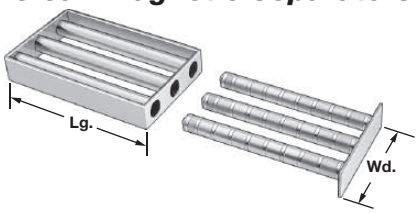
Quick-Clean Magnetic Separators



Don't struggle to remove ferrous particles that are stuck to your separator—pull these magnetic rods from their sleeve to release debris. They catch fine particles such as metal filings, shavings, and residue from metal wear. Mount separators inside gravity hoppers, chutes, drawers, housings, and surge-and-catch bins. Magnets are sealed in 1″ dia. rods; gap between rods is 1″. Magnets are rare-earth (neodymium-iron-boron); rods, frame, and sleeve are Type 316 stainless steel. Max. magnetic pull on contact is 7.7 lbs.

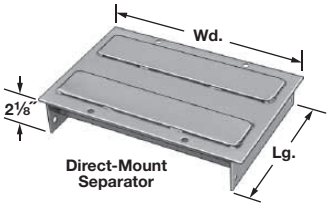
Heavy Duty Plate Magnetic Separators

Extract ferrous metal debris from process media as it moves through chutes and hoppers. Mount flush with the surface of your container; position below the flow of material. Magnets are ceramic and housing is welded steel. Max. magnetic pull on contact is 2.5 lbs. Mounting holes are 5⁄16″; hardware is not included.



Direct-mount separators bolt directly to chutes and hoppers. Can also be installed up to 3″ above conveyor belts.

Hinged-mount separators provide access to clean the magnetic surface. You can also mount as a door on chutes and hoppers.

Magnetic Separators for Coolant

Keep coolant systems free of small ferrous particles, such as chip filings and metal dust. Separators have rare-earth (neodymium-iron-boron) magnets that are sealed in a Type 304 stainless steel rod. Housing is aluminum and seal is Buna-N. Magnetic pull is not rated. Max. temp. is 150° F. Connections are NPT female.

Pipe Size	Max. psi	Ht.	Dia.		
½	200	6 3⁄16″	4 5⁄8″	57625K14	$327.69

Replacement Rods for Magnetic Separators

Replace a rod in an existing separator or make your own. Magnets are sealed in a 1″ dia. rod with a 1⁄4″-20 mounting hole on each end.

Rods for large particles catch nails, bolts, washers, staples, and other ferrous metal objects. Magnets are ceramic and rod is Type 304 stainless steel. Max. magnetic pull on contact is 1 lb.

Rods for small particles catch metal filings, shavings, residue from metal wear, and other fine particles. Magnets are rare-earth (neodymium-iron-boron) and rod is Type 316 stainless steel. Max. magnetic pull on contact is 11.2 lbs.

Sieves

Made with precision-tolerance wire cloth, use these sieves for accurate, consistent sifting results in testing and laboratory applications.

Sieves

Two Sieves Stacked with Cover and Bottom

Stack sieves with different mesh sizes to separate multiple particle sizes at once—order from largest particles to smallest, top to bottom. The bottom of each sieve fits into the top of sieves with the same diameter. Frame meets ASTM E11.

Sieves for large particles are for sifting materials with sizes similar to corn kernels and rice. *Sieves for medium particles* are for sifting materials with sizes similar to ground coffee and table salt. *Sieves for small particles* are for sifting materials with a size similar to flour. *Sieves for extra-small particles* are for sifting materials with a size similar to talcum powder.

Type 304 stainless steel is more wear resistant than brass.

Type 316 stainless steel has greater wear and corrosion resistance than brass and Type 304 stainless steel.

Sieve Shakers

A

B&C

Use these with the sieves above for accurate results in material separation and testing—shakers vibrate sieves to distribute particles evenly, which ensures separation. They operate on 115 volts AC @60 Hz. See the chart for the maximum number of sieves that can be stacked together.

Style A is good for small-batch benchtop testing. It has a vibrating baseplate and a painted-steel and aluminum body. Motor is 1/20 hp and cord is 5 feet long with a two-prong plug.

Styles B and C vibrate vertically and horizontally for greater efficiency. They have a 30-minute timer and a painted-steel body. Motor is 1/4 hp and cord is 4 feet long with a three-prong plug. They meet ASTM C136.

About Wire Cloth and Plastic Mesh

Use wire cloth and plastic mesh in filtering applications to remove contaminants.

Type & Application

Most wire cloth and plastic mesh is woven. Often used to make strainers, filter screens, and sieves, the woven style is available in the widest variety of materials and sizes.

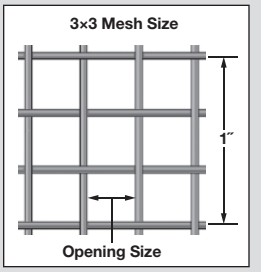
If you're working with abrasive materials such as gravel, choose **extra-rigid crimped wire cloth**. Wires are bent where they intersect, so they nest securely to maintain a consistent opening size. The crimping process also adds strength and rigidity to this wire cloth.

To make your own filter baskets, **easy-to-form welded wire cloth** is the best option. Welded joints keep opening sizes uniform and prevent the sheet from fraying as you bend it into shape.

Use **stretchable molded plastic mesh** to fit around irregular shapes without fraying.

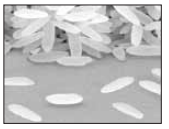
Mesh Size

To replace existing wire cloth and plastic mesh, determine the mesh size by counting the number of openings per inch. If you're not sure about the size you need, select an opening size that is smaller than the particles you wish to remove.

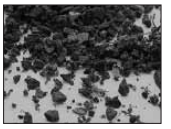


Common Particle Sizes and Corresponding Mesh Sizes (Mesh Shown at Actual Size)

Corn Kernels



Rice



Ground Coffee

Table Salt

Flour

Wire Cloth Assortments and Sample Packs

Find the best wire cloth for your application—assortments and sample packs include one sheet of the mesh sizes listed.

Assortments—Type 304 Stainless Steel

Keep a convenient range of mesh sizes on hand for maintenance and research projects. Assortments with a 2¾″×1⅝″ sheet size are good for comparing mesh sizes—sheets come labeled with the mesh size dimensions.

Wire Diameters Sample Pack—Type 304 Stainless Steel

Compare the opening size and flexibility of 20×20 mesh size with different wire diameters. Includes three samples with wire diameters of 0.009″, 0.014″, and 0.023″. Samples are 4½″×4½″.

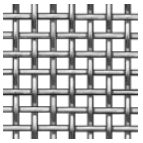
Wire Diameters Sample Pack 9231T13 $7.65

Extra-Rigid Sample Pack—Steel

Also known as space cloth, use this sample pack to compare the construction and rigidity of three varieties of extra-rigid wire cloth. Samples are 4½″×4½″.

Extra-Rigid Sample Pack 9231T15 $15.31

Corrosion-Resistant Type 304 Stainless Steel Wire Cloth



Commonly used to make strainers, filter screens, and sieves, this is our most popular wire cloth. Type 304 stainless steel has good corrosion and abrasion resistance.

For wire cloth sold per foot, prices listed are for 1 and 2 ft. lengths. 5, 8, and 10 ft. lengths are 20% lower; 20, 50, and 100 ft. lengths are 50% lower.

Corrosion-Resistant Type 304 Stainless Steel Wire Cloth Discs

A convenient solution for inline filtering, discs are die cut for an exact diameter with smooth edges for use in tube, pipe, and duct. They're made from our popular Type 304 stainless steel wire cloth, which has good corrosion and abrasion resistance. Discs are often used as replacement screens in plastic extruders.

Precision-Mesh Stainless Steel Wire Cloth

Often used in sieves and vibratory shakers for testing applications, the openings of this wire cloth are woven to a tight size tolerance for accurate, consistent sifting results. **Type 316 stainless steel** has greater corrosion resistance than Type 304 stainless steel.

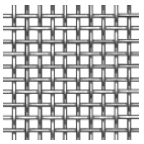
Strainer-Grade Type 304 Stainless Steel Wire Cloth



Maximize flow when straining your liquid process lines—woven from thin wire, this wire cloth has a larger percentage of open area than other wire cloth with the same mesh size. Type 304 stainless steel has good corrosion resistance.

Extra-Rigid Type 304 Stainless Steel Wire Cloth

Also known as space cloth, this mesh is woven from thick crimped wire to maintain an accurate opening size when used with heavy abrasive materials, such as gravel and rocks. Made of Type 304 stainless steel, it has good corrosion and abrasion resistance.

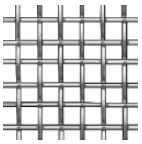
Lightweight-Particle-Filtering Stainless Steel Wire Cloth



Minimize clogs of dry powdered materials in sifting and sizing applications. Also known as milling grade, this mesh has a large percentage of open area and a small wire diameter to facilitate material flow. **Type 316 stainless steel** has greater corrosion resistance than Type 304 stainless steel.

For wire cloth sold per foot, prices listed are for 5 ft. lengths. 6 and 10 ft. lengths are 20% lower; 25 ft. lengths are 40% lower.

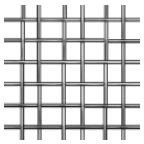
High-Volume Lightweight-Particle-Filtering Stainless Steel Wire Cloth



Maintain flow when sifting and sorting large quantities of dense nonabrasive materials, such as flour, grain, and powdered metal. Also known as bolting grade, this wire cloth has a large percentage of open area and ultra-thin wire to prevent clogs. **Type 316 stainless steel** has greater corrosion resistance than Type 304 stainless steel.

For wire cloth sold per foot, prices listed are for 3 ft. lengths. 6 and 10 ft. lengths are 20% lower; 25 ft. lengths are 40% lower.

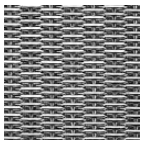
Super-Small-Particle-Filtering Stainless Steel Wire Cloth



Also known as Dutch weave, this wire cloth has a tight weave that traps tiny particles and provides strength for use in high-pressure and high-flow applications. Select mesh size based on the size of the particles you wish to remove. For example, the particle size of flour is about 100 microns and talcum powder is about 10 microns. (For more information about particle size in microns, see page 412.) **Type 316 stainless steel** has greater corrosion resistance than Type 304 stainless steel.

Super-Corrosion-Resistant Type 316 Stainless Steel Wire Cloth

Able to withstand corrosive solutions and harsh cleaning, this wire cloth is commonly used in food-processing applications. Made of Type 316 stainless steel, it has excellent corrosion and abrasion resistance.

For wire cloth sold per foot, prices listed are for 1 and 2 ft. lengths. 5 and 10 ft. lengths are 20% lower; 20 ft. lengths are 40% lower.

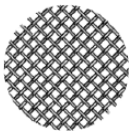
Super-Corrosion-Resistant Type 316 Stainless Steel Wire Cloth Discs



A convenient solution for inline filtering in harsh environments, these discs are Type 316 stainless steel for excellent corrosion resistance. They are die cut to an exact diameter with smooth edges for use in tube, pipe, and duct. Discs are often used as replacement screens in plastic extruders.

Steel Wire Cloth

Good for use with abrasive materials in noncorrosive applications, steel has excellent strength and good wear resistance.

For wire cloth sold per foot, prices listed are for 5 and 10 ft. lengths. 20 ft. lengths are 20% lower; 50 and 100 ft. lengths are 40% lower.

Steel Wire Cloth Discs

Made of the same mesh as our steel woven wire cloth, discs are die cut to an exact diameter with smooth edges for use in tube, pipe, and duct. Steel has excellent strength and good wear resistance, making it good for use with abrasive materials in noncorrosive applications. It's often used to filter hydraulic oil.

Oil-Resistant Epoxy-Coated Steel Wire Cloth

This wire cloth has a black epoxy coating that protects the steel from corrosion and adds rigidity for a long service life. It has small wire diameters that make it easy to bend into shape.

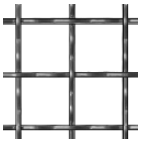
Woven Wire Cloth

For information about wire cloth, see page 433.

Extra-Rigid Steel Wire Cloth



Woven from thick crimped wire, this rigid wire cloth maintains an accurate opening size when used with heavy materials. Also known as space cloth, it's often used to screen gravel and rocks. Steel is good for use with abrasive materials in noncorrosive applications. **Alloy steel** is stronger than plain steel for a longer service life.

Weather-Resistant Galvanized Steel Wire Cloth

Prevent rust and other corrosion in outdoor applications—wire cloth is made from galvanized steel for better corrosion resistance than plain steel. Cloth with mesh sizes of 1.3×1.3 and 12×12 through 24×24 is galvanized before it is woven. Cloth with mesh sizes of 2×2 through 10×10 is galvanized after it is woven.

For wire cloth sold per foot, prices listed are for 2 ft. lengths. 5 and 10 ft. lengths are 20% lower; 50 ft. lengths are 40% lower.

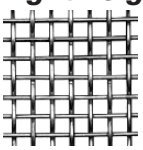
Lightweight Aluminum Wire Cloth



Choose aluminum wire cloth for good corrosion resistance at a lighter weight than plain steel or stainless steel.

For wire cloth sold per foot, prices listed are for 1 and 5 ft. lengths. 10 ft. lengths are 20% lower; 20 ft. lengths are 40% lower.

★ 1, 5, 10, and 20 ft. lengths are actually 40″ wide.

Brass, Bronze, and Copper Wire Cloth

Often used in marine environments, brass, bronze, and copper are more resistant to corrosion from salt water than stainless steel.

Brass and bronze are more corrosion and abrasion resistant than copper. *Bronze* is more abrasion resistant than brass for a longer service life in harsh environments. **Copper** has good electrical and thermal conductivity. It is nonsparking and nonmagnetic.

For wire cloth sold per foot, prices listed are for 1 ft. lengths. 10 ft. lengths are 20% lower; 20 and 50 ft. lengths are 40% lower.

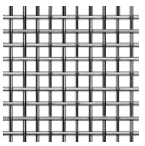
Strainer-Grade Brass Wire Cloth



Maximize flow when straining liquid process lines. Woven from thin wire, this cloth has a larger open area than other wire cloth with the same mesh size. Brass has good corrosion and abrasion resistance. It's good for use with salt solutions.

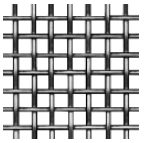
High-Temperature Nickel-Chromium Wire Cloth



Able to withstand high temperatures while resisting oxidation and scale formation, this mesh is popular for use in ovens and furnaces. Also known as Nichrome, nickel-chromium is an excellent heat conductor and is nonsparking and nonmagnetic.

Large-Opening Extra-Rigid Crimped Wire Cloth

Extra Rigid

Super Rigid

Also known as space cloth, wires are crimped where they intersect to maintain an accurate opening size when used with heavy materials. It's often used as barriers, shields, dividers, and guards. **Super-rigid wire cloth** has deep crimps that lock wires in place for superior rigidity and stability.

Easy-to-Form Stainless Steel Welded Wire Cloth

Use this wire cloth to make your own filter baskets. The welded joints keep opening sizes uniform and prevent fraying as you bend it into shape. **Type 316 stainless steel** has greater corrosion resistance than Type 304 stainless steel.

For wire cloth sold per foot, prices listed are for 1 and 2 ft. lengths. 5 and 10 ft. lengths are 20% lower; 20 and 50 ft. lengths are 40% lower.

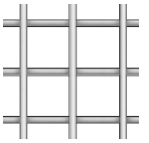
For information about wire cloth and plastic mesh, see page 433.

Easy-to-Form PVC-Coated Galvanized Steel Welded Wire Cloth



Build screens, barriers, and enclosures that last—this galvanized wire cloth is protected by a heavy duty PVC coating that provides excellent corrosion and wear resistance for a long service life. Joints are welded to prevent fraying and maintain uniform opening sizes.

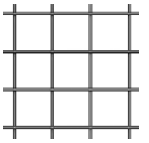
Easy-to-Form Galvanized Steel Welded Wire Cloth



Construct protective screens for use outdoors. This wire cloth is made of galvanized steel for better corrosion resistance than plain steel. It has welded joints that maintain uniform opening sizes and prevent fraying as you bend it into shape. Cloth is galvanized after it is welded.

To Order: Please specify width where price is shown and any length you choose up to 100 ft. Prices for lengths greater than 6 ft. are 20% lower and lengths greater than 19 ft. are 40% lower.

Super-Small-Particle-Filtering Stainless Steel Porous Discs

Also known as sintered filters and frits, these discs have tiny holes that trap super-small particles. Discs are often used in laboratories and gas-bubbling applications (sparging). They're Type 316L stainless steel for excellent corrosion and abrasion resistance. Select discs based on the size of the particles you wish to remove. For example, talcum powder is 10 microns in size. For more information about particle size, see page 412.

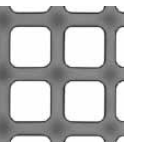
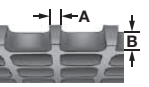
Abrasion- and Wear-Resistant Molded Polyurethane Filter Grid





Screen rocks, gravel, and other large abrasive material in wet or dry environments. This filter grid is made from thick molded polyurethane that withstands harsh environments and corrosion. Color is orange. **High-strength polyurethane filter grid** has a steel wire core that provides reinforcement for greater durability when used with heavy materials.

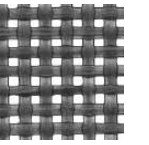
UV-Resistant Colored Polyester Mesh



Resistant to UV light and mildew, the vinyl coating on this flexible mesh is available in a selection of colors. It's often used to sift particles like sand and salt in outdoor applications. Polyester has good strength. Max. temperature is 160° F.

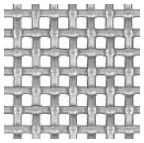
Precision Plastic Mesh



Made with openings that meet an exact size tolerance, this plastic mesh provides accurate, consistent results in filtering and sifting applications. It's more clog resistant and easier to clean than wire cloth. Color is opaque to translucent white.

Moisture-resistant polyester is stronger than nylon when wet. **Chemical-resistant polypropylene** is good for use with acetone, citric acid, and ethyl alcohol. 9275T63 can be used with food and beverages; it's made of FDA-compliant resin. **High-temperature chemical-resistant PEEK** is more chemical resistant than polypropylene at a wider range of temperatures. Made of FDA-compliant resin, it can be used with food and beverages.

Polypropylene Mesh Assortments

Keep a convenient range of mesh sizes on hand. Each assortment includes six 12″×12″ sheets—one of each mesh size listed. Max. temp. is 194°F. Color is opaque to translucent white.

For Particle Size	Mesh Sizes Included		
Large	6×6, 9×9, 10×10, 14×14, 17×17, 20×20	**93245T21**	$139.21
Medium	23×23, 27×27, 31×31, 35×35, 41×41, 51×51	**93245T22**	132.63
Small	56×56, 69×69, 76×76, 98×98, 110×110, 121×121	**93245T23**	132.63

Polyester Mesh Discs

Convenient for inline filtering, use these discs in pipe and tubing. Polyester has good strength in wet and dry conditions. Maximum temperature is 302° F. Color is opaque to translucent white.

Stretchable Molded Plastic Mesh

Pull and stretch this mesh to accommodate irregular shapes without fraying. Plastic mesh is more clog resistant and easier to clean than wire cloth. It's commonly used to filter, separate, and protect materials. Suitable for indoor use only. **Polyethylene** is black, except 14×14 mesh size is white. **Chemical-resistant polypropylene** is made of FDA-compliant resin for use with food and beverages. Color is off-white.

To Order: Please specify length in 5-ft. increments up to the maximum length listed.

High-Temperature Stretchable Molded PTFE Mesh

Often used in ovens and dryers, this plastic mesh withstands continuous heat up to 500° F. It can be stretched or cut without fraying and has good chemical resistance. Made of FDA-compliant resin, mesh is good for use with food and beverages. Suitable for indoor and outdoor use. Color is white.

To Order: Please specify length in 5-ft. increments up to the maximum length listed.

Opening Size Lg.	Opening Size Wd.	Wire Dia.	Max. Temp.	Width	Max. Length, ft.		Per Ft.

Small-Particle-Filtering Felt Sheets

Remove particles from water, organic solvents, petroleum, and weak alkalies. Select felt based on the size of the particles you wish to remove. For example, talcum powder is 10 microns in size and flour is 100 microns. For more information about particle size, see page 412. Max. temp. is 300° F.

Particle Size, microns	Thick.		12"×12"	36"×36"
5	0.07"	6376T1	$3.04	$17.78
25	0.09"	6376T4	3.04	17.78

100	0.11"	6376T7	3.04	17.78

Small-Particle-Filtering Felt Rolls

Make your own filter bags to remove particles in water and organic solvents. Select felt based on the size of the particles you wish to remove. For example, talcum powder is 10 microns in size and flour is 100 microns. For more information about particle size in microns, see page 412.

Polyester withstands higher temperatures than polypropylene. Maximum temperature is 300° F.

Polypropylene is more chemical resistant than polyester. Maximum temperature is 200° F.

Particle Size, microns	Thick.	Width	*3, 6, 9, 12, 15, 30, and 75 Ft. Lengths* Polyester	Per Ft.	Polypropylene	Per Ft.

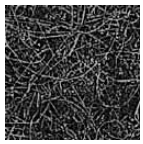
Odor-Removing Filter Felt Sheets

Less messy than carbon granules, this carbon-impregnated felt removes odor from liquids and air. It's good for use with fillable cartridges (see 9007T on page 421). Max. temperature is 150° F.

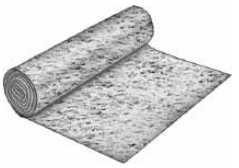


Thickness		10"×10"
0.1875"	8997T61	$7.35
0.375"	8997T62	7.68

Filter Fabric, Filter Paper & Perforated Sheets

For information about particle size, see page 412. For information about perforated sheets, see page 447.

Ultra-Thin Polyester Filter Fabric



With thickness similar to filter paper, this ultra-thin fabric provides higher flow and is more flexible than felt. It's often used to filter water, light oil, and water soluble and synthetic coolants in metal polishing, grinding, and finishing applications. Fabric is also good for filtering air and petroleum. Color is white.

Rayon/Polyester fabric is commonly used in coolant applications. Maximum temperature is 250° F.

Oil-resistant polyester fabric is 100% polyester for greater strength than rayon/polyester. It's made of FDA-compliant resin for use with food and beverages. Max. temperature is 300° F.

Lab-Testing Filter Paper

Standard and High Strength

High Capacity

Designed to capture tiny particles, this paper is often used in laboratory testing. Color is white.

Standard and high-capacity filter papers have a maximum temperature of 266° F. *High-capacity* are pleated for a large surface area for high dirt retention.

High-strength filter paper is reinforced with glass fibers for strength when wet. Good for analytical testing, this paper withstands sterilization with steam (autoclavable). Maximum temperature is 1022° F.

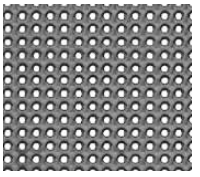
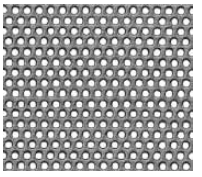
Corrosion-Resistant Type 304 Stainless Steel Extra-Thin Perforated Rolls



Straight Holes



Staggered Holes

Easy to bend and shape, these Type 304 stainless steel rolls have good corrosion and abrasion resistance as well as weldability and formability.

To Order: Please specify length: 1, 2, 3, 4, 5, 10, 20, or 30 feet.

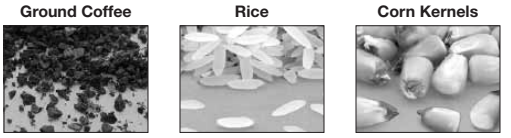
About Perforated Sheets

Use perforated sheets to filter, sort, separate, and strain liquids or dry materials. Holes have smooth edges to prevent particle buildup. Perforated sheets are also good for use as protective enclosures such as machine guards and ventilating grills or in architectural installations such as acoustical panels and decorative screens.

Compared to wire cloth, perforated sheets are more rigid and durable for a longer service life in harsh environments. They are also better for maintaining flow when straining thick liquids; the larger the percentage of open area, the greater the flow.

Common Particles and Corresponding Hole Dia.



Super-Corrosion-Resistant Type 316 Stainless Steel Perforated Sheets

Able to withstand corrosive solutions and harsh cleaning, these perforated sheets are commonly used in food-processing applications. Type 316 stainless steel has excellent corrosion and abrasion resistance and good weldability and formability. Holes are staggered.

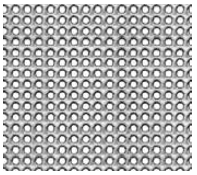
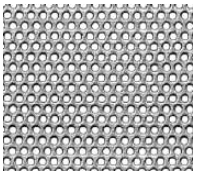
Extra-Thin Brass Perforated Rolls



Straight Holes



Staggered Holes

Bend and shape these thin perforated sheets to make strainers that fit your application. Brass is softer than Type 304 stainless steel, so it is easier to form. It also has good corrosion resistance. Maximum length is 50 feet.

Small-Particle-Filtering Type 316 Stainless Steel Perforated Sheets

Trap small particles in low-flow applications—these sheets have tiny holes and a small open area. Holes meet a precision size tolerance. Perforated area is 18″×21″; with the unperforated border, overall sheet size is approximately 20″×22″. Type 316 stainless steel has excellent corrosion resistance. Holes are staggered.

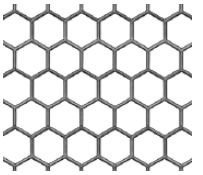
★ 36″×40″ sheet is actually 30″×40″.

Hexagon-Hole Perforated Sheets



Staggered hexagon-shaped holes provide a large open area for high-flow applications.

Aluminum sheet is Alloy 3003. It's lighter in weight than steel and has good corrosion resistance.

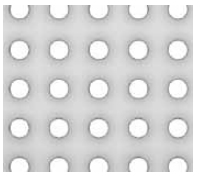
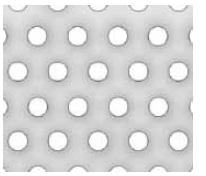
Chemical-Resistant Plastic Perforated Sheets



Straight Holes



Staggered Holes

Flexible polypropylene has good chemical resistance for use with organic solvents and degreasing agents. Max. temperature is 200° F. Color is off-white.

High-strength PVC is stronger than polypropylene for greater impact and abrasion resistance. Maximum temperature is 140° F. Color is dark gray. It meets Fed. Spec. LP-535E and ASTM D1784.

About On/Off Valves

Manually open and close these valves to quickly start and stop flow. They are also known as ball valves.

Determining Pipe Size of Your Valve: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and find the corresponding pipe size listed in the chart.

Threaded ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"	4 1/2"
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3	4

On/Off Valves

Straights:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F (1/4-2 size); 450 psi @ 100° F (2 1/2-4 size)
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -50° to 400° F
- Vacuum Rating: 29.9" Hg

Elbows:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 250 psi @ 250° F
- Max. Pressure for Steam: 150 psi @ 350° F
- Temp. Range: -50° to 350° F
- Vacuum Rating: 29" Hg

Use these valves for simple on/off control in general applications. Body and ball are brass. Seat is PTFE. Valves are full port, so they do not restrict flow. *Straights* are CSA and CSA-US certified, unless noted. *Straights with 1/4 to 2 pipe size* are also UL and C-UL listed and FM approved.

NPT female × female straights have a fluoroelastomer seal, except T-handle valves have a PTFE seal. **NPT female × male straights** have PTFE packing. **Elbows** have a PTFE seal and packing.

Spring-close lever handles automatically close when the lever is released. **T-handles, lockable oval handles,** and **short-lever handles** resist accidental movement when snagged or bumped. *Lockable* valves can be fixed in place with a padlock (not included) with a max. shackle diameter of 9/32".

Straights with extended stem have an extra-long stem for installation through thick insulation.

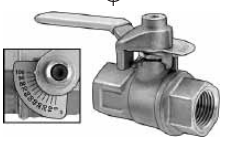
Flow-Indicating On/Off Valves



- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 235° F (1/4-3/4 size); 500 psi @ 279° F (1-2 size)
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -40° to 366° F
- Vacuum Rating: 29.89″ Hg

An easy-to-read indicator shows the percentage the valve is open. Connections are NPT female. Seat and packing are PTFE; seal is fluoroelastomer. Valves are full port, so they do not restrict flow. UL listed for use with LP gas, CSA and CSA-US certified, and FM approved.

Brass valves have a brass ball.

Nickel-plated brass valves are more corrosion resistant than plain brass valves. Ball is 316 stainless steel.

Pipe Size	End-to-End Lg.	Brass		Nickel-Plated Brass

On/Off Valves with Easy-Access Strainer

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 358° F
- Temp. Range: -40° to 365° F
- Vacuum Rating: Not rated

A built-in Y-strainer with a 304 stainless steel 50-mesh screen traps debris and lets you replace the screen without disconnecting your pipeline. Connections are NPT female. Body and ball are brass, seat is PTFE, and seal is fluoroelastomer. Valves are full port, so they do not restrict flow.

Pipe Size	End-to-End Lg.	Valves		Replacement Screens	
1/2	3 7/16″	4064T14	$16.79	4064T25	$1.08

British Standard Threaded On/Off Valves

Female x Female

Nickel-Plated Brass:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Temp. Range: -50° to 400° F
- Vacuum Rating: 29.9″ Hg

316 Stainless Steel:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 100° F
- Temp. Range: -30° to 400° F
- Vacuum Rating: Not rated

Use these valves for equipment with BSPT (British Standard Pipe Taper) or BSPP (British Standard Pipe Parallel) connections.

Nickel-plated brass valves have a brass ball, PTFE seat, and fluoroelastomer seal. They are full port, so they do not restrict flow.

316 stainless steel valves are more corrosion resistant than brass valves. Ball is 316 stainless steel. Seat, seal, and packing are PTFE. Valves have a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16″, unless noted. They are standard port, so they slightly restrict flow.

Corrosion-Resistant On/Off Valves

Chrome-Plated Brass:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 212° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -40° to 366° F
- Vacuum Rating: 29″ Hg

Nickel-Plated Brass:
- Max. Pressure for Water, Oil, Air, and Inert Gas: Lever: 600 psi @ 235° F (1/4-3/4 size); 500 psi @ 279° F (1-2 size); 400 psi @ 320° F (3 size) T-Handle: 600 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -40° to 366° F
- Vacuum Rating: 29.89″ Hg

A plated brass body resists corrosion in harsh environments. Connections are NPT. Valves are full port, so they do not restrict flow.

Chrome-Plated Brass—Ball is brass and seat and packing are PTFE. *Lockable lever* valves can be fixed in place with a padlock (not included) with a max. shackle diameter of 9/32″.

Nickel-Plated Brass—Valves are CSA and CSA-US certified. 1/4 to 2 pipe sizes are also UL listed and FM approved. *Lever* valves have a 316 stainless ball, PTFE seat and packing, and fluoroelastomer seal. *T-handle* valves resist accidental movement when snagged or bumped. They have a brass ball, PTFE seat, and fluoroelastomer seal.

Chrome-Plated Brass—Female x Female

Ultra-Corrosion-Resistant On/Off Valves

Lever

Oval Handle

- Max. Pressure for Water, Oil, Air, and Inert Gas: 800 psi @ 100° F (Standard Port);1,000 psi @ 200° F (Full Port)
- Max. Pressure for Steam: 50 psi @ 298° F (Standard Port); 150 psi @ 366° F (Full Port)
- Temp. Range: 0° to 450° F
- Vacuum Rating: 28.95" Hg

For excellent corrosion resistance in extremely harsh environments, these valves have a 316 stainless steel body and ball. Connections are NPT female. Valves have a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4".

Standard-port valves slightly restrict flow. They have a PTFE seat and packing. **Full-port** valves do not restrict flow. They have a PTFE seat and seal.

Oval handles resist accidental movement when snagged or bumped.

Easy-Access On/Off Valves

Bronze:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 70° F
- Temp. Range: 33° to 200° F
- Vacuum Rating: Not rated

316 Stainless Steel:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 100° F
- Temp. Range: -25° to 400° F
- Vacuum Rating: 29" Hg

Install these valves in tough-to-reach locations—use a square ratchet to turn the lever handle. Connections are NPT female. Seat, seal, and packing are PTFE. Valves are full port, so they do not restrict flow.

Bronze valves have a brass ball.

316 stainless steel valves are more corrosion resistant than bronze valves. Ball is 316 stainless steel. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16".

Extended-Life On/Off Valves

Female x Female with Spring-Close Lever

Female x Male with Lever

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 365° F
- Temp. Range: -20° to 450° F
- Vacuum Rating: 29" Hg

To outlast standard valves, these have a bronze body that's harder and more durable than brass. Ball is brass and seat, seal, and packing are PTFE. *Standard-port* valves slightly restrict flow. *Full-port* valves do not restrict flow.

Spring-close lever handles automatically close when the lever is released.

NPT Female x Female

On/Off Valves with Gauge Port

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Temp. Range: -50° to 400° F
- Vacuum Rating: 29.9" Hg

Attach a pressure gauge to the 1/4 NPT side port on these valves. The side port can also be used to drain and divert fluid; it comes with a plug. Connections are NPT female. Body and ball are brass, seat is PTFE, and seal is fluoroelastomer. Valves are full port, so they do not restrict flow. UL and C-UL listed and CSA and CSA-US certified.

High-Pressure On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: Lockable Lever: 1,800 psi @ 0° F (1/4-1 size); 1,500 psi @ 75° F (1 1/4-2 size); 800 psi @ 250° F (2 1/2-3 size) Spring-Close Lever: 2,000 psi @ 50° F (1/4-1 size); 1,500 psi @ 100° F (1 1/4-2 size)
- Max. Pressure for Steam: 150 psi @ 365° F, unless noted
- Temp. Range: -20° to 450° F (Lockable Lever); -20° to 500° F (Spring-Close Lever)
- Vacuum Rating: 29" Hg

Lockable Lever

Spring-Close Lever

Handle up to three times the pressure of standard on/off valves. Connections are NPT female. Seat, seal, and packing are PTFE. Valves are standard port, so they slightly restrict flow.

Lockable-lever valves have a handle that can be fixed in place with a padlock (not included). They also have mounting holes for attaching an actuator. *Steel* valves accept a padlock with a max. shackle diameter of 5/16"; *316 stainless steel* valves accept a padlock with a max. shackle diameter of 1/4". **Spring-close lever** valves automatically close when the lever is released.

Steel valves have a steel ball, unless noted. **316 stainless steel** valves are more corrosion resistant than steel valves. Ball is 316 stainless steel.

Ultra-High-Pressure On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 4,500 psi @ 120° F (1/4-1 size); 3,000 psi @ 150° F (1 1/4-2 size)
- Temp. Range: -20° to 230° F (Steel); -40° to 230° F (316 Stainless Steel)
- Vacuum Rating: Not rated

These valves are rated for up to 4,500 psi. Connections are NPT female. Ball is 316 stainless steel, seat is acetal, and seal and packing are PTFE. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 9/32". All have three mounting holes for panel mounting. Meet ANSI/FCI 70-2 Class VI standards for leakage. *Valves with 1/4 to 3/4 pipe size* are full port so they do not restrict flow; *1-2 pipe size* are standard port so they slightly restrict flow.

316 stainless steel valves are more corrosion resistant than steel valves.

Extreme-Pressure On/Off Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, and Steam: 10,000 psi @ 266° F
- Temp. Range: -40° to 446° F
- Vacuum Rating: Not rated

The highest-pressure on/off valves we offer, these withstand up to 10,000 psi. Connections are NPT female. For excellent corrosion resistance, valves have a 316 stainless steel body and ball. Seats and seals are PEEK, PTFE, and RTFE. Valves are standard port, so they slightly restrict flow.

Hydraulic Extreme-Pressure Steel On/Off Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: See table
- Temp. Range: –4° to 212° F
- Vacuum Rating: Not rated

Use with extremely high-pressure hydraulic oil systems. Connections are female. Body is zinc-plated steel, ball is chrome-plated steel, seats are acetal filled with molybdenum disulfide, and seal is fluoroelastomer. Valves have unrestricted flow (full port).

Lockable-lever valves have a handle that can be locked in position using a padlock (not included) with a shackle diameter of 5/16".

Corrosion-Resistant Compact On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 100° F (Lever and T-Handle); 450 psi @ 100° F (Wedge Handle and Screwdriver Style)
- Temp. Range: -4° to 200° F
- Vacuum Rating: 29.9" Hg

For more corrosion resistance than plain brass, these valves have a chrome-plated brass body. Ball is brass, seat is PTFE, and seal is fluoroelastomer. The low-profile handle fits in tight spots. Valves are standard port, so they slightly restrict flow. **BSPP (British Standard Pipe Parallel)** valves meet ISO 228.

T-handles and **wedge handles** resist accidental movement when snagged or bumped. **Screwdriver-style** valves require a slotted screwdriver to open and close the valve.

High-Pressure Compact On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 70° F
- Temp. Range: -40° to 300° F
- Vacuum Rating: 29" Hg

Often used in high-pressure pipelines in cramped areas, these slim valves have a low-profile handle and can withstand up to 1,000 psi. Body and ball are brass, seat is PTFE, and seal is fluoroelastomer. Valves are full port, so they do not restrict flow. **T-handles** resist accidental movement when snagged or bumped.

Corrosion-Resistant High-Pressure Compact On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 200° F
- Temp. Range: -36° to 368° F
- Vacuum Rating: 29.9" Hg

For excellent corrosion resistance in high-pressure applications, these valves have a 316 stainless steel body and ball. Seat and seal are PTFE. Valves have a low-profile lockable T-handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 9/32". *Valves with 1/4 pipe size* are full port so they do not restrict flow; *valves with 3/8 and 1/2 pipe size* are standard port so they slightly restrict flow.

Miniature On/Off Valves

- Max. Pressure: 250 psi @ 150° F
- Temp. Range: See table
- Vacuum Rating: 25" Hg

With an end-to-end length of 1 11/16", these valves are often used to control flow in miniature pipelines. Valves have 10-32 UNF female threads. Body is 303 stainless steel for excellent corrosion resistance. Ball is 316 stainless steel. Valves are standard port, so they slightly restrict flow.

	Seat and Seal Material	Temp. Range		
For Water	EPDM	-60° to 300° F	4059K36	$101.25

Drain-Handle Brass Stop Cocks

- Max. Pressure for Water, Oil, and Inert Gas (unless otherwise stated): 150 psi @ 250° F
- Temp. Range: See table

Install on your tank for easy draining. Body is brass. **Wing-nut-handle** stop cocks are for use with water and oil only. **Thumb-screw-handle** and **cable-pull** stop cocks are for use with compressed air only (250 psi at 250° F). **Removable handle** stop cocks can be disassembled for cleaning. **Cable-pull** stop cock has a 5-ft. cable for opening and closing.

External seal stop cocks are for higher flow applications. Inlet connection is NPT male. Outlet connection is vented to atmosphere, unless noted.

Easy-Grip Brass Stop Cocks

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150° F
- Temp. Range: 32° to 150° F

The large knob is easy to grip for drain applications. Use as replacement stop cocks in liquid-level compression gauges. Body is brass. Connections are NPT male.

Pipe Size	Port-to-Port Lg. (P)		
1/2	7/8"	4801K6	$60.67
3/4	1"	4801K7	66.28

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"	4 1/2"

Panel-Mount On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,500 psi @ 70° F (1/8-1/4 size straights and elbows); 1,000 psi @ 70° F (3/8-1/2 size straights); 600 psi @ 70° F (3/8-1/2 size elbows)
- Temp. Range: -40° to 300° F
- Vacuum Rating: 29" Hg

These valves have threads and a hex nut below the handle to facilitate panel mounting. Body and ball are brass. Valves have a PTFE seat and fluoroelastomer and Buna-N seals. Require a 9/16" diameter panel cutout. *Valves with 1/8 and 1/4 pipe size* are full port so they do not restrict flow; *valves with 3/8 and 1/2 pipe size* are standard port so they slightly restrict flow.

Fast-Acting Compact Panel-Mount On/Off Valves

NPT Male x UNF Female

- Max. Pressure for Water, Oil, Air, and Inert Gas: 150 psi @ 70° F
- Temp. Range: 32° to 230° F
- Vacuum Rating: Not rated

With nearly half the port-to-port length of other fast-acting elbow valves, these are often installed in narrow areas. Flick the toggle to quickly open and close the valve. Threads and a hex nut below the handle facilitate panel mounting. Body is brass with a metal toggle, unless noted. Seal is Buna-N. To panel mount, they require a 15/32" diameter cutout.

Manual-return valves remain open or closed when the toggle is moved into position. **Spring-return** valves open when the toggle is moved and snap closed when the toggle is released.

Pipe Size	Port-to-Port Lg. (P)

★Toggle is plastic.

Fast-Acting Panel-Mount On/Off Valves

Straight

Elbow

- Max. Pressure for Water, Oil, Air, and Inert Gas: 300 psi @ 200° F (NPT Threads); 200 psi @ 70° F (NPTF Threads)
- Temp. Range: -20° to 200° F (NPT Threads); -40° to 250° F (NPTF Threads)
- Vacuum Rating: Not rated

Also known as toggle valves, these open and close with the flick of a switch. They are commonly used for equipment testing and gas sampling. Threads and a hex nut below the handle facilitate panel mounting. Valves are manual return so they remain open or closed when the toggle is moved into position.

Valves with NPT threads have fluoroelastomer and PTFE seals. Toggle is plastic. To panel mount, they require a 17/32" diameter cutout. *Valves with NPTF threads* have a fluoroelastomer seal. Toggle is metal. To panel mount, they require a 9/16" diameter cutout.

316 stainless steel valves are more corrosion resistant than brass valves.

Easy-to-Install On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: See table
- Max. Pressure for Steam: 150 psi @ 366° F (Brass); 150 psi @ 365° F (Bronze)
- Temp. Range: -40° to 500° F (Brass); -20° to 450° F (Bronze)
- Vacuum Rating: 29" Hg

Disassemble the union fitting on these valves to facilitate installation and removal. The fitting also lets you access your line without unthreading pipe connections. Connections are NPT female. Ball is brass and seat is PTFE. *Standard-port* valves slightly restrict flow; *full-port* valves do not restrict flow.

Brass valves have a fluoroelastomer and a PTFE seal.

Bronze valves are harder and more durable than brass valves for a longer service life. Seal and packing are PTFE. They have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4".

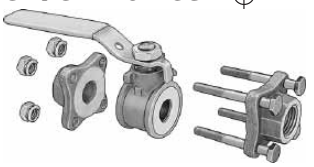
Easy-Maintenance On/Off Valves



- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F (Bronze); 1,500 psi @ 100° F (Steel)
- Max. Pressure for Steam: 150 psi @ 365° F
- Temp. Range: -20° to 450° F (Bronze); -20° to 500° F (Steel)
- Vacuum Rating: 29″ Hg

Save time on valve maintenance. A three-piece bolted body lets you replace the valve seats, packing, and ball without unthreading pipe connections. Connections are NPT female. Valves are full port, so they do not restrict flow.

Bronze valves have a brass ball and PTFE seat and packing.

Steel valves have a 316 stainless steel ball, TFM seat, and PTFE seal and packing. They have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16″.

Corrosion-Resistant Easy-Maintenance On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 220° F (1/4-2 size); 600 psi @ 220° F (2 1/2-4 size)
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: 0° to 450° F
- Vacuum Rating: Not rated

For excellent corrosion resistance, these valves have a 316 stainless steel body and ball. The three-piece bolted body lets you disassemble the valve to access the seats, packing, and ball without removing your valve from the pipeline. Seat, seal, and packing are PTFE. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4″. Valves are full port, so they do not restrict flow.

Cleaned and Bagged Easy-Maintenance On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,440 psi @ 100° F
- Max. Pressure for Steam: 250 psi @ 406° F
- Temp. Range: -50° to 400° F
- Vacuum Rating: 29″ Hg

Often used for oxygen service and other high-purity applications, these valves come cleaned and bagged. They have a three-piece bolted body to facilitate replacement of the seats, packing, and ball without removing the valve from the pipeline. Body and ball are 316 stainless steel for excellent corrosion resistance. Seat, seal, and packing are PTFE. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16″. Valves are full port, so they do not restrict flow.

Butt-weld valves have butt-weld connections for flush welding to Schedule 40 metal pipe.

High-Pressure Easy-Maintenance On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,440 psi @ 200° F
- Max. Pressure for Steam: See table
- Temp. Range: 0° to 550° F
- Vacuum Rating: Not rated

Maintenance in high-pressure-steam applications is quick and simple. A three-piece bolted body lets you replace the valve seats, packing, and ball without unthreading pipe connections. Connections are NPT female. Ball is 316 stainless steel, seat and packing are TFE, and seal is graphite. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4″. Valves are full port, so they do not restrict flow.

316 stainless steel valves are more corrosion resistant than steel valves.

On/Off Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about on/off valves, see page 450. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"	4 1/2"	6 5/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3	4	6

Plastic On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

Compact and lightweight, these valves are great for low-pressure applications in tight locations. Body and ball are PVC. Seat and seal are Buna-N. Color is dark gray. *Valves with 1/4 and 1/2 pipe size* are full port so they do not restrict flow; *valves with 3/4 pipe size* are standard port so they slightly restrict flow.

Pipe Size	NPT Female x Female End-to-End Lg.		NPT Female x Male End-to-End Lg.		NPT Male x Male End-to-End Lg.

Plastic On/Off Valves with Garden Hose Outlet

- Max. Pressure for Water: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

Connect garden hose threaded (GHT) fittings to your pipeline. Valves have a PVC body and ball, a PTFE seat, a Santoprene seat, and a Buna-N seal. All are full port, so they do not restrict flow. Color is light gray.

Pipe Size	End-to-End Lg.	GHT Female x GHT Male	GHT Female x NPT Male	GHT Female x NPT Female	NPT Female x GHT Male
3/4	2 15/16"	9848K21 $13.28	9848K31 $13.28	9848K34 $13.28	9848K24 $13.28

Compact Plastic On/Off Valves

- Max. Pressure for Water and Oil: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

The low-profile handle on these valves permits installation in confined spaces where other valves can't fit. Seat and seal are Buna-N, unless noted. **Standard-port** valves slightly restrict flow; **full-port** valves do not restrict flow.

PVC valves have a PVC body and ball. Color is dark gray, unless noted. **Nylon** valves have a nylon body and polypropylene ball. Color is black.

★Valve has a PTFE seat and a Santoprene seat. Color is light gray.

Single-Flange On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Temp. Range: 32° to 350° F
- Vacuum Rating: Not rated

Attach these valves to industry-standard two-bolt flanges on circulation pumps from manufacturers such as Bell and Gossett, Taco, Grundfos, and Armstrong. Pipe connection is NPT female. Body and ball are brass. Seat and seal are PTFE. Valves are full port, so they do not restrict flow. Mounting bolts included.

Pipe Size	End-to-End Lg.	Bolt Hole Dia.	Bolt Hole Ctr.-to-Ctr.

Flanged On/Off Valves

Cast Iron:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 150° F
- Max. Pressure for Steam: 125 psi @ 212° F
- Temp. Range: -20° to 353° F
- Vacuum Rating: Not rated

Steel and 316 Stainless Steel:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 275 psi @ 100° F
- Max. Pressure for Steam: 100 psi @ 366° F
- Temp. Range: 0° to 500° F
- Vacuum Rating: 28″ Hg

These valves bolt to flanges of the same ANSI class and pipe size. All have a lockable lever handle that can be fixed in place with a padlock (not included). They have four mounting holes for attaching an actuator. Valves are full port, so they do not restrict flow.

Cast iron valves have unthreaded ANSI Class 125 flange connections. Ball is cast iron and seat and seal are PTFE. Handles accept a padlock with a max. shackle diameter of 1/4″. Meet ANSI B16.5, ANSI B16.10, and MSS-SP-72.

Steel and **316 stainless steel** valves have unthreaded ANSI Class 150 flange connections. Ball is 316 stainless steel and seat, seal, and packing are PTFE. Meet ASME B16.5 and ASME B16.10. *1/2 to 2 pipe size* valves accept a padlock with a max. shackle diameter of 9/32″; *2 1/2 to 4 pipe size* valves accept a padlock with a max. shackle diameter of 5/16″. *316 stainless steel* valves are more corrosion resistant than cast iron or steel valves.

Easy-to-Install Double-Union Plastic On/Off Valves

PVC and CPVC:
- Max. Pressure for Water: 225 psi @ 70° F
- Temp. Range: 40° to 140° F (PVC); 40° to 180° F (CPVC)
- Vacuum Rating: 26″ Hg

Polypropylene:
- Max. Pressure for Water: 125 psi @ 140° F
- Temp. Range: 32° to 140° F
- Vacuum Rating: Not rated

Union fittings on both ends of these valves disassemble to facilitate fast installation and removal. They also let you perform maintenance without detaching pipe connections. Connections are NPT female. Use with Schedule 40 and 80 pipe and fittings. Valves are full port, so they do not restrict flow, unless noted. *PVC* and *CPVC* valves come with socket-weld (unthreaded) female fittings in addition to the threaded NPT female connections.

PVC valves have a PVC ball, PTFE seat, and EPDM seal. Color is dark gray. **Polypropylene** valves have a polypropylene ball, polyethylene seat, and EPDM seal. Color is black. **CPVC** valves have a CPVC ball, PTFE seat, and EPDM seal. Color is light gray.

T-handles resist accidental movement when snagged or bumped.

■ Valves are standard port, so they slightly restrict flow.

Easy-to-Install Single-Union Plastic On/Off Valves

- Max. Pressure for Water: 100 psi @ 70° F
- Temp. Range: -20° to 150° F
- Vacuum Rating: Not rated

With a union fitting that separates into multiple pieces, these valves can be quickly installed and removed from pipelines. The fitting also provides access to your line without unthreading pipe connections. Connections are NPT female. Body and ball are polypropylene, seat is PTFE, and seal is EPDM. All are full port, so they do not restrict flow. Color is black.

Pipe Size	End-to-End Lg.		
1/2	3 1/16″	46055K21	$15.92

2	5 13/16″	46055K26	43.05

Flow-Indicating Easy-to-Install Double-Union Plastic On/Off Valves

- Max. Pressure: 150 psi @ 68° F
- Temp. Range: 32° to 140° F
- Vacuum Rating: Not rated

An easy-to-read indicator shows the percentage the valve is open. Valves have union fittings on both ends that disassemble for easy installation and removal. They also let you perform maintenance without detaching pipe connections. Valves have NPT female connections and come with socket-weld (unthreaded) female fittings. Use with Schedule 40 and 80 pipe and fittings. Body and ball are PVC and seat is PTFE. Valves are standard port, so they slightly restrict flow. Color is dark gray.

Valve for water has an EPDM seal; **valve for chemicals** has a fluoroelastomer seal.

Pipe Size	End-to-End Lg.	For Water		For Chemicals	
1/2	4 1/8″	4490K5	$101.96	4490K6	$109.80

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

On/Off Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas:
  500 psi @ 100° F (1/2-1 size);
  400 psi @ 100° F (1 1/4-2 size);
  300 psi @ 100° F (2 1/2-3 size)
- Max. Pressure for Steam:
  15 psi @ 250° F
- Temp. Range: 0° to 250° F
- Vacuum Rating:
  29.9" Hg (Brass);
  29.89" Hg (Nickel-Plated Brass)

Use these valves with solder-connect fittings for on/off control in general applications. Seat and packing are PTFE. Valves are full port, so they do not restrict flow. UL listed, unless noted.

Lockable lever handles can be fixed in place with a padlock (not included) with a max. shackle diameter of 9/32". **T-handles** resist accidental movement when snagged or bumped.

Brass valves have a chrome-plated brass ball. Meet ANSI B16.22. C-UL listed, unless noted. **Nickel-plated brass** valves are more corrosion resistant than plain brass. Ball is 316 stainless steel and seal is fluoroelastomer. FM approved.

★Not UL or C-UL listed.

Extended-Life On/Off Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas:
  500 psi @ 100° F (3/8-1 size);
  400 psi @ 100° F (1 1/4-2 size)
- Max. Pressure for Steam:
  15 psi @ 250° F
- Temp. Range: 0° to 250° F
- Vacuum Rating: 29" Hg

For a longer service life, these valves have a bronze body which is harder and more durable than brass. Ball is chrome-plated brass and seat, seal, and packing are PTFE. **Standard-port** valves slightly restrict flow. **Full-port** valves do not restrict flow.

For Tube Size♦	For Tube OD	Standard Port End-to-End Lg.			Full Port End-to-End Lg.

Easy-Maintenance On/Off Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas:
  600 psi @ 100° F
- Max. Pressure for Steam:
  150 psi @ 365° F
- Temp. Range: -20° to 450° F
- Vacuum Rating: 29" Hg

Service these valves without cutting soldered connections. The three-piece bolted body can be disassembled for inline access to the seats, packing, and ball. Body is bronze for durability and a long service life. Ball is chrome-plated brass, seat is glass-filled PTFE, and packing is carbon/graphite-filled PTFE. Valves are full port, so they do not restrict flow.

♦Tube size is an accepted industry designation, not an actual size.

On/Off Valves with Barbed Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas:
  125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

Barbed fittings slide into soft plastic or rubber tubing. Body and ball are PVC; seat and seal are Buna-N. Valves are full port, so they do not restrict flow. Color is dark gray.

For Tube ID	End-to-End Lg.		
1/2"	2 7/8"	2772T45	$17.75
5/8"	2 3/4"	2772T46	17.75

Compact On/Off Valves with Barbed Fittings

NPTF Male x Barb

NPT Male x Barb

NPTF Threads:
- Max. Pressure for Air and Inert Gas:
  100 psi @ 150° F
- Temp. Range: 32° to 150° F
- Vacuum Rating: Not rated

NPT Threads:
- Max. Pressure for Water, Oil, Air, and Inert Gas:
  150 psi @ 300° F
- Temp. Range: 0° to 300° F
- Vacuum Rating: Not rated

With a shorter end-to-end length than standard on/off valves with barbed fittings, these fit in tight spaces. Also known as stop cocks.

Chrome-plated brass valves have a mirror-like finish and better corrosion resistance than plain brass. **316 stainless steel** valves have the best corrosion resistance and can be used in wet conditions and harsh environments. Seal is PTFE.

Compact On/Off Valves with Push-to-Connect Fittings

To fit tubing lines in tight spots, these valves have a shorter end-to-end or port-to-port length than standard on/off valves with push-to-connect fittings. Valves are standard port, so they slightly restrict flow. Seals are EPDM.

Nylon Straights

- Max. Pressure for Water: 145 psi @ 175° F
- Temp. Range: -4° to 175° F
- Vacuum Rating: 28″ Hg

Valves have a nickel-plated brass ball and a PTFE seat. Color is black.

Compact Plastic On/Off Valves with Tube Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

A low-profile handle lets these valves fit in low-clearance pipelines. Seal and seat are Buna-N. Valves are full port, so they do not restrict flow, unless noted.

PVC valves are more corrosion resistant than nylon valves. Ball is PVC. Color is dark gray.

Nylon valves have a polypropylene ball. Color is black.

On/Off Valves with Yor-Lok Fittings

Brass:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 70° F
- Temp. Range: -40° to 300° F
- Vacuum Rating: 29" Hg

316 Stainless Steel:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 100° F
- Temp. Range: -30° to 400° F
- Vacuum Rating: Not rated

For a leak-free seal around hard metal tubing in high-pressure lines, these valves have Yor-Lok fittings. Also known as instrumentation fittings, Yor-Lok fittings are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. For Yor-Lok fittings, see pages 188-189. All are standard port, so they slightly restrict flow.

Brass valve has a nickel-plated brass ball, PTFE seat, and fluoroelastomer seal.

316 stainless steel valves are more corrosion resistant than brass valves. Ball is 316 stainless steel; seat, seal, and packing are PTFE. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16".

Squeeze-Grip Zinc Alloy Valves

- Use with air and water
- Max. Pressure: 150 psi
- Temp. Range: -40° to 200° F

Put flow control in the palm of your hand. For applications that require intermittent operation such as blow guns, press down on the lever to start flow. Valve closes upon release to stop flow. Body is zinc alloy and seal is Buna-N. Port-to-port length is 2 1/8". Connections are 1/4 NPT female.

6852K11 ..... $12.17

Panel-Mount On/Off Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: See table
- Temp. Range: See table
- Vacuum Rating: See table

Threads and a hex nut below the handle let you mount these valves in instrument panels. All have Yor-Lok fittings, which are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. For Yor-Lok fittings, see pages 188-189. Valves are standard port, so they slightly restrict flow.

Brass—*1,000 psi* and *1,500 psi* valves have a nickel-plated brass ball, PTFE seat, and Buna-N and fluoroelastomer seals. *3,000 psi* valves have a 316 stainless steel ball and a PTFE seat, seal, and packing.

316 Stainless Steel—These valves are more corrosion resistant than brass valves. Ball is 316 stainless steel. *1,000 psi* valves have a PFA (perfluoroalkoxy) seat, seal, and packing. *6,000 psi* valves have a Kel-F seat and a PTFE seal and packing.

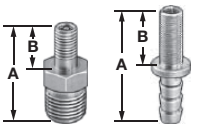
Air Fill Valves



1&2 3

- Use with air
- Max. Pressure: 200 psi
- Temp. Range: -40° to 225° F

Also known as Schrader valves, use these to rapidly fill or empty compressed air tanks. They have 0.305"-32 straight threads for connection to your air supply. All connections are male. Valves come with a cap.

Style 2 is nickel-plated brass for greater corrosion resistance than plain brass.

Safety Auto-Shutoff Brass Air Valves

- Use with air
- Max. Pressure: 250 psi
- Temp. Range: 0° to 180° F

Also known as air fuses, valves close automatically to stop air flow when pressure exceeds the set closing flow rate (see table). They reopen when pressure drops below the closing flow rate. Body is brass. Seal is acetal, except 5000K88, which is brass. Connections are NPTF (Dryseal) female.

Pipe Size	Valve Closes At	Lg.

Safety Air-Exhaust Bronze Valves

- Max. Pressure for Water, Oil, and Inert Gas: 125 psi @ 200° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 50° to 200° F
- Vacuum Rating: Not rated

Meet OSHA requirements for safety and control in your compressed air system. All valves have a 1/4 NPT female exhaust port; when closed, valves vent air pressure so you can disconnect air tools safely.

Valves have NPT female connections. Body is bronze and ball is chrome-plated brass. Seats are glass-filled PTFE, seals are PTFE, and packing is glass-filled PTFE. Valves have unrestricted flow (full port). The handle can be locked in the shut-off position using a padlock (not included) with a shackle diameter of 1/4". *Valves with 3/4 to 2 1/2 pipe size* have two mounting holes for attaching an actuator.

Pipe Size	End-to-End Lg.	Mounting Hole Size

On/Off Valves with Garden Hose Outlet for Drinking Water

- Max. Pressure: 600 psi @ 300° F
- Temp. Range: -40° to 400° F
- Vacuum Rating: Not rated

For use with drinking water, these valves meet NSF/ANSI Standard 61. Inlet is NPT female; outlet is 3/4" garden hose thread (GHT) male. Valves have a durable bronze body for a long service life. Ball is brass and seat and packing are PTFE. Valves are full port, so they do not restrict flow.

Pipe Size	End-to-End Lg.		
1/2	2 5/8"	47315K71	$20.90
3/4	2 15/16"	47315K72	27.05

Safety-Lockout Aluminum Air Valves

- Use with air
- Max. Pressure: See table
- Temp. Range: 40° to 175° F

1/4 to 3/8 Pipe Size with Muffler

Comply with OSHA regulation 29 CFR Part 1910 for lockout/tagout procedures. The valve handle can be locked in the shut-off position using a padlock (not included) with a shackle diameter of 9/32". Body is aluminum and seals are PTFE. Handle is plastic. Inlet, outlet, and exhaust connections are NPT female.

Valves with muffler come with a muffler in the exhaust port to reduce the noise level.

Safety Air-Exhaust Brass Valves

- Max. Pressure for Air: 200 psi @ 210° F (1/4-1); 200 psi @ 72° F (1 1/4-2)
- Max. Pressure for Steam: Not rated
- Temp. Range: -40° to 350° F (1/4-1); 15° to 210° F (1 1/4-2)
- Vacuum Rating: Not rated

Meet OSHA requirements for safety and control in your compressed air system. When closed, these valves vent air pressure through the exhaust port on the bottom so you can disconnect air tools safely.

Connections are NPT female. Body is brass and ball is chrome-plated brass. Seats, seals, and packing are PTFE, except 1 1/4 through 2 pipe sizes have fluoroelastomer packing. The handle can be locked in the shut-off position using a padlock (not included) with shackle diameter of 9/32". *Valves with 1/4 through 1 pipe sizes* have a 10-32 threaded exhaust port and slightly restricted flow (standard port). *Valves with 1 1/4 through 2 pipe sizes* have a 1/4" NPT threaded exhaust port and unrestricted flow (full port).

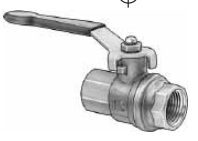
On/Off Valves for Drinking Water



Standard:
- Max. Pressure: 600 psi @ 100° F
- Temp. Range: -50° to 400° F
- Vacuum Rating: 29.9" Hg

Compact:
- Max. Pressure: 600 psi @ 212° F
- Temp. Range: -40° to 366° F
- Vacuum Rating: Not rated

These valves meet NSF/ANSI Standard 61 for use with drinking water. Connections are NPT female. Body and ball are brass. Seat and packing are PTFE. Valves are full port, so they do not restrict flow.

Compact valves have a smaller end-to-end length than standard valves to fit in tight areas. They have a PTFE seal. CSA-US certified and FM approved.

Easy-to-Install Single-Union Plastic On/Off Valves

- Max. Pressure: 235 psi @ 100° F (1/2-2 size); 150 psi @ 100° F (3 size)
- Temp. Range: 40° to 140° F
- Vacuum Rating: 26" Hg

Disassemble the union fitting for quick valve installation and removal. The fitting also lets you access your line without disturbing pipe connections. Use with Schedule 40 and 80 pipe and fittings. Body and ball are PVC and seat is PTFE. Valves are full port, so they do not restrict flow. Color is dark gray.

Valves for drinking water meet NSF/ANSI Standard 61. Seal is Buna-N. **Valves for chemicals** have a fluoroelastomer seal.

Socket-weld valves bond to unthreaded male plastic pipe.

Easy-to-Install Double-Union Plastic On/Off Valves

T-Handle

PVC and CPVC:
- Max. Pressure: 225 psi @ 70° F
- Temp. Range: 40° to 140° F (PVC); 40° to 180° F (CPVC)
- Vacuum Rating: 26" Hg

Polypropylene:
- Max. Pressure: 150 psi @ 73° F, except 125 psi @ 140° F for chemicals
- Temp. Range: 32° to 180° F, except 32° to 140° F for chemicals
- Vacuum Rating: 29" Hg, except not rated for chemicals

Union fittings on both ends of these valves disassemble to cut down on installation and removal time. They also let you perform maintenance without disturbing pipe connections. Use with Schedule 40 and 80 pipe and fittings. Connections are female. Seat is PTFE, except polypropylene valves for chemicals have a polyethylene seat. Valves are full port, so they do not restrict flow, unless noted.

Valves for drinking water meet NSF/ANSI Standard 61. Seal is EPDM. **Valves for chemicals** have a fluoroelastomer seal.

NPT and socket-weld valves include fittings for each connection. *Socket-weld* valves bond to unthreaded male plastic pipe.

Lockable T-handles can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4".

★Valve is standard port, so it slightly restricts flow.

Plastic On/Off Valves for Drinking Water

- Max. Pressure: See table
- Temp. Range: 40° to 140° F (PVC); 40° to 200° F (CPVC)
- Vacuum Rating: 26″ Hg

NPT Female

Socket Weld

These valves meet NSF/ANSI Standard 61 for use with drinking water. Seal is EPDM. Use with Schedule 40 and 80 pipe and fittings. Valves are full port, so they do not restrict flow.

Socket-weld valves bond to unthreaded male plastic pipe.

Valves with Max. Pressure of 150 psi @ 73° F—All have a PTFE/HDPE seat. *PVC* valves have a PVC ball. *CPVC* valves have a CPVC ball.

Valves with Max. Pressure of 235 psi @ 73° F—Ball is PVC and seat is PTFE.

On/Off Valves with Solder-Connect Fittings for Drinking Water

- Max. Pressure: 500 psi @ 100° F (1/2-1 size); 400 psi @ 100° F (1 1/4-2 size)
- Temp. Range: 0° to 250° F (Standard); -50° to 250° F (High Flow)
- Vacuum Rating: Not rated (Standard); 29.9″ Hg (High Flow)

These valves meet NSF/ANSI Standard 61 for use with drinking water. Body is brass and seat and packing are PTFE. Valves are full port, so they do not restrict flow.

Standard valves have a tin/nickel-coated brass ball and PTFE seal. **High-flow** valves have a larger bore ID for twice the flow rate of standard valves. Ball is chrome/nickel-plated brass.

On/Off Valves for Food and Beverage

- Max. Pressure: 1,000 psi @ 150° F (1/2″-2″); 800 psi @ 150° F (2 1/2″-3″)
- Temp. Range: 0° to 300° F
- Vacuum Rating: Not rated

Maintain sanitary standards in food and beverage lines using these valves with polished internal surfaces for easy cleaning. Valves have a three-piece bolted body that disassembles for access to the seats, seals, and ball without removing your valve from the pipeline. Body and ball are 316 stainless steel for excellent corrosion resistance. Seat, seal, and packing are PTFE. Valves are full port, so they do not restrict flow.

Valves have a lockable lever that can be fixed in place with a padlock (not included). *1/2″ to 2″ tube OD* accept a padlock with a max. shackle diameter of 9/32″; *2 1/2″ to 3″ tube OD* accept a padlock with a max. shackle diameter of 3/8″.

Sanitary quick-clamp valves have quick-clamp connections for easy disassembly. Use with quick-clamp fittings on pages 228-231. **Butt-weld** valves have butt-weld fittings for a flush connection to metal tubing.

- Temp. Range: 35° to 200° F (Full Port); 35° to 150° F (Standard Port)
- Vacuum Rating: Not rated (Full Port); 29.9" Hg (Standard Port)

Made of FDA-listed materials, these valves have push-to-connect fittings for easy installation in soft plastic tubing lines for food and beverage applications.

Full-port valves do not restrict flow. Body is polypropylene, ball is polysulfone, and seal is EPDM. Color is white.

Standard-port valves slightly restrict flow. Body and ball are acetal; seal is Buna-N. Color is light gray.

Compact On/Off Valves for Chemicals

- Max. Pressure: 15 psi @ 73° F
- Temp. Range: 32° to 120° F
- Vacuum Rating: Not rated

Also known as stop cocks, these valves have a low profile to fit in tight spots and an EPDM seal to withstand harsh chemicals. Body is PVC. Color is black.

Pipe Size	NPT Female x NPT Female End-to-End Lg.			NPT Female x NPT Male End-to-End Lg.		
1/4	2 13/16"	47205K44	$20.59	2 3/4"	47205K52	$20.59

Ultra-Chemical-Resistant On/Off Valves for Chemicals

- Max. Pressure: 720 psi @ 150° F
- Temp. Range: –50° to 450° F
- Vacuum Rating: 29.9" Hg

The most chemical-resistant valves we offer, these have an alloy body and a PTFE seat and seal that can withstand extremely aggressive and corrosive chemicals. Connections are NPT female. Valves are standard port, so they slightly restrict flow.

Alloy 20 stainless steel valves are extremely resistant to sulfuric acid and other acidic solutions. Ball is Alloy 20 stainless steel.

Monel valves have exceptional resistance to alkaline solutions in addition to harsh acids such as hydrochloric and hydrofluoric acid. Ball is Monel.

Pipe Size	End-to-End Lg.	Alloy 20 Stainless Steel		Monel	
1/2	2 3/16"	4072T15	$221.21	4072T55	$262.03

1	2 3/4"	4072T21	424.33	4072T61	486.93

On/Off Valves with Quick-Turn and Barbed Fittings for Water, Oil, and Inert Gas

Male x Male

Male x Barb

- Max. Pressure: 50 psi @ 72° F
- Temp. Range: Not rated
- Vacuum Rating: Not rated

Also known as stop cocks, these valves are for water, oil, and inert gas. They are semi-clear purple polycarbonate with a white handle.

Male and **female** connections have quick-turn (also known as luer-lock) fittings—they attach to other quick-turn fittings with a half turn. For couplings, see 51525K on page 227.

Barbed connections slide into soft plastic and rubber tubing with a 1/8" ID.

Connections	End-to-End Lg.		
Male x Male	1 1/2"	7033T21	$2.33
Male x Female	1 3/8"	7033T24	2.29

Barb x Barb	1 1/2"	7033T23	1.38

On/Off Valves for Chemicals

- Max. Pressure: 235 psi @ 73° F
- Temp. Range: 40° to 200° F
- Vacuum Rating: 26" Hg

To withstand a broad range of harsh chemicals and solvents, these valves have a fluoroelastomer seal. Body and ball are CPVC and seat is PTFE. Use with Schedule 40 and 80 pipe and fittings. Valves are full port, so they do not restrict flow. Color is light gray.

Socket-weld valves bond to unthreaded plastic pipe.

Pipe Size	End-to-End Lg.	NPT Female		Socket Weld

Easy-Maintenance On/Off Valves for Chemicals

- Max. Pressure: 150 psi @ 70° F (1/2-2 size); 100 psi @ 70° F (3 size); 75 psi @ 70° F (4 size)
- Temp. Range: –20° to 150° F
- Vacuum Rating: Not rated

These valves have a three-piece bolted body that comes apart so you can replace the seats, seals, and ball inline. Seal is fluoroelastomer for excellent chemical resistance. Connections are NPT female. Body and ball are polypropylene and seat is PTFE. Color is black.

Standard-port valves slightly restrict flow. **Full-port** valves do not restrict flow.

Easy-Clean On/Off Valves for Chemicals

- Max. Pressure: 125 psi @ 73° F
- Temp. Range: 15° to 180° F
- Vacuum Rating: 29″ Hg

There's no need to unbolt these valves for cleaning—just remove the valve handle and slide the valve apart for inline access to the internal components. Also known as elliptical valves, these have a chemical-resistant fluoroelastomer seal. Connections are NPT female. Body and ball are polypropylene. Valves are full port, so they do not restrict flow. Color is black.

Pipe Size	End-to-End Lg.			Pipe Size	End-to-End Lg.

Flanged On/Off Valves for Chemicals

- Max. Pressure: 250 psi @ 100° F
- Temp. Range: -50° to 215° F
- Vacuum Rating: 29.92″ Hg

To handle extremely harsh, concentrated chemicals that would degrade valves with a fluoroelastomer seal, these valves have a glass-filled vinyl ester body and ball and a PTFE seal for exceptional chemical resistance. Valves have ANSI Class 150 flange connections and bolt to flanges of the same ANSI class and pipe size (bolts not included). Seat and packing are PTFE. Valves have a lockable lever handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16″. They are standard port, so they slightly restrict flow. Meet ASME B16.5 and ASME B16.10.

On/Off Valves for Fuels

Standard Port

Full Port

Max. Pressure of 1,000 psi @ 200° F:
- Use with diesel fuel, fuel oil, gasoline, kerosene, and methanol
- Temp. Range: -20° to 500° F
- Vacuum Rating: Not rated

Max. Pressure of 2,000 psi @ 250° F:
- Use with diesel fuel, fuel oil, gasoline, kerosene, and methanol, unless noted
- Temp. Range: -20° to 450° F
- Vacuum Rating: 26″ Hg

Max. Pressure of 3,600 psi @ 100° F:
- Use with diesel fuel, fuel oil, gasoline, kerosene, and methanol
- Temp. Range: -40° to 185° F
- Vacuum Rating: 29.4″ Hg

Max. Pressure of 6,000 psi @ 100° F:
- Use with diesel fuel, fuel oil, gasoline, kerosene, and methanol
- Temp. Range: -70° to 550° F
- Vacuum Rating: 29.4″ Hg

Protect personnel and equipment in the presence of flammable fuels. Fire-tested to meet American Petroleum Institute (API) standard 607, Edition 4, these valves are designed to securely isolate fluid and prevent the spread of fire. Connections are NPT female. Ball is 316 stainless steel. Valves have a lockable handle that can be fixed in place with a padlock (not included).

Standard-port valves slightly restrict flow. **Full-port** valves do not restrict flow. They comply with National Association of Corrosion Engineers (NACE) MR0175 and meet API standard 608 and ANSI B16.34.

Valves with a max. pressure of 1,000 psi have a PTFE seat and graphite seal. *2,000 max. psi* have a PTFE seat and graphite packing. *3,600 max. psi* have an acetal seat, fluoroelastomer seal, and graphite packing. *6,000 max. psi* have a PEEK seat, fluoroelastomer seal, and graphite packing.

316 stainless steel valves are more corrosion resistant than steel valves.

★Not for use with methanol.

On/Off Valves with 37° Flared Compression Fittings for Fuels

- Use with diesel fuel, gasoline, and methanol
- Max. Pressure: 200 psi @ 72° F
- Temp. Range: -40° to 250° F
- Vacuum Rating: Not rated

37° flared tube fittings form a tight seal on metal tubing for the safe transfer of diesel fuel, gasoline, and methanol. Use with 37° flared tubing and fittings. For tubing, see page 160; for fittings, see page 195. Body and ball are aluminum; seat and seal are PTFE. Valves are full port, so they do not restrict flow.

Compact On/Off Valves for Fuels

Male × Female

- Use with diesel fuel, fuel oil, gasoline, kerosene, and methanol
- Max. Pressure: See table
- Temp. Range: -40° to 250° F
- Vacuum Rating: Not rated

The low-profile handle lets you install these valves in low-clearance fuel pipelines. They are commonly called plug valves. Connections are NPTF. Body and plug are brass and seal is Buna-N. *Valves with a max. pressure of 15 psi @ 70° F* are UL listed.

Pipe Size	End-to-End Lg.	Max. Pressure of 15 psi @ 70° F		Max. Pressure of 30 psi @ 70° F

Compact On/Off Valves for Natural, Propane, and Butane Gas

Female × Male Flare

- Max. Pressure: 5 psi @ 125° F
- Temp. Range: -40° to 125° F
- Vacuum Rating: Not rated

With a smaller overall height than standard valves for gas, these valves are often installed in low-clearance areas. Body is brass, ball is chrome-plated brass, and seat and packing are PTFE. Valves are standard port, so they slightly restrict flow. UL listed and CSA and CSA-US certified.

Valves with 45° flared tube fittings form a tight seal on metal tubing lines.

Pipe Size	Thread Size	End-to-End Lg.

On/Off Valves with Ultra-High-Vacuum Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 150° F
- Max. Pressure for Steam: 40 psi @ 267° F
- Temp. Range: 0° to 300° F
- Vacuum Rating: 0.0001 torr (1/2"-1 1/2"); 0.001 torr (2")

Create a tight seal in vacuum conditions. Valves have ultra-high-vacuum tube fitting connections, which are also known as NW fittings. The three-piece bolted body comes apart for inline replacement of the seats, seals, and ball. Body and ball are 316 stainless steel. Seat, seal, and packing are PTFE. The lockable lever handle can be fixed in place with a padlock (not included). Valves are full port, so they do not restrict flow. Meet 3-A sanitary requirements.

On/Off Valves for Natural, Propane, and Butane Gas

- Max. Pressure: See table
- Temp. Range: 32° to 125° F
- Vacuum Rating: Not rated

Also known as plug valves, these are often used as a mainline shutoff in gas pipelines. Connections are NPT female. Body and plug are bronze, unless noted. Valves have a handle stop that prevents the valve from turning past the fully open or fully closed position, except lockable handles. *Lockable handles* can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/2". **Wrench-operated** valves require a square wrench (sold separately) to open and close the valve.

About Gradual On/Off Valves

Also known as gate valves, these gradually open and close to prevent system damage caused by suddenly starting or stopping flow. All have a gate that provides a tight seal when closed. Most gradual on/off valves require multiple turns of a wheel handle to open or close.

Valves with a Rising Stem—The stem lifts as the valve opens and lowers as the valve closes to provide a visual indication of whether flow is on or off. Since the stem is isolated from the process media, valves with a rising stem have a longer service life than valves with a nonrising stem.

Valves with a Nonrising Stem—The stem stays in the same position whether the valve is open or closed, so these valves are often used underground and in other low-clearance areas.

Gradual On/Off Valves

Class 125:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 100° F
- Max. Pressure for Steam: 125 psi @ 353° F
- Temp. Range: -20° to 400° F

Class 150:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 300 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -20° to 400° F

Class 200:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 100° F
- Max. Pressure for Steam: 200 psi @ 388° F
- Temp. Range: -20° to 550° F

Class 300:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 100° F
- Max. Pressure for Steam: 300 psi @ 422° F
- Temp. Range: -20° to 550° F

Rising Stem

Nonrising Stem

These valves have a durable bronze body and gate for a long service life. Connections are NPT female. Packing is graphite. Valves meet MSS-SP-80.

Pipe Size	Class 125 End-to-End Lg.			Class 150 End-to-End Lg.			Class 200 End-to-End Lg.			Class 300 End-to-End Lg.

Corrosion-Resistant Gradual On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 350° F
- Max. Pressure for Steam: 120 psi @ 350° F
- Temp. Range: 0° to 350° F

Since these valves have a 316 stainless steel body and gate, they resist corrosion in harsh environments and wet conditions. Packing is PTFE. Stem is nonrising. Valves meet ASTM A351.

NPT

Pipe Size	End-to-End Lg.	NPT Female		Socket Weld

Fast-Acting Gradual On/Off Valves

Lever and Spring-Close Lever:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 125 psi @ 120° F (1-1 1/4 size); 200 psi @ 70° F (1 1/2-3 size)
- Temp. Range: 35° to 150° F (1-1 1/4 size); -40° to 150° F (1 1/2-3 size)

Pull Handle:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 20 psi @ 1000° F (1-3 size); 10 psi @ 1000° F (4 size); 5 psi @ 1000° F (6 size)
- Temp Range: -40° to 1000° F

Pull the handle to start and stop flow faster than valves with a wheel handle. Connections are NPT female.

Lever and **spring-close lever** valves have a brass body and gate. *1 and 1 1/4 pipe size* have a Buna-N seal; *1 1/2 to 3 pipe size* have PTFE packing. *Spring-close levers* are easier to turn than standard lever handles.

Pull-handle valves have a rising stem that lifts as the valve opens and lowers as the valve closes to provide a visual indication of whether flow is on or off. They have a cast iron body, 304 stainless steel gate, and graphite packing.

Gradual On/Off Valves

For information about gradual on/off valves, see page 469. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"	4 1/2"	6 5/8"	8 5/8"

High-Pressure Gradual On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,975 psi @ 100° F
- Max. Pressure for Steam: 715 psi @ 800° F
- Temp. Range: -20° to 800° F

To withstand nearly 10 times the pressure of other gradual on/off valves, these have a forged steel body and bolted construction for extra strength and durability. Gate is steel and packing is graphite. Stem is rising. Rated Class 800. Meet API (American Petroleum Institute) 602 and ASTM A105N.

Pipe Size	End-to-End Lg.	NPT Female		Socket Weld

Lockable Safety-Air-Exhaust Valves

- Max Pressure for Compressed Air: 250 psi @ 250° F (1/2-1 size); 125 psi @ 250° F (1 1/2 and 2 size)
- Max. Pressure for Steam: Not rated
- Temp. Range: -40° to 250° F

Meet OSHA requirements for safety and control in your compressed air system. When closed, these valves vent air pressure through the exhaust port so you can disconnect air tools safely. Connections are NPT female. Gate is aluminum and seals are polyethylene and acetal. Stem is rising. Valves lock in any of four positions using a padlock (not included) with a shackle diameter of 3/8".

Valves with 1/2 to 1 pipe size have an aluminum body; *valves with 1 1/2 and 2 pipe size* have a cast iron body.

Pipe Size	End-to-End Lg.	Exhaust Port, dia.

Plastic Gradual On/Off Valves

- Max. Pressure for Water: See table
- Temp. Range: 35° to 120° F

These valves have a pull handle that starts and stops flow faster than valves with a wheel handle. Body is PVC. Stem is rising. Color is white.

Socket-weld connections are for bonding to unthreaded male plastic pipe. **Unthreaded pipe end connections** are for dispensing or attaching to hose using a hose clamp.

Fast-Acting Flanged Gradual On/Off Valves

- Max. Pressure for Air and Inert Gas: 10 psi @ 1000° F (4 size); 5 psi @ 1000° F (6 size)
- Temp. Range: -40° to 1000° F

Often used as blast gates in air conditioning and ventilating systems, these valves have a pull handle that starts and stops flow more quickly than valves with a wheel handle. They have unthreaded ANSI Class 125 and 150 flange connections and bolt to flanges of the same ANSI class and size. Body is cast iron, gate is 304 stainless steel, and packing is graphite. Stem is rising.

		Flange					
Pipe Size	End-to-End Lg.	OD	Bolt Circle Dia.	Bolt Hole Dia.	No. of Bolt Holes

Ultra-Corrosion-Resistant Flanged Gradual On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 275 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: 0° to 375° F

The most corrosion-resistant flanged gradual on/off valves we offer. Body and gate are 316 stainless steel to withstand extremely harsh conditions. Valves have unthreaded ANSI Class 150 flange connections and bolt to flanges of the same ANSI class and size. Packing is PTFE. Stem is rising. Valves meet API (American Petroleum Institute) 603 and ASME B16.34.

		Flange

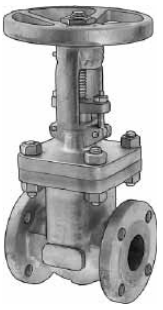
For information about gradual on/off valves, see page 469. For information about pipe size, see pages 2-3.

Flanged Gradual On/Off Valves

Cast Iron:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 150° F
- Max. Pressure for Steam: 125 psi @ 353° F
- Temp. Range: -20° to 450° F

Epoxy-Coated Cast Iron:
- Max. Pressure for Water: 200 psi @ 140° F
- Max. Pressure for Steam: Not rated
- Temp. Range: -35° to 140° F

Steel:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 285 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -20° to 800° F



Steel with Rising Stem

Bolt these valves to flanges of the same ANSI class and size. Packing is graphite, unless noted.

Cast iron valves have a cast iron gate. Flange connections are unthreaded ANSI Class 125. *Cast iron valves with nonrising stem* meet ANSI B16.10 and MSS-SP-70.

Epoxy-coated cast iron valves are more corrosion resistant than valves with a plain cast iron or steel body. Gate is rubber-coated cast iron. Flange connections are unthreaded ANSI Class 125. Meet ANSI B16.10, ASTM A126 Class B, AWWA (American Water Works Association) Standard C509, and MSS-SP-70. *Epoxy-coated cast iron valves with a rising stem* are also UL listed and FM approved.

Steel valves have a steel gate. Flange connections are threaded ANSI Class 150. Meet API (American Petroleum Institute) 600 and ASTM A216-WCB.

Gradual On/Off Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 100° F
- Max. Pressure for Steam: 15 psi @ 250° F
- Temp. Range: -20° to 250° F

Incorporate gradual on/off control in copper tubing lines—these valves have solder end (unthreaded) female connections. Body and gate are bronze for a long service life. Packing is graphite. Valves meet MSS-SP-80 and are rated Class 125.

Nonrising Stem

Gradual On/Off Valves for Drinking Water

- Max. Pressure @ 73° F: See table
- Temp. Range: 35° to 140° F (150 psi valves); 40° to 140° F (200 psi valves)

NPT Female

Valves meet NSF/ANSI Standard 61 for use with drinking water. Body is PVC. Stem is nonrising.

Valves with a Max. Pressure of 150 psi @ 73° F— Gate is PVC and seal is EPDM. Choose from white valves for use with Schedule 40 pipe and fittings and dark gray valves for use with Schedule 40 and 80 pipe and fittings. **To Order:** Please specify white or dark gray.

Valves with a Max. Pressure of 200 psi @ 73° F— Gate is polypropylene and seal is Buna-N. Use with Schedule 40 and 80 pipe and fittings. Color is dark gray.

Socket-weld valves bond to unthreaded male plastic pipe.

Gradual On/Off Valves for Chemicals

- Max. Pressure: 150 psi @ 73° F (Acetal); 200 psi @ 73° F (CPVC and PVC)
- Temp. Range: 35° to 180° F (Acetal); 40° to 200° F (CPVC); 40° to 140° F (PVC)

Socket Weld

A plastic body and fluoroelastomer seal provide excellent chemical resistance. Stem is nonrising.

Acetal valves have an acetal gate. Color is bronze. **CPVC** and **PVC** valves are for use with Schedule 40 and 80 pipe and fittings. *CPVC* valves have a CPVC gate. Color is light gray. *PVC* valves have a polypropylene gate. Color is dark gray.

Socket-weld valves bond to unthreaded male plastic pipe.

Gradual & Actuated On/Off Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about gradual on/off valves, see page 469. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	3 1/2"	4 1/2"	6 5/8"
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3	4	6

Gradual On/Off Valves for Thick Liquids and Dry Materials

For Thick Liquids:
- Max. Pressure: 150 psi @ 212° F
- Temp. Range: -50° to 212° F

For Dry Materials:
- Max. Pressure: 150 psi @ 400° F
- Temp. Range: -50° to 400° F

Also known as knife valves, these have a sharp gate that slices through thick slurries, wastewater, dry bulk solids, and other materials that would clog other gradual on/off valves. They have unthreaded ANSI Class 150 flange connections and bolt to flanges of the same ANSI class and size. Body is cast iron with a 300 series stainless steel liner. Gate is 316 stainless steel. Stem is rising.

Valves for thick liquids have an EPDM seat for a tight seal when used with viscous liquids. **Valves for dry materials** have a 316 stainless steel seat designed for use with dry media.

Pipe Size	End-to-End Lg.	Flange OD	Flange Bolt Circle Dia.	Flange Bolt Hole Dia.	Flange No. of Bolt Holes	For Thick Liquids		For Dry Materials

Gradual On/Off Valves for Boiler Blow-Off

- Max. Pressure for Water: 250 psi @ 350° F
- Temp. Range: 35° to 350° F

Prevent boiler scale deposits and sediment buildup with these valves designed for boiler drainage applications. Valves meet ASME Section 1 Codes for Boiler and Pressure Vessels, ANSI B16.31 for power piping, and ANSI B31.1. Connections are NPT female. Body and gate are cast iron and packing is EPDM and nylon.

Lever handles open and close faster than wheel handles.

Wheel handles open and close slowly to provide more controlled, shock-resistant flow. Stem is nonrising.

Pipe Size	End-to-End Lg.	Lever		Wheel Handle

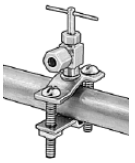
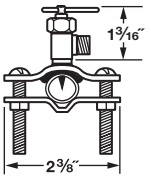
1 1/2	4 1/2"	4692K33	838.85	7917T53	1,263.85
2	4 5/8"	4692K34	944.75	7917T54	1,502.13

Tap Valves



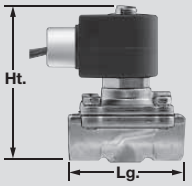


- Max. Pressure for Water, Oil, Air, and Inert Gas: 150 psi @ 180° F
- Temp. Range: 35° to 180° F

Also known as a saddle valve and humidifier valve clamp, this self-piercing valve for copper tubing allows you to tap existing lines to redirect a small amount of liquid for on/off control of a secondary line. It clamps onto tubing with 3/8" to 1 5/16" OD. Outlet connection is a 1/4" compression tube fitting. Body is brass.

4863K12 ..... $12.51

About Actuated On/Off Valves



Also known as solenoid valves, actuated on/off valves are operated by an electrical signal. Use a sensor or switch to direct the electrical signal to open or close the valve. All actuated on/off valves are either normally closed or normally open. **Closed unless energized (normally closed)** valves remain closed until they receive an electrical signal to open. When the signal stops, the valve closes. **Open unless energized (normally open)** valves remain open until they receive an electrical signal to close. When the signal stops, the valve opens.

Many actuated on/off valves require a **minimum pressure drop** across the valve to open and close; the upstream pressure must be greater than the downstream pressure. Valves with a minimum pressure drop use less energy to control flow because they are assisted by the pressure in your pipeline.

To prevent foreign particles from impacting valve performance, install an inline strainer before the actuated on/off valve in your system.

Premium Actuated On/Off Valves

- Use with water, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 180° F (AC Valves); 32° to 150° F (DC Valves)

These top-of-the-line valves are interchangeable with Parker Gold Ring 23C Series and Asco Red Hat 8210G Series.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.84 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	AC Valves Max. psi	120V AC	240V AC	24V AC		DC Valves Max. psi	24V DC

Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 195° F

The standard choice for automated flow control—no minimum pressure drop is required for operation. Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have a DIN electrical connection and draw a max. of 1.12 amps. All meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. Mount in any position.

Extended-Life Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: -40° to 212° F

A bronze body and piston provides more strength and durability than brass body valves. Connections are NPT female. Seal is Buna-N. Valves operate on 120 volts AC. They have wire leads and a 1/2 trade size conduit port. Mount in horizontal pipe with the solenoid on top.

Premium Energy-Efficient Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 180° F (AC Valves); 32° to 150° F (DC Valves)

Comparable to Parker Gold Ring 22C and 24C Series and Asco Red Hat 8210G Series, these valves meet the highest quality standards. For lower energy consumption than standard actuated on/off valves, they use pressure from your pipeline to assist in opening and closing.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.84 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Energy-Efficient Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 7 psi required
- Temp. Range: 14° to 195° F

These valves use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves. Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves have a DIN electrical connection and draw a max. of 0.6 amps. Mount in any position.

Style A meet IP65 for resistance to dust and low-pressure jets of water, unless noted. **Style B** meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use.

Extended-Life Energy-Efficient Actuated On/Off Valves

Standard

Compact

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: -40° to 220° F

To outlast valves with a brass body, these have a bronze body for more strength and durability. They use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves. Connections are NPT female. Piston is brass and seal is Buna-N. Valves have wire leads and a 1/2 trade size conduit port. Mount in horizontal pipe with the solenoid on top.

Standard—*120 volt AC* valves draw a max. of 0.32 amps; *24 volt DC* valves draw a max. of 1 amp.

Compact—These have a shorter height than standard valves for use in low clearance areas. Valves draw a max. of 1 amp. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. *120/240 volt AC* valves are UL listed and CSA certified.

Corrosion-Resistant Energy-Efficient Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 180° F

To withstand corrosion in wet conditions and harsh environments, these valves have a 316 stainless steel body. They operate with the assistance of pressure from your pipeline for lower energy consumption than standard actuated on/off valves.

Connections are NPT female. Diaphragm is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.16 amps. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 13/16"	3 7/8"	150	**48025K711**	$342.21
1/2	2 13/16"	3 7/8"	150	**48025K721**	570.95
3/4	2 15/16"	4 1/16"	150	**48025K741**	585.23
1	3 3/4"	5 11/16"	100	**48025K731**	990.67

Anti-Water-Hammer Actuated On/Off Valves

- Use with water
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 185° F

Reduce the risk of system damage caused by suddenly starting or stopping flow with these valves that open and close more slowly than other actuated on/off valves. They use pressure from your pipeline to assist in opening and closing to reduce energy consumption.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.15 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the solenoid on top. UL and C-UL listed.

Pipe Size	Lg.	Ht.	Max. psi		
1/2	2 3/16"	3 5/8"	150	**4241T44**	$282.71

1	3 15/16"	4 3/4"	230	**4241T43**	527.65

Hazardous-Location Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: -40° to 220° F

Often used in refineries and other environments with flammable gases and combustible dust, these valves are rated for use in hazardous locations. They meet NEMA 7 and are UL listed for Class I, Group D and Class II, Groups E, F, and G hazardous locations. All use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves.

