Wheel dehumidifiers to damp areas to remove moisture from the air. They operate on 120 volts AC and have a cord with a three-prong plug. Temperature range is 41° to 95°F. Removal capacity is based on 80°F and 60% relative humidity.

Style A have a reservoir to collect water. Reservoir must be emptied when full or can be drained directly through a 9/16" ID×6" Lg. plastic hose (included). Cord is 6 ft. long. UL listed.

Style B has a 25-ft. long cord. *Powder-coated steel dehumidifier* has a 25-ft. long hose to drain water. *Polyethylene dehumidifier* has a 40-ft. long hose to drain water. UL listed.

Style C has a 25-ft. long hose to drain water. Cord is 25 ft. long.

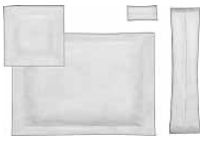
Disposable Desiccant Bags



Remove moisture from sealed containers during shipping and storage. Volume covered is calculated at 77°F and 40% relative humidity. Desiccants are enclosed in tear-resistant Tyvek bags, except anhydrous calcium sulfate is enclosed in paper bags.

Silica gel is the most popular desiccant material. It works best when relative humidity is higher than 40%.

Odor-removing silica gel contains carbon to remove odors as well as moisture.

Indicating silica gel changes from blue to pink when it has absorbed 8% of its weight. Bags have a window for monitoring color change.

Low-humidity molecular sieve is more effective than other desiccants when relative humidity is below 40% or temperatures exceed 77°F.

Clay is our most economical desiccant per ounce.

Anhydrous calcium sulfate is suitable for large spaces.

Large Disposable Desiccant Bags

Often used to protect cargo sent in large containers, these desiccants absorb up to 280% of their weight in moisture at 77°F and 90% relative humidity. The bags are filled with a mixture of starch and calcium chloride and weigh 4.4 oz. They are 5¾″×10¼″. 32 bags are recommended for a 20-ft. shipping container.

Adhesive-back bags come in strips of six bags.

Standard Bags per Pkg.		Standard Pkg.	Adhesive Back Bags per Pkg.		Adhesive Back Pkg.
4	2228K6	$21.05	6	2228K7	$37.42
32	2228K8	70.35	36	2228K9	177.68

Disposable Desiccant Capsules

An alternative to disposable desiccant bags, these plastic capsules are often used in automated applications that pass desiccants through machinery. Capsules are transparent.

Indicating silica gel changes from blue to pink after absorbing 8% of its weight.

Reusable Bulk Desiccants

After use, heat these desiccants in a 255°F oven for 12 hours to reactivate. They absorb 23% of their weight in moisture at 77°F and 40% relative humidity.

Indicating silica gel changes from blue to pink when it has absorbed 6% of its weight in moisture.

Reusable Desiccant Canisters

Indicating Silica Gel Canister

Anhydrous Calcium Sulfate Canister

Housed in durable canisters, these desiccants can be reactivated after use.

Indicating silica gel changes from blue to pink when absorption capacity is reached. To reactivate, heat in a 300°F oven for three hours. 2219K91 has an aluminum housing with a window. 2219K92 has a transparent plastic housing and can also be reactivated in a microwave oven.

Anhydrous calcium sulfate covers large spaces. It has an aluminum housing. To reactivate, heat 2202K67 at 425°F for one hour; heat 2202K66 at 450°F for three hours.

Reusable Desiccant Vacuum Canisters

Canister

Cartridge

Protect materials from moisture and dust by storing them inside these compact, shatter-resistant canisters. Canisters can hold a vacuum of 29″ Hg for 24 hours. To create a vacuum, use the ¼″ ID tubing connection. Top is clear polycarbonate; bottom and release valve are white polypropylene. You need both the canister and the desiccant cartridge, each sold separately. The cartridge has indicating silica gel that absorbs 20% of its weight in moisture and changes from blue to pink when maximum absorption is reached. To reactivate, heat cartridge in a 300°F oven for three hours.

Canisters OD	ID	Ht.			Desiccant Cartridges Wt., lbs.		
6¾″	5⅞″	8⅛″	2204K5	$89.76	½	2204K51	$43.26

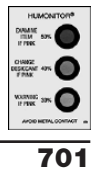
Humidity Indicating Cards



Dots on the card change color to indicate the amount of moisture in the air.

Humidity Range	Ht.	Wd.		Pkg. of 100
10%-60%	4″	1⁷⁄₁₆″	2175K12	$27.75
30%-50%	3″	2″	2175K11	25.42

About Air Filter Efficiency Ratings

Select a filter that has an appropriate MERV (minimum efficiency rating value) rating for your application. Filters with high MERV ratings are effective at trapping small particles but also reduce airflow and may need to be replaced more often than filters with lower ratings.

MERV Rating	1-4	5-8	9-12	13-16
Filter Type	Low Efficiency/Prefilter	General Purpose	High Efficiency	Ultra Efficiency/HEPA
Dust Captured	60-80%	80-95%	90-98%	95-99%
Traps Contaminants Down to	10 microns	3 microns	1 micron	0.3 micron
Typically Used to Trap	Sanding dust, pollen, textile fibers	Cement dust, mold spores	Humidifier dust, auto emissions, oil mist	Bacteria, most smoke
Typical Environments	Equipment protection	Industrial workplaces, office buildings	Office buildings, data centers	Hospitals, laboratories

Panel Air Filters

Often used as replacement filters in HVAC equipment, these filters remove dust and other particles from the air. They meet UL 900 flame retardance requirements. Actual size is up to 5⁄8″ less than trade size.

Pleated filters are our most popular panel air filters. The pleated design creates greater surface area for filtering, which makes these more effective than unpleated panel filters without reducing airflow. The filter media is a blend of polyethylene and polypropylene. A galvanized steel support grill is bonded to the filter media to prevent sagging. The frame is made of cardboard that's treated to resist humidity. Maximum temperature is 150° F.

Poly-coated fiberglass filters trap more dust than fiberglass filters. They have a fiberboard frame with a tin-plated steel grill bonded to each side. Maximum temperature is 180° F.

Fiberglass filters are an economical option. They can be an effective prefilter to protect more expensive filters that catch finer particles. Frame is fiberboard. Maximum temperature is 180° F.

Made-to-Order Sizes

Don't see the size you need? We'll get it for you. Multiply the length×width you need to determine square inches. Then, see square inch ranges for pricing. Minimum filter size is 4″×4″. Maximum filter size is 23″×30″. **To Order:** Please specify length and width. **Pleated filters** are sold as trade size; add ½″ to the length and width you need. **Fiberglass filters** are sold as actual size.

Also Available: Filters larger than 23″×30″. Please ask for 3923T999 and specify material, thickness, actual length, and actual width.

Odor-Removal Panel Air Filters

Carbon granules remove odors while the polyester filter media traps dust and contaminants. The frame is made of cardboard that's treated to resist humidity. A galvanized steel backing supports the frame and prevents the filter media from sagging. Actual size is up to 5/8″ less than trade size.

Filters with **10 grams of carbon/sq. ft.** control light odors. Filters are pleated to create greater surface area for filtering. Maximum temperature is 225° F. MERV rating is 5.

Filters with **300 grams of carbon/sq. ft.** control heavy odors. They meet UL 900 flame retardance requirements. Maximum temperature is 250° F. MERV rating is 7.

Reusable Electrostatic Panel Air Filters

An inherent electrostatic charge attracts particles to the layered polypropylene and polyester filter media. Filters can be washed and reused. Frame is galvanized steel. All meet UL 900 flame retardance requirements. Maximum temperature is 180° F. Actual size is up to ½" less than trade size.

Panel Air Filters

For information about air filter efficiency ratings, see page 702.

High-Efficiency Panel Air Filters

Use in data centers, hospitals, and other locations that require extra-clean air. Filters trap smaller particles than standard panel air filters and have a pleated design that creates greater surface area for filtering without reducing airflow. Filter media is a blend of polyethylene and polypropylene. The frame is made of cardboard that's treated to resist humidity. A galvanized steel support grill is bonded to the filter media to prevent sagging. Filters meet UL 900 flame retardance requirements. Maximum temperature is 150° F. Actual size is up to 5/8" less than trade size.

Long-Life High-Efficiency Panel Air Filters

Our premium panel air filters have tightly pleated filter media that creates a large surface area for long service life. The filter media is synthetic fiber and is housed in a moisture-resistant plastic frame. Filters meet UL 900 flame retardance requirements. Maximum temperature is 150° F. Actual size is up to 5/8" less than trade size.

Snug-Fit Panel Air Filters

Create a seal to prevent air from bypassing your filter around its edges. The polyester filter media extends beyond the wire frame for a tight fit. Filters have a tacky surface that retains particles.

1" thick filters have a maximum temperature of 220° F. Actual size is 5/8" less than trade size.

1½" thick filters contain a compound to inhibit the growth of mold, mildew, and fungi on the filter. They meet UL 900 flame retardance requirements. Maximum temperature is 200° F. Actual size is 3/4" greater than trade size.

For information about air filter efficiency ratings, see page 702.

Reusable Metal Panel Air Filters

Made of expanded corrugated aluminum sheets with an aluminum frame, these filters can be washed and reused. They are also known as metal mesh filters. Maximum temperature is 240° F. Filters meet UL 900 flame retardance requirements.

Light duty filters are not MERV rated. They have a 0.019″ thick frame, except ½″ thick filters have a 0.012″ thick frame.

Heavy duty filters have a 0.04″ thick frame.

Light Duty—Dimensions shown are actual size

Actual Size			Actual Size		
½″ Thick			**1″ Thick (Cont.)**		
13″ × 16½″	2061K73	$10.52	11½″ × 23½″	2061K81	$18.72
1″ Thick			13″ × 13″	2061K77	13.15

Heavy Duty Made-to-Order Sizes

Don't see the size you need? We'll get it for you. Multiply the length × width you need to determine square inches. Then, see sq. inch ranges for pricing. **To Order:** Please specify actual length and width, as opposed to trade size.

Also Available: Filters larger than 599 square inches. Please ask for 2150K999 and specify thickness, actual length, and actual width.

Sq. Inch	½″ Thick		1″ Thick		2″ Thick	
1-299	2150K91	$28.30	2150K93	$28.96	2150K95	$32.56
300-599	2150K92	42.39	2150K94	43.37	2150K96	47.44

Long-Life Ultra-Efficiency Box Air Filters

4 Panel

Boxes contain multiple panels that are arranged to maximize filtering surface area for long service life. Filter media is microfiber fiberglass. Frame is plastic. Maximum temperature is 180° F. Actual size is up to ⅝″ less than trade size. MERV rating is 14.

8-panel filters have more surface area than 4-panel filters for an even longer service life.

Trade Size	Thick.	4 Panel		8 Panel	
12 × 24	12″	1729T11	$66.36	1729T16	$109.26
20 × 24	12″	1729T12	91.18	1729T17	154.72
24 × 24	12″	1729T14	96.88	1729T18	159.48

High-Temperature Reusable Metal Panel Air Filters

All-metal construction holds up under heat. Filters can be washed and reused. They meet UL 900 flame retardance requirements. Actual size is ½″ less than trade size, except 10 × 10 and 30 × 30 filters are actual size. MERV rating is 4.

Galvanized steel filters have a maximum temperature of 425° F. Filters do not have handles. Optional handles are sold separately.

Stainless steel filters are Type 304. Maximum temperature is 900° F. Filters have handles.

Trade Size	Thick.	Galvanized Steel		Stainless Steel	
10 × 10	2″	2157K11	$22.86	22115K21	$82.22

Handles for Galvanized Steel Units (Pair)				2157K32	6.07

Electronic Equipment Air Filters

Panels

Pads

Designed for use with electronic and telecommunication equipment, these filters can withstand prolonged exposure to heat and humidity.

Panels are replacement air filters for specific manufacturers. They are NEBS (Network Equipment Building Systems) certified.

Also Available: Other panel models. Please ask for 5307T999 and specify filter part number.

Pads can be cut to the size you need. Max. temp. is 240° F. *Polyester* pads meet UL 94 flame retardance requirements. *Polyurethane foam* pads can be washed and reused. They have 45 pores per inch and meet UL 900 flame retardance requirements.

Box & Bag Air Filters, Frames, and Air Filter Rolls

For information about air filter efficiency ratings, see page 702.

HEPA Air Filters

Control dust and contaminants in hospitals, laboratories, and other demanding environments. These HEPA filters capture 99.97% of particles down to 0.3 microns. They have a rigid frame that can withstand fluctuations in airflow, such as those created by variable air volume systems. Filter media is microfiber fiberglass. All have a neoprene gasket on the downstream side of the filter for a tight seal. Filters meet UL 900 flame retardance requirements, except 3″ thick filters. Maximum temperature is 180° F, except 2¾″ thick filters have a maximum temperature of 160° F.

Actual Size	Particleboard Frame		Aluminum Frame		Galvanized Steel Frame		Type 304 SS Frame

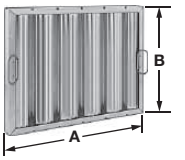
Reusable Grease Filters



Use in exhaust hoods to remove grease and oil from the air. These filters have layers of baffled metal that collect grease while allowing air to pass through. Filters can be washed and reused. All are UL classified and meet NFPA Standard 96. Actual size is ½″ less than trade size.

Aluminum filters have a max. temperature of 250° F. **Galvanized steel** filters have a max. temperature of 450° F. **Type 304 stainless steel** filters have a max. temperature of 900° F.

Note: Install so baffles are vertical (as shown).

Trade Size (A × B)	Thick.	Aluminum		Galvanized Steel		Type 304 Stainless Steel

Metal-Reinforced Reusable Polyurethane Foam Air Filter Rolls

Wrapped in aluminum mesh for added support, this polyurethane foam filter media can be used without a frame. Cut to the size you need. Media can be washed and reused. It has 30 pores per inch and meets UL 900 flame retardance requirements. Color is green. Maximum temperature is 250° F.

For information about air filter efficiency ratings, see page 702.

General Purpose Polyester Air Filter Rolls and Pads

Our most popular filter material, polyester traps more particles than fiberglass. Cut rolls and pads to the size you need; frames are sold separately (see page 706). Filter media meets UL 900 flame retardance requirements.

Rolls

Maximum temperature for 1/2" and 1" thick rolls is 225° F; for 2" thick rolls, it's 150° F.
Dry rolls are white, except 2" thick × 5 ft. length dry rolls, which are white and yellow. They are rated MERV 6.
Tacky rolls have a tacky surface that retains particles. Rolls are blue on one side and white on the other. *1/2" thick* rolls are rated MERV 6; *1" thick* rolls are MERV 7; *2" thick* rolls are MERV 8.

Reusable Rigid Polyester Air Filter Rolls and Pads

No frame needed—rigid polyester is firm enough to be used without one. Filter media can be washed and reused. *1/2"* and *1" thick* rolls and pads are blue and have a maximum temperature of 225° F; *2" thick* rolls and pads are green and have a maximum temperature of 200° F. All meet UL 900 flame retardance requirements. *1/2" thick* rolls and pads are rated MERV 5; *1" thick* rolls and pads are MERV 6; *2" thick* rolls and pads are not MERV rated.

Air Filter Rolls for Automatic Roll Machines

Replace the filter roll in your automatic filtering equipment. Filter media is wrapped onto a core and has pull tabs for installation. Rolls meet UL 900 flame retardance requirements. They are 65 ft. long. Rolls are not MERV rated.
Fiberglass rolls have a tacky surface that retains particles. Color is blue. Rolls are 2" thick. Maximum temperature is 250° F.
Polyester rolls trap more particles than fiberglass. Color is white. Rolls are 5/8" thick. Max. temperature is 220° F.

Reusable Polyurethane Foam Air Filter Rolls and Pads

Filter, rinse, repeat—polyurethane foam can be washed and reused. It is lightweight and mildew resistant. Cut rolls and pads to the size you need; frames are sold separately (see page 706). Polyurethane foam with more pores per inch catches smaller particles than foam with fewer pores per inch. Rolls and pads meet UL 900 flame retardance requirements.

Rolls

Color is gray. Maximum temperature is 200° F.

To Order: Please specify pores per inch: 30 or 60.

Odor-Removal Air Filter Rolls and Pads

In addition to catching dust and other particles, this filter media contains carbon granules to remove odors. Color is black. Rolls and pads meet UL 900 flame retardance requirements. Maximum temperature is 120° F. For information about air filter efficiency ratings, see page 702.

Rolls—MERV 6

Control light odors. Cut to the size you need; frames are sold separately (see page 706).

Pads—MERV 7

Pads have more carbon than rolls to handle heavy odors.

Pads with **375 grams of carbon/sq. ft.** provide greater odor control than our other filters and can handle ammonia, hydrogen sulfide, and other gases. They are often used in hospitals and laboratories.

Actual Size	300 grams of Carbon/sq. ft.	375 grams of Carbon/sq. ft.

Fiberglass Air Filter Rolls and Pads

Often used as a prefilter to protect more expensive filters, fiberglass is our most economical air filter media. Cut rolls and pads to the size you need; frames are sold separately (see page 706). Filter media meets UL 900 flame retardance requirements. For information about air filter efficiency ratings, see page 702.

Rolls—Not MERV rated

Color is white. Maximum temperature is 300° F. Rolls are 20 ft. long.

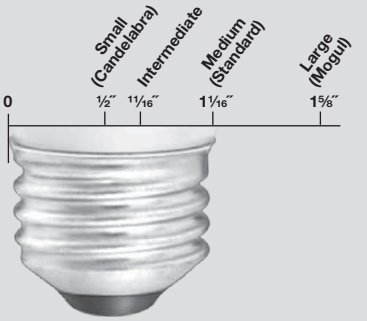
About Screw-In Light Bulbs

The emergence of new technologies has increased the number of lighting options. When selecting a bulb, consider the following:

Make sure the bulb will fit your socket.
To determine the size of your current bulb, measure its base.

Select a bulb that is bright enough for your application.
We've used *equivalent incandescent bulb wattage* to help compare the amount of light produced by incandescent, halogen, CFL, and LED bulbs. Brightness is also measured in *lumens*; the higher the lumens, the brighter the light.

Consider the bulb type, including its energy efficiency and light appearance.
Energy efficiency varies substantially among different types of bulbs. A bulb's *rated life*, as well as its *estimated yearly energy cost,* is based on 3 hours of usage per day at $0.11 per kWh. *Light appearance*, measured in Kelvins, can be warm, neutral, or cool.



Bulb Types	Initial Cost	Energy Efficiency	Light Appearance: Warm Red/Yellow Tones General Purpose (2,400-3,200K)	Light Appearance: Neutral Tones Workspaces (3,200-4,500K)	Light Appearance: Cool White/Blue Tones Inspecting & Reading (4,500-6,500K)
 **Incandescent—**The traditional light bulb. Many have been phased out due to governmental energy requirements but some are still available for special applications. **Halogen—**The closest substitute to incandescent bulbs, these are slightly more energy efficient but generate more heat.	$	Poor	✓		
 **CFL (Compact Fluorescent Light)—**Bulbs are efficient and long lasting but can take several seconds to reach full brightness, and they contain small amounts of mercury (for disposal information, visit www.epa.gov/cfl).	$$	Good	✓	✓	✓
 **LED (Light-Emitting Diode)—**The newest technology. Bulbs generate little heat, tolerate vibration, and are the most efficient and long lasting.	$$$	Excellent	✓	✓	✓

Medium-Base Light Bulbs

Built with a 1 1/16″ dia. base, these bulbs fit standard household light sockets. They are 120 volts, except the low-voltage and high-voltage bulbs. Bulbs are dimmable, except CFL bulbs (unless noted).

3-way bulbs are for fixtures that have low, medium, and high settings.

Rough-service bulbs have reinforced filaments to tolerate vibration.

Shatter-resistant bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break. They are often used in food service environments.

Small-Base Light Bulbs

Light up signs, control panels, and other devices that have small light sockets. Built with a 1/2" dia. base, these bulbs are also known as candelabra-base bulbs. They are dimmable, except CFL bulbs.

Rough-service bulb has reinforced filaments to tolerate vibration.

Medium-Base Infrared Heat Bulbs

Radiate warmth to heat, dry, or bake. Bulbs have a 1 1/16″ dia. medium base. They are 120 volts and are dimmable. Maximum temperature is not rated.

Shatter-resistant bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break.

Bi-Pin & Bayonet-Base Light Bulbs and Bulb Holders

Bi-Pin CFL (Compact Fluorescent Light) Bulbs

Designed to fit energy-efficient GU24 light sockets, these spiral bulbs have pins that lock into sockets with a twist. Bulbs are 120 volts and are not dimmable. They are frosted and have a built-in ballast.

Medium base-to-GU24 base socket adapter permanently converts a standard 1 1/16" dia. screw-in light socket to a GU24 socket.

Bayonet-Base Light Bulbs

Double-Contact Bayonet Base

Single-Contact Bayonet Base

Pins on the base of the bulb lock into sockets to tolerate vibration. They are often used in machines, vehicles, and elevators. Incandescent bulbs are dimmable; LED bulbs are not.

Holders and Lens Caps for Miniature Light Bulbs

Miniature Bayonet

Midget Flanged

For Single Bulbs

Miniature Bayonet

Oil-Tight for Single Bulbs

Miniature Bayonet

For Four-Bulb Clusters

Pair a bulb holder with a lens cap to create a miniature lamp in control panels, machines, and other devices. Holders and lens caps work with incandescent and LED light bulbs.

Bulb holders are metal, except holder for *four-bulb clusters* is plastic. *Oil-tight* holder has a sealing gasket.

Lens caps are plastic. They protect the bulb and diffuse the light.

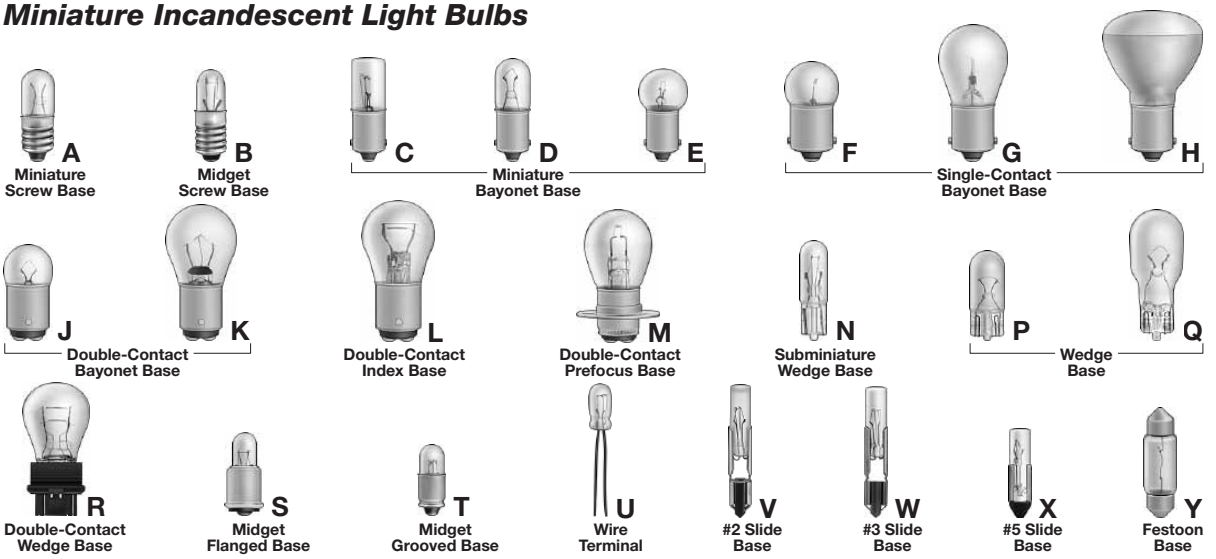
Miniature Incandescent Light Bulbs



Sized to fit tight spaces, these bulbs are often used in instruments, indicators, vehicle lights, and signs. Bulbs are clear, except trade number 1383 is frosted and trade numbers 7443NA and 7507 are amber.

Tubular Halogen Light Bulbs

Double-Ended Recessed Single-Contact Base

Mini-Screw Base (Mini-Candelabra)

Medium Single-Contact Prefocus Base

Double-Contact Bayonet Base

Medium Bi-Pin Base

Small but powerful, these slender bulbs provide brilliant light for photography, stage lighting, and security lighting. They are clear and dimmable.

Bi-Pin Spotlight and Floodlight Bulbs

These clear bulbs are often used in recessed can fixtures and track lighting. Light intensity is measured in candlepower; the higher the candlepower, the brighter the bulb.

Bulbs with Protective Lens—The lens contains glass shards if the bulb breaks.

MR-16 Halogen

Miniature Neon Light Bulbs

A no-filament design allows these bulbs to withstand vibration. They are often used in control panels and electronic equipment. Bulbs cast an orange glow. They are 120 volts.

Sealed-Beam & LED Light Bulbs

Sealed-Beam Light Bulbs

Circular

Rectangular

Base Types

2 Contact Lugs

3 Contact Lugs

Screw Terminals

Slip-On Terminals

Often used in vehicles, these clear bulbs have a sealed assembly to withstand the rigors of outdoor use. They are also used for spot, flood, and emergency lighting. Light intensity is measured in candlepower; the higher the candlepower, the brighter the bulb.

Trade numbers H6024 and H6054 can be used as high/low beam bulbs.

Status-Indicating LED Light Bulbs

Medium Screw Base

Single-Contact Bayonet Base

Double-Contact Bayonet Base

Bulbs communicate a device's state.

Medium screw-base bulbs, also known as beacon lights and signal lamps, provide high-intensity light. They are often used in security warning devices and machinery. Each bulb contains 48 LEDs.

Bayonet-base bulbs can be used as replacements for bulbs in stack lights. Each bulb contains 4 LEDs.

Exit Sign LED Light Bulbs with Panels

Small Screw Base (Candelabra)

Replace incandescent bulbs in exit signs with longer-lasting, energy-efficient alternatives. Each kit contains two bulbs and two diffuser panels. They meet UL 924 requirements and are compatible with exit signs that are viewable from one or both sides. Bulbs are 120 volts and last up to 100,000 hours.

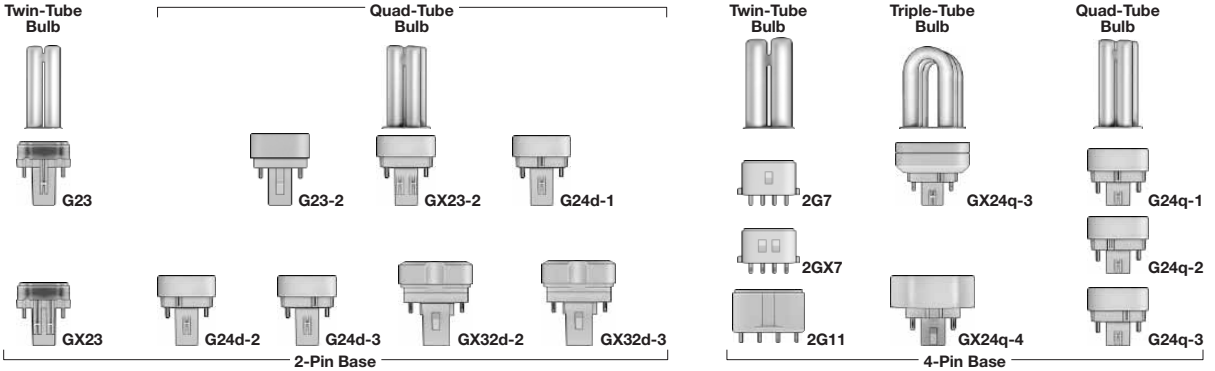
Plug-In Compact LED Light Bulbs

More durable and energy-efficient than CFLs (Compact Fluorescent Lights), this bulb contains 30 LEDs and is 120 volts.

Base Type	Watts	Brightness, lumens	Light Appearance	Rated Life, hours	Overall Wd.	Overall Lg.		Each
GX23	3	175	Cool (5,500K)	50,000	1¾″	7¼″	8746T1	$35.47

Plug-In CFL (Compact Fluorescent Light) Bulbs



Energy efficient and long lasting, these bulbs are comparable to PL, Dulux, and Biax bulbs. They require a ballast (see page 731). *2-pin base* bulbs are not dimmable; *4-pin base* bulbs are dimmable.

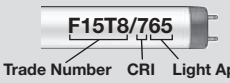
Fluorescent Light Bulbs

About Replacing Tubular Fluorescent Light Bulbs



When replacing a fluorescent bulb, check its label and match the trade number, CRI, and light appearance. Low-mercury bulbs are labeled Alto, Eco, Ecologic, or Ecolux.

CRI (Color Rendering Index)—Measures on a scale of 0-100 how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear. A value of 7 on the label indicates that the bulb's CRI is in the 70s.

Light Appearance—Measured in Kelvins, a light's appearance can be warm, neutral, or cool. Use the table to the right to find the light appearance that corresponds to your bulb. A value of 65 on the bulb label means it produces cool light at 6,500K.

Light Appearance

Bulb Label	
Warm Red/Yellow Tones—General Purpose	
27	2,700K
30 or WW	3,000K
Neutral Tones—Workspaces	
35	3,500K
41, CW, CWX	4,100K
Cool White/Blue Tones—Inspecting/Reading	
50	5,000K
65, D, DX	6,500K

T12 Tubular Fluorescent Light Bulbs

Medium Bi-Pin Base

Single-Pin Base

Recessed Double-Contact Base

A design common in older installations, these bulbs are 1½″ dia. **Shatter-resistant** bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break. USDA compliant and meet OSHA regulations.

Ⓔ Bulb meets Federal minimum efficiency standards.

T5 Tubular Fluorescent Light Bulbs

These slender 5/8″ dia. bulbs are the most energy-efficient tubular fluorescent bulbs we offer.

Shatter-resistant bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break. USDA compliant and meet OSHA regulations.

Fluorescent Light Bulbs

For information about replacing tubular fluorescent light bulbs, see page 724.

T12-to-T5 Light Fixture Converters

Switch from T12 to energy-efficient T5 bulbs without replacing ballasts or fixtures. Converters plug directly into existing fixtures and reduce energy costs by up to 50%. They have a built-in programmed-start ballast and allow fixtures with a magnetic ballast that hold 48″ T12 bulbs with a medium bi-pin base to accept 46″ T5 bulbs. UL listed.

Converter	1110N1	Each	$44.55
46″ T5 Tubular Fluorescent Bulbs with Neutral (4,100K) Light Appearance (Pkg. of 6)	1562K53	Pkg.	$69.56

T8 Tubular LED Light Bulbs

Plug these bulbs into existing fluorescent lights to convert them to longer-lasting, energy-efficient LED lights without having to replace your ballast. The bulbs are shatter resistant and have a rated life of 50,000 hours. Use them in ballasts with an input voltage of 120-277 volts. Bulbs are 1″ diameter. Light appearance is neutral (4,100K). ETL and C-ETL listed.

Blacklight Blue Fluorescent Light Bulbs

Detect UV-reflective materials that are invisible to the naked eye. Bulbs contain a blue filter that absorbs the visible light they produce while allowing long wave ultraviolet (UVA) light to pass through. They appear black when they are turned off. For blacklight bulbs used in bug zappers, which appear white when turned off, see page 2143.

Shatter-resistant bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break. USDA compliant and meet OSHA regulations.

Medium-Base Metal Halide Light Bulbs

These high-intensity discharge (HID) bulbs produce bright, white light and are commonly used for security lighting. They have a 1 1/16″ dia. base and fit standard light sockets. Initial start time is 2-5 minutes. Light appearance ranges from warm to neutral (3,000K-4,000K). CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

For Open and Enclosed Fixtures—Bulbs will not burst when they fail.

General purpose bulbs take 10-15 minutes to restart.

Pulse-start bulbs restart faster than general purpose bulbs. They take 2-8 minutes to restart.

Medium-Base High-Pressure Sodium Light Bulbs

Often used for security lighting, these energy-efficient high-intensity discharge (HID) bulbs produce warm, yellow light. Bulbs have a 1 1/16″ dia. base and fit standard light sockets. Initial start time is 3-5 minutes with a 1-minute restart. Light appearance is warm (1,900-2,100K). CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

End-of-Life Shut-Off—Bulbs remain off at the end of their service life instead of cycling on and off like general purpose bulbs.

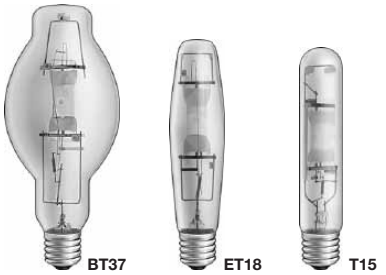
Large-Base Metal Halide Light Bulbs



Our most popular high-intensity discharge (HID) bulbs, these bulbs produce white light and illuminate large spaces, such as warehouses, factories, arenas, parking lots, and roads. They have a large (mogul) 1⁵⁄₈″ dia. base. Initial start time is 2-5 minutes. Light appearance ranges from neutral to cool (3,200-5,000K). CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

E39 Base—Bulbs are for use in enclosed fixtures, except shatter-resistant bulbs can also be used in open fixtures.

EX39 Base—For use in open and enclosed fixtures, bulbs will not burst when they fail.

General purpose bulbs take 10-20 minutes to restart.

Pulse-start bulbs restart faster than general purpose bulbs. They take 3-15 minutes to restart.

Shatter-resistant bulbs have an outer coating that prevents them from breaking as easily as other bulbs, yet retains glass shards if they do break. They are often used in food service environments. They take 7-12 minutes to restart.

Large-Base Metal Halide Light Bulbs for High-Pressure Sodium Ballasts

Switch from the yellow light of high-pressure sodium bulbs to the white light of metal halide bulbs without changing ballasts. These high-intensity discharge (HID) bulbs have a large (mogul) 1⅝″ dia. base. Initial start time is 2-4 minutes; restart time is 10-20 minutes. Light appearance is neutral (3,700-4,000K). CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

E39 Base—Bulbs are for use in enclosed fixtures.

EX39 Base—For use in open and enclosed fixtures, bulbs will not burst when they fail.

Large-Base High-Pressure Sodium Light Bulbs

Bulbs are energy-efficient, produce warm, yellow light, and illuminate large spaces, such as parking lots and roads. These high-intensity discharge (HID) bulbs have a large (mogul) 1⅝″ dia. base. Initial start time is 3-5 minutes with a 1-minute restart, except instant-restart bulbs rapidly restart. Light appearance is warm (1,900-2,200K). CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

High-color rendering bulbs provide whiter light than other high-pressure sodium bulbs.

End-of-life shut-off bulbs remain off at the end of their service life instead of cycling on and off like other high-pressure sodium bulbs.

Instant-restart bulbs quickly restart so you're not left in the dark.

Shatter-resistant bulbs have an outer coating that prevents bulbs from breaking as easily as other bulbs, yet retains glass shards if they do break. They are often used in food service environments.

Large-Base Mercury Vapor Light Bulbs

A traditional bulb type often found in older high-intensity discharge (HID) fixtures, these bulbs have a large (mogul) 1⅝″ dia. base. Initial start and restart time is 15 minutes. Light appearance is neutral (3,700-4,000K). Bulbs are frosted. CRI (Color Rendering Index) is a measure on a scale of 0-100 of how accurately the light from a bulb represents an object's true colors; the higher the number, the more natural the colors appear.

About Replacing a Ballast

Ballast Label

Voltage	120V TO 277V 50/60Hz		
	Lamp Type	Line Current 120V	Line Current 277V	Min. Start Temp.
(Quantity) and Bulb Trade Number	(4) F32T8	0.97A	0.41A	0°F
	(4) F25T8	0.74A	0.32A	0°F
	(4) F17T8	0.53A	0.23A	0°F
	Also Compatible with: (3) F32T8; (3) F25T8; (3) F17T8: 0°F (3) F40T8: 32°F			
Start Type and Ballast Type	Instant Start	Electronic Ballast		

When replacing a ballast, check its label and follow these steps to find an equivalent ballast:

1. Choose a ballast type. Electronic ballasts are lighter, quieter, and more energy-efficient than magnetic ballasts, which are often found in older installations. Upgrading from a magnetic to an electronic ballast may require rewiring.
2. Select the same voltage and start type (preheat, instant start, rapid start, or programmed start) as your existing ballast.
3. Find a ballast that operates the same bulb trade number and quantity as your current model. For example, (4)F32T8 means the ballast will power four 32-watt, T8-sized bulbs.
4. Confirm that the ballast's dimensions will fit in your fixture and that the ballast has as many wires as your current ballast. Ballasts that can operate multiple bulbs may have more wires than you need. Be sure to cap off any unused wires.

Ballasts for Tubular Fluorescent Light Bulbs

Ballasts are UL listed. For fluorescent light bulbs, see pages 724-727.
Electronic—Lighter, quieter, and more energy-efficient than magnetic ballasts.
Magnetic—Often found in older installations.
Preheat ballasts take several seconds to start and require a starter (see page 732).
Instant-start ballasts turn on fastest and are the most energy-efficient but shorten the bulb's life.
Rapid-start ballasts have a slight turn-on delay but produce a longer bulb life than instant-start ballasts. *Low-frequency* ballasts don't interfere with high-frequency electronic equipment.
Programmed-start ballasts produce the longest bulb life but take longer than rapid-start ballasts to turn on. They are often used with motion-sensing light controls.

Ballasts for Plug-In CFL (Compact Fluorescent Light) Bulbs

Ballasts are UL listed. For plug-in CFL bulbs, see page 723.
Electronic instant-start ballasts are the most energy-efficient but shorten the bulb's life.
Electronic programmed-start ballasts produce the longest bulb life but have a slight turn-on delay.
Magnetic preheat ballasts take several seconds to start. They do not require a starter.

Fluorescent Ballast Connectors

Two Circuit

Three Circuit

Avoid exposure to live wires when replacing ballasts. To install these quick-disconnect connectors, push the wires between the ballast and power source into the connector. Connectors accept solid 18-12 AWG wire and stranded 14-12 AWG wire. They are orange and white plastic with copper alloy contacts. Maximum temperature is 220° F and maximum voltage is 600 volts AC. Connectors comply with NEC requirements for connecting fluorescent lights. UL listed and CSA certified.

Choose the **three-circuit** ballast connector if your fixture has an integral switch or dimmer.

Light Bulb Sockets, Adapters, and Lamp Replacement Parts

Build a new fixture or replace lamp components. UL listed, except Style M.

Sockets

A

B

C

D

E

Create a fixture for medium-base (1 1/16″ dia.) screw-in bulbs. Sockets are porcelain and have screw-terminal connections, unless otherwise stated.

Styles A-C—Mount to 3 1/4″ and 4″ outlet boxes. Overall diameter is 4 1/2″. CSA certified. Style C has a three-prong grounded receptacle rated for 125 volts AC and 15 amps.

Style D—Base is 2″×2″ and has 3/16″ dia. mounting holes.

Style E—Also called a pigtail holder, socket has a rubber lip that molds around the bulb to form a seal. Socket is ceramic and has wire leads.

Glass-Retaining Tubular Fluorescent Light Bulb Guards

Slip guards over bulbs to retain glass if a bulb breaks. Guards are transparent plastic and have two end caps. They meet OSHA requirements and NEC standards. Guards for *high-output* and *very-high-output* bulbs have a heat sink screen that distributes heat build-up.

UV-filtering guards block light rays that may cause colors to fade.

Tubular Fluorescent Light Bulb and Ballast Testers

There's no need to replace bulbs or dismantle fixtures to determine whether your bulb or ballast has failed. Touch the tester's 2½-ft. telescoping probe against a bulb to diagnose the problem. The tester will beep and flash to indicate the results. Operates on four AA batteries (included).

1107N1 ..... $152.31

Tubular Fluorescent Light Bulb Changers

Install and remove T12 (1½″ dia.) bulbs up to 96″ long. Changer has nylon clips that snap onto bulbs for a secure grip and a 12½-ft. telescoping pole.

8376K11 ..... $215.42

Miniature Light Bulb Changers

Friction Grip

Spring Loaded

Replace hard-to-grip miniature bulbs in panels, instruments, indicators, and signs without leaving behind oil from your skin that can cause bulbs to break.

Friction-grip bulb changer has two ends to accommodate a wide range of bulbs. It is rubber.

Spring-loaded bulb changer grasps bulbs securely when you pull the lever. Changer is plastic and steel.

	For Bulb Diameter	Overall Lg.		
Friction Grip	0.25″-0.38″ and 0.75″-1″	3″	**9820K1**	$5.64
Spring Loaded	0.2″-0.31″	4″	**9820K2**	26.88

Light Bulb Changers and Broken Bulb Removers

Spring Clip Bulb Changer

Adjustable-Angle Spring Clip Bulb Changer

Suction Cup Bulb Changer

Locking Suction Cup Bulb Changer

Broken Bulb Remover

Connect up to four poles to extend your reach.

Adjustable-angle spring clip bulb changers have a flexible joint to change bulbs mounted at an angle.

Suction cup and **locking suction cup bulb changers** are often used with recessed fixtures. *Locking suction cup bulb changer* has a slide rod that creates a tight seal when pulled.

Broken bulb remover has a built-in dish to collect glass shards. Insert remover into broken bulbs and twist to remove.

Light Meters

For General Lighting

For General Lighting with Analog Output

For General and White LED Lighting

Monitor the brightness of your lights in footcandles and lux. One footcandle is one lumen per square foot. One lux is one lumen per square meter. Meters measure light from incandescent, fluorescent, and HID bulbs but are not for use with lasers.

For General Lighting—Meters include a light sensor with a 3-ft. long cable and a 9-volt battery. They are not for use with LED lighting. Meters *with analog output* can transmit data to a recorder. Meters *with computer interface* have an RS-232 output for connecting to a PC (optional Windows 7 compatible data software and cable sold separately below).

For General and White LED Lighting—Meters include an integral light sensor, a protective pouch, and 2 AAA batteries.

For General and Colored LED Lighting—Meters store up to 99 readings. They include a light sensor with a 5-ft. long cable, a hard case, and a 9-volt battery.

Lighting Maintenance Carts

Keep all the supplies you need to change a light bulb ready to roll. Cart includes a tool box and has four compartments for storing fluorescent bulbs up to 4-ft. long, as well as screw-in bulbs. Use the built-in steps to reach ceilings up to 9-ft. high. Maximum capacity is 500 lbs. Cart is black plastic and is 31¾″ Lg.×22″ Wd.×54½″ Ht.

1603K44 ..... $744.51

Light Filters

Also called lighting gels, these filters block or transmit specific types of light.

Red, blue, and **green** filters allow only the same color lightwave to pass through.

Infrared filter has a coating that reflects the infrared spectrum and reduces radiated heat. It's rated for use with up to 1000-watt light bulbs.

Ultraviolet filter blocks the transmission of ultraviolet light.

Polarizer filter reduces glare from reflective surfaces.

	Size	Thick.	Max. Temp.

Light Diffuser Panels

Cut these 2 ft.×4 ft. diffusers to size.

Solid—Diffuse light while keeping bulbs hidden.

Open Cell—Allow more light through than solid diffusers, as well as more air circulation to cool bulbs. *Parabolic* panels are mirrored to reflect light and reduce glare.

Polystyrene panels are the most economical but may yellow over time. **Acrylic** panels have UV stabilizers to prevent yellowing. **Polyester** panels do not yellow and are stronger than acrylic. **Polycarbonate** panels are suitable for rough-service environments but may yellow over time. **Aluminum** panels can withstand high temperatures.

Strip Lights

Fluorescent Strip Lights

With Rapid-Start Ballast

With Instant-Start Ballast

The traditional strip light; these lights are energy efficient and long lasting. They have an electronic ballast and operate on 120 volts AC. UL listed.

With Rapid-Start Ballast—Bulbs last longer than with instant-start ballasts but have a slight turn-on delay. Housing and lens are white plastic. Lights have an on/off switch, a 6″ connecting cable to attach additional lights, a two-prong plug, and mounting hardware.

With Instant-Start Ballast—Bulbs turn on faster than with rapid-start ballasts but don't last as long. Lights have a steel housing with a white finish and a white plastic lens. They have an on/off switch. Lights with 5-ft. cord have a 3-prong plug. Lights require 1/2″ dia. screws for mounting.

Bulbs have a neutral (4,100K) light appearance.

Exposed-Bulb Fluorescent Strip Lights

Shown with Bulb and Optional Reflector

These lights are designed without a lens to maximize light output. Housing is steel with a white finish. Lights have an electronic rapid-start ballast that has a slight turn-on delay. Lights operate on 120 volts AC. Mounting hardware is included. UL listed.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Optional reflectors concentrate light in one direction. They are steel with a white finish.

DIN-Rail/Magnet Mount CFL (Compact Fluorescent) Lights

Illuminate enclosures and control cabinets. Mount this light on 35 mm DIN rail or use its magnetic back to mount to steel surfaces. Housing is gray plastic with a protective plastic lens. The included twin-tube bulb has a neutral (4,000K) light appearance. Light has an electronic instant-start ballast that turns on fast but shortens the bulb's life. It has an on/off switch and a three-prong receptacle rated for 15 amps. It must be hardwired and operates on 120 volts AC. CE approved.

Overall Ht.	Overall Wd.	Overall Dp.	No. of Bulbs	Light		Repl. Bulb Watts

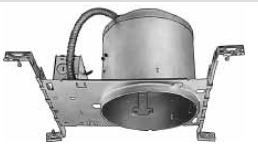
Can Lights

Create a recessed fixture by pairing the housing with a reflector of your choice. UL and C-UL listed for damp locations, except Style H.

Housing

Housing has a socket for medium-base (1 1/16″ dia.) bulbs. It operates on 120 volts AC and must be hardwired. Mount housing in ceilings with or without insulation (mounting hardware included). Hanger bars are adjustable. Housing requires a 7″ diameter cutout.



Housing Lg.	Wd.	Dp.	Hanger Bar Lg.		
15″	13 7/8″	6 7/8″	13 1/4″-25 1/4″	1495K41	$12.75

Reflectors

Reflectors fit securely inside the housing to direct light. They have a white flange. *Styles A-G* do not include bulbs (see pages 710-714); *Style H* includes a bulb.

Styles E and **F** swivel to focus light.

Style G is water resistant. It is UL and C-UL listed for wet locations.

Style H has an integral 13-watt LED bulb that produces a warm (2,700K) light appearance. Bulb will last up to 50,000 hours and is not replaceable. It swivels to focus light. ETL and C-ETL listed.

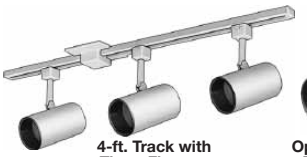
Track Lights

Swivel and slide individual fixtures along the track to focus light where you need it. Operate on 120 volts AC. UL and C-UL listed. Bulbs are not included (see pages 710-714).

4-ft. Track with Three Fixtures—Track is aluminum with a white finish and includes mounting hardware and screw terminals for hardwire connections. Fixtures are white.



4-ft. Track with Three Fixtures

Wall-Mount Lights

A three-sided white acrylic lens directs light up, down, and outward. Lights use T8 bulbs with a medium bi-pin base. Housing is steel and aluminum, except 48 1/8″-long light is steel with a white finish. They have an electronic instant-start ballast that turns on fast and is energy efficient but shortens the bulb's life. Lights must be hardwired and operate on 120 volts AC. They have an on/off switch and a three-prong receptacle. UL listed for damp locations.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Recessed Ceiling Lights

Also known as troffers, lights fit standard drop-ceiling grids. They are for fluorescent bulbs with a medium bi-pin base. Housing is steel with a white finish. Lights operate on 120/277 volts AC and must be hardwired. UL listed.

With Prismatic Lens—Disperse light evenly. Lens is semi-clear acrylic.

With Parabolic Diffuser—Direct light downward and reduce glare. Diffusers are aluminum.

Lights have electronic ballasts. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Programmed-start ballasts* produce the longest bulb life, but take longer than instant-start ballasts to turn on.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Enclosed-Bulb Ceiling and Wall Lights

Lights have a semi-clear, acrylic prismatic lens to reduce glare, disperse light evenly, and protect bulbs from damage. They are good for illuminating storage rooms and offices. Lights are for fluorescent bulbs with a medium bi-pin base. Housing is steel with a white finish. Lights operate on 120/277 volts AC and must be hardwired. They have 1/2" dia. mounting holes (hardware not included) for surface mounting. UL listed.

Lights have electronic ballasts. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Programmed-start ballasts* produce the longest bulb life, but take longer than instant-start ballasts to turn on.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Wraparound-Lens Ceiling and Wall Lights

In addition to reducing glare and protecting bulbs from damage, wraparound lenses allow light to shine from the sides as well as the bottom to illuminate storage rooms and offices. They have a semi-clear, acrylic prismatic lens that disperses light evenly. Housing is steel with a white finish. Lights operate on 120/277 volts AC and must be hardwired. They can be surface or suspension mounted.

Fluorescent—Lights have electronic ballasts. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Programmed-start ballasts* produce the longest bulb life, but take longer than instant-start ballasts to turn on.

Mounting hardware is not included. UL and C-UL listed. Lights *with tandem bulb arrangement* have bulbs mounted end-to-end.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

LED—Lights are more energy efficient and last longer than fluorescent lights. Bulbs and mounting hardware are included. CSA certified.

Heat-Resistant Ceiling Lights

Without Guard

With Guard

Designed to withstand heat and grease, these lights are commonly used in commercial cooking hoods. They are also known as hood lights and are for compact fluorescent, halogen, incandescent, and LED bulbs with a medium screw-in base. Lens is clear tempered glass. Housing is aluminum. Lights operate on 120 volts AC and must be hardwired. They have 3/16" dia. mounting holes (hardware not included) for surface mounting. UL and C-UL listed, CSA certified, and meet NEC 410 and NFPA 96.

Bulbs are not included (see pages 710-712).

Overall Dia.	No. of Bulbs Req'd	Max. Watts per Bulb	Without Guard Overall Ht.		With Guard Overall Ht.

Plug-In Enclosed-Bulb Ceiling Lights

Ready-to-use lights offer plug-in convenience and have a lens that reduces glare and protects the bulb from damage. Lights have an LED bulb and a semi-clear, acrylic parabolic lens that directs light downward. Housing is steel with a white finish. Lights operate on 120 volts AC. They have a 5-ft. cord with three-prong plug and a pull-string switch. Suspension mount with the included hardware. UL and C-UL listed.

Overall Lg.	Overall Wd.	Overall Ht.	Watts	Min. Start Temp.		
46 5/8"	3 3/4"	2 3/8"	25	0°F	1602K6	$67.09

Plug-In Ceiling Lights with Reflectors

No need for wiring, these lights are ready to use. Also known as turret lights, they have reflectors that direct light down to maximize light distribution and are used in manufacturing and warehouse spaces. Lights are for fluorescent bulbs and have an electronic instant-start ballast. Housing and reflectors are steel with a white finish. Lights operate on 120 volts AC. They have a pull-string switch and a cord with three-prong plug. Suspension mount with the included hardware. UL and C-UL listed.

Bulbs (sold separately) have a neutral light appearance.

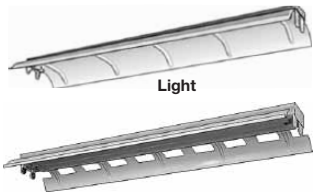
Ceiling and Wall Lights with Reflectors



Reflectors capture light that shines from the top and sides of bulbs and directs it down to maximize light distribution. Also known as turret lights, these are good for use in manufacturing and warehouse spaces. Housing and reflectors are steel with a white finish. Lights operate on 120/277 volts AC and must be hardwired. Surface or suspension mount (hardware not included). UL listed.

Lights with Uplight Reflectors—Openings allow some light to escape through the top of the reflector to provide more ambient lighting and reduce glare.

Lights have an electronic ballast. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Programmed-start ballasts* produce the longest bulb life, but take longer than instant-start ballasts to turn on.

Lights *with tandem bulb arrangement* have bulbs mounted end-to-end.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

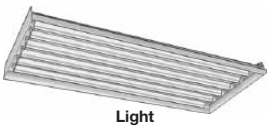
Linear Bay Lights



Light

Louvered Light with Uplight Reflectors

With a lower profile design than other bay lights, these mount close to ceilings to keep them out of the way. Use them in manufacturing and warehouse spaces. They operate on 120/277 volts AC and must be hardwired.

Lights—Mounting hardware is included. UL and C-UL listed for damp locations. **Low-bay lights** are for fluorescent bulbs with a medium bi-pin base. Light have an electronic instant-start ballast that turns on immediately and is energy efficient, but shortens the bulb's life. Housing and reflectors are steel with a white finish. **High-bay lights** are for fluorescent bulbs with a miniature bi-pin base. Lights have an electronic programmed-start ballast that produces the longest bulb life, but takes longer than instant-start ballasts to turn on. Housing and reflectors are aluminum with a white finish.

Louvered Lights with Uplight Reflectors—Louvers direct light output and reduce glare. Openings allow some light to escape through the top of the reflector to provide more ambient lighting. Lights are for fluorescent bulbs with a miniature bi-pin base. They have an electronic programmed-start ballast that produces the longest bulb life, but takes longer than instant-start ballasts to turn on. Housing and reflectors are steel with a white finish. Lights have 3/4″ mounting holes (hardware not included). UL and C-UL listed.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Bay Lights

Low-Bay Light

High-Bay Light

A round reflector creates a wide beam of uniform light for open areas such as manufacturing and warehouse spaces. Lights are for bulbs with a large (mogul) screw-in base. Housing is aluminum with a white finish. Lights operate on 120/208/240/277 volts AC and must be hardwired. They have a 3/4 NPS female conduit connection and include mounting hardware and a bulb. UL and C-UL listed. *Aluminum* reflectors have a white finish.

Low-Bay Lights—A clear, acrylic prismatic lens protects the bulb and disperses light evenly.

High-Bay Lights with Uplight Reflector—Openings allow some light to escape through the top of the reflector to provide more ambient lighting and reduce glare.

Metal halide lights produce a neutral white light. They have a minimum start temperature of –20° F. These products cannot be sold in California. **High-pressure sodium lights** produce a warm yellow light and are more energy efficient than metal halide lights. They have a minimum start temperature of –40° F.

Ballasts, Reflectors, Lenses, and Hooks for Bay Lights

Build your own bay light or replace existing ballasts, reflectors, lenses, and hooks. Components are compatible with Hubbell or Lithonia bay lights only.

Ballasts

Supply power to your bay light. Ballasts are for use with bulbs that have a large (mogul) screw-in base. Housing is aluminum with a white finish. Ballasts operate on 120/208/240/277 volts AC and must be hardwired. UL listed for damp locations.

Hubbell—Mounting hardware included. They have ¾ NPT female conduit connections. CSA certified. Minimum start temp. for ballasts *for metal halide lights* is –20°F; temp. *for high-pressure sodium lights* is –40°F.

Lithonia—Minimum start temp. is –40°F. They have ¾ NPS female conduit connections. Mounting hardware not included. **Lithonia with sensor** power on when heat changes from body or equipment movement fall within sensor range.

Metal halide lights produce cool white light. **High-pressure sodium lights** produce a warm yellow light and are more energy efficient than metal halide lights.

★ This product cannot be sold in California.

Hooks

Thread a hook into a bay light ballast for suspension mounting. **Hubbell** hook is CSA certified.

Hubbell Hook

Manufacturer	Overall Lg.	Conduit Connection		
Hubbell	4″	¾ NPS Male	14815K81	$8.17
Lithonia	3¾″	¾ NPT Male	2135T41	13.14

Reflectors

Compatible with Hubbell brand bay lights only.

Reflector for Low-Bay Lights—Beam spread is wide.

Reflectors for High-Bay Lights—*Aluminum reflector* is sealed and has a wide beam spread. UL listed for damp locations and C-UL listed. *Acrylic reflector* has an adjustable beam spread from medium to wide.

Uplight Reflectors for High-Bay Lights—Openings allow some light to escape through the top to provide more ambient lighting and reduce glare. Beam spread is adjustable from narrow to wide.

Note: High-bay reflectors require a lens when used with 175- and 250-watt metal halide ballasts unless they're used with a bulb that is rated for open fixtures.

Wet-Location Wall Lights

The lens and housing are sealed to keep out dripping, splashing, and falling liquids as well as dirt. Lights are for fluorescent bulbs with a medium bi-pin base. They have a clear, acrylic prismatic lens that disperses light evenly. Housing is steel with a white finish. Lights have an electronic ballast, operate on 120/277 volts AC, and must be hardwired. They have 5/16″ dia. mounting holes (hardware not included) for surface mounting. UL and C-UL listed for wet locations with covered ceilings. ETL and C-ETL listed.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Overall Lg.	Overall Ht.	Overall Dp.	Ballast Start Type	Min. Start Temp.	For Bulb Trade Size	For Bulb Dia.	For Bulb Lg.	No. of Bulbs Req'd	Max. Watts per Bulb	Lights		Bulbs Pkg. Qty.	Bulbs	Bulbs Pkg.

Wet-Location Ceiling Lights

A sealed lens and one-piece housing withstand dripping, splashing, and falling liquids as well as dirt. Housing is white plastic. Lights operate on 120/277 volts AC and must be hardwired. They can be surface or suspension mounted. UL listed for wet locations.

For T5 Bulbs—Lights have a clear, impact resistant, polycarbonate prismatic lens that disperses light evenly but can yellow over time. They have 5/16″ dia. mounting holes (hardware not included). C-ETL listed.

For T8 Bulbs—Lights have a semi-clear, nonyellowing, acrylic lens that is less impact resistant than polycarbonate lenses. Mounting hardware is included. Lights meet IP65 and are C-UL listed for wet locations with covered ceilings.

Lights have electronic ballasts. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Programmed-start ballasts* produce the longest bulb life, but take longer than instant-start ballasts to turn on.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Wraparound-Lens Wet-Location Ceiling Lights

Sealed wraparound lenses protect lights from dripping, splashing, and falling liquids and allow light to shine from the sides as well as the bottom to illuminate large spaces. Lights have a semi-clear, acrylic prismatic lens that disperses light evenly. They are for fluorescent bulbs with a medium bi-pin base. Housing is steel with a white finish. Lights have an electronic ballast, operate on 120/277 volts AC, and must be hardwired. They have 5/16″ dia. mounting holes (hardware not included) for surface mounting. UL and C-UL listed for wet locations with covered ceilings.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Vandal-Resistant Wet-Location Ceiling Lights

Tamper-resistant Torx screws secure the impact-resistant lens to the housing to protect lights from vandals while a seal between the lens and housing protect them from dripping, splashing, and falling liquids. To remove screws, use a T20 pin-in-head Torx driver. Lights are for fluorescent bulbs with a medium bi-pin base. They have a clear, polycarbonate prismatic lens that disperses light evenly. Housing is steel with a white finish. Lights have an electronic ballast and must be hardwired. Surface mount (hardware not included). ETL and C-ETL listed for wet locations with covered ceilings; light that operates on 120 volts AC only is UL and C-UL listed for wet locations with covered ceilings.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Wet-Location Ceiling and Wall Lights with Guard

Stem Mount

Ceiling Mount

Wall Mount

Also known as jelly jar lights, these have a heat-resistant lens that's sealed to keep out moisture and dirt. Lights have an aluminum housing and can be used outdoors. They operate on 120 volts AC and must be hardwired. UL listed for wet locations. Lights have a clear, impact-resistant tempered glass lens, except LED lights have a frosted glass lens. Mounting hardware is not included, except LED lights include hardware. For medium-base bulbs, see pages 710-712.

For Compact Fluorescent, Halogen, Incandescent, and LED Bulbs—C-UL listed and meet NEMA 3R and IP55.

With Compact Fluorescent Bulbs—Lights include a bulb. C-UL listed and meet NEMA 4X.

With LED Bulbs—Lights are more energy efficient and last longer than fluorescent lights. They have an LED bulb and are C-UL listed for wet locations.

Replacement lens with PFA-coated tempered glass has added crack resistance.

Tubular High-Pressure Washdown Ceiling and Wall Lights

These lights meet NSF/ANSI Standard C-2 to withstand sprayed water for use in washdowns in food-processing and corrosive environments. Lights have a clear, nonyellowing acrylic lens and silicone gaskets. Housing is stainless steel; reflector is aluminum with a white finish. Lights operate on 120/277 volts AC and must be hardwired. Surface or suspension mount with the included hardware. UL, ETL, and C-ETL listed for wet locations.

Lights have electronic ballasts. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Rapid-start ballasts* have a slight turn-on delay, but produce a longer bulb life than instant-start ballasts.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Hazardous Location Ceiling and Wall Lights

Aluminum Housing

Stainless Steel Housing

A sealed lens and corrosion-resistant housing resist heat, moisture, dust, and fumes found in hazardous locations. Reflectors are aluminum with a white finish. Lights operate on 120/277 volts AC and must be hardwired. They can be surface mounted. Lights are UL 1598A listed and meet IP66 and NEMA 4X.

Aluminum Housing—Lights have a clear glass lens. Bulbs are included. Mounting hardware is not included. UL 844 listed; UL listed for Class I, Division 1, Groups C, D; Class I, Division 2, Groups C, D; Class II, Division 1, Groups E, F, G; Class II, Division 2, Groups E, F, G; Class III.

Stainless Steel Housing—Lights provide more corrosion resistance than those with an aluminum housing. Lens is clear nonyellowing acrylic, which is more impact resistant than glass. Bulbs are not included. Mounting hardware is included. UL and C-UL listed for Class I, Division 2, Groups A, B, C, D.

Ballasts are electronic. *Instant-start ballasts* turn on immediately and are the most energy efficient, but shorten the bulb's life. *Rapid-start ballasts* have a slight turn-on delay, but produce a longer bulb life than instant-start ballasts. *Programmed-start ballasts* produce the longest bulb life, but take longer than rapid-start ballasts to turn on.

Bulbs (sold separately) have a neutral light appearance.

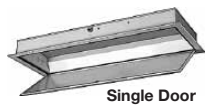
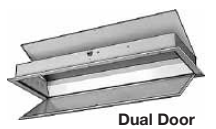
Hazardous Location Recessed Ceiling and Wall Lights



Single Door



Dual Door

Commonly used in paint-spray booths, lights have a sealed lens and housing to withstand moisture, dust, and fumes. An access door makes quick work of light bulb changes. Lights are for fluorescent bulbs with a medium bi-pin base. Lens is clear, tempered glass. Housing is steel with a white finish. Lights have an electronic ballast, operate on 120/277 volts AC, and must be hardwired. Minimum start temp. is 0° F. Mounting hardware is included. ETL and C-ETL listed for Class I, Division 2, Groups A, B, C, and D; Class II, Division 2, Groups F and G.

Dual-door lights allow access from both sides of the ceiling or wall. The door with the lens has a safety interlock switch that can be wired to disable equipment (such as paint sprayers) when the door is opened.

Bulbs (sold separately) have a neutral (4,100K) light appearance.

Hazardous Location Bay Lights

A round reflector creates a wide beam of light for hazardous open areas with heat, moisture, dust, and fumes. These lights are low-bay lights for a maximum ceiling height of 20 feet. They have a semi-clear, nonyellowing, acrylic prismatic lens that disperses light evenly. Housing and reflectors are aluminum with a white finish. Lights must be hardwired. They have a 3/4 NPT female conduit connection and include mounting hardware and bulbs. UL listed for wet locations and Class I, Division 2/Zone 2, Groups A, B, C, and D. C-UL listed, IP65 rated, and meet NSF standards.

Lights *for fluorescent bulbs* produce a warm yellow light. They have an electronic program-start ballast.

Lights *for metal halide bulbs* produce a cool white light and are more energy efficient than fluorescent lights.

Lights *for high-pressure sodium bulbs* produce a warm yellow light and are more energy efficient than metal halide lights.

Ⓔ Light meets Federal minimum efficiency standards.

Hazardous Location Ceiling and Wall Lights with Guard

Ceiling Mount

Stem Mount

Wall Mount

Also known as jelly jar lights, these have a sealed lens and housing to withstand heat, moisture, dust, and fumes in hazardous locations. Lights can be used outdoors and are for compact fluorescent, halogen, incandescent, and LED bulbs with a medium screw-in base. They must be hardwired. Mounting hardware is not included. *Ceiling-mount* lights mount with their conduit connection.

Aluminum Housing—Lights operate on 120 volts AC.

Lights **with glass lens** have a semi-clear prismatic lens that disperses light evenly. Housing has a tan finish. UL listed for Class I, Division 1, Groups C, D; Class I, Division 2, Groups C, D; Class II, Division 1, Groups E, F, G; Class II, Division 2, Groups E, F, G; Class III, Division 1; Class III, Division 2. CSA certified and meet NEMA 4X.

Lights **with tempered glass lens** have a clear lens. Housing has a gray finish. UL listed for Class I, Division 2, Groups A, B, C, D and meet NEMA 4.

Fiberglass Housing—Lights have better corrosion resistance than those with an aluminum housing. They operate on 120/277 volts AC. UL listed for Class I, Division 2, Groups A, B, C, D; Class I, Zone 2, Groups IIA, IIB, IIC; Class II, Division 2, Groups F and G hazardous locations. CSA certified to U.S. and Canadian standards for marine luminaries. Meet NEMA 4X and IP66.

Bulbs are not included (see pages 710-712).

Emergency Backup Lights

A

B

C

D

E

F

G

H

When the power goes out, these lights go on. They have adjustable bulb heads and a test switch. Bulbs and rechargeable batteries are included. All wall mount (hardware not included). UL 924 listed.

Lights have a low-voltage disconnect, except Style B LED light. Lights have a status indicator, except Styles D, F, and 1474K24 Style H krypton lights.

Halogen lights last longer than incandescent lights. *Krypton* lights last longer than halogen lights. *LED* lights are the longest lasting. They have bulbs that cannot be replaced.

Plug-In—Light has a 2-ft. cord with three-prong plug.

Hardwire with Delayed Shut-Off—Lights stay on after power is restored, making them a good backup for systems with long restart times.

Styles A-E have a beige steel housing. New York City approved. *Style B halogen* lights are also City of Chicago approved. *Style B with delayed shut-off* stays on for 60 minutes after power is restored.

Style F has a white plastic housing. It can also mount to the ceiling.

Style G has a brown steel housing. New York City approved.

Style H has a white plastic housing. It can also mount to the ceiling. C-UL listed. Light *with delayed shut-off* stays on for 15 minutes after power is restored.

Note: Maximum output wattage is the combined wattage of the attached bulbs and any add-on bulbs. If you exceed this maximum, lights may not run for the 11½ hours required by law.

Wet-Location and Washdown Emergency Backup Lights

Wet Location

Lights are sealed to withstand wet environments. They have adjustable bulb heads, a test switch, and a low-voltage disconnect; washdown lights also have a status indicator. All have 5/16″ dia. holes for wall mounting (hardware not included). Lights operate on 120/277 volts AC. Bulbs and rechargeable batteries are included.

Wet Location—Sealed to withstand humidity, moisture, and dripping and splashing liquids. Housing is gray plastic. *Incandescent* light is UL and ETL listed. *LED* light has a battery that cannot be replaced. UL 924 listed.

Washdown—With a NEMA 4X and 13 rating, lights provide more protection against moisture and liquids than wet-location lights. Lights have a gray fiberglass housing. UL 924 listed. Light *for outdoor use* has a built-in heater to keep the batteries from freezing in temperatures as low as –4° F.

LED lights are more energy efficient and last longer than incandescent and halogen lights. LEDs cannot be replaced.

Note: Maximum output wattage is the combined wattage of the attached bulbs and any add-on bulbs. If you exceed this maximum, lights may not run for the 1½ hours required by law.

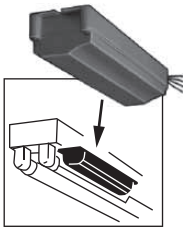
Emergency-Light Conversion Kits for Fluorescent Lights



Connect these battery packs to your existing fluorescent lights to convert them into emergency backup lights. Packs illuminate one or two bulbs (see chart at right) for 1.5 hours. Housing is black plastic and has 5/16″ dia. holes for mounting (hardware not included). Packs operate on 120/208/240/277 volts AC, have a test switch, and include a nonreplaceable rechargeable battery. UL 924 listed.

Entryway Lights

Mount near entry and exit doors to cast a soft, even glow of light. Light uses compact fluorescent, halogen, incandescent, or LED bulbs with a medium screw-in base (bulb sold separately on pages 710-712). It has a frosted polycarbonate lens and a black polycarbonate housing. Wall mount with the included hardware. Light operates on 120 volts AC and must be hardwired. ETL listed for wet locations.

Overall Ht.	Overall Wd.	Overall Dp.	No. of Bulbs Req'd	Max. Watts per Bulb		
9⅛″	6⅛″	7¼″	1	100	14755K73	$74.44

Security Lights

Perimeter Wall Security Lights

Light up building perimeters for safety and security. Also known as wall packs, lights have a semi-clear, glass prismatic lens to disperse light evenly. Housing is bronze-colored aluminum. Lights must be hardwired. Mount on a 4″ outlet box (hardware not included). The included bulbs have a cool (5,000K) light appearance. UL and C-UL listed for wet locations.

High-pressure sodium lights are more energy efficient than metal halide lights.

LED lights are the longest lasting and most energy efficient lights. LEDs cannot be replaced.

Ⓔ Light meets Federal minimum efficiency standards.

Vandal-Resistant Perimeter Wall Security Lights

In addition to lighting up building perimeters, lights have an impact-resistant polycarbonate lens to protect them from vandals. The lens is prismatic to disperse light evenly. Lights must be hardwired. Mounting hardware is not included.

Metal halide and **high-pressure sodium** lights have tamper-resistant screws for added protection. To remove screws, use a pin-in-head T20 Torx driver. Lights are for bulbs with a medium screw-in base. They have a semi-clear lens and a bronze-colored polycarbonate housing. ETL and C-ETL listed for wet locations.

Metal halide light produces neutral white light. Bulbs (sold separately) have a neutral light appearance.

High-pressure sodium lights produce warm (2,100K) yellow light and are more energy efficient than metal halide lights.

LED lights produce cool (5,000K) white light and are the longest lasting and most energy efficient lights. They have a clear lens and a bronze-colored aluminum housing. LEDs cannot be replaced. CSA certified.

Adjustable-Head Security Lights

With Clear Lens

With Semi-Clear Visored Lens

Bulb heads move up and down so you can direct light where needed. Lights have a tempered glass lens and a bronze-colored aluminum housing. They operate on 120 volts AC and must be hardwired. Mount to a wall (hardware included) or a pole (pole mounting bracket sold separately below).

The light **with clear lens** includes LED modules that have a neutral (5,000K) light appearance. UL listed for wet locations and C-UL 1598 listed. The light **with semi-clear visored lens** reduces glare. It includes a halogen bulb that has a warm (3,000K) light appearance. UL listed. C-UL listed for wet locations.

Vandal-Resistant Ceiling and Wall Security Lights

A

B

C

Also known as canopy lights, these have impact-resistant lenses that are held in place with tamper-resistant screws. To remove screws, use a pin-in-head T20 Torx driver. Lights have a semi-clear polycarbonate prismatic lens to disperse light evenly. They have ¼″ dia. mounting holes (hardware not included). The included LED bulbs have a neutral (3500K) appearance. ETL and C-ETL listed for wet locations.

Styles A and **B** have a white polycarbonate housing.

Style C have a bronze-colored aluminum housing.

	Mounting Location	Overall Lg.	Overall Wd.	Overall Ht.	Overall Dp.	AC Voltage	Max Watts

Large-Area Security Lights

Also known as floodlights, fill large spaces such as parking lots with light. Lights have a clear lens and bronze-colored aluminum housing, except Style A is gray. They mount to a pole or wall (brackets sold separately) and must be hardwired. UL listed for wet locations. 8421K31, 8421K881, 84005K45, and 84005K47 cannot be sold in California.

Metal halide and **high-pressure sodium** lights have an impact-resistant tempered glass lens. They use one bulb and have a minimum start temperature of –20° F. *Metal halide* lights produce neutral white light. *High-pressure sodium* lights produce warm yellow light and are more energy efficient than metal halide lights.

LED lights produce white light and are the longest lasting and most energy efficient lights. Min. start temp. is –30° F. LEDs can't be replaced. *Stem mount* have an impact-resistant, nonyellowing acrylic lens. *Surface mount* have a glass lens.

Ⓔ Light meets Federal minimum efficiency standards. ★ Have ¾″ and ⅞″ dia. mounting holes.

Hazardous Location Large-Area Security Lights

Also known as floodlights, these are UL listed for use in environments with flammable gases and combustible dust as well as salt water. They have a clear, tempered glass lens and a bronze-colored aluminum housing. Wall mount with the included hardware. Lights operate on 120/208/240/277 volts AC and have a ½ NPT female conduit connection for hardwiring. UL 1598A and 844 listed; UL listed for Class I, Division 2, Groups A, B, C, D; C-UL listed.

Use large (mogul) screw-in bulbs (sold separately). **Metal halide** produce cool light; **high-pressure sodium** produce warm light.

Ⓔ Light meets Federal minimum efficiency standards.

Adjustable-Head Motion-Sensing Lights

A

B

Lights automatically turn on when motion is detected by a sensor within a 70-ft., 180° radius. Housing is bronze-colored aluminum and has heads that adjust to any angle. Wall mount with the included hardware. Lights operate on 120 volts AC and must be hardwired. UL and C-UL listed for wet locations.

Style B includes LEDs that cannot be replaced. It is the longest lasting and most energy efficient light. Minimum start temperature is –20° F.

	Overall Ht.	Wd.	Dp.	Max. Watts per Bulb	Watts	Light Appearance	Lens Material	
For Compact Fluorescent, Halogen, Incandescent, and LED Bulbs with Medium Screw-In Base—Two Bulbs Required (Not Included)								
A	9″	14″	9″	150				1459K57 $35.07

B	7½″	7″	6¼″		19	Neutral (4,000K)	Glass	1459K41 107.80

Battery-Powered Adjustable-Head Motion-Sensing Lights

Mount these lights anywhere you need light, but don't have electricity. They only turn on when the sensor detects motion in darkness to conserve battery life. Lights have a clear polycarbonate lens, a black plastic housing, and LEDs. They operate on three D batteries (not included). Ceiling or wall mount with the included hardware. Meets IPX4 for wet locations.

For Bulb Type	Overall Ht.	Wd.	Dp.	Sensing Radius	Max. Sensing Distance, ft.	Battery Life, hrs.	Light Appearance	Min. Start Temp.		
LED	6½″	3½″	5″	180°	30	40	Cool (5,000K)	0° F	1336N21	$31.64

Dusk-to-Dawn & Landscape Lights

Dusk-to-Dawn Wall Lights

No need for timers, a sensor automatically turns lights on at dusk and off at dawn. Lights have a semi-clear polycarbonate lens and a bronze-colored aluminum housing. They operate on 120 volts AC and must be hardwired. Mounting hardware and bulbs are included. UL listed for wet locations and C-UL listed.

Compact fluorescent light produces neutral (3,500K) white light.

LED light produces cool (5,000K) white light and is the longest lasting and most energy efficient light. LEDs cannot be replaced.

For Bulb Type	Overall Ht.	Overall Wd.	Overall Dp.	Max. Watts per Bulb	Watts	Min. Start Temp.

LED	11″	6 7/8″	5 3/8″	—	20	–4°F	16905K51	223.33

Adjustable-Head Dusk-to-Dawn Wall Lights

Similar to our Dusk-to-Dawn Wall Lights that automatically turn on at dusk and off at dawn, except this has bulb heads that adjust to any angle. Light uses compact fluorescent, halogen, incandescent, or LED bulbs with a medium screw-in base. Housing is aluminum. Light operates on 120 volts AC and must be hardwired. Mounting hardware is included. UL listed for wet locations.

Bulbs are not included (see pages 710-712).

Overall Ht.	Overall Wd.	Overall Dp.	No. of Bulbs Req'd	Max. Watts per Bulb		
2 7/8″	9 7/8″	4 1/2″	2	150	8300K2	$15.62

Dusk-to-Dawn Pole Lights

Mount these lights on a pole to illuminate large, open areas such as parking lots. They automatically turn on at dusk and off at dawn and have a semi-clear, acrylic prismatic lens to disperse light evenly. Housing is aluminum. Lights operate on 120 volts AC and must be hardwired. Mounting hardware and bulbs are included. UL listed for wet locations.

High-pressure sodium light produces warm (2,100K) yellow light. C-UL listed.

LED light produces cool (5,100K) white light and is the longest lasting and most energy efficient light. LEDs cannot be replaced.

For Bulb Type	Overall Dia.	Overall Ht.	Overall Dp.	Arm Lg.	Max. Watts per Bulb	Watts	Min. Start Temp.

■ Uses two bulbs.

Low-Voltage Landscape Lights

These 12-volt lights are easier to install and move than other landscape lights because their wires can be run just beneath the soil. Lights have a tempered glass lens and an aluminum housing. Bulbs are included. Lights require a transformer (sold separately) and must be hardwired. ETL and C-ETL listed.

Transformers have a 6-ft. cord with three-prong plug for 120-volt AC outlets. Housing is steel with a gray finish. Note: When selecting a transformer, make sure your total bulb wattage does not exceed the transformer wattage.

Lights for T-Slotted Framing

Mount lights directly to workstations created with T-slotted framing. The included fasteners slide into your framing and will hold lights in place anywhere along the framing. Lights have a clear polycarbonate lens and an aluminum housing. They have a switch, operate on 120 volts AC, and have a 9-ft. cord with three-prong plug. Bulbs are included. ETL and C-ETL listed.

Fluorescent lights have an electronic programmed-start ballast.

LED lights last longer, generate less heat, and are more tolerant of vibration and sudden impacts than fluorescent lights. LEDs cannot be replaced.

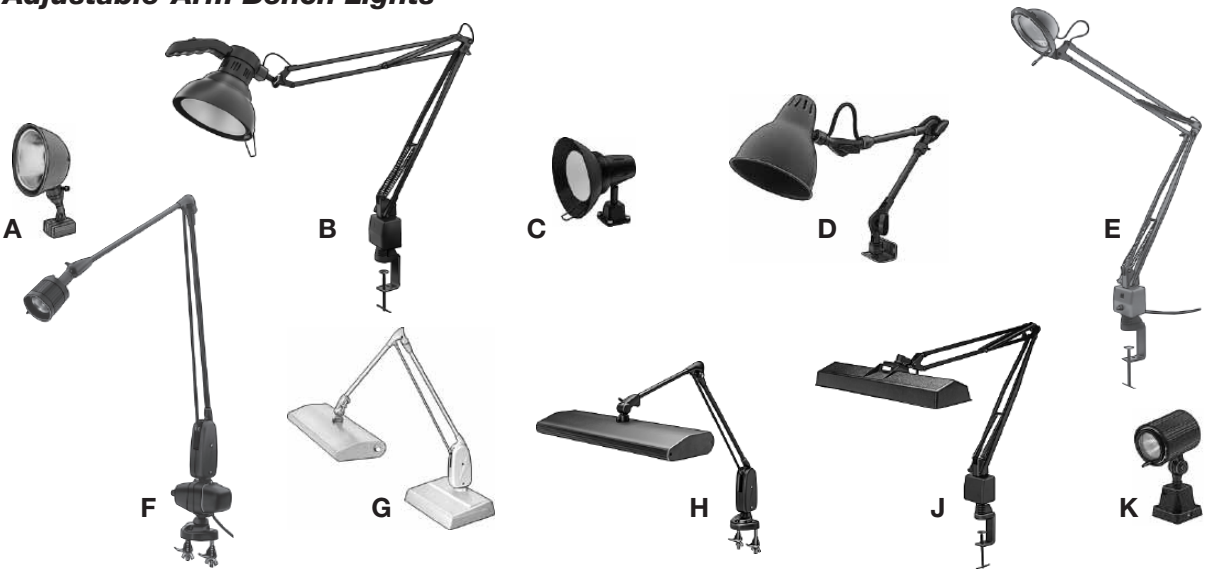
Adjustable-Arm Bench Lights



Arm adjusts horizontally and vertically, except Style K adjusts vertically. Lights have a switch and include bulbs; *Styles A-D* include a compact fluorescent bulb. Fluorescent lights last longer and generate less heat than halogen lights.

Plug In—Cords have a three-prong plug.

Hardwire—Requires a transformer (sold separately) to connect to 120 volts AC.

Style A has a vented shade.

Style B has a vented shade. Light mounts to surfaces up to 2¾" thick. ETL listed.

Style C includes mounting hardware. UL listed.

Style D has a polycarbonate lens that is more impact resistant than glass, but can yellow over time. Light has a vented shade. Mounting hardware is included. ETL and C-ETL listed.

Style E has a glass lens. Light mounts to surfaces up to 2¾" thick.

Style F has a dimmer switch and a glass lens. It mounts to surfaces up to 2" thick. UL and C-UL listed.

Style G is UL and C-UL listed.

Style H mounts to surfaces up to 2" thick. UL and C-UL listed.

Style J mounts to surfaces up to 2¾" thick. UL listed.

Style K has a glass lens. Mounting hardware is included.

Any-Which-Way-Arm Bench Lights with Cool-Touch Heads

Lights have an aluminum heat sink that keeps the head from getting too hot. They include a compact fluorescent bulb but also can use incandescent and LED bulbs with a medium screw-in base. Lights have a switch, operate on 120 volts AC, and have a 6-ft. cord with three-prong plug. Mounting hardware is included. UL and C-UL listed.

Ultra-Flexible Fiber-Optic-Arm Lights

Get high-intensity illumination for work on small and microscopic parts. To create a complete lighting system, you need a fiber-optic light, fiber-optic cable, and an adapter to connect the cable to the light.

Fiber-optic light includes a halogen bulb. Housing is gray plastic and has a handle. Light has a switch, operates on 120/230 volts AC, and has a 7-ft. cord with three-prong plug.

Add a **probe** to 1/8" dia. fiber-optic cables to illuminate small areas that have recessed or deep orifices.

Pair a **focusing lens** with a positionable cable to focus a concentrated beam of light on your work. Lens is glass.

Plug-In Tubular Machine Lights

Lights have a cord with three-prong plug. Lens is clear and housing is black plastic. Bulbs and mounting hardware are included.

Lights with acrylic lens are best for water-only areas. **Lights with glass lens** resist discoloration and are for applications involving water as well as heat and chemicals.

LED lights last longer, generate less heat, and are more tolerant of vibration and sudden impacts than fluorescent lights. LEDs cannot be replaced.

Style A is UL listed and rated NEMA 13 to protect against splashing water, oils, and coolants. *20" long lights* have an external ballast.

Styles B and *C* are ETL listed and meet IP67 to protect against temporary submersion in water.

Style D is ETL listed.

Panel Machine Lights

With its flat, clear tempered glass lens, these lights have a lower-profile design than tubular machine lights. They have a black aluminum housing and are IP67 rated to protect against temporary submersion in water. Magnet mount or screw mount (fasteners not included). The included LEDs cannot be replaced.

Plug-in light has a 12-ft. cord with three-prong plug.

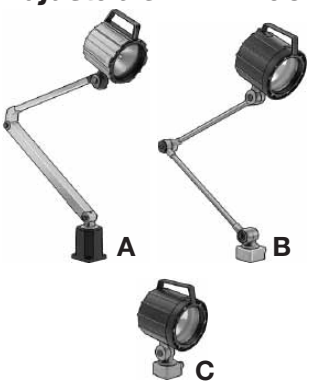
Machine & Dock Lights

Adjustable-Arm Machine Lights



These halogen lights have a clear glass lens that resists discoloration and is for applications involving water as well as heat and chemicals. Lights have an aluminum head. They include screws for mounting. Bulbs are included.

Plug In—Arm adjusts horizontally and vertically. Lights have a cord with three-prong plug and switch.
Hardwire—Arm adjusts vertically. Require a transformer (sold separately) to connect to 120 volts AC.
Style A has head that is IP65 rated to protect against spraying water.
Style B is IP65 rated to protect against spraying water.
Style C is IP67 rated to protect against temporary submersion in water.

Clearance Lights

Use these dual-bulb fixtures to avoid misjudging clearance. Lights have an acrylic lens and a polypropylene base. All metal parts are stainless steel. Overall size is 2″ Ht.×4″ Wd.×1⅛″ Dp. Each bulb has a 2500-hour life. Surface mount using the two 3⁄16″ dia. mounting holes (screws not included). They have one 4½″ wire lead.

	Amps @ 12 VDC		
Light with Amber Lens	0.67	8720T561	$3.79
Light with Green Lens	0.67	8720T563	4.86
Light with Red Lens	0.67	8720T562	3.79
Replacement Bulb		14335T95	.45

Forklift Tail Lights

Improve safety around forklifts with these multifunctional, long-lasting LED lights. They have an amber turn light, red stop light, and a clear backup light. Lights have five 12″ wire leads. Lens is polycarbonate and base is ABS plastic. Overall size is 8½″ Ht.×2″ Wd.×1⅛″ Dp. Surface mount using the two ¼″ dia. mounting holes (screws not included). UL recognized for lift trucks.

12 VDC light has a continuous red tail light in addition to the lights listed above.

	Amps		
12 V DC	0.4	58065T16	$61.27
36 V DC	0.4	58065T17	72.77

Any-Which-Way-Arm Dock Lights

Compared to other dock lights that can only adjust vertically and horizontally, these bend at any angle to illuminate loading-dock work areas as well as trailers. They have a black steel arm and a yellow polycarbonate head. Lights have a switch, operate on 120 volts AC, and have a 7-ft. cord with three-prong plug. Mounting hardware is included. The included LEDs cannot be replaced. UL and C-UL listed.

For Bulb Type	Arm Reach	Head Dia.	Watts	Included Bulb Brightness, lumens		
LED	42″	6″	16	600	2546K23	$511.57

Adjustable-Arm Dock Lights

Lights swing out from the wall and adjust horizontally and/or vertically to illuminate loading-dock work areas as well as trailers. Arms are yellow steel. Lights have a switch, operate on 120 volts AC, and have a cord with three-prong plug. They have 3/8″ dia. mounting holes (hardware not included).

Lights **for compact fluorescent, halogen, incandescent, and LED bulbs** and **for incandescent bulbs** use bulbs with a medium screw-in base (for bulbs, see pages 713-714). They have a yellow head and a steel wire guard. Lights are UL and C-UL listed, except lights that include a compact fluorescent bulb are ETL and C-ETL listed.

Lights **for halogen bulbs** have a black head, a steel wire guard, and a tempered glass lens. ETL and C-ETL listed.

Lights **for LED bulbs** last the longest, generate the least heat, and are the most tolerant of vibration and sudden impacts. They have a yellow head and a polycarbonate lens that is more impact resistant than tempered glass, but can yellow over time. LEDs cannot be replaced. UL, ETL, and C-ETL listed.

Wet-Location Adjustable-Arm Dock Lights

Similar to our other dock lights, except these have a sealed head and switch to keep them shining in wet environments. Lights use incandescent bulbs with a medium screw-in base. They have a yellow steel arm that adjusts horizontally and vertically, a tempered glass lens, a yellow aluminum head, and a steel guard. Lights operate on 120 volts AC and must be hardwired. They have 1/2″ dia. mounting holes (hardware not included). UL listed for wet locations. CSA certified.

Bulbs are sold separately (see pages 713-714).

Replacement Handles and Guards for Portable Lights

Handle and guard are for portable lights that use medium screw-in bulbs. They are not for use with insulated, wet-location, or hazardous location portable lights.

Handle is red plastic, has a switch, operates on 120 volts AC, and has a three-prong outlet. CSA certified.

Guard is zinc-plated steel. It fits handles up to 1½″ dia.

	Overall Lg.	Overall Dia.		
Handle	7″	1⅞″	1559K2	$6.63
Guard	6¾″	3⅝″	1559K3	5.27

Insulated Portable Lights

Lights have a thick rubber handle to protect against electrical shock. They have a plastic lens and a yellow housing. Lights have a switch, operate on 120 volts AC, and have a cord with three-prong plug. They include a 13-watt compact fluorescent bulb. UL listed and CSA certified.

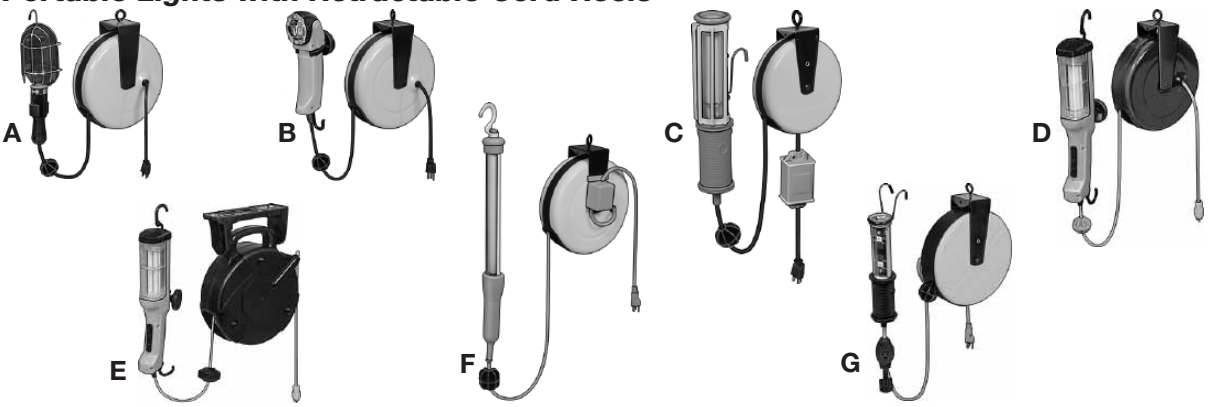
Cord		Overall		Included Bulb Brightness, lumens		
Lg., ft.	Type	Lg.	Dia.			
25	SJTOOW	13½″	2⅝″	900	1477K66	$166.60
50	SJTOOW	13½″	2⅝″	900	1477K67	185.45
Replacement Bulb					1528K51	4.11

Low-Voltage Portable Lights

Furnished with a 12-volt DC cigarette-lighter plug, this light can be powered by your vehicle or a battery pack. It has a yellow housing, a plastic lens, a switch, and includes a 13-watt compact fluorescent bulb. UL and C-UL listed.

Cord		Overall		Included Bulb Brightness, lumens		
Lg., ft.	Type	Lg.	Dia.			
20	SJTOW	13¼″	2″	900	15045K31	$58.06
Replacement Bulb					1528K51	4.11

Portable Lights with Retractable Cord Reels



Keep excess cords out of your way—the retractable cord reel locks your cord at any length and retracts it when not in use. Lights operate on 120 volts AC and have a cord with three-prong plug. They have a switch, except Style F. Mount the reel using the eye loop, except Style E has a mounting bracket. They have a plastic housing with a steel reel, except Style E has a plastic reel and Style F has a rubber housing.

Fluorescent lights last longer and generate less heat than halogen lights. **LED** lights last the longest, generate the least heat, and are the most tolerant of vibration and sudden impacts. LEDs cannot be replaced.

Style A has a steel guard and a three-prong outlet in the handle. Housing is black and reel is yellow. UL listed.

Style B has a tempered glass lens and a magnet for mounting the light. Housing and reel are yellow. UL listed.

Style C has an impact-resistant plastic lens. Housing is yellow, white, and black. Reel is white. UL and C-UL listed.

Styles D and **E** have an impact-resistant plastic lens, a magnet for mounting the light, and a three-prong outlet in the handle. They have a black and yellow housing and a black reel. ETL and C-ETL listed.

Style F has an impact-resistant plastic lens. Housing is yellow and reel is white.

Style G has an LED flashlight on the end and a three-prong outlet inline with the cord. Housing is black and reel is white. ETL and C-ETL listed.

Heavy Duty Portable Lights with Retractable Cord Reels

Made of heavy duty steel, these durable lights keep excess cords out of your way—the retractable cord reel locks your cord at any length and retracts it when not in use. Lights have a steel guard and a yellow rubber handle with a three-prong outlet. Lights have a switch, operate on 120 volts AC, and have a cord with a three-prong plug. Mounting bracket has ⅜″ dia. holes (hardware not included). UL listed and CSA certified.

Use one halogen, incandescent, or LED bulb with a medium screw-in base (sold separately on pages 710-712).

Cordless Portable Lights

Fluorescent LED

Bring light to areas that don't have an electrical power source. Lights have a switch and include a rechargeable battery and 120-volt AC charger. They have a plastic lens and handle. Bulbs are included. UL and C-UL listed. Lights cannot be sold in California or Oregon.

Compact fluorescent light has a black and yellow housing. It also includes a 12-volt DC charger with cigarette-lighter plug.

LED light lasts longer, generates less heat, and is more tolerant of vibration and sudden impacts than fluorescent lights. Housing is yellow. LEDs cannot be replaced.

Washdown Portable Lights

With Tempered Glass Lens With PTFE Lens

Completely sealed to keep dirt and water out, lights have a NEMA 4X rating to provide protection against washdowns. Lights use halogen, incandescent, or LED bulbs with a medium screw-in base and operate on 120 volts AC. They have a yellow housing. CSA certified.

Without Cord—Light has a steel guard and a rubber handle. UL listed. For cords, see page 844. For plugs, see page 820.

With Cord—Lights have an SOOW cord. Lights **with tempered glass lens** have a steel guard, rubber handle, and a three-prong plug. Lights **with PTFE lens** have a plastic handle and a two-prong plug. Lens is impact resistant. UL listed.

Bulbs are not included (see pages 710-712).

Hazardous Location Portable Lights

For Halogen, Incandescent, and LED Bulbs For Fluorescent Bulbs

These spark-resistant lights are rated for use in hazardous environments with flammable gases and combustible dust. Lights operate on 120 volts AC.

Lights **for halogen, incandescent, and LED bulbs** have a tempered glass lens, which is more durable than annealed glass. They have a plastic handle and an aluminum guard. Lights have an SOOW cord and three-prong plug. UL listed for Class I, Division 1, Groups C and D with bulbs up to 100 watts; Class II, Division 1, Groups F and G with bulbs up to 75 watts.

Lights **for fluorescent bulbs** have a glass lens, an aluminum handle, and an SOOW cord. Plugs are not included (see page 822). FM approved. Meets NEC Class I, Division 1 and 2, Group D; Class II, Division 1 and 2, Groups E, F, and G; Class III, Division 1 and 2.

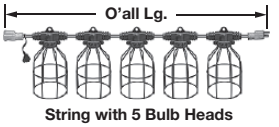
Hanging Light Strings



String with 5 Bulb Heads

A

B

A series of bulb heads are attached to a power cord to provide overhead lighting for jobsites. The cord has a plug on one end and a female connector on the other end so you can connect multiple strings to illuminate larger areas. Housing is black. Lights operate on 120 volts AC.

Light strings **for compact fluorescent, halogen, incandescent, and LED bulbs** have a plastic housing with steel guard and a three-prong plug. UL listed.

Light strings **for LED bulbs** have a plastic lens, an aluminum housing, five carabiners for hanging, and a two-prong plug. LEDs cannot be replaced. Meets IP44. ETL and C-ETL listed.

Wraparound Rope Lights

Lights are clear and have nonreplaceable bulbs spaced every inch in a 1/2″ dia. cord. They operate on 120 volts AC and have a two-prong plug. An end cap and mounting clips are included. UL listed for indoor and outdoor use.

The LED lights last longer, generate less heat, and are more tolerant of vibration and sudden impacts than incandescent lights.

Cord Lg.	Feeder Cord Lg.	Incandescent		LED	
30 ft.	5 ft.	16995K113	$54.01	16995K95	$125.43

Magnet-Mount Hanging Lights

Hang these lights by their eyelet hook or mount them to ferrous surfaces with their built-in magnet. Lens is plastic. They have a switch, operate on 120 volts AC, and have a 6-ft. cord with three-prong plug. ETL and C-ETL listed.

High-pressure sodium and **metal halide** lights last longer than halogen lights. *High-pressure sodium* lights produce yellow light, while *metal halide* lights produce white light. **Fluorescent** lights last longer and generate less heat than halogen lights. **LED** lights last the longest, generate the least heat, and are the most tolerant of vibration and sudden impacts. LEDs cannot be replaced.

Flashlights

When comparing light brightness and battery life for these flashlights, halogen lights are better than incandescent lights, krypton lights are better than halogen lights, xenon lights are better than krypton lights, while LED lights are the best.

Lights have an impact-resistant plastic lens, except Style B has a glass lens. Batteries are not included, unless noted. *Rechargeable flashlights* include a battery charger.

Style A are aluminum and have a push-button switch on the handle. Twist the head to adjust beam focus. *LED* lights have high- and low-beam, momentary, and strobe settings, except 2036K2 and K3. *Xenon* lights include a spare bulb. 2036K9 charges in 4 hours.

Style B is aluminum and has a push-button switch on the handle. Light has high-, low-, and medium-beam, momentary, and strobe settings.

Style C is rubber and has a push-button switch on the handle.

Style D are plastic and have a slide switch on the handle. 6619T3 also has a push-button switch.

Style E is plastic and has push-button switches on the handle and tail. Light has high-, low-, and medium-beam, momentary, and strobe settings. It charges in 5 hours. Cannot be sold in California or Oregon.

Style F is plastic and has a push-button switch on the handle. Light has high- and low-beam and momentary settings. It charges in 8 hours and includes a carrying strap. Cannot be sold in California or Oregon.

Style G is plastic and has a toggle switch on the head. It charges in 8 hours and includes a carrying strap and wall mounting bracket.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

Slide-to-Focus Flashlights

Slide the flashlight head forward and back with your thumb to adjust the focus with just one hand. These LED flashlights are black aluminum with a plastic lens. They have a push-button switch and high- and low-beam settings, unless otherwise stated. Batteries are included.

Style A has a tail switch. *Rechargeable flashlights* include a holster, mini USB charging cable, and wall mounting bracket.

Style B has a switch on the handle. Light has high-, low-, and medium-beam and momentary settings.

Style C has a switch on the handle. Light has momentary and strobe settings. Includes a belt ring, carrying case, and carrying strap.

Note: Battery life significantly reduced when flashlights are used at the high-beam setting.

Flashlights

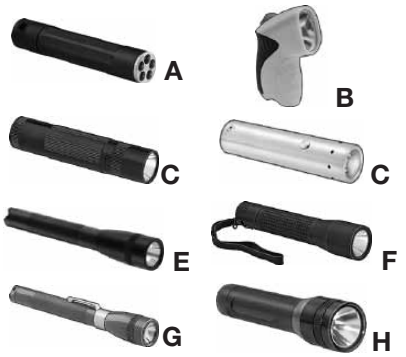
Mini Flashlights



You don't have to sacrifice brightness for a compact design—mini flashlights offer both. Batteries are included.

LED lights produce more light and consume less battery power than xenon lights.

Style A are aluminum with a glass lens. They have a push-button tail switch and a twist head. Lights have high- and low-beam and momentary settings.

Style B is plastic with an impact-resistant plastic lens. It has a slide switch on the head. Batteries cannot be replaced.

Style C is aluminum with an impact-resistant plastic lens. It has a push-button tail switch and a twist head to adjust beam focus. Light has high- and medium-beam and strobe settings.

Style D is stainless steel with an impact-resistant plastic lens. It has a push-button head switch.

Style E are aluminum with an impact-resistant plastic lens. They have a twist head to turn the light on and adjust beam focus. *LED* light includes a holster. *Xenon* light includes a spare bulb.

Style F is aluminum with a glass lens. It has high- and low-beam, momentary, and strobe settings. Light has a push-button tail switch and includes a lanyard.

Style G is aluminum with an impact-resistant plastic lens. It has a twist head to turn the light on and adjust beam focus. Light includes a pocket clip and a spare bulb.

Style H is aluminum with an impact-resistant plastic lens. It has a push-button tail switch and a twist head to adjust beam focus. Light has a momentary setting.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

Penlights

These pen-sized flashlights are small enough to fit in pockets. They have a push-button switch and an impact-resistant plastic lens. Batteries and a pocket clip are included.

LED lights produce more light and consume less battery power than incandescent lights. 6551T1 has a twist head to adjust beam focus and has high- and low-beam and momentary settings.

Incandescent light batteries cannot be replaced.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

Keychain Flashlights

The smallest flashlights we offer, these attach to a key ring. Lens is plastic. Batteries are included.

LED light produces more light and consumes less battery power than incandescent lights. It is plastic and has a push-button switch on the head. It has high- and low-beam, momentary, and strobe settings.

Incandescent light is aluminum and includes a spare bulb. It has a twist head to turn it on and adjust beam focus.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

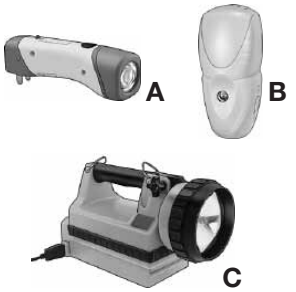
Plug-In Emergency Flashlights



When plugged in, these flashlights automatically light up when the power goes out. Lights are plastic with a plastic lens. Rechargeable batteries are included.

LED lights produce more light and consume less battery power than halogen lights.

Styles A and **B** are white and have a built-in battery charger. They charge in 24 hours. *Style A* have a push-button switch and fold-away plug. *Style B* has a slide switch and includes a night light. UL and C-UL listed. It cannot be sold in California or Oregon. **Style C** is orange, has a toggle switch, and includes a battery charger and wall mounting bracket. It charges in eight hours. CE approved.

Flexible Flashlights

Angle the flexible shaft around corners and into hard-to-reach spaces. Lights have a push-button switch and include batteries.

LED lights produce more light and consume less battery power than krypton lights.

Styles A and **B** are black aluminum and have a momentary setting. *Style A* have a glass lens and a tail switch. They include a pocket clip. *Style B* has a head switch and an impact-resistant plastic lens. It includes a magnetic clip holder.

Style C has a 2″ Lg. x 1¼″ Wd. removable mirror and a twist head. Handle is nickel-plated brass and extends from 6½″ to 30½″.

Style D is black plastic with a glass lens. It has a tail switch and includes an 18″ extension/protective cover.

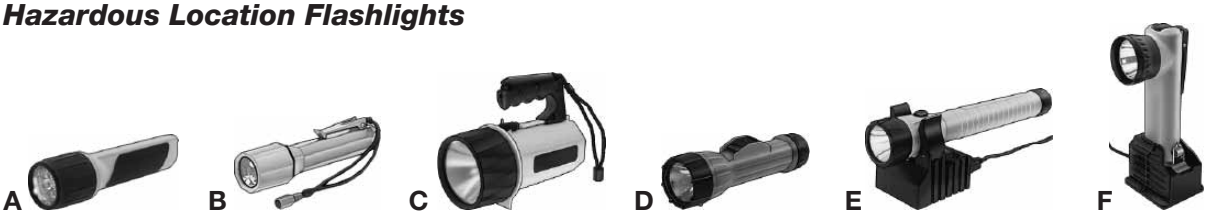
Hazardous Location Flashlights



Flashlights are rated for use in environments with flammable gases. Lights are plastic with a plastic lens. Styles A-D do not include batteries; Styles E and F include batteries and a battery charger.

LED lights produce more light and consume less battery power than incandescent and xenon lights.

Style A has a push-button switch on the tail and a momentary setting. UL listed for Class I, Division 1. UL and C-UL listed for Class I, Division 2; Class II, Division 2; Class III.

Style B have a twist head. *LED* light is ETL and C-ETL listed for Classes I, II, III, Division 1, Groups A, B, C, D, F, G. *Xenon* light is UL listed for Class I, Division 1, Groups C, D and is CSA certified.

Style C has a rotary switch on the head and has a removable handle so you can change the grip. FM approved for Class I, Division 2, Groups C, D, Temperature T1.

Style D have a slide switch on the handle and a strobe setting. UL listed for Class I, Division 1, Groups C, D; Class II, Division 1, Group G. MSHA approved nonincendive. *10-lumen* light is also UL listed for Class I, Division 2, Groups C, D; Class III, Temperature T5.

Style E has a push-button switch on the head and high-, low-, and medium-beam and strobe settings. It takes 10 hours to charge. UL listed for Class I, II, Division 1, Groups C, D, F, G; Class I, Division 2, Groups A, B, C, D; Class III, T3C.

Style F has a push-button switch on the head and high-, low-, and medium-beam and strobe settings. It takes one hour to charge. UL and C-UL listed for Class I, Division 1, Groups C, D; Class I, Division 2, Groups A, B, C, D; Class II, Division 2, Groups F, G; Class III. Meets NFPA 1901-14.11.2.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

Wear these flashlights on your head or hard hat to keep hands free for work in hazardous environments with flammable gases. Flashlights are black plastic with a plastic lens, except Style C has a glass lens. Batteries are included.

LED lights produce more light and consume less battery power than xenon lights.

Style A have a push-button switch on the head and a nylon strap. They have high- and low-beam settings. 2048K6 is UL listed for Class I, Division 1, Groups A, B, C, D. 2048K53 also has medium-beam and strobe settings. UL listed for Class I, Division 2, Groups A, B, C, D; Class II, Division 2, Groups F, G.

Style B has a push-button switch on the head and a nylon strap. It has high- and low-beam settings. UL listed for Class I, Division 2, Groups A, B, C, D; Class II, Division 2, Groups F, G.

Style C has a clip to attach flashlight to clothing as well as hard hats. UL listed for Class I, Division 1, Groups A, B, C, D.

