With their heavy gauge welded-steel construction, these trucks can take a beating yet keep on hauling your waste, scrap, and bulk materials. Bottom panel is solid 12-ga. steel. Trucks roll on two rigid and two swivel casters with rubber wheels. All have a gray powder-coated finish. Shipped assembled.

Trucks with solid side panels prevent small items from falling out. Made of 12-ga. steel. ***Trucks with mesh side panels*** maximize air circulation and visibility of contents. Made of 13-ga. steel.

Wheelbarrows

Load after load, these heavy duty wheelbarrows keep performing. All have a rugged steel frame and legs. Handles are painted steel, unless noted. Shipped unassembled.

Pneumatic wheels are quiet and shock absorbing.

Flat-free wheels are solid yet provide a cushioned ride.

(A) Tray is 17-ga. blue steel and has a rolled rim for extra strength.

(B) Tray is 16-ga. blue steel with a rolled rim for extra strength.

★Handles are wood.

Dump Carts

Save your back—these carts are easier to maneuver than a wheelbarrow. The location of the wheels allows the carts tighter turns and easier dumping. Shipped assembled, unless otherwise stated.

Polyethylene trays are lightweight yet strong, and an economical alternative to steel. ***Steel trays*** have heavy gauge construction to withstand abuse.

(C) Frame is tubular steel with a green powder-coated finish; tray is black. Carts roll on two puncture-proof never-go-flat (also known as semi-pneumatic) wheels. 23115T12 ships unassembled.

(D) Tray has a curved bottom and 1½" wide reinforced rockers. Frame and tray are blue 14-ga. steel. Carts roll on two pneumatic wheels.

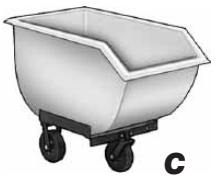
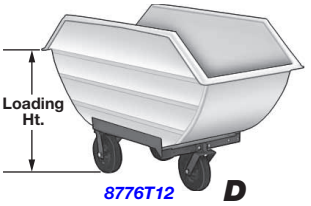
Polyethylene Tilting Dump Trucks





Forklift Pockets

Tough, sturdy, and easy to handle, these trucks are simple to empty—just tilt and dump. All have a seamless polyethylene body that resists many chemicals and can be cleaned with high pressure water or steam.

(A) Trucks have a tubular steel frame and handle (unless noted). Steel side rails (except for 2434T61, T62, and T66) provide added support. All trucks have two axle-mounted wheels and two swivel casters. Color is black. Shipped assembled.

13½- and 27-cu. ft. capacity trucks have hooks below the handle for hanging accessories (unless noted).

(B) Same as *Style A*, but truck is blue with a recycling imprint on the side. Shipped assembled.

(C&D) Sloped ends make loading and dumping these trucks easier. A rounded bottom also adds to the dumping ease. Frame is welded steel. Trucks roll on two rigid and one swivel caster (except for 8776T13, which has two rigid and two swivel casters). Trucks are made of FDA-compliant materials. Color is white. Some assembly is required (hardware included). *Style D* have ribbed walls for added strength.

(E) Trucks can be moved around your facility by a forklift. All have a welded tubular steel frame and handle, 6″ Wd.×3″ Ht. forklift pockets, two axle-mounted wheels, and two swivel casters, unless noted. Color is black. Shipped assembled. 28755T41 and *T42* have steel side rails for added support and hooks below the handle for hanging accessories. Fork pocket spacing is 17″ center-to-center. 28755T43 has fork pockets spaced 15″ center-to-center.

(F) Same as *Style A*, but with a ¾″ dia. hitch pin and 24″ long tow bar that allow you to connect and tow a maximum of three trucks using a lift or forklift truck with a trailer (drawbar coupler) hitch. Max. tow speed is 5 mph. Color is black. Shipped assembled.

Note: Don't exceed 2,100 lbs. total cap. for all three trucks.

(G) Made of structural polyethylene, these trucks are more durable than our other polyethylene trucks. They have two axle-mounted wheels and two swivel casters. Made of USDA-accepted and FDA-compliant materials. Color is black. Shipped assembled.

Polyethylene Tilt-and-Lock Hoppers

Just pull the handle to release the lock and tilt to empty; tilt back and the hoppers will lock in place. Made of polyethylene, these hoppers are lighter than steel hoppers, plus they won't rust, dent, or pit.

For strength, all hoppers have ribbed side walls and a red steel frame with forklift pockets. They roll on two rigid and two swivel casters with polypropylene wheels. Color is black. Shipped assembled.

Note: Not for use with hand hydraulic pallet trucks.

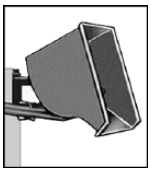
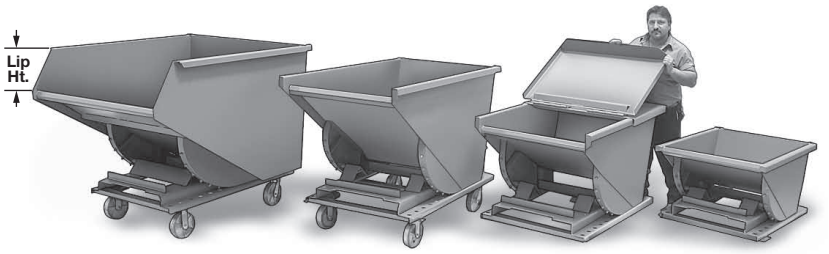
Steel Easy-Empty Hoppers



Hopper in Dump Position

Locking Latch on the Hoppers



Mobile 54-cu. ft. Capacity | *Mobile 27-cu. ft. Capacity* | *13½-cu. ft. Capacity with Optional Hinged Lid* | *6¾-cu. ft. Capacity*

Release the locking latch and these perfectly balanced hoppers dump their load and then automatically return to an upright, locked position. Made of steel with a gray finish, all have a smooth formed edge around the top and lip (where applicable) for superior durability. The interior seams are welded for strength. All have a pallet base with forklift pockets. Shipped assembled.

Mobile Hoppers— Have two rigid and two swivel casters. *Note:* Casters will add 9″ to the overall height of the hopper.

Cast iron wheels combine strength and durability with abrasion and heat resistance.

Polyurethane wheels allow loads to be rolled easily while protecting your floor.

Steel Bottom-Empty Hoppers

Fill these hoppers with your bulk material, hoist them to your work location, and then release the bottom trapdoor for quick, complete discharge. All are made of steel and have a hoisting eye.
Note: Not recommended for fine material such as sand or powder.

The ***400-lb. capacity hopper*** has a handle on each side of the trap door. The ***800-*** and ***1,600-lb. capacity hoppers*** have one handle for the trapdoor and a positive shutoff to stop the discharge flow between loads.

400-lb. Capacity

Wood Deck Wagons

Look no further if you need a smooth and gentle ride for transporting fragile loads. Wood decks are quieter and more impact absorbing than steel decks. All wagons have a steel frame and a T-style pull handle. They roll on pneumatic wheels that cushion the load over rough surfaces and obstructions.

(A) A two-piece handle with a cushion grip steers each wheel independently for better stability. The T-end is removable for towing applications. Maximum tow speed is 25 mph. Frame and handle have a black painted finish. Shipped unassembled.

(B) Pivoting front wheels and axle provide "fifth-wheel" steering for tighter turns and easier maneuverability. The welded frame and handle have a blue enamel finish. Shipped assembled.

Steel Deck Wagons

Dependable and durable, these wagons have a lipped deck to keep items from sliding off. Pivoting front wheels and axle provide "fifth-wheel" steering for tighter turns and easier maneuverability. All have a vinyl-gripped handle that stays upright when not being pulled. Color is red.

Never-go-flat rubber wheels are puncture proof. ***Pneumatic wheels*** offer a cushioned ride.

(C) Perforated decks allow drainage and keep debris from accumulating. Shipped assembled.

(D&E) Solid decks offer maximum durability. *Style D* is shipped assembled; *Style E* is shipped unassembled.

Heavy Duty Steel Deck Wagons

Flush Deck with 16″ Dia. Pneumatic Wheels

Lipped Deck with Rubber-Tread Wheels

Bring out the big guns—these rugged wagons handle your heaviest loads. Deck is reinforced for strength. Pivoting front wheels and axle provide "fifth wheel" steering for easier maneuverability and tighter turns. All have a vinyl-gripped T-handle that stays upright when not being pulled. Color is gray. Shipped assembled.

Lipped-deck wagons have a 1½″ high lip to prevent loads from slipping off.

Pneumatic wheels offer a cushioned ride over rough surfaces. ***Rubber-tread wheels*** accommodate heavier loads on smooth surfaces.

Also Available: Wagons with a 2½″ ID tow eye at the end of the handle for intermittent, low-speed towing. These wagons have 16″ dia. pneumatic wheels. Please ask for 2538T888 and specify flush or lipped deck and deck size.

Box Trailer

Move large quantities of loose material around your facility. Made of structural foam, the trailer interior is seamless and smooth. The rear panel slides up for easy dumping and cleaning. Trailer rolls on pneumatic wheels for a cushioned ride over rough surfaces. Max. tow speed is 3 mph. Color is black. Shipped unassembled.

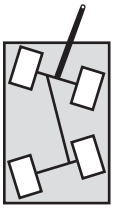
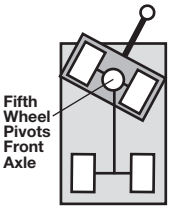
Warning! ***Never exceed capacities.***

Steering Trailers





Pull up to five of these welded-steel trailers at the same time using their rear hitch. All roll on pneumatic wheels for a smooth, cushioned ride over rough surfaces. Max. tow speed is 5 mph. Shipped assembled.

Four-wheel steering trailers have pivoting axles connected by a tie rod for accurate tracking when pulling two or more trailers. Color is green.

Fifth-wheel steering trailers have pivoting front wheels and axle for easier maneuverability and tighter turning under heavy loads. Deck is reinforced with 12-ga. square steel channel. Color is gray.

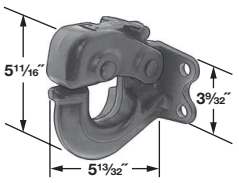
Drawbar Couplers, Drawbar Eyes, and Tow Hook

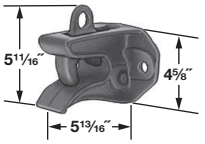
All the accessories you'll need to properly connect your trailer for towing. ***Trailer/load weight capacity*** is the total weight being towed. ***Vertical capacity*** (also known as tongue weight) represents the weight of the load on the drawbar eye or hitch ball.

Note: Capacity is reduced 25% in off-road use.

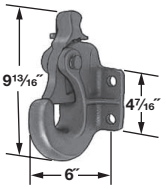
Drawbar Couplers



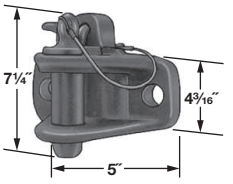
A



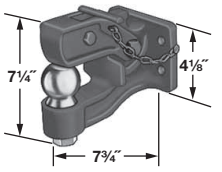
B



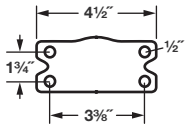
C

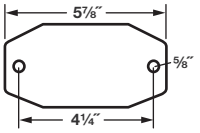


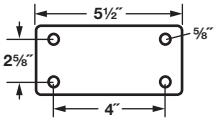
D

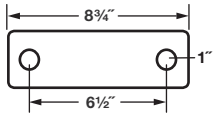


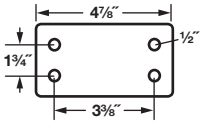
E











Also known as pintle hitches, drawbar couplers are used with drawbar eyes (sold separately on this page) to connect your trailer to your vehicle for towing. Made of steel. Use Grade 8 screws (not included, see pages 3145-3148) for mounting.

Drawbar eye/ball couplers include a chrome-plated steel ball for use with ball-style hitch connections.

Trailer/Load Weight Cap., lbs.	Vertical Cap., lbs.	*For Drawbar Eye* Min. Eye ID	*For Drawbar Eye* Max. Ring Thick.	Ball Dia.	Mounting Screw Size		Each

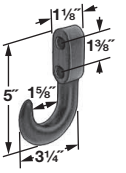
J 90,000	13,500	2⅜″	1⅝″	—	12675T73	112.73

Tow Hook

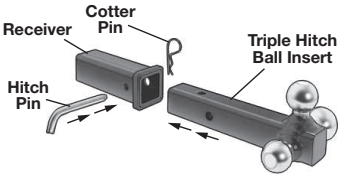
Mount this hook to your bumper or trailer for a simple towing connection. Made of forged steel. Use Grade 8 screws (not included, see pages 3145-3148) for mounting.

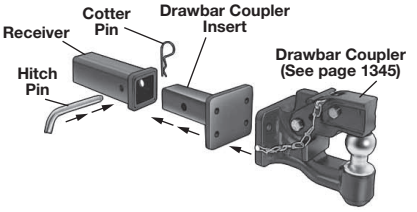


Trailer/Load Wt. Cap., lbs.	Mounting Plate Thick.	Mounting Screw Size		Each
10,000	1″	½″	2589T9	$10.66

Warning! ***Never exceed capacities.***

Hitch Receivers, Inserts, Pins, and Balls



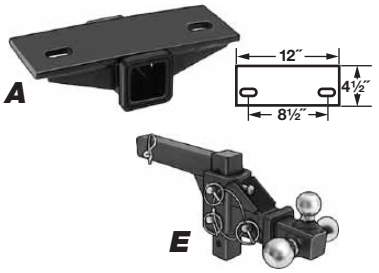


Like the examples shown at left, you can create a hitch that's right for your towing needs. All the components you need for a complete hitch are sold separately.

Trailer/load weight capacity is the total weight being towed.

Vertical capacity (also known as tongue weight) represents the weight of the load on the drawbar eye or hitch ball.

Receivers and Inserts



All receivers and inserts are steel with a black powder-coated finish (unless noted).

(A&B) Receivers are standard 2″ square models. *Style A* includes mounting hardware.

(C) Raise or drop the ball to the height that works for your trailer. Accept ball with a 1″-14 thread size.

(D&E) Three hitch sizes in one. Inserts include 1⅞″, 2″, and 2⁵⁄₁₆″ dia. chrome-plated steel balls. *Adjustable insert* has a 12″ vertical adjustment in 1¼″ increments.

(F) Get the versatility of mating with a drawbar eye or hitch ball coupler. The 2″ dia. ball is chrome-plated steel. Insert accepts drawbar eye with a 2½″ to 3″ ID and maximum eye ring thickness of 1⁹⁄₁₆″.

(G&H) Allow you to connect your drawbar coupler to a receiver. The coupler mounts to the mounting plate with ½″ dia. Grade 8 screws (not included). Please see page 1345 for couplers and pages 3145-3148 for Grade 8 screws.

	Trailer/Load Weight Cap., lbs.	Vertical Cap., lbs.	Drop/ Rise	O'all Lg.		Each

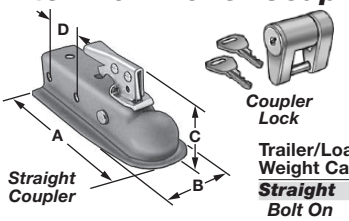
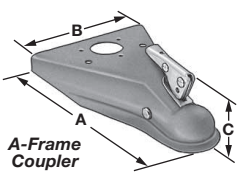
Hitch-Ball Trailer Couplers





Bolt or weld these steel couplers to the trailer tongue for easy hook-up to the towing vehicle's hitch ball. All couplers meet Society of Automotive Engineers (SAE) J684 standard classes.

Note: Trailer/load weight capacity is the total weight being towed.

Straight couplers bolt or weld to a single-channel trailer tongue. *Bolt-on* couplers use Grade 8 screws (not included, please see pages 3145-3148) and have a 5⁄16″ dia. hole in the latch lever to accommodate the coupler lock (sold separately) or your own padlock.

A-frame couplers weld onto an A-frame (two-channel) trailer tongue set at a 50° angle.

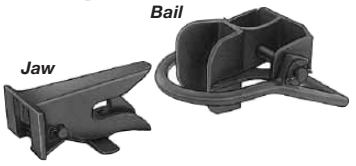
Coupler Lock with Two Keys for 2743T2, 2743T6, and 2743T5								2743T8	9.94

Warning! Never exceed capacities.

Automatic Trailer Couplers



No worries that these weld-on components will uncouple when turning or going over small obstacles. The trailer-mounted jaw has a spring-loaded lever that opens as the vehicle-mounted bail presses against it. Once the bail pushes past the open lever, it closes to secure the bail for towing. To uncouple, just depress the lever. Made of steel with gray finish. Use for towing over level surfaces. Not recommended for highway use.

Note: Trailer/load weight capacity is the total weight being towed.

Trailer/Load Weight Cap., lbs.	O'all Size, Lg. x Wd. x Ht.	Mounting Plate Size, Wd. x Ht.	Coupled Lg.		Each
Jaw					
8,000	11" x 6" x 5¾"	6" x 3½"	17¾"	9726T61	$139.33
Bail					
8,000	16" x 7⅝" x 6½"	7⅝" x 3½"	17¾"	9726T62	187.47

Easy-Push Trailer Mover

Make your job easier when moving trailers. A long handle with rubber grips provides added leverage while pneumatic wheels allow easy rolling.

Mover is made of steel with a black powder-coated finish and has a removable chrome-plated hitch ball. Shipped unassembled.

Note: Vertical capacity (also known as tongue weight) represents the weight of the load at the hitch ball.

Vertical Cap., lbs.	O'all Wd.	Hitch Ball Dia.	Ground-to-Ball Ht.	Handle Lg.	Wheel Dia.		Each
700	24"	1⅞"	16"	29"	12"	22275T12	$288.11

Battery-Powered Trailer Movers

With these movers, one person can do the work of two or three. Ideal for moving heavy machinery. These movers operate on two 12-volt batteries (included) and have a built-in 20-amp battery charger and level meter. Under typical conditions, movers will run approximately eight hours on a full charge.

Movers are equipped with a hydraulic hitch ball lift that raises the ball into the coupling and transfers the weight to the mover for better traction. The hitch ball can be mounted to the lift at a height of 9" to 15" and adjusts in 2" increments. The lift has 7" of travel. Handle has diamond-patterned grips. Shipped assembled.

Note: Trailer/load weight capacity is the total weight being towed with full traction. Vertical capacity (also known as tongue weight) represents the weight of the load at the hitch ball.

Pneumatic wheels are quiet and shock absorbing. ***Flat-free wheels*** are solid yet provide a cushioned ride.

Trailer/ Load Weight Cap., lbs.	Vertical Cap., lbs.	Overall Size, Lg. x Wd. x Ht.	Hitch Ball Dia.	hp	Travel Speed, fpm	Wheel Dia.	*Pneumatic Wheels*	Each	*Flat-Free Wheels*	Each
40,000	1,000	64¼" x 34½" x 41⅜"	2"	2	140	18⅝"	22065T46	$7,666.47	22065T48	$7,933.80

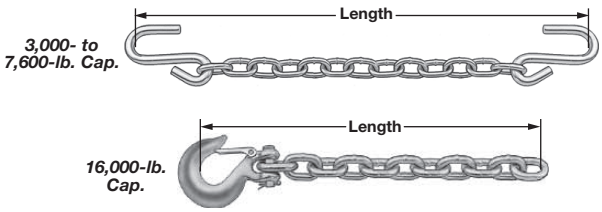
Trailer Safety Chains

Don't let your trailer get away from you if the hitch fails. Chains and hooks are steel with an electro-galvanized finish. Do not use for lifting applications. Chains must be used in pairs and each chain must meet or exceed your trailer capacity. For example, if you need to haul a 7,600-lb. load, choose two 25475T8 chains, each with a 7,600-lb. trailer/load weight capacity. Chains meet Society of Automotive Engineers (SAE) J684 standards.

Note: Trailer/load weight capacity is the total weight being towed.

3,000- to 7,600-lb. capacity chains have an S-hook at each end.

16,000-lb. capacity chain has a clevis-style hook with a latch at one end.



Trailer/Load Weight Cap., lbs.	*Chains* Trade Size	Dia.	Lg.	Hook Opening		Each	*Additional Hooks*	Each
3,000	3/16"	7/32"	48"	¾"	25475T2	$8.14	25475T1	$1.57
3,500	5/0	¼"	48"	¾"	25475T4	9.64	25475T3	1.79

7,600	8/0	11/32"	48"	¾"	25475T8	17.15	25475T7	3.40
16,000	⅜"	13/32"	35"	15/16"	25475T11	24.44	25475T9	7.68

Trailer Kingpin Locks

Don't compromise security—cover the entire kingpin of your trailer to prevent theft. Lock is recessed and housed in high-strength cast iron to prevent twisting and prying. The pick-resistant locking mechanism slides in like a drawer. Choose from locks keyed differently (each opens with a different key) and keyed alike (all open with the same key). For optimal security, locks include two keys that may only be duplicated by the manufacturer.

Max. Kingpin Size	Overall Size, Lg. x Wd. x Ht.	*Keyed Differently* Each	*Keyed Alike* Each
2½"	6" x 4½" x 3"	1757A39 $181.82	1757A42 $181.82

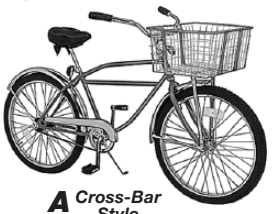
Engine, Casting, and Die Stands

The mounting plate on these stands rotates 360° and locks in position. Four arms adjust to hold various castings and come with mounting hardware. Stands have a heavy duty steel frame with cast iron wheels (6671A16 are 3" OD and A17 are 3½" OD). They quickly disassemble for transport and storage.

Cap., lbs.	O'all Size, Lg. x Wd. x Ht.		Each
750	31½" x 31½" x 36¾"	6671A16	$184.33
1,250	33⅜" x 33⅞" x 42¾"	6671A17	282.68

Warning! ***Never exceed capacities.***

Cycles

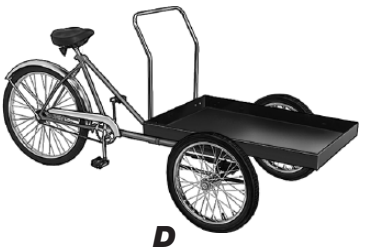


A Cross-Bar Style

Rear Cabinet

C With Rear Perforated Basket

B Step-Through Style



D

Our single-speed classic cycles are made in the USA and have basket, cabinet, or platform storage to fit your transport needs. All frames are made of steel with an orange painted finish (unless noted) and have chrome-plated fenders and padded seats. Shipped partially assembled.

Pneumatic wheels are quiet and shock absorbing. ***Flat-free wheels*** are solid yet provide a cushioned ride.

(A) Wire basket is zinc-plated steel.
(B) Wire basket is black vinyl-coated steel.
(C) *Perforated basket* is steel with a black enamel finish.
Rear cabinet is steel with a gray enamel finish. The hinged lid can be locked with a padlock (not included) that has a maximum shackle diameter of ½". For padlocks, please see pages 2914-2925.
(D) Front platform is steel with a black enamel finish.

Quilted Protective Pads

Also known as furniture pads, these quilted pads give your furniture and equipment added protection during moving and storage. The quilted pattern prevents bunching, and the double-stitched edging reduces rips and snags. One side of the pad is blue; the other side is dark blue.

Polyester and ***heavy duty polyester*** pads are made of polyester and have blended polyester/wool fill.

Heavy duty cotton/polyester pads are more durable than polyester pads. They are a blend of cotton and polyester and have blended polyester/wool fill.

Approximate Size, Lg. × Wd.	Polyester Fill oz./yd.	Thick.		Each	Heavy Duty Polyester Fill oz./yd.	Thick.		Each	Heavy Duty Cotton/Polyester Fill oz./yd.	Thick.		Each

Plastic Equipment-Moving Slides

And away you go—slide equipment and furniture across carpeted and smooth surfaces. Slides have a smooth bottom surface and a 1/2" thick foam pad on the top that holds the load in place. Slides are white; foam is black. *Note:* Do not use slides on concrete.

The *11 1/2" long* slide is for items with legs. Place one slide under each leg. The *48" long* slide is best for items without legs such as file cabinets and boxes. Slide has holes for a pull strap (sold separately).

Size, Lg. x Wd.		Each 1-3	4-Up
11 1/2" x 6 3/4"	2137T46	$11.84	$9.98
48" x 6 3/4"	2137T47	23.68	19.96
Pull Straps for 2137T47 (Set of Two)	2137T48	Per Set	$12.45

Two 2137T47 Slides Shown with Pull Straps

Tilt-and-Lift Dollies

Here's an easy way to move your file cabinets, drums, and crates. Slide the load plate of the dolly under the edge of the load and step down on the other end of the dolly to raise the load.

Two axle-mounted rubber wheels under the load plate balance the load and prevent it from tipping. Two swivel casters with rubber wheels are mounted at the step-down end for easy turning.

Dollies are made of square steel tubing with a vinyl coating for a nonskid, nonmarring contact surface. Shipped assembled.

Cap., lbs.	Overall Size, Lg. x Wd. x Ht.	Wheel Dia.		Each
600	32" x 15" x 3 1/2"	3"/2 1/2"	2649T14	$132.84
600	32" x 18" x 3 1/2"	3"/2 1/2"	2649T16	144.72

Lift-and-Roll Dollies

Position these dollies under your load, depress the removable handle to lift the load, and you're ready to roll. A safety latch locks the dollies in the raised position; a handle-activated lock release lowers the load. The platform and handle are square steel tubing with a red vinyl coating for a nonskid, nonmarring contact surface. All other surfaces have a silver powder-coated finish. Dollies roll on four swivel casters with rubber wheels. Shipped assembled.

With Desk Attachment

2761T13 & T15

Cap., lbs.	Deck Size, Lg. x Wd.	Deck Ht. Min.	Deck Ht. Max.	Wheel Dia.		Each
600	26 1/2" to 38" x 16"	1 1/4"	6 1/4"	4"	2761T18	$501.43

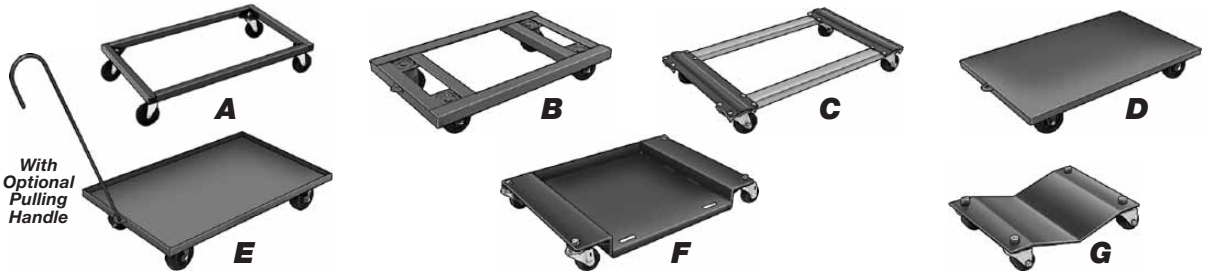
600	32" x 16"	6"	11 1/4"	4"	2761T15	330.87

Single-Pedestal Desk Attachment— Acts as a pedestal substitute for moving right- and left-hand single-pedestal desks. The support height is adjustable to fit a variety of desk sizes. Capacity is 250 lbs.

2761T17 ..... **Each** $128.94

Steel Dollies



Put these steel dollies to the test in your toughest environments. All roll on four swivel casters. Shipped assembled.

(A) Has reinforced corners for strength and vinyl end caps to protect walls and furniture from damage. Made of welded square tubing with a green powder-coated finish. Wheels are rubber.

(B) Welded angle iron frame and extra cross braces withstand abuse. Dollies have an eye for attaching a pulling handle (sold separately). Wheels are rubber (unless noted).

(C) The 4" wide raised ends have a protective coating for a nonskid, nonmarring contact surface. Have bolted construction and a gray powder-coated finish. Wheels are polypropylene.

(D) A solid flush deck lets you easily load and unload. Have an eye for attaching a pulling handle (sold separately). Dollies have a green powder-coated finish. Wheels are rubber (unless noted).

(E) Same as *Style D* except deck has a 1" high lip to keep your load from sliding off. Wheels are rubber (unless noted).

(F) Has a low-profile front edge for easy loading and a 2 1/4" high lip on the other three sides to keep your load from sliding off. Has a green powder-coated finish. Wheels are polyurethane.

(G) The deck height gradually lowers from the ends to create a recessed center to hold the wheels of vehicles, trailers, and machinery. Have a red powder-coated finish. Wheels are polyurethane.

Movers' Choice Wood Dollies

A

With Raised Rubber-Capped Ends B

C

D

A nonmarring, impact-absorbing, and quiet ride is what these dollies are all about. All dollies roll on four swivel casters with impact- and chemical-resistant polypropylene wheels. Shipped assembled.

Raised carpet-covered ends and ***carpet-covered deck*** provide added protection from damage to the load.

Raised rubber-capped ends also provide added protection from damage, plus they grip the load to keep it from sliding.

Easy-Stack Wood Dollies

Single Dolly

Five Dollies Stacked

A space-saving design lets you stack and transport up to 35 dollies. As you stack, each dolly interlocks with the top of the previous dolly for compact stacking.

The deck is made of 1″ thick plywood and the legs are carpet covered to keep your load from slipping off. Dollies roll on four swivel casters with rubber wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Wheel Dia.		Each
660	24″ × 24″ × 5½″	3″	5336T8	$48.84

Food-Grade Aluminum Dolly

For use in food-service application, this dolly meets NSF/ANSI standards and is USDA approved. Deck is made of 1/8″ thick rustproof aluminum, so it's lightweight yet strong enough for heavy loads. It has a 1 3/4″ high lip on three sides to keep your load from sliding off and open corners for easy drainage. Dolly rolls on two rigid and two swivel casters with polypropylene wheels. Shipped assembled.

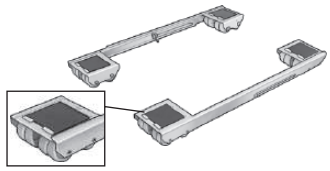
Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Wheel Dia.		Each
300	33″ × 27″ × 8″	5″	1666T1	$196.47

***Optional Pulling Handle*—** Pull rather than push your dolly. Handle is made of 3/8″ dia. steel and is 36″ long.

1666T9	Each	$20.60

Adjust-a-Length Aluminum Dolly

Also known as an appliance dolly, this dolly is adjustable in length to handle a variety of moving jobs. Used (and sold) in pairs, each half of the dolly has a 3″ × 3″ support at each end. A nonmarring rubber pad on the top of the supports grips your load. Each half of the dolly rolls on 16 plastic wheels (eight wheels mounted under each support). Shipped assembled.



Cap. per Pair, lbs.	Adjustable Lg.	Ht.	Wheel Dia.		Per Pair
2,000	18 1/4″ to 28″	1 1/4″	3/16″	2402T13	$33.33

Large-Deck Heavy Duty Steel Dollies

Welded steel channel and six axle-mounted wheels provide strength for moving pallets, machinery, large containers, and other heavy equipment. The center wheels are mounted lower than the end wheels for easier pivoting. Dollies have a yellow powder-coated finish. Shipped assembled.

6,000-lb. capacity dolly has steel wheels. ***10,000-lb. capacity*** dolly has cast iron wheels.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Center Opening, Lg. × Wd.	Wheel Dia.		Each
6,000	36″ × 24″ × 6 3/16″	33 3/16″ × 12 1/2″	5″	2735T3	$468.31
10,000	60″ × 36″ × 8 1/2″	56 3/16″ × 21 3/16″	8″	2735T2	763.63

Large-Deck Heavy Duty Aluminum Dollies

Although they weigh less than comparable steel dollies, these welded aluminum channel dollies are just as strong. Plus they're easier to get moving. Dollies roll on axle-mounted phenolic wheels. The center wheels are mounted lower than the end wheels for easier pivoting. The frame has an extra set of axle holes so the center wheels can be mounted at the same height as the end wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Center Opening, Lg. × Wd.	No. of Wheels	Wheel Dia.		Each

Hydraulic Lift-and-Move Fork Dollies

Your solution for moving large, bulky, and long loads. Dollies are used (and sold) in pairs. Each half has adjustable-width forks that go under the load and a hand-operated hydraulic lift that lifts and lowers the load. Steel cleats on the forks grip the load and a 12′ Lg. × 2″ Wd. web strap with a ratchet buckle attaches to each side of the dollies to stabilize and secure the load. Dollies are welded steel and each rolls on two swivel casters with phenolic wheels (unless noted). Shipped assembled.

Cap. per Pair, lbs.	Size, Lg. × Wd.	Handle Ht.	Fork Ht.	Fork Lg.	Outside Fork Wd.	Max. Lift	Wheel Dia.		Per Pair

● Wheels are cast iron.

Wheeled Levers

Here's the leverage you need when raising a big load. Also known as Johnson bars, pry bars, pry trucks, and mules, these levers are often used in pairs to lift each end of a load so a dolly can be slid underneath. Shipped assembled.

Rubber wheels are quiet and protect your floors. ***Cast iron wheels*** handle heavy loads.

(A) Have a 1 3/4″ thick oak handle and beveled steel load plate with green powder-coated finish.

(B&C) *Style B* has a tubular handle, a wedge-style steel load plate, and a blue painted finish. *Style C* has a tubular handle and a beveled steel load plate with grooves for a better grip on the load. A steel step bar opposite the load plate makes it easier to push the load plate under the load. Lever has a blue powder-coated finish.

Heavy Duty Low-Profile Dolly

Low to the ground and high in strength—this compact welded-steel dolly has a 1/4" thick deck with a 1/2" high lip on two sides for better load retention. It rolls on four axle-mounted heat-treated steel wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. x Wd. x Ht.	Wheel Dia.		Each
10,000	11 1/2" x 8 3/4" x 2 5/16"	2"	2725T81	$155.78

Compact Swivel-Plate Roller Dollies

Swivel Plate

Tilt-and-Swivel Plate

Their small size combined with the swivel plate make these dollies easy to handle and position when moving heavy machinery. The plate is removable so the dollies can be permanently installed on equipment that's moved frequently. Use 1/2"-13 cap screws (not included, please see pages 3151 and 3160) for installation. Dollies are welded steel and roll on two steel rollers.

Tilt-and-swivel plate dolly has a tilt plate under the swivel plate to compensate for uneven floors. Dolly includes a 5 1/4" long side bar to ease turning the dolly under load.

Dollies

Cap., lbs.	Plate Size	Overall Size, Lg. x Wd. x Ht.	Roller Dia.		Each

Grip-Plate Steel Roller Track Dollies

Cushion-Grip Swivel Plate

Cushion-Grip Swivel Plate with Lock

Cushion-Grip Rigid Plate

Diamond-Grip Swivel Plate with Lock

Diamond-Grip Rigid Plate

Small-diameter hardened-steel rollers rotate around a center plate to evenly distribute weight and make moving heavy equipment easier. All have welded construction and a green painted finish.

Cushion-grip dollies have a black neoprene rubber pad on the plate that firmly grips your load without damaging the surface.

Diamond-grip dollies have small teeth on the plate that grip the load.

Swivel plates provide controlled turning as well as straight-line movement. ***Swivel plates with lock*** provide more controlled turns by locking every 45°. ***Rigid plates*** are ideal for straight-line movement.

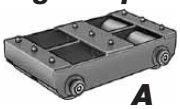
High-Capacity Cleated Roller Dollies



A
12,000-lb. Cap.

A
30,000-lb. Cap.