Connections are NPT female. Body is bronze for durability and a long service life. Piston is brass and seal is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.32 amps. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1/2	2 3/4"	7 1/4"	150	**4691K14**	$336.82

2	5 7/8"	9 1/2"	150	**4691K19**	802.75

High-Pressure Hazardous-Location Actuated On/Off Valves

- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 100° F

Rated for up to four times the pressure of standard hazardous-location actuated on/off valves, these are often used to control flow through high-pressure pipelines in environments with flammable gases and combustible dust. All meet NEMA 9 and are UL listed for Class I, Division 1, Groups C and D and Class II, Division 2, Groups A, B, C, D, E, F, and G hazardous locations.

Connections are NPT female. Body is 303 stainless steel for excellent corrosion resistance and seal is CTFE. Valves are closed unless energized (normally closed). They have wire leads and a 1/2 trade size conduit port. Size is 2 5/8" Lg. x 3 1/4" Ht. Mount vertically.

120 volt AC valves draw a max. of 0.12 amps; *24 volt DC* valves draw a max. of 0.4 amps.

Premium Compact Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: -40° to 185° F

Interchangeable with industry standard valves from Asco, Parker Gold Ring, and Skinner, these are top of the line. Connections are NPT female. Body is 430 stainless steel and seal is Buna-N. Valves have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.41 amps. They meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed and CSA certified.

Normally open valves have a top outlet.

Compact Actuated On/Off Valves

- Pressure Drop Across Valve: None required
- Temp Range:
  14° to 190° F (Style A);
  32° to 120° F (Styles B and C);
  32° to 210° F (Style D)

Connections are NPT female. Body is brass. Valves are closed unless energized (normally closed). Mount in any position.

Style A have a DIN electrical connection.

Styles B-D have wire leads and a 1/2 trade size conduit port. They meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. UL listed and CSA certified.

Corrosion-Resistant Compact Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 180° F (120V AC valves); 32° to 120° F (24V DC valves)

For more corrosion resistance than standard compact valves with a brass body, these have a 303 stainless steel body. Connections are NPT female. Seal is Buna-N. Valves are closed unless energized (normally closed). They have wire leads and a 1/2 trade size conduit port. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed and CSA certified, unless noted.

High-Pressure Compact Actuated On/Off Valves

430 Stainless Steel

303 Stainless Steel

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range:
  32° to 165°F (PCTFE Seal);
  32° to 185°F (PTFE and Nylon Seals);
  0° to 100°F (CTFE Seal)

Control flow in high-pressure lines in tight spots—these valves have the highest pressure ratings of our compact actuated on/off valves. Connections are NPT female. Valves are closed unless energized (normally closed). They have wire leads and a 1/2 trade size conduit port.

430 stainless steel valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. They draw a max of 0.41 amps. Size is 1 5/8" Lg. x 2 7/8" Ht. Mount in horizontal pipe with the solenoid on top. *Valves with PCTFE* and *PTFE* seals are UL listed and CSA certified.

303 stainless steel valves are more corrosion resistant than 430 stainless steel valves. Size is 2 3/8" Lg. x 2 3/4" Ht. Mount vertically. *120 volt AC* valves draw a max. of 0.12 amps; *24 volt DC* valves draw a max. of 0.4 amps.

Miniature Actuated On/Off Valves

- Use with air and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 140°F

Less than half the size of our compact actuated on/off valves, these have small pipe connections for miniature lines. Connections are 10-32 UNF female. Body is 303 stainless steel for excellent corrosion resistance. Seal is fluoroelastomer. Valves are closed unless energized (normally closed) and have wire leads. Size is 3/4" Dia. x 1 11/16" Ht. Mount in any position.

Compact Actuated On/Off Valves with Push-to-Connect Fittings

- Use with water, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: -10° to 100°F

Insert plastic or soft metal tubing into the push-to-connect fittings on these small valves for a low-pressure seal. Body is polycarbonate and seal is Buna-N. Valves are closed unless energized (normally closed) and have a 1/4" quick-disconnect electrical connection. Mount in any position. CSA certified.

120 volt AC valves draw a max. of 0.09 amps; *24 volt DC* valves draw a max. of 0.78 amps.

Actuated On/Off Valves for Steam and Hot Water

- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 300°F

Body is brass and diaphragm is EPDM. Connections are NPT female. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.19 amps. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the solenoid on top.

Extended-Life Actuated On/Off Valves for Steam

- Pressure Drop Across Valve: None required
- Temp. Range: -350° to 400°F

With a durable bronze body and piston, these valves last longer than brass body valves. Connections are NPT female. Seal is glass-filled PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 2 amps. Mount in horizontal pipe with the solenoid on top.

Energy-Efficient Actuated On/Off Valves for Steam

- Pressure Drop Across Valve: At least 1 psi required, unless noted
- Temp. Range: 32° to 350° F, unless noted

These valves use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves. Connections are NPT female. Body is brass and diaphragm is PTFE, unless noted. Valves have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.83 amps, unless noted. They meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the coil on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi	120V AC	24V AC	
Closed Unless Energized (Normally Closed)

★Diaphragm is EPDM. Temp. range is 32° to 300° F.
■ A pressure drop of at least 10 psi is required for operation.
▲ Draws a max. of 0.16 amps.

Actuated On/Off Valves for Coolants and Detergents

- Use with degreasing fluid, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 230° F

Body is brass and diaphragm is fluoroelastomer. Connections are NPT female. Valves have wire leads and a 1/2 trade size conduit port. They meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed.

120 volt AC valves draw a max. of 0.19 amps; *24 volt AC* and *24 volt DC* valves draw a max. of 1.12 amps.

Extended-Life Energy-Efficient Actuated On/Off Valves for Steam and Hot Water

A

B

- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: -40° to 365° F (Style A); -40° to 355° F (Style B)

To extend service life, these valves have a bronze body for more strength and durability than valves with a brass body. They use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves.

Connections are NPT female. Piston is brass and seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads and a 1/2 trade size conduit port. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Style A draw a max. of 0.42 amps.

Style B meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Valves draw a max. of 1 amp.

Pipe Size	Lg.	Ht.	Max. psi

Corrosion-Resistant Actuated On/Off Valves for Steam and Hot Water

- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 32° to 365° F

With a 316 stainless steel body, these valves resist corrosion in harsh environments and wet conditions. They use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves.

Connections are NPT female. Diaphragm is PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.11 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with solenoid on top. UL listed and CSA certified.

Actuated On/Off Valves with Strainer for Coolants and Detergents

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 180° F

To keep these valves operating efficiently, a built-in 60-mesh strainer traps debris and lets you replace the screen without disconnecting your pipeline. Valves use pressure from your pipeline to assist in opening and closing for lower energy consumption. Connections are NPT female. Body is brass and diaphragm is EPDM. Valves are closed unless energized (normally closed). They have a 1/4" quick-disconnect electrical connection. Size is 2 7/16" Lg. × 3 3/4" Ht. Mount in horizontal pipe with the solenoid on top.

Actuated On/Off Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about actuated on/off valves, see page 472. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Corrosion-Resistant Actuated On/Off Valves for Coolants and Detergents

304 Stainless Steel

316 Stainless Steel

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range:
  -320° to 400° F (304 Stainless Steel);
  14° to 300° F (316 Stainless Steel)

For excellent corrosion resistance in harsh environments, these valves have a stainless steel body. Connections are NPT female. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads and a 1/2 trade size conduit port.

304 stainless steel valves have a 303 stainless steel piston and a glass-filled PTFE seal. They draw a max. of 0.8 amps. Mount in horizontal pipe with the solenoid on top.

316 stainless steel valves have the best corrosion resistance. Diaphragm is fluoroelastomer. Valves draw a max. of 0.16 amps. They meet NEMA 2 for resistance to dripping liquid and light splashing. Mount in any position. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi

Energy-Efficient Actuated On/Off Valves for Coolants and Detergents

These valves use pressure from your pipeline to assist in opening and closing for lower energy consumption than standard actuated on/off valves. Connections are NPT female. Diaphragm is fluoroelastomer. Valves are closed unless energized (normally closed). Mount in any position.

Standard—Brass Body

- Use with cutting oils and ethylene glycol
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 230° F

Valves have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.55 amps. They meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. UL listed and CSA certified.

Corrosion Resistant—Nickel-Plated Brass Body

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: At least 2 psi required
- Temp. Range: 14° to 280° F

Valves have a nickel-plated brass body for more corrosion resistance than plain brass. They have a DIN electrical connection. All meet NEMA 4 for resistance to washdowns, splashing water, and dust. They are suitable for outdoor use. *120 volt AC* valves draw a max. of 0.12 amps; *24 volt DC* valves draw a max. of 0.33 amps.

Ultra-Corrosion-Resistant Actuated On/Off Valves for Coolants and Detergents

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: At least 20 psi required
- Temp. Range: -40° to 300° F

A 316 stainless steel body provides the best corrosion resistance in wet environments and harsh conditions. These valves use pressure from your pipeline to assist in opening and closing, so they consume less energy than standard actuated on/off valves.

Connections are NPT female. Piston is 303 stainless steel and seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.6 amps. Mount in horizontal pipe with the solenoid on top.

Corrosion-Resistant Compact Actuated On/Off Valves for Coolants

- Use with ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 212° F

A

B

Resist corrosion in harsh conditions using these valves with a 303 stainless steel body. Connections are NPT female. Seal is fluoroelastomer. Valves are closed unless energized (normally closed). Mount in any position. *120 volt AC* valves draw a max. of 0.11 amps; *24 volt DC* valves draw a max. of 0.33 amps.

Style A have wire leads and a 1/2 trade size conduit port. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. UL listed.

Style B have a DIN electrical connection. Valves meet IP65 for resistance to dust and low-pressure jets of water.

Actuated On/Off Valves for Food and Beverage

- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 325° F

These valves meet NSF/ANSI Standard 169 for use with food equipment. Connections are NPT female. Body is 430 stainless steel for good corrosion resistance. Seal is fluoroelastomer. Valves are closed unless energized (normally closed) and have wire leads. All meet NEMA 6 for resistance to temporary submersion, washdowns, splashing water, and dust and are suitable for outdoor use. Mount in any position.

High-Use Actuated On/Off Valves for Coolants and Detergents

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 200° F

Sturdy internal components resist wear for a long service life in applications with frequent cycling. These valves use pressure from your pipeline to assist in opening and closing for reduced energy consumption.

Connections are NPT female. Body and piston are brass and seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.24 amps. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi

Actuated On/Off Valves for Drinking Water

- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 180° F

Since these valves meet NSF/ANSI Standard 61, they're suitable for use with drinking water. They use pressure from your pipeline to assist in opening and closing for lower energy consumption. Connections are NPT female. Body is 303 stainless steel for excellent corrosion resistance. Diaphragm is EPDM.

Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have a 1/4" quick-disconnect electrical connection and draw a max. of 0.1 amps. Mount in horizontal pipe with the solenoid on top.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	1 7/8"	3"	125	4530T11	$116.56
1/2	1 7/8"	3"	125	4530T12	120.21

Actuated On/Off Valves with Tube Fittings for Food and Beverage

- Pressure Drop Across Valve: None required
- Temp. Range: -10° to 100° F

Push-to-connect fittings let you quickly install these valves in food-grade tubing lines. They meet NSF/ANSI Standard 169 for use with food equipment. Body is polycarbonate and seal is EPR. Valves are closed unless energized (normally closed) and have a 1/4" quick-disconnect electrical connection. Mount in any position. CSA certified.

120 volt AC valves draw a max. of 0.09 amps; *24 volt DC* valves draw a max. of 0.78 amps.

Actuated On/Off Valves for Chemicals

- Pressure Drop Across Valve: None required
- Temp. Range:
  34° to 140° F (PVC);
  34° to 190° F (CPVC)

With a plastic body and a fluoroelastomer diaphragm, these valves have excellent chemical resistance. Union fittings on each end disassemble to facilitate installation and allow you to remove the central portion of the valve for maintenance without disturbing pipe connections. Valves include a set of NPT female fittings and a set of socket-weld (unthreaded) fittings.

Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have a DIN electrical connection, a 1/2 trade size conduit port, and draw a max. of 0.16 amps. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
PVC—Color is dark gray					
1/2	5 5/16"	6 3/8"	120	**4744K24**	$337.71

Actuated On/Off Valves for Natural, Propane, and Butane Gas

- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 175° F

Body is aluminum and seal is Buna-N. Connections are NPT female. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.15 amps. All meet NEMA 2 for resistance to dripping liquid and light splashing. Mount in any position. UL listed.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 5/8"	4"	2	**4689K43** **4689K44**	$162.83

Compact Actuated On/Off Valves for Natural, Propane, and Butane Gas

- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 175° F

Designed for small pipelines and low-clearance areas, these valves are available in smaller pipe sizes than standard valves for natural, propane, and butane gas and they have a lower profile.

Connections are NPT female. Body is brass and seal is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.16 amps. All meet NEMA 2 for resistance to dripping liquid and light splashing. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1/8	1 3/4"	3 1/8"	10	**47545K32**	$325.33

3/8	2"	3 1/2"	10	**47545K34**	253.40

Compact Actuated On/Off Valves for Chemicals

- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 150° F

To fit in tight spots, these valves are only a third of the size of standard actuated on/off valves for chemicals. They have an acetal body and fluoroelastomer seal for excellent chemical resistance. Connections are NPT female. Valves are closed unless energized (normally closed) and have wire leads. Mount in any position using the two 1/4" dia. mounting holes (fasteners not included).

120 volt AC valves draw a max. of 0.06 amps; *24 volt DC* valves draw a max. of 0.23 amps.

Pipe Size	Lg.	Ht.	120V AC Max. psi		24V DC Max. psi

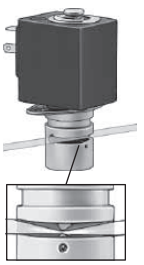
Actuated On/Off Valves for Chemical-Resistant Tubing



- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 140° F

Also known as pinch valves, these press down on the outside of tubing to stop flow without contacting the process media, so there's no need to worry about chemical compatibility or corrosion.

Body is anodized aluminum and pinch mechanism is acetal. Valves are closed unless energized (normally closed) and have a DIN electrical connection. They meet IP65 for resistance to dust and low-pressure jets of water. Use with tubing with a max. durometer of 50A (tubing not included). Mount in any position.

For Tube OD	ID	Lg.	Ht.	Max. psi	Amps		
12V DC

Actuated On/Off Valves for Fuel Oil

- Pressure Drop Across Valve:
  At least 5 psi required (1/4 size);
  None required (3/8 size)
- Temp. Range: -10° to 180° F

Use one of these UL listed valves to control the flow of fuel oil. Connections are NPT female. Body is brass and diaphragm is fluorocarbon. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads and a 1/2 trade size conduit port. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in horizontal pipe with the solenoid on top. CSA certified.

1/4 pipe size valve uses pressure from your pipeline to assist in opening and closing for reduced energy consumption. It draws a max. of 0.25 amps.

3/8 pipe size valve draws a max. of 0.34 amps.

Pipe Size	Lg.	Ht.	Max. psi		
1/4	2"	3 3/16"	300	**47545K15**	$122.40
3/8	3"	3 5/8"	230	**47545K16**	173.15

Actuated On/Off Valves for Cryogenic Liquids

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Pressure Drop Across Valve: None required
- Temp. Range: -320° to 355° F (Brass); -350° to 400° F (Bronze)

Brass

Bronze

Built to withstand the extreme cold of liquid argon, liquid nitrogen, and liquid oxygen, these valves come cleaned and bagged for high-purity applications. Connections are NPT female. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads and a ½ trade size conduit port.

Brass valves meet NEMA 2 for resistance to dripping liquid and light splashing. Seal is PTFE. Valves draw a max. of 0.16 amps. Mount in any position.

Bronze valves are stronger and more durable than valves with a brass body for an extended service life. Piston is bronze and seal is glass-filled PTFE. Valves draw a max. of 2 amps. Mount in horizontal pipe with the solenoid on top.

Pipe Size	Lg.	Ht.	Max. psi		
Brass					
1/8	1 3/4"	3 1/8"	300	50585K21	$330.32

Energy-Efficient Actuated On/Off Valves for Cryogenic Liquids

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: -320° to 355° F (Brass); -320° to 120° F (304 Stainless Steel)

Brass

304 Stainless Steel

Since these valves use pressure from your pipeline to assist in opening and closing, they consume less energy than standard on/off valves for cryogenic liquids. All are designed to withstand the extreme cold of liquid argon, liquid nitrogen, and liquid oxygen. They come cleaned and bagged for high-purity applications.

Connections are NPT female. Seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 volts AC. They have wire leads, a ½ trade size conduit port, and draw a max. of 0.23 amps. Mount in any position.

Brass valves have a brass piston. They meet NEMA 2 for resistance to dripping liquid and light splashing.

304 stainless steel valves are more corrosion resistant than brass valves. Piston is 304 stainless steel. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use.

About High-Pressure Actuated On/Off Valves

Also known as actuated ball valves, these motor- or air-driven valves withstand higher pressures than other actuated on/off valves. They automatically start and stop flow.

Air-driven valves operate on compressed air and electricity; an electric solenoid turns the air on and off to open and close these valves faster than motor-driven valves. They are available in two actuation styles. *Air-to-open/air-to-close* valves use air pressure to open and close. *Closed unless air is on (normally closed)* valves use air pressure to open and automatically spring closed when the air turns off.

Motor-driven valves operate solely on electricity.

All high-pressure actuated on/off valves are available with direct-mount and bracket-mount actuators. **Direct-mount** actuators are directly attached to the valve body to minimize movement and reduce wear. They are more compact than bracket-mount actuators. **Bracket-mount** actuators are secured to the valve body with a bracket for easy disassembly, maintenance, and repair.

Air-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Valve Temp. Range: -50° to 400° F
- Vacuum Rating: 29.9" Hg

These valves automatically start and stop flow for remote on/off control. Connections are NPT female. Body is brass, ball is 316 stainless steel, seat is graphite-filled PTFE, and seal is fluoroelastomer. Valves meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows whether flow is on or off. Requires an air supply of 80 to 120 psi; inlet is ¼ NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 volts AC @ 60 Hz. Has 12" long wire leads with a ½ trade size conduit port. Actuator temperature range is 0° to 130° F.

Corrosion-Resistant Air-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 600 psi @ 250° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: -20° to 400° F
- Vacuum Rating: 29.9" Hg

These valves have a nickel-plated brass body for more corrosion resistance than plain brass. Connections are NPT female. Ball is 316 stainless steel, seat is PTFE, and seal is fluoroelastomer. Valves meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows whether flow is on or off. Requires an air supply of 40 to 120 psi; inlet is 1/4 NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a DIN electrical connection. Actuator temperature range is -4° to 180° F.

Ultra-Corrosion-Resistant Air-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 720 psi @ 150° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: -50° to 450° F
- Vacuum Rating: 29.9" Hg

For the best corrosion resistance in wet conditions and harsh environments, these valves have a 316 stainless steel body and ball. Connections are NPTF (Dryseal) female. Seat and seal are glass-filled PTFE. Valves meet IP65 for resistance to dust and low-pressure jets of water. All are standard port, so they slightly restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows whether flow is on or off. Requires an air supply of 60 to 125 psi; inlet is 1/8 NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a DIN electrical connection. Actuator temperature range is -20° to 140° F.

Also Available: Solenoids that operate on 240 volts AC, 24 volts AC, and 24 volts DC. Please ask for 47005K15 and specify 240 volts AC, 24 volts AC, or 24 volts DC.

Heavy-Use Air-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 500 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Valve Temp. Range: -20° to 350° F
- Vacuum Rating: Not rated

Limit wear and damage in high-cycling applications—these valves have additional seals that prevent leakage to reduce maintenance time. Connections are NPTF (Dryseal) female. Body and ball are 316 stainless steel for excellent corrosion resistance. Seat is glass-filled PTFE and seal is fluoroelastomer. Valves are standard port, so they slightly restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is direct mount and double-acting (air-to-open/air-to-close). Requires an air supply of 60 to 125 psi; inlet is 1/8 NPT female. Housing is aluminum.

Required solenoids (sold separately) have screw terminals with a DIN electrical connection. They meet IP65 for resistance to dust and low-pressure jets of water. Temperature range is -20° to 140° F. Choose a solenoid based on the voltage you need.

Valves

Ultra-High-Pressure Air-Driven Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 200° F
- Max. Pressure for Steam: 150 psi @ 365° F
- Valve Temp. Range: -20° to 450° F
- Vacuum Rating: 29.9" Hg

Handle nearly twice the pressure as high-pressure air-driven on/off valves. Connections are NPT female. Body and ball are 316 stainless steel for excellent corrosion resistance. Seat is glass-filled PTFE and seal and packing are PTFE. Valves meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows whether flow is on or off. Requires an air supply of 40 to 118 psi; inlet is 1/4 NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a DIN electrical connection. Actuator temperature range is 32° to 120° F.

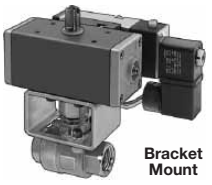
Extreme-Pressure Air-Driven Actuated On/Off Valves

Direct Mount:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,500 psi @ 100° F
- Max. Pressure for Steam: 100 psi @ 338° F
- Valve Temp. Range: 0° to 335° F
- Vacuum Rating: 28″ Hg

Bracket Mount:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 2,000 psi @ 100° F (½ to 1 size); 1,500 psi @ 100° F (1½ and 2 size)
- Max. Pressure for Steam: 150 psi @ 365° F
- Valve Temp. Range: -20° to 450° F
- Vacuum Rating: 29″ Hg

Direct Mount



Bracket Mount

The highest-pressure air-driven actuated on/off valves we offer, these withstand at least 1,500 psi. Connections are NPT female. Body and ball are 316 stainless steel for excellent corrosion resistance. Valves are full port, so they do not restrict flow.

The actuator has an aluminum housing. Comes with a solenoid that operates on 120 volts AC @ 60 Hz.

Direct Mount—Seat, seal, and packing are PTFE. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Use in horizontal pipeline. The actuator has a visual indicator that shows whether flow is on or off. Requires an air supply of 80 psi; inlet is ¼ NPT female. Solenoid has screw terminals and a DIN electrical connection with a ½ trade size conduit port. Actuator temperature range is -4° to 140° F.

Bracket Mount—Seat, seal, and packing are glass-filled PTFE. Can be used in horizontal and vertical pipeline. The actuator requires an air supply of 80 to 115 psi; inlet is ¼ NPT female. Solenoid has 12″ long wire leads and a DIN electrical connection with a ½ trade size conduit port. Actuator temperature range is -4° to 185° F.

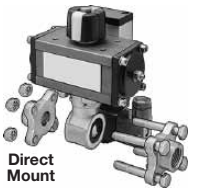
- Max. Pressure for Steam: 100 psi @ 338° F
- Valve Temp. Range: -4° to 335° F
- Vacuum Rating: 28″ Hg



Direct Mount

Bracket Mount

To facilitate inline maintenance, these valves have a three-piece bolted body that comes apart so you can access the seats, seal, packing, and ball without unthreading pipe connections. Connections are NPT female. Body and ball are 316 stainless steel for excellent corrosion resistance.

The actuator has an aluminum housing. Comes with a solenoid that operates on 120 volts AC @ 60 Hz.

Direct Mount—Seat is glass-filled TFE and seal and packing are PTFE. Valves meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Can be used in horizontal and vertical pipeline. The actuator has a visual indicator that shows whether flow is on or off. Requires an air supply of 40 to 118 psi; inlet is ¼ NPT female. Solenoid has screw terminals with a DIN electrical connection. Actuator temperature range is 32° to 120° F.

Bracket Mount—Seat and seal are PTFE and packing is polyethylene. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. All are standard port, so they slightly restrict flow. Use in vertical pipeline. The actuator requires an air supply of 80 psi; inlet is ¼ NPT female. Solenoid has screw terminals and a DIN electrical connection with a ½ trade size conduit port. Actuator temperature range is -4° to 140° F.

Air-Driven High-Pressure Actuated On/Off Valves for Chemicals

- Max. Pressure: 250 psi @ 70° F
- Valve Temp. Range: 40° to 140° F
- Vacuum Rating: 28″ Hg

For excellent chemical resistance, these valves have a fluoroelastomer seal and a PVC body and ball. Union fittings on each end of the valve disassemble to facilitate installation and removal, and they also allow you to remove the central portion of the valve for maintenance without disturbing pipe connections.

In addition to the NPT female connections, these valves also come with socket-weld (unthreaded) fittings. Use with Schedule 40 and 80 pipe and fittings in horizontal and vertical pipeline. Seat is PTFE. Valves meet NEMA 4 for resistance to washdowns, splashing water, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Color is dark gray.

The actuator is bracket mount and has a visual indicator that shows whether flow is on or off. Requires an air supply of 80 to 120 psi; inlet is ¼ NPT female. Housing is plastic. Comes with a solenoid that operates on 120 volts AC @ 60 Hz. Has 17″ long wire leads with a ½ trade size conduit port. Actuator temperature range is 0° to 120° F.

High-Pressure Actuated On/Off Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about high-pressure actuated on/off valves, see page 481. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/2	3/4	1	1 1/4	1 1/2	2

Motor-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 720 psi @ 150° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: -50° to 450° F (Brass 1/2 to 1 1/2 size); -20° to 400° F (Brass 2 size); -20° to 400° F (316 Stainless Steel)
- Vacuum Rating: 29.9" Hg

These actuated valves automatically start and stop flow for remote on/off control. Connections are NPTF (Dryseal) female. Ball is 316 stainless steel and seat and seal are PTFE. Can be used in horizontal and vertical pipeline. *Full-port* valves do not restrict flow. *Standard-port* valves slightly restrict flow.

The actuator is direct mount. It has a visual indicator that shows whether flow is on or off and a manual override in case of power loss or motor failure. Housing is plastic. Operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a 1/2 trade size conduit port. Actuator temperature range is 40° to 150° F.

Brass valves turn flow on or off in 6 seconds. **316 stainless steel** valves are more corrosion resistant than valves with a brass body. They turn flow on or off in 10 seconds.

Easy-to-Install Motor-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure: 250 psi @ 70° F
- Valve Temp. Range: 40° to 140° F (PVC); 40° to 190° F (CPVC)
- Vacuum Rating: 28" Hg

Separate the union fittings on each end of these valves for fast installation and removal. The union fittings also let you remove the central portion of the valve for maintenance without disturbing pipe connections. In addition to NPT female connections, these valves also come with socket weld (unthreaded) fittings. Use with Schedule 40 and 80 pipe and fittings in horizontal and vertical pipeline. Seat is PTFE. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow.

The actuator is bracket mount and has a visual indicator that shows whether flow is on or off. It turns flow on or off in 2.5 seconds. Housing is plastic. Actuator length is 4 7/8". Operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a 1/2 trade size conduit port. Actuator temperature range is 32° to 110° F.

PVC valves have a PVC ball. **CPVC** valves have a CPVC ball.

Valves for water have an EPDM seal. **Valves for chemicals** have a fluoroelastomer seal.

Compact Motor-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: 0° to 450° F
- Vacuum Rating: Not rated

With a slimmer motor than other motor-driven actuated on/off valves, these fit in tight spots and cramped areas. Connections are NPT female. Body and ball are 316 stainless steel for excellent corrosion resistance. Seat is TFM, seal is PTFE, and packing is carbon-filled PTFE. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Use in horizontal pipeline.

The actuator is direct mount and has a manual override in case of power loss or motor failure. Housing is aluminum. Operates on 120 volts AC @ 50/60 Hz. Has screw terminals with a ½ trade size conduit port. Actuator temperature range is -20° to 145° F.

Motor-Driven High-Pressure Actuated On/Off Valves with Solder-Connect Fittings

- Max. Pressure for Water: 300 psi @ 250° F
- Max. Pressure for Steam: 15 psi @ 250° F
- Valve Temp. Range: 32° to 250° F
- Vacuum Rating: Not rated

Often used for remote on/off control in heating and cooling systems, these valves connect to copper pipe with solder-end fittings. Two fittings (sold separately) are required for installation. Body, ball, and seat are brass and seal is Buna-N. Valves are standard port, so they slightly restrict flow. Can be used in horizontal and vertical pipeline. UL and C-UL listed.

The actuator is direct mount and has a manual override in case of power loss or motor failure. It turns flow on or off in 9 seconds. Housing is aluminum. Has 18" long wire leads. Actuator temperature range is -40° to 160° F.

Required fittings have a union nut on one end that threads onto the valve connection and a solder-end connection on the other end for attaching to copper pipe. Choose fittings based on the tube size you need.

Plastic Motor-Driven High-Pressure Actuated On/Off Valves

- Max. Pressure: 235 psi @ 100° F
- Valve Temp. Range: 40° to 140° F
- Vacuum Rating: 26" Hg

These valves automatically start and stop flow for remote on/off control. Use with Schedule 40 and 80 pipe and fittings in horizontal and vertical pipeline. Body and ball are PVC and seat is PTFE. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. All are full port, so they do not restrict flow. Color is dark gray.

The actuator is direct mount. It turns flow on or off in 5 seconds. Housing is plastic. Operates on 120 volts AC @ 60 Hz. Has screw terminal connections with a ½ trade size conduit port. Actuator temperature range is 32° to 110° F.

Valves for drinking water meet NSF/ANSI Standard 61. Seal is EPDM. **Valves for chemicals** have a fluoroelastomer seal.

To Order: Please specify pipe connection: NPT female or socket weld (unthreaded).

About High-Flow and Severe-Duty Actuated On/Off Valves

High-Flow Actuated On/Off Valves—Also known as piston and angle-seat valves, these air-driven valves have angled internal components to allow the maximum possible flow.

Severe-Duty Actuated On/Off Valves—Also known as diaphragm valves, these air-driven valves are designed for use with dirty and contaminated liquids that would damage other valves.

High-Flow Actuated On/Off Valves

- Temp Range: 14° to 355° F (For Water, Oil, Air, and Inert Gas); 15° to 366° F (For Steam)

These valves have angled internal components that allow the maximum possible flow for automatic on/off control in high-flow applications. Connections are NPT female. Body is bronze for durability and a long service life. Piston is 431 stainless steel and seal is PTFE. Air inlet is ⅛ NPT female, unless noted.

High-Flow & Severe-Duty Actuated On/Off Valves

For information about high-flow and severe-duty actuated on/off valves, see page 485. For pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest ID or OD below, and read down to find the corresponding pipe size.

ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	3 1/2"	4 1/2"	6 5/8"

Compact High-Flow Actuated On/Off Valves

- Use with water, oil, air, inert gas, and steam
- Temp. Range: 15° to 366° F

The smallest general-service high-flow actuated on/off valves we offer, these are often used in low-clearance areas where other valves won't fit. Connections are NPT female. Body and piston are 316 stainless steel for excellent corrosion resistance. Seal is PTFE. Valves are closed unless air is on (normally closed). Require an air supply of 60 to 150 psi; inlet is 1/8 NPT female.

Pipe Size	Max. psi Liquid	Max. psi Steam	Lg.	Ht.		
3/8	240	150	2 3/16"	4"	5032T11	$341.37

3/4	90	90	3"	4"	5032T13	384.02

High-Temperature High-Flow Actuated On/Off Valves

- Temp. Range: -20° to 428° F

To withstand temperatures up to 20% higher than other high-flow actuated on/off valves, these have a temperature-resistant PEEK seal. Connections are NPT female. Body is 316 stainless steel for excellent corrosion resistance. Piston is brass. Valves are closed unless air is on (normally closed).

High-Flow Actuated On/Off Valves for Chemicals

- Temp. Range:
  32° to 140° F (PVC);
  0° to 180° F (Polypropylene)

With a chemical-resistant fluoroelastomer seal and no metal parts to corrode, these valves are often used in chemical-processing and water-treatment applications. Connections are NPT female. Piston is polypropylene. Valves are closed unless air is on (normally closed) and require an air supply of 40 to 80 psi.

Valves have four holes on the bottom for mounting (fasteners not included). *Valves with 1/2 pipe size* use 1/4"-20 screws; *valves with 3/4 and 1 pipe size* use 3/8"-16 screws.

PVC valves are dark gray.

Polypropylene valves are white.

Pipe Size	Max. psi	Lg.	Ht.	Air Inlet Pipe Size	PVC		Polypropylene	
1/2	150	3"	4"	1/8	8170K23	$195.70	8170K53	$227.87

1	150	4"	5"	1/2	8170K25	335.11	8170K55	375.32

Corrosion-Resistant High-Flow Actuated On/Off Valves

- Use with water, oil, and steam
- Temp. Range: 14° to 356° F

Pair exceptional corrosion resistance with ease of use—these valves come with a solenoid that controls air supplied to the valve. Connections are NPT female. Body is 316 stainless steel, piston is polyamide, and seal is PTFE. Valves have a visual indicator that shows whether flow is on or off. They require an air supply of 25 to 150 psi; inlet is 1/8 NPT female. All meet IP65 for resistance to dust and low-pressure jets of water. UL listed.

The solenoid operates on 120 volts AC @ 60 Hz and has a DIN electrical connection.

Pipe Size	Max. psi Liquid	Max. psi Steam	Lg.	Ht.

Severe-Duty Actuated On/Off Valves

- Use with water, oil, air, inert gas, and steam
- Temp. Range:
  -40° to 400° F (Bronze);
  -40° to 450° F (316 Stainless Steel)

These valves automatically start and stop flow and are designed for use with dirty and contaminated liquids that would damage other valves. Connections are NPT female. Seal is PTFE-coated stainless steel. Air inlet is 1/4 NPT female. Valves meet ANSI Class IV for tight shutoff and have a leakage rate of less than 0.01%.

Bronze valves provide durability for a long service life. Diaphragm is nylon-reinforced EPDM.

316 stainless steel valves have better resistance to corrosive fluids and aggressive process media than bronze valves. Diaphragm is fabric-reinforced EPDM. Valves meet ANSI B16.34.

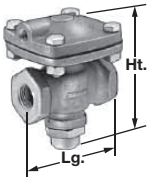
Compact Severe-Duty Actuated On/Off Valves

- Use with water, oil, air, and inert gas
- Temp. Range: -20° to 180° F

At less than half the height of standard severe-duty actuated on/off valves, these are often used in small spaces and low-clearance pipelines. They automatically start and stop flow and are designed for use with dirty and contaminated liquids that would damage other valves. Connections are NPT female. Body is bronze for durability and a long service life. Diaphragm is Buna-N and nylon; seal is 303 stainless steel. Require an air supply of 20 psi, unless noted.

Repair kits include a diaphragm, spring, and seals.



Pipe Size	Max. psi	Lg.	Ht.	Air Inlet Pipe Size	Valves		Repair Kits

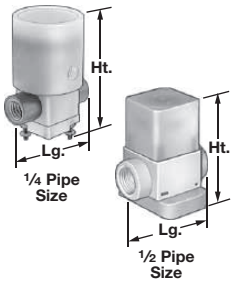
★ Require an air supply of 20 to 45 psi.

Severe-Duty Actuated On/Off Valves for Chemicals

- Temp Range:
  32° to 212° F (1/4 size);
  32° to 300° F (1/2 size)

Also known as Weir-style valves, these have a PTFE body and seals that stand up to harsh acidic solutions in addition to dirty and contaminated liquids. Connections are NPT female. Valves are closed unless air is on (normally closed).

Valve with 1/4 pipe size has two 4-40 studs on the bottom for mounting.



Pipe Size	Max. psi	Lg.	Ht.	Air Supply: Inlet Pipe Size	Air Supply: Required psi

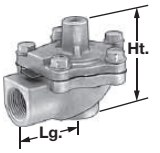
1/2	60	1 3/4"	3 3/8"	1/8	60 to 80	45185K24	362.63

Aluminum Valves for Dust Collectors

- Use with air and inert gas
- Temp. Range: -40° to 179° F



Designed for use in dust-collection systems, these valves release bursts of air to knock debris from air filter bags. The valve's inlet connects to your air supply, and the outlet connects to the blow tube in your system.

All connections are NPT female. Body is aluminum. Diaphragm is TPE, except valve with 1 1/2 pipe size, which is Buna-N. Valves are closed unless air is on (normally closed). Require an air supply of 5-125 psi.

For electrical actuation, the solenoid valve (sold separately) connects to the exhaust port. **To Order:** Specify 120V AC, 240V AC, or 24V DC.

Pipe Size	Max. psi	Lg.	Ht.	Exhaust Port Pipe Size

About Large-Diameter Actuated On/Off Valves

Also known as butterfly valves, these are designed for on/off flow control in large pipelines and applications with higher flow rates than other actuated on/off valves. All have a disc that provides a tight seal. With a small number of moving parts, these valves are long lasting and easy to maintain.

Valves with threaded flange holes have a hole pattern that matches ANSI flanges of the same pipe size. Also called lug-style butterfly valves, these can be sandwiched between two flanges or bolted directly to a single flange for servicing one end of the pipeline without depressurizing the other side.

Valves with alignment guides have alignment tabs or unthreaded alignment holes. Also called wafer-style butterfly valves, these must be sandwiched between two flanges in your system.

ANSI Flange Alignment

With Threaded Flange Holes

With Alignment Guides

Motor-Driven Large-Diameter Actuated On/Off Valves

For Water:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 225° F (High Pressure);
- Valve Temp. Range: -30° to 275° F (Medium Pressure); -20° to 225° F (High Pressure)

For Oil:
- Max. Pressure: 200 psi @ 180° F (Medium Pressure); 250 psi @ 180° F (High Pressure);
- Valve Temp. Range: 10° to 180° F (Medium Pressure); -20° to 180° F (High Pressure)

For Chemicals:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 300° F (High Pressure)
- Temp. Range: 10° to 275° F (Medium Pressure); -20° to 300° F (High Pressure)

Automatically start and stop flow in larger pipelines and applications with higher flow rates than other actuated on/off valves. These valves fit ANSI Class 125 and 150 flanges of the same pipe size. Body is iron. All valves have screw terminals with a 1/2 trade size conduit port. Valves meet MSS-SP-67.

Medium-pressure valves have a painted-iron disc. They operate on 120 volts AC @ 60 Hz. Actuator temperature range is -13° to 131° F.

High-pressure valves meet API (American Petroleum Institute) 609 for flow regulation. They operate on 120 volts AC @ 50/60 Hz. Actuator temperature range is -40° to 140° F. *Valves for water* and *valves for oil* have an iron disc; *valves for chemicals* have a 316 stainless steel disc.

Valves for water have an EPDM seat. **Valves for oil** have a Buna-N seat. **Valves for chemicals** have a fluoroelastomer seat to resist a wide range of chemicals.

■On/off time is 4 seconds for valves for chemicals.

Large-Diameter Actuated On/Off Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about large-diameter actuated on/off valves, see page 487. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest ID or OD below, and read down to find the corresponding pipe size.

ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"	4 1/2"	5 9/16"	6 5/8"
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3	4	5	6

Air-Driven Large-Diameter Actuated On/Off Valves

With Four Threaded Flange Holes

With Alignment Guides

For Water:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 225° F (High Pressure)
- Valve Temp Range: -30° to 275° F (Medium Pressure); -20° to 225° F (High Pressure)

For Oil:
- Max. Pressure: 200 psi @ 180° F (Medium Pressure); 250 psi @ 180° F (High Pressure)
- Valve Temp. Range: 10° to 180° F (Medium Pressure); -20° to 180° F (High Pressure)

For Chemicals:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 300° F (High Pressure)
- Valve Temp. Range: 10° to 275° F (Medium Pressure); -20° to 300° F (High Pressure)

These valves start and stop flow in larger pipelines and applications with higher flow rates than other actuated on/off valves. They operate on compressed air and electricity and require a solenoid valve (sold separately) that turns the air supply on and off to open and close the valve. All fit ANSI Class 125 and 150 flanges of the same pipe size. Body is iron. Air inlet is NPT female. Valves meet MSS-SP-67.

Air-to-open/air-to-close valves use air pressure to open and close. *Closed unless air is on (normally closed)* valves use air pressure to open and automatically spring closed when the air turns off.

Medium-pressure valves have a painted-iron disc. They require an air supply of 80 to 100 psi. Actuator temperature range is -4° to 176° F.

High-pressure valves meet API (American Petroleum Institute) 609 for flow regulation. They require an air supply of 80 psi. Actuator temperature range is -40° to 212° F. *Valves for water* and *valves for oil* have an iron disc; *valves for chemicals* have a 316 stainless steel disc.

Valves for water have an EPDM seat. **Valves for oil** have a Buna-N seat. **Valves for chemicals** have a fluoroelastomer seat that stands up to a wide range of chemicals.

Required solenoid valve operates on 120 volts AC @ 60 Hz. It has 18" long wire leads and 1/2 trade size conduit port. Valve meets NEMA 4 for resistance to washdowns, splashing water, and dust and is suitable for outdoor use. Temperature range is 5° to 140° F.

Plastic Air-Driven Large-Diameter Actuated On/Off Valves

With Four Bolt Holes

With Eight Bolt Holes

- Max. Pressure: 150 psi @ 70° F
- Valve Temp. Range: 40° to 140° F

These lightweight valves have alignment guides and fit ANSI Class 125 and 150 flanges of the same pipe size. All operate on compressed air and electricity and come with a solenoid valve that turns the air supply on and off to open and close the valve. Use with Schedule 40 and 80 pipe and fittings. Body is PVC and disc is polypropylene.

Valves are closed unless air is on (normally closed). The actuator requires an air supply of 80 to 120 psi; inlet is 1/4 NPT female. Comes with a solenoid that operates on 120 volts AC @ 60 Hz. Has 18" long wire leads with a 5/8 trade size conduit port. Actuator temperature range is 0° to 176° F.

Valves for drinking water meet NSF/ANSI Standard 61. Seat is EPDM. **Valves for chemicals** have a chemical-resistant fluoroelastomer seat and no metal parts for use in chemical-processing applications in corrosive conditions. Color is dark gray.

About Flow-Adjustment Valves

Also known as globe valves, these gradually open and close to adjust and regulate flow. They require multiple turns of the wheel handle to fully open and close. All have a disc that provides a tight seal when closed. With seats that extend into the center of the valve, they are not for applications that require unobstructed flow.

Valves with a Rising Stem—The stem lifts as the valve opens and lowers as the valve closes to provide a visual indication of whether flow is on or off. Since the stem is isolated from the process media, valves with a rising stem have a longer service life than valves with a nonrising stem.

Valves with a Nonrising Stem—The stem stays in the same position whether the valve is open or closed, so these valves are often used underground and in other low-clearance areas.

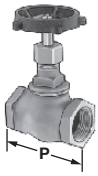
Flow-Adjustment Valves

Class 125:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 150° F
- Max. Pressure for Steam: 125 psi @ 353° F
- Temp. Range: -20° to 405° F

Class 150:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 300 psi @ 150° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: -20° to 405° F

Class 200:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 150° F
- Max. Pressure for Steam: 200 psi @ 388° F
- Temp. Range: -20° to 550° F

Class 300:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,000 psi @ 150° F (Straight); 600 psi @ 150° F (Elbow)
- Max. Pressure for Steam: 300 psi @ 421° F
- Temp. Range: -20° to 550° F



Straight

These valves gradually open and close with multiple turns of the wheel handle to adjust and regulate flow. Connections are NPT female. Body is bronze for a long service life. Packing is graphite. Stem is rising. Valves meet MSS-SP-80.

Straights—Class 125 and Class 200 have a bronze disc; Class 150 have a PTFE disc; Class 300 have a 420 stainless steel disc.

Elbows—Class 125 have a brass disc; Class 150 have a PTFE disc; Class 300 have a bronze disc.

Low-Pressure Flow-Adjustment Valves

- Max. Pressure for Water: 175 psi @ 150° F
- Temp. Range: -20° to 150° F

Use these valves for boiler maintenance and other low-pressure plumbing applications. Connections are NPT female. Body is bronze for durability and a long service life. Disc is EPDM and packing is graphite. Stem is rising.

Valves with 1/2 to 2 pipe size are UL listed.

Pipe Size	End-to-End Lg.	
1/4	2"	**4695K63** $27.13

Plastic Flow-Adjustment Valves

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 40° to 120° F

For a lightweight and corrosion-resistant alternative to metal valves, these have a PVC body. Use with Schedule 40 and 80 pipe and fittings. Disc is polypropylene and packing is EPDM. Color is dark gray. Stem is rising.

Socket-weld valves bond to unthreaded male plastic pipe.

NPT Female

Pipe Size	End-to-End Lg.	
NPT Female

Corrosion-Resistant Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 350° F
- Max. Pressure for Steam: 120 psi @ 350° F
- Temp. Range: 0° to 350° F

For exceptional corrosion resistance in harsh conditions, these valves have a 316 stainless steel body and disc. Packing is PTFE. Stem is rising.

Socket-weld valves meet ASTM A351.

Socket Weld

Flow-Adjustment Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about flow-adjustment valves, see page 489. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

High-Pressure Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,975 psi @ 100° F
- Max. Pressure for Steam: 715 psi @ 800° F
- Temp. Range: -20° to 800° F

Often used in power-processing systems and other high-pressure applications, these valves can withstand up to 1,975 psi. Connections are NPT female. Body and disc are steel and packing is graphite. Stem is rising. Valves meet API (American Petroleum Institute) 602, ASTM A105N, and are rated Class 800.

Fast-Acting Flow-Adjustment Valves

Lever

- Max. Pressure for Water, Oil, Air, and Inert Gas: 175 psi @ 100° F
- Temp. Range: -20° to 275° F

The lever handle on these valves transitions between flow-adjustment positions faster than a wheel handle requiring multiple turns. Connections are NPT female. Body is bronze for durability and a long service life. Disc is 304 stainless steel and seat is fluoroelastomer. UL listed and CSA and CSA-US certified.

Valves with a flow-indicating lever show the percentage the valve is open.

Snap-Shut Flow-Adjustment Valves

Push Lever

Pull Lever

- Max. Pressure for Water, Oil, Air, and Inert Gas: See table
- Temp. Range: 0° to 200° F (Brass); -20° to 550° F (Bronze)

Also known as whistle valves, these open and throttle as force is applied to the lever and automatically close upon release. They're commonly used for spraying, washing, and other applications that require manual discharge of liquids and air. Connections are NPT female. Stem is nonrising.

Brass valves have a Buna-N disc and packing.

Bronze valves are stronger and more durable than brass valves for an extended service life. Disc is bronze and packing is Kevlar fiber. Valves meet MSS-SP-80 and are rated Class 200.

Valves with a push lever open the valve as downward pressure is applied. *Valves with a pull lever* open the valve when you pull the handle upward. Attach a cord or chain to the hole in the handle for remote operation. Handle hole dia. is 1/4", unless noted.

Brass Lockout for Styles A-D—Accepts padlocks with 1/4" and 9/32" diameter shackles (padlock not included) 4642K15 $15.98

For information about flow-adjustment valves, see page 489. For information about pipe size, see pages 2-3.

Frostproof Outdoor Faucets with Garden Hose Outlet

- Max. Pressure for Water: 85 psi @ 140° F (Through-Wall); 125 psi @ 140° F (Tamper-Resistant Through-Wall and In-Ground)
- Temp. Range: 35° to 140° F (Through-Wall and Tamper-Resistant Through-Wall); -40° to 140° F (In-Ground)

Also known as frostproof water hydrants, these faucets drain when closed to prevent freezing.

Through-Wall— Body is brass. Inlet is dual-threaded ½ NPT female x ¾ NPT male. Outlet is ¾" garden hose thread (GHT) male.

Tamper-Resistant Through-Wall— To prevent tampering, these faucets require a key to open and close. Body is chrome-plated brass; pipe is brass. Inlet is dual-threaded 1 NPT male x ¾ NPT female. Outlet is ¾" garden hose thread (GHT) male.

In-Ground— Body is cast iron; in-ground pipe is stainless steel with a galvanized steel casing. Inlet is ¾ NPT female. Outlet is ¾" garden hose thread (GHT) male.

Flow-Adjustment Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 150° F
- Max. Pressure for Steam: 15 psi @ 250° F
- Temp. Range: -20° to 405° F

Solder these valves to copper tubing. Body is bronze for durability and a long service life. Disc is TFE and packing is graphite. Stem is rising. Valves are rated Class 125.

For Tube Size♦	For Tube OD	End-to-End Lg.		
½	⅝"	2 11/16"	4947K42	$79.06

♦ Tube size is an accepted industry designation, not an actual size.

Flow-Adjustment Valves for Fuels

- Use with diesel fuel, fuel oil, and kerosene
- Max. Pressure: 10 psi @ 70° F (¼ to ¾ size); 25 psi @ 70° F (1 Size)
- Temp. Range: 20° to 165° F

Automatically shut off the flow of diesel fuel, fuel oil, and kerosene in case of fire. When the ambient temperature reaches 165° F, these valves close and the handle permanently fuses in place. To reuse the valve, replace the handle (sold separately). Valves can also be manually shut off.

Connections are NPT female. Body is brass and seal is rubber. *Valves with ¼ to ½ pipe size* are UL listed.

Pipe Size	End-to-End Lg.	Valves		Replacement Wheel Handles	
¼	1¾"	4716K71	$19.12	4716K23	$2.83

Flow-Adjustment Valves for Cryogenic Liquids

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Max. Pressure: See table
- Temp. Range: -320° to 165° F (Compact); -325° to 150° F (Standard)

Designed for extremely cold liquids, these valves are cleaned and bagged to meet CGA G-4.1 standards for oxygen service. Connections are NPT female. Disc is brass, packing is PTFE, and seat is CTFE.

Compact valves are a third of the height of standard valves, so they are commonly used with portable cryogenic cylinders. Body is brass. Stem is nonrising.

Standard valves have a durable bronze body for a long service life. Seal is glass-filled PTFE. Stem is rising.

Flow-Adjustment Valves for Dry Materials

- Max. Pressure: Not rated
- Max. Temp: 230° F

Also known as iris valves, these control the flow of powders, grains, and other dry materials through bins and hoppers. Rotate the lever handle to adjust flow and twist to lock in any position. Body is aluminum and sleeve is nylon.

Max. Opening Dia.	Body Dia.	Thickness		
4"	6"	1¼"	8153K11	$506.25

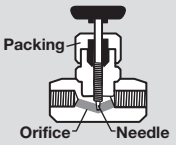
Precision Flow-Adjustment Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about pipe size, see pages 2-3.

About Precision Flow-Adjustment Valves



Also known as needle valves, these valves adjust flow in extremely small increments for metering, sampling, and other applications requiring fine flow control. A threaded needle on the end of the valve stem functions as the control, allowing for a gradual increase or decrease in the size of the orifice. **Valves with packing** have a nut that can be tightened to compress the packing if it leaks.

Cv factor (flow coefficient) is the amount of water (in gallons per minute) with a specific gravity of 1 at 60° F that will pass through a fully open valve with a pressure drop of 1 psi. For pressure drops other than 1 psi or liquids with a different specific gravity, use this formula:

$$GPM = Cv\sqrt{\frac{\text{Pressure Drop}}{\text{Specific Gravity of the Liquid}}}$$

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1

Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 2,000 psi @ 400° F (Brass); 5,000 psi @ 400° F (Steel and 303 Stainless Steel)
- Temp. Range: -15° to 400° F

These valves adjust flow in extremely small increments for applications requiring fine flow control. Connections are NPTF (Dryseal) female or BSPT (British Standard Pipe Taper) female. Seals are fluoroelastomer and PTFE; seat is metal-to-metal. Valves have a handle with a locking nut to prevent accidental adjustment.

Brass valves have good corrosion resistance. Needle is brass. **Steel** and **303 stainless steel** valves have a 416 stainless steel needle. *303 stainless steel* valves are more corrosion resistant than brass valves.

Single-direction flow-adjustment valves provide fully adjustable flow from the inlet to the outlet. They have an internal check valve that actuates when the pressure changes to stop flow from the controlled direction and allow free flow in the opposite direction. They are often used to control the speed of air cylinders and air-powered motors.

★Has a T-handle. Body is 316 stainless steel.

Plastic Precision Flow-Adjustment Valves

NPT Female × Male

- Max. Pressure for Water, Air and Inert Gas: 125 psi @ 140° F
- Temp. Range: 33° to 140° F

For use in plastic pipelines, these valves are lighter in weight than metal valves. Seal is EPDM. Valves have a nylon hex nut and threads below the handle for mounting through instrument panels. To panel mount, they require a 7/8" dia. cutout. Note: Cv factor is not rated.

PVC valves have a PVC needle and seat. Color is dark gray. **Polypropylene** valves have a polypropylene needle and seat. Color is white.

Replacement panel-mounting nuts are nickel-plated brass.

Plastic Easy-Set Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 200 psi @ 200° F
- Temp. Range: 0° to 200° F

A lightweight alternative to metal easy-set valves, these have a locking ring to prevent accidental adjustment. Handle threads are color coded to provide a visual reference point for repeated settings. One full revolution of the handle reveals a new color to indicate the set point.

Connections are NPTF (Dryseal) female. Body is glass-reinforced polyester, needle is zinc-plated steel, seal is Buna-N, and seat is polyester. Color is black. Valves can be panel mounted (mounting nuts sold separately).

Single-direction flow-adjustment valves have an internal check valve that actuates when the pressure changes to stop flow from the controlled direction and allow free flow in the opposite direction.

Optional panel-mounting nuts are plastic. *Valves with 1/8 and 1/4 pipe size* require a 1" dia. panel cutout; *3/8 to 3/4 pipe size* require a 1 3/8" dia. panel cutout.

Easy-Set Precision Flow-Adjustment Valves

Standard Flow Adjustment:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 2,000 psi @ 400° F (Brass); 5,000 psi @ 400° F (Steel)
- Temp. Range: -15° to 400° F

Single-Direction Flow Adjustment:
- Max. Pressure for Water, Oil, Air, and Inert Gas: 2,000 psi @ 190° F (Brass); 5,000 psi @ 190° F (Steel and 303 Stainless Steel)
- Temp. Range: -15° to 200° F

Color-coded handle threads and numerical markings ensure consistent and repeatable settings. One full revolution of the handle reveals a new color to indicate the set point. Connections are NPTF (Dryseal) female. Seal is fluoroelastomer and seat is metal-to-metal.

Brass valves have good corrosion resistance. Needle is brass.

Steel and **303 stainless steel** valves have a 416 stainless steel needle. *303 stainless steel* valves are more corrosion resistant than brass valves.

Single-direction flow-adjustment valves provide fully adjustable flow from the inlet to the outlet. They have an internal check valve that actuates when the pressure changes to stop flow from the controlled direction and allow free flow in the opposite direction.

Panel-Mount Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 500 psi @ 180° F
- Temp. Range: -20° to 180° F

Female × Female Straight

Male × Female Elbow

For installation in instrument panels, these valves have a hex nut and threads below the handle. Connections are NPT. Body is brass and packing is PTFE. Seat is metal-to-metal. To panel mount, they require a 9/16" dia. cutout. Note: Cv factor is not rated.

Valves with a 303 stainless steel needle are more corrosion resistant than valves with a brass needle.

Elbow, Female x Female

- Max. Pressure for Water, Oil, Air, and Inert Gas: 10,000 psi @ 100° F
- Temp. Range: -50° to 1000° F (Straights); -20° to 500° F (Elbows)

Rated for double the pressure of standard precision flow-adjustment valves, these can handle up to 10,000 psi. Connections are NPT. Seat is metal-to-metal.

Straights have graphite packing. *316 stainless steel* valves have exceptional corrosion resistance.

Elbows have PTFE packing. *Mounting nuts* are 303 stainless steel.

Extreme-Pressure Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 15,000 psi @ 72° F
- Temp. Range: -100° to 400° F

The highest-pressure precision flow-adjustment valves we offer, these withstand up to 15,000 psi. Connections are NPT female. Body and needle are 316 stainless steel for exceptional corrosion resistance. Packing is PTFE and seat is metal-to-metal.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.		
1/4	2"	0.63	0.203"	4617K15	$137.51
3/8	2 1/2"	0.75	0.219"	4617K17	157.79
1/2	3"	1.3	0.312"	4617K19	323.06

Compact Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 300 psi @ 70° F
- Temp. Range: -4° to 430° F

Install these low-profile valves with a narrow port-to-port length in tight spots where other valves won't fit. Connections are UNF male x female. Needle is 316 stainless steel, packing is fluoroelastomer, and seat is metal-to-metal.

303 stainless steel valve has excellent corrosion resistance. **316 stainless steel** valve is more corrosion resistant than the 303 stainless steel valve.

Thread Size	Port-to-Port Lg. (P)	Cv Factor	Orifice Dia.	303 Stainless Steel		316 Stainless Steel	
10-32	5/16"	0.02	0.032"	48965K32	$53.45	48965K34	$89.82

Panel-Mount High-Pressure Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 10,000 psi @ 100° F
- Temp. Range: -50° to 1000° F

Designed for high-pressure instrumentation applications, these valves are rated for up to 10,000 psi and have a steel hex nut and threads below the handle for panel mounting. Connections are NPT female. Needle is 316 stainless steel, packing is graphite, and seat is metal-to-metal. To panel mount, they require a 11/16" dia. cutout.

316 stainless steel valve has exceptional corrosion resistance.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.	Steel		316 Stainless Steel	
1/4	2 1/4"	0.6	0.172"	6321T62	$80.06	6321T72	$115.00

Precision Flow-Adjustment Valves with Vent Ports

- Max. Pressure for Water, Oil, Air, and Inert Gas: 10,000 psi @ 266° F
- Temp. Range: -4° to 446° F

Also known as block and bleed valves, these have two vent ports to isolate pressure gauges, switches, and other components in high-pressure systems for maintenance, calibration, and sampling without interrupting the process. Connections are NPT female. Body is 316 stainless steel for exceptional corrosion resistance. Needle is 17-4 PH stainless steel, packing is fiberglass-filled PTFE, and seat is metal-to-metal.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.		
1/4	2 1/2"	0.3	0.197"	4330K35	$148.75
1/2	2 1/2"	0.75	0.197"	4330K36	148.75

High-Precision Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 3,000 psi @ 450° F (Brass); 5,000 psi @ 450° F (303 Stainless Steel)
- Temp. Range: -65° to 450° F

Ensure highly accurate flow adjustment. While ordinary valves open with 10 turns or less, these valves open with 20 turns, giving you more precise flow control. Connections are NPT female. Needle is 303 stainless steel, packing is PTFE, and seat is metal-to-metal.

303 stainless steel valves are more corrosion resistant than brass valves.

Precision Flow-Adjustment Valves with 45° Flared Compression Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 150 psi @ 250° F
- Temp. Range: -45° to 250° F

Flared tube fittings provide a tight seal on metal tubing with flared ends. Pipe connections are NPTF (Dryseal) male. Body and needle are brass, seal is neoprene, and seat is metal-to-metal. Note: Cv factor is not rated.

Pipe Size	For Tube OD	Port-to-Port Lg. (P)	Orifice Dia.

Precision Flow-Adjustment Valves with Barbed Fittings

- Max. Pressure for Water, Air, and Inert Gas: 125 psi @ 140° F
- Temp. Range: 33° to 140° F

Slide the barbed fittings on these valves into soft plastic or rubber tubing. Seal is EPDM. They have a nylon hex nut and threads below the handle for panel mounting. To panel mount, they require a 7/8" dia. cutout. Note: Cv factor is not rated.

PVC valves have a PVC needle and seat. Color is dark gray. **Polypropylene** valves have a polypropylene needle and seat. Color is white.

Replacement panel-mounting nuts are nickel-plated brass.

For Tube ID	End-to-End Lg.	Orifice Dia.	PVC		Polypropylene

Precision Flow-Adjustment Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 5,000 psi @ 200° F (PTFE Packing); 6,000 psi @ 100° F (Graphite Packing)
- Temp. Range: -51° to 446° F (PTFE Packing); -65° to 700° F (Graphite Packing)

With PTFE Packing

For a leak-free seal around hard metal tubing in high-pressure lines, these valves have Yor-Lok fittings. Also known as instrumentation fittings, Yor-Lok fittings are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. For Yor-Lok fittings, see pages 188-189. Body is 316 stainless steel for excellent corrosion resistance. Seat is metal-to-metal.

About Large-Diameter Flow-Adjustment Valves

Also known as butterfly valves, these are designed for adjusting and regulating flow in large pipelines and applications with higher flow rates than other flow-adjustment valves. They start and stop flow with a quarter turn of the handle. All have a disc that provides a tight seal when closed and limits turbulence when adjusting flow. With a small number of moving parts, these valves are long lasting and easy to maintain.

Valves with threaded flange holes have a hole pattern that matches ANSI flanges of the same pipe size. Also called lug-style butterfly valves, these can be sandwiched between two flanges or bolted directly to a single flange for servicing one end of the pipeline without depressurizing the other side.

Valves with alignment guides have alignment tabs or unthreaded alignment holes. Also called wafer-style butterfly valves, these must be sandwiched between two flanges in your system.

ANSI Flange Alignment

With Threaded Flange Holes

With Alignment Guides

Flange-Mount Large-Diameter Flow-Adjustment Valves

Lockable Lever Handle with Threaded Flange Holes

Wheel Handle with Alignment Guides

For Water:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 225° F (High Pressure)
- Temp. Range: -30° to 275° F (Medium Pressure); -20° to 225° F (High Pressure);

For Oil:
- Max. Pressure: 200 psi @ 180° F (Medium Pressure); 250 psi @ 180° F (High Pressure)
- Temp. Range: 10° to 180° F (Medium Pressure); -20° to 180° F (High Pressure)

For Chemicals:
- Max. Pressure: 200 psi @ 275° F (Medium Pressure); 250 psi @ 300° F (High Pressure)
- Temp. Range: 10° to 275° F (Medium Pressure); -20° to 300° F (High Pressure)

These valves are designed to adjust and regulate flow in large pipelines and applications with higher flow rates than other flow-adjustment valves. They fit ANSI Class 125 and 150 flanges of the same pipe size. Body is ductile iron. Valves meet MSS-SP-67.

Lockable lever-handle valves can be fixed in place with a padlock (not included). *Medium-pressure* valves accept a padlock with a max. shackle diameter of 5/16"; *high-pressure* valves accept a padlock with a max. shackle diameter of 1/4".

Wheel-handle valves resist accidental movement when snagged or bumped.

Medium-pressure valves have a painted ductile iron disc.

High-pressure valves meet API (American Petroleum Institute) 609 for flow regulation. *Valves for water* and *valves for oil* have a ductile iron disc; *valves for chemicals* have a 316 stainless steel disc.

Valves for water have an EPDM seat. **Valves for oil** have a Buna-N seat. **Valves for chemicals** have a fluoroelastomer seat that stands up to a wide range of chemicals.

Corrosion-Resistant Flange-Mount Flow-Adjustment Valves

- Max. Pressure:
  150 psi @ 250° F (For Water);
  150 psi @ 212° F (For Oil)
- Temp. Range:
  -40° to 250° F (For Water);
  0° to 212° F (For Oil)

These valves have a 316 stainless steel body and disc for excellent corrosion resistance in wet conditions and harsh environments. Valves have threaded flange holes and fit ANSI Class 125 and 150 flanges of the same pipe size. All have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 3/16".

To Order: Please specify valves for water with an EPDM seat or valves for oil with a Buna-N seat.

Pipe Size	End-to-End Lg.	O'all Ht.	Fits ANSI Flange OD	Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.

Light Duty Flange-Mount Plastic Flow-Adjustment Valves

- Max. Pressure for Water: 150 psi @ 73° F
- Temp. Range: 40° to 140° F

Often used in low-pressure water pipelines, these valves have a PVC body and disc for the lightest weight of all our large-diameter flow-adjustment valves. Valves have alignment guides and fit ANSI Class 125 and 150 flanges of the same pipe size. Use with Schedule 40 and 80 pipe and fittings. Seat is EPDM. Valves have 12 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 3/16".

Note: The alignment guides do not match the ANSI flange pattern; use two of the four holes for alignment.

High-Performance Flange-Mount Flow-Adjustment Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 285 psi @ 100° F
- Temp. Range:
  -20° to 500° F (Carbon Steel);
  -100° to 500° F (316 Stainless Steel)

To handle the most demanding applications, these valves have the highest temperature and pressure ratings of our flange-mount valves. They are designed to open and close with minimal wear on internal components for a long service life.

All valves have alignment guides and fit ANSI Class 150 flanges of the same pipe size. Disc is 316 stainless steel and seat is PTFE. Valves have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16". They meet API (American Petroleum Institute) 609 for flow regulation, ANSI B16.34, ANSI B16.5, MSS-SP-25, MSS-SP-61, and MSS-SP-68.

316 stainless steel valves have excellent corrosion resistance.

Lightweight Flange-Mount Flow-Adjustment Valves

- Max. Pressure:
  150 psi @ 250° F (For Water);
  150 psi @ 212° F (For Oil)
- Temp. Range:
  -40° to 250° F (For Water);
  0° to 212° F (For Oil)

Valves have an aluminum body that provides strength and durability at half the weight of other metal large-diameter flow-adjustment valves. They have alignment guides and fit ANSI Class 125 and 150 flanges of the same pipe size. Disc is 316 stainless steel. Valves have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 3/16".

To Order: Please specify valves for water with an EPDM seat or valves for oil with a Buna-N seat.

Pipe Size	End-to-End Lg.	O'all Ht.	Fits ANSI Flange OD	Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.

Sure-Fit Flange-Mount Flow-Adjustment Valves

- Max. Pressure:
  200 psi @ 73° F (For Water);
  212 psi @ 73° (For Oil)
- Temp. Range:
  -20° to 225° F (For Water);
  -20° to 180° F (For Oil)

Upgrade industry standard flanged gate and globe valves for quicker flow-adjustment capabilities—these have the same end-to-end length as valves of the same pipe size to swap out easily. Valves have threaded flange holes and fit ANSI Class 125 and 150 flanges of the same pipe size.

Body is polyamide-coated cast iron. Valves have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16". They meet ANSI B16.10, MSS-SP-25, and MSS-SP-67.

To Order: Please specify valves for water with an EPDM-coated ductile iron disc and EPDM seat or valves for oil with a Buna-N-coated ductile iron disc and Buna-N seat.

Pipe Size	End-to-End Lg.	O'all Ht.	Fits ANSI Flange OD	Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.

Grooved-End Flow-Adjustment Valves

- Max. Pressure for Water: 300 psi @ 73° F
- Temp. Range: -20° to 200° F

Commonly used in water service pipelines and HVAC systems, these valves have grooved-end connections for easy installation. Body is polyamide-coated ductile iron, disc is EPDM-coated ductile iron, and seat is EPDM. Valves have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16". All meet MSS-SP-67.

Pipe Size	End-to-End Lg.	O'all Ht.

Large-Diameter Flow-Adjustment Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about large-diameter flow-adjustment valves, see page 496. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest ID or OD below, and read down to find the corresponding pipe size.

ID or OD	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″
Pipe Size	3/4	1	1 1/4	1 1/2	2	2 1/2	3	4	6

Plastic Flange-Mount Flow-Adjustment Valves

- Max. Pressure: 150 psi @ 70° F
- Temp Range: 40° to 140° F (PVC); 40° to 200° F (CPVC)

Lightweight and corrosion resistant, these valves have alignment guides and fit ANSI Class 125 and 150 flanges of the same pipe size. Use with Schedule 40 and 80 pipe and fittings. Valves have seven flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 7/16″. All are FM approved.

Valves for drinking water meet NSF/ANSI Standard 61. Seat is EPDM.

Valves for chemicals have a fluoroelastomer seat to resist a wide range of chemicals. They are often used for chemical-processing applications in corrosive conditions.

PVC valves have a PVC disc. **CPVC** valves have a CPVC disc.

Ultra-Chemical-Resistant Flange-Mount Flow-Adjustment Valves for Chemicals

- Max. Pressure: 150 psi @ 150° F
- Temp. Range: 10° to 150° F

With PTFE-lined Buna-N seats, these are our most chemical-resistant valves. They have threaded ANSI Class 125 and 150 flange holes and fit flanges of the same pipe size. Body is cast iron and disc is 316 stainless steel. Valves have 10 flow-adjustment positions and a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 5/16″. All meet MSS-SP-67 and API (American Petroleum Institute) 609 for flow regulation.

Flow-Adjustment Valves for Food and Beverage

Sanitary Quick Clamp with Stainless Steel Handle

Butt Weld with Lockable Plastic Handle

- Max. Pressure:
  147 psi @ 450° F (Silicone seat);
  147 psi @ 300° F (EPDM seat);
  147 psi @ 400° F (Fluoroelastomer seat);
  60 psi @ 450° F (PTFE seat)
- Temp. Range:
  -80° to 450° F (Silicone seat);
  -60° to 300° F (EPDM seat);
  -20° to 400° F (Fluoroelastomer seat);
  -40° to 450° F (PTFE seat)

These valves have polished stainless steel surfaces for use in food and beverage systems. *Valves with 12 flow-adjustment positions* have a lockable handle that can be fixed in place with a padlock (not included) with a max. shackle diameter of 1/4″.

Sanitary quick-clamp valves have quick-clamp connections that let you quickly remove the valves for cleaning. Use with quick-clamp fittings on pages 228-231.

Butt-weld valves flush weld to metal tubing for a crevice-free connection that reduces the risk of contamination and debris accumulation.

304 stainless steel valves have a 304 stainless steel disc. **316 stainless steel** valves are more corrosion resistant than 304 stainless steel valves. Disc is 316 stainless steel.

Silicone seats have some resistance to organic food acids and fats and oils.

EPDM seats have good resistance to organic food acids. They have poor resistance to fats and oils.

Fluoroelastomer seats have excellent resistance to many food-processing chemicals and good resistance to organic food acids and fats and oils.

PTFE seats have the best resistance to a broad range of food-processing chemicals, organic food acids, and fats and oils.

To Order: Please specify seat material: silicone, EPDM, fluoroelastomer, or PTFE.

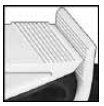
Noncontact Flow-Adjustment Valves

A



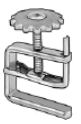
With Flow-Adjustment Positions

B

C

D

E



F

G

H

J

Also known as pinch valves, these press down on the outside of tubing to adjust flow without contacting the process media. Not rated for maximum pressure.

Valves with a closed body securely hold tubing in place. **Valves with an open body** provide easy access to tubing for maintenance or replacement.

Acetal, polyester, and **nylon** valves have no metal parts so they are often used in wet conditions and harsh environments. **Nickel-plated brass valves** are more corrosion resistant than zinc or zinc-plated steel valves.

Valves with flow-adjustment positions have notches to lock in fine adjustments. **Valves with a 1-10 mm flow-adjustment scale** allow accurate, repeatable adjustments.

Actuated Flow-Adjustment Valves

- Use with water
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 35° to 150° F

These valves are often used for irrigation and other landscaping applications. They have a handle for manual flow adjustment in addition to automated on/off control. Connections are NPT female. Body is nylon and diaphragm is EPDM. Valves have wire leads, a ½ trade size conduit port, and draw a max. of 0.3 amps. Mount in any position.

Closed unless energized (normally closed) valves remain closed until they receive an electrical signal to open. **Open unless energized (normally open)** valves remain open until they receive an electrical signal to close.

Pipe Size	End-to-End Lg.	Ht.	Max. psi	120V AC	24V AC

Actuated Flow-Adjustment Valves for Coolants and Detergents

- Use with ethylene glycol and soap solutions
- Pressure Drop Across Valve: At least 1 psi required
- Temp. Range: 32° to 150° F

Choose these valves to adjust the flow of antifreeze and cleaning solutions. They have a handle for manual flow adjustment in addition to automated on/off control. Connections are NPT female. Body is brass and diaphragm is EPDM. Valves are closed unless energized (normally closed) and remain closed until they receive an electrical signal to open. They have wire leads, a ½ trade size conduit port, and draw a max. of 0.095 amps. Mount in any position.

Air Actuators for Flow-Control Valves

Use compressed air to remotely open and close ball valves, butterfly valves, and plug valves. These actuators have an ISO 5211 hole pattern on the bottom for attaching your valve. They require a solenoid valve (not included) that turns the air supply on and off. All require an air supply of 40 to 115 psi. Housing is aluminum. Actuator temp. range is 32° to 175° F.

Air-to-open/air-to-close actuators use air pressure to open and close. **Closed unless air is on (normally closed)** actuators use air pressure to open and automatically spring closed when the air turns off.

Required solenoid valve operates on 120 volts AC @ 60 Hz and has 18" long wire leads. Temperature range is 32° to 125° F. It meets NEMA 4 for resistance to washdowns, splashing water, and dust and is suitable for outdoor use.

Flow-Control Orifices

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Flow-Control Orifices

Throttle, vent, bleed, or regulate flow at a consistent rate.

Orifices with push-to-connect fittings provide a low-pressure seal around plastic and soft metal tubing.

Orifices with a barbed fitting let you adapt threaded pipe connections for use with tubing.

303 stainless steel orifices are more corrosion resistant than brass orifices. **316 stainless steel** orifices have the best corrosion resistance.

To Order: Please specify orifice diameter from the chart.

Also Available: Orifice diameters not listed. Please ask for 2712T999 and specify the connection style, connection size, and orifice diameter desired.

Flow-Control Orifices for Drinking Water

Male × Female

Female × Female

- Max. Pressure: 200 psi @ 180° F
- Temp. Range: 33° to 180° F

These orifices meet NSF/ANSI Standard 61, so they're often used to throttle, vent, bleed, or regulate flow in drinking water systems. All adjust to changing inlet pressure to maintain consistent outlet flow. Connections are NPT.

Nickel-plated brass orifices are more corrosion resistant than plain brass orifices. **316 stainless steel** orifices have the best corrosion resistance.

Pipe Size	Choose an Outlet Water Flow, gpm

Plastic Flow-Control Orifices

- Max. Pressure for Water, Air, and Inert Gas: 100 psi @ 75° F
- Temp. Range: 40° to 120° F

Since these orifices have no metal parts, they're commonly used in wet conditions and corrosive environments. They throttle, vent, bleed, or regulate flow at a consistent rate. All are color coded based on the orifice diameter for easy identification. They have a nylon body and a hex head. Connections are NPT male.

Pipe Size	Orifice Dia.	*Flow Rate @ 40 psi* Air, scfm	Water, gpm	Color

Extended-Life Directional-Control Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 100° F
- Temp. Range: -20° to 450° F
- Vacuum Rating: Not rated

Flow Options

For a longer service life than standard directional-control valves with a brass body, these have a bronze body for additional strength and durability. Turn the handle to direct flow from the center-port inlet to either side-port outlet. Valves cannot shut off flow.

Connections are NPT female. Valves have two mounting holes for attaching an actuator. Ball is chrome-plated brass, seat is glass-filled PTFE, and packing is graphite-filled PTFE. *Valves with 1 1/2* and *2 pipe size* also have a PTFE seal.

Full-port valves do not restrict flow. **Standard-port** valves slightly restrict flow.

Pipe Size	End-to-End Lg.	Mounting Hole Size		
Full Port				
1/4	2 1/4"	10-24	4373K51	$27.89
3/8	2 1/4"	10-24	4373K52	27.89

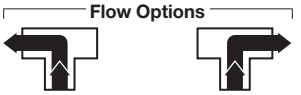
2	5 3/4"	4093T28	280.43

Corrosion-Resistant Directional-Control Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 800 psi @ 100° F
- Temp. Range: -50° to 450° F
- Vacuum Rating: Not rated

Flow Options



To withstand wet conditions and harsh environments, these valves have a 316 stainless steel body and ball for excellent corrosion resistance. Turn the handle to direct flow from the center-port inlet to either side-port outlet. These valves cannot shut off flow.

Connections are NPT female. Seat is glass-filled PTFE, seal is PTFE, and packing is graphite-filled PTFE. Valves have two mounting holes for attaching an actuator.

Full-port valves do not restrict flow. **Standard-port** valves slightly restrict flow.

Pipe Size	End-to-End Lg.	Mounting Hole Size

2	5 7/16"	1/4"-20	4467K47	568.29

Compact Directional-Control Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 125 psi @ 140° F (PVC); 500 psi @ 180° F (Brass)
- Temp. Range: 33° to 140° F (PVC); -20° to 180° F (Brass)
- Vacuum Rating: Not rated

Flow Options

PVC Female × Female × Female

PVC Female × Male × Female

Brass Female × Male × Female

With a low-profile handle and a shorter end-to-end length than standard directional-control valves, these fit in tight spots and low-clearance areas. Turn the handle to direct flow from the bottom-port inlet to either side-port outlet or shut off flow completely. Connections are NPT. Valves are standard port, so they slightly restrict flow.

PVC valves have no metal parts to corrode, so they withstand wet conditions and harsh environments better than brass valves. Ball is PVC; seat and seal are Buna-N. Valves have a wedge handle that resists accidental movement when snagged or bumped. Color is dark gray.

Brass valves have a nickel-plated brass ball, PTFE seat, and Buna-N seal. All have a lever handle.

Pipe Size	PVC End-to-End Lg.			Brass End-to-End Lg.

Panel-Mount Directional-Control Valves

Female x Female x Female with T-Handle

Female x Female x Female with Wedge Handle

Male x Male x Male with T-Handle

- Max. Pressure for Water, Oil, Air, and Inert Gas: See table
- Temp. Range: -20° to 180° F (Medium Pressure); -40° to 300° F (High Pressure)
- Vacuum Rating: Not rated (Medium Pressure); 29" Hg (High Pressure)

Flow Options

Threads and a hex nut below the handle let you install these valves through an instrument panel. Turn the handle to direct flow from the bottom-port inlet to either side-port outlet or shut off flow completely.

Connections are NPT. Body is brass, ball is nickel-plated brass, and seat is PTFE. Valves are full port (unless noted), so they do not restrict flow.

Medium-pressure valves have a Buna-N seal. They require a 13/16" dia. panel cutout.

High-pressure valves have Buna-N and fluoroelastomer seals. They require a 9/16" dia. panel cutout.

Medium Pressure

Pipe Size	Max. psi @ 180° F	End-to-End Lg.	*Female x Female x Female* T-Handle		*Female x Female x Female* Wedge Handle

★Valve is standard port, so it slightly restricts flow.

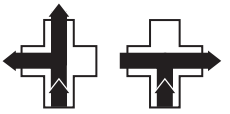
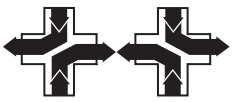
Multiport Directional-Control Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 250 psi @ 70° F
- Temp. Range: -60° to 400° F
- Vacuum Rating: Not rated

Flow Options for T-Pattern Flow



Flow Options for Double L-Pattern Flow



A quarter turn of the handle diverts flow through multiple ports. Valves have side port inlets and outlets. They are also known as plug valves.

Connections are NPTF (Dryseal) female, which are compatible with NPT threads. Body is brass, seal is fluoroelastomer, and plug is PTFE. Valves have four 1/4"-20 mounting holes and can panel mount in a 7/8" dia. cutout.

Pipe Size	End-to-End Lg.	T-Pattern Flow		Double L-Pattern Flow	
1/4	1 7/8"	8159K542	$141.51	8159K543	$141.51

Wye-Shape 3-Port Brass Valves

With NPT Connections:
- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 200° F (without Exhaust) 250 psi @ 200° F (with Exhaust)
- Max. Pressure for Steam: 150 psi @ 358° F (without Exhaust) Not rated (with Exhaust)
- Temp. Range: -40° to 365° F
- Vacuum Rating: 29" Hg

With Fire Hose Connections:
- Max. Pressure for Water: 300 psi @ 150° F
- Max. Pressure for Steam: Not rated
- Temp. Range: -20° to 150° F
- Vacuum Rating: Not rated

Control flow in two directions from a single source—valves have two balls for independent control and shut-off of each outlet. All have one female inlet, two male outlets, and a brass body.

Valves with NPT Connections— Inlet has a female pipe size of 1; outlets have a male pipe size of 3/4; length from inlet port to outlet ports is 3 1/4". Balls are chrome-plated brass, seats and seals are PTFE, and packing is fluoroelastomer. Valves have slightly restricted flow (standard port). *Valve with safety exhaust* is ideal for use with compressed air; when closed, valve vents air pressure through the exhaust port so you can disconnect air tools safely.

Valves with Fire Hose Connections— Exclusively for use with water. Inlet is 2 1/2" female; outlets are 1 1/2" male; length from inlet port to outlet ports is 5 5/8". Balls are acetal, seats are UHMW polyethylene, and seals are Buna-N. Valves have restricted flow (reduced port). For information about fire hose connections, see page 280.

NPT without Safety Exhaust	4017T14	$35.83
NPT with Safety Exhaust	4017T16	41.98
Fire Hose NPSH (National Pipe Straight Hose)	6504T4	304.11
Fire Hose NH (National Hose)	6504T5	304.11

Directional-Control Valves with Tube Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

Flow Options

Turn the handle to direct flow from the bottom-port inlet to either side-port outlet or shut off flow completely. Body and ball are PVC; seat and seal are Buna-N. Valves are standard port, so they slightly restrict flow. Color is dark gray.

Valves with barbed fittings slide into soft plastic or rubber tubing in low-pressure lines.

Valves with push-to-connect fittings connect to plastic or soft metal tubing for a low-pressure seal.

With Barbed Fittings

For Tube ID	End-to-End Lg.		
1/4"	3 3/16"	4757K57	$16.46
3/8"	3 3/16"	4757K58	16.46
1/2"	3 3/16"	4757K59	16.46

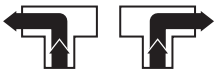
With Push-to-Connect Fittings

For Tube OD	End-to-End Lg.		
1/4"	2 5/8"	4757K61	$21.02
3/8"	2 5/8"	4757K62	21.57

Directional-Control Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: See table
- Temp Range: -30° to 400° F (Brass without shut-off); -40° to 300° F (Brass with shut-off); -30° to 280° F (316 Stainless Steel)
- Vacuum Rating: 29″ Hg

Flow Options for Valves without Shut-Off



Flow Options for Valves with Shut-Off

For a leak-free seal around hard metal tubing in high-pressure lines, these valves have Yor-Lok fittings. Also known as instrumentation fittings, Yor-Lok fittings are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. For Yor-Lok fittings, see pages 188-189.

Turn the handle to direct flow from the bottom-port inlet to either side-port outlet. Valves have threads and a hex nut below the handle for panel mounting. All are standard port, so they slightly restrict flow.

Valves with shut-off can stop flow completely in addition to diverting flow between outlet ports.

Brass valves have a PTFE seat. *Valves without shut-off* have a 316 stainless steel ball; seal and packing are PTFE. *Valves with shut-off* have a nickel-plated brass ball; seals are Buna-N and fluoroelastomer.

316 stainless steel valves are more corrosion resistant than brass valves. Ball is 316 stainless steel, seat is PCTFE, and seal and packing are PTFE.

Diverting 3-Port Hydraulic Steel Valves

- Max. Pressure for Oil: See table
- Max. Pressure for Steam: Not rated
- Temp. Range: 14° to 176° F
- Vacuum Rating: Not rated

Flow Options

Rated for extremely high pressure, these valves are great for use with fluids in hydraulic systems. Direct flow between two ports or shut off flow completely. Connections are NPT female. Body is steel, ball is chrome-plated steel, seats are polyacetal, and seals are fluoroelastomer. Valves have restricted flow (reduced port).

Pipe Size	Max. psi @ 176° F	End-to-End Lg.		
1/4	7,250	3 15/16″	**46185K511**	$251.04

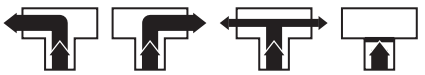
Easy-to-Install Directional-Control Valves

- Max. Pressure: 150 psi @ 70° F (L-Pattern Flow); 232 psi @ 73° F (T-Pattern Flow)
- Temp. Range: 40° to 140° F (PVC); 40° to 190° F (CPVC)
- Vacuum Rating: 28″ Hg (L-Pattern Flow); 29″ Hg (T-Pattern Flow)

Flow Options for L-Pattern Flow

Flow Options for T-Pattern Flow



L-Pattern Flow

T-Pattern Flow

Union fittings on all ends of these valves disassemble for fast installation and removal. The fittings also let you perform maintenance without detaching pipe connections. In addition to the threaded NPT female connections, these valves come with socket-weld (unthreaded) female fittings. Use with Schedule 40 and 80 pipe and fittings. Seat is PTFE. Valves are full port, so they do not restrict flow.

Valves with L-pattern flow direct flow from the bottom-port inlet to either side-port outlet or shut off flow completely.

Valves with T-pattern flow can use any port as an inlet or an outlet. Turn the handle to direct flow from the inlet port to either outlet port at full capacity, direct flow to both outlet ports simultaneously at reduced capacity, or shut off flow from the inlet port. Flow between the outlet ports remains unobstructed when flow from the inlet port is shut off.

Valves for drinking water meet NSF/ANSI Standard 61 for use with drinking water.

Valves for chemicals have a fluoroelastomer seal for excellent chemical resistance.

PVC valves have a PVC ball; color is dark gray. **CPVC** valves have a CPVC ball; color is light gray.

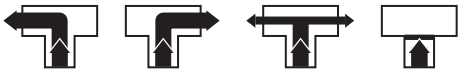
Easy-Clean Directional-Control Valves for Chemicals

- Max. Pressure: 125 psi @ 73° F
- Temp. Range: 15° to 180° F
- Vacuum Rating: 29" Hg

Flow Options for Valves with Side-Port Inlet

Flow Options for Valves with Any-Port Inlet



There's no need to unbolt these valves for cleaning—remove the valve handle and slide the valve apart for inline access to the internal components. They have a chemical-resistant polypropylene body and ball and a fluoroelastomer seal. Connections are NPT female. Valves are also known as elliptical valves. All are full port, so they do not restrict flow. Color is black.

Valves with a side-port inlet direct flow from the right port to the center or left port. They cannot shut off flow.

Valves with any-port inlet can use any port as an inlet or outlet. Turn the handle to direct flow from the inlet port to one outlet port at full capacity, direct flow to both outlet ports simultaneously at reduced capacity, or shut off flow from the inlet port. Flow between the outlet ports remains unobstructed when flow from the inlet port is shut off.

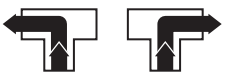
Easy-Maintenance Directional-Control Valves for Chemicals

- Max. Pressure: 100 psi @ 70° F
- Temp. Range: -20° to 150° F
- Vacuum Rating: Not rated

Flow Options for Valves with Bottom-Port Inlet

Flow Options for Valves with Center-Port Inlet



Perform valve maintenance without unthreading pipe connections. These valves have a three-piece bolted body that comes apart for inline replacement of the seats, seals, or ball. For excellent chemical resistance, body is fiberglass-filled polypropylene and seal is fluoro-elastomer.

Connections are NPT female. Ball is polypropylene and seat is PTFE. Valves are full port, so they do not restrict flow. Color is black.

Valves with a bottom-port inlet direct flow to either side port or shut off flow completely. They have a T-handle that resists accidental movement when snagged or bumped, unless noted.

Valves with a center-port inlet direct flow to either side port. They cannot shut off flow. They have a lever handle, unless noted.

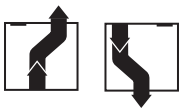
Actuated Directional-Control Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 32° to 180° F
- Vacuum Rating: Not rated

Flow Options for Normally Closed Valves



Flow Options for Normally Open Valves

These valves automatically switch the direction of flow for mixing, diverting, and venting. They are often used with single-acting spring-return cylinders. All use pressure from your pipeline to assist in opening and closing for reduced energy consumption.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves have wire leads, a 1/2 trade size conduit port, and draw a max. of 0.71 amps. They meet NEMA 4X for resistance to wash-downs, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position.

Closed unless energized (normally closed) valves allow flow through the secondary flow path until they receive an electrical signal to open the primary flow path and reverse the direction of flow.

Open unless energized (normally open) valves allow flow through the primary flow path until they receive an electrical signal to open the secondary flow path and reverse the direction of flow.

Directional Control 4-Port Aluminum Valves

- Use with air and inert gas
- Pressure Drop Across Valve: At least 20 psi required
- Temp. Range: 0° to 135° F (120V AC) 0° to 77° F (24V DC)

Control your actuated equipment—a 4-port body switches the direction of flow to apply and exhaust pressure. Also known as 4-way valves, they're often used with double-acting (push/pull) cylinders. Connections are NPT female. Body is aluminum and seals are Buna-N. Valves have wire leads and draw a max. of 0.29 amps. Mount in any position. CSA certified.

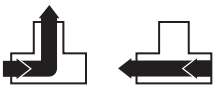
Pipe Size	Lg.	Ht.	Max. psi	120V AC	24V DC	
1/4	1 1/2"	3 11/16"	150	4368T44	4368T48	$335.66

Compact Actuated Directional-Control Valves

With a shorter end-to-end length than standard actuated directional-control valves and a lower overall height, these valves are often installed in cramped areas where other valves won't fit. They automatically switch the direction of flow for mixing, diverting, and venting applications.

Connections are NPT female. Body is brass. Valves are closed unless energized (normally closed) and allow flow through the secondary flow path until they receive an electrical signal to open the primary flow path and reverse the direction of flow. They operate on 120 volts AC. Valves have wire leads, a ½ trade size conduit port, and draw a max. of 0.26 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed and CSA certified.

Flow Options



For Water, Oil, Air, and Inert Gas—Buna-N Seal

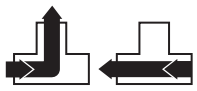
Top-Connect Actuated Directional-Control Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 175°F
- Vacuum Rating: Not rated

Flow Options



These valves have a top port for installation in pipelines without the horizontal clearance required for a center port. They automatically switch the direction of flow for mixing, diverting, and venting and are often used with cylinders and presses.

Connections are NPT female. Body is brass and seal is Buna-N. Valves are closed unless energized (normally closed) and allow flow through the secondary flow path until they receive an electrical signal to open the primary flow path and reverse the direction of flow. They operate on 120 volts AC. They have wire leads, a ½ trade size conduit port, and draw a max. of 0.16 amps. All meet NEMA 2 for resistance to dripping liquid and light splashing. Mount in any position. UL listed and CSA certified.

Pipe Size	End-to-End Lg.	Ht.	Max. psi		
1/4	1 3/4"	3 5/8"	85	47835K251	$179.66

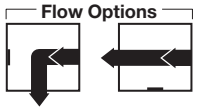
Create-a-Manifold Directional-Control Valves

- Use with water, oil, air, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 150°F
- Vacuum Rating: Not rated

Flow Options



Three Valves Shown Assembled as Manifold

Often used for emission analysis and gas processing, these valves attach to each other horizontally to create one centralized manifold for servicing multiple process lines. Valves are sold separately and require 6-32 threaded rods and locknuts (sold separately) to assemble the valves into a manifold.

Connections are NPT female. Seal is fluoroelastomer. Valves are closed unless energized (normally closed) and allow flow through the secondary flow path until they receive an electrical signal to open the primary flow path and reverse the direction of flow. They operate on 120 volts AC. All have wire leads and draw a max. of 0.07 amps. Mount in any position.

303 stainless steel valves are more corrosion resistant than brass valves.

Pipe Size	Lg.	Wd.	Ht.	Max. psi	Brass		303 Stainless Steel	
1/8	1 1/8"	1 1/8"	2 3/4"	50	4919T21	$68.09	3830T41	$80.15

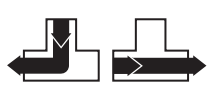
Corrosion-Resistant Top-Connect Actuated Directional-Control Valves

Flow Options for Normally Closed Valves

Flow Options for Normally Open Valves



Control flow to actuated equipment in harsh environments—these valves have a 430 stainless steel body for more corrosion resistance than standard actuated directional-control valves with a brass body. They have a top port for installation in pipelines without the horizontal clearance required for a center port. All automatically switch the direction of flow for mixing, diverting, and venting. These valves are often used to operate presses and single-acting spring-return cylinders.

Connections are NPT female. Valves have wire leads, a ½ trade size conduit port, and draw a max. of 0.42 amps. All meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. Mount in any position. UL listed and CSA certified.

Closed unless energized (normally closed) valves allow flow through the secondary flow path until they receive an electrical signal to open the primary flow path and reverse the direction of flow.

Open unless energized (normally open) valves allow flow through the primary flow path until they receive an electrical signal to open the secondary flow path and reverse the direction of flow.