Style D has a twist head. FM approved for Class I, Division 2, Groups A, B, C, D, Temperature T4.

Note: Battery life is significantly reduced when flashlights are used at the high-beam light setting.

Spotlights

Good for inspections and temporary lighting, these lights accommodate a spot or flood bulb. They use one compact fluorescent, halogen, incandescent, or LED PAR38 bulb with a medium screw-in base (sold separately). They have a yellow steel housing and rubber handle. Lights operate on 120 volts AC and have a cord with three-prong plug.

	Overall Dia.	Overall Lg.		
Light with 25-ft. Cord	5½″	11⅞″	8408K22	$139.15

Low-Voltage Spotlights

Furnished with a 6-ft. power cord with cigarette-lighter plug, this halogen spotlight operates while plugged into your vehicle. When unplugged, it can run for up to 30 min. on its own 12-volt battery. It charges in six hours with the included battery charger. Light has a black plastic housing with a plastic lens and a push-button tail switch.

Spotlights & Lightsticks

Wet-Location Spotlights

Spotlight with Retractable Cord Reel

Lights are completely sealed to keep moisture out. They have a black plastic housing with a plastic lens and plastic handle. Lights have a switch on the handle, operate on 120 volts AC, and have a cord with three-prong plug. They include a 30-watt incandescent PAR36 bulb and a transformer.

Spotlights with retractable cord reels have a steel reel with a white finish.

Battery-Operated Lightsticks

180° Light

360° Light

These reusable lightsticks turn on and off with the twist of the base. Lightsticks are black plastic with a plastic lens and are 5⅛″ Lg. × 1⅛″ Dia. They require two AA batteries (not included). Battery life is 50 hours.

180° lightsticks have almost twice the light output of the 360° lightsticks.

360° lightsticks provide area-wide illumination.

Light Spread	Choose a Color		
180°	Blue, Green, Orange, Red, White, Yellow	5716T1	$30.91
360°	Blue, Green, Orange, Red, White, Yellow	5716T2	33.13

Vehicle-Mount Spotlights

Screw Mount

Screw Mount with Handle Control

Magnetic Mount

Illuminate any spot around your vehicle. Lights rotate 360° horizontally and 180° vertically. All operate on 12 VDC. Bulb is included.

Screw-Mount Spotlight— Made of chrome-plated brass/zinc. Light has a switch, a 5-ft. 16-ga. wire lead, and a 3″ dia. screw-mount bracket (fasteners included).

Screw-Mount Spotlight with Handle Control— Aim the spotlight from inside your vehicle with the interior control handle and fingertip switch. Head is plastic; shaft is metal. Shaft length inside vehicle is 7⅛″. Includes a 6-ft. 16-ga. wire lead, a roof bracket (fasteners included), and a mounting template.

Magnetic-Mount Spotlight— Base is magnetic for easy mounting and removal on metal surfaces. Made of chrome steel. Light has a switch and a 10-ft. cord with 12-volt cigarette-lighter plug.

10-ft. extension cable for magnetic-mount spotlight has a 12-volt cigarette-lighter plug.

About Batteries

When choosing a battery, you can compare the **capacity** among similar sizes. The higher the rating, the longer the battery should last. If you know the milliamp draw of your device, the capacity will give you an estimate of battery life.

Note: For many batteries, recycling or other proper disposal is required by law. They should not be thrown in the trash. For rechargeable batteries, visit www.call2recycle.org or call 1-877-2-RECYCLE. For all other batteries, contact the manufacturer.

Don't see the battery you need? Just tell us what you're looking for and we'll get it for you.

Disposable Batteries

Alkaline batteries offer a good balance of longevity, cost, and performance in low-drain devices such as clocks and radios.
Carbon zinc batteries are an economical choice and are especially suited to low-drain devices such as clocks and radios.
Lithium batteries are lightweight and long lasting. They work well in high-drain devices such as digital cameras.

Batteries

All have a button-top connection, except 9-volt batteries have a snap-on connection.

Extreme-Temperature Disposable Batteries

Designed for long life, these batteries maintain performance in low-to-high temperature environments. They also resist humidity. These lithium batteries are lightweight and long lasting. They have a button-top connection, unless noted.
For Continuous Use—Power devices with low, long-term energy needs such as sensors and memory backup.
For High-Demand Use—Use in alarms, metering systems, and other equipment with high energy needs.

Long Shelf-Life Rechargeable Batteries

These nickel metal hydride (NiMH) batteries last longer than alkaline batteries, and recharging without completely draining them does not affect battery life. Shipped fully charged, they hold their charge even after months on your shelf. Each has a button-top connection. Ideal for use in high-drain devices such as digital cameras.

Chargers have a two-prong plug and operate on 120V AC at 60 Hz. They charge batteries in 12 hours. Include four AA batteries. They are ETL and C-ETL listed.

Battery Recycling Container

Dispose of your dead batteries with ease. These plastic buckets hold up to 55 lbs. of dry-cell batteries including alkaline, nickel, cadmium, nickel metal hydride, iron, zinc carbon, and silver. The price of the container includes pickup and transportation costs, as well as a certificate of recycling once the batteries are received and recycled.

Cap., lbs.		
25	8393K2	$123.61
55	8393K1	164.69

Don't see the battery you need? Just tell us what you're looking for and we'll get it for you.

Rechargeable Battery Packs

Side-by-Side

4 Wide × 1 Deep

5 Wide × 2 Deep

Stacked End-to-End

2 High × 1 Wide | 2 High × 2 Wide

Battery cells are wired together for use in portable devices. All have a solder connection.
Nickel cadmium (NiCad) batteries should be drained completely before recharging for maximum battery life.
Nickel metal hydride (NiMH) batteries last longer than nickel cadmium batteries, and recharging without completely draining them does not affect battery life.

Backup Batteries for Mobile Devices

Always have backup power for your mobile devices. Recharge these batteries by plugging the included USB cord into a computer or charger (not included). The cord is backward compatible, so it works with cords and connectors that meet the same or a lower USB standard. For maximum battery life, recharge these lithium ion (Li-Ion) batteries before they are drained completely. All have an LED charge status indicator.

Batteries for USB devices work with any USB-powered device. Plug devices into the USB ports to power and charge them.

Batteries for Apple iPhone smartphones are built into ultra-thin protective cases that snap onto your smartphone.

Disposable Lantern Batteries

Run flashlights and barricade lights as well as lanterns.

Alkaline batteries offer a good balance of longevity, cost, and performance.

Carbon zinc batteries are an economical choice.

Disposable Long-Life Lantern Batteries

Change batteries less often—these last at least two times longer than standard disposable lantern batteries. They power barricade lights, lanterns, and telecommunications devices. Because they are alkaline air batteries, they require oxygen to create power. Activate by removing the tape from the holes in the battery case, allowing oxygen to flow inside. They maintain voltage at a constant level, even during power peaks and pulses that can temporarily drain the oxygen. Mountable in any position with access to air. **12-volt battery** has a 3 mm negative and a 4 mm positive socket connection.

With Screw Terminal

Rechargeable Lightweight Fast-Charging Large-Cell Batteries

A step up from sealed lead-acid batteries, these lithium ion batteries weigh less than half as much and charge more quickly. Maintenance free and mountable in any position, they're a good choice for uninterruptible power supplies (UPS) and emergency lights. They charge in about two hours and can be recharged thousands of times.

Chargers (sold separately) automatically switch from fast charging to maintaining the charge level, so they won't overcharge and damage the battery. They have a charge status indicator, a 4-ft. power cord with two-prong plug, and 4-ft. leads with sheathed alligator clips. Chargers operate on 120/240V AC @ 50/60 Hz. They charge batteries in two hours. These chargers cannot be sold in California or Oregon.

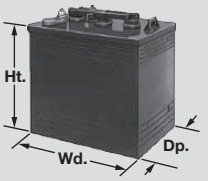
Selecting the Right Large-Cell Battery

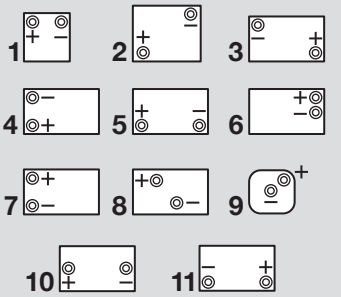
When choosing a large-cell battery, make sure the terminal location and polarity as well as the battery connection work with your application.



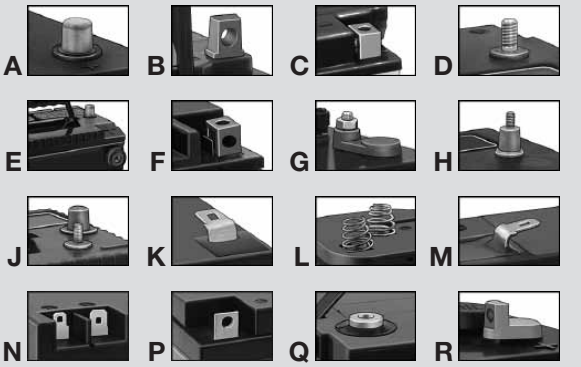
Rechargeable Large-Cell Battery

Rechargeable Maintenance-Free Large-Cell Battery

Terminal Locations and Polarity



Battery Connections



Rechargeable Large-Cell Batteries

Also known as wet-cell lead-acid batteries, occasionally these may need to be filled with distilled water. The electrolyte is in an unsealed container, so they must be mounted upright.

For Starting—Deliver a surge of power to start automobiles and other vehicles.

For Continuous Use—For use in floor-cleaning machines, lift trucks, personnel carriers, and other vehicles that require power over a long time, these deep-cycle batteries can handle many charge/deep discharge cycles.

For Starting and Continuous Use—These dual-purpose batteries provide a surge of power to start automobiles and other vehicles, and they also deliver power over a long time. They're deep cycle, so they can handle many charge/deep discharge cycles.

Cold cranking amps is the discharge load a new, fully charged battery can continuously deliver for 30 seconds at 0° F. *Reserve capacity* is how many minutes a new, fully charged battery can be continuously discharged at 25 amps at 80° F. *Marine cranking amps* is the discharge load a new, fully charged battery can continuously deliver for 30 seconds at 32° F.

Warning: Batteries should always be charged or discharged in a ventilated area.

Rechargeable Maintenance-Free Large-Cell Batteries

More leak resistant than standard rechargeable large-cell batteries, these have an absorbed glass mat (AGM) that soaks up the electrolyte, making them usable in any position except upside down. They are also known as sealed lead-acid batteries.

For Starting—Start automobiles and other vehicles with a surge of power.

For Continuous Use—Provide backup power for emergency lights, alarm systems, uninterruptible power supplies (UPS) for computers, and other systems that require power over a long time. **Long-life continuous use** batteries last at least twice as long as standard continuous use batteries. **Chargers** (sold separately) automatically switch from fast charging to maintaining the charge level, so they won't overcharge and damage the battery. They have a charge status indicator, a two-prong plug, and 3-ft. leads with sheathed alligator clips. They operate on 120/240V AC at 50/60 Hz, except chargers with 10A charging current operate on 120V AC at 60 Hz. Chargers with 1A and 1.8A charging current are UL recognized. Chargers cannot be sold in California or Oregon, except 7448K68.

For Starting and Continuous Use—These batteries can be used to deliver a surge of power for starting vehicles, and they are deep-cycle batteries that can deliver power over a long time and handle many charge/deep discharge cycles. *Cold cranking amps* is the discharge load a new, fully charged battery can continuously deliver for 30 seconds at 0° F. *Reserve capacity* is how many minutes a new, fully charged battery can be continuously discharged at 25 amps at 80° F. *Marine cranking amps* is the discharge load a new, fully charged battery can continuously deliver for 30 seconds at 32° F.

Warning: Batteries should always be charged or discharged in a ventilated area.

Solar Panel Chargers for Large-Cell Batteries

Rigid Panel

Flexible Panel

When utility power isn't available, you can still charge your batteries. Use with wet- and AGM dry-cell lead-acid batteries. Increase amp output by wiring panels in parallel.

Rigid panels have a built-in controller that prevents overcharging by shutting off the charger when the battery is fully charged. They have a 6-ft. output cable with two-pin SAE connector and 5-ft. leads with sheathed alligator clips. These panels mount to flat surfaces; mounting fasteners are included.

Flexible panels power 12-volt devices in addition to trickle charging batteries—they continuously provide a low-level charge after the battery is fully charged. They conform to curved surfaces and roll for storage. Wire panels in series to increase voltage output. Backing is made of vinyl. They have a pin-and-socket connection and 15-ft. leads with 3/8″ and 5/16″ ring terminals. Mount using 3/8″ diameter holes; fasteners not included.

Accessories—*18″ battery post adapter cord* has 5/16″ ring terminals. *12-ft. extension cord* has a two-pin SAE connector.

Battery-Powered Starters

12 Volt

12/24 Volt

Jump-start batteries at sites without an AC power source. These portable starters have LED charge status indicators and an outlet to power/charge DC power tools and work lights. Use with wet- and AGM dry-cell lead-acid batteries. Recharge starters using the DC adapter cord with cigarette lighter plug or by plugging them into a 120V AC, 60 Hz outlet.

12-volt starter is powered by a 12-volt battery (included) and has a 4-ft. power cord with a two-prong plug.

12/24-volt starter runs on two 12-volt, 22 amp-hour batteries (included). Turn the knob to switch between 12 and 24 volts. It does not include a power cord; use an extension cord with two-prong plug.

Starter

Chargers for Large-Cell Batteries

A

B

To prevent overcharging, these chargers switch modes to maintain the charge level after the battery is fully charged. All have LED charge status indicators and reverse polarity protection. They operate on 120V AC @ 60 Hz.

Automatic charger has a 6-ft. power cord with two-prong plug, a 5-ft. output cable with two-pin SAE connector, 18″ leads with 5/16″ ring terminals and 18″ leads with clamps. Use with wet- and AGM dry-cell lead-acid batteries.

Waterproof automatic chargers have a sealed housing, a 6-ft. power cord with three-prong plug, a 4-ft. output cable with two-pin SAE connector, and 18″ leads with 5/16″ ring terminals. Mount using 3/16″ diameter holes (fasteners not included). Use with wet- and AGM dry-cell lead-acid batteries. They are UL listed.

Harsh-environment automatic chargers have a sealed housing that resists water and dirt, a 2-ft. power cord with three-prong plug, and 6-ft. leads with 3/8″ ring terminals. Mount using 3/8″ diameter holes (fasteners not included). Use with wet-cell lead-acid batteries.

Hand-Held Chargers and Charger/Starters for Large-Cell Batteries

A

B

C

To prevent overcharging, these chargers switch modes to maintain the charge level after the battery is fully charged. They operate on 120V AC @ 60 Hz and have a power cord with a three-prong plug, except 1458K5 and 7206K42 have a two-prong plug. All have a charge status indicator. They have reverse polarity protection, except 7558K68 and 7558K69 do not. *Style A* is UL listed.

Automatic chargers are for use with wet- and AGM dry-cell lead-acid batteries, except 7206K51 is for use with wet-cell lead-acid batteries only.

Automatic chargers with dual-polarity connections automatically select the correct polarity so you can connect either clamp to the negative or positive terminals. They are for use with wet-cell lead-acid batteries.

Automatic charger/starter can jump or charge batteries. It is for use with wet- and AGM dry-cell lead-acid batteries.

Waterproof automatic chargers keep water out with the sealed housing so you can charge batteries even in wet environments. They have auto shut-off, electronic-overload protection, and thermal protection. They are for use with wet-cell lead-acid batteries. These chargers cannot be sold in California or Oregon.

Roll-Around Charger/Starters for Large-Cell Batteries

For jumping batteries, these charger/starters provide higher starting currents than Hand-Held Charger/Starters for Large-Cell Batteries. They have a three-prong plug and operate on 120V AC @ 60 Hz, except 7322K52 has a continental European two-prong plug and operates on 240V AC @ 50/60 Hz. They have plastic wheels, except 1269K1 has rubber wheels.

Indoor Charger/Starters—All have a 2¼-hour timer, a hold position for continuous charging, and overload protection. Use with wet- and AGM dry-cell lead-acid batteries. They are UL listed. 7173K21 has a voltmeter. *Charger/starter with load tester* checks how well a battery handles a load to see if the battery needs to be replaced. 7173K21 and 7173K25 cannot be sold in California or Oregon.

Outdoor Charger/Starters—All have a 1½-hour timer, an ammeter, a hold position for continuous charging, and reverse polarity protection. Use with wet-cell lead-acid batteries. 7322K48 is CSA certified, 7322K51 is UL listed, and 7322K52 is CE marked.

Outdoor Automatic Charger/Starter—After the battery is fully charged, this charger/starter switches modes to maintain the charge level. For extended servicing of forklifts and other 12-volt industrial equipment, use this charger/starter as a stable power supply. It has an ammeter, reverse polarity protection, and auto shut-off. Use with wet- and AGM dry-cell lead-acid batteries. It is UL listed.

Industrial Vehicle Battery Chargers

Designed to charge batteries in lift trucks, pallet jacks, and order pickers. These chargers automatically shut off when battery is fully charged to avoid overcharging. They have a charge status indicator, an ammeter, an 8-ft. battery connection cord with a 175-amp North American style connector, and a 7-ft. power cord with a three-prong plug. They operate on 120V AC @ 60 Hz. Use with wet-cell lead-acid batteries.

Battery-Testing Density and Concentration Meters

Check the condition of battery fluid by testing its state of charge. Use the scale to measure specific gravity.

Battery-Testing Density Meters

4058K81

4058K21

4058K11

Meter with specific gravity range of 1.1 to 1.35 can withstand drops as high as 10 feet.

Meter with built-in thermometer compensates for temperature variations for more accurate readings.

	Specific Gravity Range		
Plastic Body	1.1 to 1.3	4058K81	$7.02
Plastic Body	1.1 to 1.35	4058K21	56.00
Glass Body with Built-In Thermometer	1.1 to 1.3	4058K11	11.16

Concentration Meters

Also known as refractometers, these measure concentration with two or three drops of a solution. Place your sample on the reflecting prism and look through the eyepiece to view the concentration on the internal scale. Meters also measure the freezing point of propylene glycol and ethylene glycol. They are nickel-plated brass and come in a plastic case. Length is 7″.

Freezing-Point Range	Specific Gravity Range		
-60° to 32° F	1.15 to 1.3	7718K2	$97.90
-50° to 0° C	1.15 to 1.3	7718K1	114.08

Multiple-Battery Chargers

Charge up to eight 12-volt, 2- to 12-amp batteries at once, then monitor each to ensure it stays fully charged. Charger is 12″ Ht. × 19″ Wd. × 12″ Dp. and has eight detachable 6-ft. cords with booster clamps, one 6-ft. power cord with three-prong plug, and digital charge status indicator. It operates on 120V AC @ 60 Hz. Use with wet- and AGM dry-cell lead-acid batteries.

7318K31 ..... $594.67

Battery Water-Filling Equipment

Filler with Flexible Nozzle

Filler with Rigid Nozzle

Water-Filling Cart

Vent Cap

Water-Filling Gun

Add distilled water to wet-cell lead-acid batteries to maintain performance.

Fillers are polyethylene. *72-oz. capacity filler* has auto shut-off to prevent overfilling.

Water-filling gun has a ⅝″ Dia. × 9¼″ Lg. bent-end nozzle, auto shut-off, and a built-in regulator that reduces high water pressure to 1.7 gpm. It attaches to a ¾″ GHT (garden hose thread) hose or water-filling cart (sold separately) to fill batteries in hard-to-reach spaces. Made of ABS plastic. *Replacement couplings* (sold separately) include six ¾″ GHT quick-disconnect couplings with check valve.

Water-filling cart has a 10-gallon polypropylene tank, a battery-powered pump with shut-off switch, and a 9-ft. hose that attaches to a water-filling gun (sold separately). It's 37″ Ht. × 17″ Wd. × 17″ Dp. and has two wheels. Cart includes a 12-volt rechargeable AGM dry-cell lead-acid battery and a charger with a 6-ft. power cord and two-prong plug.

Vent cap flips open so you can check the water level and fill a wet-cell lead-acid battery. It attaches to quarter-turn bayonet battery vent openings. Cap has a 1″ ID and is made of polypropylene with an EPDM rubber washer for a tight seal.

6-oz. Filler with 6″ Flexible Nozzle	7656K3	$3.54
72-oz. Filler with 2½″ Rigid Nozzle	7663K1	21.53

Vent Cap (Pkg. of 6)	7045K8	11.76

Large-Cell Battery Surge Protector/Charge Monitors

See the charge level of your 12-volt battery while protecting it from power surges. This monitor also checks the condition of your charging system. It has a charge status indicator and mounts easily to the top of your battery with the attached adhesive backing. Monitor is 1¾″ Ht. × 2¼″ Wd. × 1″ Dp. and includes 20″ wire leads with ⅜″ diameter ring terminal connections. Use with wet- and AGM dry-cell lead-acid batteries.

4261T11	$26.32

Rechargeable Large-Cell Battery Monitors

Install on lift trucks and other electric vehicles to show battery condition. These monitors also have a 6-digit hour meter that tracks use throughout the life of the battery. They have a low discharge indicator that flashes at 70% discharge and indicates empty at 80% discharge. Accuracy is ±1%.

They're 2″ Dia. × 2 3/16″ Dp., fit a 2 1/16″ dia. panel cutout, and include quick-disconnect terminals with a tab size of 0.25″ Wd. × 0.032″ Thick.

For Battery Voltage		
12	71165K71	$125.71
24/36	71165K72	125.71
36/48	71165K73	125.71

Battery Selector Switch

Alternate between two batteries without interrupting your power. Switch has a polycarbonate housing and three ⅜″ dia. tin-plated copper stud terminals with hex nuts. Surface mount using the ¼″ dia. mounting holes or panel mount in a 5⅝″ dia. cutout.

Switch is rated 32 VDC and has a maximum 350-amp continuous rating when used with 4/0 AWG battery cables. It's 3.9″ Ht. × 3.9″ Wd. × 3.1″ Dp. and for use in marine applications. UL listed.

69685K61	$48.01

Large-Cell Battery Trays and Hold-Downs

Trays

Drain slots prevent fluid accumulation. Trays hold one battery at a time. They are vinyl-coated steel.

Fits Battery BCI Group	Wd.	Dp.		
1, 2, 17, 22, 23, 24, 42, 54, 55, 56, 72, 74	11″	7½″	7731K4	$9.65

Flush	8⅝″ to 14¾″	7764K3	9.48	7764K6	9.48

Battery Load Testers for Large-Cell Batteries

Load Tester

Adjustable Load Tester

See how well a starting battery handles a load. These testers measure the capacity and cold cranking amps as indicators of the battery's health. All include booster cables with clamps. Use with wet- and AGM dry-cell lead-acid batteries.

Load Testers— Apply a fixed load to small engine batteries that draw up to 125 amps. 7579K23 includes side terminal adapters. 7579K41 offers two fixed loads and is better for testing smaller batteries that draw up to 60 amps.

Load Tester with Alternator Test Lead— In addition to applying a fixed load to small engine batteries that draw up to 125 amps, this tester has a 4-ft. test lead to check for defective alternator diodes. It has side terminal adapters.

Adjustable Load Tester— Test large engine batteries that draw up to 500 amps. Turn the dial to vary the load applied to the battery to see how it performs at different loads.

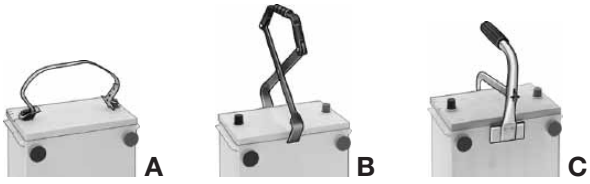
Voltage and Conductivity Testers for Large-Cell Batteries

Measure the voltage of your batteries as well as the current they can supply to check battery health. Use on 6- and 12-volt wet- and AGM dry-cell lead-acid batteries with 1.2 to 55 amp-hour capacity. Tester measures voltage from 6- to 14-volt DC and conductance from 20 to 1,200 siemens. It's 7½″ Ht. × 3½″ Wd. × 2″ Dp. It has an LED display and 12″ leads with sheathed alligator clips.

4863T11	$325.28

Hand-Held Battery Carriers



Add a handle to a large-cell battery to lift and move it.

Style A is for use with top-post terminal batteries. It is plastic.

Styles B and **C** are for use with top- and side-post terminal batteries. They are steel with a plastic handle. *Style B* has spring-action jaws; as you lift the battery, the grip increases. The handle provides a nonslip grip. *Style C* has an adjustable handle and two rubber pads.

Warning: Never use to lift items over people.

	For Max. Battery Post Spacing	For Battery Wd.

C	—	4½″-7″	69985K79	18.44

Battery Terminal Fasteners, Protectors, and Adapters

Square Head Bolts with Shoulder Nuts

Use with battery terminal clamps. Bolt size is 5/16″-18 × 1 1/4″. Made of steel with a corrosion-resistant coating.

		Pkg. of 10
Negative (Black)	7752K211	$12.50
Positive (Red)	7752K212	12.50

Side Terminal Bolt

Bolt size is 3/8″-16 × 13/32″. Made of zinc-plated steel.

	Pkg. of 10
7752K23	$11.50

Protectors

Cover battery terminals to protect against corrosion and dirt. Thread size is 3/8″-16. Made of stainless steel.

Negative (Black)	7752K241	$3.17
Positive (Red)	7752K242	3.17

Side Terminal Adapter Bolt with Stud

Use this adapter to power two accessories with the same battery. Bolt size is 3/8″-16 × 1″. Stud size is 5/16″-18 × 1/2″. Made of brass with a zinc-plated steel nut and washer.

7752K31	$10.10

Stud Terminal to Post Terminal Converters

Made of lead with a 3/8″-16 threaded insert. Includes two adapters—one for a negative terminal and one for a positive terminal.

	Pair
7752K41	$6.08

Side Terminal to Post Terminal Converters

Made of lead with a steel stud. Thread size is 3/8″-16 × 5/16″. Includes two adapters—one for a negative terminal and one for a positive terminal.

	Pair
7752K42	$6.85

Mil. Spec. Terminal Fasteners

Clamp is made of lead and includes zinc-plated steel nuts and bolts. Thread size is 3/8″-16 × 1 1/4″. Meet MIL-A-52425-1/A-52425-2.

Negative (Black)	7738K2	$5.06
Positive (Red)	7738K1	5.06

Marine Terminal Clamps

These clamps fit both negative and positive terminals.

With 5/16″ Stud	69645K59	$3.42
With 3/8″ Stud	69645K58	3.60

Terminal- and Lug-Crimping Tools

Hammer Style

Compact and economical, this tool crimps 8 to 4/0 AWG battery terminal clamps and lugs. Raise the pin to place connector and cable in slot, then hammer the top of the pin to crimp. Tool is 3 1/2″ Ht. × 2 1/4″ Wd. × 2 1/4″ Dp. and has a malleable iron body and hardened steel pin.

7061K12	$37.50

Lever Style

Adjustable rotating dies provide more consistent crimps than hammer style. Dies are coded to match battery cable and connector. Made of heat-treated carbon steel with vinyl grips.

With Ratchet—Tool won't open until fully crimped.

O'all Lg.	Connector Range	Without Ratchet		With Ratchet	
15″	8 AWG to 1/0 AWG	7061K25	$163.80

Battery Terminal Corrosion Preventatives

Extend battery life, reduce maintenance costs, and protect exposed parts from moisture, dirt, and other contaminants.

Felt Washers—Impregnated with a corrosion preventative to stop corrosion caused by battery acid fumes leaking at the post or bolt. Washers fit top- and side-mount terminals and are 1 3/4″ OD × 11/16″ ID × 1/8″ Thick.

Cleaner—Neutralizes acid and dissolves and removes corrosion. Use on batteries prior to applying washers and coating.

Cleaner and Acid Detector—You'll know acid is present when this yellow foam turns pink. It neutralizes and cleans it away.

Coatings—Form a protective barrier that makes surfaces impregnable to corrosion-causing acid fumes.

		Pkg.

Battery Terminal Brushes and Tools

Knob-Handle Brush

Straight-Handle Brush

Spreader/Cleaner

Clamp Puller

Knob-Handle Brush—Bristles made of steel and brass clean battery top posts and terminals. Includes a cover.

7455K5	$5.79

Straight-Handle Brush—Has stainless steel brush to clean side terminals and battery contacts.

7455K8	$9.98

Spreader/Cleaner—Spreads clamp and cleans the terminal all at once. This spreader/cleaner is also known as a battery reamer. Made of steel.

7455K4	$14.54

Clamp Puller—Removes corroded terminals. It's made of steel and has a 1 1/2″ jaw spread and 1 3/4″ jaw depth.

7455K3	$7.58

Battery Boxes

Polypropylene

Protect batteries from dirt, debris, and water.
Polypropylene boxes include a tie-down, screws, and a mounting bracket.
Polyethylene boxes do not include mounting hardware.

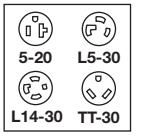
Portable Generators

Pull Start

Gasoline-Fueled Electric Start



Outlet NEMA Styles

The overhead-valve engine in these generators is cool running and fuel efficient. The 5-20 outlets are GFCI.
Gasoline-fueled generators include wheels. The e*lectric-start* generator includes a 12-volt battery.
Diesel-fueled generator shuts down when it is low on oil to protect the engine. A 12-volt battery is required (sold separately). Wheels and handle are sold separately.

Batteries and Chargers for DeWalt Cordless Tools

These DeWalt batteries and chargers are not interchangeable with other brands.

Batteries

Switch your DeWalt nickel cadmium (NiCad) battery for a lighter DeWalt lithium ion (Li-Ion) battery—DeWalt batteries can be used interchangeably in all DeWalt tools except Univolt tools. They are not interchangeable with other brands.
Nickel cadmium (NiCad) batteries should be drained completely before recharging for maximum battery life.
Lithium ion (Li-Ion) batteries achieve maximum battery life when they are recharged before they are drained completely.

500	7178K12	$26.23
800	7178K9	30.80

Battery Terminal Connectors

A color-coded barrel identifies clamps and lugs by AWG size.

Clamps secure to unthreaded battery terminals by tightening the included nut and bolt except for side-post clamps, which attach to internally threaded battery terminals. **To Order:** Please specify for negative (black) or positive (red) battery terminal connection.

Lugs are typically used on threaded terminals and require a nut (not included) to secure to the terminal.

Crimp or Solder Style—Made of tin-plated copper.

Connect to cable with a crimping tool or by soldering. UL listed. *Note:* UL listed products are only UL listed if crimped.

Antirotational lugs have serrations on both sides to lock them in place.

For Wire Size (AWG)	*Left Elbow Clamps*		*Right Elbow Clamps*		*Flag Clamps*

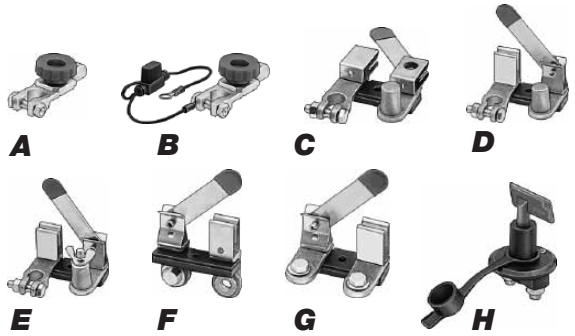
Battery Disconnect Switches



Stop battery drain and prevent theft and unauthorized use. Switches are made of copper and brass except Styles A and B, which are brass only. For *Styles C-G,* flip the lever to stop the current (lever extends 3″). *Style H* has a key.

(A&B) Install on a negative battery post. Turn the knob to disconnect the battery. *Style B* has a fused bypass to maintain trickle current to accessories such as radios and computers.

(C-E) Install on a negative battery post. *Style E* has a threaded post and a wing nut that also accommodates lugs.

(F) Attaches directly to negative side terminals.

(G) Ideal in space-restricted areas or where a battery box prevents normal mounting to battery posts. Mount switch in a remote location, run a new battery cable to switch, and connect battery cable to post on switch. Mounting hole is 1/4″ dia.

(H) A removable key prevents unauthorized use; turn 90° to connect or disconnect the battery. Switch has two keys, a waterproof cover, and 3/16″ dia. mounting holes.

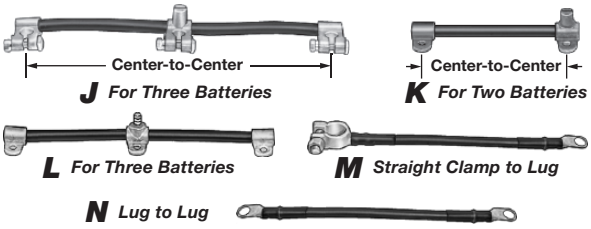
Battery Cables with Fittings



Get maximum conductivity from these copper cables that are insulated with oil-resistant PVC. Temperature range is –40° to +221° F. **To Order:** Please specify black (negative) or red (positive).

Styles J-L allow you to wire two or three batteries in parallel for maximum starting power. Connect the positive terminals together and the negative terminals together to get the combined amp-hours of the batteries (voltage remains the same). All have lead connectors. *Style J* has flag clamps with post connection. *Style K* has lugs with post connection. *Style L* has lugs with 3/8″ dia. stud.

Styles M and ***N*** allow you to connect batteries either to electrical systems or to each other. Clamps and lugs are tin-plated copper; lugs have a 3/8″ dia stud.

For battery cable without fittings, see 6948K on page 837.

Battery Charging Cable Connectors

High-amp battery charging is no problem for these connectors.

North American Style Connectors

No need to distinguish between male and female—any two connectors of the same size and color will fit together. You'll need two to make a connection. Designed for use with industrial battery cable and battery charger cable, connectors are polycarbonate with two copper contacts. The amps listed below are based on the largest wire size shown. UL recognized.

To Order: For battery connectors, please specify wire size and color. For replacement contacts, please specify AWG size.

Amps	Available Wire Sizes (AWG)	Available Colors	O'all Size Lg.	O'all Size Wd.	O'all Size Ht.	Connectors	Connectors Each	Repl. Contacts	Repl. Contacts Pair
50	12-10, 6	Black, Blue, Gray, Red	1.9″	1.4″	0.6″	7043K21	$8.27	7043K41	$4.20
120	6, 4, 2	Gray	2.5″	1.9″	0.8″	7043K22	12.64	7043K42	7.53
175	6, 4, 2, 1/0	Blue, Gray, Orange, Red, Yellow	3.1″	2.2″	1.0″	7043K23	15.04	7043K46	10.73
350	1/0, 2/0, 3/0, 4/0	Blue, Gray, Green, Orange, Red, Yellow	4.3″	2.8″	1.3″	7043K24	24.31	7043K52	16.90

Optional handles include mounting screws.

Fits Connector Size (amps)	Handle Material		Each
50	Vinyl-Coated Steel	7043K87	$6.03
50 and 120	Polycarbonate	7043K86	5.59
175 and 350	Vinyl-Coated Steel	7043K88	14.63

Optional dust covers protect the connector end when not in use. Covers for *50-* and *120-amp connectors* are rubber.

To Order: For *175-* and *350-amp connector* covers, please specify color of battery connector. Covers for blue, gray, and red connectors are nylon; covers for green, orange, and yellow connectors are rubber.

Fits Connector Size (amps)		Each
50	7043K15	$3.91
120	7043K14	6.56

Fits Connector Size (amps)		Each
175	7043K26	6.73
350	7043K28	9.57

Euro Style Connectors

Designed for use with European industrial vehicles, these connectors are CE approved and meet DIN 43589. You'll need a female and a male to make a complete connection. All connectors are made of black nylon and have two copper contacts. ***320-amp connectors*** come with a handle.

Optional handles are black nylon and include mounting screws.

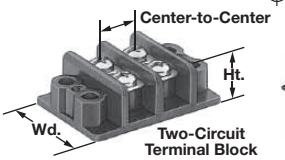
Terminal Blocks



Two-Circuit Terminal Block

Cover for Two-Circuit Terminal Block

Marker Strip for Two-Circuit Terminal Block

Jumper

Quick Disconnect

45° Quick Disconnect

90° Quick Disconnect

Mount blocks to a panel or the surface of your machine and connect multiple wires. Also known as barrier terminal strips, blocks have screw terminals and four mounting holes (screws not included). Maximum temperature is 302° F, except 3/8″ and 7/16″ center-to-center blocks have a maximum temperature of 257° F. Color is black. UL recognized, CSA certified, and CE marked.

Accessories—*Covers* protect the top of the block and prevent accidental contact with a live circuit. They include mounting clips to place between the block and its mounting screws. Color is black. *Marker strips* extend from underneath the blocks to provide a blank space for labeling. Color is black. *Jumpers* connect side-by-side terminals. *Quick disconnects* convert screw terminal connections into 0.25″ wide quick-disconnect connections, except disconnects for 3/8″ center-to-center blocks are 0.187″ wide.

Also Available: Multicircuit jumpers. Please ask for 7527K991 and specify for terminal blocks with 3/8″ or 7/16″ center-to-center, as well as the number of circuits.

Space Saver Terminal Blocks

A single row of screw terminals fits in narrow spaces. These blocks are also known as barrier terminal strips. Color is black. Maximum temperature is 302° F. UL recognized, CSA certified, and CE marked.

3/8″ center-to-center blocks have #5 screw terminals and two 0.17″ dia. mounting holes (screws not included).

9/16″ center-to-center blocks have #8 screw terminals and two 0.21″ dia. mounting holes (screws not included).

Note: Voltage ratings in the table apply only when the included insulation strip is attached to the bottom of the block.

Touch-Safe Terminal Blocks

Recessed screws prevent accidental contact with a live circuit—without the need for an additional cover. Blocks have screw-clamp terminals and can be cut into smaller sections. There is a mounting hole between every circuit (screws not included). Blocks are white. Maximum temperature is 221° F. UL recognized and CSA certified.

Pluggable Touch-Safe Terminal Blocks

Combine a plug and a receptacle to form a terminal block—the two-piece design allows quick disconnection for equipment repairs. The screws and terminals are recessed to prevent accidental contact with a live circuit without the need for additional covers. Blocks have screw-clamp terminals and can be cut into smaller sections. There is a 0.13″ dia. mounting hole between every circuit (screws not included). Color is white. Maximum temperature is 221° F. UL and C-UL recognized.

Quick and Secure Connect Terminal Blocks

Try blocks with spring-clamp terminals for faster wire installation than screw clamps. Push wire into the spring clamp for a secure connection that withstands vibration and temperature changes better than screw terminal connections. There are four terminals for every circuit and a 0.13″ dia. mounting hole between each circuit (screws not included). Temperature range is –31° to 221° F. UL recognized and CSA certified. **Optional DIN-rail adapter** allows you to mount blocks to 35 mm DIN rail. Two adapters per block are required, except the two-circuit blocks need only one adapter.

High-Amp Terminal Blocks

Blocks have higher amp ratings than ordinary terminal blocks to handle demanding applications. All have screw-clamp terminals. Color is black. Maximum temperature is 302° F. UL recognized, CSA certified, and CE marked.

7/16″ center-to-center blocks have two 0.22″ dia. mounting holes (screws not included).

5/8″ center-to-center blocks have a 0.18″ dia. mounting hole between each circuit (screws not included).

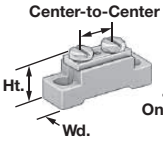
High-Temperature Terminal Blocks



Blocks are made of ceramic to withstand elevated temperatures.
460° F blocks have #10 screw terminals. Color is off-white. Mounting screws are not included.
840° F blocks have #8 screw terminals. Color is off-white. Mounting screws are included.
1110° F blocks have recessed screw-clamp terminals to prevent accidental contact with a live circuit. Color is white. Mounting screws are not included. *1-, 2-,* and *3-circuit* blocks are UL and C-UL recognized.

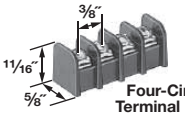
PC-Board Mount Terminal Blocks



Jumper

Quick Disconnect

45° Quick Disconnect

90° Quick Disconnect

Solder the pins on these blocks directly to your printed circuit board. Pins are tin-plated brass and 0.19″ long. You can connect the screw terminals to bare wires, ring terminals, or spade terminals. Barriers separate the screw terminals. Max. temperature is 230° F. UL recognized, CSA certified, and meet UL 94V0 for flammability. Color is black.
Accessories—*Jumpers* connect side-by-side terminals. *Quick disconnects* convert screw terminal connections into 0.187″ wide quick-disconnect connections.

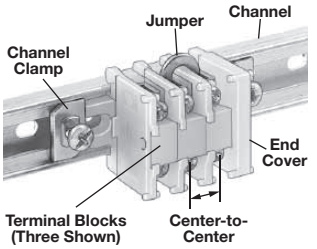
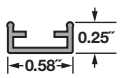
Modular Channel-Mount Terminal Blocks





Channel 7606K33

Channel 7606K71

Mount blocks to a channel and add as many circuits as you need for power distribution, control wiring, and instrumentation cabinets. All of these NEMA-style blocks have one circuit and screw-clamp terminals. Maximum temperature is 302° F. Blocks are UL and C-UL recognized, except 7606K62 is UL recognized and CSA certified.
Surface/Channel-Mount Terminal Block—Mount to channel or use the mounting hole for surface mounting (screw not included). Block has a 0.16″ dia. hole and is gray.
Channel-Mount Terminal Blocks—7606K25 is gray. 7606K62 is black.
End covers fit on the open side of a block to prevent accidental contact with a live circuit. One end cover is required per group of terminal blocks.
Channels come in 3-ft. lengths and accommodate up to 48 terminals per foot. They are aluminum and have a center row of mounting holes (screws not included). 7606K33 has 0.13″ dia. holes. 7606K71 has 0.19″ dia. holes.
Channel clamps secure a group of terminal blocks to a channel. A clamp is required on each end of a group of blocks.
Jumpers connect side-by-side terminals.
Note: Prices are 15% lower when you buy 25 or more of the same size.

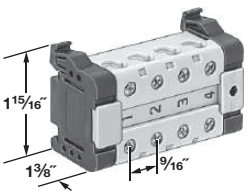
Touch-Safe DIN-Rail Mount Terminal Blocks



Because the screw-clamp terminals are concealed, you won't make accidental contact with a live circuit. Blocks mount to 35 mm DIN rail and have captive screws. Color is white. Temperature range is –55° to 300° F. UL recognized and CE marked.
Blocks **for stripped wire** have grooved clamps for a secure connection that prevents your wire from moving.
Blocks **for ring terminals** give the most secure connection. They allow you to attach ring terminals without removing the screw. Blocks have #8 screw terminals.

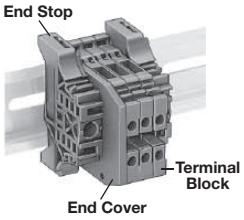
Modular DIN-Rail Mount Terminal Blocks



Standard One Circuit

Standard Two Circuit

Standard Three Circuit

Ground Block

Thermocouple Block

Mount as many circuits as you need to DIN rail. Terminal blocks mount to DIN 1 and DIN 3 rails, unless noted. The terminal blocks clip onto the rail and can be removed without disrupting adjacent blocks. All blocks have screw-clamp connections. Temperature range is –40° to 221°F. UL recognized and CE marked, unless noted. Terminal blocks, end covers, and end stops are IP20 touchproof.

Thermocouple blocks accept thermocouple wire Types J, K, and T. For wire, see page 633.

Blocks with fuse holder allow inline fuse wiring to protect components and wires from short-circuit damage. *8 mm blocks* accept 5 mm dia. fuses. *13 mm blocks* accept 1/4″ dia. (3AG) fuses. *22 mm blocks* accept 13/32″ Dia. × 1 1/2″ Lg. (midget) fuses. For fuses, see pages 970 and 972.

End covers fit on the open side of a block to prevent accidental contact with a live circuit. Color is gray, unless noted. Where end covers aren't offered, the terminal block's side is closed, so an end cover is not required.

End stops mount at the end of a group of blocks to prevent movement. Color is gray. 7641K35 is for DIN 3 rail only.

Jumpers connect terminals on adjacent blocks of the same width. They have 10 circuits and can be cut to size, except 7641K883 and 7641K873 are insulated and cannot be cut.

Marker cards have 100 markers per card. Color is white. Numbered cards have black numbers. To Order: Please specify block width: 5, 6, or 8 mm. For numbered cards, also specify numbering, 1-100 or 101-200.

Note: Prices are 15% lower when you buy 25 or more of the same size.

Speed wire installation with spring-clamp connections that won't come loose in high-vibration applications and are unaffected by changes in temperature. Temperature range is –31° to 221°F. UL recognized and CSA certified, unless noted.

Mount blocks side-by-side on DIN 3 (35 mm) rail. They all accept thermocouple wire Types J, K, and T (for wire, see page 633). Two- and three-circuit terminal blocks include a marker card holder.

Blocks with fuse holder allow inline fuse wiring to protect components and wires from short-circuit damage. 9553T1 and 9553T11 accept 5 mm dia. fuses. 9553T8 and 9553T12 accept blade-style fuses. 9553T3 and 9553T13 accept 1/4" dia. (3AG) fuses. For fuses, see pages 970 and 972.

End covers fit on the open side of a block to prevent accidental contact with a live circuit. Color is orange, except 9553T2 and 9553T9 are gray. An end cover is included with 16 mm and 25 mm standard one-circuit blocks.

End stops mount at the end of a group of blocks to prevent movement. Color is gray.

Jumpers connect terminals on adjacent blocks of the same width. Color is gray, except jumpers for ground blocks are green/yellow.

Marker cards have 100 markers per card. Color is white. Numbered cards are numbered 1-50 (two of each number). Numbers are black.

Also Available: Alternate jumpers for standard blocks that are 4.2-12 mm wide and blocks with disconnect tab. Alternate jumpers connect terminals on two blocks of the same width, skipping a block in between. Color is gray. Please ask for 9473T148 and specify block width.

Note: Prices are 15% lower when you buy 25 or more of the same size.

Modular Terminal Blocks for Mini DIN Rail

Standard Terminal Block

Clip as many terminal blocks as you need onto DIN 2 (15 mm) rail. Temperature range is –40° to 221°F. UL recognized and CE marked, unless noted. Terminal blocks, end covers, and end stops are IP20 touchproof. Terminal blocks **with screw-clamp connections** have a screw that you tighten to secure your wire. Terminal blocks **with spring-clamp connections** have a screwless connection for easy wiring. The connection withstands vibration.

Blocks with fuse holder allow inline fuse wiring to protect components and wires from short-circuit damage. They accept 5 mm dia. fuses. For fuses, see page 972.

End covers fit on the open side of a block to prevent accidental contact with a live circuit. Color is gray, unless noted.

End stops mount at the end of a group of blocks to prevent movement. Color is gray.

Jumpers connect terminals on adjacent blocks of the same width. They have 10 circuits and can be cut to size, except 7641K94 is insulated and cannot be cut.

Marker cards have 100 markers per card. Color is white. Numbered cards have black numbers. To Order: Please specify block width. For numbered cards, also specify numbering, 0-100 or 101-200.

Note: Prices are 15% lower when you buy 25 or more of the same size.

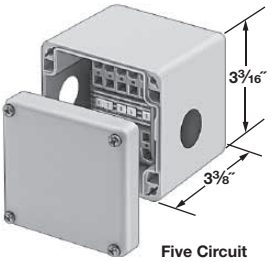
Enclosure-Mounted Terminal Blocks



Five Circuit

Save time when you need to make wiring connections in a junction box. These blocks come already installed inside an enclosure that's rated NEMA 4X for protection from washdowns and corrosion. The enclosure also meets IP65 for protection from water projected from a nozzle. Use indoors and outdoors. Blocks have spring-clamp terminals to make quick and secure connections. Maximum temperature is 176°F. Terminal blocks are UL and C-UL recognized and CE marked. Enclosures are UL listed.

Made of beige polycarbonate, enclosures have a neoprene gasket, a lift-off cover with captive screws, and two water-tight cord grips for 0.14″-0.32″ dia. cord. All have two 0.7″ dia. knockouts and four 0.16″ dia. mounting holes (screws not included).

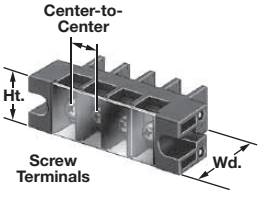
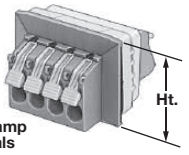
Through-Panel Terminal Blocks



Screw Terminals



Lever-Clamp Terminals

Make electrical connections through a panel—blocks mount in a cutout and have terminals on both sides.

Screw Terminals—Blocks have M5 (5 mm) screw terminals and include a cover. They have two 0.21″ dia. mounting holes (screws not included). Color is black. Max. temperature is 194°F. UL and C-UL recognized.

Lever-Clamp Terminals—The lever design makes installation and maintenance quick and convenient. Lower the lever to secure a wire; lift the lever to disconnect it. A mounting clip holds the block in place. Color is gray. Maximum temperature is 221°F. UL recognized, CSA certified, and CE marked.

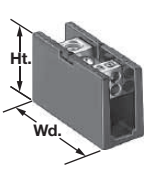
High-Amp Distribution Blocks



Screw-Clamp Terminals One Circuit

Screw-Clamp Terminals Three Circuits

Stud Terminals Two Circuits

With the help of distribution blocks, you can take a large wire from your power source and connect it to one or more wires going to your electrical devices. Blocks have 0.21″ dia. mounting holes, except the 380-amp blocks have 0.27″ dia. holes (screws not included). Maximum temperature is 302°F, except 115-amp blocks have a maximum temperature of 257°F. UL recognized, CSA certified, and CE marked.

Blocks with **screw-clamp terminals** have an amp rating based on NEC table 310-16 using 75°C copper wire. Blocks with **stud terminals** allow you to place wires with ring- or spade-terminals around the stud to make a connection.

Optional cover protects the top of the block and prevents accidental contact with live circuits. Cover is clear and fastens to the block with two screws (included). **To Order:** Please specify the part number of the distribution block.

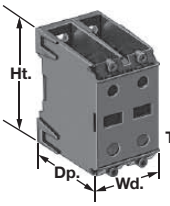
DIN-Rail Mount High-Amp Distribution Blocks



Standard Two Circuits

Touch-Safe One Circuit

Blocks handle high-amp distribution and mount to 35 mm DIN rail for quick installation and removal. They take a large wire from your power source and connect it to one or more wires going to your electrical devices. All have screw-clamp connections. Maximum temperature is 221°F. Amp rating is based on NEC table 310-16 using 75°C copper wire.

Standard blocks are black. Blocks with a quick-disconnect load connection allow you to connect an auxiliary device, such as a horn or light. All are UL recognized, CSA certified, and CE marked.

Touch-safe blocks meet IP20 and prevent accidental contact with a live circuit. Color is gray. UL recognized and CE marked, except one-circuit ¾″ and 1⅛″ wide blocks are UL listed, CSA certified, and CE marked.

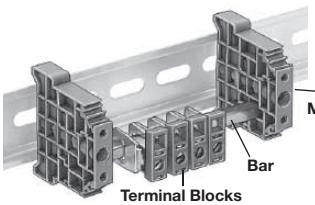
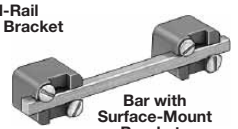
Modular Distribution Bars





Bar with Surface-Mount Brackets

Enjoy the convenience of connecting multiple wires at a single location in neutral and grounding distribution applications. Slide terminal blocks onto the bar, also known as a bus bar, and then attach mounting brackets to the bar. All wires make contact with the bar, distributing the current among the terminal blocks. Maximum temperature is 221°F.

Bars are copper. **Surface-mount brackets** have a 0.16″ dia. mounting hole (screw not included). **DIN-rail brackets** clip onto 35 mm DIN rail. **Terminal blocks** have screw-clamp connections. The connections secure the wire as well as the block to the bar. Color is green. Blocks are UL recognized for grounding applications. **Marker cards** come blank and are white.

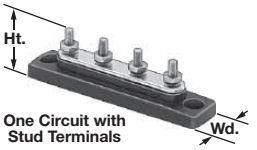
Harsh Environment High-Amp Distribution Bars



One Circuit with Stud Terminals

One Circuit with Stud and Screw Terminals

Two Circuit with Screw Terminals

Two Circuit with Stud and Screw Terminals

Also known as bus bars, these serve as connection points between wires with ring or spade terminals. They have a tin-plated copper bar and stainless steel screws and studs to protect against corrosion. The underside is sealed, so the bars can be safely mounted to conductive surfaces. Bars have two 0.21″ dia. mounting holes, except 9290T3 has four 0.26″ dia. holes (screws not included). Maximum temperature is 185° F. CE marked.

Optional covers protect the top of the bar and prevent accidental contact with live circuits. They are clear, except 9290T23, 9290T25, and 9290T26 are black. 9290T11 includes a clear cover.

High-Amp Distribution Posts

A round design saves space while you connect high-amp wire. Posts have two mounting holes (screws are not included) and come with a red cover. Color is black. Maximum temperature is 185° F. CE marked.

Posts with stud terminal allow you to stack multiple ring terminals or spade terminals on the stud; the current flows among the stacked terminals.

Posts with stud and screw terminals distribute current from the center stud to eight circuits.

DIN Rails

Mount terminal blocks, power supplies, relays, and other control and distribution devices on walls and other flat surfaces and in enclosures.

DIN Rails

Rails conform to EN 60715 and EN 50022. **DIN 3 rail** is the most commonly used rail. Rails without mounting holes allow you to drill holes where you need them. Zinc-plated rails without mounting holes have a centerline to guide you.

Accessories

Brackets provide extra mounting space behind the DIN rail to accommodate bulky items. They have two 0.26″ dia. holes for surface mounting (screws not included). Screw for mounting DIN rail is included.

Mounting adapters allow you to mount items not designed for DIN rail. Adapters clip onto the rail. Use two or more for large items. Screws are not included.

Wire Ferrules and Ferrule Crimpers

Insulated Ferrule

Two-Wire Insulated Ferrule

Noninsulated Ferrule

Add strength and stability to stranded wire to protect it from damage and speed insertion into terminal blocks. Unlike pin terminals, which have a solid pin, ferrules have a hollow pin that you crimp around the wire strands to improve the electrical connection. All are tin-plated copper and rated to 221°F. CE marked.

Insulated wire ferrules have polypropylene insulation. They are rated to 600 volts. Use *two-wire insulated* wire ferrules to combine two wires and insert into one terminal block.

Wire Ferrule Assortments

You'll have the most popular ferrule sizes ready to go in a compartmented plastic case. Ferrules are made of tin-plated copper with polypropylene insulation. Rated to 600 volts and 221°F. CE marked.

	For Wire Size, AWG	Pin Lg.	No. of Pieces		
Single Wire	12-6	0.39″-0.47″	100	9689K12	$23.53

Wire Ferrule Crimpers

Ratchet Style

Self-Adjusting Ratchet Style

Ratchet-style crimpers have individual square crimping slots for each wire size. Wire loads from the side.

Self-adjusting ratchet-style crimper automatically adjusts to the proper square crimp size. Wire loads from the front for easy use in tight spaces.

For Wire Size, AWG

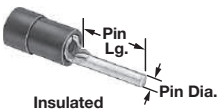
Pin Terminals



Insulated

Noninsulated

Crimp stranded wire to a solid pin for easy insertion into screw-clamp connections. Terminals are tin-plated copper. UL listed and CSA certified.

Insulated terminals are rated to 600 volts and 221°F. *Nylon-insulated* terminals have an internal brass sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated terminals are rated to 300°F.

Ring Terminals

Crimp ring terminals onto your wire and mount them on a threaded post or stud for a reliable connection. Terminals are tin-plated copper, except extra-grip terminals are tin-plated steel.

Insulated—Rated to 600 volts and 221° F. *Nylon-insulated* terminals for wire sizes 26-10 AWG have an internal metal sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated—Rated to 300° F.

Standard terminals are UL listed and CSA certified, except terminals for wire sizes 26-22 AWG.

Heavy duty terminals are 25% thicker than standard terminals. UL listed and CSA certified.

Extra-grip terminals have a serrated edge that digs into coatings to grip the metal underneath. UL recognized and CSA certified.

Multistud terminals have an elongated stud hole that holds on to different stud sizes. UL listed and CSA certified.

Ring Terminals

For information about wire size (AWG), see page 834.

Ring Terminal Assortments

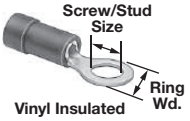
Our most popular ring terminals are conveniently organized in a compartmented plastic box. All assortments contain terminals for 22-18 and 16-14 AWG sizes for #6, #8, #10, and 1/4" screws/studs and 12-10 AWG size for #8, #10, 1/4", and 3/8" screws/studs. Terminals crimp onto wire and are made of tin-plated copper.

Insulated terminals are rated to 600 volts and 221°F. *Nylon-insulated* terminals have an internal tin-plated brass sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated terminals are rated to 300°F.

	180 Pieces		300 Pieces	
Vinyl Insulated	8853T18	$53.42	8853T19	$71.89
Nylon Insulated	8853T25	66.95	8853T26	93.91
Noninsulated	8853T11	49.39	8853T12	68.66

Metric Ring Terminals



Nylon Insulated

Noninsulated

Find a terminal that's sized to match your metric wire, screws, and studs. Terminals are tin-plated copper.

Insulated terminals are rated to 600 volts and 221°F. *Nylon-insulated* terminals have an internal brass sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated terminals are rated to 300°F.

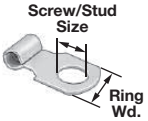
Flag Ring Terminals



The flag-on-a-flagpole design lets you connect wire at a right angle, making these crimp-on terminals a good choice when space is limited. Terminals are made of noninsulated tin-plated copper. All are rated to 300°F. For a crimper, see 7179K41 on page 801.

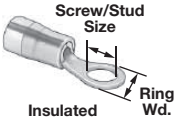
High-Temperature Ring Terminals



Noninsulated

Meet the demands of hot environments with these crimp-on terminals.

Insulated terminals are made of tin-plated copper with PVDF insulation. They are rated to 600 volts. UL listed.

Noninsulated terminals for wire sizes 22-10 AWG are UL recognized, unless noted. *Terminals rated to 900°F* are nickel-plated steel. *Terminals rated to 1200°F* are nickel.

★Not UL recognized.

For information about wire size (AWG), see page 834.

Heat-Shrink Ring Terminals

Crimp terminals onto wire and apply heat—the heat-shrink insulation forms a strain-resistant seal that keeps out water, salt, and harsh contaminants. Terminals are tin-plated copper. Rated to 600 volts and 221°F, except multistud terminals are rated to 257°F.

Standard terminals have nylon-like polymer heat-shrink insulation with a minimum shrink temperature of 194°F. UL listed and CSA certified, except terminals for 8 AWG wire with 0.46″ wide rings are not UL listed.

Sure-connect terminals have an enclosed solder that melts when heat is applied to the polyolefin heat-shrink insulation; this provides the most reliable electrical connection. Minimum shrink temperature is 275°F.

Multistud terminals have an elongated stud hole for mounting on different stud sizes. They have polyolefin heat-shrink insulation with a minimum shrink temperature of 266°F.

Heat-Shrink Spade Terminals

After you crimp the terminals onto your wire, apply heat to shrink the insulation and create a strain-resistant seal that keeps out water, salt, and harsh contaminants. The terminals have a spade design that allows you to install them without removing the mounting screw. Made of tin-plated copper. Rated to 600 volts and 221°F.

Standard terminals have adhesive-lined nylon-like polymer insulation with a minimum shrink temperature of 194°F, except terminal for 12-10 AWG wire with 0.38″ spade width has adhesive-lined polyolefin insulation with a minimum shrink temperature of 275°F. All are UL listed.

Locking sure-connect terminals have spring-action forks that lock in place around the stud, holding the terminal in place before tightening. When heat is applied to the polyolefin insulation, the enclosed solder melts to create the most reliable electrical connection. Minimum shrink temperature is 275°F.

16-14	#10 (0.19″)	0.38″	72815K53	12.40

High-Temperature Spade Terminals

Rated to 900°F, these noninsulated crimp-on terminals are suitable for high-heat applications. The spade design allows you to install them without removing the mounting screw. All are made of nickel-plated steel.

Block terminals have square shoulders and straight sides that fit tightly in terminal blocks and prevent wire turning.

Spade & Hook Terminals

For information about wire size (AWG), see page 834.

Spade Terminals

Loosen the mounting screw to install—the spade design eliminates the need to completely remove it. Terminals crimp onto wire and are made of tin-plated copper. UL listed and CSA certified.

Insulated—Rated to 600 volts and 221° F. *Nylon-insulated* terminals have an internal tin-plated brass sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated—Rated to 300° F, except locking terminals are rated to 347° F.

Block terminals have square shoulders and straight sides that fit tightly in terminal blocks and prevent wire turning.

Flanged terminals have turned-up edges to keep the terminal secure, even if the screw loosens. They're ideal for vertical applications.

Locking terminals have spring-action forks that lock around the stud, holding the terminal in place before tightening.

Hook Terminals

A hybrid of ring and spade terminals, hook terminals install without removal of the mounting screw, yet they resist being pulled off. Terminals are tin-plated copper. UL listed and CSA certified.

Insulated terminals are rated to 600 volts and 221° F. *Nylon-insulated* terminals have an internal tin-plated brass sleeve that provides an extra-tight crimp for high-vibration applications.

Noninsulated terminals are rated to 300° F.

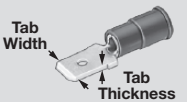
For information about wire size (AWG), see page 834.

About Quick-Disconnect Terminals

Quick-disconnect terminals provide fast and secure connections for your wiring. Because they are easy to connect and disconnect, these terminals are convenient for applications that require frequent repair or replacement. When an application calls for a ¼″ quick-disconnect, choose a terminal with a 0.250″ tab width.



Quick-Disconnect Terminals

Slide terminals together and pull them apart with ease. All crimp onto your wire and offer fast, secure connections. UL listed and CSA certified, unless noted. **Standard-barrel** terminals require one crimp. **Double-crimp barrel** terminals accept two crimps and provide an extra-tight grip for high-vibration applications.

Insulated Barrel

Terminals are rated to 600 volts and 221°F, unless noted. They are made of tin-plated brass, except male double-crimp terminals are zinc-plated brass. **Standard-barrel** terminals have vinyl insulation. **Double-crimp barrel** terminals have nylon insulation, except male terminals with 0.110″ wide tabs have vinyl insulation.

Quick-Disconnect Terminal Assortments

Open the compartmented plastic box to find male/female pairs of quick-disconnects in 22-18, 16-14, and 12-10 AWG sizes. Tab size is 0.250″ Wd. × 0.032″ Thick.

Insulated terminals are rated to 600 volts and 221° F. Female terminals are tin-plated brass. Male terminals are zinc-plated brass. *Insulated-barrel* terminals have vinyl insulation. *Fully insulated* terminals have nylon insulation that fully covers the terminal, leaving no exposed metal when connected.

Noninsulated terminals are rated to 300° F and are made of tin-plated copper.

Flag Quick-Disconnect Terminals

Fully Insulated Standard Barrel

Fully Insulated Double-Crimp Barrel

Noninsulated Standard Barrel

A good solution for making connections in tight spaces, terminals have a flag-on-a-flagpole design that places your wire at a right angle. These female crimp-on terminals connect with any male quick-disconnect tab of the same wire size and tab size. Terminals are tin-plated brass.

Fully Insulated—Nylon insulation completely covers the terminal, leaving no exposed metal when connected. Rated to 600 volts and 221° F. UL listed and CSA certified.

Noninsulated—Terminals are rated to 300° F. UL listed and CSA certified, except terminal for 12-10 AWG wire.

Standard-barrel terminals require one crimp.

Double-crimp barrel terminals accept two crimps and are good for high-vibration applications.

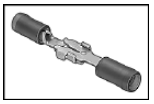
Vibration-Resistant Terminals

Nylon Insulated



Terminals interlock with each other

Easy to install, connect, and disconnect, yet difficult to shake loose. These terminals interlock with each other to make a secure connection; they do not have a gender. Terminals crimp onto wire and are made of tin-plated brass.

Nylon-insulated terminals are rated to 600 volts and 221° F.

Noninsulated terminal is rated to 300° F.

For Wire Size, AWG	Nylon Insulated Insulation Color		Each	Noninsulated	Each
22-18	Red	8414T22	$3.58	_____	____
16-14	Blue	8414T23	3.58	8414T21	$2.07

High-Temperature Quick-Disconnect Terminals

Straight Female

Straight Male

Flag Female

With a 900° F temperature rating, these quick-disconnect terminals can withstand high-heat applications. Terminals crimp onto wire and are made of noninsulated nickel-plated steel.

Flag terminals allow you to connect wires at a right angle, making them a good choice for tight spaces.

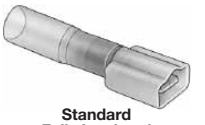
Heat-Shrink Quick-Disconnect Terminals

Standard Insulated-Barrel Female



Standard Fully Insulated Male

Sure-Connect Insulated-Barrel Female

Crimp and apply heat for a moisture- and corrosion-resistant connection that seals out water, salt, and harsh contaminants. Terminals are rated to 600 volts and 221° F. Tab size is 0.250″ Wd. × 0.032″ Thick. Terminals are tin-plated brass, except standard male terminals with insulated barrel are zinc-plated brass and sure-connect male terminals with insulated barrel are tin-plated copper.

Standard—Terminals have nylon-like polymer insulation with a minimum shrink temperature of 194° F. *Fully insulated* terminals are UL listed.

Sure-Connect—When heat is applied, the enclosed solder melts to create the most reliable electrical connection. Terminals have polyolefin insulation with a minimum shrink temperature of 275° F.

Fully insulated terminals have insulation that completely covers the terminal and barrel, leaving no exposed metal when connected.

For information about wire size (AWG), see page 834.

Flame-Retardant Quick-Disconnect Terminals

Reduce the risk of fire with female crimp-on terminals that are made of special flame-retardant, self-extinguishing materials. All meet UL 94V0 for flame resistance. Connect with any male quick-disconnect tab of the same wire size and tab size. Terminals are made of tin-plated brass and are fully insulated with nylon. The insulation completely covers the terminal, leaving no exposed metal when connected. Rated to 600 volts and 221°F. UL listed, except straight terminal for 26-24 AWG wire.

Piggyback Quick-Disconnect Terminals

Connect two wires to the same terminal. These female crimp-on terminals have a male tab piggy-backed onto them that connects with a female quick-disconnect. Tab size is 0.250″ Wd. × 0.032″ Thick. Terminals are tin-plated brass and have vinyl insulation, except double-crimp barrel terminals have nylon insulation. All are rated to 221°F.

Fully Insulated—Insulation covers the entire female terminal and barrel, leaving no exposed metal when connected.

Standard- and **expanded-barrel** terminals are rated to 600 volts. UL listed. *Expanded barrel* have a wider barrel for fast wire insertion.

Double-crimp barrel accepts two crimps for a secure connection that's suitable for high-vibration applications. Rated to 300 volts. *Insulated-barrel* terminals are UL listed.

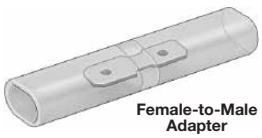
Quick-Disconnect Terminal Splitters and Adapters

Side-by-Side Male Splitter

Piggyback Male Splitter



Female-to-Male Adapter

Modify any standard quick-disconnect terminal that has a 0.250″ wide tab. Splitters and adapter are made of tin-plated brass.

Male splitters let you divide one male quick-disconnect connection into two. They are noninsulated and rated to 300°F.

Female-to-male adapter allows you to connect two female quick-disconnects. Insulation is translucent polypropylene. Rated to 221°F.

Female

Male

Also known as bullet terminals, these have a round tab that saves space compared to the flat tab found on most quick-disconnects. Terminals crimp onto your wire. UL recognized and CSA certified. **Female** terminals are tin-plated brass. **Male** terminals are tin-plated copper.

Vinyl-insulated terminals are rated to 600 volts and 122°F.

Nylon-insulated double-crimp terminals accept two crimps on the barrel for a secure connection that's suitable for high-vibration applications. Rated to 300 volts, unless noted. All are rated to 221°F.

Heat-shrink-insulated terminals have adhesive-lined nylon-like polymer insulation that shrinks when heated after crimping. It forms a strain-resistant seal that keeps out water, salt, and harsh contaminants. Minimum shrink temperature is 194°F. Rated to 600 volts and 221°F.

Noninsulated terminals are rated to 300°F.

Butt Splices

A&B C D&E F G

These crimp-on butt splices provide a compact and reliable way to connect two wires. Splices are made of tin-plated copper. UL listed, except Styles D and E. CSA certified, except Style B for 12-10 AWG wire and Styles D and E. **Insulated splices (Styles A-F)** are rated to 600 volts and 221°F, unless noted.

(B) Nylon-insulated splices are more durable than vinyl insulated.

(C) Nylon-insulated double-crimp splices have a barrel that can be crimped twice on each end to provide an extra-tight grip in high-vibration applications.

(D) Nylon-insulated moisture-resistant splices are filled with grease to resist moisture and corrosion.

(E) Nylon-insulated sealed splices are filled with a sealant. Crimp the splice and the sealant creates a barrier to completely keep out moisture. Compared to heat-shrink splices, these are quicker to install and are more suitable for tight spaces where heat can damage equipment.

(F) Heat-shrink-insulated sealed splices have adhesive-lined nylon insulation. When heated, the insulation shrinks to form a seal against moisture and corrosion. Minimum shrink temperature is 194°F.

(G) Noninsulated splices are rated to 347°F.

Butt Splices with Inspection Window

Visually confirm your connection—all of these tin-plated copper splices have a window.

Nylon-insulated splices are rated to 300 volts and 221°F. Meet MIL-T-7928/5.

Heat-shrink-insulated splices have adhesive-lined polyolefin insulation that shrinks when heated to form a watertight seal. Rated to 600 volts and 257°F. Minimum shrink temperature is 194°F.

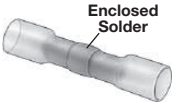
High-Temperature Butt Splices

Designed for use with stranded copper wire and rated to 900°F, these crimp-on splices are suitable for high-heat applications such as ovens, motors, and light fixtures. Made of noninsulated nickel-plated steel.

For Wire Size, AWG	Lg.	Pkg. of 100	
22-18	0.6″	7971K41	$8.65
16-14	0.6″	7971K42	8.75
12-10	0.6″	7971K43	13.35

Sure-Connect Sealed Butt Splices



Crimp these butt splices and use a heat gun to melt the heat-shrink insulation and the enclosed solder—the result is the most secure, electrically conductive, and environmentally sealed connection we offer. All are tin-plated copper with polyolefin insulation. Rated to 600 volts and 221°F. Minimum shrink temperature is 275°F.

For Wire Size, AWG	Lg.	Insulation Color	Pkg. of 10	
24-22	1.1″	Clear	9895K11	$11.76

12-10	1.6″	Yellow	9895K17	12.33

Multi-Wire Heat-Shrink Butt Splices

Connect a single wire to two wires of the same size. Crimp one wire into the small end of the splice and two into the large end. Use a heat gun to melt the heat-shrink polyolefin insulation; the adhesive lining forms a seal against moisture and corrosion. Insulation is clear and has color-coded dashes on each end to indicate which crimp die to use. An inspection window allows you to check the connection. Splices are made of tin-plated copper and are for use with stranded copper wire. All are rated to 600 volts and 221°F. Minimum shrink temperature is 250°F.

For Wire Size, AWG	Lg.	Dash Color	Pkg. Qty.		Pkg.

16-14	2.4″	Blue and Yellow	5	7617K13	7.37
12-10	2.6″	Yellow and Red	5	7617K14	9.30

Reducing Butt Splices

One end of the splice is larger than the other, so you can connect two wires of different sizes. Splices crimp onto wire and have a color-coded stripe on the end for the smaller AWG size. Made of tin-plated copper.

Insulated splices are rated to 600 volts and 221°F. The insulation is color coded according to the larger AWG size. *Heat-shrink-insulated* splices have a nylon sleeve with adhesive-lined insulation that shrinks when heated to form a seal against moisture and corrosion. Minimum shrink temperature is 194°F.

Noninsulated are rated to 300°F. UL listed and CSA certified.

For information about wire size (AWG), see page 834.

Underground Heat-Shrink Butt Splices

Make watertight, abrasion-resistant connections underground. Each butt-splice connector comes with heavy-wall polyolefin heat-shrink tubing that fits over the connector. Splices have a set screw and work with both stranded and solid wire. They can withstand burial in rocky soil. Minimum shrink temperature is 248° F. Rated to 600 volts and 194° F. UL listed.

Splice for wire is for use with copper and aluminum wire. It comes with 2″ and 5″ lengths of tubing.

Splice for UF (underground feeder) cable is for use with UF copper cable. It comes with an 8″ length of tubing.

For UF Cable

For Wire Size, AWG	No. of Wires		
For Wire			
8-2	1	7924K12	$13.17
For UF (Underground Feeder) Cable			
14-8	4 (1 ground)	7924K11	16.57

3-Way and 4-Way Splices

Connect three or four wires with a single splice. All of these crimp-on splices are made of insulated tin-plated copper. Rated to 600 volts and 221° F.

Nylon-insulated splices are more durable than vinyl insulated.

Heat-shrink-insulated splices have adhesive-lined nylon-like polymer insulation that shrinks when heated to form a seal against moisture and corrosion. Minimum shrink temperature is 194° F.

No-Crimp Butt Splices

Push-On

Twist-On

Because no crimping tools are required, these splices are a convenient way to make connections in the field. All are rated to 600 volts. UL listed, except weather-resistant splices.

Push-On for Solid Wire—This is the fastest way to connect; push stripped wire into each end of the splice. Made of polycarbonate with tin-plated copper contacts. Rated to 221° F. CSA certified.

Twist-On for Stranded Wire—These splices are a good choice for high-vibration applications. Insert wires and tighten the threaded end caps on the splice to lock them into place. Splices are made of nylon with a tin-plated brass insert. Rated to 248° F. *Weather-resistant* splices have insulation and sealed threads.

Terminal and Butt-Splice Assortments

We've grouped the most common sizes of terminals and connectors and included a crimping tool. Terminals and connectors are UL listed, unless otherwise stated.

Vinyl-insulated terminals are rated to 600 volts and 221° F, unless otherwise stated.

Heat-shrink-insulated terminals have a polyolefin sleeve that shrinks when heated after crimping to form an environmental seal against moisture and corrosion. Rated to 600 volts and 221° F. Min. shrink temperature is 266° F.

Noninsulated terminals are rated to 300° F.

Vinyl-Insulated Assortments

120-Piece—Includes ring terminals (16-10 AWG), spade terminals (22-14 AWG), male and female quick-disconnect terminals (16-14 AWG), butt splices (22-10 AWG), and a plastic case. CSA certified.

7121K13 ..... $59.88

490-Piece—Includes ring terminals (22-10 AWG), spade terminals (22-10 AWG), male and female quick-disconnect terminals (16-14 AWG), butt splices (22-10 AWG), crimp-on wire connectors (22-10 AWG; 22-14 AWG is rated to 300 volts), insulation-piercing wire taps (16-14 AWG), and a metal case.

7123K1 ..... $133.65

Heat-Shrink-Insulated Assortments

50-Piece Butt Splice—Includes butt splices in sizes 22-18 AWG, 16-14 AWG, and 12-10 AWG. Comes in a plastic case. The crimping tool is ratcheted to ensure the correct pressure is applied to every crimp.

69185K33 ..... $77.55

80-Piece—Includes ring terminals (22-10 AWG), spade terminals (16-14 AWG), male and female quick-disconnect terminals (16-14 AWG; not UL listed), butt splices (22-10 AWG), and a plastic case.

69185K53 ..... $54.44

Noninsulated Assortments

240-Piece—Includes ring terminals (16-10 AWG), spade terminals (22-14 AWG), male and female quick-disconnect terminals (16-14 AWG), butt splices (22-10 AWG), and a plastic case. CSA certified.

7121K11 ..... $60.71

900-Piece—Includes ring terminals (22-10 AWG), spade terminals (22-10 AWG), male and female quick-disconnect terminals (16-14 AWG), butt splices (22-10 AWG), and a metal case.

7123K2 ..... $139.00

Terminals Connected to Wire

Female Quick-Disconnect Terminal on One End

Ring Terminal on Both Ends

Save preparation time—the terminals are already connected to single-conductor wire. Wire is made of stranded copper with PVC insulation. Rated to 300 volts. UL listed and CSA certified.

Quick-disconnect terminals are made of nylon-insulated tin-plated brass. Tab size is 0.250″ Wd. × 0.032″ Thick.

Ring terminals and **flanged spade** terminals are tin-plated copper with vinyl-insulated barrels. They accept #10 (0.19″) stud size. Width is 0.31″ for ring terminals; 0.35″ for flanged spade terminals.

22, *18*, and *16 AWG* wires meet UL 1007/UL 1569 (221° F max.). *14 AWG* wire meets UL 1569 (221° F max.).

To Order: Please specify wire gauge (22 AWG, 18 AWG, 16 AWG, or 14 AWG, unless noted) and wire color (black, green, red, or white).

Wire Taps & Connectors

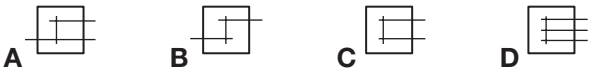
For information about wire size (AWG), see page 834.

Insulation-Piercing Wire Taps

Standard, Flame Retardant, and Moisture Resistant (7063K32)

Moisture Resistant (7063K31)

Connection Types



Connect a tap wire to a through (main) wire and insulate the connection without stripping. To install, squeeze the tap with standard pliers—a built-in U-shaped metal contact penetrates the insulation and grips the wire. Rated to 600 volts and 221°F, except 7063K32 is rated to 194°F.

Standard taps are UL listed.

Flame-retardant taps are UL listed V2 for flame retardance. CSA certified.

Moisture-resistant taps are filled with gel that seals out moisture. UL listed and CSA certified.

For Wire Size, AWG Stranded	Solid	Connection Type	Color	Pkg. Qty.		Pkg.

★ 12-10 AWG for main; 18-14 AWG for tap.

Quick-Disconnect T-Taps

Tap into a wire without cutting or stripping; crimping is all that's required. Taps connect to wires with male quick-disconnect terminals that have a 0.250″ Wd.×0.032″ Thick. tab. Made of tin-plated brass with nylon insulation. Rated to 600 volts and 221°F. UL listed and CSA certified.

Snap Plugs and Parallel Taps

Snap Plug

Parallel Tap

Combine a snap plug and a parallel tap to access wire by crimping—no cutting or splicing necessary. Plug and tap each have a tin-plated copper terminal.

Snap plug allows you to rapidly connect and disconnect a wire. Plug is male and has blue nylon insulation. Plug dia. is 0.16″. Overall length is 0.93″.

Parallel tap is rated to 32 volts and 194°F. It has a black polypropylene housing.

	For Wire Size, AWG		Pkg. of 10
Snap Plug	16-14	9675K2	$4.24
Parallel Tap	18-14	9675K1	4.35

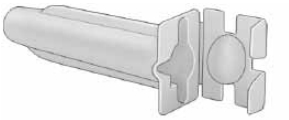
Twist-On Wire Connectors

Standard and High Temperature

High Temperature with Set Screw

Ultra High Temperature

Watertight



Underground

Twist connectors to obtain a quick, secure wire connection without crimping. Rated to 600 volts, unless noted. UL listed and CSA certified, unless noted.

Standard connectors are rated to 221°F.

High-temperature connectors are similar to standard connectors, but they are rated to 302°F. They are excellent for high-wattage applications, such as HID lighting and electric heat.

High-temperature connectors with set screw have an inner barrel with a set screw that firmly holds wires; the connector twists into the barrel. Use for a secure grip in high-vibration applications. Rated to 302°F.

Ultra high-temperature connectors are made of porcelain to withstand temperatures up to 1200°F.

Watertight connectors are filled with silicone to seal out moisture and prevent corrosion. They are suitable for underground use. Rated to 221°F.

Underground connector consists of a twist-on wire connector and a plastic insulator tube filled with grease. The tube protects your connection from abrasion and the grease creates a moisture-resistant seal. Use for irrigation and sprinkler systems, outdoor lighting, and other underground wiring applications. Rated to 120°F.

Twist-On Wire Connector Installation Tools

Installation Tool/ Screwdriver (Shown with Wire Connector)

Power Drive Installation Tool

Reduce excessive wrist twisting and sore fingers. These tools let you securely install wire connectors without having to twist wires.

Installation tool/screwdriver provides leverage and comfort when twisting connectors. The handle fits most twist-on connectors and includes a screwdriver with two double-ended bits. Each bit has a slotted blade and a Phillips blade.

Power drive installation tool attaches to your power drill or screwdriver for fast, easy installation.

Installation Tool/Screwdriver	8859T4	$14.21
Power Drive Installation Tool for Blue, Orange, Yellow, and Red Connectors	8859T2	12.17
Power Drive Installation Tool for Large Blue and Gray Connectors	8859T3	13.87

Twist-On Wire Connectors with Wings

Grip the wings on these connectors to increase leverage when tightening. Rated to 600 volts and 221°F, except grounding and space-saver grounding connectors are not rated for voltage. UL listed and CSA certified.

Wide-range connectors cover more wire sizes than other connectors, yet they still fit into cramped outlet boxes. The rigid plastic top and flexible bottom skirt protect the connection and allow it to conform to tight spaces. CE marked.

Space-saver connectors have a narrow profile that takes up less space than standard connectors with wings.

Finger-friendly connectors have soft molding over the wings to provide a comfortable grip.

Grounding and **space-saver grounding** connectors have a hole in the top that allows a single grounding wire through while multiple ground wires remain connected inside the connector.

Wire Connector and Tap Assortments

A compartmented plastic case holds 75 twist-on wire connectors for wire sizes 22-8 AWG (orange, yellow, and red) and 25 insulation-piercing wire taps for wire sizes 16-10 AWG for the main connection and wire sizes 18-10 AWG for the tap connection. Use with stranded and solid wire. Rated to 300 volts and 221°F. UL listed.

7064K22 ..... $29.63

Push-On Wire Connectors

Push connectors onto stripped wires for a reliable connection that's faster to install than twisting or crimping. All have individual ports for each wire and a clear polycarbonate housing so you can inspect the connection. Rated to 600 volts and 221°F. UL listed and CSA certified. Green color is for grounding applications. Connectors can be mounted to 35 mm DIN rail using an adapter (sold separately).

Crimp-On Wire Connectors

Twist stripped wires together, insert them into the connector, and then crimp for a dependable connection. For use with stranded and solid wire, unless noted.

Insulated connectors have a translucent nylon sleeve around a copper insert. Rated to 600 volts and 221°F, unless noted. UL listed and CSA certified.

Noninsulated connectors are made of tin-plated copper.

Rotating Connector Rings

Maintain an electrical link between a moving part and a stationary part. These rings, also known as slip rings, are typically used on rotating jib cranes, rotating signs, and test equipment.

Rings have 35-amp, 600-volt AC copper alloy contacts with moisture-resistant insulators and copper graphite brushes. All have 24″ long 10 AWG wire leads. Rings rotate in either direction and mount in any position. Housing is steel and has a 9¾″ dia. mounting plate with four ¼″ dia. holes on 9¼″ centers (bolts not included).

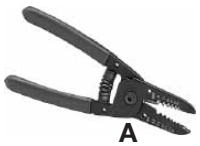
Multipurpose Wire Strippers

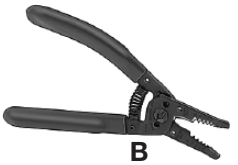
Among its wide variety of functions, this tool strips and cuts 20-10 AWG stranded and solid copper wire. It also has a plier nose for pulling and looping wire, two slotted screwdrivers, a Phillips screwdriver, a wire bender, inch and metric rulers, a metal file, a wood file, a serrated knife, and a can/bottle opener. Made of stainless steel. Closed length is 4″. Includes a nylon pouch with belt loop.

7893K5 ..... $55.89

Wire Strippers



A



B

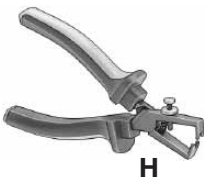
C

D

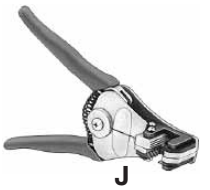
E

F

G



H



J

K

(A&B) Plier Nose—The elongated nose is useful for pulling and looping wire. Made of steel. *Style A* strippers have wire cutters. *Style B* strippers have wire and bolt cutters.

(C) Plier Nose with Built-In Voltage Detector—The handle flashes and beeps when it detects a live circuit (batteries are included). Stripper is made of stainless steel and has a bolt cutter. UL listed.

(D&E) Compact—These tools are small enough to fit in your pocket. Made of steel.

(F) Precise-Length Compact—Strippers are small to fit in your pocket and have a slide adjustment to set the strip length up to a maximum of 2.25″. Wire loads from the front for use in tight spaces. All are made of plastic and have an AWG-to-mm conversion table printed on the side. The *ESD-safe* stripper is for areas where static-free conditions are required.

(G&H) High Voltage—Handles are insulated to provide protection up to 1,000 volts. Made of steel. *Style G* has a plier nose for pulling and looping wire. *Style H* loads wire from the front for use in tight spaces. Maximum strip length is 1″.

(J&K) Squeeze and Strip—Squeeze the handle and release it; the blades strip the insulation and pull it off the wire. *Replacement blades* include both the upper and lower blades.

Style J strippers are made of zinc and have a maximum strip length of 0.88″.

Style K stripper has blades that automatically adjust to the wire size. It also has wire cutters and an adjustable stop to set the strip length. Wire loads from the front for use in tight spaces. Stripper strips multiple wires at the same time. It's made of reinforced plastic and has a maximum strip length of 0.71″.

Style J wire stripper kit includes a Style J stripper and a pair of each of the following blades: 30-20 AWG, 22-10 AWG, RG-59, and RG-58.

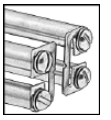
Insulation-Melting Wire Strippers



Replacement Tips

Melt off wire insulation to achieve the cleanest possible strip while eliminating the risk of nicking the wire. A press of the button heats the tip to selected temperatures up to 1700°F in two seconds. Use the heated tip to melt PTFE, Kynar, nylon, vinyl, and neoprene insulation from solid, stranded, and shielded wire. Pull off the melted insulation sleeve to complete the strip. Maximum strip length is 1½″.

Stripper has a plastic housing and a temperature controller. It comes with tips for 25-10 AWG; tips for 38-26 AWG are sold separately. Use as a hand tool or mount in the included metal bench-top stand. Overall length is 8″. Operates on 120 volts AC and has a 6-ft. cord with three-prong plug. UL listed.

Stripper	**69165K81**	$455.79

Tips for 38-26 AWG (Pair)	**69165K94**	13.18

Cable Jacket Strippers

Standard

Comfort Grip

Strip the outer jacketing of cable. Handles are plastic with a steel blade.

Standard strippers have a swivel blade that allows you to make end and center strips on PVC, rubber, and nylon jacketing up to ⅛″ thick. Use on solid and stranded wire.

Comfort-grip stripper has a handle designed to protect your knuckles from scrapes. The blade strips plastic and fabric jacketing up to 3⁄32″ thick. Use on solid and stranded wire. Includes two extra blades.

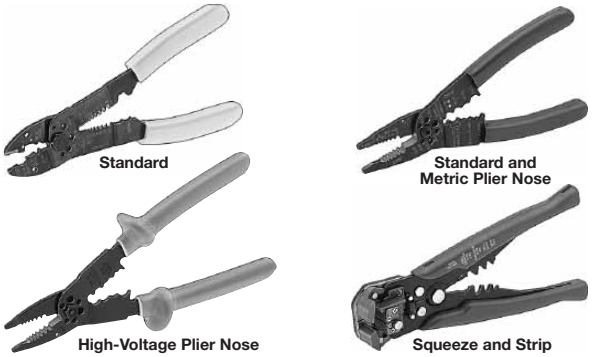
For information about wire size (AWG), see page 834.

Multipurpose Wire Strippers/Crimpers



Strip, crimp, and cut wire with one tool. Strippers/crimpers also cut bolts, except the squeeze-and-strip tool. Made of steel. **Plier nose** tools are useful for pulling and looping wire.

Standard—Strips 26-10 AWG stranded wire and 22-8 AWG solid wire. Crimps 26-10 AWG insulated terminals and 22-10 AWG noninsulated terminals. Tool has a notch for crimping automotive terminals and holes for looping wire.

Standard Plier Nose—Strips 22-10 AWG stranded and solid wire. Crimps 22-10 AWG insulated and noninsulated terminals and 7 mm and 8 mm automotive noninsulated terminals.

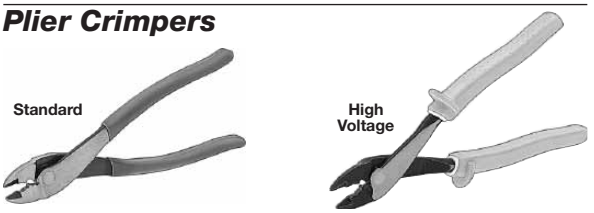
Metric Plier Nose—The tool is marked with metric and AWG sizes. Strips 0.75 mm to 6 mm (22-10 AWG) stranded and solid wire. Crimps 1.5 mm, 2.5 mm, and 6 mm (22-10 AWG) insulated and noninsulated terminals and 7 mm and 8 mm automotive noninsulated terminals.

High-Voltage Plier Nose—Handles are insulated to provide protection up to 1,000 volts. Strips 22-10 AWG stranded and solid wire. Crimps 16-10 AWG insulated terminals, 22-18 AWG noninsulated terminals, and 7 mm and 8 mm noninsulated terminals.

Squeeze and Strip—Squeeze the handle and release it; the blades strip the insulation and pull it off the wire. They automatically adjust to the wire size. This tool strips 24-10 AWG stranded and solid wire and crimps 16-10 AWG insulated and noninsulated terminals. Maximum strip length is 3/4″.

	Lg.		
Standard	8 1/2″	7007K92	$15.23
Standard Plier Nose	8 1/4″	69275K84	17.17
Metric Plier Nose	8 1/4″	69275K86	26.42
High-Voltage Plier Nose	9″	6908K87	48.69
Squeeze and Strip	7 1/2″	8372K11	32.42

Plier Crimpers



They appear ordinary, but these pliers have a built-in crimping die for insulated and noninsulated terminals and splices from 22-10 AWG. Nose has a wire cutter. Made of steel. **High-voltage** crimper has an insulated handle that provides protection up to 1,000 volts.

	Lg.		
Standard	9 1/2″	7289K1	$28.69
High Voltage	10 1/2″	7289K2	65.27

Contact Insertion and Extraction Tools

Insert and remove round pin or socket contacts in electrical connectors. Tools are made of stainless steel and have aluminum handles. **Insertion** tools are 5.3″ long. **Extraction** tools are 6″ long.

Tool kits contain each of the three tools (insertion or extraction) in a leather zipper case.

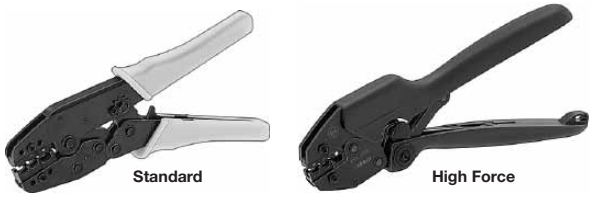
Contact Size, AWG	Contact Dia.	Handle Color	Insertion Tools		Extraction Tools	
20	0.040″	Red	7867K21	$43.55	7867K31	$51.82
16	0.063″	Blue	7867K22	43.55	7867K32	56.27
12	0.093″	Yellow	7867K23	43.55	7867K33	51.82
Tool Kits			7867K41	139.91	7867K42	169.27

Squeeze-and-Strip Flat Cable Strippers

Feed cable through the front of the stripper and squeeze the handle. When you release the handle, the blades strip the cable in the middle or at the end and pull off both the outer sheathing and the inner insulation without nicking the wire. Blades are steel and automatically adjust for cable size. Use to strip flat cable up to 15/32″ wide with 18-10 AWG stranded or solid conductors. It's often used with Romex, telephone wire, and ribbon cables. Body is plastic. Length is 5 1/4″.

8079K11 ..... $73.59

Ratchet Crimpers



A built-in ratchet applies the correct pressure to ensure a complete crimp every time. Crimpers are made of steel. **Standard** crimpers require a screwdriver to change dies. Length is 9″. **High-force crimper** gives you one ton of crimping force and has an ergonomic design to reduce fatigue. Use a Torx driver to change dies. Length is 10″.

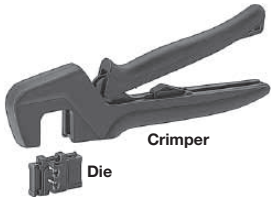
Quick-Change Ratchet Crimpers

Dies snap in and out of this ratcheting tool, so you can quickly change from one terminal type to another.

Crimper is plastic-covered steel. Length is 9 1/4″.

Dies are one piece and are marked with a drawing of the terminal style for easy identification.



Crimper—Dies sold separately

Pin-and-Socket Connector Crimpers

Crimp open- and closed-barrel terminals used in connectors. This tool also crimps flag terminals and cuts bolts. For use with 22-10 AWG insulated and noninsulated wire. Made of steel. Length is 8 1/2″.

7179K41 ..... $44.33

About Compression Connectors and Crimpers

Use compression connectors and crimpers to achieve an extra-tight connection when you're working with wire sizes 8 AWG and larger. The tables below list lug markings from two common manufacturers. You can use them to identify your lug or choose the correct die for the hydraulic compression crimpers on this page.

Copper Wire Size (AWG)	Color Code	Lug Markings T&B	Lug Markings Burndy
8	Red	21	6
6	Blue	24	7
4	Gray	29	8
2	Brown	33	10
1	Green	37	11
1/0	Pink	42	12
2/0	Black	45	13
3/0	Orange	50	14
4/0	Purple	54	15
250 MCM	Yellow	62	16
300 MCM	White	66H or 66	17
350 MCM	Red	71H or 71	18
400 MCM	Blue	76H or 76	19
500 MCM	Brown	87	20
600 MCM	Green	94H or 94	22
750 MCM	Black	106H or 106	24

Compression Lugs

Standard Barrel One Hole

Standard Barrel Two Holes

Long Barrel Two Holes

Intended for use with compression crimpers, these lugs mount to a stud and are made of seamless tin-plated copper or aluminum tubing. Rated to 600 volts and 194° F. UL listed and CSA certified, unless noted.

Copper lugs are for use with stranded copper wire. Lugs are color coded by wire size (see About Compression Connectors and Crimpers above for colors). *Long-barrel* lugs accept more than one crimp for a connection that's suitable for high-vibration applications.

Aluminum lugs can be used with stranded aluminum and copper wire.

Compression Butt Splices

Standard Barrel

Insert wires into these splices and crimp them using a compression crimper to create connections in electrical distribution systems. Splices are made of seamless tin-plated copper. All have a center stop to make sure wire is inserted to the proper depth. Wire size, color, and crimping die reference number are marked on each splice. Use with stranded copper wire. Rated to 600 volts and 194° F. UL listed and CSA certified. **Long-barrel** splices accept more than one crimp for a connection that's suitable for high-vibration applications.

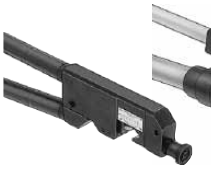
Compression Crimpers

Mechanical Rotating Die



Mechanical Dieless

Hydraulic

Use these tools to crimp compression lugs and splices for secure, reliable connections.

Mechanical Rotating Die—The dies are built-in to the rotating head and a reference chart on the tool shows you which one to use. The ratchet is controlled and won't open until the crimp is complete. Crimper also works with 8-4/0 AWG battery terminals and heavy duty power lugs (you must use comparable battery terminal settings). Made of steel with vinyl grips.

Mechanical Dieless—No dies to buy or change. A reference chart on the tool shows you the correct settings and a single screw offers easy adjustment. The head has a flat surface for standing the tool up. Made of steel with rubber grips. Handles telescope 13" for increased leverage.

Hydraulic—The most crimping force we offer. Tools have a high-pressure pumping system with a replaceable pressure cartridge that lasts for 10,000 to 12,000 compressions. The head swivels 180°. Made of steel with fiberglass handles. A plastic carrying case is included. Crimpers require a die (sold separately below). They accept U-type dies for Alcoa, Burndy, Panduit, T&B, and Blackburn 12-ton tools.

To Order: For hydraulic-crimper dies, please specify wire size from the tables in About Compression Connectors and Crimpers on this page.

For information about wire size (AWG), see page 834.

Copper Set Screw Lugs

To make a connection, tighten the set screw down onto stranded copper wire. No crimping tools required. These lugs are used in power distribution systems and with large motors and generators. Rated to 600 volts and 194° F.

Offset Tongue

Straight Tongue

Offset-tongue lugs give you extra space to insert wire. Made of copper. UL and C-UL listed, except for 6923K29, which is UL listed and CSA certified. **Straight-tongue** lugs allow more surface contact for improved conductivity. Made of copper alloy. UL listed and CSA certified, except 6923K65 is not CSA certified.

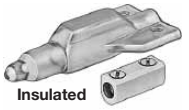
Set Screw Butt Splices

Tighten the set screws to connect wires—no crimping required. Splices are made of tin-plated aluminum. Use with copper and aluminum wire. Rated to 600 volts and 194° F. UL listed and CSA certified.

Noninsulated



Insulated

Insulated butt splices have a transparent plastic cover that provides electrical insulation and allows you to see the connection. The tip can be trimmed to fit wire size. Holes on the wings allow you to use the included cable tie to secure the cover to the wire.

For Wire Size, AWG	Noninsulated Lg.			Insulated Lg.

Split-Bolt Connectors

Tap and splice wire without any special tools. Insert wire and tighten the hex nut to make a connection. In power applications, insulate wire with tape. Connectors are rated to 600 volts and 194° F. UL listed and CSA certified.

Copper connectors are for use with copper wire and copper weld wire. Suitable for underground use, unless noted. **Aluminum** connectors can be used with any combination of copper and aluminum wire.

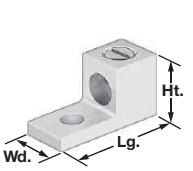
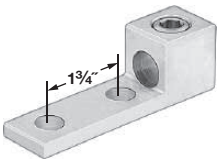
Aluminum Set Screw Lugs



Single Wire, One Mounting Hole



Single Wire, Two Mounting Holes

Dual Wire, One Mounting Hole

Made of high-strength tin-plated aluminum alloy, these lugs are for use with stranded copper and aluminum wire. To install, tighten the set screw down onto the wire; you don't need crimping tools. Lugs are lightweight and are often used on electrical distribution systems. Rated to 600 volts and 190° F. UL listed and CSA certified.

Insulated Set Screw Connectors

Standard Four Wire

Compact Two Wire

All of these connectors provide electrical insulation and make connections without crimping tools. They have set screws that you tighten down onto wire. Connectors are rated to 600 volts and 194° F.

Standard connectors are for use with copper and aluminum wire in most tap or splice applications. Insert your main wire into one of the through-hole ports and then insert each tap wire into either side of each remaining port and tighten the set screws. One side of each port must remain open. Connectors are aluminum alloy. They have transparent plastic insulation that allows you to see the connection. UL listed.

Compact connectors join copper wires in tight spaces such as cable trays, raceways, wireways, and ducts. They're also good for motor leads. Connectors are copper alloy with PVC insulation. Plastic plugs cover the set screw opening to prevent contamination. UL and C-UL listed.

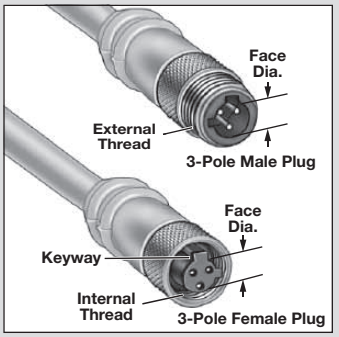
About 0.2″ to 0.8″ Face Diameter Sensor Connectors



Sensor connectors allow you to quickly replace a damaged component or cable without hardwiring to minimize labor costs and reduce equipment downtime. Primarily used to connect proximity sensors, photoelectric sensors, and limit switches, these connectors are commonly referred to as nano (or pico), micro, and mini connectors.

Factors to Consider when Replacing an Existing Sensor Connector

Face Diameter—Measure the face diameter of your plug or receptacle as shown in the illustration at left. Do not include the threading, coupling nut, or keyways in your measurement.

Keyway—Most connectors have keyways on the face to prevent mismating. Each keyway on the female aligns with a keyway notch on the male. Do you have a single or dual keyway?

Number of Poles—Count the number of pins on a male plug or receptacle, or decide how many wires your device needs for power and control.

Gender and Threading—Male connectors have pins that mate with female connectors. The threading of the collar or locknut is either internal or external. Both the gender and threading need to be opposite to join sensor connectors. For example, a male plug with external thread mates with a female plug or receptacle with internal thread.

Plug or Receptacle—Plugs typically have a cable attached and are connected to a sensor while receptacles have wire leads and are mounted in panels.

Characteristics of Sensor Connectors

Face Dia.	Common Name	Keyway	Number of Poles	Current Ratings (amps)	Max. Voltage (AC/DC)	Available Materials	Typical Application	Pages
0.2″	Nano, Pico	None	3-5	3-4	60/75	PVC, Plastic	8 mm and smaller sensors	804
0.3″	Micro	Single, Dual	2-5	4-5	300/300	PVC, Plastic, Rubber	12 mm and 18 mm sensors	805-806
0.55″-0.8″	Mini	Single	2-12	5-13	600/600	PVC, Plastic, Rubber	18 mm and 30 mm sensors	806-807

0.2″ Face Diameter Nano Connectors

Also called pico and M8 connectors, these are the smallest sensor connectors we offer. Use them for low-current devices such as 8 mm and smaller proximity sensors, miniature photoelectric sensors, and other miniature control components. Connectors have a 0.2″ face diameter. They do not have a keyway.

All meet IP67 for protection against temporary water submersion.

Plugs

Plugs accept 0.14″ to 0.2″ dia. cable with up to 20 AWG wires. They are made of black plastic and are rated to 176°F. Plugs with **insulation-piercing terminals** save time because you don't need to strip your wire. The terminals grip the insulation for a secure hold in high-vibration applications. UL and C-UL recognized.

Plugs with Cable and Receptacles with Leads

All of these plugs and receptacles are rated to 221°F. UL listed and CSA certified. **Plugs** are made of plastic molded to a 13-ft. 24 AWG cable with yellow PVC jacket. **Receptacles** are made of nickel-plated brass and have 12″ long 24 AWG wire leads with PVC insulation. There are M8 external threads for panel mounting.

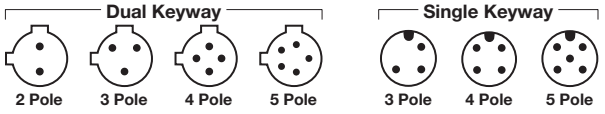
0.3″ Face Diameter Micro Connectors

These connectors are also known as micro and M12 connectors. They are often used with 12 mm proximity sensors. All have a 0.3″ face diameter. Dual-keyway connectors are typically used in AC applications while single-keyway connectors are used in DC applications.



Plugs

Turn an existing cable into a quick-disconnect cable or replace a damaged connector on a cable. Plugs are made of black plastic and rated to 185°F. All meet IP67 for protection against temporary water submersion.

Plugs with screw terminals accept 0.13″ to 0.26″ dia. cable with up to 18 AWG wires. *Single-keyway* plugs are CSA certified. **Plugs with insulation-piercing terminals** save time because you don't need to strip your wire. The terminals grip the insulation for a secure hold in high-vibration applications. They accept cable with up to 24 AWG wires. 4-pole accept 0.16″ to 0.20″ dia. cable; 5-pole accept 0.19″ to 0.23″ dia. cable. UL and C-UL recognized.

Plugs with Cable and Receptacles with Leads

Standard—Meet IP67 for protection against temporary water submersion. CSA certified. **Plugs** are made of PVC molded to a 12-ft. 22 AWG cable with yellow PVC jacket. Rated to 221°F. *Dual-keyway* plugs are UL listed. *Single-keyway* plugs are UL recognized. **Receptacles** are anodized aluminum and have 12″ long 22 AWG wire leads with PVC insulation. There are ¼″ NPT external threads (unless noted) for panel mounting. Rated to 176°F. UL listed.

Harsh Environment—Connectors resist abrasion, oil, and welding slag. They meet IP68 and NEMA 6P for protection against water submersion. UL and C-UL recognized. **Plugs** are made of rubber molded to a 12-ft. 18 AWG cable with yellow rubber jacket. Rated to 194°F. **Receptacles** are stainless steel and have 12″ long 18 AWG wire leads with PVC insulation. There are external threads for panel mounting; male receptacles have ½″ NPT threads and female receptacles have ¼″ NPT threads. Rated to 176°F.