B

C

D

E

Conquer your most demanding moving requirements with these welded-steel dollies. The plate has steel cleats that grip the load and keep it from slipping.

Polyurethane rollers are quieter than steel rollers and protect your floor. ***Rigid plates*** have cleats along their entire length. Ideal for straight-line movement. ***Swivel plates*** are 7″ sq. and provide controlled turning as well as straight-line movement.

Smooth-Surface Dollies— Four rollers provide easy movement over smooth surfaces.

All-Surface Dollies— Four larger center rollers and one smaller roller on each end allow for easy transport over uneven surfaces.

Easy-Turn All-Surface Dollies— Two larger center rollers rotate independently for easy turning and exceptional maneuverability. A single smaller roller on each end allows for easy movement over uneven surfaces.

25005T72

J

K

Used alone or with each other, these dollies make easy work of moving heavy, bulky loads. Their design lets you move over both smooth and uneven surfaces. A textured rubber pad on the plate grips your load without damaging the surface. All dollies are made of welded steel with a red powder-coated finish and roll on nonmarking nylon wheels.

Swivel plates provide controlled turning as well as straight-line movement. ***Rigid plates*** are ideal for straight-line movement.

(F&G) Have a T-style steering handle. *Style G* also have a 2″ ID ring for towing applications up to 1.9 mph.

(H) The adjustable frame has two contact points and fits a variety of loads. Both have a T-style steering handle; 25005T72 also has a 2″ ID ring for towing applications up to 1.9 mph.

(J&K) Two contact points are connected by an adjustable bar that keeps them parallel. *Style K* dollies have convenient carrying handles.

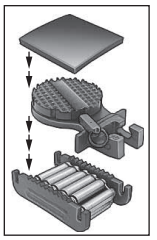
Versatile-Top Steel Roller Track Dolly Kits



Use these dollies with their rigid top plate for straight-line movement, or add the included diamond-top swivel top plates with lock for controlled turning as well as straight-line movement. The diamond-top swivel top plates have small teeth to grip your load and come with a neoprene rubber pad that can be placed on top to create a nonmarring grip top. The swivel locks every 45° for better control during turns. Dollies are made of welded steel with a green painted finish. Small-diameter, chain-activated, hardened-steel rollers rotate around the center plate to evenly distribute the weight for easier moving.

Each kit contains four dollies, four diamond-top swivel top plates, four neoprene rubber pads, two 48″ long steering handles, and a steel storage case.

Also Available: Individual dollies and diamond-top swivel top plates with lock. Please ask for 2723T888 and specify a dolly or swivel top plate and the capacity.

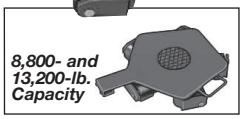
Multidirectional Roller Dollies

4,400-lb. Capacity



8,800- and 13,200-lb. Capacity

Maneuver machines and heavy loads into confined spaces. The rollers on these dollies swivel independently, allowing movement in any direction. All dollies have a textured rubber pad in the center to grip the load. Dollies are welded steel with a red powder-coated finish, have convenient carrying handles, and roll on nonmarking nylon rollers.

Cap., lbs.	Plate Dia.	Overall Size, Lg. × Wd. × Ht.	Rollers No.	Rollers Dia.		Each

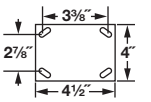
Dual Swivel-Plate Dollies

600-lb. Capacity



Two plates, one smaller than the other, swivel independently for maneuverability in tight spaces. Ideal for theatrical applications. Ball bearings between the plates allow you to turn and position the load without any caster movement. The smaller plate has four 1/2″ × 3/4″ slots for permanent mounting (fasteners not included). All dollies are made of steel with a black painted finish and roll on three swivel casters.

600-lb. capacity dolly has dual thermoplastic rubber (TPR) wheels.

2,000-lb. capacity dolly has polyurethane wheels.

Cap., lbs.	Overall Size, Dia. × Ht.	Wheel Dia.		Each
600	14″ × 5 5/8″	3″	83485T11	$345.83
2,000	18″ × 7 1/4″	4″	83485T12	454.17

Multidirectional Tripod Dollies

A

B

C

If you need to move machinery and equipment with legs look no further—just place each leg into the recessed center of a dolly and away you go. Dollies have three swivel casters for maximum maneuverability.

Rubber wheels are high impact. ***Cast iron wheels*** combine strength and durability to handle higher capacities than rubber wheels. ***Phenolic wheels*** are lightweight and protect your floors.

(A) Use for large diameter legs. Made of cast iron.

(B) Same as *Style A*, but these have a smaller recessed center.

(C) Moves loads with and without legs. Has a 1/4″ high lip on the longest edge for load retention. Made of 12-ga. steel with a vinyl coating for a nonskid, nonmarring contact surface.

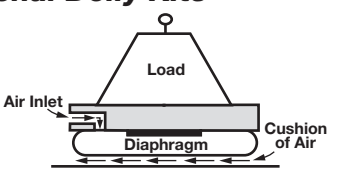
Air-Glide Multidirectional Dolly Kits



Also known as bearing movers, air casters, and air bearings, these dollies float your load on a cushion of air. As air escapes out of the neoprene air diaphragm located under the aluminum top plate, your load is lifted for easy, frictionless movement in any direction over smooth surfaces. Not only are these dollies ideal for unevenly distributed loads, their low lift height reduces the risk of injury to personnel and damage to your equipment.

Kits include four dollies, a regulator with an on/off control to ensure proper air flow to each dolly, and four 20-ft. long hoses with quick-connect fittings.

Sheet and Panel Cradle Dollies

Make transporting large, long loads such as doors, sheet stock, and partitions a one-person job. Dollies have a carpet-covered, 3/16″ thick steel cradle for a nonmarring contact surface. The cradle adjusts to accommodate a variety of load widths. All roll on two never-go-flat rubber (also known as semi-pneumatic) wheels. Shipped assembled.

G *With Optional Handle*

A-Frame Trucks

Quickly and easily load these trucks from both sides. All have welded steel construction. Shipped assembled.

(A) Trucks have a 1″ high lip along the length of the deck to keep your load from sliding off. They have a 12-ga. steel deck, a gray powder-coated finish, and roll on four swivel casters with phenolic wheels.

(B) Have nonmarring neoprene pads on contact surfaces, blue nylon web tie-down straps with zinc-plated quick-tight cam-style buckles, and welded forklift pockets. Made of 1/4″ thick steel with a hot-dipped galvanized finish for corrosion resistance. Roll on two rigid and two swivel casters with phenolic wheels. Swivel casters have a side wheel brake. All casters have a quick-release pin for easy removal to convert the trucks to storage racks. Overall height is reduced by 11″ without casters.

Rail Trucks

Trucks have a flush deck for easy loading and unloading from the ends. Their removable rails allow you to configure the truck to suit your load. All roll on two rigid and two swivel casters (unless noted). Shipped unassembled.

(C) Trucks are corrosion resistant and easy to clean. Deck is reinforced with steel and has a black nonskid surface. The rails are steel with a gray powder-coated finish.

(D) Made of 12-ga. steel. The deck is reinforced and has a red vinyl coating for a nonskid, nonmarring contact surface. Rails have crossbars for added strength and a silver painted finish.

(E) *1,200-lb. capacity truck* is 12-ga. steel with a gray powder-coated finish. *2,400-lb. capacity trucks* are made of 16-ga. steel with a silver painted finish. The deck and top half of the rails have a red vinyl coating for a nonskid, nonmarring contact surface.

(F) Rails at three different heights offer greater versatility. Trucks have a 12-ga. steel deck and a gray powder-coated finish.

(G) Deck is 12-ga. steel. All trucks have a powder-coated finish. The deck is gray; the rails are blue. The two swivel casters have a face wheel brake.

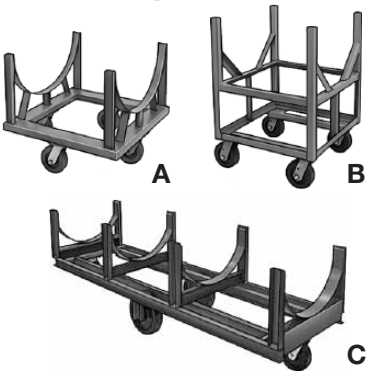
Cradle Trucks & Spool Racks

Bar and Pipe Cradle Trucks



Let gravity keep your long loads centered and balanced—great for pipe, bar stock, and channel. The open design allows easy loading and unloading with forklifts and slings. All have welded steel construction. Color is gray. Shipped assembled.

(A) Quick-turn trucks have casters mounted in a diamond pattern for better maneuverability. *3,000-lb. capacity* truck rolls on four swivel casters with phenolic wheels. *4,000-lb. capacity* truck rolls on two rigid and two swivel casters with steel wheels.

(B) Ergo-height truck has a higher cradle height for less bending during loading and unloading. It rolls on four swivel casters with phenolic wheels.

(C) High-capacity truck moves and stores your heaviest loads. It has a swivel caster with a phenolic wheel on each end and two axle-mounted phenolic wheels in the center for better maneuverability and rolling over obstructions.

Cap., lbs.	No. of Cradles	Cradle Size, Ht. × Wd. × Dp.	Wheel Dia.

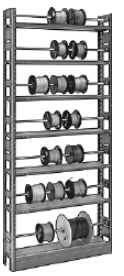
Spool Racks

Wall Mount

Floor Mount



Free-standing

Wall-mount racks are 19-ga. gray powder-coated steel with steel spindles. They have four 3/8″ dia. mounting holes (fasteners not included). Shipped unassembled.

Floor-mount racks should be securely bolted to the floor. They adjust on 2″ centers using nuts and bolts. Racks are 7-ga. steel with a painted gray finish and have steel spindles. They have four 7/8″ dia. mounting holes (fasteners not included). *Add-on units* attach to a complete unit to extend the width for additional storage. Shipped unassembled.

Freestanding rack includes shelves for additional support. It adjusts on 1½″ centers using nuts and bolts. Rack is 13-ga. steel with a painted gray finish and has galvanized steel spindles. Shipped unassembled.

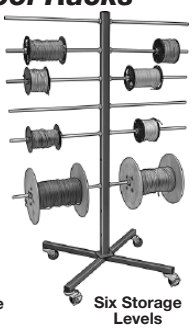
Mobile Spool Racks

Three Storage Levels



Six Storage Levels

Rack with three storage levels includes three fixed steel spindles. A wire guide on the handle allows for controlled dispensing. The frame is steel and has four swivel casters (two with brakes) with 3″ dia. rubber wheels. Color is red. Shipped assembled.

Rack with six storage levels includes six aluminum spindles that adjust on 7″ centers. Shaft collars secure the spools on the spindles. The frame is 14-ga. gray powder-coated steel and includes four swivel casters (two with brakes) with 3″ dia. polyurethane wheels. Shipped unassembled.

Warning! Never exceed capacities.

Mobile Spool Racks with Removable Carrier

Transport all your spools at the same time, or use the removable rack to carry only the spools you need. When individual carriers are removed, this rack doubles as a hand truck.

Each carrier holds spools up to 7½″ dia., except the rack with four storage levels has one carrier that holds up to 16″ dia. spools. Both racks include three fixed vises and two holders for conduit benders; the four-level rack also includes a wire guide (wire guide sold separately for five-level rack). Racks are steel with rubber wheels. Color is red.

Wire guide has ten ½″ dia. holes. Made of steel.

Roll-On Low-Profile Reel Stands

No need to lift heavy reels—just roll them up the built-in ramp for easy loading. Rollers on the top of the stands allow the reels to spin freely as you wind or dispense rope, wire, hose, and chain. Stands have four mounting holes (fasteners not included).

1,200-lb. capacity stand holds reels up to 28″ wide. Made of 12-ga. steel. Color is green.

1,500-lb. capacity stand is designed to be used in pairs to accommodate reels of any width; capacity for the pair is 3,000 lbs. Made of 7-ga. steel. Color is red and yellow.

1,200-lb. Capacity

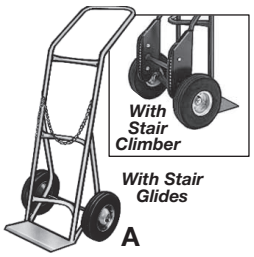
Single-Cylinder Hand Trucks



Move individual cylinders safely and easily. Shipped assembled.

Four-wheel trucks have rear legs with swivel casters for additional stability and better mobility. **Steel** and **aluminum trucks** are welded and have cross braces that support the cylinder when the truck is tilted.

(A) Trucks have a chain to secure the load and a green powder-coated finish. Trucks *with stair glides* ease the load over stairs and curbs. Trucks *with stair climbers* have a rotating nylon belt for moving over stairs and curbs.

(B) Truck is lightweight and spark resistant. It has a chain to secure the load and a dual-wheel hand brake for better load control on stairs, ramps, and inclines.

(C) Truck resists weather, corrosion, and sparks. A nylon strap secures the load. Color is black.

(D) The rear legs fold for compact storage. Trucks have a chain with plastic sleeve to secure the load and a green powder-coated finish. *Conductive wheels* have resistivity less than 250,000 ohms.

(E) A built-in hand jack with a crank handle safely lifts the cylinder up to 11″ for placement. A tightening handle puts tension on the chain to secure the cylinder. Has a red powder-coated finish.

(F) Designed for larger cylinders. A flat hook secures the cylinder. Two 2″ dia. steel rollers on the front of the truck allow you to tilt the truck forward for easier loading. Has a green powder-coated finish.

Double-Cylinder Hand Trucks

Two cylinders…one trip. Safely and easily transport two cylinders at a time with these trucks. Shipped assembled.

Front-to-back trucks are ideal for narrow aisles and confined spaces. ***Steel trucks*** have welded construction and a green powder-coated finish (unless noted).

(A&B) A lip at the back of the load plate prevents cylinders from sliding off. Trucks include a chain to secure the load, a hose hook, and a tool tray. *Style A* has a 3″ high lip; *Style B* has a 4½″ high lip.

(C) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Trucks include a tool tray and a chain to secure the load.

(D) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Truck includes a chain to secure the load and a lockable tool box.

(E) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Truck includes a chain to secure the load, a 62″ long handle with 3″ ID tow ring, and a lockable tool box. Max. tow speed is 5 mph.

(F) Raised containment rings on the load plate and a steel bar on the frame secure the load. Truck has a 61″ long handle with a 3″ ID ring for lifting or for towing up to 5 mph. The tow bar can be secured in the upright position for lifting.

(G) Rear legs with swivel casters provide added stability and better mobility. Legs fold up for compact storage. Quick-tight straps secure the load. *Optional tool tray* is 19⅞″ Lg. × 5″ Wd. × 5″ Ht. *Optional locking posts* fit into slots on the frame of the truck and over the collar of 7″ and 10″ cylinders for additional securement.

(H) Truck is lightweight and resists weather, corrosion, and sparks. Color is black. A chain secures the load.

(J) The trucks include two chains to secure each cylinder, two hose hooks, and a tool tray.

(K) The load plate has a 4¼″ floor clearance for easier moving over obstructions. Includes one chain to secure each cylinder and a removable tool tray.

Steel Six-Cylinder and Eight-Cylinder Trucks

Eight-Cylinder Truck

Wheel multiple cylinders at a time right to where you need them. A chain on each side of the truck secures the cylinders during transport. Trucks have welded construction, an orange enamel finish, and roll on two rigid and two swivel casters with phenolic wheels. Shipped assembled.

Six-cylinder truck has a floor lock to keep the truck stationary during loading and unloading.

Eight-cylinder truck has a 10″ deep fold-down ramp for smooth loading and unloading. The two swivel casters have a side wheel brake.

No. of Cylinders	Max. Cylinder Dia.	Cap., lbs.	Load Plate, Wd. × Dp.	Handle Ht.	Chain Ht.	Wheel Dia.		Each

8	9¼″	1,500	60½″ × 24″	42″	37″	8″	2348T2	745.99

Warning! ***Never exceed capacities.***

Pail Dollies

Take the work out of moving heavy pails—wheel them around on a dolly.

(A&B) Have durable welded 10- and 11-ga. steel construction and an orange enamel finish. Dollies roll on four swivel casters with polypropylene wheels. Shipped assembled.

Style A has a cross-brace deck. *Style B* has a solid deck.

(C) Made of chemical-resistant polypropylene and has a cross-brace deck. It rolls on five twin-wheel, friction-grip stem swivel casters with nylon wheels. The wheels are mounted outside of the deck for added stability. Color is beige. Casters must be installed.

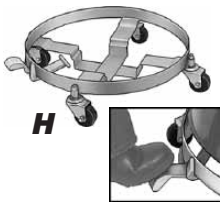
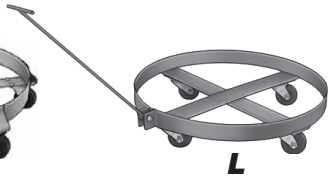
Cross-Brace Deck Drum Dollies



H

J

K



L

M

Make transporting 30-, 55-, and 85-gal. drums less of a chore. All dollies have welded construction and roll on four swivel casters (unless noted).

Casters mounted outside the deck offer increased stability.

(H) A foot-operated tilter locks the drum at a 10° angle for easier emptying. Made of 11-ga. steel with a zinc-plated finish. Casters must be installed (fasteners included).

(J) Made of 10- and 12-ga. steel with a gray powder-coated finish (unless noted). Shipped assembled (unless noted).

(K) Five swivel casters provide maximum stability. Made of 10- and 12-ga. steel and have a gray powder-coated finish. Shipped assembled.

(L) Includes a removable 30″ long T-style handle for pulling. Made of 6-ga. steel with a gray painted finish. Shipped assembled.

(M) *Steel* are 10- and 11-ga. with an orange enamel finish. Shipped assembled.

Type 304 stainless steel have 10-ga. construction and are ideal for harsh environments. Shipped assembled.

Aluminum has lightweight yet strong ¼″ thick construction. Casters must be installed (fasteners included).

Octagonal-Frame Drum Dollies

With Optional Sorbent Sock

Go ahead, give it your heavy loads, this solid-deck dolly can take it. Oversized to handle overpack drums, it has welded steel construction and rolls on four swivel casters. It can accommodate a sorbent sock (sold separately) to soak up spills and leaks. Made of 1/8″ thick steel with a yellow enamel finish. Casters must be installed (fasteners included).

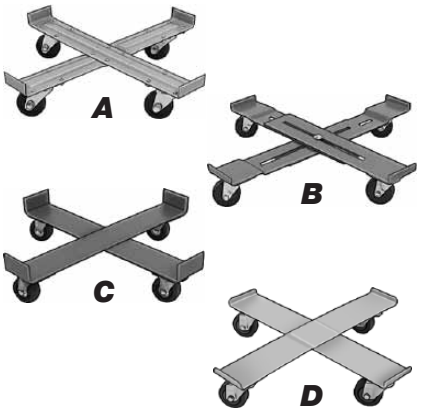
Cross-Brace Deck All-Shape Drum Dollies



Not only do these dollies transport round drums, most are also capable of handling square cartons and crates. Dollies roll on four swivel casters. Shipped assembled.

(A) Made of 13-ga. steel with a gray epoxy finish. Wheels are polypropylene.

(B) Adjust the cross braces to fit your load. Made of 7-ga. steel with an orange enamel finish. Wheels are rubber.

(C) Made of 1/4″ thick steel with a blue painted finish. Wheels are rubber. *Note:* Not recommended for square containers.

(D) Made of 10-ga. Type 304 stainless steel for corrosion resistance. Wheels are rubber.

Square-Frame Drum and Crate Dollies

Open Deck

Solid Deck

A removable T-style handle and a square deck make these dollies easier to push, pull, and steer along walls and aisles. Dollies are capable of handling both round drums and square cartons and crates. Both roll on four swivel casters. Shipped assembled.

Open deck is 6-ga. steel with a gray painted finish and phenolic wheels. Handle is 31″ long. *Note:* Do not use with loads less than 23″ dia. or 23″ square.

Solid deck is 11-ga. steel with a blue polyester coating and a drain plug for spills and leaks. Wheels are polypropylene. Handle is 28″ long.

Max. Drum Size, gal.	Cap., lbs.	Inside Lg. × Wd.	O'all Ht.	Deck Ht.	Lip Ht.	Wheel Dia.		Each
Open Deck								
55	1,120	24″ × 24″	7 5/16″	5 5/16″	2″	4″	9917T92	$161.02

Open-Front Drum Dolly Truck

A winning combination—an open front on the deck makes loading and unloading easier while a lip on the other three sides keeps the load from sliding off. The dolly truck can handle round drums as well as square crates and cartons. It has a removable tubular steel handle for pushing, pulling, and steering. The handle has a cable and hose holder and a 21″ Lg. × 6″ Wd. × 12″ Dp. steel tool box.

The dolly truck is 12-ga. steel with a gray enamel finish and rolls on two rigid and two swivel casters with phenolic wheels. Shipped assembled.

Max. Drum Size, gal.	Cap., lbs.	Inside Lg. × Wd.	O'all Size, Lg. × Wd. × Ht.	Deck Ht.	Lip Ht.	Wheel Dia.		Each
55	2,000	25″ × 25″	33″ × 25″ × 41″	6 1/2″	2″	5″	2367T51	$202.15

Easy-Load Drum Dolly Trucks

Maximize stability and minimize spills. Dolly trucks have a large, open deck that sits low to the ground to slide under drums for better support and minimal tipping. A T-style tubular steel handle pivots out for pulling, locks upright for pushing, and folds in for storage. All have welded 5/16″ thick steel construction, an orange enamel finish, and roll on two axle-mounted front wheels and one center-mounted rear swivel caster. Shipped assembled.

For Drum Size, gal.	Cap., lbs.	Inside Wd. × Dp.	O'all Size, Wd. × Ht.	Deck Ht.	Lip Ht.	Wheel Type	Wheel Dia.		Each

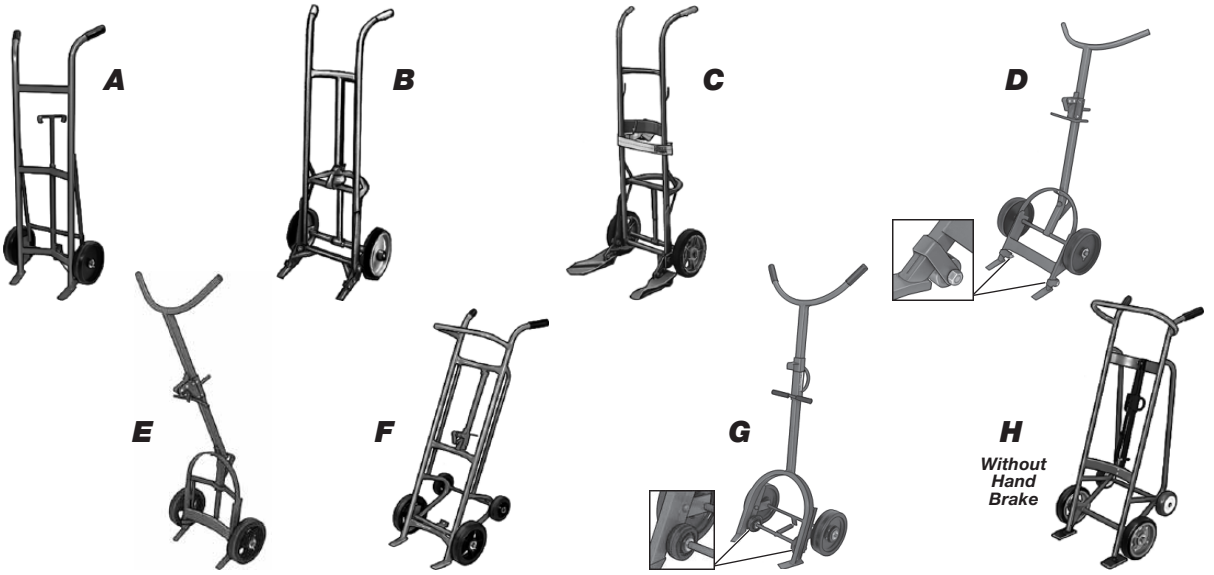
Warning! ***Never exceed capacities.***

Drum Trucks



All have welded construction, axle-mounted wheels, and load wedges that slide under the drum for lifting.

Two-wheel trucks are great for transporting drums over short distances. ***Four-wheel trucks*** offer better load support and take the strain off your arms and back. Ideal for heavier loads, traveling longer distances, and loading and unloading drums from pallets.

Steel trucks handle your most demanding application. ***Aluminum*** trucks are lightweight, easy to move, and spark resistant.

(A) Has a kickstand to keep the truck standing, an adjustable rim catch that clamps to the top of the drum to secure it, dual handles with grips, and an orange enamel finish.

(B) Have an upright design that keeps the trucks standing, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles with grips and an orange enamel finish.

(C) Have an upright design that keeps the trucks standing, a 2″ wide strap with spring-loaded cinching buckle to secure the drum, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. The strap is 27″ high when trucks are in the upright position. Trucks also have dual handles with grips and an orange enamel finish.

(D) A curved frame creates a cradle for the drum and keeps the trucks standing. Rollers on the load wedges make it easy to load and unload drums from pallets. Trucks also have an adjustable rim catch that clamps to the top of the drum to secure it, dual handles, and an orange enamel finish.

(E) Have an upright design that keeps the trucks standing, a curved frame to cradle the drum for balanced loading and unloading, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles and an orange enamel finish.

(F) Trucks are balanced to stay standing and have dual handles with grips as well as a loop handle for better control. They also have an adjustable rim catch that clamps to the top of the drum to secure it and an orange enamel finish.

(G) Have a heavy duty cradle, an upright design that keeps the trucks standing, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles with grips and a red powder-coated finish.

(H) A spring-loaded rim catch automatically clamps to the top lip of the drum as the drum is tilted, eliminating the need for manual attachment and adjustment. Trucks are balanced to stay standing and have dual handles with grips as well as a loop handle for better control. *Steel trucks* have a green enamel finish.

2850T11 and 2850T13 also have a hand brake for more control on ramps and inclines.

Raise-It Drum Trucks

Lift, transport, and place drums without a forklift. A V-style base makes it easy to load and unload drums from pallets and platforms. All trucks are made of steel with an enamel finish.

(A) A U-shaped handle engages a gas spring and ratchet mechanism to lift, hold, and release the drum. The length of the handle provides proper leverage, and the base has built-in counterbalance for stability. Three alloy steel hooks securely hold the drum below the rim. For easy steering, the truck rolls on two front axle-mounted polypropylene wheels and two rear swivel casters with polypropylene wheels. Color is blue. Shipped unassembled.

(B) A hand-operated hydraulic pump lifts and lowers the drum while a claw-style grabber attaches to the rim of the drum for a secure hold. Dual handles provide controlled maneuverability. Truck has two front axle-mounted polypropylene wheels and a rear swivel caster with a phenolic wheel and side wheel brake to keep the truck stationary during lifting and lowering. Color is green. Shipped assembled.

(C) A dual foot-operated hydraulic pump lifts and lowers the drum while a spring-loaded clamp securely grips the rim of the drum. The legs are retractable for easier maneuvering in tight spaces. Truck has two front rigid casters and two rear swivel casters. Wheels are phenolic. A floor lock keeps the truck stationary during lifting and lowering. Color is orange. Shipped assembled.

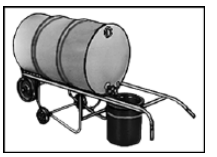
★ Capacity shown is with legs extended. Capacity is 650 lbs. with legs retracted.

Drum Trucks/Dispensing Stands



All-in-one convenience—trucks transport, store, and allow dispensing of drums. All have steel construction.

(D) Trucks have a drum saddle with a chain and ratchet-style tightener to secure the drum. Drums can be lifted 5⅛″ to 11″ from the floor. A handle lock prevents unintentional lowering and a tilt lock keeps the drum vertical. Release the tilt lock for mixing. Trucks roll on two front axle-mounted wheels and one rear swivel caster and have a blue enamel finish. Shipped unassembled.

(E) Trucks have a hook-style grabber that attaches to the rim of the drum for a secure hold, welded steel wedges that slide under the drum for easy loading, and dual handles with grips. When in the dispensing position, rollers on the frame allow you to rotate the drum for mixing. Trucks have an orange enamel finish. Shipped assembled.

(F) Truck has a 2″ wide polyester strap with spring-loaded cinching buckle to secure the drum, extra-wide load wedges for easy loading, dual handles with grips, and a kickstand to keep the truck standing. It rolls on two axle-mounted front and two axle-mounted rear wheels and has an orange enamel finish. Shipped assembled.

(G) Corrosion-resistant Type 304 stainless steel construction makes this truck great for harsh environments and washdown applications. Its unique design allows for easy loading and unloading of drums from pallets. Forged steel load wedges slide under the drum for easy loading and a spring-loaded kickstand keeps the truck standing and adds stability during dispensing. Shipped unassembled.

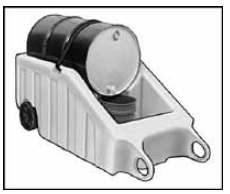
Spill-Containment Drum Trucks/Dispensing Stands



Lightweight yet durable, these corrosion-resistant polyethylene trucks/stands not only transport and dispense your drums, they also contain spills. A U-shaped platform with a recessed step and molded handles makes loading, unloading, and tipping to dispense easier. A 2″ wide nylon strap secures the drum. In the dispensing position, the drum is held at a slight downward angle for better flow. The spill containment reservoir has an 80-gallon capacity and two openings with ¾″ garden hose thread. Trucks/stands roll on two axle-mounted solid wheels and meet EPA 40 CFR 264.175. Shipped assembled.

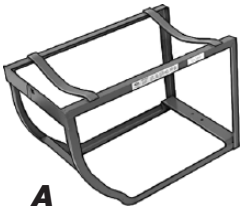
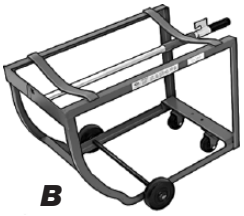
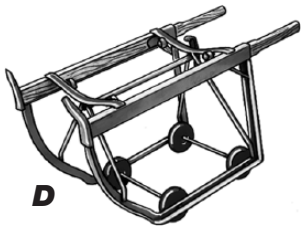
Drum Dispensing Stands



Without Handle



With One Telescoping Handle



Also known as drum cradles, these welded steel stands are an economical way to store, mix, and drain your drums. Shipped assembled.

Stationary stands are ideal for permanent storage. ***Mobile stands*** let you move your drums right to where you need them.

(A) The frame has a skid-resistant surface to prevent sliding when loading. A drum rim catch in the base of the frame secures the drum. Stands have an orange enamel finish.

2301T5 also has a telescoping zinc-plated steel handle that increases leverage when tipping to empty the drum.

(B) The frame has a skid-resistant surface to prevent sliding when loading. A drum rim catch in the base of the frame secures the drum. Stands roll on two front axle-mounted wheels and two rear swivel casters (unless noted) for better steering. All have an orange enamel finish.

Stands with handle also have an additional drum rim catch and a telescoping zinc-plated steel handle that increases leverage when tipping to empty the drum.

(C) Dual telescoping steel handles give you extra leverage and control when tipping to empty the drum. A drum rim catch on each handle secures the drum. Stands have a green powder-coated finish and roll on two front axle-mounted wheels and two rear swivel casters for better steering.

(D) Steel load wedges slide under the drum for easy loading and cross braces with rollers let you rotate the drum for draining and mixing in the horizontal position. Dual oak handles give you extra leverage and control when tipping to empty the drum. A drum rim catch on the frame secures the drum. Stands have an orange enamel finish and roll on two front and two rear axle-mounted wheels.

■ Length is with handles in the retracted position. ● Has two rear axle-mounted wheels and is designed for use with horizontal drum cabinets.

Hydraulic Drum Handlers

Look no further if you need a drum handler that makes it easy for one person to lift, move, and dispense a full drum. Handlers have a hydraulic lift that positions the drum at the required height and a manual dispensing control that tilts the drum at the proper angle for emptying. They can also rotate the drums 360° in either direction. A drum saddle with chain and ratchet-style tightener secures the drum and a floor lock keeps the handlers stationary. All are welded steel with a blue enamel finish and roll on two front axle-mounted polyolefin wheels and two rear swivel casters with polyolefin wheels.

Hand-operated handlers have a single-action, lever-operated hydraulic lift. Shipped unassembled.

Electric handler makes lifting the drum faster and easier. Just push the button to lift and release the button to stop lifting. The hydraulic lift is powered by a 1-hp, 115-VAC, 60-Hz, single-phase, totally enclosed fan cooled (TEFC) motor with an 8-ft. long power cord and three-prong plug. Amp draw is 12.8 at full load. Load will not drop in the event of a power failure. Shipped assembled.

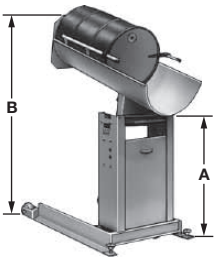
Warning! ***Never exceed capacities. Never use to lift items over people.***

Drum Dumpers, Slings & Lifters

Electric Hydraulic Drum Dumpers



An electric hydraulic lift makes it quicker and easier to lift and empty drums, and a chute controls the flow of the material being dispensed to prevent splashes and spills. A clamp on each side of the chute secures the drum. Dumpers operate on a 3/4-hp, 120V AC, 60-Hz, single-phase, totally enclosed nonventilated (TENV) motor and have a three-prong NEMA 5-15 plug socket (cord not included; see page 829). Amp draw is 12 at full load. All have a handheld pendant switch with an 8-ft. long coil cord and operate only when the push-buttons are engaged. A limit switch turns off the motor when the drum reaches the maximum height. Load will not drop in the event of a power failure.

Dumpers are steel with a blue enamel finish, and roll on two front axle-mounted phenolic wheels and two rear swivel casters with phenolic wheels. Screw-down floor locks keep dumpers stationary during operation. Shipped assembled.

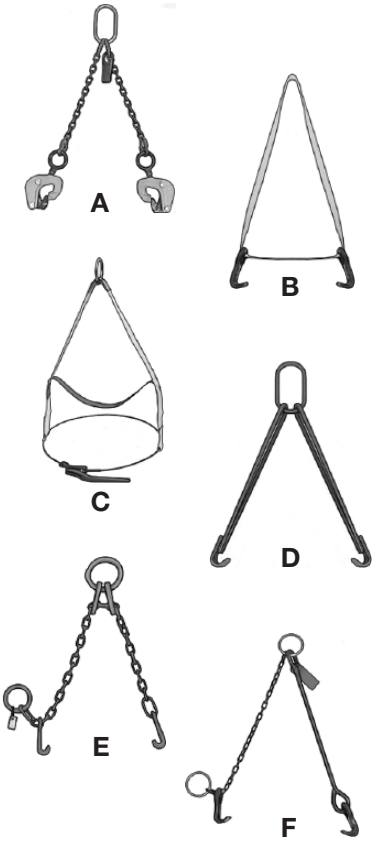
Drum Slings



Pair up these slings with overhead lifting equipment for an efficient way to pick, lift, stack, and place steel drums.

Sling **with clamps** keeps a grip on the rim of the drum even when not under load.

Slings **with hooks** grip the rim of the drum as the sling is lifted.

Sling **with wire rope** is tightened and locked around the body of the drum with a load binder.

Style A sling is made of 9/32 steel chain with one lifting eye.

Style B slings are made of one-ply, 1″ wide, yellow nylon webbing with two steel hooks.

Style C sling is made of one-ply, 2″ wide, yellow polyester webbing with one lifting eye. A 1/4″ dia., 7 × 19 galvanized steel wire rope secures the drum.