For Water, Oil, Air, and Inert Gas—Buna-N Seal

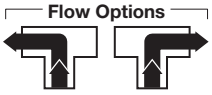
High-Pressure Actuated Directional-Control Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 176° F
- Max. Pressure for Steam: 100 psi @ 340° F
- Valve Temp Range: -4° to 340° F
- Vacuum Rating: 29" Hg

Flow Options



These valves withstand twice the pressure of other actuated directional-control valves. They operate on compressed air and electricity and have a solenoid that turns the air supply on and off. All valves direct flow from the center-port inlet to the left-port outlet when air is off. They cannot shut off flow.

Connections are NPT female. Body is brass, ball is chrome-plated brass, seat is PTFE, and seals are fluoroelastomer and PTFE. Valves meet NEMA 4X for resistance to washdowns, splashing water, corrosive liquids, and dust and are suitable for outdoor use. All are standard port, so they slightly restrict flow. Can be used in horizontal and vertical pipeline.

The actuator is directly mounted to the valve body to minimize movement and reduce wear. Requires an air supply of 60 to 125 psi; inlet is 1/4 NPT female. Housing is aluminum. The solenoid operates on 120 volts AC @ 60 Hz. Has 12" long wire leads with a 1/2 trade size conduit port. Actuator temperature range is 0° to 130° F.

Air-to-divert/air-to-return valves use air pressure to divert flow to the right-port outlet and air pressure to return flow to the left-port outlet.

Air-to-divert/spring-return valves use air pressure to divert flow to the right-port outlet. They automatically return flow to the left-port outlet when the air turns off to ensure the valve only diverts flow to the right port when air is on.

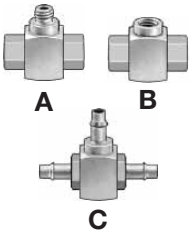
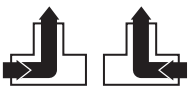
Pressure-Driven Directional Control Valves



- Max. Pressure for Water, Oil, Air, and Inert Gas: 250 psi @ 230° F
- Temp. Range: 32° to 230° F
- Vacuum Rating: Not rated

Flow Options



Direct flow between one of two side-port inlets and the top-port outlet with these valves that automatically switch between inlets based on pressure. Flow is directed from the higher-pressure inlet to the outlet. Valves cannot shut off flow. Body is brass and seal is Buna-N. Valves are also known as shuttle valves.

Valves with barbed connections are for use with soft plastic or rubber tubing.

About Backflow-Prevention Valves

Backflow-prevention valves open to allow flow in one direction and close when flow stops or reverses to prevent system contamination. They are also known as check valves.

Sure-seal backflow-prevention valves have two integral check valves for maximum protection from system contamination. They are also known as dual check valves and reduced pressure zone valves.

Backflow-Prevention Valves

- Max. Pressure: 400 psi @ 70° F, except max. pressure for steam is 125 psi @ 350° F.
- Temp. Range: 33° to 225° F

These valves open to allow flow in one direction and close when flow stops or reverses. At least 2 psi is required to open valves. Mount in any position. Connections are NPT female.

Nickel-plated brass valves are more corrosion resistant than plain brass valves.

Valves for coolant can be used to stop the backflow of antifreeze in your line.

Extended-Life Backflow-Prevention Valves

- Max. Pressure: 400 psi @ 70° F, unless noted
- Max. Pressure for Steam: Not rated (Buna-N Seal); 125 psi @ 350° F (PTFE Seal)
- Temp. Range: 32° to 190° F (Buna-N Seal); -20° to 350° F (PTFE Seal)

A bronze body provides durability and a long service life. At least 0.5 psi is required to open valves. Mount horizontally or vertically. Connections are NPT.

Valves with a Buna-N seal have a silicon bronze body.

Corrosion-Resistant Backflow-Prevention Valves

- Max. Pressure: See table
- Temp. Range: -4° to 350° F

These valves have a 316 stainless steel body for exceptional corrosion resistance. At least 0.5 psi is required to open valves, unless noted. Mount horizontally or vertically. Connections are NPT female.

Valves for steam are often used for steam service in wet conditions and harsh environments.

For Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline

Seal is fluoroelastomer.

Pipe Size	End-to-End Lg.	Max. psi @ 70° F		
1/8	2"	580	8605T12▲	$112.55

Quick-Opening Backflow-Prevention Valves

- Max. Pressure: 1,000 psi @ 70° F
- Temp. Range: -40° to 300° F (Buna-N Seal); 10° to 400° F (Fluoroelastomer Seal)

With a minimum opening pressure of 0.3 psi, these valves open at less than a third of the minimum opening pressure required for standard backflow-prevention valves for the fastest response to low pressure levels. Valves are often used in low-pressure instrumentation applications. Body is brass. Mount in any position. Connections are NPTF (Dryseal).

Compact Backflow-Prevention Valves

- Max. Pressure: 500 psi @ 70° F
- Temp. Range: -20° to 180° F

For installation in confined spaces, these valves have a shorter end-to-end length than standard backflow-prevention valves. Body is brass. At least 1 psi is required to open valves. Mount in any position. Connections are NPT.

Backflow-Prevention Valves

For technical drawings and 3-D models, go to mcmaster.com.

For information about backflow-prevention valves, see page 506. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Miniature Backflow-Prevention Valves

With UNF Connections

With NPT Connections

- Max. Pressure for Water, Air, and Inert Gas: 125 psi @ 70° F (UNF Connections); 200 psi @ 70° F (NPT Connections)
- Temp. Range: 32° to 150° F (UNF Connections); 32° to 300° F (NPT Connections)

The smallest backflow-prevention valves we offer. Seal is 304 stainless steel. At least 2 psi is required to open valves. Mount in any position.

303 stainless steel valves are more corrosion resistant than brass valves.

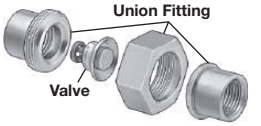
Easy-to-Install Backflow-Prevention Valves



- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 1,500 psi @ 70° F
- Temp. Range: -10° to 400° F

Insert one of these valves into a union fitting for fast installation and removal from your pipeline. Valves and union fittings (sold separately) are 316 stainless steel for exceptional corrosion resistance. Connections are NPT female.

Valves require at least 0.5 psi to open. Seal is fluoroelastomer. Mount horizontally or vertically.

Compact Plastic Backflow-Prevention Valves

- Max. Pressure for Water, Air, and Inert Gas: 125 psi @ 70° F
- Temp. Range: -20° to 180° F

Since these valves have a shorter end-to-end length than other plastic backflow-prevention valves, they're often installed in confined areas. Body is nylon and seal is Buna-N. At least 1 psi is required to open valves. Mount horizontally or vertically. Color is white. Connections are NPT male.

Pipe Size	End-to-End Lg.		
1/8	1"	1424T11	$15.00
1/4	1 1/4"	1424T15	15.00

High-Pressure Backflow-Prevention Valves for Steam

- Max. Pressure: 450 psi @ 550° F
- Temp. Range: -20° to 550° F

Rated for nearly four times the pressure of standard backflow-prevention valves for steam, these have a rugged iron body and seal that withstands steam pressure up to 450 psi @ 550° F. A threaded cap provides easy access to internal components for maintenance. At least 2 psi is required to open valves. Install horizontally or vertically. Valves are rated Class 300. Connections are NPT female.

Pipe Size	End-to-End Lg.		
1	4 1/16"	4900K13	$473.93
1 1/2	5 7/16"	4900K14	571.92

High-Pressure Backflow-Prevention Valves

- Max. Pressure: See table
- Temp. Range: See table

These valves are rated for five times the pressure of standard backflow-prevention valves. Body is brass. At least 1 psi is required to open valves. Mount in any position. Connections are NPT or NPTF (Dryseal).

Compact High-Pressure Backflow-Prevention Valves

- Max. Pressure: 2,000 psi @ 70°F (Brass); 3,000 psi @ 70°F (Steel and 303 Stainless Steel)
- Temp. Range: -30° to 190°F

Designed for installation in confined areas, these valves have a shorter end-to-end length than standard backflow-prevention valves and are rated for five times the pressure. At least 2.5 psi is required to open valves. Mount in any position. Connections are NPTF (Dryseal) male.

Valves for water have a Buna-N seal. **Valves for oil** have a brass seal, unless noted.

Brass valves have good corrosion resistance. **303 stainless steel** valves are more corrosion resistant than brass valves.

★ Seal is steel. ■ Seal is 303 stainless steel.

Corrosion-Resistant High-Pressure Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 3,000 psi @ 70°F (1/8 to 1/2 size); 2,000 psi @ 70°F (3/4 and 1 size)
- Temp. Range: -4° to 350°F

With a 316 stainless steel body for exceptional corrosion resistance and five times the pressure rating of standard backflow-prevention valves, these are often used for high-pressure applications in wet conditions and harsh environments. Seal is fluoroelastomer. At least 0.33 psi is required to open valves. Mount horizontally or vertically. Connections are NPT female.

Pipe Size	End-to-End Lg.		
1/8	1 3/4"	7838K53	$66.11

Ultra-High-Pressure Backflow-Prevention Valves

- Max. Pressure for Water and Oil: 5,000 psi @ 70°F
- Temp. Range: See table

Our highest-pressure backflow-prevention valves, these can withstand more than 12 times the pressure of standard backflow-prevention valves. Seal is 440 stainless steel. At least 1 psi is required to open valves. Mount in any position. Connections are NPTF (Dryseal) female.

303 stainless steel valves have excellent corrosion resistance.

Pipe Size	End-to-End Lg.	Steel		303 Stainless Steel

High-Performance Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 1,975 psi @ 100°F
- Temp. Range: -20° to 800°F

Often used in petroleum and power-processing systems and other demanding applications, these valves withstand nearly five times the pressure and four times the temperature of standard backflow-prevention valves. Body is steel; seal is 304 stainless steel and graphite. At least 1.08 psi is required to open valves. Mount in any position. Valves meet API (American Petroleum Institute) 598 and 602, ASME B16.34, and are rated Class 800. Connections are NPT female.

Spring-loaded valves quickly respond to flow stoppage or reversal to reduce slamming and vibration.

Lift valves have few moving parts to wear out, so they can withstand the frequent opening and closing of pulsating flow.

Pipe Size	End-to-End Lg.	Spring-Loaded Valves		Lift Valves

High-Flow Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, and Inert Gas:
  200 psi @ 150° F (Class 125);
  300 psi @ 150° F (Class 150);
  400 psi @ 150° F (Class 200);
  600 psi @ 150° F (Class 300)
- Max. Pressure for Steam:
  125 psi @ 353° F (Class 125);
  150 psi @ 366° F (Class 150);
  200 psi @ 388° F (Class 200);
  300 psi @ 422° F (Class 300)
- Temp. Range:
  -20° to 405° F (Class 125 and Class 150);
  -20° to 550° F (Class 200 and Class 300)

To achieve the maximum possible flow, internal components are designed to reduce flow resistance. A threaded cap provides easy access to internal components for maintenance. Body and seal are bronze for durability and a long service life, unless noted. At least 0.5 psi is required to open valves. Mount horizontally or vertically. Valves meet MSS-SP-80. Connections are NPT female.

Flange-Mount Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline:
  200 psi @ 70° F (Cast Iron);
  275 psi @ 70° F (316 Stainless Steel)
- Temp. Range:
  -20° to 250° F (Cast Iron);
  -20° to 1000° F (316 Stainless Steel)

Sandwich these valves between two flanges for backflow prevention at a fraction of the weight of flanged backflow-prevention valves and a reduced pipeline footprint. At least 1.25 psi is required to open valves. Mount horizontally or vertically.

Cast iron valves fit ANSI Class 125 and 150 flanges of the same pipe size. FM approved.

316 stainless steel valves have exceptional corrosion resistance. They fit ANSI Class 150 and 300 flanges of the same pipe size. Valves meet API (American Petroleum Institute) 594 and 598.

Easy-View Socket-Weld Backflow-Prevention Valves

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 32° to 140° F

A transparent body lets you visually inspect flow and debris accumulation. Bond these valves to unthreaded male plastic pipe. Use with Schedule 40 and 80 pipe and fittings. Valves have a threaded cap that provides easy access to internal components for maintenance. Body is PVC and seal is EPDM. At least 0.29 psi is required to open valves. Mount in any position.

Pipe Size	End-to-End Lg.

Drain, Waste, and Vent Socket-Weld Backflow-Prevention Valves

- Max. Pressure for Water: 60 psi @ 140° F
- Temp. Range: 33° to 140° F

Also known as backwater valves, these prevent the backward flow of sewage and wastewater. Bond to unthreaded male plastic pipe. Use with Schedule 40 pipe and fittings. A threaded cap provides easy access to internal components for maintenance.

Body and seal are PVC. Valves do not require a minimum pressure to open. Mount horizontally. Valves meet ASTM D1784, D2665, and D3311 and are CSA and IAPMO certified. Color is white.

Pipe Size	End-to-End Lg.

Socket-Weld Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 200 psi @ 70° F
- Max. Pressure for Steam: 150 psi @ 350° F
- Temp. Range: -20° to 400° F

Weld these valves to unthreaded male pipe. A threaded cap provides easy access to internal components for maintenance. Body and seal are 316 stainless steel for exceptional corrosion resistance. At least 0.5 psi is required to open valves. Mount horizontally or vertically.

Pipe Size	End-to-End Lg.

High-Performance Socket-Weld Backflow-Prevention Valves

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 1,975 psi @ 100° F
- Temp. Range: -20° to 800° F

Rated for nearly 10 times the maximum pressure and twice the maximum temperature of standard socket-weld backflow-prevention valves, these are often used in petroleum and power-processing systems and other demanding applications. They weld to unthreaded pipe.

Body is steel; seal is 304 stainless steel and graphite. At least 1.08 psi is required to open valves. Mount in any position. Valves meet API (American Petroleum Institute) 598 and 602, ASME B16.34, and are rated Class 800.

Spring-loaded valves quickly respond to flow stoppage or reversal to reduce slamming and vibration.

Lift valves have few moving parts to wear out, so they can withstand the frequent opening and closing of pulsating flow.

Pipe Size	End-to-End Lg.	Spring-Loaded Valves		Lift Valves	
3/4	3 5/8"	4895K84	$92.47	4618K82	$186.04

High-Pressure Backflow-Prevention Valves with Barbed Fittings

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 300 psi @ 70° F
- Temp. Range: -10° to 300° F

Our highest-pressure backflow-prevention valves with barbed fittings, these can withstand up to 300 psi. Slide the barbed fittings into soft plastic or rubber tubing. Body is 303 stainless steel for excellent corrosion resistance. Seal is fluoroelastomer. At least 2 psi is required to open valves. Mount in any position.

High-Use Backflow-Prevention Valves with Barbed Fittings

- Max. Pressure: 15 psi @ 70° F
- Temp. Range: -20° to 250° F

These valves have internal components that resist wear from frequent operation, so they can cycle as often as once per second. Slide the barbed fittings into soft plastic or rubber tubing. At least 0.5 psi is required to open valves. Mount horizontally.

Polypropylene valves are white. **Nylon** valves are more impact resistant than polypropylene valves. Color is white and black, unless noted. **PVDF** valve resists abrasion and UV light. Color is white.

Backflow-Prevention Valves with Push-to-Connect Fittings

- Max. Pressure for Water, Air, and Inert Gas: 125 psi @ 70° F
- Temp. Range: 40° to 100° F (NPT Male x Push-to-Connect); 34° to 140° F (Push-to-Connect x Push-to-Connect)

Insert plastic or soft metal tubing into the push-to-connect fittings for a low-pressure seal. Seal is Buna-N.

NPT male x push-to-connect valves are not rated for opening pressure. Body is acetal. Mount horizontally, except elbows can also mount vertically. Color is gray.

Push-to-connect x push-to-connect valves require at least 1 psi to open. Body is PVC. Mount horizontally or vertically. Color is dark gray.

Compact Backflow-Prevention Valves with Push-to-Connect Fittings

- Max. Pressure for Air and Inert Gas: 145 psi @ 70° F
- Temp. Range: 32° to 158° F

Often used in compressed air lines, these valves have a short end-to-end length for installation in confined spaces. Insert plastic or soft metal tubing into the push-to-connect fittings for a low-pressure seal. Body is nylon and seal is Buna-N. At least 7 psi is required to open valves. Mount in any position.

Backflow-Prevention Valves with Solder-Connect Fittings

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: 200 psi @ 70° F
- Max. Pressure for Steam: 125 psi @ 353° F
- Temp. Range: -20° to 405° F

Solder these valves to copper tubing. A threaded cap provides easy access to internal components for maintenance. Body and seal are bronze for durability and a long service life. At least 0.5 psi is required to open valves. Mount horizontally or vertically. Valves meet MSS-SP-80 and are rated Class 125.

For Tube Size ♦	For Tube OD	End-to-End Lg.

Backflow-Prevention Valves with Compression Fittings

- Max. Pressure for Water, Oil, Air, and Inert Gas: 400 psi @ 70° F
- Temp. Range: -65° to 250° F

The compression fitting bites down on hard metal tubing for a more secure seal than push-to-connect fittings. Body and seal are brass. At least 3 psi is required to open valves. Mount in any position.

Backflow-Prevention Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, Air, Inert Gas, Diesel Fuel, and Gasoline: See table
- Temp. Range: -30° to 275° F (Brass); -10° to 375° F (316 Stainless Steel)

For a leak-free seal around hard metal tubing in high-pressure lines, these valves have Yor-Lok fittings. Also known as instrumentation fittings, Yor-Lok fittings are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. For Yor-Lok fittings, see pages 184-189. Mount in any position.

Brass valves have a Buna-N seal. At least 1 psi is required to open valves.

316 stainless steel valves are more corrosion resistant than brass valves. Seal is fluoroelastomer. At least 0.33 psi is required to open valves.

Backflow-Prevention Valves for Drinking Water

- Max. Pressure: 400 psi @ 167° F (with NPT Connections); 145 psi @ 68° F (with Push-to-Connect Fittings)
- Temp. Range: 10° to 210° F (with NPT Connections); 40° to 100° F (with Push-to-Connect Fittings)

These valves meet NSF/ANSI Standard 61 for use with drinking water.

Valves with NPT female connections have a Buna-N seal. At least 0.5 psi is required to open valves. Mount in any position.

Valves with push-to-connect fittings form a low-pressure seal around plastic and soft metal tubing. Seal is acetal. At least 0.3 psi is required to open valves. Mount horizontally. Color is white.

Plastic Backflow-Prevention Valves for Drinking Water

- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 33° to 140° F

Prevent backflow in plastic pipelines for drinking water with these valves that meet NSF/ANSI Standard 61. Use with Schedule 40 pipe and fittings. Body is PVC and seal is EPDM. At least 0.5 psi is required to open valves. Mount horizontally or vertically.

Spring-loaded valves quickly respond to flow stoppage or reversal to reduce slamming and vibration. **Swing** valves provide reduced resistance to flow in your pipeline.

Socket-weld valves bond to unthreaded male plastic pipe.

Backflow-Prevention Valves with Quick-Clamp Fittings for Food and Beverage

- Max. Pressure: 150 psi @ 400° F
- Temp. Range: -20° to 400° F

Maintain sanitary standards in food, beverage, and dairy applications. These 3-A certified valves have sanitary quick-clamp connections and polished internal surfaces for easy cleaning. Use with quick-clamp fittings on pages 228-231. Body is 316 stainless steel for exceptional corrosion resistance. At least 0.5 psi is required to open valves. Mount vertically.

Fluoroelastomer seals have excellent resistance to many food-processing chemicals and good resistance to food acids, fats, and oils.

PTFE seals have the best resistance to a broad range of food-processing chemicals, food acids, fats, and oils.

Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Easy-to-Install Backflow-Prevention Valves for Chemicals

- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 40° to 140° F (PVC); 34° to 190° F (CPVC); 32° to 160° F (Polypropylene)

Disassemble the union fittings to cut down on valve installation time. The fittings also let you perform maintenance without detaching pipe connections. These valves have a plastic body and a fluoroelastomer seal for excellent chemical resistance. Use with Schedule 80 pipe and fittings. At least 1 psi is required to open valves. Mount horizontally or vertically.

PVC valves are dark gray. **CPVC** valves are light gray. **Polypropylene** valves are more corrosion resistant than PVC or CPVC valves. Color is white.

Pipe Size	End-to-End Lg.	PVC		CPVC		Polypropylene	
With NPT Female Connections

Compact Backflow-Prevention Valves for Chemicals

- Max. Pressure: 220 psi @ 70° F
- Temp. Range: 40° to 180° F

At half the end-to-end length of standard threaded backflow-prevention valves for chemicals, these are often used in confined areas. All have a PVDF body and a fluoroelastomer seal for excellent chemical resistance. At least 2.5 psi is required to open valves. Mount in any position. Color is white. Connections are NPT male.

Pipe Size	End-to-End Lg.		
1/8	1"	46505K21	$11.79
1/4	1 7/16"	46505K31	12.54

Socket-Weld Backflow-Prevention Valves for Chemicals

- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 32° to 140° F

Bond these valves to unthreaded male plastic pipe. They have a PVC body and a fluoroelastomer seal for excellent chemical resistance. A transparent body lets you visually inspect flow and debris accumulation, and a threaded cap provides easy access to internal components for maintenance. Use with Schedule 40 and 80 pipe and fittings. At least 0.29 psi is required to open valves. Mount in any position.

Pipe Size	End-to-End Lg.		
1/2	5 5/8"	4754K42	$57.43
3/4	6 5/16"	4754K43	69.31
1	6 7/8"	4754K44	79.32

Backflow-Prevention Valves for Vacuum Service

- Max. Pressure for Water, Air, and Inert Gas: 20 psi @ 150° F
- Temp. Range: 33° to 150° F
- Vacuum Rating: 29.9" Hg

Rated for vacuum up to 29.9" Hg, these valves stop backward flow caused by back pressure in vacuum lines. They have barbed fittings on each end and are not rated for opening pressure. Body and seal are polyethylene. Mount in any position. Color is white.

For Tube ID	End-to-End Lg.		
1/4", 5/16"	2 3/4"	4610K13	$7.48
3/8", 7/16", 1/2"	3 3/16"	4610K17	10.31

Ultra-Chemical-Resistant Backflow-Prevention Valves

- Max. Pressure: 100 psi @ 150° F
- Temp. Range: 0° to 212° F

The most chemical-resistant backflow-prevention valves in our offering, these have a PFA body for excellent resistance to the widest range of harsh chemicals. At least 1 psi is required to open valves. Mount in any position. Color is white. Connections are NPT female.

Pipe Size	End-to-End Lg.		
1/4	2 3/8"	47155K71	$181.90

Backflow-Prevention Valves with Barbed Fittings for Chemicals

- Max. Pressure: 125 psi @ 70° F
- Temp. Range: 33° to 140° F

Prevent backflow in chemical tubing lines. These valves have barbed fittings that slide into soft plastic or rubber tubing. Seal is fluoroelastomer. At least 1 psi is required to open valves. Mount in any position. Color is white.

For Tube ID	End-to-End Lg.	Polypropylene		Nylon

Backflow-Prevention Valves for Natural, Propane, and Butane Gas

- Max. Pressure: 25 psi @ 176° F
- Temp. Range: Max. temp. of 176° F

To prevent flashback in flammable gas pipelines, an internal flame-arresting element absorbs the heat from a fire to extinguish the flame. These valves are commonly used in pilot lines connected to waste gas burners. Body is aluminum and flame-arresting element is 316 stainless steel. Valves are not rated for opening pressure. Mount in any position. Connections are NPT female.

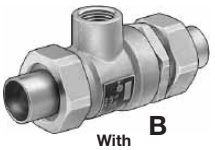
Sure-Seal Backflow-Prevention Valves

- Max. Pressure for Water: 150 psi @ 140° F (Style A); 175 psi 250° F (Style B)
- Temp. Range: 33° to 140° F (Style A); 33° to 250° F (Style B)

A



B

With Solder-Connect Fittings

For maximum protection from system contamination, these valves have two integral check valves with a vent between them. If the primary check valve fails, overflow is discharged through the vent. Seal is EPDM. At least 25 psi is required to open valves. Mount horizontally or vertically. CSA certified.

Style A has an unthreaded vent and is commonly used on laboratory faucets and other applications with intermittent flow. The valve discharges overflow directly and should not be installed in areas where spillage could cause water damage. The chrome-plated brass body is more corrosion resistant than plain brass. Valve meets ASSE 1035. It has a male inlet and female outlet.

Style B have a threaded vent and are often attached to drain pipes to prevent spillage. Valves are designed for applications with continuous flow and are often installed on water supply lines to boilers, processing tanks, and other equipment. Vent is ½ NPT female. Valves have a strainer to prevent debris from blocking the check valve. They meet ASSE 1012. All have a female inlet and outlet.

Valves with solder-connect fittings solder to copper tubing.

Sure-Seal Backflow-Prevention Valves for Drinking Water

- Max. Pressure: 175 psi @ 180° F
- Temp. Range: 33° to 180° F

Double Union

Keep backflow from contaminating your drinking water supply—these valves meet NSF/ANSI Standard 61 for use with drinking water and have two integral check valves for maximum system protection. Body is brass and seal is EPDM. At least 5 psi is required to open valves. Mount horizontally or vertically. Valves are CSA certified and meet ASSE 1024. Connections are NPT.

Single-union valves have a union fitting on one end.

Double-union valves have a union fitting on both ends.

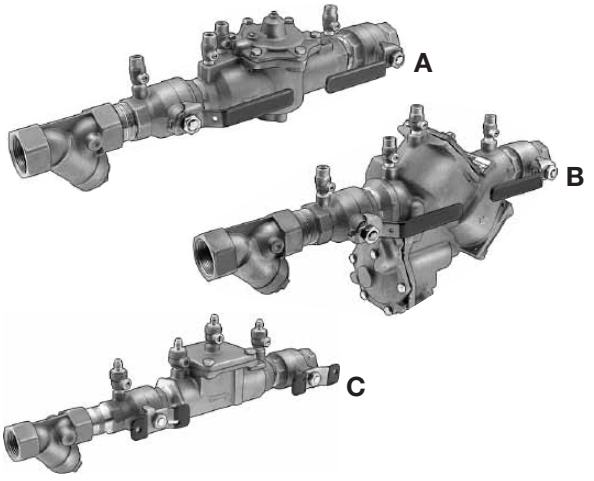
Easy-Maintenance Sure-Seal Backflow-Prevention Valves for Drinking Water



A

B

C

- Max. Pressure: 175 psi @ 180° F (Styles A and C); 175 psi @ 140° F (Style B)
- Temp. Range: 33° to 180° F (Styles A and C); 33° to 140° F (Style B)

A top-entry cover provides easy access to internal components, and integral shutoff valves isolate flow for inline maintenance. These valves meet NSF/ANSI Standard 61 for use with drinking water. They have two integral check valves for maximum protection from drinking water contamination and a strainer to prevent debris from blocking the check valves. Body is bronze for durability and a long service life. Seal is Buna-N. At least 30 psi is required to open valves. Valves are USC approved. Connections are NPT.

Styles A&B—Also known as reduced pressure zone valves, these have an integral relief valve to discharge backflow if both check valves fail. Valves meet ASSE 1013. *Style A* must be mounted horizontally. *Style B* have an additional air inlet that provides high-capacity relief in emergency conditions. If both check valves fail, the inlet introduces air to quickly displace liquid for faster discharge through the relief valve. Mount in any position.

Style C—Mount these valves in any position. They are CSA certified and meet ASSE 1015.

Vacuum-Breaking Valves for Water, Inert Gas, and Steam

- Max. Pressure for Water, Air, and Inert Gas: 300 psi @ 70° F
- Max. Pressure for Steam: 300 psi @ 365° F
- Temp. Range: -20° to 365° F

Often used with steam coils, heat exchangers, and space heaters, these valves relieve vacuum to prevent backward suction that can contaminate your system and damage equipment. Inlet is NPT male.

303 stainless steel valves are more corrosion resistant than brass valves.

Vacuum-Breaking Valves for Water

- Max. Pressure for Water: 125 psi @ 70° F
- Temp. Range: 33° to 180° F

These valves relieve vacuum to prevent backward suction that can contaminate your system and damage equipment. All are designed for applications with intermittent flow. Valves meet Uniform Plumbing Code for atmospheric discharge, ASSE standard 1001, and are CSA certified. Connections are NPT female.

Bronze valves are harder and more durable than brass valves for an extended service life. *Chrome plating* adds corrosion resistance. *Polished chrome plating* provides a decorative, mirror-like finish in addition to corrosion resistance.

Vacuum-Breaking Valves with Garden Hose Connections

- Max. Pressure: 125 psi @ 70° F
- Temp. Range: 32° to 180° F

Stop backward flow in hose and pipe that have garden hose threads (GHT). For intermittent use with water on service sinks and faucets. Body is brass. Valves meet ANSI A112.1.3, are ASSE 1011 listed, and CSA certified B64.2. Connections are 3/4 GHT; inlet is female and outlet is male.

Removable Valves—Tighten set screw to secure in place.

Tamper-Resistant Valves—Tighten set screw until the head breaks off to prevent removal. Valves can be drained.

High-Pressure Vacuum-Breaking Valves for Water, Oil, and Inert Gas

- Max. Pressure for Water, Oil, Air, and Inert Gas: 1,500 psi @ 70° F
- Temp. Range: -10° to 400° F

Rated for 12 times the pressure of standard vacuum-breaking valves for water, these can handle up to 1,500 psi. They relieve vacuum to prevent backward suction that can contaminate your system and damage equipment. Body is 316 stainless steel for exceptional corrosion resistance. Connections are NPT; inlet is female and outlet is male.

Inlet	Outlet	End-to-End Lg.		
1/2	3/4	1 5/16"	8537T74	$95.09
3/4	1	1 7/8"	8537T76	110.07

About Pressure-Relief Valves

Protect piping, tanks, and other equipment from overpressurization with these valves that automatically open at a set pressure. They should be installed as close as possible to the vessel or system they protect.

Pressure-relief valves provide gradual pressure relief. They begin opening at the set pressure and fully open at about 10% over the set pressure. Valves begin closing as pressure drops and fully close when the system pressure is restored below the set pressure.

Fast-acting pressure-relief valves, also known as pop-safety valves, provide immediate pressure relief. They spring fully open at a set pressure and remain open until the system pressure is restored below the set pressure. It's normal for these valves to expel small amounts of liquid or gas as the system pressure approaches the set pressure. Valves with plastic and rubber seals expel less liquid or gas than valves with metal seals.

Pressure-Relief Valves for Water

With Male Inlet

- Temp. Range: 33° to 180° F

These valves are commonly used with pumps in low-pressure water systems. Set pressure is not adjustable. Body is brass and seal is rubber. Connections are NPT. Inlet is on the bottom. Relief port is female (side port).

Pipe Size	Ht.	Choose a Set Pressure, psi		
With Male Inlet				
1/2	4 3/16"	30, 75	4780K11	$70.60

Adjustable Pressure-Relief Valves for Water

- Temp. Range: -30° to 160° F

Use the T-handle to alter the set pressure to suit your application. Valves have a locknut that tightens to prevent accidental changes in set pressure. Body is brass and seal is Buna-N. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

Note: Valves should not be used in applications that require the valve to close completely below the set pressure.

Pipe Size	Ht.		
Choose a set pressure range: 0-50, 0-300, or 0-700 psi			
1/2	6 5/8"	9763K11	$59.75

For information about pressure-relief valves, see page 516. For information about pipe size, see pages 2-3.

Precision-Adjustment Pressure-Relief Valves for Water

• Temp. Range: 33° to 200° F

Change set pressure without guesswork—the external adjustment screw is marked in 25 psi increments for making pressure adjustments without a gauge. These valves are commonly used with thermal-expansion protection systems and low-capacity pumps. Body is bronze for durability and a long service life. Seal is silicone. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

Pipe Size				
Inlet	Relief Port	Ht.

Vibration-Damping Adjustable Pressure-Relief Valves for Oil

• Temp. Range: -20° to 400° F

A dense cast iron body absorbs vibration to reduce noise and wear in your pipeline. Valves have an external adjustment screw to adjust the set pressure within the range. Seal is 416 stainless steel. Connections are NPT female; inlet is on the bottom and relief port is on the side.

To Order: Please specify set pressure range: 3-10, 7-35, 30-100, 60-175, 150-350, or 300-500 psi (250-600 psi for valves with 2 pipe size).

Tamper-Resistant Adjustable Pressure-Relief Valves for Oil

• Temp. Range: -40° to 250° F

Prevent unintentional changes to set pressure—these valves have an internal adjustment screw to adjust the set pressure within the range. Body is aluminum and seal is PTFE, except valves with 40-125 set pressure range have a Buna-N seal. Connections are NPT female; inlet is on the bottom and relief port is on top.

To Order: Please specify set pressure range: 40-125; 115-250; 235-450; 430-650; 630-850; 630-1,020; 800-1,500; or 1,400-2,100 psi. Note: 1/4 pipe size is not available at 430-650 psi.

Adjustable Pressure- and Vacuum-Relief Valves for Air and Inert Gas

• Temp. Range: -15° to 250° F

Relieve excess pressure or vacuum with one valve that can be configured for either application. Valves have an external adjustment screw to adjust the set pressure or vacuum level within the range. Adjust vacuum from 0 to 27" Hg and pressure from 0 to 20 psi. Body is brass and seal is Buna-N, unless noted. Valves have an NPT male inlet (bottom port) and a vented relief port on top to exhaust discharge directly.

Pipe Size	Ht.

★ Seal is 440C stainless steel.

Adjustable Pressure-Relief Valves for Oil

• Temp. Range: -40° to 250° F

These valves gradually relieve excess pressure in hydraulic and lubrication systems. They have an external adjustment screw to adjust the set pressure within the range. Body is brass and seal is Buna-N. Connections are NPT female; inlet is on the bottom and relief port is on the side.

To Order: Please specify set pressure range: 4-15; 10-50; 40-125; 115-250; 235-450; 430-650; 630-850; 630-1,020; 800-1,500; 1,400-2,100; 1,500-2,750; 2,000-3,100; or 3,000-3,600 psi.

3/8	3 3/4"	4706K55	289.50	3/4	5 15/16"	4706K59	343.44

Extended-Life Adjustable Pressure-Relief Valves for Oil

• Temp. Range: -320° to 420° F

For a longer service life than other pressure-relief valves for oil, these have a durable bronze body. Use the external adjustment screw to adjust the set pressure within the range. Seal is 316 stainless steel. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

To Order: Please specify set pressure range: 15-75, 50-150, 100-300, 200-600, or 600-900 psi. Note: 1 1/2 pipe size is not available at 600-900 psi.

Pipe Size				
Inlet	Relief Port	Ht.		
1/2	3/4	7 1/4"	4460K81	$382.21
3/4	3/4	7 1/4"	4460K82	405.00
1	1	7 1/2"	4460K83	447.96
1 1/4	1 1/4	8"	4460K84	499.31
1 1/2	1 1/2	8 7/8"	4460K85	604.28

Adjustable Pressure-Relief Valves for Air and Inert Gas

• Temp. Range: -40° to 250° F

Use these valves to relieve excess pressure in compressed-air systems. They have an external adjustment screw to adjust the set pressure within the range. Body is 303 stainless steel for excellent corrosion resistance. Seal is Buna-N. Connections are NPT female; inlet is on the bottom and relief port is on the side.

To Order: Please specify set pressure range: 4-15, 10-50, or 40-125 psi.

Pipe Size	Ht.		
1/2	5 7/8"	4706K67	$595.76
3/4	5 15/16"	4706K69	593.37

Compact Pressure-Relief Valves for Air

• Temp. Range: 26° to 255° F

Less than a quarter of the height of standard pressure-relief valves for air, these are often installed in low-clearance areas. Set pressure is not adjustable. Body is nylon and seal is Buna-N. Valves are color coded based on the set pressure for easy identification. They have a vented relief port on top to exhaust discharge directly.

To Order: Please specify set pressure: 0.5, 1, 1.5, 3, 6, or 10 psi.

With NPT Male Inlet

Valves are commonly used on air tanks. Inlet is on the bottom.

Pipe Size	Ht.		
1/8	5/8"	4277T51	$19.89
1/4	11/16"	4277T52	19.89

With Push-to-Connect Inlet and Outlet

Valves form a low-pressure seal around plastic and soft metal tubing. They allow inline flow from the inlet to the outlet during normal conditions and divert flow to the relief port in overpressure conditions. Inlet and outlet are on the side.

For Tube OD	Ht.		
1/4"	1 1/4"	4320T13	$27.78

1/2"	1 3/4"	4320T16	27.78

Pressure-Relief Valves

For information about pressure-relief valves, see page 516. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	3 1/2"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3

Adjustable Pressure-Relief Valves for Chemicals

These valves have a PVC body for excellent chemical resistance. Use the external adjustment screw to adjust the set pressure within the range. Color is dark gray. Connections are NPT female.

Elbows—EPDM Seal

- Use with aluminum chloride, boric acid, and hydrogen sulfide
- Temp. Range: 40° to 140° F

Valves are often used with catalysts, pH buffers, and electroplating solutions. They have a 1/4 NPT female port for attaching a pressure gauge. Inlet is on the bottom; relief port is on the side.

Pipe Size	Set Pressure Range, psi	Ht.		
1/2	5 to 75	6 3/4"	5007K61	$379.01
3/4	5 to 75	6 7/8"	5007K62	429.94

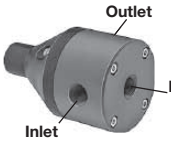
1 1/2	5 to 75	13 1/4"	5007K64	667.13
2	5 to 75	15 1/2"	5007K65	791.25

Tees—PTFE Seal



- Use with potassium sulfate and sodium hypochlorite
- Temp. Range: 0° to 140° F

With a three-port design, these valves allow inline flow from the inlet to the outlet during normal conditions and divert flow through the relief port in overpressure conditions. They are often used with feed pumps for fertilizers and bleach. Inlet and outlet are on the side; relief port is on the bottom.

Pipe Size	Set Pressure Range, psi	Ht.		
1/4	10 to 150	3 17/32"	46315K24	$182.61
1/2	10 to 250	5 9/16"	46315K25	327.51
1	10 to 250	5 7/8"	46315K27	422.00

Corrosion-Resistant Adjustable Pressure-Relief Valves for Fuel

- Use with diesel fuel, fuel oil, gasoline, and kerosene
- Temp. Range: 40° to 250° F

To relieve pressure in wet conditions and harsh environments these valves have a 316 stainless steel body and seal for exceptional corrosion resistance. They have an external adjustment screw to adjust the set pressure within the range. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

To Order: Please specify set pressure range: 30-100; 101-400; 401-1,000; or 1,001-2,000 psi.

Pipe Size	Ht.		
1/2	4 3/16"	5027K11	$291.58

Made-to-Order Pressure-Relief Valves

With Female Inlet

- Temp. Range: -15° to 400° F

Design a valve specifically for your process media and set pressure. Body is 316 stainless steel for exceptional corrosion resistance. Seal is fluoroelastomer. Connections are NPT. Inlet is on the bottom. Relief port is female (side port).

To Order: Please specify media (air, inert gas, water, diesel fuel, fuel oil, gasoline, or hydraulic oil) and a set pressure (from the range listed in the table). Set pressure is not adjustable.

Pipe Size				
Inlet	Relief Port	Choose a Set Pressure, psi	Ht.	
With Female Inlet				
3/8	3/4	10 to 3,800	9"	6871K29 $604.29

1	1	5 to 3,500	9"	6871K33 441.43

Adjustable Pressure-Relief Valves for Fuel

- Use with diesel fuel, fuel oil, gasoline, and kerosene
- Temp. Range: -20° to 400° F

Gradually relieve pressure in lines for diesel fuel, fuel oil, gasoline, and kerosene. Valves have an external adjustment screw to adjust the set pressure within the range. Body is brass and seal is 416 stainless steel. Connections are NPT female; inlet is on the bottom and relief port is on the side.

To Order: Please specify set pressure range: 3-10, 7-35, 30-100, 60-175, 150-350, or 300-500 psi (250-600 psi for valves with 2 pipe size).

Pipe Size	Ht.

1 1/4	9 9/16"	7844K55	312.12
1 1/2	11 1/16"	7844K56	385.25
2	13"	7844K57	615.59

Precision-Adjustment Pressure-Relief Valves for Fuel

- Use with diesel fuel, fuel oil, gasoline, and kerosene
- Temp. Range: -60° to 450° F

A finely threaded external adjustment screw lets you make precise set pressure adjustments within the range. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

Brass valves have a brass seal.

Bronze valves are harder and more durable than brass valves for a longer service life. Seal is bronze.

To Order: Please specify set pressure range: 0-14, 15-25, 26-40, 41-75, 76-110, 111-130, 131-150, 151-200, or 201-400 psi.

Pipe Size	Ht.		
Brass

Pressure-Relief Valves for Cryogenic Liquids

- Use with liquid carbon dioxide, liquid nitrogen, and liquid oxygen
- Temp. Range: -320° to 165° F

Cleaned and bagged to meet CGA G-4.1 for oxygen service and other high-purity applications, these valves are built to withstand the extreme cold of liquid carbon dioxide, liquid nitrogen, and liquid oxygen. Set pressure is not adjustable. Body is brass. Inlet is NPT male (bottom port) and relief port is 3/4"-20 UNEF female (top port).

Valves with set pressures of 125 psi and below have a fluorosilicone seal; valves with set pressures of 150 psi and above have a PTFE seal.

Adapters (sold separately) convert the valve relief-port connection from UNEF female threads to NPT female threads. 49315K94 is 3/8 NPT; 49315K96 is 1/2 NPT.

To Order: Please specify set pressure: 22, 35, 50, 75,100, 125, 150, 200, 250, 300, 350, 400, or 450 psi.

Pipe Size	Ht.	Valves		Adapters	
1/4	2 5/8"	49315K71	$36.88	49315K94	$9.07

1/2	2 13/16"	49315K73	51.04	49315K96	10.62

For information about fast-acting pressure-relief valves, see page 516. For information about pipe size, see pages 2-3.

ASME-Code Fast-Acting Pressure-Relief Valves for Water

- Meet ASME Code Section VIII for Water
- Temp. Range: -60° to 406° F

Use these valves with water pressure vessels. All have a threaded relief port that can be attached to a drain line for remote discharge. Body is bronze for durability and a long service life. Seal is 316 stainless steel. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

To Order: Please specify set pressure: from 20-100 psi in 10 psi increments or from 125-300 psi in 25 psi increments.

Pipe Size				
Inlet	Relief Port	Ht.		
1/2	3/4	7 1/2"	6270T11	$239.05
3/4	3/4	7 1/2"	6270T12	251.08

ASME-Code Fast-Acting Pressure-Relief Valves for Hot Water

- Meet ASME Code Section IV for Hot Water
- Temp. Range: 33° to 250° F

Protect your water-heating system. Valves have a threaded relief port that can be attached to a drain line for remote discharge. All have a test lever. Body is bronze for durability and a long service life. Seal is silicone. Connections are NPT female; inlet is on the bottom and relief port is on the side.

To Order: Please specify set pressure: 30, 50, 60, 75, 100, 125, or 150 psi.

Pipe Size

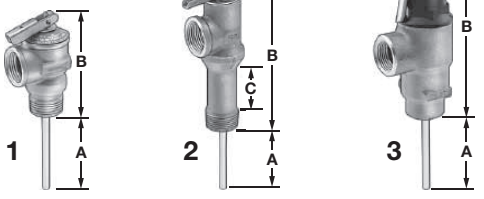
Fast-Acting Temperature- and Pressure-Relief Valves for Hot Water



- Max. Temp: 210° F

Also known as T & P valves, these open when water temperature reaches 210° F or at the set pressure. They are commonly used with water heaters and storage tanks. For remote discharge, valves have a threaded relief port to attach a drain line. All have a test lever.

Body is bronze for durability and a long service life. Seal is silicone. CSA certified. Connections are NPT. Inlet is on the bottom. Relief port is female (side port). Valves meet ASME Code Section IV for hot water, except valve with 1/2 pipe size does not.

Style 2 have an extended body to fit tanks with an insulation thickness of (C).

ASME-Code Fast-Acting Pressure-Relief Valves for Air and Inert Gas

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range, unless noted: -40° to 400° F (Brass Seal); -15° to 250° F (Silicone Seal)

Protect against damage in air lines, air receivers, compressor tanks, and other air-powered equipment. Valves have a vented relief port to exhaust discharge directly. Inlet is NPT male (bottom port).

Valves with a test ring have a side relief port. **Valves with a test lever** have a top relief port.

Nickel-plated brass valves are more corrosion resistant than brass valves.

Silicone seals provide better leak protection than brass seals.

With Test Ring—Brass Body

To Order: Please specify set pressure: from 25-150 psi in 5 psi increments or from 175-300 psi in 25 psi increments, unless noted.

Pipe Size	Ht.

Corrosion-Resistant ASME-Code Fast-Acting Pressure-Relief Valves for Air and Inert Gas

- Meet ASME Code Section VIII for Air and Inert Gas

For corrosion resistance in wet conditions and harsh environments, these valves have a stainless steel body.

With Vented Relief Port—303 Stainless Steel

- Temp. Range: –40° to 400° F

Valves have a vented relief port to exhaust discharge directly. All have a test ring. Body and seal are 303 stainless steel. Inlet is NPT (bottom port). Relief port is on the side.

To Order: Please specify set pressure: from 25-2,500 psi in 25 psi increments.

Inlet Pipe Size	Ht.		
With Male Inlet			
1/4	3 1/8"	98905K15	$95.27
1/2	3 3/4"	98905K18	139.46

With Threaded Relief Port—316 Stainless Steel

- Temp. Range: –15° to 400° F

Attach a drain line to the threaded relief port for remote discharge. Valves have a test lever. Body is 316 stainless steel for exceptional corrosion resistance. Seal is fluoroelastomer. Connections are NPT. Inlet is on the bottom. Relief port is female (side port).

To Order: Please specify set pressure: from 25-2,500 psi.

Pipe Size Inlet	Relief Port	Ht.		
With Female Inlet

Adjustable Fast-Acting Pressure-Relief Valves for Air and Inert Gas

- Temp. Range: –15° to 250° F

Change set pressure to suit your application—this valve includes four interchangeable color-coded springs; yellow for 25-50 psi, red for 51-100 psi, silver for 101-150 psi, and blue for 151-200 psi. Remove the external adjustment screw to change springs; turn the screw to alter the set pressure within the range. Valve has a vented relief port to exhaust discharge directly. Body is brass and seal is silicone. Inlet is NPT male (bottom port). Relief port is on the side.

Pipe Size	Ht.		
1/4	1 5/8"	50265K23	$5.88

Remote-Discharge ASME-Code Fast-Acting Pressure-Relief Valves for Air and Inert Gas

A

B-E

F

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range:
  –15° to 406° F (Styles A, B, E, and F);
  –60° to 406° F (Style C); –60° to 422° F (Style D)

Unlike valves that release discharge directly, these have a threaded relief port to direct discharge away from your work environment. Body is bronze for durability and a long service life. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

Swivel test levers rotate 360° around the valve for use in areas with limited clearance.

Fluoroelastomer seals provide better leak protection than brass or 316 stainless steel seals.

To Order: For *Styles A, B, and F*, please specify set pressure: from 15-150 psi in 5 psi increments or from 175-250 psi in 25 psi increments. For *Styles C and E*, please specify set pressure: from 15-150 psi in 5 psi increments or from 175-300 psi in 25 psi increments. For *Style D*, please specify set pressure: from 300-900 psi in 25 psi increments.

Large-Diameter Remote-Discharge ASME-Code Fast-Acting Pressure-Relief Valves for Air and Inert Gas

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range: -20° to 406° F

Commonly used with high-volume blowers, compressors, and air-powered conveyors, these valves quickly relieve a large amount of air in systems with a pipe size of 2 or greater. Attach a drain line to the threaded relief port for remote discharge. Valves have a test T-handle. Body is cast iron to absorb vibration for reduced noise and wear in your pipeline. Seal is bronze. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

To Order: Please specify set pressure: from 2-60 psi in 2 psi increments.

Pipe Size	Ht.		
2	7″	8175K12	$354.86
2½	8″	8175K14	496.49
3	9″	8175K16	620.40

ASME-Code Fast-Acting Pressure-Relief Valves for Steam

With Swivel Test Lever

With Test Lever

- Meet ASME Code Section I for Steam
- Temp. Range: -60° to 400° F

Use these valves with steam power boilers requiring pressure relief above 15 psi. For remote discharge, attach a drain line to the threaded relief port. Body is bronze for durability and a long service life. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

Swivel test levers rotate 360° around the valve for use in areas with limited clearance.

EPR (ethylene propylene) seals provide better leak protection than brass seals.

To Order: Please specify set pressure: from 15-95 psi in 5 psi increments or from 100-250 psi in 25 psi increments.

Fast-Acting Pressure-Relief Valves for Ultra-Low-Pressure Steam

With Vented Relief Port

With Threaded Relief Port

- Max. Temp.: 250° F

Choose these valves for small steam-heating boilers requiring pressure relief between 5 psi and 12 psi. All have a test lever. Body is bronze for durability and a long service life. Seal is EPDM. Inlet is NPT male (bottom port).

Valves with a vented relief port exhaust discharge directly. Relief port is on the top.

Valves with a threaded relief port can be attached to a drain line for remote discharge. Relief port is NPT female (side port).

To Order: Please specify set pressure: 5, 6, 8, 10, or 12 psi.

Pipe Size: Inlet	Relief Port	Ht.		
With Vented Relief Port				
¾	—	2 7/8″	4699K11	$49.78

Fast-Acting Pressure-Relief Valves for Air with Gauge Port

- Temp. Range: -15° to 250° F

Attach a pressure gauge to the ¼ NPT female port on these valves. They have a vented relief port to exhaust discharge directly. All have a test ring. Body is brass and seal is silicone. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

With Air-Fill (Schrader) Valve

Quickly fill and empty compressed air tanks.

To Order: Please specify set pressure: 125, 135, or 150 psi.

Pipe Size: Inlet	Relief Port	Ht.		
½	¼	1 7/8″	5867T11	$10.72

With Switch Port

Install a pressure switch for activating alarms and other equipment when pressure exceeds the set point. Switch port is ¼ NPT male.

To Order: Please specify set pressure: 100, 125, 135, or 150 psi.

Pipe Size: Inlet	Relief Port	Ht.		
½	¼	2½″	5867T21	$13.97

ASME-Code Fast-Acting Pressure-Relief Valves for Low-Pressure Steam

With Vented Relief Port

With Threaded Relief Port

- Meet ASME Code Section IV for Low-Pressure Steam
- Max. Temp.: 250° F

Use these valves with low-pressure steam-heating boilers requiring pressure relief at 15 psi. All have a test lever. Body is bronze for durability and a long service life. Set pressure is 15 psi. Inlet is NPT male (bottom port).

Valve with a vented relief port exhausts discharge directly. Seal is EPDM. Relief port is on the top.

Valves with a threaded relief port can be attached to a drain line for remote discharge. Seal is PTFE-coated EPDM. Relief port is NPT female (side port).

Pipe Size: Inlet	Relief Port	Ht.		
With Vented Relief Port

3	3	9½″	4699K9	424.21

ASME-Code Fast-Acting Pressure-Relief Valves for Cryogenic Liquids

- Meet ASME Code Section VIII for Cryogenic Service
- Use with liquid argon, liquid carbon dioxide, liquid helium, liquid hydrogen, liquid methane, liquid nitrogen, and liquid oxygen
- Temp. Range: -320° to 150° F

These valves meet ASME standards for use with cryogenic pressure vessels. They are cleaned and bagged for oxygen service and other high-purity applications. Attach a drain line to the threaded relief port for remote discharge. Body and seal are brass. Connections are NPT; inlet is male (bottom port) and relief port is female (side port).

To Order: Please specify set pressure: from 20-300 psi in 10 psi increments.

Pipe Size: Inlet	Relief Port	Ht.		
½	¾	6 13/16″	8089K12	$204.72
¾	1	6 13/16″	8089K14	229.91

Fast-Acting Pressure-Relief & Air-Release Valves

For information about fast-acting pressure-relief valves, see page 516. For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	3 1/2"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3

Fast-Acting Pressure-Relief Valves for Cryogenic Liquids

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Temp. Range: -250° to 350° F

Cleaned and bagged for oxygen service and other high-purity applications, these valves can withstand the extreme cold of liquid argon, liquid nitrogen, and liquid oxygen. They have a vented relief port to exhaust discharge directly. Body is brass and seal is PTFE. Inlet is NPT male (bottom port). Relief port is on the side.

To Order: Please specify set pressure: 5, 10, 15, 20, 25, 30, 40, 50, 88, 100, 110, 125, 150, 200, 220, 250, 300, 325, 350, or 400 psi.

Pipe Size	Ht.

Air-Release Valves

A&C

B

D

E

F

G

These valves remove air pockets in your system to maintain consistent flow and prevent surges that can damage equipment. Mount vertically. Inlet is on the bottom and relief port is on top.

Valves with a vented relief port exhaust discharge directly. Inlet is NPT. **Valves with a threaded relief port** can be attached to a drain line for remote discharge. Inlet and relief port are NPT female.

Styles A&B are commonly used in cooling and heating systems, unless noted. *Style B valve with 40° to 180° F temp. range* has a Buna-N seal; *valve with 40° to 212° F temp. range* has an EPDM seal.

Style C seal shut when steam enters the valve to prevent system contents from escaping through the relief port. They are commonly used in steam mains and risers.

Style D have a cast iron body to absorb vibration for reduced noise and wear in your pipeline.

Style E have no metal parts, so they have excellent corrosion resistance in wet conditions and harsh environments.

Style F meet NSF/ANSI Standard 61 for use with drinking water.

Style G have a 304 stainless steel body for excellent corrosion resistance.

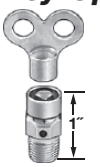
Inline Air-Release Valves

- Max. Pressure for Water: 125 psi
- Temp. Range: 40° to 240° F

Eliminate air pockets without stopping flow—these valves have an internal wire brush that traps air bubbles and discharges them through the top relief port while allowing inline flow from the inlet to the outlet. They are often used to increase efficiency in heating and cooling systems. The vented relief port exhausts discharge directly. Body is bronze for durability and a long service life. Mount vertically. Connections are NPT female.

Pipe Size	End-to-End Lg.	Ht.		
3/4	2 11/16"	6 15/16"	4742T11	$103.93
1	3 1/8"	6 1/2"	4742T12	111.41

Key-Operated Air-Release Valves



- Max. Pressure for Water: 150 psi
- Temp. Range: 33° to 200° F

Turn the key to manually release air from radiators, heaters, and other hot water equipment. These valves have a vented relief port that exhausts discharge directly. Body is nickel-plated brass for good corrosion resistance. Mount in any position. Inlet is 1/8 NPT male (bottom port). Relief port is on the side.

Valve with Key	1813K31	$9.82
Replacement Key	1813K21	2.93

Pressure-Relief Discs

With Vented Relief Port

With Threaded Relief Port

- Temp. Range: -50° to 500° F

These valves are for installation in pipelines and tanks. Discs break open at the burst pressure to allow unrestricted flow. All are for one-time use. Body is brass. Also known as rupture discs.

Valves with a vented relief port exhaust discharge directly. Inlet is NPT male (bottom port). Relief port is on the side.

Valves with a threaded relief port attach to a drain line to direct discharge away from your work environment. Connections are NPT male; inlet and relief port are on the side.

Operating ratio is 80%. Operating ratio is the ratio between the normal operating pressure and the burst pressure. Exceeding the operating ratio decreases the service life of the disc. For example, a disc with a burst pressure of 100 psi and an operating ratio of 80% should not be used in a system with an operating pressure greater than 80 psi.

To Order: Please specify burst pressure: 100, 125, 150, 200, 250, 500, or 700 psi.

Pipe Size		End-to-End Lg.	Ht.

1/2	1/2	2 1/4"	—	4412T23	134.75

Flange-Mount Pressure-Relief Discs

- Temp. Range: -20° to 300° F

Install these discs within the bolt circle of ANSI Class 150 flanges. They break open at the burst pressure to allow unrestricted flow. All are for one-time use. Discs are made of resin-impregnated graphite for resistance to temperature and pressure fluctuations as well as corrosive liquids and gases. They include two neoprene gaskets for installation between flanges. They are also known as rupture discs.

Vacuum-rated discs have supports to resist rupture caused by vacuum. They withstand up to 29.92" Hg.

Operating ratio is 80%. The operating ratio is the ratio between the normal operating pressure and the burst pressure. Exceeding the operating ratio decreases the service life of the disc. For example, a disc with a burst pressure of 100 psi and an operating ratio of 80% should not be used in a system with an operating pressure greater than 80 psi.

Pressure-Regulating Valves

With Buna-N Diaphragm

With Neoprene Diaphragm and Gauge Port

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure: 250 psi (Buna-N Diaphragm); 400 psi (Neoprene Diaphragm)
- Temp. Range: 32° to 180° F

These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. They have a screw to adjust the outlet pressure within the range. Body is brass and seal is Buna-N. Connections are NPT female; inlet and outlet are on the side.

Valves with gauge port have a 1/4 NPT female gauge port on the side to attach a pressure gauge to monitor outlet pressure.

Valves with a Buna-N diaphragm have an internal strainer to trap debris. *Valves with a neoprene diaphragm* have higher flow rates than valves with a Buna-N diaphragm.

Heavy Duty Pressure-Regulating Valves

- Use with water and air
- Max. Inlet Pressure: 300 psi
- Temp. Range: 32° to 180° F

Thicker walls and a 304 stainless steel seal make these valves tougher than standard brass pressure-regulating valves. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range and an internal strainer to trap debris. Body is brass and diaphragm is EPR. Connections are NPT female; inlet and outlet are on the side.

Pressure-Regulating Valves

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Vibration-Damping Pressure-Regulating Valves

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure:
  200 psi (Buna-N Seal);
  250 psi (420 Stainless Steel Seal)
- Temp. Range:
  32° to 180°F (Buna-N Seal);
  32° to 300°F (420 Stainless Steel Seal)

A cast iron body absorbs vibration from pressure changes to reduce wear and noise in your pipeline. These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. Connections are NPT female; inlet and outlet are on the side.

Valves with a Buna-N seal have an internal strainer to trap debris. Diaphragm is Buna-N.

Valves with a 420 stainless steel seal have a fluoroelastomer diaphragm.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Extended-Life Pressure-Regulating Valves

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure: 400 psi
- Temp. Range: 32° to 180°F

For a longer service life than brass and cast iron valves, these have a durable bronze body. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range and an internal strainer to trap debris. Seal and diaphragm are Buna-N. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Corrosion-Resistant Pressure-Regulating Valves

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure: 720 psi
- Temp Range: 32° to 200°F

Often used in wet conditions and harsh environments, these valves have a 316 stainless steel body for excellent corrosion resistance. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. Seal and diaphragm are Buna-N. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/2	2-30, 10-50, 30-125, 50-150	4 1/2"	8099K11	$1,753.17

Pressure-Regulating Valves with Garden Hose Fittings

- Use with water
- Max. Inlet Pressure: 150 psi
- Temp. Range: 33° to 140°F

Use this valve to automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure in light duty water systems with garden hose thread (GHT) connections. It has a screw to adjust the outlet pressure within the range. Body is brass, seal is Buna-N coated nylon, and diaphragm is Buna-N. Valve comes with a pressure gauge for monitoring outlet pressure. Connections are GHT; inlet is female (side port) and outlet is male (side port).

Thread Size	Outlet Pressure Range, psi	End-to-End Lg.		
3/4"	10-60	3"	4000T31	$125.30

Clean Room Pressure-Regulating Valves

- Use with air, deionized water, nitrogen, and oxygen
- Max. Inlet Pressure: 150 psi
- Temp. Range: 41° to 140°F

To maintain contaminant-free standards in clean room environments, these valves are cleaned and bagged in a Class 100 clean room and have a 316 stainless steel body with a smooth finish to resist dust collection. They automatically reduce a high, variable inlet pressure to a lower, stable output pressure. Valves have a knob to adjust the outlet pressure within the range. They are no-bleed style, so they keep process media contained within the valve.

Seal is 316 stainless steel and diaphragm is fluoroelastomer. Valves can be panel mounted in a 1 1/4" dia. cutout. Connections are UNF female; inlet and outlet are on the side.

Thread Size	Outlet Pressure Range, psi	End-to-End Lg.		
10-32	1.4-28	1 3/16"	4390T111	$167.82
10-32	7-99	1 3/16"	4390T112	167.82

Compact Pressure-Regulating Valves

- Use with water
- Max. Inlet Pressure: 300 psi (NPT Connections); 150 psi (GHT Connections)
- Temp. Range: 33° to 140° F

A low-profile body fits in systems where space is at a premium. Often used to regulate the water supply to small tanks, these valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Use the screw to adjust the outlet pressure within the range. Body is brass; seal and diaphragm are Buna-N. Inlet and outlet are on the side.

Valves without a pressure gauge have a 1/8 NPT female gauge port on the side. **Valves with a pressure gauge** come with a gauge for monitoring outlet pressure. *Valves with NPT connections* have a female inlet and outlet. *Valves with GHT connections* have a female inlet and male outlet.

With NPT Connections and Pressure Gauge

With GHT Connections

Pipe/Thread Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.	Without Pressure Gauge		With Pressure Gauge	
With NPT Connections

Corrosion-Resistant Compact Pressure-Regulating Valves

- Use with water and deionized water
- Max. Inlet Pressure: 400 psi
- Temp. Range: 33° to 120° F

Often used on dispensers, humidifiers, and fountains, these valves have a 316 stainless steel body that can stand up to deionized water and corrosive conditions. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Use the screw to adjust the outlet pressure within the range. Valves have a low-profile body to fit in tight spots. They have a 1/4 NPT female gauge port on the side. Seal and diaphragm are Buna-N. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	1-25, 3-50, 10-125, 20-175, 100-300	3 3/4"	8119K44	$600.43

Low-Pressure-Regulating Valves

- Use with water
- Max. Inlet Pressure: 300 psi
- Temp. Range: 0° to 120° F

Designed for excellent performance at low pressures, these valves respond to even the slightest inlet pressure changes to maintain a lower, stable outlet pressure. Valves have a T-handle to adjust the outlet pressure within the range and an internal strainer to trap debris. Body is brass, seal is 303 stainless steel, and diaphragm is Buna-N coated nylon. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-8, 0-20, 0-50	4 1/4"	3878T41	$307.69

High-Pressure-Regulating Valves

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure: 3,000 psi
- Temp. Range: 32° to 300° F

Withstand more than six times the inlet pressure of standard pressure-regulating valves. These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. They have a screw to adjust the outlet pressure within the range. Body is 303 stainless steel for corrosion resistance in harsh environments. Seal is PTFE. Connections are NPT female; inlet is on the side and outlet is on the bottom.

Pipe Size	Choose an Outlet Pressure Range, psi	Port-to-Port Lg. (P)		
2	150-450; 250-1,200; 500-2,200	2 1/2"	4256T16	$2,473.85

Quick-Set Pressure-Regulating Valves

- Use with water
- Max. Inlet Pressure: 250 psi
- Temp. Range: 33° to 140° F

Change outlet pressure without using a gauge—turn the dial to adjust the outlet pressure in 10 psi increments. Valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Union fittings on both ends of these valves disassemble for easy valve installation and removal.

Valves have two 1/4 NPT female gauge ports on the side and an internal strainer to trap debris. Body is bronze for durability and a long service life. Seal is EPDM and diaphragm is Buna-N. CSA certified. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Outlet Pressure Range, psi	End-to-End Lg.		
1/2	25-90	4 7/8"	45805K66	$79.33

2	25-90	8 37/64"	45805K72	460.82

Cleaned and Bagged Pressure-Regulating Valves

- Use with argon, helium, neon, nitrogen, oxygen, and xenon
- Max. Inlet Pressure: 435 psi
- Temp. Range: -40° to 165° F

Often used for oxygen service and other high-purity applications, these valves are cleaned and bagged to meet CGA G-4.1 standards to prevent contamination. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Use the T-handle to adjust the outlet pressure within the range. Valves are no-bleed style, so they keep process gases contained in the valve.

Valves have two 1/4 NPT female gauge ports on the side. Body is brass, seal is fluoroelastomer, and diaphragm is Buna-N. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

1	5-55, 40-110, 100-200	3 5/16"	49305K23	225.67

Pressure-Regulating Valves

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

High-Temperature Pressure-Regulating Valves

- Use with water, oil, air, and inert gas
- Max. Inlet Pressure: 300 psi
- Temp. Range: 32° to 550°F

Rated for more than double the temperature of standard pressure-regulating valves, these can withstand temperatures up to 550°F. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. Body is steel, seal is 303 stainless steel, and diaphragm is 316 stainless steel. Valves meet ANSI Class IV for tight shut-off (max. leakage rate of 0.01%). Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Plastic Panel-Mount Pressure-Regulating Valves

- Max. Inlet Pressure: 150 psi
- Temp. Range: 40° to 150°F

For easy panel mounting in your system, these valves have threads below the adjustment knob and come with a panel-mount nut to install in a 9/16" dia. cutout. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Body is polysulfone, which is lightweight and corrosion resistant. Seal is polyurethane and diaphragm is Buna-N/EPDM. Color is black. Connections are female; inlet and outlet are on the side.

Pipe/Thread Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
For Water

Miniature Panel-Mount Pressure-Regulating Valves

- Use with water, air, and inert gas
- Max. Inlet Pressure: 80 psi
- Temp. Range: 32° to 180°F

Our smallest pressure-regulating valve automatically reduces a high, variable inlet pressure to a lower, stable outlet pressure in tight spaces where other valves can't fit. Adjust the outlet pressure within the range. Valve has threads below the adjustment screw and comes with a panel-mount nut to install in a 1/2" dia. cutout. Body is nickel-plated brass for good corrosion resistance. Seal is Buna-N. Connections are UNF female; inlet is on the bottom and outlet is on the side.

Thread Size	Outlet Pressure Range, psi	Port-to-Port Lg.		
10-32	5-80	3/8"	3834T51	$15.53

Panel-Mount High-Pressure-Regulating Valves

- Use with air, argon, helium, and nitrogen
- Max. Inlet Pressure: 3,500 psi
- Temp. Range: -40° to 165°F

Withstand inlet pressures up to 3,500 psi. These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Valves have threads below the adjustment knob and come with a panel-mount nut to install in 1 3/8" dia. cutout. All have a 1/4 NPT female gauge port on the side and an internal strainer to trap debris. Body is brass, seal is PTFE, and diaphragm is 316 stainless steel. Valves meet ANSI/ASME B31.3. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-25, 0-50, 0-100, 0-250, 0-500	2"	3811T11	$291.14

Panel-Mount Ultra-High-Pressure-Regulating Valves

- Use with air, argon, helium, and nitrogen
- Max. Inlet Pressure: 6,000 psi
- Temp. Range: -40° to 165°F

These valves are rated for inlet pressures up to 6,000 psi. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Threads below the adjustment knob and an included mounting bracket let you install these valves in instrument panels with a 2 1/4" dia. cutout. Valves are no-bleed style, so they keep process gases contained in the valve.

Valves have two 1/4 NPT female gauge ports on the side and an internal strainer to trap debris. Body is brass and seal is polyimide. Valves meet ANSI/ASME B31.3. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-500; 0-800; 10-1,500; 15-2,500; 25-4,000; 50-6,000	2 1/8"	3950T21	$790.62

Corrosion-Resistant Panel-Mount Ultra-High-Pressure-Regulating Valves

- Use with water, air, and inert gas
- Max. Inlet Pressure: 6,000 psi
- Temp. Range: 32° to 165°F

To regulate inlet pressures up to 6,000 psi in wet conditions and harsh environments, these valves have a 316 stainless steel body for exceptional corrosion resistance. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Valves have threads below the adjustment knob and come with a panel-mount nut to install in a 1.37" dia. cutout. They are no-bleed style, so they keep the process gases contained in the valve.

Valves have two 1/4 NPT female gauge ports on the side. Seal is PTFE. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-1,500; 0-2,500	2"	4289T21	$612.54

Miniature Panel-Mount Ultra-High-Pressure-Regulating Valves

- Use with water, air, and argon
- Max. Inlet Pressure: 6,000 psi
- Temp. Range: -15° to 165° F

For extremely high-pressure applications in tight spots, these valves handle the same inlet pressures as other ultra-high-pressure-regulating valves within a smaller footprint. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Valves have threads below the adjustment knob to panel mount in a 1 3/8" dia. cutout. They are no-bleed style, so they keep the process gas contained within the valve.

Valves have two 1/4 NPT female gauge ports on the side. Body is nickel-plated aluminum for good corrosion resistance. Seal is polyimide. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-80; 0-140; 0-220	1 5/8"	4428T23	$335.22
1/4	0-700; 0-1,200; 0-1,800	1 5/8"	4428T24	434.89

Cleaned and Bagged Panel-Mount Pressure-Regulating Valves

- Use with air, argon, helium, and nitrogen
- Max. Inlet Pressure: 3,500 psi (1/4 Pipe Size); 300 psi (1/2 Pipe Size)
- Temp. Range: -40° to 160° F

Commonly used for oxygen service and other high-purity applications, these valves come cleaned and bagged to prevent contamination. All automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Valves have threads below the adjustment knob and come with a panel-mount nut. They can also be surface mounted using the two 10-32 mounting holes. Valves are no-bleed style, so they keep process gases contained in the valve.

Valves have two 1/4 NPT female gauge ports on the side. Body is 316 stainless steel for exceptional corrosion resistance. Seal is PCTFE. Connections are NPT female; inlet and outlet are on the side.

Valves with a 1/4 pipe size can be panel mounted using a 1.42" dia. cutout. Diaphragm is 316 stainless steel. *Valves with a 1/2 pipe size* can be panel mounted using a 1.56" dia. cutout. Diaphragm is nickel alloy.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	1-30, 2-100, 5-200, 5-300	2"	8166T21	$309.60
1/2	1-30, 2-100, 5-150	2 1/2"	8166T22	509.88

Pressure-Regulating Valves for Steam

- Max. Inlet Pressure: 150 psi (PTFE Seal); 250 psi (420 Stainless Steel Seal)
- Temp. Range: -20° to 400° F

Automatically reduce a high, variable inlet pressure in your steam system to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. The cast iron body absorbs vibration from pressure changes to reduce wear and noise in your pipeline. Diaphragm is bronze. Connections are NPT female; inlet and outlet are on the side.

Valves with a PTFE seal have an internal strainer to trap debris.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Extended-Life Pressure-Regulating Valves for Steam

- Max. Inlet Pressure: 250 psi
- Temp. Range: -20° to 400° F

For a longer service life than cast iron valves, these have a durable bronze body. All automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range and an internal strainer to trap debris. Seal is PTFE and diaphragm is bronze. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Corrosion-Resistant Pressure-Regulating Valves for Steam

- Max. Inlet Pressure: 400 psi
- Temp. Range: -40° to 450° F

Regulate steam pressure in wet environments and harsh conditions with these valves that have a 316 stainless steel body for exceptional corrosion resistance. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. Seal is PTFE and diaphragm is 316 stainless steel. Connections are NPT female; inlet and outlet are on the side.

Pressure-Regulating Valves

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

High-Accuracy Pressure-Regulating Valves for Steam

- Max. Inlet Pressure: 250 psi
- Temp. Range: 40° to 450° F

Control steam line pressure with ±1 psi accuracy. These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. They have a screw to adjust the outlet pressure within the range. The cast iron body absorbs vibration from pressure changes to reduce wear and noise in your pipeline. Seal is 420 stainless steel and diaphragm is 301 stainless steel.

Valves meet ANSI Class IV for tight shut-off (max. leakage rate of 0.01%). Install 1/4 NPT male pipe (not included) between the control valve and your downstream steam line. Connections are NPT female; inlet and outlet are on the side.

Repair kits (sold separately) include replacement seals, diaphragm, spring, and spring assembly.

Pipe Size	Choose an Outlet Pressure Range, psi	Valves		Repair Kits

Pressure-Regulating Valves for Drinking Water

A

B

- Max. Inlet Pressure: 400 psi
- Temp. Range: 33° to 140° F

These valves meet NSF/ANSI Standard 61 for use in drinking water systems. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range and an internal strainer to trap debris. All have a 1/4 NPT female gauge port on the bottom.

Body is bronze for durability and a long service life. Seal and diaphragm are Buna-N. Valves are ASSE 1003 listed, IAPMO listed, and CSA certified. Connections are NPT female; inlet and outlet are on the side.

Style B have a union fitting that disassembles for easy installation and removal.

Pipe Size	Outlet Pressure Range, psi	End-to-End Lg.		
(A) Valves				
1/2	15-75	3 1/2"	4946K11	$55.94

Pressure-Regulating Valves for Chemicals

- Max. Inlet Pressure: 125 psi
- Temp. Range:
  40° to 140° F (PVC);
  35° to 180° F (Polypropylene)

A plastic body and a fluoroelastomer seal and diaphragm stand up to harsh chemicals. These valves automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. They have a screw to adjust the outlet pressure within the range. Color is dark gray. Connections are NPT female; inlet and outlet are on the side.

Polypropylene valves withstand higher temperatures than PVC valves.

Pipe Size	Outlet Pressure Range, psi	End-to-End Lg.	PVC		Polypropylene	
1/2	10-80	3"	45965K31	$330.40	45965K41	$338.80

1	10-80	3 15/16"	45965K33	451.08	45965K43	483.84
1 1/2	10-80	4 9/16"	45965K34	793.80		
2	10-80	4 11/16"	45965K35	1,015.41		

Pressure-Regulating Valves for Food and Beverage

A B C D

- Max. Inlet Pressure:
  300 psi (Styles A & C);
  150 psi (Style B);
  250 psi (Style D)
- Temp. Range:
  35° to 125° F

Made of FDA-listed materials, these valves are often used to regulate pressure in food and beverage lines. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Adjust the outlet pressure within the range. Color is black. Inlet and outlet are on the side.

Styles A & C have an adjustment screw and two 1/4 NPT female gauge ports on the side. Body is Noryl PPO; seal and diaphragm are Buna-N. *Style A* comes with two plugs to close the unused ports. *Style C* has push-to-connect fittings to connect to plastic or soft metal tubing for a low-pressure seal.

Styles B & D have an adjustment knob. Body is acetal and seal is EPDM. *Style B* has a 1/8 NPT female gauge port on the side. Diaphragm is Buna-N/nylon. *Style D* has compression fittings that bite down on hard metal and plastic tubing for a tighter seal than push-to-connect fittings. Diaphragm is Buna-N/stainless steel.

Connection Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
With NPT Female Connections				
A 1/4 NPT	0-25, 0-60, 0-125	1 9/16"	8113K11	$47.73

Pressure-Regulating Valves for Cryogenic Liquids

- Use with liquid argon, liquid carbon dioxide, liquid nitrogen, and liquid oxygen
- Max. Inlet Pressure:
  600 psi (Brass);
  400 psi (Bronze)
- Temp. Range: -320° to 150° F

These valves can withstand the extreme cold of liquid argon, liquid carbon dioxide, liquid nitrogen, and liquid oxygen. All are cleaned and bagged for oxygen service and other high-purity applications. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range. Body is brass, seal is PTFE, and diaphragm is bronze. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	15-65, 75-175, 100-250	1 3/4"	47435K31	$178.83
3/8	15-65, 75-175, 100-250	1 3/4"	47435K32	178.83

Extended-Life Pressure-Regulating Valves for Cryogenic Liquids

- Use with liquid argon, liquid carbon dioxide, liquid nitrogen, and liquid oxygen
- Max. Inlet Pressure: 600 psi (Brass); 400 psi (Bronze)
- Temp. Range: -320° to 150° F

For a longer service life than standard valves for cryogenic liquids, these have a durable bronze body. Valves are designed to withstand the extreme cold of liquid argon, liquid carbon dioxide, liquid nitrogen, and liquid oxygen. All are cleaned and bagged for oxygen service and other high-purity applications. They automatically reduce a high, variable inlet pressure to a lower, stable outlet pressure. Valves have a screw to adjust the outlet pressure within the range and an internal strainer to trap debris. Seal is PTFE and diaphragm is bronze. Connections are NPT female; inlet and outlet are on the side.

Back-Pressure-Regulating Valves for Water and Oil

- Max. Inlet Pressure: 400 psi
- Temp Range: -40° to 200° F

Commonly used as bypass lines after centrifugal, reciprocating, and rotary pumps, these valves obstruct flow to maintain sufficient operating pressure in your system. If the system pressure exceeds the set pressure, they exhaust through the threaded relief port. Valves have a screw to adjust the set pressure within the range. The cast iron body absorbs vibration from pressure changes to reduce wear and noise in your pipeline. Seal is brass and diaphragm is nickel alloy. Connections are NPT female. Inlet and outlet are on the side; relief port is on the bottom.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.

Extended-Life Back-Pressure-Regulating Valves for Water and Oil

- Max. Inlet Pressure: 600 psi
- Temp Range: -40° to 450° F

For a longer service than cast iron valves, these have a durable bronze body and a 303 stainless steel seal. Commonly installed as bypass lines after centrifugal, reciprocating, and rotary pumps, they obstruct flow to maintain sufficient operating pressure in your system. If the system pressure exceeds the set pressure, they exhaust through the outlet. Valves have a screw to adjust the set pressure within the range. Connections are NPT female; inlet is on the bottom and outlet is on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	Port-to-Port Lg. (P)

Back-Pressure-Regulating Valves for Air and Inert Gas

- Max. Inlet Pressure: 250 psi
- Temp. Range: 0° to 150° F

Often used to protect equipment running on air compressors, these valves obstruct flow to maintain sufficient operating pressure in your system. If the system pressure exceeds the set pressure, they exhaust through the vented relief port. Valves have a knob to adjust the set pressure within the range and two 1/4 NPT female gauge ports. Body is aluminum and diaphragm is Buna-N. Inlet and outlet are NPT female. Inlet, outlet, gauge ports, and relief port are on the side.

Pipe Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
1/4	0-2, 0-10, 0-30, 0-60, 0-150	3"	4783K51	$134.74
3/8	0-2, 0-10, 0-30, 0-60, 0-150	3"	4783K53	134.74
1/2	0-2, 0-10, 0-30, 0-60, 0-150	3"	4783K55	149.49

Panel-Mount Back-Pressure-Regulating Valves for Air and Inert Gas

- Max. Inlet Pressure: 100 psi
- Temp. Range: 40° to 150° F

Threads below the adjustment knob and an included panel-mount nut allow you to add these valves to your instrument panel in a 9/16" dia. cutout. Often used in systems running on air compressors, they're installed after pressure-sensitive equipment to obstruct flow and maintain a consistent operating pressure. If the system pressure exceeds the set pressure, they exhaust through the outlet. Adjust the set pressure within the range. Body is polysulfone, seal is silicone, and diaphragm is Buna-N. Connections are female; inlet and outlet are on the side.

Pipe/Thread Size	Choose an Outlet Pressure Range, psi	End-to-End Lg.		
10-32 UNF	0.5-3.5, 0.5-10, 0.5-30, 0.5-60, 0.5-90	1 1/8"	99045K12	$30.40

Vacuum- & Temperature-Regulating Valves

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	1/2	3/4	1	1 1/4	1 1/2	2

Vacuum-Regulating Valves

- Use with air, carbon dioxide, and nitrogen
- Temp. Range: -20° to 180° F

Throttle a high vacuum source to maintain a lower vacuum level in your system. Valves have a screw to adjust the outlet vacuum level within the range and a 1/8 NPT female gauge port on the side. Body is brass, seal is Buna-N, and diaphragm is EPR. Connections are NPT female; inlet is on the bottom and outlet is on the side.

Pipe Size	Outlet Vacuum Range	Port-to-Port Lg. (P)		
1/4	0-15" Hg	1 1/8"	**5021K14**	$251.55
1/4	10"-30" Hg	1 1/8"	**5021K24**	251.55

Extended-Life Vacuum-Regulating Valves

- Use with air and inert gas
- Temp. Range: -20° to 180° F

For a longer service life than brass vacuum-regulating valves, these are made of bronze for strength and durability. They throttle a high vacuum source to maintain a lower vacuum level in your system. All have a screw to adjust the outlet vacuum level within the range. Seal is chrome-plated bronze and diaphragm is neoprene. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Outlet Vacuum Range	End-to-End Lg.		
1/2	2"-30" Hg	2 7/8"	**4710K11**	$426.74
3/4	2"-30" Hg	2 7/8"	**4710K13**	426.74
1	2"-30" Hg	4 1/2"	**4710K15**	1,028.71
1 1/4	2"-30" Hg	4 1/2"	**4710K17**	1,028.71
1 1/2	8"-30" Hg	5 3/4"	**4710K18**	1,342.94
2	8"-30" Hg	5 3/4"	**4710K19**	1,342.94

Plastic Panel-Mount Vacuum-Regulating Valves

- Use with air and inert gas
- Temp. Range: 40° to 150° F

A lighter and more corrosion-resistant alternative to metal valves. All valves throttle a high vacuum source to maintain a lower vacuum level in your system. Adjust the outlet vacuum level within the range. Threads below the adjustment knob and an included panel-mount nut let you add these valves to your instrument panel in a 9/16" dia. cutout. All are constant-bleed style, so they continually release small amounts of process gas to improve accuracy and repeatability.

Body is polysulfone, seal is polyurethane, and diaphragm is Buna-N/EPDM. Connections are female; inlet and outlet are on the side.

Pipe/Thread Size	Outlet Vacuum Range	End-to-End Lg.		
10-32 UNF	0-30" Hg	1 1/8"	**41585K41**	$50.55
1/8 NPT	0-30" Hg	1 9/16"	**41585K43**	56.70

Panel-Mount Vacuum-Regulating Valves

Valve with Gauge

- Use with air and nitrogen
- Temp. Range: -40° to 150° F

Regulate vacuum levels from your instrument panel with these valves that have threads below the adjustment handle and a panel-mount nut to install in a 1" dia. cutout. They throttle a high vacuum source to maintain a lower vacuum level in your system. Valves have a knob to adjust the outlet vacuum level within the range. All are constant-bleed style, so they continually release small amounts of process gas to improve accuracy and repeatability. Body is nickel-plated brass for good corrosion resistance. Seal is Buna-N and diaphragm is bronze. Connections are NPT female; inlet is on the side and outlet is on the bottom.

Valve without gauge has a 1/8 NPT female gauge port on top.

Valve with gauge comes with a vacuum gauge for monitoring your vacuum level.

Pipe Size	Outlet Vacuum Range	Port-to-Port Lg.		
Valve without Gauge				
1/8	0-20" Hg	1 1/16"	**4172K13**	$263.83
Valve with Gauge				
1/8	0-20" Hg	1 1/16"	**4172K12**	329.79

High-Accuracy Panel-Mount Vacuum-Regulating Valves

- Use with air, argon, and nitrogen
- Temp. Range: -40° to 165° F

For precise control over your vacuum level, these valves have ±0.1% accuracy. They throttle a high vacuum source to maintain a lower vacuum level in your system. Adjust the outlet vacuum level within the range. Valves have threads below the adjustment knob and come with a panel-mount nut to install in a 1 3/8" dia. cutout. They are constant-bleed style, so they continually release small amounts of process gas to improve accuracy and repeatability.

Valves have a 1/4 NPT female gauge port on the side. Body is brass; seal and diaphragm are Buna-N. Connections are NPT female; inlet and outlet are on the side.

Pipe Size	Outlet Vacuum Range	End-to-End Lg.		
1/8	0-28" Hg	2 1/8"	**4640T71**	$660.73
1/4	0-28" Hg	2 1/8"	**4640T72**	660.73

Temperature-Regulating Valves

- Use with water
- Max. Inlet Pressure: 150 psi
- Max. Inlet Temp.: 212° F (PTFE-Coated Brass); 210° F (Copper Silicon Alloy)

These valves blend hot and cold water to automatically maintain a set outlet temperature. They have a knob to adjust the outlet temperature within the range. Seal is EPDM. Valves meet ASSE 1017, are IAPMO listed, and CSA certified. Connections are NPT female; inlet is on the side and outlet is on the bottom.

Copper silicon alloy valves have a safety shut-off to restrict flow down to a drip if your cold water supply shuts off. An internal check valve with strainer prevents backflow and traps debris.

Pipe Size	Max. Flow Rate, gpm	Choose an Outlet Temp. Range	End-to-End Lg.

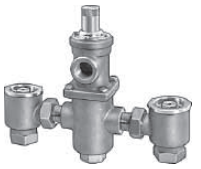
High-Flow Temperature-Regulating Valves

- Use with water
- Max. Inlet Pressure: 125 psi
- Max. Inlet Temp.: 200° F

Often used with large water heaters and other applications with flow rates greater than 25 gpm, these valves blend hot and cold water to automatically maintain a set outlet temperature. They have a screw to adjust the outlet temperature within the range and an internal check valve with strainer to prevent backflow and trap debris. Body is bronze for durability and a long service life. Seal is EPDM. Valves meet ASSE 1017 and are CSA certified. Connections are NPT female; inlets and outlet are on the side.



Pipe Size Inlet	Outlet	Flow Rate Range, gpm	Choose an Outlet Temp. Range	End-to-End Lg.		
3/4	3/4	3-42	60° to 90° F; 90° to 160° F	11 5/8"	7827K61	$764.88
3/4	1	4-64	60° to 90° F; 90° to 160° F	11 5/8"	7827K63	872.56
1 1/4	1 1/4	5-110	60° to 90° F; 90° to 160° F	15 1/4"	7827K64	1,045.89
1 1/4	1 1/2	7-144	60° to 90° F; 90° to 160° F	15 1/4"	7827K66	1,321.23

Temperature-Regulating Valves with Solder-Connect Fittings

- Use with water
- Max. Inlet Pressure: 150 psi
- Max. Inlet Temp.: 212° F

Solder these valves to copper tubing. They blend hot and cold water to automatically maintain a set outlet temperature. All have a knob to adjust the outlet temperature within the range. Body is PTFE-coated brass and seal is EPDM. Valves meet ASSE 1017, are IAPMO listed, and CSA certified. Inlets are on the side and outlet is on the bottom.

For Tube Size★	For Tube OD	Max. Flow Rate, gpm	Choose an Outlet Temp. Range	End-to-End Lg.		
1/2	5/8"	8	70° to 120° F; 70° to 145° F	4 7/16"	9156K64	$128.81
3/4	7/8"	12	70° to 120° F; 70° to 145° F	4 15/16"	9156K65	123.87

★Tube size is an accepted industry designation, not an actual size.

Temperature-Regulating Valves with Compression Fittings

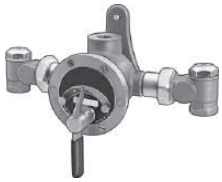
- Use with water
- Max. Inlet Pressure: 70 psi
- Max. Inlet Temp.: 110° F

Designed for use on tubing lines with a constant inlet temperature and pressure, this valve has compression fittings that bite down on hard metal and plastic tubing for a secure seal. Manually turn the lever to blend hot and cold water to maintain the set outlet temperature. Tighten the adjustment screw on the lever to prevent unintentional temperature changes. Valve has an internal check valve to prevent backflow. Body is chrome-plated brass for good corrosion resistance and a decorative finish. CSA certified. Inlets are on the side and outlet is on top.

For Tube OD	Max. Flow Rate, gpm	Outlet Temp. Range	End-to-End Lg.		
3/8"	4	40° to 105° F	2 13/16"	9158K12	$50.06

Temperature-Regulating Valves for Water and Steam

- Use with water and steam
- Max. Inlet Pressure: 80 psi
- Max. Inlet Temp.: 240° F



Mix steam and cold water to reach your set outlet temperature more quickly than valves that only mix hot and cold water. Valve has a handle to adjust the outlet temperature within the range and internal check valves with strainers to prevent backflow and trap debris. Body is bronze for durability and a long service life. Seal is Buna-N/EPDM. Connections are NPT female; inlets are on the bottom and outlet is on top.

Pipe Size	Flow Rate Range, gpm	Outlet Temp. Range	End-to-End Lg.		
3/4	13-25	60° to 180° F	14 1/2"	4714K2	$784.62

Temperature-Regulating Valve Systems for Water and Steam

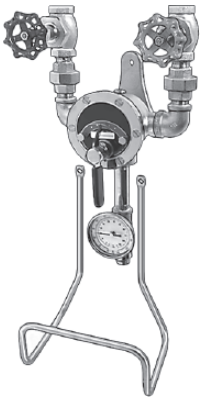
- Use with water and steam
- Max. Inlet Pressure: 125 psi
- Max. Inlet Temp.: 240° F

Commonly used in washdown applications, these systems include a temperature-regulating valve with an internal check valve and vacuum breaker to prevent backflow, two ball valves for manual control of the water supply, a dial thermometer that displays the outlet temperature, and a 302 stainless steel hose rack for storage. Inlet is 3/4 NPT female and outlet is 3/4" garden hose thread (GHT).

Manually activated valves give you independent control of hot and cold water supply. *Chrome-plated bronze* valve is more corrosion resistant than the bronze valve. *316 stainless steel* valve has the best corrosion resistance. *Valve with safety shut-off* restricts flow down to a drip if your cold water supply shuts off.

Temperature-driven valve maintains your set temperature by adjusting flow in response to the water supply temperature.

Optional 50-ft. hose with fittings has a 3/4" GHT female inlet. Both are cream-colored EPDM rubber and have a trigger spray nozzle. Max. temperature is 180° F @ 200 psi. The 303 stainless steel nozzle is more corrosion resistant than the bronze nozzle.



Temperature-Driven Valve

With 303 Stainless Steel Nozzle	3062K77	886.56

Temperature-Regulating Valves

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3

Temperature-Regulating Valves with Compression Fittings for Drinking Water

- Max. Inlet Pressure: 150 psi
- Max. Inlet Temp.: 180° F

Often used in tubing systems with low-flow drinking water faucets and fixtures, this valve meets NSF/ANSI Standard 61. It blends hot and cold water to automatically maintain a set outlet temperature. Adjust the outlet temperature within the range and tighten the adjustment screw to prevent unintentional changes. Valve has compression fittings that bite down on hard metal and plastic tubing for a secure seal. Body is brass and seal is Buna-N. Valve meets ASSE 1070. Inlet is on the bottom and outlet is on top.

For Tube OD	Max. Flow Rate, gpm	Outlet Temp. Range	End-to-End Lg.		
3/8″	2.25	80° to 105° F	3 3/8″	5847T85	$202.71

Compact Remote-Reading Temperature-Regulating Valves

- Use with water, oil, and steam

Nearly half the height of our other remote-reading temperature-regulating valves, these are often used in low-clearance areas. They have an external sensor that opens and closes the valve based on temperature changes in your tank or pipeline. Use the nut to adjust the set temperature within the range. Body is brass. Sensor is 6 3/8″ Lg. × 5/8″ Dia. and has a 6-ft. long cable. Connections are NPT female.

304 stainless steel sensors and cables are more corrosion resistant than brass and copper sensors and cables.

Valves that are closed until temperature rises are also known as reverse-acting valves. They're commonly used to cool oil or water from heat exchangers, chillers, and compressors. As the temperature in your tank or pipeline rises to the set temperature, the valve opens to let in cold water or oil. When the tank or pipeline temperature cools to the set temperature, the valve closes again.

Valves that are open until temperature rises are also known as direct-acting valves. They're often used with boilers and steam tables in washing and sterilizing applications. As the temperature in your tank or pipeline rises to the set temperature, the valve closes. As the tank or pipeline temperature falls below the set temperature, the valve opens again to let in hot water or steam.

Optional thermowells (sold separately) protect the sensor from pressure, shock, and corrosion in tanks and pipelines. They also isolate the contents of your process so the sensor can be removed without stopping flow or draining the system. *304 stainless steel thermowell* is more corrosion resistant than the brass thermowell.

Valves

To Order: Please specify temperature range from the chart.

Remote-Reading Temperature-Regulating Valves

With Dial Thermometer

- Use with water, oil, and steam

These valves have an external sensor that opens and closes the valve based on temperature changes in your tank or pipeline. Use the nut to adjust the set temperature within the range. Body is bronze for durability and a long service life. Sensor is copper and has an 8-ft. long copper cable. Connections are NPT female.