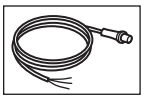
For Male Connectors

For Female Connectors

0.3″ Face Diameter Quick and Secure Micro Connectors

4 Pole



Plugs with Cable

Push these unthreaded connectors together to make secure, reliable connections in less time than it takes to twist coupling nuts on threaded connectors. All have a 0.3″ face diameter, a single keyway, and four poles (female plugs have a five-pole face with the center pole not used). Rated to 194°F. Connectors meet IP67 for protection against temporary water submersion. CSA certified.

Note: Plugs mate with a receptacle of the opposite gender. The male plugs and the female plugs cannot be connected.

Plugs turn an existing cable into a quick-disconnect cable or replace a damaged connector on a cable. Made of nylon. They accept 0.13″ to 0.26″ dia. cable with up to 18 AWG wires.

Plugs with cable are made of polyurethane molded to a 6½-ft. 22 AWG cable with yellow PVC jacket.

Receptacles are nickel-plated brass and have 12″ long 22 AWG wire leads with PVC insulation. There are ½″ NPT external threads for panel mounting.

Plugs with Cable and Receptacles with Leads

Standard—Rated to 221°F. Meet IP67 for protection against temporary water submersion. UL recognized and CSA certified. **Plugs** are made of PVC molded to a 12-ft. oil-resistant 16 AWG cable with yellow PVC jacket. **Receptacles** are die cast zinc and have 12″ long 16 AWG wire leads with PVC insulation. There are ½″ NPT external threads for panel mounting.

Harsh Environment—Connectors resist abrasion, oil, and welding slag. Rated to 194°F. Meet IP68 and NEMA 6P for protection against water submersion. UL and C-UL recognized. **Plugs** are made of rubber molded to a 12-ft. oil-resistant 16 AWG cable with yellow rubber jacket. **Receptacles** are stainless steel and have 12″ long 16 AWG wire leads with PVC insulation. There are ½″ NPT external threads for panel mounting.

Cables with Plugs on Each End

Plugs on each end allow you to make connections without hardwiring. Connectors consist of a 6-ft. 16 AWG cable that has a male plug with internal threads on one end and a female plug with internal threads on the other end.

Standard cables are oil-resistant and have a yellow PVC jacket. Rated to 221°F. Meet IP67 for protection against temporary water submersion. UL recognized and CSA certified.

Harsh environment cables resist abrasion, oil, and welding slag. They have a yellow rubber jacket. Rated to 194°F. Meet IP68 and NEMA 6P for protection against water submersion. UL and C-UL recognized.

Servomotor Connectors

Also known as M23 connectors, these are commonly used in servomotor and servodrive applications. All have solder terminals. The gender, threading, and pole layout must be opposite to join these connectors.

All are made of nickel-plated copper-zinc alloy and are rated NEMA 4X to withstand washdowns and resist corrosion. They meet IP67 for protection against temporary water submersion and IP69K for protection against water from high-pressure, high-temperature washdowns. Temperature range is –40° to 257°F. UL listed and CSA certified.

Plugs accept 0.12″ to 0.67″ dia. cable. **Male receptacles** have four 0.13″ dia. mounting holes (screws not included). **Panel-mount male receptacles** have M25 external threads for mounting in a 1″ dia. panel cutout.

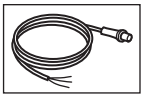
Harsh Environment Molded Connectors with Cable

3 Pole

4 Pole



The toughness to resist abrasion, oil, and welding slag is combined with the highest amp ratings we offer for sensor connectors. All have a 0.85″ face diameter and are also known as 7/8″ connectors. Use them on conveyors, cooling fans, and grinders. Connectors have a single keyway and are rated to 221°F. Meet IP68 and NEMA 6P for protection against water submersion. UL recognized and CSA certified.

Plugs are made of rubber molded to a 6-ft. oil-resistant cable with yellow rubber jacket.

Receptacles are plastic and have 12″ wire leads with PVC insulation. There are 1/2″ NPS external threads for panel mounting.

Compact Push-In Connectors

Push the plugs and receptacles together to make a connection. Small and lightweight, connectors fit in tight spaces, such as the interior of machines. A complete connector requires a plug, a receptacle, and enough pins and sockets for the number of poles you're connecting. Choose your own components or select an assembled connector.

Plugs and Receptacles

All are made of white nylon and rated to 221°F.

Space-saver connectors accept smaller pins to fit the same number of circuits in less space than other connectors.

600V AC connectors lock together for a secure connection. They are UL recognized and CSA certified.

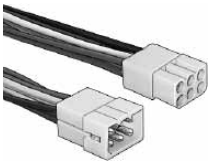
Assembled Connectors with Wire Leads



Standard 6 Pole

Save installation time—these connectors come assembled with wire leads, so you don't need a crimper.

Standard connectors have a white nylon housing. They have 0.093″ dia. pins and 18 AWG wire leads that meet UL 1015. Rated to 221°F.

Weatherproof connectors have a sealed black polymer housing to withstand harsh environments. They have 0.059″×0.031″ pins and 18 AWG wire leads that meet SAE J1128. Rated to 257°F.

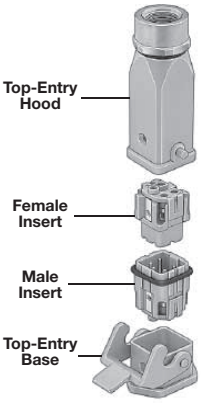
Compact Enclosed Latching Connectors

Surround your connections to protect them from the environment. The hood and base latch together, making these small connectors convenient for external machine components that require frequent disconnection for repair or replacement. A complete connector consists of a female insert, a male insert, a hood, and a base. Choose your own components or select a connector kit.



Connector Kit Top Entry

Inserts

Made of plastic and have silver-plated copper alloy pins and sockets. All have screw terminals. The inserts work with any hood and base below. UL recognized and CSA certified.

No. of Poles	AC Voltage	Amps	For Wire Size, AWG	Female Inserts		Male Inserts		Set of Female and Male Inserts

Side-Entry Hood with Top-Entry Base

Solenoid Valve Connectors

Make connections with hydraulic valves, pneumatic valves, motors, pumps, and pressure switches. Connectors have a plastic housing. Contact distance is the distance from the center of one pin or slot to the center of the opposite side pin or slot.

Plugs and Receptacles—Meet IP65 for protection against water projected from a nozzle. Housing includes a rubber gasket. **Female plugs** have screw terminals and a vibration-resistant locking screw. All are square and rated to 194° F. UL recognized. 4985K16 has a power indicator. **Male receptacles** have solder terminals. *Type A receptacles* are round and rated to 257° F. *Type C receptacles* are square and include two mounting screws. Rated to 194° F. UL recognized.

LED Plugs with Cable—An LED indicates power to the plug. Plugs are square and rated to 176° F. Meet IP67 for protection against temporary water submersion. *Type A plugs* are molded to an 18 AWG cable with PVC jacket. *Type C plugs* are molded to a 20 AWG cable with polyurethane jacket.

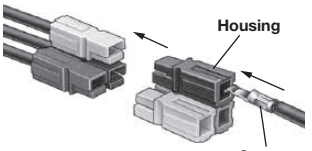
Build-Your-Own Push-In Connectors

Create a single connector or stack the housings and lock them together to form a multipole connector. Also known as power-pole connectors, these are genderless; push them together to mate. A complete connector consists of a housing and a contact.

Connectors



Six Housings Shown

Connector kits consist of housings with contacts. **Housings** are polycarbonate. **Contacts** are silver-plated copper alloy, except 15- and 30-amp contacts are silver-plated copper and 45-amp contacts are tin-plated copper. An internal stainless steel spring ensures that the contacts maintain constant pressure.

The given amp rating is based on a single-pole configuration using the largest wire shown within each range. Rated to 221° F. UL and C-UL recognized.

To Order For *connector kits* and *housings*, please specify black, blue, green, red, or white.

Enclosures for 15-, 30-, and 45-amp Connectors

Standard (Shown with Four Connectors)

Plug

Inline Receptacle

Panel-Mount Receptacle

Enclosures hold four complete connectors. Color is black. *Plug* and *inline receptacle* enclosures meet IP68 for protection against continuous water submersion when used with PG-16 cord grips (sold separately). *Panel-mount receptacle* enclosure has four 0.12″ dia. mounting holes (screws not included). Meets IP68 for protection against continuous water submersion.

Covers protect connectors and allow the enclosure to maintain its IP68 rating when not in use.

Build-Your-Own Locking Connectors

Join as many connectors as you need—these clamp together for secure connections. Housing is polycarbonate with copper alloy pins and sockets. Rated to 257° F. UL recognized.

2-pole connectors have screw terminals that require a 2 mm hex key to install wire.

5-pole connectors have screw-clamp connections.

Weatherproof Low-Voltage DC Connectors

Also known as weather-pack connectors, these DC connectors withstand moisture, chemicals, and extreme temperatures. Use them in forklifts, trucks, and trailer lighting. A complete connector requires a plug, a receptacle, and enough pins, sockets, and wire seals for the number of poles you're connecting. Choose your own components or select a kit. Rated to 16 volts DC.

Plugs and Receptacles

Made of heat-stabilized black nylon. Temperature range is –40° to 257° F. Rated 20 amps.

Pins, Sockets, and Wire Seals

Pins and **sockets** are tin-plated brass. Rated 20 amps.

Wire seals provide an environmental seal between the wire and the plug or socket.

Cavity plugs fill unused connector cavities to keep out dust.

For Wire Size, AWG	Pins	Pkg. of 25	Sockets	Pkg. of 25	Wire Seals	Pkg. of 25

Ratchet Crimper	20	20-14	9171T8	150.32

Harsh Environment Low-Voltage DC Connectors

A sealed plastic housing resists corrosion and allows these connectors to endure temporary submersion in up to 3 ft. of water. Connectors consist of a plug, a receptacle, and enough pins and sockets to correspond to the number of poles. They are compatible with Deutsch-style connectors. Pins and sockets are made of nickel-plated copper alloy, except pins and sockets for 7.5-amp connectors are nickel-plated copper. Crimp wire onto the pins and sockets (crimper sold separately below). Temperature range is –67° to 257° F.

7.5-amp connectors are UL recognized.

13-amp connectors meet IP67 for protection against temporary water submersion and IP69K for protection against high-pressure, high-temperature washdowns. UL recognized.

25-amp connectors meet IP67 for protection against temporary water submersion.

Mil. Spec. Connectors

2 Pole (10SL-4) · 3 Pole (10SL-3) · 4 Pole (14S-2) · 5 Pole (14S-5) · 6 Pole (14S-6) · 7 Pole (16S-1) · 10 Pole (18-1) · 14 Pole (20-27) · 17 Pole (20-29) · 37 Pole (28-21)

Meet the need for tough connectors that work well in high-vibration applications and withstand frequent connection and disconnection. Connectors meet MIL-DTL-5015, so they're compatible with other manufacturers' products that meet the same standard. All come assembled with pins and sockets in place. They have solder terminals and accept 16 AWG wire. Housing is aluminum alloy with a green cadmium finish. Rated to 13 amps. Temperature range is –67° to 257° F.

Plugs have a built-in clamp to relieve strain on your cable. **Receptacles** have four 0.12″ dia. mounting holes. **Closure caps** are made of metal and protect connectors when they are not mated.

Quick-Connect Mil. Spec. Connectors

After you push these military-grade connectors together, lock them with a quarter turn. The turn-lock design provides a secure hold in high-vibration applications and saves time during frequent connections and disconnections. Connectors meet MIL-DTL-26482 standards, so they're compatible with other manufacturers' products that meet the same standard. All come assembled with pins and sockets in place.

Connectors have solder terminals. They accept 24-20 AWG wire, except 3-pole connectors accept 20-16 AWG wire and 15-pole connectors have one pole that accepts 20-16 AWG wire. Environmentally sealed to resist moisture, the housing is aluminum alloy with a green cadmium finish. Temp. range is –67° to 257°F. UL and C-UL recognized.

Plugs have a built-in clamp to relieve strain on your cable. **Receptacles** have four 0.12″ dia. mounting holes.

★ One pole is rated 13 amps.

Quick-Connect Crimp-Style Connectors

A quarter turn locks connectors securely together, yet this turn-lock design is also easy to disconnect. Connectors have crimp-style terminals for easier wire installation than solder terminals (crimper sold separately below). To assemble, insert the included pins and sockets into the connectors. The connectors rated to 7.5 amps accept 20 AWG wire; the connectors rated to 13 amps accept 16 AWG wire.

All have the same pin and socket configurations as MIL-DTL-26482 connectors, so they're compatible with other manufacturers' products that meet that standard. Housing is nickel-plated zinc alloy. Temperature range is –40° to 221°F. Meet IP67 for protection against temporary water submersion. UL listed.

Receptacles have four 0.12″ dia. mounting holes.

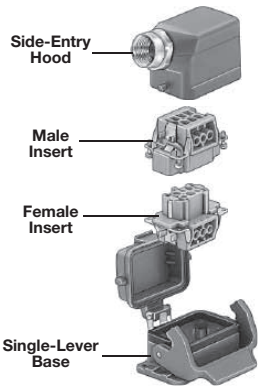
Heavy Duty Enclosed Connectors

Made for signal and power circuits in harsh environments, the mated components create a connector that is rated NEMA 12 for protection against oil and coolant seepage and meets IP65 for protection against water projected from a nozzle. They are rated NEMA 4X to withstand washdowns, except vibration-resistant kits do not meet NEMA 4X and compact kits meet NEMA 4.

A complete connector consists of a male insert, female insert, hood, and base. The hood and base latch together for quick disconnection for equipment repairs. Choose your own components or select a kit. Rated to 257°F, except vibration-resistant kits are rated to 194°F.



Inserts

Inserts have notches to prevent mismating. They are made of plastic with silver-plated pins and sockets. UL recognized and CSA certified. **Inserts with screw terminals** are for 18-14 AWG wire. **Inserts with spring-clamp terminals** are for 26-14 AWG wire and offer a secure connection in high-vibration applications.

Connector Kits

Kits include everything you need for a complete connector. They are UL recognized.

Standard—Inserts have screw terminals. *Single-lever bases* have an attached plastic cover, unless noted.

Vibration Resistant—Inserts have spring-clamp terminals.

Harsh Environment—Connectors have stainless steel hardware and fluoroelastomer seals for chemical and UV resistance. Bases have a removable aluminum cover, except the 48-pole connector has an attached plastic cover. All inserts have screw terminals.

Compact—Inserts have screw terminals, except the 5-pole kit has spring-clamp terminals.

High Amp—Inserts have screw terminals. The *4-pole kit* has two control pins to prevent arcing if it is disconnected before the power is turned off. Ideal for brakes or thermo sensors on large motors. Control pins are rated to 300 volts AC.

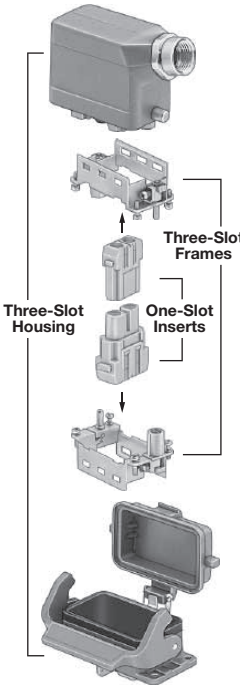
Build-Your-Own Heavy Duty Enclosed Connectors



Combine different types of inserts to build a connector that meets your requirements for machine power and control applications. A complete connector consists of male and female inserts, two frames, and a housing. The inserts snap into the frames, and the frames fit into the housing.

Inserts

Male Standard 2 Pole/1 Slot

Female Standard 2 Pole/1 Slot

Male USB

Female USB

Male Compressed Air

Female Compressed Air

Select a male and a female insert for each slot in your frame. **Standard inserts** have a polycarbonate housing with copper alloy contacts. UL recognized. **USB inserts** are for standard USB cords and have gold-plated copper alloy contacts. **Compressed air inserts** are for ¼″ ID tubing. They have a Buna-N seal and acetal contacts. *Female insert* has a polypropylene shut-off valve. UL recognized.

Frames and Housings

Frames and housings are UL recognized. **Frames** are zinc. **Housings** are aluminum and rated to NEMA 4 and 12 to withstand washdowns and oil seepage. They have a single-lever base and four 0.17″ dia. mounting holes (screws not included). Rated to 257° F. **Kits** include two frames and a housing.

High-Amp Single-Pole Plugs and Connectors

A high amp rating means the ability to handle big jobs such as industrial machinery and floodlights. Plugs and connectors are easy to connect and disconnect; give them a twist and a push or pull.

Sleeves are shatter- and crack-resistant thermoplastic elastomer, except 570- and 690-amp plugs and connectors have neoprene rubber sleeves. Contacts are brass. Amp ratings are based on using these plugs and connectors with the largest size 194° F rated cable in the wire size range listed (amp ratings decrease as cable size decreases). *140-, 300-,* and *400-amp plugs* and *connectors* are rated NEMA 3R for outdoor use and are UL listed and CSA certified.

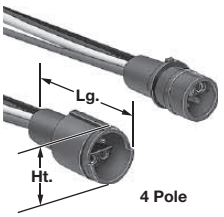
Chemical-Resistant Connectors



Made of PVC, connectors withstand exposure to chemicals, oils, fuels, salt water, and harsh weather. Use them in construction vehicles and machine tool applications. When mated, the connectors meet IP67 for temporary submersion.

Connectors come assembled with tin-plated copper pins and sockets in place. They have 12″ wire leads, so you don't need a crimper. Housing is black. Temperature range is –40° to 221° F. UL recognized and CSA certified.

No. of Poles	Wire Size, AWG	AC/DC Voltage	Amps	Lg.	Ht.

Power Plugs, Connectors, and Receptacles

All of these pin-and-sleeve plugs, connectors, and receptacles meet international standards IEC 309-1 and 309-2, so they are fully interchangeable with other manufacturers' IEC 309 devices. A rugged nylon housing makes them nonconductive, so they are safer than components made of steel. Use them for temporary power systems and portable processing equipment. All are three pole, four wire (three power and one larger ground) and are for use in three-phase voltage systems. Pins and sleeves are brass. There is a single keyway. To prevent incorrect mating, components are color coded by voltage (250V AC devices are blue, 480V AC are red) and housings are sized by amp rating.

Standard—Meet IP44 for protection against splashing water. UL and C-UL listed. CE marked. *Receptacles* have four 1/4″ dia. mounting holes (screws not included).

Washdown—Meet IP67 for protection against water projected from a nozzle. UL listed, CSA certified, and CE marked. *Receptacles* have four mounting holes (screws are included).

To Order: Please specify AC voltage.

Corrosion-Resistant Power Plugs, Connectors, and Receptacles

When used together, these pin-and-sleeve plugs, connectors, and receptacles maintain a NEMA 4X watertight, corrosion-resistant connection and meet UL 1686 standards. They are fully interchangeable with UL 1686 configured and listed devices including Crouse-Hinds Arktite, Appleton Powertite, and Killark Versamate. Use them to supply power to both fixed and portable electrical equipment including pumps, welders, and blowers. Housing is copper-free aluminum with an epoxy/polyester finish. Contacts are brass with a beryllium-copper tension spring. All have a single keyway. Rated to 600 volts AC and 250 volts DC. UL listed and CSA certified.

Receptacles include a mounting box with a conduit entry hub. All have mounting holes (screws not included). *30-amp receptacles* have two 5/16″ dia. holes, *60-amp receptacles* have two 3/8″ dia. holes, and *100-amp receptacles* have four 7/16″ dia. holes.

Safe-Break Power Plugs, Connectors, and Receptacles

Male Plug

No need for a separate disconnect switch—plug, connector, and receptacle combinations have spring-loaded contacts that act like a switch and open to make a safe break, allowing you to connect and disconnect with the power on. They can withstand a 100,000-amp short circuit. Made of fiberglass-reinforced polyester with silver-nickel contacts. Components lock together to form a connection that is rated NEMA 4X to withstand washdowns and resist corrosion. UL 2682 listed as a switch-rated plug and receptacle for branch circuit disconnect switching and motor circuit disconnect switching. CSA certified. *20-, 30-,* and *60-amp plugs, connectors,* and *receptacles* meet IP67 for protection against temporary water submersion.

Plugs have three power pins plus one ground pin. **Receptacles** have a 30° angle and a junction box with conduit entry hub. They have four 1/4″ dia. mounting holes, except 100-amp receptacle has 5/16″ dia. mounting holes. Screws are not included.

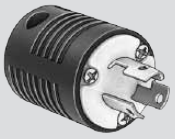
About NEMA Turn-Lock Plugs, Connectors, and Receptacles



Plug

Connector

Receptacle

After mating plugs with connectors or receptacles, give them a quarter turn to lock the connection. The locked connection remains secure in high-vibration applications and prevents accidental disconnection, so it is suitable for critical connections. All conform to National Electrical Manufacturers' Association (NEMA) configurations for plugs and connectors/receptacles.

To replace a device, first check it for a NEMA-style number. It may have a NEMA number ending with a P, C, or R, signifying either a plug, connector, or receptacle. For example, an L5-15P is an L5-15 plug. If you are buying a plug, the NEMA style must match your existing NEMA connector or receptacle. Different NEMA turn-lock styles are not compatible; for example, an L5-15 plug will not fit an L5-20 receptacle.

If you do not have a NEMA-style number, match the plug, connector, or receptacle you're replacing to a diagram in the chart below, making sure the voltage and amp ratings match your requirements. If you don't see a diagram that matches your configuration, see page 819 for space-saver (NEMA midget) styles and non-NEMA styles, and page 820 for NEMA straight-blade styles.

Turn-Lock Plugs, Connectors, and Receptacles

Mate plugs with connectors or receptacles and give them a quarter turn to lock the connection. This connection remains secure in high-vibration applications and prevents accidental disconnection. Made of plastic. UL listed. For receptacle wall plates, see page 893.

Plugs and **connectors** have a cord grip for strain relief.

Flanged Receptacles—*15-amp receptacles* mount in a 1.7″ dia. cut-out. *20-amp receptacles* mount in a 2.1″ dia. cutout, except two-blade receptacles mount in a 1.7″ dia. cutout and four- and five-blade male receptacles mount in a 2.3″ dia. cutout. *30-amp receptacles* mount in a 2.3″ dia. cutout.

Impact-Resistant Rubber Turn-Lock Plugs and Connectors

Rubber construction resists abrasion and damage from drops and other types of impact. The rubber also provides more oil resistance than plastic plugs and connectors. Not intended for use in wet or damp environments. All have a cord grip for strain relief. Color is yellow. UL listed and CSA certified.

Weather-Resistant Covers for Plugs and Connectors

Protect your turn-lock connections from moisture and light splashing (covers are not intended for liquid immersion or direct spray). Slide a cover over your plug and another over your connector; screw the covers together to conceal the connection. Covers work with NEMA and non-NEMA configurations. Made of rubber.

Premium Turn-Lock Plugs, Connectors, and Receptacles

Also known as twist-lock devices, these plugs, connectors, and receptacles are built to handle tough, repetitive-use applications. All have a plastic housing and are UL listed. For receptacle wall plates, see page 893.

Plugs and **connectors** have a ribbed housing for easy gripping and an internal dust seal to protect contacts from contaminants. A two-piece cord grip provides strain relief and keeps your cable securely attached.

Ground-Monitoring Turn-Lock Plugs and Connectors

Know the power and ground status of your plugs and connectors at a glance. Dual LEDs, visible from all angles, light up green to indicate when plugs and connectors have power and are safely grounded. The LEDs are red when plugs and connectors have power, but are not grounded. Plugs and connectors are made of plastic. They have a cord grip to provide strain relief and keep your cable securely attached. The cord grip also has a dust seal to block contaminants. UL and C-UL listed.

Corrosion-Resistant Turn-Lock Plugs, Connectors, and Receptacles

For use in damp and corrosive environments, these plugs, connectors, and receptacles have a plastic housing, nickel-plated blades and contacts, and stainless steel hardware for corrosion resistance. UL listed. CSA certified, except four-blade receptacles. For receptacle wall plates, see page 893.

Plugs and **connectors** have a ribbed housing for easy gripping and an internal dust seal to protect contacts from contaminants. A two-piece cord grip provides strain relief and keeps your cable securely attached.

Watertight Turn-Lock Plugs, Connectors, and Receptacles

A multiple-ring seal keeps out water, oil, and other contaminants. When used together, these plugs, connectors, and receptacles form a connection that meets NEMA 4X, 6P, 12, and IP67 for protection against washdowns, submersion, and corrosive agents. Housing is made of insulated rubber to resist heat, weather, and chemicals. Color is yellow. Blades and contacts are nickel-plated brass. UL listed, except male receptacles and female connectors for male receptacles.

Plugs and **connectors** have a cord grip for strain relief. Male plugs cannot mate with female connectors for male receptacles.

Outlet boxes for receptacles have two NPT female threaded hubs.

Space-Saver Plugs, Connectors, and Receptacles

Also known as NEMA midget plugs, connectors, and receptacles, these smaller versions of their standard-size NEMA equivalents are a good fit for tight spaces. Housing is plastic. UL listed and CSA certified.

Male plugs have a 1.26″ OD, except the ML1-15 plug has a 1.07″ OD.

Receptacles have a plastic or stainless steel flange for mounting into a panel cutout. *ML1-15 receptacles* require a 1.1″ dia. cutout; *ML2-15* and *ML3-15 receptacles* require a 1.25″ dia. cutout.

Turn Lock—These are compatible only with other turn-lock midget devices that have the same NEMA style. Meet Fed. Spec. WC596, except receptacles with stainless steel flange.

Straight Blade—Plugs fit standard NEMA 1-15 and 5-15 connectors and receptacles.

To Order: For *receptacles*, please specify plastic or stainless steel flange.

Non-NEMA Turn-Lock Plugs, Connectors, and Receptacles

Although not compatible with NEMA devices, these plugs, connectors, and receptacles conform to Pass & Seymour standards and are UL listed. After mating, give them a quarter turn to lock the connection. Housing is plastic. For receptacle wall plates, see page 893.

Plugs and **connectors** have a cord grip for strain relief. *Style A* and *Style B* devices, also known as California Standard plugs and connectors, have a 2.3″ OD and are CSA certified. *Style C* and *Style D* devices have a 2.2″ OD.

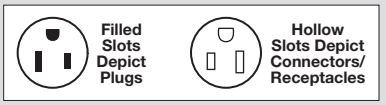
About NEMA Straight-Blade Plugs, Connectors, and Receptacles



Straight-blade plugs, connectors, and receptacles conform to National Electrical Manufacturers' Association (NEMA) requirements. The diagrams below show the NEMA configurations for plugs and connectors/receptacles.

Note: The 15-amp (5-15, 6-15) connectors and receptacles are not compatible with the 20-amp (5-20, 6-20) plugs. For example, a 5-20 plug will not fit in a 5-15 connector or receptacle.

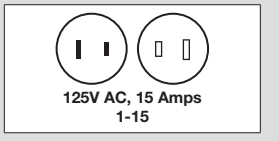
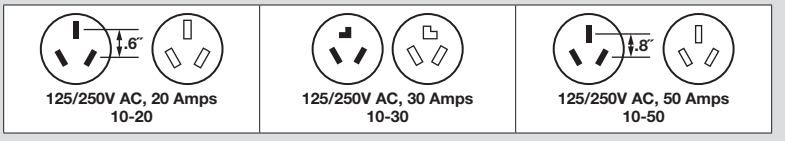
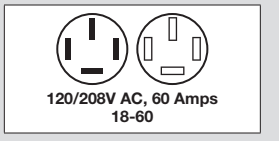
Two Blades—Non-Grounded



Three Blades—Non-Grounded



Four Blades—Non-Grounded



Straight-Blade Plugs, Connectors, and Receptacles

Meet the durability requirements of industrial applications. All of these straight-blade devices have a plastic housing. UL listed, unless noted.

Plugs and **connectors** have a cord grip for strain relief. *90° male plugs* have a rotating face to allow cord entry at the most convenient angle, unless noted.

Female receptacles fit standard wall plates (see page 893). *Single female receptacles* can be wired from the back. *Duplex female receptacles* can be wired from the back and side.

Flanged receptacles mount in a 1.6″ dia. panel cutout and can be wired from the back. Color is white.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Premium Straight-Blade Plugs, Connectors, and Receptacles

It's the design details that make these rugged devices stand out. All have a plastic housing that's durable enough to handle repeated use. UL listed. *Grounded* devices are also CSA certified.

Plugs and **connectors** have a ribbed housing for easy gripping. A two-piece cord grip provides strain relief and keeps your cable securely attached.

Receptacles can be wired from the back. 15-amp and 20-amp receptacles can also be wired from the side. All fit standard wall plates (see page 893).

Flanged receptacles mount in a 1.72″ dia. panel cutout and can be wired from the back. Color is white.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Hospital-Grade Straight-Blade Plugs, Connectors, and Receptacles

Look for the green dot to confirm devices are certified for use in hospitals. Once mated, they have a tight connection that remains secure in high-vibration applications. Compared to industrial-grade devices, these resist a higher level of abuse and have a longer service life. All have three blades and are grounded. Made of plastic. UL listed and CSA certified. Meet Fed. Spec. WC596, except quad female receptacles.

Male plugs and **female connectors** have a transparent face, so you can visually confirm the connection.

90° male plugs have a rotating face to permit cord entry at the most convenient angle. The housing is transparent, so you can visually confirm the connection.

Duplex female receptacles can be wired from the back and side. Terminals accept 14-10 AWG wire. For wall plates, see page 893. **To Order:** Please specify ivory or red (6-15 style only available in ivory).

Quad female receptacles have four outlets that are internally connected and can be wired as a single circuit or split into two circuits. Terminals accept up to 12 AWG wire. Mount directly to a 4″ square outlet box. **To Order:** Please specify gray, ivory, red, or white.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Impact-Resistant Rubber Straight-Blade Plugs and Connectors

A durable rubber housing gives these plugs and connectors the ability to resist damage from drops and other types of impact. The rubber also resists oil and abrasion. Not intended for use in wet or damp environments. All are UL listed. CSA certified, except the three-blade connector with power indicating light.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Corrosion-Resistant Straight-Blade Plugs, Connectors, and Receptacles

Meet the demands of corrosive environments. Devices have an impact-resistant plastic housing, nickel-plated blades and contacts, and stainless steel hardware. They have three blades and are grounded. Color is yellow. Meet Fed. Spec. WC596. UL listed and CSA certified.

Plugs and **connectors** have a built-in seal to protect terminals.

Receptacles can be wired from the back and side. They fit standard wall plates (see page 893).

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Watertight Straight-Blade Plugs, Connectors, and Receptacles

The multiple-ring seal and synthetic rubber housing are like a built-in raincoat for these devices. They resist water, heat, oils, and chemicals. When mated with each other, devices meet NEMA 4X, 6P, and IP67 for protection against corrosion, washdowns, and submersion. They have three blades and are grounded. Color is yellow. UL listed, except male receptacles and female connectors for male receptacles.

Male plugs cannot mate with female connectors for male receptacles.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Power-Indicating Straight-Blade Plugs and Connectors

A light, visible from any angle, visually confirms if your plugs and connectors have power. All have three blades and are grounded.

Standard and **hospital-grade** devices have a transparent plastic housing. *Hospital-grade* plug has an extra-tight fit and is marked with a green dot. **Ground-monitoring** plugs and connectors have a black plastic housing. Light is green when device has power and is safely grounded. Light is red when device has power, but is not grounded. UL and C-UL listed.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

NEMA Style	AC Voltage	Amps	Male Plugs		Female Connectors

Hazardous-Location Straight-Blade Plugs and Receptacles

For use where ignitable gas and dust may be present, these plugs and receptacles are UL listed for Class I, Div. 1 and 2, Groups C and D; Class II, Div. 1 and 2, Groups F and G; and Class III hazardous environments. Housing is aluminum. They have three blades and are grounded. CSA certified. **Receptacle** has a spring-loaded cover and accepts both the 5-15 and 5-20 plugs. Color is gray.

To Order: For *receptacle,* please specify ½″, ¾″, or 1″ NPT female threaded hub for conduit entry.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

NEMA Style	AC Voltage	Amps	Male Plugs		Female Receptacle	
5-15	125	15	7461K21	$92.60	—	—

Quick-Wire Straight-Blade Plugs and Connectors

With Blade Terminals

Because the housing is hinged, these devices open up and remain in one piece for fast wire installation. Housing is impact-resistant plastic. All have three blades and are grounded. They meet Fed. Spec. WC596, except 7216K5, 7216K6, and 7216K13. All are UL listed.

Plugs and connector **with blade terminals** eliminate wire stripping; blades pierce the wire insulation when you close the housing. CSA certified. *Hospital-grade* plug has an extra-tight fit and is marked with a green dot.

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

Straight-Blade Plugs with Fuse

Place a fuse in these NEMA 5-15 plugs to protect your equipment from current overload. If the amps exceed your fuse rating, the fuse breaks the circuit. Plugs accept a ¼-amp to 15-amp ceramic fuse (sold separately).

Plugs

Plugs have three blades and are grounded. Made of plastic. UL listed. *Hospital-grade* plug has an extra-tight fit and is marked with a green dot.

	AC Voltage		
Standard Yellow Plug	125	7155K11	$33.75
Hospital-Grade Transparent Plug	125	7155K12	34.31

Fuses

To Order: Please specify amp rating from those listed.

For information about turn-lock and straight-blade plugs and receptacles, see pages 816 and 820.

DC Voltage Plugs, Receptacles, and Extension Cords

Plug

Receptacle

Extension Cord

Supply power from a battery in vehicle and marine applications. When used together, the plug and receptacle create a moisture-resistant seal. Used separately, they are compatible with devices that have standard 12-volt plugs and receptacles. All have a moisture-proof and corrosion-resistant plastic housing. Contacts are nickel-plated copper alloy.

Plug has an LED power indicator and a 10-amp, 1/4″ Dia. × 1 1/4″ Lg. glass-tube fuse. Length is 3.7″.

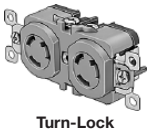
Receptacle has a cap to seal out moisture when not in use. It also has two male quick-disconnect terminals with 0.25″ Wd. × 0.032″ Thick. tabs.

Extension cord has a plug on one end and a receptacle on the other. Retracted length is 14″; extended length is 6 ft.

	DC Voltage	Amps		
Plug	12	10	6860K1	$10.63
Receptacle	12	15	6860K2	16.69
Extension Cord	12	10	6860K3	36.49

Interference-Limiting Receptacles

Turn-Lock 1-Outlet Receptacle



Turn-Lock 2-Outlet Receptacle

Straight-Blade 2-Outlet Receptacle

Protect computers and other sensitive devices from electromagnetic interference caused by high currents or surges from nearby equipment. Housing is plastic, except NEMA 5-20 straight-blade male plug has a rubber housing. UL listed, except NEMA 5-20 straight-blade male plug. All are CSA certified.

Receptacles, also known as isolated ground receptacles, have a ground terminal that's insulated from the mounting strap so an isolated ground wire can be run through the conduit. They can be wired from the back and side, except 4-outlet receptacles can be wired from the back. All are orange and marked with a green triangle. *Turn-lock* receptacles provide a secure connection in high-vibration applications.

Male plugs do not limit interference, but they are orange to match the interference-limiting receptacles. Rated 125 volts AC.

Straight-Blade 4-Outlet Receptacle

Straight-Blade Male Plug

Note: The amp rating of your plug should not exceed that of your connector or receptacle.

DC Voltage Turn-Lock Plugs and Receptacles

A unique locking configuration provides a secure connection in high-vibration environments and prevents attachment to AC connectors. Use in vehicle and marine applications to supply power from a battery or generator. Housing is plastic. All have corrosion-resistant electrical components and nickel-plated brass blades and contacts.

Plugs have an O-ring that seals out moisture when connected to a receptacle. *Plug with wire entry* has three entry holes. *Plug with cord entry* has one entry hole.

Receptacle fits into a 1 1/8″ dia. mounting hole and accepts two or three wires. It has a watertight cap for protection when not in use.

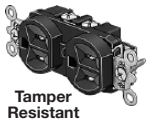
Receptacle	48	40	10-8	2671K15	28.81

Straight-Blade Receptacles

Economy

Flush Mount



Tamper Resistant

Keep it simple with these grounded receptacles that accommodate standard straight-blade plugs with two or three blades. Made of plastic. All fit standard wall plates (see page 893).

Economy—Can be wired from the side. UL listed and CSA certified.

Flush Mount—Have a flat face that lies flush with a wall plate for a neat appearance. They can be wired from the back and side. Meet Fed. Spec. WC596. UL and C-UL listed.

Tamper Resistant—Have internal shutters to prevent insertion of foreign objects and accidental contact with power. They are good for use in hospitals and schools. Receptacles can be wired from the back and side. Meet Fed. Spec. WC596. UL listed and CSA certified.

5-20	125	20	Brown, Gray, Ivory, White	7159K2	13.59

Straight-Blade Receptacles with USB Chargers

Charge mobile devices without a separate adapter. Receptacles have two straight-blade receptacles and two USB ports. They replace duplex receptacles and fit standard GFCI wall plates (see page 893). For use with electrical boxes 2″ or deeper. Receptacles are plastic. UL and C-UL listed.

The straight-blade receptacles are tamper resistant; internal shutters prevent insertion of foreign objects and accidental contact with power. They are NEMA 5-15 and grounded. Accept standard straight-blade plugs with two or three blades. Receptacles can be wired from the back and side. Rated 15 amps and 125 volts AC. USB ports deliver 3 amps to charge tablet computers and smartphones.

Panel-Mount Straight-Blade Receptacles

Snap this grounded receptacle into a 1″ square cutout in electrical panels. No screws or clips are needed. It fits panels 0.03″ to 0.07″ thick and accepts standard straight-blade plugs with two or three blades. Made of black plastic with blade terminals that pierce the insulation of 14-12 AWG solid copper wire. Rated 15 amps and 125 volts AC. UL recognized. CSA certified.

7168K1 ..... $1.60

DIN-Rail Mount Straight-Blade Receptacles

Single

Duplex

Add outlets to your DIN rail to bring power to tools, lights, test equipment, and computers that have a standard straight-blade plug with two blades (NEMA 1-15) or three blades (NEMA 5-15). These grounded receptacles have screw-clamp terminals for wire connection. Made of plastic. Rated 15 amps and 120 volts AC. UL recognized.

Single receptacle fits both 32 mm (DIN 1) and 35 mm (DIN 3) rail. It accepts 26-12 AWG wire. Color is black. CSA certified.

Duplex receptacle fits 35 mm (DIN 3) rail and accepts 18-14 AWG wire. Color is ivory.

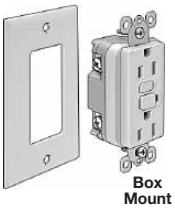
GFCI Receptacles



Box Mount

DIN-Rail Mount

Install these GFCI receptacles to provide ground fault protection to all outlets that are downline on the same circuit. Receptacles have test and manual-reset buttons. They are made of impact-resistant plastic.

Box Mount—Install in a standard outlet box. Receptacles can be wired from the back and side and come with a wall plate. UL listed. *Tamper-resistant/weather-resistant* receptacles have internal shutters to prevent insertion of foreign objects and accidental contact with power. They are also suitable for use in wet or damp locations. CSA certified. *Hospital-grade* receptacles meet UL 498 for hospital-grade requirements and have an indicator light. They are marked with a green dot.

DIN-Rail Mount—Install on 35 mm DIN rail. Housing is black. Size is 5⅜″ Ht. × 3″ Wd. × 2½″ Dp. UL recognized.

Surge Suppressor Receptacles

Box Mount

DIN-Rail Mount

Prevent damage to electronic equipment from current spikes and meet UL 498 hospital-grade requirements for plug holding strength. These duplex receptacles have an LED status indicator.

Box-mount receptacles can be wired from the back and side. They are UL listed and fit standard GFCI wall plates (see page 893). *Interference-limiting* receptacles, also known as isolated ground receptacles, have an isolated ground connection to protect computers and other equipment from electromagnetic interference.

DIN-rail mount receptacle mounts to 35 mm DIN rail. Housing is black. Size is 5″ Ht. × 2½″ Wd. × 2″ Dp. UL recognized.

Outlet Adapters

Grounding Adapter

Triple Adapter

Three-Way Adapter

Six-Outlet Adapter

Use adapters with standard straight-blade outlets. They are for indoor use. Rated 15 amps and 120 volts AC. Made of plastic. UL listed.

Grounding Adapter—Converts a two-blade outlet into a three-blade grounded outlet.

Triple Adapters—Convert a three-blade outlet into 3 three-blade outlets.

Three-Way Adapter—Converts a three-blade outlet into 3 three-blade outlets that are in a T-shape to provide space for large plugs.

Six-Outlet Adapter—Converts a three-blade outlet into 6 three-blade outlets. Size is 3⅛″ Ht. × 3¼″ Wd. × 1⅞″ Dp. C-UL listed.

Turn-Lock and Straight-Blade Adapters

Plug in an adapter to change the NEMA blade configuration of an existing receptacle or connector. Adapters have a male plug on one end and a female receptacle with a different configuration on the other end. Housing is plastic with a rubber coating for impact resistance. Rated 125 volts AC. UL listed, except 6379K37 and 6379K33. All are CSA certified.

6379K33 $35.83

GFCI Outlet Converters

With 1 Outlet

With 5 Outlets

Convert standard three-blade wall outlets into GFCI-protected outlets. All have a plastic housing and NEMA 5-15 outlets. UL listed. *Automatic reset* allows the converter to regain power after it's grounded again. *Manual reset* prevents unexpected restarts.

No. of Outlets	Reset	AC Voltage	Amps	Color		
1	Automatic	125	15	Yellow	6975K633	$17.00
1	Manual	120	15	White	6975K63	19.48
1	Manual	120	15	Yellow	6975K632	20.33
5	Automatic	125	15	White	6975K73	25.77

For information about NEMA plugs and receptacles, see pages 816 and 820.

Surge Suppressor Outlet Converters

Change any outlet that accepts a standard three-blade plug (NEMA 5-15) into a surge suppressor to protect sensitive equipment from current spikes. All converters have NEMA 5-15 outlets. Housing is plastic, except standard 2-outlet converters have a metal housing.

Standard converters are ETL and C-ETL listed, except 4-outlet converter is UL and C-UL listed, and 6-outlet converter is UL listed.

Converter with USB ports has two USB ports and two outlets that rotate 360° to accommodate large plugs. USB ports deliver 2.1 amps to charge tablet computers, smartphones, and other mobile devices. UL and C-UL listed.

Portable Impact-Resistant Rubber Outlet Boxes

Wire boxes to an electrical cable to bring outlets to areas far from a power source. They are for indoor use. Made of rubber, boxes withstand drops and other types of impact. The rubber also resists oil, chemicals, and abrasion. A strain-relief fitting at the cord entrance protects the internal wire connections. Boxes accept 0.32″ to 0.63″ OD cord. They are 3⅜″ deep and rated 15 amps and 125 volts AC. Interior box size is 2.6″ Ht. × 1.8″ Wd. × 3″ Dp. Color is yellow. UL listed and CSA certified.

Boxes with Outlet Covers—A spring-loaded flip cover for every outlet keeps out dust and moisture.

Boxes are empty so you can build your own outlet box or replace a damaged box. They accept a standard-size duplex receptacle on two sides. **Boxes with outlets** have four NEMA 5-15 outlets; there is a duplex receptacle on two sides of the box.

Box with Outlets and Outlet Covers

Temporary Power Distribution Boxes

Plug these portable distribution boxes into a power source, such as a generator, to power tools and other equipment when permanent outlets are not available. Each box has four GFCI-protected outlets that are rated 20 amps and 125 volts AC. Made of steel with a rust-resistant yellow finish. Boxes can be used outdoors. Size is 16″ Lg. × 12½″ Wd. × 12″ Ht. Meet OSHA requirements. UL and C-UL listed.

California Standard Plug—The plug is rated 50 amps and 125/250 volts AC.

Turn-Lock Plug (NEMA L14-30)—The plug is rated 30 amps and 125/250 volts AC.

Covered-Cord Outlet Boxes

A combination of outlet box, cord, and duct, this all-in-one unit minimizes indoor tripping hazards and protects cable from damage. The outlet box has a duplex three-blade (NEMA 5-15) outlet and a 16-ga. flat cord that is protected by plastic lay-flat duct. The cord has a NEMA 5-15 plug that extends two feet beyond the end of the duct. To secure duct, use tape with adhesive on both sides (sold separately below). Outlet box is 4½″ long and rated 13 amps, 125 volts AC. UL listed.

Tape with Adhesive on Both Sides—2″ Wd. × 10-ft. Lg. 6961K24 4.28

Cabinet-Mount Outlet Strips

Strips are extra-long to mount on the frame of your electrical cabinet. Screw the included clips to the cabinet and snap the strips into place (mounting screws are included). Strips have a resettable circuit breaker and an aluminum housing with gray finish. Rated 120 volts AC. UL listed.

15-amp outlet strips have a 14-ga. cord with standard three-blade (NEMA 5-15) plug and outlets.

20-amp outlet strips have a 12-ga. cord with NEMA 5-20 plug and outlets.

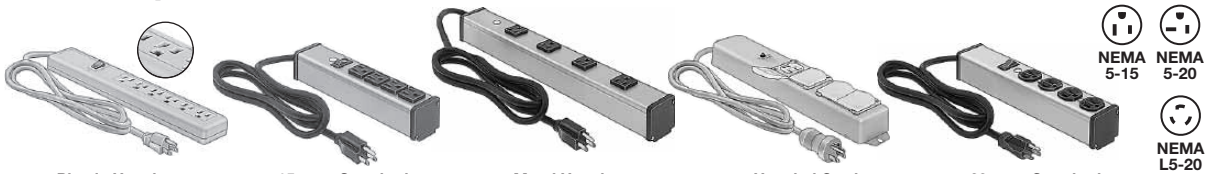
Outlet Caps

Protect unused outlets from dust and contaminants. These round plastic caps fit receptacles that accept standard straight-blade plugs with two or three blades.

	Pkg. of 12	
Clear	9534T5	$2.72
Yellow	9534T1	4.77

Outlet Strips



Plastic Housing with 90° Outlets | 15-amp Standard with Power Switch | Metal Housing with 90° Outlets | Hospital Grade with Outlet Covers | 20-amp Standard

Make power readily accessible with multiple outlets. These strips have a built-in resettable circuit breaker and most have a lighted power switch (see table). All are rated 120 volts AC. Mounting clips are included, except 71675K44 and 71675K43. UL and C-UL listed, except 71675K44 and 71675K43.

15-amp Outlet Strips—All have a 14-ga. cord with three-blade NEMA 5-15 plug and outlets.

20-amp Outlet Strips—Have a 12-ga. cord with a three-blade NEMA 5-20 plug, unless noted. *4-outlet* and *6-outlet* strips have NEMA 5-20 outlets. *24-outlet* strips have two NEMA 5-20 outlets and 22 NEMA 5-15 outlets.

Outlet strips **with 90° outlets** have rotated outlets to accommodate large plugs and power supplies.

Hospital-grade outlet strips are marked with a green dot and have a hospital-grade plug and outlets. They are more durable than most other outlet strips and have an extra-tight fit to stay secure in high-vibration applications. Not intended for use in patient-care areas, except outlet strips *with outlet covers* meet NEC Article 517 requirements for use in patient-care areas. The covers protect the outlets from dust and contaminants when not in use.

Impact-Resistant Rubber Outlet Strips

Made of rubber to resist damage from drops and other types of impact, these are the most durable outlet strips we offer. All are 10⅜″ long with three outlets that are 2¼″ center-to-center. Color is yellow.

Strips **without cord** accept 0.33″ to 0.66″ OD cord. UL listed and CSA certified.

Strips **with cord** are wired with a 25-ft. long 12-ga. cord with plug. The plug and outlets have the same NEMA configuration. CSA certified.

NEMA Style	AC Voltage	Amps	Without Cord		With Cord	
5-15	120	15	8056K74	$100.30	8056K75	$223.34
5-20	120	20	8056K94	150.21	8056K95	252.65

Pole-Mount Outlet Strips

Tighten the knob to mount this curved outlet box on a ¾″ to 1½″ dia. pole or table leg. It also has two 3⁄16″ dia. holes for wall mounting (screws not included).

Strip has three NEMA 5-15 duplex outlets and includes a 15-ft. long 14-ga. cord with three-blade (NEMA 5-15) plug. Housing is blue plastic and has a power-indicating light. Rated 12 amps and 125 volts AC. Size is 5⅝″ Ht.×5¼″ Wd.×3¼″ Dp. UL listed.

8331K1 $119.09

Surge Suppressor Outlet Strips

Standard with Plastic Housing

With USB Ports

With Coaxial Jacks

Energy Saving

Bench Mount with USB Ports

Standard with Metal Housing

One outlet strip protects multiple devices from spikes in current. Strips have a 14-ga. cord, three-blade (NEMA 5-15) plug and outlets, and a power switch, unless noted. They have a 15-amp circuit breaker, except interference-limiting outlet strips have a 12-amp circuit breaker. Phone jacks are RJ-11. Rated 120 volts AC. UL listed, except bench-mount strips are ETL and C-ETL listed.

With USB Ports—This strip has two USB ports to charge electronic devices. The outlets rotate 360° to accommodate large plugs. Strip also has LED status indicators.

With Coaxial Jacks—14″ long strip has four coaxial jacks. 9½″ long strip has two coaxial jacks, LED status indicators, and an audible alarm that alerts you if strip is damaged and needs replacement.

Energy Saving—Has a master outlet, five outlets controlled by the master, and two outlets that are always on. Plug your main device, such as a computer, into the master outlet; plug accessory devices, such as a monitor and printer, into the outlets controlled by the master. Turn your computer on and off to control power to the accessory devices. The outlets have sliding covers.

Bench Mount with USB Ports—Has two USB ports to charge electronic devices. Clamp to the edge of your bench or desktop, or surface mount over a 1½″ to 3″ dia. opening. Clamp and mounting plate are included.

With GFCI Plug—Housing is yellow. Include four outlet covers.

Interference Limiting—These isolated ground strips protect computers and other sensitive equipment from electromagnetic interference.

Hospital Grade—This strip has tight-fitting outlets and meets UL 498 requirements for plug holding strength. It is more durable than most other outlet strips.

★ Does not have a power switch.

Rack-Mount Outlet Strips

Standard

Outfit your standard 19″ wide electronics racks, enclosures, and cabinets with an outlet strip. Front outlets power external components and rear outlets power components inside your cabinet. All outlet strips have a resettable circuit breaker, a 14-ga. cord, and three-blade (NEMA 5-15) plug and outlets. Strips that have a power switch also have a power indicator. Rated 15 amps and 120 volts AC. Housing is steel with a black finish. All have four ¼″ dia. mounting holes (screws not included, unless noted). UL and C-UL recognized, unless noted.

With Surge Suppressor—Protect equipment from spikes in current.

With 90° Outlets—Outlets are rotated to accommodate large plugs and power supplies.

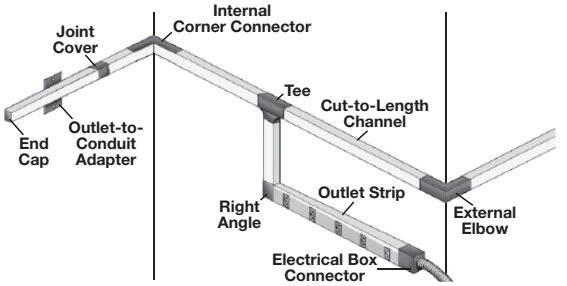
■ Comes with screws. ▲UL and C-UL listed.

Hardwired Outlet Strips



Combine outlet strips and accessories to create a permanent outlet system without rewiring or opening walls. You can also hardwire the outlet strips into an existing electrical system. Outlet strips and accessories are made of steel and are UL and C-UL listed.

Outlet Strips

Strips have three-blade (NEMA 5-15) outlets with 12-ga. insulated solid wire. There are knockouts in the back for ½″ trade size conduit and cable connectors. Two end caps are included. Rated 15 amps and 125 volts AC.

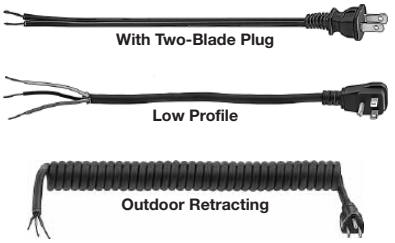
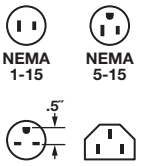
Power Cords





With a plug on one end and wires on the other, these cords are ready for installation. Rated 125 volts AC, unless noted.

Power Cords

Cords have a PVC jacket and stay flexible in temperatures from –4° to 140°F. Color is black, except 70355K72 is gray and hospital-grade cords are gray with a clear plug marked with a green dot. All are UL listed and CSA certified. For SPT cord type, the numbers 1, 2, and 3 following SPT designate the relative thickness of the cord insulation (1-thinnest to 3-thickest).

Continuous-flex cords have the pliability of vacuum cleaner cords, so they are good for applications where cord is repeatedly wound.

Hospital-grade cords resist abuse and the plug has an extra-tight fit to remain secure in high-vibration applications.

Low-profile cords have a plug angled 90° to allow the cord to fit tight against a wall.

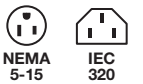
Electronic Equipment Power Cords

Use for computers, lab equipment, and office machines that have IEC 320 male receptacles. Cords are black, except hospital-grade cords are gray with a clear plug marked with a green dot.



North American Cords

Cords have an IEC 320 female connector on one end. Rated 125 volts AC. Temperature range is –4° to 140°F, except hospital-grade cords have a range of –4° to 221°F. UL listed and CSA certified.

Interference-limiting cords have an insulated ground wire and are shielded to prevent electromagnetic interference.

Continuous-flex cords have the pliability of vacuum cleaner cords, so they are good for applications where cord is repeatedly wound.

Hospital-grade cords resist abuse and the plug has an extra-tight fit to remain secure in high-vibration applications.

Turn-Lock Power Cords

One end of these round cords has a turn-lock plug to offer a locked connection that remains secure in high-vibration applications and prevents accidental disconnection. There are wires on the other end. Rated 125 volts AC, unless noted. Cords have a PVC jacket and stay flexible in temperatures from –4° to 140°F. Color is black. UL and C-UL listed.

★ Rated 250 volts AC.

For information about cord type, see page 844. For information about wire gauge, see page 834.

About Extension Cords

Voltage dissipates over the length of an extension cord—the longer the cord, the less power available to run your tool. Too much voltage loss can decrease the efficiency of your tool and shorten its operating life.

To minimize voltage drop, choose the proper gauge cord based on the power required by your tool and the shortest possible cord length you need. The chart at right provides some examples of tools that are commonly used with extension cords.

	Power Draw	Recommended Wire Gauge for 50-ft. Cord	Recommended Wire Gauge for 100-ft. Cord
Industrial Fan, Floodlight	10 amps	16	16
Power Drill, Wet/Dry Vacuum	13 amps	16	14
Circular Saw, Angle Grinder	15 amps	14	12
Air Compressor, Pressure Washer	20 amps	12	10

Outdoor Extension Cords

All of these extension cords have a PVC jacket and resist water, making them suitable for outdoor use. They have a three-blade NEMA 5-15 plug and connector, except turn-lock cords have a NEMA L5-20 plug and connector. All are rated 125 volts AC. Cords stay flexible in temperatures from –4° to 140° F. Meet OSHA requirements. UL listed, except red cord with white stripe and 50-ft. and 100-ft. neon cords are ETL listed.

Cords—All are type SJTW.

Cords with Power-Indicating Light—The connector end is transparent and illuminates when the cord has power. Cords are type SJTW.

Abrasion-Resistant Cords—The jacket is extra thick to protect the internal wires. Use in areas with high traffic or where the cord comes in contact with rough surfaces. Cords are type STW.

Turn-Lock Cords—The connection locks to stay secure in high-vibration applications and prevent accidental disconnection. These cords have a higher amp rating than the other cords to handle high-power tools. 8049K21 and 8049K22 have an SJTW cord. 8049K23 has an STW cord.

Harsh Environment Extension Cords

A thermoplastic rubber jacket gives these extension cords the ability to resist moisture, oils, chemicals, and UV light. They are suitable for outdoor use and are a good choice for dirty and greasy environments. Cords have a three-blade NEMA 5-15 plug and connector. Rated 125 volts AC. Cords stay flexible in temperatures from –58° to 194° F. Meet OSHA requirements. UL listed, except 50-ft. and 100-ft. striped cords are ETL listed.

Cords—All are type SJEOW.

Cords with Power-Indicating Light—The connector end is transparent and illuminates when the cord has power. Cords are type SJEOW.

Abrasion-Resistant Cords with Power-Indicating Light—The jacket is extra thick to protect the internal wires. Use in areas with high traffic or where the cord comes in contact with rough surfaces. The connector end is transparent and illuminates when the cord has power. Cords are type SEOW.

Extension Cords

For information about extension cords, see pg. 829. For information about wire gauge and cord type, see pgs. 834 and 844.

Black Extension Cords

Less conspicuous than brightly colored extension cords, these black cords also resist moisture for outdoor use. Cords have a three-blade (NEMA 5-15) plug and connector. Rated 125 volts AC. Meet OSHA requirements. UL listed, except 1-ft. cord.

Cords—Jacket is PVC. *14-ga. cords* stay flexible in temperatures from –22° to 140° F. *12-ga. cords* stay flexible in temperatures from –40° to 140° F.

Harsh Environment Cords with Power-Indicating Light—Cords resist oils, chemicals, and UV light. They are a good choice for dirty and greasy environments. A light in the connector illuminates when the cord has power. Cords have a thermoplastic rubber jacket and stay flexible in temperatures from –58° to 221° F.

Multi-Outlet Extension Cords

Three Outlet

Three Outlet with Circuit Breaker

Power multiple devices with a single extension cord. Cords have three-blade (NEMA 5-15) plug and outlets. They have a PVC jacket, except SJEOW, SEOW, and SJEOOW cords have a rubber jacket. Cords with a power-indicating light have a light on the outlet end that illuminates when the cord has power. Rated 15 amps and 125 volts AC, unless noted. Meet OSHA requirements. UL listed.

Abrasion-resistant cords have an extra-thick jacket to protect the internal wires. Use in areas with high traffic or where the cord comes in contact with rough surfaces.

Cords **with circuit breaker** have a resettable circuit breaker that prevents overload damage.

Harsh environment cords resist moisture, oils, and solvents.

★ Rated 13 amps.

High-Power Extension Cords

Bring power to high-amp equipment such as compressors and generators. These cords can be used outdoors and have an extra-thick jacket to protect the internal wires. Use in areas with high traffic or where the cord comes in contact with rough surfaces. Color is yellow. UL listed, except NEMA L5-20 turn-lock cords.

Turn-Lock Cords—The connection locks to stay secure in high-vibration applications. Cords have a plug and connector and a PVC jacket.

Harsh Environment Cords—All have a rubber jacket and a heavy duty rubber plug and connector to resist oil and withstand impact from accidental drops.

Locking Extension Cords

A locking mechanism on the connector end prevents your device from becoming unplugged. Cords have a three-blade (NEMA 5-15) plug and connector. They are for outdoor use; cords are type SJTW and have a PVC jacket to resist moisture. A light in the connector illuminates when the cord has power. 14-ga. cords are yellow and 12-ga. cords are red with a blue stripe. Rated 125 volts AC. Temperature range is –40° to 140° F. Meet OSHA requirements. UL listed and CSA certified.

Wire Ga.	Cord Dia.	25 ft. to 50 ft. Amps		25 ft.	50 ft.	100 ft. Amps		100 ft.

For information about extension cords, see pg. 829. For information about wire gauge and cord type, see pgs. 834 and 844.

GFCI Cord Converters

90° Plug

Inline with Plug

Inline

Inline with Three Outlets

Hardwire one of these converters to your power or extension cord to add GFCI protection. Housing is plastic.

Manual Reset—Prevent unexpected start-ups of equipment. Color is yellow. UL listed and CSA certified, except inline GFCIs with plug or outlets are UL and C-UL listed.

Automatic Reset—Devices automatically regain power after ground is established. 90° GFCI plug is black; inline GFCI with plug is yellow. UL and C-UL listed.

90° GFCI plugs have a NEMA 5-15 GFCI plug. **Inline GFCIs** require cord to be hardwired on each end of the converter. **Inline GFCIs with plug** have a NEMA 5-15 plug on one end. **Inline GFCI with three outlets** has three NEMA 5-15 outlets on one end.

GFCI Style	AC Voltage	Amps	For Cord Dia.

Inline with Plug	120	15	5/16"-5/8"	7228K16	31.73

Retracting Extension Cords

No winding necessary—these self-coiling cords stretch to full length and then return to their retracted length for tangle-free storage. The stretch allows easy movement without having loose cord in your way. All have a three-blade (NEMA 5-15) plug and connector. Rated 125 volts AC. Meet OSHA requirements. UL listed.

Indoor—Cord is type SJT with a 90° plug and PVC jacket. The cord stays flexible in temperatures from –4° to 140°F.

Outdoor—Cords resist water, oil, and UV light. They have a straight plug, except black cords have a 90° plug. Jacket is thermoplastic rubber. Cords stay flexible in temperatures from –20° to 194°F. They are type SJEO, except gray cord is type SVEO. 5-ft. long black cord includes a belt clip to keep the cord out of your way.

Outdoor Extension Cords with Inline Outlets

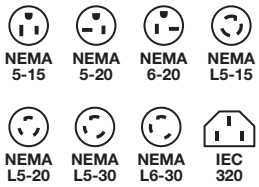
In addition to the end connector, these type STW cords have multiple inline outlets. The cords are suitable for outdoor use and have an extra-thick PVC jacket for abrasion resistance. They have three-blade (NEMA 5-15) plug and outlets. End connector and inline outlets each have a power-indicating light. The inline outlets also have weather-resistant covers to keep out moisture. Cords stay flexible in temperatures from –40° to 167°F. UL and C-UL listed.

Lg., ft.	Wire Ga.	Amps	Color	Cord OD	No. of Outlets		
25	14	15	Yellow	1/2"	3	7591K42	$33.29
50	12	15	Black	5/8"	6	7591K44	90.86

GFCI Extension Cords

Single Outlet

Triple Outlet



Bring along ground fault protection wherever you take these extension cords—they have a built-in GFCI. Cords are type SJTW to resist moisture and withstand outdoor use. Jacket is PVC. Housing is plastic. Connectors and plugs are the same NEMA style, unless otherwise stated. *Manual reset* prevents unexpected start-ups of equipment. Cords with *automatic reset* automatically regain power after ground is established. **Turn-lock** cords have a locking connection that stays secure in high-vibration applications.

Single outlet and **single outlet with power-indicating light** cords have an inline GFCI, unless noted. Color is yellow. UL listed and CSA certified, unless noted.

Single outlet with power-indicating light and IEC 320 connector cord has an inline GFCI and a 90° plug. Use with computers and other office machines that have an IEC 320 plug. Color is black. UL and C-UL listed.

Triple outlet cords have a 90° GFCI plug, unless noted. Color is yellow. UL listed and CSA certified.

★ Has a 90° GFCI plug. ▲ UL and C-UL listed. ■ Has an inline GFCI.

Safety Start-Up Power Cords

Cords shut off equipment in the event of a power failure and must be manually reset, preventing unexpected start-up of tools and equipment. They replace the three-wire power cord on equipment driven by small single-phase motors. Cords are 14-ga. with a 3/8" OD. They are type SJTO with a black thermoplastic jacket that resists oil. Plug and connector are NEMA 5-15. Temperature range is 32° to 167°F. Cords meet OSHA, NEC, and NFPA safety standards. UL and C-UL recognized.

Plug and Cable

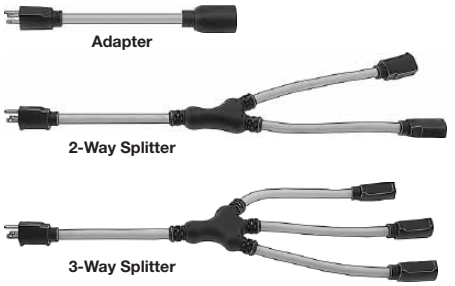
Extension Cords & Cord Reels

For information about extension cords, see pg. 829. For information about wire gauge and cord type, see pgs. 834 and 844.

Extension Cord Adapters and Splitters



All of these adapters and splitters have an extra-thick yellow thermoplastic jacket that resists water and abrasion, making them suitable for outdoor use. The cords are 12-ga. with a 9/16″ dia., except cord for 2-way splitter/adapter with turn-lock plug is 10-ga. with a 3/4″ dia. Rated 125 volts AC. Temperature range is –31° to 140° F. UL listed, except 30-amp splitter/adapters.

Adapters and **splitter/adapters** change the connection style between your outlet and your tool. **Splitters** have multiple connectors.

	NEMA Style

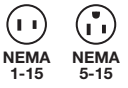
Appliance Indoor Extension Cords

The 90° plug on these cords has a low profile to fit flush behind equipment. Cords are flat and have a PVC jacket (SPT-3) and three-blade (NEMA 5-15) plug and connector. Color is beige. Rated 125 volts AC. Temperature range is –4° to 140° F. Meet OSHA requirements. UL listed.

Amps	Wire Ga.	Cord Wd.		3 ft.	6 ft.	9 ft.	15 ft.
15	14	9/16″	**7469K15**	$6.23	$7.81	$9.53	$13.83

Indoor Light Duty Extension Cords



A plug with a thin, angled profile means you can keep office furniture close to walls while reducing strain on the plug and keeping other outlets accessible. Cords are 16-ga. and flat. They have a PVC jacket (SPT-2). The connector end has three outlets with the same NEMA style as the plug. Rated 13 amps and 125 volts AC. Temperature range is –4° to 140° F. UL listed.

Manual-Rewind Reels with Outlets

Light Duty without Extension Cord

Light Duty with Extension Cord

Medium Duty without Extension Cord

Make power more accessible at the jobsite while keeping excess cord out of the way. Reels have outlets on the side and a carrying handle. All have a three-blade (NEMA 5-15) plug rated 15 amps and 125 volts AC. They also have a 15-amp resettable circuit breaker, except 9346T5 has a 10-amp circuit breaker. *Light duty* reels are ETL and C-ETL listed. *Medium duty* reels have a power indicator and are UL and C-UL listed.

Without Extension Cord—Use reels upright or lay them on their side. *Light duty* reel has a plastic housing and a metal stand. Connect your extension cord to the plug on the reel; plug the other end into a power source. *Medium duty* reel is all steel. It has an adjustable brake to control tension during unwinding or to stop the cord at the desired length. Connect your extension cord to an outlet on the reel. Connect to a power source using the attached 6″ long 12-ga. type SJTW power cord with three-blade (NEMA 5-15) plug.

With Extension Cord—Reels have a type SJT extension cord that also acts as your power cord. The cord has a PVC jacket. *Light duty* reel is all plastic and can be used upright or on its side. Cord is yellow. *Medium duty* reels have a plastic housing and a steel stand. Cord is the same color as the reel and has black stripes.

Heavy Duty Manual-Rewind Reels

Carrying Reel

Reel with Outlets

Heavy gauge steel construction makes these the toughest manual reels we offer. They have a brake to prevent unwanted rewind, a carrying handle, and nonslip rubber feet. Finish is gray.

Carrying Reels—Use for storing and transporting your cord.

Reels with Outlets—Connect an extension cord to a power source and take the reel where you need power. The outlets have covers to keep out water and dust when not in use. Hardwire your extension cord to the reel.

Reel with Outlets and 100-ft. Extension Cord—The outlets have covers to keep out water and dust when not in use. The reel comes with a 12-ga. SOOW extension cord that also acts as your power cord; the cord has a black rubber jacket and a three-blade (NEMA 5-15) plug rated 15 amps and 125 volts AC to connect to a power source.

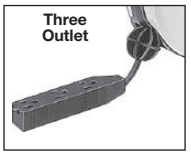
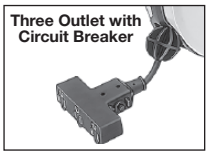
Light Duty Spring-Rewind Reels

Single Outlet



Three Outlet



Three Outlet with Circuit Breaker

A spring-driven rewind mechanism neatly retracts cord into these light-gauge steel reels. They have a ratchet to hold the cord at any length; a quick pull releases the cord. An adjustable ball stop controls how much cord retracts into the reel. Reels come with a 30-ft. long extension cord on the outlet side; connect to a power source with the included 18" long power cord. All have three-blade (NEMA 5-15) plug and outlets. Rated 125 volts AC. Mount using the included swivel eye hook, mounting bracket, and hardware. Reels are 9½" Lg.×3" Wd.×11¼" Ht. UL listed.

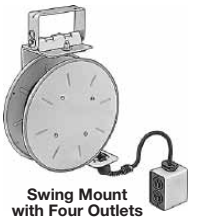
	Wire Ga.	Amps	Color		
Single Outlet	16	10	White	7016K16	$46.00
Three Outlet	16	10	White	7016K71	47.07
Three Outlet w/Circuit Breaker	16	10	Yellow	7016K81	51.85
Three Outlet w/Circuit Breaker	14	13	Yellow	7016K88	60.00

Medium Duty Spring-Rewind Reels

More rugged than our light duty reels, these are made of impact-resistant black plastic. A ratchet holds the cord at any length; a quick pull releases the cord and the spring-driven rewind mechanism retracts the cord into the reel. Reels come with an extension cord with three outlets and a circuit breaker; connect to a power source with the included 3-ft. long power cord. They have three-blade (NEMA 5-15) plug and outlets. Cord is yellow. Rated 125 volts AC. Mount reel with the quick-release mounting bracket (hardware is included) or use the carrying handle to transport it. Base is 9¼" Lg.×3" Wd. Reels are 11½" Lg.×4½" Wd.×15¼" Ht. UL and C-UL listed.

Wire Ga.	Cord Lg., ft.	Amps		
14	50	13	4804K11	$153.39
12	40	15	4804K12	158.92

Heavy Duty Spring-Rewind Reels



Swing Mount with Four Outlets

Intended for demanding, frequent-use applications, these reels have a heavy-gauge steel housing with a yellow finish. They have a slip ring, adjustable cord tension, and automatic take-up that maintains constant tension on the cord. An adjustable ball stop controls how much cord retracts into the reel. All come with a heavy duty cord that resists oil and water. Connect to a power source with the included 6-ft. long power cord. Rated 125 volts AC. Base is 5½" Lg.×4½" Wd. and has three ⅜" Wd. mounting slots (fasteners not included). UL listed.

Rigid mount reels are 12" Lg.×7¾" Wd.×13 13/16" Ht. **Swing mount** reels allow you to dispense cord at an angle. They are 12" Lg.×7¾" Wd.×13⅞" Ht.

Heavy Duty Controlled-Rewind Reels

NEMA 5-20

Rewind is slower and more controlled than with other spring-rewind reels to prevent cord-whipping action at the end of recoiling. This makes rewind safer and extends the life of the cord and reel. A ratchet holds the cord at any length; a quick pull retracts the cord at a rate of 5 ft. per second.

Reels have a steel housing with a blue finish. They have an adjustable rubber cord stop; an adjustable arm for mounting to walls, floors, ceilings, and vehicles; and a heavy duty cord on the outlet side. Connect to a power source with the included 5-ft. long heavy duty power cord. Plugs and outlets are NEMA 5-20. Rated 115 volts AC. Base has four ½" dia. mounting holes (fasteners not included).

Reels **with 50-ft. cord** are 13½" Lg.×8½" Wd.×14⅞" Ht. and have a 5" Lg.×6" Wd. base. UL listed. Reels **with 100-ft. cord** are 24" Lg.×10¼" Wd.×25½" Ht. and have a 6" Lg.×6" Wd. base.

No. of Outlets	Wire Ga.	Amps	With 50-ft. Cord		With 100-ft. Cord	
1	12	20	2781K1	$493.31	2781K4	$868.61
2 (GFCI)	12	20	2781K3	541.67	2781K6	965.07
4	12	20	2781K2	557.15	2781K5	982.75

Extra-Heavy-Duty Hardwired Reels

A direct-drive, lifetime-lubricated spring provides reliable operation and long life. A ratchet holds the cord at any length; a quick pull retracts the cord. Or, flip a switch to disengage the ratchet and use the automatic take-up feature to maintain constant tension on the cord. A roller guide provides smooth winding. Housing is steel with a rust-resistant yellow finish.

The slip ring is enclosed in a gasketed dust-tight and watertight NEMA 4 plastic enclosure and has screw terminals for hard-wiring to your power source. Rated 35 amps and 600 volts AC. Reels come with a heavy duty cord that resists oil and water. Base is 9¼" Lg.×4½" Wd. and has eight ⅜" dia. mounting holes (fasteners not included). Reels are 13½" Lg.×15" Wd.×15" Ht. UL listed and CSA certified, except 70-ft. long 12-ga. cord.

Swivel base permits 345° rotation. **Cord stops** allow you to control how much cord retracts into the reel.

About Wire and Cable

Shown with Three 18-ga. Wires (18/3)

Wire consists of a metal conductor, usually copper or tinned copper, that is covered by insulation. The diameter of a wire without its insulation is known as wire gauge or American Wire Gauge (AWG). The smaller the wire gauge, the larger the diameter of the wire. Gauges with the largest wire diameters have the designation MCM.

Cable consists of two or more wires. In addition to the insulation covering each wire, cable has a layer of outer insulation surrounding all the wires. The wire gauge of cable is the diameter of each individual wire without its insulation. One wire is usually used as a ground.

Wire Gauge Dimensions

Amp Rating

The larger the wire diameter, the more current the wire can carry (as measured in amps). However, the amp rating of wire decreases when the temperature of its surrounding environment increases, when the wire is close to or bundled with other wires, or when the wire is enclosed in conduit or a raceway. To allow comparisons among different types of wire, we present the maximum amps for an unenclosed single wire or cable at an 86° F ambient temperature. For more information on amp ratings for your specific environment, reference Article 310 in the National Electrical Code (NEC).

Flexibility

Bend and Stay—Useful for long, straight runs and other applications where you need wire to stay in the shape you bend it. This wire is usually solid and easier to terminate than stranded wire.

Flexible—You can bend this wire, but it does not hold its shape. Use it for jobs that require pulling wire around curves and corners in conduit. This wire is usually stranded.

Ultra Flexible—This spaghetti-like wire is limp, so it can handle tighter curves than flexible wire. Also for use in applications that require periodic flexing, such as CNC machines. This wire is usually stranded.

Continuous-Flex—This wire is designed to be in motion, so it's a good choice for robotics applications. It is usually stranded.

Wire

Stranded Wire

Solid Wire

- Stranded Wire: Flexible; Solid Wire: Bend and Stay
- Temperature Range: -40° to 220° F
- Insulation: PVC

This wire is also known as hook-up wire. Use for internal wiring of electrical panels and equipment. UL flame rated VW-1. UL recognized and CSA certified.

300V AC—Meets UL 1007/1569.
600V AC—Meets UL 1015.

Wire Assortments

Have multiple colors of 1,000V AC Mil. Spec. wire on hand. Carry the included rack or wall mount it using the two 1/4″ dia. mounting holes (fasteners not included).

Five 100-ft. Spools—Includes spools of wire in five colors: black, blue, green, red, and white.

Eight 25-ft. Spools—Includes spools of wire in eight colors: black, blue, brown, green, orange, red, white, and yellow.

Metric Wire

- Flexible
- Temperature Range:
  -40° to 220° F
- Insulation: PVC

Also known as Harmonized European Wire, this meets European sizing requirements (mm^2). It can also be used on North American electrical panels and machines.

Wire is UL recognized, CSA certified, and CE marked. *0.5* to *1 mm^2* wire conforms to European Harmonization document HD-21, HAR H05V-K and meets UL 1007/1569. *1.5* to *6 mm^2* wire conforms to European Harmonization document HD-21, HAR H07V-K; meets UL 1015; and is type MTW for use in machine tool wiring.

To Order: Please specify black, blue, or green/yellow, except 6 mm^2 wire is not available in blue and 500-ft. length of 0.5 mm^2 wire is not available in green/yellow.

Wire Size mm^2	Wire Size Ga.	Amps @ 86° F	AC/DC Voltage	OD		10 ft.	25 ft.	50 ft.	100 ft.	500 ft.

Building Wire

- Stranded Wire: Flexible; Solid Wire: Bend and Stay
- Temperature Range:
  -10° to 190° F
- Insulation: Inner is PVC; outer is nylon

Install in conduit and cable trays to carry electricity to outlets in commercial and industrial buildings. It is also known as branch circuit wire. The insulation resists oil and water. Rated 600 volts AC/DC. UL flame rated VW-1, except 18-ga., 16-ga., 1/0, and 2/0 wire. UL listed.

TFFN wire connects light fixtures to power circuits. It is also known as fixture wire.

THHN wire can be used in damp and dry locations.

Stranded

Solid

To Order: Please specify black, blue, brown, gray, green, orange, red, white, or yellow, except TFFN wire is not available in gray or yellow.

Machine Tool Wire

- Flexible
- Temperature Range: 0° to 190° F
- Insulation: PVC

Also known as type MTW, this more flexible alternative to standard building wire is for use in machine tool wiring. The insulation resists oil and coolants. Wire is stranded and rated 600 volts AC. UL flame rated VW-1. UL listed and CSA certified.

To Order: Please specify black, blue, brown, green, orange, red, white, or yellow, except 8-ga. and 6-ga. wire is not available in brown, orange, or yellow.

Space-Saver Wire

- Flexible
- Temperature Range: -40° to 220° F
- Insulation: mPPE

In areas where space is tight, choose this alternative to standard building wire and machine tool wire—it's up to 40% lighter and has up to a 45% smaller OD. The insulation is halogen-free modified polyphenylene ether (mPPE). This stranded wire is also known as hook-up wire. Rated 600 volts AC. UL flame rated VW-1. UL and C-UL listed.

To Order: Please specify black, green, red, or white.

Chemical-Resistant Wire

- Flexible
- Temperature Range: -65° to 390° F
- Insulation: PTFE

Our most chemical-resistant wire, this wire also resists abrasion, oil, and solvents. This stranded copper wire is silver plated for corrosion resistance and strength. It is also known as hook-up wire. Rated 600 volts AC. Meets MIL-W-16878/4 and is UL flame rated VW-1.

To Order: Please specify black, green, red, or white.

Harsh Environment Wire

- Flexible
- Temperature Range: -90° to 390° F
- Insulation: Teflon® FEP

This stranded wire withstands abrasion, chemicals, and the extreme temperature fluctuations that often occur in manufacturing environments. It is also known as hook-up wire. Rated 600 volts AC. UL flame rated VW-1 and UL recognized.

To Order: Please specify black, red, or white.

Radiation-Resistant Wire

Stranded

- Stranded Wire: Flexible; Solid Wire: Bend and Stay
- Temperature Range: -140° to 500° F
- Insulation: PEEK

The insulation stays intact when exposed to radiation. Use in areas with nuclear or X-ray radiation as well as applications involving mining or oil and gas exploration. The insulation also resists chemicals. It's also known as hook-up wire. Rated 1,000 volts AC. Color is beige. Meets UL 94V0 for flame retardance. **Stranded wire** is silver-plated copper for added strength. **Solid wire** is bare copper.

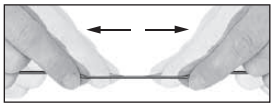
Stretchable Wire and Cable



- Continuous Flex
- Temperature Range: -30° to 175° F
- Insulation: Inner is polypropylene; outer is polyurethane

When pulled lengthwise, this wire and cable extends 30% and returns to its original length, making it useful for high-vibration and continuous-motion applications. Rated 300 volts AC. Color is black. Maximum continuous length is 100 ft.

Shielded—Foil shielding in this wire prevents electromagnetic interference (EMI) to minimize signal distortion.

Pinch clamps act as ferrules to hold insulation in place in continuous-motion applications. Crimp the pinch points to install (for tools, see 6541K on page 310).

Outdoor Wire

- Flexible
- Temperature Range: -55° to 220° F
- Insulation: EPDM rubber

Protected with a thick insulation to resist chemicals, oil, UV light, and water, this stranded wire is for use outdoors and in harsh environments. Use in lighting and generators. Rated 600 volts AC/DC. Color is black. UL listed and CSA certified.

Wire Ga.	Amps @ 86° F	OD	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up

Vehicle Wire

- Flexible
- Temperature Range: -10° to 175° F
- Insulation: PVC

Also known as primary wire and type GPT, this stranded wire meets SAE J1128 for low-voltage wiring in trucks, boats, trailers, and other vehicles. Rated 25 volts AC/60 volts DC.

To Order: Please specify black, red, or white.

Wire Ga.	Amps @ 86° F	OD	Small Spools Lg., ft.			100-ft. Spools

Battery Wire

- Temperature Range: -40° to 190° F
- Insulation:
  Flexible: PVC
  Ultra Flexible: EPDM rubber, except 250 MCM to 500 MCM is CPE (chlorinated polyethylene)

The insulation resists abrasion and chemicals. Wire is stranded.

Flexible—Connect vehicle batteries in addition to other types of batteries. This wire meets SAE standards for low-voltage wiring in vehicle electrical systems. Rated 60 volts DC.

Ultra Flexible—Thinner strands make this wire more bendable than standard flexible battery wire. Rated 600 volts AC/DC.

To Order: For *8-ga. to 4/0 wire*, please specify black or red. *250 MCM to 500 MCM wire* is black.

Tangle-Free Wire

- Ultra Flexible
- Temperature Range: -30° to 175° F
- Insulation: Blended polyurethane/PVC

Eliminate tangles—the insulation is slippery so it won't catch on itself or rough surfaces. Use wherever multiple wires are in motion near each other. This stranded wire is also known as hook-up wire. Rated 300 volts AC. Color is gray.

Wire Ga.	Amps @ 86° F	OD	Lengths, ft.		Per Ft. 1-499	Per Ft. 500-Up

High-Temperature Braided Wire

Made of heat-resistant materials, the braided insulation allows this stranded wire to withstand higher temperatures than other wire.

480° F Wire

- Flexible
- Temperature Range: -65° to 480° F
- Insulation: Inner is PTFE; outer is fiberglass

Suitable for applications with repeated flexing, this hook-up wire is also called type TGGT wire. The insulation resists chemicals and moisture. Wire is nickel-plated copper. Rated 600 volts AC. Color is beige. UL recognized and CSA certified.

Oven 840° F Wire

- Flexible
- Temperature Range: -40° to 840° F
- Insulation: Inner is mica tape; outer is fiberglass

Also known as lead wire and type MG wire, it's a good choice for internal wiring of ovens and furnaces. Wire is nickel-plated copper. Rated 600 volts AC/DC. Color is beige. UL listed and CSA certified.

Open Flame 1830° F Wire

- Bend and Stay
- Temperature Range: -40° to 1830° F
- Insulation: Inner is mica tape; outer is ceramic fiber braid

This wire has the highest temperature rating we offer. Use it in furnaces, kilns, and other open-flame applications. The insulation resists chemicals. Wire is nickel. Rated 300 volts AC. Color is white. UL flame rated VW-1.

Wire Ga.	Amps @ 86° F	Amps @ 750° F	OD	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up

Miniature High-Temperature Wire

- Temperature Range:
  Flexible: -235° to 390° F
  Ultra Flexible: -100° to 400° F
- Insulation:
  Flexible: FEP
  Ultra Flexible: Silicone rubber

When space and temperature are both concerns, this small, lightweight wire withstands extreme temperature. Its thin insulation accommodates repeated flexing. Wire is stranded and rated 50 volts AC/DC.

Flexible—Has chemical-resistant insulation and is silver plated for corrosion resistance and strength.

Ultra Flexible—Silicone rubber insulation makes this wire highly bendable for applications that require tight turns.

To Order: Please specify black, green, red, or white.

Continuous-Flex Wire

Miniature
- Temperature Range: -40° to 175° F
- Insulation: PVC

Standard
- Temperature Range: 45° to 190° F
- Insulation: PVC

Harsh Environment
- Temperature Range: -30° to 190° F
- Insulation: TPE

With fine copper strands, this wire has excellent flexibility for use in cable carriers. It can also be used in automated applications such as robotics.

Miniature—Use this small-gauge wire in thermostats and electronics. The insulation resists acid, oil, and solvents. *36-ga.* to *30-ga.* wire is UL recognized for applications up to 30 volts AC. *28-ga.* to *18-ga.* wire is UL recognized for applications up to 150 volts AC.

Standard—The insulation resists oil. UL flame rated VW-1. UL recognized and CSA certified.

Harsh Environment—With insulation that resists abrasion as well as water, UV light, oil, and coolant, this wire is a good choice for continuous-movement applications in challenging environments. UL flame rated FT-1. UL and C-UL recognized.

Ultra-Flexible Wire for Tight Turns

- Temperature Range: -40° to 300° F
- Insulation: Silicone rubber

Fine strands and silicone rubber insulation make this wire highly bendable. Use it in applications requiring tight turns in small spaces, such as in motors. It is also known as hook-up wire and appliance and fixture wire. Rated 600 volts AC. UL recognized and CSA certified.

To Order: Please specify black or white.

High-Voltage Wire

- Flexible
- Temperature Range: -40° to 300° F
- Insulation: Silicone rubber

Able to handle high DC voltages, this stranded wire is used in high-power signs and lasers. It's also known as corona-resistant hook-up wire. The insulation resists abrasion. Color is white. UL listed and CSA certified.

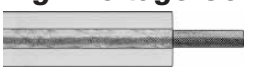
High-Voltage Continuous-Flex Wire



- Temperature Range: -85° to 390° F
- Insulation: Silicone rubber

Although the insulation is thick for high-voltage protection, this stranded wire remains flexible to handle tight bends and automated applications. The clear insulation also resists moisture. Meets UL 94V0 for flame retardance. UL recognized.

To Order: Please specify 5, 10, 25, 50, or 100 ft.

Long-Life Continuous-Flex Wire

Carbon Fiber
- Temperature Range: 0° to 140° F
- Insulation: PVC

Metallic Tinsel
- Temperature Range: -20° to 175° F
- Insulation: Polypropylene

The strands in this wire have better fatigue resistance under repeated flexing than the copper strands in standard continuous-flex wire, so it will last longer. Use it in automated applications such as robotics and cable carriers; it is also for use in low-current signal applications. Rated 300 volts AC. Color is gray.

Carbon fiber wire has 12,000 flexible strands that are nearly invisible on X-rays and imaging equipment. It cannot be soldered—you must use a crimped connection.

Metallic tinsel wire has thin strands of metal wrapped around a fiber core to provide better flexibility and longer service life than carbon fiber wire. The *33-ga.* wire has a Kevlar core and can be soldered in addition to crimped. The *30-ga.* wire has a polyester core and cannot be soldered—you must use a crimped connection.

Motor Winding Wire

- Bend and Stay
- Maximum Temperature: 390° F
- Insulation: Enamel

Also known as magnet wire, it's commonly used in motors, transformers, relays, and other high-speed winding applications. The enamel insulation resists moisture, so this solid wire can be used in hermetic motors. Meets NEMA 1000 MW-73C and 1000 MW-35C. UL recognized.

Flat Control Cable

- Flexible
- Temperature Range: -40° to 220° F
- Insulation: Inner and outer is PVC

This slim cable, also known as festoon cable, is made for frequent movement in confined spaces such as overhead cranes and hoists. Wire is stranded and has color-coded insulation (1-black, 2-red, 3-blue, 4-orange, 5-yellow, 6-brown, 7-red with black tracer, 8-blue with black tracer, 9-orange with black tracer, 10-yellow with black tracer, 11-brown with black tracer, 12-black with red tracer). The outer insulation resists oil and UV light and is yellow. Rated 600 volts AC. UL listed and CSA certified.

To provide a secure connection between a single flat cable and a junction box, use a cord grip for flat cable (for cord grips, see page 890).

Control Cable

- Flexible
- Temperature Range: 45° to 190° F
- Insulation: Inner and outer is PVC

Unshielded

Shielded

Control conveyors, CNC machines, and other types of automated equipment that requires cable to periodically bend and flex. Wires are stranded. Cable with three or more wires has a ground wire with green/yellow insulation. All other wires have black insulation and are numbered. The outer insulation resists oil and is gray. Rated 600 volts AC. UL flame rated VW-1. UL recognized and CSA certified.

Shielded cable has braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

For information about wire and cable, see page 834.

No-Conduit-Required Control Cable

Unshielded

Double Shielded

- Flexible
- Temperature Range: -10° to 190°F
- Insulation: Inner is blended PVC/nylon; outer is PVC

This cable meets UL TC-ER crush and impact requirements for use in open cable trays or other exposed runs. It is also known as cable-tray-rated cable. It bends easily for installation and works well in applications that require periodic bending. Wires are stranded. One wire has green/yellow insulation to indicate ground; the other wires have black insulation and are numbered. The outer insulation resists oil and is black. Rated 600 volts AC. UL and C-UL listed.

Double-shielded cable has foil and braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

Space-Saver Control Cable

Unshielded

Double Shielded

- Flexible
- Temperature Range: -40° to 220°F
- Insulation: Inner and outer is mPPE

An alternative to standard control cable, this cable is 55% lighter and has up to a 32% smaller OD. It is for tight spaces or areas where you need to install multiple cables. Use it to control conveyors, CNC machines, and other types of automated equipment that requires cable to periodically bend and flex. Wires are stranded and have color-coded insulation (1-black, 2-red, 3-white, 4-green, 5-orange, 6-blue, 7-brown, 8-yellow, 9-purple, 10-gray, 11-pink, 12-beige). The cable's outer insulation is gray. All of the insulation is halogen-free modified polyphenylene ether (mPPE). Rated 600 volts AC. UL flame rated VW-1. UL and C-UL listed.

Double-shielded cable has foil and braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

Double-Shielded Motor Cable

- Flexible
- Temperature Range: -40° to 220°F
- Insulation: Inner is blended PVC/nylon; outer is PVC

Block electromagnetic interference (EMI) caused by voltage fluctuations and current spikes in variable-frequency drive motors. Also known as VFD motor cable, this cable is double shielded with foil and braiding to minimize signal distortion. Wires are stranded. One wire has green/yellow insulation to indicate ground; the other wires have black insulation and are numbered. The outer insulation resists oil and is black. Rated 600 volts AC. UL and C-UL listed.

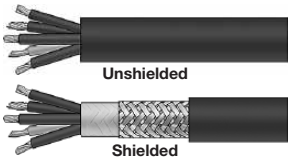
Continuous-Flex Cable

300V AC Standard and 1,000V AC Oil Resistant
- Temperature Range: 25° to 155° F
- Insulation: Inner is TPE; outer is PVC

600V AC Standard
- Temperature Range: 25° to 155° F
- Insulation: Inner and outer is PVC

300V AC Oil Resistant and 300V AC Long Life
- Temperature Range: -30° to 175° F
- Insulation: Inner is TPE; outer is polyurethane

600V AC Oil Resistant
- Temperature Range: 45° to 190° F
- Insulation: Inner and outer is PVC



Use this cable when continuous movement is required in automated equipment such as robotics and cable carriers. Wires are stranded. Cable has a ground wire with green/yellow insulation, except 24-ga. cable does not have a ground. The other wires are numbered and have black insulation, except 24-ga. cable has color-coded wires and 600V AC oil-resistant cable has wires with red insulation, unless noted. **Shielded** cable has braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

Standard—UL flame rated FT-1. UL and C-UL recognized. *300V AC* cable has gray outer insulation. *600V AC* has green outer insulation.

Oil Resistant—Outer insulation is black, except 300V AC cable has gray outer insulation. *300V AC* and *1,000V AC* cable are UL flame rated FT-1. UL and C-UL recognized. *600V AC* cable is UL flame rated VW-1. UL recognized and CSA certified.

Long Life—This cable has a life span of more than 20 million high-speed flex cycles. Outer insulation is gray.

To Order: Please specify 5, 10, 20, 30, 50, or 100 ft. Prices are approximately 15% lower for 100-ft. lengths.

★ Has wires with black insulation.

For information about wire and cable, see page 834.

No-Conduit-Required Continuous-Flex Cable

Unshielded

Shielded

- Temperature Range: 25° to 175° F
- Insulation: Inner is blended PVC/nylon; outer is PVC

This cable meets UL TC-ER crush and impact requirements for exposed runs in cable trays. It is also known as cable-tray-rated cable. It's designed to handle the continuous movement required in automated equipment such as robotics and cable carriers. Wires are stranded. Cable with three or more wires has a ground wire with green/yellow insulation. All other wires have black and green/yellow insulation. Black insulation is numbered. The cable's outer insulation is gray. Rated 600 volts AC. UL listed and CSA certified.

Shielded cable has braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

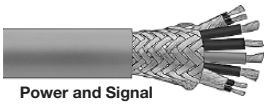
Servomotor Continuous-Flex Cable



Power and Signal

- Temperature Range: -40° to 175° F
- Insulation: Inner is polypropylene; outer is polyurethane

Connect servocontrollers and servomotors in automated equipment and on assembly lines. This cable withstands frequent and sudden movement. It has foil and braided shielding that prevents electromagnetic interference (EMI) to minimize signal distortion. Wires are stranded. Cable has a ground wire with green/yellow insulation. The other wires have black insulation. The cable's outer insulation is orange. Rated 1,000 volts AC. UL flame rated VW-1. UL recognized and CSA certified. For servomotor connectors, see page 807.

Power and signal cable transmits data such as positioning information from the motor to the controller. There are four power wires and two pairs of signal wires twisted together.

To Order: Please specify 5, 10, 20, 30, or 50 ft.

High-Voltage Continuous-Flex Flat Cable

- Temperature Range: -85° to 325° F
- Insulation: Silicone rubber

Thick insulation provides protection from high voltage and stays flexible in extreme temperatures. The flat shape fits better in tight spaces than round cable. Made for repeated flexing, this cable is suitable for use in automated equipment. Wires are stranded and have clear insulation. Meets UL 94V0 for flame retardance.

To Order: Please specify 10, 20, 30, 50, or 100 ft.

Continuous-Flex and -Twist Robotics Cable

Unshielded

- Temperature Range: 300V AC and 600V AC: -40° to 175°F
  1,000V AC: -10° to 175°F
- Insulation: Inner is TPE; outer is polyurethane

This cable handles the repeated flexing and extreme twisting common in robotics. The insulation resists moisture, oil, and UV light. Wires are stranded. Cable with three or more wires has a ground wire with green/yellow insulation. All other wires have black and white insulation and are numbered. UL flame rated VW-1. **Shielded** cable has braided shielding to prevent electromagnetic interference (EMI) to minimize signal distortion.

300V AC and **600V AC—**The outer insulation is black. UL recognized and CSA certified.

1,000V AC—The outer insulation is blue. UL and C-UL recognized.

Drop-Down Cable

Standard
- Flexible
- Temperature Range: -40° to 140°F
- Insulation: Inner is PVC; outer is polypropylene covered by PVC

With Strain Relief
- Flexible
- Temperature Range: 15° to 220°F
- Insulation: Inner and outer is PVC

Use this cable for overhead wiring of tools and equipment, such as pendant switches, where cable hangs down. It is also known as bus drop cable. The insulation resists abrasion, chemicals, and oil. Wires are stranded and have color-coded insulation. Rated 600 volts AC.

Standard cable is for wet environments. The ground wires are not counted in the number of wires. The cable's outer insulation is gray. UL listed.

Cable with strain relief has galvanized steel strain cables on the sides to provide strength and reduce pull stress. Wires are numbered. The cable's outer insulation is yellow. UL listed and CSA certified. Use the *strain relief kit* (sold separately) to secure the cable to your equipment. The kit includes two eyebolts, three cable clamps, two cable ties, four hex nuts, and four washers.

High-Temperature Cable

The outer insulation protects wires from heat. Rated 600 volts AC.

Shielded Cable for Ovens

- Flexible
- Temperature Range: -65° to 390°F
- Insulation: Inner and outer is PTFE

This cable has braided shielding that prevents electromagnetic interference (EMI) to minimize signal distortion. The insulation resists chemicals, moisture, and water, and the wires are silver plated for corrosion resistance and strength. Wires are stranded and have color-coded insulation (1-white, 2-black, 3-red, 4-green). The cable's outer insulation is white. Meets MIL-W-16878/4.

Furnace Cable

- Flexible
- Temperature Range: -40° to 840°F
- Insulation: Inner is fiberglass and mica tape; outer is fiberglass, mica tape, and PTFE

Fiberglass braiding and mica tape around the wires add an extra layer of protection. The insulation resists oil. Wires are stranded and nickel plated. They have insulation with color-coded tracer threads (1-black, 2-white, 3-red, 4-green). The cable's outer insulation is black.

Wire Ga.	No. of Wires	Amps @ 700°F	OD	Lengths, ft.		Per Ft. 1-99	100-Up

Abrasion-Resistant Cable

Unshielded

- Flexible
- Temperature Range: -20° to 190°F
- Insulation: Inner is PVC; outer is polyurethane

The insulation resists cuts and abrasion as well as chemicals, moisture, oil, solvents, and water. The outer insulation is black. Wires are stranded. Rated 300 volts AC. UL flame rated VW-1. UL and C-UL recognized.

Unshielded—Wires have color-coded insulation (1-black, 2-red, 3-white, 4-green, 5-orange, 6-blue, 7-brown, 8-yellow, 9-purple, 10-gray, 11-pink, 12-beige, 13-red/green, 14-red/yellow, 15-red/black).

Shielded—Has foil shielding to prevent electromagnetic interference (EMI) to minimize signal distortion. There is an uninsulated ground wire that is not counted in the number of wires. Wires have color-coded insulation (1-black, 2-brown, 3-red, 4-orange, 5-yellow, 6-green).

Wire Ga.	No. of Wires	Amps @ 86°F	OD	Lengths, ft.		Per Ft. 1-99	100-Up

Cable

Tough and durable, this cable is commonly used for temporary power and with portable equipment. It's for use outdoors, except black PVC. Wires are stranded and have color-coded insulation (1-black, 2-white, 3-green, 4-red, 5-orange, 6-blue, 7-white with black tracer, 8-red with black tracer, 9-green with black tracer, 10-orange with black tracer). UL listed and CSA certified, unless noted.

To Order: Please specify 10, 25, 50, 100, or 250 ft. Prices are approximately 25% lower for 250-ft. lengths.

Cable Type Characteristics

The letters in the industry designation represent cable characteristics based on Underwriters Laboratories (UL) and National Electrical Code (NEC) Article 400.

Letter	Cable Characteristics
S	Standard; rated at 600V AC
SJ	Junior; rated at 300V AC
E	Elastomer (thermoplastic rubber)
T	Thermoplastic
O	Oil-resistant outer insulation
OO	Oil-resistant inner and outer insulation
W	Approved for outdoor use

Ultra-Flexible Neoprene Rubber

- Temperature Range: Black: -40° to 190° F; Yellow: -55° to 220° F
- Insulation: Inner is EPDM rubber

Retracting Cable

After stretching to provide extra reach, this cable returns to its retracted length and coils up for tangle-free storage. It is often connected to hand tools and other portable devices. Wires are stranded and have color-coded insulation. Color coding is 1-black, 2-white, 3-green, 4-red, 5-orange, 6-blue, 7-yellow, 8-brown, 9-gray, 10-purple, unless noted. The cable's outer insulation is black. The 2-ft. cable extends to 10 feet, 4-ft cable extends to 20 feet, 6-ft. cable extends to 30 feet, and 8-ft. cable extends to 40 feet.

Ultra-Flexible Neoprene Rubber

- Temperature Range: Standard and Low-Current Communication: -40° to 140° F; Water and Oil Resistant and High Voltage: -40° to 190° F
- Insulation: Inner is EPDM, except Low-Current Communication is neoprene rubber

This cable is UL listed, except cable with 15 wires.

Building Cable

- Bend and Stay
- Temperature Range: 10° to 190° F
- Insulation: Inner and outer is PVC

Dry Location

Wet Location

Designed to be used without conduit, this cable is typically used for wiring buildings. Cable has type THHN solid wires and an uninsulated ground wire that is not counted in the number of wires. Wires have color-coded insulation (two-wire cable has black and white; three-wire cable has black, red, and white). Rated 600 volts AC. UL listed. To connect to enclosures or outlet boxes, use cord grips for building cable (for cord grips, see page 890).

Dry Location—Also known as Romex type NM-B, this cable is made to run through walls, ceilings, and concrete blocks. 14-ga. cable has white outer insulation, 12-ga. cable has yellow outer insulation, and 10-ga. cable has orange outer insulation. All cable meets UL 719.

Wet Location—Often used as outdoor feeder cable for pumps and lighting, this cable is also known as type UF-B. It can be used for direct burial. The insulation resists moisture and UV light. The cable's outer insulation is gray. Meets UL 493.

For information about wire and cable, see page 834.

Armored Building Cable

The metal armor works as conduit to protect THHN building wires and make installation convenient. Use this cable in dry locations. The amp rating @ 86°F is 15 amps for 14-ga. cable, 20 amps for 12-ga. cable, and 30 amps for 10-ga. cable. Rated 600 volts AC. UL listed.

Cable

With Uninsulated Ground Wire

With Insulated Ground Wire

- Flexible
- Temperature Range: 15° to 190°F
- Insulation: Inner is PVC; outer is aluminum

Wires are solid. The ground wire is not counted in the cable AWG. The other wires have color-coded insulation (1-black, 2-white, 3-red, 4-blue).

With Insulated Ground Wire—This standard armored cable is also known as type MC. The ground wire has green insulation. For use in NEC Class I, Division 2; Class II, Division 2; and Class III, Division 1 and 2 hazardous locations.

With Uninsulated Ground Wire—Also known as type AC and BX, this cable has an uninsulated aluminum ground wire that's in constant contact with the armor so it can be used for bonding and grounding.

Cable with Fittings

- Flexible
- Temperature Range: –10° to 190°F
- Insulation: Inner is PVC; outer is steel

The easiest to install of our armored building cable, this comes with locknut fittings attached and 6″ long wire leads. It has an insulated ground wire. Wires are solid type THHN, except cable with three 12-ga. wires are stranded. All wires have color-coded insulation (1-black, 2-white, 3-green, 4-red, 5-blue).

Wire Ga.	No. of Wires	Cable AWG	OD	6-ft. Lengths
14	3	14/3	0.46″	9340T12 $11.49
14	4	14/4	0.49″	9340T13 13.13

10	5	10/5	0.92″	9340T23 28.78

Harsh Environment Cable

Standard and Armored
- Flexible
- Temperature Range: –40° to 230°F
- Insulation: Inner is polyolefin; outer is chlorinated polyethylene

Flat
- Flexible
- Temperature Range: 0° to 165°F
- Insulation: Inner and outer is PVC

Meet the challenge of extreme environmental conditions. The wires are heat treated for corrosion resistance, and the insulation resists chemicals, oil, salt water, and solvents. Rated 600 volts AC.

Standard and **Armored—**Wires are stranded and have color-coded insulation (1-black, 2-red, 3-white, 4-green). The cable's outer insulation is black. UL listed and CSA certified. *Armored* cable has bronze braided armor surrounded by insulation that is flame retardant and resists abrasion and other types of physical damage.

Flat—At 0.22″ thick, this cable has a low profile to fit in tight spaces. Wires are stranded and have color-coded insulation (black, green, and white). The cable's outer insulation is white. UL flame rated VW-1. UL listed. Meets UL 1426.

Cable Repair Resins

Protect and insulate electrical connections and repair damaged insulation. All of these two-part resins bond to the insulation of most cable. Size listed is the total of the two parts. Temperature range is 35° to 190°F.

Easy-flow resin is thin, so it completely fills gaps. **Removable** resins are soft even after setting. Use on splices that may be accessed later.

	Max. Volts	Size	Begins to Harden	Reaches Full Strength	Color	Material		
Easy Flow	1,000	23.8 oz.	20 min.	20 hrs.	Green	Polyurethane	6366K44	$71.00
Flame Retardant	1,000	7.5 oz.	20 min.	24 hrs.	Black	Polyurethane	6366K47	23.90
Flame Retardant	1,000	21.5 oz.	20 min.	24 hrs.	Black	Polyurethane	6366K48	56.42

Water-Block Control Cable

- Flexible
- Temperature Range: –68° to 221°F
- Insulation: Inner and outer is PVC

Keep water from damaging wires—a layer of absorbent material traps moisture before it reaches the wires. Use in low-current control and signal applications, such as communication and security systems. It's suitable for washdown areas, indoor/outdoor transitions, and direct burial without conduit. Wires are stranded and have color-coded insulation (1-black, 2-white, 3-red, 4-green). The cable's outer insulation is black. Rated 300 volts AC. UL listed.

Wire Ga.	No. of Wires	Amps @ 77°F	OD	Lengths, ft.		Per Ft. 1-249	Per Ft. 250-Up
18	2	5	0.22″	10, 25, 50, 100, 250	7000T32	$0.43	$0.33
18	4	7.2	0.25″	10, 25, 50, 100, 250	7000T33	.74	.58

12	2	12	0.32″	10, 25, 50, 100, 250	7000T37	1.71	1.33

Rodent-Repellent Cable

- Flexible
- Temperature Range: 0° to 175°F
- Insulation:
  300V AC: Inner is polypropylene; outer is TPE
  600V AC: Inner and outer is TPE

It's not necessary to enclose this cable in conduit to prevent pest damage. An additive in the insulation has a bitter smell and taste to rodents and other animals and discourages them from snacking on the cable. The insulation also resists abrasion, gasoline, and oil. Wires are stranded and have color-coded insulation (1-black, 2-white, 3-green). The cable's outer insulation is black.