Style D slings have rigid bar legs with a steel hook at each end and one lifting eye. 3401T1 has 5/8″ dia. steel legs. 3401T6 is made of spark-resistant components. It has 1/2″ dia. 304 stainless steel legs with aluminum-bronze hooks. 3401T7 has 1/2″ dia. steel legs.

Style E sling is made of 5/16 steel chain with a steel hook at each end and two lifting eyes; use the center eye for horizontal lifts and the other eye for near vertical lifts. It has two fittings on the center eye that allow you to adjust the length of the sling legs.

Style F sling has one flexible 3/16 Grade 80 steel chain leg with a hook, one rigid 5/8″ dia. steel leg with a hook, and two round lifting eyes. Use the center eye for horizontal lifts and the other eye for near vertical lifts.

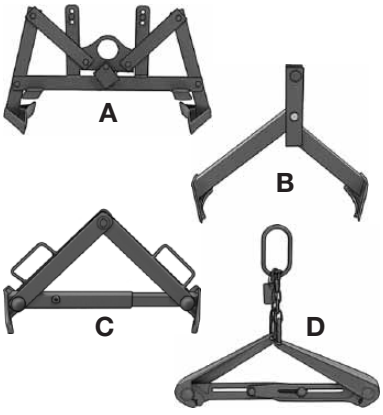
★ First dia. is the center lifting eye; second dia. is the eye for near vertical lifts.

Drum Lifters



Use with overhead lifting equipment on closed-head drums and open-head drums with lids securely in place. Lifters grip as they pick up the drum.

Style A lifter has pads to grip with equal pressure on both sides for a secure, even lift. Has a lifting eye and a blue enamel finish.

Style B lifter has pads to grip with equal pressure on both sides for a secure, even lift and requires a manual release. Has a bolt for attaching your lifting device and an orange enamel finish.

Style C lifter has guide handles to give you ultimate drum control and pads to grip with equal pressure on both sides for a secure, even lift. Has a bolt for attaching your lifting device and a blue enamel finish.

Style D lifters have clamps with high-strength jaws that get a vise-like grip on drum rims up to 1″ deep without damaging them. The gripping action is unaffected by greasy and oily surfaces. Clamps have a dual-lever design and are connected by chain with a lifting eye. Have a gray finish.

For Drum Sizes gal.	Dia.	Cap., lbs.	For Drum Material	Lifting Eye/Bolt Opening

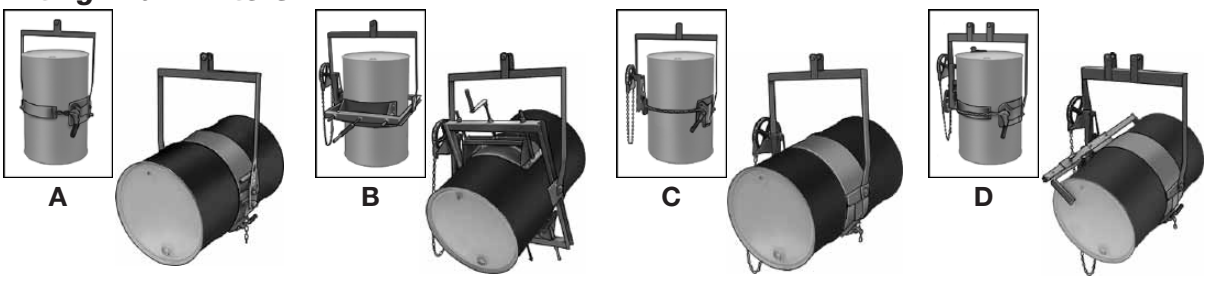
Warning: Never use to lift people or items over people.

Tilting Drum Lifters



Raise, transport, tilt, and drain full drums using the hook of a crane or hoist. A lock on each side of the frame keeps the drum vertical or horizontal during transport. Lifters have a chain with ratchet tightener to secure the drum, unless noted. Made of steel with a blue enamel finish.

Chain hand wheel lifters have a chain with a 6-ft. operating length.

Optional **tilt brake** holds your drum in place if chain is released.

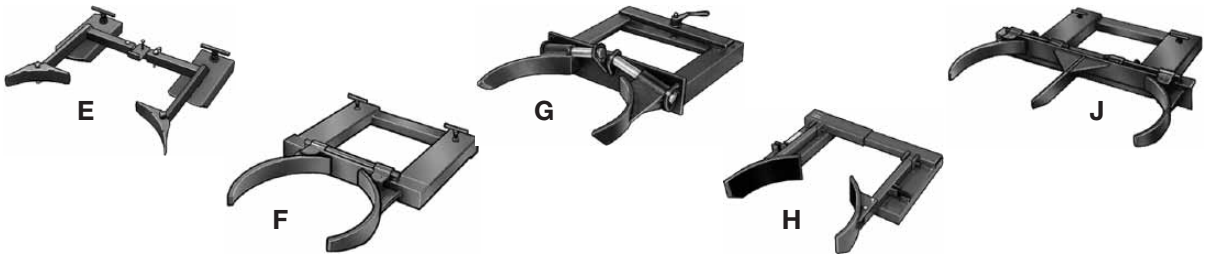
Optional Tilt Brake						3669T15	$227.50

▲ In half-full drums, contents shift, which reduces capacity.
■ Pads with adjustment screws secure the drum.

Fork-Mount Side-Grip Drum Movers



Their gripping arms automatically close and lock around the drum when lifting and release when drum is set down. Locking screws clamp down on the forks to secure the movers to your forklift. All are made of steel and shipped assembled (unless noted).

(E) For proper operation, this mover can only be used with drums with a 3/16″ minimum rim depth. Shipped unassembled.

(H) Gripping arms are rubber lined for a nonslip contact surface.

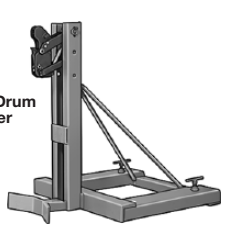
♣ Capacity is for two drums.

Fork-Mount Top-Grip Drum Movers

No more hassles when moving drums in areas with little or no side clearance. Made of welded steel, movers have locking screws that clamp down on the forks to secure the movers to your forklift. The jaws automatically grip the top of the drum when lifting and release when the drum is set down. Use with closed- and open-head drums.

Optional drum protector is made of 3″ wide flexible PVC and bolts to the base of the mover to cushion and protect the drum from wear (mounting hardware included).

Note: Two-drum mover requires two protectors.



For Drum Sizes gal.	Dia.	Cap. per Drum, lbs.	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.	Single Drum		Two Drum

♠ Fork pockets are 5½″ Wd. × 2″ Ht. and 22″ center-to-center.

Warning: Never use to lift people or items over people.

Fork-Mount Pivoting Drum Handlers

Handlers mount to the forks on your forklift for lifting and transport, plus they pivot for manual tilting so dispensing is easier. The band clamps around the drum and is secured with a latch. The fork pockets pivot for manual tilting. Made of steel.

For Drum Sizes gal.	Dia.	Cap., lbs.	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.		Each
30	18″-18½″	1,000	Ribbed Steel	5″ × 3″	26″	3419T32	$72.89
55	22″-22½″	1,000	Ribbed Steel	5″ × 3″	30″	3419T21	74.38

Fork-Mount Hand-Chain Dispense Drum Handlers

Slide handlers onto the forks on your forklift and raise, tilt, and drain drums without leaving your seat. A geared mechanism operated by a hand chain lets you tilt and drain. Hand chain has a 10-ft. operating length. Handlers also allow 360° rotation in either direction. A chain with ratchet-style tightener secures the drum (unless noted). All are made of steel.

Optional tilt brake holds your drum in place if chain is released. Can be used with all handlers except Style A with a full-drum capacity of 2,000 lbs.

	For Drum Sizes gal.	Dia.	Cap., lbs. Full Drum	Half-Full Drum ♦	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.		Each

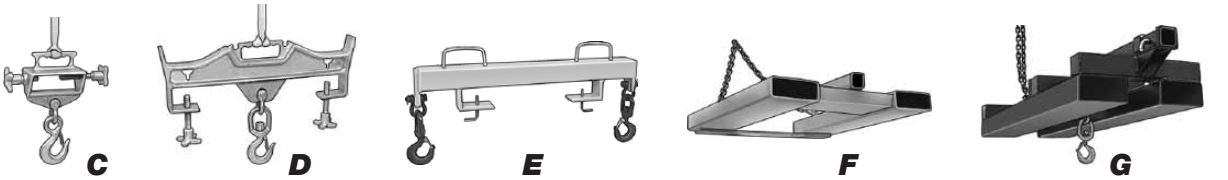
Optional 30-Gallon (18½″-19″ Dia.) Drum Adapter — 3407T52 Each $150.51
Optional Tilt Brake — 3669T15 Each $227.50

♦ In half-full drums contents shift, which reduces cap. ★ Has two chains with ratchet-style tighteners.

Fork-Mount Lifting and Towing Adapters



Convert your forklift into lifting or towing equipment. All adapters are made of steel and all lifting hooks have a latch.

(C) Single-fork hook lifting adapters have T-style locking thumb screws and a web strap to secure adapters to one fork and the forklift. Hook is zinc plated.

(D) Dual-fork hook lifting adapters same as *Style C* but have a swivel hook and attach to both forks.

(E) Spreader beam lifting adapters have two hooks to lift loads and L-shaped fork brackets that accommodate forks of any width. Inside height of fork brackets is 2½″. T-style thumb screws secure adapters to forks. Have a yellow enamel finish.

(F) Towing adapter has a drawbar receiver welded between the fork pockets. A chain with a grab hook and a connecting pin secures adapter to the forks. Has a yellow enamel finish. For couplers and inserts, please see pages 1345-1346.

(G) Combination lifting/towing adapter has a hook for vertical lifting and a receiver welded between the fork pockets that accepts a hitch receiver for towing applications. A chain and hook secure adapter to the forks. Has a black enamel finish. Please see page 1346 for inserts.

Fork Extensions

Add length to the forks for extra support of long and large loads. All are 5/16″ thick welded steel with cast steel tips and a yellow powder-coated finish. Steel loops secure them to the forks. OSHA standards require that length of extensions is 150% or less of the supporting fork length. *Note:* Extensions reduce the capacity of your forklift. Please refer to your forklift manufacturer for load capacity reductions.

Fork Bumpers

Protect your load from dents without reducing load capacity. These bumpers include black powder-coated steel brackets and red polyurethane inserts. Brackets are adhesive-backed for permanent mounting to fork uprights. Inserts slide into the brackets and provide excellent wear resistance and vibration damping. Simply replace inserts when worn.

Fits Fork Wd.	O'all Size, Wd. × Ht. × Dp.	Bumpers	Per Pair	Repl. Inserts	Per Pair
4″-5″	4″ × 24″ × 1½″	1110T1	$292.42	1110T6	$157.67
6″-8″	6″ × 24″ × 1½″	1110T3	385.00	1110T8	209.97

Warning! ***Never exceed capacities. Never use to lift items over people.***

Forklift Booms

Handle long, cumbersome loads without special equipment. All booms are made of steel with a yellow painted finish, have two forged steel swivel hooks with latch, and are labeled with capacity for each hook position. They secure to the forklift with a chain and grab hook. Fork pockets are 2½″ Ht.×7½″ Wd. × 30″ Dp. (unless noted). *Note:* Capacities are approximate and depend on the type and load capabilities of the forklift used. Check with the manufacturer of your forklift for load capabilities before using.

(A) Horizontal fixed-length boom is 8 ft. long with five hook positions spaced 12″ apart. First position is located 4 ft. from the fork pocket end.

(B) Horizontal telescoping booms adjust from 7 ft. to 12 ft. long in 12″ increments. One hook is mounted at the end of the boom. The other hook has four positions spaced 12″ apart. The first position is located 3 ft. from the fork pocket end.

(C) Vertically adjustable telescoping booms are the same as Style B, plus they have five vertical height adjustments in increments of approximately 15″ with a maximum height of 6′4″.

(D) High-reach telescoping boom is designed for tall loads where more bottom clearance is needed. Length adjusts from 4 ft. to 6 ft. in 12″ increments. Has three hook positions on the adjustable length spaced 12″ apart. The fixed section has three hook positions spaced 6″ apart. The first hook position is 4 ft. from the fork pocket end.

★ Fork pockets are 2½″ Ht.×5½″ Wd.×24″ Dp.

Pallet Pullers

Position heavily-loaded pallets for easy forklift access. All pullers are made of steel with a powder-coated finish (unless noted). The jaws have gripping teeth. Rated capacity is based on moving pallets over smooth surfaces. *Note:* Do not use pullers for lifting.

(E) Single-scissor puller provides a wide jaw opening. A pull chain closes the jaws. Color is black.

(F) Double-scissor puller provides greater gripping force compared to a single-scissor puller. A pull chain closes the jaws. Color is yellow.

(G) Cam-action puller has low-profile jaws for maximum gripping strength. A welded handle allows easy positioning and removal. A pull chain closes the jaws.

Optional pull chain with grab hooks connects the puller's chain to a forklift. Pull chain is 20-ft. long.

Pallet Truck Replacement Parts

Reduce downtime—we offer the most common replacement parts for the most popular pallet trucks.

Wheel kits include two load wheels and two steer wheels with all necessary bearings, axles, and hardware.

Seal kits include all U-cups, scrapers, seals, washers, and O-rings needed to maintain smooth operation.

Also Available: Other replacement parts. Please ask for 2641T999 and specify truck manufacturer, model number, and part required.

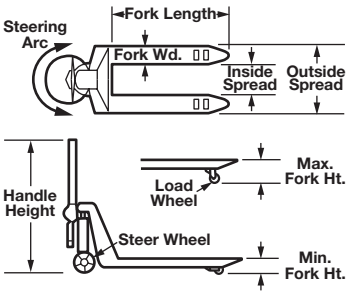
Pallet Trucks

A



Before selecting a pallet truck, determine the weight of your load as well as the size and style of your pallets. The most commonly used pallets measure 48″ Lg. × 40″ Wd.

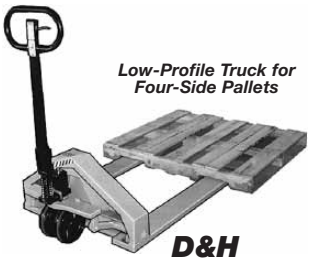
For pallets 26″ to 32″ wide, use a pallet truck with an outside fork spread of 20½″.

For pallets 33″ to 40″ wide, use a pallet truck with an outside fork spread of 27″.

For pallets 41″ to 48″ wide, use a pallet truck with an outside fork spread of 33″.

B&C

All trucks have a hydraulic pump, welded-steel frame, and forks with cutouts for the load wheels. The handle has a three-position hand control (raise, lower, and neutral). A relief valve prevents pressure build-up to provide overload protection.



Low-Profile Truck for Four-Side Pallets

D&H

(A-G) Trucks for Two-Side Pallets

Two-side pallets allow fork entry at each width end.

(A) Standard trucks have tapered forks with entry and exit rollers. Steer and load wheels are polyurethane. Trucks have a gray and blue powder-coated finish.

(B) Premium trucks combine a high-performance pump and a reinforced frame for dependability and long service life. All have rounded forks with entry glides and exit rollers. Steer and load wheels are nylon (unless noted). Trucks have a yellow and black powder-coated finish.

(C) Heavy duty truck is for high-capacity applications. It has rounded forks with entry glides and exit rollers. Steer and load wheels are steel. Truck has a yellow and black powder-coated finish.

(D) Low-profile trucks have a lower fork height. All have rounded forks with entry glides and exit rollers. Steer wheels are nylon; load wheels are steel. Trucks have a yellow and black powder-coated finish.

(E) Easy-start truck gets your load moving with minimal effort. As you pump the handle the steer wheels start rotating and accelerate the truck. A hand grip directs the acceleration so the truck starts easily whether you are pushing or pulling. Truck also has precision steering and rounded forks with entry and exit rollers. Steer and load wheels are polyurethane. Truck has a yellow and black powder-coated finish.

(F) Corrosion-resistant truck has a galvanized frame, stainless steel components, and a specially-designed pump that stands up to harsh environments. It has rounded forks with entry glides and exit rollers. Steer and load wheels are nylon.

(G) Type 304 stainless steel truck offers maximum corrosion resistance for the most demanding environments. Truck has rounded forks with entry and exit rollers and a polished finish. Steer and load wheels are nylon.

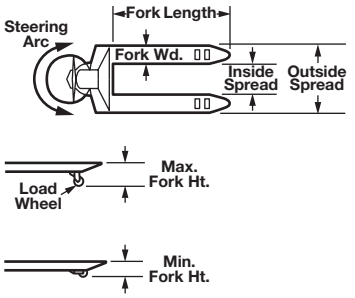
Battery-Powered Pallet Trucks

No more struggling to move a load—this truck requires only minimal effort to start and stop, which makes it more ergonomic and efficient than manual pallet trucks. Truck is for use with 30″ to 40″ wide pallets, on inclines or declines up to 10°.

A hydraulic pump raises and lowers the rounded forks at the touch of a button while a variable-speed throttle controls forward and reverse speed. An automatic brake stops the truck when the handle is released. Truck also has a safety button that automatically reverses the direction of travel if the truck comes in contact with the operator.

Truck includes 24 VDC batteries, a charger, and a 6-ft. cord with a three-prong plug. Operates for eight hours on a full charge when used intermittently. A discharge indicator lets you know when batteries need charging.

Truck is steel with a red plastic cover. Steer and load wheels are polyurethane.



Before selecting a pallet truck, determine the weight of your load as well as the size and style of your pallets. The most commonly used pallets measure 48″ Lg. × 40″ Wd.

Cap., lbs.	Fork Size, Lg. × Wd.	Fork Spread Outside	Fork Spread Inside	Fork Ht. Min.	Fork Ht. Max.	O'all Lg.	Handle Ht.	Steering Arc	Wheel Dia.	No. of Batteries		Each

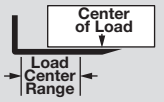
About Load Center

Load center is measured horizontally from the back of forks or a platform. To help ensure safe and balanced lifting, the center of a balanced load should not be positioned past the load center. Also, the overall length of a balanced load should never be more than twice the load center.



Improperly Balanced Load

Load-Positioning Lift Trucks

The load-moving benefit of a pallet truck combined with the load-positioning capabilities of a lift truck. Trucks are made of steel and have polyurethane steer and load wheels. A relief valve prevents pressure build-up to provide overload protection.

Note: Use with open-bottom pallets only.

Foot-operated trucks have a single-speed hydraulic pump that raises the load 13/16″ per stroke and a lever to control lowering the forks. The steer wheels swivel for better maneuverability; one has a face wheel brake to prevent movement when using the truck as a lift table. Trucks have a black and blue enamel finish.

Hand-operated trucks have a lever on the handle to raise and lower the forks. A two-speed hydraulic pump raises the load 3/8″ per stroke. Trucks are yellow with a black handle. All have a powder-coated finish.

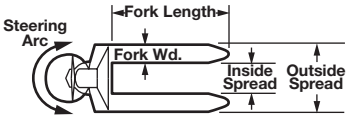
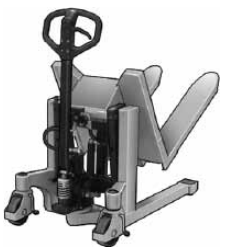
Lift-and-Tilt Lift Truck

Look no further if you need a truck that not only moves your load, but will also lift and tilt your pallets and containers for better load positioning.

This steel truck has two hand-operated levers; one to raise and lower the forks and one to tilt the forks. The dual-position hydraulic pump raises the load 7/16″ per stroke as well as tilts the forks up to 90°. Truck has a yellow and black powder-coated finish. Steer and load wheels are polyurethane.

Note: Use with open-bottom pallets only.





Cap., lbs.	Fork Size, Lg. × Wd.	Fork Spread Outside	Fork Spread Inside	Fork Ht. Horizontal Min.	Fork Ht. Horizontal Max.	Fork Ht. Vertical Min.	Fork Ht. Vertical Max.	Load Center Min. Foot-Operated Lift Trucks

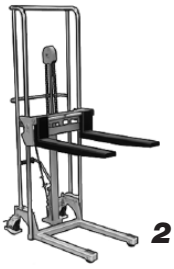
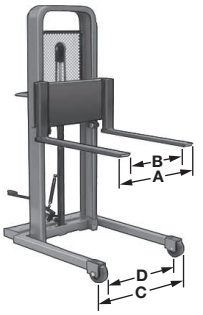
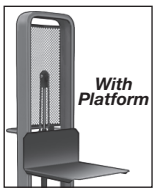
1&4



2





3&5

6

A foot-operated lever and a single-speed hydraulic pump allow you to raise and lower the forks or platform with less effort. Trucks are made of steel and roll on polyurethane wheels (unless noted).

(1&2) Trucks with Adjustable-Width Forks—*Style 1* raises the load 3/4″ per stroke. Base has two rear rubber-tread wheels and two front swivel casters. A foot-operated wheel lock on the rear wheels keeps the truck stationary. *Style 2* raises the load 1″ per stroke. Base has two rear swivel casters with a face wheel brake and two front wheels.

(3) Trucks with Adjustable-Width Forks and Straddle Base— Have a greater distance between the base legs for easier access to loads on pallets. They raise the load 1 1/8″ per stroke. Base has two rear swivel casters and two front wheels. Wheels are phenolic. A floor lock keeps trucks stationary.

(4&5) Trucks with Platform—*Style 4* is the same as *Style 1*, but has a platform with 6″ high backplate in place of the forks. *Style 5* are the same as *Style 3*, but have a platform with 11 1/4″ high backplate in place of the forks. Wheels are phenolic.

(6) Truck with Platform and Hand-Truck Base— Picks up, moves, and positions loads like a conventional hand truck. It raises the load 3/4″ per stroke. Rolls on two rear rubber-tread wheels and has a tapered platform with 6″ high backplate. A foot-operated wheel lock keeps it stationary.

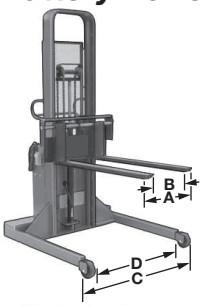
Battery-Powered Lift Trucks



7

8

9

The hydraulic pump raises and lowers the forks or platform 5″ per second when fully loaded. The pump is powered by a sealed, maintenance-free, rechargeable 12 VDC battery. The built-in charger has an LED charge indicator and a 6-ft. long power cord with three-prong plug. It fully charges the battery in 5-10 hours. The push-button control has a self-retracting cord. Retracted length is 26 1/2″; extended length is 7 ft. Trucks are steel and have phenolic wheels (unless noted). A floor lock keeps the trucks stationary. Meet ASME B56.10.

(7) Trucks with adjustable-width forks and straddle base have a greater distance between the base legs for easier access to loads on pallets. The base has two rear swivel casters with polyurethane wheels and two front polyurethane wheels.

2814T13 also has adjustable-width base legs and a telescoping mast. Overall height with mast fully extended is 12′7″.

(8) Trucks with adjustable-width forks and counterweight base have short legs on the base for closer access to the load. The base has two rear swivel casters and two front wheels. A counterweight set (sold separately) is required.

(9) Trucks with platform have a narrow width to fit in tight spaces. The base has two rear swivel casters and two front wheels.

2

3

4

5

Turn the winch handle to raise and lower the forks or platform approximately 1″ per handle rotation. A brake keeps the load in place.

(1&2) Trucks with reversible forks allow you to invert the forks and gain additional lifting height. The base has two rear thermoplastic rubber (TPR) wheels and two front dual-wheel swivel casters with rubber-tread wheels. Trucks are steel and aluminum.

Style 2 also have adjustable-width base legs to better straddle pallets and other items for easier access to the load.

(3) Trucks with reversible forks and counterweight base have shorter base legs for closer access to the load. Forks can be inverted for additional lifting height. Base has two rear swivel casters with polyurethane wheels and a side wheel brake and two front polyurethane wheels. Made of steel and aluminum.

(4) Truck with platform has two rear swivel casters with phenolic wheels and two front phenolic wheels. A floor lock keeps the truck stationary and a safety catch holds the platform in place if the winch fails. Made of steel.

(5) Truck with low-profile platform allows you to get your load on the platform with minimal manual lifting. The platform has a 2″ high lip on two sides to keep the load from sliding off. The base has two rear rubber-tread wheels and two front cast iron wheels. Made of steel.

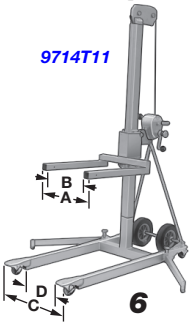
Winch-Operated Mast-Style Lift Trucks



6

7

8

9

Choose from masts with multiple sections and masts that telescope to reach the desired height. Turn the winch handle to raise and lower the forks. A brake holds the load in place.

(6) Trucks with Sectional Mast and Outriggers— Have a single-speed winch with dual handles to move the load 1⅜″ per handle rotation. Rear folding outriggers with leveling feet and four swivel casters with rubber wheels and a side wheel brake provide added stability. Trucks are steel. UL listed.

9714T11 has two extra mast sections. The base also has two rear never-go-flat (semipneumatic) wheels for easier transport over uneven surfaces. Overall width with outriggers is 6′9″. 9714T12 has three extra mast sections. Base also has front outriggers. Overall width with outriggers is 6 feet.

(7-9) Trucks with Telescoping Mast— Roll through doorways in the upright position. A standard winch moves the load 1⅜″ per handle rotation. The base has four swivel casters with polyurethane wheels. Rear casters have a side wheel brake and swivel lock. Mast is aluminum; base is steel.

Style 8 also has rear outriggers with four swivel casters with polyurethane wheels for added stability. Overall width with outriggers is 6′4½″.

Style 9 also have adjustable-width base legs to better straddle pallets and other items for easier access to the load.

Foot-Operated Mobile Lift Tables

A

Move these tables where you need them, then adjust your work to a comfortable height. They have a foot lever and hydraulic pump to raise loads. They have two rigid and two swivel casters, unless noted. All tables are steel.

(A) Scissor-Style Lift Tables

Tables have a hand-operated lever for controlled lowering. Casters have rubber wheels, unless noted. A floor lock keeps the table stationary, unless noted.

330-lb. capacity table has a relief valve that prevents pressure build-up and provides overload protection. One swivel caster has a brake.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation per Stroke	Handle Height	Tabletop Gauge	Wheel Dia.		
330	27½″	18″	8½″-28½″	1¼″	31½″	14	4″	5014T15★	$715.67

Warning: *Do not move while under load. Never use to lift people.*

Hand-Crank Mobile Lift Tables

Use the hand crank to adjust your work to a comfortable height. The handle is removable and can be operated from either side of the table. It has two speeds for fast and slow adjustment. Tables are steel and have two rigid and two swivel casters. A floor lock keeps the table stationary. Meet ANSI MH 29.1.

Plastic wheels are smooth rolling and nonmarking. **Cast iron wheels** combine strength and durability with abrasion and heat resistance.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation per Stroke	Tabletop Gauge	Wheel Dia.	With Plastic Wheels		With Cast Iron Wheels	
2,000	36″	24″	24″-42″	1/8″/1/4″	7	5″	2847T2	$1,081.34	2847T1	$1,193.18

Foot-Operated Stationary Lift Tables

Lift Table Skirt

Make repetitive lifting and positioning less of a chore. These tables have a foot lever and hydraulic pump to raise the load. A hand knob provides controlled lowering. All have a compact design, so they fit in confined spaces. Made of steel. Meet ANSI MH 29.1.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. They are vinyl and bolt directly to the table frame. Mounting fasteners are included. Color is blue and yellow.

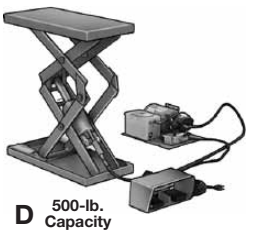
C



D 500-lb. Capacity

E With Optional Loading Ramp

F 3,500-lb. Capacity

An electric motor and a hydraulic pump perform repetitive lifting and positioning with the push of a button. Tables are steel. Meet ANSI MH 29.1.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. Styles A&B and 3740T72 are blue and yellow vinyl. Mounting fasteners are included. Styles C&D and 3740T56 are black and yellow plastic.

(A) Standard Lift Tables with External Motor

Tables have a 120V AC, 60 Hz, single-phase, 8.4-amp motor with an 8-ft. long power cord and three-prong plug, unless noted. They have a NEMA 1 rated hand-operated push-button control with a 10-ft. long cord, unless noted.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Tabletop Gauge	Lift Tables		Lift Table Skirts

★ Has an internal 10.8-amp motor and a NEMA 12 rated hand-operated push-button control.

(B) Standard Lift Tables with Internal Motor

Tables have an internal motor with an 8-ft. long power cord and three-prong plug, except 480V AC tables do not include a plug.

To Order: Please specify hand or foot-operated push-button control. Tables *with hand-operated push-button control* have a NEMA 4 rated control with 10-ft. long cord. Tables *with foot-operated push-button control* have a NEMA 1 rated control with 10-ft. long cord.

(C) Long-Tabletop Lift Tables

An extra-large tabletop provides plenty of room for oversized loads. Tables have a 120V AC, 60 Hz, single-phase, 8.4-amp internal motor with a 10-ft. long power cord and three-prong plug. They have a NEMA 1 rated foot-operated push-button control with a 10-ft. long cord.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Tabletop Gauge	Lift Tables		Lift Table Skirts	
2,000	96″	48″	6½″-42½″	¾	12	7	2874T67	$5,002.67	3740T65	$1,071.27
6,000	96″	48″	8″-44″	½	12	7	2874T68	11,477.33	3740T66	1,071.27

(D) Lift Tables for Tight Spaces

These tables are compact, yet provide the lifting capacity of standard lift tables. They have a 120V AC, 60 Hz, single-phase, 8.4-amp motor with a 10-ft. long power cord and three-prong plug. They have a NEMA 1 rated foot-operated push-button control with a 10-ft. long cord.

500-lb. capacity table has an external motor; **2,000-lb. capacity** table has an internal motor.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Tabletop Gauge	Lift Tables		Lift Table Skirts	
500	25″	12″	5″-30″	1¾	12	7	2846T11	$3,429.33	3740T41	$476.00
2,000	42″	18″	6″-42″	1	12	7	2846T12	4,165.33	3740T47	657.20

(E) Floor-Load Lift Tables

The tabletop can go as low as 3″, making loading and unloading from the floor and pallets easier. A toe guard at the base of the table provides safety for the operator. Tables have a 120V AC, 60 Hz, single-phase, 8.4-amp external motor with an 8-ft. long power cord and three-prong plug. They have a NEMA 4 rated hand-operated push-button control and 6-ft. long hydraulic hose.

Cap., lbs.	Lg.	Wd.	Ht.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Tabletop Gauge	Lift Tables	
550	40″	23½″	3″-29½″	2½	9	10	2295T42	$2,762.46
1,100	40″	23½″	3″-30″	1¼	9	10	2295T43	3,261.19
Optional 23″ Long Loading Ramp							2295T52	$347.43

(F) Turntable-Top Lift Tables

The turntable rotates to reduce reaching. Tables have a 120V AC, 60 Hz, single-phase, internal motor with a 10-ft. long power cord and three-prong plug. They have a NEMA 1 rated foot-operated push-button control with a 10-ft. long cord.

2,000- and **3,000-lb. capacity** tables are round and have a 14.5-amp motor. **3,500-lb. capacity** table is square with a 43″ dia. turntable. It has a 17-amp motor.

Cap., lbs.	Tabletop Size	Ht.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Tabletop Gauge	Lift Tables		Lift Table Skirts	
2,000	43″ Dia.	11½″-41½″	1¼	9	11	2901T43	$2,920.29	3740T72	$826.57
3,000	43″ Dia.	12″-45½″	1¼	9	11	2901T44	3,463.77	3740T72	826.57
3,500	48″ Sq.	8″-43½″	¾	20	7	2901T15	5,044.50	3740T56	752.00

Warning: Never use to lift people.

Stationary Air-Lift Tables

No hydraulics, motors, or pumps to maintain and no electrical connection required. These tables connect to your compressed air system. Durable air bags provide consistent and smooth lifting. A relief valve prevents pressure build-up to provide overload protection. Tables are steel and operate on 15 cfm at 80 psi.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. They are black and yellow plastic.

Lift Table Skirt

Air-Lift Table

Air-Lift Tables

Tables come ready to operate. They have a hand-operated push-button control to raise and lower the load.

Cap., lbs.	Lg.	Wd.	Ht.	Tabletop Gauge	Air Inlet, NPT female	Lift Tables		Lift Table Skirts	
2,000	48″	48″	8″-32″	3	1/4	99295T11	$2,825.45	3740T51	$742.20
4,000	48″	48″	8″-32″	3	1/4	99295T13	3,493.64	3740T51	742.20

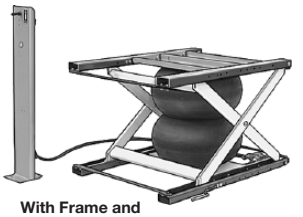
Design-Your-Own Air-Lift Tables

Choose your table based on capacity, then choose the type of control and top that best suit your application.

Controls include a 12-ft. long air hose.

Tabletop is 36″ Lg. × 48″ Wd. × 1/4″ Thick.

The **turntable top** rotates to allow easy access to the load during loading and unloading. Made of steel, it measures 36″ Lg. × 48″ Ht. × 1/2″ Thick.



With Frame and Hand-Operated Push-Button Control

Cap., lbs.	Frame Size Lg.	Wd.	Ht.	Frame Gauge	Air Inlet, NPT female	Lift Tables		Lift Table Skirts	
1,000	35 1/2″	47″	7″-32″	3	1/2	9409T1	$2,297.06	9409T9	$523.68

Foot-Operated Push-Button Control	9409T6	378.46	Turntable Top	9409T4	1,332.35

Pallet Stands and Turntables—*Not for Lifting*

Adjustable pallet stand holds pallets at one of three fixed heights. Height is manually adjustable from the fold storage height of 8 3/4″ up to 24″, 30 1/2″, and 34″. Stand is steel and 40″ Lg. × 40″ Wd. Capacity is 4,000 lbs. Use an optional turntable to rotate your load.

23835T9 ..... $634.02

Pallet Stand

Open-ring turntables are steel and have evenly spaced roller bearings so the ring turns smoothly. They are 2″ Ht. × 40″ Dia. Use on floors, work benches, and lift tables as well as the pallet stand listed above.

Cap., lbs.		
2,000	8771T42	$372.53
4,000	8771T44	436.84
6,000	8771T46▲	493.37

▲ Do not exceed stand capacity.

Open-Ring Turntable

Low-profile turntable is designed for floor use. It has a tapered ramp around the perimeter for easy 360° loading and unloading with pallet and lift trucks. Made of steel. Turntable is 7/8″ Ht. × 43 3/8″ Dia. Capacity is 4,000 lbs.

2695T2 ..... $989.09

Low-Profile Turntable

Spring-Actuated Auto-Leveling Pallet Stands—*Not for Lifting*

Use one to three springs (included) to automatically maintain a convenient ergonomic working height based on the load. A built-in damper provides smooth and gradual raising and lowering without bounce. The turntable rotates 360° to reduce reaching. The stand must be loaded to at least the minimum capacity for auto-leveling to engage. Stand is steel. The base is 36 1/4″ Lg. × 36 5/8″ Wd. and can be moved with a forklift.