Valves with a dial thermometer display the sensor temperature. The dial can be rotated for easy viewing. Dial is 3″ dia.

Valves that are closed until temperature rises are also known as reverse-acting valves. They're commonly used to cool oil or water from heat exchangers, chillers, and compressors. As the temperature in your tank or pipeline rises to the set temperature, the valve opens to let in cold water or oil. When the tank or pipeline temperature cools to the set temperature, the valve closes again.

Valves that are open until temperature rises are also known as direct-acting valves. They're often used with boilers and steam tables in washing and sterilizing applications. As the temperature in your tank or pipeline rises to the set temperature, the valve closes. As the tank or pipeline temperature falls below the set temperature, the valve opens again to let in hot water or steam.

Optional thermowells (sold separately) protect the sensor from pressure, shock, and corrosion in tanks and pipelines. They also isolate the contents of your process so the sensor can be removed without stopping flow or draining the system. *316 stainless steel* thermowells are more corrosion resistant than brass thermowells.

Sump Pump Valves with Hose Clamps

- Use with water
- Max. Pressure: 25 psi @ 70° F
- Temp. Range: 33° to 130° F

Prevent dirty water from flowing back to your pump. Valves have flexible couplers with hose clamps to slip over ABS, PVC, or steel pipe or copper tubing for easy installation. Body is ABS and seal is EPDM rubber and stainless steel. At least 2 psi is required to open valves. Install for horizontal or upward flow.

For Pipe Size	Lg.	Color		
1¼ and 1½	4 13/16"	Black	7744K11	$13.20
2	6"	Green	7744K12	26.86

Brass Float Valves

With Copper Float

With Bobbing Polypropylene Float

- Use with water
- Temp. Range: 50° to 175° F

Control water levels in processing tanks and cooling towers. Valve bodies are elbow style. Body and float rod are brass; seal is Buna-N. Mount in an open tank.

Use valves **with a bobbing float** in tanks where the float may get jostled. The float moves independently of the rod, so valve operation is not disrupted.

Valves with a **discharge outlet** release contents into your tank; the outlet is unthreaded.

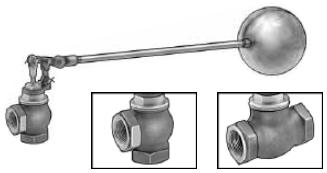
Bronze Float Valves



Elbow

Straight

- Use with water and hydraulic fluid
- Temp. Range:
  -50° to 180° F (Neoprene seal);
  -50° to 350° F (PTFE seal)

With a durable bronze body, these float valves can be used with water and hydraulic fluid. Use them to control liquid levels in processing tanks and cooling towers. They have a 360° rotating joint that allows you to alter the angle between the valve body and rod to fit in your tank. Float is copper and float rod is brass. Mount in an open tank. Connections are NPT female.

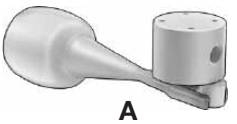
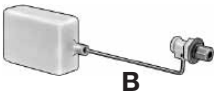
Polypropylene Float Valves



A



B

- Use with water
- Temp. Range: 35° to 175° F

Able to withstand higher temperatures than PVC float valves, use these valves to control water levels in processing tanks and cooling towers. Valve bodies are straight style. Body is polypropylene. Mount in an open tank.

Style A valves have a polypropylene float and float rod; seal is fluoroelastomer. Color is white.

Style B valves are for small-scale applications using tubing. Float is polyethylene, float rod is brass, and seal is Buna-N. The discharge outlet releases contents into your tank; outlet is unthreaded.

(A) NPT Female Inlet x NPT Female Outlet

Compact Plastic Float Valves

- Use with water
- Temp. Range: 35° to 160° F

Smaller than other float valves, these are sized for containers with limited space. They also minimize noisy water hammer. Use them to control water levels in processing tanks and cooling towers. Valve bodies are elbow style. Body is nylon, float is polyethylene, float rod is brass, diaphragm is polyurethane, and seal is neoprene. Mount in an open tank. Connections are NPT female.

Valve with pipe size 1 includes adapters to reduce to 3/8, 1/2, and 3/4 pipe size.

Pipe Size	Flow Rate @ 50 psi	Max. psi	Float Lg.	Float Wd.	Float Rod Lg.

Extra-Compact Plastic Float Valves

- Use with water
- Temp. Range: 35° to 150° F

Control the water level in spaces where a rod and lever won't fit; these float valves have an internal float and connect to your pipe. When the water level reaches the bottom of the valve, the float rises to stop the flow. Valve bodies are straight style. Body is nylon, float is ABS plastic, and seal is silicone. Mount in an open tank. Connections are NPT female.

Pipe Size	Flow Rate @ 50 psi	Max. psi	Overall Dia.	Overall Ht.		
1/2	22 gpm	65	2 3/4"	5"	46585K42	$37.51
1	70 gpm	100	3 3/4"	5"	46585K44	37.51

Float Valves for Chemicals

- Use with chemicals, acetone, alcohol, and hydraulic fluid
- Temp. Range: 35° to 350° F

Made of stainless steel, these float valves have excellent corrosion resistance even when exposed to chemicals. Body and float rod are 316 stainless steel, float is 304 stainless steel, and seal is PTFE. Connections are NPT female.

Valves for open tanks are for use only in an open tank.

Valves for closed tanks are designed to withstand the pressure in a closed tank.

Float Valves for Food and Beverage

- Temp. Range: 35° to 450° F (Fluoroelastomer seal); 35° to 550° F (PTFE seal)

These float valves meet NSF/ANSI Standard 169 for food-equipment components. They can withstand the corrosive solutions and high temperatures found in harsh cleaning procedures required for food-processing applications. Valve bodies are elbow style. Body, float, and float rod are 316 stainless steel. Mount in an open tank. Connections are NPT female.

Compact Float Valves with Plastic Reservoir for Food and Beverage

- Temp. Range: 35° to 175° F

Commonly used in ice-making machines, these valves have floats that rest inside a clear polycarbonate reservoir. They meet NSF/ANSI Standard 169 for food-equipment components. Reservoir is 5″ Lg. × 2 1/2″ Dp. × 4 1/2″ Ht. and has a removable cover. Float is polypropylene, float rod is 316 stainless steel, and seal is Buna-N. Valves have two drain holes on the bottom for connecting to 1/2″ ID soft tubing. Inlet is a compression fitting. Outlet is for discharge; it is unthreaded and releases contents into your tank.

Valve with side inlet is straight style. Body is acetal.

Valve with top inlet is elbow style. Body is brass.

For Tube OD	Flow Rate @ 55 psi	Max. psi	With Side Inlet: Float Rod Lg.			With Top Inlet: Float Rod Lg.

Float Valves for Draining Condensate

- Use with inert gas
- Temp. Range: 35° to 450° F

Automatically remove condensate from compressed air or inert gas lines—these float valves have a float-operated drain control. Install them as a condensate trap after the separator in your system. All are straight style. Float is 304 stainless steel and housing is cast iron. Valves meet ASTM Class 30. Connections are NPT female; inlet is on top and outlet is on the bottom.

Valves with a 420 stainless steel body have a top vent and a 1/4 NPT female drain with plug. Seal is carbon steel.

Valve with a 303 stainless steel body has a 3/4 NPT female drain with plug. Seal is Buna-N.

Floats

For information about pipe size, see pages 2-3.

Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Threaded Floats

Round Polypropylene

Oblong Polypropylene

Cylindrical

Rectangular

Round Stainless Steel, Copper, and Steel

Oblong Stainless Steel, Copper, and Steel

Connect these floats to threaded float rods. Use them to replace an existing float or combine with rods and float valve bodies to build a float valve. Connections are female.

Polypropylene floats are lightweight and have good corrosion resistance. Use them in open tanks. Temperature range is 35° to 175° F. *Round* floats are UV resistant. Color is black. *Oblong, cylindrical,* and *rectangular* floats are off-white. *Rectangular float with slot* is self-tapping when used with a threaded rod.

Stainless steel floats have excellent corrosion resistance. Use in an open or closed tank. Temperature range is -30° to 225° F.

Copper floats are for use in open tanks. Temperature range is 50° to 180° F.

Steel floats can be used in open or closed tanks. Temperature range is 35° to 210° F.

Through-Hole Floats

The through-hole connection allows these floats to slide up and down a vertical float rod. Use clamps to set them in a fixed position. Floats are for use in open tanks.

Copper floats have a temperature range of 50° to 180° F.

Stainless steel floats are more corrosion resistant than copper floats. Temperature range is -30° to 225° F.

Floats without Connections

These floats are untethered by a float rod so they can float freely in your open or closed tank. Use with water, oil, and hydraulic fluid. Temperature range is -30° to 225° F.

316 stainless steel floats are more corrosion resistant than 304 stainless steel floats.

Dia.	Max. psi	Gauge	304 Stainless Steel		316 Stainless Steel

Floats for Chemicals

Made of polyethylene, these floats can be used with chemicals, salts, and caustic fluids. Use in an open tank. Temperature range is 35° to 140° F. Connections are female.

Round floats are UV resistant. Color is black.

Rectangular float is off-white.

Round

Float Valve Bodies

- Temp. Range:
  35° to 180° F (Buna-N seal);
  35° to 450° F (Fluoroelastomer seal);
  35° to 550° F (PTFE seal)

Combine these float valve bodies with floats and rods to create float valves that meet exact specifications.

316 stainless steel float valve bodies have excellent corrosion resistance even when exposed to chemicals. *Float valve bodies with a PTFE seal* withstand higher temperatures than float valve bodies with a fluoroelastomer seal.

Float valve bodies with a **discharge outlet** release contents into your tank; the outlet is unthreaded.

About Selecting a Mixer

Liquid Thickness and Mixing Speed

Liquid thickness and tank size determine the required mixing speed. Also known as viscosity, liquid thickness is measured in centipoise (cp).

- *Mixers for thin liquids* operate at high speeds for rapid tank turnover. They are also known as direct-drive mixers.
- *Mixers for thick liquids* turn the propeller at low speeds. They're commonly called gear-drive mixers.

Horsepower Recommendations

The motor must be strong enough to mix your liquid. The chart shows horsepower recommendations for ½ to 1 tank turnovers per minute.

- If you need more rapid mixing or are unsure of your viscosity, choose a mixer with more horsepower than the chart recommendation to prevent overloading.
- When mixing the contents of containers with a capacity less than 25 gallons, use a mixer with ¼ horsepower or lower.

Mixer Horsepower Recommendations

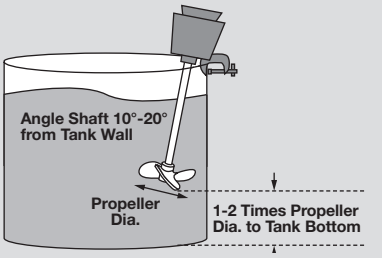
Viscosity, cp	Liquid Example	Mixer Horsepower — Tank Size, gal. 25	50	100	500	1,000	2,000	3,000
1	Water	¼	¼	¼	½	1	1½	2
100	Olive Oil	¼	¼	⅓	1	2	⅓	¾
500	SAE 40 Oil	½	½	½	2	¾	1	1½
1,000	SAE 60 Oil	1	1	1½	¾	1	1½	2
3,000	Honey	⅓	⅓	½	1	1½	2	–
5,000	Molasses	½	½	¾	1½	2	–	–
15,000	Silicone	¾	¾	1	–	–	–	–

Use a mixer for thin liquids Use a mixer for thick liquids

Mixer Mounting and Shafts

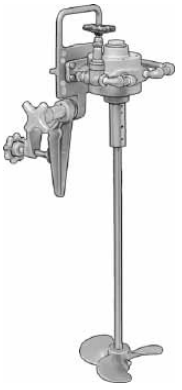
Improper mounting decreases efficiency and can damage the mixer. Mixers for drums, intermediate bulk containers, and pails are sized to fit in your container. For sizing and mounting mixers in larger tanks, follow these guidelines for optimal performance.

- When attaching the mixer to the side of the tank, angle the shaft 10° to 20° from the tank wall for the most efficient tank turnover.
- Clearance from the propeller to the bottom of the tank should be between one to two times the diameter of the propeller.
- For tanks that are deeper than they are wide, use a mixer with more than one propeller.



Air-Powered Mixers

Clamp-Mount Air-Powered Mixers for Tanks



Single Propeller

Blend liquids and prevent separation with these mixers that attach to the side of your tank. They have a needle valve to adjust mixing speed. Air inlet connection is NPT female.

Shaft and propellers are 316 stainless steel. They attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing. 2 hp mixers can also be set to move counterclockwise for aeration. Choose a dual-propeller mixer for thorough mixing in tanks that are deeper than they are wide and for faster mixing than single-propeller mixers.

Mixers for thin liquids are for liquids with a viscosity similar to water and light oils. **Mixers for thick liquids** are for liquids with a viscosity similar to honey and molasses.

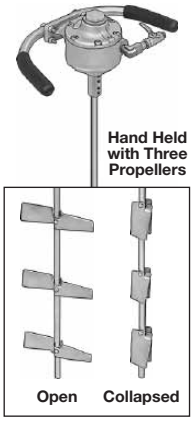
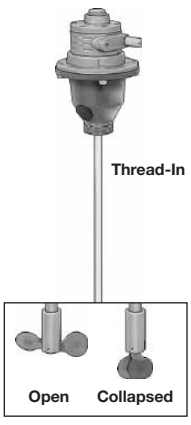
3	0-400	48″	1″	13″	89	½	_____	_____	3486K46	2,980.15

Air-Powered Mixers for Drums





Collapsible propellers let you insert these mixers through a 2 NPT opening in 55-gal. drums, so there's no need to remove the lid. They're commonly used with thin liquids such as water and light oils. Adjust mixing speed with the needle valve. Air inlet connection is NPT female.

Shaft and propellers are 304 stainless steel, unless noted. They attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing. Choose a mixer with multiple propellers for faster and more thorough mixing than single-propeller mixers.

Hand Held—Manually direct mixing in your drum.

Thread-In—Screw this mixer into a drum opening for a secure connection.

Thread-In with Clamp—For reduced vibration and noise, this mixer has a clamp in addition to the thread-in connection.

Rim-Clamp Mount—These mixers attach directly to the drum lip.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Propeller Qty.	Propeller Dia.	Air Consumption @ 80 psi, cfm	Air Inlet		
Hand Held									
1½	30-3,000	28″	⅜″	3	3″	60	¼	3476K71	$716.85

1½	30-3,000	36″	½″	4	6″	60	¼	35005K73	1,109.42

★ Shaft and propeller are 316 stainless steel.

Flange-Mount Air-Powered Mixers for Tanks

For permanent installation with minimal vibration, these mixers have a mounting flange that bolts onto closed tanks. They are often used with water, light oils, and other thin liquids. Adjust mixing speed with the needle valve. Mixers have six mounting holes. Air inlet connection is NPT female. Mixers have a 316 stainless steel shaft and propellers that attach with set screws.

Single Propeller—Mixer has a left-hand propeller that can move clockwise for efficient mixing or counterclockwise for aeration.

Dual Propeller—These mixers have one left-hand propeller and one right-hand propeller to move material in opposing directions for increased flow. Choose a dual-propeller mixer for thorough mixing in tanks that are deeper than they are wide and for faster mixing than single-propeller mixers.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Propeller Dia.	Air Consumption @ 80 psi, cfm	Air Inlet	Flange OD	Bolt Circle Dia.	Mounting Hole Dia.

Dual Propeller

Air-Powered Mixers for Intermediate Bulk Containers

Mix right in your IBC—these mixers come mounted to a bracket that centers the propeller in your container to prevent damage from the blades. Forklift channels let you move these mixers to multiple IBCs. Use the needle valve to adjust mixing speed. Air inlet connection is NPT male.

Shaft and propellers are 316 stainless steel. They attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing. Choose a dual-propeller mixer for faster and more thorough mixing than single-propeller mixers.

Mixers for thin liquids are for liquids with a viscosity similar to water and light oils. **Mixers for thick liquids** are for liquids with a viscosity similar to honey and molasses.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Propeller Qty.	Propeller Dia.	Air Consumption @ 80 psi, cfm	Air Inlet		
For Thin Liquids

2	10-350	35″	1″	2	12″	70	½	1152N3	3,440.80

Single Propeller

Pipe-Mount Air-Powered Mixers

The pipe-clamp connection lets you quickly raise or lower these mixers to change containers. They fit 1½″ OD vertical pipe. These mixers are commonly used with water, light oils, and other thin liquids. They have a needle valve for adjusting mixing speed. Air inlet connection is NPT female.

Mixers have 316 stainless steel propellers. Propellers and shaft attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing.

Single-propeller mixers come with four 304 stainless steel shafts of multiple lengths. **Dual-propeller mixers** have a 316 stainless steel shaft. Choose a dual-propeller mixer for thorough mixing in tanks that are deeper than they are wide and for faster mixing than single-propeller mixers.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Propeller Dia.	Air Consumption @ 80 psi, cfm	Air Inlet		
Single Propeller								
½	300-1,750	12″, 16″, 20″, 24″	⅝″	4″	25	¼	3477K57	$637.00
Dual Propeller								
½	300-1,750	32″	⅝″	4″	25	¼	3477K24	373.00

Single Propeller

Stand-Mount Air-Powered Mixers for Small Batches

With shorter shafts and smaller propellers than other mixers, these mixers fit in small containers. They come with a 9⁄16″ Dia. × 10″ Lg. bar for mounting on a stand (sold separately below). A needle valve lets you adjust mixing speed. Air inlet connection is NPT male.

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above for efficient mixing.

Mixers for thin liquids are for liquids with a viscosity similar to water and light oils. **Mixers for thick liquids** are for liquids with a viscosity similar to honey and molasses.

Stands have a swivel clamp. Container-mount stand fits containers up to 15″ in diameter.

Shown with Tabletop Stand (Sold Separately)

Self-Contained Air-Powered Mixers for Small Batches

Mixer with 304 SS Container

Mix and dispense from the same container without messy transfers. These mixers are built into the lid of a container with a dispenser. They are designed for thin liquids such as water and light oils. Use the needle valve to adjust mixing speed. Air inlet connection is NPT female, and mixer comes with a 10-ft. air hose.

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above for efficient mixing.

Mixers with steel container have a plastic spigot. **Mixers with 304 stainless steel container** are corrosion resistant for harsh environments. They have a 316 stainless steel ball valve with a 3/4 NPT female connection.

Container Size, gal.	hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.	Air Consumption @ 80 psi, cfm	Air Inlet	With Steel Container		With 304 SS Container	
5	3/4	0-1,750	10″	1/2″	5″	20	1/4	3513K13	$587.09	3513K23	$993.07

Hand-Held Air-Powered Mixers for Small Batches

Manually control and monitor mixing in small pails, buckets, and drums. These lightweight mixers are for use with thin liquids such as water and light oils. Adjust mixing speed with the needle valve. Air inlet connection is 1/4 NPT female.

Mixers have a removable 304 stainless steel shaft and a built-in propeller. Propeller moves clockwise when viewed from above to direct flow downward for efficient mixing.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.	Air Consumption @ 80 psi, cfm		
1/2	300-1,200	15″	1/4″	2 5/8″	15.9	3489K51	$512.00
1/2	300-800	21″	1/2″	5″	13.7	3489K52	574.00
1/2	300-450	40″	1/2″	5″	11.9	3489K53	634.00

Clamp-Mount Variable-Speed Electric Mixers for Tanks

Single-Propeller Mixer

Adjustment Dial

Turn the dial to adjust mixing speed. These mixers clamp to the side of the tank. Motor is totally enclosed nonventilated (TENV) and has a 7 1/2-ft. cord with plug.

Mixers have high-flow propellers that generate 40% greater flow than conventional propellers. Shaft and propellers are 316 stainless steel. They attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing.

Choose a dual-propeller mixer for thorough mixing in tanks that are deeper than they are wide and for faster mixing than single-propeller mixers.

Mixers for thin liquids are for liquids with a viscosity similar to water and light oils.

Mixers for thick liquids are for liquids with a viscosity similar to honey and molasses.

Electric 5-Gallon Pail Mixers

Use the same removable pail to mix and transfer small batches. The mixer pail rotates at 60 rpm and the mixing paddle stirs the mixture as the pail rotates. Mixer comes with a 5-gal. steel pail with lid, a steel shaft with mixing paddle, and a stand. Motor is open dripproof (ODP) and has an 8-ft. cord with plug and on/off switch.

Replacement Paddle							7658T12	50.51
Replacement Pail with Lid							7658T1	46.94

Clamp-Mount Electric Mixers for Tanks

Light Duty and Standard Single-Propeller Mixers

Attach these mixers to your tank wall. Motor is totally enclosed fan cooled (TEFC), except hazardous-location mixers. Mixers have wire leads for electrical connection, except light-duty mixers have a 6-ft. cord with plug.

Shaft and propellers are 316 stainless steel. They attach with set screws. Propellers are left hand and move clockwise when viewed from above to direct flow downward for efficient mixing. Choose a dual-propeller mixer for thorough mixing in tanks that are deeper than they are wide and for faster mixing than single-propeller mixers.

Mixers for Thin Liquids—These are for liquids with a viscosity similar to water and light oils.

Mixers for Thick Liquids—These are for liquids with a viscosity similar to honey and molasses.

High-flow mixers have specialized propellers for 40% greater flow than conventional propellers.

Hazardous-location mixers have a motor that's UL listed for Class I, Groups C and D and Class II, Groups F and G for environments with flammable gases and combustible dust.

Electric Mixers for Intermediate Bulk Containers

Protect the sides of your IBC from propeller blades. These mixers come bolted to a 39½" wide bracket that keeps the propeller centered in your container. They can be moved to multiple IBCs with the attached forklift channels. Motor is totally enclosed fan cooled (TEFC). *Single-phase motors* have a 10-ft. cord with plug. *Three-phase motors* have wire leads for electrical connection.

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above to direct flow downward for efficient mixing.

Mixers for thin liquids are for liquids with a viscosity similar to water and light oils.

Mixers for thick liquids are for liquids with a viscosity similar to honey and molasses. They have a collapsible propeller that fits into a standard 6" IBC top opening.

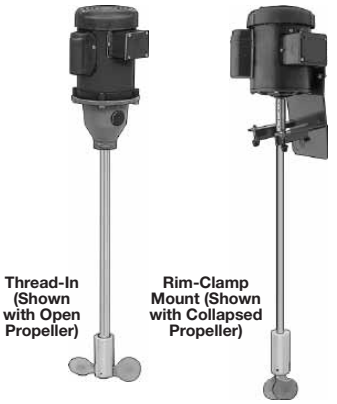
Electric Mixers for Drums



Mix the contents of 55-gal. drums without removing the lid—these mixers have collapsible propellers that fit through 2 NPT drum openings. They are for use with thin liquids such as water and light oils. Electrical connection is wire leads.

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above to direct flow downward for efficient mixing.

Standard—Motor is totally enclosed fan cooled (TEFC).

Hazardous Location—Motor is UL listed for Class I, Groups C and D and Class II, Groups F and G for environments with flammable gases and combustible dust.

Thread-in mixers screw into a drum opening for a secure connection.

Rim-clamp-mount mixers attach directly to the drum lip.

Easy-Pour Electric Mixers

For easy dispensing, these mixers have a mixing drum that tilts downward to unload material. They are often used with concrete, feed, and seed. The mixing drum has a 15¼" dia. opening. Mixers have a 1-ft. cord with plug.

Stationary—This mixer has a removable polyethylene liner with molded-in blades for easy cleaning.

Mobile—Two 10" wheels let you roll this mixer where you need it. The mixing drum comes with two blades and two mixing paddles.

Replacement Drum Liner for Stationary Mixer										7595T22	216.46

No-Mess Electric Mixers for Drums

Eliminate spills and splatter with these mixers that rotate your closed drum to mix its contents. They fit 15-, 30-, and 55-gal. steel drums. Mixers have a variable-speed control that rotates drums at 10 to 24 rpm. They come with a chain and guard, a grounding strap, and two 3" dia. casters. Dimensions are 20" Ht. x 35" Wd. x 21" Dp.

Standard mixer has a totally enclosed fan-cooled (TEFC) motor with thermal overload protection and a 3-ft. cord with plug and on/off switch.

Hazardous-location mixer has a motor that's UL listed for Class I, Group D and Class II, Groups F and G for environments with flammable gases and combustible dust. Electrical connection is wire leads.

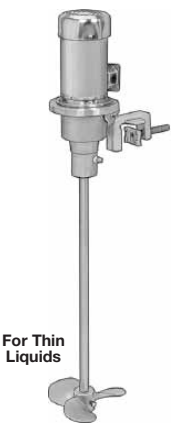
Replacement 4" Drive Wheel for Adapter						2889T19	73.18

Food and Beverage Clamp-Mount Electric Mixers for Tanks



For use with dairy, food, and beverage, these mixers are made from 3-A listed materials. They mount to the side of your tank with a clamp. Motor is totally enclosed fan cooled (TEFC) and meets IP55 for resistance to dust and washdowns. Electrical connection is wire leads.

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above to direct flow downward for efficient mixing.

Mixer for thin liquids is for liquids with a viscosity similar to water and light oils.

Mixer for thick liquids is for liquids with a viscosity similar to honey and molasses. It has a high-flow propeller.

Stand-Mount Variable-Speed Electric Mixers for Small Batches

Shown with Tabletop Stand (Sold Separately)

An adjustment dial lets you alter your mixing speed. Motor is totally enclosed nonventilated (TENV) and has a 6-ft. cord with plug. These mixers include a 9/16" Dia. x 10" Lg. aluminum rod for mounting to a stand (sold separately below).

Shaft and propeller are 316 stainless steel. They attach with set screws. Propeller is left hand and moves clockwise when viewed from above to direct flow downward for efficient mixing.

Mixers for thin liquids can be used with water. 1/15, 1/10, and 1/8 hp models can also be used with light oils. **Mixer for thick liquids** is for liquids with a viscosity similar to honey and molasses.

Stands have a swivel clamp. Container-mount stand fits containers up to 15" in diameter.

Blenders

Tabletop

Immersion

Blend liquids and create slurries. All blenders meet NSF/ANSI standards for use with food and beverage.

Tabletop—These blenders come with a 304 stainless steel container, stainless steel blades, and a plastic cover. They have a 6-ft. cord with plug and are UL listed. **1-liter blenders** have a zinc housing. *Two-speed blender* has a 3-minute timer. **64-oz. blender** has a polycarbonate housing.

Immersion—Reduce sample loss by mixing in your container. Overall height is 27". Blender has a removable 12" stainless steel shaft with built-in blade. Housing is polycarbonate, fiberglass, and aluminum. Blender has a 12-ft. cord with plug.

Capacity	No. of Speeds	Max. Speed, rpm	Volts AC @ 60 Hz (phase)	Amps

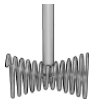
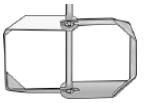
Mixing Attachments for Power Tools



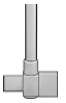
Energy-Efficient Coiled Spring

Paint and Drywall Mud—Small Batch



Paint and Drywall Mud—Large Batch

High-Flow Dual Propeller



Chemical-Resistant Fixed T

Chemical-Resistant Fixed U

Chemical-Resistant Collapsible T

Turn your power tool into a mixer. Choose a shaft diameter that fits in your chuck.

Energy-Efficient Coiled-Spring Attachments—Generate the same mixing power as a standard propeller at half the rotation speed. Attachments are 304 stainless steel. Max. viscosity is 12,000 centipoise.

Paint and Drywall Mud Attachments—All are steel. **Small-batch** attachments have a twisted propeller. Maximum viscosity is 100,000 centipoise. **Large-batch** attachments have a large-diameter propeller for bigger jobs. Maximum viscosity is 10,000 centipoise.

High-Flow Dual-Propeller Attachments—Two propellers increase turnover. Attachments are 304 stainless steel. Max. viscosity is not rated.

Chemical-Resistant Plastic Attachments—Polypropylene propellers and a PVC-covered steel rod have excellent chemical resistance. Maximum viscosity and maximum rpm are not rated. **Collapsible T** attachments have a propeller that folds to fit in 2 NPT drum openings.

Stirring Paddles

200 Series Stainless Steel Paddle

Food and Beverage Paddle with Holes

Wood and Metal—Use these paddles for general purpose mixing and scraping.

Plastic—Food and beverage stirring paddles are made of FDA-listed material. Choose a stirring paddle with holes to break up clumps in your mixture. *Metal-detector-grade stirring paddles* contain a compound that can be sensed by metal detectors. **Chemical-resistant** stirring paddles are often used with caustics such as detergents and cleaning fluids.

Inline Pipe Mixers

Nylon PVC

Also known as static mixers, these install in your pipeline and mix liquid as it passes over fixed spiral blades. They have no moving parts and require no external power source. Connections are NPT male.

Nylon mixers have brass fittings and acetal blades. The body is translucent for monitoring the condition of the mixer.

PVC mixers have a clear body for monitoring your mixing process.

304 stainless steel mixers are highly corrosion and chemical resistant.

Number of Blades—Follow these steps to determine your Reynolds number, which indicates if you need a mixer with 6, 12, or 18 blades.

1. Multiply flow rate (gpm) by 3,157
2. Multiply specific gravity by total of Step 1
3. Multiply viscosity (cp) by pipe ID (inches)
4. Divide total of Step 2 by total of Step 3
5. Compare Reynolds number to chart

Reynolds Number	Required Blades
1,000+	6
500-1,000	12
10-500	18

Pipe Size	6 Blades for Thin Liquids Lg.			12 Blades for Thick Liquids Lg.

★ Mixer has 18 blades.

Inline Tube Mixers

(Cutaway View)

Blend liquid in your process line. Materials are mixed as they pass over the fixed spiral blades, so these mixers require no external power source. They're often used with adhesives, solvents, chemicals, and oils. Housing and blades are 316 stainless steel. Maximum temperature is 300° F. Mixers have unthreaded ends that can be secured with compression or push-to-connect fittings.

Tube OD	Tube ID	Tube Lg.	No. of Blades

½″	0.430″	24¾″	32	3530K62	214.14

Drum-Mount Proportional Mixers

Dilute concentrated fluids and dispense the solution directly from your drum in a measured ratio. Attach your water line to the inlet and set your desired mixing ratio with the adjustment control. The water line connection has a quarter-turn shutoff valve. *PVC* and *bronze mixers* fit 2 NPT drum openings. *Aluminum mixers* fit 2 NPS drum openings.

Mixers for Soap and Water—PVC mixer has a metering screw. Intake and discharge tubes are vinyl. **Aluminum mixer** has an adjustment knob. Intake tube is nylon and discharge tube is PVC.

Mixers for Coolant and Water/Soluble Oil and Water—Bronze mixers have a heavy duty bronze body and a needle valve dial. Intake tubes are steel. Discharge tube is vinyl. **Aluminum mixer** has an adjustment knob. Intake tube is nylon and discharge tube is PVC.

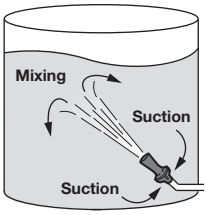
Mixing Nozzles



Circulate tank contents by pumping your liquid through one of these polypropylene nozzles. For every gallon of liquid that flows through the inlet, suction draws in and mixes about four gallons from the tank. Nozzles should be positioned close to the bottom of your tank. Connection is NPT male.

Orifice Size	Pipe Size	Dia.	Lg.	Max. Temp., °F	Max. psi @ 70° F

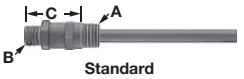
Injectors



Standard

Easy Maintenance

Inject liquid into your process line or tank without draining your system. Tube length is 6″. Pipe connections are NPT male.

Standard Injectors—Also known as injection quills, these are for permanent installation.

Easy-Maintenance Injectors—Close the ball valve to isolate flow from your system to clean these injectors.

Injectors for water, pH control, and chlorination have a fluoroelastomer seal.

Injectors for wastewater and chemicals have an EPDM seal.

Stainless Steel Propellers

These 316 stainless steel propellers come with two stainless steel set screws.

Selecting a Left-Hand or Right-Hand Propeller—Propellers direct flow downward or upward based on the rotation of your shaft. Most mixers require a left-hand propeller. To determine whether you need a left- or right-hand propeller, view your existing propeller from the side. The blades of a left-hand propeller point up to the left, and the blades of a right-hand propeller point up to the right.

On most mixers, the shaft and propeller move clockwise when viewed from above. **Left-hand propellers** direct flow downward for efficient mixing. **Right-hand propellers** direct flow upward for aeration.

Stainless Steel Mixer Shafts

The ends of these shafts are machined to fit mixer shaft couplings. They are 316 stainless steel.

Shafts for propellers with set screws have two machined ends.

Shafts for threaded propellers have one threaded end to fit threaded propellers and one machined end.

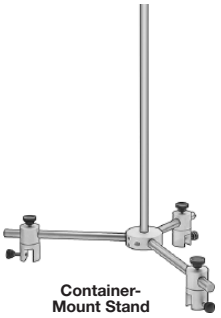
Mixer Stands for Small Batch Mixers



Container-Mount Stand

These stands have a 304 stainless steel shaft. Mixers can be mounted at any height on the stand.

Tabletop stands are for use with mixer shaft lengths up to 18″.

Container-mount stand fits containers up to 15″ in diameter. Maximum mixer shaft length is the depth of the container plus 18″.

Air-Powered Paint Shakers

Use plant air to shake paint cans 700 times per minute. This aluminum shaker adjusts to hold aerosol, pint, quart, and gallon cans. Air inlet connection is 1/4 PTF female and is compatible with NPTF. Shaker is rated for continuous duty. It must be mounted to a bench top or the optional pedestal stand.

Optional pedestal stand is steel. Dimensions are 31″ Ht. × 11″ Wd. × 8 1/2″ Dp.

Repair kit includes a bushing, wear ring, air hose, hose clamps, and O-rings.

Electric Paint Shakers

Portable

Dual Can

Heavy Duty and Hazardous Location

Quickly and thoroughly mix paint and coatings. All shakers are rated for continuous-duty operation.

For Pint, Quart, and Gallon Containers—Portable shaker weighs only 24 pounds and doesn't require permanent mounting. This steel shaker has a 15-minute timer. It has an 8-ft. cord with plug. **Dual-can shaker** cuts mixing time in half by shaking two cans at once at 525 shakes per minute. Motor is UL listed. Housing is steel and has four 1/4″ dia. holes for bench-top mounting (fasteners not included). Shaker has a 30-minute timer. It has a 10-ft. cord with plug.

For 1- and 5-Gallon Containers—Mix at 325 shakes per minute. Housing is steel and has four 1/4″ dia. holes for floor mounting (fasteners not included). Motor is UL listed. **Heavy duty shaker** has a 30-minute timer. It has a 10-ft. cord with plug. **Hazardous-location shaker** is UL listed for Class I, Group D for environments with flammable fuels and solvents. It has wire leads for electrical connection.

Vibrating Electric Shakers

Round Platform

Rectangular Platform

Combine small samples and settle mold and die castings at 3,600 vibrations per minute. These shakers have a variable-speed control and a single-phase motor that operates on 120 volts AC @ 60 Hz. Housing is zinc, unless otherwise stated.

Round Platform—Shakers have an intermittent-duty motor (15 minutes on; 5 minutes off) and a 6-ft. cord with plug. Platform is rubber-covered zinc.

Rectangular Platform—8-lb. capacity shaker has an intermittent-duty motor (15 minutes on; 5 minutes off) and a 5-ft. cord with plug. Platform is rubber-covered steel. **10-lb. capacity shaker** is powered by an electromagnetic vibrator and has a 7-ft. cord with plug. Housing is aluminum. Platform is plastic.

Air-Powered Aerators

Also known as a diffuser and an air bubbler, this aerator connects to your compressed air line. It has notches at the base that create small bubbles for uniform aeration. Aerator is commonly used in wastewater treatment. Body is ABS plastic with a clog-resistant rubber diaphragm. Air inlet connection is NPT male.

Dia.	Lg.	Max. psi @ 70° F	Air Inlet		
5″	4 1/2″	9	1/2	3699K36	$27.46

Air-Powered Bin Aerators

Weld On

Bolt On

Also known as fluidization nozzles, these aerators create flow in your bin or hopper by combining vibration and aeration to dislodge compacted material. They're often used with dry, powdery materials such as cement, starch, and clay. Aerators are rated for continuous-duty operation and run on plant air. They install directly through a hole in your bin or hopper wall. For large containers, mount several aerators in rows set 6″ to 18″ apart.

Weld-on aerator comes with a bushing for welding to the outside of your tank.

Bolt-on aerator installs from inside your tank and secures with the included mounting bolt.

Electric Aerators

Introduce fresh air into your liquid while mixing the contents of your tank. These aerators include a rubber air diffuser for uniform bubble distribution. They also come with an air pump and a PVC hose. Maximum water depth is 6 feet. Aerators are rated for continuous duty. They have a 7-ft. cord with plug.

About Selecting a Vibrator

For Dry Materials

Often used to loosen compacted powders and distribute grains, these vibrators emit a high-frequency vibration that shakes material to maintain a steady flow. They're also known as ball and turbine vibrators.

Vibrator strength is measured in pounds of force; every 10 pounds of dry material requires 1 pound of force to move it. If your bin has 200 pounds of dry material, you need a vibrator with at least 20 pounds of force.

- One vibrator can move the contents of a bin with a diameter up to 10 feet.
- For bins larger than 10 feet in diameter, add a second vibrator to the opposite side of the bin. Each vibrator should provide half the total required pounds of force.
- Align vibrators in the direction of flow for best results.

For Wet Materials

Commonly used with sticky slurries and caked-on substances, these vibrators produce a hammer-like pounding action that dislodges material from bin walls. Also known as piston vibrators, they're often used on materials with a moisture content of 5% or more.

Bin wall thickness determines the force required to move the material in the bin. To select a vibrator strong enough for your application, find your bin's wall thickness in the table.

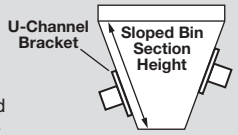
- One vibrator can clear about 4 to 6 feet of a bin wall.
- To clear larger areas of a bin, add a second vibrator to the opposite side of the bin.
- Since they produce a strong pounding action, these vibrators require a solid mount.

Vibrator Mounting

Attach vibrators to a U-channel bracket that is welded to the bin rather than attaching vibrators directly to the bin wall.

To clear the contents of a large bin or move extremely compacted material, add a second vibrator to the opposite side of the bin for even vibration and optimal flow.

Vibrator 1
Mount between one quarter and one third of the way up the sloped section of the bin.



Vibrator 2
Mount halfway up the sloped section of the bin on the opposite side of the first vibrator.

Air-Powered Vibrators

Air-Powered Vibrators for Dry Materials

A

B

C

D

E

F

Also known as ball vibrators, these produce a high-frequency vibration that shakes powders, grains, and other dry materials to maintain a steady flow through your bin. All vibrators are rated for continuous duty and have a muffler. Air connections are female.

Corrosion-resistant plastic vibrators stand up to splashing water and outdoor environments.

Energy-Efficient Air-Powered Vibrators for Dry Materials

A

B

C

D

E

F&G

Also known as turbine vibrators, these use half the air of other air-powered vibrators to generate the same force. Often used to shake powders, grains, and flakes, they maintain a steady flow of dry material through bins, chutes, and screens. Vibrators are rated for continuous duty. *Styles A, B, D & E* have a muffler; *Style D* muffler is internal.

Miniature plastic vibrators are designed for small containers and tight spaces. Air connections are push to connect for tubing.

Iron and **aluminum vibrators** have female air connections.

Corrosion-resistant 303 stainless steel vibrators stand up to splashing water and harsh chemical environments. Air connections are female.

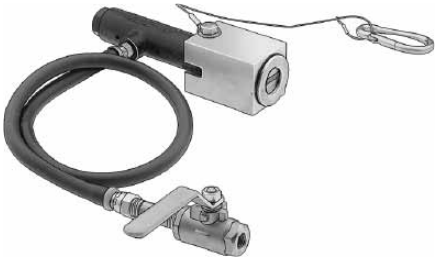
Portable Magnetic-Mount Air-Powered Vibrators for Dry Materials



Move this vibrator to the source of your flow problem. It weighs only four pounds and has a magnetic mount, so it can be moved between ferrous containers. This vibrator is often used to shake powders, grains, and small parts in bins and hoppers with intermittent flow issues. It has a 5-ft. air hose with a valve and a safety cable with latch. Vibrator is rated for intermittent duty (1 to 3 seconds on; 10 seconds off). It has NPT female air connections and a side inlet. Maximum temperature is 250° F.

Optional adhesive-back metal pad allows use of vibrator on nonferrous containers.

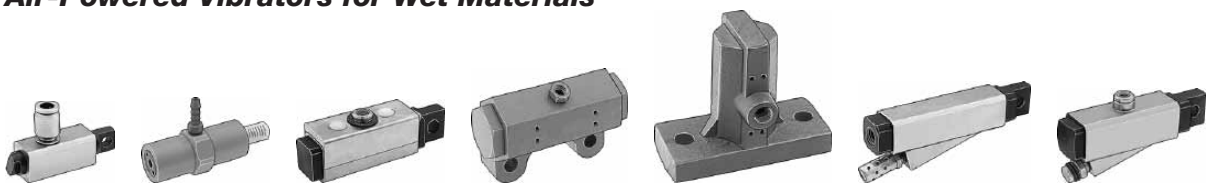
Air-Powered Vibrators for Wet Materials



A B C D E&H F G

Also known as piston vibrators, these pound the sides of your bin to dislodge wet, sticky, and caked-on materials.

Light Duty—Commonly used on small bins that require periodic shaking, these vibrators are rated for intermittent duty (3 minutes on; 3 minutes off). They make direct contact with your container wall. Air connections are push to connect for tubing. *Vibrator with 15 lbs. of force* has a 304 stainless steel body. *Vibrator with 21 lbs. of force* has a steel body.

High Force—These vibrators make direct contact with your container wall for maximum impact. All are rated for continuous duty. Air connections are female. *Style B* have an aluminum body and a muffler. *Styles C, D & E* have a steel body.

Cushioned Impact—An air cushion prevents metal-to-metal contact. These vibrators are rated for continuous duty. Body is steel. Air connections are female. *Styles F & G* have a muffler.

Heavy Duty Air-Powered Vibrators for Wet Materials

To dislodge extremely thick, sticky materials from the sides of your bin, these iron vibrators have a sturdy, four-bolt base for secure mounting and even force distribution. They are continuous duty. Vibrators have NPT female air connections and a side inlet. Maximum temperature is 200° F.

High Force—These vibrators make direct contact with your container wall for maximum impact.

Cushioned Impact—These vibrators have an air cushion that prevents metal-to-metal contact.

Vibrators with setup kit come with a U-channel bracket, a manual air valve, an automatic lubricator, and a 5-ft. hose with fittings.

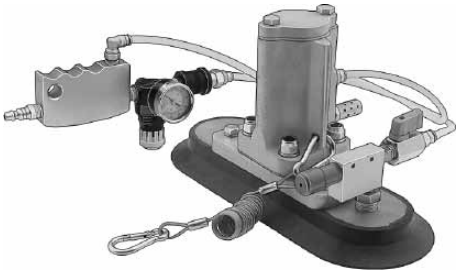
Air-Powered, Battery-Operated & Electric Vibrators

For information about selecting a vibrator, see page 547.

Portable Vacuum-Mount Air-Powered Vibrators for Wet Materials



Mount these vibrators on any flat-sided container in seconds. They weigh 10 pounds and attach by generating a vacuum instead of bolting or welding, so you can place them at the source of the blockage and quickly move them between bins. These iron vibrators are often used to dislodge sticky, caked-on materials from trailers, railcars, and hoppers. They are rated for intermittent duty. Vibrators have a muffler. They have NPT female air connections and a side inlet. Maximum temperature is 200° F.

Quick-Mount Air-Powered Vibrators for Wet Materials

For Large Bins and Railcars

Weld a bracket to each of your containers and move these iron vibrators from job to job. Vibrators and brackets are sold separately. They're commonly used to dislodge sticky, caked-on materials from container walls. They have NPT female air connections and a side inlet. Maximum temperature is 200° F.

Vibrator for small bins and hoppers is rated for intermittent duty. **Vibrators for large bins and railcars** are rated for continuous duty.

Weld-on bracket for small bins and hoppers is steel. Weld-on bracket for large bins and railcars is iron.

Battery-Operated Vibrators for Dry Materials

Solve flow problems at construction sites and other locations without electricity. Often used to shake sand, gravel, and other small particles in drums and spreaders, these vibrators have wire leads for connecting to a 12-volt battery (sold separately). Body is aluminum, cast iron, and steel. Motor is continuous duty and totally enclosed fan cooled (TEFC) for use in environments with splashing water and dust. Maximum temperature is 104° F.

Adjustable-Force Electric Vibrators for Dry Materials

A

B-D

E

F

Change force output for different materials in your bin. These vibrators come set at the maximum force; adjust the internal weight to reduce force. They're often used to shake and settle powders, flakes, and pellets in bins and hoppers. Motor is totally enclosed for use in environments with splashing water or dust. Maximum temperature is 104° F.

Adjustable Force—Vibrators are rated for continuous duty. *Style A* has a plastic body. *Styles B, C & D* have an aluminum body. *Styles A & B* have a 10-ft. cord with plug. *Styles C & D* have screw terminals for electrical connection. **Optional manual starters for Styles C & D** provide on/off motor control and have thermal overload protection.

Adjustable Force and Speed—Alter vibrations per minute in addition to force output. The speed adjustment dial lets you change speed while running these vibrators. Body is steel, plastic, and aluminum. They have a 10-ft. cord with plug. At 0-950 and 2,500-4,000 vibrations per minute, these vibrators are rated for intermittent duty (30 minutes on; 30 minutes off). At 950-2,500 vibrations per minute, they're rated for continuous duty.

For information about selecting a vibrator, see page 547.

Super-Quiet Electric Vibrators for Dry Materials

The quietest vibrators we offer, these produce less noise than normal conversation. They're often used to stimulate the flow of powders and flakes through chutes, parts feeding tracks, and screens. Vibrators have a continuous-duty motor and a 3-ft. cord with plug. Max. temp. is 104° F.

Standard vibrators have a steel, plastic, and aluminum body, except vibrator with 80-lb. material capacity has an aluminum body.

Water-resistant vibrators stand up to splashing water, dusty environments, and outdoor use. They are not submersible. Body is aluminum.

Extended-Life Electric Vibrators for Wet Materials

Low-Force Vibrators | High-Force Vibrators | Required Controllers

A&B

C

D

E

F

G&H

J

Since they generate vibration with electromagnets, these vibrators have no moving parts that can wear out and shorten service life. They pound on container walls to dislodge sticky, caked-on materials. Vibrators require a controller (sold separately). Body is aluminum, except Style A have a steel body. Motor is continuous duty and has a 10-ft. cable with wire leads. Maximum temperature is 180° F.

Low-force vibrators are for use on small bins and hoppers.

High-force vibrators are powerful enough to move material in thick-walled bins. They are water resistant for use in environments with splashing water. *Style E* have an internal cushion for reduced noise. *Style F* make direct contact with the container wall for maximum impact.

Required controllers have an adjustable speed dial. Electrical connection is screw terminals. *Style G* has four 5⁄32″ dia. mounting holes. *Style H* has two 7⁄32″ dia. mounting holes. *Style J* has four 5⁄16″ dia. mounting holes. *Styles G & J* have an enclosure that meets NEMA 4 for indoor/outdoor use and resistance to splashing water and dust.

Electric Vibrating Feeders

A built-in vibrator shakes material to stimulate flow through the feeder trough. These vibrating feeders generate vibration with electromagnets, so there are no mechanical parts that can wear out and shorten service life. Motor is rated for continuous duty and has wire leads for electrical connection. Feeders are CSA certified. They require a controller (sold separately). Maximum temperature is 180° F.

Vibrating feeders with a 304 stainless steel trough are often used in wet and corrosive conditions.

Required controller adjusts speed. Electrical connection is screw terminals. It has four 5⁄32″ dia. mounting holes.

Air-Powered Vibrating Feeders

Vibrating Feeder

Required Solenoid Valve

Agitate and convey material through the feeder trough with the built-in air-powered vibrator. The vibrator has a muffler and an air cushion to prevent metal-to-metal contact. Air connections are NPT female and inlet is under the feeder trough. These vibrating feeders require a solenoid valve (sold separately). Maximum temperature is 200° F.

Vibrating feeders with a 304 stainless steel trough are often used in wet and corrosive conditions.

Required solenoid valve comes with an air filter/regulator/lubricator and a 5-ft. air hose. Valve has 1/4 NPT female connections. Body is brass and seal is Buna-N. Valve is closed unless energized (normally closed). It has wire leads, a 1/2″ conduit port, and draws a max. of 0.35 amps. Dimensions are 3″ Lg. × 3″ Ht. Mount in horizontal pipe with solenoid on top. Valve is UL listed.

Electric Water Heaters

Standard

All heaters have a glass-lined steel tank and copper elements to protect against corrosion. They include a thermostat for accurate water-temperature output. Hardwiring is required (except 2 1/2-gallon heater includes a 6-ft. power cord with three-prong plug). UL listed.

Standard Water Heaters—Have polyurethane insulation. Connections are on the top of the heater for 2 1/2-, 30-, and 50-gal. capacity models; on the side for 6-, 10-, 19-, and 80-gal. capacity models. *Standard with heat pump* includes a heat pump that captures heat from the surrounding air and transfers it to the water in the tank. Electric water heaters with heat pump are more energy efficient than conventional electric water heaters. Heaters *not rated for an estimated yearly energy cost* cannot be sold in California.

Commercial Water Heater—Has 2″ of polyurethane insulation. Connections are on the top and side of the heater.

Point-of-Use Instant-Heat Electric Water Heaters

Get hot water on demand. Also known as tankless electric water heaters, these provide instant hot water at the point of use, while taking up less space than heaters with a tank. And compared to gas heaters, electric heaters are easier to install and don't require a relief valve. They turn on when water flows through the heater and turn off when the flow stops. All are UL and C-UL listed and meet ASSE 1070. Connections are compression tube fittings, unless otherwise stated. Use with water pressure between 25 and 150 psi.

Nonadjustable Water Heaters—The temperature of the water coming out depends on the temperature of the water going in. *Double-fixture heater* handles two side-by-side utility or handwashing sinks.

Adjustable Temperature-Maintaining Water Heaters—You can adjust the thermostat to the exact water temperature you need. *Sanitation heater* is for parts washing and dishwashing applications. Connections are NPT male. *Four-fixture heater* can be used with circular multistation wash fountains or a single shower. Connections are NPT male.

Also Available: Replacement elements. Please ask for 3556K99 and specify the McMaster-Carr part number.

■ The estimated yearly energy cost is based on electricity cost of $0.12 per KWh. For more information, visit www.ftc.gov/energy.

Portable Water Heater/Recirculators

Take these lightweight heaters anywhere you need to boost your water temperature. All have a heavy duty drive pump to recirculate the water in a process bath or sink. They also have a graduated control dial that lets you adjust and maintain the water temperature to within 0.25°F.

Heaters operate on 115 volts AC, single phase. They have a stainless steel cover, measure 7" Ht.×9" Wd.×17" Dp., and include a 7-ft. long power cord with standard three-prong plug (a ground fault outlet, sold separately, is recommended for safety). *8.7-amp* heater has a 5/8" OD smooth inlet and barbed outlet and two 6-ft. long, 5/8" ID water hoses. *14-amp* heater has a 1/2" OD smooth inlet and barbed outlet and two 6-ft. long, 1/2" ID water hoses.

Corrosion-Inhibiting Rods and Pads

Rod

Round Pad

Rectangular Pad

Guard tanks, pipelines, water heaters, and water-circulating process equipment from corrosion. Also known as sacrificial anodes, these rods and pads are attacked and consumed by any corrosive action that would otherwise attack and consume your equipment.

Corrosion-Inhibiting Rods—Have a reinforcing steel core that holds the zinc or magnesium in place until it's completely consumed. They include NPT hex brass plugs. Connections are NPT male. **Zinc rods** protect against corrosion and scaling in hot and cold saltwater. **Magnesium rods** protect against heavy corrosion in hot and cold freshwater.

Corrosion-Inhibiting Pads—*Round pads* have a 5/8" dia. mounting hole. *Rectangular pads* have a copper wire for attaching to your tank, except 6"×6" pads have a 5/8" dia. mounting hole. **Zinc alloy pads** provide corrosion protection in hot freshwater as well as saltwater. Meet MIL-A-18001. **Aluminum alloy pads** last longer than zinc alloy and can be used in hot and cold freshwater as well as saltwater. Meet MIL-A-24779.

Immersion Heaters

For information about pipe size, see pages 2-3.

About Immersion Heaters

Heat water, oil, solvents, process solutions, and viscous liquids through direct contact with the liquid. When choosing a heater, make sure the heating element material and the wattage are right for your liquid. *Note:* To prevent heater failure, do not run heaters dry and keep elements free from sludge, scale, and mineral deposits.

Heating Element Materials and Compatible Liquids

Type 304 Stainless Steel—Offers good corrosion resistance. For use with mildly corrosive process water and liquid detergents. Also good for heat transfer fluids such as propylene and ethylene glycol.

Type 316 Stainless Steel—Offers excellent corrosion resistance. For use with moderately corrosive liquids such as process water with less than 3% acid or alkaline content. Also for use with deionized water.

Incoloy—Offers corrosion resistance. For use with corrosive liquids such as process water with less than 6% acid or alkaline content; up to 2% caustic solutions (unless otherwise indicated).

Steel—For use with oils.

Copper—For use with clean water.

Minimum Wattage Required to Heat Water

The chart shows the minimum wattage required to heat water in a tank. Multiply watts by 3.4 to convert to Btu/Hr.

	Minimum Wattage Required to Heat Water (6-Hr. Warm-Up Time)						
Gallons	10° F Temp. Rise	30° F Temp. Rise	50° F Temp. Rise	70° F Temp. Rise	90° F Temp. Rise	110° F Temp. Rise	130° F Temp. Rise
5	20	70	110	160	200	250	300
10	50	130	220	310	400	500	600
15	70	200	340	470	600	750	850
25	110	340	550	800	1,000	1,200	1,500
50	220	650	1,100	1,600	2,000	2,500	2,900
100	450	1,300	2,200	3,100	4,000	4,900	5,800
200	900	2,700	4,500	6,300	8,100	9,900	11,600
400	1,800	5,400	9,000	12,500	16,100	19,700	23,300

Wattage Required to Heat Other Liquids

To heat water-based solutions (50% or more water), multiply the watts value in the chart above by 0.90.

To heat corrosive solutions (20% or less water), multiply the watts value in the chart above by 0.75.

To heat oils, multiply the watts value in the chart above by 0.43.

Compact Cartridge-Style Immersion Heaters

Don't let their size fool you—these heaters are packed with the power you need to heat liquids in cramped spaces. All have an NPT male screw plug and wire leads for hardwiring. Maximum temperature is 212° F. Heaters should be used with a temperature switch (not included; see pages 637-639 and 641).

Type 316 Stainless Steel Element for Moderately Corrosive Liquids—For process water with less than 3% acid or alkaline content. Element is UL recognized and CSA certified. Screw plug is Type 316 stainless steel.

Incoloy Element for Water—Screw plug is Type 304 stainless steel. Note: Not for use with process water; alkaline, acid, or caustic solutions.

Flange-Mount Immersion Heaters

For high-volume applications, these extra-large immersion heaters have a flange for mounting to large tanks. Element is Incoloy for use with corrosive liquids such as process water with less than 6% acid or alkaline content; up to 2% caustic solutions.

All heaters are three phase and accept a temperature switch with 3/8″ dia. probe (not included; see pages 638-639). They have screw terminals for hardwiring. UL listed and CSA certified. Heaters for *pipe size 3* have four 3/4″ dia. flange mounting holes; heaters for *pipe size 5* have eight 7/8″ dia. flange mounting holes.

To Order: Please specify 240 or 480 volts AC.

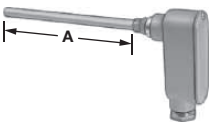
Freeze-Protection Immersion Heaters



A built-in temperature controller keeps fluid between 70° and 80° F to guard against icing and freezing. All heaters have a cartridge-style, Type 316 stainless steel element for use with moderately corrosive liquids such as process water with less than 3% alkaline content. Also for deionized water as well as 10W-30 oil, mineral oil, and hydraulic oil.

Heaters are single phase and have a 1/2″ conduit connection and wire leads for hardwiring. A weatherproof NEMA 4 enclosure allows outdoor use. Screw plug is brass. Mount horizontally only. UL recognized and CSA certified.

To Order: Please specify 120 or 240 volts AC.

Watts	Amps @ 120V AC	Amps @ 240V AC	Pipe Size	Element Dia.	Element Lg. (A)	For Tank Size, gal.

1,000	8.4	4.2	3/4	3/4″	31″	50-100	**3493K13**	297.00

Floating Immersion Heaters

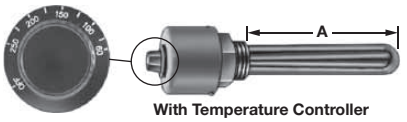
Keep tank fluid from icing and freezing. These heaters automatically turn on when fluid cools to about 45° F and turn off when fluid reaches about 65° F. They have an ABS plastic housing and are for use with clean and deionized water.

Heaters operate on 120V AC, single phase. They have a 6-ft. long power cord with standard three-prong plug and are UL listed. They are for use in metal tanks. To use them in a plastic tank, pair them with a clip-on *heater guard*.

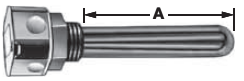
Watts	Amps	O'all Dia.	O'all Ht.	For Max. Tank Size, gal.	Heaters		Heater Guards	
1,000	8.3	8″	4″	150	**3639K47**	$34.20	**3639K61**	$16.36
1,500	12.5	8″	4″	300	**3639K48**	34.90	**3639K61**	16.36

For information about immersion heaters, see page 554. For information about pipe size, see pages 2-3.

Screw-Plug Immersion Heaters



With Temperature Controller



Without Temperature Controller

Whether you need to heat or provide freeze protection to liquids in a tank, these heaters will get the job done. All have a threaded plug that screws directly through a threaded opening in your tank wall or through a matching pipe coupling. The result is direct-contact heating of liquids for use in warming, boiler, and food-processing equipment; cleaning and rinsing tanks; liquid storage tanks; and heat-transfer systems.

Mount these heaters horizontally or vertically, as long as the element is completely immersed in your liquid. Enclosures are NEMA 1 rated (indoor use only), except for hazardous-location heaters. All have screw terminals for hardwiring. For through-wall fittings, see pages 112-114.

To calculate amps, use the following formulas:

For single phase, amps = total watts ÷ voltage.

For three phase, amps = total watts ÷ (voltage × 1.73).

Heaters with temperature controller have a thermostat dial and are adjustable from 60° to 250°F (except heaters with hazardous-location steel element for oils are adjustable from 60° to 240°F and have an internal thermostat that adjusts with a screwdriver).

Three-phase heaters require a three-pole magnetic contactor (see 6564K on page 952).

Type 304 Stainless Steel Element for Mildly Corrosive Liquids— For process water and liquid detergents. Also good for heat transfer fluids. Element is UL recognized and CSA certified. Screw plug is Type 304 stainless steel.

Type 316 Stainless Steel Element for Moderately Corrosive Liquids— For process water with less than 3% acid or alkaline content. Also for use with deionized water. Element is UL recognized and CSA certified. Screw plug is Type 316 stainless steel.

Incoloy Element for Corrosive Liquids— For process water with less than 6% acid or alkaline content; up to 2% caustic solutions. Element is UL recognized and CSA certified. Screw plug is Type 304 stainless steel.

Steel Element for Oils— Screw plug is steel.

Hazardous-Location Steel Element for Oils— Heaters are CSA certified and labeled for the United States and Canada. Their terminal enclosure meets Class I, Div. 1, Groups B, C, and D; Class II, Groups E, F, and G; and Class III specifications. Element is CSA certified. Screw plug is steel.

Copper Element for Clean Water— Element is UL recognized and CSA certified. Screw plug is brass.

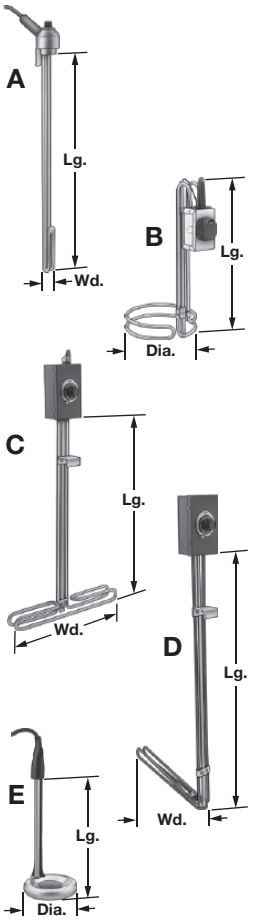
Side-Mount Immersion Heaters



Attach these heaters to the side of your drums to warm their contents. *Note:* All heaters must be immersed in liquid up to at least the minimum liquid level. They are not for use in plastic drums.

Heaters with Type 316 and Type 321 stainless steel element for moderately corrosive liquids are for process water with less than 3% alkaline content. They're also for deionized water, except Styles A and B.

Heaters with Incoloy element are not for use with acid, alkaline, or caustic solutions.

Style A—For applications with stable liquid levels. All have a thermostat that adjusts from 70° to 212° F. They also have a 6-ft. power cord with standard three-prong plug.

Style B—For applications with fluctuating liquid levels. All have a 6-ft. power cord with standard three-prong plug. *Heaters with a cycling temperature controller* maintain constant heat by cycling on and off. They can be adjusted from 70° to 212° F. *Heaters with a thermostat* provide faster heating than cycling control and can be adjusted from 70° to 250° F.

Style C—The T-shaped element evenly distributes heat in low or fluctuating liquid levels. Heaters include a thermostat that adjusts from 60° to 212° F. All have a 6-ft. long power cord. *120V AC heaters* have a standard three-prong plug; *240V AC heaters* have a NEMA 6-30 plug.

Style D—Include a thermostat that adjusts from 60° to 250° F in a NEMA 1 enclosure (indoor use only). They have screw terminals for hardwiring.

Style E—Have a circular base that sits in your tank—good when there's nothing to clip onto. Remove from water when desired temperature is reached. All have a 5½-ft. long power cord. UL listed. *120V AC heaters* have a standard three-prong plug; *240V AC heater* has a NEMA 6-15 plug.

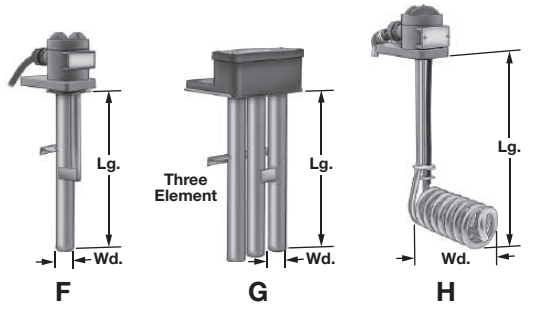
Immersion Heaters with Overheat Protection



To prevent fire and element burnout, a replaceable fuse cuts off power to these heaters if the element exceeds 190° F. All elements are Type 304 stainless steel for use with liquid detergents and mild alkaline solutions. All heaters are single phase, unless noted. They have a flange with two mounting holes (¼″ OD for Style F and Style G; 9⁄32″ OD for Style H) for attaching to a tank. *Note:* All heaters must be immersed in liquid up to at least the minimum liquid level. Not for use with mildly corrosive process water (except Style H can be used with mildly corrosive process water).

(F) Heaters with temperature controller have a digital temperature control box with 8-ft. long power cord and standard three-prong plug.

(G&H) Heaters without temperature controller include 3 feet of flexible conduit with wire leads for hardwiring. Use with a temperature control switch (not included; see 35055K on page 638). *Style H* have a PTFE-covered element for added corrosion resistance and are UL listed and CE marked.

To Order: Where amps are listed, please specify AC voltage.

For information about immersion heaters, see page 554. For information about pipe size, see pages 2-3.

Inline Immersion Heaters

No need to cut and tap a hole into your tank—these heaters install directly into pipelines.

Heaters with titanium element are for use with water and ammonium hydroxide. They have a 90° to 190° F thermostat with automatic shut off at 202° F. They also have screw terminals for hardwiring (except 1,500-watt heater has a 6-ft. long power cord with standard three-prong plug). Connections are NPT female. Enclosure is NEMA 1 rated (indoor use only).

Heaters with an Incoloy element are for use with corrosive liquids such as process water with less than 6% acid or alkaline content; up to 2% caustic solutions. All have a 60° to 250° F thermostat, wire leads for hardwiring, and NPT male connections.

Heaters with a copper element are for use with clean water. They have a 60° to 180° F thermostat, screw terminals for hardwiring, and NPT female connections.

Heaters with a steel element are for use with oils. They have a 150° to 560° F thermostat, screw terminals for hardwiring, and NPT female connections.

Bendable Immersion Heater Elements

Form these heater elements into virtually any shape. They can even be bent by hand. All elements are made of Incoloy for use in corrosive environments to heat process water with less than 3% acid or alkaline content, up to 2% caustic solutions, and inert gases. Maximum operating temperature is 1700° F.

Each end of the heater elements has 2½″ of unheated length; a ceramic insulator; and a 10-32 threaded stud with washer, nut, and terminal. UL recognized. Heaters should be used with a temperature control switch (see 3626K and 7079K on page 638 and 7981K on page 641).

Disc and Ring Heaters

Use these heaters with tanks, hot plates, and dies where moisture is not present. A flat bottom means there's a large surface area for excellent heat transfer. All have two screw terminals and are CSA certified. They should be used with a temperature control switch (see 3626K and 7079K on page 638 and 7981K on page 641).

Half-sheath heaters provide faster heat-up. **Full-sheath heaters** are impervious to dirt and are UL recognized. For a secure hold, use the **optional mounting clamps**, sold individually.

Disc Heaters—Have a maximum heat output of 750° F. Sheath is iron with a center mounting hole. Screw terminal size is 6-32 × 7/16″ high.

Ring Heaters—Have a maximum heat output of 1200° F. Sheath is chrome steel. Screw terminal size is 10-32 × 9/16″ high.

Ring Heater with Optional Mounting Clamps

Heat-Transfer Putty

To conduct heat and prevent burnout when your heat cable can't make direct contact with your pipe, mold this putty around the cable and stick it directly to the pipe. Putty with a maximum temperature of 450° F stays pliable; 750° F and 1250° F sets to a rock-like hardness in 48 hours, unless noted.

	450° F Max.		750° F Max.		1250° F Max.

About Heat Cable

Maintain the temperature and viscosity of process fluids, protect pipes from freezing, and keep roofs and gutters free from snow and ice buildup. To secure heat cable to pipes, use fiberglass tape (see 7574A on page 3491). You should also wrap fiberglass insulation around pipe to protect the cable and ensure maximum heat output (see 5556K on page 3577).

Self-Regulating Heat Cable—Adjusts its heat output in response to surface as well as surrounding temperatures. The hotter the surrounding temperature, the lower the heat output. As a result, a temperature controller is not needed unless a specific, consistent temperature is desired.

Constant-Wattage Heat Cable—Always puts out the designated amount of watts/ft., regardless of the surrounding temperature. Because it's designed to continually supply wattage to the object being heated, it should be used with a temperature controller to prevent burnout. Using a controller also lets you maintain more precise temperatures. Note: To prevent burnout, the cable must not be overlapped and must be in full contact with the surface being heated.

How to Determine Your Power Needs

Total watt output = cable length × watts/ft.
Amp draw = total watt output ÷ volts.

Watts/ft. Needed for Temperature Change

Temperature rise is the fluid temperature you need to maintain minus the minimum surrounding temperature. Watts/ft. ratings are based on using fiberglass insulation.

Watts/ft. Needed for Temperature Change							
Temp. Rise	Insulation Thickness	*Pipe Size to be Heated*					
		½	¾	1	1¼	1½	2
50° F	1″	1.7	1.9	2.2	2.5	2.8	3.3
50° F	1½″	1.3	1.5	1.7	1.9	2.1	2.5
50° F	2″	1.2	1.3	1.4	1.6	1.8	2
100° F	1″	3.5	3.9	4.5	5.3	5.8	6.8
100° F	1½″	2.8	3.1	3.5	4.1	4.4	5.1
100° F	2″	2.4	2.7	3	3.4	3.7	4.3
200° F	1″	7.5	8.6	9.9	11.5	12.6	14.9
200° F	1½″	6.1	6.8	7.7	8.9	9.7	11.2
200° F	2″	5.3	5.9	6.6	7.5	8.1	9.3

For example, to maintain a fluid temperature of 150° F with a minimum ambient temperature of 50° F (temp. rise of 100° F) in an application with 1″ of insulation and a size 1 pipe, you need a heat cable with at least 4.5 watts/ft.

Self-Regulating Heat Cable

Heat Cable with Power-Connection/ Termination Kit

Heat Cable with LED Termination Kit

This cable automatically responds to surrounding temperatures to provide freeze protection and low-temperature maintenance on metal and plastic pipes and tanks. The colder it gets, the greater the heat output; as the temperature increases, the heat output decreases. A power-connection kit (sold below) is required for hardwiring.

All cable is braided copper with leads. It can be overlapped but is not suitable for burying underground. UL listed and CSA certified. **Heavy duty cable** has a plastic outer cover for added durability.

Low-Temperature Heat Cable—Maximum heat output is 150° F. All cable withstands –60° to 185° F temperatures. *Standard cable* is ½″ Wd. × 3⁄16″ Thick. *Heavy duty cable* is 9⁄16″ Wd. × ¼″ Thick.

Medium-Temperature Heat Cable—Maximum heat output is 250° F. Cable withstands –76° to 400° F temperatures and measures 7⁄16″ Wd. × ¼″ Thick. FM approved Class I, Div. 2, Groups B, C, and D.

Power-Connection/Termination Kit—Has what you need (including a junction box and a three-point DIN mount terminal block) to connect power to a run of cable. It also has an end cap, power-connection cover, and adhesive to make an end termination.

LED Termination Kit—This end termination kit has a high-visibility green LED to indicate when your cable is on.

Termination Kit—Includes an end cap, power-connection cover, and adhesive to make an end termination.

Splice Kit and T-Splice Kit—Have splice-connection covers, wire nuts, and adhesive to make an inline or T-splice connection.

Ready-to-Use Self-Regulating Heat Cable

120V AC

No need for power-connection and termination kits—an included 30″ power cord means this heat cable is ready for action. It automatically responds to surrounding temperatures to provide freeze protection on metal and plastic pipes up to 2½″ diameter. The colder it gets, the greater the heat output; as the temperature increases, the heat output decreases.

All cable is braided copper with a waterproof plastic cover. It measures 7⁄16″ Wd. × 3⁄16″ Thick and can be overlapped. Cable provides 6 watts/ft. @ 40° F and withstands –40° to 150° F temperatures. CSA certified for pipe freeze protection. **120V AC cable** has a three-prong plug. It's also CSA certified for roof and gutter de-icing applications. **240V AC cable** has leads.

Constant-Wattage Heat Cable

Heat Cable with Power-Connection/Termination Kit

Heat Cable with LED Termination Kit

Get continuous heat output for freeze protection and high-temperature maintenance on metal pipes and tanks regardless of the surrounding temperature. A power-connection kit (sold below) is required for hardwiring. A temperature controller is also required (see pages 637-639, 641).

All cable is braided copper with leads. It has a plastic outer cover for added durability and measures ½″ Wd. × 11⁄32″ Thick. UL listed, CSA certified, and FM approved Class I, Div. 2, Groups B, C, and D. Note: To prevent burnout, the cable must not be overlapped and must be in full contact with the surface being heated.

High-Temperature Heat Cable—Maximum heat output is 150° F. Cable withstands –40° to 400° F temperatures.

Ultra-High Temperature Heat Cable—Maximum heat output is 302° F. Cable withstands –60° to 500° F temperatures.

Power-Connection/Termination Kit—Has what you need (including a junction box and a three-point DIN mount terminal block) to connect power to a run of cable. It also has an end cap, power-connection cover, and adhesive to make an end termination.

LED Termination Kit—This end termination kit has a high-visibility green LED to indicate when your cable is on.

Termination Kit—Includes an end cap, power-connection cover, and adhesive to make an end termination.

Splice Kit and **T-Splice Kit—**Have splice connection covers, wire nuts, and adhesive to make an inline or T-splice connection.

Copper-Tubing Heat Cable

The ¼″ diameter copper-tubing cover on this constant-wattage heat cable offers greater water and oil resistance than rubber-covered heat cable. It's also stiff so it stays in place to protect ½″ to 24″ diameter metal pipes both indoors and out. Use this cable on oil lines and compressor drain lines. It has a maximum heat output of 220° F and withstands a maximum temperature of 450° F.

Cable provides 10 watts/ft. It operates on 120V AC, single phase and has a 6-ft. power cord with three-prong plug. Note: To prevent burnout, cable must not be overlapped.

Lg., ft.	Watts	Amps		
5	50	0.4	3566K21	$235.29
10	100	0.8	3566K22	278.85
15	150	1.3	3566K23	349.06
20	200	1.7	3566K24	398.15

Ready-to-Use Freeze-Protection Heat Cable

Set to go right out of the box, this constant-wattage heat cable has a temperature controller and 2-ft. power cord with three-prong plug. The controller turns the cable on when the temperature goes below 38° F; turns it off when it reaches 45° F. Use this cable to keep water flowing through ¾″ to 1½″ dia. plastic and metal pipes.

Cable provides 7 watts/ft. and operates on 120V AC, single phase. It's PVC, measures ½″ Wd. × 3⁄8″ Thick., and withstands –40° to 155° F temperatures. CSA certified. Note: To prevent burnout, apply cable straight along pipe. It must not be overlapped or spiraled and must be in full contact with the surface being heated.

Lg., ft.	Watts	Amps			Lg., ft.	Watts	Amps		
3	21	0.18	3554K21	$38.33	24	168	1.4	3554K27	$56.13

18	126	1.1	3554K26	52.44					

Roof and Gutter Heat Cable

Before ice begins to form, install this constant-wattage heat cable on roofs and in gutters and downspouts to prevent damage caused by ice buildup. Cable operates on 120V AC, single phase and comes with a 6-ft. power cord with three-prong plug. CSA certified. Note: To prevent burnout, cable must not be overlapped.

Cable includes enough roof clips and downspout spacers for the length ordered. Extra clips and spacers are offered below.

Cable controller turns cable on when moisture is detected and temperature drops below 39° F; turns off when moisture is no longer detected. Includes a 6-ft. power cord with three-prong plug.

To determine the length of cable you need, multiply the length of your roof by the multiplier below, based on roof overhang. For example, for a 24-ft. long roof with a 12″ overhang: 24 × 4 = 96 ft. of cable.

Overhang	Multiplier	Overhang	Multiplier
12″	4	48″	8.1
24″	5.3	60″	9.6

Ultra-Flexible Heat Cable

With 2.1 mm ID Connector

Bend, twist, or pack this 0.12″ Wd. × 0.06″ Thick. cable into tight spaces for freeze protection or added heat. It has a polymer-based fiber heating element for unbeatable flexibility. This cable can even be used around electronics because it does not produce an electromagnetic field. Use it on plastic and metal pipes. Cable provides 3 watts/ft. and withstands –30° to 221° F temps.

12V and 24V DC Cable—To Order: Please specify with leads or with a 2.1 mm ID connector. *Cable with 2.1 mm ID connector* can be used with an AC adapter (see 70235K on page 985) to convert it to AC power.

36V DC Cable—Has leads.

High-Temperature Heat Cable with Temperature Controller

Made of silicone rubber, this flexible, constant-wattage heat cable withstands temperatures from –30° to 450°F. It also has a moisture and chemical resistant outer sheath. An attached controller lets you regulate the on and off heating time of the cable, which has a maximum heat output of 450°F. Use it for thawing frozen pipes and applications requiring rapid heating. You can even use it for bending plastics.

All heat cable is 3/16″ thick, single phase, and has a 6-ft. long power cord. Note: To prevent burnout, the cable must not be overlapped and must be in full contact with the surface being heated prior to energizing.

To Order: Please specify 120V or 240V AC. *120V AC cable* includes a two-prong plug. *240V AC cable* has leads.

★ 240V AC heat cable is rated at 1,800 watts (180 watts/ft.).

High-Temperature Heat Cable

To warm up metal pipes and equipment, this constant-wattage heat cable has a maximum heat output of 900°F. It's made of flexible woven fiberglass and operates on 120V AC, single phase. UL recognized and CSA certified. Note: To prevent burnout, the cable must not be overlapped and must be in full contact with the surface being heated.

Cable with cord and plug is 0.300″ thick and withstands –50° to 900°F temperatures. **Cable with wire leads** is 0.165″ thick and withstands –100° to 900°F temperatures.

Ultra-Thin Heat Sheets

Merely 0.007″ thick, these slim heat sheets conform to any flat or curved surface and slip into the smallest gaps. All sheets are polyimide to resist stretching and tearing. An adhesive backing facilitates installation. Use them on clean, metal surfaces.

Heat sheets have 1-ft. leads for hardwiring to a temperature controller (see pages 637-639, 641). They have a maximum heat output of 300°F and withstand –40° to 300°F temperatures.

To Order: Please specify 5 or 10 watts/sq. in. where available below. *5 watts/sq. in.* is a good all-purpose choice, and *10 watts/sq. in.* is good for rapid warm-up and high-temperature applications.

Extreme-Temperature Heat Cable

With a maximum heat output of 1400°F, this constant-wattage heat cable is the highest temperature heat cable we offer. Made of fiberglass yarn, it's flexible to conform to a variety of metal, ceramic, and glass surfaces. Note: Not for use on plastic.

Heat cable is 1/8″ thick, ½″ wide, and single phase. It withstands –60° to 1400°F temperatures. For a temperature controller, see pages 637-639, 641. Note: To prevent burnout, the cable must not be overlapped and must be in full contact with the surface being heated.

To Order: Please specify 120V AC with leads, 120V AC with power cord and two-prong plug, or 240V AC with leads.

Super-Flexible Ultra-Thin Heat Sheets

You can bend these heat sheets around edges and corners without breaking the internal heating element. They're made of durable, formable aluminum foil and measure 0.20 thick.

Heat sheets have 18″ leads for hardwiring to a temperature controller (see pages 637-639, 641). They have a maximum heat output of 300°F and withstand –40° to 300°F temperatures.

Heavy Duty Silicone-Rubber Heat Sheets

For exceptional durability, the heating element is protected by a thick layer of fiberglass-reinforced silicone rubber. Use these sheets on flat and slightly curved tanks for slow, gentle warming. All heat sheets are single phase and measure 3/16″ thick. They include 4-ft. wire leads for hardwiring to a temperature controller (required for use; see pages 637-639, 641). Sheets withstand –60° to 450°F temperatures.

Adhesive-backed sheets have a nonreusable pressure-sensitive silicone adhesive. **Plain-backed sheets** can be attached with an RTV silicone adhesive (see page 3473).

Sheets for Plastic Containers—Provide 1.25 watts/sq. in. and have a maximum heat output of 185°F.

Sheets for Metal Containers—Provide 2.5 watts/sq. in. and have a maximum heat output of 450°F.

Flexible Silicone-Rubber Heat Sheets

Round with Wire Leads

Rectangular with Wire Leads

With their thin profile, these sheets conform to flat and oddly shaped surfaces. For use on metal containers, all are fiberglass-reinforced silicone rubber and measure 0.030″ to 0.070″ thick. They operate on 115V AC, single phase. Heat sheets with wire leads are UL recognized and CSA certified.

Adhesive-backed sheets are for use on clean surfaces. They have a nonreusable, pressure-sensitive acrylic adhesive and withstand –60° to 300°F temperatures. **Plain-backed sheets** can be installed with Dow Corning 736 Silicone-Rubber Adhesive (see page 3472). They withstand –60° to 450°F temperatures.

To Order: Please specify low, medium, or high watts/sq. in. where available below. *Low* is for gentle warming, *medium* is a good all-purpose choice, and *high* is for rapid warm-up and high-temperature applications.

DC Voltage Flexible Silicone-Rubber Heat Sheets

When you don't have access to electricity, these sheets run on battery power to provide the heat. Use them on metal and plastic tanks for mobile and laboratory applications. All sheets provide 5 watts/sq. in. and withstand –40° to 300°F temperatures. They have 1-ft. wire leads for hardwiring to a temperature controller (see page 641).

Adhesive-backed sheets facilitate installation and are for use on clean surfaces.

Plain-backed sheets can be attached with an RTV silicone rubber adhesive (see page 3473).

To Order: Please specify 12V or 24V DC where available below.

Silicone-Rubber Pail and Drum Band Heaters

Wrap bands around pails and drums to keep contents at desired temperatures. All are single phase and have a 6-ft. long power cord. Note: Not for use with flammable materials or in hazardous areas. *120V AC heaters* have a three-prong plug. *240V AC heaters* have leads.

3″ wide heaters withstand –40° to 450°F temps. **4″ wide heaters** have three layers of silicone rubber for durability and withstand –40° to 450°F temps. **9½″ wide heaters** maximize surface area contact and heat distribution. They withstand –40° to 392°F temps. and are good for heating substances that are sensitive to high heat concentrations. *Expansion strap* fits the heaters to drums 1½″ to 11″ larger in circumference (2 required per heater).

High-Temperature Barrel Band Heaters

Insulated with mica, these heaters provide the high temperatures you need to heat metal barrels of resins for extrusion as well as injection- and blow-molding machinery. All heaters are single phase. They have a rust-resistant steel sheath and screw terminals. Use them with a temperature controller (see 3626K and 7079K on page 638 and 7981K on page 641). Maximum heat output is 900°F. **To Order:** Please specify 120V or 240V AC.

Noncontact Pail and Drum Band Heaters for Sensitive Liquids

5-gal.

55-gal.

By warming the air around a pail or drum without coming into direct contact, these heaters eliminate hot spots to provide uniform heat to 80% of your container. Use them for heat-sensitive substances such as adhesives, sealants, and food. All heaters are thermostatically controlled and are for use on metal pails and drums only. They have an 8-ft. long power cord with the plug listed below (for illustrations of plugs, see pages 816 and 820). Note: Not for use with flammable materials or in hazardous areas.

5-gallon capacity heaters let you set a pail in from the top. **55-gallon capacity heaters** are mounted on casters and can be wrapped around a drum.

High-Temperature Nozzle Band Heaters

Able to operate in temperatures up to 1200° F, these heaters clamp around nozzles of extrusion, injection, and blow-molding machines to keep material warm. All are single phase, have leads, and should be used with a temperature controller (see 3626K and 7079K on page 638 and 7981K on page 641). Maximum heat output is 1200° F.

All heaters have a Type 430 stainless steel sheath. Choose the **mineral-insulated heaters** if you require faster warm-up times.

To Order: Please specify 120V or 240V AC.

Mica Insulated

Mineral Insulated

Pail and Drum Steel-Band Heaters

With a higher wattage output, these heaters warm up faster than silicone-rubber heaters. All are made of corrosion-resistant aluminized steel and have a spring-loaded toggle clamp for a snug fit around pails and drums. They also have a 6-ft. long power cord with plug listed below (for illustration of plugs, see page 820). UL listed and CSA certified.

Note: Not for use with flammable materials or in hazardous areas. Heaters should be positioned at the base of the pail or drum.

5″ Wide Heaters for Metal Pails and Drums— All have a dial with three heat output settings: high, medium, and low. *Heaters with a thermostat* have an adjustable thermostat that controls on and off settings. *Variable-cycle heaters* have a dial that regulates the ratio of on and off time.

9¼″ Wide Heater for Plastic Drums— Has an on/off switch and a nonadjustable thermostat that does not let the heater exceed 165° F.

Drum-Insulating Heaters

Completely cover your 55-gallon drums to speed up heating time and increase heat retention. Made of silicone-impregnated fiberglass cloth with fiberglass insulation, these heaters are good for drums stored in unheated warehouses (for indoor use only). All fit 22 5/16″ Dia. × 34″ Ht. drums, have hook-and-loop edges for secure closing, and include a 6-ft. long power cord. Note: Not for use in hazardous areas. *120V AC heaters* have a three-prong plug. *240V AC heater* has leads.

Heaters for Metal Drums— Have a 50° to 450° F temperature controller.

Heater for Plastic Drums— Has a 50° to 160° F temperature controller.

Adjustable-Diameter Silicone-Rubber Band Heaters

Nonstandard sizes are no problem—these heaters have hook-and-loop to adjust to a wide range of metal and fiberglass beakers, pails, and drums. All are single phase and have a 6-ft. long power cord. They withstand –70° to 375° F temperatures. Maximum heat output is 375° F.

To Order: Please specify 120V or 220V AC. *120V AC heaters* have a two-prong plug. *220V AC heaters* have leads.

Heated Drum Dollies

Heat 55-gallon metal drums while adding portability. A 15¼″ square plate contains the heating element. An adjustable control dial regulates the ratio of on and off time. Use these dollies to heat thick, nonflammable, and nonhazardous materials such as wax.

Dollies are 28½″ OD (24″ ID) × 6″ Ht. and hold up to 900 lbs. They have a 6-ft. long power cord with plug (for illustrations of plugs, see page 820). UL listed.

Watts	AC Voltage (Phase)	Amps	NEMA Plug

Strip Heaters

These 3/16″ thick, mica-insulated heaters deliver high heat on flat surfaces where space is limited. All are single phase and should be used with a temperature controller (see 3626K and 7079K on page 638 and 7981K on page 641). UL recognized and CSA certified.

1½″ Wide Heaters— Maximum heat output is 1200° F. All have a Type 430 stainless steel sheath and 10-24 screw terminals with ¾″ high threaded studs. Mounting holes are ¼″ dia.

3″ Wide Heaters— Maximum heat output is 900° F. All have a rust-resistant steel sheath and ¾″ high stud and nut terminals with 10-32 threads. Mounting holes are 9/32″ Lg. × 3/8″ Wd.

To Order: For all heaters, please specify 120V or 240V AC.

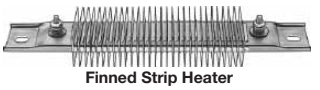
Moisture-Resistant Strip Heaters

Flat Strip Heater



Finned Strip Heater

Style A | Style B | Style C

A seamless, Type 304 stainless steel sheath protects these ceramic-insulated heaters from moisture. All withstand a max. temperature of 1200°F, are single phase, and should be used with a temperature controller (see 7981K on page 641). Size is 1½″ Wd. × 5/16″ Thick. Heaters have two ½″ Lg. × 5/16″ Wd. mounting slots and two ⅝″ high stainless steel stud and nut terminals with 10-32 threads.

Finned Strip Heaters—The fins provide a large surface area for excellent heat dissipation and rapid heat transfer. Fins measure 2″ Wd. × 1⅜″ Ht. and are nickel-plated steel. UL recognized.

To Order: For all heaters where watts/sq. in. are listed, please specify Style A, B, or C terminal configuration. Note: Style B finned strip heaters have a fin length that is approximately ¾″ longer than listed.

Moisture-Resistant Strip Heaters with Wire Leads

In addition to a Type 304 stainless steel sheath to keep moisture out, these ceramic-insulated heaters have leads for hardwiring. All are single phase and should be used with a temperature controller (see 3626K, 7079K, and 7981K on pages 638, 641). Heaters withstand a max. temperature of 1000°F. Leads withstand a max. temperature of 482°F. Size is 1½″ Wd. × 5/16″ Thick. UL recognized.

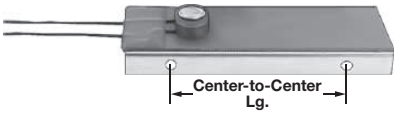
Freeze-Protection Strip Heaters



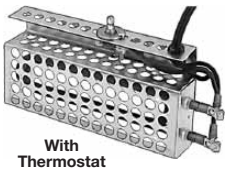
End View

A built-in thermostat maintains a set temperature to protect parts in enclosures from freezing, humidity, and condensation build-up. Made of silicone rubber, heaters are bonded to a 2″ wide aluminum plate with a ½″ wide angled mounting bracket. All operate on 115V AC, single phase and have leads for hardwiring. Mounting holes are ¼″ dia. (fasteners not included). UL recognized and CSA certified.

60-watt heaters are 6″ long with 4″ ctr.-to-ctr. between mounting holes. **120-watt heaters** are 12″ long with 10″ ctr.-to-ctr. between mounting holes.

Temp. Range	60 Watts Amps			120 Watts Amps		
40° to 60°F	0.5	3654K12	$118.63	1	3654K22	$129.44
105° to 140°F	0.5	3654K13	118.63	1	3654K23	129.44
150° to 180°F	0.5	3654K14	118.63	1	3654K24	129.44

Heavy Duty Freeze-Protection Strip Heaters



With Thermostat

These durable heaters have a Type 304 stainless steel alloy-sheathed element that's protected by a perforated steel cover. Use them on electrical panels and mechanical equipment for freeze, humidity, and condensation protection. All have 8-32 screw terminals and ⅜″ dia. mounting holes. Size is 8⅛″ Lg. × 1½″ Wd. × 3½″ Ht.

Heaters with thermostat have a temperature range of 30° to 150°F.

Cartridge Heaters

Transfer heat across metal surfaces such as plates, molds, and dies. Heaters are insulated with magnesium oxide and encased in a Type 304 stainless steel sheath. All operate on 120V AC, are single phase, have leads for hardwiring, and should be used with a temperature controller (see 3626K, 7079K, and 7981K on pages 638 and 641). Cartridges withstand a max. temperature of 1000° F. Leads withstand a max. temperature of 842° F (unless noted). UL recognized and CSA certified.

■ Leads withstand 392° F.

High-Temperature Cartridge Heaters

The heating elements are tightly wound and compressed to produce a durable heater with high heat output and resistance to impact and vibration. These heaters are insulated with magnesium oxide and encased in an Incoloy sheath. All are single phase, have leads for hardwiring, and should be used with a temperature controller (see 3626K, 7079K, and 7981K on pages 638 and 641). Cartridges withstand a max. temperature of 1400° F. Leads withstand a max. temperature of 842° F. CSA certified. Note: To calculate amps, divide watts by volts.

Braided Lead Covering—Leads have a braided stainless steel cover for added protection.

Armored Lead Covering—Leads are covered with stainless steel armor for superior protection against abrasion.

To Order: For all heaters, please specify 120V or 240V AC as well as wattage where there is more than one option listed.

Easy-Maintenance High-Temperature Cartridge Heaters

A bonded-graphite coating acts as a dry lubricant to ease insertion and removal of these heaters for cleaning. Heaters are insulated with magnesium oxide and encased in an Incoloy sheath. All operate on 120V AC, are single phase, have leads for hardwiring, and should be used with a temperature controller (see 3626K, 7079K, and 7981K on pages 638 and 641). Cartridges withstand a max. temperature of 1400° F. Leads withstand a max. temperature of 842° F. Heaters are UL recognized and CSA certified, unless noted.

Miniature High-Temperature Cartridge Heaters

With a diameter of only ⅛″, these heaters are for use with very small hot plates and dies. They are insulated with magnesium oxide and encased in an Inconel sheath. All are single phase and have leads for hardwiring. Cartridges withstand a max. temperature of 1400° F. Leads withstand a max. temperature of 480° F.

High-Temperature Cartridge Heaters with Internal Temperature Sensors

Monitor temperature at the heat source with an internal Type K thermocouple that measures from 32° to 2300° F. Heaters are insulated with magnesium oxide and encased in an Incoloy sheath. All are single phase and have leads for hardwiring. Cartridges withstand a max. temperature of 1400° F. Leads withstand a max. temperature of 480° F. Note: To calculate amps, divide watts by volts. **To Order:** Please specify 120V or 240V AC and wattage where there is more than one option listed.