To Order: Please specify 10, 25, 50, 100, or 250 ft.

Wire Ga.	No. of Wires	Amps @ 86°F	AC Voltage	OD		Per Ft. 1-249	Per Ft. 250-Up
18	3	7	300	0.31″	8688T1	$3.71	$3.34
16	3	10	300	0.37″	8688T2	4.48	4.04
14	3	15	600	0.57″	8688T3	6.89	6.20
12	3	20	600	0.6″	8688T4	8.31	7.48

Direct-Burial Cable

- Flexible
- Temperature Range: 0° to 140°F
- Insulation:
  Landscape Lighting: PVC
  Sprinkler System: Inner is polypropylene; outer is polyethylene

Weather-resistant insulation makes this cable suitable for outdoor use and direct burial without conduit. UL listed.

Landscape Lighting—The wires can be separated for installation. Wires are stranded and have black insulation.

Sprinkler System—Wires are solid and have color-coded insulation (1-red, 2-white, 3-green, 4-blue, 5-yellow, 6-brown, 7-orange, 8-black, 9-pink). The cable's outer insulation is black.

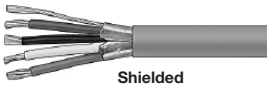
Communication and Security System Cable

- Flexible
- Temperature Range:
  General Purpose: 0° to 140°F; Duct Rated: 0° to 165°F
- Insulation: Inner and outer is PVC

Unshielded



Shielded

Use this cable in low-current circuits and communication and security systems, including intercoms and remote controls. The insulation is flame retardant. Wires are stranded and have color-coded insulation (1-black, 2-red, 3-white, 4-green, 5-brown, 6-blue, 7-orange, 8-yellow, 9-purple, 10-gray, 11-pink, 12-beige). Rated 300 volts AC/DC. ETL and C-ETL listed. **Shielded** cable has foil shielding to prevent electromagnetic interference (EMI) to minimize signal distortion. There is an uninsulated ground wire that is not counted in the number of wires.

General Purpose—Meets NEC Article 725 and 800, Type CMR/CL3R for use in vertical shafts and floor-to-floor wiring (risers), except unshielded 22-ga., 2- and 4-wire cable meet NEC Article 725 and 800, Type CM/CL2 (not for use in vertical shafts or risers). The cable's outer insulation is gray.

Duct Rated—Also known as plenum cable, this has low-smoke insulation and can be used without conduit in duct work and above a drop ceiling. Meets NEC Article 725 and 800, Type CMP/CL3P. The cable's outer insulation is white.

Cable

For information about wire and cable, see page 834.

Audio Cable

- Flexible
- Temperature Range: 0° to 140° F
- Insulation: PVC

Power speakers, intercoms, public address systems, and other low-current circuits and communication systems with this two-wire cable. The wires are stranded and can be separated for installation. One wire is marked for polarity. ETL and C-ETL listed.

22-ga. and *18-ga.* cable have white insulation. They meet NEC Article 725 and 800, Type CMR/CL3R for use in vertical shafts and floor-to-floor wiring (risers).

16-ga., 14-ga., and *12-ga*. cable have clear insulation. They meet NEC Article 725, Type CL2.

Wire Ga.	No. of Wires	AC/DC Voltage	Wd.	Thick.		10 ft.	25 ft.	50 ft.	100 ft.	250 ft.

Fire Alarm Cable

Unshielded

- Flexible
- Temperature Range:
  Riser Rated: 0° to 140° F;
  Duct Rated: 0° to 165° F
- Insulation: Inner and outer is PVC

Flame-retardant insulation makes this cable the correct choice for critical control circuits in fire alarm systems and smoke detectors. Wires are solid and have color-coded insulation (1-black, 2-red, 3-green, 4-yellow). The cable's outer insulation is red. Rated 300 volts AC/DC. Cable is ETL listed, unless noted.

Shielded cable has foil shielding to prevent electromagnetic interference (EMI) to minimize signal distortion. There is an uninsulated ground wire that is not counted in the number of wires.

Riser-Rated Cable—Use in vertical shafts and floor-to-floor wiring (risers). Meets NEC Article 760, Type FPLR.

Duct-Rated Cable—Also known as plenum cable, this has low-smoke insulation and can be used without conduit in duct work and above a drop ceiling. Meets NEC Article 760, Type FPLP.

Wire Ga.	No. of Wires	Riser-Rated Cable OD		10 ft.	25 ft.	50 ft.	100 ft.	250 ft.	Duct-Rated Cable OD		10 ft.	25 ft.	50 ft.	100 ft.	250 ft.

Thermostat Cable

- Bend and Stay
- Temperature Range: 0° to 140° F
- Insulation: Inner is polyethylene; outer is PVC

Wire thermostats, air-conditioning units, security systems, and other low-voltage equipment. Wires are solid and have color-coded insulation (1-red, 2-white, 3-green, 4-blue, 5-yellow, 6-brown, 7-orange, 8-black). The outer insulation is flame retardant and brown; it's also smooth for easy pulling. Rated 150 volts AC/DC. Meets NEC Article 725, Type CL2. ETL listed.

Easy-ID Low-Voltage Cable

- Flexible
- Temperature Range: -40° to 175° F
- Insulation: PVC

This cable has one red wire and one black wire, so you can identify polarity in low-voltage power applications such as radios and battery and vehicle wiring. It is also known as type GPT. The wires are stranded and can be separated for installation. The insulation resists oil. Rated 12 volts DC.

About Wire and Cable Protection

Protect wire and cable from the environment with heat-shrink tubing and sleeving. **Heat-shrink tubing** is tight-fitting protective insulation for electrical connections. **Sleeving** has a looser fit and is used to bundle multiple wires and cables, and offer protection from heat and abrasion. Sleeving can also be used over heat-shrink tubing to bundle wires and cables or provide extra protection.

Heat-Shrink Tubing (pages 849-856)

When heat is applied, the tubing contracts to conform to whatever it's surrounding. To fit inside the tubing, your wire or cable assembly must be smaller than the tubing's ID before shrinking. To have a tight fit, the smallest portion of your assembly must be the same as or larger than the ID after shrinking.

Shrink ratio is the relationship between the ID before shrinking and the ID after shrinking. For example, a 2 to 1 shrink ratio means that the tubing ID will be half as large after shrinking. When heat is applied, the length of the tubing also shrinks slightly (usually less than 15%). For tools to apply heat, see pages 856 and 2725-2726.

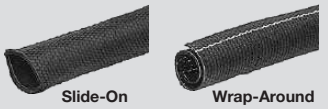
● Excellent ◓ Good

Heat-Shrink Tubing Material Characteristics

Material	Properties	Shrink Temp., °F	Minimum Temp., °F	Flexibility	Electrical Insulation	Abrasion Resistance	Chemical Resistance
Polyolefin/ Olefin	A general purpose heat-shrink tubing that is more flexible than PVC and easy to shrink.	195° to 285°	–65° to –40°	●	◓		◓
PVC	More economical than polyolefin with excellent chemical resistance.	215° to 285°	0°	●	◓	◓	●
Rubber/ Elastomer	Stays flexible at temperature extremes and resists oils and fuels.	275° to 350°	–100° to –65°	●	◓	◓	◓
PVDF (Kynar)	High strength at a low shrink temperature.	350°	–65°	◓	◓	●	●
FEP	Excellent chemical and abrasion resistance at a lower shrink temperature than PTFE.	420°	–400°	◓	●	●	●
PTFE	Good for harsh environments and high temperatures.	660°	–450°	◓	●	●	●
PEEK	Rigid material with the best strength and chemical resistance.	575°	–20°		●	●	●

Sleeving (pages 856-863)

Most sleeving slides over wire and cable. It's easiest to use for new installations and areas where there is not an electrical connector. **Wrap-around** sleeving has a slit along its length, making it convenient for field installations.



● Excellent ◓ Good

Heat-Shrink Tubing

- Material: Polyolefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 250°F
- UL recognized and CSA certified (except clear tubing)
- AMS (formerly MIL)-DTL-23053/5 Classes 1 (color tubing) & 2 (clear tubing)

The most popular choice for general purpose use, polyolefin tubing is flexible and doesn't shrink much lengthwise. Temperature range is –65° to 275°F.

To Order: Please specify black, blue, clear, green, red, white, or yellow.

Heat-Shrink Tubing Assortments

Multi-Color

- Material: Polyolefin
- Shrink Ratio: 2 to 1

Keep on hand a convenient variety of general purpose tubing. Made of polyolefin, it's flexible and doesn't shrink much lengthwise. Temperature range is –65° to 275° F.

Multi-Color 133-Piece Assortment

- Shrink Temperature: 215° F
- UL recognized and CSA certified (except clear tubing)
- AMS (formerly MIL)-DTL-23053/5 Classes 1 (color tubing) & 2 (clear tubing)

Assortment— Includes ½-ft. lengths of the six sizes listed below. Each size comes in seven colors: black, blue, clear, green, red, white, and yellow. Supplied in a compartmented plastic box.

6334K41 ..... $75.54

- Shrink Temperature: 215° F
- UL recognized and CSA certified
- AMS (formerly MIL)-DTL-23053/5 Class 1

Assortment— Includes ½-ft. lengths of the six sizes listed below. Supplied in a compartmented plastic box.

6363K21 ..... $75.54

Yellow/Green Striped Ground Wire Tubing

- Material: Polyolefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 250° F
- UL recognized and CSA certified

Use the yellow and green stripes along the length of the tubing to identify ground wire and cable. Temperature range is –65° to 275° F.

ID Before Shrinking	ID After Shrinking	Wall Thick. After Shrinking	Lg., ft.

High-Shrink-Ratio Tubing

Abrasion Resistant

- Material: Polyolefin
- Shrink Temperature: 250° F

A high shrink ratio allows this tubing to accommodate large size differences between cables and their connectors. It also covers irregularly shaped objects. Color is black.

Flexible

- Shrink Ratio: 4 to 1
- UL recognized
- AMS (formerly MIL)-DTL-23053/5 Class 1

This flexible tubing has a temperature range of –65° to 275° F.

ID Before Shrinking	ID After Shrinking	Wall Thick. After Shrinking		½ ft.	4 ft.
1″	0.28″	0.05″	**2746K21**	$12.36	$72.04

4″	1.05″	0.05″	**2746K24**	33.09	218.20

Abrasion Resistant

- Shrink Ratio: 6 to 1

Extra-thick walls protect wire and cable from physical damage. Temperature range is –65° to 230° F.

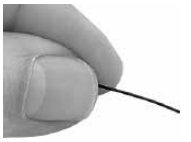
Miniature Tubing



- Material: Polyolefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 285° F

Protect wires that have a very small outside diameter. This flexible tubing can be sterilized. Color is black, except 6699T14 and 6699T18 are clear. Temperature range is –40° to 220° F.

ID Before Shrinking	ID After Shrinking	Wall Thick. After Shrinking	½-ft. Lengths		4-ft. Lengths

Chemical-Resistant Tubing

Choose-a-Color Tubing

- Material: PVC
- Shrink Ratio: 2 to 1
- Shrink Temperature: 215°F
- UL recognized, UL 224, flame rated VW-1, and CSA certified
- AMS (formerly MIL)-DTL-23053/2 Class 2

Although it's less flexible than polyolefin, PVC offers better resistance to chemicals. It is flame retardant and resists UV light, so it's a good choice for outdoor applications. Temperature range is 0° to 220°F.

To Order: Please specify black, blue, clear, green, red, white, or yellow.

Assortments

- Shrink Ratio: 2 to 1
- Shrink Temperature: PVC: 215°F; Kynar: 350°F; Polyolefin: 195°F
- PVC: UL recognized, UL 224, flame rated VW-1, and CSA certified
- PVC: AMS (formerly MIL)-DTL-23053/2 Class 2; Kynar: AMS (formerly MIL)-DTL-23053/8; Polyolefin: AMS (formerly MIL)-DTL-23053/4 Class 2

Enjoy the convenience of having a variety of tubing sizes. Tubing is black, except Kynar tubing is clear. **PVC** tubing has excellent chemical resistance. Temperature range is 0° to 220°F. **Kynar** tubing has excellent chemical resistance combined with high strength. Temperature range is –65° to 345°F. **Polyolefin** tubing has good chemical resistance and an adhesive lining that melts when the tubing is heated; the lining bonds to the underlying surface and creates a water-resistant seal. Temperature range is –65° to 275°F.

175 Pieces of PVC—Tubing comes in a canister.

Five Spools of PVC—The spools come on a rack. Carry the rack with you, or wall mount it using the two ¼″ dia. mounting holes (screws not included).

150 Pieces of PVC, Kynar, and Moisture-Seal Polyolefin—Tubing comes in a case.

Five Spools of PVC

	ID Before Shrinking		
100 Pieces of PVC (½-ft. lengths)	0.06″, 0.13″, 0.25″, 0.38″, 0.5″, 0.75″	8061K5	$46.43

Five Spools of PVC (one 100-ft. spool and four 25-ft. spools)	0.06″, 0.13″, 0.19″, 0.25″, 0.38″	8061K7	111.28
150 Pieces of PVC, Kynar, and Moisture-Seal Polyolefin (½-ft. lengths)	0.13″, 0.19″, 0.25″, 0.38″, 0.5″	8061K4	124.64
Replacement Spools for 8061K7 (Please specify ID before shrinking)			8061K8

Food-Grade Tubing

- Material: Acrylated olefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 250°F
- FDA CFR 177.1330

Made of FDA-compliant materials for contact with food, this tubing resists moisture. Temperature range is –65° to 250°F.

Weather-Resistant Large-Diameter Tubing

- Material: PVC
- Shrink Ratio: 2 to 1
- Shrink Temperature: 215°F

Thanks to its large diameter, this tubing can protect thick cables as well as poles, conveyor rollers, tool and equipment handles, and irregularly shaped objects. It withstands weather, chemicals, and UV light. Temperature range is 0° to 220°F.

Moisture-Seal Tubing

Create a water-resistant seal as you shrink this tubing. It has an adhesive lining that melts when the tubing is heated and bonds to the underlying surface to keep out moisture. Temperature range is –65° to 230° F, except 4 to 1 shrink ratio high-temperature tubing has a temperature range of –40° to 265° F.

Black and Clear

- Material: Polyolefin
- Shrink Temperature:
  2 to 1 and 3 to 1 Shrink Ratios: 250° F;
  4 to 1 Shrink Ratio: 230° F;
  4 to 1 Shrink Ratio High Temperature: 275° F
- UL recognized, except 6855K11 and 6855K21

Tubing with a small shrink ratio is more flexible than tubing with a large shrink ratio. Tubing with a large shrink ratio is more abrasion resistant and accommodates irregularly shaped objects and larger size differences between cables and connectors.

Color Coded

- Material: Polyolefin
- Shrink Ratio: 2.5 to 1
- Shrink Temperature: 275° F
- UL recognized
- AMS (formerly MIL)-DTL-23053/4 Class 1

Each size is a different color for easy identification. This tubing is not as flexible as the 3 to 1 shrink ratio tubing above.

Moisture-Seal Chemical-Resistant Tubing

- Material: PVC
- Shrink Ratio: 2 to 1
- Shrink Temperature: 215° F

Made of PVC for better chemical and UV resistance than polyolefin, this tubing has an adhesive lining that melts when heated and bonds to the underlying surface to form a water-resistant seal. Use to protect connections outdoors and in washdown areas. Temp. range is 0° to 220° F. Color is black.

Wrap-Around Moisture-Seal Tubing

- Material: Polyolefin
- Shrink Ratio: 3 to 1
- Shrink Temperature: 250° F

Unlike most tubing that slides over cable, this tubing wraps around it and fastens with an adhesive strip. It's ideal for field repairs because your cable assembly can stay connected. The adhesive lining melts when the tubing is heated and bonds to the underlying surface to create a water-resistant seal. Temperature range is –65° to 230° F. Color is black.

ID		Wall Thick.

Moisture-Seal Wrap

Use this wrap with standard heat-shrink tubing to create a moisture-resistant seal. Apply it like tape around the ends of wire, cable, or irregularly shaped objects. Then, slide your tubing over the wrap; the wrap melts when the tubing is heated and bonds to the underlying surface to keep out moisture.

0.026″ thick wrap has thermoplastic adhesive, which is similar to the adhesive found inside most moisture-seal tubing. Temperature range is –65° to 245° F. **0.062″ thick wrap** has butyl adhesive. It seals larger gaps than thermoplastic adhesive, making it good for irregular shapes. Temperature range is –40° to 190° F.

Thick.	Wd.	Color	1-ft. Lengths		5-ft. Lengths

0.062″	1″	Gray	1428T3	6.49	1428T4	25.94

High-Purity Tubing

- Material: Olefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 250° F

Heat this tubing to create a moisture-resistant seal on metal, glass, and most plastics. It has excellent chemical resistance and resists cuts and abrasion. The tubing is cleaned with alcohol and then bagged and sealed in a clean room. It can be sterilized with steam (autoclaving), gas, and radiation. Temperature range is –65° to 250° F. Color is black.

Moisture-Seal End Caps

- Material: Polyolefin
- Shrink Temperature: 275° F

Seal the ends of cylindrical objects and crimped connections to protect them from moisture. These end caps have an adhesive lining that melts when heated. The adhesive bonds to the underlying surface and creates a moisture-resistant seal. Temperature range is –65° to 230° F. Color is black. 72855K21, 72855K23, 72855K24, and 72855K25 are UL recognized.

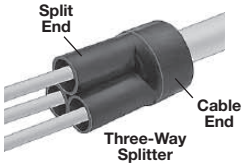
Moisture-Seal Cable Splitters

- Material: Polyolefin
- Shrink Temperature: 250° F



Also known as breakout boots, these flame-retardant splitters insulate and seal cables at the point where they transition to individual wires. They are often used with armored cable, sheathed cable, and conduit ends. Splitters have an adhesive lining that melts when heated. The adhesive bonds to the underlying surface to create a moisture-resistant seal. Temperature range is –65° to 230° F. Color is black.

Wrap-Tight Tubing

- Material: PVC
- Shrink Ratio: 2 to 1
- Shrink Temperature: 285° F
- UL recognized and flame rated VW-1

With extra-thin walls that tightly conform to objects, this tubing acts like shrink wrap to bundle batteries, capacitors, and other electronics. Temperature range is 0° to 210° F. Color is white.

Heat-Shrink Tubing

For information about heat-shrink tubing, see page 849.

Flame-Retardant Tubing

A flame-retardant additive gives this tubing the ability to resist combustion and minimize the spread of flames to surrounding areas.

Standard

- Material: Polyolefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 195° F
- UL recognized, UL 224, flame rated VW-1, and CSA certified
- AMS (formerly MIL)-DTL-23053/5 Classes 1 & 3

Polyolefin tubing is flexible and doesn't shrink much lengthwise. Temperature range is –65° to 275° F. Color is black.

Low Smoke

- Material: Polyolefin
- Shrink Ratio: 3 to 1
- Shrink Temperature: 250° F
- MIL-C-24643

For use in enclosed areas such as ships, tunnels, and mass transit vehicles, tubing emits minimal amounts of smoke and toxic gases during combustion. Also known as halogen-free tubing, it meets ABS (American Bureau of Shipping) standards. Temp. range is –65° to 230° F. Color is black.

Abrasion Resistant

- Material: Fluoropolymer
- Shrink Ratio: 2 to 1
- Shrink Temperature: 305° F
- UL recognized and flame rated VW-1
- AMS (formerly MIL)-DTL-23053/18 Class 2

Strong, flexible tubing resists abrasion and withstands contact with other objects. Temperature range is –65° to 275° F.

Ultra-Flex Tubing

Even at extreme temperatures, this tubing maintains its flexibility. It also resists oil and chemicals. Color is black.

Standard

- Material: Neoprene rubber
- Shrink Ratio: 2 to 1
- Shrink Temperature: 275° F
- AMS (formerly MIL)-DTL-23053/1 Classes 1 & 2; MIL-R-46846 Type I, Class 1

Rubber tubing has good abrasion and cut resistance. Temperature range is –90° to 250° F.

ID Before Shrinking	ID After Shrinking	Wall Thick. After Shrinking	½-ft. Lengths Pkg. of 5	
0.19″	0.11″	0.04″	7505K81	$7.61

High Temperature

- Material: Viton® fluoroelastomer
- Shrink Ratio: 2 to 1
- Shrink Temperature: 350° F
- AMS (formerly MIL)-DTL-23053/13; MIL-R-46846 Type III, Class 1

With a temperature range of –65° to 390° F, this tubing withstands higher temperatures than standard neoprene rubber tubing. It also has better abrasion resistance.

Fuel-Resistant High-Flex Tubing

- Material: Elastomer
- Shrink Ratio: 2 to 1
- Shrink Temperature: 350° F
- AMS (formerly MIL)-DTL-23053/16

Ideal for vehicles and machines subject to harsh environments, this tubing resists diesel fuels, hydraulic fluids, and lubricating oils. It also provides good abrasion resistance while remaining flexible at extreme temperatures. Temperature range is –100° to 300° F. Color is black.

Abrasion-Resistant Fabric Heat-Shrink Tubing

- Material: Polyethylene/polyester woven fabric
- Shrink Ratio: 2 to 1
- Shrink Temperature: 230° F
- UL recognized

Get the flexibility of fabric sleeving with the fit and protection of heat-shrink tubing. This woven fabric shrinks when heated to conform to the underlying surface. It has excellent abrasion resistance and can be used to muffle sound. It also resists trapping water. Temperature range is –40° to 255° F. Color is black.

Interference-Shielding Tubing

- Material: Polyolefin
- Shrink Ratio: 2 to 1
- Shrink Temperature: 215° F
- UL 224

A layer of conductive cloth shields wire and cable from electromagnetic interference (EMI). Use to protect unshielded wire and cable, add extra protection to shielded items, or cover a terminal where an existing shield has been stripped for a connector. Temperature range is –65° to 275° F. Color is black.

Note: For proper grounding, a conductive wire (see pages 834-836) or braid strip (see page 978) should be wound around the outside of wires or attached by conductive epoxy (see page 3466) prior to shrinking.

Harsh Environment Tubing

- Material: FEP
- Shrink Ratio: 1.3 to 1
- Shrink Temperature: 420° F

Made of FEP, this tubing combines strength with excellent abrasion and chemical resistance. It also has a lower shrink temperature than PTFE tubing, which has similar properties. Temperature range is –400° to 400° F. Tubing is clear.

Small Diameter

- AMS (formerly MIL)-DTL-23053/11

Use as extra protection for wires.

To Order: Please specify 1, 2, 3, or 4 ft.

Extreme Environment Tubing

- Material: PEEK
- Shrink Ratio: 1.4 to 1
- Shrink Temperature: 575°F

Excellent abrasion resistance makes PEEK tubing the toughest we offer. It resists caustic fluids and withstands high-temperature, high-pressure applications. It's suitable for use in oil and gas exploration and other demanding environments. Temperature range is –20° to 500°F. Tubing is translucent. Maximum continuous length is 4 ft.

No-Heat Shrink Tubing

Create a permanent seal without a heat gun or wand. This tubing, also known as cold-shrink tubing, has a removable spiral-wound core. Slide the tubing over your object and pull out the core; the removal of this internal support causes the tubing to contract and conform to the underlying object. Tubing is rated to 1,000 volts and insulates wire and cable splices. It resists acids, alkalies, ozone, and UV light. It also resists water and can be buried or submerged. Made of EPDM rubber. Color is black. Meets ANSI C119.1 water seal requirements. CE marked.

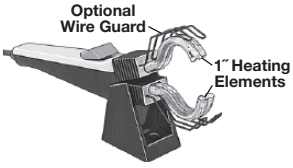
Radiant Heat-Shrink Wand



Within seconds, this wand reaches its operating temperature of 1500°F and creates a circle of radiant heat for heat-shrink tubing, bendable plastic tubing, and solder sleeves. Use for applications where a heat gun is not practical, such as in clean rooms and other controlled environments. This wand can be hand held or bench mounted with the included stand. Wand is 7½″ Lg. × 1½″ Wd. × 1¾″ Ht. and operates on 120 volts AC. It has a 6-ft. cord with three-prong plug. CE marked.

Heating elements (sold separately) are required for proper operation. Designed for heating intervals of less than two minutes, they are specially plated to reflect and focus heat. They are surrounded by quartz glass.

Optional wire guards protect you from direct contact with the heating elements.

Spiral Bundling Wrap

Use this flexible spiral wrap instead of tape or cable ties to bundle wire, tubing, and hose. Unlike tape, it's reusable and allows you to route wires between the spirals. It also provides abrasion resistance. Supplied on a spool.

Polyethylene—Resists solvents and is for indoor use. Temperature range is –75° to 190° F. UL recognized.

UV-Resistant Polyethylene—Resists solvents and is suitable for outdoor use in direct sunlight. Temperature range is –75° to 190° F. UL recognized.

Choose-a-Color Polyethylene—Use color to identify your bundles. This wrap resists solvents and is for indoor use. Temperature range is –75° to 190° F. UL recognized.

Self-Extinguishing Nylon—This lightweight wrap does not produce toxic fumes if exposed to an open flame or high temperatures, so it's suitable for enclosed areas. Temperature range is –40° to 250° F. UL recognized. The black wrap is UV resistant, so it withstands outdoor use in direct sunlight.

Harsh Environment PTFE—The best choice for demanding environments, this wrap has excellent chemical resistance and withstands extreme temperatures. Temperature range is –450° to 500° F. Meets UL 94V0 for flame retardance.

Wrap-Around Sleeving

A slit in this flexible sleeving allows you to bundle cable and wires without disconnecting them. Wrap the sleeving around items, yet have access to them along the entire length. Made of black polyester.

Braided

The sleeving wraps around itself to stay closed without an adhesive strip, cable ties, or special tools. It won't gap when flexed. Temperature range is –90° to 255° F. UL recognized and CSA certified.

Abrasion-Resistant Woven

Sleeving is tightly woven to provide better abrasion resistance than braided sleeving. It wraps around itself to stay closed without an adhesive strip, cable ties, or special tools. It is flame retardant and won't gap when flexed. Temperature range is –55° to 255° F. Meets ASTM E162.

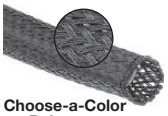
Expandable Sleeving



Choose-a-Color Polyester

Fray-Resistant Polyester

Thick-Wall Polyester

Heavy Duty Nylon

This sleeving expands for easy installation over wire, cable, or tubing; it then tightens around its contents for a secure fit. Sleeving is double braided to provide flexibility and permit heat and moisture dissipation. It also provides good resistance to abrasion and chemicals. Temperature range is –90° to 255° F, except heavy duty nylon has a temperature range of –75° to 300° F. All polyester sleeving is UL recognized and CSA certified.

Choose-a-Color Polyester—Use color to identify your bundles.

Fray-Resistant Polyester—Has tighter braiding than other sleeving to resist fraying when cut with scissors.

Thick-Wall Polyester—Braided from strands that are 50% thicker than strands in other polyester sleeving for better resistance to cuts and abrasion. Use to protect wire, cable, and tubing that comes in contact with rough surfaces.

Heavy Duty Nylon—Braided with flat, thick strands for excellent abrasion resistance. Use for hose, wire, cable, and tubing that is constantly in contact with rough surfaces.

Flame-Retardant Expandable Sleeving

Reduce the threat of flame spread from wire, cable, and tubing bundles. Sleeving expands for easy installation and then tightens around its contents. It's braided to provide flexibility and permit heat and moisture dissipation. Color is black with a white strand.

Standard—Made of braided polyester. Temperature range is –90° to 255° F. Flame rated VW-1 and FR1. Meets MIL-STD-202 for flammability. UL recognized and CSA certified.

Duct Rated—Suitable for use in plenum (air-handling) spaces, duct-work, and other confined spaces. Sleeving is self-extinguishing and emits minimal amounts of smoke and toxic gases during combustion. It resists corrosive chemicals and organic solvents. Made of braided Halar (ECTFE). Temperature range is –90° to 300° F. UL 2024 and NFPA 262 rated for use in plenums. Flame rated VW-1.

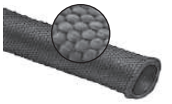
Abrasion-Resistant Sleeving



Tightly woven nylon fibers create abrasion-resistant sleeving that offers more protection as it wears; the worn fibers frizz and make the outer wall thicker. The interior is smooth to reduce snags during installation over hose, cable, chains, or springs. Temperature range is –40° to 250° F. Color is black. MSHA (Mine Safety and Health Administration) approved.

Abrasion-Resistant Wrap

Apply this wrap to hose or cable to protect against abrasion and extend service life, especially where hose and cable are in motion. Secure the ends with the included tape. Made of 1" Wd. x 1/8" thick neoprene rubber. Temperature range is –20° to 200° F. Color is black.

3-ft. Roll	9043T41	$10.40
6-ft. Roll	9043T42	19.30

Zippered Sleeving

Wrap this nylon sleeving around your wire and cable bundles and zip it closed. The nylon provides abrasion resistance, and the zipper allows quick access to contents. Use to protect cables that come in contact with rough surfaces or are dragged across shop floors, such as welding cables. Max. temperature is 300° F. Color is black.

Super-Abrasion-Resistant Expandable Metal Sleeving

Strong yet flexible, this braided metal sleeving protects wire, cable, and hose from abrasion. The sleeving expands for installation over irregularly shaped items; pull it tight around its contents for a secure fit. Cut with sheet metal snips (see page 2364).

Interference Shielding—Made of copper to protect wire and cable signals from electrical noise and electromagnetic interference (EMI).

Corrosion Resistant—Made of stainless steel.

High-Temperature Chemical-Resistant Expandable Sleeving

Use this braided sleeving for superior protection from chemicals, even in extreme temperatures. It also resists salt water for use in marine applications. Sleeving expands for installation over irregularly shaped items. Temperature range is –90° to 480° F.

High-Flex PEEK—Has open weave construction to offer flexibility and resist trapping water, heat, and humidity. Use to protect cable assemblies, hose, and wire harnesses from abrasion, chafing, and cutting. Color is black. Flame rated VW-1.

Heavy Duty PTFE—This is the toughest expandable sleeving we offer. With thicker strands than PEEK sleeving, PTFE has better resistance to abrasion and chemicals. Color is clear.

High-Temperature Chemical-Resistant Tube Sleeving

Also known as spaghetti tubing because of its small diameter and flexibility, this PTFE sleeving resists acids and solvents. It has a smooth, friction-resistant surface. Temperature range is –450° to 500° F. Color is white. Meets AMS 3655 and UL 94V0 for flame resistance. UL recognized and CSA certified.

Chemical-Resistant Wrap-Around Sleeving

A vinyl coating gives this polyester sleeving resistance to mild chemicals, solvents, and abrasion. Sleeving wraps around cable and wire bundles, so you don't have to disconnect them. Permanently secure with the adhesive strip. Temperature range is –40° to 180°F. Color is black. UL recognized, UL 224, and flame rated VW-1. Meets MIL-C-43006E, Type II, Class 1. Max. continuous length is 25 ft.

Interference-Shielding Wrap-Around Sleeving

Interior shielding protects cable and wire bundles from electromagnetic interference (EMI). Sleeving is polyurethane and has good resistance to abrasion and excellent resistance to solvents. It has a sewn-in grounding strap to dissipate any stored charge. You can wrap this sleeving around cable and wires without disconnecting them. Permanently secure with the adhesive strip. Color is black. Max. continuous length is 25 ft.

Standard—Use in stationary applications to prevent damage to the interior foil shielding. Temperature range is –65° to 225°F. UL recognized, UL 224, and flame rated VW-1.

Continuous Flex—Interior is highly flexible conductive cloth. Use in robotics and other automated applications. Temperature range is –45° to 220°F.

Interference-Shielding High-Flex Wrap-Around Sleeving

Copper filaments woven into flexible polyester fabric provide protection from electromagnetic interference (EMI). A ground wire is also woven into the fabric to dissipate any stored charge. Use this abrasion-resistant sleeving to bundle cable and wires without disconnecting them. The sleeving wraps around itself to stay closed without an adhesive strip, cable ties, or special tools. Temperature range is –75° to 300°F. Color is black. Max. continuous length is 50 ft.

High-Temperature Mica Wrap

Withstanding temperatures up to 2100°F, this nonadhesive wrap is made of heat-resistant mica paper bonded to glass cloth and infused with silicone to provide a fire barrier. It works well as a protective wrap for wire and cable. When wrapping, it should overlap half of its width. Wrap is 0.005" thick. Color is silver.

High-Temperature Sleeving

Made of fiberglass to withstand the high heat that plastic cannot.

Uncoated 1000°F

The sleeving is braided and resists alkalies, water, solvents, and oil. Use for general long-term heat protection. Temperature range is –40° to 1000°F. Color is white.

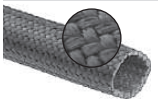
Coated 1200°F



Sleeving is braided from fiberglass that is heat-treated and coated with high-temperature resins. It resists abrasion, chemicals, solvents, and oil. Use where toughness and durability are essential in high-temperature, physically abrasive applications. Temperature range is –90° to 1200°F. Color is black. UL recognized.

High-Temperature Expandable Sleeving

Protection from temperatures up to 1000°F is combined with the ability to accommodate irregularly shaped objects. Sleeving is fiberglass and resists burning. Use to protect hose and cable located near ovens and furnaces. Temperature range is –60° to 1000°F. Color is beige.

Standard sleeving is more flexible than abrasion-resistant sleeving.

Abrasion-resistant sleeving has an acrylic coating to add rigidity and minimize fraying.

Ultra-High-Temperature Silica Sleeving

Silica sleeving withstands higher temperatures than fiberglass and resists open flame and molten metal splash. Color is white. Max. continuous length is 50 ft.

1800° F— Has 96% silica content and braided continuous fibers for superior strength and abrasion resistance. The sleeving is coated to aid in installation; the coating then decomposes when used in high-temperature applications. Sleeving resists acids, grease, alcohol, solvents, and petroleum. Temperature range is –100° to 1800° F.

2300° F— Sleeving is braided and has 98% silica content. It resists alkalies, water, detergents, petroleum, UV light, and salt. Temperature range is –40° to 2300° F.

High-Temperature Abrasion-Resistant Sleeving

Made from a mix of Kevlar and fiberglass, this braided sleeving delivers strength, flexibility, and better abrasion resistance than plain fiberglass and silica. It also resists acids, alkalies, and flame. Wall thickness is 1/16". Maximum temperature is 650° F. Color is light yellow.

Ultra-High-Temperature Ceramic Sleeving

Ceramic sleeving will not burn and it won't irritate your skin like fiberglass and silica. It resists abrasion, molten metal splash, acids, alkalies, alcohol, solvents, and petroleum. Sleeving expands slightly to aid installation. Color is white. Meets MIL-I-24244B.

1100° F— Woven from calcium aluminum silicate.

2600° F— Woven from alumina, boria, and silica fibers. It has better strength and flexibility at extreme temperatures than the 1100° F sleeving.

Spark-Resistant Sleeving

A coating of silicone rubber gives this fiberglass sleeving the ability to shed sparks and molten metal splash. It also prevents fraying and resists hydraulic fuels and lubricating oils. Exposure to a torch will char the coating, but won't scorch the fiberglass inner layer. Temperature range is –65° to 500° F. Color is orange. Max. continuous length is 50 ft.

Standard— Sleeving is knitted.

High Performance— Sleeving is braided with thicker and denser fiberglass than standard sleeving for greater strength and abrasion resistance. It withstands short-term flame exposure up to 2000° F. Flame rated VW-1. C-UL listed.

Heat-Dissipating Sleeving

Reduce the outer temperature of hot hoses and pipes to protect personnel. This thick, braided fiberglass sleeving has a silicone rubber coating that allows heat to dissipate. It can reduce the outer temperature of a 380° F steam hose to 130° F. Use with hose and pipe operating up to 600° F. Also for use with cable and tubing. Ambient temperature range is –65° to 500° F. Color is blue. Maximum continuous length is 50 ft.

Heat-Reflective Wrap-Around Sleeving

Woven fiberglass is laminated with aluminum foil to reflect heat in ambient temperatures up to 390° F. The foil on this sleeving also prevents electromagnetic interference (EMI) and has good fluid and chemical resistance. Wrap sleeving around cable and wires without disconnecting them and permanently secure with the adhesive strip. Temperature range is –40° to 390° F. Meets ASTM D350 requirements as self extinguishing.

Electrical-Insulating Sleeving

General Purpose Vinyl

High-Flex Acrylic

High-Temperature Silicone Rubber

High-Temperature Expandable Rubber

Add a layer of insulation to individual wires or bundles of wire while boosting resistance to temperature and abrasion. Made of coated fiberglass, sleeving remains highly flexible and insulates up to 7,000 volts. Use in motors, generators, and transformers. UL recognized.

General Purpose Vinyl—Resists waxes, alcohols, esters, and many alkalies and acids. Temperature range is 0° to 265° F. Color is black. Flame rated VW-1. CSA certified.

High-Flex Acrylic—Insulation made of acrylic resin gives this sleeving more flexibility than silicone rubber. It resists corrosion and many acids, organic solvents, and oils. Temperature range is –10° to 310° F. Color is tan. Flame rated VW-1. CSA certified.

High-Temperature Silicone Rubber—This sleeving maintains excellent flexibility throughout its temperature range of –90° to 390° F. It resists ozone and weathering and will self extinguish, leaving a nonconductive ash. Flame rated VW-1. CSA certified.

High-Temperature Expandable Rubber—Stretches to twice its relaxed ID to snugly fit over irregularly shaped objects. It has excellent abrasion, chemical, and moisture resistance. Temperature range is –65° to 390° F.

High-Strength Abrasion-Resistant Sleeving

Get strength, cut resistance, and excellent abrasion resistance that's unmatched by fiberglass, silica, and ceramic. This Nomex sleeving is knitted from aramid fibers and doesn't irritate the skin like fiberglass and silica. It resists most acids and alkalies, water, hydraulic fluid, alcohol, solvents, waxes, petroleum, flame, and salt. Temperature range is –320° to 400°F. Color is white.

Heat-Reflective Corrugated Wrap-Around Sleeving

A highly reflective aluminum covering over nylon protects wire, cable, tube, and hose from ambient heat up to 300°F. The corrugated construction provides impact and abrasion resistance similar to conduit while the slit along the length allows you to bundle items without disconnecting them. Sleeving resists gasoline, oil, brake fluid, and antifreeze. Temperature range is –40° to 300°F. Color is silver.

5/8"	3/4"	2652K34	8.00
3/4"	7/8"	2652K35	8.84

Heat-Reflective Flex-and-Stay Corrugated Sleeving

Bend this flexible, crush-resistant sleeving and it holds its shape. Use it for routing wire, cable, and hose in environments subject to heat and abrasion, such as vehicle engines. Made of aluminum with woven fiberglass, it has a reflective surface to protect contents from high heat. Temperature range is –65° to 900°F. Color is silver. Max. continuous length is 15 ft.

Corrugated Wrap-Around Sleeving

Corrugated construction gives this sleeving the impact and abrasion resistance of conduit, yet offers flexibility for routing wire and cable. A slit along the length allows the sleeving to wrap around items without the need for disconnection. It does not gap during flexing and resists acids and solvents.

Polyethylene—Temperature range is –40° to 200°F. *Flame-retardant* polyethylene meets UL 94V2.

High-Strength Nylon—Has better impact resistance than polyethylene. Temperature range is –40° to 300°F.

Full-Coverage Corrugated Wrap-Around Sleeving

Two Piece

Hinged

Offering the protection of conduit and the convenience of wrap-around sleeving, this corrugated polypropylene sleeving has interlocking ridges that overlap when closed to fully protect contents from dirt, dust, and abrasion. The sleeving opens along its length to allow you to bundle cable and wires without disconnecting them. It does not gap during flexing. Temperature range is –40° to 275°F. Color is black.

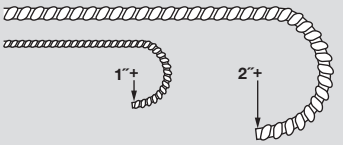
About Conduit

Conduit protects wire and cable from damage. When selecting conduit, consider where it will be installed and how flexible it needs to be for your application. Each type of conduit has specific fittings. The fittings are not interchangeable among conduit types.

Choosing Flexible or Rigid Conduit

	Conduit Type	Characteristics	Applications	Pages
Flexible Conduit—Use where wire needs to make tight bends or withstand vibration, such as connection points to machines or fixtures.				
	Plastic	Not as strong as metal conduit, but is lightweight and resists corrosion.	Wiring inside walls, robotics, automated equipment.	864-865
	Liquid-Tight Plastic and Metal	Has an outer cover with a metallic or non-metallic core. Resists oil and moisture.	Environments where liquids, oil, or grease are present.	866-868
	Metal	Good strength and crush resistance. Typically has the ability to make tight bends.	Areas where there is potential for physical damage. Often used for motor connections.	868-869
Rigid Conduit—Use for long, straight runs along building walls and floors. Also provides good crush protection.				
	Thin-Wall (EMT) Metal	General purpose metal conduit that is easier to bend and cut than medium- and thick-wall conduit.	Runs along walls and ceilings, away from high-traffic areas.	870-871
	Medium- and Thick-Wall (Rigid) Metal	Intended for heavy duty applications, this is our most crush-resistant metal conduit.	Areas where there is potential for physical damage.	872-873
	PVC	Lightweight, easy to install, and resists corrosion.	Outdoor use, including burial.	875

Bend Radius for Flexible Conduit

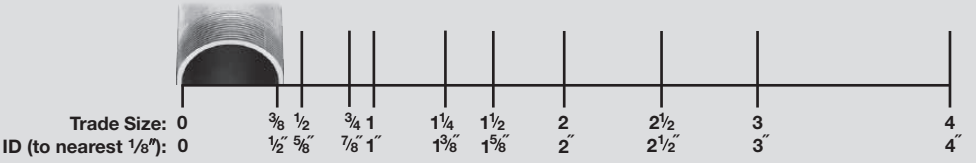


Bend radius, measured from the center of the bend to the edge of the conduit, can be used to compare flexibility among conduit. It indicates how tightly you can bend conduit without damaging it or shortening its life. The smaller the bend radius, the greater the flexibility.

Determining Conduit Trade Size

To be compatible, conduit and fittings must be of the same type and have the same trade size. **Trade size** is an industry designation for conduit and fittings. For threaded fittings, trade size also designates the NPT or NPSM pipe size of the threaded end.

You can use the scale below to find the trade size of your conduit. Measure the inside diameter (ID) of your conduit, then select the trade size on the scale that corresponds to your measurement.



Flexible Plastic Conduit and Fittings

Make tight bends in machine and equipment wiring with this corrugated nylon conduit. Also known as electrical nonmetallic tubing (ENT), it withstands vibration, is flame retardant, and resists oil, solvents, and UV light. When used with fittings for flexible plastic conduit, it seals out air and liquid. Color is black.

Conduit

Temperature range is -40° to 220° F. UL recognized.
Crush resistant conduit has thicker corrugations than standard conduit.

Trade Size	ID	OD	Bend Radius	Lengths, ft.	Standard	Per Ft. 1-99	Per Ft. 100-Up	Crush Resistant	Per Ft. 1-99	Per Ft. 100-Up

Fittings

Tabs on one end snap into grooves in conduit; the other end attaches to a knockout in an outlet box or enclosure. All are nylon and meet IP68 for continuous submersion and IP69K for high-pressure, high-temperature washdowns.

Straight and **90° elbow adapters** have a temperature range of -40° to 235° F. UL recognized.

Tee connectors and **wye connectors and reducers** have a temperature range of -20° to 210° F.

Choose-a-Color Flexible Plastic Conduit and Fittings

Visually identify different runs of wire and cable in machine and equipment wiring. Also known as electrical nonmetallic tubing (ENT), this corrugated PVC conduit is often used in areas with tight bends in walls, floors, and ceilings. Temperature range is 0° to 140°F. Conduit and fittings are UL listed and CSA certified.

Conduit

When used with the fittings below, this conduit provides protection from moisture and corrosion and can be embedded in concrete.
To Order: Please specify blue, red, or yellow.

Trade Size	ID	OD	Bend Radius	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up
½	0.56″	0.84″	4″	10, 25, 50, 100, 200	8067K11	$0.86	$0.73

Liquid-Tight Flexible Plastic Conduit and Fittings

When used with liquid-tight fittings, this PVC conduit seals out liquid and resists oil, corrosion, and UV light. It has a smooth interior that protects wire and cable from abrasion when being pulled.

Conduit

Ultra Flexible

Abrasion Resistant

Ultra Flexible—The spiral design makes this conduit flexible. Route it around tight bends and use in high-vibration applications or those that require periodic flexing. This conduit cuts cleanly with no jagged edges. Temperature range is 0° to 155° F. Color is black. UL recognized.

Abrasion Resistant—Also known as Type B, this conduit is crush and abrasion resistant. Use a tube cutter (not included) for clean cuts with no jagged edges. Temperature range is 0° to 165° F. Color is gray. UL listed and CSA certified.

Fittings

Fittings are UL listed when used with abrasion-resistant liquid-tight flexible plastic conduit (Type B). Maximum temperature is 175° F. Adapters are nylon; connectors are gray PVC.

Push-In Fittings—Fittings are removable and reusable. They have NPT male threads, except 75145K51 has PG-7 threads. They have a steel locknut for securing to an enclosure (75145K21 has a nylon locknut). C-UL listed, except 75145K16 and 75145K21 are CSA certified. *Multi-angle elbow adapters* can be positioned at any angle from 0° to 90°.

Twist-In Fittings—Attach to conduit with a few quick turns. They have NPT male threads and zinc locknuts. Adapters are CSA certified. Connectors are C-UL listed.

To Order: For adapters, please specify black or gray. 75145K51 comes only in black. 75145K16 comes only in gray.

Liquid-Tight Flexible Metal Conduit and Fittings

When used with liquid-tight fittings, this conduit seals out liquid. The metal core provides crush resistance, and the PVC cover is UV light resistant. Use this bendable conduit for connections to motors and other equipment in tight areas.

Conduit

Conduit is made of steel, except standard (UL listed) conduit is zinc-plated steel. Cover is PVC unless otherwise stated. Prices are approximately 25% less for the longest length listed.

Standard—Temperature range is 0° to 140° F. Color is gray.

Standard (UL Listed)—Can be used underground. It has a built-in copper ground, except 1 1/2 and 2 trade sizes do not. Temperature range is 0° to 140° F. CSA certified. **To Order:** Please specify blue or gray, except 7127K66 comes only in gray. Blue conduit is often used for data lines.

Ultra Flexible—Bends and twists for installation in tighter areas than standard conduit. Temperature range is 0° to 140° F. Color is black.

Food Grade—Has a cover that can be cleaned and sterilized without weakening or splitting. Temperature range is 0° to 140° F. Color is white. Meets NSF/ANSI standard 169 for special-purpose food equipment.

Liquid-Tight Flexible Metal Conduit and Fittings *(Continued from previous page)*

Conduit (Cont.)

Prices are approximately 25% less for the longest length listed.

Oil Resistant—UL listed. Resists oil, lubricants, and grease. It can be used underground. It has a built-in copper ground, except 1½ and 2 trade sizes do not. Temperature range is -20° to 175° F. Color is gray. CSA certified.

Extreme Temperature (UL Listed)—Stays flexible in temperatures of -50° to 220° F. It can be used underground. It has a built-in copper ground, except 1½ and 2 trade sizes do not. Color is gray.

Extreme Temperature—Stays flexible in temperatures from -75° to 300° F. It has a TPE rubber cover. Color is black.

Harsh Environment—The toughest liquid-tight flexible metal conduit we offer. It has a silicone rubber cover and resists oil, chemicals, and extreme temperature fluctuations. Temperature range is -90° to 390° F. Conduit is halogen-free and has a built-in copper ground. Color is gray.

Fittings

Twist into conduit with a few quick turns. Fittings have NPT male threads, except zinc fittings have NPSM threads. They include a locknut, except 304 stainless steel. UL listed and CSA certified, except zinc fittings are UL and C-UL listed.

304 stainless steel adapters are corrosion resistant.

Adapters with **grounding lug** ground conduit outside an outlet box or enclosure. Run a ground wire through the lug. Adapters with **wire-mesh grip** provide strain relief and added protection against conduit pullout.

Continuous-Flex Liquid-Tight Plastic Conduit and Fittings

Also known as Type A, this conduit meets the demands of continuous motion while sealing out liquid when used with liquid-tight fittings.

Conduit

Conduit is PVC with a PVC cover. A layer of nylon provides strength during flexing. This conduit is crush and abrasion resistant as well as flame retardant. It also resists oil, chemicals, and UV light. Temperature range is 0° to 140° F. Color is orange. UL listed and CSA certified.

Trade Size	ID	OD	Bend Radius	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up

Fittings

One end twists into a piece of conduit for a quick connection; the other end attaches to a knockout in an outlet box or enclosure. Temperature range is 0° to 140° F. UL listed.

Acetal fittings resist corrosion and chemicals. Color is blue.
Steel fittings are stronger than acetal.

Flexible Metal Conduit and Fittings

Also known as FMC, this conduit offers the crush resistance of metal combined with flexibility to handle bends in tight spaces.

Conduit

Prices are approximately 35% less for the longest length listed.

Zinc-plated steel conduit has a heavy zinc coating for corrosion resistance. UL listed, except 5/16 trade size is UL recognized.

Aluminum conduit is lighter than steel and has good corrosion resistance. It's often used to hook up motors and light fixtures. UL listed, except 5/16 trade size is UL recognized.

304 stainless steel conduit has superior corrosion resistance.

Bend-and-stay steel conduit stays in position after bending; it is not intended for repeated bending.

(Continued on following page)

Flexible Metal Conduit and Fittings *(Continued from previous page)*

Standard Fittings

Attach flexible metal conduit to a knockout in an outlet box or enclosure. Adapters have NPSM male threads, except 7920K84, 7920K85, 7920K86, and 7920K87 screw-clamp adapters and screw-on adapters have NPT male threads. Locknut is included.

Screw-clamp adapters and **screw-clamp 90° elbow adapters** have a screw-clamp end that tightens around conduit with a screw.

Twist-in adapters and **twist-in connectors** have an end that attaches to conduit with a few quick turns.

Screw-on adapters have an end that screws onto the OD of conduit.

Grommets, also known as antishort bushings, slide into the ends of conduit and types AC and MC armored cable to protect wire and cable from sharp edges. Made of red plastic.

Zinc—For light duty applications. UL listed and CSA certified. Screw-clamp adapters and screw-clamp 90° elbow adapters can be used with armored cable.

Iron—Stronger and more durable than zinc. UL listed.

316 stainless steel—The most corrosion resistant.

Aluminum—Provides some corrosion resistance.

Specialty Fittings

Attach flexible metal conduit and types AC and MC armored cable to a knockout in an outlet box or enclosure. Fittings are made of zinc. UL listed and CSA certified. *Wye* adapters join two pieces of conduit or armored cable to one knockout.

The **threaded** end has NPSM male threads. The **snap-in** end has tabs that snap into the knockout without locknuts or tools.

The **screw-clamp** end tightens around conduit with a screw.

Rigid Aluminum Conduit and Fittings

This nonmagnetic aluminum conduit withstands damp and corrosive environments. It is lightweight, but its walls are strong enough to resist damage while remaining easy to bend and cut.

Conduit

Bend with a conduit bender (not included) and cut with a hacksaw. This conduit has one threaded male end; the other end has a threaded female connector. UL listed.

5-ft. lengths can be shipped via small-parcel carrier.

Trade Size	ID	OD	5-ft. Lengths		10-ft. Lengths

Thin-Wall (EMT) Steel Conduit and Fittings

Also known as electrical metallic tubing (EMT), this conduit has thin walls that easily bend with a conduit bender and can be cut with a hacksaw. Run it along walls and ceilings, away from high-traffic areas.

Conduit

Conduit is unthreaded. UL listed.

5-ft. lengths can be shipped via small-parcel carrier.

Trade Size	ID	OD	5-ft. Lengths		10-ft. Lengths

Straight Fittings

A compression end offers a more reliable hold on conduit than a screw-clamp end.

Adapters have NPSM male threads and include a locknut. *Adapters with grommet* protect wire and cable from abrasion when being pulled.

Zinc—UL listed and CSA certified.

Raintight Zinc—Fittings have an O-ring to prevent liquid from entering the conduit. They meet UL raintight standards when used with EMT conduit.

Steel—UL listed. C-UL listed, except the 2½, 3, and 4 trade size screw-clamp adapters and screw-clamp connectors are CSA certified.

Specialty Fittings

Compression ends offer a more reliable hold than screw-clamp or push-in ends.

Space-Saver Adapters—These secure conduit to a knockout without a locknut, leaving more space inside your outlet box or enclosure. Made of zinc-plated steel. UL and C-UL listed.

Screw-Clamp Offset Elbows—They have NPSM threads and include a locknut. Made of zinc. UL listed and CSA certified.

90° Compression Elbows—Have NPSM threads and include a locknut. Made of zinc. UL listed and CSA certified.

Screw-Clamp 90° Elbows with Removable Cover—The cover allows for quick access to pull wire and cable. Made of zinc. UL listed and CSA certified.

Screw-Clamp 90° Elbows—Made of zinc. UL listed.

Wye Reducers—Made of zinc. UL and C-UL listed.

Push-In 90° Elbows—Made of galvanized steel. UL listed and CSA certified.

Grommets—Slide into conduit ends to protect wire and cable from abrasion when being pulled. Made of plastic. UL listed and CSA certified.

Choose-a-Color Thin-Wall (EMT) Steel Conduit and Fittings

Visually identify different runs of wire and cable along walls and ceilings with this conduit that has a painted exterior. Also known as electrical metallic tubing (EMT), it has thin walls that are easy to bend with a conduit bender and cut with a hacksaw.

Conduit

Conduit is unthreaded and UL listed.

5-ft. lengths can be shipped via small-parcel carrier.

To Order: Please specify black, blue, red, or white.

Trade Size	ID	OD	5-ft. Lengths		10-ft. Lengths	
1/2	0.62"	0.71"	1829T4	$3.11	1829T1	$4.66

3/4	Black, Blue, Red, White	9150T21	2.27	9150T31	2.67
1	Blue, Red	9150T23	3.74	9150T33	3.98

Medium-Wall (IMC) and Thick-Wall Steel Conduit and Fittings

With thicker walls than EMT, this steel conduit provides better strength and protection from impact in heavy duty applications.

Conduit

This conduit has one threaded NPT male end; the other end has a threaded NPT female connector. *5-ft. lengths* are cut from UL listed material and can be shipped via small-parcel carrier. *10-ft. lengths* are UL listed.

Medium Wall (IMC)—Also known as intermediate metallic conduit (IMC), this conduit is lightweight and strong. A smooth coating protects wire and cable from abrasion when being pulled.

Thick Wall (Rigid)—This impact- and crush-resistant conduit is also known as galvanized rigid conduit (GRC).

Trade Size	ID	OD	5-ft. Lengths		10-ft. Lengths

Fittings

Attach medium-wall (IMC) and thick-wall (rigid) steel conduit to a knockout in an outlet box or enclosure. Fittings are UL listed.

Compression straight adapters offer a reliable hold on conduit. Made of zinc-plated steel. Locknut is included. CSA certified.

Compression straight connectors join two pieces of unthreaded conduit. Made of zinc-plated steel. CSA certified.

Straight connectors are made of galvanized steel and have NPSM female threads.

Three-piece straight connectors have two outer pieces that turn independently so you don't need to rotate the conduit. Made of zinc-plated, malleable iron. Have NPT threads.

Flanged straight adapters are also known as conduit nipples, chase nipples, and box adapters. The flange installs through a knockout from inside an outlet box or enclosure. Use with a locknut (not included) to create a short raceway between boxes or enclosures. Made of zinc and have NPSM threads. CSA certified.

90° elbow connectors with removable cover allow for quick access to pull wire and cable. Made of zinc and have NPSM threads. CSA certified.

90° elbow adapters are for tight spaces where conduit can't be bent. Made of iron. Trade sizes 1, 1 1/4, 1 1/2, and 2 are CSA certified. They have NPSM threads.

90° elbow connectors are made of galvanized steel and have NPT threads. CSA certified.

Straight adapters are also known as hubs. They have an insulated throat to protect wire and cable from abrasion when being pulled. Use in wet or dry locations. Made of zinc and have NPT threads on the conduit end and NPSM threads on the enclosure end. CSA certified.

Offset elbow connectors join knockouts on outlet boxes or enclosures that do not align. Offset is 3/4". Made of zinc and have NPSM threads. CSA certified.

Grommets connect to the end of conduit or a fitting to protect wire and cable from abrasion when being pulled. Made of polypropylene and have NPSM threads. CSA certified.

Grounding clamps ground conduit by running a ground wire through the attached lug. They are compatible with aluminum and copper wire. The included grommet protects wire and cable from abrasion when being pulled. They have a hinge to open for quick installation around conduit and secure with a screw, except 7513K251 is not hinged. They are made of zinc and are unthreaded, except 7513K251 has NPSM threads.

(Continued on following page)

Medium-Wall (IMC) and Thick-Wall Steel Conduit and Fittings

(Continued from previous page)

Fittings (Cont.)

Fittings are UL listed.

Straight connectors are also known as nipple extensions. They extend the length of conduit or connect two outlet boxes or enclosures. They are zinc-plated steel and have NPT male threads. CSA certified.

Bushings join two different sizes of threaded conduit. They are zinc-plated steel and have NPSM threads.

Reducing washers reduce the knockout size in an outlet box or enclosure so you can attach a different size of conduit to it. Two reducing washers are required per knockout. They are steel, and CSA certified.

Raintight reducing washers seal out moisture while reducing a knockout size in an outlet box or enclosure. Each includes a steel washer and a rubber-coated steel gasket. C-UL listed.

Stainless Steel Conduit and Fittings

Use in food-processing and chemical plants—this is the most corrosion-resistant conduit we offer.

Conduit

Conduit is 304 stainless steel.

Thin-Wall (EMT) Conduit—Also known as electrical metallic tubing (EMT), this tubing has thin walls that are easy to bend with a conduit bender and cut with a hacksaw.

Rigid Conduit—This conduit is crush and impact resistant. It has one NPT threaded male end; the other end has an NPT threaded female connector. UL listed.

5-ft. lengths can be shipped via small-parcel carrier.

Trade Size	ID	*Thin-Wall (EMT) Conduit* OD	5-ft. Lengths		10-ft. Lengths		*Rigid Conduit* OD	5-ft. Lengths		10-ft. Lengths	
1/2	0.62"	0.71"	1831T11	$39.55	1831T21	$63.27	0.84"	5150K11	$57.55	5150K31	$92.50

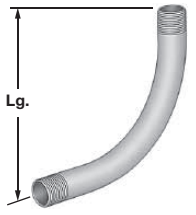
Fittings

Fittings are 316 stainless steel.

Thin Wall (EMT)—The compression end provides a reliable hold on conduit in high-vibration applications.

Rigid—UL listed. *Straight connectors* have NPSM threads; *90° elbow connectors* have NPT threads. *Straight adapters* are also known as hubs. They have NPT male and female threads. They attach rigid stainless steel conduit to a knockout in an outlet box or enclosure.



Trade Size	*Thin Wall (EMT)* Straight Compression Adapters		Straight Compression Connectors		*Rigid* Straight Connectors		90° Elbow Connectors Lg.		Straight Adapters

Locknuts for Metal Conduit Fittings

Secure threaded metal conduit fittings to a knockout in an outlet box or enclosure. Locknuts are compatible with NPT and NPSM threads.

Zinc-plated steel locknuts are UL listed and CSA certified.

Zinc-plated steel locknut with PVC molded gasket creates a seal for moisture protection. UL listed and CSA certified.

316 stainless steel locknuts are UL listed and C-UL listed.

Thread Size	Zinc-Plated Steel	Pkg. of 10	Zinc-Plated Steel with PVC Molded Gasket	Pkg. of 2	316 Stainless Steel	Each

Access Ports for Metal Conduit

Also known as conduit bodies, these ports provide access to wire and cable inside conduit for pulling, splicing, and maintenance. They are also used to change the direction of a run. All are corrosion resistant and connect to medium-wall (IMC) and thick-wall (rigid) metal conduit. **Aluminum ports with set screw** also connect to thin-wall (EMT) steel conduit without a compression connector.

Aluminum—Ports have NPSM threads. UL listed.

Aluminum with Set Screw—Ports are UL listed. *Straights, tees,* and *90° elbows* have NPSM threads and are CSA certified. *90° elbows with two removable covers* have NPT threads. They are UL listed raintight for thick-wall (rigid) steel conduit and C-UL listed. *Any-style* ports can be configured as a straight, tee, 90° elbow, left elbow, or right elbow. They come with three ports with NPT threads and multiple cover plates for openings not in use. They are UL listed raintight for thick-wall (rigid) conduit and concrete-tight for thin-wall (EMT) conduit. CSA certified.

Iron—Ports are zinc plated and have NPT threads. UL listed and CSA certified.

316 Stainless Steel—Offer the best corrosion resistance. Ports have NPT threads. UL listed.

Hazardous Location Conduit Fittings

Use to connect thick-wall (rigid) metal conduit to a knockout in an outlet box or enclosure. These fittings meet Class I and II, Division 1 and 2 standards for flammable gases and combustible dust in hazardous locations. Fittings are aluminum with NPT threads. UL listed and CSA certified.

Connectors have three pieces; the outer two pieces turn independently, so you don't need to rotate the conduit.

Fittings with **sealant chamber** require packing fiber and sealing compound (sold separately). They minimize the travel of gases and flames through conduit.

Rigid PVC Conduit and Fittings

This conduit is corrosion resistant and UV light resistant for outdoor use. It is lightweight with strong walls to provide protection from damage. It can be buried or encased in concrete.

PVC cement is required (not included) when joining conduit and push-in ends on fittings and access ports.

Conduit

Also known as PVC Schedule 40 conduit. Both ends are unthreaded; the female end is expanded so another piece of conduit can be pushed in to connect without a fitting. Color is gray.

8-ft. lengths are cut from UL listed material and can be shipped via small-parcel carrier. *10-ft. lengths* are ETL listed.

Trade Size	ID	OD	8-ft. Lengths		10-ft. Lengths

Fittings

Use fittings to attach PVC Schedule 40 or Schedule 80 conduit to a knockout in an outlet box or enclosure. Fittings are UL listed, except 90° elbows are ETL listed and locknuts are UL recognized. The ends are unthreaded, unless otherwise stated. Color is gray.

Fittings with **NPSM threads** connect unthreaded conduit to threaded fittings and knockouts.

Push-in male × flanged end male adapters, also known as box adapters, install through a knockout from inside an electrical enclosure.

Reducing adapters connect two different sizes and genders of conduit.

Multi-angle elbow connectors also attach conduit to a knockout when you take off the removable ends to access the NPT threaded connections.

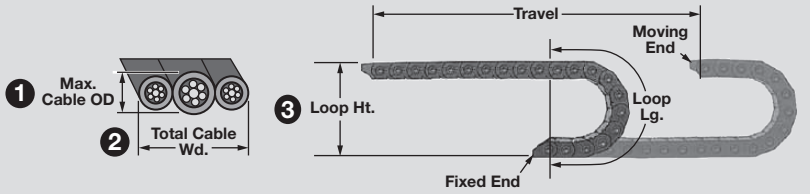
About Cable and Hose Carriers

Carriers support and protect cable and hose during machine movement while also reducing safety hazards. They are often used between fixed and moving portions of machines. During installation, evenly distribute cable and hose weight within the carrier. The fixed end of the carrier should be mounted at the midpoint of travel. See pages 839-843 for flexible cable that is suitable for use with carriers.

Selecting the Right Carrier for Your Cable or Hose



1. Measure the OD of your largest cable.

2. Measure the total width of your cables. This will enable you to choose a carrier that is wider than the sum of the ODs of your cables (total cable width).

3. Keep in mind how much vertical clearance you have. The loop height indicates the minimum vertical clearance required for the carrier. Also, take into account the flexibility of the carrier. The bend radius indicates how tightly the carrier can bend. To prevent damage to your cable, the bend radius of the carrier should be larger than or equal to the bend radius of your cable.

4. Once you have selected a part number, use the formula to determine the carrier length you need. We provide Loop Lg. for all of our carriers and you supply the travel length according to your application.

$$\text{Loop Lg., ft.} + \frac{\text{Travel, ft.}}{2} = \text{Carrier Length, ft.}$$

Example: Suppose you've selected a carrier with a loop length of 0.4 ft. and your application requires 6 ft. of travel. Using the formula, the carrier length necessary is 3.4 ft. Round up to the nearest foot and order a total of 4 ft. of carrier.

Snap-Together Cable and Hose Carriers

Connect lengths of carrier without tools—snap the links together to create the exact length you need to support and protect moving cable and hose. Lengths can be joined by hand, but a screwdriver is required for disassembly. Carriers are made of black nylon. Operating temperature is –40° to 245°F.

Open carriers promote air flow to prevent heat buildup and keep cable and hose visible. *Feed-through carriers* require cable and hose to be threaded through the entire length. *Lay-in carriers* have snap-on cross bars that allow access at any point along the length and make it easy to install cable and hose without threading it through.

Enclosed lay-in carriers protect cable and hose from damage caused by dirt, chips, and debris. They have snap-on cross bars that allow access at any point along the length and make it easy to install cable and hose without threading it through.

Mounting brackets are black nylon. Mounting fasteners are not included.

Dura-Guard Cable and Hose Carriers

Bands of stainless steel surround flexible black nylon to make these the most durable, protective carriers we offer. They resist corrosion and fully enclose cable and hose to minimize damage from dirt, chips, and debris. Remove the rivets in the links to make length adjustments. Operating temperature is –40° to 265°F.

Mounting brackets are aluminum and include fasteners. *Surface-mount* brackets can be attached with the mounting holes facing inside or outside the loop of the carrier.

Repair kit has two top and bottom stainless steel pieces, two center nylon pieces, and four connecting rivets.

Heavy Duty Cable and Hose Carriers

A zinc-plated steel frame provides strength for a long service life. The open design of these carriers promotes air flow to prevent heat buildup and keeps cable and hose visible. Remove the steel pins in the links to make length adjustments. All of these carriers have aluminum cross-bars that twist out of the frame, allowing installation of cable from the top and access at any point along the length. Operating temperature is –10° to 265°F.

Mounting brackets can mount inside or outside the carrier frame. All are made of zinc-plated steel. Each set includes two brackets for the fixed end, two brackets for the moving end, and fasteners.

Low-Vibration Cable and Hose Carriers

A flexible one-piece design minimizes vibration, clicking, and jumping for smooth, quiet travel. Use for vibration-sensitive applications such as printing and scanning. There are no links or hinges, making these carriers suitable for Class 3 clean room use. Snap off the crossbars to load the cable and hose into the carrier. They are made of black nylon and can be shortened with a screwdriver. Operating temperature is –40° to 158° F.

Mounting brackets are black nylon. Mounting fasteners are not included.

Any-Which-Way Snap-Together Cable and Hose Carriers

Capable of turning and flexing up to 380° in any direction, these round carriers are a perfect match for robotic arms. Press cable and hose into the interior. The carriers hold cable in both the top and bottom chambers. Lengths can be snapped together by hand, but a screwdriver is required for disassembly. Made of black nylon. Operating temperature is –40° to 175° F.

Mounting brackets are black nylon. Mounting fasteners are not included. *End brackets* have teeth for strain relief. Use *supporting brackets* as needed along the length of the carrier.

Cable and Hose Trays

For ease of installation and great accessibility, lay cable and hose in trays instead of pulling it through conduit or raceway. The trays support the weight and prevent sagging while routing. Trays and accessories are aluminum, except hanging clamps and hanging bars are steel.

Trays

Trays offer excellent ventilation and support up to 280 lbs. per foot (based on a tray support, such as a pair of hanging clamps or a hanging bar, every 8 feet). Usable depth is 3″. Trays include two straight connectors to join sections, except horizontal tees include four straight connectors.

Accessories

Accessories include mounting hardware, unless otherwise stated. Threaded rod is not included, please see pages 3182-3197. **Drop outs** relieve stress on cable as it exits the tray. **Hanging clamps** attach to the sides of a tray section to suspend it from ½″-13 threaded rod using two hex nuts (not included) on each clamp. **Hanging bars** have slotted strut channel that you suspend from ½″-13 threaded rod; the tray rests on the channel.

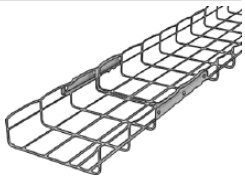
Formable Cable and Hose Trays

Cut, bend, and connect these wire mesh trays to route cable and hose in configurations such as curves, slopes, and tees. They are a lightweight option for organizing larger groups of cable than can fit in most conduit and raceway. Trays can be cut with bolt cutters.

Black-painted steel blends into dark backgrounds. **Zinc-plated steel** offers good corrosion resistance in most environments. **Stainless steel** provides the best corrosion resistance.

Trays

Each package contains two 78″ long sections of tray and two straight connectors for joining the two sections in a straight line.



Wd.	Dp.	Work Load Limit, lbs.★	Black-Painted Steel	Pkg.	Zinc-Plated Steel	Pkg.	Stainless Steel	Pkg.

★ Based on mounting brackets spaced every 6 feet.

Accessories

Use two **straight connectors** to join two sections in a straight line.

Connecting clamps join two straight or curved sections.

Drop outs relieve stress on cable as it exits the tray.

Hanging clips attach to sides of tray to suspend it from 1/4″-20, 3/8″-16, or 1/2″-13 threaded rod (not included, see pages 3182-3197). Two nuts and two washers (not included) are required for each clamp.

Wall mounting brackets have 1/4″ dia. mounting holes (fasteners not included).

Ceiling and **straight mounting brackets** have 5/16″ dia. mounting holes (fasteners not included).

Raceway

Also known as wireway and wire trough, raceway routes and protects cable, hose, and electrical wiring. It's made of 0.06″ thick steel with a gray finish. A removable screw-on cover allows you to lay cable in the raceway instead of pulling it through (10-ft. raceway section has two overlapping covers). Raceway sections have four 1/4″ dia. mounting holes (10-ft. lengths have six) for wall or ceiling mounting. Mounting fasteners are not included. UL listed, CSA certified, and meets NEMA 1 standards for indoor use.

Raceway with knockouts has combination 1/2 and 3/4 trade size and combination 1 and 1 1/4 trade size knockouts. It has an equal number of knockouts on the top and bottom.

90° elbows and **tees** have removable covers. A **connector** is required to join components, except end caps and end flanges. Connectors have a swing gate for easy connection and include connecting hardware. **End caps** terminate a raceway or fitting and include connecting hardware. They have a combination 1 1/4 and 1 1/2 trade size knockout. **End flanges** create a secure raceway connection to an enclosure or wall.

Dust-Tight Raceway

Gaskets on the covers and at connection points protect against dust as well as seeping oils and coolant. Raceway, 90° elbows, tees, and the reducer have a hinged cover, allowing you to lay cable, hose, and electrical wiring in the raceway instead of pulling it through. All are made of 0.08″ thick steel with a gray finish. The cover gaskets are urethane foam and the end gaskets are neoprene rubber. Rated NEMA 12 for indoor use and resistance to falling liquids and light splashing; nonhazardous dust, lint, and fibers; and oil and coolant seepage. **Raceway, 90° elbows,** and **tees** are UL listed and CSA certified.

All components include connecting hardware. A **box connector** is required to join raceway to an enclosure. **End caps** terminate a raceway or fitting. **Wall hangers** have four 5/16″ dia. mounting holes; mounting fasteners are not included.

Corrosion Resistant Washdown Raceway

In areas exposed to washdowns, chemicals, and corrosion, install this 0.08″ thick stainless steel raceway that has oil-resistant polyurethane gaskets at the connection points. Size is 4″ Wd. × 4″ Dp. UL listed, CSA certified, and meets NEMA 4X standards for indoor and outdoor protection against corrosion and water projected from a hose.

Raceway has a cover secured with heavy duty hinges on one side and screw clamps on the other. This allows you to lay cable, hose, and electrical wiring in the raceway instead of pulling it through.

All components include connecting hardware. A **box connector** is required to join raceway to an enclosure. An **end cap** terminates a raceway or fitting. **Overhead hanger** and **wall hanger** can be mounted to the raceway flange in various configurations. They have 9/32″ dia. mounting holes; mounting fasteners are not included.

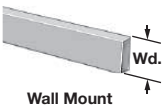
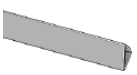
Low-Voltage Raceway



Wall Mount

Lay-In Wall Mount



Corner Mount

Route low-voltage data and control cables (up to 90 volts AC/DC) while keeping them organized and hidden from view. Raceway has an adhesive back for mounting and can be painted.

Wall-mount raceway comes flat on a roll, ready to be cut to length and folded around cable. One surface has an additional adhesive strip for closing, except 1767T1 and 1767T2 snap closed. Made of polypropylene, except 1767T1 and 1767T2 are PVC and meet UL 94V0 for flame retardance.

Lay-in wall-mount raceway allows you to insert and remove cable at any point along the length. Made of PVC.

Corner-mount raceway has a triangular shape to fit in corners. It comes flat on a roll, ready to be cut to length and folded around cable. One surface has an additional adhesive strip for closing. Made of polypropylene.

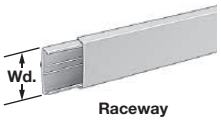
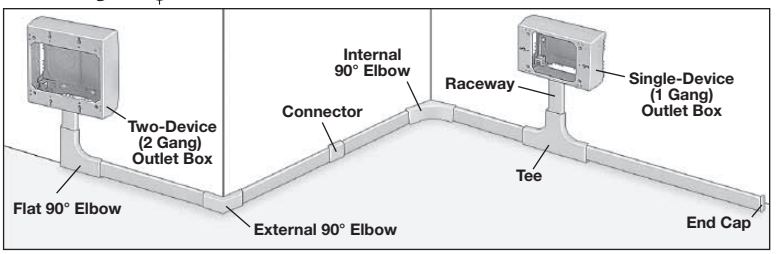
Low-Profile Single-Channel Raceway





Surface mount this small raceway on walls that you can't get inside of to run power, data, and control wiring. It conceals wires and takes up little space. Each section of raceway includes a cover and can be cut with a hacksaw. Raceway and components are ivory and can be painted. All are compatible with Wiremold raceway of the same size. UL and C-UL listed.

PVC with Snap-On Cover—This cover style provides easy access to wires. For low-voltage applications less than 30 volts AC/42 volts DC, you can mount raceway using its adhesive back. For applications up to 600 volts AC/DC, mount raceway with screws (not included).

Steel—Raceway is 0.04″ thick and has a slide-on cover. To install, fasten a **wall hanger** to the wall and press the raceway onto the hanger. Wall hanger has a 9⁄32″ dia. hole (screw not included).

Steel with Snap-On Cover—Provides easy access to wires. Raceway is 0.04″ thick and has 9⁄32″ dia. mounting holes (screws not included).

Outlet boxes accept any standard wall plate; see page 893.

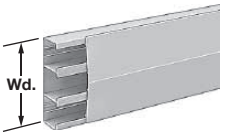
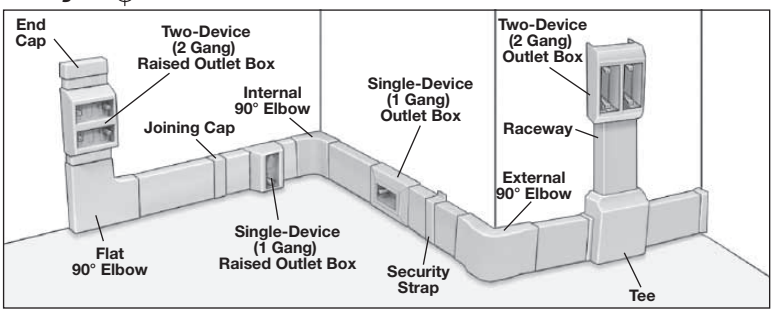
Low-Profile Multichannel Raceway





With more than one channel, this raceway allows you to separate power and data wiring to prevent interference. Surface mount raceway where you can't get inside walls. It conceals wires and has a low profile and a cover that provides easy access. The elbows meet the 1 1⁄4″ bend radius required for fiber optic cable. Raceway and components are made of PVC and are flame retardant. They are off-white and can be painted. Raceway sections can be cut with a hacksaw. Use in applications up to 600 volts AC/DC. UL listed and CSA certified.

Two-Channel Raceway—Raceway section has a hinged cover and is 2.12″ Wd. x 1.04″ Dp. For low-voltage applications less than 50 volts AC/DC, you can mount raceway using its adhesive back. For applications up to 600 volts AC/DC, mount with screws (not included).

Three-Channel Raceway—Raceway section has a snap-on cover and is 4.5″ Wd. x 1.63″ Dp. Mount with screws (not included).

Outlet Box Covers—For two- and three-channel raceway. One cover is required for single-device boxes; two are required for two-device boxes.

Data Cable Jacks (RJ-45)—Snap jacks into the outlet box cover for data cable jacks (71865K14).

Wire Duct

Often used as an alternative to cable ties, wire duct guides and organizes short runs of wire and cable in electrical enclosures, control panels, and machines. For longer runs, mount lengths end-to-end (they do not connect). Duct is made of PVC and comes with a cover. UL recognized, CSA certified, and meets UL 94V0 for flame retardance.

Slotted duct has fingers that hold wires in, yet allow you to direct wires in and out of the duct (remove fingers to enlarge the opening size). Duct has 0.2″ dia. mounting holes (screws not included).

Solid duct completely encloses wire. It does not have mounting holes (except 69865K51 has 0.2″ dia. mounting holes), so you can drill your own or use adhesive to mount.

Snap-on Cover

All of this duct has a removable cover that snaps on. **Solid** duct is gray.

To Order: For *slotted* duct, please specify gray or white, unless noted.

Flexible Wire Duct

Made of flexible polypropylene, this duct bends to route wire around curves. The slotted fingers overlap to form a canopy over wires, yet allow you to direct wires in and out. For mounting, duct has an adhesive back and 10 mounting holes, unless noted (mounting screws not included). Color is gray.

▲ 20 mounting holes.

Cable Protection Tape

Adhesive on the edges keeps this cloth tape in place on any clean surface, including carpeting. A vinyl coating on the underside of the tape creates a smooth channel that makes it easy to pull through cables, cords, and wires. The tape can be repositioned several times without loss of adhesion. It is 0.01″ thick and can be torn by hand. Temperature range is 50° to 200° F.

Connectable Cable Protectors

Snap together as many of these interlocking protectors as you need to span sidewalks, roads, and plant floors. They reduce tripping hazards and prevent damage to cable and hose. Protectors resist weather and abrasion.

Single Channel

Drop Over

Lay In

Made of polyurethane with a tread pattern that improves traction.

Drop-over protectors can be placed over existing cable and hose. *Light duty* protector is for areas with pedestrian traffic.

Lay-in protectors have a slit on the top that allows you to place your cable in the channel, keeping it off the floor.

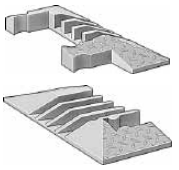
Multichannel

Heavy Duty Protector (4 Channel)



End Caps for Heavy Duty Protector (4 Channel)

Multiple channels let you separate different types of cable and hose. Protectors consist of a base with a hinged cover that opens for cable access. All are made of polyurethane.

Light duty protector is gray and yellow.

Heavy duty protectors are black and yellow. **End caps** come in pairs: one female and one male. Color is yellow.

Bendable Cable Protectors

Curve these protectors left or right to route cable around bends and corners while minimizing tripping hazards. Protectors are segmented and curve without leaving a gap between sections. The sections snap together for easy length adjustment. Made of ABS plastic with nonskid pads on the bottom. Color is black and yellow. For indoor use.

Light Duty Cable Protectors

Protector

Connector

Protect wire, cord, and cable from carts, pedestrians, and other light traffic. Made of thick, flexible PVC, these durable protectors have a tapered profile with a flat bottom. Thread your cable through the channel or slit the underside of the protector with a utility knife and insert the cable. Includes tape with adhesive on both sides for easy installation. For indoor use.

Connector fits all sizes and serves as a tee, riser, L, 4-way, or terminal box. Made of PVC.

To Order: Please specify beige, black, brown, gray, or yellow.

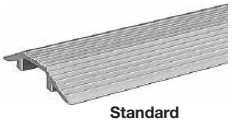
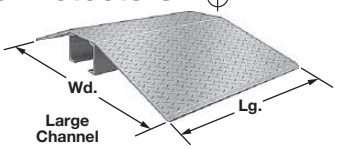
Heavy Duty Cable Protectors



Standard



Large Channel

Made of aluminum with a textured surface, these cable protectors resist corrosion and withstand heavy pedestrian and equipment traffic.

Standard protectors have serrations for slip resistance.

Large channel protectors span large hose, wire, pipe, and cable. They have a diamond tread surface for improved traction.

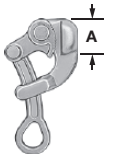
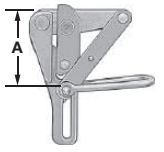
Wire Pulling Clamps



Without Latch (7285K4 and 7285K5)



Without Latch (7285K1 and 7285K9)

With Latch

Pull wire and cable and maintain tension until the line can be permanently anchored. Use with stranded bare steel wire and cable. Clamps have a tight grip and are for applications where marring can be tolerated. Made of steel. Warning: Do not use as an anchor.

Without Latch—7285K1 and 7285K9 have spring-loaded jaws that grip the cable before tensioning to aid proper positioning.

With Latch—These clamps provide a more secure grip that prevents wire and cable from slipping out of the jaws. 7285K8 and 7285K22 can be used with wire rope.

Fish Tape & Cable Pullers

Fish Tape

Steel

Compact Steel

Stainless Steel and Fiberglass

Move wire through conduit and raceway—attach your wire to the tape and fish it through. Tape comes on a plastic reel with a handle; the reel for compact steel tape also has a winding knob.

Steel and **compact steel** tape is flat, so it's good for long runs without multidirectional bends.

Stainless steel tape is flat for long runs without multidirectional bends. It won't rust or corrode, making it suitable for damp areas.

Super-flex stainless steel tape is round and stranded. It's flexible enough for pulling through multiple bends, yet it's stiff enough to push through tough runs without backing up. Tape has a stainless steel core surrounded by a hard nylon jacket to resist rust and corrosion in damp areas.

Nonconductive fiberglass tape is oval. It has a plastic tip and is safer to use around energized equipment than metal tape. Use for pushing only.

Conduit Threading Line

Bucket

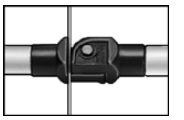
Use a blower or vacuum to insert this lightweight pulling line into conduit or raceway, attach your pulling rope, and guide the rope through. Note: Not for directly pulling wire or cable.

1,000-ft. roll is nylon and has a breaking strength of 80 lbs. Color is white.

6,500-ft. bucket has a handle and center hole for easy dispensing. Rope is polypropylene and has a breaking strength of 210 lbs. Line is mildew resistant, so it can be left in place for future use. Color is white with a blue marking strand.

1,000-ft. Roll	5043K3	$21.41
6,500-ft. Bucket	5043K2	45.78

Fish Tape Pullers



The two-piece hinged design allows you to use both hands for twice the pulling force. It also prevents tape from kinking and is safer than using pliers for pulling tasks. Overall length is 12″.

4861K66 ..... $41.96

Fish Tape Leaders

Single-Loop Leader

Multi-Loop Leader

Attach your steel fish tape or pulling wires to the end of these leaders for guiding through conduit bends. Leaders have a blunt nose for smooth travel inside conduit.

Single-loop leader handles up to six 10-ga. bare wires. Use with flat and round fish tape.

Multi-loop leader has six staggered eyelet loops to prevent bunching and snagging in tight bends. Use with flat fish tape.

	Lg.		
Single-Loop Leader	12 1/4″	6611K62	$16.03
Multi-Loop Leader (6 Loops)	11 1/4″	6611K65	19.04

Cable-Pulling Grips

The greater the pulling force, the tighter the wire mesh grips your cable. Use for pulling one or more cables through conduit. A flexible pulling loop allows you to pull at an angle. Mesh is galvanized steel. For more than one cable, measure the circumference of the bundle and divide by 3.14 to determine the cable diameter range you need. CSA certified.

For Cable Dia.	Mesh Lg.	Work Load Limit, lbs.

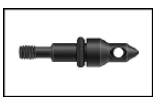
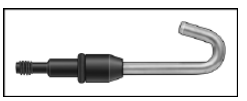
Wire and Cable Push-Pull Rods

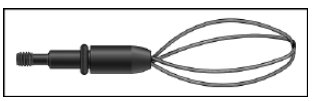
6-ft. Rod with Eyelet on Each End



Eyelet



Hook



Whisk

Route wire and cable outside of conduit in drop ceilings and behind walls. Rods are nonconductive fiberglass, which is safer to use around energized equipment than metal rods. The rods glow in the dark for good visibility. The smaller the rod diameter, the more flexible the rod and the better its ability to make tight bends. Rods with multiple sections are threaded and have removable ends.

O'all Lg.	Rod Sections	Rod Dia.	Ends		
6 ft.	Single 6-ft.	5/32″	Eyelet on each end	4078K12	$15.35

Cord Grips

Relieve tension at connection points and prevent cable pull out. As you tighten these grips, a nylon inner ring and a rubber bushing secure your cable and prevent overtightening. All have NPT threads. Temperature range is –30° to 225°F. UL listed and CSA certified. Prices are approximately 10% lower for 10 or more of the same item.

Liquid-tight cord grips include a zinc-plated steel locknut and a metal-clad rubber O-ring for the threaded end to seal panel connections. Rated IP66 for protection from power jets of water, and NEMA 4X and 13 for protection from washdowns, corrosion, and oil/coolant spraying.

Aluminum—Lightweight, yet durable.

Steel—Has good strength and zinc plating for corrosion resistance. *90° elbows* have a zinc-plated iron body and a zinc-plated steel outer compression nut.

Nylon—Chemical resistant with thick walls and a knurled collar for hand tightening. Color is gray.

Compact Liquid-Tight Cord Grips

Sized to fit in tight areas, grips have a rubber bushing and O-ring to provide liquid-tight entry for cable, wire, and tubing. They are rated IP68 for protection from water submersion, and NEMA 4X and 6 for protection from washdowns, corrosion, and temporary water submersion. Grips are nylon. They include nylon locknuts, except 1¼ and 1½ trade sizes have zinc-plated steel locknuts. Grips have NPT threads, except ¼ trade size has PG-7 threads. Temperature range is –20° to 210°F. Color is black. UL listed, except ¼ and ⅜ trade sizes are UL recognized. All are CSA certified.

Continuous-flex grips provide extra support for moving cables and prevent kinking for longer cable life.

Submersible Cord Grips

Use these nickel-plated brass grips in up to 300 feet of water, underground, and in other locations where protection from corrosion, salt, oil, and fuel is essential. They have a rubber seal and O-rings for a liquid-tight connection. All are rated IP68 and IP69K to withstand water submersion and high-temperature, high-pressure washdowns. Grips include a nickel-plated brass locknut. They have NPT threads, except ¼ trade size has PG-7 threads. Temperature range is –20° to 210°F. UL listed, except ¼ and ⅜ trade sizes are UL recognized. All are CSA certified.

Continuous-flex grips provide extra support for moving cables and prevent kinking for longer cable life.

Dust-Tight Cord Grips with Mesh

Prevent dust and cable pull-out from compromising your connections. A plastic bushing seals out dust and dirt while steel mesh provides a secure hold in applications where cable is pulled or in motion. The mesh reduces stress on the cable and prevents kinking for longer cable life. Grips are aluminum and include a zinc-plated steel locknut. All have NPT threads. Temperature range is –40° to 220°F. UL listed and CSA certified.

Chemical-Resistant Cord Grips with Mesh

With a polyester body and flexible nylon mesh, these grips resist most chemicals and are corrosion resistant. They have a nitrile/PVC bushing and a rubber O-ring to provide a liquid-tight seal. The mesh offers a secure hold in applications where cable is pulled or in motion. It reduces stress on the cable and prevents kinking for longer cable life. Grips include a zinc-plated steel locknut. All have NPT threads. Temperature range is –40° to 225°F. Color is gray. UL listed and CSA certified.

Harsh Environment Cord Grips with Mesh

All of these heavy duty aluminum grips meet Class I, Div. 2; Class II, Div. 1 and 2; and Class III, Div. 1 and 2 standards for use in hazardous locations. They have stainless steel mesh for a secure hold in applications where cable is pulled or in motion. The mesh reduces stress on the cable and prevents kinking for longer cable life. Grips have rubber O-rings clad with zinc-plated steel and include a zinc-plated steel locknut. All have NPT threads. Temperature range is –30° to 240°F. UL listed and CSA certified.

Prices are approximately 10% lower for 10 or more of the same item.

PG- and Metric-Thread Liquid-Tight Cord Grips

These grips have PG (European standard) or metric male threads, plus rubber bushings and O-rings to seal out liquid. UL listed, unless noted. All are CE marked.

Chemical Resistant—Grips resist most corrosives as well as salt water, oil, and grease. They are also flame retardant and self extinguishing. Made of nylon and include a nylon locknut. Temperature range is 0° to 175° F. Color is gray. CSA certified.

Submersible—Rated IP68 for protection from water submersion. Made of nickel-plated brass and include a nickel-plated brass locknut. Temperature range is 0° to 210° F.

Corrosion Resistant—Made of stainless steel for the best protection from corrosion. They include a nickel-plated brass locknut. Temperature range is –20° to 210° F. Grips are rated IP68 for protection from water submersion. CSA certified.

Corrosion-Resistant Cord Grips

Meet the demands of wet, corrosive environments indoors and out. Grips are stainless steel and have a rubber bushing and O-ring to seal out dirt, moisture, coolant, and corrosive fumes. They include a zinc-plated steel locknut (stainless steel locknuts are sold separately). Grips have NPT threads. Temperature range is –40° to 250° F. Rated IP67 for protection from temporary water submersion. UL listed.

Straights with mesh have flexible stainless steel mesh to provide a secure hold in applications where cable is pulled or in motion. The mesh reduces stress on the cable and prevents kinking for longer cable life.

Sure-Clamp Liquid-Tight Cord Grips

Tighten the screw-down clamp on these grips for superior pull-out resistance. Grips are nylon to resist corrosion and are rated IP68 for protection from water submersion. They have rubber bushings and O-rings. Grips include a nylon locknut. All have metric threads. Temperature range is 0° to 155° F. Color is black. CSA certified and UL listed, except 1013N11 is UL recognized.

Heat Shrink-Sealed Liquid-Tight Cord Grips

Add a layer of moisture protection to your connection. The cable-entry side has heat-shrinkable polyolefin with an adhesive lining. Use a heat gun to melt the lining; the adhesive bonds to your cable to form a liquid-tight, fume-tight seal. Shrink temperature is 250° F. Grips have a two-piece design; the pieces screw into each other to save space inside your enclosure. Made of black plastic. Temperature range is –65° to 190° F.

Moisture-Resistant Plastic Cord Grips

Low moisture absorption and good corrosion resistance make these polyester grips a practical choice for washdown areas and food-processing applications. They have a rubber bushing and O-ring and include a zinc-plated steel locknut. Temperature range is –40° to 250° F. Color is black. Rated IP68 for protection from water submersion. UL listed and CSA certified.

Straights have NPSM threads. **90° elbows** have NPT threads.

High-Temperature Liquid-Tight Cord Grips

Heat and moisture won't keep these grips from performing; they withstand temperatures from –30° to 300° F and have a fluoroelastomer rubber bushing and O-ring to seal out liquids. Made of white PVDF, grips resist chemicals and corrosion. They include a nickel-plated brass locknut. All have NPT threads and meet IP68 for protection from water submersion. UL listed, except 7799K82 and 7799K81 are UL recognized. CSA certified.

Snap-In Cord Grips

Straight

Continuous Flex

Quickly relieve cord strain in applications that don't require a moisture-resistant seal. To install, snap a grip onto your cable and push it into your panel opening. Installation pliers (sold separately) make it easier to insert the grip into a panel. Grips are black nylon. Maximum temperature is 220° F. UL recognized and CSA certified.

Continuous-flex grips provide extra support for moving cables and prevent kinking for longer cable life.

Interference-Shielding Liquid-Tight Cord Grips

An internal ring keeps cables with braided shielding grounded to the body of the grip so that the grip doesn't affect the shielding's ability to block electromagnetic interference (EMI). Grips are nickel-plated brass and have a rubber seal and O-ring to keep out liquids. They include a nickel-plated brass locknut. All have NPT threads. Temperature range is –40° to 210° F. Rated to IP68 for protection from water submersion. UL listed, except 7802K21 and 7802K22 are UL recognized. CSA certified.

Multicord Liquid-Tight Cord Grips

Standard Nylon

Break-Through

Save space and have fewer cutouts in your enclosure by running more than one cord through a single cord grip. All have NPT threads.

Standard— Grips have a rubber inner grommet with multiple holes and a rubber O-ring. Temperature range is –40° to 210° F. Rated IP65 for protection from water projected from a nozzle and NEMA 4X for protection from washdowns and corrosion. UL recognized and CSA certified. *Nylon* grips are black. 3/8 to 1 trade sizes include a nickel-plated brass locknut. 1 1/4 and 1 1/2 trade sizes include a zinc-plated steel locknut. *Nickel-plated brass* grips include a nickel-plated brass locknut.

Break-Through— Grips have a thin, flexible seal that covers the holes until you push cord through them. Made of black nylon and include a zinc-plated steel locknut. Temperature range is –20° to 210° F. Rated IP68 for protection from water submersion. Grips for 0.17″-0.22″ dia. cord are UL and C-UL recognized. Grips for 0.24″-0.3″ dia. cord are UL listed and CSA certified.

Wrap-Around Cord Grips

Round Grip

Rectangular Grip

Insert for One Cord

Insert for Two Cords

Insert for Four Cords

Attach a cord grip to cable without the hassle of removing connectors and rewiring. Choose a cord grip and then select inserts (sold separately). The cord grips have a two-piece design to fit around cables with connectors; the inserts have a slit, eliminating the need to thread cable through them. Temperature range is –20° to 190°F. UL and C-UL listed.

Round Grips—Made of gray polycarbonate with a rubber gasket. Thread into panels up to 0.31″ thick. Grips include a nylon locknut.

Rectangular Grips—Made of black nylon and have four 0.22″ dia. mounting holes (screws not included).

Inserts—Made of gray elastomer.

Multidiameter Liquid-Tight Cord Grips

Modify inserts to get the perfect fit for your cord—it's not necessary to know your exact cord diameter. Grips have two-piece blue rubber inserts that have layers you peel away to fit your cord. And because the inserts split into halves, they fit around cables with connectors. All meet IP67 for protection from temporary water submersion and NEMA 4X and 13 for protection from washdowns, corrosion, and oil/coolant spraying. UL listed.

Replacement inserts make it easy to change cord sizes and configurations.

Shown with Cords of Different Diameters

Metal Round

Thread the outer housing into a 2.48″-2.52″ dia. knockout, pull your cords through, and then add the inserts and adapt each hole to the cords. Max. panel thickness is 0.16″. Temperature range is –75° to 185°F.

Nickel-plated brass grips include a nickel-plated brass locknut.

Stainless steel grips include a stainless steel locknut.

Cord Grips for Building Cable

Screw Connector

Snap-In Connector

Locking Snap-In Connector

Connect multiconductor jacketed building cable, also known as Romex cable, to enclosures and outlet boxes. UL listed and CSA certified.

Screw Connectors—Secure into a knockout with the included locknut, insert cable, and tighten the two screws. Made of zinc.

Snap-In Connectors—Push into a knockout and insert cable. Made of PVC.

Locking Snap-In Connectors—Snap into a knockout and push in the cable. An insert clamps the cable in place and provides strain relief. Made of PVC.

★Fits into a 1/2 trade size knockout.

Liquid-Tight Cord Grips for Building Cable

A rubber bushing with an oval slot provides liquid-tight entry for building cable, also known as Romex type NM-B or type UF-B. Grips are black nylon to resist corrosion and have a rubber O-ring and a nylon locknut. All have NPT threads. Temperature range is –40° to 210°F. Rated IP68 for protection from water submersion. CSA certified.

1/2 trade size fits NM-B Romex 14/2, 14/3, 12/2, and 12/3 AWG cable, and UF-B Romex 14/2, 12/2, and 10/2 AWG cable.

3/4 trade size fits NM-B Romex 12/2, 12/3, and 10/2 AWG cable, and UF-B Romex 14/3 and 12/3 AWG cable.

Cable-Support Grips

Single Loop

Self-Tightening

Double Loop

Midcable

Also known as bus drop grips, these grips relieve tension on cables, support cable weight, and reduce vibration in vertical, straight runs of cable, rod, and tubing. CSA certified, except optional safety springs.

Single Loop—Can be supported with a hook. *Standard* grips are galvanized steel. *Corrosion-resistant* grips are stainless steel.

Self-Tightening—The loops tighten by the weight of your cable or by manual adjustment. These grips are often wrapped around a beam or pipe. Made of galvanized steel.

Double Loop—Loops offer support at two points, often at an angle. The loops must be equally supported to balance the load. *Standard* grips are tinned bronze. *Corrosion-resistant* grips are stainless steel.

Midcable—When the end of a cable is not accessible, wrap the mesh around a continuous length of cable (anywhere along the length). Lace the mesh closed with the included lacing wire. *Standard* grips are tinned bronze. *Corrosion-resistant* grips are stainless steel.

Optional safety spring alleviates strain from sudden pulls. It reduces work load limit for single-loop and self-tightening grips. 8″ long.

Plastic Outlet Boxes

Attach these plastic boxes to studs or joists behind drywall. They are not intended for exposed areas. UL listed.

Nail On and **Clamp On**—Designed for commercial use, these heavy duty boxes have rigid, thick walls. Knockouts are 9/16" Ht. x 1/2" Wd.; single-device boxes have four knockouts and two-device boxes have eight. Color is blue. *Nail-on* boxes attach to wall studs. *Clamp-on* boxes have swing clamps to attach to drywall.

Low-Voltage Nail On—Boxes attach to wall studs and have an open back to accommodate extra-deep low-voltage devices. They have two combination knockouts with 3/4, 1, and 1 1/4 trade sizes. Color is orange.

Corrosion-Resistant Wall Plates with Covers

Single-Device Blank

Single-Device (Duplex Receptacle Horizontal)

Locking Single-Device (GFCI Receptacle Vertical)

Two-Device (Two Toggle Switches)

Keep switches and receptacles under cover for protection from dust and dirt. Wall plates have gasketed, flip-down covers (except blanks) and are stainless steel to resist corrosion. Mounting screws are included. UL listed and CSA certified.

Locking wall plates have a lockable cover to prevent tampering. They include two keys.

Floor Outlet Boxes

Floor Box

Duplex Cover

Carpet Flange

Access outlets in concrete and under carpeted or tile floors. Box is zinc-coated stamped steel and is adjustable—external leveling screws allow 1 1/4" adjustment before concrete pour; internal screws allow 0.38" adjustment after pour. There are 13 knockouts in 1/2 and 3/4 trade sizes. UL listed and CSA certified.

Duplex cover and **carpet flange** are brass.

Floor Box, 37.3 cu. in. (4 11/16" Sq. × 2 7/8" Dp.)	6372K1	$57.06
Duplex Cover, 3 7/8" Dia.	6372K3	72.65
Carpet Flange, 5 1/4" Dia.	6372K2	67.69

Outlet Boxes and Covers

Make secure connections to conduit without using fittings. UL listed.

PVC Boxes—Have unthreaded connections for attaching PVC Schedule 40 rigid conduit using PVC cement (see page 3466). Boxes are gray and have four 0.2" dia. mounting holes. *Single-device (1 gang)* boxes are 2 13/16" Ht. × 5 11/16" Wd. × 2 5/16" Dp. (19 cu. in.). *Two-device (2 gang)* boxes are 4 5/8" Ht. × 4 5/8" Wd. × 2" Dp. (32 cu. in.).

Aluminum Boxes—Have NPT female threaded connections for attaching medium and thick wall (rigid) conduit. Boxes with one or two connections have two 5/16" dia. mounting holes; boxes with three connections do not have mounting holes. All are 2 7/8" Ht. × 4 5/8" Wd. × 2" Dp. (18 cu. in.).

PVC Covers—All are gray and include mounting screws. CSA certified. *Single-device (1 gang)* covers are 3 3/16" Ht. × 4 7/8" Wd., unless noted. *Two-device (2 gang)* covers are 4 7/8" Ht. × 4 7/8" Wd.

Aluminum Covers—Mounting screws are included. 7169K53 and 7169K52 are 2 13/16" Ht. × 4 9/16" Wd.; 7169K49 is 2 13/16" Ht. × 4 3/16" Wd.

Weatherproof Outlet Boxes and Covers

Exposure to rain, snow, and wet indoor conditions won't hurt these corrosion-resistant boxes, extension rings, and covers. They have a gray powder-coated finish. Mounting hardware is included. UL listed, except 7219K6, 7219K8, and 7219K13 are UL recognized.

Boxes are aluminum and have NPT threaded connections for attaching conduit and fittings. Include plugs for unused connections and a grounding screw. Mount horizontally or vertically. *Single-device (1 gang)* boxes are 2¾″ Ht.×4½″ Wd.×2″ Dp., except 7219K81 is 2⅝″ Dp. *Two-device (2 gang)* boxes are 4½″ Ht.×4½″ Wd.×2″ Dp. 7219K7 and 7219K71 are 4″ Dia.×1½″ Dp.

Extension rings are aluminum and provide additional depth to increase the volume of a box. 7219K15 is 4½″ Ht.×2¾″ Wd.×1″ Dp. 7219K16 is 4″ Dia.×1½″ Dp. and has four ½ trade size holes.

Covers are metal and have a gasket. *Single-device (1 gang)* covers are 4⁹⁄₁₆″ Ht.×2¹³⁄₁₆″ Wd. *Two-device (2 gang)* covers are 4⁹⁄₁₆″ Ht.×4⁹⁄₁₆″ Wd. 7219K78, 7219K13, and 7219K8 are 4⅛″ Dia.

Weatherproof While-in-Use Covers

Keep the cover closed during operation to completely shield the outlet and plug from rain and snow outdoors as well as wet locations indoors. Covers are corrosion resistant and include sealing gaskets and zinc-plated steel mounting hardware. They comply with NEC requirements for plugs in wet locations and are rated NEMA 3R for protection from falling liquids and light splashing. UL listed.

Single-device (1 gang) covers include adapter plates for toggle switches, duplex receptacles, GFCI receptacles, and circular receptacles. *Polycarbonate two-device (2 gang)* cover includes adapter plates to create any combination of the previously listed switches and receptacles; *aluminum two-device (2 gang)* cover has adapter plates for nine combinations.

Polycarbonate—Semi-clear with a locking hasp for OSHA lockout/tagout requirements.

Low-Profile Polycarbonate—Has an accordion-style bellows that can project up to 3½″ from the wall to accommodate plugs and cable. When not in use, the bellows collapses to give the cover a slim profile. The cover has a clear window.

Aluminum—Covers have a locking hasp for OSHA lockout/tagout requirements. CSA certified.

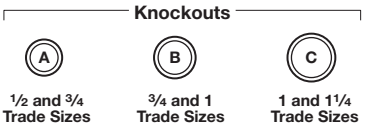
Indoor Steel Enclosures with Knockouts

Hinged Cover

Lift-Off Cover



Punch out the knockouts on the top, bottom, or sides for convenient connection to conduit fittings and cord grips—no special tools required. Enclosures are rated NEMA 1 for indoor applications where dust and liquids are not a concern. They are steel and have mounting holes. Color is gray. UL listed and CSA certified.

Hinged Cover—Have steel hinges and a slotted latch.

Lift-Off Cover—Screws fasten the cover to the enclosure, but the cover has keyhole-shaped slots that allow you to slide it off without removing the screws.

Weather-Resistant Steel Enclosures

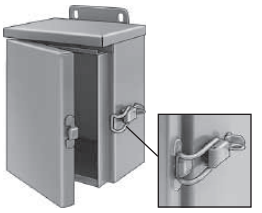
Keep components safe from rain, snow, and ice. Rated NEMA 3R, enclosures have a top that overhangs the cover for protection from dirt, falling liquids, and light splashing. Enclosures are gray powder-coated steel and have mounting holes. UL listed and CSA certified, unless noted.

Hinged Cover

Enclosures have a continuous steel hinge and a removable inner panel where components can be mounted. The cover can be secured with a padlock (3/8" max. shackle dia.).

With Knockouts—Have knockouts on the bottom for attaching conduit fittings and cord grips as well as a quick-release latch.

Without Knockouts—Two screws keep the cover closed.



With Knockouts—Quick-Release Latch

Without Knockouts—Screw Closure

★ Not UL listed and does not accept a padlock.