Cap., lbs.	Ht.	Turntable Dia.		
400-4,500	9 1/2″-27 1/2″	43 5/8″	2914T11	$1,795.00

Air-Actuated Auto-Leveling Pallet Stands—*Not for Lifting*

This stand keeps the top of your load at a convenient height; an air cylinder automatically returns the stand to your set height as you add or remove parts of your load. The turntable rotates 360° to reduce reaching. A maximum of 60 psi of air is needed for setup but not for operation. Adjust height before adding pallets. A three-position knob allows capacity adjustments while a relief valve prevents pressure build-up to provide overload protection. The stand must be loaded to at least the minimum capacity for auto-leveling to engage.

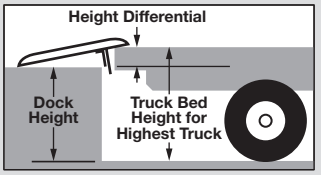
Stands are steel. The base is 49″ Lg. × 24 3/8″ Wd. and can be moved with a forklift. Inlet is 1/4 NPT female. Meet ANSI MH 29.1.

Cap., lbs.	Ht.	Turntable Dia.		
250-4,000	10 1/2″-30 1/2″	43″	2883T7	$2,555.69

Warning: *Never use to lift people.*

Dock Levelers, Dockboards & Dock Plates

About Dock Levelers, Dockboards, and Dock Plates



Use dock levelers, dockboards, and dock plates to bridge gaps between loading docks and trucks that are loading and unloading cargo. There are three factors to consider when making your selection:

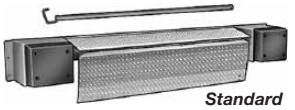
Height Differential— The difference between the height of your loading dock and the height of your truck bed. The larger the height differential, the longer your dockboard or dock plate should be.

To calculate height differential, subtract the height of your dock from the height of the truck bed (typically 55″ for most semi-trailers and 59″ for refrigerated trailers and container trailers).

Width— Your leveler, dockboard, or dock plate should be 12″ to 18″ wider than your forklift or pallets (whichever is wider). Wider dockboards and dock plates also offer greater maneuverability when placing material inside the trailer.

Capacity— The weight of the load plus the weight of your loading equipment (hand truck, forklift, lift truck, etc.). Load capacities shown are for a single-shift operation. For multiple shifts, choose a board with a capacity 5,000 lbs. higher than your actual expected loads.

Dock Levelers



Standard

Permanently attach levelers to bridge the gap between the edge of your dock and the truck you're loading or unloading. For use with a forklift, pallet, or hand truck.

Each leveler has a steel deck plate; a hinged, steel lip plate; and two 13″ Lg. × 12″ Wd. × 4″ Thick. rubber bumpers that are attached to steel bumper blocks. Dual extension springs act as a counterbalance to aid the leveler as it mechanically lifts the lip plate onto the truck bed; the springs return the lip plate to its original position when the truck pulls away. The deck plate and lip plate have a diamond-pattern tread for positive traction.

Weld levelers to a dock face with a min. 8″ wide steel channel embedded into concrete at the dock edge. If the dock edge does not have an 8″ wide steel channel, use the ***optional installation kit*** (sold separately) for bolt-on mounting.

Standard Levelers— An included lifting hook raises the lip plate. Comes with a hanger for storing the lifting hook when not in use.

Levelers with Handle— Pull the self-storing handle back about 50° and then return it to its original vertical position to lift the lip plate. It's so easy, there's no need to bend, push, or lean.

Note: To determine your load, take the gross weight of your equipment, add your typical load weight, and then multiply by two.

Plate Wd.	O'all Wd.	Max. Ht. Differential	Lg.	Load Cap., lbs.	*Standard*	Each	*With Handle*	Each

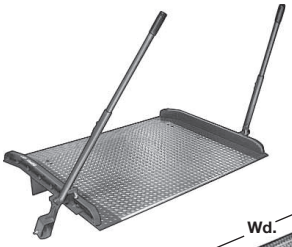
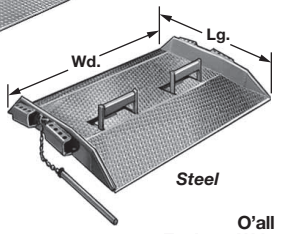
Optional Installation Kit (includes ramp plate, 17 anchor bolts, and four angles; color is gray) **8749T53** Each $281.82

Dockboards



Aluminum/Steel with Wheels



Steel

The best portable choice for handling heavy loads, these dockboards usually require you to use a forklift to move them to your dock. For use when loading and unloading trucks using forklifts, battery-operated hand trucks, and other powered equipment. All have a tread-plate surface for positive traction, plus side curbs to lessen the chance of vehicle runoff.

Aluminum/Steel Dockboards— Have steel curbs bolted to an aluminum tread plate. The curbs are painted high-visibility yellow.

Aluminum/Steel Dockboards with Wheels— Telescoping handles with wheels allow one person to lift and position these dockboards without using a forklift. Retract the handles when the dockboard is in position. All have steel curbs bolted to an aluminum tread plate. The curbs are painted blue.

Steel Dockboards— The heaviest dockboards we offer, these are built to endure high-traffic use. Made of steel with welded-on steel side curbs. Dockboards have steel pins that you drop into any of the eight holes along their edges—this anchors the dockboard in the space between the dock and the truck. All have forklift loops that flip up for easy maneuvering and fold flat when not in use. Color is gray with blue side curbs.

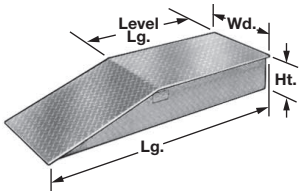
Wheel-Riser Ramps

In addition to elevating trucks to dock height for easy loading and unloading, these ramps can be used to elevate the front or rear wheels of any vehicle for maintenance jobs. Ramps are made of heavy duty aluminum with a tread-plate surface for positive traction. Load capacity is 15,000 lbs. per ramp.



Ht.	Wd.	Level Lg.	O'all Lg.		Each
5 7/8"	18"	30"	48"	2179T11	$462.00

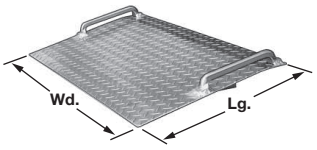
11 7/8"	24"	36"	72"	2179T18	950.50

Low-Height Walk Ramps

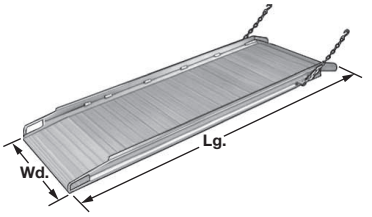
Make pushing your hand truck easier; use these ramps to navigate 3" to 5" high curbs and door thresholds. Ramps are made of aluminum with a diamond-tread surface for good traction and welded side handles for easier positioning.



Wd.	Lg.	Load Cap., lbs.		Each
30"	18"	600	2187T32	$116.91
36"	18"	700	2187T33	146.14

Walk Ramps

No dock available? Use these ramps to create a walkway for loading and unloading trucks. They're useful when using a hand truck.



Ramps are aluminum with a nonskid serrated deck and welded side curbs to prevent run-offs. There's a 9" apron that lays on a truck bed to provide a smooth transition from truck to ramp. Furnished with two handles and two 18" long security chains to secure ramp to truck.

Note: Not for use with pallet trucks and forklifts.

Ht. Range Min.	Ht. Range Max.	Usable Wd.	O'all Wd.	Lg.	Cap., lbs.		Each

Make-A-Ramp Sets

Convert standard 2×8 and 2×12 lumber into all-purpose ramps. Each set contains two steel ramp tops and two rubber feet with a ribbed, nonslip surface. Furnished with assembly hardware.

For Lumber Size		Each
2× 8	21765T55	$43.12
2×12	21765T56	64.69

Space-Saving Ramps

You won't need a lot of storage space for these ramps. Use them to move equipment, and then fold or retract them for convenient carrying and storage. Ramps have side curbs to lessen the chance of runoffs and are made of extruded aluminum alloy. Furnished in pairs; each component has an antislip surface.

***Telescoping*—**For up to 6" high curbs.

***Folding*—**For up to 10" high curbs. Has two handles for easier carrying.

Wheel Chocks & Railroad Equipment

Wheel Chocks for Tires Up to 30″ Diameter and Larger

	Chock Size, Lg. × Wd. × Ht.	Material	Color	Features		Each
For Up to 30″ Diameter Tires						
1.	10″ × 7 1/4″ × 8″	Rubber	Black	Has a 3/4″ dia. hole for attaching rope or chain	8827T41	$29.27
2.	9 15/16″ × 9 13/16″ × 8 1/4″	Steel	Yellow	Has nonslip gripping teeth; furnished with a 10-ft. chain	2213T21	52.66
3.	11 1/4″ × 7 3/4″ × 8″	Polyurethane	Orange	Has a 3/4″ dia. through hole for attaching rope or chain	2269T14	35.52
4.	8″ × 7 1/2″ × 9″	Steel	Yellow	—	2257T14	53.69
5.	8″ × 8″ × 8″	Rubber	Black	Has laminated rubber pads compressed between steel plates; anchor plate has a 5/8″ dia. hole for attaching rope or chain	2200T41	36.13
6.	10 3/4″ × 7″ × 8″	Aluminum	Yellow	Has a flag (red and white striped with black lettering) to insert and lock on either side of chock	9399T91	188.00
7.	12″ × 7″ × 8″	Aluminum	—	Has solid base with gripper cleats; hollow middle for attaching rope or chain	2254T14	48.11
For Up to 32″ Diameter Tires						
8.	10 3/4″ × 8″ × 9″	Steel	Yellow	Saw-tooth bottom for gripping; 1/2″ dia. hole in back for attaching rope or chain	2774T1	35.17
For Up to 46″ Diameter Tires						
9.	21″ × 11 1/4″ × 12 1/4″	Polyurethane	Yellow	Complies with NFPA (National Fire Protection Association) 1901 and 1906; has two aluminum plates with cleats for gripping	21745T13	282.58
For Up to 65″ Diameter Tires						
10.	15″ × 15″ × 11″	Polyurethane	Yellow	Base has antislip rubber pads; has a 1 3/8″ dia. hole for attaching rope or chain	21835T51	244.44
11.	17″ × 14″ × 14″	Polyurethane	Orange	Has a 1″ dia. hole for attaching rope or chain	2269T13	194.05
For Up to 105″ Diameter Tires						
12.	17 3/4″ × 15 1/4″ × 10″	Polyurethane	Yellow	Base has antislip rubber pads; has a 1 1/8″ dia. hole for attaching rope or chain	2269T16	362.88

Railcar Derailers

Secure the wedge clamp on these derailers to the rail head to protect people, buildings, and other freight cars from uncontrolled car movements. Derailers operate by lifting the railcar's wheel and dropping it clear of the rail. For temporary installation.

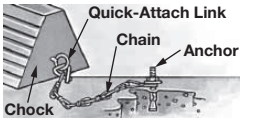
All are double-end style for derailment in both directions. They're made of ductile iron and have a safety-yellow enamel finish.

The clamp and the detachable, reflective "DERAIL" flag can be locked in position with a padlock (not included) that has a 3/8″ shackle diameter. Flag is blue with white lettering and is 48″ high.

Note: If you are unsure of your rail size, choose the derailer for 60- to 141-lb./3-ft. rails. It's the most common size range.

For Rail Size, lbs./3 ft.	Length		Each
20- 60	19 3/4″	2184T1	$576.38
60-141	32 3/4″	2184T2	617.83

Wheel Chock Anchoring Set



Set includes 15 feet of plated-steel chain, a zinc-plated-steel quick-attach link, a stainless steel wedge anchor, and a zinc-plated-steel drive anchor. Simply thread chain over the quick-attach link and close securely with hammer or vise. Chock not included.

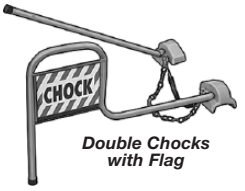
56835T85 ..... **Per Set** $14.91

Railcar Mover

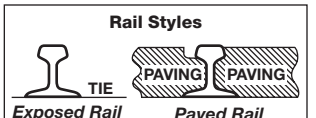
The easiest, most economical way to move railcars short distances. This mover is made of ductile and malleable iron with a hardwood handle and heat-treated steel spurs. The spurs securely grip the rail as you push downward on the handle to create the leverage needed to move the railcar. Contact points adjust to the wheel for full contact over the entire length of the stroke.

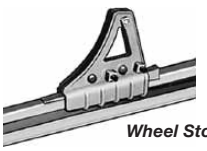
Approx. O'all Lg.		Each
66″	2221T8	$268.63

Railcar Wheel Chocks and Stops



Double Chocks with Flag





Wheel Stop

Chocks and stops have a painted safety-yellow enamel finish.

Railcar Wheel Chocks

Chock the wheels on stationary railcars to keep them from moving during loading, unloading, and servicing. They're for use on 75- to 141-lb./3-ft. rails and railcars that have 28″ to 42″ diameter wheels. Chocks are made of cast steel and install quickly and easily without tools. All meet OSHA regulations 1910.110 (15), 1910.111 (13), and 1910.30 (A) (5).

Chocks ***without flag*** have an angled handle. Chocks ***with flag*** have a flag to indicate that chocks are in use. Flag is red and white with black lettering. Distance between chock and flag is 17″.

Double Chocks—A chain connects two chocks; a rubber strap hooks onto the chain and draws the chocks together.

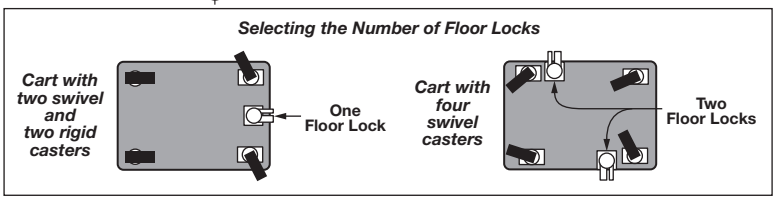
For Rail Style	Chock Size, Lg. × Ht.	*Without Flag*	Each	*With Flag*	Each
Single Chocks—*Prevent movement in one direction*					
Exposed	7 1/2″ × 2 3/4″	2261T11	$85.42	2261T1	$114.29
Paved	7 1/2″ × 2 3/4″	2261T12	74.55	2261T2	122.22
Double Chocks—*Prevent forward and backward movement*					
Exposed	5″ × 2″	2261T16	124.07	2261T6	157.38
Paved	5″ × 2″	2261T17	120.37	2261T7	148.15

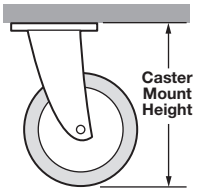
Railcar Wheel Stops

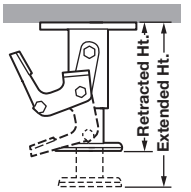
Simply clamp these wheel stops to your rail (no drilling required) to stop moving railcars at track ends and approaches to buildings and doors. For use on 85- to 141-lb./3-ft. rails and railcars that have 33″ to 42″ diameter wheels. Impact speed should not exceed 3-mph switching speed. Made of rugged ductile iron. Stops stand 13 1/2″ above the top of the rail. Furnished in pairs.

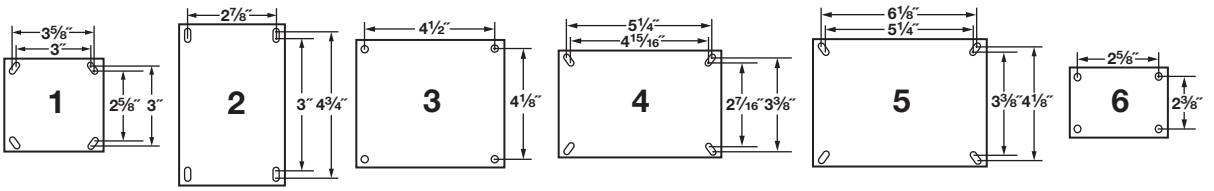
2274T14 ..... **Per Pair** $810.00

Floor Locks









Stabilize carts, trucks, workbenches, and other mobile equipment during loading and unloading. Floor locks bolt or weld to the underside of your equipment (unless otherwise stated), and have a spring-loaded base with a nonskid floor pad to keep equipment stationary. Note: Floor locks are not load rated. They are designed to keep equipment in place, not lift it off the floor.

Extended height is the maximum height of the lock and should always be greater than or equal to your caster mount height.

Front Pedal

Locks have one pedal to extend and one to retract, both of which are easy to access without placing your foot underneath the equipment. Locks are zinc-plated steel and accommodate 3⁄8″ mounting bolts (not included).

For Caster Mount Height	Height: Extend.	Height: Retract.	Mtg. Plate: Style	Mtg. Plate: Lg.	Mtg. Plate: Wd.		
5 5⁄16″-5 1⁄2″	5 5⁄8″	4 7⁄8″	1	4 5⁄8″	3 3⁄4″	2478T61	$57.02

Adjustable Height

Unlike our other floor locks that are either fully extended or retracted, these locks can engage at any point up to the maximum extended height shown. The side pedal extends the lock while the center pedal retracts it. Locks are aluminum and accommodate 3⁄8″ mounting bolts (not included). Note: Locks are for bolt mounting only (cannot be welded).

For Caster Mount Height	Max. Extend. Height	Max. Retract. Height	Mtg. Plate: Style	Mtg. Plate: Lg.	Mtg. Plate: Wd.		
6 1⁄2″-7 1⁄2″	8″	5 1⁄2″	1	4 3⁄4″	3 3⁄4″	2510T17	$80.38
8″-10 1⁄2″	11″	7″	1	4 3⁄4″	3 3⁄4″	2510T18	83.76

Side Mount

This lock has a vertical mounting plate that attaches to the side of your equipment and accommodates a range of caster mount heights. One large foot pedal extends and retracts the lock. Lock is chrome-plated steel and accommodates 3⁄8″ mounting bolts (not included).

For Caster Mount Height	Height: Extend.	Height: Retract.	Mtg. Plate: Style	Mtg. Plate: Lg.	Mtg. Plate: Wd.		
10 3⁄4″ Max.	10 3⁄4″★	8 3⁄4″★	2	4 1⁄2″	6 1⁄2″	27185T11	$60.38

★ Measured from the bottom of the mounting plate.

Dual Release

Standard and Corrosion Resistant

High Clearance

Heavy Duty

A center pedal extends the lock, while either of the two side pedals retracts it. Locks accommodate 3⁄8″ bolts, except *Styles 4* and 5 *mounting plates* accommodate 1⁄2″ bolts. Mounting fasteners not included.

High-clearance locks have 3 1⁄8″ of ground clearance when retracted, which allows you to move equipment over ramps and obstructions.

Heavy duty locks have a thick iron frame for more durability than standard locks. The base pivots to accommodate uneven floors.

About Casters and Wheels

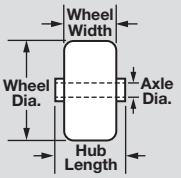

Plate Caster

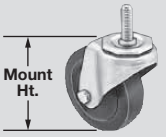

Stem Caster

Capacity

To determine the capacity required, divide the weight of your load by the number of casters. Choose an even higher capacity if your application involves shock loads (the impact of a load being dropped) or rolling over rough surfaces or obstructions such as thresholds.

Rolling Effort

The force required to start a wheel rolling and keep it rolling is affected by the size of the wheel, the shape of the tread, and the type of bearings in the wheel. Generally, the larger the wheel, the more easily it rolls. Rounded treads start rolling and turn easier than flat treads.

Wheel Material

The hardness of a wheel affects wheel traction, shock absorption, durability, and rolling effort. Softer wheels are quiet and have excellent shock absorption and traction on rough surfaces. Harder wheels are very durable, have higher capacities, and roll more easily on smooth surfaces and carpeting, but can be noisy and damaging to floors. If floor protection is a concern, choose a nonmarking material such as phenolic, nonmarking rubber, polyurethane, nylon, or glass-filled nylon. For replacement wheels, see pages 1414-1422.

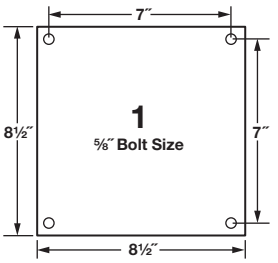
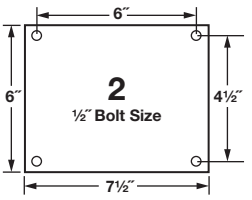
Colossus Casters—5,000 to 23,000 lbs.





Swivel

Rigid

Dual Wheel Swivel

Move your heaviest loads with the largest casters we offer. Casters have a heavy duty forged steel frame for demanding applications. Impact-resistant tapered roller wheel bearings withstand both downward and side force and perform well at high speeds. Frame has a zinc-plated finish, unless noted. Wheels are nonmarking, except steel wheels.

Swivel casters have impact-resistant tapered roller bearings to withstand the stress of sudden force.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer).

Long-Lasting Nylon—Wheels are extra hard (80D durometer).

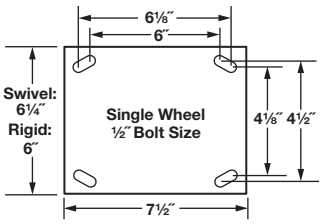
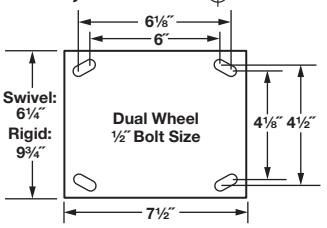
Hercules Casters—3,500 to 20,000 lbs.





Swivel

Rigid

Dual Wheel Swivel

Not only do these casters offer some of the highest capacities, they withstand the stress of sudden impact. Swivel casters have large-diameter ball bearings for good impact resistance. The precision-machined (kingpinless) raceway provides smooth swiveling and extended service life. All casters have a steel frame with a blue painted finish. Polyurethane and phenolic wheels are nonmarking.

Swivel bearings are sealed to keep out dust and debris.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Maintenance-free easy-roll bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of wheel bearings we offer.

Impact-resistant bearings have tapered rollers to withstand both downward and side force and perform well at high speeds.

Abrasion-Resistant Blue Polyurethane—Wheel treads are hard (92A durometer).

Abrasion-Resistant Black Polyurethane—Wheels are extra hard (70D durometer).

Black Phenolic—Wheels are extra hard (90D durometer).

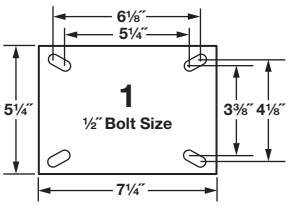
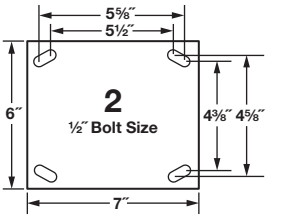
Brute Casters—2,000 to 7,000 lbs.





Swivel casters have large-diameter ball bearings and a precision-machined (kingpinless) raceway for good impact resistance, smooth swiveling, and extended service life. All casters have a steel frame with a blue painted finish. Wheels are nonmarking, except iron and steel wheels.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Impact-resistant wheel bearings have tapered rollers to withstand both downward and side force and perform well at high speeds.

Black Phenolic—Wheels are extra hard (95D durometer).

Abrasion-Resistant Blue Polyurethane—Wheel treads are hard (95A durometer).

Abrasion-Resistant Black Polyurethane—Wheels are extra hard (70D durometer).

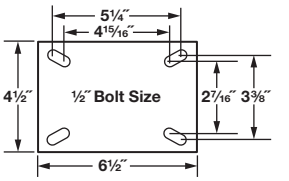
■ Has impact-resistant wheel bearings.

Compact Alliance Casters—1,800 to 4,000 lbs.



With the smallest mounting plates and the lowest mounting heights in their capacity range, these casters are a strong choice for tight spaces. Frame is steel with a blue painted finish. Wheels are nonmarking, except iron wheels.

Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. Swivel bearings are sealed to keep out dust and debris.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (92A durometer).

Maintenance-Free Easy-Roll Casters—700 to 2,000 lbs.

Both the wheel bearings and the swivel bearings are completely sealed from dust and debris and never need lubrication. Bearings have precision steel balls for the least resistance to rolling and swiveling of all the bearings we offer. Frame is steel with a zinc-plated finish. Wheels are nonmarking.

Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life.

Cushioned Rubber—Wheel treads are soft (65A durometer).
Cushioned Polyurethane—Wheel treads are soft (75A durometer).
Abrasion-Resistant Polyurethane—Wheel treads are hard (92A durometer).
Long-Lasting Nylon—Wheels are extra hard (81D durometer).

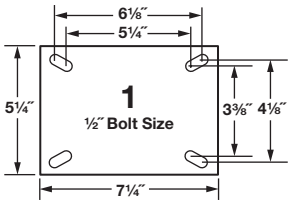
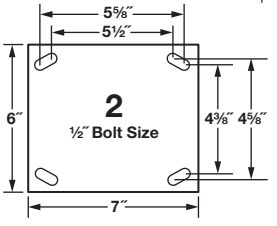
Heavy Duty Sure-Fire Casters—680 to 1,600 lbs.





Swivel

Rigid

Thicker frames, larger mounting plates, and a heavy duty swivel design make these casters more durable than other casters in their capacity range. Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. All casters have a steel frame with a blue painted finish. Wheels are nonmarking.

Phenolic—Wheels are extra hard (90D durometer).
Cushioned Rubber—Wheel treads are soft (75A durometer).

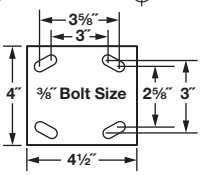
Gladiator Casters—700 to 1,500 lbs.



Swivel casters have dual precision-machined (kingpinless) raceways for better weight distribution and smoother swiveling than other kingpinless casters. Their large-diameter ball bearings withstand the stress of sudden impact and extend the service life of the caster.

All casters have a steel frame with a zinc-plated finish. Wheels are nonmarking, except iron and steel wheels.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Black Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Red Polyurethane—Wheel treads are hard (95A durometer).

Abrasion-Resistant Blue Polyurethane—Wheels are extra hard (70D durometer).

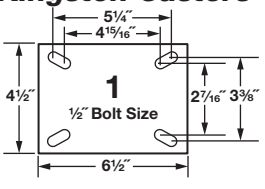
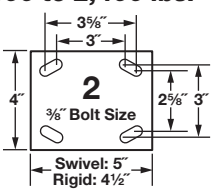
Kingston Casters—500 to 2,400 lbs.





Swivel

Rigid

Swivel with Left Side Brake and Swivel Lock

Dual Wheel Swivel

For durability in demanding applications, these casters have a heavy duty forged steel construction. Casters with mounting plate 1 have a frame with a red painted finish; with mounting plate 2 have a frame with a gray painted finish. Wheels are nonmarking, except iron wheels.

Swivel casters have ball bearings and tapered roller bearings for easy swiveling and good impact resistance. **To Order:** For swivel casters with side brake, please specify right or left side brake.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Maintenance-free easy-roll bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Phenolic—Wheels are extra hard (90D durometer).

Cushioned Polyurethane—Wheel treads are soft (85A durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer).

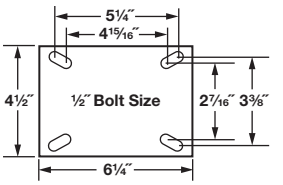
Large-Plate Spartan Casters—700 to 1,600 lbs.

Swivel

Rigid



The largest-plate casters we offer in our Spartan series, these casters move heavy loads over smooth surfaces. Frame is steel with a zinc-plated finish. Wheels are nonmarking, except iron wheels.

Heavy duty casters have a forged steel frame for durability.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane on Aluminum—Wheel treads are extra hard (60D durometer).

Abrasion-Resistant Polyurethane—Wheels are extra hard (75D durometer).

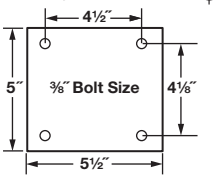
Spartan Casters—700 to 1,500 lbs.

Swivel

Rigid



Similar to Large-Plate Spartan Casters, these are designed for heavy loads on smooth surfaces, except they have a slightly smaller mounting plate. Frame is steel with a zinc-plated finish. Wheels are nonmarking, except iron wheels.

Swivel casters with neoprene seals prevent contamination of the swivel bearing to extend service life.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane on Aluminum—Wheel treads are extra hard (60D durometer).

Abrasion-Resistant Polyurethane—Wheels are extra hard (75D durometer).

Long-Lasting Glass-Filled Nylon—Wheels are extra hard (85D durometer).

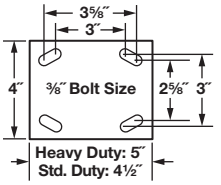
Compact-Plate Spartan Casters—700 to 1,500 lbs.



Swivel

Swivel with Brake

Swivel with Brake and Swivel Lock

Rigid

Rigid with Brake

The Spartan casters with the smallest mounting plate, these move heavy loads over smooth surfaces. Frame is steel with a zinc-plated finish. Wheels are nonmarking, except iron and steel wheels.

Heavy duty casters have a forged steel frame for durability.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Sealed general purpose wheel bearings keep out contaminants to extend service life. *Swivel* casters also have a seal on the swivel.

Lightweight Polypropylene—Wheels are extra hard (65D durometer).

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane on Aluminum—Wheel treads are extra hard (60D durometer).

Abrasion-Resistant Polyurethane—Wheels are extra hard (75D durometer).

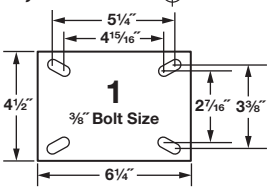
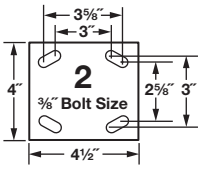
Optional Weld-On Bracket for Standard Duty Casters—For quick replacement of casters.												49935T12	12.34

Mauler Casters—800 to 1,200 lbs.

Swivel

Rigid





An economical alternative to our Spartan casters, these steel casters have a thinner frame for less demanding applications. Frame has a gray powder-coated finish. Wheels are nonmarking, except long-lasting iron wheel.

Swivel bearings are sealed to keep out dust and debris.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (90A durometer).

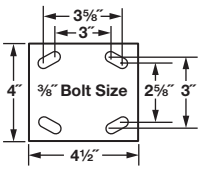
High-Temperature Corrosion-Resistant Casters—800 to 900 lbs.

Swivel

Rigid



Great for bakeries and other areas requiring frequent washdowns, these casters are Type 304 stainless steel and withstand temperatures up to 475°F. Wheels are black glass-filled nylon that is extra hard (85D durometer) and nonmarking.

Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. Bearings are sealed to keep out dust and debris.

Easy-Roll Corrosion-Resistant Casters—700 to 1,200 lbs.

Type 304 stainless steel construction combined with precision steel ball bearings result in better corrosion resistance and smoother rolling than other casters in their capacity range. The wheel bearings are completely sealed so they never need lubrication. Wheels are black polyurethane that is extra hard (60D durometer) and nonmarking.

Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. Bearings are sealed to keep out dust and debris.

Washdown Food-Service Casters—800 to 1,000 lbs.

A stainless steel frame and rust-resistant bearings make these casters great for food-service equipment that's frequently washed down. Meet NSF/ANSI standards. Wheels are nonmarking.

Swivel bearings are sealed to keep out dust and debris.

Type 316 stainless steel frame provides better corrosion resistance than Type 304 stainless steel.

General purpose stainless steel wheel bearings have straight rollers for smoother rolling than acetal sleeve bearings.

Phenolic—Wheels are extra hard (90D durometer).

Abrasion-Resistant Red Polyurethane—Wheel treads are hard (90A durometer).

Abrasion-Resistant Black Polyurethane—Wheels are extra hard (65D durometer).

Patriot Food-Service Casters—700 to 1,050 lbs.

A solid polyurethane wheel eliminates the possibility of tread separation. Use in food-service applications. Wheels are extra hard (55D durometer) and nonmarking. Frame is steel with a zinc-plated finish.

General purpose wheel bearings have straight rollers for smoother rolling than acetal sleeve bearings.

Optional swivel seal kit keeps out dust and debris.

Optional total lock brakes the wheel and locks the swivel in one operation.

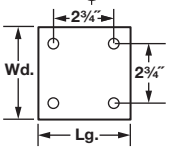
Leveling Casters—825 to 1,650 lbs.

With Thumbwheel Adjustment

With Ratchet Adjustment

Leveling Pad Extended



A leveling pad lifts the wheel off the ground to hold your mobile equipment in place, plus it can be adjusted to compensate for uneven surfaces. Wheels are black nylon, except 3½″ and 3 13/16″ dia. wheels are blue. Nylon is extra hard (90D durometer) and nonmarking. Mounting hardware included.

Aluminum casters have a steel mounting plate. Casters with *black finish* have general purpose swivel bearings. Casters with *ivory finish* have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life.

Type 304 stainless steel casters offer excellent corrosion resistance. Casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life.

Ratchet pulls out for easy adjustment and retracts out of the way when not in use.

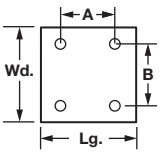
Easy-Turn Leveling Casters—500 to 1,000 lbs.

Leveling Pad Extended



Adjusting the nut extends the leveling pad to keep your equipment stationary and compensate for uneven floors. The dual-wheel design provides better load distribution and easier turning than single-wheel casters. Wheels are nonmarking. Frame is Type 301 stainless steel.

Maintenance-free easy-roll wheel bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Phenolic—Wheels are extra hard (95D durometer).

Abrasion-Resistant Polyurethane—Wheels are extra hard (75D durometer).

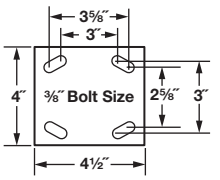
Shock-Absorbing Casters—800 to 1,000 lbs.



The springs in these casters take on bumpy surfaces and obstructions while preventing shock to the load. A seal on the swivel and metal debris guards on the wheel bearings retain lubricants and keep out contaminants. Bearings have precision steel balls, which provide the least rolling resistance of all the wheel bearings we offer. Wheels are gray polyurethane that is extra hard (55D durometer) and nonmarking. Frame is steel with a zinc-plated finish.

Air-Ride Casters—1,220 to 1,655 lbs.

Good for heavy and fragile loads, these casters have a forged steel construction and a cushioned pneumatic tire. Their impact-resistant wheel bearings have tapered rollers that withstand both downward and side force. Tires are black rubber. Frame has a red painted finish.

Swivel casters have impact-resistant ball and tapered-roller bearings that withstand both downward and side force.

Easy-Turn Air-Ride Casters—700 to 1,570 lbs.

Dual wheels provide better load distribution and easier turning than single-wheel casters. Casters have a forged steel frame for durability. Frame has a zinc-plated finish.

Flat-free wheels cushion just as well as pneumatic wheels but are filled with polyurethane foam so they won't go flat.

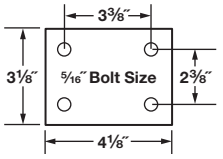
Low-Profile Casters—700 to 1,000 lbs.



Swivel

Swivel with Brake

Rigid

Rigid with Brake

Choose these casters when you need high capacities and low mounting heights. Their wheel bearings are completely sealed and have precision steel balls, so they never need lubrication and provide the least rolling resistance of all the wheel bearings we offer. Wheels are black glass-filled nylon that is extra hard (85D durometer) and nonmarking. Frame is steel with a zinc-plated finish.

Vulcan Casters—350 to 680 lbs.