Miniature Heat Exchangers

Perform high pressure condensing, evaporating, heating, and cooling in areas with space constraints. Heat exchangers have a Type 316 stainless steel shell and tube. Fluid enters the shell and flows over the tube, which heats or cools the fluid in the tube. Max. pressure is 1,000 psi shell side; 1,500 psi tube side. Max. pressure for steam is 125 psi. Max. temp. is 800° F. Pipe connections are ¼ NPT female for shell side; ⅜ NPT female for tube side. Note: Btu/hr. capacity is based on cooling 180° F process water with 85° F water and a 10 psi difference.

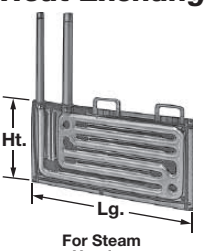
Flat-Panel Open-Tank Heat Exchangers



For Steam Heating

Quickly heat or cool fluids in open tanks. Heat exchangers have tube passageways that are embossed into both sides of the panel for the smooth flow of steam or liquids, which are used to heat or cool your tank contents. Pipe connections are NPT male and located above the fluid level, which means you can remove heat exchangers without emptying the tank. Flow capacity is 18 gpm. Heating and cooling capacity is not rated.

Steel heat exchangers have a maximum pressure of 300 psi and a maximum temperature of 500° F.

Type 316L stainless steel heat exchangers have a maximum pressure of 250 psi and a maximum temperature of 400° F.

Heat Exchangers

These heat exchangers have a shell and tube design to exchange thermal energy. Fluid enters the shell and flows over the tubes, which heats or cools the fluid in the tubes. For superior heat transfer, the tubes have baffles, which direct the fluid to make four passes through the tubes. All are for heating and cooling water. Connections are NPT female. Note: Btu/hr. capacity is based on cooling 180° F process water with 85° F water and a 10 psi pressure differential.

Steel Heat Exchangers—For cooling lube oil when brass can't be used and the corrosion resistance of stainless steel isn't necessary. All have a steel shell and copper tubes. Maximum pressure is 300 psi shell side; 150 psi tube side. Maximum temperature is 300° F.

Brass Heat Exchangers—Use these heat exchangers with fluids that are hard to heat and cool, such as oil. All have a brass shell and copper tubes. They also have corrosion inhibiting zinc rods. Maximum pressure is 300 psi shell side; 150 psi tube side. Maximum temperature is 300° F.

Stainless Steel Heat Exchangers—For heating and cooling deionized water. Maximum pressure is 225 psi shell side; 150 psi tube side. Maximum temperature is 450° F.

For additional dimensions for these heat exchangers, go to mcmaster.com and search for **3222KAC**.

Heavy Duty Heat Exchangers

Standard

In addition to excellent heat transfer, these heat exchangers have a U-shaped tube design that allows the tubing to expand and contract as necessary for durability. They're for using steam to heat water or other liquids. All have a steel shell and copper tubes. Connections are NPT female. Note: Btu/hr. capacity is based on changing water temperature from 60° to 120° F using 15 psi of steam.

Standard exchangers have a maximum pressure of 100 psi and a maximum temperature of 400° F.

ASME-code exchangers meet the American Society of Mechanical Engineers (ASME) pressure vessel code for overpressurization. Maximum pressure is 150 psi. Maximum temperature of 375° F.

Space-Saving Heat Exchangers

Standard

Consisting of stacked, corrugated plates, these exchangers are compact for more efficient heat transfer than shell-and-tube exchangers. Also known as brazed-plate exchangers, their plates are brazed in a vacuum furnace to ensure 100% sealed construction.

Standard exchangers have a maximum temperature of 350° F. They have four ⅜″-24 × ⅞″ mounting studs (except 35115K61 has two ¼″-20 × 11/16″ studs; 35115K66 and 35115K67 have four ½″-13 × 1⅜″ studs; 3253K21 has four ½″-13 × 1½″ studs). Connections are NPT male. *Copper-brazed* units have a maximum pressure of 450 psi. Plates are Type 316 stainless steel. UL listed. Note: Btu/hr. capacity is based on cooling water from 120° to 100° F using 70° F water. *Nickel-brazed* units have a maximum pressure of 300 psi. Plates are Type 316L stainless steel. Note: Btu/hr. capacity is based on cooling oil from 140° to 120° F using 70° F water.

ASME-code exchangers meet the American Society of Mechanical Engineers (ASME) pressure vessel code for overpressurization; they have a U-1 code stamp. Maximum pressure is 435 psi and maximum temperature is 450° F. Plates are Type 316 stainless steel. They have two tabs on the frame with mounting holes. Mounting holes are 9/32″ dia. for pipe size ¾ unit, 13/32″ dia. for pipe size 1 units, and ½″ dia. for pipe size 2 units. Connections are NPT male. Note: Btu/hr. capacity is based on cooling 100 SSU oil to 125° F using 85° F water.

Portable Sampling Heat Exchangers

3613K26 and 3613K22

Test high-temperature liquid samples by first cooling them to safe levels. Sample liquid enters the steel shell and flows through a series of coiled tubes. Cold water from an external water supply flows around the tubes, reducing the temperature of the liquid so it can be drawn and safely tested. Cooling and flow capacities are not rated. Connections are NPT.

Copper tubes are for use with water. **Stainless steel tubes** are for use with deionized water and corrosive liquids.

Miniature Fan-Cooled Heat Sinks

Made for light duty applications in small spaces, a built-in fan directs hot air away from the heat sink to efficiently cool any liquid running through the tubes. Fan operates on 115V AC, single phase and includes a 24" long power cord with two-prong plug. Heat sinks have flanges with 7/32" wide slots for mounting to a frame or cabinet. Maximum pressure is 150 psi. Maximum temperature is 400°F. Note: Overall size does not include tube ends.

Heat sinks **with copper tubes** are for use with water. Heat sinks **with Type 316L stainless steel tubes** are for use with deionized water and corrosive liquids. **To Order:** For all heat sinks, please specify plain tube ends or tube ends with a 37° flared fitting.

Flat-Surface Heat Sinks

Standard Pin Style

High-Efficiency Fin Style

Cool flat metal surfaces as well as electrical panels and components by dissipating heat. Heat sinks are made of black-anodized aluminum. Thermal mounting tape is included. **High-efficiency fin-style** heat sinks have more surface area to dissipate heat more efficiently.

O'all Size Lg.	Wd.	Ht.	No. of Pins/Fins		
Standard Pin Style					
1"	1"	3/8"	49 Pins	8822T11	$5.09
1 5/8"	1 5/8"	1/4"	225 Pins	8822T12	5.94

High-Capacity Fan-Cooled Heat Sinks

An aluminum bar and plate construction with louvered fins provides excellent heat transfer as a large fan allows high cooling capacities without using refrigerant. Use these heat sinks to cool hydraulic and lubricating oils in air compressors and hydraulic cylinders. Fan operates on 208-230V/460V AC, three phase and includes a junction box for hardwiring. Maximum pressure is 250 psi. Maximum temperature is 250°F. Note: Cooling capacity is based on an initial temperature differential of 50°F.

Cooling Cap., Btu/Hr.	Flow Cap., gpm	Pipe Size	O'all Size Ht.	Wd.	Dp.		
20,000	35	1 5/16	12 7/16"	15 3/4"	14 3/4"	3579K11	$944.27
25,000	40	1 5/16	16 1/4"	19 7/8"	15 5/8"	3579K12	1,130.83

Heat-Sink Compounds

These compounds operate as thermal transfer agents. **Silicone compound** has a thermal conductivity of 0.75 watt/mK at 97°F. **Dow Corning 340 silicone compound** has a thermal conductivity of 0.68 watt/mK. **Silicone-free compound** won't change its shape like silicone can. It has a thermal conductivity of 0.92 watt/mK at 97°F.

Compound Type	Temp. Range	Tube Size		
Silicone	–40° to 400°F	8 oz.	10405K79	$28.79
Dow Corning 340 Silicone	–40° to 392°F	5 oz.	10405K83	38.02
Silicone-Free	–40° to 320°F	2 oz.	3883K24	12.66

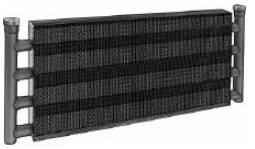
Fan-Cooled Heat Sinks

A built-in pump and internal reservoir ensure a consistent flow of cooled fluid, while a fan-cooled copper heat exchanger dissipates heat without using refrigerant. Use these heat sinks for liquid-to-air cooling of water and other noncorrosive fluids. All operate on 115V AC, single phase and include an 8-ft. power cord with three-prong plug. They are housed in a cabinet for quiet operation and to keep out debris. Maximum temperature is 131°F. Connections are NPT female. Note: Cooling capacity is based on water with an initial temperature differential of 77°F.

35205K13 has a maximum pressure of 15 psi. 35205K15 and 35205K16 have a maximum pressure of 60 psi.

Cooling Cap., Btu/Hr.	Flow Cap., gpm	Pipe Size	O'all Size Ht.	Wd.	Dp.		
4,450	1	1/2	13 5/16"	17 5/16"	15 1/8"	35205K13	$2,198.54
8,200	1.8	1/2	24"	15"	15"	35205K15	2,403.69
12,000	1.8	1/2	24"	15"	15"	35205K16	2,513.54

Radiator-Style Heat Sinks



Dozens of heat-dissipating aluminum fins and copper coolant tubes quickly transfer unwanted heat to the atmosphere. Designed for cooling oil, these heat sinks are not for use with water. Maximum pressure is 300 psi. Maximum temperature is 350°F. Connections are NPT female. Note: Cooling and flow capacities are based on 50 SSU oil, 1,000 feet per minute of air, 50°F initial temperature differential, and 10 psi pressure drop.

Mounting kits (sold separately) are recommended for installation. They include two each of the following: rubber blocks, carriage bolts, nuts, flat washers, and locknut washers.

Cooling Cap., Btu/Hr.	Flow Cap., gpm	Pipe Size	O'all Size Ht.	Wd.	Dp.	Mounting Kits Needed

About Liquid Chillers

Using refrigerant, liquid chillers provide constant, uniform cooling to temperature-sensitive equipment such as spot-welding systems, molds, lasers, X-ray diffraction equipment, and water jackets. The chillers we offer are designed to cool either water or water mixed with ethylene or glycol. They can also be used for cooling metalworking coolants or fluids.

To select a liquid chiller, determine the amount of heat (referred to as heat load) you need to remove from your process to maintain the required temperature. Heat load is typically expressed in Btu/Hr. Use the following formulas as a guide to determine the Btu/Hr. you'll need. Be sure to select a chiller that exceeds that value.

For Water: Btu/Hr. = gpm × 500 × Δtemp. °F (Difference between cooling liquid inlet and outlet temperature).

For Water Mixed with Ethylene or Glycol: Btu/Hr. = gpm × 450 × Δtemp. °F (Difference between cooling liquid inlet and outlet temperature).

Precision Circulating Process Chillers

Using refrigerant, these chillers maintain an accurate temperature between 14° and 158° F. Suitable for cooling water and ethylene glycol, all have an LED display that shows temperature, pressure, and flow for precise control of your process. Chillers have a 1.1-gallon internal tank and include an 8-ft. power cord with plug (see page 820 for plug illustrations). Maximum flow is 3.5 gpm. Refrigerant is 134A. Connections are NPT female. For indoor use only.

Btu/Hr.	AC Voltage (Phase)	Amps	Compressor hp	Pipe Size	NEMA Plug Style	O'all Size Ht.	O'all Size Wd.	O'all Size Dp.

Circulating and Open-Loop Process Chillers

6,000-9,000 Btu/Hr.

These efficient chillers offer temperature control from 40° to 100° F. Use them to cool water or water mixed with a maximum of 30% ethylene or propylene glycol. Chillers have an air-cooled condenser and a low-pressure safety control (except the 1/2- and 6-gal. circulating chillers do not have a low-pressure safety control). Those rated 12,000 Btu/Hr. and up also have a high-pressure safety control and a relief valve that ensures the pump will continue to work if flow is restricted. Chillers have screw terminals for hardwiring (except the 1/2-gal. circulating chiller has a 10-ft. power cord with three-prong plug). Refrigerant is 134A. Connections are NPT female. For indoor use only. Note: Btu/Hr. is based on 68° F liquid temperature; 80° F ambient temperature.

Circulating liquid chillers have an internal tank and are for closed-loop cooling of liquids in process equipment (except the 1/2-gal. chiller has an external tank on the back and can be used for both circulating and open-loop applications).

Open-loop liquid chillers are for cooling liquids in a process bath, coolant spray system, or an external tank. Furnished without a tank.

▲ Pump capacity is 4 gpm @ 10 psi.

High-Flow Circulating Process Chillers

5,500 and 12,000 Btu/Hr.

Equipped with a heavy duty pump, these self-contained chillers achieve higher flow rates than our other chillers for higher cooling capacities. Cooling liquid temperature is adjustable and thermostatically controlled from 50° to 95° F, except chillers rated 5,500 and 12,000 Btu/Hr. are controlled from 50° to 80° F. Use these chillers to cool plain water and water mixed with a maximum of 50% ethylene or propylene glycol. All have an air-cooled condenser, electrical controls with shut-off switch, and a liquid-level sight glass. Connect them to coolant lines and a power source to get them up and running. For indoor use only. Note: Btu/Hr. is based on 65° F liquid temperature; 95° F ambient temperature for chillers rated 5,500 and 12,000 Btu/Hr.; 90° F ambient temperature for chillers rated 24,000 to 60,000 Btu/Hr.

Chillers rated *5,500* and *12,000 Btu/Hr.* contain R134A refrigerant and have a polyethylene internal tank. They also have NPT female connections and casters. Chiller rated 5,500 Btu/Hr. has a 10-ft. power cord with a NEMA 5-20 plug; chiller rated 12,000 Btu/Hr. has a 10-ft. power cord with a NEMA L6-30 plug (see pages 816 and 820 for plug illustrations).

Chillers rated *24,000* to *60,000 Btu/Hr.* contain R407C refrigerant and have a high-density polypropylene internal tank. They also have screw terminals for hardwiring, NPT female connections, a cleanable air-intake filter, and a manual bypass valve to adjust flow.

Cold Plates

For a continuously cooled surface that provides contact cooling, connect these plates to process chillers and liquid-to-air cooling systems. All have U-shaped tubes that pass through a thermally conductive aluminum plate. Drill or tap the plate for mounting. Maximum temperature is 392° F.

Cold plates **with copper tubes** are for use with water. Cold plates **with Type 316 stainless steel tubes** are for use with corrosive as well as high-purity fluids, such as deionized water.

Glass Sights

See inside tanks, gear cases, bearing housings, and mixers. *Sights for dark liquid* have a reflector that makes liquid easy to see, especially in low-light conditions.

Brass sights are for use with hydraulic oil and water. Seal is Buna-N.

Steel sights are for use with hydraulic oil, diesel fuel, and water. Window is fused to the body.

Type 303 stainless steel sights are for use with hydraulic oil, diesel fuel, and water. Seal is Buna-N. They are more corrosion resistant than brass and steel sights.

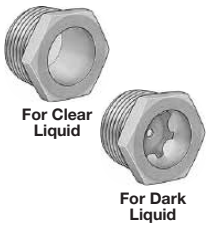
High-Pressure Glass Sights



To resist cracking at high pressures, these sights have a thick glass window fused to a metal body. Use with hydraulic oil, diesel fuel, and water. Connection is NPT male. *Sights for dark liquid* have a reflector that makes liquid easy to see, especially in low-light conditions.

Type 2205 stainless steel sights are the most corrosion resistant we offer.

Glass Sights with British Standard Threads

Often used with imported equipment, these sights have a BSPP (British Standard Pipe Parallel) male connection. They are for use with hydraulic oil, diesel fuel, and water. *Sights for dark liquid* have a reflector that makes liquid easy to see, especially in low-light conditions.

Brass and **aluminum** sights have a Buna-N seal.

Type 303 stainless steel sights have a fluoroelastomer seal and are more corrosion resistant than brass and aluminum sights.

High-Visibility Glass Sights

An indicator ball makes liquid movement and level changes easy to see from a distance. These sights also have a reflector that makes dark liquid easy to see, especially in low-light conditions. Use with hydraulic oil, diesel fuel, and water. Window is fused to a steel body. Temperature range is –40° to 250°F.

Pipe Size	Window Dia.	Hex Size	Max. psi @ 70°F

Through-Wall Glass Sights

Install these sights through an unthreaded hole in tank walls up to 1/4" thick. All mount from inside the tank and come with a locknut. Seal is Buna-N. *Sights for dark liquid* have a reflector that makes liquid easy to see, especially in low-light conditions.

Aluminum sights are for use with hydraulic oil and water.

Type 303 stainless steel sights are for use with hydraulic oil, diesel fuel, and water. They are more corrosion resistant than aluminum sights.

Plastic Oil-Inspection Sights

Vertical Mount

Horizontal Mount

Continuously monitor oil quality through a clear acrylic reservoir, and use the attached drain valve to remove water accumulation. Connection is NPT male. *Sights with a Type 304 stainless steel connection* are more corrosion resistant than sights with a brass connection.

Vertical-Mount Sights—Install through a port on the bottom of your tank. There must be enough clearance for the sight to fit below the tank base. They can also be installed through a port on the side of your tank (requires an elbow).

Horizontal-Mount Sights—In areas with limited space under equipment, install one of these sights horizontally through a port on the side of your tank.

Plastic Sights for Quick-Clamp Fittings

Sight shown assembled with gasket, quick clamp, and tube fitting (all sold separately)

These sights detach from quick clamps for easy cleaning. Quick-clamp fittings are sold separately (see pages 228-232). Use with water. The window is plastic, which is more shatter resistant than glass. Temperature range is 33° to 200°F.

Large-View Weld-On Glass Sights

With Easy-Access Window

Weld these sights to single-wall tanks to monitor contents. They're often used with process vessels, mixers, and bulk containers. Seal is silicone.

Sights with Easy-Access Window—Unscrew the viewing window from the body to clean the glass or access the tank. Sights meet DIN 11851 (dairy fitting standard). They're also for use with hydraulic oil, water, and compressed air.

Sight with Bolt-On Window—For use with hydraulic oil and water.

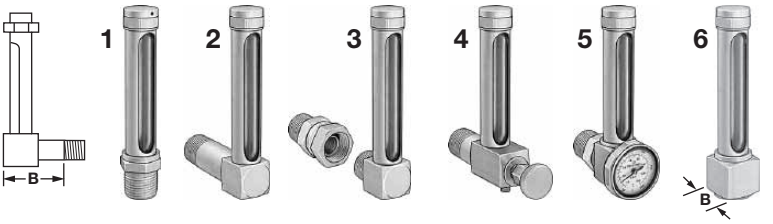
Oil-Level Indicators



For optimal viewing of oil level in gear boxes, crank cases, and other reservoirs, these indicators have gauge shields that rotate 360°. All have one tank connection and install from outside the tank. They are for use with hydraulic oil in nonpressure applications. A vent prevents pressure from building up and causing an inaccurate level display. All have a brass connection and gauge shield, a glass sight, and a Buna-N seal. Temperature range is –40° to 250° F. Connection is NPTF (Dryseal).

High-Pressure Oil-Level Indicators

Check hydraulic oil levels in pressurized applications. Indicators have a glass window. *Styles 1 & 3-5* have an aluminum body and Buna-N seals; *Style 2* have a Type 304 stainless steel body and fluoroelastomer seals. Temperature range for *Style 1* is –40° to 250°F; for *Style 2*, it's 0° to 300°F; and for *Styles 3-5*, it's –40° to 220°F.

(1-4) Indicators with threaded tank connections have 1/2"-20 UNF male connections. Mount from outside the tank. *Styles 1, 3 & 4* also include nuts for mounting through tank walls up to 1/2" thick.

(5) Indicators with through-wall tank connections install from inside the tank through two 1/2" dia. unthreaded holes and include nuts for mounting through tank walls up to 3/4" thick.

Flexible Liquid-Level Indicators

With a clear sight that bends to follow the contours of a tank, these indicators provide an unobstructed view of liquid level. Bend radius is 3 1/4". Use with hydraulic oil and water. Indicators have aluminum end blocks with steel connections. Seals are Buna-N. Temperature range is 33° to 165°F. Connections are 1/2"-20 UNF male.

Shatter-Resistant Oil-Level Indicators

For better shatter resistance than glass, these indicators have a nylon body and sight. Use with hydraulic oil. Seal is Buna-N.

Unobstructed-View Indicators—Monitor liquid level from multiple angles through the clear 13/16" dia. sight. End blocks are aluminum. Temperature range is –40° to 225°F. Connections are 1/2"-20 UNF male. Mount from outside the tank.

Indicators with Thermometer—For outdoor applications, these indicators are UV resistant. Temperature range is –65° to 212°F. Indicators install from inside the tank through two 1/2" dia. unthreaded holes and include nuts for mounting through tank walls up to 1/2" thick.

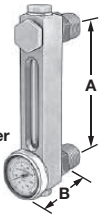
Oil-Level Indicators with NPT Connections

Install these indicators in tanks with threaded holes. Use with hydraulic oil. Window is glass.

Standard indicators have an aluminum body, brass connections, and Buna-N seals. Temperature range is –40° to 250°F.

Corrosion-resistant indicators have a Type 304 stainless steel body and connections and fluoroelastomer seals. Temperature range is 0° to 300°F.



To Order: Please specify pipe size: 1/4, 3/8, 1/2, or 3/4.

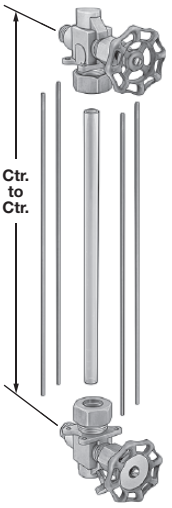
Liquid-Level Indicators & Gauge Glass

For information about pipe size, see pages 2-3.

Build-Your-Own Liquid-Level Indicators



(1) Select a Pair of Valves

Includes two valves with automatic shutoff, aluminum handles, neoprene gaskets, graphite composite stem packing, and a 3/8" NPT female drain cock with a thumbwheel handle. Use with hydraulic oil, diesel fuel, and water. Not for use with steam. Connections are NPT male. **Ductile iron** valves withstand higher pressures than bronze valves; **Type 316 stainless steel** valves are more corrosion resistant than bronze or ductile iron valves.

Pipe Size	For Glass OD	For Glass Wall Thick.	Bronze Max. psi @ 300°F★	Bronze	Bronze Pair	Ductile Iron Max. psi @ 300°F★	Ductile Iron	Ductile Iron Pair	Type 316 Stainless Steel Max. psi @ 300°F★	Type 316 Stainless Steel	Type 316 Stainless Steel Pair

★ Pressures listed are subject to the limitations of the gauge glass used.

(2) Select Your Gauge Glass

See our selection of tubular gauge glass below. To determine the length you need, subtract 2" from the center-to-center length between your valves. Then choose gauge glass based on the liquid pressure.

(3) Select a Set of Guard Rods

Construct one complete indicator with four 3/16" dia. rods. **Bronze** rods are for bronze and ductile iron valves. **Type 303 stainless steel** rods are for Type 316 stainless steel valves; they are more corrosion resistant than bronze.

Tubular Gauge Glass

Clear

Easy View

Offering good resistance to clouding and pitting, this gauge glass provides a clear view of hydraulic oil, diesel fuel, and water. Sizes over 24" long are not for use with steam. Cut to size with a glass tube cutter (see 36755A21 on page 2357). Length tolerance is ±1/16".

Easy-view glass emphasizes liquid level with a red line between two white lines on the glass.

Liquid-Level Indicators with Shutoff Valves

Shutoff valves stop flow so you can clean and replace gauge glass without removing these indicators from your equipment. Temperature range is 33° to 400° F. Connections are NPT male.

Indicators with Safety Spill Control—If gauge glass breaks, a ball check in each valve automatically closes for a temporary shutdown. The valves must be closed manually for permanent shutoff.

(1) Clog-resistant brass indicators have a needle point in the stem of the lower shutoff valve to clear the orifice as the valve closes. Use with hydraulic oil, water, saltwater, and steam. They have a 1/4" dia. drain cock, fluoroelastomer gaskets, and graphite stem packing.

(2) Type 316 stainless steel indicators are often used on expansion tanks. Use with hydraulic oil, water, and steam. They have a stainless steel drain valve, Hypalon-rubber reinforced PTFE gaskets, and PTFE stem packing.

(3) ASME-rated Type 316 stainless steel indicators conform to ASME Boiler Section I, A18 requirements. Use with alcohol-based solvents, acetic acid, and ketones as well as hydraulic oil, water, and steam. They have Type 316 stainless steel ball checks, a ball-valve style drain, Hypalon-rubber reinforced PTFE gaskets, and PTFE stem packing.

Flat Oval Gauge Glass and Gaskets

For use with armored flat-glass liquid-level gauges.

Gauge glass has a temperature range of –418° to 470° F. Maximum psi for liquid is 4,000; maximum psi for steam is 500. Gauge glass meets DIN 7080 and 7081, JIS B 8211, and MIL-G-16356D.

Gaskets are 1/16" thick. Temperature range is –40° to 600° F. Maximum psi for liquid is 1,200. Not rated for steam.

Liquid-Level Gauges

Install these gauges through the top opening of your tank or drum to check the level of hydraulic oil, diesel fuel, and water. They have an indicator with a UV-resistant acetate sight. Maximum tank/drum pressure is 70 psi. Maximum temperature is 110° F. Connection is NPT male.

Tank Gauges—They are graduated in volume fractions (Full, 7/8, 3/4, 5/8, 1/2, 3/8, 1/4, 1/8, and Empty). Float is polyethylene.

Drum Gauges—They are graduated in gallons, liters, and volume fractions (Full, 7/8, 3/4, 5/8, 1/2, 3/8, 1/4, 1/8, and Empty). Gauges with a 3/4 NPT connection have a Buna-N float; gauges with a 2 NPT connection have a polyethylene float. Gauges with a Type 316 stainless steel float rod are more corrosion resistant than gauges with a galvanized steel float rod.

To Order: For tank gauges, please specify exact tank depth within the inch ranges listed.

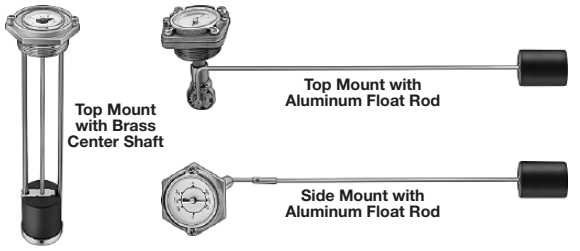
Drum Gauge

Liquid-Level Gauges & Transmitters

For information about pipe size, see pages 2-3.

Liquid-Level Gauges for Fuel



Designed for use with gasoline, diesel fuel, and fuel oil, these gauges indicate level in volume fractions (Full, 3/4, 1/2, 1/4, and Empty). They have a Buna-N float and a 2 5/16″ dia. zinc dial with a plastic lens. Temperature range is –40° to 158° F. Connection is NPT male.

Top-mount indicators with brass center shaft have zinc-plated steel guide rods.

Top- and **side-mount indicators with aluminum float rod** are UL listed MH8786 for flammable liquids. For shallower tanks, cut the rod 1/2″ to 1″ shorter than your tank depth to prevent it from touching the bottom.

Pipe Size	For Tank Depth	Max. psi		
Top Mount with Brass Center Shaft				
1 1/2	8″	25	3610K41	$58.80

Precision Liquid-Level Gauges

For liquid-level readings down to 1/8″, this gauge displays measurements on a 6″ dial face. The small hand displays feet, and the large hand displays inches. It comes with decals to mark high and low levels. Use with hydraulic oil, diesel fuel, and water.

It has an aluminum housing and a Type 304 stainless steel float and cable. Height from the top of the dial to the bottom of threads is 8 7/16″; float is 7 7/8″ long. Temperature range is 0° to 120° F. Connection is NPT male.

Pipe Size	Max. Tank Depth, ft.	Max. psi		
2	12	5	6151T83	$471.36

Liquid-Level Drum Gauges

Graduated in gallons and liters with sliding markers for calibration, these gauges keep tabs on the contents of 55-gallon drums. Vented for nonpressure applications, they are for use with hydraulic oil, diesel fuel, and water. Install through the opening of a horizontal drum, and attach a drain or valve to the second pipe connection. Gauges have an aluminum frame, a glass window, and TFE seals. Window height is 19 5/8″. Connections are NPT male.

Pipe Size	Temperature Range, °F	O'all Ht.	(B)		
PVC

Pop-Up Full-Tank Indicators

Avoid overfilling—these polyethylene indicators pop up when your tank is almost full. Use with hydraulic oil, diesel fuel, and water. Maximum pressure is not rated. Temperature range is 20° to 120° F. Connection is NPT male.

Pipe Size	O'all Ht.		
3/4	5″	3780K26	$15.31
3/4	11″	3780K27	21.37

Drop-In Liquid-Level Transmitters

Also known as level loggers, level sensors, and pressure transducers, these transmitters are designed to sit at the bottom of your tank in applications that make traditional mounting difficult. They have a 4-20 mA output signal, a 40-ft. cable, and operate on 10-35 volts DC. Accuracy is ±0.25%. Body is Type 316L stainless steel; seal is fluoroelastomer. Temperature range is –10° to 175° F. FM approved for Class I, II, and III; Division I; Groups A-G hazardous locations.

Transmitters for clean water have a nose cone that protects the sensing element from the effects of pressure surges.

Transmitters for water with solids have an unobstructed sensing element that resists clogging and sludge buildup in water with particulate and sewage.

Available Level Ranges, ft.	For Clean Water		For Water with Solids	
0-3	3450K51	$564.78	3450K31	$647.84
0-5	3450K53	564.78	3450K33	647.84
0-10	3450K55	564.78	3450K35	647.84
0-15	3450K57	564.78	3450K37	647.84
0-30	3450K59	564.78	3450K39	647.84

Noncontact Liquid-Level Transmitters

Since this ultrasonic transmitter measures liquid level with sound waves, you don't have to worry about fluid compatibility. It transmits readings with a 4-20 mA output signal. Mount at the top of your tank.

Housing is PVC and meets NEMA 4X for indoor/outdoor use and resistance to corrosive fluids and splashing water. Transmitter operates on 12-30 volts DC and has wire leads. Maximum pressure is 15 psi at 70° F. Temperature range is –40° to 140° F. Connection is NPT male.

Pipe Size	Operating Range	Dia.	Lg.		
1	4″ to 72″	4″	4 1/8″	5354K63	$579.03

Portable Sludge Indicators

Unspool the cable to lower the probe into your liquid and pull the trigger switch. When the probe encounters sludge, the indicator emits an alarm tone. The tone's pitch and volume increase with sludge thickness. Calibrate the indicator with a sensitivity control that can be set high enough to sound the alarm when the probe encounters even slightly cloudy water.

Body is aluminum. The indicator has a 33-ft. vinyl-jacketed cable that comes with marking decals. Six AA batteries are included. Temperature range is 0° to 120° F.

6164T1 ..... $1,376.92

Quick-Clamp Flow Sights

Sanitary quick-clamp connections make these sights great for food and dairy applications (see pages 228-232 for quick-clamp fittings). They are electropolished to eliminate any cavities that can collect debris. Sights also can be used with water. Flow can move in either direction and you can mount at any angle. Body is Type 316L stainless steel and window is glass. Seals are made of EPDM, are FDA compliant, and meet USP (United States Pharmacopeia) Class IV standard for food applications. Temperature range is –20° to 300° F.

Flow Sights

Designed with front and back windows for backlighting, these sights make it easy to see flow variations, even when used with dark liquid. Mount at any angle. They are for use with hydraulic oil and water, except *standard Type 316 stainless steel* sights are for use with water only. Windows are glass. Connections are NPT female.

Standard—Flow can move in either direction. *Bronze* sights have Buna-N seals. *Type 316 stainless steel* sights have PTFE seals.

Standard with Indicator—A Type 304 stainless steel flapper increases visibility of liquid movement. Seals are Buna-N. Flow can only move in one direction.

High-Temperature with Indicator—A Type 304 stainless steel flapper increases visibility of liquid movement. Seals are fluoroelastomer. Flow can only move in one direction.

High-Pressure with Indicator—A PPS flapper increases visibility of liquid movement. Flow can move in either direction.

Flow Sights for Tubing

A nylon ball indicates flow in tubing lines. Mount horizontally or vertically. Flow can only move in one direction. The sight is made out of polycarbonate and is for use with water and compressed air. Maximum pressure is 10 psi at 70°F. Temperature range is 32° to 180°F. Connections are barbed and fit 1/4" to 3/8" ID tubing.

4218K61 ..... $33.33

High-Visibility Flow Sights

For monitoring flow at a glance, these sights have an internal rotor that spins when liquid moves through your line. All mount horizontally. Use with hydraulic oil and water. Connections are NPT female.

With Glass Front Window—Sights are bronze with an acetal rotor and Buna-N seals; flow can only move from right to left.

With Plastic Front Window—All have a nylon rotor. Flow can move in either direction. *Polypropylene* sights have Buna-N seals. *Brass* and *Type 316 stainless steel* sights have fluoroelastomer seals.

With Glass Front and Back Windows—They can be backlit to increase visibility of dark liquid. *Bronze* and *high-pressure bronze* sights permit flow from right to left; *Type 316 stainless steel* sights permit flow in either direction. *Bronze* sights have an acetal rotor and Buna-N seals. *High-pressure bronze* sights have a PPS rotor and fluoroelastomer seals. *Type 316 stainless steel* sights have a Type 316 stainless steel rotor and PTFE seals.

Flow Sights

For information about pipe size, see pages 2-3.

Easy-Clean Flow Sights

Maintain a clear view without disrupting flow—twist the glass tube to clear buildup with internal wipers. When liquid moves through your line, it spins a rotor in these sights for flow monitoring at a glance. Use with water. Sights mount horizontally and permit flow in either direction. They have an acetal rotor and fluoroelastomer seals. Temperature range is 40° to 212°F. Connections are NPT female.

Type 316 stainless steel sights are more corrosion resistant than brass sights.

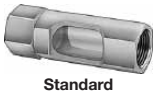
Slim-Line Flow Sights



Standard

High Visibility

A compact body lets you see flow in lines with limited clearance. Sights have a front and back glass window. Mount horizontally or vertically; flow can move in either direction. Seals are Buna-N. *High-visibility sights* have a white indicator ball that makes flow easy to see from a distance.

Brass sights are for use with hydraulic oil and water.

Zinc-plated steel and **Type 303 stainless steel** sights are for use with hydraulic oil, diesel fuel, and water. *Type 303 stainless steel* sights are more corrosion resistant than brass or zinc-plated steel sights.

Long-Length Flow Sights

With a long tubular window, these sights offer unobstructed visual inspection. Use with hydraulic oil, diesel fuel, and water. Mount at any angle. Flow can move in either direction. Type 316 stainless steel fittings and an FEP window provide excellent corrosion resistance. Temperature range is –100° to 250°F. Connections are NPT male.

High-Visibility Low-Flow Sights

Brass

Bronze

When liquid moves through these sights, indicator balls bounce in a domed window to show even small amounts of flow. Seals are Buna-N. Connections are NPT female.

Brass sights have two white balls and one green ball. Use with diesel fuel and water. Mount horizontally or vertically. Flow can move in either direction. Sights can also be panel mounted with a 2 3/8" cutout. They have a plastic window.

Bronze sights have one white ball. Use with hydraulic oil, water, and air. Sights mount horizontally and can be installed to permit flow in either direction. Window is glass.

Full-View Flow Sights

Standard

High Visibility

Monitor fluid movement, clarity, and color from multiple angles through the large cylindrical window.

Standard Sights—All are for use with water. They mount at any angle and permit flow in either direction. Connections are NPT female. *Bronze* sights have a glass window and neoprene seals. *PVC* sights have an acrylic window and fluoroelastomer seals; they provide excellent chemical resistance. *Type 316 stainless steel* sights have a glass window and PTFE seals; they are highly corrosion resistant.

High-Visibility Sights—A white indicator ball makes flow easy to see from a distance. Use with hydraulic oil and water. Mount horizontally or vertically. Flow can move in either direction when sights are mounted horizontally; when they are mounted vertically, flow must move from bottom to top to agitate the indicator ball. Sights have a brass body and a glass window. Connections are NPTF (Dryseal) female.

About Liquid-Level Switches

Activate pumps, motors, and process equipment based on the liquid level in your tank or vessel. Most of our switches can be set to empty a tank (normally open) or to fill a tank (normally closed).

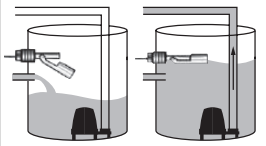
Many liquid-level switches have an amp rating too low to activate equipment directly. If your equipment has a higher amp rating than the switch you're using, you must install a relay for operation. See 47475K on page 582. For additional relays, see pages 952-962.

Selecting a Float-Style Switch—Float-style switches activate when their float is moved by the changing level of your liquid. To ensure that the float is buoyant in your application, choose a switch with a minimum specific gravity at or below your liquid's specific gravity. For example, to use a float switch with gasoline, it must have a minimum specific gravity of 0.74 or less.

Specific Gravity of Common Liquids

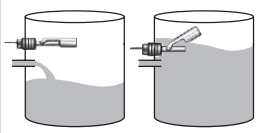
	Specific Gravity @ 70° F		Specific Gravity @ 70° F
Water	1	Gasoline	0.74
Hydraulic Oil	0.90	Butane	0.60
Ethanol	0.79	Propylene	0.52

To Empty a Tank (Normally Open)



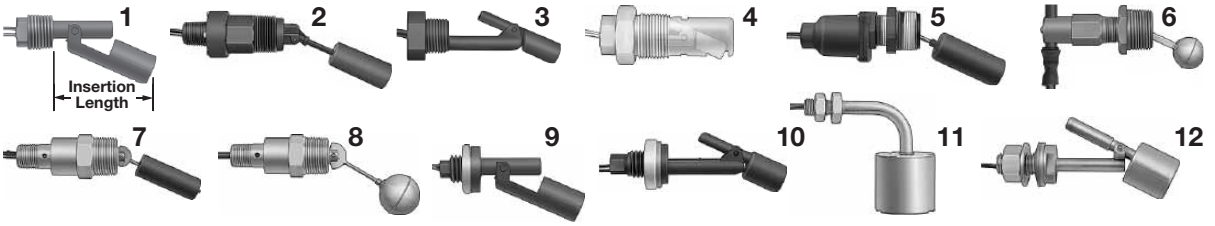
A switch installed to empty a tank (normally open) turns one circuit from "off" to "on" when the liquid level reaches the switch. In the example, the switch activates an internal pump to remove liquid from the tank.

To Fill a Tank (Normally Closed)



A switch installed to fill a tank (normally closed) turns one circuit from "on" to "off" when the liquid level reaches the switch. In the example, liquid is pumped into the tank until the level reaches the switch, which deactivates an external pump.

Horizontal-Mount Liquid-Level Float Switches



When liquid level moves the float, switches activate a pump to empty or fill a tank. They can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). *Styles 1, 3, 4, 6, & 9-12* are single pole, single throw (SPST); *Styles 2, 5, 7 & 8* are single pole, double throw (SPDT). They operate on 120/240 volts AC, unless noted. All mount horizontally through a tank wall. *Styles 4 & 11* have a shield around the float to minimize false switch activation in splashing liquid.

Choose switches with a metal body for durability in harsh conditions.

Switches with Threaded Tank Connection—Pipe and conduit connections are NPT male; spade connections are female. All switches mount from outside the tank.

Switches with Through-Wall Tank Connection—Install through an unthreaded hole in the tank wall. Switches mount from inside the tank and include a nut to secure.

■ Not rated for 240 volts AC.

Liquid-Level Switches

For information about liquid-level switches, see page 579. For information about pipe size, see pages 2-3.

Hazardous Location Horizontal-Mount Liquid-Level Float Switches

Designed for use in areas where flammable substances are present, these switches are CSA certified for hazardous locations. Please see the chart to determine which switches meet the classifications you need. Switches can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). All operate on 120/240 volts AC and have wire leads. Mount horizontally through a tank wall. Pipe and conduit connections are NPT male, except *Style 3* have an NPT female conduit connection.

Switches with a stainless enclosure are more corrosion resistant than switches with a brass enclosure. *Styles 1 & 2* have a Type 303 enclosure; *Styles 3, 4 & 5* have a Type 316 enclosure.

Styles 1, 2 & 3 are single pole, double throw (SPDT). Enclosure meets NEMA 4 for indoor/outdoor use and resistance to splashing water.

Styles 4 & 5 are single pole, single throw (SPST).

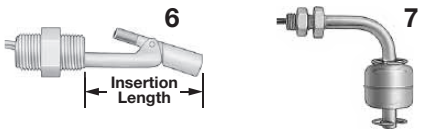
Food and Beverage Horizontal-Mount Liquid-Level Float Switches



Often used in food-processing applications, these switches meet NSF/ANSI standards. They can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches are single pole, single throw (SPST). All operate on 120/240 volts AC and have wire leads. Mount horizontally through a tank wall. Switches are CSA certified, and components are UL recognized.

Switches with Threaded Tank Connection—Pipe and conduit connections are NPT male. All switches mount from outside the tank.

Switch with Through-Wall Tank Connection—Install through an unthreaded hole in the tank wall. Switch mounts from inside the tank and includes a nut to secure.

Dual-Level Switch Kits for Liquids

Activate equipment to empty and fill your tank with a single switch. These kits include everything you need to build a custom dual-level switch: two single pole, single throw (SPST) float switches with wire leads, fittings, and cut-to-length tubing. Mount vertically at the top of your tank. Each float switch can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 120/240 volts AC. Connections are NPT male.

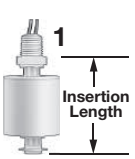
For information about liquid-level switches, see page 579. For information about pipe size, see pages 2-3.

Vertical-Mount Liquid-Level Float Switches



Automate tank emptying and filling—these switches activate pumps and other equipment when liquid level reaches the float. All are single pole, single throw (SPST). NO (normally open) switches turn one circuit from "off" to "on"; NC (normally closed) switches turn one circuit from "on" to "off"; and NO/NC switches can be installed either way. Switches operate on 120/240 volts AC and have wire leads, except *Style 6* are not rated for 240 volts AC. They mount vertically through the top or bottom of your tank, unless noted. *Styles 3 & 7* have a shield around the float to minimize false switch activation caused by splashing liquid.

Choose switches with a metal float for durability in harsh conditions.

Switches with Threaded Tank Connection—Pipe connection is NPT male. All switches mount from outside the tank.

Switches with Through-Wall Tank Connection—Install through an unthreaded hole in the tank wall. Switches mount from inside the tank and include a nut to secure.

Switches with Bracket-Mount Tank Connection—Install with two 9/32″ holes to the inside of the tank wall (fasteners not included).

Hazardous Location Vertical-Mount Liquid-Level Float Switches

For hazardous locations with flammable gases and combustible dust, these switches are UL listed and CSA certified. Both meet Class I, Groups C and D; Class II, Groups E, F, and G. Switches are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 120/240 volts AC and have wire leads. Mount vertically through the top of your tank. Pipe connection is NPT male; conduit connection is 3/4 NPT female. Enclosure meets NEMA 4 for indoor/outdoor use and resistance to splashing water.

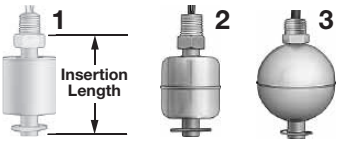
Liquid-Level Switches

For information about liquid-level switches, see page 579. For information about pipe size, see pages 2-3.

Food and Beverage Vertical-Mount Liquid-Level Float Switches



For use with food-processing equipment, these switches meet NSF/ANSI Standard 169. They are single pole, single throw (SPST) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 120/240 volts AC and have wire leads. Mount vertically through the top or bottom of your tank. They are CSA certified and have UL-recognized components, except the 1-amp switch is not CSA certified and does not have UL-recognized components. Pipe connection is NPT male. **Switches with a metal float** withstand high pressures and temperatures.

Relays for Low-Amp Liquid-Level Switches

Relay with Sealed Connections

Install one of these relays to actuate equipment that has a higher amp rating than your switch. Relays are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They can be used with any of our single pole, single throw (SPST) switches (see pages 579-582). They accept 120/240 volts AC signal input and have a terminal block connection. A 10-second time delay minimizes false switch activation in splashing liquid. Housing is plastic.

Compact relay has knockouts in the base and sides for easy cable entry. **Relay with sealed connections** meets IP65 for protection from dust and low-pressure jets.

	Temperature Range,°F	Ht.	Wd.	Dp.	Amps @ 120 volts AC		
Compact	–4° to 122°	3 3/8"	3 3/8"	1 9/16"	8	**47475K62**	$90.67
With Sealed Connections	–4° to 122°	3 3/16"	6 5/16"	2 3/8"	8	**47475K82**	189.09

Drop-In Liquid-Level Float Switches

Fixed-Level Switch for Water

Adjustable-Level Switch for Water

Adjustable-Level Switch for Thick Liquids

Hang these free-floating switches in your tank for liquid-level monitoring that doesn't require installation through a tank wall. Normally open switches turn one circuit from "off" to "on," and normally closed switches turn one circuit from "on" to "off."

Fixed-Level Float Switches—Often used to trigger an alarm, these switches have a single on/off set point. They are single pole, single throw (SPST). **Switches for water** have a three-prong piggyback switch and an ABS float. They operate on 120 volts AC and are UL listed. **Switches for thick liquids and slurries** have wire leads and a polypropylene float for buoyancy in viscous liquids. They operate on 120/240 volts AC and are CSA certified.

Adjustable-Level Float Switches—To prevent excessive switch activation in tanks with fluctuating levels, adjust the on/off set point by moving the weight along the cable or altering the cable length. Switches have wire leads and operate on 120/240 volts AC. **Switches for water** are single pole, single throw (SPST) and have an ABS float. **Switches for thick liquids and slurries** are single pole, double throw (SPDT) and have a polypropylene float for buoyancy in viscous liquids. CSA certified.

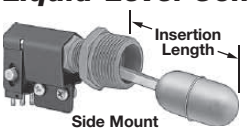
Liquid-Level Compressed-Air Switches



These switches activate with a three-way compressed air valve instead of an electrical signal. When liquid moves the float, it opens the air valve. Switches require a 30-100 psi air supply. Use with hydraulic oil, diesel fuel, and water. Stem is Type 301 stainless steel, and float is Type 304 stainless steel. Tank connection is NPT male; valve and air connections accept 3/32" ID tubing.

Switches with a Type 303 stainless steel body are more corrosion resistant than switches with a brass body.

Mounting Position	Tank Connection	Minimum Specific Gravity	Max. psi @ 70°F	Temperature Range, °F	Insertion Lg.	O'all Lg.	Brass Body		Type 303 Stainless Steel Body	
Side Mount	1 NPT	0.5	200	35° to 140°	2 7/8"	6 7/8"	**3792K31**	$299.09	**3792K41**	$343.64
Top Mount	1 NPT	0.5	200	35° to 140°	3 1/2"	7 5/8"	**3792K32**	385.64	**3792K42**	451.82

For information about liquid-level switches, see page 579. For information about pipe size, see pages 2-3.

Vibration-Resistant Liquid-Level Switches

NPT Male

BSPP Male

Since these switches detect liquid level with infrared light instead of a float, vibration in your tank won't cause false switch activation. Also known as optical switches, they sense liquid level by reflecting light into a receiver that sends an output signal to activate an alarm or control circuit. Switches are sensitive to light and should be shielded or used in enclosed tanks. They are single pole, single throw (SPST) and have wire leads. Mount horizontally or vertically. **Switches with an NPT connection** are for use with water. **Switches with a BSPP connection** are for use with acids, bases, and water. They have an external LED for visual indication of when the output signal is on.

Activates When Wet (Normally Open)—When the tip is submerged in liquid, light stops reflecting into the receiver and the output signal is activated.

Activates When Dry (Normally Closed)—When the tip is exposed to air, light reflects into the receiver and the output signal is activated.

Tank Connection	Max. psi @ 70° F	Temperature Range, °F	Insertion Lg.	O'all Lg.	Hex Size	Voltage, DC	Output Signal	Activates When Wet (Normally Open)		Activates When Dry (Normally Closed)

Level Switches for Conductive Liquids

Designed to use the properties of conductive liquid for operation, these switches activate when conductive liquid reaches two Type 316 stainless steel tips to close the circuit. These switches can be used with dirty fluid and liquid with a high solid content, but they are not for use with flammable liquids. Housing meets NEMA 6 to withstand occasional submersion. Switches have a 6-ft. cable with wire leads. They are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches mount horizontally or vertically. Tank connection is NPT male. **Standard** switches have a polypropylene body. **High-pressure** switches have a PPS body.

Tank Connection	Minimum Specific Gravity	Insertion Lg.	Amps @ 24 volts DC	Standard: Max. psi @ 70° F	Standard: Temperature Range, °F			High Pressure: Max. psi @ 70° F	High Pressure: Temperature Range, °F		
3/4 NPT	1	1 1/2"	1	85	–10° to 140°	3915K13	$205.00	290	–10° to 176°	3915K11	$215.79

External-Mount Liquid-Level Switches

For visual monitoring and easy access for maintenance, these switches are encased in a clear reservoir that sits outside your tank. Use with water and hydraulic oil. Switches are single pole, single throw (SPST). Normally open switches turn one circuit from "off" to "on," and normally closed switches turn one circuit from "on" to "off." All switches operate on 120/240 volts AC and have wire leads; they are rated for 0.4 amps @ 120 volts AC. Mount vertically. Connections are 1/2 NPT female.

Switches have a Type 316 stainless steel float, an acrylic reservoir, aluminum alloy end plates, and Buna-N gaskets. Minimum specific gravity is 0.65, and maximum pressure is 125 psi at 70° F. Temperature range is 33° to 170° F. Overall size is 3 5/16" Dia. × 6 3/8" Ht., and center-to-center height is 4 3/8".

Wired "Off" to "On" (Normally Open)	4288K51	$131.29
Wired "On" to "Off" (Normally Closed)	4288K52	131.29

Cut-to-Length Level Switches for Conductive Liquids

Dual-Level Switch

Control Box

Cut the probes for a custom fit in your tank. These switches use the conductive properties of your liquid to complete a circuit. All operate on 120 volts AC and are rated for 10 amps @ 120 volts AC. They have screw terminals. Switches are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They mount vertically and are for indoor and outdoor use. Control box is polycarbonate and probes are PTFE-encased stainless steel. Maximum pressure is 250 psi @ 70° F; temperature range is –40° to 150° F. Connection is 2 NPT male. UL listed and CSA certified. Do not use in flammable solutions.

Single-level switches detect one level change with two probes. **Dual-level** switches detect two level changes with three probes, so they can activate equipment when your tank is empty and when it's full.

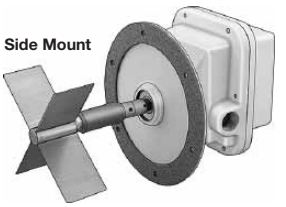
Probe Lg.	Single Level		Dual Level	
12"	46715K22	$572.85	46715K92	$675.58
18"	46715K23	642.08	46715K93	779.43
24"	46715K24	642.08	46715K94	779.43
36"	46715K25	709.08	46715K95	879.93

Noncontact Level Switches for Plastic Tanks

Since this switch monitors tank levels without touching the contents, it can be used with harsh chemicals, viscous liquids, and dry materials. It detects levels through plastic tank walls by measuring the capacitance between the switch and tank contents; it cannot be used with metal tanks. Switch is single pole, single throw (SPST) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Rated for 0.25 amps at the supply voltage, the switch operates on 20 to 240 volts AC and has wire leads. Mount horizontally or vertically with the included mounting bracket. Switch is 1 3/16" Dia. × 3" Lg. Temperature range is –13° to 176° F. UL listed and CSA certified.

4696K21		$273.17

Level Switches for Dry Materials



Side Mount

When dry material rises to the level of the rotating paddle, these switches turn equipment on or off. They are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Enclosure is aluminum; it meets NEMA 4X for indoor/outdoor use and resistance to corrosive fluids and splashing water and IP66 for resistance to dust. Switches have a Type 316 stainless steel paddle that rotates at 1 rpm. Mounting plate is steel. Conduit connection is 3/4 NPT female. UL and C-UL listed.

Safety switches have a second SPDT relay for activating an additional alarm; relay is rated for 0.46 amps @ 120 volts AC. Two LEDs can be used to test functionality and indicate switch and alarm failure while the unit is in operation.

Liquid-Level & Flow Switches

For information about liquid-level switches, see page 579. For information about pipe size, see pages 2-3.

Noncontact Liquid-Level Switches

Designed for use with corrosive, dirty, and thick liquids, these ultrasonic switches use sound waves to detect liquid level without coming into contact with your liquid. For activating several alarms or automating tank filling and emptying, these switches have three relays that can be programmed for multiple set points. They are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 95 to 250 volts AC and have screw terminals; they are rated for 0.5 amps @ 120 volts AC.

They have a polycarbonate enclosure that meets NEMA 4X for indoor/outdoor use and resistance to corrosive fluids and splashing water. Maximum pressure is 30 psi @ 70°F. Temperature range is –7° to 140°F. Tank connection is NPT male; conduit connections are ½ NPT female.

Tank Connection	Operating Range, ft.	Lg.	Wd.		
1 NPT	0.33 to 9.8	3 15/16"	5 3/16"	3785K11	$795.00

Flow Switches

These switches activate when flow in your pipeline reaches the set point. Use with hydraulic oil, diesel fuel, and water. They are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 120/240 volts AC and have wire leads; they are rated for 0.17 amps @ 120 volts AC.

Seals are fluoroelastomer. Maximum pressure is 400 psi @ 70°F; temperature range is –20° to 300°F. Mount at any angle. Components are UL recognized; switches are CSA certified and CE marked. Pipe connections are NPT female; conduit connection is ½ NPT male.

Type 316 stainless steel switches are more corrosion resistant than bronze switches.

★ Port-to-port length is 4 1/2".

Washdown Adjustable Flow Switches

For indoor/outdoor use and resistance to splashing water and corrosive liquids, these switches have an enclosure that meets NEMA 4X. Alter the activation point with the adjustment screw. Use with hydraulic oil, diesel fuel, and water.

Switches are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 0.4 amps @ 120 volts AC and have screw terminals. Switches have a bronze body and mount at any angle. Maximum pressure is 400 psi at 70°F, and temperature range is –30° to 212°F. Pipe connections are NPT female; conduit connection is a ½" through hole.

Pipe Size	Available Flow Rate Settings, gpm	Port-to-Port Lg.		
1/4	0.3-2, 0.4-3, 0.5-4	3 1/16"	2913T21	$275.12

2	5-40, 5-60, 15-100, 20-150, 30-200	3 3/16"	2913T26	366.73

Adjustable Flow Switches

When your flow rate changes, alter the set point on these switches with an adjustment screw. Use with hydraulic oil, diesel fuel, and water. They are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 120/240 volts AC and have wire leads; they are rated for 0.17 amps @ 120 volts AC.

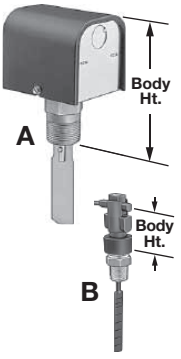
They have a bronze body and fluoroelastomer seals. Maximum pressure is 400 psi @ 70°F. Mount at any angle. Switches are CSA certified and CE marked. Pipe connections are NPT female; conduit connection is ½ NPT male.

Straight switches have a temperature range of –20° to 200°F; components are UL recognized.

Elbow switches have a temperature range of –20° to 180°F.

Fitting Type	Pipe Size	Available Flow Rate Settings, gpm	Port-to-Port Lg. (P)		
Straight	1	1-6, 2-8, 5-15	3 1/4"	4980K2	$199.74
Elbow	3/4	0.75-4, 2-8, 7-14	1 3/8"	4980K4	208.34

Insertion Flow Switches



Install these switches into a tee or pipe outlet in horizontal pipe runs. A paddle extends into the pipe and activates the switch when flow reaches the set point. Paddles can be trimmed to fit a range of pipe sizes. Flow rate varies based on pipe size and paddle used. Switches operate on 120/240 volts AC. Use with water. NPT pipe connections are male. *Switches with a stainless steel paddle* are more corrosion resistant than switches with a brass or PVC paddle.

Style A are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They have 1", 2", 3", and 6" paddles and screw terminals. UL listed and CSA certified, except outdoor switch has UL recognized parts.

Style B are single pole, double throw (SPDT) and turn one circuit from "off" to "on" (normally open). They have a 5" paddle and an 8-ft. cable.

Hazardous Location High-Flow Insertion Switches

For installing into in a tee or pipe outlet in horizontal pipelines located in areas with flammable gases and combustible dust, these switches are UL listed for Class I, Groups C and D; and Class II, Groups E, F, and G hazardous locations. All are for use with carbon dioxide, nitrogen, hydraulic oil, diesel fuel, and air. *Switches with a Type 316 stainless steel body* are also for use with natural gas and methane, and they are more corrosion resistant than brass.

All switches include 1", 1½", 2 7/16", 3½", and 5½" paddles to fit various pipe sizes; they activate when flow reaches the paddle. Flow rate varies based on pipe size and paddle used. Switches operate on 120/240 volts AC and have wire leads. Temperature range is –4° to 275°F. They are CSA certified and CE marked. Insertion pipe connection is NPT male; conduit connection is NPT female.

Switches for one circuit are single pole, double throw (SPDT). They turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). **Switches for two circuits** are double pole, double throw (DPDT). They turn two circuits from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Insertion Pipe Size	For Pipe Sizes	Flow Rate: For Air, scfm	Flow Rate: For Water, gpm	Body/Paddle Material	Max. psi @ 70°F	Amps @ 120 volts AC	Conduit Connection	For One Circuit (SPDT)		For Two Circuits (DPDT)

Hazardous Location Flow Switches

For use in areas with flammable gases and combustible dust, these switches are UL listed and CSA certified for hazardous locations, except *adjustable-flow switches* are not CSA certified. They meet Class I, Groups B, C, and D; and Class II, Groups E, F, and G; switches with a Type 304 stainless steel body also meet Class I, Group A. All switches are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 120/240 volts AC and have wire leads. Mount horizontally. Pipe connections are NPT female; conduit connections are NPT male. *Adjustable-flow switches* have adjustment screws to alter the set point.

Switches with a brass body are for use with diesel fuel, water, air, and nitrogen. **Switches with a Type 304 stainless steel body** are for use with methane, natural gas, and carbon dioxide as well as diesel fuel, water, air, and nitrogen. They are more corrosion resistant than switches with a brass body.

Low-Flow Switches

Detect even small amounts of flow in your pipeline. Switches operate on 120/240 volts AC, except the 0.1-amp switch does not operate on 240 volts AC. They have wire leads, except *Style E* have a 1/2 NPT female conduit connection. Mount horizontally or vertically, unless noted. Components are UL recognized. Pipe connections are NPT. *Switches with a metal body* withstand higher temperatures and pressures than switches with a plastic body. Type 316 stainless steel is more corrosion resistant than brass.

Styles A, B & C are single pole, single throw (SPST) and turn one circuit from "off" to "on" (normally open).

Styles D & E are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

★ Mount vertically only.

Quick-Check Flow Transmitters and Adjustable Switches

For flow monitoring at a glance, these transmitters and switches have a plastic window with a rotor that spins when flow is present. Use with water. Mount horizontally or vertically. They are CE marked and components are UL recognized. All have NPT female pipe connections and wire leads. *Transmitters and switches with a metal body* withstand higher temperatures and pressures than those with a polypropylene body. Type 316 stainless steel is more corrosion resistant than brass.

Transmitters send flow readings to a data recorder, logger, or display (sold separately on page 617) with a 70 mA output signal. They operate on 0.008 amps @ 24 volts DC.

Switches are single pole, double throw (SPDT) and can be installed to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Set the activation point with the adjustment screw. They operate on 0.3 amps @ 120 volts AC.

Flowmeters

For information about pipe size, see pages 2-3.

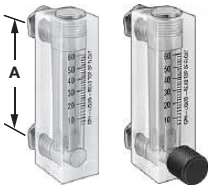
About Flowmeters and Totalizers

Flowmeters measure the rate of flow for a liquid or gas. **Totalizers** measure the cumulative flow volume. **Flowmeter/totalizers** display both the flow rate and the cumulative flow volume.

For the highest degree of accuracy, select a meter that has a flow range with your anticipated flow near the top of the range. Install an inline strainer before your meter to prevent debris from clogging your pipeline and reducing accuracy. For inline strainers, see pages 401-405.

Because valves and other restrictions in your system cause turbulent liquid flow that leads to inaccurate readings, install your flowmeter or totalizer with enough straight pipe before and after the device to ensure uniform flow.

Panel-Mount Flowmeters



Standard | Flow Control

Monitor flow rate from your instrument panel. All flowmeters have an acrylic tube and EPR seals. They mount vertically, and flow moves from bottom to top. Connections are NPT; flowmeters with two pipe sizes have internal NPT female threads and external NPT male threads. **Flowmeters for water** have a maximum pressure of 125 psi @ 70°F and a temperature range of 33° to 130°F. **Flowmeters for air** have a maximum pressure of 100 psi @ 70°F and a temperature range of 33° to 100°F.

Standard Flowmeters—*Low flow* have brass fittings. *High flow* have PVC fittings, except 41945K31 and 3281K26 have brass fittings.

Flowmeters with Flow Control—A valve at the inlet allows you to adjust the flow rate within the range. Choose Type 316 stainless steel for greater corrosion resistance than brass. *Low flow with a brass valve* have brass fittings. *High flow with a brass valve* have PVC fittings, except 41945K73 and 3281K36 have brass fittings. *All with a Type 316 stainless steel valve* have Type 316 stainless steel fittings.

Flowmeters with NIST certificate have been tested and certified to fall within a required tolerance. The certificate comes marked with a calibration date. Record the date of installation to determine when to test the flowmeter again.

Also Available: Repair kits with replacement seals. Please ask for 6766T2 and specify overall height.

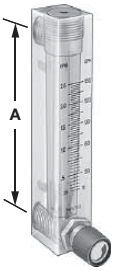
High-Accuracy Panel-Mount Flowmeters



Use these flowmeters for more accurate readings than standard panel-mount flowmeters. All have an acrylic tube and a Type 303 stainless steel valve at the inlet for adjusting flow within the range. They mount vertically, and flow moves from bottom to top.

Maximum pressure is 100 psi @ 70°F; maximum temperature is 150°F. Connections are NPT female. *Flowmeters with 1/4 NPT connections* have Type 303 stainless steel fittings and fluoroelastomer seals. *Flowmeters with 1 NPT connections* have PVC fittings and Buna-N seals.

Low-Flow Shatter-Resistant Panel-Mount Flowmeters

Standard | Flow Control

A polycarbonate tube and case make these flowmeters more shatter resistant than flowmeters with glass components. They mount vertically, and flow moves from bottom to top.

Flowmeters have Type 303 stainless steel fittings and fluoroelastomer seals. Accuracy is ±4%, and overall height is 4 13/16". Maximum pressure is 100 psi @ 70°F; maximum temperature is 150°F. Connections are NPT female.

Flowmeters with flow control have a Type 303 stainless steel valve at the inlet so you can adjust the flow rate within the range.

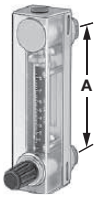
For information about flowmeters, see page 586. For information about pipe size, see pages 2-3.

Low-Flow Panel-Mount Flowmeters with Protective Case



Designed for low-flow applications, these flowmeters have a Type 304 stainless steel case with a polycarbonate window for built-in protection. They have a Type 316L stainless steel valve at the inlet for adjusting the flow rate within the range. Mount vertically; flow moves from bottom to top. Flowmeters have a glass tube, Type 316L stainless steel fittings, and fluoroelastomer seals. Maximum pressure is 200 psi at 70°F. Temperature range for water is 33° to 200°F; for air, it's 33° to 250°F. Connections are NPT female.

Pipe Size	O'all Ht.	Ctr.-to-Ctr. Ht. (A)	Accuracy	Available Flow Ranges

High-Temperature Water Panel-Mount Flowmeters

Flow Control

These flowmeters have a polysulfone tube that can withstand temperatures as high as 212°F. They have a dual scale graduated in gallons per minute and liters per minute. Fittings mount vertically into your control panel. Flow moves from bottom to top. Flowmeters have polysulfone fittings and fluoroelastomer seals. Maximum pressure is 175 psi @ 70°F. Minimum temperature is 33°F. Connections are NPT male.

Flowmeters with flow control have a polypropylene valve at the inlet for adjusting flow within the range.

Pipe Size	O'all Ht.	Ctr.-to-Ctr. Ht. (A)	Accuracy	Available Flow Ranges, gpm	Standard		Flow Control

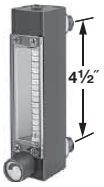
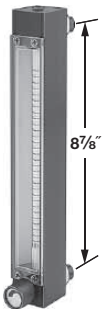
Panel-Mount Flowmeters for Liquids and Gases



Compact



Standard

Monitor the flow rate of water, compressed air, nitrogen, oxygen, argon, and helium at different pressures. These flowmeters have a correlated scale and come with conversion charts for the liquids and gases listed above in cubic centimeters per minute. A Type 303 stainless steel valve lets you adjust the flow rate within the range. They mount vertically, and flow moves from bottom to top. Maximum pressure is 200 psi @ 70°F, and maximum temperature is 200°F. Connections are NPT female.

Flowmeters have an aluminum case with a polycarbonate magnifying window for easy viewing of the glass tube. *Flowmeters with aluminum fittings* have Buna-N seals. *Flowmeters with Type 316 stainless steel fittings* have fluoroelastomer seals and are more corrosion resistant than flowmeters with aluminum fittings.

Compact flowmeters have an overall height of 5 1/2" and are often used in areas with limited vertical space. Accuracy is ±5%.

Standard flowmeters have an overall height of 10". Accuracy is ±3%.

Flowmeters with Protective Case

A Type 304 stainless steel case with a polycarbonate window protects these flowmeters from impact. Measure water (gallons per minute) or air (standard cubic feet per minute) by installing one of the two interchangeable scales. Mount vertically; flow moves from bottom to top.

Flowmeters have a glass tube, Type 316 stainless steel fittings, and fluoroelastomer seals. Maximum pressure is 200 psi @ 70°F, and temperature range is 33° to 200°F. Connections are NPT female.

Easy-to-Install Flowmeters

Quickly install and disconnect these flowmeters from your system for maintenance. They mount vertically with included union nuts, and flow moves from bottom to top. Seals are fluoroelastomer. Connections are NPT female.

Ultrapure flowmeters have no metal parts that can contaminate water-processing applications, so they are often used with deionized water. They have a polysulfone tube and PVC fittings. Accuracy is ±6%. Maximum pressure is 150 psi @ 70°F, and temperature range is 33° to 130°F.

High-flow flowmeters are designed to fit larger pipes and handle higher flow rates. They have an acrylic tube and Type 303 stainless steel fittings. Accuracy is ±5%. Maximum pressure is 100 psi @ 70°F, and maximum temperature is 150°F.

Flowmeters

For information about flowmeters, see page 586. For information about pipe size, see pages 2-3.

Inline Flowmeters

NPT Female

Install these flowmeters directly into your pipeline. They mount vertically, and flow moves from bottom to top. Flowmeters have an acrylic tube and ethylene propylene (EPR) seals. Connections are NPT. Choose flowmeters with stainless steel fittings for more corrosion resistance than flowmeters with PVC fittings.

Flowmeters for water have a maximum pressure of 125 psi @ 70° F and a temperature range of 33° to 130° F. **Flowmeters for air** have a maximum pressure of 100 psi @ 70° F and a temperature range of 33° to 100° F.

Also Available: Repair kits with replacement seals. Please ask for 6766T1 and specify overall height.

Dual-Scale Water Flowmeters

To indicate flow rate in both gallons per minute and liters per minute, these flowmeters have a dual scale. They mount vertically, and flow moves from bottom to top.

Flowmeters have an acrylic tube, polypropylene fittings, and fluoroelastomer seals. Accuracy is ±5%. Maximum pressure is 150 psi @ 70° F, and temperature range is 33° to 150° F. Connections are NPT female.

Pipe Size	O'all Ht.	Flow Range gpm	Flow Range lpm

Oxygen Flowmeters

Calibrated, cleaned, and packaged for oxygen service, these flowmeters are often used in welding applications. They have a knob for adjusting flow within the range. Flowmeters mount vertically, and flow moves from the side inlet to the bottom outlet. They have a polycarbonate tube, a brass fitting, a Type 303 stainless steel valve, and Buna-N seals. Maximum pressure is 100 psi @ 70° F, and maximum temperature is 150° F. Side inlet connection is NPT female; bottom outlet connection is barbed and fits 1/4" ID tubing.

Pipe Size	O'all Ht.	Accuracy	Flow Range, lpm		
1/8	6 7/8"	±0.2	1/8-3 1/2	3505K44	$104.56
1/8	6 7/8"	±0.4	1/4-8	3505K45	104.56
1/8	6 7/8"	±0.6	1/2-15	3505K46	104.56

For information about flowmeters, see page 586. For information about pipe size, see pages 2-3.

High-Pressure Flowmeters

A dual scale shows flow rate in both standard and metric units and rotates 360° for easy viewing. These flowmeters mount at any angle. Scale has a polycarbonate shield, except high-temperature flowmeters for hydraulic oil have a glass shield. Connections are NPTF (Dryseal) female, except pipe size 1¼ flowmeter with pressure gauge and valve for hydraulic oil, which has an NPTF male inlet and an NPTF female outlet.

Flowmeters for Water—Body is brass, fittings are Type 303 stainless steel, and seals are fluoroelastomer.

Flowmeters for Hydraulic Oil—Body is aluminum, fittings are Type 303 stainless steel, and seals are fluoroelastomer. **Flowmeters with pressure gauge and valve** test flow and pressure. Open the valve to read maximum flow at zero pressure; close the valve to test the performance of pumps or other equipment under pressurized conditions. Gauge measures pressure from 0 to 3,500 psi; dial size is 2½″ and lens is plastic.

Flowmeters for Air—Body and fittings are aluminum, and seals are fluoroelastomer. **Flowmeters with pressure gauge** measure pressure from 0 to 160 psi; dial size is 2½″ and lens is glass.

Full-View Flowmeters

Spot problems at a glance—visually inspect flow through a transparent body. The dual scale shows flow rate in both gallons per minute and liters per minute. Mount at any angle. Accuracy is ±5%. Maximum pressure is 325 psi @ 70° F, and temperature range is 33° to 200° F. Connections are NPTF (Dryseal). Choose brass fittings for more durability than polysulfone fittings.

Standard

Easy-to-install flowmeters have a union nut, so they can quickly be disassembled for maintenance and cleaning.

Clog-Resistant Flowmeters

These flowmeters are designed for use with water containing particles up to ⅛″ dia. Seals are ethylene propylene. Maximum pressure is 200 psi @ 70° F, and temperature range is –10° to 400° F. Connections are NPT.

Flowmeters with a brass and steel body are more durable than flowmeters with a brass body.

To Order: Please specify mounting and flow direction: horizontal left to right, horizontal right to left, vertical up, or vertical down.

Pipe Size	Lg.	Accuracy	Flow Range, gpm

Corrosion-Resistant PVC Flowmeters

For monitoring flow of harsh liquids such as chlorinated water, these flowmeters have a highly corrosion-resistant PVC body. An easy-to-read dial permits flow monitoring at a glance. Mount at any angle. Seals are fluoroelastomer. Maximum pressure is 200 psi @ 70° F; maximum temperature is 120° F. Connections are NPT female.

Pipe Size	Accuracy	Flow Range, gpm	2½″ Dial Size		3½″ Dial Size

Easy-Read Flowmeters

Quickly check flow rate on the large 3½" dial face. These flowmeters have a bronze body and Buna-N seals. Maximum pressure is 180 psi @ 70° F. Temperature range for water is 33° to 212° F; for air, it's –30° to 212° F.

For the most accurate readings, install these flowmeters a minimum distance of at least 10 times the pipe diameter from any fittings.

To Order: Please specify mounting and flow direction: horizontal left to right, horizontal right to left, vertical up, or vertical down.

Easy-Read High-Pressure Flowmeters

Withstanding pressures up to 3,000 psi @ 70° F, these flowmeters display flow rate on a large dial face that makes readings easy to see. Mount at any angle. Temperature range for water is 33° to 150° F; for air, it's –40° to 150° F. Connections are NPT female. Choose Type 316 stainless steel for greater corrosion resistance than aluminum or brass.

Super-Low-Flow Air Flowmeters

These flowmeters pinpoint small amounts of air in heat-treating and welding applications. They mount horizontally and have an RS-232 port and a 4-20 mA output signal for transmitting readings to a remote display.

Body is ABS plastic, and fittings are Type 316 stainless steel. Flowmeters operate on 90 to 240 volts AC and have a 5-ft. cord with a two-prong plug. Maximum pressure is 150 psi @ 70° F, and temperature range is 32° to 122° F. Connections are compression and fit ⅛" OD tubing.

Flow Range	Accuracy	Lg.

0.1-5 lpm	±3%	4 7/8"	9365K65	1,454.52

Spot-Check Portable Flowmeters

Monitor flow throughout your system. These handheld flowmeters use ultrasonic waves to check flow in liquid containing particles 100 microns (similar to flour) or larger; meters cannot read flow in particle-free liquid. They are also known as Doppler flowmeters.

These flowmeters measure fluid velocity from 0.3 to 30 feet per second and include a calculator to convert velocity to flow rate in gallons per minute. Housing is ABS and meets NEMA 12K for resistance to oil seepage and dust. Overall size is 4" Lg. × 7 11/16" Ht. × 1 11/16" Dp. Temperature range is –28° to 140° F. Batteries are included.

For Pipe Sizes	Accuracy		
¼-120	±2%	42195K9	$2,411.11
1-120	±2%	42195K8	1,733.33

Super-Low-Flow Compact Flowmeters

Flowmeter

Optional Display Meter

Small enough to fit in tight spaces, these flowmeters measure liquid flow rates down to the milliliter per minute. Use with particle-free, low-viscosity liquids up to 25 centipoise (similar to antifreeze). Mount vertically to horizontal pipe. These flowmeters produce a 0-5 VDC pulse output signal.

Body is Type 316 stainless steel, and seals are PTFE. Flowmeters operate on 8 to 30 volts DC and have a 3-ft. cable with wire leads. Overall size is 2½" Dia. × 4 5/8" Ht. Maximum pressure is 3,000 psi @ 70° F, and temperature range is –40° to 180° F. Connections are NPT female.

Optional display meter accepts flowmeter output signals and registers flow rate and total. The display can be manually reset. Meter has screw terminals. Overall size is 1 7/8" Lg. × 1" Ht. × 2 3/4" Dp.

Pipe Size	Accuracy	Flow Range, ml/min.		
¼	±1%	1-250	4126K23	$1,605.28
¼	±1%	5-1,250	4126K24	1,470.95
Optional Display Meter			4126K38	234.48

Water Flowmeters for PVC Pipe

Install these flowmeters without disassembling your pipeline—drill a ⅝" dia. hole in horizontal pipe and use the included clamps to mount. Flowmeters have an acrylic body and a neoprene seal. Temperature range is 33° to 190° F.

Flowmeters for Schedule 40 PVC pipe have a dual scale that shows flow rate in both gallons per minute and liters per minute. Maximum pressure is 150 psi @ 70° F.

Flowmeters for Schedule 40/Schedule 80 PVC pipe have a dual scale that shows flow rate in gallons per minute for each schedule. Maximum pressure is 75 psi @ 70° F.

■ Schedule 40/Schedule 80

For information about flowmeter/totalizers, see page 586. For information about pipe size, see pages 2-3.

High-Accuracy Flowmeter/Totalizers

View flow rate in gallons per minute or liters per minute and register total flow volume up to 999,999 total units with these flowmeter/totalizers. Cumulative total flow volume is nonresettable; batch total volume can be reset. They mount horizontally or vertically. They are calibrated for water but can be calibrated for other liquids with viscosities from 1 to 100 centipoise.

Flowmeter/totalizers have Type 316 stainless steel seals. Temp. range is 14° to 140°F. Connections are NPT female. All meet NEMA 4 for indoor/outdoor use and resistance to splashing water; they are also FM approved as intrinsically safe for Class I, Div. 1 hazardous locations with flammable gases or vapors. Two 3-volt lithium batteries are included.

Flowmeter/totalizers with NIST certificate come with a calibration certificate traceable to NIST and includes the test measurements that confirm accuracy.

Optional Output Modules—Transmit output signals to an external device such as a data recorder, logger, or remote display (not included). Both modules include 10 feet of cable with wire leads and are for use with brass and Type 316 stainless steel flowmeter/totalizers. **Pulse output module** transmits a pulse signal to your external device from up to 5,000 feet away. **4-20 mA output module** transmits a 4-20 mA signal to your external device and comes with a circuit assembly.

Optional Remote Panel-Mounting Kit—Mount the meter's display up to 100 feet away. Kit includes a sensor module and 10 feet of cable with wire leads.

Water Flowmeter/Totalizers for PVC Pipe

With NPT Female Connections

With Unthreaded Male Pipe End Connections

Monitor water flow in Schedule 80 PVC pipe. Flowmeter/totalizers show flow rate in gallons per minute or liters per minute and register total flow volume up to 999,999 total units. Cumulative total flow volume is nonresettable; batch total volume can be reset. Mount horizontally or vertically. They have a PVC body and Type 316 stainless steel seals. Maximum pressure is 225 psi @ 70°F; temperature range is 33° to 140°F. Two 3-volt lithium batteries are included.

Flowmeter/totalizers with NPT female connections fit Schedule 80 threaded pipe.

Flowmeter/totalizers with unthreaded male pipe end connections fit Schedule 80 unthreaded pipe fittings; connect with PVC cement and primer.

Flowmeter/totalizers with flange connections bolt to ANSI Class 150 flanges of the same pipe size. *Pipe size 3* has a 7 1/2″ OD with a 6″ dia. bolt circle and requires four 5/8″ bolts. *Pipe size 4* has a 9″ OD with a 7 1/2″ dia. bolt circle and requires eight 5/8″ bolts.

Remote-Monitoring Water Flowmeter/Totalizers for PVC Pipe

Display

Sensor

Tee Fitting

Check water flow rate and volume from up to 25 feet away. For a complete unit, order a display, a sensor, and a tee fitting. Use in Schedule 80 unthreaded pipe. Maximum pressure is 180 psi at 70°F, and temperature range is 33° to 149°F.

Display

View flow rate in gallons or liters per second, minute, hour, or day. The display meets NEMA 4X for indoor/outdoor use and resistance to corrosive fluids and splashing water. Accuracy is ±0.5%. Designed for panel mounting, the display is 1/4 DIN (96 mm×96 mm×41 mm). Batteries are included. *Optional surface-mounting bracket* has four 3/16″×3/4″ mounting slots.

Display	4114K335	$633.62
Optional Surface-Mounting Bracket	4114K94	39.66

Sensor

Install this sensor in a tee fitting (sold separately below). Body is polypropylene and seal is fluoroelastomer. Sensor includes 25 feet of cable with wire leads. Accuracy is ±1%. Connection is 1 1/4 NPSM; sensor fits 1/2 to 3 pipe sizes.

4114K222		$434.62

Tee Fittings

Mount these PVC fittings in horizontal or vertical pipe. Connections are unthreaded female socket end; connect with PVC cement and primer.

Pipe Size	Flow Range, gpm		
1/2	1-18.9	4114K231	$153.85
3/4	1.7-33.2	4114K232	153.85

3	23-460.8	4114K238	299.04

Flowmeters & Totalizers

For information about flowmeters and totalizers, see page 586. For information about pipe size, see pages 2-3.

Splash-Resistant Water Flowmeters and Totalizers

The display has an enclosure that meets NEMA 4X for outdoor use and protection against splashing water. All flowmeters and totalizers mount horizontally and have a polypropylene body and a fluoroelastomer seal. Maximum pressure is 300 psi @ 70° F, and temperature range is 33° to 200° F. Batteries are included. Connections are NPT male.

Flowmeters measure flow rate in gallons per minute. **Totalizers** register total flow volume up to 999,999 gallons. Total flow volume can be reset to zero; reset function can be disabled to prevent tampering. **Flowmeter/totalizers** perform both functions.

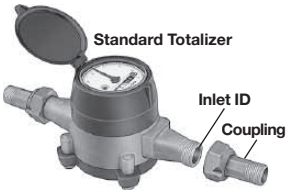
Drinking-Water Totalizers



Often used for cold-water service, these totalizers meet NSF/ANSI Standard 61 and have a low-flow indicator to detect leaks in the system. All have a nonresettable dial that measures total flow volume. Totalizers mount horizontally. They have a brass body, bronze fittings, and an EPR seal. Maximum pressure is 150 psi @ 70° F; temperature range is 33° to 80° F. All come with NPT couplings.

Standard—Coupling connections are NPT male. *Totalizers* register up to 10,000,000 gallons. *Totalizers with a remote display* register up to 99,999,999 gallons.

High Volume—Coupling connections are NPT female. *Totalizers* register up to 100,000,000 gallons. *Totalizers with a remote display* register up to 99,999,999 gallons.

Totalizers with a remote display can be read up to 1,000 feet from the totalizer in environments where the dial face is difficult to access. Battery included. *Cable for remote display* (sold separately below) connects the display to the totalizer.

High-Flow Flanged Drinking-Water Totalizers

Designed for large pipes and high flow rates, these totalizers meet NSF/ANSI Standard 61 for drinking water. They are often used for cold-water service and have a nonresettable dial that measures total flow volume up to 99,999,000 gallons. Totalizers mount horizontally. They have a bronze body and a Buna-N seal. Maximum pressure is 175 psi @ 70° F, and temperature range is 33° to 150° F. Connections are flanged.

Totalizers with round flanges are drilled to accommodate ANSI 150-lb. flanges.

Pipe Size	Lg.	Accuracy	Flange OD	Bolt Circle Dia.	Bolt Holes, Qty.	Hole Dia.	Flow Range, gpm		
With Elliptical Flanges—For Centrifugal Pumps

Corrosion-Resistant Cold-Water Totalizers

To stand up to deionized water and reverse-osmosis processes, these totalizers have a corrosion-resistant nylon body. A nonresettable dial measures total flow volume up to 9,999,999 gallons. Mount horizontally. Seal is Buna-N. Maximum pressure is 100 psi @ 70° F, and temperature range is 35° to 120° F. Totalizers come with NPT male couplings.

Inlet ID	Coupling Pipe Size	Lg.	Accuracy	Flow Range, gpm	Totalizers		Replacement Couplings	
5/8"	1/2	10"	±1.5%	0.25-13	4119K41	$147.27	4119K77	$24.00
3/4"	3/4	11 1/2"	±1.5%	0.25-22	4119K42	161.82	4119K79	24.00
3/4"	1	10 3/4"	±1.5%	0.75-50	4119K43	221.82		

Hot-Water Totalizers

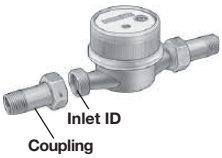
Measure the flow volume of water up to 194° F. These totalizers have a nonresettable dial that records up to 99,999,900 total gallons. They mount horizontally and have a bronze body with a rubber seal. Maximum pressure is 150 psi @ 70° F, and temperature range is 33° to 194° F. Totalizers come with NPT male couplings.

Inlet ID	Coupling Pipe Size	Lg.	Accuracy	Flow Range, gpm		
1"	3/4	7 1/2"	±1.5%	0.22-22	9817K13	$205.42
1 1/4"	1	10 1/4"	±1.5%	0.44-52	9817K14	332.92
2"	1 1/2	11 3/4"	±1.5%	0.88-88	9817K15	786.25

For information about totalizers, see page 586. For information about pipe size, see pages 2-3.

Corrosion-Resistant Hot-Water Totalizers

For metering mildly acidic water, these totalizers have a nickel-plated brass body that resists corrosion. A nonresettable display registers total flow volume up to 9,999,999.9 gallons. Mount horizontally or vertically. Seal is fluoroelastomer. Maximum pressure is 150 psi @ 200° F, and temperature range is 32° to 200° F. Totalizers come with NPT male couplings.



Inlet ID	Coupling Pipe Size	Lg.	Accuracy	Flow Range, gpm		
1/2"	1/2	9 5/8"	±1.5%	0.1-13	4115K41	$166.00
3/4"	3/4	10 1/8"	±1.5%	0.2-20	4115K42	178.00

Water and Fuel Totalizers

Track your system's total flow volume up to 9,999 units; these totalizers reset to zero when they reach the maximum reading. They mount horizontally or vertically and have Type 316 stainless steel seals. Batteries are included. Connections are NPT female.

Totalizers for water have a nylon body. Temperature range is 33° to 130° F.

Totalizers for fuel have an aluminum body and are for use with kerosene, gasoline, and diesel fuel. Temperature range is 14° to 130° F.

Pipe Size	Accuracy	Flow Range	For Water: Max. psi @ 70° F			For Fuel: Max. psi @ 70° F		
1	±5%	3-30 gpm	150	9978K75	$180.42	300	9978K77	$180.42
1	±5%	10-100 lpm	150	9978K76	180.42	300	9978K78	180.42

High-Accuracy Oil Totalizers

Measure the flow volume of hydraulic and motor oil with ±0.5% accuracy. These totalizers register total flow volume up to 999,999.9 units; they can be programmed to display readings in ounces, gallons, or liters. They activate automatically or manually and automatically shut down 40 seconds after flow stops. Totalizers mount at any angle and have a fluoroelastomer seal. Batteries are included. Connections are NPT male.

Totalizer with a Type 316 stainless steel body is more durable than the totalizer with a nylon body.

Pipe Size	Ht.	Wd.	Dp.	Max. psi @ 70° F	Temperature Range, °F	Flow Range, gpm		
Nylon Body								
1	5"	6"	4"	60	33° to 130°	2-30	41935K49	$233.46
Type 316 Stainless Steel Body								
1	6"	5"	4"	100	33° to 185°	2-30	41935K98	366.15

High-Accuracy Fuel Totalizers

For use with gasoline, diesel fuel, and kerosene, these totalizers have ±2% accuracy. They display total flow volume (up to 999,999.9 units; nonresettable) and batch total volume (up to 999.9 units; resettable). Mount horizontally or vertically. Both have an aluminum body, Buna-N seals, and a 10×10 mesh strainer. Temperature range is –20° to 125° F. Connections are NPT female.

Pipe Size	Ht.	Wd.	Dp.	Max. psi @ 70° F	Flow Range		
1	7"	8"	6"	50	5-30 gpm	9854K11	$211.00
1	7"	8"	6"	50	19-114 lpm	9854K12	211.00

High-Pressure Grease Totalizers

Accurately monitor grease dispensing to reduce waste at pressures up to 10,000 psi @ 70° F. Install this totalizer on a grease gun or valve. It can measure usage in ounces, grams, or cubic centimeters; reset the display to zero after each application. Body is aluminum, and seal is neoprene. Temperature range is –4° to 130° F. Battery is included. Connections are NPT female.

Pipe Size	Ht.	Wd.	Dp.	Accuracy		
1/8	2 1/2"	3"	2 1/2"	±3%	6727T11	$569.20

Calibration Columns

Use these clear tubes to calibrate flow rates on metering pumps. They have a PVC body and fittings and a scale graduated in gallons per hour. Temperature range is 32° to 140° F. Connections are NPT female.

Pipe Size	Ht.	Tube Volume, ml	Flow Range, gph		
1/2	12 1/2"	100	0-1.5	4446K71	$51.26
1/2	16 1/4"	250	0-4	4446K72	56.73

2	46"	20,000	0-320	4446K78	533.79

Natural Gas Totalizers

Meter natural gas with ±1% accuracy. These totalizers have a nonresettable display that registers total flow volume up to 999,900 cubic feet. Mount horizontally. They have an aluminum body and a Buna-N seal. Temperature range is –30° to 140° F. Connections are NPT.

Pipe Size	Ht.	Wd.	Dp.	Max. psi @ 70° F	Flow Range, cu. ft./hr.		
3/4 female	13"	9"	9"	5	0-250	4360K21	$239.80
1 1/4 male	13"	9"	9"	10	0-425	4360K22	593.80

About Pressure Gauges

Install gauges in pipelines and tanks to measure and display pressure. Consider the following in your selection:

Type of Gauge & Application

Pressure gauges measure positive pressure. The most common type of gauge, they're used with pumps, filters, regulators, and in process lines.

Vacuum gauges measure negative pressure (vacuum). They're used with vacuum pumps, packaging equipment, and in suction lines.

Compound gauges measure both pressure and vacuum. Use compound gauges with compressors, refrigeration equipment, and in pump start-up applications.

Differential gauges display the difference between two pressure measurements. They're often used with air-handling equipment to control ventilation for clean rooms and fume hoods.

Connection Material & Process Media

Choose a gauge with a **brass connection** for use with noncorrosive liquids and gases, such as air and water. For corrosive environments that could damage brass, choose a gauge with a **stainless steel connection**. If you require additional protection, use a *gauge guard* (page 609) between the process media and gauge.

For steam and other high-temperature media, install a *siphon tube* (page 609) to protect your gauge. Also known as a pigtail, the tube is filled with water to provide a protective barrier between the internal parts of the gauge and high-temperature media.

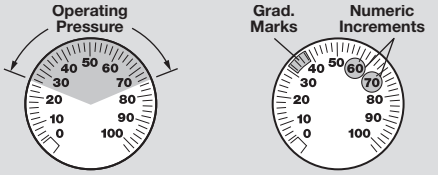
Dry or Liquid-Filled

Gauges with a dry dial work well for most applications. For environments prone to vibration, consider a gauge with a liquid-filled dial. They suppress needle flutter for more precise readings. They're also good for use in pipelines that incur pressure spikes because they absorb some of the shock, which may prevent damage to the gauge.

Pressure Range & Dial Face

Choose a range that is about double the normal operating pressure of your application. Your maximum operating pressure should not exceed 75% of the maximum pressure of the gauge.

When replacing an existing gauge, use the graduation marks and numeric increments to select a matching dial face.



Accuracy

Mid-scale accuracy applies to readings that fall between 25% and 75% of the pressure range. *Full-scale accuracy* applies to readings for the entire pressure range.

Gauges with 5% to 2% accuracy are the most commonly used.

Gauges with 1.6% to 1% accuracy are typically required for critical processes, such as food processing and hydraulics.

Gauges with 0.5% to 0.05% accuracy are suitable for testing, laboratory, and calibration applications.

NIST Certification

Many gauges are available with a certificate of calibration traceable to the National Institute of Standards and Technology (NIST). It verifies that the gauge has been tested against a NIST-certified gauge and falls within a required tolerance. The certificate comes marked with a calibration date, which is the actual date of certification. Record the date you install the gauge to determine when to test it again.

Multipurpose Gauges

Single Scale with Bottom Connection

Bottom Connection with Cover

Dual Scale with Center Back Connection

Panel Mount Connection (Back View)

- Use with air, water, hydraulic oil, ethyl alcohol, natural gas, and nitrogen
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (Grade B)

Our most popular gauges for pressure readings in a wide variety of applications. Lens is impact-resistant polycarbonate. Temp. range is –40° to 150° F. *Gauges with cover* have a rubber sleeve to protect the case from impact.

ABS-plastic-case gauges are more corrosion resistant than steel-case gauges. All have a single scale that displays pressure in psi. *Gauges with NIST certificate* come with a certificate of calibration traceable to NIST.

Steel-case gauges are more impact resistant than ABS-plastic-case gauges. *Single scale* display pressure in psi; *dual scale* display pressure in psi and kPa.

Available Pressure Ranges

Pressure Range psi	Pressure Range kPa	Grad. Marks, psi	Num. Inc., psi
0- 15	0- 100	0.5	1
0- 30	0- 200	0.5	5
0- 60	0- 400	1	5
0-100	0- 700	2	10
0-160	0-1,100	5	20

★ Available only in pressure ranges up to 1,000 psi.