Oil-Resistant Steel Enclosures

Enclosures have a gasketed cover and are rated NEMA 13 for indoor protection from dust, dirt, and oil/coolant spraying. They are gray powder-coated steel and have mounting holes. UL listed. **Panels** are steel and are for mounting components inside enclosures.

Hinged Cover with Screw-Down Clamps—Enclosures have a continuous steel hinge and screw-down clamps to keep the cover closed. Enclosures 20" high and taller have a padlock hasp (3/8" max. shackle dia.) and are CSA certified.

Hinged Cover with Quick-Release Latch—A latch offers easy access without screws or clamps to unfasten. Enclosures have a continuous steel hinge and are C-UL listed.

Lift-Off Cover with Screw-Down Clamps—The cover is secured with screw-down clamps. CSA certified.

Easy-Access Washdown Enclosures

Steel, Choose-a-Color Steel, and Stainless Steel

Sloped-Top Stainless Steel

Steel with Top Hinge

Locking Handle

Give the slotted latch a quarter turn to open these enclosures—there are no clamps or screws to unfasten. A gasketed cover protects components from washdowns. All have mounting holes. **Panels** are steel and are for mounting components inside enclosures.

Steel and **Choose-a-Color Steel**—Rated NEMA 4 and 12 for protection from dust, dirt, washdowns, and oil/coolant dripping. Enclosures have concealed steel hinges. UL listed and CSA certified. *Steel* has a gray powder-coated finish.

Steel with Top Hinge—Enclosures are gray powder-coated steel and are rated NEMA 4 and 12 for protection from dust, dirt, washdowns, and oil/coolant dripping. They have steel hinges. UL and C-UL listed. CSA certified.

Stainless Steel—The best choice for environments with corrosive liquids or frequent moisture, enclosures are rated NEMA 4X and IP66 for protection from dirt, washdowns, corrosion, and power jets of water. They have plastic hinges and mounting feet, except the 16″ and 20″ wide enclosures have stainless steel hinges and do not have mounting feet. UL listed and CSA certified.

Sloped-Top Stainless Steel—A 20° sloped top and door edge allows washdown solutions to run off, eliminating standing water to meet NSF/ANSI Standard 169. Enclosures are rated NEMA 4X and 12 as well as IP66 for protection from dirt, washdowns, corrosion, oil/coolant dripping, and power jets of water. UL and C-UL listed.

Accessories—*Locking handle* replaces the slotted latch and includes two keys. *Standoffs* are 1″ long and create space between the enclosure and the wall to allow thorough washdowns.

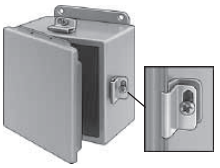
Washdown Enclosures with Hinged Cover



Components stay dry during washdowns because the cover has a gasket. Stainless steel screw-down clamps on three sides resist corrosion and keep the cover closed. Enclosures have mounting holes and are UL listed and CSA certified. **Panels** are steel and are for mounting components inside enclosures.

Steel—Enclosures are gray powder-coated steel and are rated NEMA 4 and 13 for protection from dust, dirt, washdowns, and oil/coolant spraying. Enclosures 4″ to 16″ high have a continuous steel hinge. Enclosures 20″ high and taller have a continuous stainless steel hinge and a padlock hasp (⅜″ max. shackle dia.).

Stainless Steel—Use in areas with constant moisture. Enclosures are rated NEMA 4X and 12 for protection from dirt, washdowns, corrosion, and oil/coolant dripping. They have a continuous stainless steel hinge.

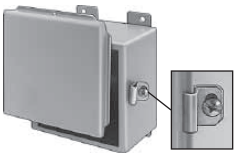
Washdown Enclosures with Lift-Off Cover



Use where frequent access isn't necessary, but NEMA 4 and 13 protection from dust, dirt, washdowns, and oil/coolant spraying is required. Enclosures are gray powder-coated steel. The cover has a gasket and is secured with stainless steel screw-down clamps on four sides. Enclosures have mounting holes. UL listed and CSA certified.

Panels are steel and are for mounting components inside enclosures.

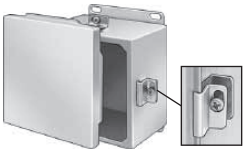
Lightweight Corrosion-Resistant Washdown Enclosures

Stronger and more durable than plastic enclosures, these are aluminum to resist corrosion, plus they weigh less than other metals. They are rated NEMA 4X for protection from dirt, washdowns, and corrosion. All have a gasketed lift-off cover and mounting holes.

Screw-Down Clamp Cover



The cover is secured with stainless steel screw-down clamps on four sides. Enclosures have a brushed finish. UL listed and CSA certified.

Panels are steel and are for mounting components inside enclosures.

Screw Cover

Screws secure the cover. Enclosures meet IP66 for protection from power jets of water.

Standard—Have a brushed finish. UL and C-UL listed.

Heavy Duty—Have thicker walls than standard enclosures and a beige powder-coated finish. CSA certified.

Tamper-Resistant Washdown Enclosures

Prevent unauthorized access. Enclosures have a key-operated pin lock (30″ high enclosures have two locks) and come with one key. Locks are keyed alike (all open with the same key). Enclosures have a gasketed cover with stainless steel hinges and a steel inner panel for mounting components. They are rated NEMA 4 and 12 for dust, dirt, washdowns, and oil/coolant dripping. Meet IP66 for protection from power jets of water. UL listed and CSA certified.

Steel—Have a gray powder-coated finish.

Stainless Steel—Have a brushed finish. They are also rated NEMA 4X for corrosion resistance.

See-Through Washdown Enclosures

View all sides of your installed components through clear blue polycarbonate. Enclosures have good acid resistance and are rated NEMA 4X and 13 for protection from dirt, washdowns, corrosion, and oil/coolant spraying; they also meet IP65 for protection from water projected from a nozzle. They have a lift-off cover with gasket, stainless steel screws to secure the cover, and mounting holes. UL listed.

Corrosion-Resistant Washdown Enclosures

Made of gray fiberglass, these enclosures are stronger than polycarbonate enclosures. They have a gasketed cover and mounting holes. Padlockable enclosures accept a 3/8" max. shackle dia.

Panels are for mounting components inside enclosures.

Lift-Off Cover

Rated NEMA 4X and 12, these enclosures protect components from dirt, washdowns, corrosion, and oil/coolant dripping. They have stainless steel captive screws to hold the cover in place. UL and C-UL listed.

Panels are aluminum.

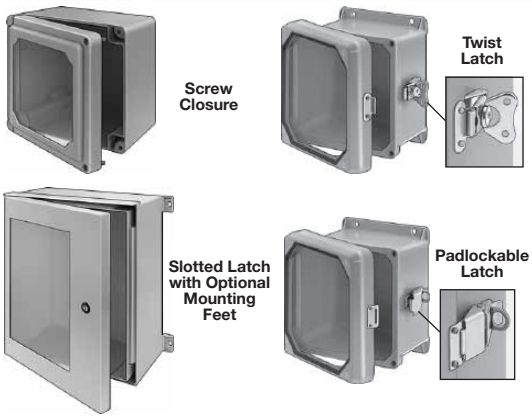
Hinged Cover with Window



A window allows inspection of components without opening the cover. Enclosures are rated NEMA 4X for protection from dirt, washdowns, and corrosion. **Panels** are aluminum, except panels for slotted-latch enclosures are steel.

Screw Closure—Also rated NEMA 12 for protection from oil/coolant dripping. Enclosures have stainless steel captive screws to keep the cover closed, stainless steel hinges, and an acrylic window. UL and C-UL listed.

Slotted Latch—Also rated NEMA 12 and 13 for protection from oil/coolant dripping and spraying. Enclosures have polyamide hinges and a polycarbonate window. UL and C-UL listed.

Twist Latch and **Padlockable Latch**—Have flanged mounting holes and stainless steel hinges and latches. Also rated NEMA 13 for protection from oil/coolant spraying, except the 7 1/2" high enclosures are rated NEMA 12 for protection from oil/coolant dripping. Enclosures have a polycarbonate window and are UL listed and CSA certified, except the 7 1/2" high enclosures have an acrylic window and are UL and C-UL listed.

Impact- and Corrosion-Resistant Washdown Enclosures

Made of polycarbonate, these enclosures resist denting better than metal and resist chipping and cracking better than other nonmetallic enclosures. Polycarbonate also has good acid resistance. Enclosures have a gasketed cover and are rated NEMA 4X for protection from dirt, washdowns, and corrosion. They have a gray body and mounting holes. UL listed. **Panels** are steel and are for mounting components inside enclosures.

With Lift-Off Cover

Plastic screws hold the cover in place, unless noted.

With Latch and Clear Cover

Chemical-Resistant Washdown Enclosures

Shelter components from water and corrosive chemicals. Made of PVC, enclosures resist solvents, alkalies, and acids. They are rated NEMA 4X and 13 for protection from dirt, washdowns, corrosion, and oil/coolant spraying. Enclosures have a lift-off cover with gasket that's secured by four brass captive screws. They include mounting feet, which are removable except on the 2¼" deep enclosures. Color is gray. UL and C-UL listed. CSA certified.

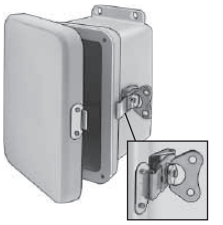
Submersible Enclosures

Able to withstand periodic submersion in water, these enclosures offer our highest level of protection from liquids. They have a gasketed cover and are rated NEMA 6P and 4X for protection from dirt, washdowns, corrosion, and water submersion.

Hinged Cover

With Screw Cover

With Padlockable Latch



With Twist Latch

These fiberglass enclosures are also rated NEMA 12 for protection from oil/coolant dripping. They have stainless steel hinges and flanged mounting holes. UL and C-UL listed. CSA certified. **Panels** are aluminum and are for mounting components inside enclosures.

With Screw Cover—Have two stainless steel captive screws to keep the cover closed.

With Padlockable Latch—Have a stainless steel padlock hasp (⅜" max. shackle dia.).

With Twist Latch—Have a stainless steel quick-closing latch.

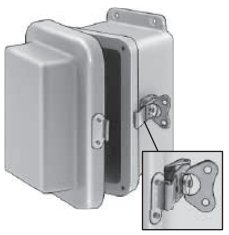
Raised Hinged Cover



With Twist Latch

A raised cover gives these fiberglass enclosures additional depth. They are also rated NEMA 12 for protection from oil/coolant dripping. They have stainless steel hinges and flanged mounting holes. Color is gray. UL and C-UL listed. CSA certified. **Panels** are aluminum and are for mounting components inside enclosures.

With Padlockable Latch—Have a stainless steel padlock hasp (⅜" max. shackle dia.).

With Twist Latch—Have a stainless steel quick-closing latch.

Watertight Enclosures with Versa-Mount System

Place panels or DIN rail in these enclosures to mount components—they have internal mounting bosses that accept No. 10 self-tapping screws. Enclosures are polycarbonate to resist corrosion as well as chipping and cracking. They have polycarbonate hinges, a gasketed cover, and four mounting brackets with hardware. Body is gray. UL and C-UL listed.

Washdown Enclosures—The cover has a stainless steel padlockable latch (3/8" max. shackle dia.). Enclosures are rated NEMA 4X and 13 for protection from dirt, washdowns, corrosion, and oil/coolant spraying.

Submersible Enclosures—Four captive screws keep the cover closed. Enclosures are rated NEMA 6P, 4X, and 13 for protection from dirt, washdowns, corrosion, water submersion, and oil/coolant spraying.

Panels are aluminum and are for mounting components inside enclosures.

DIN rail is cut to fit inside enclosures. Mounting screws are included.

Panel adjustment mounting pads allow you to position your panel at almost any depth inside the enclosure. You'll get four mounting pads that slide on rails. Mounting hardware is included.

Hazardous Location Enclosures

For use in hazardous locations, these enclosures meet NEMA 7 (Class I, Groups B, C, and D) and 9 (Class II, Groups E, F, and G). They are also rated NEMA 4 for dust, dirt, and washdowns. Enclosures are made of aluminum and resist corrosion. They have steel screws to secure the cover as well as mounting holes. The 16 1/2" high enclosures have a hinged cover; all others have a lift-off cover. UL listed and CSA certified. **Panels** are aluminum and are for mounting components inside enclosures.

Underground Enclosures

Access electrical service and other underground utilities. Lighter than enclosures made entirely of concrete, these enclosures are polymer concrete reinforced with fiberglass. Bury them in the ground or in concrete. They withstand freeze/thaw conditions and have an open bottom for water drainage. Enclosures withstand occasional vehicular traffic, are nonconductive, and are impact and corrosion resistant. You can stack multiple enclosures in deep holes with only one cover (sold separately). Color is gray. UL listed. **Covers** include two bolts for attaching to enclosure. **Cover hook** makes it easier to lift a cover; it's steel and 7" long.

Wiring Trough Enclosures

Long, narrow enclosures protect runs of wire, cable, and hose. Enclosures are gray powder-coated steel and have mounting holes. UL listed and CSA certified.

Oil Tight—Rated NEMA 12 for protection from dust, dirt, and oil/coolant dripping. They're also rated IP55 for protection from water projected from a nozzle. The cover has a gasket and steel hinges. Screw-down clamps on one side keep the cover closed.

Weather Resistant—Rated NEMA 3R for protection from falling liquids and light splashing. Enclosures have a lift-off cover and steel screws to secure the cover. The top overhangs the cover to keep out rain.

Electronics Enclosures

Small and lightweight, these indoor enclosures are used with sensors, switches, testing devices, and circuit boards. They are ABS plastic for impact resistance and have a lift-off cover and steel screws to secure the cover. For use in dry locations.

Black enclosures are opaque. **Choose-a-color** enclosures are semi-clear.

Circuit Board Enclosures

Circuit boards are at home in these aluminum enclosures—internal slots hold them in place.

Enclosures

The included end caps are secured with steel screws. Remove the end caps and the front panel can slide off on enclosures 4 3/4" high and taller to provide access to components.

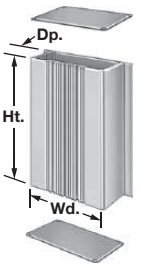
Build-Your-Own Enclosures



Choose an enclosure body and two matching end caps to make your own dust-tight or watertight enclosure.

Enclosure bodies can be cut to height. Those with a side flange have a 1/2" flange; all others require drilling and tapping new holes on one end when cut.

Dust-tight end caps provide IP40 protection from dust. They require four M4×16 mm flat head screws (not included) for mounting to the enclosure body, except those for enclosure bodies with a side flange require M3×6 mm flat head screws.

Watertight end caps have a gasket to provide IP65 protection from water projected from a nozzle. Four screws for mounting to the enclosure body are included.

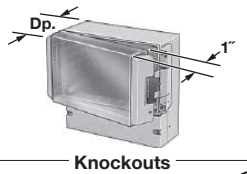
Dual-Access Instrumentation Enclosures



Knockouts

A	B	C	D
PG-9 1/2" Dia.	PG-11 3/4" Dia.	PG-13.5 13/16" Dia.	PG-16 7/8" Dia.

Two chambers with separate covers allow you to access wiring connections in the lower section without disturbing instrumentation that you install in the upper section (such as displays, monitors, and meters). Mount indoors on walls or machines. Enclosures are rated NEMA 12 for indoor protection from dust, dirt, and oil/coolant dripping. They are also rated IP65 for protection from water projected from a nozzle, except the 6 1/4" high enclosure is rated IP40 for protection from dust. Enclosures are ABS plastic, except the 7 1/4" high enclosure is polycarbonate. The upper section has a clear polycarbonate cover with an ABS plastic hinge, a push-button latch, and a gasket. The lower section has a lift-off cover that is secured with screws. Enclosures are gray and have mounting holes.

Panels are aluminum and are for mounting instrumentation inside the upper section of the enclosure.

Machine-Mount Electronics Enclosures

Molded-in flanged mounting feet make attachment to machines and walls hassle-free. Made of polycarbonate, enclosures resist chipping and cracking, and are rated NEMA 4X and 13 for protection from dirt, washdowns, corrosion, and oil/coolant spraying. They are rated IP65 for protection from water projected from a nozzle. Enclosures have a lift-off cover with a gasket and four stainless steel screws to secure the cover. Internal slots hold circuit boards, unless noted. UL listed.

Hand-Held Enclosures

The unique shape of these enclosures provides a handle to hold scanners, detectors, and remote switches. They meet IP65 for protection from water projected from a nozzle. Housing is yellow glass-filled nylon for impact resistance. The removable front panel is polyester and has a gasket. Enclosures include wall-mount brackets, mounting screws, and a cord grip with M20 threads for strain relief (accepts 0.24" to 0.47" dia. cord).

DIN-Rail Mount Enclosures

Snap enclosures onto 35 mm DIN rail and lock them in place. They have internal slots to hold circuit boards. Enclosures are aluminum and have nylon end caps that are secured with two steel screws on each end. Remove the end caps and the front panel can slide off to provide access to components.

Enclosures with Terminal Blocks

Side-Mounted Terminals

Center-Mounted Terminals

Terminal blocks molded into the body create a ready-to-wire junction box for use on machinery and in control systems and robotics applications. Enclosures have a gray ABS plastic body and are rated IP65 for protection from water projected from a nozzle. They have a lift-off cover with a gasket, four steel screws to secure the cover, and mounting holes (screws are included). There are two #6 screw terminals per circuit. Terminals are 5/16" center-to-center and accommodate 20-14 ga. wire. Rated 120 volts AC and 15 amps per circuit.

Clear cover is polycarbonate. *Gray cover* is ABS plastic.

Battery Enclosures

For use in enclosures and panels where components require battery power, these enclosures have contacts for AA and 9-volt batteries. Body is nylon with a plastic lift-off cover. Color is black.

Four-contact enclosure snaps into a 1 5/16" Ht. × 2 7/16" Wd. cutout. *Eight-contact* enclosure snaps into a 2 7/16" Ht. × 2 7/16" Wd. cutout.

For Use With	No. of Contacts	Ht.	Wd.	Dp.		
Two AA or One 9-Volt	Four	1 1/2"	2 1/2"	7/8"	1042N11	$11.18
Four AA or Two 9-Volt	Eight	2 1/2"	2 1/2"	7/8"	1042N12	13.65

Hand-Held Enclosures with Battery Holder

A 9-volt battery fits inside a compartment in these enclosures to power testing devices and other hand-held instruments. Enclosures are black ABS plastic and have a lift-off cover that is secured with zinc-plated steel screws. Battery is not included.

Protective boots prevent damage to the enclosure and make it easy to grip. They are rubber and have a built-in stand to keep the enclosure upright.

Enclosure

Enclosure Shown with Pedestal and Pedestal Base

Mount these enclosures on either of two sides, creating a 30° or 60° slanted surface on a desktop, wall, or machine. Use for displays, touch screens, and other interactive devices. Enclosures are rated NEMA 12 for protection from dust, dirt, and oil/coolant dripping and IP65 for water projected from a nozzle. They are gray powder-coated steel and have a continuous steel hinge, a cover with a gasket, and zinc-plated steel captive screws to keep the cover closed. UL listed and CSA certified.

Add a pedestal and a pedestal base to make your enclosure free-standing. **Pedestal** is steel and includes mounting flanges, mounting hardware, and a gasketed access plate. **Pedestal base** is steel with leveling screws and four 5/16" dia. holes for bolting to the floor.

Solderless Ready-to-Use Circuit Boards

Also known as solderless breadboards, these boards have contact points inside each hole. Insert wires into the holes to create a custom circuit board. The holes are numbered and lettered to organize your connections. Holes are 0.025" dia. and spaced 0.100" center-to-center. Boards have 100 contacts per distribution strip and 630 contacts per terminal strip, unless noted. All are made of white ABS plastic and have a max. temperature of 180° F.

6 1/2" Lg. circuit boards include 70 jumper wires, unless noted. *2 1/8" Lg. circuit board* includes 70 jumper wires, three connection posts, and five rubber feet. *6 7/8" Lg. circuit board* includes 140 jumper wires, four connection posts, and five rubber feet. Jumper wires are 22 AWG and come in 0.1" to 5" lengths.

■ Has 50 contacts per distribution strip and 300 contacts per terminal strip. ▲ Does not include jumper wires.

Push-Button Enclosures CAD

Steel Six Holes

Stainless Steel One Hole

Polycarbonate Four Holes

Fiberglass Three Holes

Holes are cut for push buttons, switches, and lights. Enclosures have a gasketed lift-off cover with captive screws to secure it, unless noted. NEMA ratings apply when used with equivalently rated components.

Oil-Tight Steel—Rated NEMA 13 for indoor protection from dust, dirt, and oil/coolant spraying. Made of gray powder-coated steel. Screws are zinc-plated steel. UL listed. Enclosures with *22 mm (7/8") dia. holes* are CSA certified. Enclosures with *30 mm (1 3/16") dia. holes* are C-UL listed.

Corrosion-Resistant Stainless Steel—Rated NEMA 4X for protection from dirt, washdowns, and corrosion. Screws are stainless steel. UL listed and CSA certified.

Washdown Polycarbonate—Rated NEMA 4X and 13 for protection from dirt, washdowns, corrosion, and oil/coolant spraying. Screws are stainless steel. Color is gray. UL and C-UL listed.

Submersible Fiberglass—Rated NEMA 4X, 6P, and 12 for protection from dirt, washdowns, corrosion, water submersion, and oil/coolant dripping. Made of fiberglass-reinforced polyester. Screws are stainless steel. Color is gray. UL and C-UL listed.

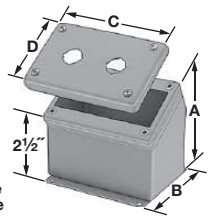
★ Has a hinged cover.

Push-Button Slant-Top Enclosures



Two-Hole Enclosure

Four-Hole Enclosure Shown with Pedestal and Pedestal Base

Make your push-buttons, switches, and indicating lights more visible and ergonomic to use. Enclosures mount on either of two sides, creating a 30° or 60° slanted surface. Mount directly onto a desktop or wall. Enclosures are gray powder-coated steel and have a lift-off cover with a gasket, captive screws to secure the cover, and mounting holes. They are rated NEMA 13 for indoor protection from oil/coolant spraying when used with NEMA 13 rated switches. UL listed and CSA certified.

Add a pedestal and a pedestal base to enclosures with two or more rows to make the enclosure freestanding. **Pedestal** is steel with mounting flanges, mounting hardware, and a gasketed access plate. **Pedestal base** is steel with leveling screws and four 5/16″ dia. holes for bolting to the floor.

Extra-Large Steel Enclosures

A large interior provides space for many components. Enclosures are gray powder-coated steel. They have heavy duty lifting eyes, gasketed doors, and a welded-on 12″ high floor stand with mounting feet. UL listed and CSA certified. **Panels** are steel and are for mounting components inside enclosures.

Oil Tight—Rated NEMA 12 for indoor protection from dust, dirt, and oil/coolant dripping. Enclosures have a steel hinge, key-locking handle, and two keys. Locks are keyed alike (all open with the same key).

Washdown—Rated NEMA 4 for protection from dust, dirt, and washdowns, enclosures have stainless steel clamps on each door to ensure a watertight seal. They have a steel continuous hinge and a padlock hasp (3/8″ max. shackle dia.).

Electronics Cabinets

House automation controls, data communication, and networking equipment. The internal rails hold standard 19″ wide components. Cabinets are steel.

Small Cabinets

Cabinets have rails on the front and back. They include handles, rubber feet, 10-32 clip nuts for mounting components, and 10-32 screws. Capacity is 800 lbs. Color is light gray.

Solid rear panels are aluminum and allow access for repairs and maintenance.

Solid and **vented front panels** fit all cabinets and cover the front area where no components are present. *Solid panels* are aluminum; *vented panels* are steel.

					Solid Rear Panels

Large Cabinets

The front and rear doors are perforated for ventilation and visibility. Both doors are lockable and include two keys. They are keyed alike (all open with the same key). Cabinets have a top cable access panel, removable locking sidewalls, and an open base for cable exit as well as ventilation. They have two sets of depth-adjustable mounting rails and four leveling feet. Capacity is 3,200 lbs. Color is black.

Shelf can be mounted at any level. Size is 17 3/4″ Wd. × 23 5/8″ Dp. Capacity is 150 lbs.

Shelf			46365T26	233.75

Electronics Racks

Freestanding

Wall Mount

Mount standard 19″ wide components to these racks. They are black painted steel.

Freestanding—Rack is 15″ deep. The rails have 10-32 threaded holes on the front and back. *Shelf* is vented and has eight 1/4″ dia. mounting holes (screws not included). *Dolly* has four lockable casters and includes hardware for mounting to rack.

Wall Mount—Depth is adjustable from 12″ to 18″. Racks are double-hinged for rear access to components.

Submersible Hole Plugs

Prevent water from entering unused knockouts and holes in enclosures and boxes. Plugs are rated NEMA 4X for protection from washdowns and corrosion and NEMA 6P and IP68 for protection from water submersion. Plugs are fiberglass and have a gasket. Use on panels up to 1/4" thick. Color is gray. UL recognized.

Washdown Hole Plugs

A gasket provides a tight seal in unused push-button holes and knockouts. Plugs are rated NEMA 4 and 13 for protection from dust, dirt, washdowns, and oil/coolant spraying. Use on panels up to 0.31" thick. UL recognized and CSA certified.

Steel plugs are galvanized and have a gray powder-coated finish.

Stainless steel plugs are also rated NEMA 4X for corrosion resistance.

Enclosure Vents

Snap-In Breather Vent

Washdown Threaded Breather Vent

Liquid-Tight Threaded Breather Vent

Drain Vent

Maintain a stable environment inside your enclosure as temperatures fluctuate. **Breather vents** allow air to flow through sealed enclosures, preventing inside pressure changes. **Drain vent** mounts to the outside of your enclosure to prevent moisture being trapped inside.

Snap-In Breather Vents—Made of black nylon, vents have louvers with foam filters. For panels up to 1/8" thick.

Washdown Threaded Breather Vent—Made of gray nylon with a gasket. Vent is rated NEMA 4X for protection from washdowns and corrosion and IP66 for protection from power jets of water. For panels up to 11/32" thick. UL recognized.

Liquid-Tight Threaded Breather Vents—Made of gray nylon and rated IP68 for protection from water submersion.

Drain Vent—Made of gray fiberglass with a gasket. Vent is rated NEMA 4X for protection from washdowns and corrosion. To install, drill ventilation holes and mounting holes into your enclosure (screws are included). Size is 2 3/4" Ht. x 2" Wd. x 11/16" Dp. UL recognized.

About Choosing an Electrical Switch

An electrical switch is used to turn power to a device on and off. This occurs when the switch closes or opens a set of contacts within an electrical circuit. The contacts act like a bridge that closes to allow electricity to pass through the circuit.

Switch Style— Choose the style that's right for your application. The following pages include push-button, toggle, rocker, foot switch, limit switch, and relay styles, among others.

Industry Designation— A standard naming convention that describes the contact for each switch.

Number of Poles: Determine the number of circuits you'll need to switch. Each circuit requires at least one set of contacts or "poles." The number of poles on a switch is indicated by the first two letters of the contact type (SP for single pole, DP for double pole, etc.).

A *single throw (ST)* switch is designed to be either open (off) or closed (on) before switching. A switch designed to be open is called normally open (NO), while a switch designed to be closed is normally closed (NC).

A *double throw (DT)* switch can be wired to be normally open or normally closed, offering greater flexibility. Another advantage of a double throw switch is that it can shift power between devices.

For example, in the diagrams at right, **SPST-NO** shows a single circuit that controls one device (a light bulb) and requires a single pole switch. **SPDT** shows a single pole double throw switch used to switch power between two lights. **DPST-NO** shows two circuits that power two light bulbs and require a double pole switch.

Switch Action— Decide if you want the switch to stay on only while you press it, such as your car horn (momentary), or if you want the switch to stay on when released, as with most light switches (maintained). Momentary switches "spring back" and maintained switches "stay switched."

Amp or Load Rating— You need to know how much electrical current will flow through the switch at the voltage of your circuit. You can compute this current if you know the amount of power required by the device you want to control.

For example, you have a 60 watt bulb powered by a 120 volt AC power supply. Use the formula **Current (amps) = Power (watts) ÷ Voltage (volts)** to calculate that the light bulb will draw 0.5 amps of current. You must select a switch with an amp rating higher than 0.5 amps at 120 volts AC. Remember, the required amp rating may change when there is a change in voltage.

Input Voltage— Some switches are activated by pressing a button (physical force), while other switches, such as relays, are activated by applying a voltage (electrical force). Relays need an input voltage (also known as a control or coil voltage) to operate. If your switch requires electrical activation, make sure your system can supply the appropriate voltage. If you need to use multiple relays, you may also want to look at power consumption (the amps or volt-amps drawn by the coil of the relay) to ensure your system can supply the required amount.

Industry Designation (● = Terminal)	No. of Circuits	Before Switching, Circuit Is	No. of Terminals
 **SPST-NO—** Single Pole Single Throw, Normally Open	1	Off	2
 **SPST-NC—** Single Pole Single Throw, Normally Closed	1	On	2
 **SPDT—** Single Pole Double Throw, Can Be Wired Normally Open or Normally Closed	1	1 Off or 1 On	3
 **DPST-NO—** Double Pole Single Throw, Normally Open	2	2 Off	4
 **DPST-NO/NC—** Double Pole Single Throw, 1 Normally Open and 1 Normally Closed	2	1 Off and 1 On	4
 **DPST-NC—** Double Pole Single Throw, Normally Closed	2	2 On	4
 **DPDT—** Double Pole Double Throw, Can Be Wired Normally Open or Normally Closed	2	2 Off or 2 On	6

30 mm Panel Cutout Metal Push-Button Switches

Their durable construction withstands abuse in demanding environments. Body is metal; button is plastic, unless noted. Switches mount in a 30 mm (1 3/16") dia. panel cutout and have screw terminal connections. Depth behind panel is 1 3/4". Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed and CSA certified. For replacement contacts and accessories, see 65575K on page 911.

Washdown switches are rated NEMA 4 and 13 for splashing water and oil/coolant spraying. 1 3/4" dia. mushroom switch has a metal button. ***Corrosion-resistant washdown*** switches are oil- and watertight as well as rated NEMA 4X for protection from corrosion.

To Order: Please specify button color where necessary.

Switch Label

Sealed to keep out dirt and other contaminants, these switches have a long operating life. Body is metal; button is plastic (except key switches, which are all metal). Switches mount in a 30 mm (1 3/16") dia. panel cutout and have screw terminal connections. Depth behind panel is 1 13/16". Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They're oil- and watertight, meeting NEMA 4, NEMA 13, and IP66. UL listed, CSA certified, and CE marked.

Two-position lever and ***key*** switches prevent the switch from being caught between two positions. Key switches are opened with the same key (keyed alike) and include two keys; turn left to remove. ***Three-position*** switches are off in the center position. ***Illuminated lever*** switches have an input voltage of 120 AC.

To Order: Please specify color where necessary: black, green (Grn), red, or yellow (Yel). For illuminated push-button switches, also specify input voltage: 24 AC/DC, 120 AC, or 240 AC/DC.

Switch labels are black plastic with white letters, unless stated otherwise. **To Order:** Please specify message: Blank (black), Blank (red), Open, Close, Up, Down, Forward, Reverse, On, Off (red with black letters), Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Start-Stop, Stop (red with black letters), or Emergency Stop (red with black letters).

Palm-Button Switches

With Optional Ring Guard

Designed for machine actuation and other heavy duty applications, these rugged switches are easy to operate, even while wearing gloves. They have spring back (momentary) switch action and screw terminal connections. Rated 6 amps @ 120 volts AC and 2.2 amps @ 120 volts DC with a maximum voltage of 600 AC and 250 DC. Body is metal. Mushroom button is plastic; flat button is metal. Depth behind panel is 1 1/16". Switches have a 4 5/16"×2 13/16" plate for mounting on single-device outlet boxes (see 7169K on page 894). They meet NEMA 13 and IP65 for oil and water resistance. UL listed, CSA certified, and CE marked.

Optional ring guards surround the switch to protect the actuator and reduce the chance of accidental actuation.

30 mm Panel Cutout Metal Switch Components

Build the right switch for your environment with an ***actuator*** and a ***contact*** (each sold separately). They mount in a 30 mm (1 3/16″) dia. panel cutout. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed and CSA certified.

Actuators

All have a threaded locknut for panel mounting. **To Order:** Please specify button color where necessary. ***Washdown*** actuators are rated NEMA 4 and 13 for splashing water and oil/coolant spraying. *Key* actuators open with the same key (keyed alike) and include two keys. ***Corrosion-resistant washdown*** actuators are oil- and watertight as well as rated NEMA 4X for protection from corrosion.

Heavy Duty Metal Emergency Stop Switches

Panel Mount

Panel Mount with Lockout

Box Mount with Lockout

Push the button to immediately break the circuit and cut off electrical power. All switches have a red plastic mushroom-style button, metal body, and screw terminal connections. UL listed and CSA certified.

Panel Mount and ***Illuminated Panel Mount*—** Switches mount in a 30 mm (13/16″) dia. panel cutout. Pull to reset. Depth behind panel is 113/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They're oil- and watertight, meeting NEMA 4, NEMA 13, and IP66.

To Order: For illuminated switch, please specify input voltage: 24 AC/DC or 120 AC/DC.

Panel Mount with Lockout and ***Box Mount with Lockout*—** Switches latch when you depress the button and can be locked in that position using a lockout or padlock with a 9/32″ shackle dia. (not included). Rated 6 amps @ 120 volts AC and 2.2 amps @ 125 volts DC. They meet NEMA 13 and IP65 for oil and water resistance.

Panel-mount switch mounts in a 30 mm (13/16″) dia. panel cutout. Pull to reset. Depth behind panel is 17/8″. Maximum voltage is 600 AC and 150 DC.

Box-mount switch has a 45/16″×213/16″ faceplate that mounts on a single-device outlet box (see 7169K on page 894). Push to reset. Maximum voltage is 600 AC and 250 DC.

Contact Block Kits

All kits consist of a contact mounting latch and one or more single-pole contacts. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC. They have screw terminal connections. Depth behind panel is 1 13/16".

Kits with bulbholder are used with illuminated push-button actuators. **To Order:** Please specify input voltage: 24 AC/DC, 120 AC, or 240 AC and bulb color: green, red, or white. *Note:* White bulbs are used for illuminated push-button actuators with yellow lenses.

22 mm Panel Cutout Plastic Switch Components *(Continued from previous page)*

Accessories (Cont.)

Padlockable cover prevents unauthorized use.

Switch labels are black plastic. *Black* and *red inserts* are engraved with your choice of message (letters are white). **To Order:** Please specify message: Blank, Open, Close, Up, Down, Forward, Reverse, On, Off, Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Stop, Stop-Start, or Emergency Stop. *Transparent inserts* let you write or print message on a 3/8″ x 1″ card.

Also Available: Custom labels. Please ask for 7550K97 and specify color (black or red) and message. They have a maximum of two lines, 13 characters per line. (Not compatible with 2 3/4″ dia. mushroom or twin start-stop push-button switches.)

Mounting tool makes it easy to install a 22 mm or 30 mm switch in a crowded panel.

Mounting Tool

22 mm Panel Cutout Plastic Switches

Made of corrosion-resistant plastic, these complete switches include everything you need. They mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. Depth behind panel is 1 11/16″. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. Switches are oil- and watertight, meeting NEMA 4X, 13, and IP66. UL listed, CSA certified, and CE marked. ***Three-position*** switches are off in the center position.

For accessories, see 22 mm Panel Cutout Plastic Switch Components on this page.

To Order: Please specify color where necessary: black, green, red, white (Wh), or yellow (Yel). For illuminated switches, also specify input voltage: 24 AC/DC or 120 AC.

The integral contact block in these one-piece plastic switches extends just 1″ behind your panel, saving valuable space. They are NEMA 4X rated for washdowns and corrosion resistance and have an internal PTFE-coated seal to keep dirt and moisture away from the contacts. Switches mount in a 22 mm (7/8″) dia. panel cutout and have screw terminal connections. You can add up to three contacts (sold separately) to control a maximum of eight circuits. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and 250 DC. UL and C-UL listed, CSA certified, and CE marked. *Note:* When installing, ensure the panel gaskets are behind the panel.

To Order: Please specify color: black, green, red, or yellow.

22 mm Panel Cutout Emergency Stop Switches

Plastic Pull-to-Reset

Plastic Key-to-Reset

Plastic Turn-to-Reset

High-Vibration Turn-to-Reset

Metal Pull-to-Reset

Pull-to-Reset with Lockout

Metal Turn-to-Reset

Immediately cut power with a single push. These switches meet EN 418 for compliance with European machine directives for emergency stop applications. All stay switched (maintained) and have a red plastic button and screw terminal connections. They mount in a 22 mm (7/8″) dia. panel cutout. Depth behind panel is 1 13/16″. UL listed and CSA certified.

Plastic— Switches are oil- and watertight and corrosion resistant, meeting NEMA 4X, 12, and 13. CE marked.

Standard switches are rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. They also meet IP66. Key-to-reset switches open with the same key (keyed alike) and include two keys.

High-vibration switches have a single-piece construction that prevents the contact from separating from the actuator in high-vibration applications. Rated 3 amps @ 220 volts AC and 1.1 amps @ 110 volts DC with a maximum voltage of 600 AC. They also meet IP65. Illuminated switches have a 24-volt LED bulb.

Metal— Switches are rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC. They're oil-tight, meeting NEMA 13. NEMA 4 and IP65 rated for washdowns, except pull-to-reset with lockout is IP65 rated only. **To Order:** For illuminated switches, please specify input voltage: 24 AC/DC or 120 AC.

Also Available: Emergency stop switch labels. Please ask for 6741K7 and specify switch part number. Labels are yellow plastic.

Also Available: Replacement contacts. Please ask for 6741K8 and specify switch part number.

16 mm Panel Cutout Plastic Switches

Mount these corrosion-resistant switches in a 16 mm (5/8″) dia. panel cutout. For removal tools and mounting wrench, see 16 mm Panel Cutout Plastic Switch Components on this page.

Push-Button and ***Illuminated Push-Button***—Switches don't project from panel, protecting them from damage. They have solder terminal connections. Depth behind panel is 1 3/16″. Rated 0.1 amps @ 42 volts AC and DC. *Illuminated* switches have a 2.0-volt DC LED bulb in red, 3.0-volt DC bulb in yellow, and 3.2-volt DC bulb in green.

Emergency Stop Push-Button, Lever, and ***Key***—Switches are oil- and watertight, meeting NEMA 4, 13, and IP65. Depth behind panel is 1 11/16″. Rated 2.5 amps @ 125 volts AC and 6 amps @ 24 volts DC with a maximum voltage of 250 AC. UL recognized, CSA certified, and CE marked. Three-position switches are off in the center position.

Emergency stop push-button switches meet EN 418 directive for emergency stop applications. They have screw terminal connections.

Lever switches have 0.11″ quick-disconnect/solder terminal connections. To illuminate, add an incandescent bulb up to 60 volts AC (sold separately). **To Order:** For bulb, please specify voltage: 6.3, 14, 28, 48, or 60 AC.

Key switches open with the same key (two included). They have 0.11″ quick-disconnect/solder-terminal connections.

To Order: Please specify button color.

16 mm Panel Cutout Plastic Switch Components

Custom build a plastic switch by selecting an actuator and contact block (each sold separately). They mount in a 16 mm (5/8″) dia. panel cutout and are oil- and watertight, meeting NEMA 4 and 13 and IP65. Rated 2.5 amps @ 125 volts AC and 6 amps @ 24 volts DC with a maximum voltage of 250 AC. UL recognized, CSA certified, and CE marked.

Push-Button Actuators

Square

Rectangular

Round

Actuators can be permanently converted to stay switched (maintained) from springs back (momentary) action. To illuminate, add an incandescent bulb up to 60 volts AC (sold separately).

To Order: Please specify button color: black, green, red, white, or yellow.

Small Square (1 1/16″ × 1 1/16″)	65645K13	$18.33
Large Square (15/16″ × 15/16″)	65645K11	18.61

Finger-Touch Switches

An infrared light beam senses the lightest finger contact to switch a circuit on or off. These switches do not require any pressure to operate, easing stress caused by repetitive motion. They stay switched only when touched (momentary), mount in a 30 mm (1 3/16″) dia. panel cutout, and have LEDs that indicate "power on" and "output activated." Housing is sealed, impact-resistant black plastic and has a guard to prevent accidental activation. Overall size is 1 7/16″ Ht. × 2 3/8″ Wd. × 1 11/16″ Dp. Meet NEMA 4X, NEMA 13, and IP66 for use in wet and corrosive environments. UL listed, CSA certified, and CE marked. Rated 7 amps @ 120 volts AC except the NPN switch, which has a 150-mA transistor output and is typically used with a programmable logic controller (PLC).

Switches with ***5-pole male connector*** allow you to quickly change out and repair. They have a single-keyway male receptacle with external threads to accept 0.55″ face dia. female plugs with internal threads.

With 6-ft. Cable

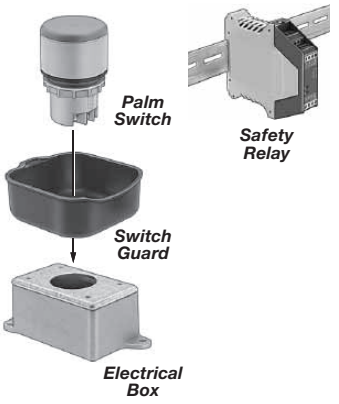
Electrical Switches

For information about choosing an electrical switch, see page 909.

Two-Hand Safety Switch System



Simultaneous two-hand touch operation promotes safety when starting machinery. For a complete system, you'll need a safety relay, two palm switches, and two electrical boxes (sold separately).

Palm switch meets OSHA requirements and ANSI standards for machine operator safety. It's plastic with a 2 3/8″ dia. gray flat-head button. Depth behind panel is 1 3/4″. Rated 1 amp @ 250 volts AC and 90 volts DC. It switches two circuits, one from off to on and one from on to off (DPST-NO/NC). Contacts stay switched only when switch is touched (momentary). Operates on 120 volts AC. IP64 rated for protection from splashing water. UL listed and CSA certified.

Safety relay controls the two palm switches. It sends an output when both switches are activated within 0.5 seconds of each other. Self-monitoring circuitry offers double protection—if any part of the system fails, the entire system shuts down until repaired. It switches two circuits from off to on or on to off (DPDT) and is rated 4 amps @ 230 volts AC and 2 amps @ 24 volts DC. It has screw terminal connections, mounts on a 35 mm DIN rail, and operates on 115 volts AC. Overall size is 4 1/2″ Ht. x 7/8″ Wd. x 3 7/8″ Dp. UL listed and CE marked.

Switch guard protects against damage and accidental actuation. You'll need one per switch.

Electrical boxes have a drilled hole for the palm switch and two 5/16″ dia. mounting holes (hardware included).

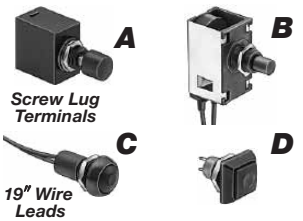
Palm Switch	65945K11	$518.75
Safety Relay	65945K21	414.62
Switch Guard	65945K31	109.47
Electrical Box with One 3/4″ Conduit Hub	65945K33	103.03
Electrical Box with Two 3/4″ Conduit Hubs	65945K34	112.05

Flush-Mount Stainless Steel Push-Button Switches

Mount flush to your panel for protection against damage. Switches are stainless steel and have 0.11″ quick-disconnect terminals. Depth behind panel is 1 5/16″. IP67 rated for temporary water submersion. Rated 5 amps @ 125 volts AC and 24 volts DC with a maximum voltage of 250 AC and DC.

Panel Cutout	Dia.	No. of Circuits	Before Switching, Circuit Is	Switch Action	No. of Terminals	Industry Designation		
16 mm (5/8″)	3/4″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T12	$13.82
19 mm (3/4″)	7/8″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T13	14.43
22 mm (7/8″)	1″	1	Off or On	Springs Back (Momentary)	3	SPDT	6023T14	16.17

Compact Harsh Environment Push-Button Switches



Sealed for protection from moisture and debris, these switches also take up less space in your panel than 16 mm switches.

Style A are IP67 rated for temporary water submersion. Rated 6 amps @ 125 volts AC and 6 amps @ 30 volts DC with a maximum voltage of 600 AC and 30 DC. Button and body are black plastic.

Style B have a stainless steel and plastic housing that protects the internal mechanism. IP68 rated for continuous submersion, so they're good for marine applications. Rated 5 amps @ 120 volts AC and 28 volts DC. Button is black plastic.

Styles C and ***D*** are IP67 rated for temporary water submersion. Rated 0.5 amps @ 48 volts AC and 0.2 amps @ 50 volts DC with a maximum voltage of 250 AC and 50 DC. Button and body are plastic; bezel is metal. 6915K23 is illuminated with a red LED. **To Order:** Please specify button color: black or red.

Low-Voltage Metal Push-Button Switches

Operate doorbells, buzzers, and other low-voltage circuits. Switches spring back (momentary), switch one circuit from off to on (SPST-NO), and have two screw terminals. Button is plastic.

Styles A-C are panel mount. *Style A* snaps into a panel; *Styles B* and *C* have a hex nut. **Styles D&E** are surface mount and include mounting hardware.

★Has one input terminal and three output terminals. ■Body and button are brass.

Touch-Sensor Flush-Mount Switches

Whether you create a single switch or a large panel of switches, it's easy to build your own finger-touch sensor switch. The adhesive front of the switch mounts behind a piece of plastic or glass, which you can customize with labels or graphics. Switches are momentary, switch one circuit from off to on, and have solder connections. Operate on 5 volts DC and have a 1 mA output rating.

Illuminated switches have a green LED.

For plastic mounting, choose a material with a maximum thickness of 0.078″ (5/64″). If you need plastic sheets, see 8574K on page 3627 and 85815K on page 3631.

For glass mounting, choose a material with a maximum thickness of 0.157″ (5/32″). If you need glass sheets, see 8476K on page 3690.

Note: Maximum thickness includes anything applied to the plastic or glass.

One Switch (Front)

30 mm Panel Cutout Indicating Lights

Metal Plastic

Mount in a 30 mm (1 3/16″) dia. panel cutout. Lights have screw terminal connections. UL listed.

Metal indicating lights have a durable construction for long-term operation. *LED* bulbs last longer than incandescent bulbs and provide years of maintenance-free operation. Minimum panel depth is 2 1/4″. Lights withstand washdowns and oil spraying, meeting NEMA 4 and 13. CSA certified.

Plastic indicating light resists corrosion. Minimum panel depth is 1 3/16″. Rated NEMA 4X for protection from corrosion and washdowns. C-UL listed. Note: When bulb burns out, the entire light must be replaced.

To Order: For indicating lights, replacement LED bulbs, and replacement lenses, please specify color: green, red, or yellow.

22 mm Panel Cutout Indicating Lights

Metal Bezel Plastic Bezel

These lights meet NEMA 13 for oil resistance and have an LED bulb for years of maintenance-free operation. They mount in a 22 mm (7/8″) panel cutout and have screw terminal connections. UL listed, CSA certified, and CE marked. Note: When bulb burns out, the entire light must be replaced.

Metal Bezel—Provide durability for longer life. Minimum panel depth is 1″. Rated NEMA 4 for protection from washdowns.

Plastic Bezel—Minimum panel depth is 1 3/4″. They resist corrosion and are oil- and watertight, meeting NEMA 4X and 13.

To Order: Please specify color: blue, green, red, white, or yellow.

22 mm and 30 mm Panel Cutout Plastic Indicating Light Components

Lens Cap LED Bulbholder Label

Select a lens cap and LED bulbholder (each sold separately) to build a custom indicating light. All components are made of plastic. Assembled lights resist corrosion and are oil- and watertight, meeting NEMA 4X, 12, and 13, and IP65. CSA certified and CE marked.

Lens caps are UL recognized for use with LED bulbholders. **To Order:** Please specify cap color: blue, clear (30 mm light only), green, red, white (22 mm light only), or yellow.

LED bulbholders have screw terminal connections and include a clip for attaching a lens cap. UL listed. **To Order:** Please specify bulb color: blue, green, red, white, or yellow.

Optional **labels** make it easy to identify function. Message is printed in white. **To Order:** Please specify message: Blank, Open, Close, Up, Down, Forward, Reverse, On, Off, Off-On, Hand-Off-Auto, Jog, Reset, Run, Start, Stop, Stop-Start, or Emergency Stop.

16 mm Panel Cutout Plastic Indicating Lights

Incandescent Cylindrical

Incandescent Square

LED

Mount these compact indicating lights in a 16 mm (5/8″) dia. panel cutout.

Incandescent lights meet NEMA 4 and 13 and are IP65 rated to be oil- and watertight and withstand washdowns. They have 0.11″ quick-disconnect terminals. Minimum panel depth is 1 9/16″. UL recognized, CSA certified, and CE marked. Lights require a 28-volt miniature bulb (sold separately).

LED light resists corrosion and is oil- and watertight, meeting NEMA 4X, 13, and IP65. It has screw terminal connections. Minimum panel depth is 1 3/4″. UL and C-UL listed and CE marked. Note: When bulb burns out, the entire light must be replaced.

To Order: Please specify lens color: blue (LED only), green, red, white, or yellow.

Sunlight-Visible Watertight

Lights have an LED bulb for years of maintenance-free operation. They're made of plastic. Note: When bulb burns out, the entire light must be replaced.

Standard lights are UL recognized and CSA certified. 2779K15 and K4 are CE marked. Bezel is metal.

Watertight lights resist corrosion and meet NEMA 4X and 13. UL and C-UL listed. Bezel is plastic.

Sunlight-visible watertight lights can be used outdoors and still be seen. Rated IP67 for washdown applications. UL recognized and CSA certified. Bezel is metal.

Use a **wire lead adapter** (sold separately) to power the light using wire leads rather than a quick-disconnect terminal.

Neon

Flat without Bezel

Conical with Bezel

Neon lights last longer than incandescent but not as long as LED. They're plastic and have 10″ wire leads. The **lights for 10 mm** panel cutouts come with a retaining clip to hold the light in place after installation. The **lights for 13 mm** panel cutouts have a metal snap-in bezel for easy mounting. UL recognized and CSA certified. Note: When bulb burns out, the entire light must be replaced.

Enclosure-Mounted Switches

Housed in a steel enclosure, these switches have contacts rated 3 amps @ 120 volts AC with a maximum voltage of 600 AC. Buttons switch one circuit and spring back (SPDT momentary) and have two screw terminal connections. Enclosure has 1/2" and 3/4" trade size conduit knockouts. NEMA 1 rated for indoor use. UL listed and CSA certified.

★Switches one circuit (SPST). ■Stays switched (maintained).

Corrosion-Resistant Washdown Enclosure-Mounted Switches

Whether you select one of our styles or design your own, you'll get a switch that's ready to install and meets NEMA 4X for washdown and corrosion protection. Buttons switch one circuit (SPST) and have two screw terminal connections. Enclosure has 1/2" trade size conduit knockouts except 7546K32-K45 has PG-13.5 knockouts. UL listed, CSA certified, and CE marked.

Switches with plastic enclosure also meet NEMA 13 for oil protection. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC except 7546K32-K45, which are rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and 250 DC.

Switches with aluminum enclosure are rated 10 amps @ 120 volts AC and 4 amps @ 24 volts DC with a max. voltage of 600 AC and DC.

Design Your Own Enclosure-Mounted Switch

Customize your own switch with plastic enclosure. All meet NEMA 4X for corrosion and washdown protection.
To Order: Please ask for 7546K888 and select from the options listed below. Indicate selections for each button from top to bottom.

- Panel Cutout: 22 or 30 mm
- No. of Buttons: 1, 2, or 3
- Button Style: flush, projecting, mushroom, lever, or key
- Contact Block: 1 Circuit Off to On (SPST-NO), 1 Circuit On to Off (SPST-NC), 1 Circuit Off to On or On to Off (SPDT), or 2 Circuits Off to On or On to Off (DPST)
- Switch Action: Springs Back (Momentary) or Stays Switched (Maintained)
- Button Color: black, green, red, or yellow
- Switch Label: Forward, Reverse, Up, Down, Open, Close, Auto, Stop, or Emergency Stop

Emergency Stop Corrosion-Resistant Washdown Enclosure-Mounted Switches

Plastic Enclosure Pull-to-Reset

Plastic Enclosure Pull-to-Reset with Indicator

Aluminum Enclosure Turn-to-Reset

Mounted in an enclosure with a yellow cover, these switches conform to EN418 for machine safety. They have a 1 9/16″ dia. red mushroom button except switches with indicator, which have a 2 1/8″ dia. button. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. UL listed, CSA certified, and CE marked.

With Plastic Enclosure— All have 1/2″ trade size conduit knockouts. Meet NEMA 4X and 13 and IP66 for washdown, oil, and corrosion protection. *Key-to-reset* switches stay locked out until switch is reset with a key. They include two keys. Switches *with indicator* alert you from the front and sides when the switch has been actuated.

With Aluminum Enclosure— All have 0.89″ (PG-16) knockouts. Meet NEMA 4 and 13 and IP66 for washdown and oil protection.

Replacement contact blocks switch one circuit from on to off (SPST-NC).

Stainless Steel Corrosion-Resistant Washdown Enclosure-Mounted Switches

Two Button, One Flush/ One Projecting

Protected by a tough stainless steel enclosure that stands up to abuse, these switches meet NEMA 4X for washdown and corrosion resistance. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 AC and DC. Buttons have screw terminal connections and each switches two circuits: one from off to on and one from on to off (DPST-NO/NC). Start buttons are black (except start button for switch with one flush/one mushroom is green); stop buttons are red. Enclosure has 7/32″ dia. mounting holes. UL listed and CSA certified.

Hazardous-Location Enclosure-Mounted Switches

Two Button

Enclosed in corrosion-resistant cast aluminum alloy, these switches meet NEMA 7 and 9 for use in hazardous locations Class 1, Groups C and D; Class 2, Groups E, F, and G; and Class 3. Rated 6 amps @ 120 volts AC and 5 amps @ 24 volts DC with a maximum voltage of 600 volts AC and DC. Buttons have screw terminal connections and each switches two circuits: one from off to on and one from on to off (DPST-NO/NC). Start buttons are black; stop buttons are red. Lever is black with white insert. Enclosure has one 3/4″ trade size conduit hole and 3/8″ dia. mounting holes. UL listed and CSA certified.

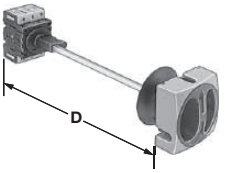
Enclosure Disconnect Switches



Make sure your enclosure can't be opened unless it's safe—turn the switch to disconnect power before you open the door. Also known as door interlock disconnect switches, they are lockable in the off position using a padlock with a 5/16″ dia. shackle (not included). All switch three circuits (3PST) and have screw terminal connections. They're also 35 mm DIN-rail mountable. Switches have an 11 13/16″ long metal shaft that you can cut to fit your application and 3/16″ dia. mounting holes. Mount in a 7/8″ dia. panel cutout. Switch is yellow and red plastic. UL and C-UL listed and CE marked.

Auxiliary contact block can be used to power an indicating light; send a signal to a PLC, relay, or small motor; or to connect to another device. It switches one circuit from off to on (SPST-NO) and one circuit from on to off (SPST-NC). Rated 10 amps @ 600 volts AC.

Disconnect Switches

These high-amp switches stay switched (maintained). They switch three circuits (3PST) and have six screw terminal connections except DC-rated padlockable switches, which switch two circuits (DPST) and have four screw terminal connections. Maximum voltage for AC-rated switches is 600. Maximum voltage for DC-rated 20- to 50-amp switches is 800; 63-amp switch is 650. UL listed and C-UL listed, CSA certified, and CE marked except DC-rated 32-amp switch is CSA certified and CE marked only.

***Panel Mount*—** Padlockable and nonpadlockable switches are plastic and require a 3/8″ dia. panel cutout. They can also mount on a 35 mm DIN rail. Harsh-environment padlockable switches are stainless steel and require a 7/8″ dia. panel cutout. They're IP69K rated for high-pressure and high-temperature washdowns.

***Enclosed*—** Padlockable, DC-rated padlockable, and nonpadlockable switches are plastic. Padlockable and nonpadlockable switches have 1.2″ (PG-21) knockouts. Harsh-environment padlockable switches are stainless steel and IP66 rated for washdown protection.

Padlockable switches have a dial selector knob and lock in the off position. Lock out using a padlock with a maximum shackle dia. of 5/16″ (not included). ***Nonpadlockable*** switches have a lever selector knob.

To Order: Please specify color: yellow with red knob or gray (except enclosed harsh-environment and DC-rated switches come in yellow with red knob only). Use yellow with red knob for a main disconnect switch. Gray is for other disconnect applications.

Also Available: Additional power poles, neutral poles, and terminal blocks. Please ask for 6759K88 and specify switch part number and accessory type.

"Main Switch" Adhesive-Backed Label (0.79″ Ht. × 3.15″ Wd.)												6759K65	$6.18

♠ Has 0.87″ (PG-16) knockouts and is rated IP66 for washdown protection.

Compact Disconnect Switches

Just because your electrical load is large doesn't mean your switch needs to be. These switches are a smaller, cam-style alternative to other disconnect switches. Disconnect power to electrical panels, motors, and appliances with high amp ratings. Switches can be used in single- and three-phase applications with a maximum voltage of 600 AC and 24 DC. They stay switched (maintained) and switch three circuits (3PST). All have ground connections, eight screw terminal connections, and a red lever knob. They are marked as "Main Switch" and have a safety lockout that can be secured using a padlock with a maximum shackle dia. of 5/16″ (not included). When locked, the knob can't be turned to the on position. Enclosure is corrosion-resistant gray plastic. IP65 rated for oil and water resistance. UL recognized and CSA certified.

Panel-mount switches require a 3/8″ dia. panel cutout. ***Enclosed 12-*** to ***25-amp*** switches have four 0.87″ (PG-16) knockouts; ***50-*** and ***63-amp*** switches have six 1.14″ (PG-21) and four 1.5″ (PG-29) knockouts.

Joystick Switch Components

Assemble a complete switch with an actuator and at least one contact block (sold separately) to operate up to eight circuits. Actuators fit in a 22 mm (7/8″) dia. panel cutout. Depth behind panel is 2 5/8″. Made of black rubber. NEMA 4X and 13 and IP66 rated for water, oil, and corrosion resistance. UL listed, CSA certified, and CE marked.

Actuators include a mounting clip that accepts two contact blocks. ***Two-position actuators*** move up and down and require one to four contact blocks. ***Four-position actuators*** move up, down, left, and right and are off in the center position. Require two to four contact blocks.

Contact block switches two circuits: one from off to on and one from on to off (DPST-NO/NC). It has screw terminal connections. Rated 6 amps @ 120 volts AC and 2.5 amps @ 24 volts DC with a maximum voltage of 600 AC and 300 DC.

Optional mounting clip connects up to four contact blocks.

Disconnect & Pendant Switches

For information about choosing an electrical switch, see page 909.

Heavy Duty Steel Disconnect Switches

240V AC/ 250V DC Indoor

600V AC/DC Indoor

Also known as safety switches, these have spring-driven, quick-make/quick-break action to eliminate arcing and prolong switch life. All stay switched (maintained) and have wire lug connections.

Switches have two separate lockouts that prevent door access and lock the handle—secure with padlocks (not included). Knockout sizes range from 1/2″ to 3″ trade size. UL listed.

Note: Fusible hp ratings are based on time-delay fuses installed.

Rain-tight outdoor enclosures are rated NEMA 3R for falling liquid and light splashing.

240V AC/250V DC Maximum Voltage Switches

Switches have an interlock feature that prevents opening the cover when the switch is on, unless noted. Enclosure has a 3/4″ slot and 1/4″ dia. mounting holes on the back panel. Lockouts accept a padlock with a 5/16″ dia. shackle.

Fusible switches are designed with fuse holders inside the enclosure so there's no need for additional wiring for circuit protection. *Note:* If Class RK1, Class RK5, or Class T fuses are used, a rejection clip kit is required. Ask for 7524K888 and specify the McMaster-Carr switch part number and the fuse class. *DPST* switches use two fuses; *3PST* switches use three fuses (see pages 966-968).

Nonfusible switches are used where overload protection is not needed.

★ Does not have interlock feature.

600V AC/600V DC Maximum Voltage Switches

Use with heavy duty motor loads. Switches have an interlock feature that prevents opening the cover when the switch is on or from turning on the switch when the cover is open. Handle is red on one side and black on the other. Enclosure has 5/16″ dia. mounting holes on the back panel. Lockouts accept a padlock with a 3/8″ dia. shackle. Switches meet Fed. Spec. WS-865c.

Fusible switches use three fuses (see pages 966-968). *Note:* If Class RK1 or Class RK5 fuses are used, a rejection clip kit is required. Ask for 7499K888 and specify the McMaster-Carr switch part number and the fuse class.

Nonfusible switches are used where overload protection is not needed.

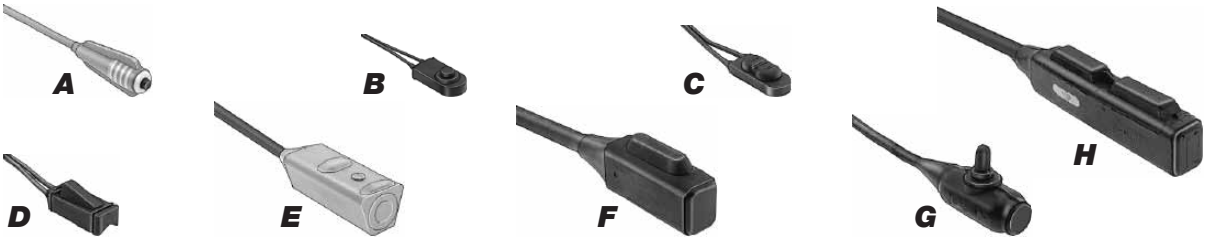
Pendant Switches with Cable



These switches are already wired and ready to operate your mobile machinery except Style E, which must be wired for either 1 NO or 1 NC. Switches spring back (momentary) except Style C, which stays switched (maintained). ***Switch*** is gray.

Sealed switches withstand dirt, water, and corrosion. Color is black except Style E which is yellow. *Styles B-D* are IP68 rated for continuous submersion in water. *Styles F-H* are IP66 and NEMA 4 rated for washdown protection. *Styles G* and *H* are labeled "Up/Down."

Pendant Switches

Operate hoists, trolleys, cranes, and bridges with these handheld, multiple-button switches. All have push-buttons that spring back (momentary) and screw terminal connections. They can be wired to prevent operating two buttons simultaneously. Housing is yellow. CSA certified.

Two-speed switches have staged contacts. Push button halfway to close first contact (for slow speed) and all the way to close second contact (for high speed).

Corrosion-resistant washdown switches are polycarbonate and NEMA 4X and 12 rated for washdown, corrosion, and oil resistance. UL listed except 7161K18.

Also Available: Corrosion-resistant washdown pendant switches in other configurations. Please ask for 7161K999 and tell us what you are looking for.

Impact-tough switches are made of durable rubber.

Easy-Grip Pendant Switches

The slim shape of these pendant switches fits comfortably in your hand. They have a mechanical interlock that prevents operating both buttons simultaneously (except 7987K32, which must be wired for this feature). Buttons spring back (momentary) and have screw terminal connections. Enclosure is yellow plastic. NEMA 4X rated for wash-down and corrosion protection except 7987K31, which is NEMA 4 rated for washdowns. 7987K32 is also NEMA 6 rated for temporary submersion in water. UL listed except 7987K32. CSA certified except 7987K31 is C-UL listed.

Two-speed switch has staged contacts. Push halfway to close first contact (for slow speed) and all the way to close the second contact (for high speed).

Wireless Pendant Switch Systems

Control power from a distance without being tethered by a cord. Systems include two transmitters and one receiver. Buttons switch one circuit (SPST-NO), spring back (momentary), and are single speed. Transmitters operate up to 330 feet away and have a turn-to-reset stop button and a start/on dial. Transmitters run on two AA batteries (included); receivers have a 6-ft. cable with spade terminals. They operate on one of 45 channels, so you can use up to 45 systems in the same area. Rated 5 amps @ 250 volts AC and 24 volts DC. Housing is blue nylon. IP65 rated for washdowns.

To Order: Please specify for new or existing systems. For existing systems, please advise which channels are currently in use so a different channel can be provided. For the replacement transmitter, please specify the serial number.

Variable Output & Rotary Switches

For information about choosing an electrical switch, see page 909.

Variable Output Switches

Also known as potentiometers, variable output switches fine-tune electrical current, giving you control over speed, volume, or light intensity. Select a switch and a dial (except digital switches, which include a dial or buttons) to adjust electrical current easily and accurately. For additional dial knobs, see 3148K on page 2249.

Switches have a plastic housing and three solder lug connections except on/off control switch, which is metal with five solder terminals.

Economy switch offers good resolution at an economical price.

Standard switches have a finer resolution than economy style.

Compact switch saves valuable panel space.

High-resolution switch offers the finest resolution, plus it's built to withstand demanding environments.

Digital switches have a three-position digital display and snap into your panel. *Optional cover for digital switch with buttons* is clear rubber.

Long-life switch is metal and has ball bearings for smoother rotation. Service life is twice that of the other switches.

On/off control switch shuts off power to your device when turned all the way to the left. It switches one circuit from off to on (SPST-NO). On/off control is rated 1.5 amps @ 12 volts DC.

To Order: Please specify maximum resistance.

Dials have an unthreaded hole with set screw. *Style J* has a locking feature that holds the dial setting. The more marks per turn, the more precise.

Heavy Duty Variable Output Switches

22 mm

30 mm

NEMA-rated for tough environments, these switches let you adjust speed, volume, or light intensity. Also known as potentiometers, they have a single-turn dial and screw terminal connections. Maximum voltage is 500 AC and DC. UL listed and CSA certified.

22 mm dia. panel cutout switch is NEMA 4X rated to protect against washdowns and corrosion. Depth behind panel is 2 1/4". Housing is polyester; dial is 1 1/8" dia. black plastic with a white face.

30 mm dia. panel cutout switch is rated NEMA 13 for protection against oil and coolant spray. Depth behind panel is 1 3/4". Housing is metal; dial is 1 1/4" dia. black plastic.

To Order: Please specify maximum resistance.

Rotary Selector Switches

13/32" with Screw Terminals

13/32" with Solder Lugs

1/4"

Control multiple devices with one switch. Each position closes a set of contacts in each circuit, so you can select between multiple devices on one or more circuits. Contacts stay switched (maintained).

13/32" dia. panel cutout switches are plastic and have a 1/4" shaft dia. Dial knobs not included; see page 2249.

1/4" dia. panel cutout switches are nickel-plated brass and have a 1/8" shaft dia. They include a black plastic knob.

Key Switches

Ensure security and prevent accidental actuation. Key switches have a threaded body and stay switched (maintained). Include two keys and a hex nut for tightening the switch to a panel.

Standard— Made of die cast zinc. 65635K14 and K13 have a stainless steel face. Switches with *6″ wire leads, quick-disconnects,* and *solder lugs* are rated 4 amps @ 125 volts AC and 24 volts DC. UL recognized and CSA certified. Switches with *screw terminals* are rated 6 amps @ 120 volts AC. UL recognized and CSA certified. Switches with *10″ wire leads* are rated 7 amps @ 28 volts AC and DC.

High Security— Switches have a round key that is difficult to duplicate. Rated 7 amps @ 28 volts AC and DC. Made of die cast zinc.

High Amp— Use in high-current applications such as motor and pump loads. Rated 20 amps and 1.5 hp @ 120 volts AC. Made of plastic and steel. UL recognized.

Also Available: Replacement keys. Please ask for 7188K888 and specify the McMaster-Carr part number of your switch.

Washdown Key Switches

With a stainless steel face, dust shutter, and rubber O-ring, these NEMA 4-rated key switches are ready for washdown environments. Switches have a threaded zinc body, stay switched (maintained), and mount in a 3/4″ dia. panel cutout. They include two keys and mounting hardware. UL recognized and CSA certified.

One-circuit switches are rated 4 amps @ 125 volts AC and 28 volts DC.
Two-circuit switches are rated 10 amps @ 300 volts AC and 24 volts DC.

Sealed Touch Pad Switches

Where push-buttons or toggles won't work, try a low-profile touch pad switch. The sealed design provides water resistance; switches also resist mild acids, bases, and alcohols (but not suitable for continuous contact). Often used for machine start/stop and door opening applications, they switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 28 volts AC and DC. Switches have wire leads and a black PVC housing. UL recognized. ***Optional mounting frames*** are metal and secure your switch to a wall or bench top. Holes are 1/8″ dia. (fasteners not included).

DIN-Rail Mount Toggle Switches

Conveniently built into a terminal block, these switches mount on a 35 mm DIN rail. They have screw terminal connections and can be mounted side-by-side. UL recognized and CE marked.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

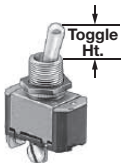
Toggle Switches



With Screw Terminals

With Quick-Disconnects

With Solder Lugs

Controlling a circuit is as easy as flipping a switch. Switches have a 15⁄32″-32 bushing and hex nut for mounting in a 1⁄2″ dia. panel cutout. Maximum voltage is 250 AC and 28 DC. UL recognized and CSA certified.

Optional "Off/On" toggle switch labels and switch boots are sold on page 930. See 70205K4 boot for toggles that switch one or two circuits and 70205K75 boot for toggles that switch three or four circuits.

Two-position illuminated flat toggle switch has a 14-volt incandescent bulb.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

To Order: Please specify connections: screw terminal, 1⁄4″ quick-disconnect, or solder lug. For illuminated flat toggle switch, also specify green or red.

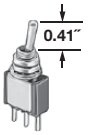
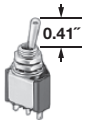
♣ Quick-disconnect connections only.

Miniature Toggle Switches



Standard with Quick-Disconnects



Standard with Solder Lugs

Mil. Spec.

Half the size of most toggle switches, you can fit more of them in your panel. UL recognized.

Standard switches include a 1⁄4″-40 bushing and hex nuts for mounting in a 1⁄4″ dia. panel cutout. Maximum voltage is 250 AC and 30 DC. CSA certified. For optional switch boot, see 70205K3 on page 930. **To Order:** Please specify connections: 1⁄16″ quick-disconnect or solder lug.

Mil. Spec. switches meet MIL-S-83731 to withstand splashing, dirt, and high vibration. They have a water-resistant silicone seal and solder lug connections. Mount in a 1⁄2″ dia. panel cutout using the included 15⁄32″-32 bushing and hex nuts. Maximum voltage is 125 AC and 30 DC. For "Off/On" toggle switch labels, see page 930. For optional switch boot, see 70205K4 on page 930.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

■ Not offered with quick-disconnect connections.

Harsh Environment Toggle Switches

Sealed to hold up in demanding environments, these switches come with a hex nut for mounting in a 1/2" dia. panel cutout. For "Off-On" toggle switch labels, see page 930.

Washdown switches meet IP67. They have a Buna-N rubber seal that covers the opening in the panel and an M12 mounting bushing. Maximum voltage is 250 AC and 30 DC. For optional switch boot, see 70205K26 on page 930.

Oil-tight and ***Mil. Spec. washdown switches*** have a silicone rubber seal around the toggle and a 15/32"-32 mounting bushing. UL recognized, CSA certified, and CE marked. For optional switch boot, see 70205K75 on page 930 (not for use with flat toggles). *Oil-tight washdown switches* are IP68 and NEMA 4 and 13 rated for washdown and oil spray protection. Maximum voltage is 277 AC and 28 DC. Flat toggles are high-visibility yellow. *Mil. Spec. washdown switches* meet MIL-S-3950. Maximum voltage is 125 AC and 28 DC.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

Pull-to-Unlock Toggle Switches

Prevent accidental movement—these toggles must be pulled up before they can switch a circuit. Rated IP68 and NEMA 4 and 13 for washdown and oil spray protection, they have a completely sealed switching chamber. Switches have a silicone seal, screw terminal connections, and a 15/32"-32 bushing for mounting in a 1/2" dia. panel cutout. Maximum voltage is 277 AC and 28 DC. UL recognized, CSA certified, and CE marked. For optional switch seal, see 70205K38 on page 930.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

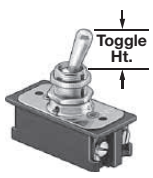
Toggle Switches & Switch Boots

For information about choosing an electrical switch, see page 909.

High-Amp Toggle Switches



With Screw Terminals

With Quick-Disconnects

With Solder Lugs

Built to handle large electrical loads. Switches include an M12 metric bushing and hex nut for mounting in a 1/2″ dia. panel cutout. Maximum voltage is 250 AC and 30 DC. Switches with screw terminals rated 16 and 20 amps @ 125 volts AC are UL recognized and CSA certified; switches with screw terminals rated 30 and 50 amps @ 125 volts AC are UL recognized except 8001K32

Note: Switches that stay switched are also known as maintained.

Optional "Off/On" toggle switch labels and switch boots and seals are sold separately on this page. See 70205K5 seal for 8001K51-K54 and K85; see 70205K26 boot for switches with 1/4″ quick-disconnect connections and solder lug connections.

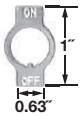
♣Has a 15/32″-32 mounting bushing. Maximum voltage is 250 AC/DC. ▲Also rated 20 amps @ 250V AC.

Toggle Switch Guards and Labels

Guard



Vertical Label

Horizontal Label

Use these accessories with toggle switches that have a 15/32″-32 or M12 threaded bushing and mount in a 1/2″ dia. panel cutout.

Guard protects your two-position switch (0.69″ maximum toggle height) from accidental activation. Cover is spring loaded and stays open until you close it, returning your switch to the off position.

Labels indicate whether your switch is in the on or off position. Made of steel.

Guard	1143T1	$18.76
Vertical Labels (Pkg. of 5)	9423T11	3.28
Horizontal Labels (Pkg. of 5)	9423T12	5.96

Switch Boots and Seals

Protect your toggle, push-button, and rotary switches from moisture and dust by replacing your panel mounting nuts with switch boots and seals. All are high-strength silicone and include a nut. UL and C-UL recognized.

(B) Quick-install toggle boot fits over the existing mounting bushing, so you don't have to remove the switch from the panel to install.

(C) Armored toggle boot has a nickel-plated brass cap.

(G) Armored push-button boot has a stainless steel housing.

To Order: Please specify color where necessary.

Rocker Switches

For a lower profile and smoother look than toggle switches, snap these rocker switches into your panel. Maximum voltage is 250 AC except illuminated miniature are 125 AC and illuminated high-amp switches are 110 AC. Miniature and illuminated miniature switches have 3/16″ quick-disconnects; standard and illuminated standard switches have 1/4″ quick-disconnects; and all others have solder lugs. Two-position switches are UL recognized and CSA certified, unless noted. Three-position switches are UL and C-UL recognized.

Illuminated switches include a bulb. *Illuminated standard* switches light up when the power is switched on. *Illuminated high-amp* switch has a red square on one side of the rocker. *Three-position illuminated* switches stay lit regardless of switch position. Bulb is 28 volts and replaceable.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

Heavy Duty Rocker Switches

A durable steel housing holds up in tough environments. These rocker switches have solder lug connections and stainless steel retaining clips for mounting in a 1 1/4″ Lg. × 3/4″ Wd. panel cutout. Rated 10 amps @ 125 volts AC and 6 amps @ 30 volts DC. Maximum voltage is 250 AC and 30 DC. UL and C-UL recognized.

Illuminated rocker switches are lit on each side by a separate replaceable 28-volt bulb (included) and stay lit regardless of switch position. One side of the rocker has a green lens; the other has a red lens.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

Washdown Rocker Switches

Get the dust and washdown protection you need. Switches with wire leads are rated IP67. The front side of switches with screw terminals and 1/4″ quick-disconnects is rated IP67. All are black and snap in a 1 11/32″ Lg. × 11/16″ Wd. panel cutout. Rated 15 amps @ 125 volts AC and 30 volts DC. Maximum voltage is 250 AC and 30 DC. UL and C-UL recognized.

Note: Switches that stay switched are also known as maintained; switches that spring back are also known as momentary. Parentheses in the industry designation indicate momentary switch action.

High-Amp Rocker Switches

Designed for high currents, these switches mount in a 1 7/16" Lg. × 15/16" Wd. panel cutout (mounting hardware included) and have screw terminal connections. Rocker is white. UL recognized.

AC-rated switches are rated 30 amps @ 125 volts AC. Maximum voltage is 250 AC.

DC-rated switches are rated 30 amps @ 30 volts DC. Maximum voltage is 125 DC.

Note: Switches that stay switched are also known as maintained.

High-Starting Amp Rocker Switches

Horizontal Label

Vertical Label

Built to handle starting currents up to 10 times greater than their amp rating, these rockers are also known as high-inrush current switches. They are used with amplifiers, power supplies, and other high-starting amp devices. Switches snap into a 1 3/16" Lg. × 13/16" Wd. panel cutout and have solder lug connections. Rated 16 amps @ 125 volts AC and 5 amps @ 30 volts DC. Maximum voltage is 250 AC and 72 DC. UL recognized and CSA certified.

To Order: Please specify rocker color: black or red.

Note: Switches that stay switched are also known as maintained.

Push-Pull Switches

Push-pull operation lets you easily see the position of these DC switches. Made of brass, they're good for marine environments and mount in a 3/8" dia. hole (hardware included). Maximum voltage is 24 DC. 8795T13 has a plastic-covered body for extra protection from moisture and dirt.

Three Position—Pull to the middle position to close one contact or all the way to close two contacts.

Note: Switches that stay switched are also known as maintained.

Light-Sensing Light Controls

Standard with Plastic Housing

Flush Mount

Conserve electricity with photoelectric controls that turn lights on after dark and off at daybreak. Typically used outdoors, they work with any bulb type within the specified watt rating, unless stated otherwise. All switch one circuit (single pole).

Standard controls have a 1/2" NPT male conduit fitting and 6" wire leads. 7078K13 has a weatherproof housing. ETL and C-ETL listed and CSA certified. 7078K17 has a weatherproof housing and is CSA certified. 7078K15 has a weather-resistant housing. Use a sealant (sold separately, see page 3472) to weatherproof the housing. UL listed and CSA certified.

Swivel-head controls swivel 180° for a better sensing position. They have a weatherproof plastic housing, 1/2" NPT male conduit fitting, and 6" wire leads. UL listed and CSA certified.

Flush-mount controls have a weather-resistant plastic housing and 6" wire leads. A built-in delay prevents false switching due to light flashes. UL listed and CSA certified. 7000K21 mounts through an 11/16" hole in a post or light fixture. 7000K19 mounts through a 3/8" hole in a post or light fixture. 7000K22 mounts to an outlet box and includes a gasketed aluminum wall plate.

Socket Mount for Standard Bulb

Twist Lock

Socket-mount controls screw in between the bulb and socket of any medium-base incandescent or halogen fixture. They have a weather-resistant plastic housing and are designed for incandescent and halogen lighting only. ETL and C-ETL listed and CSA certified. Choose *standard-bulb* type for small enclosed fixtures and *PAR-bulb* type for floodlights.

Twist-lock controls make replacement easy. They require a twist-lock base and bracket (sold separately). Housing is plastic.

Twist-lock base and bracket has 14" wire leads, a square top mounting hole with a 5/16" wide hanger notch, and a 3/8" dia. bottom mounting hole (screws not included). Base is weather-resistant plastic and bracket is aluminum.

High Security Key Actuated

Switch Lockout

Durable for use throughout your facility, these specification-grade switches work with incandescent, halogen, fluorescent, and high-intensity discharge lighting. You can also use them with AC motor loads up to 80% of the amp rating. They stay switched (maintained) and have screw terminal connections. Switches can be back- or side-wired and fit standard single-device (single-gang) wall boxes and plates. Wall plates are not included (except with high-security key-actuated switches); sold separately on page 893. UL listed and CSA certified.

Key-actuated switches include a key that is removable in the on and off positions. The same key is provided for all switches.

High-security key-actuated switches include a hard-to-duplicate round key that's removable in the on and off positions.

Switch lockout mounts on a switch to secure it in an on or off position. Use with a 9/32″ shackle dia. padlock (not included).

To Order: Please specify color where necessary: white, ivory, brown, clear, gray, or stainless steel.

Wireless Light Switches

Turn fluorescent fixtures on and off with a wireless signal. To set up, surface mount a switch and install a control relay in the fixture. No batteries or secondary power source is necessary.

Switch transmits a 902 MHz wireless signal up to 150 ft.

Control relays have 16″ wire leads. UL and C-UL listed. *SPST* relays switch one circuit on. Rated 5 amps @ 120/277 volts AC. *SPDT* relays switch one circuit on or off. Rated 20 amps @ 120/277 volts AC.

Motion-Sensing Light Switches

One Circuit

When personnel enter an area, infrared sensors detect their presence and turn on the lights. Switches have a 5-minute to 30-minute user-selectable time delay to turn lights off. A manual override lets you switch lights off when area is occupied. Switches have wire leads and fit in a single-device (single-gang) wall box. They are for incandescent and fluorescent lights. Incandescent watt rating is 800 @ 120 volts AC. Fluorescent watt rating is 1,200 @ 277 volts AC. UL and C-UL listed.

One Circuit—Switch one circuit from off to on (SPST-NO). Include a wall plate. **Two Circuit—**Switch two circuits from off to on (2 SPST-NO). Wall plates not included; sold separately on page 893.

No. of Circuits	Amp Rating @ 120/277V AC	White		Ivory	
1 (Single Pole)	6.6/4.3	7704K34	$50.76	7704K33	$49.76
2 (Double Pole)	6.6/4.3	7704K64	98.51	7704K63	98.51

Slide Switches

Screw mount these compact nylon slide switches into a 1/2″ Lg.×1/4″ Wd. panel cutout. They switch two circuits from off to on and on to off (DPDT), stay switched (maintained), and have six terminals. Rated 6 amps @ 125 volts AC and 1 amp @ 125 volts DC. Mounting holes are 5/32″ dia. and 1 1/8″ center to center (screws not included). UL recognized and CSA certified.

Connections		
Solder Lugs	66065K23	$5.23

Light Controls & Pull Switches

For information about choosing an electrical switch, see page 909.

Motion-Sensing Light Controls

Ceiling Mount

Wall/Ceiling Mount

Fixture Mount

Fixture Mount for Wet Locations

Also called occupancy sensors, these controls turn your lights on when movement is detected and off when an area is unoccupied. They have a white plastic housing and wire leads except 7477K32 and K36 have screw terminal connections. Use indoors with fluorescent or incandescent lights. Fixture-mount controls for wet locations can also be used outdoors. UL and C-UL listed.

Ultrasonic sensors respond to movement and don't require a direct view of the occupants. *Infrared sensors* detect moving heat sources and require a direct view of the occupants. *Ultrasonic/infrared sensors* minimize false activation.

Ceiling- and **fixture-mount** controls are ready to operate your 120-volt lighting circuit. Incandescent watt rating is 800 @ 120 volts AC. Fluorescent watt rating is 1,200 watts @ 277 volts AC except 7477K52 is rated 1,800 watts @ 277 volts AC. *Ceiling-mount* controls fit a 4″ outlet box. *Fixture-mount* controls have a ½″ NPT male connection. Improve the position of your control with a *mounting extension*, which threads onto your fixture.

Wall/ceiling mount control operates at low voltage and requires a power controller to switch a 120- or 277-volt AC lighting circuit. Mounting bracket and screws are included. *Power controller* has a relay that can switch a maximum 20 amp load.

Cable-Pull Emergency Stop Switches

One Direction

One Direction with LED

Two Direction

One-Direction Accessory Kit

Pull the cable to immediately break the circuit and cut off electrical power. All stay switched (maintained) and have screw terminal connections and a manual reset. Rated NEMA 4 for washdowns and NEMA 12 for oil protection. Enclosures are aluminum, unless stated otherwise. Mounting hardware not included.

One-direction switches have a ½″ NPT female threaded conduit entry and four ¼″ dia. mounting holes. CSA certified and CE marked.

One-direction switch with LED indicator illuminates when switch has been pulled. It has a ½″ NPT threaded conduit entry and four ¼″ dia. mounting holes. Enclosure is die cast zinc and a tension indicator helps you set the correct cable tension. UL listed, CSA certified, and CE marked.

Two-direction switch has a ¾″ NPT female threaded conduit entry and two 5⁄16″ dia. mounting holes. When used with the tension springs in the cable accessory kit (sold separately), contacts open to stop machinery if the cable breaks. UL and C-UL listed and CE marked.

Accessory kits simplify installation of a new cable-pull switch. Kits for *one-direction* switches include cable (in max. lengths shown below), tension screws, clamps, and thimbles. Kit for *one-direction switch with LED indicator* includes a cable, J-hook turnbuckle, thimbles, clamps, and cable supports (eyebolts with hardware). Kit for *two-direction* switch includes the same items as the one-direction kits plus eyebolts (instead of thimbles) and tension springs.

Cable-Pull Stop Switches

Turn off production lines and material handling systems. This switch mounts in any position and has a manual reset for added safety. It switches one circuit from on to off (SPST-NC) and stays switched after released (maintained). Rated 6 amps @ 120 volts AC, 3 amps @ 240 volts AC, and 0.55 amps @ 125 volts DC. Maximum voltage is 600 AC and DC. Enclosure is aluminum with a ½″ NPT female threaded conduit entry, screw terminal connections, and two mounting holes (fasteners included). Overall size is 6½″ Ht.×5″ Wd.×3¼″ Dp. Meets NEMA 1 for indoor use. UL listed, CSA certified, and CE marked.

Note: Cable (not included) should be supported with eyebolts every 5 ft.

Max. Cable Length	No. of Circuits	Actuation Force		
75 ft.	1	2 to 6 lbs.	**7186K53**	$215.49

Overhead Rope-Pull Switches

Keep your switch out of the way. Pull the hanging rope in any direction to actuate. Switches two circuits, one from off to on and one from on to off (DPST-NO/NC). It springs back after released (momentary).

Rated 6 amps @ 120 volts AC, 3 amps @ 240 volts AC, and 0.55 amps @ 125 volts DC. Maximum voltage is 600 AC and 600 DC. Enclosure is aluminum with a ½″ NPT female threaded conduit entry and screw terminal connections. Overall size is 5½″ Ht.×5¼″ Wd.×3⅛″ Dp. Meets NEMA 4 for washdowns. UL listed, CSA certified, and CE marked.

Included Rope Lg.	No. of Circuits	Actuation Force		
15 ft.	2	5 lbs.	**8488K61**	$221.11

About Motor Switches and Starters

Motor switches provide manual on/off control of a motor circuit. They can also be used in other circuits, including lighting and electric heat circuits. There is no overload protection.

Motor starters provide on/off control of a motor circuit with the additional benefit of overload protection. This protection monitors the current flowing to a motor and opens the circuit if the current exceeds the full-load amp rating. The full-load amp rating is the current the motor is expected to continuously draw under normal conditions. This rating is often found on the motor's faceplate.

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Manual Motor Switches

Silver contacts dissipate heat and extend switch life. All stay switched (maintained) and have screw terminal connections. UL listed and CSA certified.

Indoor enclosure is nylon and rated NEMA 1.

Rain-tight enclosure is aluminum and rated NEMA 3R.

Washdown enclosure is polyester and rated NEMA 4X. It can also be used as a motor disconnect switch.

Hazardous-location enclosure is aluminum and rated NEMA 7 and 9.

Manual Motor Starters

Compact size makes these starters ideal when multiple motor circuits are housed in one panel. Built to IEC standards, they have three poles, screw clamp connections, and an adjustable overload relay that allows you to set the exact overload amperage you need. Mount on a standard 35 mm DIN rail (see page 787) or in an *enclosure*, which you don't have to open to control the starter. Rated 25 amps @ 600 volts AC. UL listed, CSA certified, and CE marked.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range.

Enclosure with external lever has four PG-16 threaded holes for conduit.

Auxiliary contacts allow you to add a signal, alarm, or other device. They have one normally open and one normally closed contact. Rated 1 amp @ 400 volts AC.

Motor Starters

Open Standard

Open Reversing

Enclosed Standard

Built to IEC standards, these motor starters activate via an electrical signal (control voltage) and can be operated remotely. An adjustable overload relay allows you to set the exact overload amperage you need. It trips in less than 10 seconds (Class 10 trip time) and has a manual reset and includes auxiliary contacts, unless noted. **Additional auxiliary contacts** for adding a signal, alarm, or other device are sold separately.

Open starters can be mounted on 35 mm DIN rail (see page 787 for rail). **Enclosed starters** have a watertight plastic enclosure that's rated NEMA 4X for corrosion resistance. They have an overload reset on the cover. **Reversing** starters are for use with reversible motors.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range. Match control voltage to your control circuit; motor voltage may be different.

To Order: Please specify control voltage: 24 AC, 24 DC, 120 AC, 200/240 AC, or 480 AC.

Manual Motor Starter Components

Build your own starter by combining a switch and a thermal overload element.

Switches

Switches have screw terminal connections and are for use with single-phase motors rated 1 hp @ 115/230 volts AC. Flush plate and indoor (NEMA 1) enclosure are steel; water/oil-tight enclosure is die cast zinc and rated NEMA 4 and 12 for outdoor use.

Switches **with pilot light** indicate when the starter is on.

Two-circuit switches can also be used on DC motors up to ¾ hp.

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Heavy Duty Motor Starters

A NEMA-size contactor and solid state overload relay extend motor life and reduce energy costs in demanding applications. Motor starters have encapsulated coils that protect against moisture, heat, dirt, and mechanical and thermal stress. They are three phase, activate via an electrical signal (control voltage), and can be operated remotely. The adjustable overload relay allows you to set the exact overload amperage you need. The relay also provides phase-loss protection and has a tripping accuracy of ±1%. All have screw terminal or screw clamp connections and come with a normally open (NO) auxiliary contact for additional signaling capability.

NEMA contact sizes 0-1 are universal mount, which fit Cutler-Hammer, GE, and Square D installations. **Enclosed starters** are rated NEMA 1 for indoor use.

Note: Ensure the full-load amp rating of your motor falls within the starter's adjustable overload amp range. Match control voltage to your control circuit; your motor voltage may be different.

To Order: Please specify control voltage: 24 AC, 110/240 AC, 208 AC, or 220/480 AC.

Heavy Duty Overload Relays

Upgrade starters that use thermal overload protection with these solid state overload protection relays. They don't use heater elements, so enclosure ventilation and cooling is not required. Relays have a full-load amp adjustment dial to accommodate circuits with different full-load amp ratings. They also provide phase-loss protection. All are adjustable to trip in 5, 10, 20, or 30 seconds (Class 5, 10, 20, and 30 overload protection).

Relays have one normally open (NO) and one normally closed (NC) built-in auxiliary contact and screw terminal connections. UL listed and CSA certified.

Energy-Saving Motor Starters

Reduce the starting current to your motor, saving electricity and extending motor life. These soft starters gradually start and stop your three-phase, 208- to 600-volt AC motors. Acceleration time adjusts from 1 to 20 seconds; deceleration time adjusts from 0 to 20 seconds. Starters accept a control voltage of 24 DC and are used on motors where torque varies, such as pumps, compressors, and conveyors. Enclosure is plastic and can be surface or DIN-rail mounted except 59-amp starter is surface mount only. See page 787 for DIN rail. Starters have a remote indicator contact for a signal, alarm, or other device (sold separately). UL and C-UL listed and CE marked.

Thermal Overload Element—**To Order:** Please specify the full-load amp rating of your motor from 0.1 to 32 amps.

AC Motor hp Rating 240V	480V	Amps	Ht.	Wd.	Dp.		
3/4	2	3	4.7″	1.8″	4.5″	7112T5	$138.67

20	40	59	8.7″	2.8″	7.1″	7112T48	469.49
Thermal Overload Element (One Required)						7112T8	125.26

Low-Voltage DC Motor Speed Controls

Control the speed of low-voltage, permanent-magnet DC motors. These accept DC input voltage and supply a variable DC voltage output. Adjust the speed and current limit of the motor as well as set a minimum and maximum speed with the included variable switch (potentiometer) or with an external input signal (not included). Controls have an open design, overload protection, and screw terminal connections. C-UL listed.

For hp	DC Voltage Output	Input	Amps	Ht.	Wd.	Dp.		
1/6, 1/3	12/24	12/24	16	6.9″	4.4″	2.2″	7729K13	$364.24
3/4, 1	12/24	12/24	60	7.8″	6.9″	3.3″	7729K11	444.16

ⓘ If the full-load amp rating is not shown on your motor's faceplate, you can estimate the amp rating (given the motor's hp and voltage) using a chart. Go to mcmaster.com and search for **7603KAC**.

Programmable Three-Phase AC Motor Speed Controls

DIN-Rail Mount

Indoor Enclosure

Washdown Enclosure

Vary the speed of three-phase, 230- or 480-volt AC motors with these easy-to-program speed controls. All have built-in thermal overload protection, forward/reverse control, and adjustable acceleration/deceleration times. They accept a 4- to 20-mA or 0- to 10-volt DC signal to control speed, or you can wire a variable switch (potentiometer) for remote manual control. UL and C-UL listed and CE marked.

DIN-Rail Mount—Can be installed inside a control panel or surface mounted. Enclosure is plastic. Output frequency is 0 to 320 Hz.

Indoor and **Washdown Enclosures—**Made of steel. Output frequency is 0 to 120 Hz. Indoor is rated NEMA 1; washdown is rated NEMA 4.

Three-Phase AC Motor Speed Controls

A compact alternative to programmable controls, these take a single-phase input and allow you to manually control the speed of a three-phase motor. Controls have an open aluminum chassis design for mounting inside your machine or control cabinet. Use in packaging machines, conveyors, and vacuum equipment. Controls also have forward and reverse capabilities as well as a variable switch (potentiometer) for remote speed adjustment. Internal adjustments let you control the maximum speed, acceleration/deceleration times, run and jog speed modes, and torque boost. Output frequency range is 0 to 120 Hz. UL and C-UL listed.

Input kit allows controls to accept an input of 0 to 5 volts DC, 0 to 10 volts DC, or 4 to 20 mA. It mounts on the bottom of the controls.

For hp	AC Voltage Output	Input	Ht.	Wd.	Dp.		
1/15-1/2	230	115/230	3.0″	4.3″	3.7″	**6488K21**	$352.27

Input Kit						**6488K31**	88.61

AC to DC Motor Speed Controls

Open

Indoor Enclosure

Washdown Enclosure

Supply a single-phase AC voltage and you'll get a variable DC voltage to control the speed of a 90- or 180-volt DC permanent-magnet motor. Controls have an on/off switch, knob for DC output adjustment (except open control has a variable switch), and screw terminal connections. UL and C-UL listed. *Reversing* controls allow you to reverse the motor's shaft rotation.

Indoor enclosure is steel and rated NEMA 1.

Washdown enclosure is plastic and rated NEMA 4X.

Heat sinks are required for open and indoor enclosure controls when an output greater than 5 amps is needed.

Ratings for all AC to DC Motor Speed Controls

For hp	DC Output Voltage	AC Input Voltage	Amps

Three-Phase AC Voltage-Monitoring Controls

Plug-In

DIN-Rail Mount

Surface Mount

Protect three-phase motors from phase loss and reversal, voltage imbalance, and over/under voltage. Also known as voltage-monitoring relays, these controls monitor your system and cut power to your motor when a fault occurs. All switch one circuit on or off (SPDT) and are rated 10 amps @ 240 volts AC.

Plug-in control has eight pins and a trip-delay range of 0.25 to 30 seconds to prevent nuisance tripping. Voltage imbalance adjusts from 2% to 10%. UL recognized and CSA certified.

DIN-rail mount controls have a trip-delay range of 1 to 30 seconds to prevent nuisance tripping. Voltage imbalance adjusts from 2% to 10%. They have screw terminals and can also be surface mounted. Rated 1/3 hp @ 240 volts AC. UL and C-UL listed.

Surface-mount controls have a memory function to store the last 10 fault conditions, allowing you to diagnose voltage problems. They have a trip-delay range of 0.25 to 30 seconds. Switch between automatic restart and delayed automatic restart (adjusts from 0.25 to 64 seconds after tripping). They have screw terminals. UL listed and CSA certified.

Socket is DIN-rail or surface mountable. It has two 5/32″ dia. mounting holes (hardware not included).

Mount Type	For Three-Phase AC Voltage		
Plug-In	200-480	**6973K73**	$117.81
DIN Rail	200-480	**6969K52**	159.58

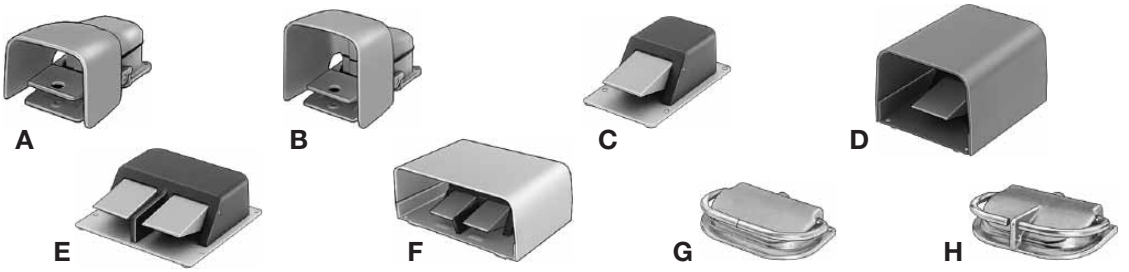
Surface	480	**7632K74**	493.54
Socket for Plug-In Control (1″ Ht.×1.6″ Wd.×2″ Dp.)		**7122K26**	4.65

Heavy Duty Foot Switches



A heavy duty construction handles your toughest environment. Switches meet NEMA 4 and 13 for washdown and oil resistance. UL listed.

Washdown switches have a 3/4" NPT female threaded conduit entry and cast iron housing. Guard is aluminum. Switches *with two stages* let you actuate one piece of equipment at two speeds. Push the pedal halfway to actuate the first stage (slow speed) or all the way to actuate the second stage (high speed). Switches *with oversized guard* provide additional opening height to accommodate bulky footwear. *Push-to-unlock* switches have a safety lever inside to prevent accidental actuation. You must push the lever forward before you can depress the pedal.

Corrosion-resistant washdown switches meet IP68 and NEMA 6P. They have an aluminum housing and a 1/2" NPT female threaded conduit entry except Styles E and F have a 3/4" NPT female threaded conduit entry. *Guards* are steel. *Low-profile* switches are C-UL listed.

Note: Switches that spring back are also known as momentary; switches that stay switched are also known as maintained.

Wireless Heavy Duty Foot Switches

With no wires to tangle or trip over, these switches install quickly and transmit up to 40 ft. away. Transmission frequency is 2.41 to 2.48 GHz. Switches have an orange cast iron housing with aluminum guard and meet IP68 for protection against water submersion. Operate on three AA batteries (included). Receiver has a 10-ft. cord. Maximum voltage is 380 AC and 48 DC. Overall size is 9 1/8" Lg. x 6" Wd. x 5 3/4" Ht. UL and C-UL listed and CE marked.

One-circuit switch has three leads; *two-circuit* switch has six leads.

Note: Switches that spring back are also known as momentary.

Heavy Duty Variable-Output Foot Switches

Without Guard

A rugged cast iron housing provides strength and durability. Also called potentiometers, these switches adjust resistance to vary output current for motor drives. You can wire them to increase or decrease the current when you press down. Switches meet NEMA 4 and 13 for washdown and oil resistance. An auxiliary contact switches one circuit from off to on or on to off (SPDT) and springs back (momentary). Contact is rated 15 amps @ 125/250 volts AC. Maximum voltage is 250 AC and 500 DC. Switches have three solder lug connections, three 0.187" quick-disconnect connections for the auxiliary contact, and a 3/4" NPT female conduit entry. UL and C-UL recognized. *Guard* is aluminum.

To Order: Please specify maximum resistance.

Air-Actuated Switches

Keep live electrical circuits away from you and your work area. Choose a complete switch or build your own.

Note: Switches that spring back are also known as momentary; switches that stay switched are also known as maintained.

Complete Switches

Foot Operated with Plastic Guard

Hand Operated

Switches include 10 ft. of tubing. **Foot-operated** switches allow you to plug your device directly into the switch, which has a three-prong receptacle and plug. Rated 15 amps @ 120 volts AC. UL and C-UL listed. **Hand-operated** switches are rated 20 amps @ 125/250 volts AC. They have three 0.187″ quick-disconnect connections. UL recognized.

Switch Components

SPDT Switching Mechanism

Metal Foot Switch Actuator

Hand Switch Actuator

You'll need a switching mechanism and an actuator.

Switching mechanisms are rated 21 amps @ 250 volts AC and have ¼″ quick-disconnect connections.

Actuators include 6 ft. of tubing.

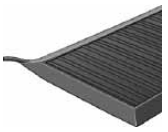
For information about electrical switches, see page 909.

Switch Mats



Step on these mats to open doors and perform other hands-free tasks (not intended for use as an emergency stop or safety control switch). Mats require an actuation force of 10-15 lbs. and are made of durable molded vinyl. They're 3/8″ thick and have a 6-ft. cord with two wire leads. All switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 24 volts AC and DC. Maximum capacity is 3,000 psi.

Size	Black		Brown	
10″×17″	7351K61	$117.74	7351K3	$117.74

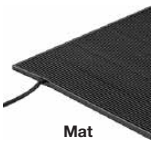
30″×30″	7351K64	319.64	7351K51	319.64

Safety Switch Mats



Mat

Controller

Select a mat and controller to create a four-wire system that will turn machinery off if someone steps on the mat or if a fault is detected. Meet ANSI/RIA 15.06-1999 and conform to OSHA safety requirements.

Mats switch one circuit from off to on (SPST-NO) and spring back (momentary). They're made of black PVC with a beveled edge and have a 6-ft. cable with four wire leads. Rated 1 amp @ 24 volts AC and DC. IP65 and NEMA 4 rated for washdowns. *Standard mats* require an actuation force of 22 lbs. They're 1/2″ thick with a maximum weight capacity of 1,100 psi. *High-abuse mats* can withstand repeated impact from heavy and sharp objects and require an actuation force of 20 lbs. They're 5/8″ thick and have a maximum capacity of 1,500 psi.

Optional frames firmly secure the switch mat to the floor. Made of aluminum.

Controllers mount on a 35 mm DIN rail. Rated 5 amps @ 240 volts AC. UL and C-UL listed and CE marked.

Mini Switch Mats

A tap of your foot actuates machinery, doors, or alarms. These black vinyl mats require an actuation force of 10-15 lbs. They're 3/8″ thick and have a corrugated surface and 15-ft. cord with two wire leads. They switch one circuit from off to on (SPST-NO) and spring back (momentary). Maximum capacity is 3,000 psi.

Standard mat is rated 4 amps @ 24 volts AC and DC. **Water-resistant** mat is rated 1 amp @ 24 volts AC and DC.

Size	Standard		Water Resistant	
6″×8″	7374K31	$82.64	7374K42	$101.42

Low-Profile Switch Mats

At only 3/32″ thick, these mats fit under carpeting or anywhere else you want to hide them. They require an actuation force of 5 lbs., switch one circuit from off to on (SPST-NO), and spring back (momentary). Rated 1 amp @ 24 volts AC and DC.

Mats are green PVC and UL listed.

Cut-to-length mat is yellow polyethylene and comes on a roll (width cannot be cut).

Size	Connections		
Mats

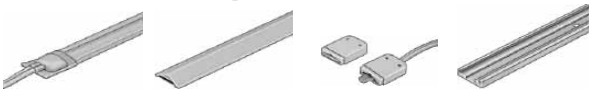
Cut-to-Length Mats			
30″×25 ft.	Bare Wires (2)	7676K3	740.00

Low-Profile Strip Switches



Switch | Cut-to-Length Switch | Termination Kit | Mounting Channel

Detect people and objects to control lights and alarms. These strip switches are 3/4″ Wd.×3/16″ Thick. PVC and can be actuated anywhere along their length. All switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 24 volts AC and DC. Maximum voltage is 32 AC/DC. UL and C-UL recognized and CE marked.

Gray switches require an actuation force of 3.7 lbs.

Yellow switches require an actuation force of 1.5 lbs.

Switches have two wire leads.

Cut-to-length switches come on a roll and require a *termination kit*, which includes one live-end and one dead-end connector. Live end has two wire leads. Use *vinyl adhesive* to seal ends.

Optional mounting channels are 1/4″ Ht.×7/8″ Wd. aluminum. Holes are 5/32″ dia. and spaced 7″ apart.

Bumper Switches

With Optional Mounting Channel

Often used to signal when an overhead door closes or an item reaches the end of a conveyor, these switches are sensitive along their entire length. They're made of heavy duty flexible urethane, sealed and insulated for weather resistance, and require an actuation force of 3-5 lbs. Switches are 1/2″ Ht.×1″ Wd. and have a 2-ft. cord with two wire leads. All switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 24 AC and DC. Lengths cannot be cut.

To Order Please specify color.