More durable than other casters in their capacity range, these withstand the stress of sudden impact. Wheels are black rubber on an iron core. Wheel treads are soft (75A durometer). Frame is steel with a zinc-plated finish, except casters with a 3″ wide wheel, which have a blue painted finish.

Swivel casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. Bearings are sealed to keep out dust and debris.

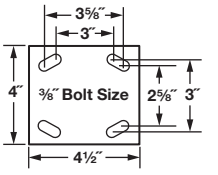
Samson Casters—350 to 675 lbs.

Swivel

Swivel with Swivel Lock

Swivel with Total Lock

Rigid



Like our Large-Plate Samson Casters these are good for moderately heavy loads on smooth surfaces, but they have a smaller mounting plate. Wheels are nonmarking, except cushioned black rubber and long-lasting iron wheels. Frame is steel with a zinc-plated finish.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Sealed general purpose wheel bearings keep out dust and debris for longer service life. Swivel casters also have a seal on the swivel.

Lightweight Black Polypropylene—Wheels are extra hard (65D durometer).

Black Phenolic—Wheels are extra hard (90D durometer).

Cushioned Black Rubber on Iron—Wheel treads are soft (78A durometer).

Cushioned Gray Rubber on Polypropylene—Wheel treads are soft (70A durometer).

Abrasion-Resistant Green Polyurethane on Iron—Wheel treads are hard (95A durometer).

Abrasion-Resistant Green Polyurethane on Aluminum—Wheel treads are extra hard (60D durometer).

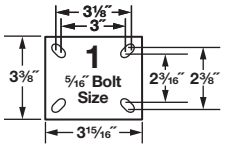
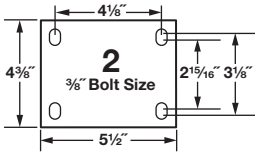
Quiet-Glide Casters—330 to 770 lbs.





Swivel

Swivel with Total Lock

Rigid

Reduce noise in your work environment—a cushioned blue rubber tread provides a quiet ride. Metal debris guards protect the wheel bearings from contaminants for smooth operation and extended service life. Wheel treads are soft (65A durometer) and nonmarking; core is nylon. Frame is steel with a zinc-plated finish.

Swivel bearings are sealed to keep out dust and debris.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Easy-roll wheel bearings have steel balls and require less effort to start rolling than general purpose bearings.

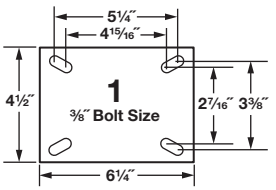
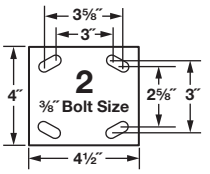
Mauler Casters—290 to 650 lbs.





Swivel

Rigid

An economical way to move moderately heavy loads on smooth surfaces, these casters are similar to our Samson Casters on the previous page but have a thinner gauge frame. Frame is steel with a gray powder-coated finish.

Swivel bearings are sealed to keep out dust and debris.

Lightweight Polypropylene—Wheels are extra hard (70D durometer) and nonmarking.

Cushioned Rubber—Wheel treads are soft (70A durometer).

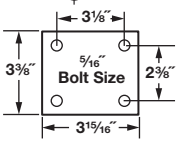
Cushioned-Center Casters—440 to 485 lbs.

Swivel

Swivel with Total Lock

Rigid



Get the strength of nylon with the cushion of rubber. The long-lasting white nylon wheels have a layer of rubber in the middle for good shock absorption. Wheel bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer. Wheels are extra hard (75D durometer) and nonmarking. Frame is steel with a zinc-plated finish.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

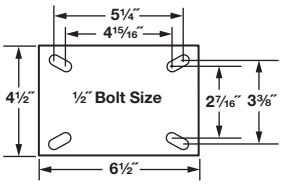
Swivel

Swivel with Right Side Brake

Swivel with Right Side Brake and Swivel Lock

Rigid

Rigid with Brake



Forged steel construction gives these casters the strength for demanding applications. Wheels are black rubber on an iron core. Wheel treads are soft (70A durometer). Frame has a red painted finish.

Swivel casters have ball bearings and tapered roller bearings for smooth swiveling and good impact resistance. **To Order:** For swivel casters with brake, please specify right or left side brake.

Choose from a variety of mounting plate sizes that match many common carts and dollies. Frame is steel with a zinc-plated finish.

Plain bore casters have a wheel that rides directly on the axle, making them an economical choice for equipment not frequently moved. Casters meet NSF/ANSI standards. *Swivel* casters have light duty single-ball swivel bearings.

General purpose wheel bearings have straight rollers for smoother rolling than casters with a plain bore. *Swivel* casters have a welded (kingpinless) raceway with two rows of ball bearings for smooth swiveling and extended service life.

Lightweight Black Polypropylene—Wheels are extra hard (60D durometer).

Cushioned Black Rubber—Wheels are soft (75A durometer).

Impact-Resistant Gray Rubber—Wheels are extra hard (75D durometer).

Swivel

Swivel with Face Brake

Swivel with Total Lock

Rigid

Dual Wheel Swivel with Side Brake

Dual Wheel Swivel with Thumb-Screw Brake

Our most popular casters for carts and dollies, these are offered in a variety of sizes and styles to fit your equipment. Frame is steel with a zinc-plated finish.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Plain bore casters have a wheel that rides directly on the axle, making them an economical choice for equipment not frequently moved.

Sleeve bearings prevent wear to the wheel bore and are a good choice when ease of rolling is not critical.

General purpose bearings have straight rollers that provide smooth rolling.

Easy-roll bearings have steel balls and require minimal effort to start rolling.

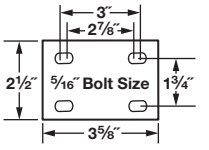
Creston Casters—200 to 400 lbs.

Swivel

Swivel with Face Brake

Swivel with Wrap-Around Brake

Rigid



Swivel bearings have a seal to keep out dust and debris, lengthening the life of the caster. Casters with rubber and neoprene rubber wheels also have debris guards on the wheel bearings. All casters have a steel frame with a zinc-plated finish.

Swivel casters with wrap-around brake are easy to engage and have a rubber brake pad for a strong grip.

Easy-roll wheel bearings have steel balls and require less effort to start rolling than acetal sleeve bearings.

Abrasion-Resistant Polyurethane—Wheel treads are nonmarking.

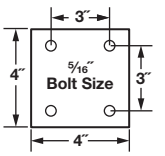
Heavy Duty Debris-Guard Casters—350 lbs.

Swivel

Rigid



A thick frame and metal wheel guards keep these sturdy casters rolling smoothly. Wheels are soft (78A durometer) black rubber. Frame is steel with a zinc-plated finish.

Swivel bearings are sealed to keep out dust and debris.

Wheel Dia.	Wheel Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Rigid

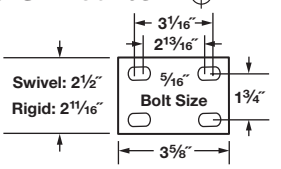
Optional Brake for Swivel Casters—To Order: Please specify 3½″, 4″, or 5″ wheel dia. 2877T81 $6.58

Static-Control Casters—250 lbs.

Swivel

Rigid



Protect sensitive electronic equipment from electrostatic discharge. The wheels on these casters dissipate static to keep it from building up. Average electrical resistance is less than 250,000 ohms. Casters meet NSF/ANSI standards and Fed. Spec. FF-C-88C. Wheels are gray rubber on a polypropylene core. Wheel treads are soft (75A durometer) and nonmarking. Frame is steel with a zinc-plated finish.

Optional total locks brake the wheel and lock the swivel in one operation.

Wheel Dia.	Wheel Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Rigid

Optional Total Lock for 5″ Dia. Swivel Caster 3238T212 5.36

Trash-Container Casters—350 to 650 lbs.

Built to withstand the stress of impact, the legs of the swivel casters are less angled than other casters so these are good for containers that are frequently picked up and set back down. All casters have a steel frame with a gray powder-coated finish.

Acetal sleeve wheel bearings prevent wear to the wheel bore and are a good choice when ease of rolling is not critical.

Impact-Resistant Polypropylene—Wheels are extra hard (72D durometer) and nonmarking.

Cushioned Rubber—Wheel treads are soft (70A durometer).

Food-Service Casters—500 to 750 lbs.

Casters with polyurethane treads are treated to inhibit the growth of microbes and protect the wheels from degradation. Casters with phenolic wheels are BISSC (Baking Industry Sanitation Standards Committee) certified. All casters have a steel frame with a zinc-plated finish.

General purpose wheel bearings have straight rollers for smoother rolling than acetal sleeve bearings.

Polyurethane—Wheel treads are hard (90A durometer).

Phenolic—Wheel treads are extra hard (90D durometer).

Glide-Light Food-Grade Casters—350 to 550 lbs.

The lightweight wheels on these casters are easy to get rolling. Use in food-service applications. Wheels are nonmarking. Frame is steel with a zinc-plated finish.

Easy-roll wheel bearings have steel balls and require less effort to start rolling than general purpose wheel bearings.

Cushioned Rubber—Wheel treads are soft (63A durometer).

Cushioned Polyurethane—Wheel treads are soft (85A durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer).

Optional total lock brakes the wheel and locks the swivel in one operation.

Cardinal Food-Grade Casters—210 to 315 lbs.

A debris cap on the swivel keeps out contaminants for extended service life. Use in food-service applications. Casters with 4″ and 5″ dia. wheels also have debris guards on the wheel bearings. All casters have nonmarking wheels and a zinc-plated steel frame.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Cushioned Rubber—Wheel treads are soft (85A durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (45D durometer).

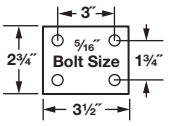
Silent-Roll Maintenance-Free Casters—220 lbs.

Swivel

With Swivel Lock



Popular in hospitals and laboratories, our quietest casters have a corrosion-resistant nylon frame and a cushioned gray rubber wheel with completely sealed easy-roll bearings. Debris guards on the wheel bearings and seals on the swivel ensure smooth operation and extend service life. Wheels are soft (85A durometer) and nonmarking. Mounting plate is steel with a zinc-plated finish.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Wheel Dia.	Wheel Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Swivel with Swivel Lock		Swivel with Total Lock

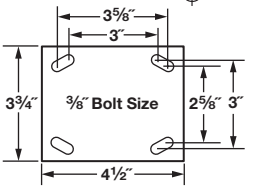
Washdown Casters—300 to 400 lbs.

Swivel

Rigid



Our most corrosion-resistant casters have a Type 316 stainless steel frame that stands up to frequent washdowns. Wheels are gray rubber on a polypropylene core. Wheel treads are soft (80A durometer) and nonmarking.

Swivel bearings are sealed to keep out dust and debris.

General purpose stainless steel wheel bearings have straight rollers for smoother rolling than acetal sleeve bearings.

Optional Brake for Swivel Casters						22595T91	$25.92

Corrosion-Resistant Casters—200 to 400 lbs.

With a Type 304 stainless steel frame for good corrosion resistance, these casters are an economical alternative to the Washdown Casters shown on the previous page. Wheels are nonmarking, except oil-resistant neoprene rubber wheels.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

General purpose stainless steel wheel bearings have straight rollers for smoother rolling than sleeve bearings.

Long-Lasting Nylon—Wheels are extra hard (80D durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer).

Oil-Resistant Neoprene Rubber—Wheels are soft (78A durometer).

Lightweight Polypropylene—Wheels are extra hard (90D durometer).

Bright-Finish Casters—220 lbs.

The bright zinc finish gives these steel casters a clean appearance. Debris guards on the wheel bearings keep out contaminants for extended service life.

Swivel bearings are sealed to keep out dust and debris.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Maintenance-free easy-roll wheel bearings never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Long-Lasting Nylon—Wheels are extra hard (70D durometer) and nonmarking.

Cushioned Rubber—Wheel treads are soft (80A durometer) and nonmarking.

Static-Control Rubber—Wheels prevent static buildup. Surface resistance is less than 10^6 ohms. Wheel treads are soft (80A durometer).

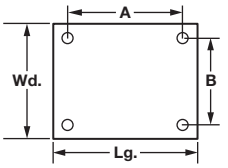
Ultra-High-Temperature Casters—200 to 800 lbs.

Swivel

Rigid



Withstanding temperatures up to 1600° F, these are the most heat-resistant casters we offer. Frame and wheels are long-lasting iron.

Swivel casters have general purpose double-ball swivel bearings, except 4 1/4" and 5 1/4" high casters, which have single-ball bearings for equipment that's not often moved.

Note: To match swivel casters to compatible rigid casters, choose swivel and rigid casters with the same mount height.

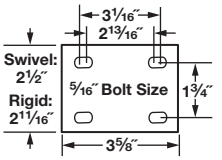
Nonmarking High-Temperature Casters—250 to 800 lbs.

Mounting Plate 1

Swivel

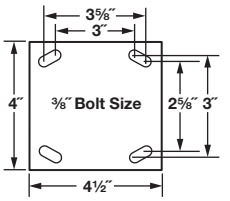
Rigid



Mounting Plate 2

Swivel

Rigid



A floor-friendly alternative to casters with metal wheels, these have heat-resistant plastic or rubber treads. They're rated for use in temperatures up to 475° F. Frame is steel with a zinc-plated finish.

PTFE-coated steel sleeve wheel bearings eliminate the need for lubrication.

General purpose wheel bearings have straight rollers for smoother rolling than sleeve bearings.

Long-Lasting Glass-Filled Nylon—Wheels are extra hard (85D durometer).

Cushioned Rubber—Wheel treads are soft (75A durometer).

Phenolic—Wheels are extra hard (90D durometer).

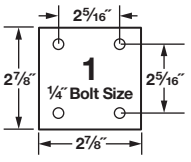
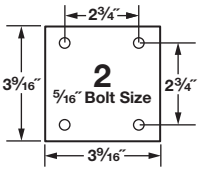
Leveling Casters—275 to 600 lbs.

With Thumbwheel Adjustment

With Ratchet Adjustment

Leveling Pad Extended





Adjust the leveling pad to keep equipment stationary and compensate for uneven floors. Wheels are black nylon that is extra hard (90D durometer) and nonmarking.

Aluminum casters have a steel mounting plate. Casters with *black finish* have general purpose swivel bearings. Casters with *ivory finish* have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life.

Type 304 stainless steel casters offer excellent corrosion resistance. Casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life.

Ratchet pulls out for easy adjustment and retracts out of the way when not in use.

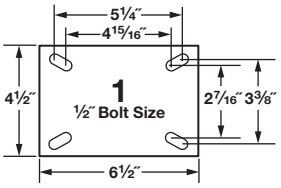
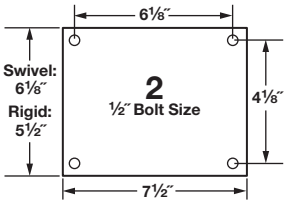
Heavy Duty Air-Ride Casters—330 to 625 lbs.





Swivel

Rigid

Dual Wheel Swivel

A forged steel frame and air-filled tires absorb shock to prevent damage to your load. Tires are black rubber. Frame has a red painted finish, except dual-wheel casters have a zinc-plated finish.

Single-wheel swivel casters have impact-resistant ball and tapered roller swivel bearings that withstand both downward and side force.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters. *Swivel* casters have general purpose double-ball swivel bearings.

Swivel

Swivel with Brake

Rigid

Lower-capacity wheels and formed steel construction make these an economical alternative to our Heavy Duty Air-Ride Casters.

Air-filled wheels are quiet and shock absorbing.

Flat-free wheels, also known as semi-pneumatic wheels, have a tough, puncture-resistant tread and a core of nonpressurized air that does not require inflation.

Lightweight flat-free wheels are solid foam rubber or polyurethane so they cushion like air-filled wheels but won't go flat.

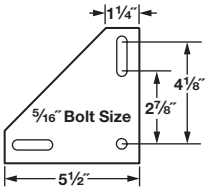
■ Caster has a total lock that brakes the wheel and locks the swivel in one operation.

Corner-Mount Casters—350 to 580 lbs.



Mount these casters to the corners of carts, equipment, and angle iron. Casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling and extended service life. Wheels are nonmarking. Frame is steel with a zinc-plated finish.

General purpose wheel bearings have straight rollers for smoother rolling than wheels with a plain bore.

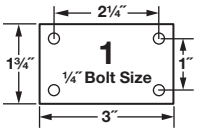
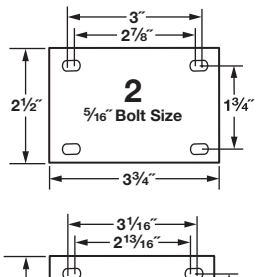
Mighty-Lite Casters—90 to 175 lbs.

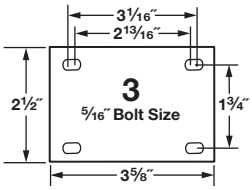
Swivel

Swivel with Brake

Rigid







Double-ball bearings in the swivel provide smooth swiveling, making these our best general purpose casters in the lowest capacity range. Frame is steel with a zinc-plated finish. *Cushioned gray rubber wheels* are nonmarking.

Metal sleeve wheel bearings prevent wear to the wheel bore and are a good choice when ease of rolling is not critical.

General purpose wheel bearings have straight rollers that provide smooth rolling.

Easy-roll wheel bearings have steel balls and require less effort to start rolling than other bearings.

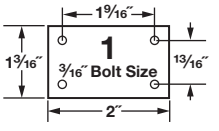
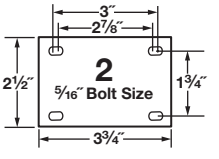
★ Wheel width is 1 3/8"; Mount height is 4". ■ Wheel width is 1".



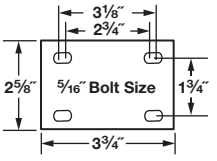


Air-Ride Casters—150 lbs.

The cushioned black rubber wheels absorb shock to eliminate noise and protect your load.

Swivel casters have a debris cap to keep out contaminants for extended service life.

Flat-free wheels are solid foam rubber so they cushion as well as air-filled wheels but won't go flat.



Wheel Dia.	Wheel Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Swivel with Brake		Rigid	
Air-Filled Rubber Wheels

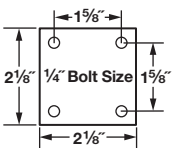
Leveling Casters—55 lbs.

Turning the thumbwheel extends the leveling pad to keep your equipment stationary and compensate for uneven floors. Wheels are extra hard (90D durometer) black nylon. Frame is aluminum.

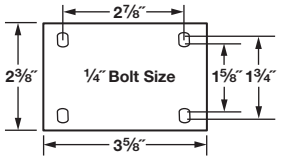


Wheel Dia.	Wheel Wd.	Mount Ht. Min.	Mount Ht. Max.	Cap. Ea., lbs.	Swivel with Black Finish		Swivel with Ivory Finish	
1 5/8"	3/4"	2 13/16"	3 3/16"	55	5475T12	$22.48	5475T11	$22.48

Corrosion-Resistant Casters—110 to 165 lbs.

Swivel

Rigid



Type 304 stainless steel construction gives these better corrosion resistance than steel casters. A debris cap on the swivel keeps out contaminants for extended service life.

Easy-roll wheel bearings have steel balls and require less effort to start rolling than acetal sleeve bearings.

Oil-Resistant Neoprene Rubber—Wheels are soft (60A durometer).

Impact-Resistant Rubber—Wheels are extra hard (80D durometer).

3	3 3/4″	2 1/2″	3″	1 3/4″	5/16″

Used on hotel bellman's carts, these casters have a compact frame for small appliances and furniture. Wheels are nonmarking. Frame is plated steel.

Maintenance-free easy-roll wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Lightweight Polypropylene—Wheel is extra hard (60D durometer).

Oil-Resistant Rubber—Wheels are hard (90A durometer). Casters provide better load distribution and easier turning than single-wheel casters.

Abrasion-Resistant Polyurethane—Wheel is hard (92A durometer).

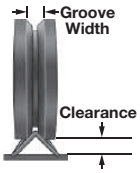
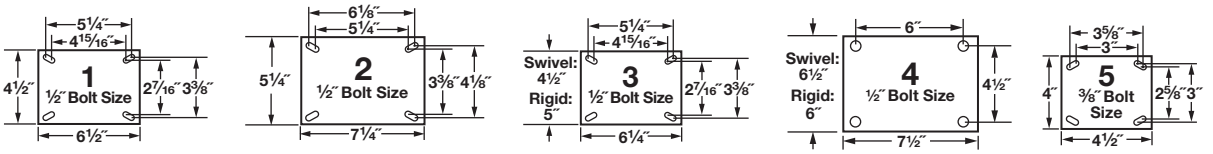
V-Groove Wheel Track Casters—300 to 8,350 lbs.





The wheels of these casters have a 90° V-groove and a flat tread to move your equipment on angle-iron track as well as the floor.

Swivel casters have general purpose double-ball bearings, unless otherwise stated.

Steel frames have a zinc-plated finish, except Style A casters with long-lasting iron wheels have a painted finish.

Style A casters have a thicker frame than standard duty steel frames for more durability. *Swivel* casters have a precision-machined (kingpinless) raceway with large-diameter ball bearings for smooth swiveling, good impact resistance, and extended service life.

Style B casters have a forged steel frame for demanding applications.

Style C casters have a thick forged steel frame as well as a forged steel wheel for the highest capacities. *Swivel* casters have impact-resistant tapered-roller bearings that withstand both downward and side force.

Casters with **corrosion-resistant Type 303 stainless steel wheels** are suitable for steam-cleaning applications.

Flanged-Wheel Track Casters—500 to 4,200 lbs.

Used on equipment that runs on rails and other square structural tubing, these casters have a flange on one or both sides of the wheel to keep them on track. Frame is steel with a painted finish. Wheels are iron with a painted finish, except 5″ dia. wheels are high-capacity steel. Temperature range is –30° to 300° F.

Heavy Duty Threaded-Stem Casters—*140 to 900 lbs.*

Stem Caster

Our strongest threaded-stem casters have a thick metal frame for heavy loads and long service life. Wheels are nonmarking, except black rubber wheels.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Steel stem casters and **corrosion-resistant Type 304 stainless steel stem casters** have a debris cap on the swivel that keeps out contaminants. Stem length is 1½″ for ½″-13 stem, 2″ for ⅝″-11 stem, and 2½″ for ¾″-10 stem.

Long-stem steel casters have a 4″ long stem.

Add-a-bolt steel casters have a hole in the frame so you can create a stem from any ½″ dia. Grade 8 bolt.

Easy-roll wheels require minimal effort to start rolling.

High-Temperature Glass-Filled Nylon—Wheels withstand temperatures up to 550° F.

✓ Swivel does not have a debris cap. ★ Caster has a wheel brake instead of a total lock.

Washdown Easy-Roll Threaded-Stem Casters—*240 lbs.*

Swivel

The nylon frame gives these casters the corrosion resistance you need for equipment that's frequently washed down. Seals on the swivel and wheel bearings keep out contaminants. Both the wheel bearings and swivel bearings have precision steel balls for the smoothest rolling and swiveling of all the bearings we offer. Wheels are nonmarking gray rubber on a polypropylene core. Wheel treads are soft (85A durometer).

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Stem Thread	Stem Lg.	Wheel Dia.	Wheel Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Swivel with Total Lock	
M12	28 mm	5″	1¼″	6 5/16″	240	2335T21	$41.63	2335T22	$44.44
M12	68 mm	5″	1¼″	6 5/16″	240	2335T23	43.30	2335T24	46.22

Threaded-Stem Casters—90 to 325 lbs.

Thread these casters into the metal legs of furniture, carts, chairs, and appliances. Frame is plated steel. Wheels are nonmarking, except black rubber wheels.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters.

Easy-roll bearings have steel balls and require minimal effort to start rolling.

Maintenance-free easy-roll bearings have completely sealed steel balls and never need lubrication. Debris guards on the wheel keep out contaminants for extended service life.

Static-Control Rubber—Wheels prevent static buildup. Surface resistance is less than 10^6 ohms. Meet BIFMA standards.

Shock-Absorbing Rubber—Wheel treads are thick rubber so they cushion like air-filled tires but won't go flat.

■ Caster has a total lock that brakes the wheel and locks the swivel in one operation.

Low-Profile Threaded-Stem Casters—70 to 350 lbs.

A popular choice for business machines and display fixtures, these casters are offered with low mounting heights to keep your equipment stable. Casters have a plated steel frame. *Polypropylene* and *phenolic wheels* are nonmarking.

Static-Control Rubber—Wheels prevent static buildup. Surface resistance is less than 10^6 ohms. Meet BIFMA standards.

Leveling Threaded-Stem Casters—60 to 1,100 lbs.

With Thumbwheel Adjustment

Leveling Pad Extended

Not only does the leveling pad lift the wheel off the floor to keep equipment stationary, it also adjusts to compensate for uneven floors. Wheel is black nylon that is extra hard (90D durometer) and nonmarking.

Type 304 stainless steel frame offers excellent corrosion resistance.

★ Black frames have a 7/8" stem length.

Light Duty Threaded-Stem Casters—40 to 175 lbs.

Plastic Frame

Hood with Brake

Aluminum Frame with Brake

Also known as twin-wheel casters, these lightweight and economical casters are commonly found on furniture and displays. Meet BIFMA standards, unless noted.

Casters with a **white aluminum frame** met NSF/ANSI standards.

Black Nylon—Wheels are extra hard (70D durometer), except 4" dia. wheels are hard (95A durometer).

Black Polyurethane—Wheels are hard (90A durometer), except 4" dia. wheels are soft (75A durometer).

Gray Rubber—Wheel treads are soft (70A durometer).

To Order: For choose-a-finish metal hood, please specify matte black, antique brass, bright chrome, or satin chrome finish.

Hooded Friction-Grip Stem Casters—80 to 110 lbs.

Ball-Style Polypropylene Wheel

Neoprene Rubber Wheels

A hood covering the wheel gives these casters a clean, finished look. Press-fit these casters into tubing, sockets, or drilled holes, and friction on their stem's grip ring holds them in place. Frame is steel. Wheels are black. For mounting sockets, see page 1412.

Ball-style polypropylene wheel is extra hard (70D durometer).

Neoprene rubber wheels are soft (55A durometer) and oil resistant. The wheel bearings are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Friction-Grip Stem Casters—75 to 325 lbs.

Press-fit the stem into tubing, sockets, or drilled holes—friction on the stem's grip ring holds the caster in place. Frame is plated steel. For mounting sockets, see page 1412.

Single-wheel casters meet BIFMA standards, except casters with easy-roll bearings. **Dual-wheel** casters provide better load distribution and easier turning than single-wheel casters.

Easy-roll bearings have steel balls and require minimal effort to start rolling.

Static-Control Rubber—Wheels prevent static buildup. Surface resistance is less than 10^6 ohms.

■ Caster has a total lock that brakes the wheel and locks the swivel in one operation.

Light Duty Friction-Grip Stem Casters—40 to 110 lbs.

Commonly found on furniture and displays, these twin-wheel casters are lightweight and economical. Friction on the stem's grip ring holds the caster in place once it's press-fit into tubing, sockets, or drilled holes. Meet BIFMA standards, unless noted. Wheels are black and nonmarking. For mounting sockets, see page 1412.

Concealed-stem casters create a seamless joint between the top of the caster and the bottom of most swivel chairs.

Choose-a-finish metal hood is available in matte black, antique brass, bright chrome, and satin chrome finishes. **To Order:** Please specify finish.

Nylon wheels are extra hard (70D durometer). *Static-control wheels* prevent static buildup. Surface resistance is less than 10^4 ohms.

Polyurethane wheels are hard (90A durometer).

♦ Does not meet BIFMA standards. ↙ Brake is internal; caster rolls when load is applied and stops when load is removed.

Wire Shelving Food-Service Friction-Grip Stem Casters—250 to 300 lbs.

Round Stem

Square Stem with Brake

Mobilize your food-service shelving. Casters meet NSF/ANSI standards. They press-fit into 1″ OD 16-ga. tubing, and friction on their stem's grip ring holds them in place. Stem is 7/8″ OD and 2 3/16″ long. A debris cap on the swivel keeps out contaminants. Frame is zinc-plated steel.

Lightweight Polypropylene—Wheels are extra hard (65D durometer).

Cushioned Rubber—Wheel treads are soft (65A durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer).

Also Available: Type 304 stainless steel casters for superior corrosion resistance. Please ask for 88005T888 and specify steel caster part number.

Expanding-Stem Casters—125 to 220 lbs.

Sleeve Style

Wedge Style

Wedge Style with Total Lock

Wedge-Style Stem Expanded

Create the exact stem diameter you need by tightening the stem's nut, which expands the stem for a snug fit inside your equipment's legs. Wheels are nonmarking gray rubber on polypropylene core. Frame is plated steel.

Sleeve-style stem has a rubber sleeve that expands as it is compressed. They meet NSF/ANSI standards. Wheel treads are soft (75A durometer).

Wedge-style stem has metal wedges that expand outward for a more secure fit than the sleeve-style stem. Wheel bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all bearings we offer. Wheel treads are soft (80A durometer). *Swivel casters with total lock* brake the wheel and lock the swivel in one operation.

Octagonal- and Square-Stem Casters—125 to 325 lbs.

The stems on these casters fit into square tubing and can also be bolted to angle iron using three 1/4" bolts. Stem is 3/4" OD and 2 1/16" long. Frame is zinc-plated steel.

Swivel casters with total lock brake the wheel and lock the swivel in one operation.

Octagonal-stem casters also fit inside round tubing.

Square-stem casters meet NSF/ANSI standards. *Abrasion-resistant polyurethane on polypropylene wheels* have easy-roll steel ball bearings.

★ Caster has a wheel brake instead of a total lock.

Large Stem Casters—450 to 900 lbs.

Commonly used on scaffolding, these are the biggest stem casters we offer. All casters have a total lock that brakes the wheel and locks the swivel in one operation. Stems have two 1/2" dia. mounting holes. Frame is zinc-plated steel.

Cushioned Rubber—Wheel treads are soft (85A durometer).

Abrasion-Resistant Polyurethane—Wheel treads are hard (95A durometer) and nonmarking.

5"	31/32"	5 3/4"	145	2399T8	23.36

Socket-Mount Casters—300 lbs.

Slide the socket onto equipment legs, tighten the knurled thumb screw, and you're rolling. Casters have maintenance-free easy-roll ball bearings so they never need lubrication and provide the least rolling resistance of all the wheel bearings we offer. Wheels are red polyurethane on a polypropylene core. Wheel treads are hard (90A durometer) and nonmarking. Frame is zinc-plated steel.

Casters come in three sizes that fit a range of tubing ODs: 3/4"-1", 1"-1 1/4", and 1 1/4"-1 1/2".

To Order Please specify tubing OD range.

V-Groove Track Wheels

Move equipment on angle-iron track as well as the floor—these have a 90° V-groove machined into the flat tread.

General purpose bearings have straight rollers that provide smooth rolling.

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision stainless steel balls provide the least rolling resistance of all the wheel bearings we offer.

Abrasion-Resistant Polyurethane—Wheels are extra hard (60D durometer) and nonmarking.

Phenolic—Wheels are extra hard (90D durometer) and nonmarking.

Corrosion-Resistant Type 303 Stainless Steel—Wheels are suitable for steam-cleaning applications.

To Order: Please specify axle diameter where applicable.

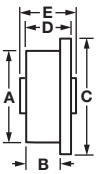
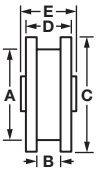
Flanged Track Wheels

Single Flange



Double Flange



A flange on one or both sides of the wheel keeps your equipment running on track. Wheels have straight roller bearings and are made of steel with a black powder-coated finish. Temperature range is –13° to 250° F.

Also Available: Wheels with plain bore (no bearings). Please ask for 2353T999 and specify material, single or double flange, with or without keyway, with or without set screws, wheel dia., wheel width, flange dia., overall width, axle dia., and hub length.

To Order: Please specify axle diameter where applicable.

Corrosion-Resistant Stainless Steel Wheels

The best choice for washdown applications such as food-processing areas, these wheels are Type 303 stainless steel with sealed Type 440C stainless steel bearings. Bearings never need lubrication and have precision stainless steel balls for the least rolling resistance of all wheel bearings we offer. Temperature range is –15° to 250° F.

High-Capacity Steel Wheels

Wheels are forged from steel for strength. They have rounded edges that ensure easy turning. Temperature range is –20° to 250°F.

General purpose bearings have straight rollers that provide smooth rolling.

Impact-resistant bearings have tapered rollers that withstand both downward and side force.

Long-Lasting Nylon Wheels

White

High-Temperature Black and Wear-Resistant Black

High-Capacity Black

Our most durable plastic wheels are made of nylon, which resists impact and wear as well as corrosion from water, oil, and detergents. Wheels are extra hard (65D-85D durometer) and nonmarking.

General purpose bearings have straight rollers that provide smooth rolling.

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

High Temperature—Withstanding temperatures up to 480°F, these wheels are commonly used on racks in bakeries and curing ovens.

Wear Resistant—Glass-filled nylon wheels offer even more durability than other nylon wheels for maximum service life.

High Capacity—A lightweight alternative to metal wheels, these offer capacities approaching those of steel.

Long-Lasting Iron Wheels

Standard

High Strength

Rugged cast iron wheels offer the strength and wear resistance you need for heavy loads and long life.

Standard—Also known as gray iron. Wheels are solid, unless noted. Temperature range is –20° to 250°F.

High Strength—Made of ductile iron, wheels are more shock resistant than standard iron wheels. Wheels are spoked. Temperature range is –45° to 800°F.

General purpose bearings have straight rollers for smooth rolling.

To Order: Please specify axle diameter where applicable.

★ Wheels are spoked.

Econo-Lite Polypropylene Wheels

Made of lightweight polypropylene, these are the most economical wheels we offer. Wheels are extra hard (70D durometer) and nonmarking. They resist water, oil, gasoline, and solvents. Temperature range is –20° to 180°F.

General purpose bearings have straight rollers that provide smooth rolling.

To Order: Please specify axle diameter and color where applicable.

Phenolic Wheels

The standard in plastic wheels, phenolic wheels are nonmarking and oil resistant. Wheels are extra hard (90D durometer). Temperature range is –50° to 250° F, unless noted.

Water Resistant— Unlike other phenolic, this special blend won't absorb water.

High Temperature— Wheels are commonly used in bakeries and production lines with heating elements. Temperature range is –65° to 475° F.

Impact Resistant— Treads are laminated to prevent chipping.

General purpose bearings have straight rollers that provide smooth rolling.

To Order: Please specify axle diameter where applicable.

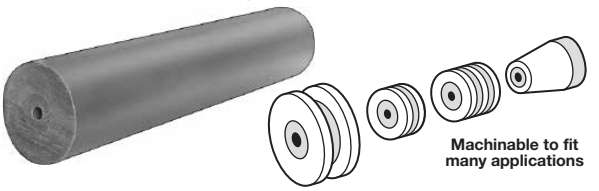
Cut-to-Width Polyurethane Wheels



Machinable to fit many applications

Make your own wheels by cutting these 20″ long wheel blanks to size with a band saw. They're easy to machine so you can create V-groove and flanged wheels, as well as conveyor rollers and pulleys. Polyurethane resists abrasion, oil, and mild solvents, plus is nonmarking and shock absorbing. Temperature range is –60° to 212° F. Note: Do not cut with a circular saw.

Wheels with **30A durometer** are extra soft. Color is orange.

Wheels with **50A durometer** are comparable to soft rubber but more resilient. Color is yellow.