Metric Gauges with BSPT Threads

- Use with air, water, hydraulic oil, carbon dioxide, and natural gas
- Pipe Connection: Brass BSPT male
- Accuracy: ±2% mid scale (Grade B)

Center Back Connection

Keep an eye on the pressure of your imported equipment with BSPT (British Standard Pipe Taper) threads. Gauges have a dual scale that displays pressure in psi and kPa. Case is ABS plastic and lens is polystyrene. Temp. range is –4° to 140° F.

Miniature Gauges

- Use with air, water, hydraulic oil, ethyl alcohol, natural gas, and nitrogen
- Pipe Connection: Brass NPT male or brass BSPT male
- Accuracy: ±5% full scale (Grade D)

With a dial that's less than an inch in diameter, these gauges work well in tight spots. Case is ABS plastic and lens is impact-resistant polycarbonate. Temperature range is –40° to 150° F.

Available Pressure Ranges (psi)

High-Pressure Miniature Gauges

- Use with air, water, hydraulic oil, and natural gas
- Pipe Connection: Nickel-plated brass NPT male
- Accuracy: ±5% full scale (Grade D)

Monitor high-pressure applications that are low on space. Case is nickel-plated brass and lens is impact-resistant polycarbonate. Temperature range is –50° to 160° F.

Brass-Case Gauges

- Use with air, water, and hydraulic oil
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (Grade B)

A brass case provides good water resistance. Gauges have a dual scale that displays pressure in psi and kPa. Lens is acrylic. Temperature range is –40° to 140° F.

Square Panel-Mount Gauges

- Use with air, water, hydraulic oil, carbon dioxide, and natural gas
- Pipe Connection: Brass NPT male and UNF female
- Accuracy: ±2.5% full scale (not graded)

Fit square cutouts in your instrument panel. Gauges are dual threaded with NPT male and UNF female threads for either connection. Case is ABS plastic and lens is acrylic. Temperature range is 0° to 140° F.

Available Pressure Ranges (psi)

Top-Connect Gauges

- Use with water
- Pipe Connection: Brass GHT female
- Accuracy: ±2% mid scale (Grade B)

Get pressure readings from faucets and hose—gauges have garden hose threads (GHT) and a top connection. They have a dual scale that displays pressure in psi and kPa. Case is black-painted steel and lens is acrylic. Temperature range is 32° to 160° F.

Pressure Gauges with Brass Connection

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Compact Digital Gauges

- Use with air, carbon dioxide, hydrogen, natural gas, and nitrogen
- Pipe Connection: Brass NPT male
- Accuracy: ±1% full scale (Grade 1A)

Small and versatile, these gauges are commonly used on pneumatic regulators, filters, and compressors. Set the 4-digit LCD for digital pressure readings in psi, bar, MPa, or Kg/cm2. Gauges are powered by a 3-volt lithium battery (included) and shut off after five minutes to extend battery life. Lens and case are ABS plastic. Temperature range is -10° to 140° F.

Stainless Steel-Case Gauges

Center Back Connection

- Use with air, water, hydraulic oil, ethyl alcohol, natural gas, and nitrogen
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (Grade B)

Corrosion resistance is combined with impact resistance for durability in harsh environments—case is Type 304 stainless steel and lens is polycarbonate. Temperature range is –40° to 150° F. 4003K93 fits a 2$^{35}/_{64}$″ dia. panel cutout; 4003K95 fits a 3$^{31}/_{32}$″ dia. panel cutout.

Colored-Case Gauges

- Use with air, water, hydraulic oil, and natural gas
- Pipe Connection: Brass NPT male
- Accuracy: ±1% full scale (Grade 1A)

Measure pressure while using color to identify an important spot in your process line. Gauges have a dual scale that displays pressure in psi and kPa. Case is polyester and lens is impact-resistant polycarbonate. Temperature range is –40° to 150° F.

Available Pressure Ranges

Pressure Range psi	Pressure Range kPa	Grad. Marks, psi	Num. Inc., psi	Pressure Range psi	Pressure Range kPa	Grad. Marks, psi	Num. Inc., psi

Compact Stainless Steel-Case Gauges

- Use with air, water, hydraulic oil, ethyl alcohol, natural gas, and nitrogen
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (not graded)

Small and durable, these gauges minimize needle bounce from shock and vibration for precise readings. They have a corrosion-resistant Type 304 stainless steel case with an impact-resistant polycarbonate lens. Temperature range is –40° to 150° F.

Available Pressure Ranges (psi)

Low-Pressure Gauges

Bottom Connection

- Use with air, water, hydraulic oil, carbon dioxide, and natural gas
- Pipe Connection: Brass NPT male
- Accuracy: ±1.5% full scale (not graded)

Get the right gauge to measure small pressure changes in ventilation systems. Case is black-painted steel and lens is acrylic. Temperature range is –4° to 140° F.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

Fire-Sprinkler-System Gauges

- Use with: See table
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (Grade B)

UL 393 listed for use with fire-protection service equipment. Case is ABS plastic and lens is impact-resistant polycarbonate. Temp. range is –40° to 150° F. Gauges are FM approved.
Gauges for use with water are for systems with lines that are always filled with water.
Gauges for use with air and water are for systems that are dry from 0-79 psi and fill with water at 80 psi.

For Air and Water

Use With	Dial Size	Pipe Size	Pressure Range, psi	Grad. Marks, psi	Numeric Increments, psi	Bottom Connection	
Water	3½"	¼	0-300	5	30	3806K11	$16.20

Welding and Compressed Gas Gauges

- Use with air, acetylene, carbon dioxide, and oxygen
- Pipe Connection: Brass NPT male
- Accuracy: ±2% mid scale (Grade B)

Monitor the pressure of compressed gas when welding. Gauges come cleaned to ASME B40.1, Level IV. Case is brass and lens is impact-resistant polycarbonate. Temp. range is –40° to 140° F. Gauges with a max. pressure up to 1,000 psi are UL 252A listed; gauges with a max. pressure of 2,000 psi and above are UL 404 listed.

Pump Gauges with Feet of Head Scale

- Use with air, water, and hydraulic oil
- Pipe Connection: Brass NPT male
- Accuracy: ±1% full scale (Grade 1A)

Keep tabs on liquid levels in pump and tank applications—a dual scale displays pressure in feet of H_2O and psi. Case is aluminum and lens is glass. Temperature range is –40° to 180° F. Flange has three holes for mounting. Fasteners are not included.

Pressure Gauges with Brass Connection

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Low-Pressure Gauges with Safety Case

- Use with air, argon, natural gas, and nitrogen
- Pipe Connection: Brass NPT male
- Accuracy: ±1% mid scale (Grade A)

Minimize the hazard of excess pressure—case blows out in the back to protect operators in front. All have a dual scale. Choose from gauges with inches of H_2O/oz./inch^2 and gauges with psi/inches of Hg. Case is polyester and lens is acrylic. Environment temperature range is –4° to 140° F and process temperature range is –40° to 212° F. Has three 1/4″ dia. holes for mounting (fasteners not included).

Available Pressure Ranges (inches of H_2O/oz./inch^2)

High-Accuracy Test Gauges

With 1/4 Pipe Size

- Use with air, water, hydraulic oil, and natural gas
- Pipe Connection: Brass NPT male
- Accuracy: ±0.5% full scale (Grade 2A)

Often used for testing and calibration, the dual scale displays pressure in psi and kPa. Gauges have an aluminum case and glass lens. Temperature range is –40° to 150° F. Gauges have three bolt holes for mounting (fasteners not included).

Large Dial Boiler Gauges

With Back Flange

- Use with air, water, and hydraulic oil
- Pipe Connection: Brass NPT male
- Accuracy: ±1% full scale (Grade 1A)

Read your pressure from a distance. *Gauges with 8 1/2″ dial* have a black-painted aluminum case and glass lens. Temperature range is –40° to 180° F. Flange has a 10 1/4″ OD, three 13/64″ dia. bolt holes, and a 9 5/8″ dia. bolt circle (fasteners not included).

Gauges with 10″ dial have a dual scale that displays pressure in psi and bar. Case is black-painted steel and lens is glass. Temperature range is –40° to 140° F.

Max-Indicating Liquid-Filled Gauges

- Use with air, carbon dioxide, ethanol, hydraulic oil, natural gas, and water
- Pipe Connection: Brass NPT male
- Accuracy: ±1.5% full scale (not graded)

Center Back Connection

You can't monitor your system at all times, so these gauges have a red needle that indicates the highest pressure reached since the last setting. Gauges have a glycerin-filled dial to reduce needle flutter in environments prone to vibration. Case is brass and lens is acrylic. Temperature range is 0° to 140°F. 3842K81 and 3842K83 fit a 2½" dia. panel cutout.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

Pressure Gauges with Brass/Stainless Steel Connection

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Compact Liquid-Filled Gauges

- Use with air, water, hydraulic oil, carbon dioxide, and natural gas
- Pipe Connection: Brass NPT male
- Accuracy: ±2.5% full scale (not graded)

Get more accurate readings in tight locations that are prone to vibration—these small gauges have a glycerin-filled dial to suppress needle flutter. Case is ABS plastic and lens is acrylic. Temperature range is –4° to 140° F.

Available Pressure Ranges (psi)

Pressure Range	Grad. Marks	Numeric Increments	Pressure Range	Grad. Marks	Numeric Increments

Stainless Steel-Case Liquid-Filled Gauges

Center Back Connection

- Use with air, water, and hydraulic oil
- Pipe Connection: Brass NPT male
- Accuracy:
  1½" and 2½" Dials: ±1% mid scale (Grade A)
  4" Dial: ±1% full scale (Grade 1A)

Ideal for harsh environments that are prone to vibration, these gauges pair the corrosion resistance of a Type 304 stainless steel case with the reduced needle flutter of a glycerin-filled dial. They also have a dual scale that displays pressure in psi and kPa. Lens is impact-resistant polycarbonate.

Gauges with 1½" dial have a temperature range of 32° to 150° F. Gauges with 2½" and 4" dial have a temperature range of –4° to 140° F.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

Low-Temperature Stainless Steel-Case Liquid-Filled Gauges

Center Back Connection

- Use with air, water, hydraulic oil, and natural gas
- Pipe Connection:
  Nickel-plated brass NPT male
- Accuracy: ±2% mid scale (Grade B)

A silicone-filled dial withstands lower temperatures than a glycerin-filled dial and provides greater resistance to sudden shocks such as water hammer. Gauges have a dual scale that displays pressure in psi and kPa. Case is corrosion-resistant Type 304 stainless steel and lens is acrylic. Temperature range is –30° to 200° F. 9780T21 fits a 1⅝" panel cutout.

Available Pressure Ranges

Leak-Resistant Liquid-Filled Gauges

Bottom Connection

- Use with air, water, and hydraulic oil
- Pipe Connection:
  Brass NPT male, unless noted
- Accuracy: ±1% full scale (Grade 1A)

Designed to prevent leaks from the glycerin-filled dial, these gauges have a unique case that also eliminates the air bubble on the dial face, which can distort readings. Case is nylon and lens is acrylic. Temp. range is –40° to 150° F.

Freeze-resistant gauges have an internal seal that also prevents clogging and corrosion.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

■ Connection is Type 316 stainless steel for ranges with a maximum of 1,500 psi and above.

Metric Stainless Steel-Case Liquid-Filled Gauges with bar/psi Scale

- Use with air, water, hydraulic oil, carbon dioxide, and natural gas
- Pipe Connection: Brass BSPP male
- Accuracy: ±1.5% full scale (not graded)

Bottom Connection

Well suited for use with imported equipment, these gauges have BSPP (British Standard Pipe Parallel) threads and a dual scale that displays pressure in bar and psi. They also have a glycerin-filled dial to reduce needle flutter in locations prone to vibration. Case is corrosion-resistant Type 304 stainless steel and lens is impact-resistant polycarbonate. Temperature range is –4° to 140°F.

Stainless Steel Gauges

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 stainless NPT male
- Accuracy: ±2% mid scale (Grade B)

Dry with Bottom Connection

Liquid Filled with Center Back Connection

All-stainless construction stands up to corrosive environments. Case is Type 304 stainless steel. Gauges with 1½" dial have a glass lens; 2½" and 4" dial have an impact-resistant polycarbonate lens.

Gauges with panel mount connection require a cutout; 1½" dial fits a 1¾" dia. cutout, 2½" dial fits a 2⁹⁄₁₆" dia. cutout, and 4" dial fits a 3³¹⁄₃₂" dia. cutout.

Dry gauges have a temperature range of 0° to 200°F.

Liquid-filled gauges have a glycerin-filled dial to reduce needle flutter in locations prone to vibration. Temperature range is 20° to 150°F.

Pressure Gauges with Stainless Steel Connection

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Stainless Steel Gauges with Sanitary Quick-Clamp Connection

Dry

- Use with water, food, and dairy
- Pipe Connection:
  Type 316 stainless steel quick clamp
- Accuracy:
  Up to 60 psi: ±2% full scale (not graded)
  100 psi and above:
  ±1.5% full scale (not graded)

Meet 3-A sanitary standards. Gauges have a Type 304 stainless steel case and an impact-resistant polycarbonate lens. Environment temperature range is 0° to 150°F and process temp. range is 0° to 250°F. Use with quick-clamp fittings on pages 228-231.

Liquid-filled gauges have a glycerin-filled dial to reduce needle flutter for precise readings.

Available Pressure Ranges (psi)

High-Temperature Shock-Resistant Gauges

Aluminum-Case Gauge with Bottom Connection

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection:
  Type 316 stainless steel NPT male
- Accuracy: ±0.5% mid scale (not graded)

Built to withstand high temperatures, these gauges also have a unique design that minimizes needle bounce from shock and vibration for more precise readings. All have a glass lens. Environment temperature range is –65° to 400°F; process temperature range is –65° to 600°F.

Gauge *with back flange* has a 4¾″ flange OD and three 7⁄32″ dia. bolt holes with a 4¼″ dia. bolt circle. Fasteners are not included. *Nylon-case* gauge has three 7⁄32″ dia. bolt holes with 5⅜″ bolt circle. Fasteners are not included.

Available Pressure Ranges (psi)

Gauges with Plastic Guard

With PVC Guard

- Use PVC and CPVC with water, hydraulic oil, and sodium hypochlorite
  Use polypropylene with water, salt water, hydraulic oil, hydrochloric acid, and sulfuric acid
- Pipe Connection: NPT female
- Accuracy: ±2% mid scale (Grade B)

Avoid damage from corrosive process media—these come with a guard to protect the gauge. A dual scale displays pressure in psi and kg/cm². Case is black-painted steel and lens is acrylic. All have an environment temp. range of –40° to 140°F.

PVC guards have a process temperature range of 32° to 140°F. Color is dark gray.

CPVC guards withstand higher process temperatures than PVC; process temperature range is 0° to 200°F. Color is light gray.

Polypropylene guards are more chemical resistant than PVC and CPVC. Process temperature range is 32° to 180°F. Color is white.

Available Pressure Ranges for Gauges

Pressure Range psi	Pressure Range kg/cm²	Grad. Marks, psi	Numeric Increments, psi
0- 30	0- 2.1	0.5	5
0- 60	0- 4.2	1	10
0-160▲	0-11.2	2	20

▲ Guard has a maximum pressure of 150 psi.

To Order: Please specify pressure range in psi from the chart.

Stainless Steel Gauges with Guard

Dry with 4″ Dial (Dual Scale)

- Use with air, water, hydraulic oil, ammonia, gasoline, and natural gas
- Pipe Connection:
  Type 316 stainless steel NPT female
- Accuracy: ±1.6% full scale (not graded)

A Type 316 stainless steel guard protects these gauges from corrosive media. Case is Type 304 stainless steel and lens is acrylic. *Gauges with a 2½″ dial* have a single scale that displays pressure in psi; *gauges with a 4″ dial* have a dual scale that displays pressure in psi and kPa.

Dry gauges have a temperature range of –40° to 250°F. **Liquid-filled gauges** have a glycerin-filled dial to reduce needle flutter for precise readings. Temperature range is 33° to 250°F.

Test Gauges with Safety Case

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: Up to 15,000 psi: ±0.5% full scale (Grade 2A); 20,000 psi: ±1% full scale (Grade 1A)

Dry

For accuracy combined with safety, these gauges have a case that blows out in the back during overpressurization to protect operators in front. Case is polyester and lens is acrylic. Environment temp. range is –4° to 150° F; process temp. range is –4° to 212° F. Case has three ¼″ dia. mounting holes; fasteners not included.

Single-scale gauges display pressure in psi. *Gauges with a luminescent dial* glow in the dark after being exposed to light. ***Dual-scale gauges*** display pressure in psi and kPa.

Liquid-filled gauges have a glycerin-filled dial to reduce needle flutter for precise readings.

Available Pressure Ranges

Extreme-Duty Mil. Spec. Gauges

Bottom Connection

- Use with air, water, hydraulic oil, gasoline, natural gas, refrigerant, and salt water
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: ±1% full scale (Grade 1A)

Meet MIL-G-18997E for resistance to salt spray and washdown environments. The most shock-resistant gauges we offer, use these for precise readings in applications with high vibration. They have a safety case that blows out in the back during overpressurization to protect operators in front. Case is aluminum and lens is impact-resistant polycarbonate. Temperature range is –65° to 195°F. Has three 7/32″ dia. bolt holes for mounting; fasteners not included.

Available Pressure Ranges (psi)

Leak-Resistant Liquid-Filled Gauges with Stainless Steel Connection

Bottom Connection

Center Back Connection

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: ±1% full scale (Grade 1A)

Get precise pressure readings in locations prone to vibration without the annoying leakage and bubbles of most liquid-filled gauges. Gauges have a leak-resistant glycerin-filled dial that reduces needle flutter and a unique case design that eliminates the air bubble on the dial face, which can distort readings. Case is nylon and lens is acrylic. Environment temperature range is –40° to 150°F and process temperature range is –40° to 200°F.

Liquid-Filled Stainless Steel Gauges

Bottom Connection

Lower Back Connection with Front Flange

- Use with air, water, and hydraulic oil
- Pipe Connection: Type 316 stainless NPT male
- Accuracy:
  2½″ & 4″ Dials: ±1% full scale (Grade 1A)
  6″ Dial: ±0.5% full scale (Grade 2A)

Built for harsh locations prone to vibration, these gauges pair a corrosion-resistant Type 304 stainless steel case with a glycerin-filled dial to reduce needle flutter. Lens is glass. Gauges with front flange have three bolt holes for mounting; fasteners not included.

Gauges with 2½″ and 6″ dials have an environment temp. range of –32° to 200°F and a process temp. range of –32° to 400°F. Gauges with a 4″ dial have an environment temp. range of –4° to 140°F and a process temp. range of –4° to 212°F.

Liquid-Filled Stainless Steel Gauges with Yor-Lok Tube Connections

Bottom Connection

- Use with air, water, hydraulic oil, alcohol, carbon dioxide, and natural gas
- Tube Connection: Type 316 stainless steel Yor-Lok tube fittings
- Accuracy: ±1.5% full scale (not graded)

Measure pressure in instrumentation lines. Gauges have a tee fitting with Yor-Lok double-ferrule compression tube fittings that are compatible with Swagelok® and Parker A-Lok fittings. For information about Yor-Lok fittings, see page 184.

Gauges have a glycerin-filled dial to reduce needle flutter from vibration. Their dual scale displays pressure in psi and kPa. Case is Type 304 stainless steel and lens is impact-resistant polycarbonate. Temperature range is 14° to 150°F.

Available Pressure Ranges

Digital Gauges

- Use Type 304 stainless steel with air, hydrogen, and nitrogen
  Use Type 316 stainless steel with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection:
  Type 304 or Type 316 stainless steel NPT male
- Accuracy: ±1% full scale (not graded)

Set the four-digit LCD for digital pressure readings in psi, bar, or MPa. Gauges are powered by a 9-volt battery (included) and shut off after three minutes to extend battery life. Case is ABS plastic and lens is glass. Environment temperature range is -4° to 185°F and process temp. range is 14° to 140°F.

Also Available: Gauges with certificate of calibration traceable to NIST for an additional $125. For Type 304 stainless steel, order 2798K3 and specify pressure range. For Type 316 stainless steel, order 3834K3 and specify pressure range.

Liquid-Filled Test Gauges with Stainless Steel Guard

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 SS NPT female
- Accuracy:
  High Accuracy: ±0.5% full scale (Grade 2A)
  High Temp.: ±1% full scale (Grade 1A)

A guard protects these gauges from corrosive media while a glycerin-filled dial reduces needle flutter from vibration. They also have a safety case that blows out in the back during overpressurization to protect operators in front. Has three ¼″ dia. mounting holes; fasteners not included.

High-accuracy gauges have a phenolic case and an acrylic lens. Temperature range is 33° to 250°F.

High-temperature gauges have a polypropylene case and an acrylic lens. Environment temperature range is 0° to 200°F and process temperature range is 0° to 400°F.

Available Pressure Ranges (psi)

Solar-Powered Digital Gauges

- Use with air, water, hydraulic oil, deionized water, and ethyl alcohol
- Pipe Connection: Type 316 SS NPT male
- Accuracy: ±0.5% full scale (not graded)

Sensitive enough to operate on indoor light, these gauges have no batteries to replace. Set the four-digit LCD to show pressure in psi, kPa, kg/cm², or bar. Case is PBT plastic (polybutylene terephthalate) and lens is acrylic. Temperature range is 0° to 150°F. Case is rated IP65 (resists splashing water) and has three ¼″ dia. mounting holes; fasteners not included.

Digital Gauges with Transmitter Output

- Use with air, water, hydraulic oil, argon, and nitrogen
- Pipe Connection:
  Type 304 stainless NPT male
- Accuracy:
  ±0.5% full scale (not graded)

Monitor your application locally and from a distance. Gauges convert pressure to an electrical signal for use in process control systems. Set the four-digit LED to show pressure in psi, bar, mbar, or MPa. Case is stainless steel and lens is plastic. Temperature range is –13° to 185°F. Gauges operate on 18-36 volts DC and have a four-pole M12 male electrical connection with a 0.3″ face dia. and single keyway. For multipole connectors, see page 805. Gauges meet IP67 for protection from temporary submersion.

Available Pressure Ranges (psi)

Pressure Range	Resolution	Pressure Range	Resolution

Ultra-High-Accuracy Digital Gauges

Battery Powered

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: ±0.25% full scale (not graded)

For digital pressure readings with accuracy suitable for use in testing and calibration. Set the four-digit LCD to show pressure in psi, bar, or MPa, unless noted. Gauges have an aluminum case and polycarbonate lens. Temperature range is –4° to 180°F.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

Battery-powered gauges operate on two AA batteries (included) and shut off after five minutes to extend battery life. *Gauges for hazardous locations* are FM approved as intrinsically safe for Class I, Division 1, Groups A, B, C, and D.

AC/DC-powered gauges operate on 8-24 volts AC or 9-32 volts DC and have 3-ft. wire leads.

DC-powered gauges with 4-20 mA transmitter output convert pressure to an electrical signal for remote monitoring. They operate on 8-32 volts DC and have 3-ft. wire leads. Case is NEMA 12 for protection from dripping oil and coolant. Displays pressure in psi only.

Extreme-Accuracy Digital Gauges with NIST Certificate

- Use with air, water, hydraulic oil, gasoline, and natural gas
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: ±0.05% full scale (Grade 5A)

With the highest accuracy we offer, these gauges are commonly used in critical applications that require precision. All come with a certificate of calibration traceable to NIST. Set the five-digit LCD to show pressure in psi, Kpa, bar, inches of H_2O, or kg/cm^2.

Case is 300 series stainless steel and lens is polyester. Gauges operate on three AAA batteries (included) and shut off after five minutes to extend battery life. Temperature range is 0° to 150°F. Case is NEMA 4 (indoor/outdoor; washdown resistant). Gauges are CSA certified and FM approved as intrinsically safe for Class I, II, and III; Division 1; Groups A, B, C, D, E, F, and G; T4 temperature code.

Compound Gauges for Refrigerant Ammonia

- Use with air, ammonia, and refrigerant
- Pipe Connection: Type 316 stainless NPT male
- Accuracy: ±1.6% full scale (Grade B)

Often used with chillers and in refrigeration systems, these gauges display the temperature of ammonia relative to the pressure measurement. Case is Type 304 stainless steel and lens is impact-resistant polycarbonate. Environment temp. range is –40° to 200° F and process temp. range is 0° to 250° F.

2½″	¼	4106K1	$62.08	3843K3	$152.76
4″	¼	4106K2	133.35	3843K4	216.57

Absolute Pressure Gauges

- Use with air
- Pipe Connection: Brass NPT male
- Accuracy: ±2% full scale (not graded)

Unlike other pressure gauges that measure the difference between your system and the atmosphere, these give measurements relative to zero pressure. Also known as Torr gauges, they're often used in laboratory applications. Gauges are barometrically independent. A dual scale displays readings in mbar and Torr. Case is anodized aluminum and lens is glass. Temp. range is 0° to 150° F.

Available Absolute Pressure Ranges

Pressure Range mbar	Torr	Grad. Marks, mbar	Numeric Inc., mbar
0-25	0-20	5	0.5
0-50	0-40	10	1
0-130	0-100	20	2
0-1,000	0-760	200	20

To Order: Please specify pressure range in mbar from the chart.

Dial Size	Pipe Size	Bottom Connection	
4″	¼	1791T3	$426.72

3-in-1 Compound Test Gauges

- Use with air
- Pipe Connection: 36″ neoprene hose with steel NPTF (Dryseal) male fitting
- Accuracy: ±2% mid scale (Grade B)

Test vacuum and pressure in hydraulic applications. These portable gauges have three dual-scale dials for a wide range of measurements. Vacuum/pressure ranges are 30″ Hg to 0/0-150 psi (cm of Hg/kg/cm^2), 0-600 psi (kg/cm^2), and 0-5,000 psi (kg/cm^2). Case is steel and lens is butyrate plastic. Environment temperature range is –40° to 120° F and process temperature range is –40° to 190° F.

Overall Dia.	Pipe Size		
6 7/16″	⅛	4054K64	$329.75

Stainless Steel-Case Liquid-Filled Vacuum and Compound Gauges

Center Back Connection

- Use with air
- Pipe Connection: Brass NPT male
- Accuracy:
  1½″ and 2½″ Dials: ±1% mid scale (Grade A)
  4″ Dial: ±1% full scale (Grade 1A)

Designed for harsh environments that are prone to vibration, these gauges pair the corrosion resistance of a Type 304 stainless steel case with the reduced needle flutter of a glycerin-filled dial. Their dual scale displays readings in inches of Hg/psi and kPa. Lens is impact-resistant polycarbonate. Temperature range is 32° to 140° F.

Gauges with panel-mount bracket require a cutout; 38545K11 fits a 1 39/64″ dia. cutout and 38545K19 fits a 2 31/64″ dia. cutout.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

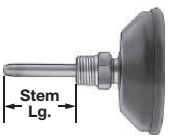
■ Not available with a range of 30″ Hg to 0/0-300 psi.

Pressure and Temperature Gauges

Center Back Connection

- Use with water and steam
- Pipe Connection: Brass NPT male
- Accuracy: ±2.5% full scale (not graded)

Measure pressure and temperature simultaneously. Designed for use with boilers, gauges have a dual scale that displays pressure in psi and feet of H_2O and displays temperature in °F/°C. Case is black-painted steel and lens is acrylic. Environment temperature range is –40° to 140° F and process temperature range is 70° to 320° F.



Available Pressure Ranges

Pressure Range, psi/ft. of H_2O	Grad. Marks, psi	Numeric Inc., psi
0- 75/0-170	5	20
0-230/0-500★	10	50

★ Center back connection is 0-200/0-460.

To Order: Please specify pressure range from the chart.

3¼″	½	2 3/8″	4013K61	$37.96	1 7/8″	4013K62	$25.20

Stainless Steel Vacuum and Compound Gauges

Dry with Bottom Connection

- Use with air
- Pipe Connection: Type 316 stainless NPT male
- Accuracy: 2½″ Dial: ±1.5% full scale (not graded)
  3″ Dial: ±0.5% full scale (Grade 2A)
  4″ Dial: ±1% full scale (Grade 1A)

Withstand corrosive environments—gauges have a Type 304 stainless steel case. Environment temperature range is –40° to 140° F and process temperature range is –40° to 212° F.

Gauges with a 2½″ dial have a nylon lens. Panel mount connection fits a 2 7/16″ dia. cutout.

Gauges with a 3″ dial come with a lens cover and pouch. Lens is acrylic.

Gauges with a 4″ dial have a glass lens.

Liquid-filled gauges have a glycerin-filled dial to reduce needle flutter caused by vibration.

Digital Vacuum and Compound Gauges

- Use with air
- Pipe Connection: Type 17-4 PH SS NPT female
- Accuracy: ±0.5% full scale (not rated)

Set the measurement unit on the four-digit LCD to get digital readings in vacuum applications. Vacuum gauge shows inches of Hg or psi and compound gauge shows psi, bar, kg/cm², or atmosphere. The LCD shuts off after an hour to extend battery life; operates on one 9-volt battery (sold separately). Case and lens are polycarbonate. Environment temperature range is –40° to 150° F and process temperature range is 32° to 130° F. Size is 4 1/16″ Ht. × 2 11/16″ Wd. × 1 7/8″ Dp.

Gauge Type	Vacuum/ Pressure Range	Resolution, psi	Pipe Size	Bottom Connection	
Vacuum	29.9″ Hg to 0	0.1	1/8	3840K8	$221.15
Compound	0-1,000 psi	1	1/8	3840K6	235.29
9-volt Battery				71455K56	2.75

Pressure Test Plugs

Check pressure without permanently installing a gauge. Plugs have an NPT male connection for installation in your pipe or tank. Use with air, water, and oil. Connect gauge adapters (sold separately) to gauges with 1/4 pipe size NPT male threads. *Standard* adapters are brass with a Type 304 stainless steel needle. *High-pressure* adapter is steel.

Pipe Size	Max. psi	Ht.	Plugs		Gauge Adapters	
Standard—Brass Plug						
1/8	1,000	1 1/4″	1493K11	$3.27	1493K28	$16.66
1/4	1,000	1 1/2″	1493K12	3.68	1493K29	17.68
High Pressure—Steel Plug						
1/8	5,800	1 7/8″	3194K55	13.69	3194K59	20.54
1/4	5,800	2″	3194K56	14.13	3194K59	20.54

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Gauge-Protecting Steam Siphon Tubes

Also known as pigtails, use a siphon tube to protect non-liquid-filled gauges from steam and high-temperature fluids. Add water to the tube to make a protective barrier between your gauge and process media.

Style B is compact for use in tight locations.

Style C requires less maintenance than Styles A, B, and D because the extra bends prolong water retention.

Pulsation-Damping Snubbers

Use a snubber to reduce the flow of fluids into your pressure gauge to dampen vibration, pulsation, and pressure spikes. Connections are NPT; process is male and gauge is female.

Standard snubbers have an orifice to restrict flow—the smaller the orifice, the greater the reduction in flow.

Snubbers with filtering disc also prevent damage to your gauge by trapping particles in your process media. Snubbers with 1/8 pipe size have a 3/16" orifice; and 1/4 and 1/2 pipe sizes have a 1/4" orifice.

To Order: For *standard snubbers*, please specify orifice size: 0.004", 0.008", or 0.015". For *snubbers with filtering disc*, please specify micron rating: 0.5, 1, 2-5, 7, 10, 40-45, or 75 microns.

	Pipe Size	Standard Max. psi	Ht.			With Filtering Disc Max. psi	Ht.		
Brass									
	1/8	2,000	7/8"	3820K26	$8.46	3,000	1 1/8"	4034K1	$9.31

High-Temperature Gauge Guards

With Drain Port

A Type 316 stainless steel body and seal provide good resistance to high temperatures and pressures. Also known as diaphragm seals. Pressure range is 100-2,500 psi. Max. temperature is 300° F. Process and gauge connections are NPT female.

Fill guards with ISO Grade 32 hydraulic oil (not included) before use. See 2158K11 on page 2204.

Guards with drain port have an 1/8 NPT female port with plug so you can remove process media.

	Pipe Size Process	Gauge	Standard Ht.			With Drain Port Ht.

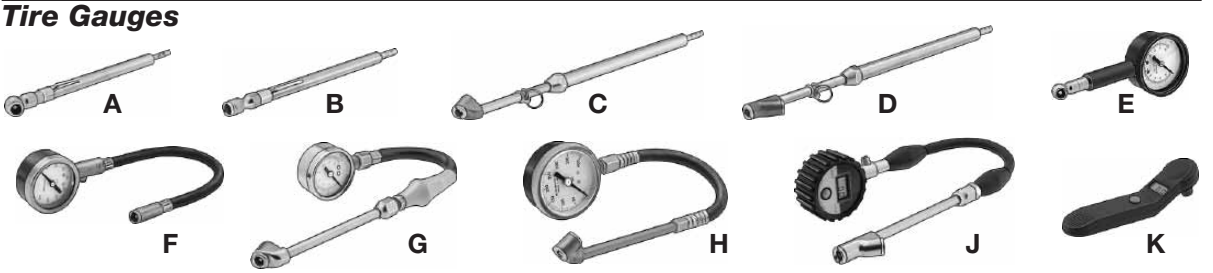
Tire Gauges, Chucks & Compression Testers

For information about pressure gauges, see page 594. For information about pipe size, see pages 2-3.

Tire Gauges



Styles A-D display pressure on a nylon indicator bar. Body and chuck are nickel-plated brass. *Styles A and B* have a pocket clip.

Styles E-H display pressure on a gauge with a 2″ dial, except Styles E and H have a 2½″ dial. *Style E* has a nickel-plated brass chuck and a gauge with a black rubber case. *Style F* has a chrome-plated steel chuck, an 11″ rubber hose, and a gauge with a painted steel case. *Style G* has a 6″ chrome-plated brass and zinc chuck, an 8″ PVC hose, and a gauge with a chrome-plated steel case. *Style H* has a nickel-plated brass chuck, an 8″ rubber hose, and a gauge with a painted steel case. It comes with a painted steel carrying case. Meets MIL-DTL-8348J Class B Size 1.

Styles J&K display pressure on an LCD. Battery is included. *Style J* has a chrome-plated brass chuck and a 10½″ rubber hose. *Style K* has a black ABS plastic body and chuck.

	Pressure Range psi	Pressure Range kPa	Numeric Increments, psi	Accuracy	O'all Lg.	Chuck

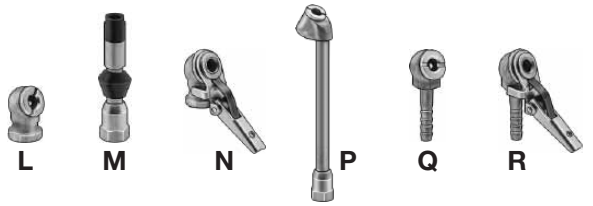
Air Chucks



Chucks have all-metal construction and a maximum pressure of 150 psi.

Styles N and R have a clip that you can attach to the valve stem for hands-free filling.

	Connection Size	Chuck		
With NPT Female Air Inlet				
L	¼	Angled, Single Head	**6146A23**	$2.67
M	¼	Straight, Single Head	**6146A25**	10.11
N	¼	Angled, Locking Single Head	**6140A62**	7.87
P	¼	Angled, Dual Head	**6701A41**	9.22
With Barbed Air Inlet				
Q	For ¼″ Tube ID	Angled, Single Head	**6146A21**	3.88
Q	For ⅜″ Tube ID	Angled, Single Head	**6146A22**	4.17
R	For ¼″ Tube ID	Angled, Locking Single Head	**6140A61**	11.00

Compression Testers

Check engine compression to maintain top performance. Pressure range is 0-300 psi. Testers have a quick-release coupler between the hose and the gauge.

Dial tester displays pressure on a gauge with a 3″ dial that shows readings in psi, kg/cm^2, bar, and kPa. Accuracy is ±2%. It comes with a 15″ braided hose and a replacement valve core.

Digital tester displays pressure on an LED that shows readings in psi. Accuracy is ±1%. It comes with an 18″ rubber hose and a plastic case. Battery is included.

	For Engine Type	Included Adapters, mm		
Dial	Gasoline	14, 14 long reach	**6136A24**	$51.73
Digital	Gasoline, Diesel	12, 14 long reach	**6136A26**	69.73

Low-Pressure Differential Gauges

Measure small changes in air pressure. These gauges are commonly used to indicate clogged filters, monitor fans and blowers, and measure air velocity. Accuracy is ±2% full scale, unless noted. Max. pressure is 15 psi. Case is aluminum and lens is acrylic. Temperature range is 20° to 140° F. Gauges have two inlets and two outlets to fit various pipe configurations; they come with plugs for the unused ports. Connections are aluminum NPT female.

Gauges with NIST certificate come with a certificate of calibration traceable to NIST.

Accessory kit includes a case to carry your gauge, a mounting bracket, two pipe-to-tube adapters, and 9 feet of 3/16″ ID tubing.

Medium-Pressure Differential Gauges

Popular for use with natural gas, these gauges measure pressure differences in pipelines with a max. pressure of 1,500 psi. Also for use with water, hydraulic oil, and gasoline. Accuracy is ±2% full scale. Lens is acrylic. Temperature range is –40° to 150° F. All are CSA certified. Connections are NPT female.

Available Differential Pressure Ranges (psi)

4 1/2″	1/4	**4028K3**	288.46	**4028K6**	562.07

Color-Band Differential Pressure Indicators

Often used to indicate clogged filters, a band of green, yellow, and red provides a clear indication of changes in differential pressure. Accuracy is ±5% full scale. Case is glass-filled nylon and lens is acrylic. Max. pressure is 300 psi. Temperature range is –40° to 200° F. Size is 3 1/4″ Ht. × 3 1/4″ Lg. × 1 1/2″ Dp. Connections are NPT female.

High-Pressure Differential Gauges

Able to withstand line pressure up to 3,000 psi, these gauges are commonly used to monitor pressure changes in pumps and filters. Use with water, hydraulic oil, and gasoline. Accuracy is ±2% full scale. Lens is acrylic. Temperature range is –40° to 150° F. Gauges are CSA certified. Connections are NPT female.

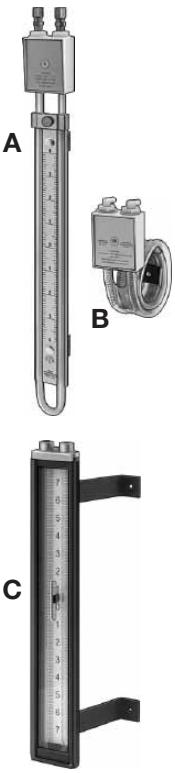
U-Tube Manometers



Measure pressure or differential pressure in your process. Manometers come with indicating liquid that moves up and down two columns—the difference in height between them is your pressure. Grad. marks are at 0.1″ H_2O and numeric increments are at 1″ H_2O. Accuracy is not rated.

Styles A and B have magnets for mounting so you can move them for use in multiple locations. *Style A* come with red indicating liquid with a specific gravity of 0.826. Max. pressure is 100 psi. *Style B* roll up for storage or transport. Indicating liquid is green and has a specific gravity of 1. Max. pressure is not rated.

Style C have brackets for wall mounting. Indicating liquid is green and has a specific gravity of 1. Max. pressure is 250 psi.

inches of H_2O Pressure Range	Scale Range	Ht.		
(A) With Compression Fittings for 1/4″ Tube OD

Inclined-Scale Manometers

Easier to read than U-tube manometers, use these to measure pressure or velocity in air applications. Accuracy is ±3% full scale. Max. pressure is 10 psi. Manometers come with indicating liquid, 8 feet of tubing, and mounting hardware. Connections are barbed for 1/8″ ID tubing.

Range	*Indicating Liquid* Specific Gravity	Color	Ht.	Wd.		
For Air Pressure						
0-3 in. of H_2O	0.826	Red	6″	7 1/2″	**3974K1**	$42.05
0-7 in. of H_2O	1.91	Blue	6″	7 1/2″	**3974K2**	187.76
For Air Velocity

Manometers & Pressure Transmitters

For information about pipe size, see pages 2-3.

Hand-Held Digital Manometers

Dual Scale

Check pressure, differential pressure, and vacuum on the go. Accuracy is ±0.5% full scale. All have a four-digit LCD. They operate on one 9-volt battery (included). Size is 6½″ Ht. x 2 13/16″ Wd. Connections are barbed.

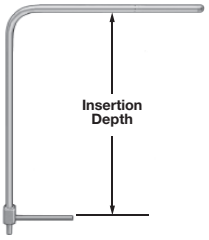
Dual-scale manometers have two scales. Use with air and natural gas. 4125K21 and 4125K23 show readings in inches of H_2O or kPa; 4125K25 shows readings in psi or bar. FM approved as intrinsically safe for Class 1, Division 1, Groups A, B, C, and D; temperature code T4.

Multiscale manometers show readings in inches of H_2O, kPa, psi, inches of Hg, or millibars. Use with air. They store up to 40 readings and have overpressure alarms. CE approved.

Also Available: Manometers with a certificate of calibration traceable to NIST for an additional cost of $180.00. Please ask for 4125K71 and specify dual scale or multiscale and pressure range.

Pressure Range	Resolution	Max. psi	For Tube ID		
Dual Scale					
0- 20 in. of H_2O	0.01	10	1/8″-3/16″	**4125K21**	$238.00
0-200 in. of H_2O	0.1	30	1/8″-3/16″	**4125K23**	166.22
0- 30 psi	0.01	60	1/8″-3/16″	**4125K25**	166.22
Multiscale					
0- 20 in. of H_2O	0.01	10	1/8″-3/16″	**4125K41**	394.64
0-200 in. of H_2O	0.1	30	1/8″-3/16″	**4125K43**	327.86
0-553 in. of H_2O	0.01	60	1/8″-3/16″	**4125K46**	327.86
Optional Nylon Carrying Case				**4125K11**	52.57

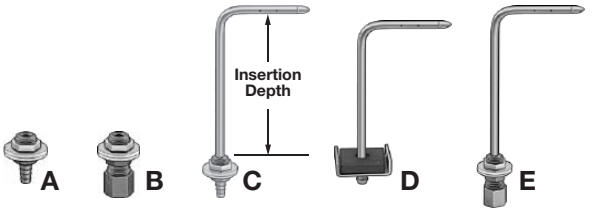
Pressure Tubes for Manometers



Also known as pitot tubes, use these with manometers and differential pressure gauges to measure air velocity. Tubes have inch graduation marks so you can monitor your insertion depth. Use in ducts with a minimum diameter of 10″.

For Tube ID	Insertion Depth		
5/16″	8 5/8″	**4039K17**	$81.03
5/16″	12 5/8″	**4039K11**	83.30
5/16″	18 5/8″	**4039K12**	89.53
5/16″	24 5/8″	**4039K13**	92.93

Pressure Sensors for Air Ducts



Use these sensors with differential pressure gauges, manometers, and pressure switches to measure the static pressure drop across air filters, cooling coils, and blowers in air-handling equipment. Install sensors in duct through a 3/8″ hole and connect to your gauge with tubing.

Sensors for high velocity have pressure tubes for more accurate measurements in applications with high air flow. *Style D* is held in place with a magnet so you can move it for use in multiple locations.

	Fitting	For Tube Size	Insertion Depth		
For Low Velocity					
A	Barbed	1/8″-3/16″ ID	—	**4077K56**	$4.65
B	Compression	1/4″ OD	—	**4077K55**	6.01
For High Velocity					
C	Barbed	1/8″-3/16″ ID	4″	**4077K52**	10.31
D	Barbed	3/16″ ID	3″	**4077K53**	11.28
E	Compression	1/4″ OD	4″	**4077K51**	11.22

Indicating Liquids for Manometers

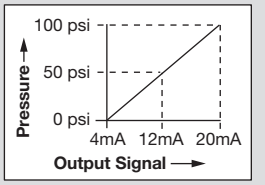
Size	Specific Gravity	Color	Temp. Range		
Full-Strength Refills					
1 oz.	0.826	Red	–20° to 160°F	**3974K7**	$9.80
1 oz.	1.91	Blue	32° to 140°F	**3974K11**	135.02
7 oz.	1.75	Blue	30° to 110°F	**4037K26**	121.88
16 oz.	0.827	Red	35° to 125°F	**4037K21**	45.50
Concentrated Refills—Dilute with distilled water.					
1 oz.	1	Green	35° to 150°F	**3985K71**	14.28
15 oz.	1	Green	35° to 125°F	**4037K22**	69.00

About Pressure Transmitters

Pressure transmitters convert pressure to an electrical signal so you can monitor your application remotely. Also known as pressure sensors and pressure transducers, use them to control system automation or display pressure with a monitoring device (see panel monitors on page 1000). *Max. psi* is the maximum pressure a transmitter can withstand without damage.

Output Signal and Pressure

A transmitter's output signal increases as the application pressure increases. For example, the chart at right illustrates the changing output signal of a transmitter with a pressure range of 0-100 psi and an output signal of 4-20 mA. The transmitter produces a 4 mA signal at 0 psi, a 12 mA signal at 50 psi, and a 20 mA signal at 100 psi.



Pressure Transmitters

- Use with air, water, and hydraulic oil
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: See below

Get remote pressure monitoring for automated applications—transmitters convert pressure to an electrical signal. They have screw terminals with a DIN electrical connection. Housing is stainless steel. Temperature range is 32° to 176°F. All are CE approved.

NIST-certified transmitters come with a certificate of calibration traceable to NIST.

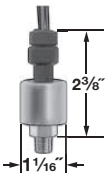
For information about pressure transmitters, see page 612. For information about pipe size, see pages 2-3.

Extended-Life Compact Pressure Transmitters

- Use with air, water, and hydraulic oil
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: ±0.5%



Designed to withstand vibration and shock for a long service life, these small transmitters also fit in tight spots. Housing is Type 316 stainless steel. Temperature range is –4° to 257° F. Transmitters have wire leads.

Available Pressure Ranges (psi)

Pressure Range	Max. psi	Pressure Range	Max. psi
0-15	75	0- 100	300

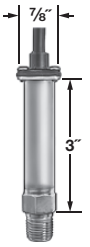
0.5-4.5V DC	4-5.5	1/4	2388K21	285.71

Washdown Vacuum and Pressure Transmitters

- Use with air, water, hydraulic oil, diesel fuel, and gasoline
- Pipe Connection: Type 316 stainless steel NPT male
- Accuracy: See below



A NEMA 4X enclosure makes these transmitters washdown and corrosion resistant. Housing is 300 series stainless steel. Temperature range is –20° to 180° F. Transmitters have wire leads.

Available Vacuum/Pressure Ranges

Vacuum/ Pressure Range	Max. psi	Vacuum/ Pressure Range	Max. psi
Vacuum Transmitters		**Pressure Transmitters**

Ultra-High-Accuracy Vacuum and Compound Transmitters

- Use with air, water, hydraulic oil, diesel fuel, and gasoline
- Pipe Connection: Type 17-4 PH stainless steel NPT male
- Accuracy: ±0.25%

Often used in applications that require high accuracy, such as activating spray nozzles and vacuum pumps. Housing is Type 316 stainless steel. Temp. range is –5° to 180° F. Transmitters have wire leads. CE approved.

Available Vacuum/Pressure Ranges

Vacuum/Pressure Range, in. of Hg/psi	Max. psi
Vacuum Transmitters	
30″ Hg to 0/———	30
Compound Transmitters	
30″ Hg to 0/0- 15	60
30″ Hg to 0/0- 45	120
30″ Hg to 0/0-100	230

To Order: Please specify vacuum/pressure range from the chart.

Output Signal	DC Voltage	Pipe Size		
4-20 mA	7-35	1/4	3591K21	$455.19

Digital Pressure Transmitters

- Use with air, water, and hydraulic oil
- Pipe Connection: Type 316 stainless steel NPT female
- Accuracy: ±0.25%

Customize your process-control system. These transmitters can be set to send a signal at any pressure within the range; they do not require a HART communicator for operation. Use the test function, also known as a loop check, to verify the output signal.

Transmitters have an LCD for local readings; digit height is 3/8″. Housing is aluminum and diaphragm is Type 17-4 PH stainless steel. Enclosure is NEMA 4X (washdown/corrosion resistant). Environment temp. range is –4° to 158° F and process temp. range is 14° to 140° F. Transmitters have screw terminals and a 1/2 NPT female conduit port. CE approved.

Available Pressure Ranges (psi)

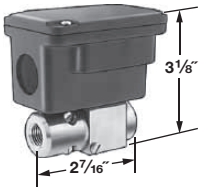
Pressure Range	Max. psi	Pressure Range	Max. psi
0-100	200	0-1,000	2,000
0-300	600	0-3,000	4,500

To Order: Please specify pressure range from the chart.

Output Signal	DC Voltage	Pipe Size		
4-20 mA	12-32	1/4	1803T2	$668.15

Differential Pressure Transmitters

- Use with air and water
- Pipe Connection: Type 17-4 PH stainless steel NPT female
- Accuracy: ±0.25%



Monitor differential pressure from a distance. Housing is aluminum. Temp. range is –5° to 175° F. Enclosure is NEMA 4 (indoor/outdoor; washdown resistant). Transmitters have screw terminals and a 7/8″ dia. conduit port. They come with mounting hardware.

Available Differential Pressure Ranges (psi)

Pressure Range	Max. psi	Pressure Range	Max. psi
0-1	250	0-10	250
0-2	250	0-25	250
0-5	250	0-50	250

To Order: Please specify pressure range from the chart.

Output Signal	DC Voltage	Pipe Size		
0-5V DC	9-30	1/4	9917K6	$730.69
4-20 mA	9-30	1/4	9917K5	730.69

Dial-Indicating Differential Pressure Transmitters

- Use with air
- Pipe Connection: Aluminum NPT female
- Accuracy: See below

Popular for use in HVAC systems, these transmitters allow you to view differential pressure at the source and remotely. Housing is aluminum and lens is plastic. Temperature range is 20° to 120° F. Transmitters have screw terminals.

Available Differential Pressure Ranges

Pressure Range, in. of H_2O	Accuracy	Max. psi
0- 0.5	±3%	25
0- 1	±2%	25
0- 2	±2%	2
0- 3	±2%	2

Pressure Switches

For information about pipe size, see pages 2-3.

About Pressure Switches

Install a switch to automate controls or activate an alarm in your process. For information about electrical switches, see page 909.

Pressure switches operate based on pressure. When the pressure exceeds the actuation point, the switch is activated.

Differential pressure switches operate based on the difference between two pressure connections. When the differential pressure exceeds the actuation point, the switch is activated.

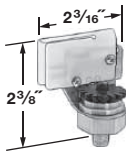
Follow these steps to select a switch for your application:

1. Determine your actuation point—the pressure at which the switch operates. Also known as the setpoint.
2. Determine your deactuation point—the pressure at which the switch resets.
3. Choose a switch with an **actuation range** that contains your actuation point. For best results, your actuation point should fall in the middle of the range.
4. Make sure the switch's **deactuation range** works with your deactuation point—subtract your deactuation point from your actuation point. The resulting value must fall within the deactuation range. Also known as deadband.

Example:

1. Actuation point = 100 psi
2. Deactuation point = 90 psi
3. In Extended-Life Pressure Switches (below), 4735K43 has an actuation range of 20 to 200 psi.
4. 100 psi – 90 psi = 10 psi, which falls in the deactuation range of 5 to 20 psi.

Compact Pressure Switches

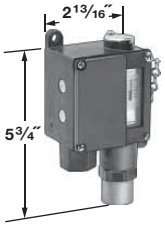


- Use with air, water, hydraulic oil, and diesel fuel
- Pipe Connection: Brass NPT male
- Amp Rating: 10 amps@125/250 volts AC

Activate controls from process lines in tight spaces. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±1 psi or ±5%, whichever value is greater. Housing is brass and seal is Buna-N. Temperature range is 0° to 225°F. Switches have spade terminals and are UL recognized.

Actuation Range, psi	Deactuation Range, psi	Max. psi	Pipe Size		
2- 10	0.3- 1.5	250	1/8	3460K21	$29.27
6- 30	0.9- 4.5	250	1/8	3460K41	29.27
20-120	3 -18	250	1/8	3460K61	29.27

Extended-Life Pressure Switches



- Use with air, water, hydraulic oil, and diesel fuel
- Pipe Connection: Type 416 stainless steel NPT female
- Amp Rating: 10 amps@125/250/480 volts AC

Often used with hydraulic presses, compactors, and machine tools, a NEMA 13 enclosure protects these switches from dust and oil for a long service life in harsh environments. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±2%. Housing is aluminum and seal is Buna-N. Temperature range is –20° to 165°F. Switches have screw terminals and a ½ NPT female conduit port.

Actuation Range, psi	Deactuation Range, psi	Max. psi	Pipe Size		
20- 200	5- 20	200	1/4	4735K43	$415.28
75- 540	10- 35	540	1/4	4735K45	415.28
100-1,500	30-100	1,500	1/4	4735K46	405.56
235-3,400	60-300	3,400	1/4	4735K48	405.56
425-6,000	120-360	6,000	1/4	4735K49	405.56

High-Pressure Switches

- Use with: See table
- Pipe Connection: Brass NPT male
- Amp Rating: 5 amps@125/250 volts AC

Able to withstand at least 1,000 psi, these switches are often used in pump and hydraulic power applications. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±1.5%. Housing is aluminum. Environment temperature range is 0° to 160°F and process temperature range is 0° to 200°F. All are UL recognized, CSA certified, and CE approved.

Indoor switches have 1/4" quick-disconnect terminals. **Washdown switches** have wire leads.

For Air and Water—Switches have a Buna-N seal.

For Oxygen—Switches come cleaned and bagged. They have a fluoroelastomer seal.

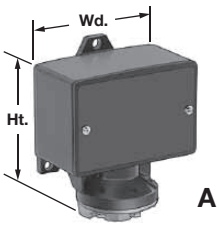
Washdown Pressure Switches



A

B

- Use with air, water, hydraulic oil, gasoline, and diesel fuel
- Pipe Connection: Type 316 stainless steel NPT female
- Amp Rating: 15 amps@125/250/480 volts AC

A NEMA 4X enclosure provides protection from washdowns and splashing water. Switches are single pole, double throw (SPDT). Accuracy is ±1%. Housing is aluminum and seal is fluoroelastomer. Environment temperature range is –20° to 150°F and process temperature range is 20° to 300°F. Switches have screw terminals and a 3/4 NPT female conduit port. They're UL listed and CE approved.

(A) Switches with one actuation point switch one circuit.

(B) Switch with two actuation points has two switches so you can switch two circuits.

Actuation Range	Deactuation Range	Max. psi	Pipe Size	Ht.	Wd.		
(A) With One Actuation Point							
4.5-30 in. of H_2O	2.1-3.5 in. of H_2O	20	1/4	5 1/8"	4"	46025K51	$299.38

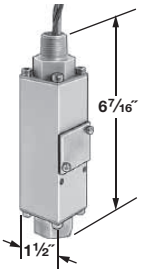
For information about pressure switches, see page 614. For information about pipe size, see pages 2-3.

Hazardous-Location Pressure Switches

- Use with air, water, hydraulic oil, gasoline, diesel fuel, and natural gas
- Pipe Connection: Type 316 SS NPT female
- Amp Rating: 5 amps@125/250 volts AC



Built for use in hazardous locations, enclosure is rated NEMA 7 for Class I, Divisions 1 and 2, Groups A, B, C, and D. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±1%. Housing is aluminum and seal is Type 316 stainless steel. Environment temp. range is –20° to 150°F and process temp. range is 0° to 200°F. Switches have wire leads and a ½ NPT male conduit port. All are UL listed, CSA certified, and CE approved.

Actuation Range, psi	Deactuation Range, psi	Max. psi	Pipe Size		
6- 30	0.5- 3.5	1,000	½	46985K61	$416.05
12- 60	0.5- 4	1,000	½	46985K62	416.05
20-100	1 - 6	1,000	½	46985K63	416.05

80-400	2 -20	1,600	½	46985K65	416.05

Nonadjustable Pressure Switches

- Use with air, water, hydraulic oil, and diesel fuel
- Pipe Connection: Brass ⅛ NPT male
- Amp Rating: 10 amps @125/250 volts AC

This switch comes set at your actuation point to prevent unintentional changes. It is single pole, double throw (SPDT)—it switches one circuit. Accuracy is ±1 psi or 5%, whichever value is greater. Housing is brass and seal is Buna-N. Max. pressure is 2,000 psi. Temperature range is 0° to 225°F. Enclosure is NEMA 4 (indoor/outdoor; washdown resistant) and NEMA 13 (dust/oil resistant). Switches have #8-32 screw terminals. UL recognized.

To Order: Please specify actuation point from 10 to 300 psi in 5 psi increments. The deactuation point comes set at approximately 15% below the actuation point.

3454K1					$52.62

High-Temperature Pressure Switches

- Use with air, hydraulic oil, and water
- Pipe Connection: Type 316 SS NPT female
- Amp Rating: 15 amps@125/250/480 volts AC

Withstand process temperatures up to 300°F. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±1.5%. Housing is epoxy-coated aluminum and seal is Type 316 stainless steel. Environment temp. range is –40° to 160°F and process temp. range is –70° to 300°F. Enclosure is NEMA 4X (washdown/corrosion resistant). Switches have screw terminals and a ½ NPT female conduit port. They're UL and C-UL listed, and CE approved.

Actuation Range, psi	Deactuation Range, psi	Max. psi	Pipe Size		
5- 30	1- 3	1,500	½	47515K71	$190.59
10- 100	1- 8	1,500	½	47515K72	190.59
15- 300	3- 18	1,500	½	47515K73	190.59
20- 500	4- 30	1,500	½	47515K74	190.59
80-1,700	5-120	2,000	½	47515K75	190.59

Digital Pressure Switches

- Use with air, water, and hydraulic oil
- Pipe Connection: Type 316 SS NPT male
- Amp Rating: 10 amps@250 volts AC

Install a switch that provides pressure readings at the source of your application. Set the LED to show your pressure, actuation point, or deactuation point. Digit height is ½″. Accuracy is ±0.5%. Switches are single pole, double throw (SPDT)—they switch one circuit.

Housing is epoxy-coated aluminum and seal is Type 17-4 PH stainless steel. Temperature range is –20° to 180°F. Enclosure is NEMA 4X (washdown/corrosion resistant). Switches have screw terminals and a ¾ NPT female conduit port. Operate on 110 VAC, 50/60 Hz.

Actuation Range, psi	Deactuation Range, psi	Max. psi	Pipe Size		
3- 60	0.03- 57	120	¼	7564T11	$713.68
5- 100	0.05- 95	200	¼	7564T12	713.68
10- 200	0.1 - 190	400	¼	7564T13	713.68

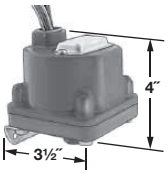
Ultra-Low-Pressure Switches

- Use with air, water, hydraulic oil, and diesel fuel
- Pipe Connection: Type 304 SS NPT female
- Amp Rating: 10 amps@125/250 volts AC



Sensitive to low pressures, these are often used in heating and ventilation systems. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±0.5%. Housing is aluminum and seal is Type 17-7 PH stainless steel. Temp. range is –65° to 165°F. Enclosure is NEMA 4 (indoor/outdoor; washdown resistant). Switches have wire leads and a ½ NPS female conduit port.

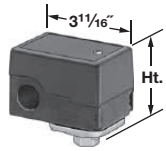
Well Water Pump and Air Compressor Pressure Switches

- Use with: See table
- Pipe Connection: Steel NPT female
- Amp Rating: See table



Standard

Meet pressure and electrical requirements of well water pumps and air compressors. Switches are double pole, single throw, and normally closed (DPST-NC)—they switch two circuits from "on" to "off." Accuracy is ±5%. Seal is rubber-coated nylon. Environment temperature range is –30° to 160°F and process temp. range is –30° to 212°F. Max. pressure is 200 psi. Switches have screw terminals and a port for ½″ conduit. UL listed and CSA certified.

Switches with air exhaust have a valve so you can release the compressed air after use.

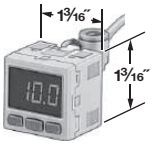
Miniature Digital Pressure Switches

- Use with air, argon, and nitrogen
- Connection: Nickel-plated brass
- Amp Rating: 80 mA@28 volts DC



Small enough to fit in tight spaces, use these switches with your programmable logic controller (PLC) for process automation. Set the LCD to show your pressure, actuation point, or deactuation point. Digit height is ⅜″. Accuracy is ±0.2%. Housing is PBT plastic (polybutylene terephthalate) and seal is nitrile. Temperature range is 32° to 122°F. Switches have wire leads. Operate on 12-24 VDC. For information about NPN and PNP switches, see page 947.

Optional panel-mount bracket fits a 1 7/32″×1 7/32″ cutout.

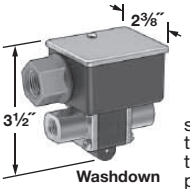
Differential Pressure Switches



- Use with air, water, and petroleum-based hydraulic oil
- Pipe Connection: Brass NPT female
- Amp Rating: 5 amps@125/250 volts AC

Switch a circuit based on the difference in pressure between two process lines. Switches have two pressure connections; they operate when the pressure differential exceeds your actuation point. Often used to indicate clogged filters.

Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±1%. Housing is polyester and 300 series stainless steel. Seal is Buna-N. Environment temp. range is 30° to 160°F and process temp. range is 0° to 200°F. Switches have screw terminals and a ⅞″ conduit port. All are UL listed, C-UL listed, and CE approved.

Actuation Range, psi	Deactuation Point, psi	Max. psi	Pipe Size		
Indoor Switches—NEMA 1 Enclosure					
1-10	0.75	150	¼	**46845K71**	$120.00
4-45	1	150	¼	**46845K72**	120.00
Washdown Switches—NEMA 4 Enclosure

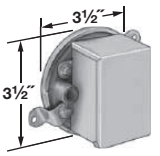
4-45	1	150	¼	**46845K82**	142.86

Low Differential Pressure Switches



- Use with air
- Pipe Connection: Aluminum NPT female
- Amp Rating: 15 amps @ 120/240/480 volts AC

Often used with ovens, dryers, and HVAC systems, these measure in inches of H_2O for activation based on small pressure differences. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±3%. Housing is zinc-plated steel and seal is silicone. Temp. range is –30° to 180°F. Switches have screw terminals and a ⅞″ conduit port. They're UL listed, CSA certified, and FM and CE approved.

Actuation Range, in. of H_2O	Deactuation Point, in. of H_2O	Max. in. of H_2O	Pipe Size		
0.07″- 0.15″	0.04″	45″	⅛	**40915K54**	$52.35

3″ -11.75″	0.4″	45″	⅛	**40915K63**	49.38
4″ -20″	0.5″	45″	⅛	**40915K65**	49.38

For information about pressure switches, see page 614. For information about pipe size, see pages 2-3.

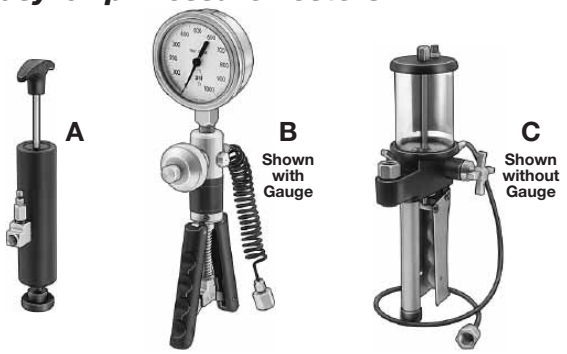
Dial-Indicating Differential Pressure Switches

- Use with air, water, and hydraulic oil
- Pipe Connection: Brass NPT female
- Amp Rating: 0.25 amps @ 120 volts AC

A gauge and switch in one, install one of these to view measurements at the source of your application. They activate based on the difference in pressure between two process lines. Switches are single pole, double throw (SPDT)—they switch one circuit. Accuracy is ±2%. Housing is brass, seal is Buna-N, and lens is glass. Temperature range is –40° to 176°F. Enclosure is NEMA 4X (washdown/corrosion resistant). Switches have screw terminals and a 1/2 NPT female conduit port. They are CSA certified.

Actuation Range, psi	Deactuation Point, psi	Max. psi	Pipe Size		
3-15	3	5,000	1/4	40945K81	$327.12
6-30	6	5,000	1/4	40945K82	327.12
10-50	10	5,000	1/4	40945K83	327.12

Easy-Grip Pressure Testers



Test your gauges and other pressure-sensing equipment. All testers have adjustable pressure control. Housing is stainless steel and plastic and seal is Buna-N. Connection is NPT female.

Styles A and B use air to test pressure. They have an air exhaust to vent after use.

Style C uses hydraulic oil to test pressure. They have a polycarbonate reservoir for test fluids.

Testers with gauge can also be used for calibration. Accuracy is ±0.5%. They have a swivel fitting so you can rotate the gauge.

	Max. psi Tester	Max. psi Gauge	Pipe Size		
Without Gauge					
A	200	—	1/8	3363K22	$463.62

Pressure Chart Recorders

Measure and record pressure in critical gas and liquid applications to troubleshoot system problems and track important process parameters. Accuracy is ±2%. Temperature range is –22° to 122°F. Recorders operate on one AA battery (included) and come with a red pen. Enclosure is NEMA 4X (washdown/corrosion resistant). Pipe connection is brass 1/4 NPT male. Charts are not included (sold separately below).

Recorders with a 4″ chart diameter can be set for 24 hour or 7 day recording speed. Response time is 1 second. Case is PBT plastic (polybutylene terephthalate) and has a 3/8″ dia. mounting hole. Size is 6 1/4″ Ht. × 6″ Wd. × 2 7/8″ Dp.

Recorders with a 8″ chart diameter have a response time of 5 seconds. Case is plastic and has two 3/8″ dia. keyhole slots for mounting. Size is 10 5/16″ Ht. × 9 1/2″ Wd. × 3 19/32″ Dp.

Replacement Red Pen					4069K98	10.62

Washdown Pressure Data Loggers with Digital Display

Track and store pressure measurements in air and water applications. These loggers save up to 64,000 data samples that you can upload to your PC. Enclosure is IP68 rated for protection against prolonged water submersion. The LCD shows pressure for local readings; digit height is 9/16″. Operates on one DL123 lithium battery (included).

Sampling interval is 1 second to 24 hours; response time is 45 seconds. Use the USB connection or a flash drive to upload data.

Housing and lens are polycarbonate. Temperature range is –4° to 158°F. Size is 3 3/8″ Dia. × 2 13/16″ Ht. Pipe connection is Type 316 stainless steel NPT male.

Software is compatible with Windows 98 or better and must be used with a PC that has a USB port and CD-ROM drive. It can be used with more than one logger.

Pressure-Recording Film

Create an instant, permanent image of pressure variation. Place film between any two contacting surfaces and apply pressure. Commonly used to measure pressing forces in bolted joints, welding fixtures, and jigs.

For Low Pressure—Film produces a grayscale image. Accuracy and resolution are not rated. Temperature range is 0° to 150°F. Film cannot be cut.

For Medium Pressure—Film produces a color image. Accuracy is ±10% and resolution is 5-15 microns. Temperature range is 41° to 95°F. Film can be cut. Use the *color chart* (sold separately) to determine the magnitude of pressure measurements.

Sample pack includes one 3″ × 4″ piece of film for each of the five pressure ranges and a color chart.

Tire Tread Pressure Distribution

Temperature-Indicating Labels

Horizontal

Continuously monitor surface-temperature changes. The temperature windows instantly turn from black to green when surface temperature reaches the temperature points. They return to black when the surface cools. Labels are self-adhesive and have °F/°C markings. Store in a cool, dry place below 64° F with less than 50% humidity.

Temp. Range, °F	Grads., °F	Accuracy, °F		Pkg. of 10
Horizontal, 7 Temp. Points—½″ Ht. x 1¾″ Wd.				
-22° to 32°	9°	±1.8°	59535K11	$12.16

154° to 184°	2°	±3.6°	59485K25	16.64

Temperature-Indicating "Hot" Labels

These self-adhesive labels indicate when pipes, ovens, and other machinery are too hot to touch. When your surface heats to the temperature point, these labels display a colored graphic with the message "hot." When the surface cools, the graphic and message disappear. Accuracy is ±4° F. Store in a dry place at 70° F with less than 50% humidity. Shelf life is one year from date of shipment.

Temp. Point, °F	Dia.	Pkg. Qty.		Pkg.
Yellow with Red Message				
122	1½″	10	83375T83	$11.15
Red with Black Message				
158	1½″	4	83375T82	6.69

One-Time-Use Single-Point Temperature-Indicating Labels

See at a glance whether inventory has been exposed to high temperatures during shipping and storage. The window on these self-adhesive labels permanently turns to black when your surface heats to the temperature point. Labels are ½″ Ht. x ½″ Wd. They have °F/°C markings. Accuracy is ±2%. Store in a cool, dry place below 64° F with less than 50% humidity. Comes on a sheet of 21 labels.

Choose a Temp. Point, °F

One-Time-Use Single-Point Low-Temperature-Indicating Labels

Often used with cold-sensitive chemicals, paints, and electronics, these labels have a window that permanently turns red when your surface's temperature drops to the temperature point. Labels are 11/16″ Ht. x 1⅜″ Wd. They are self-adhesive and have °F/°C markings. Accuracy is ±3.6° F. Store in a cool, dry place below 64° F with less than 50% humidity.

Crayon Assortments

Apply multiple temperature markings to workpieces, pipes, and equipment to visually identify a wide range of temperature changes. Crayons are ⅜″ Dia.×5″ Lg. and come in a plastic case.

Temp. Points, °F	No. of Crayons		
125 to 350 (in 25° increments)	10	3224K23	$161.77
125 to 500 (in 25° increments), 550, 600, 700, 800	20	3224K32	215.11
300 to 750 (in 50° increments)	10	3224K24	161.77

Threaded Thermometers

Monitor process temperature with these thermometers that install directly into threaded tank and pipe connections. Accuracy is ±1%. Thermometers are stainless steel. To calibrate, thermometers have either an external adjustment screw or accept a hex key. Stem dia. is ¼″. Connection is ½ NPT male.

Vibration Resistant—These thermometers have a silicone-filled dial that keeps the pointer from fluttering for accurate readings in high-vibration environments.

Thermometers with NIST certificate come with a calibration certificate traceable to NIST that states they've passed a test for accuracy.

Adjustable thermometers have a stem that pivots 180° and a head that rotates 360° for viewing at multiple angles. Tighten the set screws to secure the desired angle.

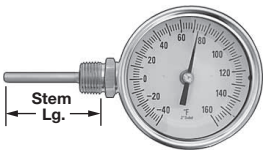
★ 5″ dial dia. has 1°F grads. for the -20° to 120°F temp. range.

Side-Connection Threaded Thermometers



Left-Side Connection

For installation in tight spaces, these thermometers have a side connection and face upright for easy viewing. Accuracy is ±1%. Thermometers are stainless steel with a glass lens. They have an external calibration adjustment screw. Dial dia. is 3″. Stem dia. is ¼″. Connection is ½ NPT male.

To Order: Please specify temperature range.

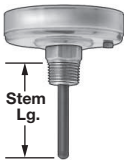
Threaded Thermometers with Corrosion-Resistant Stem



Monitor the temperature of corrosive fluids in harsh conditions. Accuracy is ±1%. Housing is stainless steel and lens is glass. Thermometers have an external calibration adjustment screw. Stem dia. is ¼″. All have a ½ NPT male back connection.

Stainless steel stems have excellent corrosion resistance in humid, wet environments. Made of 316 stainless steel. **PFA-coated stainless steel stems** have the best resistance to caustic chemicals and solvents.

To Order: Please specify temperature range.

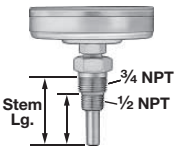
Heavy Duty Threaded Thermometers with Thermowell



A thermowell covers the thermometer stem for protection from vibration, corrosion, shock, and pressure. Accuracy is ±1%. With the thermowell, thermometers have a max. pressure of 1,200 psi @ 70°F. Thermometers are stainless steel with an acrylic lens. They have an external calibration adjustment screw. Dial dia. is 3″. Stem dia. is ½″. All have a back connection with dual ½ and ¾ NPT male threads.

To Order: Please specify temperature range.

Minimum/Maximum-Indicating Threaded Thermometers

In addition to a pointer that shows the current temperature, these thermometers have a second pointer that indicates the highest or lowest temperature reached. They are not recommended for high-vibration environments. Accuracy is ±1%. Thermometers are stainless steel with a glass lens. They have an external calibration adjustment screw. Dial dia. is 3″. Stem dia. is ¼″. All have a ½ NPT male back connection.

To Order: Please specify temperature range.

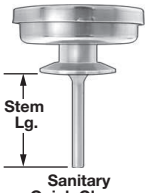
Food and Beverage Thermometers



Dry dials with plastic lenses eliminate the risk of contamination in case of breakage, so these thermometers are often used in food-processing applications. Accuracy is ±1%. Thermometers are stainless steel. Lens is acrylic, except ½ NPT male thermometers with 3″ dial dia. have a polycarbonate lens. To calibrate, thermometers have either an internal or external adjustment screw. All have a back connection.

Sanitary quick-clamp thermometers are 3-A certified for use with dairy, food, and beverage. The quick-clamp connection facilitates easy removal from your system for cleaning.

To Order: Please specify temperature range.

Deep-Reach Threaded Thermometers

An extra-long stem extends into deep tanks and hard-to-reach areas. These thermometers are often used to monitor internal temperatures in compost piles and waste containers. Accuracy is ±1%. Thermometers are stainless steel with an acrylic lens. They have an external calibration adjustment screw. Dial dia. is 3″. All have a ½ NPT male back connection.

Thermometers with grip handle have a removable aluminum handle that threads onto the ½ NPT male thermometer connection. Dial has a dual temp. range of 0° to 200°F/-15° to 90°C with 2°F/1°C graduations.

Thermometers without handle show a temp. range of 0° to 200°F with 2°F graduations.

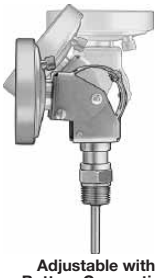
High-Accuracy Threaded Thermometers with Calibration Certificate

The most accurate threaded thermometers we sell, these come with a calibration certificate traceable to NIST that states they've passed a test to fall within ±0.5°F accuracy. Thermometers have a temp. range of -75° to 750°F with 0.1 resolution. They are stainless steel with a glass lens. All have an LCD. Dial dia. is 5″. Stem dia. is ¼″. Batteries are included. Connection is ½ NPT male.

Adjustable thermometers have a stem that pivots 180° and a head that rotates 360° for viewing at multiple angles. Tighten the set screws to secure the desired angle.



Stem Lg.	Back Connection		Bottom Connection		Adjustable with Bottom Connection

Adjustable-Angle Quick-Response Threaded Thermometers

Obtain the best viewing angle and a fast response time with these pivoting thermometers filled with a blue, mercury-free fluid (kerosene) that registers temperature changes more quickly than dial thermometer stems. The case rotates 180° and the stem pivots 180° to support angled mounting. Tighten the set screws to secure the desired angle. Accuracy is ±2°F. Thermometers have an aluminum housing with a 7/16″ dia. zinc stem and an acrylic window. Connection is ¾ NPT male.

Thermometers with thermowell are protected from shock and pressure in tanks and pipelines. 316 stainless steel thermowells are more corrosion resistant than brass.

To Order: Please specify temperature range.

Heavy Duty Quick-Response Threaded Thermometers with Thermowell

The detachable brass thermowell covers the thermometer stem to protect it from vibration, corrosion, shock, and pressure. These thermometers are filled with a red, mercury-free fluid (kerosene) that responds to temperature changes more quickly than dial thermometer stems. They have °F/°C markings with an accuracy of ±2°F. Housing is plastic with a glass window. Scale is 5″ high. Thermometers have dual ½ and ¾ NPT male threads.

To Order: Please specify temperature range.

Adjustable-Angle Solar-Powered Threaded Thermometers

Since these thermometers operate on indoor light, there's no need for batteries. The case rotates 180° to obtain the best viewing angle, and the stem pivots 180° to support angled mounting. Thermometers are °F/°C selectable with a temp. range of -50° to 300°F/-45° to 150°C. Accuracy is ±1%. Resolution is 0.1. Housing is plastic and stem is aluminum. Thermometers have an LCD. To calibrate, they have an external adjustment screw.

Thermometers without thermowell have a 11¼″-18 UNEF male connection. Stem dia. is 7/16″.

Thermometers with brass thermowell are protected from shock and pressure in tanks and pipelines and have a ¾ NPT male connection. Stem dia. is ⅝″.

Remote-Reading Panel-Mount Thermometers

Monitor the temperature of difficult-to-access system components from a distance. The probe is connected to a cable, so the dial can be mounted away from your system. Mount the dial no more than 5 feet above or below the probe to ensure accuracy. Accuracy is ±1%. Probe and cable are copper; probe is 7/16″ in dia. Housing is stainless steel and lens is polycarbonate. Connection is 1/2 NPT male. *Optional brass thermowell* protects thermometer probes from vibration, shock, pressure, and corrosive liquids.

Flange-mount thermometers have three mounting holes.

Bracket-mount thermometers have an adjustable bracket that allows the dial to pivot 90° front to back. The bracket has two mounting holes.

Available Temperature Ranges

Temp. Range	Grads.
-40° to 110°F/-40° to 43°C	1°F/1°C
-20° to 100°F/-30° to 35°C	2°F/1°C

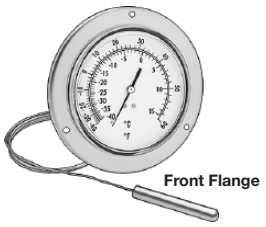
Food and Beverage Panel-Mount Thermometers



For use in food processing and preparation areas, these thermometers meet NSF/ANSI standards. They have an unthreaded probe attached to a cable for dropping into tanks, vats, and drums. Accuracy is ±1%. The probe is nickel-plated copper and 3/8″ in dia. The cable is copper. Housing is stainless steel and lens is acrylic. Flange has three mounting holes.

★ Only available in -40° to 110°F/-40° to 43°C.

High-Accuracy Panel-Mount Thermometers with Calibration Certificate

Obtain the most accurate readings possible with these thermometers that include a calibration certificate traceable to NIST that states they've passed a test to fall within ±0.5°F accuracy. The probe is connected to a cable, so the display can be mounted away from your system for remote viewing. The probe is stainless steel and 1/4″ in dia. The cable is PTFE. Housing is plastic and lens is glass. Resolution is 0.1. All have an LCD. Thermometers have a back flange with three mounting holes. Batteries are included. Connection is 1/2 NPT male.

For information about thermocouples and RTDs, see page 628.

Heavy Duty Panel-Mount Thermometers with Thermowell

The included thermowell protects the probe from the effects of vibration, shock, pressure, and corrosive liquids in tanks and pipelines. The probe is connected to a cable, so the dial can be mounted away from your system or in a control panel. Accuracy is ±1%. Probe and cable are stainless steel; probe is 5/8" in dia. Housing is aluminum and lens is glass. Thermometers have a back flange with three mounting holes.

Thermowell has a 3/4 NPT male connection. Thermowells are brass and have a max. pressure of 5,000 psi @ 70°F, except thermowells for thermometers with a temp. range of 50° to 550°F and 50° to 750°F are 304 stainless steel and have a max. pressure of 7,000 psi @ 70°F.

To Order: Please specify temperature range.

Remote-Reading Panel-Mount Freezer Thermometers with Audible Alarm

Protect temperature-sensitive materials in refrigerators and freezers with one of these thermometers that sound an alarm and flash the LED display when temperature rises above your activation point.

Thermometer is °F/°C selectable with a temp. range of -25° to 99°F. Accuracy is ±3°F. Resolution is 1. Thermometer is 5" Ht.×3 1/8" Wd.×1 1/16" Dp. and has two 7/32" dia. mounting holes. To mount, use a panel cutout of 3 7/8" Ht.×2 7/8" Wd. Includes a 6-ft. cable with probe. Housing is metal with a stainless steel faceplate.

Alarm operates on 10.5 to 28V AC/12 to 28V DC. It has wire leads to connect to the required power supply (sold separately).

Thermometer	3825K2	$162.30
Power Supply—12V AC Output/120V AC Input	3825K11	38.15

Miniature Remote-Reading Panel-Mount Thermometers

Install the small display in tight spaces and crowded instrument panels up to 10 feet from the probe. Thermometer is °F/°C selectable with a temp. range of -40° to 300°F. Accuracy is ±1.8°F. Resolution is 0.1. Thermometer is 1 5/8" Ht.×2 15/16" Wd.×1" Dp. and has two 5/32" dia. mounting holes. It requires a panel cutout of 1 1/2" Ht.×2 3/4" Wd. Housing is plastic and lens is glass. Thermometer has an LCD. Batteries are included.

4141K11		$25.66

Clip-On Thermometers

Attach these thermometers to the rims of tanks, trays, vats, and other containers. They are stainless steel and come with a clip that fits containers with a 1/2" to 3/4" wall thickness. Accuracy is ±1%. Stem dia. is 5/32". Thermometers can be calibrated with a hex key. All have an unthreaded back connection.

1 3/4" dial dia. thermometers with a max. temp. of 300°F/110°C and below have a polycarbonate lens; those with a max. temp. of 400°F and above have a glass lens.

2" dial dia. thermometers have a glass lens.

3" dial dia. thermometers have a polycarbonate lens.

To Order: Please specify temperature range.

High-Temperature Panel-Mount Thermometers

Often used to remotely monitor probe readings in high-temperature applications, these thermometers have a 1/8 DIN plastic housing designed for installation in instrument and control panels. They interpret data from a probe. Probes with wire leads are sold separately on pages 629-631.

Thermometers are °F/°C selectable, except 4068K73, 4068K58, 4068K59, and 4068K74, which are °F only. They are 1 7/8" Ht.×3 13/16" Wd.×4 1/8" Dp. and require a 1 25/32" Ht.×3 13/16" Wd. panel cutout. The LED display has a resolution of 1, unless noted. Thermometers have screw terminal connections and operate on 120/240 volts AC @ 60 Hz.

For Probe Type	Temp. Range	Accuracy		
Thermocouple Probes				
J	-346° to 1400°F	±3.7°F	4068K61	$119.02

100 ohm	-58° to 1562°F	±2.0°F	4068K66	119.02

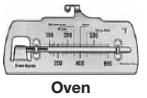
■ Resolution is 0.1.

Quick-Response Food and Beverage Panel-Mount Thermometers

A resistance temperature detector (RTD) probe responds to temperature change faster than dial thermometers. Thermometers include a 2,000-ohm RTD probe. The LED display has a resolution of 1. Housing is plastic. Thermometers have a mounting bracket and require a 2" dia. panel cutout. They have screw terminal connections and operate on 120 volts AC.

Temp. Range	Accuracy	Cable Lg.		
-40° to 199°F	±2°F	8 ft.	38675K14	$152.54
0° to 250°F	±2°F	8 ft.	38675K15	152.54
-40° to 120°C	±2°C	8 ft.	38675K16	152.54

Clip-On Oven and Freezer Thermometers



Oven

Freezer

Check internal oven temperature or monitor the temperature inside freezers, coolers, and storage areas. These thermometers have a glass tube filled with mercury-free fluid for a quick response time. Clip is stainless steel.

Oven thermometer is filled with blue Therminol 59.

Freezer thermometer is filled with red diesel fuel. It meets NSF/ANSI standards and has °F/°C markings.

Temp. Range	Grads.	Accuracy	Lg.	Ht.		
Oven Thermometer—Stainless Steel Housing						
100° to 600°F	10°F	±10°F	4 7/8"	2 3/8"	7974K32	$18.51
Freezer Thermometer—Plastic Housing						
-20° to 84°F	2°F	±3°F	4 7/8"	1 1/4"	4132K11	6.28

Remote-Reading Magnetic-Back Thermometers

Remotely check temperature on the go. These thermometers have a magnetic-back display for temporary mounting and a thermocouple probe with a 5-ft. long coiled cable. The probe can be used to monitor air, gas, liquid, solid, and surface temperatures. Resolution is 1. Housing is plastic. All have an LCD. Batteries are included.

With Thermocouple Probe Type	Temp. Range	Accuracy		
J	-50° to 1200°F	±0.25%	38855K72	$115.78
K	-50° to 1000°F	±0.25%	38855K74	115.78
T	-100° to 700°F	±0.25%	38855K76	115.78

Pipe-Mount Surface-Temperature Thermometers

Strap Mount

Clip-On Mount

Check the temperature of pipes, tubing, and other cylindrical surfaces. Thermometers have an aluminum housing and a glass lens.

Strap-mount thermometers wrap around pipes with a flexible strap.

Clip-on mount thermometers have a spring-loaded clip that snaps onto pipes.

To Order: Please specify temperature range.

Available Temperature Ranges

1 5/8" to 2 3/8"	2"	±2%	4100K6	63.55

Pipe-Mount Hazardous-Location Thermometers

Mount this thermometer on pipes in environments with flammable gases, combustible dust, and ignitable fibers. It is FM approved for Class I, Division 1, Groups B, C, and D; Class II, Division 1, Groups E, F, and G; and Class III hazardous locations. The enclosure meets NEMA 4X for indoor/outdoor use and resistance to corrosive fluids, splashing water, and dust. Thermometers are for use with Types J and K thermocouple probes and RTD probes with wire leads (sold separately on pages 629-631).

Thermometer is °F/°C selectable with a temp. range of -58° to 1832°F. Accuracy is ±1°F. Resolution is 1. Housing is aluminum and lens is glass. Thermometer has an LCD. Requires two AA batteries (not included). It requires a pipe size 2 mounting bracket (sold separately).

Thermometer	4128K25	$368.33
Pipe-Mounting Bracket—Stainless Steel Housing	4128K26	129.20

Floating Pocket Thermometers

A removable rubber float keeps these thermometers on the surface of liquid-filled containers for hands-free temperature readings. Accuracy is ±1%. Thermometers are stainless steel with a polycarbonate lens. Dial dia. is 1 3/4". Stem dia. is 5/32". Thermometers have an external calibration adjustment screw.

Temp. Range	Grads.	5" Stem Lg.		8" Stem Lg.	
0° to 140°F	2°F	3992K13	$30.05	3992K23	$30.05
0° to 220°F	2°F	3992K14	30.05	3992K24	30.05

Remote-Reading Magnetic-Back Thermometers with Calibration Certificate

Externally monitor the air temperature inside freezers, refrigerators, water baths, and incubators. These thermometers come with a calibration certificate traceable to NIST that states they've passed a test for accuracy.

They have a glass probe with a 10-ft. cable that connects to a magnetic-back external LCD. The probe is insulated in a bottle filled with mercury-free fluid (glycol) to prevent false readings from rapid temperature changes such as opening freezer doors. The display simultaneously shows the high, low, and current temperatures. These thermometers have a programmable alarm to indicate when temperature rises above or below your actuation point. They are °F/°C selectable. Housing is plastic. Batteries are included.

Temp. Range	Accuracy	Resolution		
-58° to 158°F	±1.8°F	1	9276T12	$55.87
-58° to 158°F	±0.9°F	0.1	9276T22	67.13

Magnetic-Back Surface-Temperature Thermometers

Min./Max. Indicating Dial

Check the surface temperature of tanks, generators, annealing ovens, boilers, and other metallic equipment. Accuracy is ±2%. Thermometers have an aluminum housing and a glass lens. Dial dia. is 2".

Min./Max. Indicating Dial—In addition to showing current surface temperature, these thermometers have pointers to indicate the min. and max. temperatures since the last reading. Reset the min. and max. pointers with the included magnetic wand.

Temp. Range	Grads.	Plain Dial		Min./Max. Indicating Dial	
-100° to 160°F	2°F	3982K17	$48.24	3982K41	$70.37

0° to 220°F	2°F	4129K12	20.04	4129K21	22.69

Quick-Response Pocket Thermometers

The red, mercury-free fluid (benzoic acid isoamyl ester) in these glass thermometers registers temperature changes more quickly than a dial thermometer stem. Thermometers must be totally immersed in liquid for accurate readings. They come with an aluminum sheath.

Heavy duty thermometers have a protective aluminum housing that keeps the thermometers from cracking or shattering when dropped.

Standard

Temp. Range	Grads.	Accuracy	Overall Lg.	Standard		Heavy Duty	
-30° to 120°F	2°F	±2°F	5½″	3913K71	$21.99	3913K81	$23.89

-10° to 110°C	1°C	±1°C	5½″	3913K74	21.99	3913K84	23.89

Hand-Held Glass Thermometers

Mercury-free fluid (benzoic acid isoamyl ester) in these glass thermometers quickly responds to temperature changes. Thermometers are 12″ long, unless noted. *Thermometers with 3″ immersion depth* are known as partial immersion and are designed for use in shallow areas where total immersion is not possible. *Thermometers with 12″ immersion depth* are known as total immersion and must be completely submerged in fluid.

Shatter-resistant thermometers have an FEP coating that absorbs shock and contains glass and liquid for easy cleanup in case of breakage.

Heavy duty thermometers have a nickel-plated brass housing that protects the thermometers from cracking or shattering when dropped or bumped.

Digital Pocket Thermometers

Keep one of these thermometers in your pocket for readings on the go. They are °F/°C selectable, unless noted. Resolution is 0.1. Stem is stainless steel. All have an LCD. Thermometers have an on/off switch, except Style C has an on button and automatically turns off in one hour and Style J turns on when the probe is unfolded. Thermometers include a plastic probe sheath, except Styles J and K. Batteries are included.

Thermometers with NIST certificate come with a calibration certificate traceable to NIST that states they've passed a test for accuracy. *Water-resistant* thermometers have a housing that stands up to washdown conditions and outdoor use.

Food and beverage thermometer meets NSF/ANSI standards.

Deep-reach thermometers have a long stem that reaches the bottom of flasks, test tubes, and beakers.

Extended-life thermometers have a probe that folds into the handle to prevent wear and damage.

Miniature thermometer has a clip for attaching to your belt loop or keys.

Hand-Held Thermometers

For information about thermocouples and RTDs, see page 628.

Hand-Held Surface-Temperature Thermometers

Touch surfaces with these indicators for a quick temperature reading. They can read temperatures on both shiny and dull surfaces. Display is LED. Batteries are included. **Thermometer with NIST certificate** includes a calibration certificate traceable to NIST that states the thermometer has passed a test for accuracy.

Temp. Range	Accuracy	Thermometer		Thermometer with NIST Certificate	
32° to 999°F/0° to 537°C	± 2%	1232N11	$218.69	1232N12	$498.97

Hand-Held Thermometers with Calibration Certificate

Remote Reading

Remote Monitoring

These thermometers come with a calibration certificate traceable to NIST that states they've passed a test for accuracy. Thermometers are °F/°C selectable. They have a single-probe input, except remote-reading thermometer with ±0.6°F accuracy has two inputs. They have min./max. memory, unless noted. All have an LCD. Batteries are included.

Remote-reading thermometers have a probe on a cable that extends your reach in hard-to-access areas.

Remote-monitoring thermometer allows viewing of temperature readings up to 100 feet from the source. This thermometer includes one temperature sensor with a probe that transmits signals to the wireless monitor. The wireless monitor accommodates up to two additional sensors (sold separately).

Temp. Range	Accuracy	For Use With	Cable Lg.

★ Does not have min./max. memory.

High-Temperature Hand-Held Thermometers

With Thermocouple Probe

With RTD Probe

Track slight temperature variations in critical applications with these high-temperature thermometers. All have a single-probe input. Thermometers have a backlit LCD, unless noted. Batteries are included. CE marked. *Thermometers with NIST certificate* come with a calibration certificate traceable to NIST that states it has passed a test for accuracy.

Extended Life with RTD Probe—Thermometers with resistance temperature detector (RTD) probes have a longer service life and more consistent readings over time compared to thermometers with thermocouple probes.

Water-resistant thermometer has a housing that meets IPX7 for protection from temporary submersion.