Optional mounting channel is made of aluminum and includes hardware for mounting to walls or conveyors.

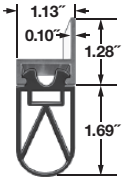
Safety Bumper Switches



Prevent power-operated doors from closing on a person or an object. Combine a bumper switch with a controller to create a four-wire system that will turn machinery off if the switch is actuated or if a fault is detected. Switches require an actuation force of 10 lbs. They have a weather- and chemical-resistant rubber bumper; an aluminum channel that mounts to your door (screws not included); and two 6-ft. cords with two wire leads.

All switch one circuit from off to on (SPST-NO) and spring back (momentary). Rated 1 amp @ 28 volts AC and DC. Meet IP67 for temporary submersion. UL and C-UL listed and CE marked. Lengths cannot be cut.

Controllers are rated 5 amps @ 240 volts AC. UL and C-UL listed and CE marked.

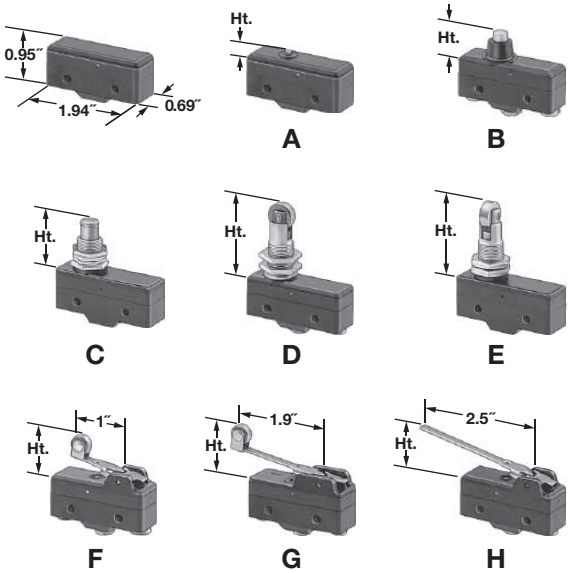
Snap-Acting Switches



Switches have rapid snap closing action that minimizes arcing to extend switch life and let you control high currents in small spaces. Often the internal switches in limit, pressure, and temperature switches, these are also used as door-open indicators on appliances and enclosures. Switches spring back (momentary). They have a plastic housing with two 0.17″ dia. mounting holes spaced 1″ center to center, except one-circuit switches with screw terminals, which have 0.14″ dia. mounting holes (fasteners not included). UL recognized and CSA certified. Styles C, D, and E can be mounted in a ½″ dia. cutout.

One-circuit switches have three terminals. Switches *with screw terminals* are also rated for horsepower. 15-amp switches are rated ¼ hp @ 250 volts AC, 20-amp switches are rated 2 hp @ 250 volts AC, and 25-amp switches are rated 1 hp @ 125 volts AC and 2 hp @ 250 volts AC.

Two-circuit switches have six screw terminals. Rated ¼ hp @ 250 volts AC.

Plastic cover for switches with screw terminals fits over the bottom of the switch to prevent contact with live terminals.

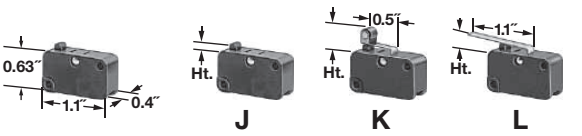
Miniature Snap-Acting Switches



Switches turn one circuit from off to on or on to off (SPDT) and have three terminals except Style J with 0.25″ quick-disconnect terminals, which switches from off to on (SPST-NO) and has two terminals. They spring back (momentary) and have a plastic housing with two 0.11″ dia. mounting holes spaced 0.87″ center to center (fasteners not included). UL recognized and CSA certified.

10- and **15-amp** switches are rated ½ hp @ 250 volts AC.

25-amp switches are rated 2 hp @ 250 volts AC and have a maximum voltage of 277 AC.

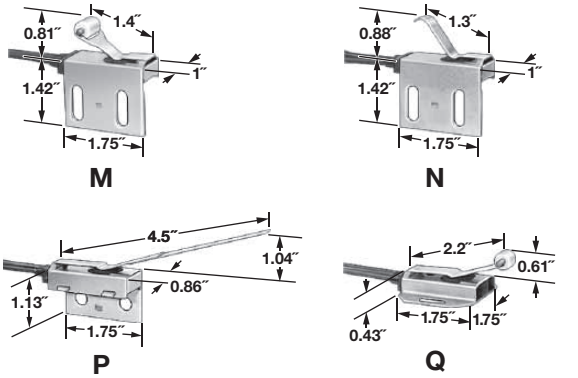
Harsh-Environment Snap-Acting Switches



Tough enough for environments exposed to water, oil, dirt, and vibration, these switches are encased in rubber and have a corrosion-resistant stainless steel bracket. IP68 rated for water submersion. All switch one circuit from off to on or on to off (SPDT), spring back (momentary), and have three wire leads. Mounting fasteners not included.

Side Mount—*Roller lever* and *curved rigid lever* switches have two 0.22″ dia. mounting holes spaced 1″ center to center. *Rigid lever* switch has two 0.27″ dia. mounting holes spaced 1″ center to center.

Bottom Mount—Mounts on a flat surface. It has two 0.2″ dia. mounting holes spaced 1.34″ center to center.

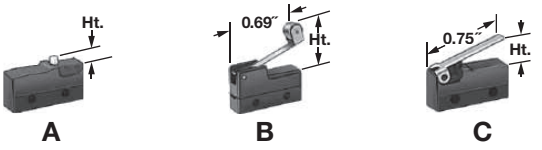
Subminiature Snap-Acting Switches

With Solder Lug Terminals

With Wire Leads



Even smaller than miniature switches, these fit the tiniest of spaces. They have a rapid snap closing action that minimizes arcing to prevent welded contacts. All switches spring back (momentary) and have a plastic housing with two 0.09″ dia. mounting holes spaced 0.37″ center to center (fasteners not included). UL and C-UL recognized.

SPST switches have two connections; *SPDT* switches have three connections.

Washdown switches meet IP67 for temporary water submersion. Switches *with solder lug terminals* are rated 1/4 hp @ 125 volts AC.

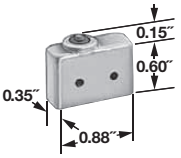
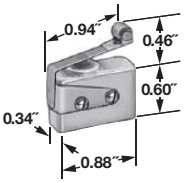
Mil. Spec. Subminiature Snap-Acting Switches



Pin Plunger



Roller Lever

Keep dirt and moisture out of your switch—the corrosion-resistant aluminum body is watertight and meets MIL-PRF-8805. Switches have a stainless steel plunger surrounded by a silicone rubber seal and epoxy-sealed wire leads. All spring back (momentary) and have two 0.09″ dia. mounting holes spaced 0.38″ center to center (fasteners not included).

SPST switches have two leads; *SPDT* switches have three.

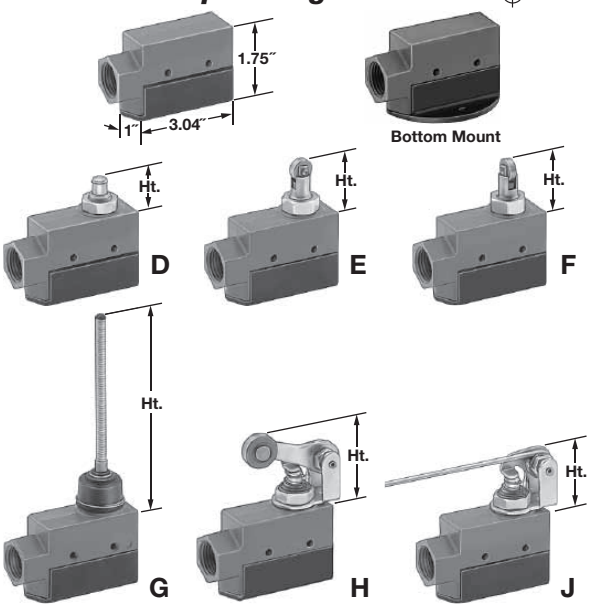
Enclosed Snap-Acting Switches



A rugged die cast zinc housing holds up in tough environments. These switch one circuit from off to on or on to off (SPDT), spring back (momentary), and have three internal screw terminal connections. Rated 1/4 hp @ 250 volts AC. Housing has a 1/2″ NPT female conduit entry. UL recognized and CSA certified.

Washdown switches have a neoprene rubber seal around the actuator and are rated NEMA 4.

Side-mount switches have two 0.14″ dia. mounting holes spaced 1″ center to center (fasteners included).

Bottom-mount switches have two 0.17″ dia. mounting holes spaced 1.63″ center to center (fasteners not included).

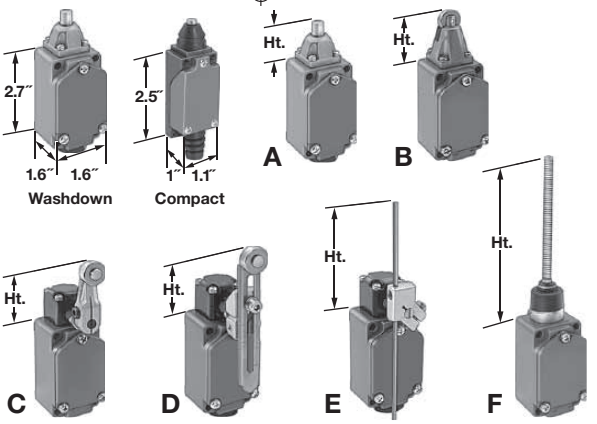
Limit Switches



Get the same rapid closing action of a snap-acting switch but with an actuator designed for larger objects. These switch one circuit from off to on or on to off (SPDT) and spring back (momentary). UL and C-UL listed and CE marked.

Washdown switches have a maximum voltage of 300 AC. Housing is rugged die cast aluminum and rated IP67 for temporary water submersion. Switches have four internal screw terminal connections, a ½″ NPT female conduit entry, and four 0.20″ dia. mounting holes (fasteners not included).

Compact switches fit tight spaces. Maximum voltage is 250 AC and 125 DC. Housing is gasketed die cast zinc with a plastic cover and rated IP64 for protection against splashing water. Switches have five internal screw terminal connections and a 0.25″ dia. opening with a cord grip. Mounting hardware included.

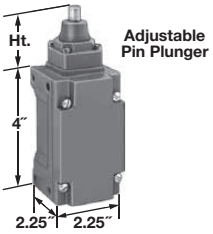
Hazardous Location Limit Switches



The choice for indoor hazardous environments, these switches meet NEMA 7 (Class I, Div. 1, Groups B, C, D) and NEMA 9 (Class II, Div. 1, Groups E, F, G). They switch one circuit from off to on or on to off (SPDT) and spring back (momentary). Maximum voltage is 600 AC and 250 DC. Housing is die cast aluminum with two 0.26″ dia. mounting holes (fasteners not included). Switches have five internal screw terminal connections and a ½″ NPT female conduit entry. UL and C-UL listed.

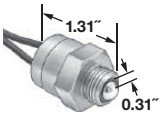
Sealed Ball Plunger Limit Switches



The ball actuator on these switches will not jam, even when exposed to oil, sand, mud, and ice. They switch one circuit (SPST) and spring back (momentary). Ball is Type 440 stainless steel and housing is zinc-plated steel. Switches have two wire leads and 9/16″-18 threads for mounting in a panel.

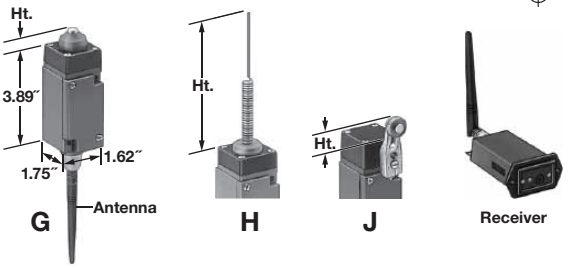
Wireless Washdown Limit Switches



When running wire is impractical or impossible, these allow you to switch or send a signal up to 1,000 ft. away. Transmission frequency is 2.4 GHz. Housing is zinc and meets NEMA 6P and 13 and IP67 for washdowns and protection from oil and coolant. Switches spring back (momentary). Lithium battery included. CE marked.

Receiver (required) operates on 10-30 volts DC. It has one NPN normally open output to switch one circuit from off to on and three 0.25″ quick-disconnect terminals. Rated 200 mA.

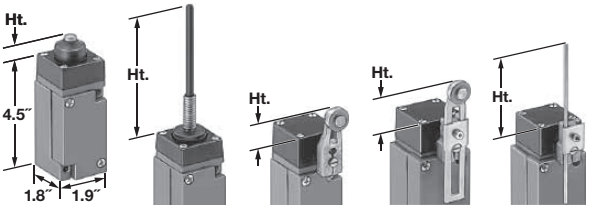
Corrosion-Resistant Washdown Limit Switches



Built to withstand heavy use in wet environments, these switches meet IP67 and NEMA 4X, 6P, and 13 for protection against temporary water submersion, oil, and corrosion. All spring back (momentary). Maximum voltage is 600 AC. Housing is fully gasketed die cast zinc with a ½″ NPT female conduit entry and two 0.20″ dia. mounting holes (fasteners not included). UL listed and CSA certified.

One-circuit switches have four internal screw terminal connections. **Two-circuit** switches have eight internal screw terminal connections.

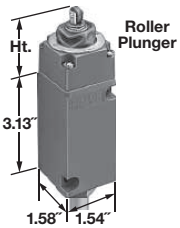
Corrosion-Resistant Washdown Limit Switches with Cable



Because they're already wired, they're easy to connect. Switches have an 8-ft., oil- and water-resistant (STOOW) cable with five wire leads and meet NEMA 4X, 6P, 13, and IP67 for protection against temporary water submersion, oil, and corrosion. They switch one circuit from off to on or on to off (SPDT) and spring back (momentary). Maximum voltage is 600 AC and 250 DC. Housing is die cast zinc with two 0.20″ dia. mounting holes (fasteners not included). UL listed, CSA certified, and CE marked.

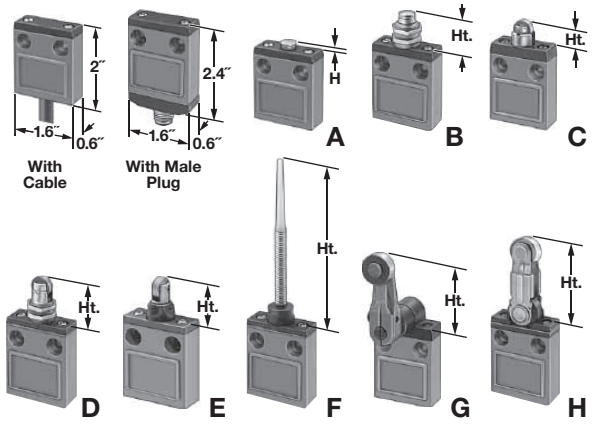
Wobble Stick	10 @ 600V AC	13.6″	7926K32	225.12

Low-Profile Washdown Limit Switches



Much slimmer than our other limit switches, you can also stack them together. Switches are IP67 and NEMA 4 and 13 rated for washdowns and oil protection. They switch one circuit from off to on or on to off (SPDT) and spring back (momentary). Housing is die cast aluminum with two counterbore 0.20″ dia. mounting holes (fasteners not included). Switches are UL listed and CSA certified.

Switches with cable have a maximum voltage of 250 AC and DC and a 9½-ft., oil-resistant (SJTO) cable with four wire leads. Switches *with sealed plunger* keep water and dirt out of the plunger.

Switches with male plug have a four-pin 0.3″ face dia. male plug with external threads, also known as a micro connector. They're compatible with the *cable with female plug*, which is 6½ ft. long with a PVC jacket. It has a female plug on one end and four wire leads on the other. Cable is C-UL listed. *Panel-mount* switches have M14 threads for mounting in a 0.57″ dia. panel cutout.

Ultra-Precision Pin Plunger Limit Switches

It takes only a 1-micron (0.00004″) push to actuate these sensitive switches. Use in applications requiring a high degree of accuracy, such as determining manufacturing tolerances and detecting minute expansions and contractions. They switch one circuit from on to off (SPST-NC) and spring back (momentary). All have a 2½-ft. cable with two wire leads, a nickel-plated brass housing, and hardware for panel mounting. Maximum voltage is 24 AC and 15 DC. UL and C-UL listed and CE marked.

Standard switches have a zirconium-oxide pin. Switch end is unthreaded and cable end has M8 threads.

Washdown switches meet IP67 for temporary water submersion and have a ruby pin. Both ends have M8 threads.

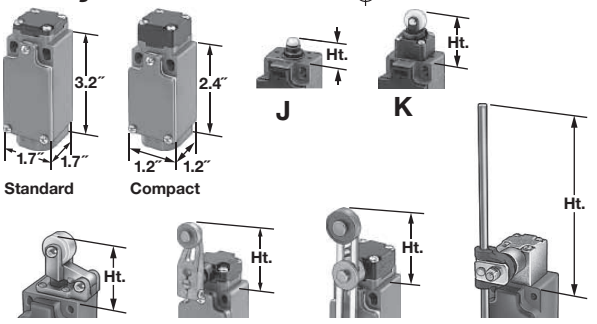
Safety Limit Switches



Positive-force contacts open the circuit when triggered, even if a spring fails or the contacts stick. These switch one circuit from off to on or on to off (SPDT) and spring back (momentary). Actuator rotates 360° in 90° increments for additional mounting options. Switches have a ½″ NPT female conduit adapter. CSA certified and CE marked. *Standard* switches have four 0.21″ dia. mounting holes; *compact* switches have two 0.17″ dia. mounting holes. Mounting fasteners not included.

Switches with plastic housing have four internal screw terminal connections. They have a maximum voltage of 240 AC, meet IP65 and NEMA 4 for washdowns, and are CSA-US certified except 65745K18, which has a maximum voltage of 600 AC and 250 DC, meets IP67 and NEMA 13 for resistance to oil and water, and is UL listed.

Switches with die cast zinc housing meet IP67 and NEMA 4 and 13 for washdowns and oil protection. UL listed. *Standard* switches have five internal screw terminal connections. Maximum voltage is 600 AC and 250 DC. *Compact* switches have four internal screw terminal connections. Maximum voltage is 300 AC and 250 DC.

Manual Reset Safety Limit Switches

Prevent equipment from automatically restarting—these limit switches must be manually reset each time they're actuated. Common in conveyors and elevators, they have positive-force contacts that open the circuit when triggered, even if a spring fails or the contacts stick. They switch two circuits: one from off to on and one with positive force from on to off (DPST-NO/NC). Contacts stay switched (maintained) until you pull the reset knob. Maximum voltage is 300 AC. Housing is plastic with two 0.17″ dia. mounting holes (fasteners not included) and meets IP67 for temporary water submersion. Switches have four internal screw terminal connections and a ½″ NPT female conduit entry for wiring. UL and C-UL listed, CSA certified, and CE marked.

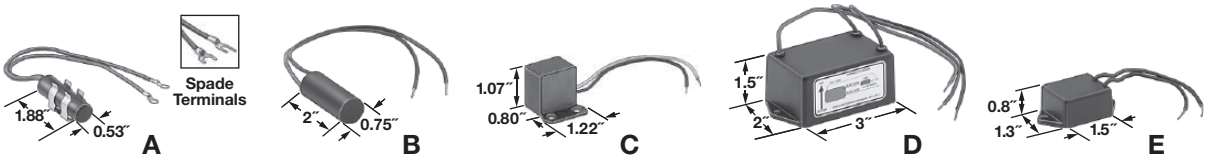
Tilt & Magnetic Switches

For information about electrical switches, see page 909.

Tilt Switches



Combining electromechanical and solid state technologies for reliability and long life, these switches actuate when tilted to a certain angle. They're excellent as position indicators, machine limit switches, pump level controls, and manual motor controls. Housing is plastic. Mounting screws not included. Switches mount horizontally and activate when tilted down to the "make angle." They deactivate when tilted up to the "break angle." The differential angle, which is the total angle from make to break, is shown in the table.

Style A have terminals that fit #8 (0.17″ dia.) studs. They include a mounting clip with three 0.19″ dia. holes.

Style C has two 1/4″ dia. mounting holes.

Styles D and **E** have two 3/16″ dia. mounting holes.

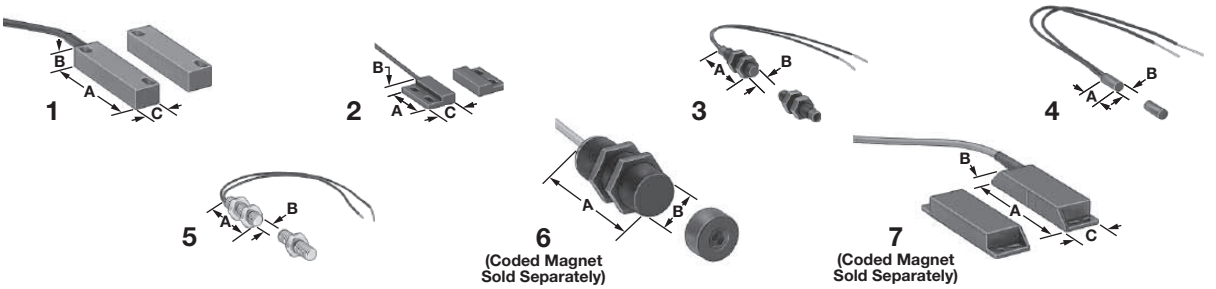
Magnetically Actuated Switches



With no moving parts to wear out, these switches provide long-term, trouble-free service. When the magnet comes within the sensing distance of the switch, the switch actuates. When the magnet moves away, the switch resets. The switch is usually mounted in a stationary location such as a door frame while the magnet is mounted on a movable object such as a door. Switches with mounting slots do not include hardware; switches with mounting threads include two hex nuts.

Standard switches are designed for proximity-sensing applications such as detecting when a door or window is open. Magnet included. They are not for use on safety-guard doors found on machinery. *AC-rated* switches have a 3-ft. cable. Rated NEMA 4X for washdowns and corrosion resistance. *DC-rated* switches have two wire leads except SPDT switches have three. UL and C-UL recognized.

Tamper-resistant switches require coded magnets (sold separately) that prevent bypassing with a simple or improperly coded magnet. They have a 3-ft. cable. Meet IP67 for temporary water submersion. UL listed, CSA certified, and CE approved. Note: In safety applications (such as machine guarding) these switches must be used with a safety relay.

Switch *with safety relay* constantly checks for faults in safety circuits, components, and wiring. Relay operates on 24 volts DC.

Safety relay accepts 10-30 volts DC input signals and a control voltage of 24-230 AC and DC. It has three output contacts rated 6 amps @ 250 volts AC, two auxiliary semiconductor outputs that provide 100 mA for signaling purposes, and screw terminal connections. Mount on 35 mm DIN rail.

About Choosing a Proximity Switch

When choosing a replacement proximity switch, there are several specifications to consider.

No. of Wires—Most DC switches have three wires; AC have two.

Diameter—Measure the threaded body of your switch to determine this size in mm. This is also the metric thread size.

Mounting Style—*Flush* switches (also known as shielded) can mount in metal that's even with the sensor surface. *Projecting* switches (also known as unshielded) require the area around the sensor to be free of metal but provide a longer sensing distance.

Output—DC switches typically require a choice between *PNP* or *NPN,* which depends on the input required by your programmable logic controller (PLC) or other control device. PNP output is more common. For DC switch tester, see page 950.

Sensing Distance—This is based on the type of metal being sensed. The distance we provide is for mild steel. To find the approximate distance for other materials, multiply the sensing distance by the correction factor: *stainless steel:* 0.7; *brass:* 0.5; *aluminum:* 0.4; *copper:* 0.3.

3-Wire DC Metallic-Object Proximity Switches

Detect metallic objects without coming into contact with them. Also known as inductive proximity switches, these have short-circuit, overload, and reverse-polarity protection. Meet IP67 requirements for washdown. UL and C-UL listed and CE marked.

Switches with cable include a 6½-ft. cable with wire leads. They operate on 15-34 volts DC and have a 150 mA output rating and temperature range of -13° to 185°F, unless noted.

Switches with male plug quickly connect and disconnect for changeout and repair. They operate on 10-30 volts DC and have a 200 mA output rating and temperature range of -13° to 158°F, unless noted.

Cables with female plug mate with male plug switches. Cable is 12 ft. long. For more information about female plugs with cable, see page 804 for 7138K and page 805 for 6897K.

Plated-brass switches resist corrosion. They have a plastic face.

Stainless steel switches are Type 303 for excellent corrosion, impact, and abrasion resistance. They have a stainless steel face except switches with 1.5 and 2.5 mm maximum sensing distance have a plastic face.

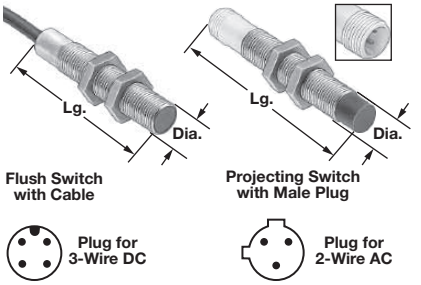
Omron	

Long Sensing Distance Metallic-Object Proximity Switches



These intelligent proximity switches have longer sensing distances at the same diameter than our other proximity switches. They also have the capability for customized programming when used with a programming kit. All switch one circuit from off to on (normally open). Face is plastic. Temperature range is –40° to 158° F. Meet NEMA 6P and 13 for protection against water submersion and oil/coolant dripping. Rated IP69K for high-pressure and high-temperature washdowns. UL and C-UL listed and CE marked.

3-wire DC switches automatically provide PNP or NPN output based on the control device to which they're connected. Operate on 6-48 volts DC.

2-wire AC switches have a 200 mA output rating and operate on 20-132 volts AC.

Switches with cable have a 6½-ft. cable with wire leads.

Switches with male plug quickly connect and disconnect for changeout and repair.

Switches with male plug and programming kit lets you configure your switch to match other manufacturers' specifications (such as sensing distance) or create your own. Kit includes a computer cable and software compatible with Windows 98/2000/XP operating systems.

Cables with female plug mate with male plug switches. Cable is 12 ft. long. For more information, see 6897K on page 805.

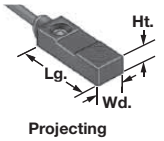
Flat-Body 3-Wire DC Metallic-Object Proximity Switches



A space-saving flat design mounts to a base or rail. Switches detect metallic objects without coming into contact with them and have reverse-polarity protection and normally open (NO) contacts. They operate on 10-30 volts DC and have a temperature range of –13° to 158° F. Meet IP67 for temporary submersion. Switches have a 6½-ft. cable with wire leads and two mounting holes, unless noted. 27 mm long switches come with a mounting bracket.

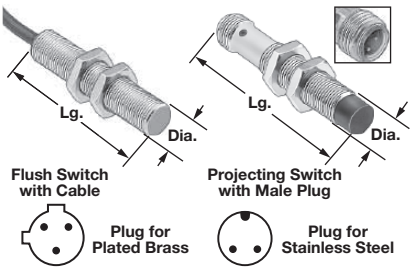
■ Has one mounting hole.

2-Wire AC Metallic-Object Proximity Switches



Detect metallic objects without coming into contact with them. These AC switches have an LED power indicator and a plastic face. Meet IP67 for temporary submersion. CE marked.

Switches with cable accept an input of 20-265 volts AC and 20-320 volts DC. They have a 6½-ft. cable with wire leads. Temperature range is –13° to 185° F. UL listed.

Switches with male plug quickly connect and disconnect for changeout and repair. They accept an input of 20-250 volts AC. Switches with stainless steel housing also operate on 20-320 volts DC. Temperature range is –13° to 158° F. *Plated-brass* switches are CSA certified to UL Standard 508. *Stainless steel* switches are UL and C-UL listed and CSA certified.

Cables with female plug mate with male plug switches. Cable is 12 ft. long. For more information, see 6897K on page 805.

Plated-brass switches resist corrosion. *Switches with cable* are nickel plated and *switches with male plug* are chrome plated.

Stainless steel switches are Type 303 for excellent corrosion, impact, and abrasion resistance.

Universal-Object Proximity Switches

Detect both metallic and nonmetallic objects with these projecting switches. Also known as capacitive proximity switches, they have a plastic housing that meets IP66 for washdowns, a 6½-ft. cable with wire leads, and an LED power indicator. Output rating is 200 mA. Temperature range is –13° to 158°F except for 30 mm dia. switches, which have a temperature range of 14° to 131°F. **3-wire DC switches** operate on 10-30 volts DC. **2-wire AC switches** operate on 90-250 volts AC.

Also Available: Proximity switches made by a specific manufacturer. Please ask for 6693T999 and specify manufacturer and manufacturer part number.

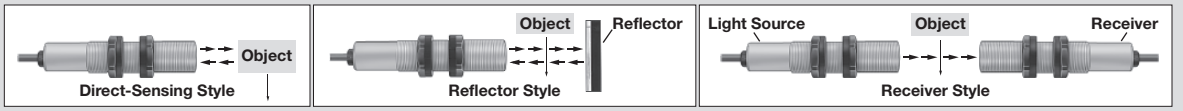
About Light Beam Sensing Switches



Also known as photoelectric switches, these use a light beam to detect the presence or absence of an object made of any material. They have a longer sensing distance than proximity switches.

Direct-Sensing Style—They have the shortest sensing distance for use in confined spaces and can be adversely affected by the color or surface of the target object. The light source and receiver are in the same housing. Switches detect the target object when the light beam reflects off the object back into the receiver.

Reflector Style—They have a longer sensing distance than direct-sensing switches. The light source and receiver are in the same housing, but switches use a reflector. They detect the target object when it passes between the switch and the reflector, interrupting the beam.

Receiver Style—They have the longest sensing distance. The light source and receiver are in separate housings that must be lined up facing each other. Switch detects the target object as it breaks the light beam between the light source and receiver.

Switch Operation—*On when object present* switch when a target object is present (similar to a normally open switch). *On when object absent* switch when the target object is absent (similar to a normally closed switch).

Light Beam Sensing Switches

Mount these threaded switches in an 18 mm dia. panel cutout. They have a signal strength indicator and watertight plastic housing. Temperature range is –13° to 131°F. Rated IP67 for washdowns. CE marked.

DC Input—Operate on 10-30 volts DC and have a 100 mA output rating. 45 mm long. *Reflector* switches require a reflector (sold separately below). *Switches with cable* have a 4-wire cable.

To Order: Please specify PNP or NPN output.

AC Input—Operate on 24-250 volts AC and have a 300 mA output rating. 85mm long. *Switches with cable* have a 3-wire cable. UL listed and CSA certified. *Reflector* switches include a reflector.

Flat-Body Light Beam Sensing Switches

Fit these small, flat-body switches into tight spaces. They can be set to switch on when an object is present or on when an object is absent. Switches have an 18 mm dia. threaded face and plastic housing with 3 mm dia. mounting holes spaced 24 mm apart. Output rating is 100 mA. Temperature range is –4° to 158°F. They're watertight and oil tight for outdoor use, meeting NEMA 4X and 13. Meet IP67 for washdowns. UL and C-UL recognized, CSA certified, and CE marked.

Switches with male plug quickly connect and disconnect.

DC Input—Operate on 10-30 volts DC and have PNP and NPN outlets. *Switches with cable* are 2⅛″ Lg.×½″ Wd.×1³⁄₁₆″ Ht. and have a 6½-ft. 4-wire cable. *Switches with male plug* are 2⅞″ Lg.×½″ Wd.×1³⁄₁₆″ Ht.

AC Input—Operate on 24-240 volts AC. *Switches with cable* are 2⅝″ Lg.×½″ Wd.×1³⁄₁₆″ Ht. and have a 6½-ft. 2-wire cable. *Switches with male plug* are 3⁵⁄₁₆″ Lg.×½″ Wd.×1³⁄₁₆″ Ht.

Reflector switches include a 3⁵⁄₁₆″ dia. reflector.

Switch Style	Sensing Distance	Switches with Cable		Switches with Male Plug

Light Beam Sensing Switches with Relay Output

With a built-in relay output, you can switch loads up to 3 amps at 250 volts AC. Output can be set to switch on when an object is present or on when an object is absent. Operate on 24-240 volts AC and DC. Switches have screw terminal connections, ABS plastic housing, and a mounting bracket with two ³⁄₁₆″ dia. holes (screws not included). Temperature range is –13° to 131°F. Meet IP66 for washdowns. CE marked.

Time delay switches have delay-on, off-delay, and switch-on initiated interval timing functions (see About Timer Relays on page 960). They're adjustable from 0.1 to 5 seconds.

Reflector switches include a 1⅝″ Lg.×2⅜″ Ht. reflector.

Switch Style	Sensing Distance		
Standard			
Direct Sensing	3.3 ft.	9231K11	$103.08

Replacement Reflector		9231K31	13.04

Fiber-Optic Light Beam Sensing Switches

Switch

Direct Sensing

Receiver

Highly flexible fiber-optic cable that can be cut to length and a small sensing end allow precise positioning in tight spaces. Switches can be set to switch on when an object is present or on when an object is absent. They have a red LED that indicates signal strength and alignment accuracy. Fiber-optic cable is 6½ ft. long and made of plastic with an acrylic core. The relay output is SPDT and rated 5 amps @ 250 volts AC and 30 volts DC. Operate on 24-250 volts AC and 12-250 volts DC.

Switches have a 6-ft. 5-wire cable and a 2⅛″ Lg.×1¾″ Wd.×2¾″ Ht. polyester housing with a ½″ NPS female conduit opening and two 3⁄16″ dia. mounting holes (fasteners not included). Temperature range is –13° to 131° F. Rated NEMA 6P for outdoor use and meet IP67 for washdowns. UL listed, CSA certified, and CE marked.

Time delay switches let you delay the on signal (on-delay) or off signal (off-delay) from 0.1 to 0.15 seconds, 0.1 to 1.5 seconds, or 1 to 15 seconds. It can also be set for interval, single-shot, or repeat cycle timing (see About Timer Relays on page 960).

Switch Style	Sensing Distance	Standard Switches		Time Delay Switches		Replacement Cables	
Direct Sensing	1.8″	65935K53	$154.35	65935K83	$196.74	65935K93	$39.13
Receiver	4.9″	65935K54	158.70	65935K84	201.09	65935K94	43.48

Precision Laser Sensing Switches

A smaller beam detects smaller objects than light beam sensing switches for optimal performance in tight spaces. Laser switches operate on 10-30 volts DC and have an SPDT PNP output (see About Proximity Switches on page 947). They have a 6-ft. 4-wire cable and a 1¼″ Lg.×5⁄8″ Wd.×1⅛″ Ht. plastic housing with an 18 mm dia. threaded face for mounting. Temperature range is 14° to 122° F. Rated NEMA 6 for outdoor use. Meet IP67 for washdowns. UL and C-UL recognized and CE marked.

Switch Style	Sensing Distance		
Direct Sensing	12″	5038T12	$135.00
Reflector	3.9″-33 ft.	5038T11	156.25

Proximity and Light Beam Sensing Switch Brackets

Clamp Style

Adjustable Angle

Right Angle

Clamp-style brackets mount any cylindrical switch.

Adjustable-angle bracket swivels and includes adapters to ensure a tight fit.

Right-angle brackets have 0.22″ wide slots (except 55205K23 and K26 have 0.28″ slots) for mounting in almost any position. Fasteners not included.

Fits Switch Dia., mm	Lg., mm	Wd., mm	Ht., mm

Proximity and Light Beam Sensing Switch Testers

Verify the output voltage of DC switches. A red LED indicates NPN; green LED indicates PNP. Tester has four spring-loaded terminals for connection and operates on two 9-volt batteries (included). CE marked.

6555K44 ..... $166.25

Ultrasonic Switches

High-frequency sound waves detect objects of all sizes, shapes, colors, and materials, even in dirty environments. These 30 mm Dia.×100 mm Lg. threaded sensors also measure the distance to a target. Set the turn-on and turn-off point to specify a particular range of detection anywhere within the sensing distance. Switches have short-circuit and reverse-polarity protection, an LED alignment accuracy indicator, and plastic housing with rubber face. Operate on 20-30 volts DC. Operating temperature range is 32° to 140° F.

Digital-output switches have two solid state relays, one that switches from off to on (normally open) and one that switches from on to off (normally closed). Rated 50 mA @ 130 volts AC and 100 mA @ 130 volts DC. They have a 6-ft. 5-wire cable.

Analog-output switches have one 0-10 DC voltage output and one 4-20 mA current output. They have a 6-ft. 4-wire cable.

Sensing Distance	Digital Output		Analog Output	
4″-40″	6565K31	$395.56	6565K61	$395.56
8″-80″	6565K42	471.11	6565K62	471.11

Light Beam Safety Barrier Switches

Transmitter and Receiver

Control Box

Breaking the light beam between these barriers immediately cuts power to machinery to protect personnel. Switches detect objects with a height of 0.78″ and greater and have a selectable input voltage (24 DC or 100-240 AC). Maximum distance between transmitter and receiver is 65 ft. When you need material to pass through the sensing field, you can program the system to allow one or more beams to be broken without shutting off your machine. Note: Use only with machinery that can consistently and immediately stop anywhere in its cycle; do not use with a full-revolution clutched press or machine.

Switches include a transmitter, receiver, 33-ft. transmitter cable, 33-ft. receiver cable, and a metal control box that houses the power supply, relay outputs, and screw terminal connections.

Transmitter and receiver have a 2″ Wd.× 1½″ Dp. yellow powder-coated aluminum housing and adjustable brackets with screws for mounting to a wall or structural framing. Control box is 11 3⁄16″ Ht.×7 7⁄16″ Wd.× 2¾″ Dp. and has eight 5⁄16″ dia. mounting holes (screws not included). Switches meet or exceed OSHA and ANSI machine guard requirements. Meet IP65 and NEMA 4 and 12 for washdown and oil protection. UL and C-UL listed, CSA certified, and CE marked.

Light Beam Ht.	O'all Ht.

64.6″	70″	7774K38	6,687.32

Long Distance Light Beam Safety Barrier Switches

A single beam of light creates a wide barrier that immediately shuts down machinery when breached. Maximum distance between transmitter and receiver is 225 ft. For a complete system, you'll need the transmitter and receiver set, transmitter cable, and receiver cable. Note: Use only with machinery that can consistently and immediately stop anywhere in its cycle; do not use on a full-revolution clutched press or machine.

Transmitter and receiver have LED indicators that provide status and diagnostic information, a yellow powder-coated aluminum housing, and mounting brackets with three 9⁄32″ dia. holes (fasteners not included). Operate on 24 volts DC. Meet ANSI machine guard requirements and IP67 for temporary water submersion.

Transmitter and Receiver Set

Transmitter and Receiver Set (9 1⁄8″ Ht. x 2 1⁄8″ Wd. x 2 7⁄8″ Dp.)	7231K31	$1,108.57
Transmitter Cable (32 ft. Lg.)	7231K41	97.33
Receiver Cable (32 ft. Lg.)	7231K42	97.33

About Access Safety Switches (Interlock Switches)

Access safety switches (also known as interlock switches) prevent a machine from operating if an access panel or door is open, protecting personnel from injury and the machine from damage. Switches are typically installed on access doors or machine guards and electrically connected to the machine control circuitry.

Contacts that switch from on to off (normally closed) in access safety switches are positive-force contacts. They mechanically disengage when a switch is actuated, even if the contacts become welded shut or a spring breaks. This feature provides additional safety for the equipment operator.

Key-Actuated Access Safety Switches

Ensure that your machine cannot operate when the guard door is open. These tamper-resistant switches come with a key that must be inserted into the switch before the machine can run. Switches are usually mounted to the door frame and the key is mounted to the door (fasteners not included). When the door is opened, the key is removed from the switch and the machine shuts down. Key can actuate from both the top and side of the switch. Contacts that switch from on to off (normally closed) are positive force. Switches have a thermoplastic housing and 1⁄2″ NPT female conduit entry with screw terminals, except 65665K25 has an M16 male conduit entry and a 3-ft. cable.

65665K17 and 7787K12 have a rotating head. 65665K17 has the same mounting style as Allen Bradley's Guardmaster Trojan series. 7787K12 also mounts to 2″ square tubing.

Standard switches are UL listed and CE marked. 65665K25 is also C-UL listed. *Adjustable-mount key* pivots for horizontal or vertical mounting when used with Style D.

Switches with access delay are for machines that take time to stop after they are turned off, delaying access to hazardous areas until conditions are safe. The key is held in place with 225 lbs. of force until the switch receives a signal from your time delay relay, motion sensor, or position sensor (not included) that the machine's motion has stopped. UL and C-UL listed and CE marked.

Emergency override key works with *Style E*, allowing the user to bypass the access delay feature.

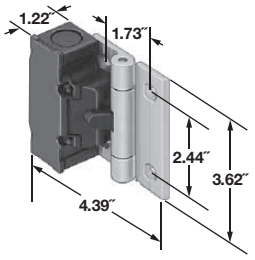
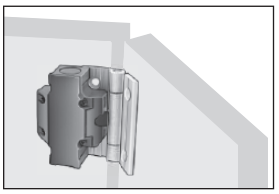
Hinge-Actuated Access Safety Switches

You can install an access safety switch even if the space around your door is tight. Replace one of the hinges with this switch and the other with the included plain hinge. It can also be used on machine guards constructed from aluminum T-slotted framing. It switches three circuits, one from off to on and two from on to off (3PST-1NO/2NC). Rated 2 amps @ 250 volts AC. When the switch rotates at least 4°, the normally closed contacts open and shut off the power. Contacts that switch from on to off (normally closed) are positive force. Switch has a plastic housing, aluminum hinges, an M20 threaded female conduit entry, and six screw terminals. Meets IP65 for washdowns.

7777K48 ..... $174.51





High-Amp Relays

For information about electrical switches, see page 909.

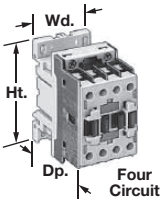
About High-Amp Relays

High-amp relays (also known as contactors) use an electrical signal or control voltage to remotely switch high-amp circuits such as lighting and large motors. They are typically rated for applications up to 50 hp.

Full load amp rating is the maximum amount of current a relay can switch for a motor.

Resistive load amp rating is the maximum amount of current a relay can switch for other electrical loads such as heaters.

High-Amp Relays



Switch motors and lighting. Also known as IEC contactors, these relays are built to International Electrotechnical Commission dimensional standards. Mechanical life is 20 million cycles, significantly longer than that of Infrequent-Cycle High-Amp Relays. They mount to 35 mm DIN rail and have 0.17″ dia. holes for surface mounting (fasteners not included). All have touchsafe screw terminal connections to prevent contact with live terminals. Connections are accessible from the front for side-by-side mounting. Contacts spring back (momentary) when power is removed. UL and C-UL listed.

Relays with **AC control voltage** have a power draw of 6.5 VA. **To Order:** Please specify control voltage: 24 AC, 120 AC, or 240 AC.

Relays with **24 DC control voltage** have a power draw of 5.4 watts.

Auxiliary contacts allow you to add a signaling device or control another relay. They switch two circuits, one on and one off (DPST-NO/NC). You can add one front-mount contact per relay or two side-mount contacts per relay.

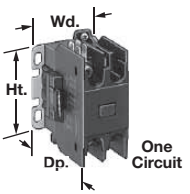
Infrequent-Cycle High-Amp Relays



Also called definite-purpose contactors, these relays meet UL 508 standards for air conditioning and heating. Mechanical life is 500,000 cycles. They have at least three holes for surface mounting (fasteners not included). Relays have screw terminal connections and 1/4″ quick-disconnect terminals except 6564K89, which has screw terminals only. Connections are accessible from the front for side-by-side mounting. Contacts spring back (momentary) when power is removed. UL recognized, CSA certified, and CE marked.

Relays with **AC Control Voltage—To Order:** Please specify control voltage: 24 AC, 120 AC, or 208/240 AC.

Also Available: Auxiliary contacts. Please ask for 6564K99 and specify the McMaster-Carr part number of your relay and whether you want to switch one circuit on (1 NO) or off (1 NC).

★ Auxiliary contacts not available. ■ Size is 3.8″ Ht.×2.4″ Wd.×3.4″ Dp.

DIN-Rail Mount Infrequent-Cycle High-Amp Relays

Mount these relays to 35 mm DIN rail. Also known as definite-purpose contactors, they meet UL 508 standards for air conditioning and heating. All have screw terminals and touchsafe protection to prevent contact with live terminals. They can also be surface mounted using the 0.17″ dia. holes (fasteners not included). Contacts spring back (momentary) when power is removed. Mechanical life is 20 million cycles. UL and C-UL listed.

Relays with **AC control voltage** have a power draw of 6.5 VA. **to Order:** Please specify control voltage: 24 AC, 120 AC, or 230 AC.

Relays with **24 DC control voltage** have a power draw of 5.4 watts.

Auxiliary contacts allow you to add a signaling device or control another relay. They switch two circuits, one from off to on and one from on to off (DPST-NO/NC).

DIN-Rail Mount Long-Life High-Amp Relays

No moving parts means longer, quieter operation than our other high-amp relays. Also known as solid state contactors, these relays mount to a 35 mm DIN rail. All have screw terminal connections, an integrated heatsink, and an LED indicator. They also have 0.17″ dia. holes for surface mounting (fasteners not included). Contacts spring back (momentary) when power is removed. Rated for continuous operating duty. They do not switch DC loads. CE marked. UL and C-UL listed.

DC Voltage High-Amp Relays

Use on DC-powered equipment such as forklifts and floor scrubbers. Also known as solenoids and contactors, these relays accept a DC control voltage and switch a DC load. Rated for continuous operation for cycles that run longer than 30 seconds. All spring back (momentary) when power is removed. Relays have 5⁄16″-24 threaded stud terminals and 0.28″ dia. mounting holes (fasteners not included). They allow different control and load voltages except for 7995K23, which requires the same control and load voltage. Mechanical life is 100,000 cycles except for standard relays, which have a mechanical life of 250,000 cycles.

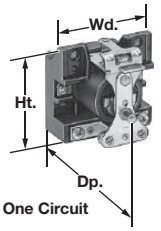
Medium-Amp Relays

For information about electrical switches, see page 909.

About Medium-Amp Relays

Medium-amp relays (also known as power relays) use an electrical signal or control voltage to remotely switch medium-amp circuits such as industrial automation systems, security and emergency lighting, and small motors. They are typically rated for applications up to 3 hp.

Medium-Amp Relays



One Circuit

Two Circuit

Four Circuit

Also known as power relays, these are commonly used with lighting and motors. Relays have screw terminal connections and can be surface mounted (fasteners not included). Contacts spring back (momentary) when power is removed. UL and C-UL listed.

One- and **two-circuit** relays are rated 1½ hp @ 120/240 volts AC. Maximum voltage is 600 AC. They have 0.19″ dia. mounting holes. Mechanical life is 1 million cycles. *One-circuit* relays and *two-circuit (DPST-NO)* relays are 2.5″ Ht. × 2.5″ Wd. × 2.2″ Dp. *Two-circuit (DPDT)* relays are 3.3″ Ht. × 2.5″ Wd. × 2.4″ Dp. *Optional dust cover* is aluminum with two 1″ trade size knockouts.

Four-circuit relay is rated 1 hp @ 120 volts AC and 1½ hp @ 240 volts AC. Maximum voltage is 277 AC. Relay has 0.21″ dia. mounting holes. It is 3.4″ Ht. × 2.7″ Wd. × 2.7″ Dp. Mechanical life is 2 million cycles. *Optional dust cover* is steel with four ¾″ trade size knockouts.

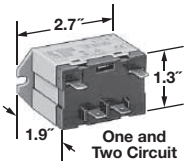
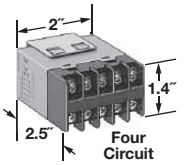
Enclosed Medium-Amp Relays



One and Two Circuit



Four Circuit

Contacts are protected from dust and dirt. Also known as power relays, these accept voltage drops up to 50% of the rated voltage without switching. All have a contact test button and 0.18″ dia. holes for surface mounting (fasteners not included). Contacts spring back (momentary) when power is removed. Mechanical life is 1 million cycles. They're rated 1½ hp @ 120 volts AC and 3 hp @ 240/265-277 volts AC, except two-circuit relays are rated 1½ hp @ 120 volts AC and 2 hp @ 240/265-277 volts AC. UL recognized, CSA certified, and CE marked.

One- and **two-circuit** relays have 0.25″ quick-disconnect terminals.

Four-circuit relays have screw terminal connections. They are also rated @ 24 volts DC for the amp ratings given in the table.

Control Voltage	Amp Rating @ 220V AC	Power Draw

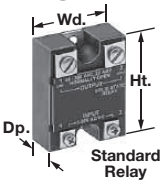
Long-Life Medium-Amp Relays



Standard Relay

Touchsafe Relay

With no moving parts, these solid state relays provide silent operation and long service life. They have a built-in safeguard that protects against high starting current, screw terminal connections, and 0.18″ dia. mounting holes (fasteners not included). All are 2.3″ Ht. × 1.8″ Wd. × 1.1″ Dp. Contacts spring back (momentary) when power is removed. UL recognized, CSA certified, and CE marked (unless noted).

Touchsafe relays have a cover to prevent contact with live terminals.

Optional heat sinks disperse heat to increase the amp rating of relays. They mount to 35 mm DIN rail except heat sink for 25- and 45-amp relays has 0.19″ dia. holes for surface mounting. Before mounting, apply silicone compound (included except for heat sink for 75- and 90-amp relays) between the heat sink and the relay.

Long-Life Medium-Amp Relays with Built-In Heat Sink

A heat sink attached to these relays provides optimal convection cooling. Also known as solid state relays, they have no moving parts for silent operation and long service life. Relays have screw terminal connections and a built-in safeguard that protects against high starting current. Mount to 35 mm DIN rail. Contacts spring back (momentary) when power is removed. UL and C-UL listed.

One-circuit relays are 4.2″ Ht.×5.4″ Dp. The *30-amp* relays are 0.9″ wide; *60-amp* relays are 2.7″ wide.

Two-circuit relays are 4.3″ Ht.×2.1″ Wd.×4.0″ Dp.

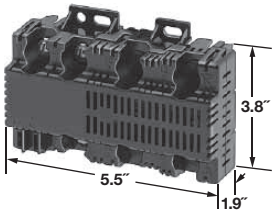
Hybrid Long-Life Medium-Amp Relays



The combination of solid state and electromechanical technologies provides a long life of rapid switching without the need for a heat sink. These relays are an alternative to mercury relays. Use with resistive heating loads; relays cannot be used with motor loads. Control terminals have 0.25″ quick-disconnect connections and the load terminals have screw terminal connections. Contacts spring back (momentary) when power is removed. Relays have ¼″ dia. holes for surface mounting (fasteners not included) and an LED that indicates if the relay is open or closed. UL and C-UL recognized and CE marked.

Note: Relays cannot be used with an RC snubber.

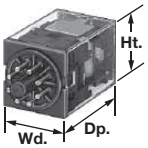
Circular-Pin Relays



8-Pin Relay

11-Pin Relay

Socket for 8-Pin Relays

Socket for 11-Pin Relays

Plug relays right into a socket for easy installation and replacement. Also known as ice cube relays, they have a clear plastic dust cover. Contacts spring back (momentary) when power is removed.

Standard relays are UL recognized and CSA certified. *One-circuit relays* are 1.4″ Ht.×1.4″ Wd.×2.3″ Dp. Mechanical life is 10 million cycles. *Two-* and *three-circuit relays* have a lockable test button. They are 1.4″ Ht.×1.4″ Wd.×2.1″ Dp. Mechanical life is 5 million cycles.

Premium relays are tough enough for motors and pumps. They are rated ⅓ hp @ 120 volts AC and ½ hp @ 240 volts AC. Relays are also rated 10 amps @ 28 volts DC. All are 1.4″ Ht.×1.4″ Wd.×2″ Dp. Mechanical life is 10 million cycles. UL recognized and CSA certified.

Sockets mount to 35 mm DIN rail or surface mount using the 0.17″ dia. holes (fasteners not included).

Long-Life Circular-Pin Relays

Relays plug into a socket and have solid state construction for an extended service life. Use for high-speed switching at low current levels. Relays switch one circuit on (SPST-NO). They have eight pins and a black plastic dust cover. Contacts spring back (momentary) when power is removed. **Socket** mounts to 35 mm DIN rail or surface mounts using the 0.17″ dia. holes (fasteners not included). Size is 2″ Ht.×1.6″ Wd.×1″ Dp.

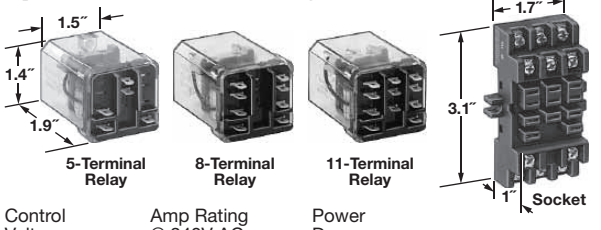
Spade-Terminal Relays



5-Terminal Relay | 8-Terminal Relay | 11-Terminal Relay | Socket

Also known as ice cube relays, these offer three ways to connect. Plug them into a socket, connect with 0.187″ quick-disconnect terminals, or solder wires directly to terminals. Contacts spring back (momentary) when power is removed. Mechanical life is 10 million cycles. UL recognized and CSA certified.

One-circuit and **two-circuit relays** are rated 1/3 hp @ 120 volts AC and 1/2 hp @ 240 volts AC. **Three-circuit relays** are rated 1/2 hp @ 120/240 volts AC.

Socket mounts to 35 mm DIN rail or surface mounts using the 0.16″ dia. holes (fasteners not included).

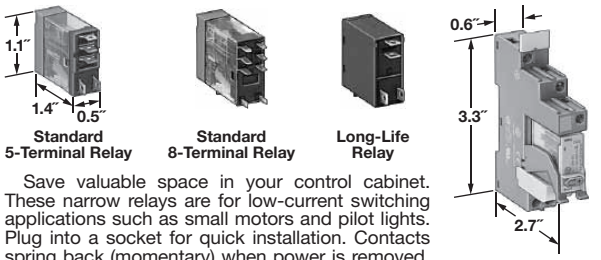
Slim Spade-Terminal Relays



Standard 5-Terminal Relay | Standard 8-Terminal Relay | Long-Life Relay | Relay and Socket with PLC Output Protection

Save valuable space in your control cabinet. These narrow relays are for low-current switching applications such as small motors and pilot lights. Plug into a socket for quick installation. Contacts spring back (momentary) when power is removed. Relays are UL recognized and CSA certified, except relays with PLC output protection are UL and C-UL listed.

Standard relays have a mechanical life of 10 million cycles for AC operation and 20 million for DC. Maximum voltage is 440 AC. *One-circuit relays* are rated 1/3 hp @ 120 volts AC. *Two-circuit relays* are rated 1/6 hp @ 120 volts AC.

Long-life relay has solid state construction with no moving parts for silent operation and longer service life than standard relays.

Relays with PLC output protection prevent coil voltage spikes from damaging your programmable logic controller or other sensitive control device. Mechanical life is 10 million cycles. Maximum voltage is 440 AC. Include a socket. *One-circuit relays* are rated 1/3 hp @ 120 volts AC. *Two-circuit relays* are rated 1/4 hp @ 120 volts AC.

Sockets mount to 35 mm DIN rail.

To Order: For sockets for standard and long-life relays, please specify screw terminal or spring clamp connections. Sockets with screw terminal connections have a 0.14″ dia. hole for surface mounting (fasteners not included). They're 3.6″ Ht.×0.6″ Wd.×2.4″ Dp. Sockets with spring clamps are 3.6″ Ht.×1.1″ Wd.×2.5″ Dp.

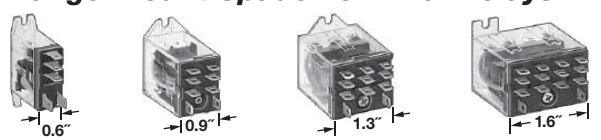
Flange-Mount Spade-Terminal Relays



5-Terminal Relay | 8-Terminal Relay | 11-Terminal Relay | 14-Terminal Relay

Mount relays to a flat surface using the 0.14″ wide slots. All of the relays plug into a socket. They are 1.8″ Ht.×1.4″ Dp. Contacts spring back (momentary) when power is removed. Maximum voltage is 250 AC. UL recognized and CSA certified.

5-terminal relays are rated 1/3 hp @ 120 volts AC. Mechanical life is 10 million cycles.

8-, 11-, and **14-terminal relays** have a mechanical life of 50 million cycles. *8-terminal relays* are rated 1/2 hp @ 120 volts AC; *11-* and *14-terminal relays* are rated 1/2 hp @ 240 volts AC.

Sockets have screw terminal connections. Mount to 35 mm DIN rail or surface mount (fasteners not included). For more socket information, see page 959.

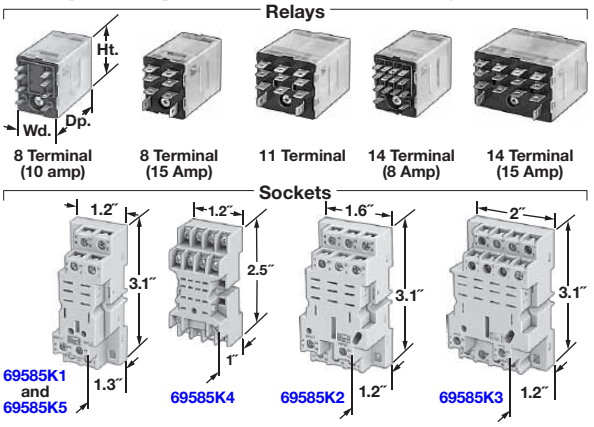
Compact Spade-Terminal Relays



Relays have the same connection options as spade-terminal relays, but are smaller to fit in tight spaces. Plug them into a socket, connect with quick-disconnect terminals (SPDT connect with 0.197″ quick-disconnect terminals; 15-amp DPDT, 3PDT, and 4PDT are 0.187″; and 10-amp DPDT and 8-amp 4PDT are 0.11″), or solder wires directly to terminals. Contacts spring back (momentary) when power is removed. Mechanical life is 10 million cycles. Max. voltage is 300 AC, except SPDT is 250 AC. Relays and sockets are UL and C-UL recognized, CSA certified, and CE marked. Relays are UL listed when used with the suggested sockets, except SPDT relays and sockets are not C-UL recognized or UL listed when used together. **Relays** are 1.1″ Ht. × 0.9″ Wd. × 1.6″ Dp., except 11-terminal relays are 1.2″ wide and 15-amp 14-terminal relays are 1.6″ wide. **Sockets** have screw terminal connections. Mount to 35 mm DIN rail or surface mount using the two 0.16″ dia. holes (fasteners not included).

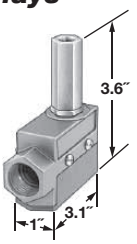
High-Pressure Air-Actuated Relays

Also known as an air-to-electric switch, this relay converts an air signal to an electrical signal. Use for actuating solenoid valves and other electric components from your pneumatic control system. Relay switches one circuit on or off (SPDT) and has three screw terminal connections. Requires 8 to 100 psi of air pressure to actuate. Air connection is ⅛″ NPT female; electrical connection is ½″ NPSM (National Pipe Straight Mechanical) female. Rated 15 amps @ 230 volts AC. Contacts spring back (momentary) when power is removed. UL and C-UL recognized.



49145K51 ... $144.99

DIN-Rail Mount Screw Terminal Relays

Built to IEC dimensional standards, relays mount to 35 mm DIN rail and have 10 touch-safe screw terminal connections to prevent contact with live terminals. Relays also have four 0.17″ dia. holes for surface mounting (fasteners not included). Contacts spring back (momentary) when power is removed. Mechanical life is 20 million cycles. UL and C-UL listed. 7230K87 and 7230K88 have interlocked opposing contacts that will not simultaneously close, making them ideal for safety applications such as machine guarding.

Relays with **AC control voltage**—To Order: Please specify control voltage (power draw): 24V AC (125 mA), 120V AC (25 mA), or 240V AC (12.5 mA).

Relays with **24 DC control voltage** have a power draw of 13 mA.

Auxiliary contact allows you to add a signaling device or control an-

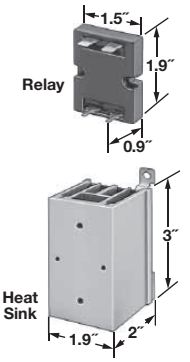
Long-Life Relays



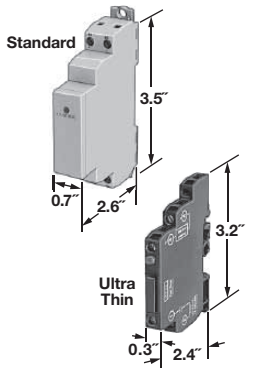
Because they don't have moving parts, these solid state relays have a longer service life than other spade-terminal relays. Use for high-speed switching at low current levels. Relays have two 0.11″ quick-disconnect terminals on the input side and two 0.25″ quick-disconnect terminals on the output side. They switch one circuit on (SPST-NO). All have two 0.14″ dia. holes for surface mounting (fasteners not included). Contacts spring back (momentary) when power is removed. UL and C-UL recognized, CSA certified, and CE marked.

To Order: Please specify control voltage: 5 DC, 12 DC, or 24 DC.

Heat sink increases the relay amp rating. Mount to 35 mm DIN rail or surface mount using the two 0.18″ dia. holes (fasteners not included).

Amp Rating @ 100-240V AC With Heat Sink	Without Heat Sink	Relays		Heat Sinks	
—	5	8192K21	$25.61	—	—
10	5	8192K22	25.61	8192K31	$20.95

Thin Long-Life Relays



Install solid state relays where space is limited. Relays have a narrow width and no moving parts for a long service life. They switch one circuit on (SPST-NO). All have four screw terminal connections and a power indicator. Mount to 35 mm DIN rail. Contacts spring back (momentary) when power is removed.

Standard relays have two 0.2″ dia. holes for surface mounting (fasteners not included). UL and C-UL listed, CSA certified, and CE marked.

Ultra-thin relays are also called output modules. They have a replaceable 3-amp fuse to protect equipment. UL recognized, CSA certified, and CE marked.

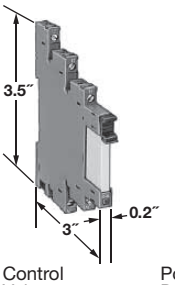
Replacement 3-Amp Fuse for Ultra-Thin Relays		8299K21	1.15

Ultra-Thin Relays



Maximize space in your control cabinet. Relays plug into a socket (included) and have an extra-narrow width. Also known as output modules, they switch one circuit on or off (SPDT) and are rated 6 amps @ 250 volts AC. Maximum voltage is 400 AC. All have five screw terminal connections and a power indicator. Mount to 35 mm DIN rail. Contacts spring back (momentary) when power is removed. Mechanical life is 10 million cycles. UL and C-UL recognized.

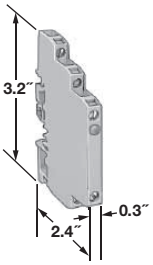
Ultra-Thin Signal-Conditioning Relays



Convert electrical signals into signals for PLCs and microprocessors and prevent power surges from reaching these devices. Relays have a narrow design to save space in your control cabinet. Also known as input modules, relays switch one circuit on. If a control voltage is present, there is no output voltage. An output voltage is generated when the control voltage is removed. Relays have an LED indicator and five screw terminal connections. Mount to 35 mm DIN rail. UL recognized, CSA certified, and CE marked.

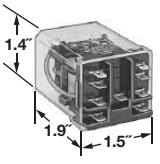
Control Voltage	Output Voltage	Amp Rating @ 28V DC		
90-280 AC	4-28 DC	100 mA	7356K21	$27.42
4-28 DC	4-28 DC	100 mA	7356K22	26.54

PC-Board Mount Relays

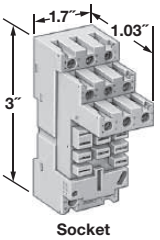
Solder relays to a printed circuit board to switch small motors and pilot lights. Maximum voltage is 380 AC and 125 DC. All have 0.16″ long pins. Mechanical life is 10 million cycles for AC voltage, 20 million cycles for DC voltage. Contacts spring back (momentary) when power is removed. UL recognized, CSA certified, and CE marked.

Control Voltage	Amp Rating @ 250V AC/30V DC	Power Draw		
Switch One Circuit On or Off (SPDT)—5 Pins				
5 DC	10	106 mA	7098K35	$6.70
12 DC	10	44 mA	7098K31	6.70
24 DC	10	22 mA	7098K32	8.70
Switch Two Circuits On or Off (DPDT)—8 Pins				
5 DC	5	106 mA	7098K36	10.30
12 DC	5	44 mA	7098K33	7.95
24 DC	5	22 mA	7098K34	10.32

Relays That Stay Switched



Relay



Socket

Save energy if your relay has to stay switched for a long time—these relays, also called latching relays, don't require a constant control voltage to stay switched. A momentary signal to one coil transfers and sets the latch; a momentary signal to the other coil releases it.

Relays switch two circuits on or off (DPDT). They have 0.187″ quick-disconnect terminals and nine spade terminals. All plug into a socket (sold separately). Rated 1/3 hp @ 120 volts AC and 1/2 hp @ 240 volts AC. Mechanical life is 10 million cycles. UL recognized and CSA certified.

Socket mounts to 35 mm DIN rail.

Control Voltage	Amp Rating @ 240V AC/ 28V DC	Power Draw		
24 AC	10	70 mA	1358T11	$57.07
120 AC	10	14 mA	1358T12	62.20
12 DC	10	100 mA	1358T13	34.24
24 DC	10	50 mA	1358T14	32.98
Socket			1358T21	11.56

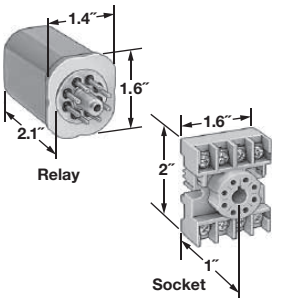
Sequenced Relays That Stay Switched

Also known as latching or step relays, these switch circuits differently each time they receive a control voltage signal and stay switched after the control voltage is removed. Use to control motors, pumps, and lighting. All have a test button and a mechanical indicator. Touchsafe screw terminals prevent contact with live terminals (one-circuit relays have four terminals; two-circuit relays have six terminals). Mount to 35 mm DIN rail. Rated 16 amps @ 120 volts AC and 24 volts DC and 1/2 hp @ 120 volts AC. Power draw is 6.5 VA for AC voltage and 5 watts for DC voltage. Maximum voltage is 277 AC. Mechanical life is 300,000 cycles. UL and C-UL recognized and CE marked.

To Order: Please specify control voltage: 24V AC, 120V AC, 240V AC, 12V DC, or 24V DC.

1st Signal	*When Relay Receives* 2nd Signal	3rd Signal	*Circuit Is*		
Switch One Circuit					
Off	On	____		6784T11	$21.74
Switch Two Circuits					
1 Off, 1 On	1 On, 1 Off	____		6784T13	26.09
2 Off	2 On	____		6784T12	26.09
2 Off	1 On, 1 Off	2 On		6784T14	26.09

Hazardous Location Relays



Relays are hermetically sealed to meet UL Class 1, Division 2, Groups A, B, C, and D for use in hazardous locations. They switch two circuits on or off (DPDT) and have a maximum voltage of 300 AC. Relays have eight circular pins and plug into a socket (sold separately). Contacts spring back (momentary) when power is removed. Mechanical life is 10 million cycles. UL and C-UL recognized.

Socket mounts to 35 mm DIN rail or surface mounts using the two 0.16″ dia. holes (fasteners not included).

Control Voltage	Amp Rating @ 120V AC/24V DC	Max. hp @ 120V AC	Power Draw		
120 AC	12	1/3	10 mA	7125T32	$94.51
24 DC	12	1/3	38 mA	7125T34	94.51
Socket				7125T41	4.85

Harsh Environment Relays

A NEMA 4X enclosure protects relay from water washdowns, dirt, and corrosion. Relay has six 16″ long wire leads through a 1/2″ NPT male connection. It switches one circuit on or off (SPDT) and is rated 1/3 hp @ 240 volts AC when wired to switch circuit on. Power draw is 28 mA @ 120 volts AC and 18 mA @ 24 volts DC. Relay has a power indicator and two holes for surface mounting (fasteners included). Contacts spring back (momentary) when power is removed. Mechanical life is 10 million cycles. UL and C-UL listed and CE marked.

Control Voltage	Amp Rating @ 277V AC		
10-30 AC/DC, 120 AC	10	4766T11	$22.20

Shared Run-Time Relays

Give two devices, such as two pumps or heaters, equal running time with a relay that automatically alternates between them. It's also known as an alternating relay. There is a switch to cancel the alternating mode and select one device; this limits downtime during maintenance. The relay can also be wired to run both devices simultaneously when necessary. Relay plugs into a socket and has 8 circular pins. It switches two circuits on or off (DPDT). UL recognized, CSA certified, and CE marked. **Socket** mounts to 35 mm DIN rail or surface mounts using the two 0.17″ dia. holes (fasteners not included).

	Control Voltage	Amp Rating @ 120/240V AC		
Relay	120 AC	10	7136K12	$68.65
Socket (2″ Ht. x 1.6″ Wd. x 1″Dp.)			7122K19	4.07

High DC Inrush Current Relays

Made to handle a high starting (inrush) current, this type of relay is also called an automotive relay. They have 0.25″ wide quick-disconnect terminals, except standard four-terminal relays have two 0.25″ wide and two 0.375″ wide quick-disconnect terminals. Mechanical life is rated at 10 million cycles, unless noted. Relays with mounting tab have a ¼″ dia. hole (fasteners not included). Sockets are sold separately.

Standard relays are for dry environments.

Weatherproof relays are for wet or damp locations.

Long-life relays have solid state construction for an extended service life.

Sockets have terminals to attach wire. 8228K43 is 1.2″ Ht. × 1″ Wd. × 1.3″ Dp. 8228K16, 8228K18, and 8228K42 are 1″ Ht. × 1″ Wd. × 0.9″ Dp. 8228K17 and 8228K19 are 1.4″ Ht. × 1.4″ Wd. × 1.6″ Dp.

Sockets with wire leads have 12″ wire leads. 8228K12 is 1.2″ Ht. × 0.8″ Wd. × 1.3″ Dp. 8228K13 and 8228K15 are 1″ Ht. × 1″ Wd. × 0.9″ Dp. 8228K14 and 8228K44 are 1.6″ Ht. × 1.4″ Wd. × 1.4″ Dp.

Plug relays into sockets for fast installation and replacement. Mount sockets to 35 mm DIN rail or use the two holes for surface mounting (fasteners not included). All have screw terminal connections. UL recognized, CSA certified, and CE marked, except Style B and Style E are not CE marked.

Touchsafe sockets have recessed screw terminal connections to prevent contact with live circuits.

Use **hold-down clips** in applications subject to vibration.

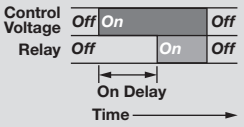
About Timer Relays

Timer relays, or time-delay relays, have contacts that open or close based on a time delay once control voltage is applied or removed.

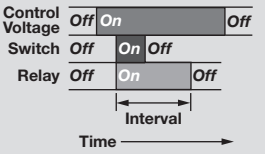
On-Delay (Delay-On-Make)



You set how long it takes for the relay to turn on after control voltage is applied.

Example: A drill starts pumping lubricant immediately, but it does not start rotating until the set time has elapsed.

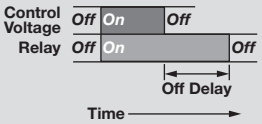
Switch-On Initiated Interval (Single-Shot)



Unlike interval timer relays, these require a switch to activate the timing function instead of control voltage (which is applied the entire time). When you turn on the switch, the relay turns on. It stays on for the interval time and then turns off.

Example: Lights in a storage room are turned on with a switch and stay on for a set time before turning off.

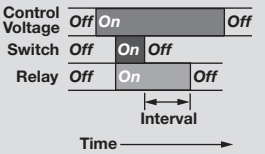
Off-Delay (Power-Off Delay)



When control voltage is applied, the relay turns on. When the control voltage is removed, the relay stays on for the off-delay time and then turns off.

Example: A motor shuts off and its cooling system continues to run for a set time.

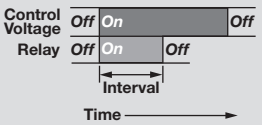
Switch-Off Initiated Interval (Delay-On-Break)



A switch is required to activate the timing function instead of control voltage (which is applied the entire time). When you turn on the switch, the relay turns on. When you turn off the switch, the relay stays on for the interval time and then turns off.

Example: A projector's light is turned off with a switch, but its cooling fan continues to run for a set time.

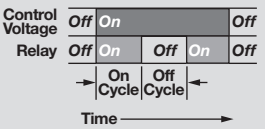
Interval



When control voltage is applied, the relay turns on. It stays on for the interval time and then turns off.

Example: When a part moving down a conveyor reaches a certain location, a cleaning spray comes on for a set time.

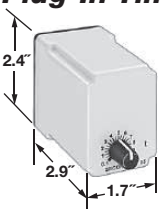
Repeat Cycle

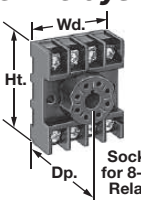


When control voltage is applied, the relay turns on for the on-cycle time. Then the relay turns off for the off-cycle time. This process repeats until the control voltage is removed.

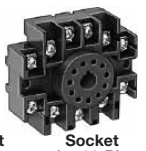
Example: A flashing light.

Plug-In Timer Relays





Socket for 8-Pin Relays



Socket for 11-Pin Relays

Turn knobs to adjust the delay between the time relays receive the control signal and the time relays turn on or off. Use in applications such as paint and conveyor lines where machinery needs to turn on or off after a set period of time. All plug into a socket.

Relays switch two circuits on or off (DPDT), except switch-on initiated interval (single-shot) relays switch one circuit on or off (SPDT). All are rated 10 amps @ 240 volts AC and 8 amps @ 28 volts DC. Mechanical life is 10 million cycles, except off-delay (power-off delay) relays have a life of 2 million cycles. UL recognized, CSA certified, and CE marked, except off-delay (power-off delay) relays are not CSA certified.

Sockets mount to 35 mm DIN rail or surface mount using the two 0.17″ dia. holes (fasteners not included).

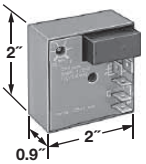
Surface-Mount Timer Relays



Relays surface mount and have an on-delay (delay-on-make) timing function. Adjust the delay with the built-in variable switch (potentiometer). Relays switch one circuit on or off (SPDT). All have 0.25″ quick-disconnect terminals and a 0.17″ dia. mounting hole (fastener not included). Rated 8 amps @ 250 volts AC. Mechanical life is 10 million cycles. UL and C-UL recognized.

Control Voltage	Overall Timing Range	Power Draw

12 DC	15 sec.-300 sec.	292 mA	**77055K632**	42.34

For information about electrical switches, see page 909. For information about timing functions, see page 960.

Medium-Amp Timer Relays

With a higher amp rating than other timer relays, these are ready for compressors, blowers, and heaters. Relays are rated 30 amps @ 120 volts AC, 30 amps @ 28 volts DC, and 1 hp @ 120 volts AC. Also known as power relays, they switch one circuit on or off (SPDT). Mechanical life is ten million cycles. All have 0.25″ quick-disconnect terminals, a knob for timer adjustment, and can be surface mounted (fasteners not included). UL recognized and CSA certified. For information about medium-amp relays, see page 954. **To Order:** Please specify overall timing range: 0.1-10 sec., 1-100 sec., 10-1,000 sec., 0.1-10 min., or 1-100 min.

Switch-Off Initiated Interval (Delay-On-Break)	36 mA	2809T45	64.30	41 mA	2809T46	64.30
Repeat Cycle	36 mA	2809T55	64.30	41 mA	2809T56	64.30

Wide-Range Timer Relays

Postpone starts longer and set wider intervals than with most timer relays. All have eight circular pins and plug into a socket. Rated 10 amps @ 240 volts AC. Relays switch two circuits on or off (DPDT), except switch-on and switch-off initiated interval relays switch one circuit on or off (SPDT). Mechanical life is 10 million cycles. UL recognized.

On-delay (delay-on-make) relay has a three-digit push-button switch for timer adjustment.

Interval, switch-on initiated interval (single-shot), switch-off initiated interval (delay-on-break), and **repeat cycle relays** have DIP switches for timer adjustment. Rated 10 amps @ 28 volts DC and ⅓ hp @ 240 volts AC.

Socket mounts to 35 mm DIN rail or surface mounts using the two 0.17″ dia. holes (fasteners not included). See page 959 for more socket information.

To Order: For relays, please specify control voltage (power draw): 24V AC (135 mA), 120V AC (27 mA), 240V AC (14 mA), 12V DC (271 mA), or 24V DC (135 mA).

7096K1

7096K21-K24

Socket		7122K19	4.07

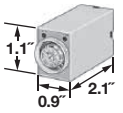
Multifunction Timer Relays

Each relay has a variety of timing functions to choose from. All plug into a socket. Mechanical life is 10 million cycles.

Standard relay allows you to switch between on-delay (delay-on-make), interval, switch-on initiated interval (single-shot), switch-off initiated interval (delay-on-break), and repeat cycle functions. It has five timing ranges and a three-digit push-button switch for timer adjustment. Relay switches two circuits on or off (DPDT) and has 11 circular pins. Rated 10 amps @ 240 volts AC. UL and C-UL recognized. **To Order:** Please specify control voltage (power draw): 24V AC (83 mA), 120V AC (17 mA), 240V AC (8 mA), 12V DC (167 mA), or 24V DC (83 mA).

Standard Relay

Miniature relay saves space. Switch between on-delay (delay-on-make), interval, and repeat cycle functions. Relay has four timing ranges and a knob for timer adjustment. It switches four circuits on or off (4PDT). There are 14 spade-terminal connections. Rated 3 amps @ 250 volts AC. UL recognized, CSA certified, and CE marked. **To Order:** Please specify control voltage (power draw): 100-120V AC (15 mA), 200-230V AC (9 mA), or 24V DC (45 mA).



Miniature Relay

Sockets mount to 35 mm DIN rail or surface mount using the two 0.17″ dia. holes (fasteners not included). See page 959 for more socket information.

	Overall Timing Range	Relays		Sockets	
Standard	0.05 sec.-999 min.	6964K2	$86.78	7122K21	$6.89
Miniature	0.1 sec.-10 min.	7339K7	75.53	7122K25	9.14

Panel-Mount/Plug-In Timer Relays

Plug relays into a socket and use the mounting bracket (sold separately) if you need to install them in a panel. Standard relays fit into a 1.78″×1.78″ cutout and compact relays fit into a 1.30″×1.30″ cutout. Relays switch two circuits on or off (DPDT), except relay with eight functions switches one circuit on or off (SPDT). Mechanical life is 10 million cycles.

Standard Relays with 8 Circular Pins and **Compact Relays—**All have a knob for timer adjustment and an indicating light. UL recognized, CSA certified, and CE marked. *Standard relays* have four timing ranges. *Relay with four functions* allows you to switch between on-delay (delay-on-make), interval, switch-on initiated interval (single-shot), and repeat cycle functions. *Compact relays* have a single timing range.

Standard Relays with 11 Circular Pins—*Relay with five functions* allows you to switch between on-delay (delay-on-make), interval, switch-on initiated interval (single-shot), switch-off initiated interval (delay-on-break), and repeat cycle functions. It has six timing ranges and knob adjustment. UL and C-UL recognized. *Relay with eight functions* allows you to switch between on-delay (delay-on-make), interval, switch-on initiated interval (single-shot), two types of switch-off initiated interval (delay-on-break), repeat cycle, and two types of signal on/off delay functions. It has seven timing ranges, push-button adjustment, and an LCD to show the time remaining. UL recognized, CSA certified, and CE marked.

Sockets mount on 35 mm DIN rail or surface mounts using the two 0.17″ dia. holes (fasteners not included). See page 959 for more socket information.

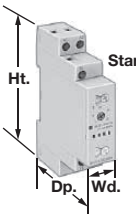
Multifunction DIN-Rail Mount Timer Relays



Relays switch between a variety of timing functions. All mount to 35 mm DIN rail.

Standard relay switches between on-delay (delay-on-make), off-delay with switch (power-off delay), interval, switch-on initiated interval (single-shot), switch-off initiated interval (delay-on-break), and repeat cycle functions. It has six timing ranges; total range is 0.1 seconds to 24 hrs. Relay switches one circuit on or off (SPDT). UL and C-UL listed; CE marked.

Long-life relays have solid state construction with no moving parts for extended life. Switch between on-delay (delay-on-make), interval, switch-on initiated interval (single-shot), switch-off initiated interval (delay-on-break), and repeat cycle functions. Relays switch one circuit on (SPST-NO). All have holes for surface mounting (fasteners are included). UL recognized, CSA certified, and CE marked. *DIP switch adjustable* relays have a timing range of 0.1 seconds to 63 minutes. DIP switches are more precise than knobs, making it easier to set multiple relays to the same timing range. *Knob adjustable* relays have a timing range of 0.1 seconds to 100 minutes. **To Order:** Please specify adjustment style: DIP switch or knob.

Ultra-thin relays disconnect from the included socket for easy replacement. Switch between two types of on-delay (delay-on-make), interval, and repeat cycle functions. Relays have four timing ranges; total range is 0.1 seconds to 6 hours. 4799T11 switches one circuit on or off (SPDT). 4799T12 and 4799T13 switch one circuit on (SPST-NO). All are UL and C-UL recognized and CE marked.

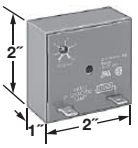
Replacement Relay for 4799T12							**4799T23**	17.75

Long-Life Surface-Mount Timer Relays



No moving parts means these solid state relays have a longer life and quieter operation than other timer relays. They have a built-in variable switch (potentiometer) to adjust the delay within the timing range, unless noted. Relays surface mount (fastener not included). All switch one circuit on (SPST-NO) and have 0.25″ quick-disconnect terminals.

Relays have a 0.17″ dia. mounting hole. UL and C-UL recognized. 77055K74 has DIP switch adjustment with an overall timing range of 1-1,023 sec. **To Order:** Please specify timing range (except for 77055K74): 0.05-1 sec., 0.25-5 sec., 0.5-10 sec., 3-60 sec., 15-300 sec., or 30 sec.-10 min; for 7457K51 and 7457K52, specify 0.25-5 sec., 0.5-10 sec., or 3-60 sec.

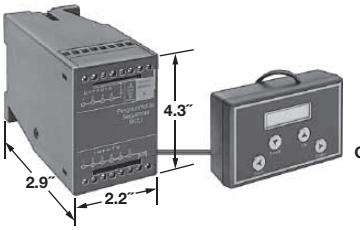
★ Requires one variable switch (potentiometer), sold separately.
■ Requires two variable switches (potentiometers), sold separately.

Easy-Program Logic Controllers



Controller with Hand-Held Programmer

Design and operate up to six simultaneous programs without symbols or technical language—the on-screen instructions use simple English. These PLCs have a 32KB memory capacity and memory backup to retain programming during power outages. Use to program automation jobs and to replace relays, timer relays, and timer switches.

Controllers have six 12-14 volt DC inputs and four relay outputs rated 5 amps @ 115 volts AC. Processing speed is 1,000 lines per second. Use the included 3-ft. power cord and two-prong plug or hardwire directly to a 115 volt AC supply. Mount to 35 mm DIN rail or panel mount using the two 5/16″ dia. holes (fasteners not included). Controllers have screw terminal connections. Operate on 115 volts AC.

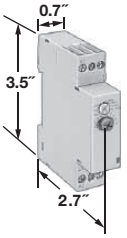
Controller with hand-held programmer has a 1-ft. long connection cable. **Controller with PC software** includes a serial interface cable. You'll need a PC running Windows 95 or better with a CD-ROM drive and an RS-232 serial port.

Remote timer panel monitors and adjusts up to eight timers while the controller is operating. It's NEMA 12 rated for oil protection and can machine mount (fasteners are included). Comes with a 30″ long cable.

Expansion module lets you double the PLCs' inputs and outputs.

Controller with Hand-Held Programmer	**6884K2**	$342.73
Controller with PC Software	**6884K4**	319.09
Remote Timer Panel	**6884K7**	159.55
Expansion Module (6 Input/4 Output)	**6884K3**	177.27

DIN-Rail Mount Timer Relays



Mount relays to 35 mm DIN rail and turn the screw to select one of seven timing ranges. Overall timing range is 0.1 seconds to 100 hours. Use knob to adjust within the selected timing range. Relays have solid state construction for long life. They switch one circuit on (SPST-NO) and are rated 0.7 amps @ 250 volts AC. Power draw is 7 mA. Relays have screw-clamp connections. UL and C-UL listed and CSA certified.

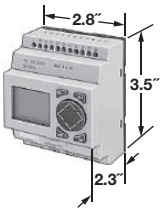
	Control Voltage		
On-Delay (Delay-On-Make)	24-240 AC/DC	**7801K51**	$64.34
Interval	24-240 AC	**7801K52**	54.70

Surface-Mount GFCIs

Mount and hardwire to your equipment for ground fault protection. These GFCIs have a power-on indicator light, test and reset buttons, and 3/16″ dia. mounting holes (screws not included). They will trip if a ground fault is detected; press the button to reset. In case of a power outage, reset is automatic. Housing is black polycarbonate. UL recognized and CSA certified.

Rating						
VAC	Amps	Ht.	Wd.	Dp.		
120	20	3.3″	2.4″	2.0″	**72155K73**	$61.14
240	20	3.3″	2.4″	2.0″	**72155K74**	62.76

Mini Programmable Logic Controllers



A mix between a PLC and a timer relay, these controllers have built-in logic, timer, and counter functions. They have eight individually programmable timers that each control up to four devices and can be set up to seven days in advance. No additional hardware or programming software is needed. Mount to 35 mm DIN rail.

Set up to 16 timing ranges between 0.01 sec. and 100 hours and six operating modes: two types of on-delay (delay-on-make), switch-on initiated interval (single-shot), two types of switch-off initiated interval (delay-on-break), and repeat cycle. Controllers have an LCD screen, push-buttons, and memory backup.

Both have solid state output rated 10 amps @ 240 volts AC and 8 amps @ 24 volts DC. Mechanical life is 10 million cycles. They have touchsafe screw terminal connections to prevent contact with live terminals. UL listed, CSA certified, and CE marked. **24-volt DC** controller can receive analog signals from temperature and pressure sensors on two of the eight inputs.

Control Voltage	No. of Signal Inputs	No. of Relay Outputs	Power Draw		
100/240 AC	8	4	40/20 mA	7244K8	$251.92
24 DC	8	4	80 mA	7244K9	251.92

High-Amp Time and Day Activated Switches

Position trippers around the clock dial to set on and off times for large loads such as lighting, pumps, and heaters. Enclosures have 0.19″ dia. mounting holes (fasteners not included) and ½″ and ¾″ trade size knockouts, unless noted. All switches have screw terminal connections. CSA certified to UL standard 917, unless noted. Cannot be sold in California.

24-hour switches repeat the same on/off schedule daily.

24-hour switches with day skipper repeat the same on/off schedule daily, plus they can skip operation for 1 to 6 days. Switches come with three skip screws.

7-day switches allow a different program for each day of the week.

Indoor switches have a NEMA 1 steel enclosure. Size is 7¾″ Ht.×5″ Wd.×3″ Dp., except 79915K66 is 12½″ Ht.×8¼″ Wd.×4″ Dp.

Indoor/outdoor switches have a rain-tight NEMA 3R steel enclosure, except 7037K15 and 79915K59 are polycarbonate. Size is 9⅜″ Ht.×5½″ Wd.×3⅝″ Dp., except 7037K78 is 8¼″ Ht.×5¼″ Wd.×4⅝″ Dp., 7037K15 and 79915K59 are 8⅞″ Ht.×6⅝″ Wd.×3″ Dp., and 79915K68 is 12½″ Ht.×8¼″ Wd.×4″ Dp.

Set-to-the-Minute High-Amp Time and Day Activated Switches

24 Hour

7 Day

Sunrise/Sunset

Switch large loads on and off with to-the-minute electronic programming. These switches have battery backup to keep time during a power outage. Enclosures are lockable and have ½″ and ¾″ trade size knockouts. Switches have screw terminal connections. UL listed, unless noted.

24-hour indoor/outdoor switches repeat the same on/off schedule daily. Enclosures are 8¼″ Ht.×5″ Wd.×3″ Dp. and have 0.16″ dia. mounting holes (fasteners not included). Cannot be sold in California.

7-day switches with day skipper allow a different program for each day of the week and can skip operation on selected days. 7459K89 can program each circuit independently and be set to activate equipment such as bells and signals for just a few seconds. Enclosures are 8¼″ Ht.×5″ Wd.×3″ Dp., except 7459K89 is 7¾″ Ht.×5″ Wd.×3″ Dp. All have 0.16″ dia. mounting holes (fasteners not included). Cannot be sold in California.

Sunrise/sunset indoor/outdoor switches have built-in programming to automatically turn lights off and on based on sunrise and sunset. They also allow a different program for each day of the year. Switches compensate for leap year and daylight saving time. You can set them to override regular programming for up to 99 holidays. Switches can also be used for 7-day programming and to activate equipment such as bells and signals for just a few seconds. Enclosures are 8⅝″ Ht.×5¾″ Wd.×3⅝″ Dp. and have 0.19″ dia. mounting holes (fasteners not included).

♦ Not UL listed; CSA certified to UL standard 916.

Time & Day Activated Switches

For information about electrical switches, see page 909.

Compact Set-to-the-Minute Time and Day Activated Switches

One Circuit Panel Mount

Two Circuit 24 Hour

A level above compact time and day activated switches, these have electronic programming for to-the-minute on and off times. Switches have manual override and battery backup to keep time during a power outage.

One-circuit switches allow a different program for each day of the week. Rated 16 amps @ 277 volts AC. UL and C-UL recognized. Cannot be sold in California. *Panel-mount* switches have 0.25″ quick-disconnect connections. They are 2.8″ Ht.×2.8″ Wd.×1.5″ Dp. and fit in a 2.63″ square cutout. *Surface/DIN-rail mount* switches have screw terminal connections. Mount to 35 mm DIN rail or surface mount using the three 0.13″ dia. holes (fasteners not included). They are 4.1″ Ht.×2.9″ Wd.×2.2″ Dp.

Two-circuit switches can control two loads with two different programs. They have screw terminal connections. Rated 15 amps @ 250 volts AC. UL recognized and CSA certified. *24-hour* switch can set two 24-hour on/off schedules, each for a different circuit. Program each circuit to apply its schedule to any combination of days during the week. Mount to 35 mm DIN rail, panel mount in a 3.62″ square cutout, or surface mount (fasteners included). Switch is 3.8″ Ht.×3.8″ Wd.×2.2″ Dp. *7-day* switch has more flexibility; each day of the week can have a unique schedule. It is 2.8″ Ht.×2.8″ Wd.×2.2″ Dp. and panel mounts in a 2.68″ square cutout.

Compact Time and Day Activated Switches

Surface/DIN-Rail Mount

A dial clock face and captive trippers simplify programming of these small, space-saving switches. They switch one circuit and are rated 21 amps @ 250 volts AC. Input voltage is 120 AC. UL recognized and CSA certified. Cannot be sold in California.

7-day switches allow a different program for each day of the week.

Panel-mount switches have 0.25″ quick-disconnect connections and are 2.8″ Ht.×2.8″ Wd.×1.5″ Dp. Mount in a 2.63″ square cutout.

Surface/DIN-rail mount switches have screw terminal connections and are 4.2″ Ht.×2.8″ Wd.×2.2″ Dp. Mount to 35 mm DIN rail or surface mount using the three 0.13″ dia. holes (fasteners not included).

Timing Range	Maximum On/Off Cycles	Minimum On/Off Time	Panel Mount		Surface/DIN-Rail Mount	
24 hr.	48 per day	15 min.	7797K11	$51.76	7797K13	$51.76
7 day	6 per day	2 hr.	7797K12	76.04	7797K14	76.04

Wall-Mount Time and Day Activated Switches

24 Hour

7 Day

Replace your wall switch and turn lights and other devices on and off at programmed times. Switches can operate fluorescent and incandescent lights. Mount in a single-device (single-gang) wall box. Both switch one circuit and have 6″ wire leads. Color is white.

24-hour switch repeats the same on/off schedule daily. Set with the included captive trippers. There is a slide switch to select on, off, or timer setting. Wall plate is included. Rated 20 amps @ 120 volts AC. UL and C-UL listed. Cannot be sold in California.

7-day switch has to-the-minute programming that can be set for each day of the week. It can also turn lights on and off based on sunset and sunrise; use this feature independently or combine it with timed programming. Switch has an LCD and battery backup. Rated 15 amps @ 120 volts AC. CSA certified. Fits a standard GFCI wall plate (not included, see page 893).

Timing Range	Maximum On/Off Cycles	Minimum On/Off Time		
24 hr.	24	30 min.	7367K4	$43.38
7 day	40	1 min.	7367K61	54.67

Time and Day Activated Switches

A

B

C

D

E

Put your lamp or other small electrical load on an on/off schedule. Plug the switch into an outlet and your device into the switch. All have a manual on/off override. Input voltage is 120 AC.

(A&B) 24-Hour—Switches repeat the same on/off schedule daily. *Style A* is CSA certified. *Style B* has a 5-ft. cord and is UL listed.

(C) 7-Day—Switch can perform a different schedule for each day of the week. It has a random on/off time function and on/off sunset/sunrise setting. CSA certified.

(D) Outdoor 24-Hour—Switch repeats the same on/off schedule daily. Mount at least 3 feet above ground level. Has two pairs of removable trippers, a 1/4″ dia. mounting hole (fasteners not included), and a 2-ft cord. CSA certified. Cannot be sold in California.

(E) Outdoor 7-Day—Switch can perform a different schedule for each day of the week. It has a random on/off time function. Mount at least 4 1/2 feet above ground level. Has two 5/16″ dia. mounting holes (fasteners not included), and a 2-ft cord. UL and C-UL listed.

Wall-Mount Timer Switches

Rotary with Wall Plate

Rotary without Wall Plate

High-Amp Rotary

Push-Button

Programmable Push-Button

Use in place of wall switches to automatically turn electrical equipment, such as lights, on or off. Switches have screw terminal connections and mount in a single-device (single-gang) wall box, unless otherwise stated. UL listed and CSA certified, except programmable switch is UL and C-UL listed.

Switches **with override** let you bypass the automatic shut-off.

Switches **without wall plate** fit a standard GFCI wall plate (not included, see page 893).

Rotary switches are rated 20 amps @ 125 volts AC and 10 amps @ 250 volts AC. Cannot be sold in California. Switches *with wall plate* have a silver plastic wall plate and ivory knob. Switches *without wall plate*—To Order: Please specify knob color: ivory or white.

High-amp rotary switches can control 240-volt AC air conditioners, heaters, and ventilating equipment. Switches mount in a two-device (two-gang) wall box. Rated 28 amps @ 240 volts AC and 1 hp @ 120/240 volts AC. Each has a steel wall plate with a black knob.

Push-button switch has four set times of 5, 10, 15, and 30 minutes. Rated 20 amps @ 120 volts AC and has wire leads. Includes an off button and switch covers in ivory, light almond, and white.

Programmable push-button switch eliminates the need to reset a dial with every use. You can program lights to turn off automatically after an interval of five minutes to 12 hours. An LCD counts down until shut-off and offers an optional visual and audible shut-off warning. Rated 6.6 amps @ 120 volts AC, 4.3 amps @ 277 volts AC, and 1/6 hp @ 125 volts AC. Switch is white.

Power-Saving Timer Switches

Push and release the button to operate—no electricity required. It switches one circuit on or off (SPDT) after an adjustable 2-60 second time delay. Rated 10 amps @ 240 volts AC. Switch has solder-lug connections and is 1 7/16" Ht. x 1" Wd. x 1 1/2" Dp. Panel mount in a 15/32" dia. cutout. Depth behind panel is 1 1/16". Maximum panel thickness is 3/16". UL recognized and CSA certified.

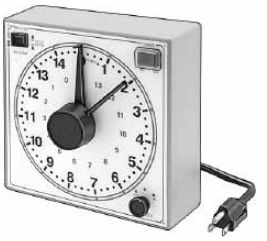
8008K33 ..... $139.00

Timer Switches

Plug your electrical device into the switch's three-prong receptacle and turn the dial to set the run time. Rated 10 amps @ 125 volts AC. Include a 6-ft. cord with three-prong plug. Switches are 3 1/4" Ht. x 2 3/4" Wd. x 2 3/4" Dp. UL listed and CSA certified.

Timing Range	Minimum On Time		
0-30 min.	1 min.	8386T13	$108.20
0-60 min.	1 min.	8386T14	108.20

High-Visibility Timer Switches



A 6 1/2" dia. clock face makes the run time easy to see from a distance. Switches have two rocker switch-operated three-prong outlets on the side; plug in your devices and set the run time. A buzzer sounds when the timer stops. Each outlet is rated 5 amps, 1/3 hp @ 120 volts AC.

Standard switches have a white face. Set them so both outlets turn off when the timer stops or have the top outlet turn off and the bottom outlet turn on when the timer stops.

Glow-in-the-dark switch has a black face with phosphorescent dial and hands. Set it so both outlets turn on when the timer stops or have the top outlet remain off, the bottom outlet remain on, and the buzzer sound when the timer stops.

All switches sit on a table top and have two 3/8" dia. holes on the back panel for wall mounting (fasteners not included). They have a 6-ft. cord with three-prong plug. Switches are 7 1/2" Ht. x 7 1/2" Wd. x 2 1/2" Dp.

Timing Range	Minimum On/Off Time		
Standard			
0-15 min.	0.25 sec.	1302T12	$204.17
0-60 min.	1 sec.	1302T22	195.83
0-15 hr.	15 sec.	1302T32	208.33
0-60 hr.	1 min.	1302T42	204.17
Glow-in-the-Dark			
0-60 min.	1 sec.	1302T62	209.13

Panel-Mount Timer Switches

Mount switches to your panel to control hard-wired devices. They switch one circuit on or off (SPDT) and require a 3/8" dia. mounting hole. Maximum panel thickness is 1/8". Rated 15 amps @ 125/250 volts AC. All have 0.25" quick-disconnect connections and two 8" wire leads. Input voltage is 120 AC. UL and C-UL recognized and CSA certified.

Rotary reset switches are set for each use by a dial. They are 3 1/16" Dia. x 1 13/16" Dp.

Push-button reset switches are convenient if you often repeat the same interval. They retain the last setting of the dial; a push of the button starts the timer over at the same interval. Switches are 3 1/16" Dia. x 2 1/8" Dp.

Timing Range	Minimum On/Off Time	Rotary Reset		Push-Button Reset	
0-30 min.	1 min.	7366K61	$116.91	7366K71	$151.68
0-60 min.	5 min.	7366K62	116.91	7366K72	151.68
0-12 hr.	1 hr.	7366K63	116.91	7366K73	151.68
0-24 hr.	2 hr.	7366K64	116.91	7366K74	151.68
0-60 hr.	1 hr.	7366K65	116.91	7366K75	151.68

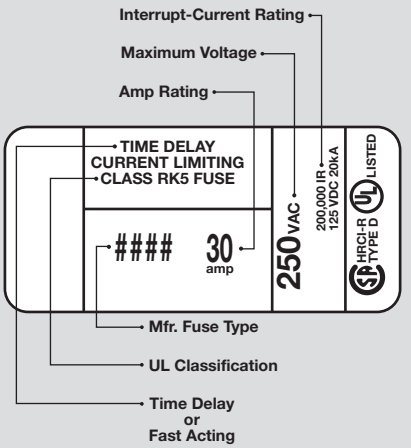
Cycle Timer Switches

Turn equipment on and off at regular intervals and repeat the cycle every hour. Switch one circuit on or off (SPDT). Rated 16 amps @ 250 volts AC. Switch has screw terminal connections. Mount to 35 mm DIN rail or surface mount using the two 0.16" dia. holes (fasteners not included). Switch is 3 5/16" Ht. x 2 1/8" Wd. x 2 3/8" Dp. UL and C-UL recognized and CE marked.

Input Voltage	Timing Range	Maximum On/Off Cycles	Minimum On/Off Time		
120 AC	0-60 min.	24 per day	1.25 min.	2827T3	$90.51

About Fuses

How to Read Your Fuse Label



Fuses interrupt overload and short-circuit currents. Overload currents typically are up to 10 times larger than the fuse's available amp rating and occur when your equipment draws more current than it needs. Short circuits are greater than 10 times the fuse's amp rating and occur when the current finds a "shortcut" outside its normal path.

Time-delay fuses delay opening on low-level overloads until the overload has been sustained for a specific amount of time. This prevents the fuse from blowing when exposed to harmless temporary overload currents such as motor start-ups and switching surges. Some time-delay fuses are also known as dual-element fuses.

Fast-acting fuses do not have a time-delay opening. Use them when temporary overload currents are not present. Suitable for resistive loads that don't surge, such as heating and lighting.

Amp rating is the maximum current that a fuse carries under normal conditions.

Interrupt-current rating is the maximum current that a fuse can safely stop in the event of a short circuit.

UL Class J Fuses

Time Delay (1 to 60 Amp)

Time Delay (70 to 400 Amp)

Time Delay with Blown-Fuse Indicator (8 to 60 Amp)

Time Delay with Blown-Fuse Indicator (70 to 200 Amp)

Fast Acting (1 to 60 Amp)

Fast Acting (80 to 400 Amp)

More compact than UL Class RK1 fuses, these fuses are a good choice for tight spaces. UL listed and CSA certified. For fuse blocks, see 7688K and 7721K on page 969.

To Order: Please specify amp rating where necessary.

Time-Delay Fuses—Also known as dual-element fuses. AC interrupt-current rating is 300,000 amps; DC interrupt-current rating is 100,000 amps.

Time-Delay Fuses with Blown-Fuse Indicator—A dot on the side turns red when the fuse blows. AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 100,000 amps.

Fast-Acting Fuses—AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 10,000 amps for 15- to 60-amp fuses.

UL Class CF Touch-Safe Fuses and DIN-Rail Mount Fuse Blocks

Fuse

Fuse Block

An enclosed design with recessed plug-in blades prevents accidental contact with electrical circuits. Meet IEC European standards and UL Class CF (cube fuse) requirements. UL listed and CSA certified.

Fuses— A safer alternative for new installations. These time-delay fuses (also known as dual element) have a blown-fuse indicator except for the 1- and 3-amp fuses. AC interrupt-current rating is 300,000 amps; DC interrupt-current rating is 100,000 amps.

To Order: Please specify amp rating.

Fuse Blocks— Mount directly on 35 mm DIN rail (see 8961K on page 787). You can gang them together to create double- and triple-pole configurations.

UL Class Fuse Block Safety Covers

Prevent accidental shocks with these snap-on safety covers. They fit most popular fuses and fuse blocks and have slotted openings for testing with probes. CSA certified and CE approved. UL listed except the covers for Class CC fuses, which have UL recognized components.

Covers with indicator light illuminate yellow when fuse is blown.

UL Class J Touch-Safe DIN-Rail Mount Fuse Blocks

Designed for use with UL Class J fuses, these blocks prevent accidental contact with live parts. Mount blocks directly on 35 mm DIN rail (see 8961K on page 787). All blocks are rated for 600 VAC and have screw terminals. UL listed and CSA certified.

Semiconductor Very Fast-Acting Fuses

A  **B** 

With a quicker response time than standard fast-acting fuses, these fuses provide superior circuit protection for sensitive solid-state devices. Interrupt-current rating is 200,000 amps except for 150 VAC fuses, which have a 100,000 amp rating. UL recognized and CE approved.

To Order: Please specify amp rating where necessary.

1,000 VDC Fast-Acting Fuses and Fuse Blocks

Fuse

Fuse Block

Developed for the solar industry, these fuses and fuse blocks handle the requirements of high-voltage DC applications. Meet IEC European standards.

Fuses withstand the cycling conditions and environment associated with outdoor installations. Interrupt current rating is 10,000 amps. UL listed.

To Order: Please specify amp rating.

Fuse blocks are touch-safe style and mount on 35 mm DIN rail (see 8961K on page 787). UL recognized.

Available Amps	Dia.	O'all Lg.		
Fuse Types: PV and DCT

Fuse Block			4504K7	25.02
Fuse Block with Blown-Fuse Indicator			4504K9	31.91

UL Class G Midget Fuses

Protect your power distribution branch circuits with these fuses. AC interrupt-current rating is 100,000 amps; DC interrupt-current rating is 10,000 amps. UL listed and CSA certified. For fuse blocks, see 7716K on page 971.

To Order: Please specify amp rating where necessary.

♦ Prices are 10% lower when you buy in quantities of 10 or more.

UL Class CC Midget Fuses

Replacement errors aren't a concern for these fuses, which are used in power distribution branch circuits. They have a rejection-style design that ensures they can only be replaced with 200,000 amp and higher interrupt-current rated fuses. UL listed. For fuse blocks and fuse holders, see 7716K, 6113T, and 7055K on page 971.