Wheels with **70A durometer** provide some cushion but are firmer than wheels with 30A and 50A durometer. Color is blue.

Wheels with **90A durometer** are hard and offer the most abrasion resistance. Color is red.

To Order: Please specify durometer: 30A, 50A, 70A, or 90A.

Polyurethane Wheels

Polyurethane is wear resistant like plastic yet is quieter and more resilient. Wheels resist oil, grease, and mild acids and can be steam cleaned. They are extra hard (80D durometer) and nonmarking. Temperature range is –40° to 230° F.

General purpose bearings have straight rollers that provide smooth rolling.

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Lightweight Polyurethane-Tread Wheels

Polypropylene Core

High-Capacity Aluminum Core

Wheels have a plastic or aluminum core so they're not only lighter than wheels with an iron core but also more corrosion resistant. Polyurethane is quiet and nonmarking and resists water, oil, and many solvents. Temperature range is –20° to 180° F.

General purpose bearings have straight rollers that provide smooth rolling.

Polypropylene Core

Treads are rounded for easy turning.

85A durometer tread is soft. Color is gray.

95A durometer tread is hard. Color is red.

To Order: Please specify tread durometer: 85A or 95A.

10″	2½″	¾″	3″	1,900	2438T45	89.43

Polyurethane-Tread Wheels

Like polyurethane and rubber wheels, these protect your floor and eliminate noise, but their hard iron core makes them a higher-strength alternative. Temperature range is –20° to 180° F.

General purpose bearings have straight rollers that provide smooth rolling.

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Impact-resistant bearings have tapered rollers that withstand both downward and side force.

Cushioned Tread

Shock-Absorbing Tread

Polyurethane-Tread Pallet and Lift Truck Wheels

Replace worn or broken wheels on your equipment—these wheels are designed to fit specific models of pallet and lift trucks. Treads are hard (90A durometer) and nonmarking. Core is steel. Temperature range is –20° to 140° F.

Wheels with bearings have maintenance-free easy-roll bearings that are completely sealed so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Also Available: Other manufacturers' wheels not shown. Please ask for 2670T999 and specify the manufacturer's name, part number, and wheel size.

Easy-Turn Polyurethane-Tread Wheels

A rounded tread allows these wheels to swivel more easily than flat-tread wheels. Treads are quiet, nonmarking, and resistant to oil and grease.

Easy-roll bearings have steel balls that require minimal effort to start rolling.

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

Abrasion-resistant treads are hard (95A durometer). Temperature range is –30° to 200°F.

Cushioned treads are soft (80A durometer). Temperature range is –50° to 150°F.

To Order: Please specify axle dia. where applicable.

Rubber Wheels

With no possibility of tread separation, solid rubber wheels offer a durable, smooth ride. Temperature range is –20° to 180°F, except wheels with nylon sleeve bearings have a temperature range of –40° to 158°F.

Static-control rubber wheels prevent static buildup. Surface resistance is less than 10^6 ohms. Meet Fed. Spec. FF-C-77/FF-C-86.

Oil-resistant neoprene wheels won't degrade when they come in contact with oil. They also resist acids and solvents and are more resilient than other rubber wheels. Wheels have debris guards (unless noted) to keep out contaminants. *Easy-roll bearings* have steel balls that require minimal effort to start rolling.

Lightweight Rubber-Tread Wheels

Nylon or aluminum cores make these wheels lighter than standard iron-core wheels without sacrificing capacity. Their cushioned rubber treads provide a quiet, smooth ride. Treads are soft (70A durometer).

Maintenance-free easy-roll bearings are completely sealed, so they never need lubrication. Their precision steel balls provide the least rolling resistance of all the wheel bearings we offer.

General purpose bearings have straight rollers that provide smooth rolling (unless noted).

Oil-resistant neoprene treads won't degrade when they come in contact with oil. They also resist solvents and acids and are more resilient than other rubber wheels.

▲ Has a spoked core.

High-Performance Rubber-Tread Wheels

Thermoplastic rubber treads outlast standard rubber wheels with better resistance to water, steam, and acids. Treads are gray (unless noted) and nonmarking. Core is polypropylene. Temperature range is –40° to 180° F for extra-soft and hard treads and –45° to 120° F for soft treads.

Extra-soft treads provide superior cushioning and a quiet ride. Durometer is 40A.

Soft treads still provide a quiet, cushioned ride, but can roll over debris—even metal shavings and chips—without breaking apart. Durometer is 65A.

Hard treads have higher capacities to rival polyurethane-tread wheels, but won't squeak. Hard treads also make these wheels easy to roll. Durometer is 90A.

General purpose bearings have straight rollers that provide smooth rolling.

Easy-roll bearings have steel balls that require minimal effort to start rolling.

Rubber-Tread Wheels

For information about wheels, see page 1380.

Easy-Turn Rubber-Tread Wheels

Also known as balloon tires, these have a rounded, cushioned tread for easy turning and good shock absorption. Wheels have steel ball bearings that require minimal effort to start rolling. Tread is soft (62A durometer) and nonmarking; core is aluminum. Temperature range is –20° to 160° F.

To Order: Please specify axle diameter.

Cushioned Rubber-Tread Wheels

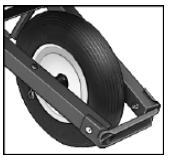
Smooth Rim

Lug-Type Rim

Polypropylene Core

Aluminum Core

Hollow Tread *Solid Tread*



Center-Mount Hub

Side-Mount Hub

Thick rubber treads offer more cushion than standard rubber treads, and unlike air-filled tires there's no chance of flats. Treads are ribbed black rubber, unless noted.

Hollow Tread—Also known as semi-pneumatic wheels, these have a puncture-resistant tread and a pocket of nonpressurized air that doesn't require inflation. Temperature range is not rated. All rims are welded. *Smooth rims* are better for light duty applications. *Lug-type rims* have a series of indentations that line up with the tire's lugs to lock the tire in place so it won't slip on the rim.

Solid Tread—*Polypropylene core* has a soft tread (80A durometer). Temperature range is –22° to 212° F. *Aluminum core* has a soft tread (60A durometer) that's molded onto the core for durability. Temperature range is –40° to 120° F.

Center-mount hubs are symmetrical for equal clearance on both sides of the wheel. **Side-mount hubs** are offset for extra clearance between the wheel and your equipment.

Easy-roll bearings have steel balls and require less effort to start rolling. **General purpose bearings** have straight rollers that provide smooth rolling.

To Order: Please specify axle diameter where applicable.

Air-Ride Wheels and Tires

A B C D E F G H

Complete Wheel

Replacement Tire

Center-Mount Hub

Side-Mount Hub

Also known as pneumatic wheels, these consist of an air-filled rubber tire on a steel rim and are among the quietest, most shock-absorbing wheels available. Wheels 5″ and wider offer better load distribution so they won't damage grass or sod but still provide good traction.

Standard Rims—Tires are tubeless, unless noted.

Easy-Maintenance Rims—Consist of two pieces bolted together so the wheels can be quickly repaired or replaced. Tires have inner tubes for more puncture resistance than tubeless tires. For replacement inner tubes, see page 1422.

Center-mount hubs are symmetrical for equal clearance on both sides of the wheel. *General purpose bearings* have straight rollers that provide smooth rolling. *Easy-roll bearings* have steel balls and require minimal effort to start rolling.

Side-mount hubs are offset for extra clearance between the wheel and your equipment. Their easy-roll bearings have steel balls and require minimal effort to start rolling.

■ Has inner tube.

Air-Ride Trailer Wheels

Like other air-filled tires these absorb shock to protect your load, but they have a stiff sidewall that prevents swaying during towing. Also known as pneumatic wheels, they consist of a black rubber tire on a steel rim. Wheels are suitable for highway use.

Four-hole rims have a 4″ bolt circle.

Five-hole rims have a 4½″ bolt circle.

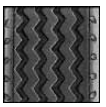
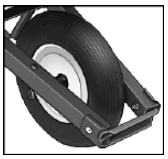
Flat-Free Wheels



A



Center-Mount Hub

B

Side-Mount Hub

C

You'll get the quiet, cushioned ride of an air-filled tire without the possibility of a flat. All have easy-roll steel ball bearings. Treads are black. Rims are steel.

Lightweight Wheels—Made of high-density foam polyurethane, these are lighter in weight than foam-filled rubber tires. Polyurethane is nonmarking and water- and UV-resistant.

Extra-Stable Wheels—The original flat-free wheel, these consist of a conventional rubber tire filled with polyurethane foam. Wheels are more stable and handle higher speeds than lightweight wheels.

Center-mount hubs are symmetrical for equal clearance on both sides of the wheel. **Side-mount hubs** are offset for extra clearance between the wheel and your equipment.

To Order: Please specify axle diameter where applicable.

Emergency Tire Inflator/Sealant

Inflate tires and temporarily seal most punctures on the spot.

7345A29 ..... $8.75

Prevent-a-Flat Sealant

Fill your tire with this sealant before a puncture occurs. Temperature range is –10° to 110° F.

For Tire Type	Net Wt.	For Tires with Inner Tube		For Tubeless Tires	
Bicycle	8 oz.	4995T4	$7.48	4995T1	$7.48
Car	16 oz.	4995T5	10.00	4995T2	11.68
Truck	32 oz.	—	—	4995T3	17.88

Inner-Tube Repair Kit

Kit includes six 7/8″ square adhesive-backed patches that expand and contract with the tube, sandpaper for preparing the area around the puncture, and a carrying case.

4991T93 ..... $3.50

Tubeless-Tire Repair Kits

Repair kit includes five string patches, a tube of rubber cement, and tools to prepare the area around the puncture and apply the patches.

Refill kit includes 10 extra string patches.

Repair Kit	4991T83	$9.29
Refill Kit	4991T82	4.54

Tire Tread Gauge

Measure tread depth in 1/32″ increments up to 1″.

4991T85 ..... $4.69

Tire Valves and Valve Repair Tools

Tire Valves and Extensions

Tire Valve

Valve Extension

Tire valves snap into tubeless tire rims. Max. pressure is 60 psi. Valves are black rubber.

Valve extension lengthens the stem of the tire valve for easier access. Extension is brass.

	For Rim Hole Dia.	Installed Lg.	Pkg. Qty.		Pkg.
Tire Valve	0.453″	7/8″	2	4991T84	$2.09

Tire Valve	0.453″	2″	2	4991T953	4.00
Valve Extension	———	1 1/4″	4	4991T955	12.20

Tire Valve Caps

Keep dust and debris out of your tire valve.

Plastic

	Pkg. Qty.		Pkg.
Plastic	5	4991T956	$1.33
Chrome-Plated Brass	4	4991T94	3.93

Tire Valve Cores

Refurbish a worn valve by threading in one of these replacement cores. Maximum pressure is 200 psi. Cores are nickel-plated brass.

Pkg. of 5 ..... 4991T954 $2.87

Tire Valve Tools

Repair Tool

Installation Tool

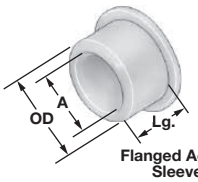
Repair or replace valves and cores using these steel tools.

Tire valve repair tool rethreads the inside and outside of valve stems.

Tire valve installation tool has a grip handle so you can easily pull the stem of a new valve through the hole on your tire's rim. Tool has a built-in deflator.

Tire Valve Repair Tool	6115A11	$2.49
Tire Valve Installation Tool	6115A12	4.80

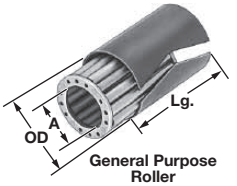
Wheel Bearings



Flanged Acetal Sleeve

Standard Acetal Sleeve

Easy-Roll Ball



General Purpose Roller

Retaining Washer

Replace worn or damaged wheel bearings to keep your equipment rolling. Bearings and washers are steel, unless otherwise stated. Use *flanged acetal sleeve bearings* and *easy-roll ball bearings* in pairs. Axle diameter can be changed using reducer bushings (sold separately on this page). Note: Not for use in towing applications.

For impact-resistant tapered roller bearings, as well as other bearing materials and sizes, please see pages 1174-1209.

Acetal sleeve bearings are a good choice for washdown and dusty environments. Temperature range is –20° to 180° F.

Easy-roll ball bearings require minimal effort to start rolling and are best for low speeds.

General purpose roller bearings are the most popular style of bearing and provide smooth rolling.

Retaining washers hold roller bearings in place.

✓ Made of nylon.

Reducer Bushings for Wheels

Reducer bushings, also known as spanner bushings, reduce the inside diameter of a bearing to fit a particular axle size. Bushings also reduce wear on the axle when used in plain bores and with straight roller bearings. All are hardened steel and have a hole for lubrication.

Washers slide over the bushing and add 3/32″ to the hub length. Multiple washers can be used to match the length of the bushing. Washers are steel.

Wheel Covers

For Center-Mount Wheels

For Side-Mount Wheels

Protect your floors from grime and scuffs, plus reduce noise. Covers are made of water-proof polypropylene fabric and can be easily slipped on and off your wheels.

Covers **for center-mount wheels** cover the tread of the wheel and are typically used on casters. All have a hook-and-loop closure.

Covers **for side-mount wheels** cover the tread and one side of the wheel. They're used on hand trucks and other wheels mounted on the end of an axle.

Traction Chains

Durable steel chains keep you from spinning your wheels in snow and mud.

Chains **for cars** automatically adjust to the right tension as you drive, so they're easy to install and remove. Chains include a carrying case.

Chains **for trucks/SUVs** comply with NACM (National Association of Chain Manufacturer) specifications.

Also Available: Chains for other tire sizes. Please ask for 4991T999 and specify vehicle type and tire size.

Slip-On Feet

Cover the bottom of furniture legs, canes, and crutches to gain traction and protect floors from scratches and wear.

Feet with a **reinforced bottom** have a metal washer in the base to prevent equipment legs from cutting through the rubber.

Oil-resistant rubber feet are neoprene.

UV-resistant rubber feet are EPDM, which withstands exposure to direct sunlight.

About Leveling Mounts

In addition to leveling the supports or legs of equipment, mounts position equipment above the floor for easier cleaning and inspection. Mounts that swivel compensate for uneven floors.

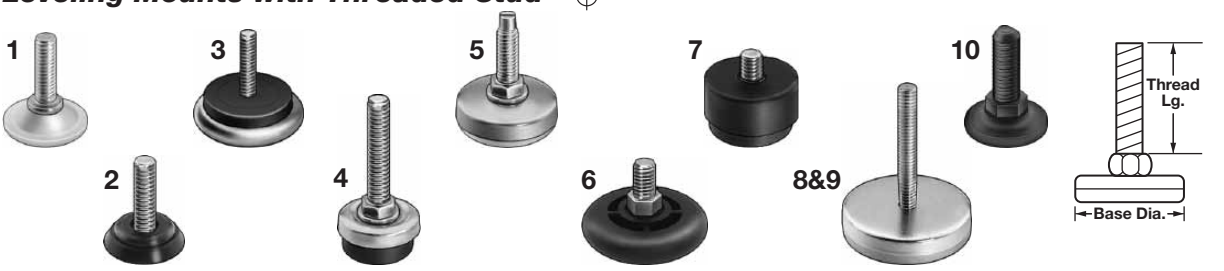
Vibration-damping leveling mounts also isolate vibration and noise transmitted from machines. Performance is measured by deflection (the distance the mount moves when subjected to force). Generally the higher the deflection rating, the greater the vibration and noise isolation.

Before selecting a mount, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formula to find the capacity required per mount:

$$\text{Capacity per Mount} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Leveling Mounts with Threaded Stud



(1) Light Duty— Stud is zinc-plated steel; base is white plastic. Not rated for temperature or capacity.

(2) High Temperature— Stud is zinc-plated steel; base is black plastic.

(3) Cushion Rest— The black plastic cushion on top of the 304 stainless steel base provides padding between your furniture and the mount. Stud is zinc-plated steel. The 100-lb. capacity mount has a tee nut insert for mounting to unthreaded wood feet.

(4) Nonmarring— A black plastic cushion on the bottom of these mounts protects surfaces from scratches and wear. Mount is zinc-plated steel. Stud has a hex nut for height adjustment.

(5) Easy Adjust— A hex nut at the base of the stud and a slotted stud tip allow easy height adjustment. Stud is zinc-plated steel. Base is nickel-plated steel with a nonmarring plastic bottom.

(6) Low-Clearance Easy Adjust— Use when there is little room between the machine base and floor. Stud is galvanized steel. Base is black plastic.

(7) Self Adjusting— Often used on wobbly tables, these mounts automatically adjust up to 5/16" to compensate for uneven floors. Stud is zinc-plated steel. Base is black plastic.

(8) Heavy Duty— Use these zinc-plated steel mounts on heavy machines and equipment. Base has a nonmarring plastic bottom.

(9) Corrosion Resistant— Made of 303 stainless steel, these mounts resist corrosion from water and most chemicals. Base has a nonmarring plastic bottom.

(10) Oil Resistant— Made entirely of black plastic, these mounts won't scratch your surface.

Vibration-Damping Leveling Mounts with Threaded Stud

Use these mounts to minimize vibration and noise to prolong machine life and protect floors. Their cushion grips the floor for stability and is resistant to oil and grease. Mounts are zinc-plated steel for corrosion resistance. Cushion is black rubber with a temperature range of -40° to 200° F, except 6167K14 and K17 have a maximum temperature of 150° F.

Extreme-Force Vibration-Damping Leveling Mounts

Higher deflection ratings translate to greater vibration and shock isolation than our other vibration-damping leveling mounts. These mounts have a black rubber base that grips the floor for stability and is resistant to oil and grease. Temperature range is -20° to 180° F.

Mounts **with threaded stud** include a locknut and a flange nut for height adjustment. Stud is zinc-plated steel.

Mounts **with threaded hole** have a steel insert and can be used with your own threaded stud or bolt.

Quick-Install Vibration-Damping Leveling Mounts with Threaded Stud

A two-piece design simplifies installation and requires less clearance than one-piece mounts. Use these mounts to minimize vibration and noise to prolong machine life and protect floors. Their cushion grips the floor for stability and is resistant to oil and grease. Cushion is black rubber and has a temperature range of -20° to 180° F. Base is steel; stud is zinc-plated steel.

Low-Clearance Swivel Leveling Mounts with Threaded Stud

At less than 2" tall, it's easy to position these compact mounts when clearance is limited. Mounts are made entirely of 304 stainless steel and resist corrosion from water and most chemicals. The base nut swivels 5° to compensate for uneven surfaces.

Mounts with a **cushion** are non-skid for an extra measure of stability. Cushion has a temperature range of 0° to 180° F.

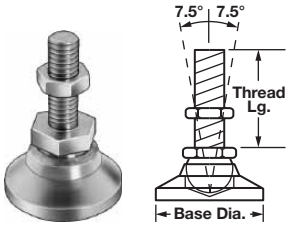
Swivel Leveling Mounts with Threaded Stud



Mounts have a ball-and-socket design that swivels 7.5° to compensate for uneven floors. Mounts include a removable zinc-plated steel locknut.

Mounts with a **cushion** are nonskid for an extra measure of stability. Cushion is black rubber and has a temperature range of -20° to 170° F.

Nickel-Plated Steel—Provides some corrosion resistance. Stud is nickel-plated steel.

Zinc-Plated Steel—Offers more corrosion resistance than nickel. Stud is zinc-plated steel.

Black-Oxide Steel—Use where appearance is a concern. Stud is zinc-plated steel.

Plastic—An economical choice for applications is corrosive environments that don't require high load capacities. Base is white and nonmarring; stud is zinc-plated steel. Temperature range is -20° to 170° F.

Swivel Leveling Mounts with Threaded Hole

Add your own threaded stud or bolt to build a mount that fits your needs. Mounts have a ball-and-socket design that swivels 7.5° to compensate for uneven floors.

Mounts with a **cushion** are nonskid for an extra measure of stability. Cushion is black rubber and has a temperature range of -20° to 170°F.

Nickel-Plated Steel—Provides some corrosion resistance.

Zinc-Plated Steel—Offers more corrosion resistance than nickel.

Black-Oxide Steel—Use where appearance is a concern.

Plastic—Base is white and nonmarring. Temperature range is -20° to 170°F.

High-Capacity Swivel Leveling Mounts with Acme Threaded Stud

Broader, stronger threads enable faster adjustments and higher load capacities than standard V-shaped threads. Mounts have a ball-and-socket design that swivels 7.5° to compensate for uneven floors. They're made of zinc-plated steel for corrosion resistance.

Studs include a removable lock-nut.

Corrosion-Resistant Swivel Leveling Mounts

With Threaded Stud

With Threaded Hole

Made entirely of stainless steel, these mounts hold up in harsh environments. Their ball-and-socket design swivels 7.5° to compensate for uneven floors.

Mounts **with threaded stud** include a removable locknut.

Mounts **with threaded hole** allow you to add your own threaded stud or bolt to build a mount that fits your needs.

303 Stainless Steel—Resists corrosion from water and most chemicals.

316 Stainless Steel—Provides superior corrosion resistance from chemicals, solvents, and water.

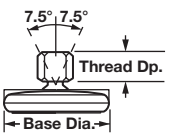
Bolt-Down Swivel Leveling Mounts with Threaded Hole



Punch-out holes in the base let you bolt down these mounts to keep your equipment stationary. Their ball-and-socket design swivels 7.5° to compensate for uneven floors. Add your own threaded stud or bolt to build a mount that fits your needs. Base is black plastic. Temperature range is -20° to 170°F.

Mounts with a **cushion** are nonskid for an extra measure of stability.

Zinc-Plated Steel Nut—Offers some corrosion resistance.

303 Stainless Steel Nut—Provides superior corrosion resistance.

■ Mounts with cushion: Add 1/16″ to overall height for 3,500- to 7,500-lb. mounts; add 5/16″ to 10,000-lb. mounts.

Bolt-Down Swivel Leveling Mounts with Threaded Stud

Punch-out holes in the base let you bolt down these mounts to keep your equipment stationary (fasteners not included). Their ball-and-socket design swivels 7.5° to compensate for uneven floors. Mounts also include a removable locknut. Base is black plastic. Temperature range is -20° to 170°F.

Mounts **with offset mounting hole** have an oval shape that allows you to secure these mounts without moving your machine.

Mounts **with cushion** are nonskid for an extra measure of stability. Cushion is black rubber.

Zinc-Plated Steel Stud—Offers some corrosion resistance.

303 Stainless Steel Stud—Provides superior corrosion resistance.

■ Mounts with cushion: Add 3/16" to overall height.

Precision Leveling Mounts

These mounts have fine threads that give you precise adjustment control, so you can align machine components exactly. Add height to mounts using a swivel top or shim. All have an unthreaded hole and are made of steel.

Swivel tops allow mounts to level non-parallel surfaces with a maximum adjustment angle of 4°, while providing additional height. Use a **shim** under any mount to increase the height. Two **spanner wrenches** are required to adjust the height of each mount—one to brace the bottom half of the mount and the other to turn the top half.

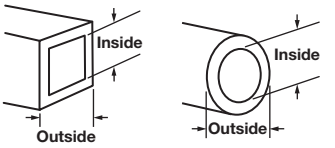
Threaded Tube Inserts



Install these inserts and you'll be able to use threaded leveling mounts on your tube-end machinery supports, instrument bases, and conveyor equipment. Inserts are plastic with brass threads and tap into place with a rubber hammer.

Inch inserts have a temperature range of 20° to 180° F.

Metric inserts have a temperature range of -20° to 180° F.

Leveling Mounts with Shielded Threaded Stud

A shield on the stud prevents dirt accumulation on the threads and provides a finished appearance. In addition to leveling equipment, use mounts to set workbenches and tables at a comfortable working height. Meet NSF/ANSI standards.

Style 1 stud is zinc-plated steel.

Style 2 stud is black-oxide steel.

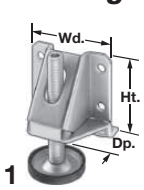
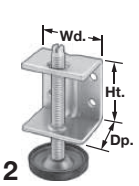
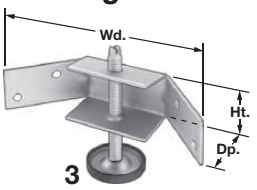
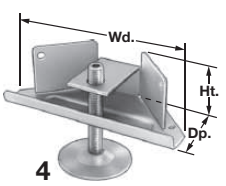
Leveling Mounts with Mounting Bracket









Install these mounts on machines without feet. Mounting brackets are zinc-plated steel.

Styles 1-4 have a steel base with a black plastic cushion, unless noted. Temperature range is -20° to 170° F. Mounting brackets have four 3/16″ dia. mounting holes and include 5/8″ long tapping screws.

Styles 5&6 have a shield on the stud that prevents dirt accumulation on the threads and provides a finished appearance. Mounting brackets have four 5/16″ dia. mounting holes spaced 2 5/8″ center-to-center (fasteners not included). Meet NSF/ANSI standards.

Mount with **plastic shield** has a maximum temperature of 175° F.

★Base does not have a cushion.

Swivel Leveling Mounts with Mounting Bracket

Ready for installation on the bottom of machines and equipment without feet, these mounts come with their own bracket. Their ball-and-socket design swivels 25° to compensate for uneven floors. Brackets are stainless steel and have four mounting holes (fasteners not included).

Aluminum mounts have an aluminum base and a zinc-plated steel stud. They are corrosion resistant and lightweight. **Stainless steel** mounts have a stainless steel base and stud.

Heavy Duty Leveling Mounts

Choose from mounts that support 3,000 to 30,000 lbs. for heavy machinery. Since your machine rests on top of these mounts, they're good for equipment with inaccessible mounting feet or no feet at all. Mounts have a ribbed top to maximize grip and prevent liquids from settling. Turn the bolt to adjust the level and compensate for uneven floors. Mounts are cast iron; stud is zinc-plated steel.

Vibration-damping mounts have a cushion underneath the base that resists oil, grease, and acids. Temperature range is 0° to 150° F.

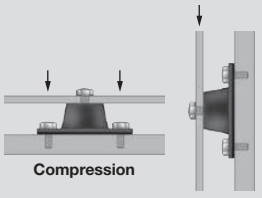
Vibration-Damping Leveling Mounts

For technical drawings and 3-D models, go to mcmaster.com.

About Vibration-Damping Mounts



Vibration-damping mounts isolate vibration and noise transmitted to and from machinery. They reduce maintenance costs, prolong equipment life, and protect floors. Performance is measured by deflection (the distance the mount moves when subjected to force). Generally, the higher the deflection rating, the greater the vibration and noise isolation.

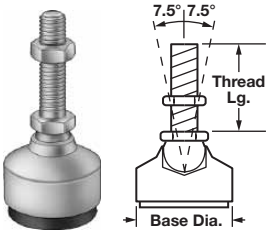
Most vibration-damping mounts are used in *compression* applications. Some mounts can also be used in *shear* applications, where force is applied to the stud or bolt hole from the side.

Before selecting a mount, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formula to find the capacity required per mount:

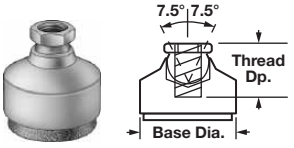
$$\text{Capacity per Mount} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Swivel Vibration-Damping Leveling Mounts



With Threaded Stud



With Threaded Hole

Use these mounts to minimize vibration and noise to prolong machine life and protect floors. Their ball-and-socket design swivels 7.5° to compensate for uneven floors. They're zinc-plated steel. Cushion is rubber and has a temperature range of -20° to 170° F.

Standard mounts have a black cushion. **High capacity** mounts have a brown cushion.

Mounts **with threaded stud** come with a removable locknut. Stud is zinc-plated steel.

Mounts **with threaded hole** can be used with your own threaded stud or bolt to build a mount that fits your needs.

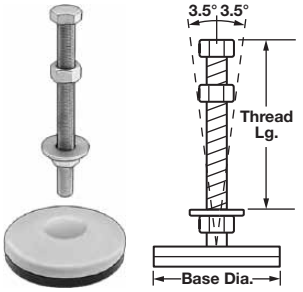
Low-Clearance Swivel Vibration-Damping Leveling Mounts



A two-piece design requires less clearance than one-piece mounts and simplifies installation—raise your machine just enough to slide the base underneath, then insert the stud from above. Use these mounts to minimize vibration and noise to prolong machine life and protect floors. The stud rests in an unthreaded depression in the center of the base and swivels 3.5° to compensate for uneven floors. They have a cast iron base with a black rubber cushion that's good for use indoors in dry conditions. Temperature range is -40° to 200°. Stud is zinc-plated steel.

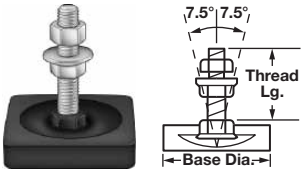
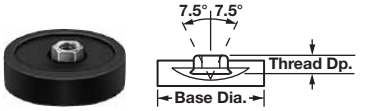
Extreme-Force Swivel Vibration-Damping Leveling Mounts



Square Base with Threaded Stud



Round Base with Threaded Hole

Higher deflection ratings translate to greater vibration and shock isolation. These mounts have a black rubber base that grips the floor for stability and is resistant to oil and grease. Their ball-and-socket design swivels 7.5° to compensate for uneven floors. Temperature range is -20° to 180° F.

Mounts **with threaded stud** include a removable locknut and a flange nut. Stud is zinc-plated steel.

Mounts **with threaded hole** can be used with your own threaded stud or bolt to build a mount that fits your needs.

Stainless Steel Swivel Vibration-Damping Leveling Mounts

All-stainless steel construction stands up to water and chemicals and won't rust or corrode. Use these mounts to minimize vibration and noise to prolong machine life and protect floors. Their ball-and-socket design swivels to compensate for uneven floors. Mounts are 304 stainless steel with a black rubber cushion under the base. Temperature range is 0° to 200°F, except the 1¼" dia. base has a temperature range of -20° to 170°F.

Standard mounts swivel 7.5°. They include a removable locknut and washer, unless noted.

Bolt-down mounts have a hole in the base so you can bolt them down to keep equipment stationary. Mounting hole is ⅝" dia. (fasteners not included). Mounts swivel 5°.

Food-grade mounts are designed for use with food-processing equipment because they have no place for contamination to accumulate. Mounts swivel 10°.

♦ Washer not included.

Tear-Resistant Light Duty Vibration-Damping Mounts

A specially designed natural rubber body provides uniform stress distribution, isolates vibration, and protects from occasional shock in compression load applications. Metal parts are aluminum for 2-8 lb. capacity mounts and steel for 12-90 lb. capacity mounts. Rubber is black. Temperature range is 0° to 170°F.

All have four mounting holes (fasteners not included). **Surface** mounts have a holder that raises the entire mount above the supporting base, eliminating the need to drill a large hole in the base material. **Optional washers** can be installed (one on each end of the mount) to keep equipment supported if the rubber fails.

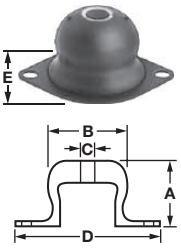
Oil-Resistant Light Duty Vibration-Damping Mounts



Specifically designed for light vertical load applications, these mounts buckle under loads to protect small equipment such as compressors and pumps from vibration and shock. They're made of oil-resistant rubber and have an aluminum mounting flange with two holes (fasteners not included). Temperature range is –20° to 180° F. Rubber is black.

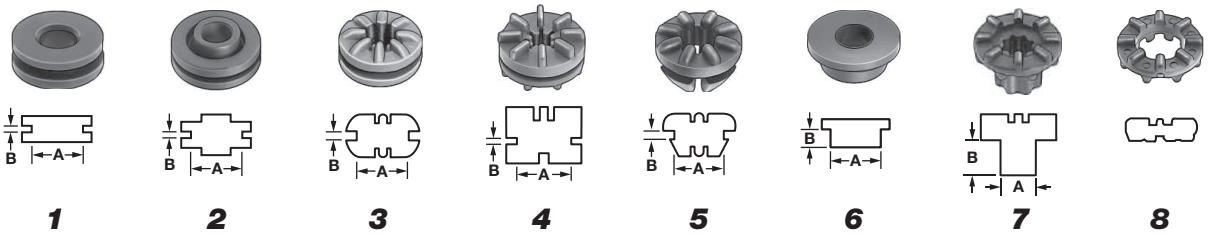
Vibration-Damping Grommets and Bushings



Dampen vibration as well as isolate and reduce shock and motion in motors, fans, blowers, actuators, circuit boards, and other electromechanical equipment. Unlike grommets, bushings can work with a range of hole thicknesses.

Ribbed grommets and bushings are more flexible. Use *ribbed bushings* (Style 7) with *flat ribbed rings* (Style 8) to fill space between the bushing and the equipment surface.

High Damping— Made of PVC, these grommets and bushings absorb vibration quickly and rebound less than their low-damping equivalents. Durometer is 56A. Temp. range is 55° to 105° F. Color is blue.

Low Damping— Compared to high-damping grommets and bushings, these absorb vibration more slowly and have more elastic for greater rebound. They are made of rubber. Durometer is 57A. Temperature range is –40° to 120° F. Color is black.

Versa-Mount Vibration-Damping Mounts

Mount in any direction with this two-piece design. Mounts have an unthreaded zinc-plated steel insert to handle both compression and shear loads. Made of oil-resistant black rubber. Furnished with a washer to keep equipment supported if the rubber fails. Temperature range is –20° to 180° F.

Extreme-Temperature Light Duty Vibration-Damping Mounts

These clear silicone gel mounts retain flexibility in temperatures from –40° to 390° F, and won't discolor when exposed to the sun. Use them for protecting fragile equipment, such as electronics, from vibration in light duty compression load applications. All have an unthreaded brass insert. Not rated for deflection.

Oil-Resistant Vibration-Damping Mounts

Made of oil-resistant rubber, mounts isolate vibration, shock, and noise in compression load applications. Install under machines and equipment such as generators, HVAC equipment, electric motors, pumps, and blowers. Temperature range is 10° to 180° F. Rubber is black.

Styles 3, ***5***, and ***6*** can be stacked for additional shock protection. ***Style 6*** base is covered by rubber.

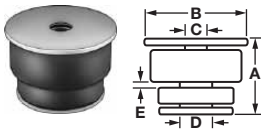
Chemical-Resistant Vibration-Damping Mounts



Made of a specially formulated rubber, mounts withstand exposure to weather and resist oil, antifreeze, and other petroleum-based fluids. Use for long-term service in compression applications such as electric motors, air compressors, and generators. An unthreaded steel insert in the center of the mount provides stability, while steel washers at the top and bottom add support. Temp. range is –40° to 200° F. Rubber is black.

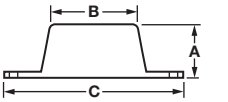
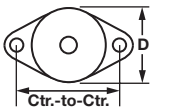
Bolt-Down Vibration-Damping Mounts





Keep mounts stationary in compression load applications—mounting holes in the flange base allow you to fasten them in place. Mounts provide vibration, shock, and noise isolation for rotating equipment such as fans, blowers, pumps, compressors, and generators. Made of oil-resistant rubber with a steel base. Styles 1-7 have a tapped hole in the center that allows you to use your own threaded rod or bolt; Style 8 has an unthreaded through-hole. Base has two mounting holes, except Style 7 has four holes (fasteners not included).

Fail-safe mounts have an interlocking steel design that keeps the mount intact even if the rubber fails.

Styles 1&2— Temperature range is 10° to 180° F.