Food and beverage thermometer meets NSF/ANSI standards. The probe has a pointed tip to pierce dense meats and frozen foods. The housing meets IPX7 for protection from temporary submersion.

Temp. Range	Accuracy	Probe Type	For Use With	Cable Lg.

■ LCD is not backlit.

Water-Resistant Hand-Held Thermometers

A water-resistant housing and rubberized keypad stand up to washdown conditions and outdoor use. Thermometer is °F/°C selectable with a temp. range of -58° to 302°F. Accuracy is ±0.8°F. Thermometer comes with one immersion probe. It has min./max. memory. It also has a backlit LCD. Cable is 3.25 feet long. Batteries are included. To measure the temperature of air or solids, use an air or penetration probe (sold separately).

Thermometer	40055K11	$188.16
Replacement Immersion Probe	40055K21	77.54
Optional Air Probe	40055K22	102.63
Optional Penetration Probe	40055K23	74.12

Fluke High-Accuracy Hand-Held Thermometers

Single-Probe Input

Designed for laboratory applications, these thermometers determine temperature within ±0.75°F accuracy. Thermometers have a temp. range of -40° to 500°F and are °F/°C/Kelvin selectable. They come with a type K thermocouple probe that can be used to monitor air, gas, solid, and surface temperatures. All have a backlit LCD. Cable is 3.25 feet long. Batteries are included. CSA certified and CE marked.

Data-logging thermometers store up to 500 readings and have min./max. memory.

Thermometers with NIST certificate include a calibration certificate traceable to NIST that states the thermometer has passed a test for accuracy.

	Fluke No.	Thermometers		Thermometers with NIST Certificate	
Standard					
Single-Probe Input	51-2	40255K31	$295.82	40255K41	$424.74
Dual-Probe Input	52-2	40255K32	345.12	40255K42	473.94
Data Logging					
Single-Probe Input	53-2B	40255K33	415.01	40255K43	545.22
Dual-Probe Input	54-2B	40255K34	466.14	40255K44	596.36

For information about thermocouples and RTDs, see page 628.

Data-Logging Hand-Held Thermometers

Measure and store thousands of temperature readings and upload data to a PC. Thermometers are °F/°C selectable. All have min./max. memory. They also have a backlit LCD. Batteries are included. CE marked.

Thermometer with Type K Thermocouple Probe—Measure and store up to 8,800 temperature readings from two sources and upload using the RS-232 port. Software and cable are included.

Thermometer with Extended-Life 100-ohm RTD Probe—For more accurate and consistent readings than thermometers with thermocouple probes and a longer service life, this thermometer has a resistance temperature detector (RTD) probe. It logs up to 2,000 time- and date-stamped readings that can be uploaded using the USB port. Conserve battery life with the optional power adapter (sold separately).

With RTD Probe

With Probe Type	Temp. Range	Accuracy	For Use With	Cable Lg.		
Type K Thermocouple	-22° to 572°F	± 1.75°F	Air, Gases, Surfaces	3 ft.	9281T44	$259.19
Extended Life 100-ohm RTD	-58° to 932°F	± 0.1°F	Air, Gases, Liquids, Solids, Surfaces	5 ft.	38655K18	535.54
Optional 120V AC/240V AC Power Adapter for Extended-Life Thermometer					38655K52	72.70
Replacement Type K Thermocouple Probe					9281T21	19.19
Replacement Extended Life 100-ohm RTD Probe					38655K49	141.05

Infrared Thermometers

Check the temperature of hazardous, hard-to-reach, and moving surfaces without risking electrical shock or contamination. These thermometers are often used to locate and diagnose problems in electrical, heating, and ventilation systems. They are °F/°C selectable with a resolution of 0.1. All have an LCD. Response time is 1 second. Thermometers have a laser sight and shut off automatically. Batteries are included. CE marked.

Thermometers with NIST certificate come with a calibration certificate traceable to NIST that states they've passed a test for accuracy.

Thermometers with adjustable emissivity can be calibrated for more accurate readings of shiny surfaces than thermometers with fixed emissivity.

Temp. Range	Accuracy	Emissivity	Max. Working Distance	Overall Size Ht.	Wd.	Dp.	Thermometers		Thermometers with NIST Cert.

Pocket Infrared Thermometers

Keep these small thermometers in your pocket or toolkit to spot check the temperature of hazardous, hard-to-reach, and moving surfaces without touching them. They are °F/°C selectable with a resolution of 0.1, unless noted. All have an LCD. Response time is 1 second, except Style D is not rated for response time. Thermometers have a laser sight, unless noted. They shut off automatically. Batteries are included. CE marked, unless noted.

Thermometers with NIST certificate come with a calibration certificate traceable to NIST that states they've passed a test for accuracy.

Thermometers with adjustable emissivity can be calibrated for more accurate readings of shiny surfaces than thermometers with fixed emissivity.

Style E meets IP67 for protection against dust and water submersion.

♣ Not CE marked. ♦ Does not have laser sight. ▲ Resolution is 1.

Thermal Imaging Guns

Detect hot spots, leaks, moisture problems, and construction defects invisible to the eye. These imaging guns translate thermal energy into a color image that indicates hotter areas as brighter and cooler areas as darker, so it's easy to identify and diagnose problems on instrument panels, HVAC systems, and other equipment. Imaging guns have adjustable emissivity and can be used on dark, dull, light, and shiny surfaces. They are° F/° C selectable. Both have an LCD. 4006K8 has a laser sight. Thermal imaging guns come with a rechargeable battery, charger, memory card, and USB cable. CE marked. Cannot be sold in California or Oregon.

Thermocouple Probes

About Selecting Temperature Sensors

RTDs (resistance temperature detectors) and thermocouples are temperature sensors that convert readings into electrical signals that can be transmitted to instrumentation such as switches, controllers, recorders, and thermometers.

Selecting a New Temperature Sensor

Though RTDs and thermocouples both measure temperature, they vary in maximum temperature, accuracy, reliability over time, vibration resistance, and cost. Use this chart to determine which sensor type will work best in your application.

	RTDs	Thermocouples
Maximum Temperature	Moderate	Extremely High
Accuracy	High	Moderate
Reliability Over Time	Consistent	Decreases
Vibration Resistance	Low	High
Cost	Moderate	Low

Replacing a Temperature Sensor

RTDs and thermocouples are not interchangeable. RTDs generally have three wires; thermocouples have two wires.

RTDs are available in 100 ohms or 1,000 ohms. RTD types are not interchangeable.

Thermocouples are available in Types J, K, and T. Types are not interchangeable. If you don't know your thermocouple type, use this chart to identify it by the color of the wire leads or connecting plug.

Type	Best for Measuring	Wire Lead Colors	Plug Color
J	High Temperatures	White and Red	Black
K	High, Fluctuating Temperatures	Yellow and Red	Yellow
T	Low Temperatures	Blue and Red	Blue

Thermocouple performance is impacted by the sensor type.

Exposed Sensor

This sensor has no protective sheath, so it has the best response time but no protection from corrosion and damage.

Ungrounded Sensor

This sensor is isolated from the protective sheath, so it has the slowest response time but is protected from the environment and will not create a ground loop.

Grounded Sensor

This sensor is welded to the protective sheath for a faster response time than an ungrounded sensor, but it can create a ground loop that interferes with readings.

Thermocouple Probes for Air

1-3

4

5

6

Monitor ambient air temperature throughout your facility. Accuracy is ±0.75%, unless noted. Probes have an exposed sensor.

Probes with armored cable have an armored cable that protects wiring from corrosion and damage in humid conditions and harsh environments. They have a bayonet mounting connection that securely holds the probe in place in high-vibration environments. The included mounting adapter converts the bayonet connection to a threaded connection. Probes have 2″ long, 20-ga. wire leads.

Type	Temp. Range	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
Standard Cable with Flat-Pin Connector

Thermocouple Probes for Surfaces

Standard

Heavy Duty

Touch the probe tip to your surface for a quick reading. Probes have 20-ga. wire leads. Wire leads are 2″ long, except heavy duty probes have 3″ long wire leads. Accuracy is ±0.75%.

Standard probes have a fiberglass cable. They have an exposed sensor. *Type J* probes are iron; *Type K* probes are nickel; *Type T* probe is copper.

Heavy duty probes have an armored stainless steel cable that resists wear, abrasion, and corrosion in humid and harsh conditions. A bayonet connection securely holds the probe in place in high-vibration environments. Probes are stainless steel and have a grounded sensor.

Type	Temp. Range	Cable Lg.	Response Time, sec.	Max. Cable Temp.		
Standard—1/16″ Dia. x 3/8″ Lg. Probe						
J	32° to 900°F	3 ft.	1.8	900°F	9251T91	$19.50
J	32° to 900°F	6 ft.	1.8	900°F	9251T92	21.40
K	32° to 900°F	3 ft.	1.8	900°F	9251T93	19.40
K	32° to 900°F	6 ft.	1.8	900°F	9251T94	22.10
T	32° to 500°F	6 ft.	1.8	900°F	9251T96	21.00
Heavy Duty—3/16″ Dia. x 1/2″ Lg. Probe						
J	32° to 1380°F	8 ft.	2.5	950°F	3860K53	32.86
K	32° to 2280°F	8 ft.	2.5	950°F	3860K59	32.86

Hand-Held Thermocouple Probes for Surfaces

Straight Probe

60° Angled Probe

90° Angled Probe

Often used with thermocouple thermometers, these probes have a handle for a comfortable grip. All have a flat-pin connector. Probes are stainless steel and have a 4-ft. polyurethane cable. Not rated for accuracy.

Type	Temp. Range	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
Straight Probes (7/16" dia.)—Exposed Sensor						
J	32° to 1200°F	4"	1	175°F	3861K36	$146.17
K	-40° to 1200°F	4"	1	175°F	3861K37	146.17
T	-40° to 750°F	4"	1	175°F	3861K311	146.17
60° Angled Probes (11/16" dia.)—Grounded Sensor						
J	32° to 500°F	4 1/2"	4	175°F	3861K631	105.88

K	-40° to 1200°F	5"	1	175°F	3861K322	150.84

Noncontact Infrared Thermocouple Probes for Surfaces

Monitor the temperature of hazardous, sensitive, and hard-to-reach surfaces without touching them. The 304 stainless steel enclosure meets NEMA 4 for use in washdown environments and IP65 for protection from dust and splashing water.

Thermocouples require 12V-24V DC power. Use the *optional power adapter* to convert AC voltage to DC voltage. Use the included nuts to install these probes through a panel with a 3/4" dia. cutout or use the optional mounting bracket to surface mount for continuous, hands-free temperature monitoring. Thermocouples have a 3.25-ft. PVC cable with wire leads. Accuracy is ±2%. Response time is 0.35 seconds.

Type	Temp. Range	Max. Working Distance	Probe Dia.	Probe Lg.	Max. Cable Temp.		
J	32° to 660°F	4 ft.	3/4"	3 1/2"	220°F	3889K111	$318.04
J	85° to 930°F	4 ft.	3/4"	3 1/2"	220°F	3889K211	318.04
Optional Power Adapter—120V AC/240V AC Input						3889K31	137.03
Optional Mounting Bracket						3889K32	45.04

Quick-Connect Thermocouple Probes for Surfaces

Hose-Clamp Probe

Hook-and-Loop Probe

Magnetic Probe

Clip-On Probe with 5-ft.Cable

Clip-On Probe with 10-ft. Cable

Bolt-On Probe

Adhesive-Back Probe

The probe tips come attached to mounting connections for fast installation. Accuracy is ±0.75%, unless noted.

Hose-clamp and **hook-and-loop** probes fit around pipes, tubes, and cylindrical containers. *Hose-clamp* probes have a 25 second response time. *Hook-and-loop* probes have a 60 second response time.

Magnetic probes mount on any flat, ferrous surface. They have a magnetic holding force of 16 lbs. Wire leads are 1/4" long. Not rated for response time.

Clip-on probes attach to vents, oven racks, circuit boards, and other irregular surfaces. Response time is 5 seconds.

Bolt-on probes mount on motors, machines, and other equipment for temperature readings in high-vibration environments. They have fiberglass insulation and a 300 series stainless steel jacket. Wire leads are 48" long. Response time is 2 seconds. Mounting bolt is not included.

Adhesive-back probes stick to your surface and have a slim profile that fits in tight spots. They have fiberglass insulation and jacket. Wire leads are 48" long. Response time is 2 seconds.

Thermocouple Probes

For information about thermocouples and RTDs, see page 628.

Thermocouple Probes for Liquids and Gases

Standard Cable with Wire Leads

Armored Cable with Flat-Pin Connector

Keep tabs on liquid and gas process temperatures. Accuracy is ±0.75%, unless noted. All probes have a grounded sensor.
Probes with standard cable have 20-ga. wire leads. They are not rated for response time.
Probes with armored cable protect thermocouple wiring from wear and corrosion. Response time is 1 second.

Standard Cable with Wire Leads

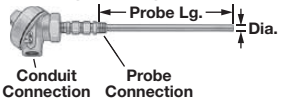
Heavy Duty Threaded Thermocouple Probes for Liquids and Gases



A protective head prevents dust and moisture from damaging the terminal block, and thick probe walls reduce wear on the sensing element. Terminal block has screw connections. Probes are stainless steel. Accuracy is ±0.75%. Not rated for response time. All have a grounded sensor.

To Order: Please specify thermocouple type from those listed.

With Aluminum Head

Terminal block accepts a maximum wire size of 20 ga.

For information about thermocouples and RTDs, see page 628.

Threaded Thermocouple Probes with Thermowell for Liquids and Gases

The included thermowell protects the probe from vibration, corrosion, and shock in tanks and pipelines. Probes have a terminal block with screw connections. Probe is ceramic and head is cast iron. Accuracy is ±0.75%. Not rated for response time.

Probes with a 304 stainless steel thermowell accept a maximum wire size of 20 ga.

Probes with a 316 stainless steel thermowell accept a maximum wire size of 14 ga.

Available Thermocouple Types	
Type	Temp. Range
J	32° to 1400°F

Thermocouple Probes for Solids

Pierce pliable plastics, rubber, and other soft solids to check the internal temperature. Probes have a flat-pin connector. All are stainless steel. Accuracy is ±0.75%, unless noted. Probes have a grounded sensor, except Style 8 has an ungrounded sensor.

Pointed-tip probes pierce dense solids more easily than round-tip probes. *Needle-tip* probes minimize puncture damage when inserted into sensitive materials and small objects.

Probes with armored cable have an armored stainless steel cable that protects wiring from corrosion and damage in humid conditions and harsh environments.

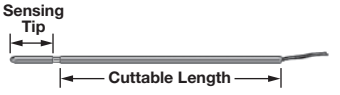
Cut-to-Length Thermocouple and RTD Probes for Liquids and Gases

Trim these probes to the exact length you need with a pipe cutter. They have 6" long wire leads and a 3" long sensing tip. Probes are stainless steel. Accuracy is ±0.12%. Response time is 107 seconds. **Thermocouple** probes have a grounded sensor; **RTD** probes have a platinum sensing element.

24" long probes have a 20" cuttable length, except RTD probes have a 21" cuttable length.

48" long probes have a 44" cuttable length, except RTD probes have a 45" cuttable length.



Type	Temp. Range	Probe Dia.	24" Length		48" Length	
Thermocouple Probes—20-ga. Wire Leads						
J	32° to 400°F	1/4"	38705K41	$64.67	38705K31	$106.72

RTD Probes for Air

Use these RTD probes for more stable air-temperature readings than thermocouple probes. Probes are platinum and have a 100-ohm element. Temperature range is -55° to 400°F. Accuracy is ±0.12%. Cable is PTFE and has a maximum temperature of 400°F. Probes have 1/2" long, 24-ga. wire leads. Response time is 5 seconds.

Probe Dia.	Probe Lg.	Cable Lg.		
1/8"	5/8"	3 ft.	1237N11	$22.10
1/8"	5/8"	6 ft.	1237N12	25.60

RTD Probes with Armored Cable for Liquids and Gases

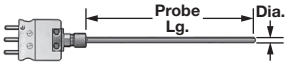
For a long service life in harsh conditions, this RTD probe has an armored stainless steel cable to protect wiring from corrosion, abrasion, and impact. Probe is stainless steel and has a 100-ohm element. Temperature range is -55° to 400°F. Accuracy is ±0.12%. Cable has a maximum temperature of 400°F. Probe has three, 24-ga. wire leads; leads are 36" long. Response time is 10 seconds.

Probe Dia.	Probe Lg.	Cable Lg.		
1/4"	6"	3 ft.	1220N11	$96.10

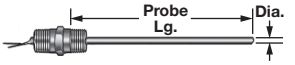
RTD Probes

For information about thermocouples and RTDs, see page 628.

RTD Probes for Liquids and Gases



With Round-Pin Connector



With Threaded Connection and Wire Leads

Obtain more accurate and reliable liquid and gas temperature measurements than thermocouple probes. These RTD probes are stainless steel and have a 100-ohm element. Temperature range is -55° to 400° F. Accuracy is ±0.12%. Response time is 10 seconds.

Probes with round-pin connector have a 3-pin connector.

Probes with threaded connection and wire leads are often used to measure temperature in water lines and low-pressure steam lines. They have a ½ NPT male probe connection for easy installation in pipes, tanks, and thermowells. Probes have three, 24-ga. wire leads; leads are 3″ long.

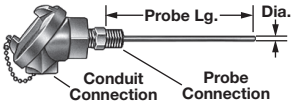
	With Round-Pin Connector			With Threaded Connection and Wire Leads		
Probe Dia.	Probe Lg.			Probe Lg.		
¼″	6″	3866K85	$85.32	6⅝″	3866K43	$87.10
¼″	12″	3866K86	87.42	12⅝″	3866K44	90.03

Threaded RTD Probes for Liquids and Gases

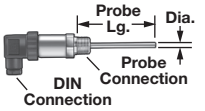
To protect the probe from vibration, corrosion, and shock, these RTD probes come with a 304 stainless steel thermowell. Probes are stainless steel and have a 100-ohm element. Temperature range is -55° to 400° F. Accuracy is ±0.12%. Head is cast iron and has a terminal block with screw connections to attach wire. Response time is 30 seconds.

Probe Dia.	Probe Lg.	O'all Lg.	Thermowell Connection, NPT male	Conduit Connection, NPT female		
½″	5½″	14⅛″	¾	¾	6581T51	$204.86
½″	8½″	17⅛″	¾	¾	6581T52	238.57
½″	11½″	20⅛″	¾	¾	6581T53	276.58

Threaded RTD Probes with 4-20 mA Output



With NPT Conduit Connection



With DIN Connection

A built-in transmitter converts the probe's temperature readings to a 4-20 mA signal for use with switches, controllers, and data loggers. Probes are stainless steel and have a 100-ohm element. Probe connection is ½ NPT male. Probes operate on 10V-30V DC power.

Probes with NPT conduit connection measure air temperature. Conduit connection is ¾ NPT female. Accuracy is ±0.1%. Probes have an aluminum head with a screw-on cap and retaining chain. The transmitter has screw terminal connections. Response time is 6 seconds.

Probes with DIN connection measure both liquid and gas temperatures. Accuracy is ±0.5%. Probes have a plastic head. They have a maximum pressure of 600 psi @ 70° F. Response time is 10 seconds. Probes meet IP65 for protection from dust and splashing water. CE marked.

Temp. Range	Probe Dia.	Probe Lg.	O'all Lg.

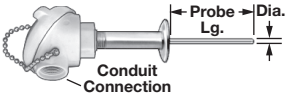
Food and Beverage RTD Probes with Sanitary Quick-Clamp Connection



Designed for clean-in-place applications such as dairy processing and food-preparation areas, these 3-A certified RTDs have a sanitary quick-clamp probe connection for easy removal. For sanitary quick-clamp fittings, see pages 228-232. Probes are stainless steel and have a 100-ohm element. Temperature range is -325° to 400° F. Accuracy is ±0.1%. Head is plastic and flange is 316 stainless steel. Probes have screw terminal connections. Response time is 5 seconds.

Quick-Connect RTD Probes for Surfaces

A B C D E F

For fast installation, the tips of these RTD probes come attached to mounting connections. Accuracy is ±0.12%. Probes have 40″ long wire leads.

Adhesive-back probes stick to your surface and have a slim profile that fits in tight spots. Probes are platinum.

Bolt-on probes securely mount on machines, motors, and other equipment. They meet MS-202 (Method 204, Test Condition D) for use in high-vibration environments. Probes are stainless steel, unless noted. They have a mounting hole, except for Style B which has an attached bolt that fits a ¼″-20 hole. Fasteners are not included.

★ Wire leads are 24 ga. ■ Probe is nickel-plated copper.

For information about thermocouples and RTDs, see page 628.

Thermocouple and RTD Wire

Make your own thermocouples and RTDs. *Stranded* wire is more flexible than solid wire.
PVC insulation and jacket is good for general purpose applications.
FEP insulation and jacket is more abrasion and chemical resistant than PVC.
Fiberglass insulation and jacket is rated for higher temperatures than PVC and FEP and is highly resistant to chemicals.
Polyimide insulation and jacket stands up to humid conditions and rapid temperature changes.

Solid Thermocouple Wire

Stranded RTD Wire

Thermocouple Wire—Two Wires

Thermocouple extension wire carries thermocouple signals over longer distances than standard thermocouple wire by lengthening existing thermocouple connections. UL recognized.

Thermocouple Extension Wire with Connectors

5-ft. Length

10-, 25-, and 50-ft. Lengths

Extend the reach of your thermocouple probe—plug-in connectors on both ends of this wire speed installation. *Stranded* wire is more flexible than solid wire.

5-ft. lengths have 28-ga. stranded wire with PTFE insulation and a polyurethane jacket. Temp. range is -30° to 220°F.

10-, 25-, and 50-ft. lengths have 24-ga. solid wire with PVC insulation and jacket. Temp. range is -15° to 220°F.

Panel-Mount Thermocouple Connection Strips

Flat-Pin Connection

Round-Pin Connection

Connect multiple thermocouple probes to an instrument panel. All have female screw terminal connections. Body is plastic. Maximum temperature is 400°F. Mounting fasteners are included.

Flat-pin connection strips accept a maximum wire size of 24 ga. Panel cutout height is 1″.

Round-pin connection strips accept a maximum wire size of 16 ga. Panel cutout height is 1¼″.

Connection strips for Type J thermocouples are black and have iron contacts; *Type K* are yellow and have nickel contacts; *Type T* are blue and have copper contacts.

To Order: Please specify thermocouple probe type: Type J, Type K, or Type T.

No. of Connections	Flat-Pin Connection: Panel Cutout Wd.			Round-Pin Connection: Panel Cutout Wd.

Thermocouple and RTD Connectors

Thermocouple Connectors and Adapters—*Type J* have iron contacts; *Type K* have nickel contacts; *Type T* have copper contacts.

Thermocouple Connectors

Add these connectors to thermocouple wire for easy attachment to thermometers and control panels.

(1) Flat Pin with Screw Terminal Connections—Accept a maximum wire size of 24 ga. Type J connectors are black; Type K are yellow; Type T are blue.

(2) Round Pin with Screw Terminal Connections—Accept a maximum wire size of 14 ga. Connectors are red.

(3) Round Pin with Exposed Screw Terminal Connections—The exposed screw terminal lets you quickly attach wire leads without disassembling the connectors. Accept a maximum wire size of 14 ga. Connectors are white.

Threaded Thermocouple Connectors

Round-Pin Connector

Also known as feedthrough connectors, these mount through threaded tank openings to make connections between thermocouple probes and external equipment. They have a female screw terminal connection on one end and 24-ga. wire leads on the other. Wire leads have PTFE insulation and jacket and are 48″ long. Body is stainless steel. Temperature range is -40° to 250° F.

Flat-pin connectors have a ½ NPT male probe connection; **round-pin** connectors have a ¾ NPT male probe connection.

Type	Flat-Pin Connector		Round-Pin Connector	
J	3877K221	$61.82	3877K241	$71.43
K	3877K222	61.82	3877K242	71.43
T	3877K223	61.82	3877K243	71.43

Panel-Mount Thermocouple Connectors

Flat-Pin Connector

Plug thermocouple probes into a control panel. Connectors have female screw terminal connections. Body is plastic. Maximum temperature is 400° F. Mounting fasteners are included.

Flat-pin connectors accept a maximum wire size of 20 ga.; **round-pin** connectors accept a maximum wire size of 14 ga.

Type	Color	Flat-Pin Connector Panel Cutout		Round-Pin Connector Panel Cutout	
J	Black	⅞″ Dia. 3869K47	$11.92	1⅛″ Dia. 3869K66	$12.95

Thermocouple Round-Pin Male to Flat-Pin Male Adapters

Convert round-pin male connectors to flat-pin male connectors. Adapters have plastic bodies. Maximum temperature is 400° F.

Type	Color		
J	Black	3869K69	$9.27
K	Yellow	3869K71	9.27

RTD Connectors

Male

Female

Attach plug-in connectors to RTD probes with wire leads. These round-pin connectors can be used with both 100- and 1,000-ohm RTDs. They have screw terminal connections and accept a maximum wire size of 20 ga. Body is plastic and contacts are copper. Maximum temperature is 400° F.

Male	3869K77	$5.75
Female	3869K76	9.27

Wire-Clamp Brackets

For Flat-Pin Connectors

For Round-Pin Connectors

Install these brackets on thermocouple and RTD connectors to stabilize connections between wire leads and screw terminals. Brackets are stainless steel, except bracket for round-pin thermocouple connectors is steel.

For Flat-Pin Thermocouple Connectors	3869K62	$2.25
For Round-Pin Thermocouple Connectors	3869K19	1.93
For Round-Pin RTD Connectors	3869K61	2.37

Accessories for Thermocouple and RTD Probes

Terminal Blocks

Connect thermocouple probes to extension wire or instrumentation. Terminal blocks have screw terminal connections and accept a maximum wire size of 14 ga. Maximum temperature is 1000° F.

For Thermocouple Wire	38705K82	$11.43
For RTD Wire	38705K83	14.46

Thermocouple and RTD Fittings

Adapt unthreaded thermocouple and RTD connections for use with threaded tanks and connection heads. Fittings have ½ NPT male connections. They are stainless steel.

Standard	38705K81	$34.14
With Fluoroelastomer O-Ring	38705K91	43.00

Connection Heads

With Screw-On Cap

With Hinged Cap

A removable cap seals out dust and moisture and provides easy access to sensor connections. Heads have a ½ NPT female probe connection. Conduit connection is ¾ NPT female.

FM-approved connection heads are rated for use in Class I, Division 1, Groups A, B, C, and D and Class II, Division 1, Groups E, F, and G hazardous locations with flammable gases and combustible dust.

With Screw-On Cap and Retaining Chain

Thermowells

Protect thermometers and temperature probes from pressure, vibration, shock, and corrosion in tanks and pipelines. These thermowells isolate the contents of your process, so you can replace temperature sensors without stopping flow or draining the system. Thermowells are for use with thermometers with a ½ NPT male connection.

Brass thermowells have a maximum temperature of 400° F and maximum pressure of 5,000 psi @ 70° F.

304 stainless steel and *316 stainless steel* thermowells have a maximum temperature of 1600° F and maximum pressure of 7,000 psi @ 70° F, unless noted.

304 stainless steel thermowells are more corrosion resistant than brass thermowells. 316 stainless steel thermowells are extremely resistant to corrosive chemicals.

Heavy Duty Thermowells—Thick walls and a tapered shank shield thermometers and temperature probes from higher pressure and flow than other thermowells.

Thermowells for Insulated Tanks—The extra-long nut on these thermowells lets you install thermometers and temperature probes through thick insulation.

Weld-In Thermowells

To protect thermometers and temperature probes in steam lines and other high-temperature and high-pressure applications, these thermowells weld into place for a more secure connection than threaded thermowells. They are for use with thermometers with a ½ NPT male connection.

304 stainless steel thermowells have a maximum temperature 1650° F. Maximum pressure is 3,400 psi @ 1000° F.

316 stainless steel thermowells have a maximum temperature of 1700° F. Maximum pressure is 5,200 psi @ 1000° F.

Food and Beverage Thermowells with Sanitary Quick-Clamp Connection

Isolate thermometers and temperature probes from the contents of dairy and food-processing equipment with these 3-A certified thermowells that have a sanitary quick-clamp connection for easy removal. Thermowells are 316 stainless steel and accept thermometers with a ½ NPT male connection. They require a quick-clamp fitting (not included) for installation. For sanitary quick-clamp fittings, see pages 228-232.

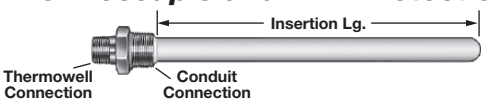
Thermocouple and RTD Protection Tubes



Designed for use with thermocouples and RTDs in large, nonpressurized tanks, these protection tubes are available in long lengths at a lower cost than thermowells.

Steel and **316 stainless steel** protection tubes are more durable than ceramic protection tubes.

316 stainless steel protection tubes are extremely resistant to corrosive chemicals, and they can handle higher temperatures than steel protection tubes.

Ceramic protection tubes withstand temperatures nearly twice as high as 316 stainless steel protection tubes.

Temperature and Humidity Chart Recorders with Calibration Certificate

Track ambient temperature and humidity over time with this recorder that includes a calibration certificate traceable to NIST that states it has passed a test for accuracy. Temperature accuracy is ±1.8° F/±1° C. Relative humidity range is 0% to 95%; accuracy is ±3%. Charts (sold separately) are required.

Recorder is freestanding or can be wall mounted (fasteners included). Housing is plastic. Size is 9 3⁄16″ Ht. × 9 3⁄16″ Wd. × 3 1⁄8″ Dp. Recorder is battery operated (batteries included).

Temperature Chart Recorders

Record temperature in hard-to-access areas. These recorders have a stainless steel probe on a 15-ft. cable. Accuracy is ±2° F/±1° C. They include 60 assorted charts with a variety of recording times and temperature ranges.

Recorders are freestanding or can be wall mounted using the two ½″ dia. mounting holes. Housing is plastic. Size is 9 1⁄4″ Ht. × 7 1⁄4″ Wd. × 2 3⁄4″ Dp. Recorders operate on 120 volts AC with a 10-ft. cord and two-prong plug. The battery backup requires eight AA batteries (batteries sold separately). CE marked.

Temperature Chart Recorders with High/Low Alarm

To alert you of temperature fluctuations, this recorder sounds an alarm and flashes the display when temperature rises above or falls below the programmable temperature range. It has a nickel probe on a 4-ft. cable for taking readings in hard-to-access areas. Accuracy is ±3.8° F/±2.1° C. Charts (sold separately) are required.

Recorder is freestanding or can be wall mounted (fasteners included). Housing is plastic. Size is 9 3⁄16″ Ht. × 9 3⁄16″ Wd. × 3 1⁄8″ Dp. Recorder operates on 120 volts AC with a 6-ft. cord and two-prong plug. Also has a battery backup (batteries included).

Temperature, Humidity, and Dew Point Chart Recorders with High/Low Alarm

Remotely record temperature, humidity, and dew point and set the alarm to sound and flash the display if temperature readings rise above or fall below a set range. This recorder has a remote polycarbonate probe on a 10-ft. cable and a display that can be set to show current temperature, min./max. temperature, or relative humidity and calculated dew point. Charts (sold separately) are required.

Temperature accuracy is ±1.8°F/±1°C. Relative humidity range is 0% to 95% with ±3% accuracy. Dew point range is 32° to 122°F/0° to 50°C with ±3.6°F/±2°C accuracy. Recorder is freestanding or can be wall mounted (fasteners included). Housing is plastic. Size is 9 3/16″ Ht. × 9 3/16″ Wd. × 3 1/8″ Dp. Recorder operates on 120 volts AC with a 6-ft. cord and two-prong plug. It also has a battery backup (batteries included).

USB-Connection Temperature and Humidity Data Recorders

Standard

With LCD

The USB connection lets you upload up to 32,000 data points to a PC for analysis. Recorders can log data in intervals from once per second to once per day. Temperature can be recorded in both °F and °C with an accuracy of ±1.8°F. Relative humidity range is 0% to 95% with an accuracy of ±3%. Housing is plastic. Recorders are battery operated (batteries included). They require software and a USB cord (sold separately). *Recorder with LCD* has a resolution of 1.

Plug-In Adjustable Temperature Switches with Calibration Certificate

Plug heating and cooling equipment into this programmable switch for precise control over system elements. It comes with a calibration certificate traceable to NIST that states it has passed a test for accuracy. Switch is single pole, single throw (SPST) and turns one circuit from "off" to "on" (normally open). It has two actuation points; actuation tolerance is ±2°F. Switch accepts up to three pairs of timed off/on events per day and has a manual override that lets you turn equipment off or on without resetting the programmed settings.

Switch is °F/°C selectable. Accuracy is ±1.8°F. Housing is plastic and probe is copper. Size is 5 1/2″ Ht. × 2 3/4″ Wd. × 1 1/4″ Dp. Switch accepts a three-prong plug. Resolution is 0.1.

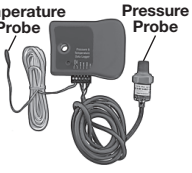
		AC Voltage	Probe			
Temp. Range	Amps	(Phase)	Dia.	Lg.		
-4° to 140°F	15	120 (1)	1/4″	1″	3313K21	$165.60

Quick-Export Temperature and Humidity Data Recorders

No cords or software required—this data recorder stores readings on an included SD card in Excel format for easy transfer to a PC. Recorder can log data in intervals from once per 5 seconds to once per 600 seconds. Temperature can be recorded in both °F and °C with an accuracy of ±1.5°F. Relative humidity range is 10% to 90% with an accuracy of ±4%. Housing is plastic. Resolution is 0.1. Recorder is battery operated (batteries included).

Temp. Range	Ht.	Wd.	Dp.		
32° to 122°F	5 3/16″	3 1/16″	1 5/16″	1255N1	$271.69

Remote-Reading Temperature and Pressure Data Recorders



Monitor temperature and pressure in hard-to-access system components with this data recorder that has remote sensors that track and store up to 21,500 data points for upload to a PC. It can record data in intervals from once per second to once per 18 hours. Temperature can be recorded in both °F and °C with an accuracy of ±1°F. Pressure accuracy is ±3 psi. Temperature probe has a 15-ft. cable. Pressure probe has a 6-ft. cable and a 17-4 PH stainless steel probe with a 1/4 NPT male connection. Housing is plastic. It requires software, a USB cord, and one 9-volt battery (sold separately).

Temp. Range	Pressure Range	Ht.	Wd.	Dp.		
-40° to 150°F	0 to 500 psi	2 1/2″	3″	1 3/32″	3440K44	$228.92
Software and 6-ft. USB Cord					3440K54	65.00
9-Volt Battery					71455K56	2.75

Fixed Temperature Switches for Surfaces

Often used on heat-tracing and process-fluid pipelines, these switches keep the temperature of flat and curved surfaces within a preset range. They are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Switches have wire leads and a 304 stainless steel flange with two 11/64″ mounting holes (fasteners not included). Housing is plastic. Size is 2 15/16″ Ht. × 2″ Wd. Switches are FM approved for use in Class I, Division 2, Groups A, B, C, and D hazardous locations. UL recognized and CSA certified.

Plug-In Adjustable Temperature Switches

To control the power supplied to immersion heaters and other equipment, plug your device into one of these switches that cycle on and off to maintain a constant temperature. Switches require a thermometer (not included) to monitor temperature. They are single pole, single throw (SPST) and turn one circuit from "on" to "off" (normally closed). Use the adjustment dial to alter the ratio of "on" to "off" time.

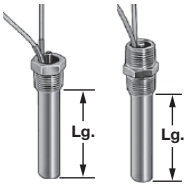
Switches have a 6-ft. cord with a three-prong plug. Housing is nickel-plated steel. Size is 3 13/16″ Ht. × 2 1/4″ Wd. × 2 1/4″ Dp. *Solid-state* switch reduces arcing of the circuit contacts for a long service life.

	Amps	AC Voltage (Phase)		
Standard Switch	13	120 (1)	35655K88	$108.57
Solid-State Switch	13	120 (1)	35655K89	125.71

Temperature Switches

For information about electrical switches, see page 909.

Compact Adjustable Temperature Switches



Install directly into tanks, pipes, and other process components to control temperature in tight spaces. These switches are single pole, single throw (SPST). Accuracy and actuation tolerance is ±2%. Use the adjustment screw to set the actuation point within the temperature range. Switches have 8″ long wire leads with fiberglass insulation. Housing and probe are stainless steel. UL recognized. Switches with 5/8″ dia. probe are also CSA certified.

Normally closed switches turn one circuit from "on" to "off." **Normally open** switches turn one circuit from "off" to "on."

Probe Dia.	Probe Lg.	Pipe Size	Temp. Range	Amps @ 120/240V AC (Phase)	Turns "On" to "Off" (Normally Closed)		Turns "Off" to "On" (Normally Open)

Adjustable Temperature Switches

A

B

Immerse these switches in tanks, ovens, cleaning baths, and other equipment and automatically turn heating equipment off when the temperature reaches a set actuation point. Actuation tolerance is not rated. Accuracy is ±12°F, unless noted. Probe and cable are copper, unless noted. Housing is steel. Switches have screw terminal connections. Style A has two 7/32″ dia. mounting holes; Style B has three 3/16″ dia. mounting holes. Mounting fasteners not included. *Two-circuit* switches are double pole, single throw (DPST) to turn two circuits from "on" to "off" (normally closed). *Three-circuit* switches are triple pole, single throw (3PST) to turn three circuits from "on" to "off" (normally closed).

Switches with pilot light indicate when the switch is on.

Packing seal and brass fitting is required to seal the probe into threaded tanks and pipes. Fitting has 3/18″-18 male threads.

★Accuracy is ±15°F. Probe and cable are nickel.

Water-Resistant Adjustable Temperature Switches

Dial Switch

Digital Switch

Actuate heating equipment in washdown environments with splashing water, corrosive liquids, and dust using these switches with an enclosure that meets NEMA 4X. Switches have °F and °C scales. Adjust the actuation point within the temperature range. Switches have screw terminal connections. Housing is plastic.

Two-circuit switch is double pole, single throw (DPST) and turns both circuits from "on" to "off" (normally closed). *Three-circuit* switches are triple pole, single throw (3PST) and can be set to turn three circuits from "on" to "off" (normally closed) or from "off" to "on" (normally open).

Dial switches are set with a dial. Accuracy is ±4°F. Actuation tolerance is ±8°F. Probe and cable are copper; probe is PFA coated. **Digital** switches are set with a keypad. The display shows a resolution of 0.1. Accuracy and actuation tolerance is ±0.25°F. Probe is PFA-coated PTFE and cable is PVC.

Remote Room-Monitoring Adjustable Temperature Switches

If ambient air temperature rises above or falls below an actuation point, this switch flashes the current temperature reading on the display and shows a "high" or "low" message. To actuate remote-mount buzzers (sold separately), it has two single pole, double throw (SPDT) relays that can each be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switch has four actuation points. Actuation tolerance is ±1°F.

Switch has a built-in ambient temperature sensor that is °F/°C selectable. Accuracy is ±2°F. Housing is plastic. Resolution is 1. Switch requires a 12-volt DC power supply with wire leads (sold separately).

Remote-mount buzzer emits an 86 dB alarm when temperature reaches the actuation point. **Optional remote temperature sensors** let you monitor temperature up to 1,000 feet from the switch. Remote sensors can be used simultaneously with the switch's built-in ambient temperature sensor for monitoring two areas.

Switch and Accessories

32° to 299°F	±1°F	1,000 ft.	7525K11	72.59

Heavy Duty Adjustable Temperature Switches

Direct-Reading Extended Life

Rugged enclosures make these switches suitable for harsh environments. Switches are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Accuracy and actuation tolerance is ±1%, unless noted. Switches adjust with a dial. All have screw terminal connections. UL listed and CSA certified. *Switches with one actuation point* have one relay; *switches with two actuation points* have two relays. *Direct-reading* switches have a max. pressure of 1,897 psi.

Extended-Life Switches—The plastic enclosure meets NEMA 1 to protect switches when actuating heating and cooling equipment in dirty indoor conditions. *Direct-reading* switches have a brass probe with a ⅜ NPT male connection. *Remote-reading* switches have two 3/16″ dia. mounting holes. Probe and cable are copper.

Water-Resistant Switches—The aluminum enclosure meets NEMA 4X for use in washdown environments with splashing water, corrosive liquids, and dust. CE marked. *Directing-reading* switches have a probe with a ½ NPT male connection. Probe is brass, unless noted. *Remote-reading switches with one actuation point* have a copper probe and cable; *remote-reading switches with two actuation points* have a stainless steel probe and a 304 stainless steel cable.

Hazardous Location Switches—Control temperature in chemical plants, refineries, and other environments with flammable gases and combustible dust. Switches have an aluminum enclosure that's UL listed for Class I, Divisions 1 and 2, Groups B, C, and D and Class II, Divisions 1 and 2, Groups E, F, and G; and Class III hazardous locations. Enclosure also meets NEMA 4X for resistance to splashing water and corrosive fluids. C-UL certified. *Direct-reading* switches have a brass probe with a ½ NPT male connection. *Remote-reading* switches have a stainless steel probe and a 304 stainless steel cable.

Remote-Reading Water Resistant

Humidity and Temperature Meters

A

B

C

D

E

Get relative humidity and temperature readings from a single source. Meters have °F and °C scales. Housing is plastic.

(A) Remote-Reading Indoor/Outdoor Meter with Scale and Dial Display—Includes a probe with a 3-ft. cable for measuring outdoor temperatures. Wall mount using the included fasteners. Relative humidity graduations are 2%; temperature graduations are 2°F.

(B) Digital Indoor Meter—Mount using the two 1/4″ dia. mounting holes (fasteners not included) or use the pullout stand. Relative humidity resolution is 1; temperature resolution is 0.1. Requires two AAA batteries (not included).

(C) Digital Indoor Meter with Min./Max. Memory—Mount using the two 3/32″ dia. mounting holes (fasteners not included) or use the pullout stand. Resolution is 1. Batteries are included.

(D) Digital Remote-Reading Indoor/Outdoor Meter with Min./Max. Memory—Includes a remote sensor with 200-ft. wireless transmission range for monitoring outdoor relative humidity and temperatures. Meter has a built-in stand; remote can be wall-mounted using 1/4″ dia. mounting hole (fastener not included). Relative humidity resolution is 1; temperature resolution is 0.1. Meter requires two AA batteries; remote sensor requires two AAA batteries (batteries not included).

(E) Digital High-Accuracy Indoor Meter with NIST Certificate—Comes with a calibration certificate traceable to NIST that states it has passed a test for accuracy. Meter includes a probe on a 6-ft. cable. It has min./max. memory and audible high/low alarms. Meter also displays dew point or frost point. Dew point range is -40° to 140°F; accuracy is not rated. Resolution is 0.01. Batteries are included. *Optional software, RS-232 cable, and USB cable for Style E* allows you to upload data directly to your PC.

Portable Humidity and Temperature Meters

A&B

C

D

E

Carry one of these battery-operated meters with an easy-to-read display to make fast system checks. Meters are °F/°C selectable. Housing is plastic. Batteries are included.

(A&B) Pocket Meters— Meters have min./max. memory and include a belt clip. Style B comes with a calibration certificate traceable to NIST that states it has passed a test for accuracy.

(C-E) Hand-Held Meters— For comprehensive system checks and quality control, these meters can determine dew point in addition to humidity and temperature. All have a data-hold function. Styles C and D also have min./max. memory. Style E has a probe attached to a 3-ft. cable for use in hard-to-reach areas.

Psychrometers

Obtain continuous temperature measurements from a wet-bulb and a dry-bulb thermometer to determine relative humidity. This wall-mount psychrometer consists of two mercury-free fluid-filled thermometers, a wick, a glass water bulb, and a relative humidity calculation table.

Temperature range is 0° to 120° F with ±2° F accuracy; graduations are 2° F. Relative humidity range is 14% to 95% with ±10% accuracy. Size is 10" Ht. × 4" Wd. × 1 3/16" Dp. Housing is plastic. Psychrometer has one 3/16" dia. mounting hole (fastener not included).

Psychrometer	3970K9	$41.52
Repl. Wicks (Pkg. of 12)	3970K6	11.85

Plug-In Adjustable Humidity Switches with Calibration Certificate

Plug humidifiers, dehumidifiers, and other devices into this programmable switch to turn your equipment on or off when humidity levels reach the actuation point. Switch can be set with two actuation points. It comes with a calibration certificate traceable to NIST that states it has passed a test for accuracy. Switch accepts any equipment with a three-prong plug. A manual override lets you turn equipment on or off without resetting the programmed settings.

Relative humidity range is 30% to 90% with an accuracy of ±5%. Maximum temperature is 100° F. Switch operates on 120 volts AC. Rated at 15 amps. Size is 4 1/8" Ht. × 2 3/8" Wd. × 1 1/2" Dp. Housing is plastic. Resolution is 1.

	1250N11	$180.60

Portable Psychrometers

With 9" High Scale

Also known as sling psychrometers, these calculate relative humidity in the field based on continuous temperature measurements from a wet-bulb and a dry-bulb thermometer. They consist of two mercury-free fluid-filled thermometers, a wick, a glass water bulb, and a handle. Housing is plastic.

Psychrometer with 5" high scale has a built-in slide rule for calculating humidity without a calculation table. Relative humidity range is 10% to 100% with ±5% accuracy.

Psychrometer with 9" high scale includes a relative humidity calculation table. Relative humidity range is 10% to 100% with ±10% accuracy.

Scale Ht.	Temperature Range	Temperature Accuracy	Temperature Graduations		
5"	25° to 120° F	±1° F	1° F	3980K7	$110.00
9"	20° to 120° F	±2° F	0.5° F	3995K14	135.33
Repl. 5" Thermometer				3980K9	53.80
Repl. Wicks for 5" Thermometer (Pkg. of 4)				3980K8	34.24
Repl. Wicks for 9" Thermometer (Pkg. of 12)				3970K6	11.85

Humidity Sensors and Controllers

Sensor

Controller

Monitor relative humidity with the sensor and turn equipment on or off with the controller. Relative humidity range is 10% to 100% with ±5% accuracy. Housing is plastic. Sensor and controller are sold separately.

Sensor has a maximum temperature of 140° F. It connects to the controller with 3-ft. long wire leads. To mount, it has two 1/4" dia. mounting holes (fasteners not included).

Controller is single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Adjust the two actuation points with the keypad. Maximum temperature is 158° F. Controller has screw terminal connections and operates on 24 volts AC. Rated at 4 amps. Install in a 1 11/32" Ht. × 3 3/32" Wd. panel cutout. Controller has a resolution of 1. UL recognized.

	O'all Size Ht.	O'all Size Wd.	O'all Size Dp.		
Sensor	3 1/4"	2 1/4"	1 13/16"	39635K11	$109.09
Controller	1 1/2"	3 3/16"	2 1/2"	39635K22	90.00

Thermocouple and RTD Signal Converters

Convert thermocouple and RTD probe signals to a 4-20 mA signal for use with switches and controllers. Signal converters have screw terminal connections and accept probes with bare wire leads (probes not included; see pages 628-632). Accept a maximum 26-ga. wire.

Head-mount signal converters are 1 11/16″ Dia. × 13/16″ Dp. Operate on 12 to 36 volts DC.

Panel-mount signal converters are 1 7/8″ Ht. × 3 7/8″ Wd. × 6 1/16″ Dp. They have a 1/8 DIN housing that fits a 1 3/4″ Ht. × 3 5/8″ Wd. panel cutout. Resolution is 1. Operate on 120/240 volts AC (single phase).

Head Mount

Panel Mount

For Probe Type	Temp. Range		
Head Mount—Plastic Housing			
J Thermocouple	32° to 572°F	38875K81	$78.66

K Thermocouple	-58° to 1999°F	38535K42	226.86
100-ohm RTD	-50° to 850°C	38535K56	226.86

Programmable Temperature Controllers

Forget temperature switches with finicky adjustment screws and dials—these controllers have a digital display with a keypad and a simple menu for easily setting an actuation point. They turn heaters and other process components on or off when temperature reaches the actuation point. Controllers are °F/°C selectable. Accuracy and actuation tolerance is ±1%.

Controllers have a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). A thermocouple or RTD probe with bare wire leads (not included; see pages 628-632) is required. Controllers are 2 7/8″ Ht. × 2 7/8″ Wd. × 2″ Dp. and require a 2 11/16″ Ht. × 2 11/16″ Wd. panel cutout. They have screw terminal connections. Housing is plastic. Resolution is 1. UL recognized, CSA certified, and CE marked.

For Probe Type	Temp. Range	Amps	AC Voltage (Phase)		
J Thermocouple	32° to 392°F	8	120 (1)	4314K2	$189.92
K Thermocouple	32° to 2192°F	8	120 (1)	4314K6	189.92
100-ohm RTD	32° to 1472°F	8	120 (1)	4314K8	189.92

Precision Programmable Temperature Controllers

Since these controllers have fuzzy logic with proportional-integral-derivative (PID) software that learns the behavior of your process and eliminates actuation point overshoot, they have the fastest and most precise response to temperature changes. They turn equipment on or off when temperature reaches the actuation point. A thermocouple or RTD probe (not included; see pages 628-632) is required.

Controllers are auto/manual selectable and °F/°C selectable. Housing is plastic. All controllers have screw terminal connections. UL and C-UL recognized and CE marked.

Standard Controllers

Controllers accept input from Types J, K, and T thermocouple probes as well as 100-ohm RTD probes. They can be set to one actuation point. Actuation tolerance is not rated. Operate on 90 to 264 volts AC. *Controllers with 1/16 DIN size* have one control and two alarm relays; *1/4 DIN size* have two control and two alarm relays.

Relay output controllers are single pole, single throw (SPST) and turn one circuit from "off" to "on" (normally open).

Type	Temp. Range	Accuracy
J	-58° to 1832°F	±1.8°F
K	-58° to 2498°F	±1.8°F
T	-454° to 752°F	±1.8°F
RTD	-328° to 1652°F	±0.36°F

Water-Resistant Controllers

With a faceplate that meets NEMA 4X, these controllers can turn equipment on and off in washdown environments with splashing water, corrosive liquids, and dust. Controllers accept input from Types J, K, and T thermocouple probes. They can be set to eight actuation points. Actuation tolerance is not rated. Operate on 100 to 240 volts AC. *Controllers with 1/32 DIN size* have one control relay; *1/16 DIN size* have one control and one alarm relay; *1/8 and 1/4 DIN* sizes have one control and two alarm relays.

Relay output controller with 1/32 DIN size is single pole, single throw and turns one circuit from "off" to "on" (normally open). *Relay output controllers with 1/16, 1/8, and 1/4 DIN sizes* are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Solid-state relay output controllers actuate an external relay (not included; see 7456K on page 955).

Easy-Read Outdoor Thermometers

18″ Dial

Easily read your temperature with these extra-large dials that mount to a wall. Thermometers have °F and °C markings. Lens is plastic.

12″ dial thermometer with aluminum housing displays relative humidity from 30% to 90% with an accuracy of ±10%.

12″ dial thermometer with plastic housing displays relative humidity from 0% to 100% with an accuracy of ±5%.

Dial Dia.	Temp. Range	Graduations	Accuracy	Housing Material

Outdoor Thermometers

A
Bracket Mount

B

Get current temperature readings with these thermometers that can be mounted outdoors. Thermometers have a temperature range of -40° to 120° F/-40° to 50° C with graduations of 2° F/ 1° C.

Style A thermometer tubes are filled with red diesel fuel. Accuracy is ±2° F/±1° C. Housing is aluminum. *Bracket mount* has two ¼″ dia. mounting holes (fasteners included). *Wall mount* has two 7⁄32″ dia. mounting holes (fasteners not included).

Style B thermometer has min./max. indicating marks. The tube is filled with blue fluid. Accuracy is ±3° F/±1.5° C. Housing is plastic. Thermometer has two 5⁄16″ dia. mounting holes (fasteners not included).

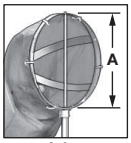
Windsocks

Complete Kit



Inlet

Visually determine wind direction and approximate speed. Windsocks are orange nylon and have brass grommets. They slide over an inlet frame (sold separately) and secure with the included mounting ties.

To replace an existing windsock, you must determine the inlet diameter. Lay the windsock flat to measure the inlet (A) and multiply by 0.63 for the inlet diameter.

	Approximate Wind Speed	
Sock Position	**Low Velocity**	**High Velocity**
At Rest	0-4 mph (0-3 knots)	0-7 mph (0-6 knots)
At 45°	4-8 mph (3-7 knots)	7-13 mph (6-11 knots)
At 60°	8-14 mph (7-12 knots)	14-20 mph (12-17 knots)
Straight	14-18 mph (12-16 knots)	21-29 mph (19-25 knots)

Low-Velocity Windsocks

These lightweight windsocks react to the slightest wind movements. **Complete kits** include a windsock, mounting ties, an aluminum inlet frame, a 30″ long metal pole, and brackets to mount pole onto a flat vertical surface.

Diameter			Windsocks		Complete Kits	
Inlet	Outlet	Lg.				
8″	3⅞″	3 ft.	6491T42	$31.30	6491T12	$79.50
13″	6⅜″	4½ ft.	6491T44	42.55	6491T14	100.60
18″	9⅝″	5 ft.	6491T46	51.73	6491T16	120.66
18″	13¼″	8 ft.	6491T48	63.00	6491T18	132.67

High-Velocity Windsocks

Use these sturdy windsocks to track stronger wind movements than low-velocity windsocks. **Inlet frames** are aluminum and mount onto a 1¼ NPT male threaded pipe (sold separately; see page 61).

Diameter			Windsocks		Inlet Frames	
Inlet	Outlet	Lg.

Remote-Reading Outdoor Thermometers

Standard

With Clock

A built-in temperature sensor and a remote-reading probe simultaneously monitor indoor and outdoor temperature. Temperature range is 23° to 122° F for indoor readings and -58° to 158° F for outdoor readings. Accuracy is ±6° F. Both have min./max memory and a probe with a 10-ft. cable. Thermometers have a plastic housing. They have a built-in stand or can be wall mounted. Resolution is 0.2. Thermometers are battery operated (batteries included).

Standard thermometer is 4″ Ht. × 4″ Wd. × 5⁄8″ Dp. Mounting fasteners are included.

Thermometer with clock shows the time of day and has an audible alarm. Size is 4⅛″ Ht. × 2½″ Wd. × ¾″ Dp. It has one 5⁄16″ dia. mounting hole (fastener not included).

Standard	40195K21	$27.32
With Clock	40195K11	46.51

Barometers

Measure atmospheric pressure changes in both inches of mercury (Hg) and millibars (mbar) with these LCD barometers. Barometric pressure range is 20″ to 32″ Hg/677 to 1,083 mbar. Accuracy is ±0.045″ Hg/±1.5 mbar. Barometer has an audible alarm and a trend indicator to track pressure changes. Housing is aluminum. Size is 2⅞″ Ht. × 9″ Wd. × 1½″ Dp. Resolution is 0.003. Barometer is freestanding or can be wall mounted using the 1″ dia. mounting hole (fastener not included). It is battery operated (battery included).

4109K5	$225.45

Desktop Multifunction Barometers

Check temperature, relative humidity, atmospheric pressure, and time with one barometer. The included remote sensor has a 100-ft. wireless transmission range for monitoring outdoor temperature and relative humidity in addition to indoor conditions. Barometer also has a trend indicator and audible alarm. It is °F/°C selectable and also displays inches of mercury.

Indoor temperature range is 14° to 158° F and outdoor temperature range is -4° to 158° F; accuracy is ±2° F and resolution is 0.1. Relative humidity range is 20% to 95%; accuracy is ±7% and resolution is 1. Barometric pressure range is 27.5″ to 31″ Hg; accuracy is ±0.15″ Hg and resolution is 0.01.

Housing is plastic. Overall size is 6″ Ht. × 8″ Wd. × 1″ Dp. Barometer can be wall mounted using the 5⁄16″ dia. mounting hole (fastener not included). Barometer requires two AA batteries; remote sensor requires two AAA batteries (batteries not included).

3964K61	$52.63

Wireless Remote-Reading Rain Gauges

Monitor rainfall up to 100 feet from the source. The rain gauge bucket transmits rainfall data to the wireless monitor in 0.01″ increments. Meets National Weather Service specifications for statistical accuracy. Requires five AA batteries (not included).

The rain bucket is plastic, 8″ Dia. × 7¾″ Ht., and includes mounting fasteners.

The monitor has dual displays that show current measurement of an individual rainfall (up to 9.99″) and accumulation measurement (up to 99.9″). Resolution is 0.01. Mounting fasteners are included.

Wireless Rain Gauge — **5729K5** — $297.80

Rain Gauges

Measure rainfall with this easy-to-read clear acrylic gauge. It has inch and mm markings and measures up to 5.5″ (140 mm) of rainfall. Graduations are 0.1″ (2 mm). Drive the pointed base into the ground or wall mount using the included fasteners. Overall length is 10″.

3940K1 — $19.02

Wireless Weather Stations

Monitor nine different weather conditions up to 1,000 feet away. The outdoor weather sensor measures outdoor temperature, humidity, wind speed and direction, rainfall rate, total rainfall, barometric pressure, heat index, wind chill, and dew point. It wirelessly transmits readings to the console by radio signal. Console has built-in sensors to measure indoor temperature and humidity. Humidity and temperature update every 1 minute; wind speed and wind direction update every 3 seconds; rainfall updates every 24 seconds.

Housing is plastic. Place the console on a desk or wall mount (fasteners not included). It operates on 100 to 240 volts AC with the included 10-ft. cord with two-prong plug. The outdoor sensor can be pipe mounted. It is solar powered and has a battery backup (battery is included).

Sensor

Console

Sensor	Range	Accuracy	Resolution
Indoor Temperature	32° to 140° F	±1° F	0.1
Indoor Relative Humidity	1% to 100%	±4%	1
Outdoor Temperature	–40° to 150° F	±2° F	0.1
Outdoor Relative Humidity	1% to 100%	±4%	1
Wind Speed	1 to 200 mph	±5%	1
Wind Direction	360°	±3°	22.5
Rainfall Rate	0.04 to 96 in. per hr.	±5%	0.01
Rainfall Total	0 to 200 in. per hr.	±4%	0.01
Barometric Pressure	16″ to 32.5″ Hg	±0.03″ Hg	0.01

Wireless Weather Station — **3011K38** — $534.25

Humidity-Indicating Cards with Calibration Certificate

Monitor current humidity levels in addition to maximum humidity exposure with these humidity-indicating cards that include a calibration certificate traceable to NIST that states they've passed a test for accuracy. The maximum humidity scale has dots that permanently change color when the humidity level reaches each humidity point. The current humidity scale is reversible and changes color as humidity increases or decreases. Maximum relative humidity range is 50% to 90%; current relative humidity range is 10% to 100%, both expressed in increments of 10%. Accuracy is ±5%. Size is 4″ Ht. × 4″ Wd.

5311K12 — Pkg. of 2 — $18.89

Hand-Held Weather Meters

Take field measurements of temperature, dew point, heat index, wind chill, wind speed, and relative humidity.

Temperature, dew point, heat index, and wind chill range is -20° to 158° F. Temperature accuracy is ±1° F; dew point accuracy is ±3.4° F; heat index accuracy is ±7° F; wind chill accuracy is ±1.6° F. Temperature and dew point readings are °F/°C selectable. Wind speed range is 1.3-90 mph and can be displayed in km/hr, m/sec, fpm, Beaufort, and knots. Relative humidity range is 5% to 95%; accuracy is ±3%. Resolution is 0.1.

Meter comes with a lanyard and a carrying case. Housing is plastic. Overall size is 4⅞″ Ht. × 1⅞″ Wd. × 1⅛″ Dp. Meter is battery operated (battery is included).

6273K6 — $192.00

Weather/Hazard Alert Radios

Get up-to-the-minute local weather and hazard alerts. These radios sound an alarm and display an alert message when they receive weather warnings in your area. Radios have siren, voice, and visual alert settings, as well as a display that indicates the degree of alert (watch or warning).

Bench-top radios operate on 120 volts AC with a 6-ft. cord and two-prong plug. In case of power loss, they have a battery backup. *Bench-top* radio can be programmed for up to 25 counties. Overall size is 2″ Ht. × 5⅛″ Wd. × 6¼″ Dp. Battery backup operates on three AA batteries (not included). *Bench-top radio with AM/FM reception* can be programmed for up to 23 counties. Overall size is 2½″ Ht. × 7″ Wd. × 5½″ Dp. Battery backup operates on four AA batteries (not included).

Hand-held radio operates up to 50 miles from the transmitter. It can be programmed for up to nine counties and has a digital clock. Overall size is 7″ Ht. × 3″ Wd. × 1½″ Dp. Operates on three AA batteries (not included).

Bench Top with AM/FM Reception

Hand Held

Bench-Top Radio — **3338K33** — $60.58
Bench-Top Radio with AM/FM Reception — **3338K32** — 97.08
Hand-Held Radio — **3338K31** — 65.45

pH Testing Paper

Check pH levels without a meter. When this testing paper is dipped in a sample, it changes color to indicate pH. Match the color of the testing paper to the color chart to determine the sample's pH.

pH Range	No. of Color Points	Increments	Wd.	Lg., ft.		
0-13.0	14	1	½″	50	**1434T31**	$12.82

58095T21	$35.86

Chemistry Controllers

Controllers compare the input from your sensor to a programmed actuation point and turn pumps, mixers, valves, and other equipment on or off when the reading reaches the actuation point. Relays are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Controllers have automatic temperature compensation that standardizes readings at 77° F to prevent inaccurate results in fluctuating temperatures. Housing is plastic.

Single Function Controllers

Pair these controllers with sensors (sold separately) to turn equipment on or off based on the pH or conductivity of a solution. Controllers accept sensors with a bayonet connection. Set the actuation point with the dial. Controllers have one control relay and one alarm relay. They can be wall mounted using the four ½" dia. mounting holes (fasteners not included). They have an LED display. Resolution is 0.01. *pH* controller has an actuation tolerance of 0.5 to 2.5 pH; *conductivity* controller has an actuation tolerance of 0 to 1.6 mS.

For Testing	Range	Accuracy	*O'all Size* Ht.	Wd.	Dp.	Amps	AC Voltage (Phase)	Controllers		Sensors	
pH	0.0 to 14.0 pH	±0.02 pH	7⅛"	8¾"	3½"	2	120 (1)	13915T45	$688.30	13915T24	$162.50
Conductivity	0 to 10 mS	±2%	7⅛"	8¾"	3½"	2	120 (1)	13915T18	688.30	13915T27	235.62

Multifunction Controllers

Use the same controller to actuate equipment based on pH or oxidation reduction potential (ORP). Attach pH and ORP sensors (not included; see 14775T on this page) and set the current measurement type with the selection switch. Controllers accept sensors with a bayonet connection. Set the two actuation points using the keypad. Controllers have one control relay and two alarm relays. They have a ¼ DIN housing and can be panel mounted using a 3⅝" Ht. × 3⅝" Wd. cutout. *Controller with LED display* is more visible in low-light conditions than controller with LCD.

Function (Range)	*Accuracy* pH	ORP	*Resolution* pH	ORP	*O'all Size* Ht.	Wd.	Dp.	Amps	AC Voltage (Phase)	LCD		LED	
pH (0.0 to 14.0 pH)/ ORP (-1,999 to 1,999 mV)	±0.01 pH	±0.1%	0.01	1	3¾"	3¾"	4¾"	5	120 (1)	11305T44	$327.98	11305T66	$327.98

Chemistry Sensors

Hand Held

Threaded

A bayonet connection makes these sensors compatible with most chemistry meters and controllers. They can be used with both clean and dirty liquids. Sensor is glass. pH sensors have a range of 0 to 14 pH. Oxidation reduction potential (ORP) sensors have a range of -1,999 to 1,999 mV. Temperature range is 32° to 140° F.

Sensors with automatic temperature compensation (ATC) standardize readings at 77° F to prevent inaccurate results in fluctuating temperatures.

Threaded sensors have a ¾ NPT male connection for installation in pipes and tanks.

Extended-Life Sensors—These sensors have a flat sensing tip that resists deposit buildup and breakage for a long service life in harsh conditions.

To Order: For hand-held sensors, please specify cable length: 3, 10, or 20 feet. For threaded sensors, please specify cable length: 10 or 20 feet.

For Testing	Hand Held		Threaded	
Standard Sensors				
pH	14775T21	$65.44	14775T91	$154.50
pH with ATC	14775T22	96.34	14775T92	199.83
ORP	14775T25	113.96	14775T95	225.21
Extended-Life Sensors				
pH	14775T23	80.98	14775T93	154.76
pH with ATC	14775T24	125.83	14775T94	206.18

For additional information for the meters on this page such as resolution and dimensions, go to mcmaster.com and search for the part number.

Single-Function Chemistry Meters

Use these chemistry meters for on-the-go measurement. Meters have automatic temperature compensation (ATC), unless noted. ATC standardizes readings at 77° F to prevent inaccurate results in fluctuating temperatures. Use a calibration solution and the calibration adjustment screw or button to maintain accuracy. Calibration solution sold separately on page 646, unless noted. Meters are battery operated (batteries included). CE marked, unless noted. *Nonglass* sensors are more durable and resistant to breakage than glass sensors.

Water-resistant meters have a housing that meets IP67 for complete resistance to dust and protection from temporary submersion.

Remote-reading meters have a remote sensor with a 3-ft. cable. *Meter with PC output* transmits pH readings to a PC for analysis.

★ Not CE marked. ■ Includes calibration solution. ▲ Does not have ATC.

Multifunction Chemistry Meters

Get the convenience of multiple chemistry meter measurements from a single meter. Meters have automatic temperature compensation (ATC) that standardizes readings at 77° F to prevent inaccurate results in fluctuating temperatures. Use a calibration solution (not included; see page 646) and the calibration button to maintain accuracy. All meters are for use with clean liquids. They are battery operated (batteries included). CE marked.

(A) Water-resistant meters have a housing that meets IP57 for good resistance to dust and protection from temporary submersion.

(B) Remote-reading meters have a remote sensor on a 3-ft. cable. 14345T76 also has PC output which allows you to upload up to 500 readings to a PC.

(C) Bench-top meters have a housing that meets NEMA 6 and IP67 for complete resistance to dust and protection from temporary submersion. They also measure resistivity from 10 kilohms to 30 megohms with ±1% accuracy.

★ ATC range is 32° to 120° F.

Liquid Samplers

T-Handle Sampler

Extract noncorrosive liquid samples from drums, vats, tanks, and other containers. Samplers are plastic.

Cleaned samplers are individually packaged in accordance with EPA protocol B. They are often used to collect environmental water samples.

Open-Top Samplers—Also known as thief samplers. Insert the sampler into your liquid and seal the top opening with your thumb to collect liquid.

T-Handle Samplers—Also known as coliwasa (composite liquid waste) samplers. The syringe-like design lets you sample liquid without manually creating a vacuum.

OD	Lg., ft.	Cap., ml	Standard		Cleaned	
Open-Top Samplers

Calibration Solutions

Maintain the accuracy of your pH, conductivity, and total dissolved solids (TDS) sensors with one of these solutions.

Solutions with certificate come with an analysis certificate traceable to NIST that states they've passed a test for concentration.

Use the *cleaning solution* to remove deposits and contaminants from pH sensors. *Storage solution* prevents pH sensors from drying between uses to extend service life.

Concentration	Size	Without Certificate		With Certificate	
For Calibrating pH					
4.0 pH	500 ml	21315T396	$12.00	3108T35	$31.86
4.0 pH	1 gal.	21315T496	33.14	3108T37	98.14

Density Meters

Also known as hydrometers, these measure the density of a liquid compared to the density of water. Pour your liquid into a tall container and immerse the meter into the liquid until it floats. Take the reading where the surface of the liquid touches the scale on the meter. Heavy liquids sink in water and light liquids float in water. Meters are glass. Length is 12″.

Scale	Range	Graduations	OD		
For Light Liquids					
Specific Gravity	0.65 to 1	0.005	9⁄16″	4099K16	$22.72
Specific Gravity	0.7 to 0.81	0.001	13⁄16″	38865K11	22.72

Concentration Meters

Eyepiece Meter

Easy-Read Meter

Also known as refractometers, these measure concentration with two or three drops of a solution. Meters come in a plastic case.

Eyepiece Meters—Place your sample on the reflecting prism and look through the eyepiece to view the concentration on the internal scale.

Easy-Read Meters—Don't strain your eyes reading a scale—these concentration meters indicate exact results on the display. Resolution is 0.1. Meters meet HACCP (Hazard Analysis Critical Control Points) standards for use in food applications.

Meters with automatic temperature compensation (ATC) standardize readings at 68° F to prevent inaccurate results in fluctuating temperatures. ATC range is 50° to 86° F, unless noted.

Meters with Brix (sugar) scale measure sugar concentration. *Meters with 0% to 18% and 0% to 90% concentration range* also measure cutting/grinding coolants, oil/water, cleaning solutions, anodizing solutions, plating/acid baths, and chromating solutions.

Meters with freezing-point scale measure the freezing point of propylene glycol and ethylene glycol as well as the specific gravities of battery acids from 1.15 to 1.30.

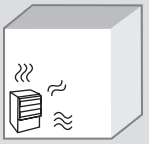
About Choosing a Heater



Space Heaters

Heaters use a built-in fan or convection to distribute heated air throughout an area. They are best suited for indoor spaces that are well insulated.

Direct Heaters

Also known as radiant heaters, these heaters transmit waves to warm people and objects rather than the surrounding air. Effective near exposed areas such as loading docks, these heaters are less affected by drafts than space heaters. They can heat spaces but generally take longer than space heaters to do so.

Calculating Heat Output for Space Heaters

To estimate the Btu/Hr. required to heat a space, insert the length, width, and height of the space into the following formula: (Lg. × Wd. × Ht.) × Desired Temperature Increase × 3/4

If your space is not well insulated, double the values. In the table below, we show the Btu/Hr. required for some common applications.

Max. Cu. Ft. Heated (Lg.×Wd.×Ht.)	Btu/Hr. Needed to Increase Temp. +10° F	+20° F	+30° F	+40° F
Small Spaces—Enclosures, Workstations, Small Offices				
800 cu. ft. (10 ft.×10 ft.×8 ft.)	6,000	12,000	18,000	24,000
Large Spaces—Shops, Garages, Warehouses				
4,800 cu. ft. (20 ft.×20 ft.×12 ft.)	36,000	72,000	108,000	144,000

Calculating Heat Output for Direct Heaters

To estimate the Btu/Hr. required to heat a space, insert the length and width of the space into the following formula: (Lg. × Wd.) × Desired Temperature Increase/0.293

For outdoor use, double the values. In the table below, we show the Btu/Hr. required for some common applications.

Max. Sq. Ft. Heated (Lg.×Wd.)	Btu/Hr. Needed to Increase Temp. +10° F	+20° F	+30° F	+40° F
Short Range—One or Two People				
225 sq. ft. (15 ft.×15 ft.)	7,600	15,300	23,000	30,700
Long Range—Several People				
1,600 sq. ft. (40 ft.×40 ft.)	54,600	109,200	163,800	218,400

Space Heaters

Small-Space Portable Electric Heaters

A

B

NEMA 6-30 Plug

C

Carry these heaters to offices, workstations, and other small spaces.

Style A—Adjust the built-in thermostat from 40° to 85° F. Housing is black plastic and is safe to touch during use. Heater shuts off if tipped over or airflow is obstructed. Cord is 6-ft. long and has a two-prong plug. ETL listed.

Style B—Adjust the built-in thermostat from 25° to 95° F. Heater has a steel housing and a 6-ft. cord with a three-prong plug. UL and ETL listed.

Style C—Adjust the built-in thermostat from 35° to 85° F. Use the bracket as a stand or to mount to the wall or ceiling with the 5/16″ mounting holes (fasteners not included). Heaters have a steel housing and a 6-ft. cord with a NEMA 6-30 plug. When operating at 208 volts AC, max. area heated and heat output are reduced by 25%. UL and C-UL listed.

Electric Enclosure Heaters

Surface Mount

DIN-Rail Mount

Protect electrical equipment from low temperatures and condensation. Heaters must be hardwired. Components are UL recognized.

Surface-mount heaters have an aluminum housing and a built-in thermostat that adjusts from 0° to 100° F. Mounting fasteners are included. CSA certified.

DIN-rail mount heaters have a plastic housing. *120-volt AC* heaters have a built-in thermostat that adjusts from 32° to 140° F. *Thermostat for 120/240-volt AC heaters* (sold separately) adjusts from 32° to 140° F and is SPST (single pole, single throw).

Electric Vehicle Heaters

Don't shiver in slow-to-warm vehicles. Hardwire these compact units to your battery. Heaters have a built-in thermostat that adjusts from 0° to 100° F, a remote on/off switch, a fuse, and hardware for floor or wall mounting. Housing is black plastic.

Small-Space Wall-Mount Electric Heaters

Standard

Low Clearance

Hazardous Location

Heat storage rooms, offices, bathrooms, and other small spaces without taking up floor space. Heaters must be hardwired.

Standard—Heaters recess mount into a wall. Housing is steel with a white finish. Built-in thermostat adjusts from 40° to 90°F, except 1726K24 and K26 adjust from 40° to 85° F. ETL listed. *Optional mounting frames* allow you to surface mount the heater. They have 3/16″ × 1/2″ mounting slots (fasteners not included).

Low Clearance—Heaters are designed to recess mount under counters and cabinets. Housing is galvanized steel with a white grille. The included thermostat adjusts from 45° to 80°F. Mounting fasteners are included. UL listed.

Hazardous Location—Heaters meet NEC Class 1, Div. 1 and 2, Groups C and D for use in the presence of flammable gases and vapors. They use convection to circulate warm air and have a built-in thermostat that adjusts from 50° to 90° F. Housing is gray steel. Heaters have a wall-mount bracket with 13/32″ dia. holes (fasteners not included). ETL listed.

Small-Space Baseboard Electric Heaters

A low profile design keeps these heaters out of the way. Often installed below windows, they use convection to circulate warm air. Housing is steel with a beige finish and has indentations for you to punch your own mounting holes. Heaters must be hardwired. UL listed.

Heater-mount thermostats adjust from 45° to 80°F. Thermostat *for 120-volt AC heaters* is SPST (single pole, single throw). Thermostat *for 208/240-volt AC heaters* is DPDT (double pole, double throw).

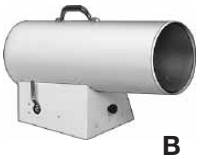
Large-Space Portable Gas Heaters

A



B

C

D

Built for big jobs, these are our most powerful portable space heaters. They have a steel housing and a safety shut-off that cuts the gas supply if the flame goes out. CSA certified.

Heaters for Use with Propane Gas—Include a hose and regulator with POL connection (the same connection between your gas grill and propane tank). Style A heaters include a 20-ft. hose; Style B heaters include a 10-ft. hose.

Style A heaters use convection to circulate warm air. They have a pilot light starter and do not require electricity. Turn the control knob to adjust heat output.

Styles B-D heaters have an electronic spark starter and operate on 120 volts AC. They have a 4″ long cord with three-prong plug. Heaters have a built-in thermostat that adjusts from 40° to 105° F, except Style B heater that covers a max. area of 13,330 cu. ft. does not have a thermostat. It has a control knob that adjusts heat output.

Large-Space Ceiling-Mount Gas Heaters

E & F

G

More economical to operate than electric heaters, these gas heaters warm shops, garages, and other large spaces. They have an electronic spark starter and an automatic safety shut-off that cuts the gas supply if the flame goes out. Motors are single phase, operate on 120 volts AC, and must be hardwired. They have a built-in transformer for a 24-volt AC thermostat (sold separately). Housing is steel. CSA certified. Note: Heaters need to be vented to the outdoors. Vent pipe is not included; see page 665.

Style E include mounting brackets.

Style F can be suspended from the ceiling with ⅜″-16 threaded rod (not included) or optional mounting brackets (sold separately).

Style G can be suspended from the ceiling with ⅜″-16 threaded rod (not included).

Wall-mount thermostat adjusts from 50° to 90° F. It's SPST (single pole, single throw). Mounting hardware is included.

Large-Space Ceiling- and Wall-Mount Electric Heaters

A

B

C

D

No need for gas lines and vent pipes—install these electric heaters in shops, garages, and other large spaces without the hassles of a gas heater installation. Heaters must be hardwired. Adjust the louvers to direct airflow.

Standard—Housing is steel. *Heater-mount thermostats* and *wall-mount thermostats* adjust from 50° to 90° F.

Style A can be wall-mounted and ceiling-mounted. When wall-mounted with the included bracket, heaters evenly warm large spaces. Bracket has 11/32″ dia. holes (fasteners not included). When installed with a *ceiling-mount bracket*, heaters focus warm air in a specific spot. Bracket has 17/32″ dia. holes (fasteners not included). *Heater-mount thermostats* are SPDT (single pole, double throw), unless noted.

Style B include a wall-mount bracket with 11/32″ dia. holes (fasteners not included). *Heater-mount thermostats* and *wall-mount thermostats* are SPST (single pole, single throw).

Washdown—Heaters have a wiring compartment that is sealed to NEMA 4X standards to withstand washdowns and dust. Housing is stainless steel. Mount to the wall or ceiling with the included hardware.

Wall-mount thermostats adjust from 40° to 100° F and are SPST (single pole, single throw). They meet NEMA 4X standards to withstand washdowns and dust.

Hazardous Location—Heaters meet NEC Class I, Div. 1 and 2, Groups C and D; and Class II, Div. 1 and 2, Groups E, F, and G for use in the presence of flammable gases, vapors, and dusts. Housing is steel. The built-in thermostat adjusts from 50° to 90° F. The included wall-mount bracket has 1/2" dia. holes (fasteners not included).

Large-Space Ceiling-Mount Steam and Water Heaters

Horizontal Air Flow for Steam

Horizontal Air Flow for Steam and Water

Vertical Air Flow for Steam and Water

Use steam and water from your existing boilers to heat your facility. Heaters have a steel cabinet and mount to the ceiling. They must be hardwired. Heat output is based on steam at 2 psi. Hazardous location motors are rated for NEMA Class I, Division 1, Group D and Class II, Division I, Groups F and G for indoor use in the presence of flammable gases, vapors, and dusts and NEMA Class III, Division I and II for indoor use in the presence of flammable fibers, unless noted.

Horizontal Air Flow—Heaters evenly warm large spaces. Connections are NPT female. **Heaters for steam** have 1/2″ mounting holes (fasteners not included). **Heaters for steam and water** are CSA certified. Heaters that cover a max. area of 11,460 cu. ft. and less have 3/8″-16 threaded mounting holes; heaters that cover 16,130 cu. ft. and more have 1/2″-13 threaded mounting holes. Fasteners are not included.

Vertical Air Flow—Heaters focus warm air in a specific spot. They have NPT male connections. CSA certified. 120-volt AC heaters have 1/2″-13 threaded mounting holes; 230/460-volt AC heaters have 5/8″ mounting holes. Fasteners are not included.

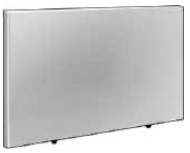
★ Not rated for NEMA Class III, Div. I and II.

Electric Desk Heaters



Stay warm at a desk, counter, or table. This direct heater has a built-in floor stand and can be mounted under desks with the included hook and loop. Housing is off-white steel and is safe to touch during use. Heating element is fiberglass. Control the heater with the on/off switch or add a thermostat (sold separately). Heater operates on 120 volts AC and has a 7-ft. cord with a three-prong plug. It is 15″ Ht. × 22″ Wd. × 1″ Dp. UL listed.

Thermostat adjusts from 40° to 100° F. It operates on 120 volts AC and has a 5-ft. cord with three-prong plug. Mount with the included hook and loop.

Direct Short-Range Portable Electric Heaters

Move these heaters to worksites, loading docks, and other cold spots to warm people in indoor and sheltered outdoor areas. Heaters have an aluminum housing and a quartz heating element. Cord is 8-ft. long, except the 120-volt AC heater has a 15-ft. long cord.

For permanent installation, add a *wall-mount thermostat*. It adjusts from 40° to 110°F and must be hardwired. Thermostat is SPDT (single pole, double throw) and operates on 120-250 volts AC. Mounting holes are 5/16" dia. (fasteners not included). UL listed. For 480-volt AC heater, a relay is required between the heater and thermostat; see page 952.

Direct Short-Range Portable Gas Heaters

Built for outdoor use, these heaters warm people at worksites and other cold spots without access to electricity. Connect heaters to a propane tank and light with a match. Heaters have a safety shut-off that cuts the gas supply to the heater if the flame goes out. They are steel with a stainless steel heating element and include a regulator with a POL connection (the same connection between your gas grill and propane tank). Mounting hardware is included. These heaters cannot be sold in California.

With One Burner

Direct Short-Range Ceiling- and Wall-Mount Electric Heaters

Install these heaters near loading docks and other drafty areas to warm people and objects. ETL listed.

Ceiling Mount—Hang heaters indoors and in sheltered outdoor areas using the included chains and S-hooks. Heating element is quartz. Heaters have a galvanized steel housing and a 6-ft. cord. *Wall-mount thermostat* adjusts from 40° to 110°F and must be hardwired. It's SPDT (single pole, double throw) and operates on 120/250 volts AC. Mounting holes are 5/16" dia. (fasteners not included). UL listed.

Wall/Ceiling Mount—Heaters have a plated steel housing with a stainless steel grille and heating element to resist corrosion in pump houses and other moist locations. They must be hardwired. Built-in thermostat adjusts from 40° to 90°F. The included mounting bracket has 1/8" dia. holes (fasteners not included).

No electricity needed—place these heaters to warm people at large worksites and other well-ventilated areas. These heaters have a pilot light starter and a safety shut-off that cuts the gas supply to the heater if the flame goes out. They have a steel housing and a stainless steel heating element. **Styles A** and **B** cannot be sold in California.

Heaters for Use with Propane Gas—Include a 20-ft. hose and regulator with POL connection (the same connection between your gas grill and propane tank).

Max. Sq. Ft. Heated	Max. Heat Output, Btu/Hr.	Req'd Tank Cap., lbs.	Max. Fuel Consumption, lbs./Hr.	Overall Ht.	Overall Wd.	Overall Dp.

Direct Long-Range Ceiling-Mount Electric Heaters

Designed to warm people in large, drafty spaces, such as shops and garages, these heaters are easier to install than gas heaters. They have an aluminum housing and quartz heating element. Heaters must be hardwired. They have 3/8″ dia. mounting holes, except heaters that cover 320 sq. ft. have 1/4″ dia. holes. ETL listed.

Wall-mount thermostat adjusts from 40° to 110°F and must be hardwired. It's SPDT (single pole, double throw) and operates on 120/250 volts AC. Mounting holes are 5/16″ dia. (fasteners not included). UL listed. For 480-volt AC heaters, a relay is required between the heater and thermostat; see page 952.

Direct Long-Range Ceiling- and Wall-Mount Gas Heaters

Wall Mount

Ceiling Mount

Our most powerful ceiling- and wall-mount direct heaters, these heaters warm people in large, drafty spaces, such as warehouses. They have a steel housing and stainless steel burners. Heaters have a safety shut-off that cuts off the gas supply if the flame goes out. Mounting hardware is included. CSA certified. These heaters cannot be sold in California.

Wall Mount—Gas connections are ½ NPT female. They include a wall-mount thermostat that adjusts from 35° to 75°F.

Ceiling Mount—Heaters include multiple burners than can be switched out to increase or decrease heat output. Gas connections are ¾ NPT female. They include a wall-mount thermostat that adjusts from 50° to 90°F.

Heaters with a **pilot light starter** don't require electricity.

Heaters with an **electronic spark starter** are good for drafty areas where pilot lights could be extinguished. They operate on 120 volts AC and are single phase. Heaters include a 24-volt transformer and must be hardwired.

Max. Sq. Ft. Heated	Heat Output, Btu/Hr.	Max. Mount Ht., ft.	Overall Ht.	Overall Wd.	Overall Dp.	For Use with Propane Gas: Pilot Light Starter		For Use with Propane Gas: Electronic Spark Starter		For Use with Natural Gas: Pilot Light Starter		For Use with Natural Gas: Electronic Spark Starter

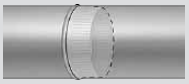
About Duct Connections

Duct Connections

Some duct and fittings press-fit together while others require connectors, clamps, and brackets. When replacing a component in your system, be sure to match the connection style of your existing duct.

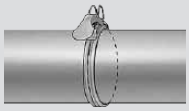


Standard Duct and Fittings

Duct and fittings press-fit together. This design allows you to assemble duct without connectors or clamps.

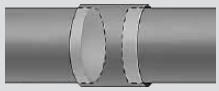
Spiral Duct and Fittings

To connect two duct ends, you need a fitting. Fittings have a slightly smaller diameter to press-fit into duct.



Quick-Assembly Duct and Fittings

Use a clamp to connect the rolled ends on either end of duct and fittings. Clamps have a quick-release latch that opens and closes to allow access.



Chemical-Resistant PVC Duct and Fittings

To connect two duct ends, you need a fitting. Fittings have a slightly larger diameter to press-fit over duct.

Low-Profile Rectangular Duct and Fittings

Both ends of the duct and fittings have interconnecting ends that lock together with brackets.

Duct-to-Duct Hose Connections

Slip duct hose over duct with a slightly smaller diameter. Standard duct, spiral duct, and chemical-resistant duct generally make the best connections because they have round, even surfaces. To secure the connection, use a worm-drive clamp (see pages 302-306) or duct tape (see pages 3500-3503).

Standard Duct and Fittings

No need for clamps or connectors—duct and fittings have a male end that is slightly smaller than its female end for simple assembly.

Galvanized steel has good corrosion resistance. **Aluminum** is lighter in weight than steel and stainless steel and has good corrosion resistance. **304 stainless steel** is more corrosion resistant than steel and aluminum.

Duct

The male end is crimped.

Easy-to-cut duct has an open seam allowing it to be cut with snips prior to installation. The seam snaps together without tools.

Rigid duct has a seam that is already locked in place for greater strength than easy-to-cut duct.

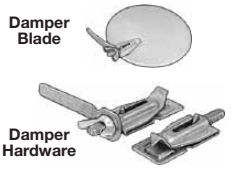
Damper Blades and Damper Hardware

Add **damper blades** to duct to control airflow. Blades are galvanized steel and include a handle.
Attach **damper hardware** to a sheet metal blade up to 0.022″ thick to create a damper. A threaded mount acts as the pivot. Hardware is galvanized steel.



Choose a Trade Size/Female ID

Female

Male

Crush-Resistant Spiral Duct and Fittings

A spiral seam gives this duct greater strength and rigidity than standard duct. Both ends of duct are female and have the same diameter. Fittings have male ends with a slightly smaller diameter than the duct.

Galvanized steel has good corrosion resistance. **PVC-coated steel** combines the strength of steel with the corrosion-resistance of plastic. **304 stainless steel** is more corrosion resistant than steel.

Duct

Both ends of duct are female.

Collars

To create branches from a rectangular duct, cut a hole in the duct and use a collar to attach spiral duct. Collars are galvanized steel and have an adhesive-back gasket to form a tight seal. They have a gasket on the male end, except collar with trade size 5 does not have a gasket.

With Damper

Floor Sweeps

Connect floor sweeps to your dust collection system. They are galvanized steel and have a female end.

Trade Size	Female ID		
6	6"	17345K11	$279.05

End Caps

Galvanized Steel and 304 Stainless Steel

PVC-Coated Steel

Galvanized steel and **304 stainless steel** end caps are male.
PVC-coated steel caps have a male side to fit inside duct and a female side to fit over duct.

	Choose a Trade Size	
Galvanized Steel	3, 4, 5, 6, 8, 10, 12, 14, 16	5078K58
PVC-Coated Steel	4, 5, 6, 7, 8, 9, 10, 12	1889K41
304 Stainless Steel	4, 6, 8, 10	2561K45

Sure-Seal Spiral Duct and Fittings

No need to seal joints with coatings or tape—these fittings have EPDM gaskets to create a tight seal. Duct and fittings are galvanized steel. Both ends of duct are female and have the same diameter. Fittings have male ends with a slightly smaller diameter than the duct. Sure-seal duct and fittings are compatible with crush-resistant spiral duct and fittings on pages 658-659.

Duct and Duct-to-Duct Connectors

Duct has two female ends.
Duct-to-duct connectors are required to join two pieces of duct. They have two male ends.

Trade Size	5-ft. Long Duct Female ID			Duct-to-Duct Connectors Male OD

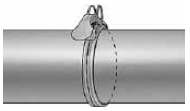
Quick-Assembly Duct and Fittings



Join duct and fittings with quick-release clamps for faster installation, cleanout, and disassembly than other duct systems. Both ends of duct and fittings have rolled ends with the same diameter. ID is slightly less than trade size.
Galvanized steel has good corrosion resistance. **Aluminum** is lightweight and has good corrosion resistance. **304 stainless steel** is more corrosion resistant than steel and aluminum and costs approximately twice as much.

Duct, Adjustment Sleeves, and Clamps

To change your duct length, cut duct and slide on an **adjustment sleeve**. The sleeve extends duct up to 7″. It includes an o-ring for clamps to grasp.

Low-Profile Rectangular Duct and Fittings

Often used in tight spaces, such as in walls and ceilings, rectangular duct allows you to select larger sizes without increasing duct height. Duct and fittings have interconnecting ends that lock together with brackets. Both ends have the same width and height. All are galvanized steel.

Duct and Fittings

Duct comes as two halves that lock together. Duct includes two S-brackets and two drive brackets to connect to duct and fittings.

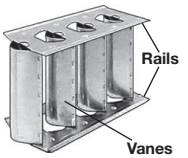
5 ft.	1964K92	$4.84	1964K94	$4.64	1964K12	$8.47

Turning Vane



Direct air flow around corners. To assemble, cut vane and rail to size. Rail has mounting tabs to hold vanes. Tabs are 2½″ apart. Mount in duct using tapping screws (not included).

	Lg.		
Vane	6 ft.	1000K5	$16.14
Rail	6 ft.	1000K2	16.73

Straight-Run Fabric Duct

Evenly distribute air from fans and blowers throughout large spaces. Duct is durable, off-white polyethylene with evenly spaced air holes. Connect duct to fans and blowers with worm-drive clamps (sold separately). Duct has sewn-in snap hooks to hang from beams or cable. It is flame retardant and has a maximum temperature of 180° F.

Trade Size	Female ID	Suggested Airflow, cfm	25-ft. Duct		50-ft. Duct		Worm-Drive Clamps

Vibration-Damping Duct Connectors

Add a flexible joint to your system to reduce vibration caused by fans and blowers. Connectors consist of a 4″ wide fabric strip attached to 2″ wide strips of galvanized steel on each end. To install, cut to length using sheet metal snips. Wrap connector around duct and fasten with screws (not included).

Fiberglass fabric resists most acids, alkalies, and solvents. Install on the warm side of your system. Color is off-white.

Neoprene fabric is waterproof and resists grease. Install on the warm or cool side of your system. Color is black.

	Max. Temp.	25-ft. Roll		50-ft. Roll

Airflow Dampers for Square Duct

Regulate airflow by adjusting dampers from fully open to fully closed. Dampers are ¼″ undersized to fit inside duct; the handle mounts outside the duct. Dampers are galvanized steel with a vinyl seal. They are 5½″ deep.

For Duct Size Wd.	Ht.		
12″	12″	2041K12	$140.91

24″	24″	2041K22	248.00
36″	36″	2041K27	412.55

Fire Dampers

Automatically stop airflow through duct in the event of a fire. Dampers have a fusible link that melts at 165° F, releasing a spring and causing the blades to close. Dampers are galvanized steel and 4⅞″ deep. They meet UL 555 and are UL fire-rated to help prevent the spread of fire for 1½ hours.

Dampers **for square duct** are ¼″ undersized to fit inside duct.