To Order: Please specify amp rating.

Time-Delay Fuses for Motors— AC interrupt-current rating is 200,000 amps; DC interrupt-current rating is 100,000 amps for 1/4- to 10-amp fuses and 20,000 amps for 12- to 60-amp fuses.

Time-Delay Fuses for Transformers— AC interrupt-current rating is 200,000 amps; 12-amp and higher fuses have a DC interrupt-current rating of 20,000 amps.

Fast-Acting Fuses— AC interrupt-current rating is 200,000 amps.

Midget Fuses

While these fuses provide additional equipment protection, they're not designed for power distribution branch circuits. UL listed and CSA certified. For fuse blocks and fuse holders, see 7722K, 7716K, and 7055K on page 971.

To Order: Please specify amp rating.

Time-Delay Fuses— AC interrupt-current rating is 10,000 amps.

Fast-Acting Fuses— AC interrupt-current rating is 10,000 amps for 250 VAC fuses (except 12 amp is 750 amps) and 100,000 amps for 600 VAC fuses. DC interrupt-current rating is 10,000 amps for DC-rated fuses.

Fuses for Multimeters

Fuses are fast acting and UL recognized. Compatible with Fluke multimeters.

44/100-amp fuse has an AC/DC interrupt-current rating of 10,000 amps. ***11-*** and ***15-amp*** fuses have an AC/DC interrupt-current rating of 20,000 amps.

Amps	VAC/VDC	Dia.	O'all Lg.

15	1,000/1,000	13/32″	1 1/2″	4398K3	10.10

European "Milk Bottle" Fuses

Also known as diazed type, these Type D fuses are rated 500 VAC.

gL-gG Fuses— Meet IEC European standards and have a blown-fuse indicator. Interrupt-current rating is 75,000 amps.

gL Fuses— Comply with DIN standards. Interrupt-current rating is 100,000 amps.

Inline Midget Fuse Holders

Crimp on for quick wire connection. Made of plastic. Rated 30 amps and 600 VAC.

Holder ***for UL Class CC*** fuses is UL listed. Holder ***for Non-UL Class*** fuses is UL recognized.

Optional cover provides a waterproof seal. Made of neoprene. Overall size with fuse is 1″ Dia. × 8″ Lg.

For UL Class		
Fuse Types: FNQ-R, ATQ-R, KLD-R, LP-CC, ATD-R, CCMR, KTK-R, ATM-R, KLK-R

Glass-Tube and Ceramic-Tube Fuse Kits

Kits come in a plastic case.

140-fuse kit includes 3AB and 3AG fuses (1/4 to 30 amps) in fast-acting and time-delay styles, plus fuse holders and fuse clips.

270-fuse kit includes 3AB, 3AG, and 5 mm × 20 mm fuses (1/8 to 30 amps) in fast-acting and time-delay styles, fuse clips, fuse holders, and a fuse block.

140-Fuse Kit	7719K8	$338.49
270-Fuse Kit	7719K9	592.70

140-Fuse Kit

Glass-Tube & Ceramic-Tube Fuses

For information about fuses, see page 966.

Don't see the fuse you need? Just tell us what you're looking for and we'll get it for you.

0.18" and 1/4" Dia. Glass-Tube Fuses

Fast Acting

Time Delay

The right size for electronic circuits. For fuse blocks and fuse holders, see 7687K, 7087K, and 7696K on page 973.

2AG fuses are 0.18" Dia.×0.57" Lg. *Fast-acting* 1/8- to 3 1/2-amp fuses are UL listed and CSA certified and have an interrupt-current rating of 10,000 amps @ 125 VAC; 4- to 10-amp fuses have an interrupt-current rating of 500 amps @ 125 VAC. *Time-delay* 1/4- to 3 1/2-amp fuses are UL listed and CSA certified and have an interrupt-current rating of 10,000 amps @ 125 VAC; 4- to 7-amp fuses are UL recognized and have an interrupt-current rating of 400 amps @ 125 VAC.

3AG fuses are 1/4" Dia.×1 1/4" Lg. *Fast-acting* fuses are UL listed except for 35-amp fuse. 1/16- to 10-amp fuses have an interrupt-current rating of 10,000 amps @ 125 VAC; 12- to 35-amp fuses have an interrupt-current rating of 300 amps @ 32 VAC. *Time-delay* 1/10- to 8-amp fuses are UL listed and have an interrupt-current rating of 10,000 amps @ 125 VAC; 10- to 30-amp fuses are UL recognized and have an interrupt-current rating of 300 amps @ 32 VAC.

8AG fuses are 1/4" Dia.×1" Lg. UL and C-UL listed. Interrupt-current rating is 10,000 amps @125 VAC.

To Order: Please specify amp rating where necessary.

1/4" Dia. Ceramic-Tube Fuses

Designed for high-current electronic circuits such as microwave ovens. These 3AB fuses are 1 1/4" long. For fuse blocks and fuse holders, see 7687K, 7087K, and 7696K on page 973.

Fast-Acting Fuses—*Fuse types ABC, GAB,* and *314* up to 15 amps are UL listed and have an interrupt-current rating of 10,000 amps @ 125 VAC/VDC; 20- to 30-amp fuses are UL recognized and have an interrupt-current rating of 1,000 amps @ 125 VAC and 400 amps @ 125 VDC.

Fuse type 505 are UL and C-UL recognized and CE approved. 10- and 12-amp fuses have an interrupt-current rating of 20,000 amps. 16- to 30-amp fuses have an AC interrupt-current rating of 30,000 amps and a DC interrupt-current rating of 20,000 amps.

Very Fast-Acting Fuses—UL recognized, CSA certified, and CE approved. Interrupt-current rating is 10,000 amps @ 125 VAC/VDC for 1- to 15-amp fuses and 200 amps @ 125 VAC/VDC for 20- and 25-amp fuses.

Time-Delay Fuses—CSA certified and CE approved. 1/4- to 20-amp fuses are UL listed; 25- and 30-amp fuses are UL recognized. Interrupt-current rating for all is 10,000 amps @ 125 VAC; 20- to 30-amp fuses also have an interrupt-current rating of 10,000 amps @ 125 VDC.

To Order: Please specify amp rating.

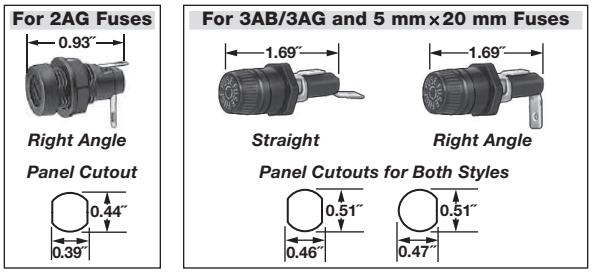
Panel-Mount Fuse Holders for Glass-Tube and Ceramic-Tube Fuses



All have quick-disconnect terminals, fit into the panel cutout sizes shown above, and are made of plastic. UL recognized.

Holder for 2AG fuses has a screwdriver slot knob. Rated 10 amps and 300 VAC. Maximum panel thickness is 1/4". Not compatible with 1/8- and 1/4-amp fast-acting fuses.

Holders for 3AB/3AG (1 1/4" Dia. x 1 1/4" Lg.) and ***5 mm Dia. x 20 mm Lg. fuses*** have a knob that unlocks with a twist. Holders for 3AB/3AG fuses are rated 20 amps and 250 VAC; holders for 5 mm x 20 mm fuses are rated 16 amps and 250 VAC. Maximum panel thickness is 1/8".

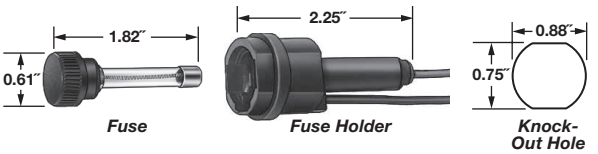
Inline Fuses and Fuse Holder



Commonly used for inline protection of fluorescent light fixtures. You'll need both a fuse and fuse holder.

Fuses— Have a built-in cap that securely connects to the fuse holder. Interrupt-current rating is 10,000 amps. UL listed and CSA certified. *LGR fast-acting* fuses protect lighting fixtures. *LMF time-delay* fuses handle high inrush (inducting) loads from ballast transformers in lighting systems.

To Order: Please specify amp rating.

LHR Fuse Holder— For use with LGR and LMF fuses. Rated 10 amps and 300 VAC. It includes two 7" wire leads. UL recognized.

Fuse Type	Available Amps	VAC		
LGR Fast Acting	1, 1 1/2, 2, 3, 4, 5, 10	300	73405K3	$2.88
LMF Time Delay	1/2, 1, 1 6/10, 2, 3 2/10	300	73405K5	7.19
LHR Fuse Holder			73405K11	2.63
Optional Panel-Mount Clip for Fuse Holder			73405K12	2.29

Lift Truck Fuses

You'll find these fuses on battery-operated lift trucks and other low-voltage equipment.

Fast-acting and ***time-delay fuses*** have an AC/DC interrupt-current rating of 10,000 amps. They're 1 1/8" dia. except 60-amp fuse is 7/8" dia. UL recognized.

Very fast-acting fuses have an AC interrupt-current rating of 2,500 amps and a DC interrupt-current rating of 2,700 amps. They're 7/8" wide and have a blown-fuse indicator. UL recognized up to 400 amps.

To Order: Please specify amp rating where necessary.

Fuse block has stud terminal connections.

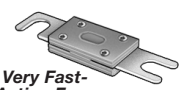
Fast-Acting and Time-Delay Fuses

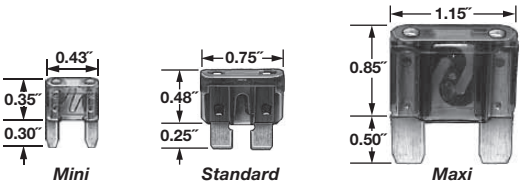


Very Fast-Acting Fuse

Fuse Block

Don't see the fuse you need? Just tell us what you're looking for and we'll get it for you.

Blade-Style Low-Voltage Fuses



Mini *Standard* *Maxi*

Easy to install, these fuses are the industry standard for low-voltage automotive and other electronic applications. UL listed except for fuses with blown-fuse indicator. For fuse blocks and holders, see 9553T on page 785 and 8110K, 5183T, and 8945T on this page.

To Order: Please specify amp rating.

Fast-acting fuses with blown-fuse indicator illuminate when it's time to replace them.

Size	Available Amps	VAC/VDC	Pkg. Qty.		Pkg.
Fast-Acting Fuses					
Fuse Types: ATM, AF2, 297					
Mini	2, 3, 4, 5, 7½, 10	32/32	5	7460K1	$3.18

40-fuse kit includes 40 standard fuses and a fuse puller/tester.

180-fuse kit contains an assortment of 135 mini, standard, and maxi blade-style fuses; 45 fast-acting, glass-tube fuses; and three different fuse puller/testers. Furnished in a plastic box.

40-Fuse Kit	7460K89	Each	$26.78
180-Fuse Kit	7460K88	Each	$101.09

Inline Blade-Style Fuse Holders

For Mini and Standard Fuses

Close the cap on these fuse holders for protection in harsh environments. All are made of plastic. Holders for *mini* and *standard* fuses have two 4″ leads. Holder for *maxi* fuse has two 6″ leads.

Holders with blown-fuse indicator have a light that illuminates when it's time to replace. Both include a fuse.

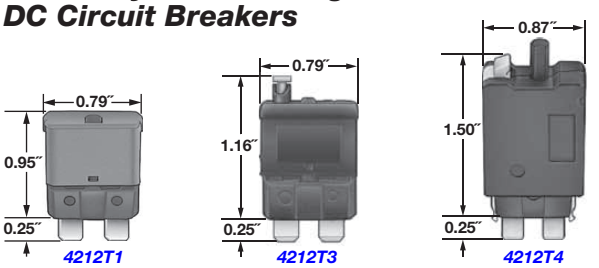
Blade-Style Low-Voltage DC Circuit Breakers



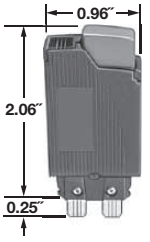
4212T1 *4212T3* *4212T4*

Never worry about blown fuses again—replace your type ATC, AF, ATO, and 257 blade-style fuses with these circuit breakers. They protect against overload and short circuits in low-voltage automotive and other electronic applications. Interrupt-current rating is 2,000 amps. Temperature range is –40° to +185° F. Meet SAE standards.

To Order: Please specify amp rating.

Available Amps	VDC		
With Automatic Reset			
6, 8, 10, 15, 20, 25, 30	12	4212T1	$16.49
With Push-to-Reset Button			
6, 8, 10, 15, 20, 25, 30	32	4212T3	24.58
Vibration-Resistant with Push-to-Reset Button			
3, 4, 5, 6, 7½, 8, 10, 15, 20, 25	28	4212T4	20.49

Blade-Style AC/DC Circuit Breakers and DIN-Rail Mount Holder



In addition to replacing type ATC, AF, ATO, and 257 blade-style fuses, this circuit breaker can also be used in AC applications. Compact size allows DIN-rail mounting. It protects against overload and short circuits in low-voltage automotive and other electronic applications. Push the button to reset. Max. voltage is 250 VAC/72 VDC. DC and AC interrupt-current rating is 2,000 amps. Temp. range is –4° to +140° F. UL recognized, CSA certified, and IP40 rated. Meet UL 1077 for branch protection. **To Order:** Please specify amp rating.

DIN-rail mount holder has screw clamp connections.

Available Amps		
¼, ½, 1, 1½, 2, 2½, 3, 4, 5, 6, 8, 10	6493T1	$28.50
DIN-Rail Mount Holder	6493T3	24.66

Blade-Style Fuse Blocks

For Standard Fuses

For Maxi Fuse

An insulating cover prevents contact with live circuits. Blocks have screw terminal connections. Rated 32 VDC.

For Standard Fuses— Maximum 30 amps per fuse; maximum 100 amps per block. Mounting holes are 3/32″ dia.

For Maxi Fuse— 30 to 80 amps. Mounting holes are 3/16″ dia.

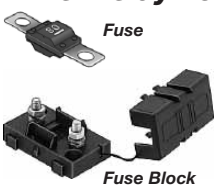
Time-Delay Low-Voltage Fuses and Fuse Blocks



Fuse *Fuse Block*

An alternative to blade-style fuses, these fuses are designed for low-voltage automotive and other electronic applications. Interrupt-current rating is 1,000 amps for 50- and 80-amp fuses and 2,000 amps for 40-amp and 100- to 250-amp fuses.

To Order: Please specify amp rating.

Fuse blocks have stud terminal connections and include a protective cover.

Available Amps	VDC	O'all Lg.	Wd.		Each ♦

♦ Prices are 10% lower when you buy in quantities of 10 or more.

Load-Center Circuit Breakers

Cutler-Hammer

Siemens

Square D Equivalent

Fit these breakers in Cutler-Hammer, Siemens, and Square D breaker boxes. All have screw clamp connections. Rated 120/240 VAC, 60 Hz. Interrupt-current rating is 10,000 amps. Meet UL 489 requirements for branch circuit protection.

Cutler-Hammer CH Series—Plug into Cutler-Hammer CH series breaker boxes.

Siemens QP Series—Plug into Siemens EQ series breaker boxes.

Square D QO Series Equivalent—Plug into Square D QO series breaker boxes (see 6790K on this page).

To Order: Please specify amp rating where necessary.

Plug-Base Fuses and Breakers

Fuses

Rated 125 VAC. UL listed.

Type TL is a time-delay fuse for normal motor applications.

Type T is a time-delay fuse that has more delay than normal. It's commonly used in motor applications when the motor is cycled on/off frequently.

Type S is a time-delay fuse with a non-interchangeable body, which prevents the wrong size fuse from being used.

Type W is a fast-acting fuse for general purpose circuit protection. It quickly opens when short-circuited or when an overload occurs.

Type TL

Type S

Square D Circuit Breakers

QO

QOB

Homeline Tandem

Use these breakers with Square D breaker boxes. All have screw clamp connections. Rated 120/240 VAC except 3-pole breaker is rated 240 VAC. Operate at 60 Hz. Interrupt-current rating is 10,000 amps. Meet UL 489 requirements for branch circuit protection. 15- to 20-amp QO and Homeline series breakers with one pole are UL listed as SWD (switching duty) for 120 VAC fluorescent lighting.

QO and ***QOB Series***—QO series plug into Square D QO series breaker boxes (see 6790K on this page). QOB series bolt onto lighting and appliance panel boards.

Homeline Series—Snap into Square D Homeline series breaker boxes (see 6914K on this page). *1-pole tandem* can only be used with the Homeline series secondary circuit breaker box.

To Order: Please specify amp rating where necessary.

Square D Circuit Breaker Boxes

QO Series Main Box

Also known as load centers, these boxes are single-phase, 3-wire, and can be mounted for top or bottom feed conduit connections. UL listed.

Main circuit breaker boxes have a main circuit breaker switch and main service knockouts in the corners. Enclosures have a hinged door and can be flush or surface mounted. Rated NEMA 1 for indoor use.

Secondary circuit breaker boxes are used as add-on boxes that connect to a main box. They do not have a main circuit breaker switch. Enclosures can be surface mounted, have a screw-on cover, and are rated NEMA 1 for indoor use except 100-amp QO series has a hinged cover and is rated NEMA 3R for outdoor use.

QO Series—Use with QO series circuit breakers (see 6782K and 5259T on this page). All have a one-piece tin-plated copper bus. Rated 120/240 VAC, 60 Hz. *Main* boxes have an interrupt-current rating of 22,000 amps; *secondary* boxes have an interrupt-current rating of 10,000 amps except 125-amp model is rated 65,000 amps when used with 65,000-amp interrupt-current rated circuit breakers.

Homeline Series—Use with Homeline series circuit breakers (see 69225K on this page). It has a one-piece plated aluminum bus. Interrupt-current rating is 10,000 amps. Rated 120/240 VAC, 50/60 Hz.

Space-Saver Branch Circuit Breakers

The smallest UL 489-rated breakers you can get, these provide branch circuit protection when space is at a premium. They have 0.25″ quick-disconnect terminals, push-to-reset button, and a ⅜″-27 bushing with hex nut for mounting in a 0.38″ dia. panel cutout. Depth behind panel is 1.43″. Rated 120 VAC, 50/60 Hz. Interrupt-current rating is 5,000 amps. Temperature range is 32° to 140° F. UL listed and CSA certified.

No. of Poles	Amps		
1	15	3851K11	$14.94
1	20	3851K12	14.94

DIN-Rail Mount Circuit Breakers

1 Pole

Mount directly on 35 mm DIN rail. All are thermal magnetic, which means they use the heat generated in overcurrent situations to trip the breaker and have a time-delay feature to prevent tripping on harmless temporary overload currents. Breakers have screw clamp connections and operate at 50/60 Hz. CSA certified. *1-pole breakers* are rated 277 VAC. *2-* and *3-pole breakers* are rated 480Y/277 VAC.

Branch Circuit Breakers— Meet UL 489 requirements for branch circuit protection. Interrupt-current rating is 10,000 amps.

Equipment Circuit Breakers— Meet UL 1077 requirements for supplemental circuit protection. Use downstream of a branch circuit breaker. Interrupt-current rating is 5,000 amps. CE approved.

Standard inrush current breakers are good for most small transformers and pilot device applications. Temperature range is –40° to +167° F.

High inrush current breakers handle motor and larger transformer applications. Temperature range is 23° to 104° F. Meet IEC standards.

To Order: Please specify amp rating.

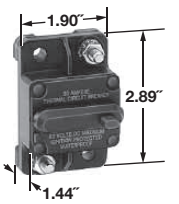
Alarm— Includes two sets of auxiliary contacts, one of which signals an audible alarm when the breaker is tripped. Rated 2 amps @ 250 VAC/0.5 amps @ 110 VDC.

7026K25 ..... $29.23

Low-Voltage DC Circuit Breakers

Push-Pull Style

Lever Style



Waterproof Button Style

Designed to withstand the harshest environments, these single-pole circuit breakers have a rugged construction that resists vibration and corrosion. All are thermal, which means they use the heat generated in overcurrent situations to trip the breaker. Use in low-voltage vehicle and electronic applications. All have screw terminal connections.

Push-pull style breakers have a push-and-pull button that can be used as an on/off switch. They have a M12×1 mm bushing with hex nut for mounting in a 0.49″ dia. panel cutout. Depth behind panel is 2.48″. Rated 28 VDC. Interrupt-current rating is 6,000 amps. Temperature range is –67° to +167° F. UL recognized.

Lever style and ***waterproof button style*** breakers are a good choice for marine environments and other areas exposed to moisture. CE approved. *Lever style* can also be used as an on/off switch and have 3/16″ dia. mounting holes (screws not included). IP66 rated for protection from power jets of water. Temp. range is –40° to +185° F. Rated 48 VDC. Interrupt-current rating is 5,000 amps. *Waterproof button style* are IP67 rated for protection against water submersion and have 1/4″ dia. mounting holes (screws not included). Temp. range is –25° to +180° F. Rated 42 VDC. Interrupt-current rating is 3,000 amps.

To Order: Please specify amp rating.

High-Temperature Circuit Breakers

Screw Terminals

Quick-Disconnect Terminals

Unlike thermal magnetic breakers, these magnetic breakers are unaffected by ambient temperature changes. They trip when the magnetic field in the coil increases from current overload. Because heat won't affect operation, they're perfect for protecting equipment in areas where ambient heat is a factor. Temperature range is –40° to +185° F. All have 6-32 threaded holes on the front. Operate at 50/60 Hz. UL recognized.

With Screw Terminals— Rated 250 VAC. Interrupt-current rating is 3,000 amps. 72015K3 is also rated for 80 VDC. *1-pole* breakers mount in a 1.45″ Ht.×0.76″ Wd. panel cutout. *2-pole* breaker mounts in a 1.45″ Ht.×1.53″ Wd. panel cutout.

With Quick-Disconnect Terminals— Great for tight spaces, all have 0.25″ quick-disconnect terminals. Rated 277 VAC/80 VDC. AC interrupt-current rating is 5,000 amps. DC interrupt-current rating is 7,500 amps. Mount in 0.63″ dia. panel cutout, one cutout for each pole.

To Order: Please specify amp rating.

Panel-Mount Circuit Breakers

Rocker Style

Push-Button Style

Toggle Style

In addition to providing supplemental protection for your equipment, these circuit breakers can also be used as on/off switches. All are thermal, which means they use the heat generated in overcurrent situations to trip the breaker. Good for applications with high inrush currents such as motor start-ups and switching surges. All have 0.25″ quick-disconnect terminals. Operate at 50/60 Hz.

Rocker and ***Push-Button Style—*** Mount in a 1.77″ Lg.×0.85″ Wd. panel cutout. Rated 240 VAC or 60 VDC. Interrupt-current rating is 1,000 amps. Temperature range is 14° to 131° F. UL recognized and CSA certified. Meet UL 1077.

Rocker style breakers have a black on/off button. Depth behind panel is 1.89″. The optional *clear plastic cover* provides IP54 protection against limited dust and splashed water.

Push-button style breakers have a green "on" button and a red "off" button. Depth behind panel is 2.32″. The optional *clear plastic cover* provides IP65 protection against dust and low-pressure water and requires a 2.07″ Lg.×1.08″ Wd. panel cutout.

Toggle Style— Have a 1/4″-40 bushing with hex nut for mounting in a 1/4″ dia. panel cutout. Depth behind panel is 2.42″. Rated 250 VAC or 75 VDC. AC interrupt-current rating is 200 amps for 1/20-amp breaker; 1,000 amps for 2/10- to 6-amp breakers; and 2,000 amps for 8- and 10-amp breakers. DC interrupt-current rating is 1,000 amps. Temperature range is –22° to +140° F. UL recognized.

Wrist Straps

With Straight Cord

With Heavy Duty Hand Clamp

Wrist straps have a cord with a snap at one end and a banana plug at the other and include an alligator clip adapter.

Wrist strap with mat includes an easy-to-carry 24″×24″ conductive green and black vinyl work mat. Cord has a 1-megohm resistor in the snap end.

Disposable wrist strap is good for temporary grounding. It adjusts up to 12″ and has an adhesive back.

Foot Straps

Reusable Shoe Strap

Disposable Heel Strap

Attach to the footwear of personnel walking on a conductive floor.

Reusable shoe strap has an adjustable hook-and-loop strap to fit most shoes.

72555K65 ..... **Each** $10.61

Disposable heel straps have an adhesive back for temporary use in static-control areas. Package quantity is 10.

72555K63 ..... **Pkg.** $10.39

Accessories

Four-Receptacle Ground Station

Wrist Strap Tester

Extra ground cord is straight, 15 ft. long, and has a snap at one end and a ring terminal at the other. Minimum resistance is 1 megohm.

72555K58 ..... $16.85

Four-receptacle ground station has a straight, 10-ft. long cord and four banana receptacles to ground four operators to the same workstation.

72555K66 ..... $19.05

Wrist-strap tester ensures wrist strap is functioning properly before personnel start working. Plug your strap into tester and press the button—one of the three lights will indicate whether the strap is pass, fail low, or fail high. Tester is 3.6″ Ht.×2.6″ Wd.×1″ Dp. and operates on one 9-volt battery (included).

72555K72 ..... $108.77

Static Control Work Surface Mats

Prevent damage to sensitive electronic equipment by controlling static electricity on work surfaces. Mats transfer the static charges from the top of your surface to the ground. They include a grounding snap, grounding cord, and wrist strap (except 40-ft. long mat, which does not include wrist strap). Surface resistivity measures the resistance between two points on the surface of the mat, as well as the resistance to the ground, and should fall between 10^6 and 10^9 ohms/sq. for proper static control.

Vinyl Mats

Mats are single layer and have an easy-to-clean surface.

40-ft. long mat has six heel straps with quick-release buckles and six 15-ft. long grounding cords for use as a floor mat. For wrist straps, see 72555K on this page.

Rubber Mats

These two-layer, reversible mats are highly resistant to abrasion, solder, flux, and heat and won't produce toxic fumes when temporarily exposed to high temperatures. *Grounding cord kit* accepts two wrist straps and includes a 15-ft. long cord with 0.39″ stud.

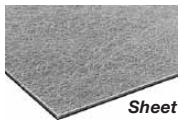
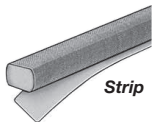
Grounding and Shielding Foam



Sheet



Strip

Flexible and compressible, this foam conducts a current between surfaces to complete a grounding path. It also shields electromagnetic interference (EMI) to protect sensitive electronic equipment. Use to ground printed circuit boards or as an EMI gasket. All have a foam core covered in electrically conductive material. Maximum temperature is 158° F.

Sheets can be used to ground larger electronic components or cut to fit your application. Meet UL 94HF1 for flame resistance.

Strips have an adhesive back. *10″ long* strips meet UL 94V0 for flame resistance.

EMI-Reducing Grounding Ribbons

Low resistance at radio frequencies gives this ribbon better electromagnetic interference (EMI) reduction capability than other types of grounding ribbon and braid. It's made of flexible copper, laminated on both sides with polyester film to avoid shorting problems, and has tinned ends with a 3⁄16″ dia. hole for termination. Good for circuit board applications and tight spaces. Meet UL 94V0 for flame resistance. UL recognized.

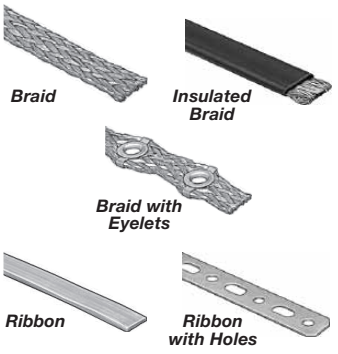
Grounding Braid and Ribbon

A more flexible alternative to grounding wire, this braid and ribbon provide low electrical resistance equivalent to the wire size listed below.

Grounding Braid and Ribbon



Braid— A flat, tin-plated copper conductor that offers better flexibility than ribbon. *Insulated braid* has green PVC insulation. *Braid with eyelets* have a 1/4″ dia. eyelet every 3″.

Ribbon— Made of tin-plated solid copper with a rolled edge, it's used for bonding cable. *Ribbon with holes* has alternating 3/16″ dia. and 1/4″ dia. holes spaced 1/4″ apart.

	Equivalent Wire Size, AWG	Wd.	Thick.	Available Lengths, ft.		Per Ft.

High-Flex Grounding Wire

Use this finely stranded, tin-plated copper wire inside control cabinets, tight spaces, and other applications requiring high flexibility.

Grounding Wire

All are UL listed.

Insulated wire has black PVC insulation; ***insulated wire with eyelets*** has translucent green PVC insulation.

Wire with eyelets has 1/4″ eyelets every 4″ and can be cut to length and mounted without terminating. Good for applications that require ground wire to be looped from ground point to ground point with no breaks.

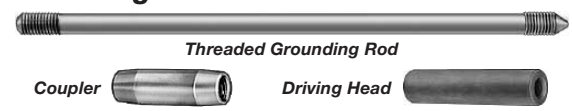
Grounding Rods



Grounding rods connect an electrical system to a ground. They're made of nickel-plated steel that's heavily plated in copper for high levels of conductivity and good corrosion resistance. *Threaded rods* provide the best connection when joining two rods with a coupler. Rods meet or exceed UL standard 467 and ANSI C33.8.

Couplers are threaded and made of high-strength, corrosion-resistant bronze for permanent, highly conductive connections between two rods. One end is chamfered and the other is tapered for easy driving. ***Driving heads*** are 6″ long and protect rod ends from "mushrooming" when driven into the ground.

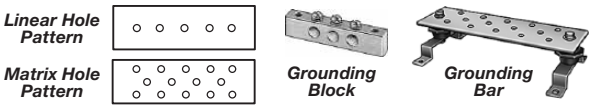
Grounding Blocks and Bars



Grounding blocks are commonly used in cabinets and enclosures to connect multiple ground wires. They're made of tin-plated copper alloy and have 1/4″-20 threaded holes with set screws and 8-32 threaded mounting holes (screws not included). UL listed.

Grounding bars let you attach multiple ground wires to one location. They're copper and designed for use as a central ground.

6″ long bar has one 1/4″-20 threaded hole, three 10-32 threaded holes, two 9/32″ dia. unthreaded holes, and plastic mounting brackets.

12″ and ***24″ long bars*** have 7/16″ dia. holes, plastic insulators, and stainless steel mounting brackets. UL listed. *Replacement mounting kit for 12″ and 24″ bars* includes stainless steel mounting brackets, hardware, and insulators.

Electronics rack grounding bar fits 19″ wide electronics racks and includes plastic mounting brackets and hardware.

Grounding Connectors

All are UL listed and CSA certified.

Connectors— Connect one or two grounding wires to steel structures, fence posts, and transformers. They can also tap one or two cables from a bus bar. Made of copper.

Couplers— Join two grounding wires to extend the length of your grounding connection or connect to an existing ground wire. Made of bronze.

♣ Also for 3/4″ rod diameter for 2 to 250 MCM AWG wire size.

Grounding Straps and Clamps

Strap

Pipe Clamp, One Wire

Pipe Clamp, Two Wire

Plate Clamp

All are UL listed.

Straps ground to virtually any size pipe or grounding rod. They include a nut and bolt that accept 14 to 6 AWG ground wire. For best performance, match strap material to pipe material.

Pipe clamps connect ground wire to pipes. *One-wire* clamp is bronze and accepts ground wire up to 2 AWG. *Two-wire* clamps are tinned bronze and accept 6 AWG to 250 MCM ground wire.

Plate clamp connects grounding wire to an existing flat grounding surface, such as the lid of an electric meter box, eliminating the need to drive a new ground rod. Accepts 14 to 6 AWG ground wire.

Lightning Protection Equipment

Components provide lightning protection on structures up to 75 ft. tall. UL 96 listed. Mounting hardware not included. For an existing system, choose components that match existing material. For a new system, choose components in the same material.

(D) Lightning wire is noninsulated. Maximum continuous length is 100 ft. *Copper* wire is 16 AWG and 3/8″ dia. *Aluminum* wire is 14 AWG and 7/16″ dia.

(E) Rods are 12″ long with 1/2″ dia. threads to screw into the base.

(F) Rod bases can be mounted horizontally or vertically.

(G) Loop straps fold around the wire.

(H) Bonding plates electrically bond system to a metallic object.

(K) Parallel connectors accept lightning wire and rods.

Antioxidant joint compounds are recommended to resist corrosion.

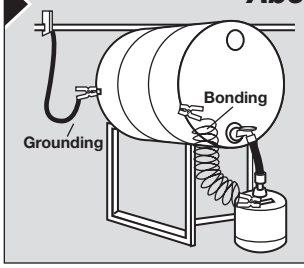
★ Accepts 7/16″ to 1/2″ dia. wire.

About Bonding and Grounding for Static Control



Static electricity can be generated by material processing such as mixing, pouring, pumping, filtering, and agitating. Bonding and grounding equipment and containers can reduce static electricity in your environment and reduce the chance of a static spark igniting flammable vapors. Conductive metal objects such as screens, rims of nonconductive drums, probes, spray nozzles, and high-pressure cleaning equipment can become statically charged.

Bonding systems connect two or more pieces of equipment to keep the same electric potential among them, which prevents static sparking. ***Grounding*** systems electrically connect equipment to ground, which prevents equipment from becoming sufficiently charged to cause a static spark.

When the potential for static electricity problems exists, you should always comply with OSHA requirements as outlined in Section 1910.106 and 1910.107 of the OSHA code. NFPA 77 also provides guidance on static electricity. Flammable liquid dispensing should be performed in accordance with all federal, state, and local laws.

Bonding and Grounding Clamps and Cable

Aluminum Hand Clamp

Hand Clamp with Serrated Jaw

Stainless Steel Hand Clamp

Quick-Release Hand Clamp

C-Clamp

Create a grounding path with these metal clamps and cable to prevent static charge buildup.

Hand Clamps—*Aluminum* clamp has stainless steel points. *Stainless steel* clamp has tungsten carbide points.

Hand Clamp with Serrated Jaw—Has a flat steel-plated jaw to prevent damage to unpainted surfaces, posts, or thin materials.

Quick-Release Hand Clamps—Jaw opens if the cable is pulled. They have stainless steel points and are used to ground vehicles.

C-Clamps—*Bronze* clamp has bronze points. *Galvanized steel* clamps have stainless steel points.

Insulated Coiled Cable—Galvanized steel with an orange vinyl coating.

Material	Jaw Opening	Accepts Cable Dia.		
Hand Clamps				
Aluminum	1 1/8"	Up to 1/8"	70345K73	$14.68
Stainless Steel	1 1/2"	Up to 1/4"	70345K77	171.00
Hand Clamp with Serrated Jaw				
Aluminum	1"	Up to 1/8"	70345K81	20.14
Quick-Release Hand Clamps				
Aluminum	1 1/4"	Up to 1/4"	70345K74	53.80

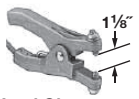
Bonding and Grounding Cable with Connectors

Cable with Two Connectors

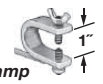
Coiled Cable with Two Connectors

Alligator Clip

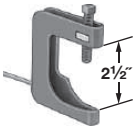


Hand Clamp

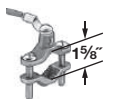
Terminal



C-Clamp



Large Dia. Pipe Clamp



Small Dia. Pipe Clamp

Quick-Release Hand Clamp

Choose the cable and connector configuration to suit your bonding or grounding requirements.

Cable with three connectors consists of a straight line of cable with a clamp at either end and one in the middle.

Cable is galvanized steel. *Bare* and *insulated cable* are 1/8" dia. *Insulated cable* has a clear vinyl coating. *Insulated coiled cable* has an orange vinyl coating. *Heavy duty insulated coiled cable* is 3/16" dia.

Alligator clips are copper. *Hand clamps* are aluminum. *Terminals* are tin-plated copper for cable with a terminal on both ends; galvanized steel for cable with a hand clamp and terminal. *C-clamps* are galvanized steel. *Large diameter pipe clamps* are plated steel. *Small diameter pipe clamps* are bronze. Quick-release hand clamp is aluminum and opens when the cable is pulled.

Also Available: Additional cable lengths for Cable with Two Connectors. For bare and insulated cable, please ask for 6955K888; for insulated coiled cable, ask for 6955K53. Specify connector types and length.

Cable with Two Connectors

Connector Type	Cable Lg.		
Bare Cable			
Alligator Clip on Both Ends	3 ft.	6955K3	$20.63
Hand Clamp on Both Ends	3 ft.	6955K9	42.51

Coiled Cable with Three Connectors

Bonding and Grounding Reels

Steel Reel with Hand Clamp

Stainless Steel Reel with Hand Clamp

Quick-Release Hand Clamp

Alligator Clip

Conveniently ground equipment with these clamps and cables stored on spring-rewind reels. A locking ratchet holds the cable at any length and releases instantly with a light tug. The spring return automatically retrieves cable and a stop keeps the cable end within reach. Cable is 3⁄32″ dia. except stainless steel reels have 3⁄16″ dia. cable.

Alligator clips are zinc-plated steel and hand clamps are aluminum. *Quick-release hand clamp* opens when the cable is pulled.

Constant-tension steel reels allow you to override the ratchet to keep constant tension on the cable. *Y-style cable* consists of two 20-ft. cables that extend from a single 30-ft. cable connected to the reel.

Static Control Cord, Tinsel, and Brushes

Remove static from moving materials on conveyors, printing rolls, and chutes. Mount up to ¼″ from surface.

Cord

With Magnets

Stretchable and easy to replace, cord is ⅛″ dia. and made of acrylic fibers bonded with copper sulfide. Cut to length and use magnets (sold separately) to mount. Magnet has a center hole for easy threading.

Lg., ft.		
5	2805K1	$17.50
32½	2805K2	76.38
Magnet	5685K31	1.40

Tinsel

More conductive than cord, tinsel has a core of three solid copper wires twisted together. Overall diameter is 1¼″. *Attachment kit* includes 20 lugs and springs to mount up to 10 pieces of tinsel.

With Attachment Kit

Lg., ft.		
6	63085T46	$5.11
72	63085T47	23.25
Attachment Kit	63085T48	61.73

Tinsel Bars

Choose these bars for more permanent installations. They're made of rigid anodized aluminum with a replaceable copper-tinsel insert that's 3″ shorter than overall length.

About AC to AC Voltage Transformers

Transformers— An AC to AC transformer typically converts alternating current (AC) from one voltage to another. It can be designed to "step up" (boost or increase) voltage or "step down" (buck or decrease) voltage. Transformers consist of two or more coils. When voltage is sent to the primary coil, it magnetizes the coil's core, inducing a voltage in the secondary coil.

Sensitive Equipment Transformers— Also known as isolating transformers, their primary and secondary coils are electrically isolated from each other. The transformer protects sensitive equipment from any input voltage spikes. They are typically larger and more expensive than transformers with connected primary and secondary coils.

High-Inrush Transformers— Also known as control transformers, these are designed for applications with high-inrush loads temporarily exceeding the VA (volt-amps) power output, such as starting and stopping motors. They have electrically isolated primary and secondary coils like sensitive equipment transformers.

Selecting the Right Transformer

1. Determine your input (line) and output (load) voltages and choose a transformer with matching input and output voltages.

2. Determine the power required by the equipment you're running. It's usually listed in kVA (kilovolt-amps) or VA (volt-amps) on the equipment's nameplate.

Choose a transformer with a power output that is equal to or greater than your equipment's power requirements.

For single-phase equipment, use this formula to find VA:

VA = Volts × Amps

For three-phase equipment, use this formula to find VA:

VA = Volts × Amps × 1.73

Sensitive Equipment AC to AC Transformers

Single Phase

Three Phase

Protect your sensitive equipment from input voltage spikes. The cores and coils are sealed to eliminate corrosion and insulation damage. Enclosure is rated UL-3R for indoor and outdoor use except single-phase transformers with 750-5,000 VA output are rated NEMA 3R. Also known as isolating transformers, they have copper wire lead connections except three-phase transformers with 30,000 and higher VA output, which have a bus bar. Wall mountable except for three-phase transformers with 15,000 and higher VA output, which are floor mount. Operate on 60 Hz. UL listed and CSA certified except single-phase transformers with 750-5,000 VA output are UL and C-UL listed.

Single-phase constant voltage transformers are used when you need to isolate the input and output voltages without changing their values.

240	120/240	5,000	13″	5.5″	5.1″	7029K47	595.83

For single-phase equipment, use this formula to find power output: **VA = Volts × Amps**
For three-phase equipment, use this formula to find power output: **VA = Volts × Amps × 1.73**

Step-Down AC to AC Transformers with Outlet

Powering a 115 VAC device on a 240 VAC system is as easy as plugging it in with these step-down transformers. Also known as auto transformers, they have a NEMA 5-15 three-prong outlet to connect appliances such as air conditioners, power tools, portable or machine tool lighting, fans, and grinders. The coils and cores are sealed to eliminate corrosion and insulation damage. They're wall mountable, operate on 50/60 Hz, and come with a 6-ft. cord (plug not included) for input connection.

Voltage (VAC) Input	Output	Power Output, VA	Ht.	Wd.	Dp.		
200/220/240	115	200	9.2″	3.9″	3.7″	6980K3	$236.27

200/220/240	115	2,000	11.5″	7.8″	7.1″	6980K8	825.95

Step-Up/Step-Down AC to AC Transformers

Improve the efficiency of your equipment and lower operating costs. Wire these step-up/step-down (boost/buck) transformers to step your input voltage up or down by as much as 20% to match the voltage your equipment needs. All have stranded copper lead wires for input/output connections and operate on 60 Hz. Mount them to a wall or floor.

In addition to the VAC input and output, these transformers are labeled with an ***isolation transformer power output***, which is the rating before you wire the transformer to step up or step down power. Transformers become nonisolating transformers (also known as auto transformers) when they are wired to step up or step down the voltage.

To Order: Choose an input/output voltage combination that comes closest to matching your application, then read down that column until you reach the power output (in VA) of the equipment you want to operate. You probably won't find the exact value you need; choose the next highest rating. *Note:* Three-phase applications require two transformers.

Single Phase—Labeled as 120/240 VAC Input and 12/24 VAC Output

	STEP UP (BOOST)					STEP DOWN (BUCK)					Isolation Transformer Power Output		
Input Voltage / Output Voltage	100 / 120	110 / 120	189 / 208	208 / 230	220 / 242	125 / 113	132 / 120	230 / 208	245 / 222	252 / 240			Each

High-Inrush AC to AC Transformers

Also known as control transformers, these transformers handle momentary high-inrush currents associated with contactors, solenoids, and relays, as well as protect your sensitive equipment. They meet NEMA standards for voltage regulation and have screw terminal input/output connections. Operate on 50/60 Hz. UL listed and CSA certified.

Transformers with top-mounted fuse block have a built-in input and output fuse block to save panel space. They install quickly with little wiring. UL class CC midget (13/32″ dia.) fuses required for fused operation.

AC to AC Transformers

For information about AC to AC transformers, see page 982.

For single-phase equipment, use this formula to find power output: **VA = Volts × Amps**
For three-phase equipment, use this formula to find power output: **VA = Volts × Amps × 1.73**

Harsh Environment High-Inrush AC to AC Transformers

Single Voltage Output

Multiple Voltage Output

Touch-Safe Multiple Voltage Output

Dust, dirt, oil, and moisture won't damage these high-inrush transformers because they have epoxy-encapsulated coils. Also known as control transformers, all have screw terminal input/output connections and four mounting slots. Operate on 50/60 Hz. UL and C-UL listed.

Single voltage output transformers have an output fuse block. All transformers with ***multiple voltage output*** can simultaneously power multiple devices that require different output voltages.

Multiple voltage output transformers have input and output fuse blocks. UL class CC midget (13/32″ dia.) fuses are required for fused operation.

Touch-safe multiple voltage output transformers have plastic covers over the screw terminals to prevent accidental contact with live electrical connections. CE marked.

Multimount High-Inrush AC to AC Transformers

Mount these high-inrush transformers using the built-in flanges with mounting holes or the included 4″×4″ plate. Also known as control transformers, they are often used in heating, ventilation, and air conditioning control circuits. Input and output electrical connections are 6″ wire leads. Operate on 60 Hz, except 7708K23, which operates on 50/60 Hz. UL recognized.

Voltage (VAC) Input	Output	Power Output, VA	Ht.	Wd.	Dp.		
120	24	40	2.8″	3.7″	2.5″	7708K21	$13.78

International-Voltage Transformers

Run an American appliance in Europe or a European appliance in the United States by stepping 220 VAC down to 110 VAC or 110 VAC up to 220 VAC. These transformers continuously operate at the rated power output. They have a NEMA 5-15 three-prong plug and outlet and a European two-prong plug adapter and outlet. Operate on 50/60 Hz.

Power Output, VA	Ht.	Wd.	Dp.		
300	3″	4″	6″	70285K71	$81.82
500	3.8″	4″	6.5″	70285K72	106.36
1,000	5″	6″	9″	70285K73	180.00
2,000	6″	7.5″	9.3″	70285K74	310.91

For single-phase equipment, use this formula to find power output: **VA = Volts x Amps**
For three-phase equipment, use this formula to find power output: **VA = Volts x Amps x 1.73**

Intermittent-Use International-Voltage Transformers and Plug Adapters

Transformer Kit

Convert 220/240 VAC electricity to power 110/120 VAC devices or 110/120 VAC electricity to power 220/240 VAC foreign devices such as radios and battery chargers. These transformers do not convert frequency. All transformers have two-prong plugs and outlets.

Transformer kit has a higher power voltage transformer with a 25/1,875 watt selector switch. It's a solid state transformer and not for use with appliances that have electronic circuitry. Kit also includes a five-piece plug adapter assortment and a carrying case.

Plug adapter assortment is for use with devices that already have a transformer that can accept foreign voltages. Includes four adapters that allow you to use NEMA 1-15 two-prong plugs with foreign outlets.

	Watts		
European Plug to NEMA 1-15 Outlet, 50 Hz			
220/240 to 110/120 VAC Transformer	50	6968K33	$18.29
220 to 110 VAC Transformer Kit	25/1,875	6968K35	42.52
NEMA 1-15 Plug to European Outlet, 60 Hz			
110/120 to 220/240 VAC Transformer	50	6968K36	18.29
Plug Adapter Assortment		6968K44	14.67

Plug-In AC to DC and AC to AC Transformers

Power low-voltage devices from an outlet. Also known as AC adapters, these transformers have a NEMA 1-15 two-prong plug, except AC to AC transformer with 40 VA output, which have a NEMA 5-15 three-prong plug. Operate on 60 Hz. UL listed.

120 VAC Input to DC Output

Quickly connect to your device. Transformers have a 6-ft. cord with 2.1 mm ID/5.5 mm OD connector and are a great solution for replacing lost or broken transformers.

Choose a ***center-positive*** or ***center-negative*** output connector. Look for the illustrations below on the transformer you're replacing to determine whether it's center positive or center negative.

Voltage Output	Power Output	Center Positive		Center Negative	
With Cord					
4.5 VDC	1,500 mA	70235K13	$7.52	70235K26	$7.52

Turn the dial to adjust the voltage you need within a given range. Also known as variacs, these transformers are often used in laboratories to vary power, heat, speed, or force. Operate on 50/60 Hz and are CSA certified, unless noted.

Bench Top— Have a ventilated steel case, power-on indicator, and 6-ft. power cord. Include a fuse.

Panel Mount— For permanent installation. They have screw terminal input/output connections, unless noted.

●60 Hz only. ■ Connections are ¼″ quick-disconnect terminals.
★Not CSA certified.

AC to DC Transformers

Single Phase

Convert AC input voltage to a constant DC output voltage. These transformers, also known as DC power supplies, have screw terminal input/output connections. UL listed and CE approved.

Single-phase power input transformers have an input voltage of 100-240 VAC and include a mounting bracket. CSA certified.

Three-phase power input transformers have a three-phase input voltage of 360-550 VAC. C-UL listed. Transformers with 10-amps DC output mount to a 35 mm DIN rail; 20- or 40-amps DC output are screw mount.

Current-Limiting AC to Adjustable DC Transformers

Single Output Digital Display

Single Output Analog Display

Prevent damage to devices that try to draw too much power. Also known as DC power supplies, these transformers allow you to adjust and limit the DC output current and voltage. All have an on/off switch and 5-ft. cord with NEMA 5-15 three-prong plug. Output connections are binding posts for banana plugs. Operate on 115/230 VAC, 50/60 Hz.

Selectable Single Output— Transformer has a knob that lets you switch between 0 to 36 VDC and 0 to 18 VDC outputs.

Dual Output— Has two 0 to 30 VDC outputs and can be connected in series or parallel.

Wattage varies depending on your DC output voltage and amperage. To determine the power output required, use the following formula: Watts = Volts × Amps.

DC Output

DIN-Rail Mount AC to DC and DC to DC Transformers

Also known as DC power supplies, these transformers conveniently install on a 35 mm DIN rail. An overload protection feature decreases output voltage and automatically resets when the output current returns to the rated range. All have a green LED output indicating light and screw terminal input/output connections.

AC Input— Operate on 50/60 Hz. UL and C-UL listed and CE marked except single-phase 20-amp transformer, which is UL listed and CSA certified. *Single phase* have an input voltage of 100 to 240 VAC, unless noted. *Three phase* have an input voltage of 380 to 480 VAC.

DC Input— Input voltage is 12 to 24 VDC. UL recognized and CSA certified.

★ Input voltage automatically selects from 115/230 VAC.

AC to Adjustable DC Transformers

0-16 VDC

0-160 VDC

Adjust and monitor the power output of these transformers, also known as DC power supplies.

0 to 16-volt transformer has an analog voltmeter and ammeter for continuous monitoring of output voltage and current. Output connections are binding posts for banana plugs. It has an on/off switch and an 8-ft. cord with NEMA 5-15 three-prong plug. Operates on 117 VAC, 60 Hz.

0 to 160-volt transformer has an on/off switch, cooling fan, 10″ input cord with NEMA 5-15 three-prong plug, and 10″ output cord with NEMA 5-15 outlet. Operates on 120 VAC, 60 Hz.

Wattage varies depending on your DC output voltage. To determine the power output required, use the following formula: Watts = Volts × Amps.

DC Output

DC to AC Voltage Transformers

Compact

General Purpose (with Cigarette Lighter Plug)

For Motor Loads (with Cigarette Lighter Plug)

For Motor Loads (with Screw Terminals)

For Sensitive Electronic Loads

Use a DC battery to power devices that run on AC voltage. Also known as inverters or converters, these transformers provide overload protection and an output frequency of 60 Hz. All have a three-prong AC outlet.

Compact— Has a cigarette lighter plug input, input short circuit protection, low battery shutdown, and a USB charging port.

General Purpose— Good for portable computers and battery chargers. 6987K22 and *K35* have a cigarette lighter plug input. K22 also includes a battery cable with clips. 6987K29, *K42,* and *K23* have screw terminal input connections.

For Motor Loads— Provide AC power to devices that temporarily draw high output, such as motors. Transformers are designed to withstand starting surges up to twice the power output rating and they maintain a 60 Hz frequency, ±1 Hz (except 6987K91 is ±0.3 Hz). 76815K85 has a cigarette lighter plug input; 6987K91 has screw terminal input connections.

For Sensitive Electronic Loads— Produce AC output that most closely resembles clean, stable AC-generated power at 60 Hz. Transformers prevent damage from overloads, short circuits, and overheating. Input connections: 70555K11 has a cigarette lighter plug; *K13-K14* have 5/16″ stud terminals; and *K17* has wire leads.

Single-Phase to Three-Phase Voltage Transformers

Also known as phase converters, these transformers generate three-phase 220 VAC output power from a single-phase 220 VAC input. Operate on 50/60 Hz.

(A) Light Load— Also known as static converters, they are often used for drill presses, mills, and grinders. They are designed to allow your motor to run at up to 70% of its normal power. All come with a terminal block for connections and are wall mountable.

Note: Select a transformer so the power output of your largest motor falls within the output range. When using multiple motors, start the largest motor first, then start smaller motors individually.

(B) High-Efficiency Light Load— Also known as rotary converters, these allow motors to run at 100% of their normal power. They include leads for hardwiring and are floor mountable.

Note: Select a transformer with a power output that exceeds but comes closest to the power requirement of your largest motor. When using multiple motors, start the largest motor first. Then start smaller motors individually until their total hp requirement is no more than twice the power output of the transformer.

(C) High-Efficiency Medium-to-Heavy Load— Similar to Style B, but they allow the total hp requirement of your motors to be three times the power output of the transformer. Used in gear head lathes and flywheel and hydraulic applications. All have leads for hardwiring and are floor mountable.

Uninterruptible Power Supplies

NEMA 5-15 NEMA 5-20

Protect sensitive and critical electronic equipment with uninterruptible power supplies (UPS). They provide the same protection as Backup Power Supplies but without any power loss when switching to battery power during an outage. These units handle input voltages from 65 to 138 VAC and provide constant output of 120 VAC (±2%). They also protect against frequency variation and waveform distortion.

Power supplies include a DB9 (serial) port and cable to save data and safely shut down an unattended computer during outages. They have six NEMA outlets. (70485K23 also has a L5-20 outlet.) Use on a desktop or mount in a 19″ wide electronics rack. Meet UL 1778. Choose a power output that is equal to or greater than the power your equipment requires.

Backup Power Supplies

Low Profile

With Power Conditioning

Be ready for brownouts that could damage your equipment and blackouts that shut you down. These products transfer power to a built-in battery with only a momentary power loss during the transfer. They also protect against line noise and power surges. Power supplies include a USB port and cable (except 7530K21) to save data and safely shut down an unattended computer during outage. They have six NEMA 5-15 outlets and a cord with NEMA 5-15 three-prong plug, unless noted. Choose a power output equal to or greater than the power your equipment requires. You can determine your volt-amps requirement by multiplying the amp draw of your equipment by 120 VAC.

Standard— All of the outlets in 7530K36 and K37 have surge suppression; three have battery backup. 7530K36 and K37 also have an RJ-45 phone jack and they cannot be sold in California or Oregon.

Low Profile— All of the outlets in these compact units have surge protection. Three of the outlets in 7530K42 have battery backup as well as four of the outlets in 7530K43 and six of the outlets in K44. All units have an RJ-11 phone jack. 7530K42 cannot be sold in California or Oregon.

With Power Conditioning— During power dips and surges, these units raise or lower power to keep it at a normal level. There is no battery transfer time during a power dip. All of the outlets in 70475K11 and K12 have surge suppression; three have battery backup. 70475K11 has an RJ-11 phone jack. 70475K17 and K12 have an RJ-45 phone jack.

Power Conditioners

General Purpose

Premium

NEMA 5-15 NEMA 5-20

Regulate power dips and surges to protect sensitive equipment. Power conditioners take AC power input and provide a constant output power level. They have NEMA 5-15 outlets and a cord with NEMA 5-15 three-prong plug. Choose a power output that is equal to or greater than the power your equipment requires. You can determine your volt-amp requirement by multiplying the amp draw of your equipment by 120 VAC.

General purpose and ***rack-mount*** units handle input voltages from 89 to 147 VAC and provide a constant output voltage of 120 VAC (±9%).

General purpose units have a 6-ft. cord. UL and C-UL listed, except 7596K56. ***Rack-mount*** unit fits in 19″ wide electronics racks. Cord is 12 ft. long.

Premium units handle input voltages from 96 to 132 VAC and provide a constant output voltage of 120 VAC (±5%). They also provide greater electromagnetic interference and line noise suppression. Cord is 6 ft. long. UL listed and CSA certified.

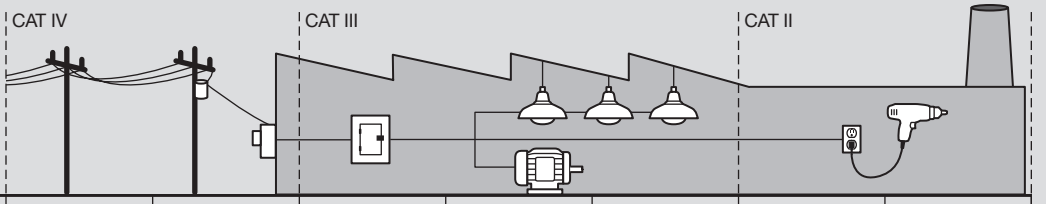
★Has four NEMA 5-15 and two NEMA 5-20 outlets.

About Safety Ratings for Electrical Testing

Choosing the right electrical testing equipment depends on where you will be using it and what level of voltage protection you need. Safety rating standards are set by the International Electrotechnical Commission (IEC). The closer you are to the utility power source, the higher the category (CAT) safety rating your testing equipment needs to have. As part of the safety rating, electrical testing equipment is also given a voltage rating.

The safety rating also takes into account the equipment's ability to resist a voltage spike, also known as transient overvoltage protection. These spikes from lightning or a power surge can damage your electrical equipment.



Safety Rating	CAT IV, 1,000V	CAT IV, 600V	CAT III, 1,000V	CAT III, 600V	CAT III, 300V	CAT II, 600V	CAT II, 300V
Transient Overvoltage Protection	12,000V	8,000V	8,000V	6,000V	4,000V	4,000V	2,500V
Applications	Three-phase power at utility connection • Outdoor overhead and underground cable runs • Electricity meters		Three-phase distribution panels and wiring • Commercial lighting systems • Feeder circuits • Permanently installed loads such as switchgears and three-phase motors			Single-phase loads plugged into electrical receptacles • Most 120V or 240V equipment inside a building • Appliances and portable tools	

Fluke Multimeters

Rely on the quality and durability of a Fluke multimeter when taking voltage, resistance, and other electrical measurements.

Multimeters with calibration certificate include a NIST-traceable document stating that they have passed a test for accuracy.

Average sensing multimeters take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

True RMS multimeters take accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Display count is an industry designation and not an actual value. For example, a 1,000-count meter shows numbers up to 999. A higher display count means the meter can give a more precise measurement.

General Purpose Multimeters

Maximum resistance is 40 MΩ, except maximum resistance of Fluke 77IV is 50 MΩ, and Fluke 113 is 60 kΩ. Maximum capacitance is 9,999 µF, except Fluke 114 does not measure capacitance. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

High-Accuracy Multimeters

These Fluke multimeters provide results at least twice as accurate as general purpose Fluke multimeters. Maximum resistance is 50 MΩ. Maximum capacitance is 9,999 µF. Batteries are included. These multimeters are UL listed and CSA certified, except Fluke 83V, 87V, 87V/E2, and 87V/IMSK are CSA certified to U.S. and Canadian standards.

(Continued on following page)

Fluke Multimeters *(Continued from previous page)*

Wireless Remote-Reading Multimeters

A wireless connection transmits electrical measurements from the multimeter to a separate display, so you can take measurements in hard-to-reach or potentially dangerous locations. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

Fluke 233 has a detachable display that communicates with the multimeter using built-in low-power wireless technology. Maximum resistance is 40 MΩ. Maximum capacitance is 9,999 µF.

Fluke 3000 FC uses built-in Bluetooth connectivity to transmit measurements to a computer with a Fluke pc3000 FC connector plugged in (sold separately, please see page 990) or to a mobile device that has the Fluke Connect app. The multimeter also receives measurements from Fluke Wireless Remote-Reading Clamp-On Current Meters and Fluke Wireless Remote-Reading Voltage Meters (see page 990). Maximum resistance is 50 MΩ. Maximum capacitance is 9,999 µF.

Mfr. Model No.	Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Frequency	Display Count	Includes	Meters		Meters with Calibration Certificate

Water-Resistant Multimeters

For taking electrical measurements in washdown environments, these multimeters have an IP67-rated housing. Maximum resistance is 50 MΩ. Maximum capacitance is 9,999 µF. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

Mfr. Model No.	Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Frequency	Display Count	Includes	Meters		Meters with Calibration Certificate

Data-Logging Multimeters

Record measurements from electrical tests over time to identify intermittent issues such as voltage spikes and temporary power flow problems. Review data in real-time or save it for future analysis. To download and analyze data on a computer, software is required (please see page 990). Maximum resistance is 500 MΩ. Maximum capacitance is 100 mF. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

Mfr. Model No.	Safety Rating	Data Log Cap.	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Frequency	Display Count	Includes	Meters		Meters with Calibration Certificate

Instrumentation Process Control Multimeters

With this combination loop calibrator and multimeter, check for current control loop issues in PLCs, motors, and fans in addition to taking other electrical measurements. When used as a loop calibrator, the current input as well as the percentage of the input scale is shown on the dual display, giving you quick diagnostic information. Maximum resistance is 40 MΩ. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

Mfr. Model No.	Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Frequency	Display Count	Includes	Meters		Meters with Calibration Certificate	
True RMS											
787	III, 1,000V	1,000V	0.1%	0.44 A	20 kHz	4,000	Alligator Clips, Test Leads	7093K89	$899.99	7093K61	$1,119.28

Insulation Testing Multimeters

Check insulation quality in electrical equipment such as motors and power tools. Maximum capacitance of Fluke 1587 FC is 9,999 µF. Fluke 1577 does not measure capacitance. Batteries are included. These multimeters are CSA certified to U.S. and Canadian standards.

Mfr. Model No.	Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Resistance	Max. Frequency	Display Count	Includes	Meters	
True RMS										
1577	IV, 600V	1,000V	0.2%	400 mA	50 MΩ	—	6,000	Alligator Clips, Hard Case, Remote Probe, Test Leads	7093K69	$699.99

Fluke Scopemeters

Perform electrical tests, record data, and see a graph of electrical waveforms with this combination multimeter and oscilloscope. Fluke scopemeters are known for quality and durability. This scopemeter includes alligator clips, a battery, battery charger, BNC adapter, probe tips, and test leads. It is CSA certified.

When used as an oscilloscope, the scopemeter is most accurate when the frequency is at least five times the maximum signal frequency you intend to measure. The multimeter function is true RMS, so it accurately takes AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

This scopemeter has a display count of 5,000 and shows numbers up to 4,999. Display count is an industry designation and not an actual value.

To download and analyze data on a computer, software (sold separately) is required.

Mfr. Model No.	Safety Rating	No. of Digital Channels	Frequency	Max. AC/DC Voltage	DC Voltage Accuracy	Max. Resistance	Max. Frequency	Max. Capacitance	Data Log Cap.		
123B	IV, 600V	2	20 MHz	600V	0.5%	30 MΩ	20 MHz	500 µF	512	6587K41	$1,499.99

Replacement Test Leads										6587K52	149.99
Soft Case										71915K72	139.99

Fluke Wireless Remote-Reading Clamp-On Current Meters

Take current measurements from a distance with these high-quality, durable Fluke meters. They wirelessly transmit readings to a separate display. Because the jaws surround a cable, these meters are convenient for taking frequent measurements since you don't have to interrupt the circuit. The meters work with the Fluke 3000 FC multimeter, a computer with a Fluke pc3000 FC connector plugged in (see 7093K321 in Fluke Multimeter Accessories below), or a mobile device that has the Fluke Connect app. Batteries are included. Meters are CSA certified to U.S. and Canadian standards.

These true RMS multimeters take accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Display count is an industry designation and not an actual value. For example, a 1,000-count meter shows numbers up to 999. A higher display count means the meter can give a more precise measurement.

Mfr. Model No.	Test End	Jaw Opening	Safety Rating	Max. AC Current	Data Log Cap.	Display Count	Includes		
a3000 FC	Current Clamp	1.33″	III, 600V	400A	65,000	1,000	_____	**7093K121**	$199.99
a3001 FC	Current Loop	10″	IV, 600V	2,500A	65,000	2,500	Magnetic Hanger	**7093K221**	249.99

Fluke Wireless Remote-Reading Voltage Meters

Measure voltage from a distance with these wireless connection-enabled meters that transmit readings to a separate display. Fluke is known for quality and durability. The meters work with the Fluke 3000 FC multimeter, a computer with a Fluke pc3000 FC connector plugged in (see 7093K321 in Fluke Multimeter Accessories below), or a mobile device that has the Fluke Connect app. Batteries are included. Meters are CSA certified to U.S. and Canadian standards.

These meters have a display count of 1,000 and show numbers up to 999. Display count is an industry designation and not an actual value.

True RMS meter takes accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Mfr. Model No.	AC Calculation	Safety Rating	*Max. Voltage* AC	DC	Data Log Cap.	Includes		
v3000 FC	True RMS	IV, 600V	1,000V	_____	65,000	Alligator Clips, Magnetic Hanger, Test Leads	**7093K421**	$199.99
v3001 FC	_____	IV, 600V	_____	1,000V	65,000	Alligator Clips, Magnetic Hanger, Test Leads	**7093K621**	199.99

Fluke Multimeter Accessories

Computer connector works with the Fluke 3000 FC multimeter, Fluke Wireless Remote-Reading Clamp-On Current Meters, and Fluke Wireless Remote-Reading Voltage Meters.

Test lead kits include a set of red and black Fluke test leads with a variety of interchangeable tips. They're rated 1,000V AC/DC. The connection end is a 4 mm banana plug. *Fluke TLK-225* have a CAT IV, 600V safety rating; *Fluke TLK289* and *Fluke 220* have a CAT II, 1,000V safety rating.

Test lead sets include two leads. Each lead has a notched probe tip test end and a sheathed right-angle banana plug connection end. They're rated 1,000V AC/DC and are CSA certified to U.S. and Canadian standards. They have a CAT IV, 600V safety rating.

	Model No.

Fuse—44A/100A, rated 1,000V AC/DC	DMM-B	**4398K1**	8.11

Temperature test sensors have a temperature range of -40° to 500°F. *Fluke 80BK-A* is a temperature probe and works with Fluke multimeters that have a temperature function. It has 4 mm banana jack connection ends. *Fluke 80TK* is a thermocouple converter that adapts a Fluke multimeter without a temperature function to a thermometer using the included temperature probe. It has 4 mm banana plug connection ends.

Pressure and vacuum test sensor measures pressure from 0 to 500 psig and vacuum from 0 to 29.9″ Hg. It has 4 mm banana plug connection ends.

Probe tip has a needle tip test end and 4 mm banana jack connection end. Safety rating is CAT II, 1,000V.

	Model No.

Fluke Open-Jaw Multimeters

Run a cable through the open jaw to test current without interrupting the circuit. These multimeters are especially useful for high current measurements and include test leads to perform other electrical tests. Fluke multimeters are known for quality and durability. Batteries are included. Multimeters are CSA certified to U.S. and Canadian standards.

All are average sensing, so they take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors. These multimeters have a display count of 1,000 and show numbers up to 999. Display count is an industry designation and not an actual value.

Multimeters with calibration certificate include a NIST-traceable document stating that they have passed a test for accuracy.

Mfr. Model No.	Jaw Opening	Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC Current	Max. Resistance	Meters		Meters with Calibration Certificate	
T5-600	0.5″	III, 600V	600V	1%	100A	1,000Ω	**7053K31**	$119.99	**7053K71**	$212.71
T5-1000	0.5″	IV, 600V	1,000V	1%	100A	1,000Ω	**7053K32**	159.99	**7053K81**	252.71

Fluke Clamp-On Multimeters

Jaws surround a cable to test current without interrupting the circuit, making these high-quality, durable Fluke multimeters especially useful for testing high current. They include test leads to perform other electrical tests, a carrying case, and batteries. These multimeters are CSA certified to U.S. and Canadian standards. Maximum capacitance is 1,000 µF unless noted. Fluke 376 FC and 381 have a maximum frequency of 500 Hz; Fluke 355 has a maximum frequency of 1,000 Hz.

These true RMS multimeters take accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Display count is 6,000 and shows numbers up to 5,999, except Fluke 355 has a display count of 10,000 and shows numbers up to 9,999. Display count is an industry designation and not an actual value. A higher display count means the multimeter can give a more precise measurement.

Multimeters with calibration certificate include a NIST-traceable document stating that they have passed a test for accuracy.

Clamp-On Multimeters

Suitable for testing high current, these multimeters have jaws that surround a cable to test without interrupting the circuit. They include test leads to perform other electrical tests, a carrying case, and batteries. Multimeters with a 1.7″ jaw opening have a built-in infrared temperature sensor. Multimeters with 1″ and 1.5″ jaw opening, and the true RMS multimeter with 1.7″ jaw opening have a temperature probe. These multimeters are UL and C-UL listed, unless noted.

Average sensing multimeters take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

True RMS multimeters take accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Display count is an industry designation and not an actual value. For example, a 6,000-count multimeter shows numbers up to 5,999. A higher display count means the multimeter can give a more precise measurement.

■ ETL and C-ETL listed.

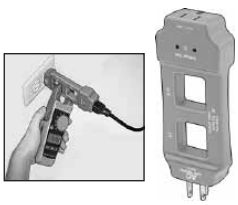
Analog Clamp-On Multimeters

Measure rapidly changing electrical values more easily than with a digital multimeter. Convenient for taking frequent high current measurements, the meter has jaws that surround a cable to test current without interrupting the circuit. Use the included test leads to perform other electrical tests. Meter requires one AA battery (sold separately). It is ETL and C-ETL listed.

This multimeter is average sensing, so it takes accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

Jaw Opening	Max. Voltage AC	Max. Voltage DC	DC Voltage Accuracy	Max. AC Current	Max. Resistance		
1.5″	600V	60V	4%	600 A	1,000 Ω	7615K57	$84.97

Line Splitters for Clamp-On Multimeters



Determine how much current a device with a two- or three-wire power cord uses without pulling apart the wires. The splitter isolates hot and neutral wires so you can measure AC current in either wire with a clamp-on multimeter. It is UL and C-UL listed.

Safety Rating	Max. AC Current		
II, 600V	15 A	7575K83	$15.47

Multimeters

Take current, voltage, resistance, and other electrical measurements.

Average sensing multimeters take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors. **True RMS** multimeters take accurate AC measurements regardless of the load type or sine wave shape. This is important for testing electronic devices that draw current in short pulses that can distort the shape of the wave, such as computers and adjustable-speed drives.

Display count is an industry designation and not an actual value. For example, a 6,000-count multimeter shows numbers up to 5,999. A higher display count means the multimeter can give a more precise measurement.

General Purpose Multimeters

Batteries are included. These multimeters are UL and C-UL listed, unless noted.

Pen-Style Multimeters

The smallest digital multimeter we offer. This meter is a portable and convenient way to perform various electrical tests. It includes alligator clips, carrying case, test leads, and batteries.

It is average sensing, so it takes accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

This multimeter has a display count of 2,000 and shows numbers up to 1,999. Display count is an industry designation and not an actual value.

Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. Resistance		
III, 600V	600V	0.7%	20 MΩ	7573K1	$44.98

Electronic-Component Testing Meters

These meters manually adjust to the low ranges needed for testing electronic components such as circuit boards and diodes. Meters include alligator clips, test leads, and batteries.

These meters have a display count of 2,000 and show numbers up to 1,999. Display count is an industry designation and not an actual value.

Capacitance Range	Resistance Range	Inductance Range		
200 pF-20 mF	20 Ω-20 MΩ	———	7620K37	$119.95
200 pF-2,000 µF	20 Ω-20 MΩ	200 µH-200 H	7620K38	224.95
Replacement Test Leads			7420K57	19.95

Pocket-Size Multimeters

Perform a variety of electrical tests with a multimeter that fits in your pocket. These multimeters include a carrying case, test leads, and batteries. They are UL and C-UL listed.

These multimeters are average sensing, so they take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

Display count is an industry designation and not an actual value. For example, a 6,000-count multimeter shows numbers up to 5,999. A higher display count means the multimeter can give a more precise measurement.

Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. AC/DC Current	Max. Resistance	Max. Frequency	Max. Capacitance	Display Count		
II, 600V	500V	1.3%	400 mA	40 MΩ	10 MHz	200 µF	4,000	7613K81	$39.97

III, 300V	600V	1.5%	2 mA	6 MΩ	30 kHz	2,000 µF	6,000	7613K9	68.89

Analog Multimeters

Measure rapidly changing electrical values with an analog display that shows the magnitude and rate of change more easily than a digital multimeter. These multimeters include test leads. **500V multimeter** requires one AA battery (sold separately). It is UL and C-UL listed. **1,000V multimeter** requires two AAA batteries (sold separately). It is ETL and C-ETL listed.

All are average sensing, so they take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. DC Current	Max. Resistance	Meters		Repl. Test Leads	
II, 500V	500V	4%	250 mA	1 MΩ	7097K31	$16.99	7508K66	$10.79

Simpson Analog Multimeters

The analog display shows the magnitude and rate of change more easily than a digital multimeter when measuring rapidly changing electrical values. Simpson multimeters are known for their ruggedness and reliability. All meters include alligator clips, test leads, and batteries. **600V meters** also include a carrying case and are ETL and C-ETL listed.

Yellow meters and **1,000V black meter with overload protection** have an audible signal to indicate continuity.

These multimeters are average sensing, so they take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

Safety Rating	Max. AC/DC Voltage	DC Voltage Accuracy	Max. Current AC	Max. Current DC	Max. Resistance	Color	Meters		Meters with Overload Protection		Repl. Test Leads

Motor Phase Sequence Testers

40-600V AC

110-600V AC

Incorrect motor rotation can be caused by a miswired connection from your motor to a three-phase electrical system. Use these testers to check the phase rotation (clockwise or counter-clockwise) of the motor and the electrical system to confirm proper wiring.

Testers include a carrying case and test leads. **40-600V tester** also includes alligator clips. Batteries are included. **110-600V tester** does not require batteries.

AC Voltage	Frequency	Safety Rating	Lead Lg.		
40-600V	2-400 Hz	CAT III, 600V	50″	7264K1	$149.97
110-600V	50/60 Hz	———	59″	7264K4	100.43

Receptacle Testers

GFCI Receptacle Tester

Duplex Receptacle and Tool Ground Continuity Tester

Plug these testers into electrical receptacles to confirm proper wiring. Light alerts on the testers indicate continuity or if there is an open circuit in the hot, neutral, or ground wires. Testers work on 120V AC receptacles.

Receptacle tester is ETL and C-ETL listed.

GFCI receptacle tester works on GFCI (ground fault circuit interrupter) receptacles in addition to standard receptacles. It is ETL and C-ETL listed.

Duplex receptacle and tool ground continuity tester checks wiring in duplex receptacles. It also checks a tool's ground continuity to see if it is safe to use—plug the tool and the tester into a duplex receptacle, then touch the insulated probe to the tool to confirm ground continuity.

Receptacle Tester	7018K15	$7.36
GFCI Receptacle Tester	7018K16	9.87
Duplex Receptacle and Tool Ground Continuity Tester	7018K14	79.78

Insulation Testers & Line Break Detectors

For information about electrical testing, see page 988.

Insulation Testers

Megger MIT310—With Digital Display

Megger MIT410—With Digital Display

With Digital Display

With Light Indicator Display

With Analog Display

Measure electrical resistance as an indication of insulation quality in equipment such as motors, generators, and switchgear. All testers come with a carrying case and test leads.

Digital displays show a numeric reading on an LCD. They include alligator clips, probe tips, and batteries. *Display count* is an industry designation and not an actual value. For example, a 1,000-count tester shows numbers up to 999. A higher display count means the tester can give a more precise measurement. **Megger digital** testers are rated IP54. *Megger MIT310* includes eight AA batteries. *Megger MIT410* includes six AA batteries.

Light indicator display has a scale with LEDs that light up to show the resistance as good, caution, or bad. Tester requires two C batteries (sold separately).

Analog display shows the magnitude and rate of change so you can see rapidly changing resistance values more easily than on a digital display. It includes a hanging strap and batteries.

Hand-Crank Insulation Testers

Megger MJ159—2,000 MΩ

5,000 MΩ

Turn the crank to generate voltage and measure electrical resistance as an indication of insulation quality in equipment such as motors, generators, and switchgear. These testers have an analog display that works well for measuring rapidly changing resistance values because you can see the magnitude and rate of change more easily than on a digital display. Testers include alligator clips, a carrying case, probe tips, and test leads.

Safety Rating	Max. Resistance	Resistance Accuracy	DC Voltage Insulation Testing Selections	AC Voltage	Mfr. Model No.	Specifications Met		
II, 300V	2,000 MΩ	1.25%	100, 250, 500, 1,000V	0-600V	Megger MJ159	—	7229K11	$1,132.53
III, 300V	5,000 MΩ	2.5%	250, 500, 1,000V	0-600V	—	IP54	6576K11	694.17

Hand Tool Insulation Testers

Ensure proper insulation and ground wire continuity in new or repaired drills, circular saws, grinders, and other hand tools. Also known as a hi-pot tester, it checks the quality of a tool's insulation by applying voltage and measuring how much current leaks from the tool. Plug your tool into the tester's three-prong receptacle. The analog display works well for measuring rapidly changing values because you can see the magnitude and rate of change more easily than on a digital display.

The tester includes a calibration certificate with test data that is traceable to NIST and includes the test measurements that confirm the tester's accuracy. It's UL listed, UL 120K rated, and CSA certified.

Current Leak Detection	Accuracy	AC Voltage Insulation Testing Selections	Includes		
1-10 mA	3%	0-2,500V	Ground Clip, High-Voltage Probe	6991K42	$1,206.92

Line Break Detectors

Long-Reach Tip and Sheathed Alligator Clip

Probe Tip and Sheathed Alligator Clips

Test Leads with Replaceable Alligator Clips

Check continuity in circuits. If there are no line breaks, light or sound alerts signal continuity.

	Alert Type	Batteries Included	Batteries Size	Batteries No. Required	Detectors		Repl. Test Leads	
Long-Reach Tip and Sheathed Alligator Clip	Light	No	AAA	1	6984K71	$13.87	—	—
Probe Tip and Sheathed Alligator Clip	Light	Yes	AAA	2	7256K11	12.16	—	—
Test Leads with Replaceable Alligator Clips	Sound	No	9V	1	7411K38	44.93	7411K39	$10.55

Clamp-On Current Meters

Measure current without interrupting the circuit—jaws surround a cable for testing, making these meters convenient for taking frequent measurements. Meters include a carrying case and batteries.

These current meters are average sensing, so they take accurate AC measurements when testing equipment that has a linear load and draws current in a smooth sine wave, such as standard induction motors.

Display count is an industry designation and not an actual value. For example, a 2,000-count meter shows numbers up to 1,999. A higher display count means the meter can give a more precise measurement.

Jaw Opening	Safety Rating	Current Range AC	Current Range DC	Current Accuracy	Display Count		
1.25″	III, 300V	0-20, 0-200 A	—	2-3%	2,000	8264T11	$110.43
1.25″	III, 300V	0-40, 0-300 A	0-40, 0-300 A	1-4%	4,000	8264T12	298.74

Current Detectors

Check for the presence of AC current without making direct contact with a wire. The detector has light and sound alerts that indicate current when it is held near the electrical component. Batteries are included. Detector is UL and C-UL listed.

Safety Rating	AC Current		
CAT III, 600V	200 mA-1,000 A	8338T11	$33.98

Vibrating Voltage Testers

In addition to vibrating to confirm the presence of voltage, these testers have LEDs that light up to show an approximate voltage level. They include 28″ test leads. **5-600V tester** also includes batteries. **100-600V tester** does not require batteries. Testers are UL and C-UL listed.

Safety Rating	AC/DC Voltage	Testers		Repl. Test Leads	
III, 600V	5-600V	7258K24	$62.46	7258K35	$22.17
III, 600V	100-600V	7258K23	41.65	7258K35	22.17
Carrying Case				7258K34	23.54

Fluke Vibrating Voltage Testers

Detect voltage with three types of alerts for extra safety—light, sound, and vibration. There are LEDs that light up to show the approximate voltage level, and a digital LCD shows precise voltage measurements. Fluke testers are known for quality and durability. Tester includes 34″ test leads and batteries. It is UL and C-UL listed.

Safety Rating	Mfr. Model No.	Max. Resistance		
IV, 600V	T+Pro	10 kΩ	7053K16	$99.98
Holster (Mfr. Model No. H3)			7053K17	34.99
Carrying Case (Mfr. Model No. C520A)			7053K15	59.99

High-Voltage Detectors

Safely check for the presence of voltage in high-voltage equipment and lines. This noncontact detector checks for voltage by sensing electrostatic fields when brought near the electrical component. Light and sound alerts indicate voltage. Detectors include a carrying case and batteries.

For testing 1,500-122,000V AC, a hot stick (sold separately) is required. It attaches to the high-voltage detector to extend your reach and detect voltage from a distance.

AC Voltage	Detectors		Hot Sticks	
30-122,000V	7440K29	$241.39	7440K32	$160.32

Voltage Detectors

Long-Reach Tip—12-250V AC

Long-Reach Tip—6-50V DC

Test Leads with Sheathed Alligator Clips

Test Leads with Needle Tips

Noncontact—5-1,000V AC

Confirm that voltage is present in receptacles, cables, and other electrical components. The detectors have light or sound alerts to indicate voltage. Batteries are included, unless noted. **Long-reach tips, tests leads with sheathed alligator clips,** and **test leads with needle tips** must touch the electrical component you're testing to sense voltage. **Noncontact** detectors can sense voltage when brought near the electrical component.

Safety Rating	Voltage AC	Voltage DC	Mfr. Model No.	Alert Type	Specifications Met		
Long-Reach Tip							
III, 250V	12-250V	12-250V	—	Light	ETL Listed, C-ETL Listed	6982K81	$11.98

★ Batteries are not required.

Oscilloscopes

The oscilloscope graphs electrical waveforms over time, allowing you to analyze signal transmission issues, voltage spikes, stray voltage, and other problems with electrical equipment. For the most accurate measurements, the oscilloscope's frequency should be at least five times the maximum signal frequency you intend to measure.

It includes a two-piece 10:1 probe set, Windows compatible PC software, and a USB cable.

No. of Digital Channels	Frequency	Real-Time Sample Rate	Rise Time	Vertical Sensitivity	AC/DC Voltage	DC Voltage Accuracy	Input AC Voltage	Safety Rating		
2	25 MHz	500 MSa/s	0 ns-14 ns	2 mV/div-10 V/div	0V-400V	3%	100V-240V	CAT I, 400V	6584K1	$479.81

Oscilloscopes for iPhone Smartphones and iPad Tablets

Your Apple iPhone smartphone or iPad tablet becomes a portable oscilloscope when you download the app and plug in this probe. The app graphs electrical waveforms over time so you can analyze signal transmission issues, voltage spikes, stray voltage, and other problems with electrical equipment. For the most accurate measurements, the oscilloscope's frequency should be at least five times the maximum signal frequency you intend to measure. Frequency range is 0-5 MHz.

They're compatible with current iPhone smartphones, iPad Air tablets, and iPad mini tablets with an 8-pin connection.

No. of Channels Analog	Digital	Real-Time Sample Rate	Rise Time	Vertical Sensitivity	AC/DC Voltage	DC Voltage Accuracy	Input AC Voltage		
2	4	50 MSa/s	0-20 ns	50 mV/div-2 V/div	-40 to 40V	3%	-40 to 40V	4228T15	$399.97

Circuit Tracers

High-Resolution Circuit Tracer

Locate cables behind walls, find short and open circuits, and identify circuit breakers. Connect the transmitter to an electrical receptacle or cable to send a signal to the receiver, which displays light and sound alerts as it identifies the path of the cable or the correct breaker. Batteries are included.

The receiver in the high-resolution circuit tracer has a thumbwheel for fine adjustments to sensitivity, making it able to detect the transmitter's signals from a greater distance than the receiver in the standard circuit tracer.

	For Max. Dp., ft.	AC/DC Voltage		
Circuit Tracer	3	0-300V	65815K63	$496.64
High-Resolution Circuit Tracer	13	9-300V	65815K67	1,117.96

Circuit Breaker Identifiers

120V AC

100-250V AC

Identify the circuit breaker connected to an electrical receptacle. The transmitter plugs into the receptacle and sends a signal through the cable to the receiver. Move the receiver over the breakers, and light and sound alerts indicate when you find the correct breaker. 120V identifier requires one 9V battery (sold separately); 100-250V identifier includes batteries. Identifiers are UL and C-UL listed.

Adapter kits trace breakers for light bulb sockets and switches.

AC Voltage	Identifiers		Adapter Kits	
120V	70195K41	$48.04	70195K42	$14.95
100-250V	70195K73	100.31	70195K74	17.85

BNC Adapters

Double Banana Plug × Sheathed BNC Jack

Stackable Double Banana Plug × BNC Plug

Stackable Double Binding Post with Banana Jack × BNC Jack

By converting a BNC connector to a double banana connector, you can perform electrical tests with a multimeter or other test equipment that accepts banana connectors. Test ends are nickel-plated brass.

Double banana plug × sheathed BNC jack adapter has a CAT III, 600V safety rating and is UL listed.

Hand-held voltage ratings are the maximum tested voltage for applications where you hold a cord connected to the adapter in your hands while testing. *Hands-free* voltage ratings are the maximum voltage the adapter is rated to withstand.

AC/DC Voltage Rating Hand-Held	Hands-Free	Lg.	Color		
Double Banana Plug × Sheathed BNC Jack

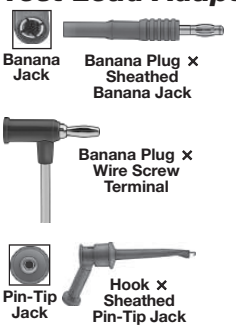
Test Lead Adapters



Banana Jack

Banana Plug × Sheathed Banana Jack

Banana Plug × Wire Screw Terminal

Pin-Tip Jack

Hook × Sheathed Pin-Tip Jack

Convert a test lead tip style to take a new electrical measurement without switching test leads. Test ends are nickel-plated brass, except hooks are gold-plated copper.

Banana jacks are 4 mm, the most common size used in electrical testing. The pin-tip jack is 2 mm, and attaches to test leads with 2 mm plugs, a size that is more commonly used for testing in tight spaces and in electronics applications, such as testing circuit boards.

Sheathed banana jack × sheathed banana jack and **banana plug × sheathed banana jack** adapters have a CAT III, 600V safety rating.

To Order: Please specify a color: black or red.

AC/DC Voltage Rating Hand-Held	Hands-Free	Current	Lg.		
Sheathed Banana Jack × Sheathed Banana Jack

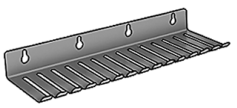
★ For 0.12″ max. wire diameter. ■ For 0.22″ max. wire diameter.

Test Leads with Reel

Extend the distance between your multimeter and the equipment you're testing. AC/DC voltage is 1,000V. Current is 20A. One end of the test leads is a 4 mm banana plug, which is the standard for connecting to a multimeter. The other end is a 4 mm banana jack that attaches to test leads with 4 mm banana plugs.

Lg., ft.	Safety Rating	Black		Red	
40	CAT IV, 600V	5920T1	$77.94	5920T2	$77.94
164	CAT II, 1,000V	5920T5	222.73	5920T6	222.73

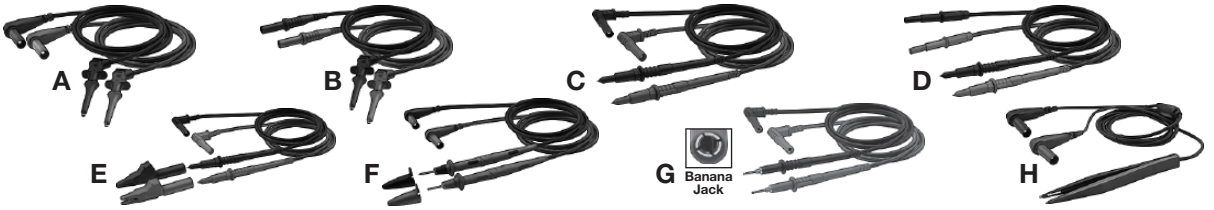
Test Lead Holders



These wall-mount test lead holders are steel with an enamel-coated finish. Mounting hole diameter is 0.19″. Overall size is 11″ Lg. × 3½″ Wd.

No. of Slots	For Max. Cord Dia.	Color		
14	0.21″	Orange	6938K67	$14.98
10	0.32″	Black	6938K68	15.34
9	0.45″	Blue	6938K69	17.93

Test Leads



For use with portable electrical testers such as multimeters. All test leads have 4 mm sheathed banana plugs, except Style G has a 4 mm sheathed banana jack. **Banana plugs** attach to a multimeter. **Banana jack** attaches to test leads with 4 mm banana plugs.

Test Lead Sets

Each set is a pair of red and black test leads. **Style E** comes with alligator clips that screw onto the tips for two testing options with one test lead set.

		AC/DC Voltage	Current	Safety Rating	Cord Lg.		Pair
A	Precision Retractable Hook × Right-Angle Banana Plug	300V/300V	5A	II, 300V	48″	6929K11	$19.95

Current-Sensing Test Leads

Measure current without interrupting the circuit by connecting these test leads to a multimeter or current meter. They step down the sensed current to a level that works with a meter—the signal reduction ratio is the factor by which they reduce current. The connection end is a 4 mm banana plug, which is the standard for connecting to a multimeter or current meter. Test leads include one black and one red cord.

Fluke i400 AC current clamp has a signal reduction ratio of 1 mA/A. It has a CAT IV, 600V safety rating and is CSA certified to U.S. and Canadian standards.

AC current clamp has a signal reduction ratio of 1 mA/A.

AC/DC current clamp has a signal reduction ration of 1 mV/A. It has a CAT III, 300V safety rating.

AC current loop has a signal reduction ration of 10 mV/A for the 5-300A range and 1 mV/A for the 50-3,000A range. It has a CAT IV, 600V safety rating.

	For Max. Cord Dia.	Current AC	Current DC	Current Accuracy	AC Voltage	Frequency Range	Jaw/Loop Opening	Cord Lg.

Test Lead Wire

This stranded test lead wire is tinned copper.

Retracting wire extends from 1-ft. to 5-ft. and has neoprene rubber insulation.

Straight wire is 50-ft. long and has EPDM rubber insulation. It is UL recognized.

	Wire Ga.	Current	AC/DC Voltage	Black		Red	
Retracting	20	4A	1,000V	7058K24	$16.26	7058K22	$16.20
Straight	18	16A	5,000V	7058K32	26.55	7058K34	26.55

Oscilloscope Test Lead Kits

Connect to an oscilloscope with these test leads and a variety of interchangeable tips.

All kits include a 59″ cable with a max. DC input of 600V, a 6″ ground lead, a BNC adapter, an insulating tip, an integrated circuit (IC) tip, a probe head, a spring hook, and a trimmer tool, unless noted.

Frequency, MHz	Attenuation	Input Resistance, MΩ	Max. Capacitance, pF

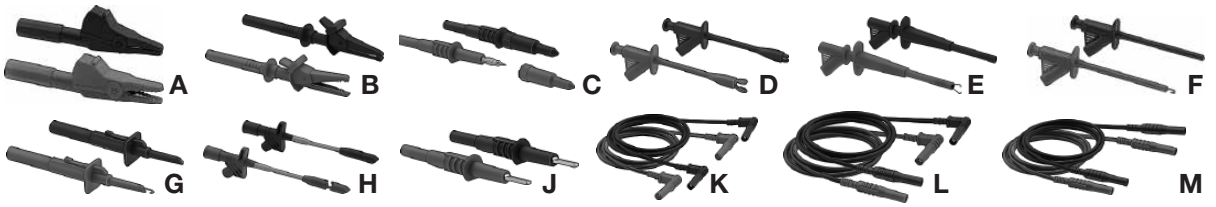
★ Trimmer tool not included. ■ Switch selectable. ▲78″ cable.

Test Leads & Patch Cords

Build-Your-Own Test Leads



Choose your own combination of test lead cords and tips.

Tip test ends are nickel-plated brass, unless noted. Each pair comes with one black and one red tip. *Styles A, B, C, G*, and *J* are UL listed and CSA certified. *Style B* tip comes with a fuse.

Cords are 47″ long and have 4 mm sheathed banana plugs, which is the standard for connecting to a multimeter. Each pair comes with one black and one red cord. They are UL listed and CSA certified.

Electrical Contact Cleaners

Less harsh than general purpose electrical cleaners, these aerosols are suitable for the delicate contacts in electronics and printed circuit boards. They remove oil, grease, dust, and oxides. Color is clear.

NSF K2-rated cleaners can be used in food-processing environments. The 16 oz. nonflammable NSF K2-rated cleaner also lubricates.

	Propellant Type	Dielectric Strength	Solvent Power, Kb	Temp., °F	Net Wt.		1-11	12-Up
Flammable	CO_2	63,000V	27	32° to 120°	13.5 oz.	7437K49	$12.17	$10.35

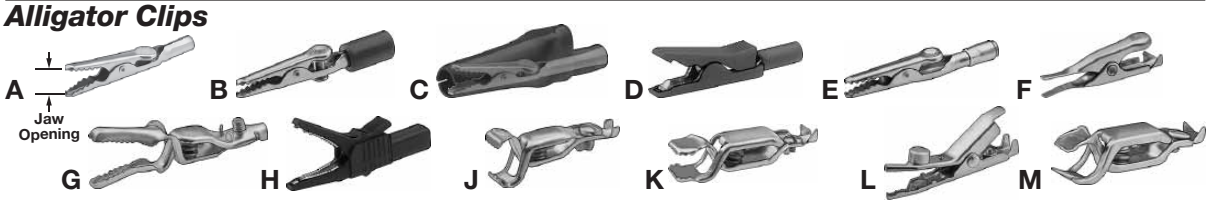
Alligator Clips



Spring-loaded clips create a secure temporary electrical connection for hands-free testing. Clips are toothed, unless noted. **304 stainless steel** clips are corrosion resistant. **Copper** and **silver** clips conduct electricity better than 304 stainless steel.

Flat alligator clips create a more secure connection than clips with standard alligator jaws. **Pipe clips**, also known as geophone clips, have rounded jaws that clamp onto battery terminal lugs and other curved surfaces.

Clips with banana jack connection ends are compatible with banana plugs, retractable banana plugs, and sheathed banana plugs, except Style B is not compatible with sheathed banana plugs.

★ Also has solder connection. ■ Also has screw-down connections. ▲ Clip is toothless. ♣ For 5/8" pipe OD and 3/8 pipe size; clip is toothless.

Air Dusters

Clean hard-to-reach and tight spaces with a burst of air. Air dusters are nonflammable.

Refillable can comes empty and must be filled from an air supply. It has a Schrader valve. It is a nonaerosol spray. **Replaceable can** comes with a CO_2 cylinder and a reusable nozzle that screws onto the cylinder to adjust air flow from a puff to a high-pressure burst. It is an aerosol spray. **Any-angle** dusters are aerosol and work even when upside down.

	Net Wt.	Air Pressure		1-11	12-Up
Disposable—Any-Angle	8 oz.	80 psi	7437K35	$13.65	$11.60

Observe rapidly changing electrical values in equipment such as motors and generators with an analog display that shows the magnitude and rate of change more easily than a digital display. Monitors have screw terminal wire connections and four 4-40 threaded mounting studs. Accuracy is ±2%. They are UL recognized.

AC current and **voltage** monitors have a frequency range of 25-125 Hz with a 60 Hz calibration, unless noted.

0-100A AC current monitors include a 100:5 current transformer.

0-100A DC current monitors include a 100A shunt.

Monitors with **electromagnetic interference (EMI) resistance** are shielded to prevent interference and maintain accuracy when mounted on a magnetic panel.

Current Indicating Rings

With Red Light

With Wire Leads

Run current-carrying wires through these rings to monitor AC current flow.

Ring with a red light illuminates to indicate power.

Rings with wire leads can monitor current from up to 200 ft. away when you attach a remote light (not included) that illuminates when current is present. They are UL and C-UL recognized.

Panel Monitors

See how much electricity motors, generators, and other electrical equipment use. The high-visibility digital screen displays electrical measurements with more accuracy than an analog panel monitor. Monitors have screw terminal connections. Temperature range is 32° to 131° F, unless noted.

Monitors for 1/8 DIN Cutout Size—They fit a 1.77" Ht. x 3.62" Wd. panel cutout. Operate on 120V AC at 50/60 Hz. *0-600V AC* monitor has a 0.1X to 4X scaling range.

Monitors for 3/64 DIN Cutout Size—They fit a 0.88" Ht. x 2.68" Wd. panel cutout. Operate on 85-250V at 40-440 Hz. *Voltage* and *current* monitors have a 0.5X to 2X scaling range, unless noted.

Monitors with a scaling range can be adjusted to compensate for measurements that are outside the monitor's set measuring range.

▲ Scaling range is 0.2X-2X. ■ Temp. range is 32° to 122° F.

Current Relays

Prevent AC current overload in equipment such as motors and heaters. These relays sense current flowing through wires routed through the opening. If the current exceeds a set trip point, the relay trips and starts the adjustable delay timer. After the timer's cycle, the relay cuts power to the equipment to protect against overload. Once current drops below the trip point, the relay allows power to flow again to the equipment. The delay timer can be adjusted from 0.5 to 6 seconds.

Relays are SPDT (single pole, double throw) and have a resistive load of 10A @ 240V AC. They have 1/4" quick-disconnect terminals and operate on 120V AC. Maximum wire diameter is 0.5". Relays have two 0.19" diameter mounting holes. All are UL recognized; relays with a 1-10A trip range and above are also C-UL recognized.

To determine the current trip range for more than one wire, divide the listed trip range by the number of wires passed through the opening.

Current Trip Range		
0.1-1A	65795K69	$141.67
1-10A	65795K71	87.94
3-30A	65795K72	87.94
6-60A	65795K73	87.94
10-100A	65795K74	87.94

Voltage and Current Meters

Estimate energy costs, and monitor and measure energy consumption. This single-phase meter has a one second sampling interval. It operates on 120V AC at 60 Hz. It has a receptacle connection and a 6-ft. power cord with a three-prong plug.

This meter is true RMS for accurate AC measurements. It is UL and C-UL listed.

AC Voltage Range	Accuracy	Current Range	Accuracy		
100-250V	1.5%	0-15A	1.5%	7382K11	$118.18

Voltage and Current Loggers

Record data over time to monitor energy consumption and troubleshoot intermittent problems such as voltage spikes. These loggers connect to a computer with a USB port to download data for later analysis. They are compatible with Windows 8 and earlier. Software and USB cord are included, unless otherwise stated. Loggers are single-phase. Set the sampling interval to determine how often the logger takes measurements.

True RMS loggers take more accurate AC measurements than other loggers.

AC voltage/current logger includes test leads with alligator clips, a clamp-on probe with 1.1″ jaw opening, and a carrying case. Software and a USB cord and a 9V battery are required.

AC voltage/current/wattage loggers have a receptacle connection and include a 6-ft. power cord with a 3-prong plug. 7382K13 includes a switching relay. They are UL and C-UL listed.

AC/DC voltage and **DC voltage** loggers have a CAT IV, 300V safety rating. They include test leads with alligator clips and batteries.

DIN-Rail Mount Voltage Conditioners for Electrical Monitors

Step down high AC voltage and create an output signal that can be used by panel monitors and other electrical measuring equipment. Conditioners operate on 24V DC and have screw terminal wire connections. They mount to DIN rail with two 0.14″ dia. mounting holes. Size is 2.2″ Ht.×1.42″ Wd.×3.27″ Dp. Temperature range is 32° to 140° F. They have a CAT II, 600V safety rating and are UL and C-UL recognized.

These conditioners have true RMS sensing capability for accurate readings of the AC input voltage.

Output	Choose an AC Input Voltage		
4-20 mA	0-150V, 0-250V, 0-500V	6853T22	$253.67
0-5V DC	0-150V, 0-250V, 0-500V	6853T21	229.53

Current Conditioners for Electrical Monitors

Reduce high current flows to levels that work with panel monitors and other electrical measuring equipment.

Feed-Through and Hinged Conditioners with Screw Terminals

These conditioners have two 0.19″ diameter mounting holes. Housing is plastic. Temperature range is 0° to 120° F. They are UL and C-UL listed.

Hinged conditioners open so you can run a wire through them without cutting the power.

Feed-Through

DIN-Rail Mount Feed-Through Conditioners with Screw Terminals

These conditioners have true RMS sensing capability for accurate readings of the AC input current. Ready to mount on DIN rail, they have two 0.14″ diameter mounting holes. Housing is plastic. Temperature range is 32° to 140° F. They have a CAT II, 600V safety rating and are UL and C-UL recognized.

To Order: Please specify an AC current input range: 0-10A, 0-20A, 0-50A, or 0-100A.

ID	Output	Ht.	Wd.	Dp.	24V DC Powered	
0.79″	4-20 mA	2.99″	1.42″	3.27″	6733T12	$253.92

Electrical Monitor Calibrators

Selectable

Fully Variable

Check the accuracy of digital and analog electrical monitors by providing a known current level. Calibrators include a 9-volt battery, connector cable with spade terminals, and carrying case.

Selectable calibrator has three possible current outputs: 4 mA, 12 mA, and 20 mA. There are LEDs that light up to show which output you've selected. It has a low-battery indicator.

Fully variable calibrator allows you to select any output between 0 and 24 mA. The digital LCD shows the current output level. The calibrator also provides a 24V DC power supply to measure loop currents and check for control loop issues. It includes an AC adapter.

Max. Circuit Resistance	Output Current Accuracy		
Selectable			
240 Ω	0.1 mA	7057K49	$109.99
Fully Variable			
1,000 Ω	0.075%	7057K69	269.99

Remote Displays for Pressure Transmitters

Monitor pressure from a distance. These displays switch between five input current and voltage signals, so you can use them with different pressure transmitters. Input signals are 0-20 mA, 4-20 mA, 1-5V, 0-5V, and 0-10V. The displays save settings even when power is turned off. To prevent tampering, they have a lockout feature that requires a password to modify settings.

Rated NEMA 4X for protection from washdowns, displays have a gasketed front panel. They fit a 1/8 DIN panel cutout (1.77″ Ht.×3.62″ Wd.) and have a 6-digit, dual line red-LED display that shows numbers from -99,999 to 999,999. They have screw terminal electrical connections. Accuracy is 0.03%. Temperature range is -40° to 149° F. They are UL and C-UL listed.

Display with two SPDT (single pole, double throw) relays can be used in process-control systems. Relay current is 3A @120/240V AC. Display includes an alarm LED indicator.

Input AC Voltage	Transmitter Power Supply	Display		Display with Two SPDT Relays	
85-265V	24V DC	38445K21	$467.19	38445K22	$537.50

Handle-Mount Commutator Resurfacers

With Adjustable-Angle Handle

With Fixed-Angle Handle

Without taking a motor out of service, reach motor commutators to remove ridges, surface contaminants, and other imperfections. These resurfacers can also be used to prepare commutators for new carbon brushes. Handles are wood. Stones are nonreplaceable.

Adjustable-angle handles insert into the knob grip at one of two 45° angles or in the vertical position.

Fixed-angle handles have a 45° angle.

To Order: Please specify grit: 46 (coarse), 90 (medium), 120 (fine), 220 (polished).

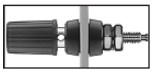
Panel-Mount Connection Posts



Single Fluted Post (Installed)

Double Hex-Head Post

Before making a permanent connection, use these connection posts to test a circuit. Also known as binding posts, they mount through panels to create a connection point for banana plugs, bare stranded wire, and spade terminals, except the single hex-head nickel-plated brass posts do not work with banana plugs. All posts are insulated to prevent contact with panels.

Gold-plated brass conducts the best. **Tin-plated brass** lasts the longest. **Nickel-plated brass** offers a good compromise between conductivity and longevity.

Single hex-head nickel-plated brass posts include O-rings.

Double posts require two panel cutout holes that are ¾″ center-to-center.

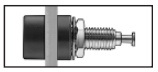
Panel-Mount Banana Jacks



Single Banana Jack (Installed)

Double Banana Jack

Create a connection point through a panel for banana plugs. All jacks are insulated with polycarbonate to prevent contact with panels. They are tin-plated brass. **Double banana jack** requires two panel cutout holes that are ¾″ center-to-center.

Hand-held voltage ratings are the maximum tested voltage for applications where you hold a cord connected to the jack in your hands while testing. *Hands-free* voltage ratings are the maximum voltage the jack is rated to withstand.

To Order: Please specify a color: black or red.

Commutator Resurfacer Kits

With a mix of stone finishes, this kit has everything you need to clean small commutators and contour new carbon brushes to fit a commutator. Kit includes one 9″ plastic handle; two stones of each grit: 46 (coarse), 90 (medium), 120 (fine), 220 (polished); and four 320 grit (extra-polished) stones. Stones are 1″ Lg.×¾″ Wd.×5/16″ Thick.

Kit	5951T11	$61.43

AC Motor-Start and Motor-Run Capacitors

Store electricity to keep motors starting and running efficiently.

Motor-start capacitors provide a burst of energy to start motor rotation in small, single-phase AC motors such as those used to power fans and pumps. They have two 1/4" male quick-disconnect terminals and four blades. Frequency is 50/60 Hz. Temperature range is -40° to 149° F. Housing is plastic. They are UL recognized.

Motor-run capacitors improve performance by ensuring even rotation in single-phase continuously running AC motors, such as those in air conditioning units. They have two 1/4" male quick-disconnect terminals and eight blades. Frequency is 60 Hz. Temperature range is -40° to 149° F. Housing is metal. They are C-UL and UL recognized.