Styles 3&4— Mounts are covered in rubber for superior corrosion resistance. The underside of the base has a nonskid surface. *Style 3* have a slotted flange hole. Temp. range is –20° to 180° F. *Style 4* include a bolt and washer. Temp. range is –20° to 225° F.

Style 5— Mounts provide high deflection and shock isolation. Temperature range is –20° to 180° F.

Styles 6&7— Mounts have a low profile and a high load capacity. Temperature range is 0° to 180° F.

Style 8— Temperature range is 10° to 180° F.

To Order: Please specify capacity per mount where necessary from those listed in the table.

For information about vibration-damping mounts, see page 1434. For information about durometer, see page 3588.

Extreme-Temperature Bolt-Down Vibration-Damping Mounts

Made of silicone, mounts withstand temperatures from –80° to 300° F in compression load applications. All have a flange base with two mounting holes so you can bolt them in place (fasteners not included). Mounts have a tapped hole in the center for use with your own threaded rod or bolt. **To Order:** Please specify capacity per mount from those listed in the table.

Versa-Mount Bolt-Down Vibration-Damping Mounts

Mount in any direction for use in compression and shear load applications. Made of oil-resistant rubber encased in zinc-plated steel for a long service life. Mounts have four mounting holes (fasteners not included). Temperature range is –20° to 180° F.

Spring-Action High-Deflection Bolt-Down Vibration-Damping Mounts

Spring action provides high deflection, which translates to greater isolation of vibration and noise for machines operating as slowly as 500 rpm. Mounts are for use in compression load applications. They have upper and lower cast iron housings that contain a steel spring and prevent horizontal movement of the mount. A layer of rubber between the housings prevents metal-to-metal contact while a rubber pad bonded to the base plate limits movement.

Mounts have two mounting slots (fasteners not included). An adjustment bolt with locking nut lets you use mounts for leveling. For best results, adjust the leveling bolt so that the upper housing is 1/4"-1/2" above the top of the lower housing. Temperature range is –20° to 180° F.

Inflatable High-Deflection Vibration-Damping Mounts

Connect these compact mounts to your air supply for vibration and shock isolation in compression load applications. They handle the high deflection of equipment such as punch presses, blowers, forging hammers, shakers, vibrators, and air compressors. Add or release air to use these mounts as leveling devices (±1/4" adjustment). Mounts have four mounting holes (fasteners not included) and a 0.30" dia. threaded air connection—inflate as you would a bicycle tire. Temperature range is –20° to 180° F.

Mounts are black rubber. They have an aluminum top plate and base, except the 1/2"-13 and 5/8"-11 thread mounts with a capacity of 1,200-lbs. and higher have a steel top plate.

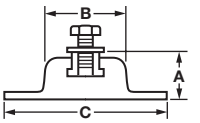
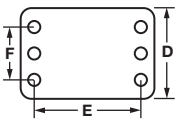
Vibration-Damping Mounts

For information about vibration-damping mounts, see page 1434. For information about durometer, see page 3588.

Seismic Vibration-Damping Mounts





Limit damage during moderate earthquakes. The mounts have a seismic rating of 1 g (acceleration of gravity) and dissipate vibration and noise in compression and shear load applications. They are made of black rubber with a steel housing, come with a cadmium-plated steel cap screw and washer for height adjustment, and have six mounting holes (fasteners not included). Temperature range is –20° to 225° F.

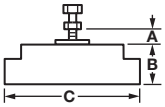
Oil-Resistant Heavy Duty Vibration-Damping Mounts



Made of resilient, black nitrile rubber that withstands oil, these mounts have an aluminum top plate that not only supports heavy loads, but also displaces vibration and shock through the entire mount. Use them in compression load applications with punch presses, milling machines, grinders, and air compressors. Hundreds of suction pockets on the bottom of each mount prevent machine walking. Mounts come with a zinc-plated steel bolt and nut, and have two tapped holes for mounting versatility. Temperature range is –25° to 250° F.

Chemical-Resistant Heavy Duty Vibration-Damping Mounts

The polyurethane base on these mounts resists solvents, gasoline, and oil, while the metal plate sustains heavy loads. Use them in compression load applications to minimize vibration and noise. Temperature range is –80° to 180° F. Base is blue.

Zinc-plated steel plate offers some corrosion resistance. ***Stainless steel plate*** provides superior corrosion resistance.

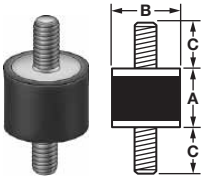
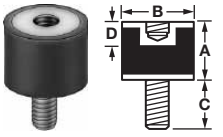
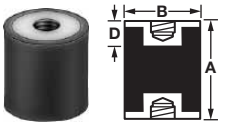
Vibration-Damping Sandwich Mounts



Style 1



Style 2



Style 3

Diminish vibration, shock, and noise in compression and shear load applications. Mounts have two threaded studs and/or inserts that are sandwiched between black natural rubber or neoprene. Durometer is 50A, unless noted.

Natural rubber has superior resistance to tears and abrasion as well as good flexibility in cold temperatures. Temperature range is –10° to 150° F. ***Neoprene*** has good resistance to weather and acids; moderate resistance to oils. Temperature range is 10° to 180° F.

Chemical-Resistant Vibration-Damping Sandwich Mounts

Style 1

Style 2

Solvents, acids, and oils are no problem for these mounts. Made of black polyurethane sandwiched between two threaded steel studs and/or inserts, they're excellent for reducing vibration and noise in motors, fans, blowers, pumps, and office machines.

Standard mounts are tough, yet flexible. Use them in compression and shear load applications. Temperature range is 55° to 105° F. ***Extra-soft mounts*** are more flexible than standard mounts. Use them in compression load applications. Temperature range is –20° to 160° F.

Extreme-Temperature Vibration-Damping Sandwich Mounts

Style 1

Style 2

In addition to having the widest temperature range of all the sandwich mounts we offer, these resist UV light, ozone, and oxidation. Mounts are made of silicone sandwiched between two threaded steel studs and/or inserts. Use them to isolate vibration and shock in compression and shear load applications. Temperature range is –80° to 300° F. Color is black for 30A durometer; green for 40A durometer; and orange for 50A, 60A, and 70A durometer.

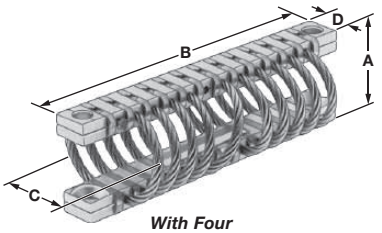
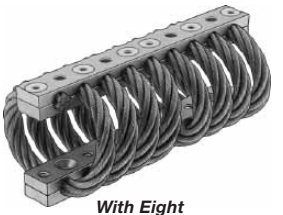
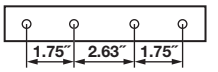
Extreme-Temperature Wire Rope Vibration-Damping Mounts



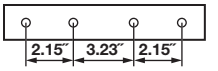
With Four Mounting Holes



With Eight Mounting Holes



Mounting Holes for 62225K6, K8 & K14



Mounting Holes for 62225K9

Isolate shock and vibration in harsh temperatures as well as harsh environments. Able to withstand temperatures from –150° to 500°F, these rugged mounts are resistant to corrosion and oils. They're made of stainless steel cable that is wound into aluminum bars, which are chromate coated for additional corrosion resistance. Use them in compression and shear load applications with pumps, compressors, generators, and electronic equipment. Mounts have four or eight mounting holes for installation (fasteners not included).

Extreme-Temperature Stainless Steel Mesh Vibration-Damping Mounts

Tightly layered stainless steel mesh provides superior damping in temperatures from –120° to 500°F. It also offers excellent resistance to corrosion and oils. Use these mounts in compression load applications with HVAC systems, blowers, fans, compressors, gas engines, and electric motors.

To install ***mounts with counterbore hole***, use a standard socket head cap screw (not included).

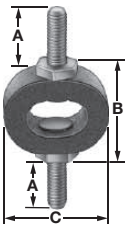
Vibration-Damping Mounts & Pads

For information about vibration-damping mounts, see page 1434. For information about durometer, see page 3588.

Precision Equipment Mounts



Allowing deflection in all directions, these ring mounts are made of rubber to protect your equipment from shock and vibration. Often used with electronics, measuring devices, small pumps, and compressors. Mounts are suitable for both compression and shear load applications. Threads are male, and made of zinc-plated steel. Temperature range is –10° to 150° F. Color of ring is black.

About Vibration-Damping Pads

Slide pads under equipment, such as drill presses, milling machines, saws, and air conditioning units, to minimize vibration. Performance is measured by deflection (the distance the pad material moves when subjected to force)—the higher the rating, the greater the vibration isolation. Stack pads for increased deflection; metal shims are recommended between layers.

Before selecting a pad, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formulas to determine the capacity per mounting point in psi.

$$\text{Capacity per Mounting Point} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

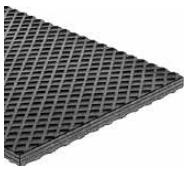
$$\text{psi} = \frac{\text{Capacity per Mounting Point}}{\text{Area (in sq. in.)}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Depending on your application, some pad materials are better suited than others. Use this chart to compare the resistance qualities of different materials:

Material	Oil	Weather	Tear	Abrasion
PVC	Fair	Fair	Fair	Fair
Natural Rubber	Poor	Fair	Excellent	Excellent
Recycled Rubber	Excellent	Excellent	Excellent	Excellent
Silicone	Good	Excellent	Fair	Good
Nitrile	Excellent	Poor	Fair	Good
Neoprene	Good	Good	Fair	Good

Chemical-Resistant PVC Vibration-Damping Pads



Made of fiber-reinforced PVC, pads endure exposure to corrosive chemicals, such as ammonium hydroxide (used in cleaning agents and solutions), chlorine, and hydrochloric acid. Pads that are 5/8″ thick also contain cork for increased deflection. Pads have a diamond texture. Temperature range is 32° to 150° F. Color is green.

Tear-Resistant Rubber Vibration-Damping Pads

Natural

Recycled

For excellent durability, try pads made of textured rubber, which resist abrasion and tears. Color is black.

Natural rubber has a waffle design composed of 2″ squares for a suction-cup grip between machinery and the floor. Temperature range is –20° to 180° F.

Recycled rubber provides greater capacity for heavier equipment than natural rubber pads. It offers excellent oil and weather resistance. Pads are textured. Temperature range is –20° to 200° F.

Extreme-Temperature Silicone Vibration-Damping Pads

Able to withstand temperatures from –40° to 375° F, these small pads work well with precision equipment, small pumps, and compressors. Made of silicone gel, pads have a nubby texture on top to secure your equipment, while a smooth bottom grips the underlying surface.

Lg.	Wd.	Thick.	Cap. per Mounting Point, psi	Deflect. @ Max. Cap.	Durometer	Color

Hydraulic Bottle Jacks

Standard

Heavy Duty

Low Profile

Tall Ram

Hand Operated Tall Body

Foot Operated Tall Body

Air Powered

Use these versatile jacks for lifting, spreading, bending, pushing, and straightening. They have a steel body and include hydraulic oil. The handle is removable, except for foot-operated jacks. All jacks can be used vertically. *Standard*, *heavy duty*, *low-profile*, and *tall-ram* jacks can also be used horizontally; for horizontal use, the pumping mechanism (where the handle meets the jack) must be positioned under the jack body.

Heavy duty jacks have fewer moving parts than standard jacks. The ram body screws onto the base so that it can be opened for inspection and repair. The ram is nickel-plated for corrosion resistance.

Low-profile jacks have a short body to fit into low-clearance spaces. The handle pumps from side-to-side, requiring less vertical space than other bottle jacks.

Tall-ram jacks fit in the same vertical space as our standard bottle jacks, but lift higher.

Hand-operated tall-body jacks are twice as tall as standard bottle jacks. Secure equipment to the ram through a mounting hole on the ram's tip. Jacks have two 5/16" dia. mounting holes in the base, except the 16,000-lb. jack has two 3/8" dia. holes. Fasteners not included.

Foot-operated tall-body jacks are equipped with two foot pedals for hands-free use, one to raise the ram and another to lower it. They are twice as tall as standard bottle jacks. Jacks have two 5/16" × 5/8" mounting holes (fasteners not included).

Air-powered jacks use air pressure to raise loads with less effort than with other bottle jacks. They operate on 110 to 175 psi of air pressure and include a 4-ft. long air hose with a 1/4 male quick-disconnect fitting. They can also be operated manually.

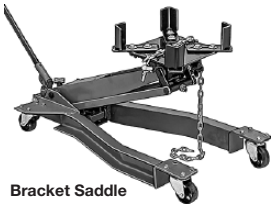
Hydraulic Jacks with Wheels

Flat Saddle

Air Powered



Bracket Saddle

Roll these jacks from job to job. They include hydraulic oil and have a steel body, except the 3 1/2" high flat-saddle jack is aluminum.

Flat-saddle jacks fit under hard-to-reach places.

Air-powered jack uses air pressure to raise loads with less effort than other jacks. It operates on 110 to 150 psi of air pressure and includes a 1/4 male quick-disconnect air inlet and a 3-ft. long air hose.

Bracket-saddle jacks have a saddle with adjustable corner brackets and chains to securely grip and align loads. It swivels forward, backward, and side-to-side for precise adjustments. The handle rotates 360° to operate in any position.

Note: Jacks should not be moved when under load.

Warning: *Never use to support people or loads over people.*

Two-Height Hydraulic Jacks

As versatile as bottle jacks, but with two lifting points—a toe for lifting loads low to the ground, and a saddle for a higher, more stable lifting point. Jacks are made of steel and include hydraulic oil.

10,000- and **20,000-lb.** capacity jacks have a handle that swivels 180°.

Cap., lbs.	Max. Lift	Min. Toe Ht.	Toe Size Lg.	Toe Size Wd.	Min. Saddle Ht.	Saddle Size Lg.	Saddle Size Wd.	Base Size Lg.	Base Size Wd.	Handle Lg.

Powered Hydraulic Pumps

Use a powered pump to lift with less effort than with a hand pump. Pumps are part of a lifting system—use with a ram that has a lower oil capacity (for rams and hose, see pages 1448 and 1449). Maximum pressure is 10,000 psi. Pumps include hydraulic oil and have a 3/8 NPTF female hose connection. They are steel and aluminum. Mounting fasteners not included.

Air Powered—Pumps operate horizontally.

Plug In—Pump from up to 10 feet away with the included remote control. All operate vertically. *116-cu. in.* oil capacity pump has a 120V AC motor. Includes a 6-ft. cord with three-prong plug. *590-cu. in.* oil capacity pump has a 120/240V AC motor. Includes an 8-ft. cord with a plug that fits a NEMA 5-20 receptacle.

Hydraulic Hand Pumps

Also known as trailer pumps, these pumps have a body that is taller than it is long to fit in a narrow space. Use as part of a permanent lifting system—bolt down the base (fasteners not included) and attach a ram with a lower oil capacity and a hose (for rams and hose, see pages 1438 and 1439). Pumps are made of cast iron and include hydraulic oil. They operate vertically and have a 3/8 NPTF female hose connection.

Hydraulic Jacks with Extenders and Pryers

Lift in tight spaces where a bottle jack won't fit.

Lifting, Pushing, and Prying

- Jack (ram, hand pump with hydraulic oil, hose, and male connector)
- Pushing accessories (rubber head, multi-point head, and serrated saddle)
- Prying accessories (hydraulic wedge, wedge head, ram toe, and plunger toe)
- Stabilizing base
- Plastic case

8,000-lb. jack includes five ram extenders (3", 6 1/8", 8 1/2", 16 1/2", and 19 1/2" lengths).
20,000-lb. jack includes four ram extenders (4", 10", 18", and 27" lengths).

Lifting, Pushing, Prying, and Pulling

- Jack (ram, pump, hydraulic oil, hose, and a male connector)
- Pushing accessories (rubber head, multi-point head, and serrated saddle)
- Prying accessories (hydraulic wedge, wedge head, ram toe, and plunger toe)
- Pulling accessories (two chains with hooks, chain pull plate, and clamp head)
- Stabilizing base
- Male and female adapters
- Metal case

8,000-lb. jack includes six ram extenders (3", 6", 18", and three 15" lengths), three ram extender connectors, and four locking pins.
20,000-lb. jack includes four ram extenders (6", 12", 15", and 18" lengths), two ram extender connectors, and four locking pins.

★ When ram extenders or accessories are used, the rated capacity is reduced by 50% for each extender and accessory connected.

Warning: Never use to support people or loads over people.

Hydraulic Jacks

Lift in tight spaces where a bottle jack won't fit. Choose a jack, or create a custom jack by choosing a ram, pump, hose, and pressure gauge.

Jacks

A

B

Jacks include a steel ram, a two-speed hand pump with hydraulic oil, a pressure gauge, and a 6-ft. hydraulic hose. Max. pressure is 10,000 psi. All can be used horizontally or vertically. For vertical use, the pump head (where the handle meets the pump) must be pointed down. Mounting fasteners are not included. Hose connections are 3/8 NPTF female. Rams with collar threads are threaded at the top for mounting in a fixture or with a mounting plate (sold separately; see page 1449). *Style A* pumps are steel; *Style B* pumps are aluminum.

Jacks with ram center hole have an unthreaded hole for attaching a threaded rod so you can use them in pulling applications.

Rams

Lifting, Prying, and Spreading

Rams are made of steel and have a maximum pressure of 10,000 psi, except the lifting, prying, and spreading rams are made of iron and have a maximum pressure of 8,000 psi. All can be used vertically or horizontally. Mounting fasteners are not included. Hose connections are 3/8 NPTF female. Rams with collar threads are threaded at the top of the ram for mounting in a fixture or with a mounting plate (sold separately; see page 1449).

Lifting, prying, and spreading rams are wedge-shaped to squeeze into tight spaces.

Lifting, pulling, and pushing rams have an unthreaded hole through the center for attaching a threaded rod.

(Continued on following page)

Warning: *Never use to support people or loads over people.*

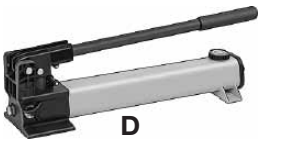
Hydraulic Jacks *(Continued from previous page)*

Pumps

Pumps have a maximum pressure of 10,000 psi and a 3/8 NPTF hose connection. They can be used horizontally or vertically; for vertical use, the pump head (where the handle meets the pump) must be pointed down. The oil capacity of your pump must be more than that of your ram. All include hydraulic oil. Mounting fasteners are not included. *Style C* is steel; *Style D* is aluminum.

Two-speed pumps are quick to pump until the load is engaged, then pump more slowly for precise positioning.

C



D

	Oil Cap., cu. in.	Lg.	Wd.	Ht.	Mounting Hole Dia.

Hose with Fittings

Hose is reinforced with steel. Maximum pressure is 10,000 psi.

Pipe Size, NPTF Male	Length, ft.	Black Rubber		Yellow Plastic	
1/4	6	2916T7	$58.13	—	—
1/4, 3/8	6	2916T4	144.73	2916T24	$184.29
3/8	6	2916T5	128.98	2916T21	173.29
3/8	10	2916T8	180.09	2916T22	238.11
3/8	20	2916T9	334.85	2916T23	457.28

Pressure Gauges

Monitor hydraulic oil pressure levels to guard against overload. Gauges are liquid filled to reduce needle vibration and include a 4 1/4" long steel adapter to mount the gauge in line with the hose. Both have a stainless steel case. Accuracy is ±1%.

Pipe Size, NPTF Female	Pipe Size, NPTF Male	Gauge Dia.	Pressure Range, psi	Graduations, psi/bar		
3/8	3/8	2 1/2"	0-10,000	500/50	2965T3	$132.04
3/8	3/8	4"	0-10,000	500/50	2965T4	214.89

Accessories for Hydraulic Jacks

Accessories have a maximum pressure of 10,000 psi.

Hose Couplings

Screw On

Quick Disconnect

Connect a hose to a ram or pump.

	Pipe Size, NPTF Female	Pipe Size, NPTF Male		
Screw On	1/4	1/4	2941T12	$67.86
Screw On	3/8	3/8	2941T11	70.34
Quick Disconnect	3/8	3/8	2941T13	210.06

Flow-Adjustment Valves

Control the flow of oil to adjust ram speed, or shut it off to temporarily hold a load. Valves are needle style and made of steel.

Pipe Size, NPTF Female		
1/4	2983T18	$167.70
3/8	2983T41	103.68

Mounting Plates

Thread one of these plates onto your ram to mount it at the point of use. The 10,000-lb. mounting plate is 3" Lg. × 3" Wd. × 1" Thick.; the 20,000-lb. mounting plate is 3 1/2" Lg. × 3 1/2" Wd. × 1" Thick. Mounting fasteners are not included.

For Ram: Cap., lbs.	For Ram: Collar Threads	Mounting Hole: Dia.	Mounting Hole: Ctr.-to-Ctr.		
10,000	1 1/2"-16	5/16"	2 1/8"	2983T27	$137.22

J	90° Elbow Connector	3/8 Female	3/8 Female	2983T36	30.64

Manifolds

Operate multiple rams from a single pump. Made of steel.

Compact manifold lets you connect up to five rams to a single pump. Includes four plugs to cover ports not in use. It has two 1/4" dia. mounting holes (fasteners not included).

Compact

Flow-adjustment manifold lets you connect up to four rams and a gauge to a pump. Ram connections have flow-adjustment valves that control the flow of oil to adjust ram speed or shut it off to temporarily hold a load. Combine two or more manifolds for larger systems. Includes an 18" long rubber hose and mounting fasteners.

Flow Adjustment

	Number of Ports	Pipe Size, NPTF Female		
Compact	6	3/8	2983T33	$132.86
Flow Adjustment	4	3/8	2983T31	758.89

Warning: **Never use to support people or loads over people.**

Two-Height Ratchet Jacks

Choose between two lifting points—use the toe for lifting loads low to the ground, or use the saddle when you need a higher, more stable lifting point. The ratcheting action raises or lowers the load one notch at a time. A removable steel handle can be used at two different positions to get the best angle for lifting.

Aluminum jack is lighter than iron for easier portability.

Cap., lbs.	Max. Lift	Min. Toe Ht.	Toe Size Lg.	Toe Size Wd.	Min. Saddle Ht.	Saddle Size Lg.	Saddle Size Wd.	Base Size Lg.	Base Size Wd.	Handle Lg.

Ratchet Jacks

These jacks can be used to lift, spread, push, pull, and clamp. The ratcheting action raises or lowers the load one notch at a time. For clamping, turn the top plate 90° and ratchet the jack to secure your workpiece. The maximum clamping force is 750 lbs. Jacks are iron with a 32″ long steel handle. Base is 7″ Lg. × 4″ Wd.

Note: Jacks must be loaded with at least 150 lbs. to safely lower your load one notch at a time. When loaded with less than 150 lbs., the notches are bypassed and the load will drop freely.

Cap., lbs.	Min. Ht.	Max. Lift	Toe Size Lg.	Toe Size Wd.		
150-2,500	4½″	45¼″	4½″	1⅜″	2925T7	$118.85
150-4,500	4½″	34⅛″	4½″	1⅜″	2925T6	116.27

Jack Pads

Create a hard surface for your jack when lifting on soft surfaces such as dirt or asphalt. Pads are plastic and resist moisture, chemicals, and oil.

Lg.	Wd.	Ht.		
18″	18″	1″	4130T26	$159.44
24″	22″	1″	4130T27	208.63
24″	24″	2″	4130T28	406.36

Inflatable Air Wedges

Thin enough to fit in the smallest spaces and strong enough to pry open a door. Made of reinforced vinyl.

Wedge Size Lg.	Wedge Size Wd.	Min. Ht.	Max. Lift		
6¼″	5¾″	5⁄64″	2⅝″	3833T43	$40.85

Screw Jacks

Bar Adjustable with Swivel Saddle (Shown with Turning Bar)

Wrench Adjustable with Swivel Saddle

Wrench Adjustable with Rigid Saddle

The screw adjustment lets you make small changes to the height of your load.

Bar Adjustable—A turning bar (sold separately) gives you leverage to lift heavier loads than wrench-adjustable screw jacks. The saddle swivels 9° to keep loads from slipping. The jack head has multiple openings so you can choose the best angle for inserting the turning bar. The jack body is iron.

Wrench Adjustable—Use these low-profile jacks in confined spaces. Jack *with rigid saddle* is also known as a spreader jack. Made of steel. Jacks *with swivel saddle* keep loads from slipping. Also known as planer jacks, they are made of iron and have a side locking screw that keeps the jack extended and prevents lowering due to vibration. The saddle swivels 25°.

Leveling Jacks

Mount these jacks to equipment to raise and level it. They have a foot plate for stability, unless noted.

Side Mount—Weld the included mount to equipment then attach the jack to the mount. A pin locks the jack in a vertical position; pull the pin to rotate the jack into a horizontal position when not in use.

Through-Hole Mount—Mount jacks through a hole in the frame of your equipment and fasten the mounting plate.

Style C jacks have a triangular plate that can be bolted or welded onto your equipment. They're commonly used with an A-frame trailer coupler. Mount through a 2¼" dia. hole; mounting plate has three 7/16" Lg. x 13/16" Wd. holes (fasteners not included).

Style D jacks mount through a 1¼" dia. hole. They have a round mounting plate with six ¼" dia. holes (fasteners not included). Jacks have a slip-resistant rubber pad.

Leveling Jacks with Wheel

Mount these steel jacks to equipment to raise and level it. A swivel caster with a plastic wheel lets you reposition your load.

Side Mount—Slide the frame of your equipment through the mounting plate. Mounting fasteners are included. *Style C* jacks have a locking pin that locks the jack in a vertical position; pull the pin to rotate the jack into a horizontal position when not in use.

Through-Hole Mount—Mount through a 2¼" dia. hole in the frame of your equipment; mounting plate can be bolted or welded. These jacks are commonly used with an A-frame trailer coupler. They have a 5 1/8" x 4 1/4" triangular mounting plate with three 7/16" Wd. x 13/16" Lg. mounting holes (fasteners not included).

Jack Stands

Hold and adjust the height of heavy loads such as truck trailers. Jacks are steel with a safety yellow finish.

Ratchet Jack Stands—The ratcheting action of these jacks makes adjusting them under load easier than screw jack stands.

Style A jacks can hold up to 50,000 lbs. when used as a stand.

Styles B-D jacks can hold up to 100,000 lbs. when used as a stand. They have two rubber wheels and a removable handle. *Style C* also has a steel front wheel.

Note: Jack stands should not be moved when under load.

Warning: Never use to support people or loads over people.

Air-Powered Lifting Bags

Use these rugged rubber lifting bags under heavy loads with less than 1″ of clearance. They also work well on soft surfaces and under water. To increase lift height, stack with an additional bag. Maximum pressure is 150 psi.

Bags include a push-button controller and a 32-ft. air hose.

Replacement hose is 3/8″ dia. and has a female quick-disconnect coupling on one end and a male air inlet on the other end.

Vertical Braces—*Not for Lifting*

Locking Pin

Support beams and joists with these tall braces. All are made of steel.

Locking-pin braces have holes spaced in 6″ increments. To adjust the height, extend the brace to the approximate height needed and insert the locking pin through the hole to secure. Then turn the threaded handle counterclockwise to raise it up to 6″ for more precise height adjustments. Top plate and base each have four 9/16″ dia. mounting holes (fasteners not included).

Locking-ring braces are notched in 4″ increments. To adjust the height, slide the safety lock into the notch to secure at the approximate height needed. Then turn the 10″ long handle for final height adjustments. Top plate and base each have two 3/8″ and two 5/8″ dia. mounting holes (fasteners not included).

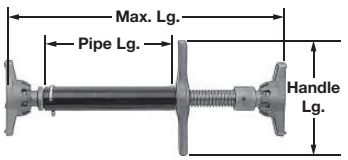
Trench Braces—*Not for Lifting*



Support trench walls when installing pipes, cables, and other buried equipment. The ends tilt up to 10° for angular shoring and have spikes that dig into surfaces for a tight grip. Braces are steel and iron.

8-ton braces have a 1 3/8″ dia. screw for width adjustments. The included pipe can be replaced with a piece of Schedule 40 pipe up to 40 1/2″ long.

13-ton braces have a 1 7/8″ dia. screw for width adjustments. The included pipe can be replaced with a piece of Schedule 40 pipe up to 50″ long.

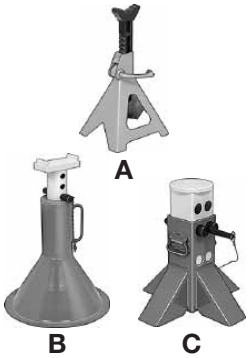
Jack Stands—*Not for Lifting*



After raising a load, add these steel stands for support.

Locking Handle—The handle locks the ratchet bar in place to support the load. Height is adjustable in 9/16″ increments for 6,000-lb. stands and in 11/16″ increments for 12,000-lb. stands.

Locking Pin—Insert the pin through the riser to lock the bar in place. Height is adjustable in 1 1/2″ increments for 24,000-lb. stands and 3″ increments for 40,000-lb. stands.

Note: Do not raise or lower stands while under load. Always use stands in pairs and on a hard, flat surface.

Warning: Never use to support people or loads over people.

Twine

Smaller in diameter than rope, twine is designed for light duty applications such as tying, binding, and cinching.

Grip-Tight High-Strength Nylon

The twisted construction lets you tightly grip this twine without it slipping. Twine is nylon for a good balance between stretch and strength. It resists UV rays and rot. Color is white.

Rope—For Lifting

Wet-Environment
Wear Resistant

Wet-Environment
Easy Splice

Low-Stretch
Wear Resistant

Low-Stretch
Easy Splice

High-Temperature
Wear Resistant

High-Temperature
No Flatten

Lightweight and strong, this rope is an alternative to wire rope for lifting. Rope can be spliced, which allows you to add a fitting or connect rope. It knots easily and does not rotate under load.

Wet Environment—Strong even when wet, this rope is a high-performance polyethylene also known as Spectra. Maximum temperature is 150° F. *Wear-resistant* rope has a polyester cover. It is white with black and red strands. *Easy-splice* rope is dark pink.

Low Stretch—For more control over your load, this rope has excellent resistance to stretch and slip. It is a high-performance polyester also known as Vectran. Maximum temperature is 150° F. *Wear-resistant* rope is white with green strands; *easy-splice* rope is brown.

High Temperature—Because it's made of a high-performance aramid also known as Technora, this rope keeps its strength in temperatures up to 300° F and is chemical and corrosion resistant. *Wear-resistant* rope is white with red and yellow strands; *no-flatten* rope is brown.

Wear-resistant rope has a braided cover that protects the braided core from wear during use.

Easy-splice rope is braided with a hollow core, so it's easier to splice than other rope for adding a fitting or connecting rope together.

No-flatten rope has a solid braided construction that keeps it from flattening during use.

Note: The safety factor for capacity is 5:1.

Comfort-Grip Wear-Resistant Rope—Not for Lifting

Standard

Shock Absorbing

Also known as sash cord, this rope has a soft cotton cover, so you can grip it without hurting your hands. The braided cover protects the braided core from wear during use. Rope knots easily and does not rotate under load. Maximum temperature is 150° F.

Standard—Rope has a polyester core and a polished finish for added wear resistance. Color is white.

Shock Absorbing—Rope is made of nylon to compensate for sudden force, such as in towing applications or dock lines. The rope resists rot and mildew. When wet, it can lose up to 20% of its strength. Color is white with red strands, except the 9/32" dia. rope is all white.

Note: The safety factor for capacity is 12:1.

Warning: ***Never use to lift people or items over people.***

Shock-Absorbing Rope—Not for Lifting

Use this rope when you need to compensate for sudden force, such as in towing applications or dock lines. Rope is rot and mildew resistant, except for flexible rope. Maximum temperature is 300° F.

Note: The safety factor for capacity is 12:1.

Grip Tight

The twisted construction gives this nylon rope a grooved surface, allowing you to grip it tight without it slipping. Rope can lose up to 20% of its strength when wet. It can be spliced, which allows you to add a fitting or connect rope. Color is white.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.

No Flatten

Solid braided construction keeps this nylon rope from flattening during use and disperses wear evenly, making it a good choice for high-friction applications, such as passing through pulleys. It knots easily and does not rotate under load. Rope can lose up to 20% of its strength when wet. Color is white.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.

Flexible

Also known as 550 cord, this all-nylon rope has a strand core, so it bends freely. You can peel back the braided cover and remove the seven core strands to use it in light duty applications, such as tying items together. Rope is black with a white core.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.
5/32"	40	50, 100, 250, 500	3696T38	$0.08

Low-Stretch Flexible

Rope has a strand core, which allows it to bend freely. The core is polyester to give the rope stretch resistance. The cover is braided nylon. Color is white.

Coated—Rope has a clear acrylic coating on the outside to reduce wear.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.
Uncoated

High-Strength Wear Resistant

This nylon rope shares the weight of a load between the core and the cover, giving it added strength. The braided cover protects the braided core from wear during use. Rope can be spliced, which allows you to add a fitting or connect rope. It can lose up to 20% of its strength when wet. Color is white with blue and red strands.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.

Reinforced Wire-Core Rope—Not for Lifting

The wire core makes this rope more wear resistant than rope with a fiber core, and it helps the rope keep its shape, so it won't stretch with repeated use. Rope does not rotate under load. Color is white.

Comfort Grip—This soft cotton rope with twisted construction allows you to grip it tight without it slipping or hurting your hands. Maximum temperature is 150° F.

Shock Absorbing—Often used with pulleys and sheaves, this braided nylon rope is more wear resistant than cotton and has more stretch to help compensate for sudden force. Maximum temperature is 300° F.

Note: The safety factor for capacity is 12:1.

Low-Stretch Rope—Not for Lifting

Choose this polyester rope for applications that require minimal stretch, such as in tie-down applications. It resists UV rays, rot, oil, and gas. Maximum temperature is 200° F.

Note: The safety factor for capacity is 12:1.

Standard

No Flatten

Reflective Flexible

No Flatten—Solid braided construction keeps the rope from flattening during use and disperses wear evenly, making it a good choice for high-friction applications, such as passing through pulleys. It knots easily and does not rotate under load. Color is white.

Reflective Flexible—Rope has a strand core, which allows it to bend freely. Color is black with reflective strands.

Rope with Eyes—Not for Lifting

Save time when attaching rope to tie downs and hooks. Made of polyester, rope has excellent stretch resistance for applications that require more control over your load. It resists UV rays, rot, oil, and gas. The braided cover protects the braided core from wear during use. Rope knots easily and won't rotate under load. Color is white with red strands. Maximum temperature is 200° F.

Rope with Eye on One End—Rope can be spliced, which allows you to add a fitting or connect rope on the end without a loop.

Note: The safety factor for capacity is 12:1.

Easy-Knot Grip-Tight Rope—Not for Lifting

The rough texture of this sisal rope allows it to make tight and long-lasting knots. It has a twisted construction that makes it easy to hold tight without slipping. Color is brown. Maximum temperature is 180° F.

Note: The safety factor for capacity is 12:1.

Dia.	Capacity, lbs.	Lengths, ft.		Per Ft.

Wet-Environment Rope—Not for Lifting

This polypropylene rope floats in water, resists rot, and doesn't lose strength when wet. It also resists acid, oil, and gas. Maximum temperature is 200°F.

Note: The safety factor for capacity is 12:1.

Grip Tight

The twisted construction gives rope a grooved surface, allowing you to grip it tight without it slipping. Rope can be spliced, which allows you to add a fitting or connect rope.