Blast Gates

Open and close gates to control airflow. A locking screw holds the gate's slide in position.

Standard Gates—Fit into duct ends, unless noted.

Self-Cleaning Gates—Often used in dust collection systems, the slide pushes through the top of the gate to clear debris. Gates fit into duct ends, unless noted.

Half Gates—Often added to existing systems, gates can be installed without disassembling duct. Cut a thin slot in the duct, insert the slide, and mount the collar to the duct.

Aluminum is lighter in weight than stainless steel and has good corrosion resistance. **304 stainless steel** is more corrosion resistant than galvanized steel. **316 stainless steel** has excellent corrosion resistance.

Automatic Blast Gates

More convenient than manual blast gates, these automatic gates can open and close in sync with dust collectors, fume exhausters, and other machines. A double-acting air cylinder with 1/4" push-to-connect ports moves the gate. Maximum air pressure is 90 psi. Gates are galvanized steel. They operate on 120 volts AC.

Duct Flanges

Without Holes

With Holes

Mount flanges to equipment to start a run of duct. They can also create a secure connection between two duct ends by mounting a flange to each end and then joining the flanges. Duct flanges are also known as angle rings.

Weld flanges **without holes** in place. Bolt flanges **with holes** in place (fasteners not included).

Galvanized steel flanges have good corrosion resistance. *304 stainless steel* flanges are more corrosion resistant than steel.

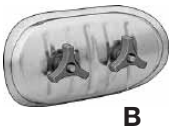
Duct Access Doors

A



B

C

D

Also known as cleanouts, doors cover cutouts in duct to provide access for inspection and cleaning.

Bolt-on doors are aluminum. They have 5/32" dia. mounting holes (fasteners not included).

Easy access doors open and close by turning the knobs. Doors are galvanized steel. They are insulated and have a gasket to create a tight seal. Use the included template to create the cutout.

High-Temperature Chimney Vents and Fittings

Built to withstand temperatures up to 1000° F, these vents and fittings are for use with boilers, furnaces, stoves, and other equipment that is fired by gas, oil, wood, or coal. UL listed, except for roof flashing and storm collars.

Vents

Vents are 304 stainless steel. They are double-walled and have 1″ of insulation. To join pieces, twist a male end into a female end and secure them with the included locking band.

Pipe has one female end and one male end.

Tees have two female ends and one male end. They include a removable cap.

Pipe

Tee

Fittings

Pipe adapters connect chimney vents to duct. They are 430 stainless steel. Adapters with *trade size 6* and *8* have a black finish.

Ceiling supports fit into a joist opening framed on all four sides. Nail the support to the framing (nails not included). Supports are steel and come with a pipe adapter. Supports with *trade size 6* and *8* have a black finish.

Wall bands should be placed every 8 feet to support chimney vents. They are 430 stainless steel.

Rain caps are 304 stainless steel.

Roof flashing is for roofs with a pitch up to 6/12. They are galvanized steel and include a storm collar.

Gas Chimney Vents and Fittings

Exhaust heat and gases from gas-fired equipment, such as boilers and furnaces. Vents and fittings are also known as Type B gas vents. Maximum temperature is 400° F. UL listed, except for roof flashing and storm collars.

Vents—Have an aluminum inner wall and a galvanized steel outer wall. To join pieces, insert a male end into a female end and secure with the included locking band.

Pipe has one female end and one male end.

Adjustable elbows can be used at an angle or straight. They have one female end and one male end.

Tees have two female ends and one male end.

Rain caps are aluminum.

Roof flashing is for roofs with a pitch up to 6/12. It requires a **storm collar** (sold separately). Flashing and collars are galvanized steel.

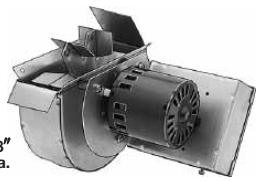
Inline Furnace Boosters



Increase airflow through exhaust duct to improve furnace performance. Create a cutout in your duct, insert the blower wheel, and mount the booster's housing to the duct. Boosters are galvanized steel and have an open motor. They operate on 120 volts AC and must be hardwired. Maximum temperature at inlet is 575° F. Boosters cannot be used for sidewall venting applications. Mounting hardware is included.

Optional safety switch (sold separately) prevents furnace from firing if booster fails. Switch is zinc-plated steel and includes mounting hardware.

For Vent Dia.	Cutout Size Ht.	Wd.	Amps	rpm		
3″-6″	2 5/8″	7 5/8″	0.5	1,550	1902K11	$145.97

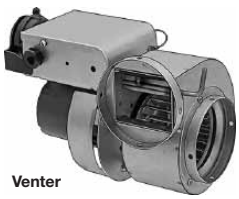
8″-12″	4″	12 3/4″	5.4	1,725	1902K27	486.63
Optional Safety Switch					1902K51	86.73

Sidewall Furnace Venters



Venter

Vent Hood

Often used for electric-to-gas conversions and renovations, these venters allow gas- or oil-fired equipment to be vented through a sidewall rather than a chimney. A thermostat signal starts the venter and a sensor ensures proper draft prior to operation. Maximum temperature at inlet is 600° F. Venters are compatible with 24- and 120-volt AC furnaces. A vent hood (sold separately) is required for the exterior of the sidewall.

Venters are galvanized steel and have an open dripproof, 3,000 rpm motor. They operate on 24 or 120 volts AC and must be hardwired.

Vent hoods are aluminum and include mounting hardware.

Furnace Btu/Hr.	For Vent Dia.	Amps	Venters		Vent Hoods	
150,000-300,000	4″-6″	1.8	3972K4	$369.60	3972K13	$139.40
300,000-600,000	6″-8″	2	3972K7	520.80	3972K18	152.10

Furnace Draft Controls

Also known as barometric dampers, controls improve furnace performance by automatically opening and closing to maintain consistent airflow through duct and chimneys despite changing environmental conditions. Controls are steel.

Controls **with single-acting damper** open inward to prevent strong drafts from pulling too much heat into the chimney vent.

Controls **with double-acting damper** open both inward and outward to relieve pressure caused by obstructions and downdrafts.

Controls **with single/double-acting damper** can be set to open inward for use with oil and coal or to open inward and outward for use with gas.

For Trade Size	For System Type		
With Single-Acting Damper			
5, 6, 7	Oil, Coal	1782K22	$80.84

11, 12	Oil, Coal, Gas	1782K14	271.15

Vent Caps

Cover external vents to reduce downdrafts and prevent obstructions from entering the vent.

Chimney Caps

Round

Square Steel

Round caps are UL listed.

Square and **rectangular** caps have expanded mesh for spark protection. *Steel* caps have a black finish. *304 stainless steel* caps have excellent corrosion resistance.

★ Also fits up to 8" dia. duct.

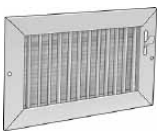
Registers

Floor

Wall/Ceiling One-Way Airflow

Wall/Ceiling Three-Way Airflow

Wall/Ceiling Four-Way Airflow



Wall/Ceiling Adjustable Airflow

Adjust the damper on these registers to control airflow. Registers are steel and fit into duct. Faceplate is 1 3/8" greater than duct size. *Wall/ceiling* registers include mounting screws.

Adjustable airflow registers have fins that can be turned to alter the airflow direction.

Drop-Ceiling Diffusers

Place these diffusers in the 2 ft.×2 ft. grid of a drop ceiling to evenly distribute airflow. Diffusers are steel with a white finish.

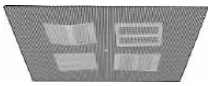
Diffusers

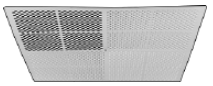
Diffusers have insulation with an R-value of 6. They connect to round duct with a snap-on collar (sold separately).

Perforated—Have more openings than grid diffusers to release more air.

Grid—Often used with cooling systems, diffusers disperse a thin layer of air along the ceiling for even distribution.

Diffusers **with steel back panel** have a vapor barrier for moisture protection.





For Trade Size	Perforated		Grid	
With Fiberglass Back Panel

Snap-on collars are galvanized steel and attach to diffusers with the included push-in fasteners. They have a male end that fits inside duct.

For Trade Size	Male OD		
6	5 15/16″	18525K44	$6.83
8	7 15/16″	18525K45	6.83
10	9 15/16″	18525K46	6.99
12	11 15/16″	18525K47	7.15

Ready-to-Connect Diffusers

Connect these diffusers to round duct using the included collar. Collars have a male end that fits inside duct. Back panel is steel.

Insulated diffusers have insulation with an R-value of 1 and a foil vapor blanket for moisture protection.

For Trade Size	Male OD	Standard		Insulated	
6	5 7/8″	17905K38	$56.45	17905K54	$75.26
8	7 7/8″	17905K39	56.45	17905K55	75.26

14	13 7/8″	17905K43	58.70		

Dampers

For use with diffusers and ready-to-connect diffusers, these dampers mount to the collar and have a removable handle to control airflow. Made of galvanized steel.

For Trade Size		
6	18525K81	$11.30
8	18525K82	11.53
10	18525K83	12.55
12	18525K84	13.98

Fire-Rated Drop-Ceiling Diffusers

Fit these diffusers into your drop ceiling to stop airflow in the event of a fire. The damper has a fusible link that melts at 165° F, causing the blades to close and stop airflow. Diffusers are white steel and fit 2 ft.× 2 ft. openings. Dampers are UL fire-rated for up to 3 hours.

For Trade Size	Male OD	Perforated		Louvered	
6	5 7/8″	1572K5	$121.50	1572K1	$137.98

12	11 7/8″	1572K8	137.26	1572K4	154.96

Wall Return Grilles

Cover the opening through which air is pulled into your HVAC system. Grilles have a white finish.

Steel and **Aluminum**—Overall size is 1 3/4″ greater than duct size. Includes mounting screws.

Steel with Filter Holder—Grilles hold a 1″ thick air filter (not included; see pages 702-706 for a filter that matches your duct size). Overall grille size is 2 13/16″ greater than duct size. Grilles have 3/8″ mounting holes (fasteners not included).

Drop-Ceiling Return Grilles

Perforated

Louvered

Designed to keep dust out of your HVAC system, these grilles have a filter holder that accepts trade size 20×20×1 air filters (not included; see pages 702-706). Grilles fit into the 2 ft.×2 ft. grid of a drop ceiling. They are steel with a white finish.

Perforated	2532K5	$48.19
Louvered	2532K7	48.19

Airflow-Actuated Switches

Detect airflow in duct with these adjustable switches. They are SPDT (single pole, double throw) and have screw terminal connections. Switches are rated NEMA 1 for indoor use. UL listed and CSA certified.

Paddle Switch

Senses changes in airflow velocity. The paddle extends into the duct and actuates the switch when airflow reaches the setpoint. Temperature range is 32° to 104° F. Enclosure is steel and has a 7/8″ hole for 1/2 trade size conduit and a 13/32″ knockout for 3/4 trade size conduit. Paddle is stainless steel. It is 3 1/8″ Wd.×6 7/8″ Ht. and can be trimmed to fit in duct.

Setpoint Range, fpm	Amps @ 120V AC	Amps @ 240V AC		
350-500	16	8	1783K13	$159.21

High-Sensitivity Diaphragm Switches

Often used to detect clogged air filters and iced air conditioner coils, switches sense small changes in pressure between two points in your duct. They have a 1/8 NPT female connection for the low-pressure side and a 1/8 NPT female inside×1/2 NPSM outside connection for the high-pressure side. Maximum pressure is 1 psi.

Enclosure is steel and plastic. Temperature range is –40° to 165° F.

Damper Actuators, Thermostat Guards & Thermostats

Damper Actuators

Without Spring Return

With Spring Return

Automatically adjust dampers to regulate airflow. Actuator attaches to the damper shaft to rotate it open and closed when signaled by a controller (not included). They can rotate clockwise and counterclockwise and are for indoor use. UL listed.

Incremental—Actuators open and close until the system requirement is met.

Proportional—Actuators provide improved control because they are constantly being positioned in response to system requirements. The actuator responds to a 0-10V DC or 0-20 mA control signal.

Actuators **without spring return** have a plastic enclosure. CSA certified.

Actuators **with spring return** can be set to return the damper to an open or closed position if the power fails. They have a manual crank for precise adjustment. Enclosure is aluminum.

Thermostat Guards

Plastic

Steel Solid Base

Steel Ring Base

Restrict access and protect thermostats from damage. Guards mount horizontally and vertically and are vented and keyed alike (one key included). Guards with a ring base mount without removing the thermostat from the wall.

Plastic guards include both a solid base and a ring base, except guard for maximum thermostat height of 3 7/8" only has a solid base. Guards are clear.

Steel guards are painted beige. Guards for maximum thermostat height of 6 1/4" and 6" have a hinged cover.

Low-Voltage Thermostats

A

B

C

D

E

F

Control low-voltage heating and cooling systems. Thermostats are white plastic and include mounting fasteners. *Programmable* thermostats can be set for four temperature changes per day.

Single Stage—Control systems that only have one speed.

Multistage—Control systems that have up to three heating speeds and two cooling speeds.

Style A can be mounted vertically and horizontally.

Style C can have individual programs for weekdays, Saturday, and Sunday. It has battery backup (two AA batteries included) to retain your program if the power fails.

Style D can have an individual program for each day of the week. They have a touch-screen display and battery backup (two AA batteries included) to retain your program if the power fails. Add an *optional remote sensor* to take temperature readings up to 300 ft. from the thermostat. Thermostats can support one remote sensor.

Styles E and **F** connect to WiFi networks so you can remotely monitor and control the temperature from a computer, tablet, or smart phone. Set an individual program for each day of the week. *Style F* has a color touch-screen display.

Line-Voltage Thermostats

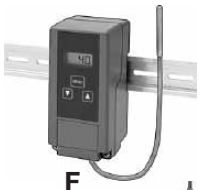
A

B

C

D

E



F

G

H

J

K

L

M

Regulate line-voltage heating and cooling systems. Thermostats must be hardwired, except Style A has a 6-ft. cord with a three-prong plug. Styles A, C-H, and L-M are UL listed. Styles B and K are ETL listed.

Standard—For indoor use.

Style A includes a wire hanger for mounting. Plug your heater into the back of the thermostat's plug.

Style B mount to a surface-mount outlet box (see page 893).

Style C includes mounting fasteners.

Styles D and **E** have 3/4" x 1/8" mounting slots.

DIN-Rail Mount—Has an LCD display, a three-button keypad, and 1/4" x 11/16" mounting slots. Thermostat is for indoor use.

With 1/2 NPT Thermowell—Sense the temperature of liquids, such as in hydronic heating systems. Thermostats are for indoor use.

Style H has 1/4" dia. mounting holes.

Washdown—Meet NEMA 4 for indoor/outdoor use and protection against washdowns and dust.

Style J can be used with one- and two-speed heaters and air conditioners. Thermostat can be set to activate the device's second speed when the temperature surpasses the setting for the first speed by 3.6° to 9° F. Mounting fasteners are included.

Style K have 5/32" dia. mounting holes. They also meet NEMA 4X for protection against corrosion.

Hazardous Location—Meet NEMA 7 (Class I, Group D) for protection against gasoline, propane, and other gases and NEMA 9 (Class II, Groups E, F, and G) for protection against dust from metal, carbon, grain, and other sources. They are for indoor use.

Style L have 1/4" dia. mounting holes. They also meet NEMA 7 (Class I, Group C) for protection against diethyl ether, ethylene, and other gases.

Style M has 3/8" dia. mounting holes.

★ SPST = single pole, single throw; DPST = double pole, single throw; SPDT = single pole, double throw; DPDT = double pole, double throw.

Air-Powered Thermostats

Use compressed air to power thermostats when electricity is not practical or available. Also known as two-pipe thermostats, the air supply feeds through the thermostat and then to your equipment. Max. pressure is 30 psi. Thermostats use 15 scim (standard cubic inches/minute) @ 20 psi. Air connections have internal filters. Calibration point is set at 9 psi.

Thermostats have a built-in sensor and include a universal fitting kit that consists of a cover, mounting plate, dial stops, screws, tubing reducers, tubing, and mounting hardware.

Direct Action—As the temperature goes up, the pressure in the system goes up.

Reverse Action—As the temperature goes up, the pressure in the system goes down.

Calibration kit enables quick adjustment of air-powered thermostats. Kit includes a pressure gauge with 1/8 NPT male connection, a 3/16 NPT male adapter, adjustment wrenches, a screwdriver, and a hand pump.

	Temp. Range, °F	Overall Ht.	Overall Wd.	Overall Dp.		
Direct Action	55° to 85°	2 1/8"	2 1/8"	1 3/8"	**17245K73**	$268.86

Calibration Kit					**17245K75**	228.57

Humidity Controls

For Humidifiers

For Humidifiers and Dehumidifiers

Turn the knob to control humidity equipment. Controls are SPDT (single pole, double throw). Mounting hardware is included.

Control **for humidifiers** mounts to a wall or duct.

Control **for humidifiers and dehumidifiers** fits surface-mount outlet boxes (see page 893).

Digital Airflow/Temperature Meters

A&B

C

D

E

Test airflow to optimize HVAC system performance. Meters can display airflow in fpm, mph, knots, m/sec., and km/hr. Temperature can be displayed in °F and °C. Batteries are included.

Compact—Small enough to fit in your pocket, meters extend to 9″ when unfolded. In addition to airflow and temperature, they can measure windchill. The LCD displays airflow and one other measurement simultaneously. Meters include a lanyard.

Style B also measures relative humidity and dew point (32° to 122° F).

Remote-Reading—Meters have a probe attached to a 4-ft. cable to access hard-to-reach places in duct. They have an LCD that simultaneously displays airflow and temperature and an RS-232 port to transmit data. To transfer data from meters to a Windows-based PC, add *data software and cable for remote meters* (sold separately). The cable has a 9-pin connector. For a USB connection, you'll need a *USB adapter cable* (sold separately).

Style C includes a hard case.

Styles D and **E** have a ½″ dia. probe that extends to 36″ to reach into narrow openings.

Low-Velocity Airflow Meters

Measure airflow in spray booths and exhaust hoods. This swinging vane-style meter has a range of 25-400 fpm. It's 3 7/8″ Ht. × 3 13/16″ Wd. × 1 9/16″ Dp. and includes a spare vane and steel mounting bracket with 3/16″ dia. holes (fasteners not included).

Air Flow Meter	**4075K61**	$42.04
Replacement Vanes (Pkg. of 2)	**4075K74**	14.80

Smoke Generators

Detect airflow and leaks in duct with short bursts of smoke.

Candles

Light the wick to produce dense gray-white smoke.

Burning Time	Smoke Volume, cu. ft.		Each 1-11	Each 12-Up
30 sec.	4,000	**4093K14**	$8.11	$5.90
1 min.	8,000	**4093K13**	8.89	6.46
3 min.	40,000	**4093K12**	16.25	11.82

Pen

Expose 3/8″ of the pen's wick and light it to produce a continuous trail of smoke. Pen includes six wicks, which provide up to 360 individual 30-second tests.

Pen	**4101T5**	$54.42
Refill Wicks (Pkg. of 6)	**4101T7**	43.50

Powdered Smoke

Squeeze this 1-oz. bottle of talc to produce a white cloud.

3880K31 ..... $3.97

Airflow/Static Pressure Meters

Often used to test airflow through supply and return grilles and air filters, this meter measures airflow and static pressure.

Meter includes a 14″ long tube, grille probes, an airflow calculator, and a carrying case.

Airflow, fpm	Static Pressure, inches of H_2O		
260-4,000	0.005-1.0	**4020K71**	$50.12

Fog Generators

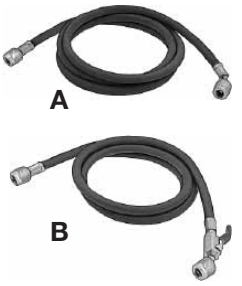
(Fluid Sold Separately)

Produce a continuous fog to detect airflow and leaks in duct. Generator warms up in six minutes and holds 45 ounces of fog fluid, which produces 45 minutes of fog. The fluid level is visible from outside the machine. Generator is 15″ Lg. × 10½″ Wd. × 9¾″ Ht. and has a remote control with 10-ft. cord. The generator operates on 120 volts AC and has a 5½-ft. cord with three-prong plug.

Fog Generator	**38985K62**	$250.00
Fog Fluid (1 gal.)	**38985K65**	20.31

Air Conditioning Charging and Testing Hoses

Hoses are rubber with Kevlar reinforcement and a nitrile cover for a long service life. Fittings are brass. Hoses and couplings are compatible with most common refrigerants, including R-12, R-22, R134a, R404A, R-407C, and R-502.



SAE Thread Size	Hose Lg.	Pressure, psi Working	Pressure, psi Max.	Available Colors	Individual Hoses		3-Color Hose Sets

1/4" SAE Male x 3/8" Quick-Disconnect Female Brass Coupling							1884K14	13.38

Air Conditioning Charging and Testing Manifolds

Standard Two Valve

Standard Four Valve

Digital Three Valve

Monitor refrigerant pressure when servicing air conditioning systems.

Standard two-valve and four-valve manifolds have double O-ring aluminum piston valves, two 3 1/8" dia. gauges (one blue and one red) with a plastic lens, and a sight glass (except two-valve manifold for R-410A refrigerant has brass valves, 2 1/2" dia. gauges, and does not have a sight glass). *Two-valve manifolds* have 1/4" SAE flared fittings. *Four-valve manifolds* have three 1/4" SAE flared fittings and one 3/8" fittings.

Digital three-valve manifold has a 5" LCD. It calculates how much refrigerant is needed in a system based on measurements taken with its thermocouples. Valves are brass. Has 1/4" NPT flared fittings. Operates on six AA batteries (included).

Automotive two-valve manifold has double O-ring brass piston valves and two 2 1/2" dia. gauges (color-coded blue and red) with a plastic lens, SAE flared vacuum ports, a sight glass, and hoses with 1/2" Acme fittings. Ports have 1/4" SAE flared fittings.

Optional gauge cover set includes one blue and one red gauge cover. Use with *standard two-valve and four-valve manifolds*, except two-valve manifold for R-410A refrigerant.

Refrigerant Recovery Machines

Pump liquid and vapor refrigerant out of a system and into a cylinder (sold separately). Use with CFC (chlorofluorocarbon), HFC (hydrofluorocarbon), and HCFC (hydrochlorofluorocarbon) refrigerants. The compressor is oilless. After use, switch to purge mode to expel excess refrigerant from unit. Compatible with most common refrigerants, including R-12, R-22, R-134a, R-407C, and R-502.

Machine has a 1/4" SAE flared hose connection. It has a 12.5" Ht. x 12.4" Wd. x 19.3" Dp. HDPE (high-density polyethylene) housing. Operates on 115 volts AC and has a 5-ft. cord with three-prong plug.

18035K7 ..... $990.55

Refrigerant Recovery Cylinders

Store recovered refrigerant in these reusable steel cylinders. All meet D.O.T. specifications 4BA and 4BW. Cylinders are compatible with most common refrigerants, including R-12, R-22, R134a, R404A, R-407C, and R-502. They have a 1/4" air tank valve opening, except 17305K77.

SAE Y-valve cylinders are gray and yellow. **Acme Y-valve** cylinders are blue.

Optional fill-level switch can be added to the 30- and 50-lb. capacity cylinders to prevent overfilling.

Cap., lbs.	Max. psi	Dia.	Ht.	1/4" SAE Y-Valve		1/2" Acme Y-Valve

Fill-Level Switch for 30- and 50-lb. Cap. Cylinders				17305K41	54.51		

Refrigerant Cylinder Charging Scales

Weigh cylinders to dispense the correct amount of refrigerant. The LCD displays weight in lbs. and kg.

Nonprogrammable scale operates on one 9-volt battery (included).

Programmable scale has 1/4" male flared fittings and 1/2" ACME fittings to connect to your cylinder. It dispenses programmed amounts of refrigerant. Operates on four AA batteries and one 9-volt battery (included).

	Charging Range	Lg.	Wd.	Dp.		
Nonprogrammable	0-110 lbs.	15 1/4"	10 1/2"	2 1/2"	1779K8	$194.68

Replacement 9-volt Battery (Pkg. of 1)					71455K56	2.75
Replacement AA Batteries (Pkg. of 4)					71455K53	2.94

Coil Cleaners

Aerosol cleaner removes dirt, oil, and contaminants without rinsing.

1- and 5-gal. cleaners contain sodium hydroxide for tough jobs. Spray or brush on, then rinse off.

Brush has a 10" long section of nylon bristles. Handle is polypropylene. Overall length is 26".

Spray gun is for use with 1- and 5-gal. cleaners. Add cleaner to the included bottle and connect to a garden hose.

18-oz. Aerosol Cleaner	17315K25	$11.67
1-gal. Cleaner	17315K41	17.34
5-gal. Cleaner	17315K42	89.38
Brush	7326T11	11.17
Spray Gun with 2-qt. Bottle	17315K29	104.60

Air Conditioning Pan Cleaners

Pad

Tablets

Keep your condensate pan clean and odor-free.

Pads release an antibacterial agent when wet. Replace pad after six months.

Tablets gradually dissolve, preventing deposits from developing on the pan. Use one tablet per ton of system capacity each month.

Pad (For units up to 5 tons)	3745T12	$7.70
Pad (For units up to 15 tons)	3745T15	17.64
Tablets (Pkg. of 200)	3745T11	31.10

Air Conditioning Filter Dryers

Liquid Line

Remove moisture and contaminants from your system to prevent corrosion and maintain efficient operation. They contain desiccants that are compatible with all HFC (hydrofluorocarbon) and HCFC (hydrochlorofluorocarbon) refrigerant and lubricant combinations. Braze in place with the copper connections.

Note: Max. unit capacity is based on use with R-22 refrigerant.

	Tube Size	Particle Size, Microns	Max. A/C Unit Cap.		
Liquid Line	3/8"	25	6 tons	3915T11	$30.28
Two-Way Liquid Line	3/8"	25	5 1/2 tons	3915T14	62.10
Suction Line	5/8"	25	5 tons	3915T12	69.20
Suction Line	7/8"	25	7 tons	3915T13	65.24

Air Conditioning Service Valves

A B C D E F

Tap into refrigerant lines to drain and fill your system. All valves have a 1/4" SAE flared male port. **Styles A and B** have a 1/4" nickel-plated brass valve core. **Style C** does not have a valve core. **Style D** has a 1/4" stainless steel valve core.

Self-piercing valves can be installed without drilling a hole into the line.

Extended valves are longer than other valves to provide easy access in tight spaces.

Valves with removable core provide unobstructed flow for your refrigerant once the core is removed.

Solder-On Valves

Fan-Motor Kits for Refrigeration Equipment

Get everything you need to replace a fan motor on refrigeration units, appliances, small fans, and blowers. Kits contain a reversible motor, two adjustable H mounting brackets, fan blades, and all necessary hardware. Motor is single speed, except 19265K7 is two speed. All have leads for hardwiring. Motor components are UL recognized.

Included Fan Blades, dia.	Max. Airflow, cfm	Max. rpm	Shaft Dia.	Shaft Lg.

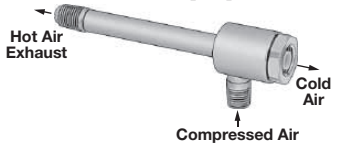
Air-Powered Equipment-Cooling Vortex Tubes



Cool electronic components and machine parts. Vortex tubes convert compressed air into a stream of cold air. The temperature is adjustable and can reach –20° F. Coolers are Type 303 stainless steel and have no moving parts for a long service life.

Note: Air supply must be filtered to remove moisture and contaminants.

Airflow adjusters can be switched out to increase or decrease the vortex tube's airflow (cfm) to alter its cooling capacity. To Order: Please specify cfm from the options listed.

Mufflers reduce the sound level to protect your hearing.

Filter removes moisture and solid particles. Pipe size is 1/4".

Kits include one vortex tube, airflow adjusters, a cold-air muffler, tubing, and a tube fitting.

About Sound Levels

Measured in decibels (dB), volume ratings indicate how much noise equipment makes. Some common volume levels include a whisper @ 20 dB, a refrigerator @ 40 dB, a conversation @ 60 dB, and a light machine shop @ 90 dB. OSHA recommends hearing protection for exposure to 80 dB and greater.

Equipment-Cooling Blowers

Blow away the heat generated by electronic equipment, induction heaters, and high-wattage bulbs. All blowers have leads for hardwiring.

Standard blowers have an aluminum housing and a galvanized steel wheel. Inlet is round and outlet is rectangular. They have 1/4" dia. mounting holes, except 91-cfm blower has 5/16" dia. mounting holes. Fasteners are not included.

Crossflow blowers create a wide stream of air for uniform cooling and ventilating. They have an aluminum housing and wheel and stainless steel flanges with 1/4" x 1/2" mounting slots. Fasteners are not included. Components are UL recognized and CSA certified.

Edge-Flow Equipment-Cooling Blowers

Use in tight spaces where traditional fans won't fit. Air enters through the center of the unit and then expels along the edges. All have leads for hardwiring. AC fans operate at 60 Hz, unless noted.

Square blowers have a fiberglass-reinforced plastic frame with a galvanized steel base plate. Components are UL recognized. Fans are CSA certified.

Round blowers are also known as motorized impellers. Frame is plastic.

★ Operates at 50/60 Hz.

Equipment-Cooling Fan Trays

Keep unenclosed electronic components cool. Place tray on top of equipment to direct a stream of cool air below. A temperature switch turns the unit on when the temperature reaches 90° F and off when it falls to 86° F. Trays contain two fans. They are single phase, operate on 120 volts AC, and have a 6-ft. cord with two-prong plug. UL listed and CSA certified.

Note: Not for use in enclosed spaces.

Airflow, cfm	Volume, dB	Size Ht.	Wd.	Dp.

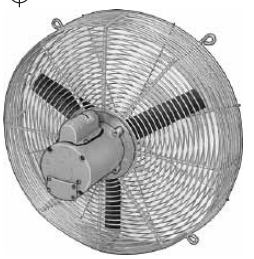
Machine-Mount Fans



Often used to cool transformers, these single-speed fans have aluminum blades, a galvanized steel guard, and a single phase, dust-resistant totally enclosed air-over (TEAO) motor. They operate on 120/208-230 volts AC and have leads for hardwiring. Mounting holes are 1/2" dia. (fasteners not included).

Optional mounting kit includes a bracket and hardware for attaching fans to machinery.

Equipment-Cooling Fans

Square

Round

Oblong

Quiet and compact, these fans are the most popular choice for cooling heat-sensitive equipment. They're also known as muffin fans. All have UL recognized components and are CSA certified. Fasteners not included. For fan guards, filters, and thermostats, see page 675.

AC fans operate at 50/60 Hz, unless noted. They are single phase. Fans with quick-disconnect (QD) terminals are compatible with the power cords on page 675.

High-performance AC fans produce greater airflow and consume less power than standard AC fans. They are single phase and can operate on a wide range of voltages at 50/60 Hz.

Quick-Disconnect (QD) Power Cords

Cords have quick-disconnect receptacles to plug into fans with quick-disconnect terminals. UL listed. CSA certified.
Cords with temperature switch are set to turn on when the temperature reaches 88° F and off when it falls to 80° F. They are not adjustable.
Daisy chain cords have multiple receptacles on the same line to connect a series of fans.

Thermostat

This thermostat mounts on a 35 mm DIN rail inside an enclosure. It adjusts from 32° to 140° F and has screw terminals to connect your fan. Overall size is 2.4″ Ht. x 1.3″ Wd. x 1.7″ Dp.

19155K16 ..... $33.20

Corrosion-Resistant Equipment-Cooling Fans

Square

Round

Able to withstand dust and water splashes, these fans are IP54 rated. They're also known as muffin fans. All have leads for hardwiring. Fasteners not included.

AC fans have plastic blades. They operate at 50/60 Hz. All have UL recognized components and are CSA certified. *Square fans* have a plastic frame. *Round fans* have an aluminum frame.

DC fans have a plastic frame and blades. Components are UL and C-UL recognized.

Equipment-Cooling Fan Kits

With Steel Fan Guard

With Plastic Fan Guard

Kits include a fan, guard, and 6 ft. cord. Fans have an aluminum frame, plastic blades, and operate at 50/60 Hz. Cord is UL listed. Fasteners not included. *120-volt AC fans* have a two-prong plug; *230-volt AC fans* have a three-prong plug.

Kits with temperature switch include a plug that has a nonadjustable built-in thermostat. It is set to turn on when the temperature reaches 85° F and off when it falls to 73° F.

Kits with plastic guard include a foam filter held in place by a plastic retainer. 3.15″ fans have a 30 ppi (pores per inch) filter; 4.69″ and 6.77″ fans have a 45 ppi filter. For replacement filters, see page 675.

Heaters for Equipment-Cooling Fans

Heat the airflow from equipment-cooling fans to warm equipment and reduce humidity. Heaters are for use with the square equipment-cooling fans on pages 674-676. Install in place of a fan guard using the 3⁄16″ dia. mounting holes (fasteners not included). Frame is black-painted aluminum. All have leads for hardwiring. Components are UL recognized.

Enclosure-Cooling Blowers

60 cfm

155 cfm

To save space inside enclosures, these blowers can mount outside. They draw cooler outside air into your enclosure or exhaust hot air through a louvered outlet vent. Incoming air is filtered to keep out dust and contaminants. The main filter is made of pleated paper and wrapped in a polyester prefilter. Blowers have a steel housing and galvanized steel fan blades. Both units are single phase and operate on 120 volts AC.

60 cfm blower has an open dripproof (ODP) motor and leads for hardwiring.

155 cfm blower has a dust-resistant totally enclosed nonventilated (TENV) motor and connections for hardwiring.

Airflow, cfm	Volume, dB	rpm	Size Ht.	Size Wd.	Size Dp.	Blowers		Replacement Prefilters		Replacement Main Filters

Enclosure-Cooling Fans

Circulate air to dissipate heat in your electrical enclosure. These fans are reversible to exhaust hot air out or draw cooler outside air in through a filter that removes dirt and dust. Motors are single phase, operate on 120 volts AC, 50/60 Hz and have UL recognized components.

With Disposable Filter—Rated IP54 for protection against dust and water splashes. Guard is plastic. Fans include mounting fasteners, except 39-cfm fan has 0.138″ dia. mounting holes and 71-cfm fan has 0.177″ dia. mounting holes.

With Washable Filter—Have an aluminum mesh filter and zinc-plated steel guard. Fans have 0.22″ dia. mounting holes (fasteners not included).

Enclosure-Cooling Fan Trays

Slide these trays in to cool standard 19″ wide enclosures. They are sized and notched in accordance with Electronic Industry Association (EIA) standards. Tray is steel; fan blades are plastic. They operate on 50/60 Hz and have a 6-ft. cord with three-prong plug. Components are UL listed. Mounting fasteners included.

Expandable fan trays come with three fans but can hold up to nine. Select a three-fan expansion module to add fans to your expandable tray.

Air-Powered Enclosure-Cooling Vortex Tubes

Prevent electronic components within enclosures from overheating. These vortex-tube coolers chill compressed air by 50°F or more while also keeping dust and other contaminants out of enclosures. Coolers require a compressed air source of 80 to 100 psi. They come with an inline compressed air filter and a ducting kit to distribute cool air throughout the enclosure.

Coolers without thermostat operate on compressed air; no electricity is required. *Coolers with thermostat* switch on only when needed. *Mechanical thermostats* don't require electricity. They're nonadjustable and maintain a temperature of 80° to 90°F. *Electric thermostats* operate on 120 volts AC and have leads for hardwiring. They require a second opening of 7/8″ dia. They adjust from 50° to 140°F.

Indoor and **quiet indoor coolers** are rated NEMA 12 to resist dirt and light water splashes. UL listed. *Quiet coolers* are often used in low-noise environments such as labs and clean rooms.

Hazardous-location indoor coolers have a check valve that seals the air outlet when the unit is not in use, allowing the enclosure to be pressurized. UL listed for Class I, Division II, Groups A, B, C, and D; Class II, Division II, Groups F and G; and Class III hazardous locations.

Indoor/outdoor coolers are rated NEMA 4 to withstand washdowns. UL listed.

Corrosion-resistant indoor/outdoor coolers are rated NEMA 4X to withstand washdowns and corrosion. UL listed.

About Air Conditioner Cooling Capacity

To determine the cooling capacity in Btu/Hr. required to cool an area, you need to know the size of the area and how much you want the temperature to cool. The table at right shows the approximate Btu/Hr. required to achieve the listed temperature reductions in some common spaces.

To estimate the Btu/Hr. required for other spaces, insert the length, width, and height of the space into the following formula:

$$(Lg. \times Wd.) + 2(Lg. \times Ht.) + 2(Wd. \times Ht.)$$

Then multiply the result by your desired temperature reduction in degrees Fahrenheit. The result is the Btu/Hr. you need.

	Lg.	Wd.	Ht.	Btu/Hr. to Reduce Temp. 10° F	20° F	30° F
Enclosure	3 ft.	4 ft.	5 ft.	800	1,600	2,400
Small Room	10 ft.	10 ft.	8 ft.	4,200	8,400	12,600
Medium Room	15 ft.	15 ft.	10 ft.	8,200	16,500	24,700
Large Room	20 ft.	20 ft.	12 ft.	13,600	27,200	40,800

Enclosure Air Conditioners

Indoor Ceiling Mount

Indoor Wall Mount

Indoor/Outdoor Wall Mount

Upgrade to an air conditioner when the heat in your enclosure is too much for a fan. These have an adjustable thermostat (68° to 131° F) and terminal blocks for hardwiring. Components are UL and C-UL recognized. Units include mounting hardware and templates. They have integrated condensate evaporators, except 1,000-, 1,700-, and 2,000-Btu units, which drain condensate through a tube. Units also have a programmable alarm and a temperature display, except 1,000-Btu units. *120 volts AC units* operate at 60 Hz, *230 and 460 volts AC units* operate at 50/60 Hz.

Indoor air conditioners are rated NEMA 12 to resist dirt, light water splashes, and oil/coolant dripping.

Indoor/outdoor air conditioners are rated NEMA 4X to resist dirt, washdowns, and corrosion.

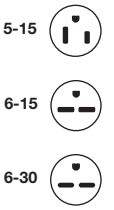
C With Optional Mounting Sleeve



Stay cool. These air conditioners have an adjustable thermostat (60° to 90° F) and adjustable louvers for directing airflow. All have a control panel and remote control. They also have a 6-ft. cord with a three-prong NEMA plug. UL and C-UL listed. The higher the energy efficiency ratio, the more energy efficient the unit. Your operating costs will depend on your utility rates and use. The estimated yearly energy cost is based on electricity cost of $0.12 per kWh. For more information, visit www.ftc.gov/energy.

Hazardous-Location Air Conditioners

Built to withstand harsh environments, these air conditioners meet ANSI/ISA 12.12.01 and NFPA 70 for hazardous locations. They have an adjustable temperature control and adjustable louvers for directing airflow. Units are single phase, operate on 208/230 volts AC, and have leads for hardwiring. The higher the energy efficiency ratio, the more energy efficient the unit. 19,000-btu unit cannot be sold in California.

Mount in a 27 7/8" to 42" wide window or through a wall with a maximum thickness of 6". 14,500-btu unit requires a 16 3/16" Ht. x 26 3/16" Wd. wall cutout. 19,000-btu unit requires an 18 3/16" Ht. x 26 3/16" Wd. wall cutout.

Cooling Cap., Btu/Hr.	Energy Efficiency Ratio (EER)	Airflow, cfm	Amps	Size Ht.	Wd.	Dp.

Portable Air Conditioners

Roll these air conditioners to the area that needs cooling. All have a 5 1/2-ft. cord with three-prong plug.

Light duty air conditioner is for temporary spot cooling. It evaporates condensate so there is no tank to empty. Vent to outdoors with included hoses.

Heavy duty air conditioners are for continuous use. They have two 2.5-gallon condensate tanks. Choose cooling or fan operation. Exhaust air into the space above your ceiling with the included kit. It fits 24" wide ceiling tiles and includes a 6-ft. long duct, a flange, and a ceiling tile. *Optional thermostat* is adjustable from 50° to 99°F.

Evaporative Cooling Fans

Get cool air where air conditioning is impractical. Also known as swamp coolers, fans take in water, which soaks into pads. When air is blown through the wet pads, the evaporation produces cool air. Fans have a leakproof molded plastic housing, casters with plastic wheels, and an open dripproof (ODP) motor. Fans are direct drive, except fan with 48" dia. blade is belt drive. All have a 3/4" GHT water connection, except the 16" heavy duty fan does not have a water connection. They are single phase, operate on 120 volts AC, and have a 10-ft. cord with three-prong plug.

Light duty fans have blowers instead of fan blades.

Optional water tank allows extended operation when you don't have access to another water supply.

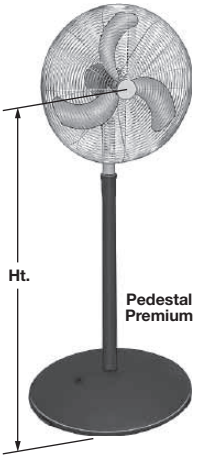
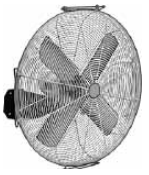
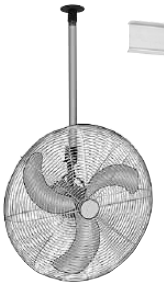
Industrial Duty Fans



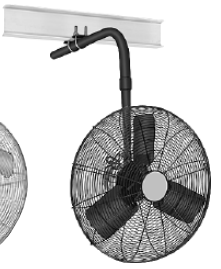
Pedestal Premium



Wall Mount High Output



Ceiling Mount Premium with Extension Pipe (Sold Separately)



I-Beam Mount Valu-Cool

Circulate air in large spaces. All fans are direct drive with a dust-resistant totally enclosed motor. They are designed to run continuously.

Pedestal—Height is adjustable. Base and pedestal are powder-coated steel.

Wall Mount—Mounting bracket has 3⁄8″ dia. holes. Fasteners not included.

Ceiling Mount—Extension pipe for mounting is sold separately on page 61. Mounting bracket has 3⁄8″ dia. holes. Fasteners not included.

I-Beam Mount—Fit 4″ to 14″ wide I-beams.

Valu-Cool fans have steel blades and a powder-coated steel guard. They have a 9-ft. cord with three-prong plug. ETL listed.

Premium fans have corrosion-resistant aluminum blades that are cupped to focus airflow. Guard is chrome-plated steel. They have a ball bearing motor and a 15-ft. cord with three-prong plug. UL listed.

High-output fans deliver greater airflow than valu-cool and premium fans. They have a chrome-plated steel guard and a ball bearing motor. *120-volt AC* fans have aluminum blades and a 15-ft. cord with three-prong plug. *208-230/460-volt AC* fans have steel blades and wire leads.

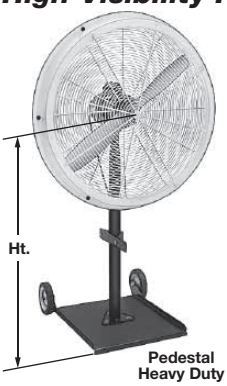
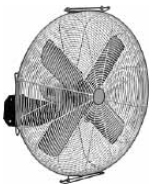
High-Visibility Fans



Pedestal Heavy Duty



Wall Mount Standard

The guard is bright yellow to reduce the chance of accidental contact. These direct-drive fans are nonoscillating and have a dust-resistant totally enclosed motor.

Pedestal—All have wheels for mobility. *Standard fans* have an adjustable-height pedestal. *Heavy duty fans* have a fixed height.

Wall Mount—Mounting bracket has 7⁄16″ dia. holes (fasteners not included).

Standard fans have galvanized steel blades and a PVC-coated steel guard. They have an 18-ft. cord with three-prong plug.

Heavy duty fans have cast aluminum blades and a powder-coated steel guard that's supported by a polyethylene ring. Operate on 120 volts AC but can be field-wired for 230 volts AC. They have a 6-ft. cord with three-prong plug.

Swivel-Arm Fans

With Optional Light Kit

Often used on loading docks, these fans have a pivoting steel extension arm so you can direct air where it's needed. Fans are nonoscillating and direct-drive. They have aluminum blades and a chrome-plated steel guard. Fans have a single-phase, dust-resistant totally enclosed motor. They operate on 120 volts AC and have a 5-ft. cord with three-prong plug. Mounting hardware not included. ETL and C-ETL listed.

Optional light kit requires a PAR38 or R40 medium screw-base bulb up to 300 watts (not included; see pages 713-714). ETL and C-ETL listed.

For information about sound levels, see page 673.

Washdown Food-Service Fans

Made of corrosion-resistant materials, these fans meet UL 507 spray test requirements for washdowns. All are nonoscillating and direct-drive with a dust-resistant totally enclosed motor. Motor is Bakery Industry Sanitation Standards Committee (BISSC) approved for food-service use.

Steel fans are FDA compliant. They are white epoxy-painted steel with a zinc-plated steel guard. Components are UL recognized. *Wall-mount fans* have a bracket with 3/8″ dia. mounting holes (fasteners included).

Type 304 stainless steel fans are USDA compliant. Meet NSF/ANSI Standard 51. UL and C-UL listed. *Wall-mount fans* have a bracket with 3/8″ dia. mounting holes (fasteners not included).

Hazardous-Location Fans

Often used in welding shops, oil refineries, and other hazardous settings, the motor on these direct-drive fans is UL listed for Class 1, Group D and Class 2, Groups E, F, and G environments. Fans are nonoscillating. They are single phase, operate on 120/230 volts AC, and have leads for hardwiring. Blades are aluminum, and the guard is chrome-plated steel.

Pedestal fans adjust from 5 ft. to 8 ft. high and have a black-painted steel base and pedestal.

Wall-mount fans have a bracket with 15/16″ dia. mounting holes (fasteners not included).

Ceiling-mount fans require a pipe size 1 extension pipe for mounting (sold separately on page 61). They have a bracket with 5/16″ dia. mounting holes (fasteners not included).

I-beam-mount fans fit 2″ to 15″ wide I-beams. Mounting hardware is included.

U.S. Navy Fans

Rugged and dependable, this steel fan meets U.S. Navy specification MIL-F-68F. It is two speed, nonoscillating, and adjusts 90° vertically and horizontally. Wall or bench mount using the included bracket with 3/8″ dia. holes (fasteners not included). Fan has a single-phase, direct-drive, open dripproof (ODP) motor. It operates on 120 volts AC and has leads for hardwiring.

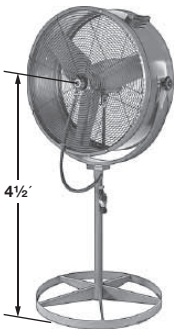
12″	2,200	22	1,400	1/15	**1936K44**	$212.52

Misting Fans

Connect this fan to a garden hose to produce a fine mist. Fan has three built-in misting nozzles, each with an inline filter to prevent clogging. It can also be operated in fan only mode.

Fan is two speed and nonoscillating. It can be used indoors and outdoors. The blades, guard, barrel, and pedestal are powder-coated steel. Fan has a single phase, direct-drive, dust-resistant totally enclosed motor. It operates on 120 volts AC and has a 10-ft. cord with three-prong plug. Water connections are 5/8 female garden hose thread (GHT). UL listed.



Blade Dia.	Max. Airflow, cfm	Volume, dB @ 15 ft.	Max. rpm	hp		
30″	8,800	65	1,140	1/3	**1711K71**	$721.99

Ultra Quiet Fans

Position these powerful fans near conference rooms and other meeting spaces to circulate air without drowning out voices. Fans are three speed; the lowest speed is a quiet setting. They oscillate or lock in a fixed position. Blades and guards are powder-coated steel. Fans have a dust-resistant totally enclosed motor. They are single phase, operate on 120 volts AC, and have a 10-ft. cord with three-prong plug. ETL listed.

Pedestal fans adjust from 4 ft. to 6 ft. high and have a powder-coated steel pedestal.

Wall-mount fans have a bracket with 3/8″ dia. mounting holes (fasteners not included).

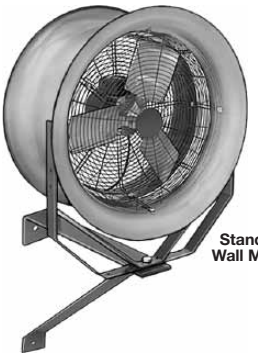
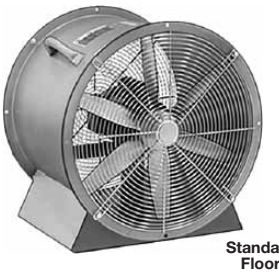
Jet Stream Fans



Standard Wall Mount



Standard Floor

Hazardous Location Mobile

Often used to cool warehouse aisles and production lines, these fans generate a stream of air that travels farther than air from conventional fans. All are nonoscillating, single speed, and have a steel housing. They are direct drive, except 2137K71 and 2137K75 are belt drive.

Standard Fans—Blades are aluminum and guard is steel. They have a dust-resistant totally enclosed motor.

Hazardous-Location Fans—Motor is UL listed for Class I, Group D and Class II, Groups F and G hazardous environments. Blades are aluminum and guard is steel.

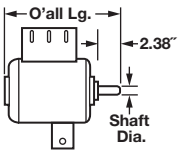
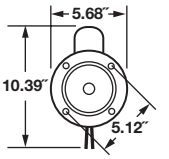
NEMA 48YZ and 56YZ Pedestal AC Fan Motors CAD





Build your own fan or replace a fan motor. Mount one of these reversible, totally enclosed air-over (TEAO) motors directly to a fan column. Motors have thermal overload protection. They are single phase, operate on 120 volts AC, and have a terminal panel for hardwiring. Four 8-32 threaded mounting studs extend 1″ for mounting a fan guard. Mounting bracket on motor base has a 0.44″ dia. hole (fasteners not included). Service factor is 1.0. Components are UL recognized. CSA certified.

For information about motors, see page 1066.

Note: When selecting a fan blade, be sure the rpm and hp are compatible and the bore size of the blade matches the shaft diameter of the motor.

For information about sound levels, see page 673.

Mobile Fans

Wheels make it easy to move these powerful fans. All are single phase and operate on 120 volts AC. They have a 10-ft. cord with three-prong plug. Direct-drive fans have fewer moving parts than belt-drive fans for less maintenance. Belt-drive fans are quieter and have a longer life span than direct-drive fans because components can be replaced if worn or damaged.

Valu-cool fans have a dust-resistant totally enclosed motor, except the 8,200-cfm fan has an open dripproof motor. Housing and guard are steel. UL listed. *Valu-cool* are C-UL listed. *Valu-cool with tilt stand* allow you to adjust the angle of the fan. The stand for 30″ and 36″ blade diameter fans can also mount to the wall and ceiling.

Standard fans have an open dripproof motor, except 48″ blade diameter fans have a totally enclosed motor. Housing and guard are steel. UL listed.

Corrosion-resistant fans have a dust-resistant totally enclosed motor, except the 42″ blade diameter fan has an open dripproof motor. Housing is aluminum and guard is powder-coated steel.

Ceiling Fans

All fans have steel blades with a white epoxy finish and leads for hardwiring. Fans are nonreversible and have a dust-resistant totally enclosed motor. They operate at 50/60 Hz. UL listed. C-UL listed, except the three-speed fan.

Mount fans on flat ceilings at least 10 ft. above the floor. All include mounting hardware and a support cable to mount fans into joists. To mount between joists, use the o*ptional installation kit*. It includes an adjustable brace, an electrical box, and mounting hardware.

Three-speed fan has a pull chain.

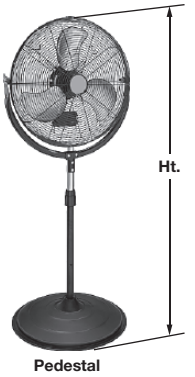
Light Duty Tilt Fans

Multi-Mount

12″ and 18″ Portable with Floor Stand

Portable with Wheeled Stand



Pedestal

Tilt these nonoscillating fans to direct air where it's needed. Fans have a steel guard. Blades are steel, except 2,800- and 6,800-cfm fans have aluminum blades. Fans are single phase, operate on 120 volts AC, and have a 6-ft. cord with three-prong plug. They are ETL listed, except the 6,800-cfm fan is also C-ETL listed and the 2,800-cfm fan is UL listed.

Multi-mount fans can be mounted on walls, ceilings, and I-beams. They have a steel bracket with a 3/4″ dia. mounting hole (fastener not included). Cannot be sold in California. **Pedestal fan** has an adjustable-height pedestal. The fan's maximum overall height is 60″.

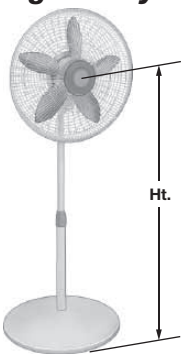
Light Duty Pedestal Fans



Adjust the height of this three-speed fan to direct airflow where it is needed. Fan oscillates through a 90° arc or locks in a fixed position. Front guard is steel; rear guard, blades, and base are plastic. It is single-phase, operates on 120 volts AC, and has a 6-ft. cord with three-prong plug. ETL listed.

Blade Dia.	Max. Airflow, cfm	Max. Ht.		
18″	1,900	45″	20965K82	$53.80

Light Duty Box Fans

With Optional Wheeled Stand

Mount this three-speed fan in a window, set it on the floor, or use the optional stand.

Fan has a steel housing, plastic blades and guard, and a single-phase, open drip-proof (ODP) motor. Operates on 120 volts AC and has a 6-ft. cord with three-prong plug. Overall size is 24″ Ht. × 21″ Wd. × 6″ Dp. ETL listed.

Optional wheeled stand raises the fan 25″ or 27″ above the floor and allows it to pivot 360°.

Blade Dia.	Max. Airflow, cfm		
20″	2,200	2027K34	$34.33

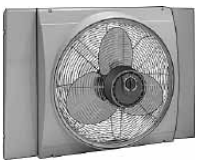
Light Duty Window-Mount Fans



Draw fresh air in or push stale air out. Reverse the airflow of this three-speed fan with the flip of a switch. Side panels expand to fit the width of your window. Fan has a plastic housing, a steel guard, and steel blades. It is single-phase, operates on 120 volts AC, and has a 7-ft. cord with three-prong plug. ETL listed.

Blade Dia.	Max. Airflow, cfm	Overall Ht.	Overall Wd.	Overall Dp.	Max. Wd. Expanded		
20″	3,500	26 1/4″	27″	10″	38″	2098K22	$182.32

Light Duty DC Bench-Top Fans

Mount these nonoscillating fans on your bench top, in your vehicle, or wherever you need cooling. Base is zinc, blades are aluminum, and guard is chrome-plated steel. Fans are direct-drive with a dust resistant totally enclosed motor. They have one lead for hardwiring. Mounting fasteners included.

Voltage	Blade Dia.	Max. Airflow, cfm	Overall Ht.	Overall Wd.	Overall Dp.	Speeds		
12V DC	6 1/2″	270	9″	8″	5″	2	19065K85	$78.27

36V DC	6 1/2″	270	9″	8″	5″	Variable	19065K92	93.04

Fan Blades

Replace worn and damaged fan blades. Blades rotate clockwise, except Style F rotate counterclockwise. Fasten fan blades to shaft using the included set screws or shaft collar, except Style F with 30″ and 36″ diameter blades. Fan blades with a keyway are for use on motors with a keyed shaft. For difficult-to-remove hubs and fan blades, see fan blade pullers on page 1115.

Light duty fan blades are for use in low-airflow applications. **Medium duty fan blades** are sturdier than light duty fan blades and produce higher airflow. **Heavy duty fan blades** are corrosion resistant and built to last. They produce high airflow. *Style E* has cupped blades to create a focused stream of air.

About Exhaust Fans

To select the exhaust fan that's right for your facility, you'll need to calculate your rate of air exchange—measured in cfm (cubic feet per minute). Divide the cubic feet of your facility by how often you want to exchange the air.

For example, if your facility is 10,000 cubic feet and you want to exchange the air every 5 minutes, you need an exhaust fan that produces airflow of 2,000 cfm.

$$\text{cfm} = \frac{\text{10,000 cubic feet}}{\text{5 minutes}} = 2{,}000$$

Air Exchange Frequency	
Type of Facility	**Air Exchange**
Engine Room	Every 1 to 3 Minutes
Boiler Room, Foundry, Laboratory	Every 1 to 5 Minutes
Factory	Every 2 to 5 Minutes
Office, Warehouse	Every 2 to 10 Minutes

Room Exhaust Fans

A

B

C

D

Remove stale air and humidity. All fans have a single-phase, permanently lubricated motor, operate on 120 volts AC, and have leads for hardwiring. They are UL listed. All have a white plastic grille. A damper prevents backdrafts, except 10″ dia. duct fan does not have a damper. Fans mount in the ceiling. *Styles A & D* can also mount in the wall. Mounting fasteners are not included. *Styles A & B* have a galvanized steel housing. *Styles C & D* have a black-painted steel housing.

Style B have a light that can operate alone or share a switch with the fan. Use a screw-in medium base bulb up to 100 watts (sold separately).

Ultra-Quiet Room Exhaust Fans

For Round Duct

For Rectangular Duct

Keep noise to a minimum with these ceiling/wall-mount exhaust fans. They have a low rpm motor, 1/2″ thick acoustical insulation, and vibration-resistant motor mounts for quiet operation. Housing is galvanized steel and grille is white-painted steel, except 8″ dia. duct fan has a plastic grille. A damper prevents backdrafts. Fans have a single-phase, permanently lubricated motor, leads for hardwiring, and operate on 120 volts AC. UL listed. Mounting fasteners are not included.

Optional variable-speed fan control fits a single gang electrical box and has leads for hardwiring. Mounting fasteners are included.

Through-the-Wall Room Exhaust Fans

Interior Wall

Exterior Wall

Exhaust air and humidity directly into another room or outdoors without using duct. Grille is white plastic. Fans are single phase, operate on 120 volts AC, and have leads for hardwiring. UL listed.

Interior wall fan has an adjustable sleeve for mounting. Housing is galvanized steel. A knob controls the variable-speed, open dripproof motor.

Exterior wall fans vent to the outside. Fans have a black-painted steel housing and permanently lubricated motor. Fasteners are not included. *180 cfm and 270 cfm fans* wire to your wall switch and have a backdraft damper. *470 cfm fan* has a pull chain.

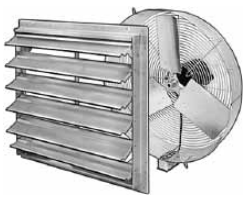
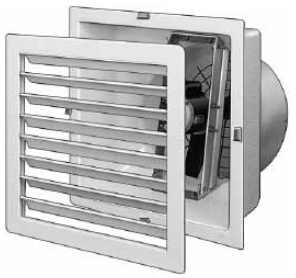
Wall Exhaust Fans with Louvers



Direct-Drive Light Duty

Direct-Drive Standard



Direct-Drive Corrosion Resistant

Belt-Drive Standard

Don't worry about finding the right louver for your fan—these units combine a powerful fan and a movable-blade louver. Louvers are gravity operated. They open only when air flows through them, which prevents backdrafts. Direct-drive fans have fewer moving parts than belt-drive fans for less maintenance. Belt-drive fans are quieter and have a longer life span than direct-drive fans because components can be replaced if worn or damaged.

Direct-drive light duty fans are designed for use without duct. Frame and guard are steel; fan and louver blades are aluminum. Fans have a dust-resistant totally enclosed motor and leads for hardwiring. Recess mount using the 1/2" x 1/4" mounting slots (fasteners not included). *12" and 16" blade dia. fans* have a dial speed control. *24" and 30" blade dia. fans* have a pull chain and UL recognized components.

Direct-drive standard fans have a galvanized steel frame, cabinet, and louvers. Blades are aluminum. Fans have a wire mesh inlet guard, open dripproof motor, and leads for hardwiring. UL and C-UL listed. They recess mount. Drill mounting holes as needed.

Direct-drive corrosion-resistant fans have a durable fiberglass housing and polypropylene blades that won't rust. Louvers are polypropylene; guard is galvanized steel. Fans have a dust-resistant totally enclosed motor and connections for hardwiring. They recess mount. Drill mounting holes as needed.

Belt-drive standard fans have a steel housing, blades, and frame. Louvers are aluminum. All have leads for hardwiring. Drop-in mount using the 3/16" dia. mounting holes (fasteners not included). *120-volt AC fans* have an open dripproof motor. *230/460-volt AC fans* have a dust-resistant totally enclosed motor.

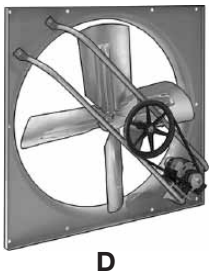
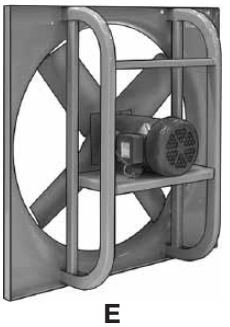
Wall Exhaust Fans

A
8″ to 14″ Blade Dia.

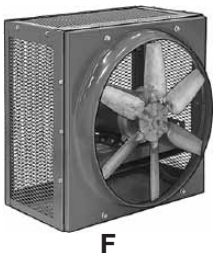
B&C



D
Belt Drive



E
Direct Drive



F

Expel stagnant and humid air. Fans must be hardwired. Wall collars and louvers are also available (see pages 689-690). Direct-drive fans have fewer moving parts than belt-drive fans for less maintenance. Belt-drive fans are quieter and have a longer life span than direct-drive fans because components can be replaced if worn or damaged.

Low-profile fans mount flush to the wall. They have a totally enclosed motor. Frame and blades are steel.

Standard fans are for use in clean, dry environments. They have an open dripproof motor and a steel frame. *Direct-drive fans* have aluminum blades. *Belt-drive fans* have steel blades.

Dust-resistant fans are better suited to damp and dirty environments than standard fans. All have a totally enclosed motor. They have a steel frame. *Styles B&C* have aluminum blades. *Styles D&E* have steel blades.

Hazardous location fans have a motor that is UL listed for Class I, Group D and Class II, Groups F and G hazardous environments, except 2208K44 is UL listed for Class I, Group D. All have a steel frame and aluminum blades.

★ Operates on 120/230 Volts AC.

Supply/Exhaust 12-Volt DC Fans

Draw fresh air in or push stale air out with these reversible fans. Guard and blades are impact-resistant nylon. Fans have a dust-resistant totally enclosed motor and leads for hardwiring. Mounting holes are 1/4″ dia. (fasteners not included).

Wall Collars for Exhaust Fans

Connect your wall exhaust fan to a louver. One side of the collar fits around your exhaust fan and the other includes a flange for mounting a louver. Collars are for use in interior and exterior walls. Made of galvanized steel.

Collars with 1⅛″ flange fit the direct-drive standard and hazardous location fans on page 688.

Collars with 1¼″ flange fit the direct-drive dust-resistant and all belt-drive fans on page 688.

Note: To be compatible, the collar must be larger than the overall fan dimensions.

Heavy Duty Movable-Blade Wall Louvers

Surface Mount

Recess Mount

Flush Mount

Thicker than standard movable-blade wall louvers, these are rugged and dependable. Blades are 0.020″-0.025″ thick aluminum. Louvers that fit 38″ openings and smaller are single panel; 40″-60″ are double panel, and 66″ are triple panel. Maximum air velocity is 2,500 fpm. Temperature range is –10° to 200°F, except motorized units have a maximum temperature of 130°F. Choose from surface, recess, and flush mount.

Surface Mount—Frame and flange mount outside the wall. Flange has ¼″ dia. mounting holes (fasteners not included). Overall size is 3″ larger than opening size.

Recess Mount—Frame rests in the wall. The flange has ¼″ dia. holes for mounting to the outside of the wall (fasteners not included). When the blades close, they're flush with the wall surface. Overall size is 3″ larger than opening size.

Flush Mount—Fit inside a wall or duct. Overall size is ⅛″ smaller than opening size.

Aluminum Frame Louvers—0.063″ thick and 1⅞″ deep except for drop-in mount louvers smaller than 50″ wide, which are 0.05″ thick and have a frame depth of 1½″.

Galvanized Steel Frame Louvers—0.079″ thick and 1½″ deep.

Gravity-operated louvers stay open only when air flows, which prevents backdrafts.

Pull-chain louvers stay closed unless the chain is tugged and secured. **Motorized louvers** have one single-phase motor, unless noted. They operate on 120/240 volts AC, and have leads for hardwiring.

To Order: Please specify mounting style: surface, recess, or flush.

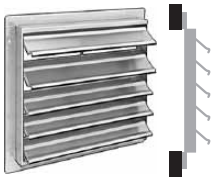
Movable-Blade Wall Louvers



Surface Mount

These gravity-operated louvers remain open only when air flows, preventing backdrafts. All have a flange with 1/4" Ht. x 1/2" Wd. slots (fasteners not included). Frame is made of 0.037" galvanized steel. Blades are 0.017" thick aluminum. Louvers that fit 36 1/2" and smaller openings are single panel; louvers that fit 42 1/2" and larger openings are double panel. Maximum air velocity is 2,500 fpm. Temperature range is -40° to 180° F.

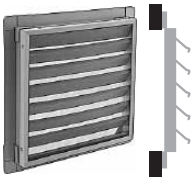
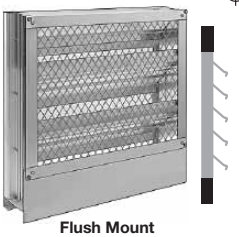
Heavy Duty Fixed-Blade Wall Louvers



Surface Mount



Flush Mount

Constructed with a thick frame and blades, these louvers have a long service life.

Surface-mount louvers have a 1 1/4" wide flange for mounting outside your wall. They're 1 3/4" deep and have a 1/8" thick frame. Blades are 1/16" thick. They include a plastic insect screen.

Flush-mount louvers mount inside your wall. They're 4" deep and include a bird screen. Blades are designed to direct water away from the louvers. *Extruded aluminum louvers* are 0.081" thick. *Galvanized steel louvers* are 0.064" thick.

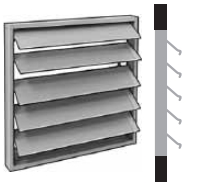
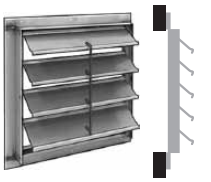
Corrosion-Resistant Movable-Blade Wall Louvers



Flush-Mount PVC



Surface-Mount Type 304 Stainless Steel

Able to withstand harsh environments, these louvers won't rust. They are gravity operated. The louvers remain open only when air flows, preventing backdrafts.

Flush-mount PVC louvers have a 1 3/4" deep frame and 1/16" thick blades. Louvers that fit 18" and smaller openings are single panel; 24" and higher are double panel. Max. air velocity is 1,200 fpm. Temperature range is 5° to 140° F.

Surface-mount Type 304 stainless steel louvers have a flange with 1/4" dia. holes (fasteners not included). Frame is 2 3/8" deep; blades are 0.019" thick. They are single panel. Max. air velocity is 2,500 fpm. Temperature range is –20° to 200° F.

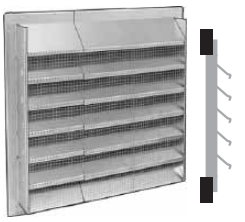
Adjustable-Width Fixed-Blade Wall Louvers



Recess Mount

Get an exact fit for your opening by sliding out the louver to the width you need. Made of corrosion-resistant aluminum, they have a 4" deep frame (mounting fasteners included) and 0.04" thick blades. Louvers include a galvanized steel bird screen.

Door Louvers

Allow air to circulate through doors. These louvers have fixed blades and include fasteners.

Indoor steel louvers have a 0.036" thick frame and 0.024" thick blades.

Indoor/outdoor aluminum louvers are 0.040" thick. **Indoor/outdoor Type 304 stainless steel louvers** have a 0.047" thick frame and 0.030" thick blades.

Indoor/outdoor fire-rated steel louvers have a spring-loaded, fusible link that locks blades closed if the temperature reaches 167° F. They are UL fire-rated for 90 minutes. Thickness is 0.060".

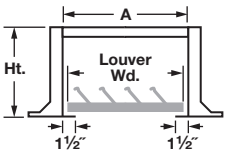
Movable-Blade Louvers for Roof Exhaust Fans

Louver

Mounting Base



The blades on these louvers are gravity operated. They open when your roof-mounted exhaust fan goes on and close when it's off, preventing backdrafts. They have a galvanized steel frame and aluminum blades for corrosion resistance. Felt seals on the face of the blades ensure quiet closing and better protection from the weather. Mounting bases (sold separately) are galvanized steel. Louvers fit the bottom of the mounting base and must be secured to the lip of the base with sheet metal screws (not included; see pages 2996-3005). Louver is 0.040″ thick; blades are 0.016″ thick. Temperature range is –40° to 180° F. Maximum air velocity is 2,000 fpm.

Also Available: Additional louver sizes. Please ask for 8061T999 and specify louver dimensions.

Wind-Driven Turbine Exhaust Fans

Designed to spin freely with the slightest breeze, these fans create a vacuum that draws air out from buildings and ventilation systems. No electricity is required. Mount fans on your roof away from wind obstructions. Optional mounting bases are sold separately on this page. Maximum temperature is 150° F. For information about exhaust fans, see page 686.

Steel exhaust fans have a galvanized finish for added corrosion resistance.

Bases for Wind-Driven Exhaust Fans

Flat Base

Straight Base

Slope Base

Made of corrosion-resistant galvanized steel, these bases have a square bottom and round top. All have 4″ wide flashing to simplify installation.

To Order: For slope bases, please specify pitch: 1/12-11/12 in increments of 1/12. To determine pitch, use an angle indicator (see page 2313) or divide rise by run (see illustration). For instance, if your roof rises 5″ in 12″ of horizontal space, your pitch is 5/12.

Exterior-Mount Wall Exhaust Fans

Fan

Grille

Louver

Attach to an outside wall. Ideal when you don't have room to mount an exhaust fan inside your facility, these fans work with or without duct. To use with duct, add an angle ring (sold separately; see 1764K on page 664). Motor is single-phase, open dripproof, and sealed against contaminants. All have a junction box. They are direct-drive and operate on 120 volts AC, except 18″ dia. fan operates on 120/230 volts AC. Mounting fasteners not included. Maximum temperature is 180° F. UL and C-UL listed. For information about exhaust fans, see page 686. For information about sound levels, see page 673.

Grilles are aluminum. They have fixed blades.

Louvers are aluminum. They are gravity operated. The blades open when air flows and close when it stops, preventing backdrafts.

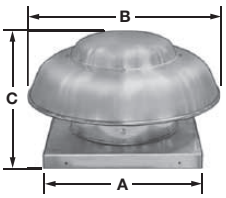
★ Airflow depends on the resistance created by louvers, filters, and ductwork in your system. This resistance, known as static pressure (SP), is measured in inches of water.

Roof Exhaust Fans



1

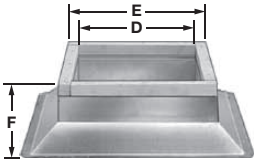
2

3

4

5

6



Mounting Base

Exhaust stagnant and humid air through your roof. All fans have a disconnect switch so power can be turned off during servicing. Direct-drive fans have fewer moving parts than belt-drive fans for less maintenance. Belt-drive fans are quieter and have a longer life span than direct-drive fans because components can be replaced if worn or damaged.

Downdraft—More economical than upblast units, these fans draw air out and then direct it back toward the roof.

Upblast—Often used with air containing dirt and other contaminants, these fans draw air out and expel it away from your roof.

(1) Downdraft direct-drive fans are aluminum and include a bird screen. Fans have a dust-resistant totally enclosed motor and screw terminals for hardwiring, except 2050K21 has an open motor. Not rated for maximum temperature. ETL listed.

(2&3) Downdraft high-output fans are aluminum and include a bird screen. They have an open dripproof motor and screw terminals for hardwiring. Not rated for maximum temperature. Fans are ETL listed. *Style 2* has a speed-control box.

(4) Upblast direct-drive fans are aluminum. They have an open dripproof motor, screw terminals for hardwiring, and a speed-control box. Maximum temperature is 300° F. ETL listed.

(5) Upblast direct-drive high-output fans are steel with cast aluminum blades. All have a dust-resistant totally enclosed motor and leads for hardwiring. They can be wired to 230 volts AC. Not rated for maximum temperature.

(6) Upblast belt-drive high-output fans are aluminum. They have an open dripproof motor and screw terminals for hardwiring. Maximum temperature is 300° F. ETL listed and AMCA (Air Movement and Control Association) rated.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Duct Fans

1

Install at any point in your ductwork for use as an exhaust, supply, or booster fan. Fans with a totally enclosed motor are dust resistant. Fans with a hazardous location motor are UL listed for Class I, Group D, and Class II, Groups F and G locations. **Direct-drive fans** have fewer moving parts than belt-drive fans for less maintenance. **Belt-drive fans** have a longer life span than direct-drive fans because components can be replaced if worn or damaged.

(1) Direct-Drive Corrosion-Resistant Fans—A tough plastic housing and a moisture-resistant seal make these corrosion and weather resistant. Blades are plastic. Maximum temperature is 140° F. UL and C-UL listed.

(2) Direct-Drive Corrosion-Resistant Fans—Blades are plastic. Maximum temperature is 140° F. UL and C-UL listed.

(3) Direct-Drive High-Output Fans—Blades are aluminum. Attach to duct using the flanges with 7/16″ dia. mounting holes (fasteners not included). Maximum temperature is 104° F.

(4) Belt-Drive High-Output Fans—Blades are aluminum. Attach to duct using the flanges with 7/16″ dia. mounting holes (fasteners not included). Maximum temperature is 175° F.

(5) Belt-Drive Corrosion-Resistant High-Output Fans—Blades are Type 316 stainless steel. Attach to duct using the flanges with 7/16″ dia. mounting holes (fasteners not included). Maximum temperature is 200° F.

Also Available: Mounting clamps to connect Styles 1 and 2 fans to duct. Please ask for 1967K74 and specify your duct diameter.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

12-Volt DC Duct Fans

Often used in vehicles, these plastic units operate on DC power and mount at any point along your ductwork. They have leads for hardwiring. Max. temperature is 200° F. Install using the 3/16″ × 3/8″ mounting slots (fasteners not included).

For Duct Dia.	Airflow, cfm @ 0″ SP★	Volume, dB @ 3 ft.	Overall Lg.	Overall Wd.	Overall Ht.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Duct Booster Fans

Increase airflow through ductwork. Fans have a single phase open motor. They operate on 120 volts AC and have leads for hardwiring, except 4″ dia. duct fan has a 6-ft. cord with three-prong plug. Housing is galvanized steel.

Inline-mount fans have one crimped end for insertion into duct, except 4″ dia. duct fan is crimped on both ends. *Single-speed fans* have aluminum blades, except 4″ dia. duct fan has plastic blades. *Two-speed fans* have plastic blades.

Cutout-mount fan installs into a hole in your duct. A template is included. Blades are plastic.

Optional thermostat adjusts from 40° to 110° F. It has a 6-ft. cord with three-prong plug, operates on 120 volts AC, and is rated for 5 amps.

Cutout Mount

Portable Blowers

Position wherever you need to circulate air and dry surfaces. These blowers operate on 120 volts AC.

Light duty blowers are compact for use in tight spaces. Housing is plastic. They have a 10-ft. cord with three-prong plug. ETL listed.

Medium duty blowers move enough air to ventilate a room and dry large surfaces. Housing is plastic. They have a 25-ft. cord with three-prong plug. UL and C-UL listed, except the downdraft blower is ETL listed. *Downdraft medium-duty blower* directs air down to dry floors quickly. It can also be turned on its side.

Heavy duty blower generates a powerful air stream for use in large spaces. It has a steel housing and pneumatic wheels for rough environments. It has a 3-ft. cord with three-prong plug.

Blowers

Use for equipment cooling, material conveying, drying, ventilating, and exhausting.

Standard blowers have a steel housing and wheel for strength and durability. Inlet is round and outlet is rectangular. All must be hardwired. Base has 3/8″ dia. mounting holes (fasteners not included). Temperature range is –15° to 180° F.

Corrosion- and spark-resistant blowers have a cast aluminum housing with a round inlet and outlet. All have a junction box. Base has 7/16″ dia. mounting holes (fasteners not included). Temperature range is 0° to 150° F. *Blowers with totally enclosed motor* have a steel wheel. *Blowers with hazardous location motor* are UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations. Wheel is aluminum, except 1,070-cfm blower has a steel wheel.

ⓘ For blower performance curves, go to mcmaster.com and search for **1963KAC**.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Heavy Duty Blowers

With Round Outlet

Powerful and durable, these blowers are able to blow air through larger systems that have more airflow resistance than standard blowers can handle. All blowers have a round inlet and an aluminum wheel. They have a direct-drive motor and a junction box. Maximum rpm is 3,450. Mounting fasteners are not included.

Standard blowers have a thick steel housing that resists vibration. *Blowers with rectangular outlet* have 3/8" dia. mounting holes. Temperature range is –15° to 180° F. *Blowers with a round outlet* have 7/16" dia. mounting holes. Temperature range is –15° to 150° F.

Spark-resistant blowers are also corrosion resistant. They have a cast aluminum housing with 7/16" dia. mounting holes. Temperature range is 0° to 150° F. *Hazardous location motor* is UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations.

Corrosion-resistant blowers have a Type 304 stainless steel housing. Blowers have 3/8" dia. mounting holes. Temperature range is –15° to 180° F.

For blower performance curves, go to mcmaster.com and search for **1953KAC.**

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Chemical-Resistant Blowers

With Round Outlet

A heavy duty plastic housing withstands chemicals and resists corrosion in harsh environments. Air enters the blowers through a side round inlet and discharges out of the top. Base is polyurethane-coated steel with 3/8" dia. mounting holes (fasteners not included). Blowers have a direct-drive motor and a junction box, except 2093K27 has leads for hardwiring. Maximum rpm is 1,725. Not rated for temperature or sound level.

Blowers with a fiberglass-reinforced polyester housing can be used in environments with organic chemicals, such as ammonia, antifreeze, and mineral oils. Wheel is polypropylene. *Hazardous location motor* is UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations.

Blowers with a PVC housing have greater chemical and corrosion resistance than fiberglass-reinforced polyester blowers. PVC resists strong oxidizing acids such as sulfuric acid but will not withstand contact with perchloric acid. 120/230-volt AC blowers have a polypropylene wheel; 230/460-volt AC blowers have a PVC wheel. *Hazardous location motor* is UL listed for Class I, Group D, and Class II, Groups F and G hazardous locations.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

▲ Operates on 120V AC. ■ Operates on 208-230/460V AC.

DC Blowers

Operate these blowers with a DC power source, such as your vehicle battery. The housing is polypropylene and the wheel is acetal. Inlet and outlet are round. All blowers have a direct-drive motor and leads for hardwiring. Maximum temperature is 130° F. The included mounting bracket lets you rotate the blower to discharge air in any direction. Bracket has 1/4″ dia. mounting holes (fasteners not included).

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Portable Blower/Exhausters

Powerful enough for use with duct, these blowers are light enough to carry from job to job. Connect flexible duct directly to the inlet or outlet.

Air-Powered Blower/Exhausters

Use your compressed air source to power these blower/exhausters. Inlet housing is cast aluminum. Blowers have a static grounding cable with clamp. Maximum air pressure is 150 psi. Mounting slots are 3/8″ wide, except 7,300-cfm blower has 1″ wide slots (fasteners not included). Note: Airflow is based on an air supply of 80 psi.

Blowers with steel diffuser have a yellow powder-coated finish, except 1,000- and 7,300-cfm blowers are galvanized. Temperature range is –15° to 350° F.

Blowers with polyethylene diffuser are lightweight and durable. Temperature range is –15° to 160° F. Color is black.

Electric Blower/Exhausters

Standard blowers have a steel housing with a powder-coated finish. Blades are polypropylene. Temperature range is –10° to 150° F. All have a cord with three-prong plug. 775-cfm blower has a 6-ft. cord. 1,700-cfm blower has a 20-ft. cord.

Corrosion-resistant blowers have a polyethylene housing and polypropylene blades. They are stackable for increased airflow and storage. All have a 20-ft. cord with three-prong plug. Temperature range is –20° to 150° F.

High-output blowers have a steel and cast aluminum housing and cast aluminum blades, except 1,500-cfm blowers have ABS blades. They rest on the floor with the built-in base or mount on the optional stand. Temperature range is –15° to 125° F.

Blowers with totally enclosed motor have a 15-ft. cord. 120-volt AC units include three-prong plug. 230-volt AC units can be hardwired or add your own plug.

Blowers with hazardous location motor have a junction box for hardwiring. Motor is UL listed for Class I, Division I, Group D, and Class II, Division I, Groups E, F, and G hazardous locations.

Duct and Accessories

Quick-attach PVC-coated polyester duct includes connectors. **Neoprene/polyester duct** requires connectors (sold separately).

Steel clamp connector attaches duct to your blower. **Aluminum couplings** connect multiple sections of duct.

Polyethylene duct carriers allow one person to carry up to 25 feet of duct.

Fume Exhausters

Floor Mount

Remove fumes, vapors, and fine dust particles from your space. Exhausters operate on 120 volts AC. Housing is galvanized steel. Base is steel and has 9/32″ dia. mounting holes.

Standard exhausters have an open dripproof motor, a steel wheel, and a 1/2″ conduit connection.

Hazardous location exhausters have an aluminum wheel and leads for hardwiring. Motor is UL listed for Class I, Groups C and D; Class II, Groups E, F, and G locations.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Portable Fume Exhausters

Use the foam-grip handle to carry these exhausters, or mount them to a wall, bench, or floor. They have a flexible 10-ft. polypropylene hose with nozzle to capture fumes at the source. Exhausters have rubber pads on the base to reduce vibration. Motor is totally enclosed. Mounting holes are 7/16″ dia. 2154K have a cast aluminum housing and steel wheel. 2111K have a steel housing and cast aluminum wheel.

120-volt AC exhausters are single phase and have an 8-ft. cord with three-prong plug, except 2111K14 has leads for hardwiring and can also operate at 230 volts AC.

230/460-volt AC exhausters are three phase and have leads for hardwiring.

Optional *dual-duct kit* has a Y connector, two 4″ Dia. × 5 ft. Lg. hoses, and two nozzles to collect fumes at two points.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Suspended-Hood Fume Exhausters

Equipped with a pulley system, these hoods can be positioned above drums, distillers, and tanks to exhaust fumes. All include a blower, aluminum hood, 10-ft. of 6″ dia. duct, and an outside vent kit. Use the pulley system to adjust hood height. Add an *optional swivel wall bracket* for side-to-side movement. Brackets have 7/16″ dia. mounting holes.

Standard exhausters operate on 120 volts AC and have a 10″ cord with three-prong plug.

Hazardous location exhausters operate on 120/230 volts AC and have leads for hardwiring. Motor is UL listed for Class 1, Groups C and D and Class 2, Groups F and G locations.

★ Airflow depends on the resistance created by ductwork. This resistance, known as static pressure (SP), is measured in inches of water.

Bench-Top Fume Exhausters

With Tilt Base

Draw fumes into an odor-removing carbon filter through the 8 1/2″ Ht. × 8 1/4″ Wd. × 4″ Dp. hood. Housing is ABS plastic. Exhausters operate on 120 volts AC and have a 6-ft. cord with three-prong plug. *Static dissipative exhausters* have a surface resistivity of 10^9 ohms.

Exhausters with tilt base sit on your bench top.

Exhausters with adjustable arm clamp to benches up to 2 1/2″ thick. They have a 24″ long painted steel arm.

	Airflow, cfm	Exhausters with Tilt Base		Exhausters with Adjustable Arm	
Standard	105	4518T45	$120.67	4518T47	$272.60

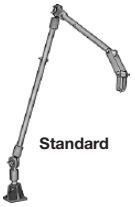
Replacement Filters (Pkg. of 3)				4518T49	$23.50

Fume Exhaust Hose Support Arms



Standard

Hold your exhaust hose in place. Arms rotate and have up-and-down and in-and-out movement. They are made of plated steel tubing and have cast aluminum fittings. Arms have 9/32″ dia. mounting holes for bench or wall mounting. Secure hose to arms with the included wire ties. Hose is not included; see pages 248-253.

Standard arm has thumb screws to lock arm in place.

Counterbalanced arms have steel tension springs to keep arm in place.

For Hose Dia.	For Hose Lg.	Arm Lg.

Positionable Fume Exhaust Hoses

Compact

High-Volume Wall Mount

High-Volume Ceiling Mount

Move the hose into position and the included support arm will hold it in place. Hoses come with a nozzle and mounting bracket.

Compact hoses have a 360° swivel bracket for exact positioning. They can be bench or wall mounted. Hose is fiberglass/PVC and nozzle is powder-coated aluminum.

High-volume wall-mount hoses have a large diameter for high-volume fume extraction. They can also be mounted to the ceiling. *4″ dia. hoses* are thermoplastic rubber and have an aluminum nozzle; *6″ and 8″ dia. hoses* are neoprene-coated cotton/polyester and have a steel nozzle.

High-volume ceiling-mount hoses have an adjustable-length arm for use in low ceiling/confined space areas. Hose is PVC-coated woven polyamide and nozzle is powder-coated steel with a plastic collar.

Air Cleaners

Remove dust, smoke, mold spores, and other contaminants from the air. Cleaners have a HEPA filter that collects 99.97% of particles down to 0.3 microns. They operate on 120 volts AC. Cleaners are compliant under all state air cleaner rules in effect on January 1, 2013.

Style A has three speeds and comes with an odor filter. Housing is black polystyrene. Cleaner has a 7-ft. cord with two-prong plug. Size is 22¼″ Ht.×20″ Wd.×10¾″ Dp. ETL listed.

Style B has a variable speed control. Housing is blue polyethylene. Odor filters are sold separately. Cord is 25 ft. long with three-prong plug. Size is 24¾″ Ht.×26¼″ Wd.×18¼″ Dp. Add optional duct (sold separately; see 1289T13 on page 247) to exhaust filtered air outside of the space that you are cleaning. UL and C-UL listed.

Portable Air Cleaners

Carry these cleaners wherever you need to remove welding fumes and other contaminants from the air. Cleaners have a prefilter and a HEPA filter that traps 99.97% of particles down to 0.3 microns. Housing is steel. Hose is rubber and 10 ft. long. Cleaners operate on 120 volts AC and have a 10-ft. cord with three-prong plug. Size is 17″ Ht.×23½″ Wd.×12″ Dp. UL listed. Cleaners are compliant under all state air cleaner rules in effect on January 1, 2013.

Combination Mobile/Bench-Top Air Cleaners

In Mobile Position

Roll this air cleaner to the contaminant source or place it on a bench top. It has two 4′5″ flexible polypropylene hoses and a detachable base with casters. Attach the included acrylic hood to use as an air cleaning booth. Housing is powder-coated steel. Cleaner operates on 120 volts AC and has a 7-ft. cord with three-prong plug. Volume @ 6 ft. is 66 dB. Size is 19½″ Ht.×12½″ Wd.×12½″ Dp. It is compliant under all state air cleaner rules in effect on January 1, 2013.

Filters are sold separately, except polyester prefilters are included with the cleaner. *Standard filters* trap 95% of particles down to 3 microns. *HEPA filters* trap 99.97% of particles down to 0.3 microns. *Odor filters* have carbon to remove odors and a pleated filter that traps 60% of particles down to 3 microns. Add an optional *odor after-filter* to standard and HEPA filters for light duty odor control.

Heavy Duty Air Cleaners

Constructed with a thick metal housing, these durable cleaners offer greater cleaning capacity than standard air cleaners. They have a HEPA filter that collects 95% of particles down to 0.3 microns. A prefilter and after-filter are also included. Cleaners have a galvanized steel housing, except 500-cfm cleaner is stainless steel. They have two speeds, operate on 120 volts AC, and have a 6-ft. cord with a three-prong plug, except 4,000-cfm cleaner is single speed. Cleaners are compliant under all state air cleaner rules in effect on January 1, 2013, except in California.

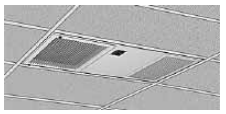
Ceiling-Mount Air Cleaners



Save floor space—cleaners mount in a 2′×4′ grid of a T-bar style ceiling. Housing is steel. Cleaners are two speed, operate on 120 volts AC, and have leads for hardwiring. They are compliant under all state air cleaner rules in effect on January 1, 2013, except in California.

Cleaners with a HEPA/odor filter trap 99.97% of particles down to 0.3 microns and include a washable prefilter.

Cleaners with an electrostatic filter trap 95% of particles down to 0.1 microns. The filter is washable and has an inherent electrical charge that attracts particles. They include a washable prefilter and a disposable odor after-filter.

Mist-Collecting Air Cleaners

Often used in machine shops, these cleaners remove oil and coolant mist from the air. Air is passed through a spinning drum to remove 98% of mist particles down to 1 micron. Cleaners are steel. They have a three-phase, totally enclosed motor with a junction box and operate on 208/230/460 volts AC, 50/60 Hz. All have 9/16″ dia. mounting holes (fasteners not included). Cleaners are compliant under all state air cleaner rules in effect on January 1, 2013.

Humidifiers & Dehumidifiers

Humidifiers

2 Gallon

9 Gallon

Add cool moisture to the air. Refill the reservoir with water as necessary to reach daily output. Humidifiers are three speed and include one evaporative filter. Housing is plastic. Humidifiers operate on 120 volts AC and have a 6-ft. cord with two-prong plug. ETL listed.

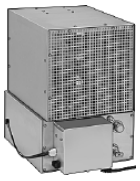
Heavy Duty Steam Humidifiers



Free Standing

Wall Mount

No need to refill reservoirs—these rugged humidifiers connect to a water supply. An electrical heater boils water to generate steam. Connect humidifiers to a water supply with 1/4" copper tubing. UL listed.

Free-standing humidifier releases humidity directly into a room or connects to a 12"×12" square duct. Housing is Type 304 stainless steel. Humidifier includes a low-water safety cutoff switch, built-in overflow protection, remote humidity control, and installation kit. It operates on 120 volts AC and has a 5-ft. cord with three-prong plug.

Wall-mount humidifier releases humidity directly into a room. It includes a built-in blower for humidity distribution, a residue collector to trap mineral deposits, and a remote fan relay. Housing is gray and white polycarbonate. Humidifier operates on 120 or 208-240 volts AC, 50/60 Hz, single phase, and has terminal block connections for hardwiring. Output varies depending on voltage from 11.5 gal./day (120 volts AC) to 23 gal./day (240 volts AC). Requires a humidistat (sold separately).

Fine-Mist Humidifiers

This humidifier spins water at high speeds to produce a fine atomized mist that rapidly evaporates. Mount nozzle through a wall to release moisture directly into a room or attach to your forced-air system return duct. Housing is plastic. Humidifier operates on 120 volts AC, 60 Hz, and has leads for hardwiring. Use 1/4" copper tubing to connect to water supply. Unit has a 1/2" OD brass nipple drain. Mounting hardware is included.

Output, gal./day	For Area, cu. ft.	Overall Dia.	Overall Ht.		
6	7,000	10 1/2"	12"	2165K14	$302.78

Storage Space Dehumidifiers

Warm the air in small rooms, such as storage closets and tool rooms, to reduce humidity. Housing is aluminum. Dehumidifiers operate on 120 volts AC, 50/60 Hz, and have a 10-ft. cord with two-prong plug. Mounting hardware is included. UL listed.

For Area, cu. ft.	Lg.

320	48"	8226K27	65.86

High-Output Fine-Mist Humidifiers

With 2 Spray Heads

Designed to release more moisture and cover larger spaces than our other humidifiers, these humidifiers are often used in textile, paper, and printing plants. They have spray heads that atomize water to produce a fine mist. Moisture output is adjustable. Humidifiers operate on 120 volts AC and have a 6-ft. cord with three-prong plug.

They have 1/4" NPT male threaded connections for water and compressed air (50-60 psi air pressure is required). They also have a pressure gauge and regulator. Each spray head requires 1/2 cfm @ 50 psi air pressure.