Freeze and Antistatic Sprays

Freeze Sprays—Chill individual electronic components on a circuit board to -60° F to troubleshoot one circuit at a time. Spray is clear.

Antistatic Sprays—Reduce static and prevent buildup in sensitive electronic components. All spray on clear and leave a transparent film so components can be inspected.

	Propellant Type	Net Wt.		1-11	12-Up

Electrical Insulating Varnish

Fix worn and damaged insulation on motor winding wire and electrical equipment. These flammable aerosol varnishes spray on to fill gaps and create an abrasion- and wear-resistant coating. Temperature range is 0° to 310° F. Rated NEMA Class F.

Clear varnish leaves a transparent film so components can be inspected.

Green varnish is designed for harsh environments and is oil resistant.

Red varnish stands out for identification when used as a coating on wires.

Thin-Face Electrical Contact Files

The spatula-like end lets you access contacts in tight spaces. Use on electrical components such as spark plugs, switches, relays, and ignition points. The 200-grit diamond abrasive cleans the contacts with a minimal amount of pressure while removing very little metal. Handle is plastic.

Lg.	Wd.	Thick.	O'all Lg.		
7/8"	1/4"	1/16"	5 5/8"	6304T11	$66.36

Electrical Connection Corrosion Inhibitors

Apply to electrical connections such as switches and lugs to prevent corrosion and enhance conductivity. These inhibitors protect and lubricate the connection while sealing out liquids and gases. This nonflammable copper compound is easy to apply with the included brush. They are UL listed.

Net Wt.	Temperature, °F		
1.5 oz.	–50° to 250°	2953K11	$6.68
8 oz.	–50° to 250°	2953K12	42.61
16 oz.	–50° to 250°	2953K13	61.73

General Purpose Electrical Cleaners and Sealants

Designed to be used together to improve performance of electrical connections. Cleaner removes oxidation and corrosion on connections. Sealant coats connections to prevent oxidation and corrosion. All are clear.

Cleaners provide long-lasting protection for all metal surfaces.

Sealants for metal surfaces protect electrical contacts and connections in high humidity, corrosive, and salty environments.

Sealants for gold surfaces improve conductivity and provide lasting protection.

Cleaner and sealant kit includes 0.5 oz. spray cans and 0.07 oz. squeeze tubes of cleaner, sealant for metal surfaces, and sealant for gold surfaces; wipes; brushes, cloths, and swabs for application; and a case.

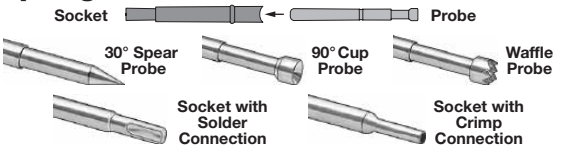
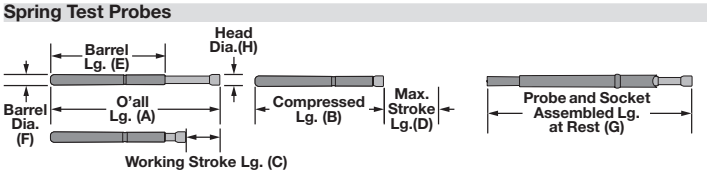
Spring Test Probes



Create an automated system to test continuity in circuit boards and electrical circuits by combining spring-loaded test probes and sockets. When installing test probes and sockets, adhere to the "minimum spacing between probe centers" to maximize testing points while preventing probes from interfering with each other. Spring test probes will produce optimal results when your system is set up to achieve the working stroke length (C). Initial spring force is the force required to start compressing the probe; maximum spring force is the force applied at the working stroke length.

Spring Test Probes



Probes have a life span of approximately 100,000 compressions. **30° spear** probes test flat and female surfaces without marring. **90° cup** probes guide protruding objects, such as terminals and pins. **Waffle** probes have many points of contact to test flat surfaces as well as terminals and pins without marring. All have a gold finish.

Min. Spacing Between Probe Centers	Current	*Spring Force, oz.* Initial	Max.	(A)	(B)	(C)	(D)	(E)	(F)	(G)	30° Spear (H)		90° Cup (H)		Waffle (H)		Pkg. of 5

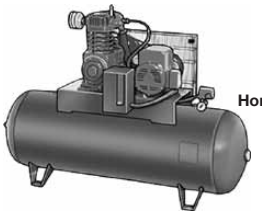
Air Compressors

About Air Compressors

Air-Flow and Pressure Requirements—It's important to consider your compressor's air flow in cubic feet per minute (cfm). To determine the air-flow requirements, total the cfm requirements of all the air-powered tools your compressor will be operating simultaneously. Your compressor should also exceed the pressure (psi) requirement of the highest-pressure-rated tool to which it will be supplying power. Add 20%-30% to allow for system variables and future expansion.

Stationary Air Compressors



Horizontal

Vertical

These compressors have an ASME-rated tank and are continuous duty. They turn on when the tank falls to the activation pressure and turn off when the tank reaches the maximum pressure. All generate lubricated air and come lubricated with 30W oil. Body and crank case are cast iron. Compressors have a relief valve, pressure gauge, and manual tank drain. Outlet is NPT female. UL listed.

Electric compressors have overload protection and must be hardwired.

Gas-powered compressor has an electric starter.

Portable Air Compressors

Single Tank

Single Tank with Wheels

Double Tank with Wheel

Compressors turn on when the tank falls to the activation pressure and they turn off when the tank reaches the maximum pressure. They have a single-phase motor with an electric starter and thermal overload protection. Tank has a manual drain.

Single-tank compressor is continuous duty, does not require lubrication, and generates nonlubricated air. It has a relief valve, a tank pressure gauge, and an outlet pressure gauge. Body and crank case are aluminum. It has a 5-ft. cord with plug. Outlet is NPT female.

Single-tank compressor with wheels is intermittent duty, generates lubricated air, and requires 30W oil for lubrication. It has a relief valve, a tank pressure gauge, and an air intake filter. Body is steel and crank case is aluminum. It has an 8-ft. cord with plug. Outlet is NPT male.

Double-tank compressors with wheel are continuous duty, generate lubricated air, and require 10W to 40W oil for lubrication. They have a pressure gauge and two quick-disconnect fittings. Body and crank case are cast iron. They have a 6-ft. cord with plug. Outlet is NPT female. UL listed.

For information about air compressors, see page 1006.

High-Flow Low-Pressure Compressed Air Blowers

Also known as regenerative blowers, use these to produce high-flow compressed air with low pressure or vacuum to operate pump drives, lift tables, and conveying systems. Compressed air blowers are also used for drying, exhausting, and aeration. Housing is aluminum, except 10- and 18-hp blowers have a cast iron housing. Blowers are continuous duty and must be hardwired. Inlet and outlet are NPT female. Blowers are CE approved and have UL and C-UL recognized components (unless noted). Single-stage blowers are CSA certified.

Air circulates inside the blower housing to compress air, which generates pressure or vacuum. **Single-stage** blowers circulate air once and then exhaust. **Two-stage** blowers circulate air twice and then exhaust, creating higher pressure or vacuum than single-stage blowers with the same horsepower.

Inverter-rated blowers have a motor that can run at slow speeds without overheating, so they can be used with a motor speed control (variable frequency drive).

Add a **relief valve** (sold separately) to protect blowers from overpressurization and excess vacuum.

Air Pumps

Battery-powered air pumps include 9-ft. cables. **60-psi** pump includes a vehicle plug for connection to a 12-volt vehicle outlet and **120-psi** pump includes spring clamps for connection to a 12-volt vehicle battery.

Compressed Air Regulating Manifolds for Air-Powered Tools

Run up to four air-powered tools from a single air supply. Two outlets deliver air at the same pressure as the air supply, and two outlets share a regulator so you can turn the knob to adjust the pressure within the range. The pressure gauge indicates air pressure at the regulated outlets. Ports accept Industrial and ARO quick-disconnect couplings; the inlet is a 3/8 plug and outlets are 1/4 sockets. Manifolds are zinc and plastic.

ASME-Code Vertical Compressed Air Storage Tanks

Without Mounting Plate

With Mounting Plate

Use ports as inlets, outlets, or drains in any configuration. Connections are NPT female and include plugs. Temperature range is –20° to 400° F, except 1- to 20-gallon tanks have a maximum temperature of 650° F. **Tanks with mounting plate** have a platform where you can secure motors, pumps, and other components.

Steel tanks have a powder-coated exterior finish. *Tanks with epoxy lining* resist interior corrosion that can result from moisture in your compressed air.

High-pressure steel tanks have a primed exterior finish.

Portable Compressed Air Storage Tanks

Vertical without Mounting Plate

Horizontal with Mounting Plate

Mil. Spec. without Mounting Plate

ASME Rated without Mounting Plate

ASME Rated with Mounting Plate and Wheels

All tanks are steel with 1/8″ thick walls. **Vertical tank without mounting plate** has an NPT female port. This product cannot be sold in New Jersey. **Horizontal tanks without mounting plate** include a pressure gauge, relief valve, and Schrader valve. They have NPT male ports. **Tanks with mounting plate** have a platform for securing compressors, motors, and other components. Ports are NPT female.

Mil. Spec. tank meets MIL-T-45169E and includes a 4-ft. hose with air chuck.

ASME-rated tank without mounting plate also meets OSHA standard 1915 and includes a 6-ft. hose with air chuck.

Portable Stainless Steel ASME-Code Pressurized Liquid Dispensing Tanks

Vacuum Closure Cap

Attach a compressed air source to pressurize liquids for dispensing and spraying. Tanks have a 1/4 NPT female dip tube that draws liquid from the bottom of the tank. Use with air, water, adhesives, and ink. Tanks have four NPT female ports. Wall is 1/8″ thick. Temperature range is –20° to 300° F. *1- to 5-gallon* tanks come with a removable EPDM gasket.

304 stainless steel tanks have good corrosion resistance.

316 stainless steel tanks have excellent corrosion resistance.

Vacuum closure caps (sold separately) are required to use tanks in vacuum applications.

Compressed Air Flow Boosters

Create a high-flow air stream from your compressed air supply. Flow boosters draw in ambient air, which amplifies compressed air flow. Use hose clamps (not included) to connect hose or duct to the inlet or outlet. To maximize performance and service life, install a filter inline before the booster to remove particles down to the maximum particle size.

Fixed boosters are anodized aluminum and have an NPT female compressed air inlet. Maximum temperature is 140° F. Maximum particle size is 5 microns.

Fixed boosters with flange mount easily near your equipment. They're zinc, except booster with 17:1 flow output to input ratio is aluminum. Compressed air inlet is NPT female. Maximum temperature is 130° F. Maximum particle size is 20 microns.

Adjustable boosters allow you to fine-tune the flow—rotate the knurled ring to change the amount of ambient air drawn into the booster. They're made of aluminum. Compressed air inlet is NPT male. Maximum temperature is 200° F. Maximum particle size is 20 microns.

Compressed Air Control Signal Flow Boosters

Use a low-flow air control signal with an air supply to produce flow up to 50 cfm to actuate valves and other air-powered system components. To maximize performance and service life, install a filter inline before the booster to remove particles down to 40 microns. Maximum temperature is 160° F. Boosters are aluminum. Connections are NPT female.

1:1 pressure output to input ratio boosters maintain pressure between the air supply inlet and the boosted output.

3:1 and 6:1 pressure output to input ratio boosters increase pressure between the air supply inlet and the boosted output.

Compressed Air Pressure Boosters

Ensure sufficient pressure to operate air-powered tools and machines. Pressure boosters compress the air supply, which increases air pressure. Do not use boosters for tank sizes larger than specified. To maximize performance and service life, install a filter inline before the booster to remove particles down to the maximum particle size.

Adjustable boosters with 1/4 NPTF female connections have an integral regulator so you can fine-tune the output pressure. They come with pressure gauges on the inlet and outlet. Maximum particle size is 5 microns. Boosters are aluminum, steel, and stainless steel.

Fixed boosters with 1/4 NPT female connections have a maximum continuous operating time of 4 minutes on with at least 4 minutes off. Not rated for maximum particle size. Boosters are aluminum and stainless steel.

Fixed boosters with 3/8 NPT female connections require compressed air to operate—they have a 1/2 NPT female drive inlet and a 1/8 NPT female pilot inlet that control the booster. Maximum continuous operating time is 30 minutes on with at least 30 minutes off. Maximum particle size is 40 microns. Boosters are aluminum (unless noted).

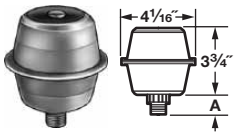
Expansion Tanks CAD

Use these tanks to accommodate the expansion of heated water and provide a cushion of compressed air in closed water-heating systems. They prevent water loss by eliminating the need to expel hot water from systems during each heating cycle.

All of these tanks can be used vertically as well as horizontally. Openings are NPT female, unless noted.

Miniature Type 304 Stainless Steel Tanks



Offering excellent corrosion resistance, these miniature tanks are made of Type 304 stainless steel. A rolling fluoroelastomer rubber diaphragm maintains tank pressure at or near 0 psi, which extends seal life and prevents leakage. Maximum pressure is 15 psi. Maximum operating temperature is 350° F. Opening is NPT male.

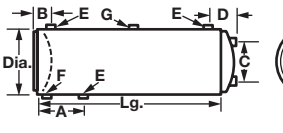
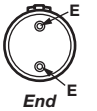
Water Storage Tanks CAD

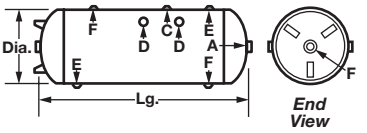
Water Storage Tanks





End View

ASME Hydropneumatic Storage Tank



End View

These tanks can be used both vertically and horizontally as hot- and cold-water storage tanks. They are galvanized inside and outside for corrosion resistance. Openings are NPT female.

Water Storage Tanks— These tanks can be used as water heaters when used with a heat source (see our immersion heaters on pages 554-557). All are 14-ga. steel. Max. pressure is 75 psi. Max. operating temp. is 450° F.

ASME Hydropneumatic Storage Tank— You can also use this tank vertically as a hydropneumatic water storage tank. It's 11-ga. steel. Max. pressure is 125 psi. Max. operating temp. is 160° F.

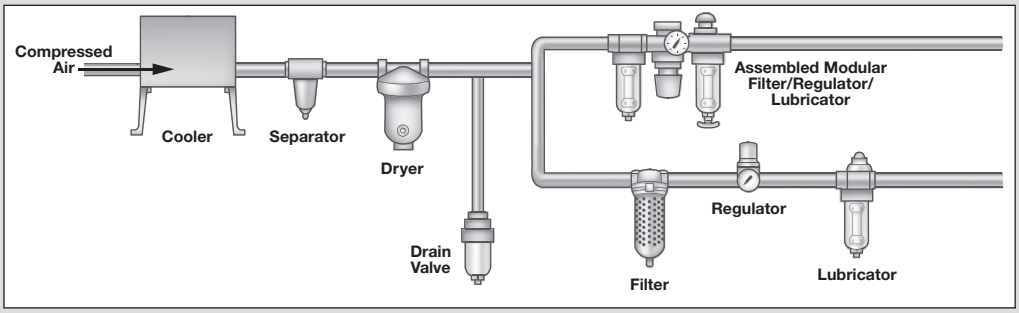
About Air Preparation



High-pressure air isn't all you get when you use a compressor—you also get water, dirt, oil, and other contaminants. Before using compressed air, it should be filtered, regulated, and in some cases, lubricated. Correctly prepared air ensures the quality and service life of your air-powered tools and equipment, including air cylinders.

Moisture Removal (Pages 1013-1017)—The first step toward dry air starts with air coolers (also known as aftercoolers), moisture separators, air dryers, and moisture drain valves. Place these items after a compressor to remove moisture from the compressed air before it enters your system. *Air coolers* (page 1013) lower the compressed air temperature, while *moisture separators* (pages 1013-1014) dispose of the condensation that occurs during this process. *Air dryers* (pages 1016-1017) remove any remaining moisture, while *moisture drain valves* (pages 1003-1005) allow you to discharge the moisture.

Filters (Pages 1017-1021)—Once you've cooled your air and removed the majority of moisture, it's necessary to filter out the remaining dirt particles, oil, oil vapors, and other damaging elements. Air filters remove solid particles and any remaining water from your system, while oil-removal or coalescing filters remove oil mist. We also offer odor-removal air filters and bacteria-removal air filters. Install filters upstream of regulators and lubricators to protect them from contamination.

Regulators (Pages 1021-1025)—Control air pressure to increase performance, save energy, and ensure the continuous, safe operation of your air-powered equipment. The pressure you need should be in the middle of the given regulating range. Relieving-style regulators exhaust excess downstream pressure; nonrelieving regulators do not.

Lubricators (Page 1025)—Introduce oil droplets into compressed air at a controlled rate. They provide point-of-use lubrication.

Filter/Regulator/Lubricators (Pages 1026-1032)—Also known as FRLs, these products conveniently combine a filter, regulator, and lubricator into a compact unit.

Water-Cooled Air Coolers

Connect these coolers to a cold-water line to cool hot air coming from a compressor—no electricity needed. Also known as after-coolers, all require a flow rate of 3 gpm per 100 scfm and are able to cool air to within 15° F of your inlet water. The cooling action condenses most of the water from your compressed air system. A moisture separator with drain is required to collect the condensed water (sold separately; see 43775K51-43775K55 on page 1014).

Coolers have a brass shell and copper tube assembly. They also have cast iron end caps that can be removed for cleaning. Max. pressure is 250 psi. Max. temperature is 250° F. Inlet and outlet connections are NPT female.

Pipe Size		Max. scfm @100 psi	O'all Size				
Air	Water		Ht.	Wd.	Dp.		
1½	½	40	31⁄2″	25⁄8″	333⁄8″	43865K76	$339.47

2½	1	310	61⁄4″	51⁄4″	501⁄2″	43865K79	809.17

Moisture Separators with Oil-Removal Filter

In addition to removing water and solids down to 3 microns, these separators trap oil droplets down to 5 ppm. Place them after your compressor and air cooler, or at the point of use in applications that don't require an air cooler.

All have an automatic drain and a liquid-level indicator. Body and bowl are aluminum. Filter is cotton paper for pipe sizes 1⁄8 and 1⁄4; fiber with a stainless steel core for all others. Max. pressure is 145 psi for pipe sizes 1⁄8 and 1⁄4; 250 psi for all others. Max. temperature is 140° F. Inlet and outlet connections are NPT female.

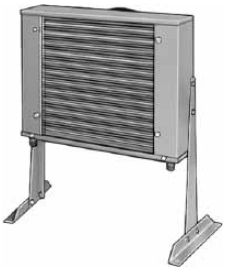
Fan-Cooled Air Coolers



Also known as aftercoolers, these coolers have a fan to chill hot air coming from compressors. The cooling action condenses most of the water from your compressed air system. A moisture separator with drain is required to collect the condensed water (sold separately; see 43775K51-43775K55 on page 1014). All coolers have a steel housing. They also have a heat exchanger with aluminum fins and copper tubing. Mount to the floor, wall, or ceiling (except 150-scfm cooler is for floor mounting only).

Coolers have a 1⁄12 hp, single-phase motor (except 150-scfm cooler has a 1⁄4 hp motor) that operates on 115 volts AC @ 60 Hz. Max. scfm ratings are based on cooling hot compressed air to within 15° F of the ambient air. Max. pressure is 250 psi. Max. temperature is 250° F. Inlet and outlet connections are NPT male. Motor has UL recognized components; CSA certified.

High-Pressure Moisture Drain Valves

Remove condensate in compressed air systems that have as much as 600 psi of pressure. Back pressure from compressed airflow activates a disc in these valves, which allows moisture to escape. The moisture is atomized as it is discharged, eliminating the need for discharge piping. An integral muffler minimizes noise.

Connect these valves to your air compressor, air cooler, moisture separator, dryer, or filter. If used outdoors, mount them vertically to prevent freezing. Body is steel; internal parts are stainless steel. Max. temperature is 220° F. Inlet and outlet connections are NPT female. All meet OSHA noise requirements.

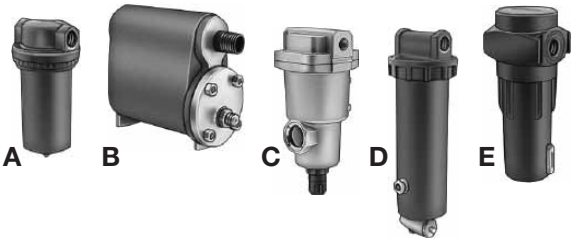
Moisture Separators & Drain Valves

For information about air preparation, see page 1013.

Moisture Separators



Designed for use in compressed air systems to remove excessive water condensation from your air stream. Use them downstream of your compressor and air cooler. Inlet connections are NPT female. Outlet connections are NPT female for styles A, C, D, and E; NPT male for style B.

(A&B) Separators with Internal Automatic Drain—*Style A* have a max. temperature of 150° F. *Style B* can rest on the floor or be suspended from piping. They have a max. temperature of 100° F.

(C) Separators with Internal Automatic Drain and Sight Glass—A sight glass allows convenient water inspections. Max. temperature of 140° F.

(D) Separators with External Automatic Drain—Provide more clog resistance than models with internal drains. Max. temperature is 120° F.

(E) Separators without Drain—Offer high flow rates and allow you to pipe moisture away for plumbing versatility. Max. temperature is 176° F.

Oil/Water Separators

Oil-contaminated condensate from compressed air lines is no match for these separators. They remove oil from the water using a combination of gravity, an oil-absorbing prefilter, and an activated carbon filter bag. Oil is collected in a separate container, allowing you to dispose of the 99.9% oil-free water, while a large settlement chamber accumulates dirt particles. Separators also have a tap for sampling water without disconnecting the outlet piping.

Multiple inlet connections allow you to connect several compressed air components, such as air coolers, separators, moisture drain valves, air dryers, and filters. Body is polyethylene. Max. temperature is 95° F. Max. pressure is 232 psi. Attach hose to inlets and outlets with a hose clamp.

Replacement filter kit includes an oil-absorbing prefilter and an activated carbon filter bag.

Moisture Drain Valves

Also known as drip legs, these low-maintenance drains consist of a bowl and a float that automatically opens the drain when the bowl begins to fill. Install them at low points in your piping; connect to your compressed air tank, air cooler, moisture separator, dryer, or filter. Drains (except Styles G and M) can be opened manually and serviced without removing them from the air line. Inlet and outlet connections are NPT female, except Style G has a male outlet connection.

(F&G) Clear View—A transparent bowl allows you to view the moisture level. *Style F* has a polycarbonate bowl. *Style G* has a nylon bowl.

(H) With External Drain—This valve has an external drain to handle oil sludge and large particles. The bowl is polycarbonate and the drain is bronze.

(J) With Sight Glass—A sight glass allows convenient inspections. Bowl is zinc.

(K) Compact—Have a compact top-mount design for use in tight spots. Bowl is aluminum.

(L) High Capacity—These high-capacity side-mount valves have a rugged construction for long service life. Bowl is cast aluminum.

(M) High Temperature and Pressure—Offers the highest temperature and pressure of all our drain valves. With a stainless steel bowl, this valve also has excellent corrosion resistance.

For information about air preparation, see page 1013.

Compressed-Air-Activated Moisture Drain Valves

Each time your compressor cycles, this piston-powered valve drains moisture. It's activated by compressed air via a 1/8" NPT female port.

Valve has rugged, cast aluminum construction for a long service life. Connect it to an air compressor, air cooler, moisture separator, dryer, or filter. Max. temperature is 150° F. Max. pressure is 200 psi. Inlet and outlet connections are NPT female.

Pipe Size	Discharge Cap., gpm	O'all Size Ht.	Wd.	Dp.		
1/4	0.25	3 7/8"	2 1/8"	2 1/8"	4919K13	$91.59

Timer-Activated Electric Moisture Drain Valves

With a timer, you set how often your drain valve opens and how long it stays open. These valves are excellent for compressed air systems with high oil content because they resist clogging when water, oil, and sediment combine to form sludge. Connect them to your air compressor, air cooler, moisture separator, dryer, or filter. Inlet and outlet connections are NPT female.

(A-D) Solenoid Valves—Allow automation with computers and PLCs to program your drain-opening cycles. *Style A* has a NEMA 1 timer enclosure (for indoor use only), a manual override switch, and a brass Y-strainer to trap large debris and sludge before it reaches the valve. It has a 6-ft. cord with three-prong plug. *Style B* have a NEMA 4 timer enclosure (for indoor and outdoor use; suitable for washdown and splashing water). They have a 6-ft. cord with three-prong plug (except 1.2-gpm and 4.5-gpm valves do not have a cord or plug). *Style C* have a NEMA 4X timer enclosure (for indoor and outdoor use; suitable for washdown and exposure to corrosive agents). They have an 8-ft. cord with three-prong plug (except 9831K22 does not have a plug; see pages 816-822 for plugs). *Style D* have a NEMA 4 timer enclosure (for indoor and outdoor use; suitable for washdown and splashing water). They have a 6-ft. cord with three-prong plug.

(E&F) Ball Valves—Resist clogging even better than solenoid valves. *Style E* have a NEMA 4X timer enclosure (for indoor and outdoor use; suitable for washdown and exposure to corrosive agents). They have an 8-ft. cord with three-prong plug. *Style F* discharge at 15 min. intervals. They're suitable for indoor use; have a 6-ft. cord with three-prong plug.

Optional strainers prevent debris from clogging valves. Manually disconnect flow to the valve for maintenance. Body is brass. Internal filter screen is Type 304 stainless steel. Connections are NPT male. All have a 1/2" inlet. Outlet is 1/4" for 4389K37, 1/2" for 4389K38, and 3/8" for 4389K39. Max. pressure is 600 psi.

Sensor-Activated Electric Moisture Drain Valves

When the internal sensor detects condensate, it opens the valve to allow moisture to drain and then closes the valve to prevent air loss and save energy. Connect to your air compressor, air cooler, moisture separator, dryer, or filter. All have a 6-ft. cord with three-prong plug. Inlet connections are NPT female.

(G&H) Clog Resistant—Resist clogging when water, oil, and sediment combine to form sludge. An alarm with a remote contact lets you connect a signaling device. Two inlet connections let you connect two components at the same time. Body is stainless steel and copper. Valves operate on 115V AC, 50/60 Hz.

(J) High Flow—Body is aluminum. Valve operates on 115/230V AC, 50/60 Hz.

Desiccant Air Dryers

Standard with Polycarbonate Bowl

Standard with Aluminum Bowl

High Pressure with Steel Bowl

High-Pressure Chemical Resistant (Pipe Size 1/4)

High-Pressure Chemical Resistant (Pipe Size 1/2)

Count on these tried and true air dryers to remove moisture from your compressed air system.

Standard—Desiccant is silica gel, which changes from blue to pink when saturated. To reactivate, heat desiccant for three to four hours at 350° F. Body is zinc. Dryers have a steel bowl guard (except the 25-scfm dryer has an aluminum bowl guard). Inlet and outlet connections are NPT female.

Dryers with *polycarbonate bowl* have a transparent bowl so you can see when the desiccant is saturated. Max. pressure is 150 psi. Max. temperature is 125° F.

Dryers with *aluminum bowl* have a moisture indicator to monitor desiccant saturation. Max. pressure is 150 psi. Max. temperature is 150° F.

High Pressure—Have a sight glass to monitor the desiccant, which is silica gel and changes from blue to pink when saturated. To reactivate, heat desiccant at 275° F until it returns to the original blue color. Body is aluminum. Max. pressure is 250 psi. Max. temperature is 120° F. Inlet and outlet connections are NPT female.

High-Pressure Chemical Resistant—Offer excellent resistance to synthetic compressor lubricants, hydrocarbons, solvents, acids, and other chemicals. All have clay desiccant to remove not only moisture, but also oil and oil vapor. They also have a built-in filter to capture particles down to 0.3 microns. Body is polyurethane. Bowl is transparent so you can view the desiccant, which darkens when saturated. Dryers lower inlet air dew point by 20% and can be mounted vertically and horizontally. Max. pressure is 250 psi. Max. temperature is 180° F.

Pipe size 1/4 model is a disposable one-piece unit. Desiccant cannot be reactivated or replaced. Inlet and outlet connections are NPT female. *Pipe size 1/2 model* has a two-piece housing with built-in mounting bracket. Desiccant can be replaced but not reactivated. Inlet and outlet connections are NPT male.

Heavy Duty Desiccant Air Dryers

Able to handle higher pressures than standard desiccant dryers, these are for use in environments with particularly high moisture. All have a bronze filter element that removes particles down to 90 microns on the 15- and 30-scfm models; 40 microns on the 60-scfm models. A built-in sight glass allows you to monitor the desiccant, which is silica gel and sold separately below. The desiccant changes color from blue to pink when saturated. To reactivate, heat the desiccant at 350° F until it returns to the original blue color.

All dryers have a zinc body. Max. pressure is 300 psi. Max. temperature is 180° F. Inlet and outlet connections are NPT female.

High-Flow Desiccant Air Dryers

Clear Acrylic Cylinder

Aluminum Cylinder w/ Sight Glass

High air flow capacities allow these dryers to be used on main compressed air lines servicing multiple end uses. Max. temperature is 150° F. Inlet and outlet connections are NPT female.

Dryers with Clear Acrylic Cylinder—The cylinder is transparent so you can monitor the desiccant. Max. pressure is 150 psi.

Dryers with Aluminum Cylinder—Stand up to vapors and liquids that can weaken plastic cylinders. Max. pressure is 250 psi. *Aluminum cylinders with sight glass* allow you to monitor the desiccant.

Clay desiccant traps not only water, but also oil, oil vapor, hydrocarbons, and particulates. Desiccant is grayish-brown and darkens when saturated, letting you know it must be replaced (desiccant cannot be regenerated). Dryers that use clay desiccant lower input air dew point by 20%.

Silica-gel desiccant changes color from blue to pink when saturated. To reactivate, heat desiccant at 220° F for two hours. Dryers that use silica-gel desiccant lower input air dew point by 40%.

Disposable Desiccant Air Dryers

When the desiccant changes color, it's time to discard and replace this economical dryer. Designed for inline, point-of-use applications, it includes a filter that removes particles down to 40 microns. Dryer can be installed vertically or horizontally. It has a transparent polycarbonate bowl to view the desiccant, which is silica gel and changes from blue to pink when saturated. Max. pressure is 125 psi. Max. temperature is 130°F. Inlet connection is NPT female. Outlet connection is NPT male.

Pipe Size	Max. scfm @ –30°F Dew Point	O'all Size Ht.	O'all Size Wd.		
1/4	15	3 3/4"	1 3/4"	7793T1	$9.88

Desiccant Air Dryers with Oil-Removal Filter

As air enters the dryer, an oil filter traps larger particles and droplets of oil and water to reduce desiccant contamination. The desiccant then absorbs the oil and water and removes solid particles down to 0.3 microns. Dryers lower dew point of inlet air by 20% and should be installed at the point of use.

Dryers have a polyurethane body and manual drain. They also have a transparent polyurethane bowl that lets you monitor the desiccant, which is clay and darkens when saturated, letting you know it must be replaced (desiccant cannot be reactivated). Max. pressure is 250 psi. Max. temperature is 180°F. Inlet and outlet connections are NPT female.

Pipe Size	Max. scfm @ 100 psi	O'all Size Ht.	O'all Size Wd.	Dryers		Replacement Desiccant No. Required		Replacement Filter Elements	
1/2	20	10 5/8"	4 5/8"	4386K6	$610.02	1	4386K41	$36.11	4386K11	$64.29

Continuous-Use Desiccant Air Dryers

Each dryer has two internal desiccant towers—one dries your air while the other automatically reactivates the desiccant to provide an uninterrupted compressed air supply, dried to a dew point of –40°F. All dryers have one filter that removes oil particles down to 0.01 microns, two combination desiccant/particle filters that remove particles down to 1 micron, an automatic drain, and an electronic display. An audible alarm lets you know when it's time to change the filters and service the dryer, which you can do without disconnecting the air connections.

Dryers operate on 115V AC, 60 Hz; are single phase; and have a junction box for hardwiring. Housing is aluminum. Max. pressure is 175 psi. Max. temp. is 122°F. Inlet and outlet connections are NPT female.

Maintenance kits include replacement desiccant, an automatic drain, and filter elements.

Pipe Size	Max. scfm@ –40°F Dew Point	O'all Size Ht.	O'all Size Wd.	O'all Size Dp.	Dryers		Maintenance Kits

Air Dryers/Coolers

Dryers cool air with refrigerant, then expel the moisture through an automatic drain to provide air that's dried to a dew point of 38°F. All operate on 115V AC, 60 Hz and are single phase. They have a power-on light and a dew point indicator. They also have a 6-ft. cord with three-prong plug. Install them after your air cooler or moisture separator. Max. pressure is 232 psi. Max. temperature is 140°F. Inlet and outlet connections are NPT female.

Air Cooler, Filter, Dryer, and Drain Combination Unit

Eliminate the need for a separate air cooler, moisture separator, and drain with these dryers, which combine all those functions into a single unit. Dryers cool air with refrigerant, then expel the moisture through an automatic drain to provide air that's dried to a dew point of 50°F. All operate on 115V AC, 60 Hz and are single phase. They have a power-on light and a dew point indicator. They also have a 6-ft. cord with three-prong plug. Max. pressure is 232 psi. Max. temp. is 200°F. Inlet and outlet connections are NPT female.

Air Filters

A

B

C

D&E

F

G

H

Remove solid particles and water from your compressed air to extend the life of your air-powered tools and equipment. Inlet and outlet connections are NPT female or BSPP straight (see listing below).

Choose **filters with automatic drain** if you drain large quantities of water.

(A) Standard—All remove particles down to 5 microns.

Filters with NPT threads can be pipe nipple connected or used in Norgren-compatible modular air filter/regulator/lubricators. Body and bowl are aluminum (except filters with a max. scfm of 47 have a zinc body and bowl).

Filters with BSPP threads have an aluminum body and polycarbonate bowl.

(B) With Service Indicator—All remove particles down to 5 microns and have an indicator to signal when the filter element needs to be replaced. Filters have a zinc die cast steel body and polycarbonate bowl.

(C) Clear View—A clear polycarbonate bowl lets you see what's being filtered. All filters remove particles down to 5 microns. Body is zinc and bowl guard is steel (except filters with a max. scfm of 23 and 25 do not have a bowl guard).

(D) Chemical-Resistant Clear View—In addition to seeing what's being filtered, a clear polyurethane bowl offers increased chemical resistance for use in systems with synthetic compressor oils and cleaning liquids. All filters remove particles down to 5 microns. Body is brass.

(E&F) Corrosion-Resistant Clear View—Have an aluminum body for increased corrosion resistance and a clear bowl that lets you see what's being filtered.

Style E remove particles down to 20 microns. They have a polycarbonate bowl.

Style F remove particles down to 5 microns. They have a polycarbonate bowl.

(G) Ultra Corrosion Resistant—Body and bowl are Type 316 stainless steel to handle extremely corrosive environments such as those found in the semiconductor, marine, chemical, and paper industries. Filter with *1/4 pipe size* removes particles down to 20 microns. Filter with *1/2 pipe size* removes particles down to 40 microns.

(H) Fine Clear View—Highly efficient all-plastic filter removes particles down to 1 micron. A clear polyurethane bowl lets you see what's being filtered. An acetal body offers corrosion resistance.

Miniature Air Filters

Standard Pressure

High Pressure

Use these compact air filters before air tools to remove unwanted moisture and particles from your compressed air and extend tool life.

Standard Pressure—Filter removes particles down to 5 microns. Body is brass. Max. temperature is 180° F. Connections are NPT female.

High Pressure—Filters remove particles down to 40 microns. Body is aluminum. Max. temperature is 200° F. Connections are NPT female (except 4414K32 and 4414K33 have one NPT male connection and one NPT female connection).

For information about air preparation, see page 1013.

Fine Air Filters

Not much gets by these filters—they remove moisture, oil mist, smoke contaminants, and particles down to 0.01 microns from compressed air and vacuum lines. Housing is aluminum coated with epoxy for corrosion resistance. Max. pressure is 125 psi. Max. temperature is 175° F. Inlet and outlet connections are NPT female.

9841K91 includes a mounting bracket.

Pipe Size	Max. scfm @ 100 psi	O'all Size Ht.	O'all Size Wd.	Filters		Replacement Filter Elements

Clean Room Air Filters

Cleaned and double-packed for protection from contamination, these filters are for use in clean room environments. All remove particles down to 5 microns. Body is aluminum and bowl is polycarbonate with a steel bowl guard. A mounting bracket is included. Max. pressure is 145 psi. Max. temperature is 140° F. Inlet and outlet connections are NPT female.

Pipe Size	Max. scfm @ 100 psi	O'all Size Ht.	O'all Size Wd.

Heavy Duty Air Filters

A specially designed Type 304 stainless steel element handles air lines with large, dirty particles. The element removes moisture and particles down to 1 micron (except for pipe sizes 1 1/4 to 2 remove particles down to 3 microns). Body is zinc. Choose an aluminum bowl or a polycarbonate bowl with a steel bowl guard.

Filters have an automatic drain and a service indicator to signal when the filter element needs to be replaced (except for pipe sizes 1 1/4 to 2 do not have a service indicator). Max. pressure is 150 psi. Max. temperature is 125° F. Inlet and outlet connections are NPT female.

Oil-Removal Air Filters

Remove oil and oil mist from your compressed air with these filters, which are also known as coalescing filters. Inlet and outlet connections are NPT female.

(A) Standard—All remove oil and oil mist down to 0.01 ppm, and particles down to 0.01 microns. Body and bowl are aluminum. Filters have an automatic drain. They can be pipe nipple connected or used in Norgren-compatible modular filter/regulator/lubricators. Max. pressure is 250 psi. Max. temperature is 150° F.

(B&C) With Service Indicator—All remove oil and oil mist down to 0.01 ppm, particles down to 0.01 microns, and have an indicator that changes from green to red when the filter element needs to be replaced. The body and bowl are aluminum. Filters have an automatic drain. They can be pipe nipple connected or used in Norgren-compatible modular filter/regulator/lubricators (unless noted). Max. pressure is 250 psi. Max. temperature is 150° F.

(D) Clear View with Service Indicator—A transparent bowl lets you see what's being filtered, while an indicator changes from green to red when the filter element needs to be replaced. All filters remove oil and oil mist down to 0.2 ppm, and particles down to 0.01 microns. They have a zinc body, a polycarbonate bowl with a steel bowl guard, and an automatic drain. Max. pressure is 150 psi. Max. temperature is 125° F.

(E) Chemical Resistant Clear View—In addition to seeing what's being filtered, a clear polyurethane bowl offers increased chemical resistance for use in systems with synthetic compressor oils and aggressive cleaning agents. Filters remove oil and oil mist down to 300 ppm, and particles down to 0.3 microns. They have a brass body and a manual drain. Max. pressure is 150 psi. Max. temperature is 120° F.

(F) Ultra Corrosion Resistant—Body and bowl are Type 316 stainless steel to handle extremely corrosive environments. All meet NACE (National Association of Corrosion Engineers) specifications. Filters remove oil and oil mist down to 300 ppm, and particles down to 0.3 microns. They have a manual drain. Max. pressure is 300 psi. Max. temperature is 180° F.

♣ Pipe nipple connection only.

Air Filters with Automatic Drain

An external automatic drain discharges up to 300 gallons per hour to handle your humid environments. All filters remove particles down to 5 microns. Inlet and outlet connections are NPT female.

Standard—The body is zinc and the bowl is polycarbonate with a steel bowl guard. Max. pressure is 150 psi. Max. temperature is 125°F.

High Flow—The body and bowl are aluminum. Max. pressure is 200 psi. Max. temperature is 150°F.

Two-Stage Oil-Removal Air Filters

Get two stages of air filtration—the first stage removes water droplets, oil, and large particles; the second captures the remaining water droplets, oil, and particles down to 5 microns. Filters have manual drains. Max. pressure is 250 psi, unless noted. Max. temperature is 180°F. Inlet and outlet connections are NPT female.

Complete filter units include filters, base core, base gasket, four cap gaskets, and a gauge to indicate when the filter elements need to be replaced, unless noted. **Replacement element kits** include first- and second-stage filter elements, base core, base gasket, and four cap gaskets.

★ Does not have a gauge. ■ Max. pressure is 150 psi.

Oil-Removal Miniature Air Filters

You can remove particles down to 0.6 microns and oil droplets down to 0.85 ppm with these tiny, disposable filters. All have a clear nylon housing. Max. pressure is 100 psi. Max. temperature is 125°F. Inlet and outlet connections are not threaded; connect using hose or tube.

Filter with indicator turns red when oil is present to let you know when your main oil-removal filter has failed.

Two-Stage Fine Particle- and Oil-Removal Air Filters

A

B

C

With two-stage filtration, it's like you're getting two filters in one. The first stage removes large particles, while the second removes fine particles. Inlet and outlet connections are NPT female.

(A) Standard—Stage one removes particles down to 5 microns; stage two removes oil droplets down to 0.5 microns. Filters have an automatic drain (except pipe size 1/4 has a manual drain). They can be pipe nipple connected or used in Wilkerson-compatible modular filter/regulator/lubricators. Body is zinc and bowl is aluminum (except pipe size 1/4 has a polycarbonate bowl).

(B) Clear View—This filter has a nylon body and clear polyamide bowl that lets you see what's being filtered. Stage one removes particles down to 1 micron and oil droplets down to 0.5 ppm; stage two removes particles down to 0.01 microns and oil droplets down to 0.01 ppm. Drain can operate as a constant- or intermittent-bleed drain.

(C) Heavy Duty—The choice for air lines with large, dirty particles. Stage one has a tough, Type 304 stainless steel element to remove bulk water and contaminants down to 3 microns; stage two removes the remaining moisture and oil particles down to 1 micron. All have an automatic drain on the first-stage filter; manual drain on the second-stage filter. Body is zinc and bowl is polycarbonate with a steel guard.

Three-Stage Fine Particle-, Oil-, and Bacteria-Removal Air Filters

In addition to removing particles, moisture, and oil that are often found in compressed air, these three-stage filters can also remove bacteria for extra-clean air. The first stage traps water, oil, and large particles. The second stage traps trace quantities of water, oil, and particles down to 0.01 microns. Finally, the third stage blocks bacteria. The first- and second-stage filters have an automatic drain; no drain is needed at the third stage. There is also a service indicator on the first-stage filter to signal when the filter element needs to be replaced. Body and bowl are aluminum. Max. pressure is 250 psi. Max. temperature is 130°F. Inlet and outlet connections are NPT female. Filters are USDA compliant for use in meat and poultry plants.

Oil Vapor- and Odor-Removal Air Filters

To remove small traces of oil vapor down to 0.003 microns as well as its associated odor, use these filters as the last step in your air preparation system; install them after a particle filter and an oil-removing filter. All are good for use in applications where high-quality air is critical. Body and bowl are zinc (except pipe sizes ¾ and 1 have an aluminum bowl). Filters have a manual drain. They can be pipe nipple connected. Max. pressure is 200 psi. Max. temperature is 150° F. Inlet and outlet connections are NPT female.

Pipe Size	Max. scfm @ 100 psi	*O'all Size* Ht.	Wd.	Filters		Replacement Filter Elements	
⅛	15	4¼″	1¾″	5757K11	$37.15	5757K81	$21.73

Air Regulators

Adjust air pressure to the level you need. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked (except Style D are nonrelieving style). Inlet and outlet connections are female.

(A) Standard—Accuracy is ±4 psi. Body is zinc (except regulator with 100 max. scfm is aluminum). Regulators have two ¼″ NPT gauge ports, except regulator with 70 max. scfm has two ⅛″ NPT gauge ports (pressure gauges are not included).

(B) With T-Handle and Pressure Gauge—A T-handle adjustment provides leverage even with gloved or greasy hands. Accuracy is ±3 psi. Body is aluminum (except pipe size ¼ NPT is zinc).

(C&D) With Built-In Pressure Gauge—Body is aluminum, except pipe size ⅛ NPT is zinc. *Style C* have a pressure gauge in the body to resist damage in high-traffic areas. Accuracy is ±3%. *Style D* have a pressure gauge in the adjusting knob, which keeps the gauge in view when mounted in a panel or horizontally. Accuracy is ±2.5%.

(E) Metric with Pressure Gauge—Accuracy is ±3.5%. Body is aluminum.

Miniature Air Regulators

Control air pressure in tight spaces with these small regulators. All are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female. Regulators with *acetal, aluminum,* and *brass body* have an accuracy of ±1 psi (except model with 24 max. scfm is not rated). Regulators with *brass body* are also compatible with water as well as noncorrosive, nonacidic chemicals. Regulators with *zinc body* have an accuracy of ±3 psi (except model with 13 max. scfm is not rated). **Standard regulators** have a ⅛″ NPT gauge port (pressure gauge is not included).

Standard with Acetal Body

With Pressure Gauge and Zinc Body

To Order: Please specify regulating range.

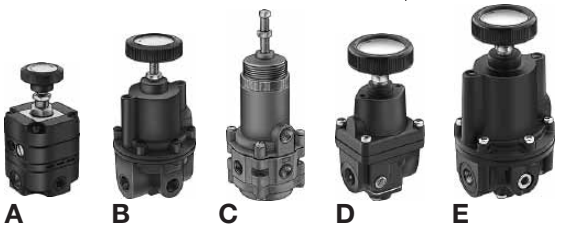
Precision Miniature Air Regulators

Accurately control air pressure in compact spaces to within ±0.3% of the pressure you set. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. They have a ⅛ pipe size gauge port (pressure gauge is not included; sold separately below). Body is aluminum. Inlet and outlet connections are female.

To Order: For *regulators* as well as optional *pressure gauges*, please specify regulating range.

Pipe Size	Max. scfm @ 100 psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.	Available Regulating Ranges, psi	Regulators		Mounting Brackets		Pressure Gauges	
⅛ NPT	14	150	160° F	3⅞″	1⅜″	1-30, 1-60, 1-120	2227T2	$68.48	2227T41	$12.02	2227T4	$17.38
⅛ BSPP	14	150	160° F	3⅞″	1⅜″	1-30, 1-60, 1-120	2490T1	68.48	2227T41	12.02	2490T2	17.38

Precision Air Regulators



Perfect when you need a higher degree of precision than typical regulators. All are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulators have a 1/4" NPT gauge port (except Style D have a 1/8" NPT gauge port). Use them with a Grade 1A or better pressure gauge (not included; see 4088K on page 604). Inlet and outlet connections are NPT female.

(A) Standard—Accuracy is ±0.1%. Body is zinc. Furnished with a mounting nut.

(B) High Flow—Accuracy is ±0.05%. Body is aluminum.

(C) Corrosion Resistant—Regulators have a Type 316 stainless steel body for superior corrosion resistance and meet NACE (National Association of Corrosion Engineers) material requirement MR-01-75. Accuracy is ±0.1 psi. Furnished with a mounting nut.

(D&E) Versatile Mount—You'll get brackets for standard mounting as well as mounting to a 35 mm DIN rail. Accuracy is ±0.2%. Body is aluminum.

To Order: Please specify regulating range.

Safety-Lock Air Regulators

Prevent unauthorized adjustment with these regulators. All are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female.

(F) Quick Response—A balanced valve diaphragm assures rapid response to inlet pressure changes for good air pressure control. All include a pressure gauge, a knob for pressure adjustment, and a tamper-resistant clip to prevent further adjustment. Accuracy is ±2%. Body is aluminum.

(G&H) Key Lock—A built-in lock provides an extra level of security. Set your pressure, lock it, and remove the key to prevent further adjustment. A universal lock design lets you lock multiple regulators with one key. All regulators include a pressure gauge and a key.

Style G have an accuracy of ±0.85% for 8080T1 and 8080T2; ±1.7% for 8080T3. Body is cast zinc. A mounting bracket is included.

Style H have an accuracy of ±3 psi. Body is zinc.

(J) T-Handle Lock—Set your pressure and then remove the T-handle to prevent further adjustment. Accuracy is ±5%. Regulators have a cast aluminum body and two 1/4" NPT gauge ports (pressure gauges are not included; sold separately below).

To Order: Please specify regulating range where applicable.

Safety-Lock Miniature Air Regulators

Sized just right to prevent accidental airflow changes in limited spaces. Set your pressure and pull up the locking ring in the adjustment knob to prevent further adjustments. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Accuracy is not rated. Body is aluminum. A pressure gauge and mounting nut are included. Inlet and outlet connections are NPT female.

Pipe Size	Max. scfm @ 100 psi	Regulating Range, psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.	Regulators		Mounting Brackets	
1/8	45	0-140	250	140° F	3 5/8"	1 5/8"	**9172K16**	$30.85	**9172K24**	$11.50

Precision Electronic Air Regulators

Electronic regulators convert electric input signals into proportional air output pressure for reliability and repeatability. As you increase your input signal, output pressure increases within the regulating range listed. Use these regulators with sensors that are capable of producing the required input signal, or a programmable logic controller (PLC) for automatic setting adjustments. All are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female.

(A) Standard—Accuracy is ±0.5%. All have a NEMA 4X enclosure that's suitable for washdown and outdoor applications. They also have a 1/4" NPT gauge port (pressure gauge is not included). Body is aluminum. A mounting bracket is included.

(B) High Flow—Accuracy is ±0.8%. An LCD indicator on top of each unit displays output pressure. Body is aluminum.

(C) Push-Button Control—Accuracy is ±0.3%. Regulators allow push-button control of 12 functions including outlet pressure, input signal (switchable from V DC to mA), pressure scale (psi or bar), minimum pressure, and maximum pressure (within the unit's stated range). All controls are on the same face for convenient access. An IP65 enclosure provides indoor protection against dust and dripping liquids. Body is aluminum.

(D) DIN Rail Mount—You'll get a bracket for mounting to a 35 mm DIN rail. Accuracy is ±0.5%. All have a 1/4" NPT gauge port (pressure gauge is not included). Body is aluminum.

Corrosion-Resistant Air Regulators

A Type 316 stainless steel body allows these regulators to stand up to corrosive environments such as those found in the semiconductor, marine, chemical, instrumentation, and paper industries. They meet NACE (National Association of Corrosive Engineers) specification MR-01-75. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Accuracy is ±1 psi. All have two 1/4" NPT gauge ports (pressure gauge is not included). Inlet and outlet connections are NPT female.

To Order: Please specify regulating range.

Clean Room Air Regulators

E

F

Cleaned and double-packed for protection from contamination, regulators are suitable for use in Class 100 clean rooms. Use them for semiconductor and food-processing applications. Accuracy is ±3%. All regulators include a mounting nut.

(E) Air, Gas, and Water—In addition to air pressure, these regulators can control pressure for nitrogen, carbon dioxide, argon, and water. All are nonrelieving style, which means they do not exhaust excess downstream pressure. Regulators are made of Type 316 stainless steel and have a fluoroelastomer seal. They also have a 1/4" NPT gauge port (pressure gauge is not included; sold separately below). Inlet and outlet connections are NPT female.

(F) Metric—Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. All have an aluminum body, a brass valve, and NBR rubber seal. Pressure gauge and mounting bracket are included. Inlet and outlet connections are BSPT female (British Standard Pipe Taper).

	Pipe Size	Max. scfm @ 100 psi	Regulating Range, psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.	Regulators		Mounting Brackets

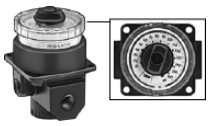
Pressure Gauge for Style E Regulators										**4238K47**	65.04

Flexible-Range Air Regulators

It's like getting four regulators in one—adjustment springs let you choose from 2-30, 10-50, 30-90, and 100-180 psi regulating pressure ranges, while a slotted-head adjusting screw lets you change your outlet pressure. Regulators are nonrelieving style, which means they do not exhaust excess downstream pressure. Accuracy is ±5%. Body is brass. Inlet and outlet connections are NPT female.

Pipe Size	Max. scfm @ 100 psi	Regulating Range, psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.		
1/4	18	2-180	300	180° F	3 1/2"	2 1/4"	**4771K2**	$116.87
3/8	18	2-180	300	180° F	3 1/2"	2 1/4"	**4771K3**	116.87

Dial-Set Air Regulators



A pressure-calibrated adjustment dial allows you to select your outlet pressure. All of these regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Accuracy is ±0.5 psi. Body is zinc. Regulators have two 1/4" NPT gauge ports (pressure gauges are not included). Max. pressure is 300 psi. Max. temperature is 150° F. Inlet and outlet connections are NPT female.

To Order: Please specify regulating range.

Pipe Size	Max. scfm @ 100 psi	*O'all Size* Ht.	Wd.	Available Regulating Ranges, psi		
1/4	117	4 1/8"	3 1/4"	0-40, 0-160	4963K31	$118.36
3/8	180	4 1/8"	3 1/4"	0-40, 0-160	4963K32	118.36
1/2	195	4 1/8"	3 1/4"	0-40, 0-160	4963K33	118.36
3/4	220	4 1/8"	3 1/4"	0-40, 0-160	4963K34	118.36
Mounting Bracket					4963K41	13.65

Panel-Mount Miniature Air Regulators

With inlet ports on the bottom, these regulators are good for panel-mount applications in small spaces. All are relieving style, which exhaust excess downstream pressure when your system is blocked. A panel mounting nut is included. Max. pressure is 250 psi. Max. temperature is 150° F.

Pipe Size 10-32 and 1/16—Accuracy is ±0.25 psi. Body is aluminum. Regulators have a 10-32 UNF female gauge port (pressure gauge not included). Inlet and outlet connections are female (UNF for pipe size 10-32; NPT for pipe size 1/16).

Pipe Size 1/8—Accuracy is ±10%. Body is brass. Inlet connection is NPT male and outlet connection is 10-32 UNF female.

To Order: Please specify regulating range.

Pipe Size	Max. scfm @ 100 psi	*O'all Size* Ht.	Wd.	Available Regulating Ranges, psi		
10-32	5	3 1/2"	1"	0-5, 0-15, 0-30, 0-60, 0-100	41795K2	$51.00
1/16	2.5	3 3/8"	7/8"	0-5, 0-15, 0-30, 0-60, 0-100	41795K3	52.22
1/8	5	2 5/8"	3/4"	0-20, 0-30, 0-40, 0-50, 0-60, 0-70, 0-100	41795K4	28.05

Air Regulators for Double-Acting Cylinders

An internal check valve permits reverse flow, making these regulators the choice for double-acting cylinders. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked (except pipe size 10-32 is nonrelieving style and does not exhaust excess pressure). Accuracy is ±3%. Body is zinc for pipe sizes 10-32 to 1/4; aluminum for pipe sizes 3/8 to 1. Max. pressure is 145 psi. Max. temp. is 140° F. Pressure gauge, mounting bracket, and mounting nut are included. Inlet and outlet connections are NPT (except pipe size 10-32 are UNF) female.

Pipe Size	Max. scfm @ 100 psi	Regulating Range, psi	*O'all Size* Ht.	Wd.		
10-32	5	7-100	2 3/8"	1"	4964K21	$25.44
1/8	28	7-123	3 3/4"	1 5/8"	4964K22	27.70
1/4	28	7-123	3 3/4"	1 5/8"	4964K23	27.70
3/8	53	7-123	4 5/8"	2 1/8"	4964K24	37.09
1/2	106	7-123	5 1/8"	2 7/8"	4964K25	45.11
3/4	353	7-123	6 3/4"	3 5/8"	4964K26	68.25
1	353	7-125	6 3/4"	3 5/8"	4964K7	73.65

Nonrelieving Miniature Air Regulators

Use these compact regulators anywhere you need to keep your air contained. Both are nonrelieving style, which means they do not exhaust excess downstream pressure. In addition to air pressure, these regulators can control pressure for drinkable water. They are made of corrosion-resistant, FDA-compliant acetal.

Regulators have two 1/8" NPT gauge ports (pressure gauges are not included). Accuracy is ±1 psi. Max. pressure is 150 psi. Max. temperature is 125° F. Inlet and outlet connections are NPT female.

To Order: Please specify regulating range.

Pipe Size	Max. scfm @ 100 psi	*O'all Size* Ht.	Wd.	Available Regulating Ranges, psi		
1/8	15	3 1/8"	1 5/8"	0-25, 0-60, 0-125	6746K41	$41.11
1/4	18	3 1/8"	1 5/8"	0-25, 0-60, 0-125	6746K42	41.11

Inline Miniature Air Regulators for Air-Powered Tools

A

B&C

Designed for installation directly to your air-powered tool. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked (except lever-controlled regulator is nonrelieving style and does not exhaust excess pressure). Connections are NPT female inlet and NPT male outlet.

(A) Lever Controlled—Turn the handle and go from full pressure to almost complete shutoff. A gauge on top indicates air pressure. Accuracy is ±5% for the first third of the range, ±3% for the second third, and ±8% for the last third. Body is brass.

(B) Tamper Resistant—A screw lock prevents unintentional changes or tampering with your pressure setting. To adjust the pressure, turn the collar. Accuracy is ±2.5 psi. Body is aluminum (except pipe size 1/4 regulator is brass).

(C) Nonadjustable—You won't have to worry about changes to the outlet pressure; it comes set so it always remains the same. Accuracy is ±2.5 psi. Body is brass.

To Order: For *Style C*, please specify pressure setting.

	Pipe Size Inlet	Outlet	Max. scfm @ 100 psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.	Regulating Range/ Available Pressure Settings, psi		
A	1/4	1/4	5	150	250° F	2"	3 1/4"	0-150	4158K72	$34.83
B	1/4	1/4	18	150	175° F	7/8"	3 1/8"	50-145	41685K11	37.96

B	3/8	3/8	18	150	175° F	1 1/8"	3 7/8"	50-145	41685K18	42.82
C	1/4	1/4	17	150	175° F	7/8"	2 7/8"	70, 80, 90, 100	2905T4	45.22

Nonadjustable Miniature Air Regulators

D

E

F

G

No need to worry about changes to your pressure setting—these inherently tamper-resistant regulators come set at one nonadjustable outlet pressure. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Accuracy is ±3 psi (except low-pressure regulators are not rated for accuracy). All have a gauge port with NPT connections (pressure gauge is not included). Inlet and outlet connections are NPT female.

(D) Standard—Body is aluminum.

(E) Air and Water—For use with both compressed air and water. Body is brass.

(F) Low Pressure—For applications requiring super low pressures. Body is aluminum.

(G) OSHA Compliant—Meet OSHA standard 1-13.1. Body is zinc.

To Order: For *Styles D* and *E*, please specify outlet pressure setting in 5 psi increments from the available settings. For *Style F*, please specify outlet pressure setting in 1 psi increments from the available settings.

	Pipe Size	Gauge Port Size	Max. scfm @ 100 psi	Max. psi	Max. Temp.	*O'all Size* Ht.	Wd.	Available Outlet Pressure Settings, psi

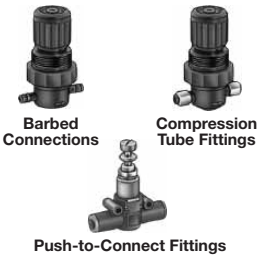
Easy-Connect Miniature Air Regulators

Install these regulators without tools or extra fittings—tube fitting connections make installation easy. All are relieving style, which exhaust excess downstream pressure when your system is blocked. Accuracy is ±3%. Body is acetal. **Regulators with push-to-connect fittings** include a mounting nut.



For Tube Size	Max. scfm @ 100 psi	Regulating Range, psi	Max. psi	Max. Temp.	O'all Size Ht.	O'all Size Wd.	Regulators		Mounting Brackets

Multicontrol Air Regulators

With a single air supply, you can set up multiple output pressure ranges (two to eight depending on the number of stations you choose). Each station includes a pressure gauge. All regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female.

Compact regulators are made of aluminum and are for use in tight spaces. Accuracy is ±3.5%. **Standard regulators** are made of zinc. Accuracy is ±0.85%.

Air Lubricators

Send mists of oil into your airstream to lubricate your air-operated tools and extend their service life. A self-adjusting flow sensor maintains a constant oil-to-air ratio (except 4268K11, 4268K13, and 4268K14 do not have a sensor). Inlet and outlet connections are female. Oil is not included.

With Sight Glass—A sight glass allows you to view the oil level. Body is aluminum (except pipe size 1/4 NPT has a zinc body). Bowl is aluminum (except pipe size 1/4 NPT has a zinc bowl; units with BSPP connections have a gray polycarbonate bowl).

Clear View—A transparent polycarbonate bowl allows convenient oil inspections. Pipe sizes 1/8 and 1/4 NPT have an aluminum body (except 4268K31 has a zinc body). Pipe sizes 3/8 NPT and up have a zinc body and metal bowl guard.

Air Lubricators for Air-Powered Tools

Designed for installation close to your air-powered tools, these lubricators send mists of oil to your tools to extend their service life. Body is aluminum (except Style B is aluminum and zinc). Oil is not included. Inlet connection is NPT female. Outlet connection is NPT male for Styles A and D; NPT female for Styles B and C.

(A&B) Clear View—A transparent plastic bowl allows convenient oil inspections. Mount *Style A* directly to the air inlet of your tool; *Style B* 4 to 6 ft. from your tool. **(C) With View Port—**A translucent view port allows you to view the oil level. Mount 6 to 8 ft. from your tool. **(D) Solid Body—**Mount directly to the air inlet of your tool.

Air Filter/Regulators & Air Filter/Regulators/Lubricators (FRLs)

For information about air preparation, see page 1013.

Space-Saver Stacked Air Filter/Regulators

A&B C D E F

A filter and a regulator have been coupled into one unit that takes the space of a filter alone. All regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female.

(A&B) Standard—Have a pressure gauge and an automatic drain. Filter removes particles down to 5 microns. Regulator accuracy is ±3 psi.

Style A have a zinc body and bowl. *Style B* have an aluminum body and bowl.

(C&D) Clear View—A clear polycarbonate bowl allows you to see what's being filtered. All have a pressure gauge and an automatic drain. Filter removes particles down to 5 microns. Regulator accuracy is ±4 psi.

Style C have a zinc body. *Style D* has an aluminum body and steel bowl guard.

(E) Chemical-Resistant Clear View—In addition to seeing what's being filtered, a clear polyurethane bowl offers increased chemical resistance for use in systems with synthetic compressor oils and cleaning liquids. All have a brass body, a pressure gauge and a manual drain. Filter removes particles down to 5 microns. Regulator accuracy is ±1%.

(F) Ultra Corrosion Resistant—Body and bowl are Type 316 stainless steel to handle extremely corrosive environments such as those found in the marine, chemical, and paper industries. They meet NACE (National Association of Corrosion Engineers) specifications. All have a 1/4" NPT gauge port (pressure gauge is not included) and a manual drain. Regulator accuracy is ±1%. Filter/regulator *with 1/4 pipe size* removes particles down to 20 microns. Filter/regulator *with 1/2 pipe size* removes particles down to 40 microns.

Space-Saver Stacked Air Filter/Precision Regulators

Filter as well as precisely control air pressure in variable conditions with these combination air filter/regulators that take the space of a single filter. All filters remove particles down to 5 microns. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulator accuracy is ±0.2 psi. Filter/regulators have a cast aluminum body with epoxy coating for added corrosion resistance. They have a 1/4" NPT gauge port (pressure gauge is not included) and a manual drain. Maximum pressure is 250 psi. Maximum temperature is 160° F. Inlet and outlet connections are NPT female.

To Order: Please specify regulating range.

Space-Saver Stacked Oil-Removal Air Filter/Regulators

You'll get a combination oil-removal (coalescing) air filter and regulator in one space-saving component. Filters remove 99.9% of oil and particles down to 0.01 micron. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulator accuracy is ±2.5%. All filter/regulators have a pressure gauge and an automatic drain. The body is aluminum and the bowl is polycarbonate (except pipe size 1/8 has a zinc body and also includes a steel bowl guard). Maximum pressure is 150 psi. Maximum temperature is 140° F. Inlet and outlet connections are NPT female.

Replacement filter element kits include a filter element and a diaphragm assembly.

Space-Saver Stacked Air Filter/Regulator/Lubricators (FRLs)

Three components in one—a filter, regulator, and lubricator have been incorporated into one unit that takes the space of a filter alone. Filters remove particles down to 40 microns. Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulator accuracy is ±2%. Lubricators use nondetergent oil (ISO Grade 32). All filter/regulator/lubricators have a pressure gauge, mounting bracket, and semiautomatic drain (opens manually when pressurized; automatically when not pressurized). Body is cast aluminum and bowl is polycarbonate with steel bowl guard. Maximum pressure is 230 psi. Maximum temperature is 120° F. Inlet and outlet connections are NPT female.

Regulator service kits include diaphragm assembly, O-rings, valve seat, spring, and stem.

Pipe Size	Max. scfm @ 100 psi	Regulating Range, psi	Oil Cap., oz.	*O'all Size* Ht.	Wd.	Filter/Regulator/ Lubricators		Replacement Filter Elements		Regulator Service Kits

Air Filter/Regulator/Lubricators (FRLs)

No need to hunt for matching components—these come as one convenient unit you can connect to your system. All regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Inlet and outlet connections are NPT female.

Stacked units save space by combining a filter and regulator into one component, with a lubricator at the side.

Standard—Filters remove particles down to 5 microns and have an automatic drain. Accuracy is not rated. Lubricators use ISO Grade 10-46 oil. Body and bowl are aluminum, except where noted. Style A with pipe size 1/8 includes a built-in mounting bracket.

Clear View—A clear bowl lets you see what's being filtered. The bowl is polycarbonate (except Styles D and J have a polyurethane bowl, which offers increased chemical resistance for use in systems with synthetic compressor oils).

Filters remove particles down to 20 microns (except Styles B, F, and H remove particles down to 5 microns, unless noted). They have a manual drain (except Style B with pipe size 3/4, Style F, and Style H have an automatic drain). Accuracy is ±1 psi (except Style B have an accuracy of ±3 psi; Styles F and H are not rated for accuracy). Lubricators use 100-200 SSU oil (except Styles F and H use ISO Grade 10-46 oil). Body is aluminum, except where noted. Style F with max. scfm of 10 and 15 include a built-in mounting bracket.

★Body and bowl are zinc. ■Requires two mounting brackets. ▲Body is zinc. ♣Removes particles down to 40 microns. ♦Body is brass.

Wilkerson-Compatible Modular Air Filter/Regulator/Lubricators (FRLs)

These filter/regulator/lubricators use a Wilkerson joiner clamp between each component for fast installation. Body is zinc (except pipe size 1 units and safety lockout valves have an aluminum body). Inlet and outlet connections are NPT female.

Filters remove particles down to 5 microns and have a sight glass. *Miniature filters* have a manual drain and polycarbonate bowl. *Standard filters* have an automatic drain and aluminum bowl.

Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulating range is 0-125 psi (except pipe size 1 units have a 7-125 psi regulating range). A pressure gauge is included. Accuracy is ±3%.

Lubricators use 10W nondetergent oil and have a sight glass. *Miniature lubricators* have a zinc bowl. *Standard lubricators* have an aluminum bowl.

Filter/Regulator/Lubricators and End Block Kits

Filter/ Regulator/ Lubricator

Stacked Filter/ Regulator/ Lubricator

End Block Kit

Joiner clamps and mounting brackets are included (except pipe size 1 units connect using built-in bolts). Maximum pressure is 150 psi for miniature units; 250 psi for standard units. Maximum temperature is 125°F for miniature units; 150°F for standard units.

Stacked Filter/Regulator/Lubricators—Combine a filter and regulator into one device, with a lubricator at the side.

End Block Kits—Each kit includes one end block for the inlet and one for the outlet. Blocks thread onto your pipe, allowing you to replace components that are between them without having to unthread your system.

Individual/Replacement Components

Filter

Regulator

Stacked Filter/ Regulator

Lubricator

Oil-Removal Filter; Oil Vapor- and Odor-Removal Filter

Manifold Regulator

Safety Lockout Valve

Joiner Clamp

Create a unique air-preparation unit using joiner clamps or by piping the components directly into your system. You can also replace a component in a filter/regulator/lubricator or use joiner clamps (sold separately) to add a component onto your filter/regulator/lubricator.

Stacked Filter/Regulators—Combine a filter and regulator into one device.

Oil-Removal Filters—Also known as coalescing filters, these filters remove particles down to 0.5 micron (except pipe size 1 filters remove particles down to 0.01). Maximum pressure is 150 psi. Maximum temperature is 125°F for miniature unit; 150°F for standard units.

Oil Vapor- and Odor-Removal Filters—Remove oil vapor down to 0.003 micron as well as its associated odor, exceeding ISO Class 1 requirements for maximum oil content. Maximum pressure is 150 psi for miniature unit; 250 psi for standard units. Maximum temperature is 125°F for miniature unit; 150°F for standard units.

Manifold Regulators—Connect two or more of these regulators with joiner clamps (sold separately) to independently control multiple outlet pressures from one pressure supply. Each regulator has two regulated ports (one can be used for a pressure gauge; not included) and one unregulated outlet. The ports are 1/8" NPT female for miniature units; 1/4" NPT female for standard units. Maximum pressure is 300 psi. Maximum temperature is 150°F.

Safety Lockout Valves—Prevent accidental start-up when you're servicing equipment. Valves exhaust downstream air pressure when closed and are lockable in the closed position (maximum shackle diameter is 5/16"; padlock not included). All have a bright-orange locking mechanism and help your process comply with OSHA lockout/tagout regulations. Maximum pressure is 246 psi. Maximum temperature is 176°F.

Lightweight Corrosion-Resistant Modular Air Filter/Regulator/Lubricators (FRLs)

With an aluminum body, these FRLs are lightweight, corrosion-resistant, and nonmagnetic. Maximum pressure is 150 psi. Maximum temperature is 125° F. Inlet and outlet connections are NPT female.

Filters remove particles down to 5 microns. All have a manual drain and a polycarbonate bowl with a nylon bowl guard.

Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked. A pressure gauge is included. Accuracy is ±2.3%.

Lubricators use 10W nondetergent oil. They have a sight glass and polycarbonate bowl with nylon bowl guard.

Filter/Regulator/Lubricators

Stacked Filter/Regulator/Lubricators—Combine a filter and regulator into one device, with a lubricator at the side.

End Block Kits—Each kit includes one end block for the inlet and one for the outlet. Blocks thread onto your pipe, allowing you to replace components that are between them without having to unthread your system.

Soft-Start Quick-Exhaust Valves

Also known as Monday-morning valves, these solenoid valves increase pressure slowly to reduce surge damage. When the solenoid is shut off, the valves cut air to your equipment by exhausting downstream pressure. All have an aluminum body. Connections are NPT female.

Pipe Size Inlet	Pipe Size Outlet	Max. scfm @ 100 psi	Max. psi	Max. Temp.	O'all Size Ht.	O'all Size Wd.	24V DC Valves		120V AC Valves

Modular Air Filter/Regulator/Lubricators (FRLs)

For information about air preparation, see page 1013.

Norgren-Compatible Modular Air Filter/Regulator/Lubricators (FRLs)

Build your own filter/regulator/lubricators by linking components together with joiner clamps. All of these components use Norgren clamps (sold separately), which provide fast installation. They can also be piped directly into your system. Components have an aluminum body, a maximum pressure of 150 psi, and a maximum temperature of 125°F (except manifold regulators and safety lockout valves have a zinc body, a maximum pressure of 250 psi, and a maximum temperature of 150°F). Inlet and outlet connections are NPT female.

Filters—Remove particles down to 5 microns. They have an automatic drain and polycarbonate bowl with an aluminum bowl guard.

Regulators—All are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulating range is 5-150 psi. A pressure gauge is included. Accuracy is ±3%.

Stacked Filter/Regulators—Combine a filter and a regulator into one device. Accuracy is ±3%.

Lubricators—Use 10W nondetergent oil. Bowl is polycarbonate with an aluminum bowl guard.

Oil-Removal Filters—Also known as coalescing filters, these filters remove oil mists down to 0.01 micron. All have an automatic drain. Bowl is polycarbonate with an aluminum bowl guard (except 7390K93 and 7390K94 do not have a bowl guard).

Manifold Regulators—Connect two or more of these regulators with joiner clamps (sold separately) to independently control multiple output pressures from one pressure supply. Each regulator has one 1/4" NPT female regulated port (pressure gauge is included).

Desiccant Air Dryers—Eliminate moisture at the point of use to deliver clean, dry air directly to your power tools and machinery. Dryers have silica gel desiccant that lowers the inlet air dew point by 15°F. To reactivate, remove and heat the desiccant at 275°F until it returns to an orange color. Bowl is polycarbonate with a steel bowl guard.

Safety Lockout Valves—Prevent accidental start-up when you're servicing equipment. Valves exhaust downstream air when closed and are lockable in the closed position (maximum shackle dia. is 5/16"; padlock not included). All have a yellow locking mechanism and help your process comply with OSHA lockout/tagout regulations.

End Block Kits—Include one end block for the inlet and one for the outlet. Blocks thread onto your pipe, allowing you to replace components that are between them without having to unthread your system.

Compact Integrated Air Filter/Regulators

Talk about convenient—here's a complete air preparation system in one compact component. You'll get a filter with automatic drain, regulator with pressure gauge, soft-start valve, shut-off valve with padlock and key, and three 1/4" air ports (one for filtered, unregulated air; two for filtered, regulated air). The filter removes particles down to 5 microns and has an indicator that lets you know when the filter element needs to be replaced. The regulator is relieving style, which exhausts excess downstream pressure when your system is blocked. Accuracy is ±2 psi. The soft-start valve eases pressure into your system to reduce surge damage.

All controls and replaceable parts are accessible via the component's front panel. Housing is acetal with an aluminum cover and has an IP65 rating for protection against splashing water. Inlet and outlet connections are NPT female.

Electric filter/regulators have an indicator signal switch to let you know whether you're above or below your set pressure (you select which). All operate on 24V DC and have a 15-ft. electrical cable.

Parker-Compatible Modular Air Filter/Regulator/Lubricators (FRLs)

Filter

Regulator

Stacked Filter/Regulator

Lubricator

Oil-Removal Filter

Safety Lockout Valves

Joiner Clamp

Link these components together with joiner clamps to create your own custom filter/regulator/lubricators. All of these components use Parker clamps (sold separately for pipe size 1/4-3/4 components; included for pipe size 1 components), which provide fast installation. Components can also be piped directly into your system. Inlet and outlet connections are NPT female.

Pipe size 1/4-3/4 components have a zinc body (except safety lockout valves have an aluminum body). Maximum pressure is 150 psi (except for pipe size 1/4 regulators and safety lockout valves it is 250 psi). Maximum temperature is 125° F (except for pipe size 1/4 regulators it is 175° F).

Pipe size 1 components have an aluminum body. Maximum pressure is 250 psi. Maximum temperature is 175° F.

Filters—Remove particles down to 40 microns and have an automatic drain. Bowl is polycarbonate with a steel bowl guard (except pipe size 1 filters have a metal bowl with sight glass).

Regulators—All are relieving style, which exhaust excess downstream pressure when your system is blocked. Regulating range is 5-125 psi. A pressure gauge is included. Accuracy is ±3 psi.

Stacked Filter/Regulators—Combine a filter and a regulator into one device. Accuracy is ±3%.

Lubricators—Use petroleum-based 100-200 SSU oil. Bowl is polycarbonate with a steel bowl guard.

Oil-Removal Filters—Also known as coalescing filters, these filters remove particles down to 0.3 micron; oil mists down to 0.01 micron (except pipe size 1/4 and 1 filters remove oil mists down to 0.75 micron). All have an automatic drain. Bowl is polycarbonate with a steel bowl guard (except pipe size 1 filter has an aluminum bowl).

Safety Lockout Valves—Prevent accidental start-up when you're servicing equipment. Valves exhaust downstream air when closed and are lockable in the closed position (maximum shackle dia. is 5/16"; padlock not included). All have a red slide-lock mechanism and help your process comply with OSHA lockout/tagout regulations.

Compact Modular Air Filter/Regulator/Lubricators (FRLs)

The smallest filter/regulator/lubricators we sell—good for laboratory use, instrumentation, and micro machining. Body is aluminum. Maximum pressure is 145 psi. Maximum temperature is 140° F.

Filters remove particles down to 5 microns. All have a manual drain and a polycarbonate bowl.

Regulators are nonrelieving style, which means they do not exhaust excess downstream pressure. Regulating range is 7-100 psi. Pressure gauge is included. Accuracy is ±5%.

Lubricators use VG32 oil (see 3499K on page 2204). They have a polycarbonate bowl with a sight glass.

Filter/Regulator/Lubricators

All include joiner clamps and mounting brackets.

Stacked Filter/Regulator/Lubricator—Combines a filter and regulator into one device, with a lubricator at the side.

End Block Kits—Each kit includes one end block for the inlet and one for the outlet. Blocks thread onto your pipe, allowing you to replace components that are between them without having to unthread your system.

Oil-Removal Filter

Safety Lockout Valve

Joiner Clamp

To make your own filter/regulator/lubricators, link these components together with joiner clamps. All of these components use SMC clamps (sold separately), which provide fast installation. They can also be piped directly into your system. Maximum pressure is 145 psi. Maximum temperature is 140° F. Inlet and outlet connections are NPT female.

Pipe size 1/8 components have a zinc body (except stacked filter/regulator has an aluminum body). *Pipe size 1/4-1 components* have an aluminum body.

Filters—Remove particles down to 5 microns and have an automatic drain. Bowl is polycarbonate. Pipe size 1/8 filter also includes a steel bowl guard.

Regulators—Are relieving style, which exhaust excess downstream pressure when your system is blocked (except pipe size 1/8 regulator is nonrelieving style, which means it does not exhaust excess downstream pressure). Regulating range is 7-120 psi. A pressure gauge is included. Accuracy is ±2.5%.

Stacked Filter/Regulators—Combine a filter and a regulator into one device. Accuracy is ±2.5%. Pipe size 1/8 filter/regulator also includes a steel bowl guard.

Lubricators—Use ISO VG32 oil. Bowl is polycarbonate.

Oil-Removal Filters—Also known as coalescing filters, these filters remove particles down to 0.01 micron and oil mists down to 0.008 ppm. All have an automatic drain. Bowl is polycarbonate. Pipe size 1/8 filter also includes a steel bowl guard.

Safety Lockout Valves—Prevent accidental start-up when you're servicing equipment. Valves exhaust downstream air when closed and are lockable in the closed position (maximum shackle dia. is 5/16"; padlock not included). All have a red locking handle and help your process comply with OSHA lockout/tagout regulations.

★ Not for use with pipe size 3/4 stacked filter/regulator and oil-removal filter.

Push-to-Connect Modular Air Filter/Regulator/Lubricators (FRLs)

Filter/ Regulator/ Lubricator

Stacked Filter/ Regulator/ Lubricator

With push-to-connect fittings, connecting and disconnecting plastic and soft metal tubing to these filter/regulator/lubricators is quick and easy. Body is zinc (except 1/2" tube OD sizes have an aluminum body). All include mounting brackets. Maximum pressure is 145 psi. Maximum temperature is 140° F.

Filters remove particles down to 5 microns. All have an automatic drain and a polycarbonate bowl.

Regulators are relieving style, which exhaust excess downstream pressure when your system is blocked (except the stacked filter/regulator/lubricator for 1/8" tube OD is nonrelieving, which means it does not exhaust excess downstream pressure). A pressure gauge is included. Accuracy is ±2.5% (except filter/regulator/lubricator for 1/8" tube OD has an accuracy of ±5%).

Lubricators use ISO VG32 oil. They have a polycarbonate bowl.

Stacked Filter/Regulator/Lubricators—Combine a filter and regulator into one device, with a lubricator at the side.

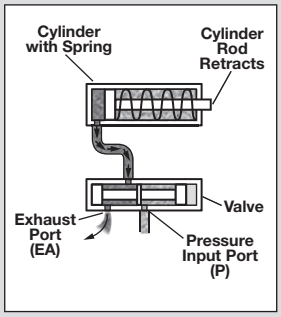
About Choosing a Directional Control Valve

Sending air pressure to the right place at the right time and then exhausting that pressure when it's no longer needed is a directional control valve's job. Use the following information to select a valve that fits your application.

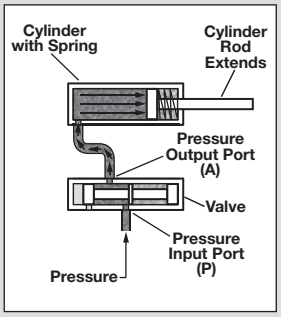
Choose a Valve to Control a Single-Acting Air Cylinder with Spring Return or a Double-Acting Air Cylinder

To Control a Single-Acting Cylinder with Spring Return— Choose a *3-way valve*. All 3-way valves have *two positions* (open and closed). A *normally open valve* lets air pass through the valve when it is in its resting position. A *normally closed valve* stays closed until activated.

The most common 3-way valve has three ports: one pressure input port to connect to your compressed air source, one pressure output port to connect to your cylinder, and one exhaust port. The following illustration shows a 3-way, two-position valve controlling a single-acting spring-return cylinder:



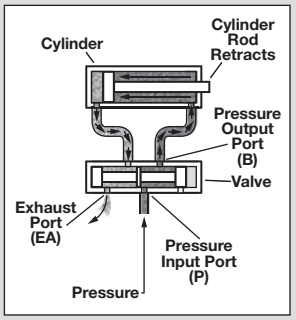
Valve Position 1— Valve is closed and exhausts air as the spring retracts the cylinder rod.



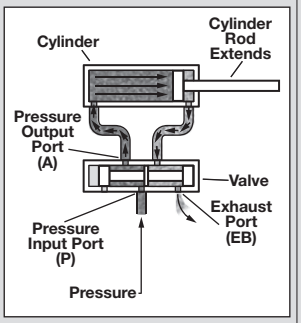
Valve Position 2— Valve is open and sends pressure to extend the cylinder rod.

To Control a Double-Acting Cylinder— Choose a *4-way valve*. They are available with *two positions* (open and closed) or *three positions* (open, center, and closed). For three-position valves, choose the center function: closed (all ports closed), exhaust (both exhaust ports open), or pressure (air flowing to both pressure outputs).

The most common 4-way valve has two positions and five ports: one pressure input port to connect to your compressed air source, two pressure output ports to connect to your cylinder, and two exhaust ports. The following illustration shows a 4-way, two-position valve controlling a double-acting cylinder:



Valve Position 1— Valve sends pressure to output B to retract the cylinder rod while EA exhausts air.



Valve Position 2— Valve sends pressure to output A to extend the cylinder rod while EB exhausts air.

Select Your Valve Configuration

Method of Operation— Valves can be operated manually, automatically, or with a solenoid. Once a *manual-return valve* is moved into a position, the valve stays in that position until you move the operator (lever, knob, or pedal) again. For *automatic-return valves*, a spring returns the valve to its original position once you let go of the operator. *Solenoids* send a signal to activate the valve and allow automation with computers and programmable logic controllers (PLCs).

Number of Ports— *3-way valves* have two or three ports. Two-port styles do not have a separate exhaust port, while three-port styles do. Choose three ports to extend and retract cylinders at the same speed.

4-way valves have four or five ports. Choose four ports (which have one exhaust outlet) to extend and retract cylinders at the same speed. Choose five ports (which have two exhaust outlets) to extend and retract cylinders at different speeds.

Flow Coefficient (Cv)— Flow coefficient is a measurement that indicates how much airflow a control valve can provide to your cylinder. The higher the flow coefficient value, the higher the airflow rate. Looking at valves with the same port size, but different flow coefficient values and not sure which one to choose? Select the one with the higher flow coefficient value because low airflow can slow down your entire system.

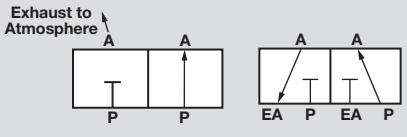
Match Your National Fluid Power Association (NFPA) Diagrams

Found on most directional control valves, these diagrams depict airflow and valve action. They're useful for replacing control valves—match the diagram on your valve to the diagrams shown here to determine the number of ways, ports, and positions you need.

P= Pressure input port
A and **B=** Pressure output ports
EA and **EB=** Exhaust ports

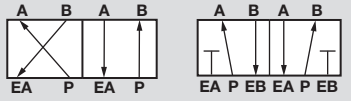
Some valves use a numbering system:
1= Pressure input port
2 and **3=** Pressure output ports
4 and **5=** Exhaust ports

3-Way Valves, Two Positions



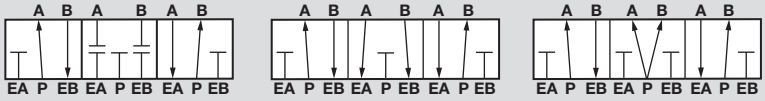
With Two Ports | With Three Ports

4-Way Valves, Two Positions



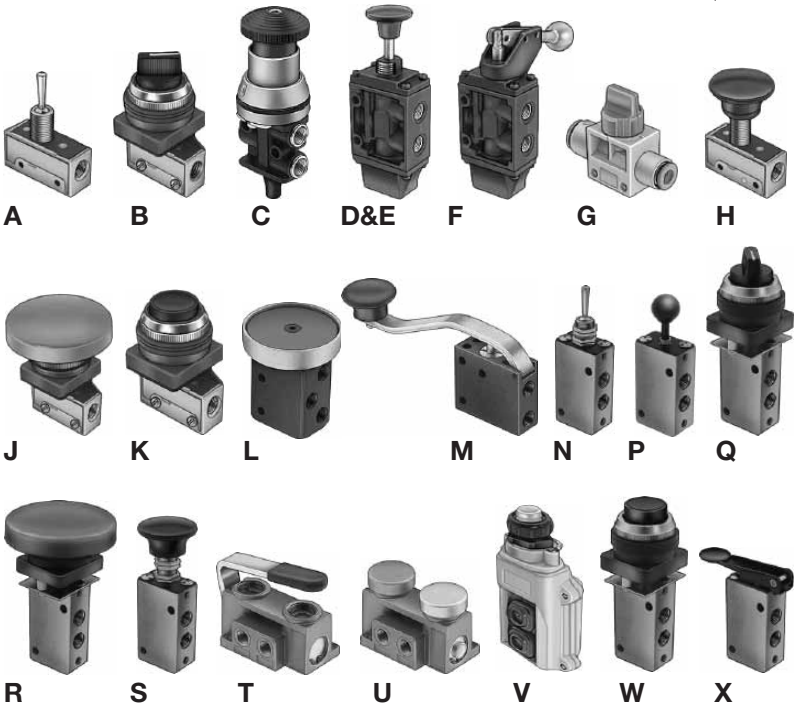
With Four Ports | With Five Ports

4-Way Valves, Three Positions



With Five Ports (Closed Center) | With Five Ports (Exhaust Center) | With Five Ports (Pressure Center)

Hand-Operated Air Directional Control Valves



You control these valves by pushing or turning their toggle, knob, button, or lever. Valves can be panel mounted and include panel-mounting hardware (except where a panel mount opening is not listed below). NPT connections are female. *3-way valves for single-acting cylinders with spring return* are normally closed.

Manual-Return Valves—Once moved into a position, the valve stays in that position until you move the toggle, knob, button, or lever again.

Automatic-Return Valves—A spring returns the valve to its original position once you let go of the toggle, knob, button, or lever.

Styles A&B are zinc and are vacuum rated to 23″ Hg.

Styles C&D are aluminum and are vacuum rated to 26.5″ Hg.

Styles E&F are aluminum and are vacuum rated to 29″ Hg.

Style G are made of plastic and have metric push-to-connect tube connections. They are not vacuum rated.

Styles H-K are zinc and are vacuum rated to 23″ Hg.

Styles L-U are aluminum and are not vacuum rated.

Style V can be used as a pendant-style valve. It's polycarbonate, has barbed tube connections, and is not vacuum rated. Valve does not have an exhaust port (exhausts directly to the atmosphere). The center position is closed. CSA certified. Meets IP65 for protection from water projected from a nozzle and NEMA 4X for corrosion resistance.

Styles W&X are aluminum and are not vacuum rated.

To Order: For Style L, please specify color of palm button: black, green, or red.

Compressed Air Directional Control Valves

For information about choosing a directional control valve, see page 1033.

Two-Hand Push-Button Safety Air Directional Control Valves

Since both hands are required to simultaneously press the buttons, these valves protect workers from accidental machinery start-ups. They're especially good for use on air-powered presses and drills. All valves are automatic return, which means a spring returns the valve to its original position once you let go of the buttons. Not vacuum rated. NPT connections are female; all others are push-to-connect tube connections.

3-way valves for single-acting cylinders with spring return are normally closed.

With Push Buttons—Valves are zinc-plated steel and do not have an exhaust port (exhaust directly to the atmosphere).

With Remote Push Buttons—The push buttons (located on the signal valves) are separate, allowing you to position them away from your machinery. Signal valves are zinc. Logic unit is aluminum. Note: A complete unit consists of one logic unit and two signal valves.

With Push Buttons

★ Complete unit, consisting of one logic unit and two signal valves. Signal valve port size is 1/8 NPT female.

Hand-Operated Lever Air Directional Control Valves

A

B

C

D

Move the hand lever to control these valves. They are not vacuum rated. Connections are NPT female.

3-way valves for single-acting cylinders with spring return are normally closed.

Manual-Return Valves—Once moved into a position, the valve stays in that position until you move the lever again.

Automatic-Return Valves—A spring returns the valve to its original position once you let go of the lever.

Styles A-C are aluminum. Style A do not have an exhaust port; air is exhausted directly to the atmosphere.

Style D are plastic with an aluminum base. You can remove these valves from their base for maintenance without unthreading your piping.

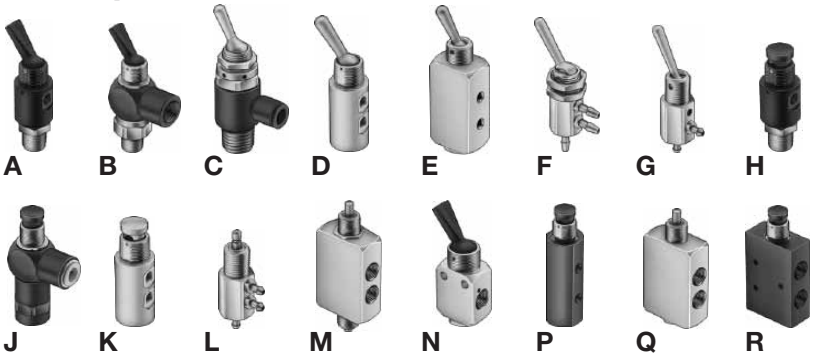
Hand-Operated Miniature Air Directional Control Valves



With the touch of a finger, these tiny valves can control air flow to your small air-powered systems. Valves are brass and are not vacuum rated, unless noted. Valves are panel mountable (except Style C is not panel mountable). Panel mount opening is 1/2" dia. (except opening is 1/4" dia. for Styles G and L; 3/8" dia. for Style F; 5/8" dia. for Style N). Mounting hardware is included.

3-way valves for single-acting cylinders with spring return are normally closed (Style L can also be used normally open).

Manual-Return Valves—Once moved into a position, the valve stays in that position until you move the toggle or button again.

Automatic-Return Valves—A spring returns the valve to its original position once you let go of the toggle or button.

★ Made of aluminum. ■ Made of nylon. ▲ Made of Type 303 stainless steel. Vacuum rated to 26" Hg.
♣ Vacuum rated to 20" Hg. ♦ Vacuum rated to 28" Hg. ♠ Center position is exhaust.

Key-Operated Air Directional Control Valves

Requiring a key to operate, you can limit who is able to adjust these valves. Made of aluminum, both are manual-return valves—once moved and locked into a position, the valves stay in that position until you lock them into another position. Two keys are included. Connections are NPT female.

3-way valve for single-acting cylinders with spring return is normally closed. Vacuum rated to 29.52" Hg. *4-way valve for double-acting cylinders* is panel mountable and includes mounting hardware. Vacuum rated to 26.5" Hg.

Compressed Air Directional Control Valves

For information about choosing a directional control valve, see page 1033.

Safety Air Directional Control Valves

Protect personnel and equipment. Valves are not vacuum rated.

Safety Shut-Off Valves—In the event of an air signal loss, a spring shuts these zinc alloy valves off to maintain your cylinder position. Valves move into position when compressed air is supplied to the control port; a spring returns the valves to their original position once air is removed. Minimum control port pressure is 45 psi at 90 psig.

Safety-Lockout Valves—To prevent accidental startups, these aluminum valves can be locked in their off position with a padlock with a maximum shackle dia. of 25⁄64″ (not included, see pages 2914-2925). They meet OSHA requirement 29 CFR 1910.147 for locking, labeling, and disconnecting air-powered equipment. All are manual return: once moved into a position, the valve stays in that position until you rotate the knob again. They are also normally closed.

Foot-Pedal-Operated Air Directional Control Valves

Using your foot to operate valves leaves hands free to perform other tasks. Connections are female. *3-way valves for single-acting cylinders with spring return* are normally closed.

Automatic-Return Valves—A spring returns the valve to its original position once you release the foot pedal.

Manual-Return Valves—Once moved into a position, the valve stays in that position until you press the foot pedal again.

Foot Guards—Prevent accidental valve operation.

Styles A&B are aluminum with a nonskid base to prevent sliding. They do not have an exhaust port (exhaust directly to the atmosphere). Not vacuum rated.

Style B consists of two valves (two ports per valve) with a foot pedal for each. A divider between the pedals prevents the two valves from being operated at the same time.

Styles C&E are bronze. Vacuum rated to 29″ Hg.

Styles D&F are zinc alloy. Valves include a foot guard and have a nonskid base to prevent sliding. Not vacuum rated.

Air-Operated Air Directional Control Valves

Allowing automation without electricity, these valves are good for environments where electrical use can be dangerous. Valves are aluminum (except valves with UNF ports are zinc). Vacuum rated to 26″ Hg (unless noted). Connections are female. *3-way valves for single-acting cylinders with spring return* are normally closed.

With One Control Port—Valves move into position when compressed air is supplied to the control port and a spring returns them to their original position once the air is removed. Minimum control port pressure is 44 psi.

With Two Control Ports—Valves move into position when compressed air is supplied to the first control port and return to their original position when the air is supplied to the second control port. Minimum control port pressure is 29 psi, unless noted.

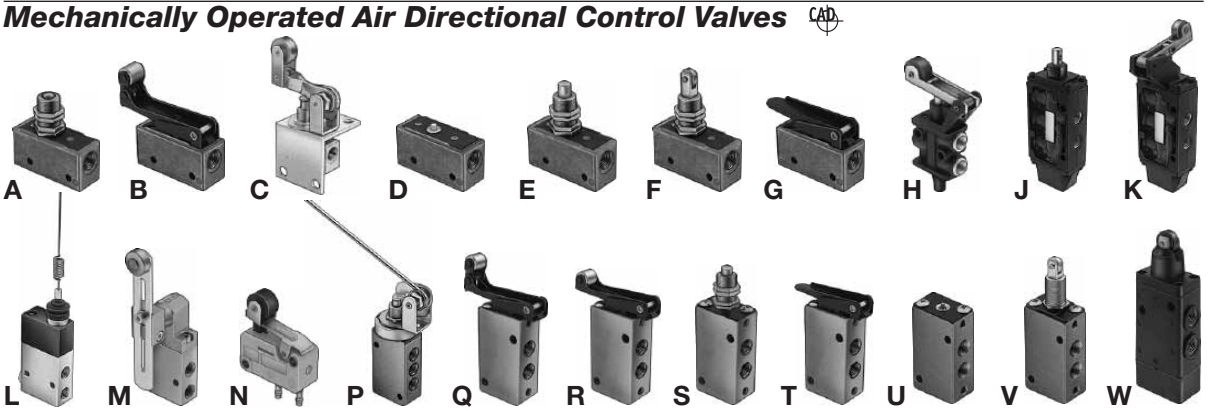
★ Vacuum rated to 10″ Hg. ■ Center position is closed. Minimum control port pressure is 44 psi.

Mechanically Operated Air Directional Control Valves



These valves are activated when an object (such as a box rolling on a conveyor) pushes against the valve operator. All valves are automatic return, which means a spring returns the valve to its original position once the force on the operator is released. Connections are female.

3-way valves for single-acting cylinders with spring return are normally closed.

Valves with *one-direction roller lever* are activated by an object in one direction only. All others are activated in both directions.

Styles A-G—Valves are zinc and are vacuum rated to 29.9″ Hg. Styles A, E, and F are panel mountable (hardware included); panel mount size is 15/32″ dia.

Styles H-M—Valves are aluminum and are vacuum rated to 29″ Hg, unless noted.

Style N—Made of plastic and vacuum rated to 29.9″ Hg. They have barbed tube connections.

Styles P-W—Valves are aluminum. Styles P-V are not vacuum rated; Style W is vacuum rated to 26.5″ Hg. Style S is panel mountable (hardware included); panel mount size is 15/32″ dia.

Push-to-Connect Solenoid Air Directional Control Valves with Manifold Mount

4-Station Manifold with 4 Valves

Install these valves and manifolds without tools or extra fittings—push-to-connect tube fitting connections make installation easy. The valves must be mounted to a manifold, which allows a single pressure source to operate multiple valves. Note: 3-way valves and 4-way valves cannot be mounted to the same manifold.

Valves—All are single solenoid; they move into position when electrical current is supplied and a spring returns them to their original position once current is removed. Valves are thermoplastic and have quick-disconnect electrical connections. DC power draw is 1.3 watts; AC power draw is 1.5 watts.

3-way valves for single-acting cylinders with spring return are normally closed and are vacuum rated to 28″ Hg. *4-way valves for double-acting cylinders* are not vacuum rated.

Manifolds—Valves mounted to manifolds share a common input pressure source and exhaust connection. Manifolds are thermoplastic and may be mounted on DIN rail (see 8961K on page 787).

To Order: For *valves*, please specify voltage: 12V DC, 24V DC, 24V AC, or 120V AC. For *manifolds*, please specify number of stations: 2, 3, 4, or 5.

♥ Max. scfm @ 30 psi.

Compressed Air Directional Control Valves

For information about choosing a directional control valve, see page 1033.

Solenoid Air Directional Control Valves

Add compressed air to the input and apply voltage to the electrical connection to operate these solenoid valves, which can be operated remotely as well as in automated processes. Connections are female.

Single-solenoid valves move into position when electrical current is supplied; a spring returns the valves to their original position once current is removed. *3-way valves for single-acting cylinders with spring return* are normally closed. Valves with two ports do not have an exhaust port (exhaust directly to the atmosphere).

Double-solenoid valves move into position when electrical current is supplied to the first solenoid; return to their original position when current is supplied to the second solenoid.

Style A—Lugs offer quick electrical connection. They require crimp-on spade lug connectors (sold separately below) for 26- to 22-ga. wire hookup. Valves are nickel-plated brass and zinc-plated steel. Power draw is 0.67 watts. Vacuum rated to 28″ Hg.

Style B—Valves have two lead wires for electrical connection. Made of aluminum. Power draw is 7 watts for DC valves; 8.5 volt-amps for AC valves. Not vacuum rated.

Style C—These respond to electrical signals faster than other solenoid valves. Made of aluminum. Power draw is 4 watts for DC valves; 5 volt-amps for AC valves. All have a 3.5 mm female DIN connector. Vacuum rated to 29.9″ Hg.

Style D—Made of aluminum. Power draw is 2.5 watts. All have a 9.4 mm female DIN connector. Not vacuum rated.

Style E-H—Made of aluminum with an 11 mm female DIN connector, except 10-32 UNF valves are made of zinc with an 8 mm female DIN connector. Not vacuum rated.

10-32 UNF valves have a power draw of 1 watt for DC valves; 1.3 volt-amps for AC valves. They are available with the coil pins facing up to be individually wired or facing down for use with a manifold (except 12V DC and 110/120V AC models of 6124K24 are only available with pins facing up). **To Order:** Please specify pins up or down.

1/8 and *1/4 NPT* valves have a power draw of 2 watts for DC valves; 1.3 volt-amps for AC valves.

3/8 NPTF valves have a power draw of 6 watts for DC valves; 7 watts for AC valves.

1/2 NPTF valves have a power draw of 2 watts for DC valves; 3.5 watts for AC valves.

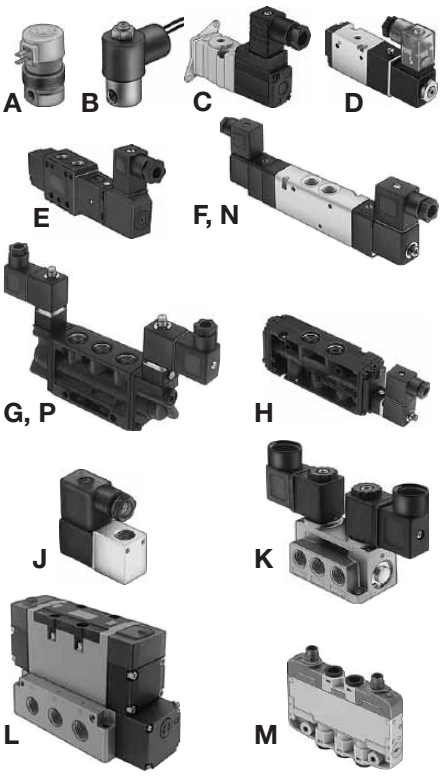
Style J—Made of aluminum. Power draw is 6.5 watts. All have an 11 mm female DIN connector. Not vacuum rated.

Style K—Made of aluminum. Power draw is 7 watts for DC valves; 8.5 volt-amps for AC valves. All have a 12 mm female DIN connector. Not vacuum rated.

Style L—These valves handle higher flows and larger pipe sizes than the other styles. Made of aluminum. Power draw is 1.8 watts for DC valves; 2.3 volt-amps for AC valves. All have a 1/2″ conduit terminal for electrical connections. Not vacuum rated.

Style M—Made of nylon and have push-to-connect tube fitting connections for easy installation. Power draw is 0.7 watts. All have a M8 3-pin female connector. Not vacuum rated.

Style N&P—Made of aluminum. Power draw is 2 watts for DC valves; 2.4 volt-amps for AC valves. All have an 18.5 mm female DIN connector. Not vacuum rated.



To Order: Please specify voltage from those available below.

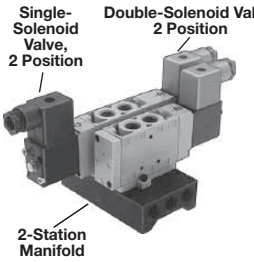
Crimp-On Spade Lug Connectors for Style A (Pkg. of 10)												**4916K81**	5.36

■ Outlet is 1/8 NPTF; inlet is 10-32 UNF. ★ Center position is closed.

Solenoid Air Directional Control Valves with Optional Manifolds



Whether you use these valves alone or mounted to a manifold, they can be operated remotely as well as in automated processes. To operate, add compressed air to the input and apply voltage to the electrical connection. Port connections are female.

Valves are made of aluminum. Power draw is 3.5 watts for DC valves; 4 watts for AC valves. Vacuum rated to 28″ Hg. Note: Same-style valves can be used on the same manifold. For example, you can put a 2-position, single-solenoid standard valve and a 3-position, double-solenoid standard valve on the same manifold.

Single-solenoid valves move into position when electrical current is supplied; a spring returns the valves to their original position once current is removed.

Double-solenoid valves move into position when electrical current is supplied to first solenoid and return to their original position when current is supplied to the second solenoid. The *3-position* valves also have a spring that returns the valves to center position.

4-Way Valves for Double-Acting Cylinders—To Order: Please specify 24V DC or 120V AC.

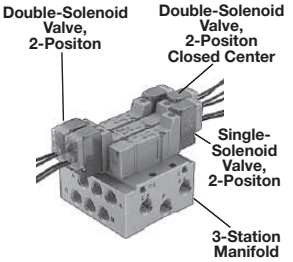
Manifolds—To Order: Please specify number of stations: 2 to 8.

Valves mounted to these manifolds share a common input pressure source and exhaust connection. Manifolds are aluminum.

For Style	Port Size, NPTF	2, 3, or 4 Stations		5 to 8 Stations	
Standard	1/4	6425K31	$46.76	6425K32	$68.33
High Flow	3/8	6425K41	50.80	6425K42	87.33

Build-Your-Own Solenoid Air Directional Control Valve System



Create a solenoid system with these electrically operated valves that mount to a single-station base, or to a manifold which allows a single pressure source for multiple valves. Same-style valves can be used on the same manifold. For example, you can put a Style B, 2-position, single-solenoid valve and a Style B, 3-position, double-solenoid valve on the same manifold. Connections are female.

Single-solenoid valves move into position when electrical current is supplied; a spring returns the valves to their original position once current is removed.

Double-solenoid valves move into position when electrical current is supplied to first solenoid and return to their original position when current is supplied to second solenoid. The *3-position* valves also have a spring that returns the valves to center position.

Style A—Also known as a direct-acting valve, this valve responds to electrical signals faster than other solenoid valves. It is made of aluminum and has a 3.5 mm female DIN connector. Power draw is 4 watts for DC valves; 5 volt-amps for AC valves. Vacuum rated to 29.9″ Hg.

Styles B-D—Style B are zinc; Styles C and D are aluminum. All have wire leads for electrical connection (connect power to each valve individually). Power draw is 0.4 watts for DC valves; 0.9 volt-amps for AC valves. Not vacuum rated.