Extra Grip—A coarse, natural texture makes this rope easier to grip than other wet-environment rope. Rope knots easily.

UV Resistant—Also known as truck tie-down rope, this rope has added UV-ray inhibitors to protect it from deterioration when used outdoors.

High Strength—Rope is made of premium polypropylene for increased strength.

No Flatten

Solid braided construction keeps the rope from flattening during use and disperses wear evenly, making it a good choice for high-friction applications, such as passing through pulleys. It knots easily and does not rotate under load.

Dia.	Capacity, lbs.	Color	Lengths, ft.		Per Ft.
1/8"	10	White	100, 200, 500, 1,000	3873T18	$0.05

3/8"	150	White	25, 100, 200, 500, 1,000	3873T25	.37

Easy Splice

Braided with a hollow core, this rope is easier to splice than other rope, so you can add a fitting or connect rope together. It does not rotate under load.

Dia.	Capacity, lbs.	Color	Lengths, ft.		Per Ft.

Extra-Grip-Tight Rope—Not for Lifting

Softer than all other grip-tight rope, this manila rope is more comfortable to grip. It has a twisted construction that makes it easy to hold tight without slipping. Rope can be spliced, which allows you to add a fitting or connect rope. Color is brown. Maximum temperature is 160°F.

Note: The safety factor for capacity is 12:1.

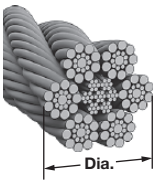
Wire Rope—For Lifting



Standard
6 x 19

Wear Resistant
6 x 26

Flexible
6 x 37

Rotation Resistant
18 x 7

Use this lightweight alternative to chain with an overhead crane or to make your own sling. It is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. It has an IWRC core and meets ASTM A1023.

Standard—Wire rope has a good balance of abrasion resistance and flexibility.

Flexible—This wire rope withstands repeated bending over a drum or pulley better than other wire rope.

Rotation Resistant—The outer strands of this wire rope lay in the opposite direction of the core to counteract rotation while under load.

High-strength wire rope is a premium steel that increases the strength approximately 10%.

Wear-resistant wire rope has flattened outer strands to give it a smooth surface and to reduce wear.

Galvanized wire rope resists rusting and corrosion.

Note: The safety factor for capacity is 5:1.

Wire Rope with Fitting—For Lifting

This 6x19 IWRC steel wire rope has a good balance of abrasion resistance and flexibility. It is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. Fittings are steel, except the 3/16" dia. wire rope with stop has an aluminum fitting.

Note: The safety factor for capacity is 5:1.

Wire Rope with Eye

With an eye, also known as a thimble, already installed, you can quickly attach a hook or a shackle to your wire rope. The thimble prevents fraying and the end is secured with a metal sleeve.

Warning: Never use to lift people or items over people.

Corrosion-Resistant Wire Rope—*For Lifting*

Choose this stainless steel wire rope when lifting in corrosive environments. Rope is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. *Extra-lubricated* wire rope has an additional coating of lubrication for added wear and corrosion resistance.

Standard—The 6×19 IWRC construction offers a good balance of abrasion resistance and flexibility.

Flexible—This 6×37 IWRC wire rope withstands repeated bending over a drum or pulley better than other corrosion-resistant wire rope.

Rotation Resistant—The outer strands of this wire rope lay in the opposite direction of the core to counteract rotation while under load.

Note: The safety factor for capacity is 5:1.

Wire Rope—*Not for Lifting*

Steel Standard 6×19 | **Steel Ultra-Flexible 7×19** | **Galvanized Steel Flexible 7×7** | **Galvanized Steel Ultra-Flexible 7×19** | **Galvanized Steel Difficult-to-Bend 1×7** | **Galvanized Steel Difficult-to-Bend 1×19** | **Galvanized Iron Low Strength 6×7**

Use this general purpose wire rope for hanging, tethering, and constructing barriers. Rope is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. *Extra-lubricated* wire rope has an additional coating of lubrication for added wear and corrosion resistance. Wire rope with a diameter less than 1/16" is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.

Steel—*Standard 6×19* wire rope has a fiber core; *ultra-flexible 7×19* wire rope has an IWRC core.

Galvanized Steel and **Extra-Lubricated Galvanized Steel—**The galvanized finish resists corrosion. The wire rope has a strand core.

Galvanized Iron—Also known as sash cord, this wire rope is designed for low-capacity applications. It has a fiber core.

Difficult-to-bend wire rope has a stiff construction, so it's often used as bracing and guy wires.

Note: The safety factor for capacity is 5:1.

Corrosion-Resistant Wire Rope—*Not for Lifting*

Flexible 3×7

Flexible 7×7

Ultra-Flexible 7×19

Difficult-to-Bend 1×7

Difficult-to-Bend 1×19

This wire rope can handle corrosive environments, such as areas that are frequently washed down. Rope is preformed to prevent it from unraveling when cut, unless noted. It's lubricated to reduce wear; *extra-lubricated* wire rope has an additional coating of lubrication for added wear and corrosion resistance. Rope has a strand core except flexible 3×7, which has a hollow core. Wire rope with a diameter less than 1/16" is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.

18-8 Stainless Steel and **Extra-Lubricated 18-8 Stainless Steel**—This wire rope has good corrosion resistance and is an economical alternative to 316 stainless steel wire rope.

316 Stainless Steel—This wire rope has excellent corrosion resistance.

Note: The safety factor for capacity is 5:1.

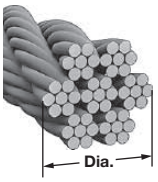
★Not preformed, which can result in the wire rope unraveling when cut.

Nonmagnetic Corrosion-Resistant Wire Rope—*Not for Lifting*



Flexible 7×7

Ultra-Flexible 7×19

Made of specialty grade 305 stainless steel, this wire rope is nonmagnetic and corrosion resistant. Rope is preformed to prevent it from unraveling when cut, and it has an additional coating of lubrication for added wear and corrosion resistance. It has a strand core.

Note: The safety factor for capacity is 5:1.

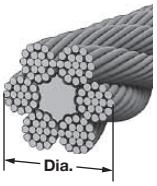
Nonsparking Corrosion-Resistant Wire Rope—Not for Lifting



Standard 6×19

Wear Resistant 6×7

Flexible 7×7

Ultra-Flexible 7×19

Made of phosphor bronze, this wire rope inhibits sparking and resists corrosion. It is preformed to prevent it from unraveling when cut, unless noted. It is lubricated to reduce wear. Wire rope with a diameter less than 1/16″ is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.

Standard and **wear-resistant** wire rope have a fiber core. **Flexible** and **ultra-flexible** wire rope have a strand core.
Note: The safety factor for capacity is 5:1.

★Not preformed, which can result in the wire rope unraveling when cut.

Ultra-Corrosion-Resistant Wire Rope—Not for Lifting

The superior corrosion resistance of nickel-copper makes this wire rope best for use with salt water and acidic- and alkaline-based solutions. Rope is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. It has a strand core. Wire rope with a diameter less than 1/16″ is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.
Note: The safety factor for capacity is 5:1.

Low-Stretch Coated Wire Rope—Not for Lifting

This nylon-coated wire rope is stretched during construction to minimize elongation under load. Use it when accuracy is critical, such as in precision mechanical applications. It is 18-8 stainless steel, which has good corrosion resistance. It is lubricated to reduce wear and has a strand core. Color is gray. Temperature range is -40° to 180° F. Wire rope with a coated diameter less than 1/16″ is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.
Note: When attaching fittings to coated wire rope, the coating must be removed from the installation area. The safety factor for capacity is 5:1.

Coated Stainless Steel Wire Rope—*Not for Lifting*

Flexible 3×7

The plastic coating protects this wire rope from abrasion and your drums and pulleys from wear. It's made of 18-8 stainless steel, which has good corrosion resistance. Rope is preformed to prevent it from unraveling when cut, unless noted. It's lubricated to reduce wear; *extra-lubricated* wire rope has an additional coating of lubrication for added wear and corrosion resistance. It has a strand core, except flexible 3×7 has a hollow core. Wire rope with a coated diameter less than 1/16″ is also known as braided wire and is often used for lightweight suspending applications, such as hanging light fixtures.

Standard and **Extra-Lubricated Standard—**The nylon coating protects the rope from abrasion. Rope has a temperature range of -40° to 180° F, except extra-lubricated wire rope is -65° to 200° F.

Weather Resistant—The vinyl coating protects the rope from abrasion and resists UV rays better than nylon. Temperature range is -30° to 180° F.

Chemical Resistant—The FEP (fluorinated ethylene propylene) coating protects the rope from abrasion and has excellent chemical resistance for use in the most demanding environments. Temperature range is -350° to 400° F.

Note: When attaching fittings to coated rope, the coating must be removed from the installation area. The safety factor for capacity is 5:1.

★Not preformed, which can result in the wire rope unraveling when cut.

Coated Galvanized Steel Wire Rope—Not for Lifting

Made of galvanized steel, this wire rope is an economical choice when you need the abrasion resistance of a plastic coating. Rope is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. *Extra-lubricated* wire rope has an additional coating of lubrication for added wear and corrosion resistance. It has a strand core.

Standard and **Extra-Lubricated Standard**—The nylon coating protects the rope from abrasion. Temperature range is -65° to 200°F.

Weather Resistant—The vinyl coating resists UV rays better than nylon. Temperature range is -30° to 180°F.

Chemical Resistant—Each strand inside the wire rope is surrounded by polypropylene, which reduces friction by keeping the strands from rubbing against each other. The outside coating gives the wire rope excellent abrasion and corrosion resistance. Temperature range is 0° to 200°F.

Note: When attaching fittings to coated rope, the coating must be removed from the installation area. The safety factor for capacity is 5:1.

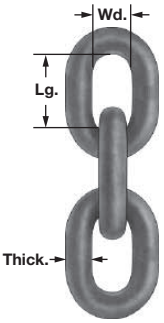
Chain—For Lifting



Grades 80, 100, and 63

Grade 120

Strong and durable, use this chain for your lifting applications. It is heat treated and stamped with the grade and manufacturer. Meets NACM (National Association of Chain Manufacturers) standards.

When using fittings with chain, you must match the trade size and meet or exceed the chain's grade. For fittings, see connectors and shackles on pages 1483-1488 and hooks for lifting on pages 1494-1498.

General Purpose Grade 80—Chain meets ASTM A391. Maximum temperature is 400° F.

High-Strength Grade 100—This chain is approximately 25% stronger than Grade 80 chain. It meets ASTM A973. Maximum temperature is 400° F.

Extra-High-Strength Grade 120—The strongest chain grade we offer, this chain is approximately 20% stronger than Grade 100 chain and 50% stronger than Grade 80 chain. The links are square, which helps spread wear evenly at the contact points. Maximum temperature is 400° F.

High-Temperature Grade 63—With a maximum temperature of 500° F, this chain withstands higher temperatures than other steel chain.

Zinc-plated steel chain has good corrosion resistance.

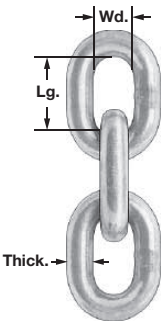
Wear Gauge for Grade 80 and Grade 100 Chain—Gauge measures the maximum allowable wear tolerances on links of Grade 80 and Grade 100 steel chain, as required by OSHA. If the gauge can be inserted over any part of the link, the chain should be taken out of service. For use on chain trade sizes 9/32, 3/8, 1/2, 5/8, 3/4, 7/8, and 1.

To Order: Please specify chain grade and the manufacturer's stamp on the chain: C8, L8, P8, C10, L10, P10, PW, PWA, H29, or KWB.

3831T41 ..... $9.60

Corrosion-Resistant Chain—For Lifting



Use this stainless steel chain when lifting in food processing areas and environments where chemicals are used. It resists rust and salt water. Maximum temperature is 650° F.

When using fittings with chain, you must match the trade size and meet or exceed the chain's grade. For fittings, see connectors and shackles on pages 1483-1488 and hooks for lifting on pages 1494-1498.

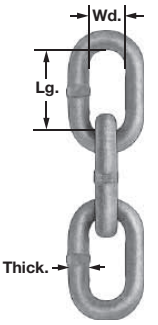
Warning: *Never use to lift people or items over people.*

Chain—Not for Lifting



Use this strong chain for binding loads, tie downs, and towing applications. It is stamped with the grade and manufacturer. Meets ASTM A413 and NACM (National Association of Chain Manufacturers) standards. Chain has a maximum temperature of 400° F, except chain with powder-coated finish has a maximum temperature of 200° F.

When using fittings with chain, you must match the trade size and meet or exceed the chain's grade. For fittings, see connectors and shackles on pages 1483-1488 and hooks on pages 1494-1498.

Tangle-Resistant Grade 30—This is the strongest tangle-resistant chain we offer. Shorter links make it easier to coil and less likely to knot.

High-Strength Grade 40/43—This chain is approximately 50% stronger than Grade 30 chain.

Extra-High-Strength Grade 70—This chain is approximately 20% stronger than Grade 40/43 chain and 60% stronger than Grade 30 chain. It meets D.O.T. 49 CFR. 393.102.

Zinc-plated steel chain has good corrosion resistance. **Galvanized steel** chain has excellent corrosion resistance and can be used outdoors.

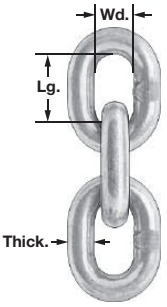
Corrosion-Resistant Chain—Not for Lifting



This chain withstands conditions that can deteriorate steel chain.

304 and **316 stainless steel** chain are the most corrosion resistant. 316 stainless steel is more corrosion resistant than 304 stainless steel, so you can use it in food processing areas and environments where chemicals are used. Maximum temperature is 750° F.

Aluminum and **brass** chain have excellent corrosion resistance. Maximum temperature is 100° F.

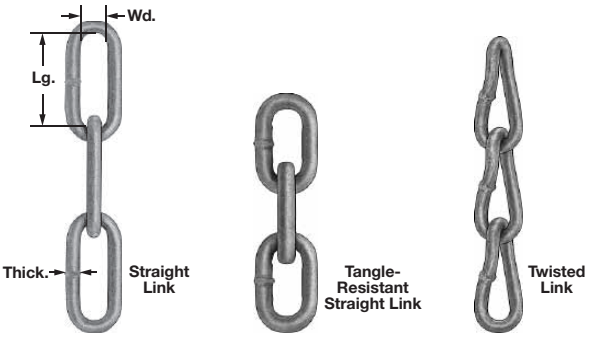
Light Duty Chain—Not for Lifting



Use this chain to hang lightweight items and construct barriers.

Tangle-Resistant Straight Link—Chain has short, wide links that make it easier to coil and less likely to knot.

Twisted Link—The twisted links allows this chain to lie flatter than other light duty chain.

Zinc-plated steel chain has good corrosion resistance. **Galvanized steel** chain has excellent corrosion resistance.

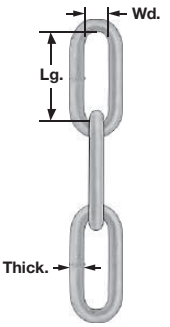
Choose-a-Color Light Duty Chain—Not for Lifting

Brightly colored for visibility, this coated steel chain is commonly used as a safety barrier to mark restricted areas.



Trade Size	Thick.	Inside Link Size Wd.	Inside Link Size Lg.	Capacity, lbs.	Approximate Links per ft.	Choose a Color	Lengths, ft.		Per Ft.

Cut-Resistant Chain—Not for Lifting

Securely tie down items and lock up tools. Chain is case-hardened for cut and wear resistance.
Square Link—For maximum security, square links are more difficult to cut with bolt cutters than round links.
Zinc-plated steel chain has good corrosion resistance.

Light Duty Tangle-Resistant Chain—Not for Lifting

Chain is highly flexible and resists kinking and tangling.
Smooth Straight Link—The links have smooth sides to prevent the chain from snagging.
Twisted Link—Small, twisted links make this flexible chain the most resistant to tangling and knotting.
Zinc-plated steel chain has good corrosion resistance. **Nickel- and brass-plated steel** chain have excellent corrosion resistance. **304 stainless steel** chain is the most corrosion resistant and can be used outdoors.

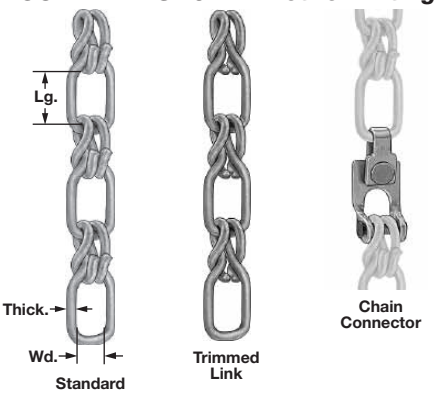
Lock-Link Chain—*Not for Lifting*



The ends of the chain are locked around the connecting link, allowing it to lie flatter than other chain. It is often used to operate overhead doors and machinery.

Trimmed Link—The trimmed links allow chain to sit closer against a chain wheel or sprocket. For chain wheels, see page 1472.

Zinc-plated steel chain has good corrosion resistance. **Galvanized steel** chain has excellent corrosion resistance and can be used outdoors.

Use a **chain connector** to form your chain into a loop when using with a chain wheel. Made of zinc-plated steel.

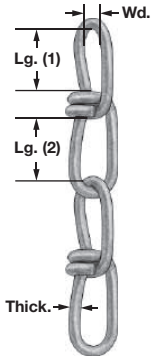
Coil Chain—*Not for Lifting*



Lightweight and flexible, use this chain in applications such as hanging signs and fixtures.

Zinc-plated steel chain has good corrosion resistance. **Vinyl-covered zinc-plated steel** chain has a cover that prevents the chain from scratching items that come in contact with it. Trade size 3 is yellow, trade size 1/0 is blue, and trade size 2/0 is green. **Galvanized steel** and **304 stainless steel** chain have excellent corrosion resistance and can be used outdoors.

Sash Chain—Not for Lifting

Also known as sash cord, this thin chain is used over pulleys and for hanging double-hung window sashes. The flat links fold back on themselves for maximum flexibility.

Zinc-plated steel chain has good corrosion resistance. **Copper-** and **nickel-plated steel, brass,** and **bronze** chain have excellent corrosion resistance. **302/304** and **430 stainless steel** chain are the most corrosion resistant and can be used outdoors.

Bead Chain—*Not for Lifting*

Also known as ball chain, use this chain to keep tools with machines, keys with chucks, and gas and dust caps with tanks. Use bead chain links (sold separately) to connect or mount chain.

Screw-Mount Links—These links allow you to mount chain with a screw, bolt, or rivet. Hole diameter for trade sizes 3 and 6 is 0.13″; for trade sizes 8, 10, and 13 it is 0.193″; and for trade size 20 it is 0.262″.

Splicing Links—Thread chain through the hole of these links to form an adjustable loop or connect chain ends to form a longer chain.

Loop Links—Use these links to connect the ends of chain to form a longer chain or create a loop for key chains and ID tags.

Push-Mount Links—Mount these links in a drilled hole to secure small items such as pens. Links can also be attached as the end of a pull chain. Hole diameter for trade sizes 2 and 3 is 1/8″; for trade size 6 it is 5/32″; for trade sizes 8 and 10 it is 7/32″; and for trade size 13 it is 5/16″.

Nickel-plated steel, aluminum, and **brass** chain have excellent corrosion resistance. **304 stainless steel** chain is the most corrosion resistant and can be used outdoors

Chain Wheels for Overhead Valves

Iron

Impact-Resistant Iron

Chain Container

Open and close overhead valves right from the floor. Wheels attach to almost any handwheel-operated valve. Use with lock-link chain made of galvanized steel (not included; see page 1468).

Corrosion-Resistant Galvanized Iron—Wheels are better for high-moisture environments than other iron wheels. Mounting fasteners are stainless steel.

Impact-Resistant Iron—Wheels are made of high-strength ductile iron. Wheels for 7¾" dia. and larger handwheels have a plate that attaches to the valve wheel with lugs. To release large or stubborn valves, pull the chain—the impact of the wheel hitting the plate opens or closes the valve.

Chain container is plastic and 4" Dia. × 12" Lg.

Rope Compression Sleeves and Tools—Not for Lifting

Compression sleeves create a strong, permanent loop when installed with a compression tool. They're also known as swaging and splicing sleeves, crimps, and ferrules. Use with braided or twisted rope. They're made of aluminum and are compatible with Nicopress® compression tools. Not rated for capacity.

Compression tools are used to compress sleeves onto rope. All are hand tools with steel handles (unless noted) and include one measuring gauge. For use with aluminum sleeves only. *Multidiameter* tools can be used with more than one sleeve size.

Quick-Install Wire Rope Clamps—Not for Lifting

Two Screw | Three Screw | One Bolt | Two Bolt

Make a removable loop without specialty tools. They're also known as tiller clamps. Not rated for capacity.

Two- and Three-screw clamps have a smooth, thin body that won't snag wire rope. Install using a screwdriver.

One-bolt clamps are for use in light duty and suspension applications. Install using a wrench.

Two-bolt clamps are stronger than one-bolt clamps and provide superior, nonslip holding power. Install using a wrench.

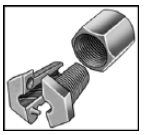
▲ Nickel-plated iron. ♣ Zinc-plated iron.

High-Strength Wire Rope Clamps—Not for Lifting

Create a strong, removable loop. To install, slide the nut over the rope and tighten it onto the threaded halves with a torque wrench. Clamps are cadmium-plated forged steel. They meet MS-16843 and Fed. Spec. FF-C-450. Use with a 6×19 IWRC and 7×19 wire rope. Clamps are rated up to 90% of the rope's capacity.



For Rope Dia.	Clamp Lg.	Clamp Wd.	Req'd Torque, ft.-lbs.

Twist-On Rope Clamps—Not for Lifting

Quickly create a stop or attachment point without tools. Slip the clamp over the rope and lock it in place with a twist. Clamps are blue plastic. Use with nylon rope. Attach a cap to the clamp to provide an attachment point for connectors.

Shown with Optional Cap

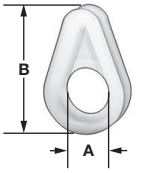
Optional Cap (Pkg. of 1)				1224N12	2.04

Rope Thimbles—Not for Lifting

Protect the inside of rope loops from fraying. These white plastic thimbles evenly distribute the weight of the rope around the loop to reduce snagging and tangling. Temperature range is –40° to 250° F.



For Rope Dia.	(A)	(B)

Quick-Adjust Wire Rope Clamps—Not for Lifting

Create a loop without specialty tools. To install, feed wire rope through the clamp in one direction, form a loop, and feed the rope back through in the opposite direction until it is at least 3" past the clamp body. Use the included key to enlarge the loop. They're also known as Gripple rope clamps. Clamps are zinc.

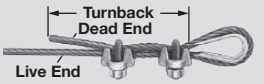
Warning: *Test all assemblies for required strength before use. Remove rope coating before use.*

Wire Rope Clamps

For wire rope, see pages 1458-1463.

About Wire Rope Clamp Installation



Single-Saddle Clamps

Single-saddle clamps must be oriented with the saddle on the long (live) end and U-bolt on the short (dead) end. They're also known as wire rope clips.

Double-Saddle Clamps

Double-saddle clamps apply equal pressure without crimping or crushing the wire rope, so orientation doesn't matter. They provide a saddle for both the long (live) and the short (dead) end of the wire rope. Also known as fist grip wire rope clips.

Crosby Forged Wire Rope Clamps—*Not for Lifting*

Single-Saddle Clamp

Double-Saddle Clamp

A forged fabrication allows these to be used in critical applications such as tie downs and support lines. They are rated up to 80% of the rope's capacity.

Galvanized steel clamps for rope diameters 1/4" and larger meet Fed. Spec. FF-C-450. *Single-saddle clamps* are painted red.

316 stainless steel clamps are the most corrosion resistant fittings we offer. They provide excellent resistance to salt water and chemicals.

Cast Wire Rope Clamps—*Not for Lifting*

Use in noncritical applications where the strength of a forged clamp is not required. All meet Fed. Spec. FF-C-450.

Iron clamps are not rated for capacity. **Zinc-plated iron** clamps are mildly corrosion resistant. They are not rated for capacity. **Galvanized iron** clamps have a thicker coating than zinc-plated clamps for added corrosion resistance. They are not rated for capacity. **18-8 stainless steel** clamps are more corrosion resistant than galvanized clamps. They are rated up to 80% of the rope's capacity. **316 stainless steel** clamps are the most corrosion resistant fittings we offer. They provide excellent resistance to chemicals and salt water. They are rated up to 80% of the rope's capacity.

For wire rope, see pages 1458-1463.

Wire Rope Clamp and Thimble Kits—Not for Lifting

Kits include clamps and thimbles to protect the inside of wire rope loops from fraying. Clamps must be oriented with the saddle on the long (live) end of rope and U-bolt on the short (dead) end.

Galvanized iron and **steel** clamps and thimbles are corrosion resistant. They are not rated for capacity. Kits include one galvanized steel thimble and meet Fed. Spec. FF-C-450.

18-8 stainless steel clamps and thimbles are chemical resistant. Kits include one 18-8 stainless steel thimble. They are rated up to 80% of the rope's capacity.

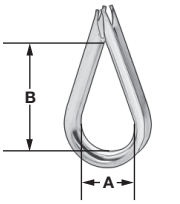
Wire Rope Thimbles

Protect the inside of wire rope loops from fraying. No tools required for installation.
Zinc-plated steel thimbles are mildly corrosion resistant.
Galvanized steel thimbles are more corrosion resistant than zinc-plated steel.
18-8 stainless steel thimbles are more corrosion resistant to chemicals than steel thimbles.
316 stainless steel thimbles are the most corrosion resistant thimbles we offer. They offer excellent resistance to salt water and chemicals.

Light Duty Wire Rope Thimbles—Not for Lifting



Also known as thin pattern thimbles. They meet Mil. Spec. MIL-T-5677 and AN Spec. 100.

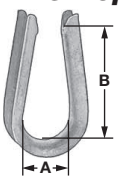
Warning: *Test all assemblies for required strength before use. Remove rope coating before use.*

Compression Sleeves, Stops & Tools for Wire Rope

For wire rope, see pages 1458-1463.

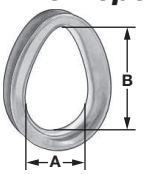
Long-Loop Open-End Light Duty Wire Rope Thimbles—Not for Lifting



Open ends allow more space to connect attachments than other thimbles. They're galvanized steel and have a thick coating for corrosion resistance.

For Rope Dia.	(A)	(B)		
1/4"	11/16"	17/16"	30335T1	$1.11
5/16"	13/16"	19/16"	30335T2	1.13
3/8"	15/16"	1 3/4"	30335T3	1.13
1/2"	1 1/8"	2"	30335T4	1.61
5/8"	1 3/8"	2 3/8"	30335T5	3.74

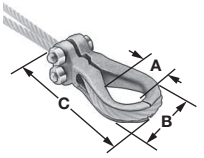
Closed-End Light Duty Wire Rope Thimbles—Not for Lifting



Smooth rounded edges and an endless design protect wire rope from snagging. They're 316 stainless steel and have excellent corrosion resistance to salt water and chemicals.

For Rope Dia.	(A)	(B)		
1/8"	3/8"	5/8"	3634T71	$5.94
3/16"	11/16"	1 1/16"	3634T73	7.33
1/4"	13/16"	1 5/16"	3634T74	10.10
5/16"	1"	1 9/16"	3634T75	21.46

Wire Rope Clamps with Thimbles—Not for Lifting



A clamp and thimble in one fitting eliminate the need for a separate thimble to protect loops from damage and wear. Clamps are cast bronze, except the 3/8" dia. clamp is cast steel. Use with six- or seven-strand wire rope. Install with a wrench.

For Rope Dia.	Rope Turnback	Req'd Torque, ft.-lbs.	(A)	(B)	(C)	Cap., lbs.

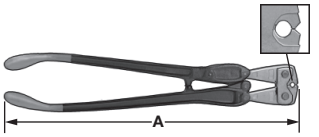
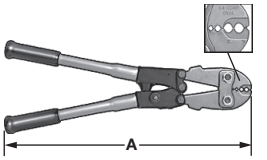
Wire Rope Compression Sleeves and Stops

Compression Sleeve

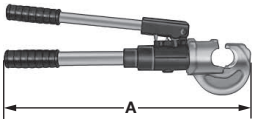
Stop



Single-Diameter Tool



Multidiameter Tool



Hydraulic Hand Tool

Compression Sleeves—Install with a compression tool to create a strong, permanent loop. Compression sleeves are also known as ferrules, crimps, and swaging and splicing sleeves. All are compatible with the tools on this page or Nicopress® tools. They're rated up to 100% of the rope's capacity. *Copper* and *stainless steel* meet MIL-STD 51844.

Stops—Create a stop at the end of a wire rope to keep it from slipping through pulleys. *Aluminum* stops are rated up to 30% of the rope's capacity; *copper* and *zinc-plated copper* are rated up to 40%.

Compression Tools—Compress sleeves and stops onto wire rope. *Single-* and *multidiameter* tools have steel handles. Tools include a measuring gauge, except 3377T23 which is pliers-style. Multidiameter tools can be used with more than one sleeve or stop size. *Hydraulic compression tools* compress sleeves and stops onto rope and wire rope with less effort than standard compression tools. All tools include a die for the sleeve material and size specified. They have fiberglass handles.

Die for Hydraulic Hand Compression Tools—To Order: Please specify rope dia., oval or stop sleeve, and sleeve material.	3433T69	$206.84
Die for Hydraulic Bench Compression Tools—To Order: Please specify rope dia., oval or stop sleeve, and sleeve material.	3433T76	299.56
Replacement Measuring Gauge for Compression Tools (not for use with 3582T22)	3377T13	25.82
Replacement Cartridges for Hydraulic Hand Tool	3433T13	172.44

Compression Tools for Wire Rope Sleeves and Stops with Built-In Rope Cutter

Cut wire rope and compress sleeves onto a variety of wire rope diameters with one tool. All have hardened blades that surround and support the wire rope for a smooth, clean cut. For use with aluminum and copper sleeves (unless noted). Made from alloy steel. Overall length is 20 inches.

For Rope Dia.	Steel Handles		Fiberglass Handles	
For Compression Sleeves

■ Not for use on 3/16" copper sleeves. ▲ Not for use on 1/4" copper sleeves.

Warning: *Test all assemblies for required strength before use. Remove rope coating before use.*

Compression Sleeves, Stops & Fittings for Wire Rope

For wire rope, see pages 1458-1463.

Compression Sleeve Assortments for Wire Rope—*Not for Lifting*

All come in a plastic case with a lid chart. Sleeves meet MS-51844. Compression tools are required for installation (please see pages 1476-1477).

End Fittings for Wire Rope Railing—*Not for Lifting*

Tensioning Fitting

Create a wire rope railing, perimeter, or barrier. To install, mount the fitting to a wall or post and insert the wire rope into the body. They require three #8 screws for mounting. Made of 316 stainless steel, they offer excellent resistance to salt water and chemicals. Rated up to 80% of the rope's capacity.

Fixed fittings pivot up to 45°, but cannot be used to add tension to the wire rope.

Tensioning fittings have a body that can be rotated with a wrench to add tension to the wire rope. They pivot up to 45°.

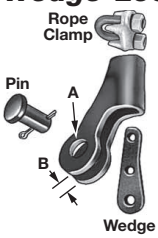
Wedge-Lock Wire Rope End Fittings—*For Lifting*



Also known as open wedge sockets. To install, attach the wire rope clamp through a hole at the top of the wedge and secure the wire rope against the clevis. Clamps are red painted steel. They meet ASME B30.26 and Fed. Spec. RR-S-550E. Use with six-, seven-, or eight-strand wire rope. They are rated up to 80% of the rope's capacity.

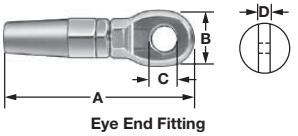
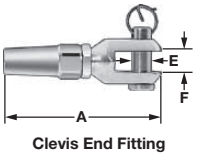
Sleeve-Lock Wire Rope End Fittings—*Not for Lifting*

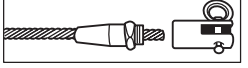


Eye End Fitting

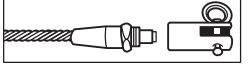


Clevis End Fitting

1 Unscrew the fitting and slide the assembled wedges over wire, leaving 1/4" of the wire rope exposed.



2 Slide the sleeve over exposed wire rope, and screw pieces together to tighten.



Add an attachment point and finished appearance to wire rope without having to fray the rope or use a compression tool. To install, unscrew the fitting, slide over the wire rope, then tighten the pieces together with a wrench. Use for light duty securing, tethering, and suspending. Fittings are 316 stainless steel. Not rated for capacity.

For Ball with Shank	3429T2	978.95

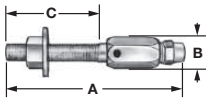
Plug-Lock Wire Rope End Fittings—*For Lifting*

Fray the end of your wire rope with a marlin spike and screw the socket over the plug to install. An inspection hole allows you to check for proper installation—If you see wire strands, the fitting has been properly secured. For use with 6×19 IWRC, 6×19 fiber core, 7×7 and 7×19 wire rope. No specialty tools required for installation. Use an assembly kit (not included) to support the wire rope while you drive the plug into the wire rope end.

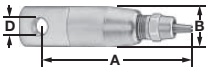
Zinc-plated steel fittings have mild corrosion resistance. **316 stainless steel** fittings are the most corrosion resistant fittings we offer. They have excellent resistance to salt water and chemicals.

Also Available: Replacement plugs. Please ask for 3475T1 and specify wire rope diameter.

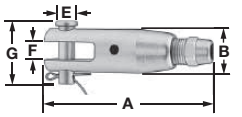
Also Available: Assembly kits. Please ask for 3473T888 and specify wire rope diameter.



Stud End Fitting

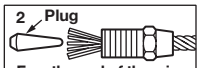


Eye End Fitting



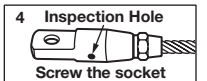
Clevis End Fitting

1
Pull the sleeve over the end of the wire rope.



Fray the end of the wire rope and insert plug.

The wire strands should cover the plug.



Screw the socket over the plug.

Retractable Wire Rope Lanyards—Not for Lifting

Loop-to-Loop

These lanyards retract to a compact, coiled position to stay out of the way when not in use. All are 1/16″ dia. galvanized steel wire rope. **Eye** ends are zinc-plated steel. **Loop** ends have zinc-plated copper sleeves. **Tab** ends are 18-8 stainless steel. **Swivel fork** ends allow the lanyard to rotate freely. Press the ends of the swivel fork together to use as an eye. They're 18-8 stainless steel.

To Order: Please specify uncoated or coated rope. Coating is vinyl and has a temp. range of -40° to 170° F.

Create-Your-Own Wire Rope Lanyard Kits—Not for Lifting

Lanyard Kit with 1/16″ Rope Dia.

Lanyard kits with 1/32″ dia. wire rope contain 1×7 nylon-coated wire rope, 25 brass sleeves, and a compression tool with built-in rope cutter. Black-coated wire rope kit comes with black-oxide brass sleeves; clear-coated wire rope kit comes with nickel-plated brass sleeves. Temperature range is 14° to 176° F.

Lanyard kits with 1/16″ dia. wire rope contain 7×7 nylon-coated wire rope, 50 aluminum sleeves, 20 zinc-plated copper eye fittings, 10 18-8 stainless steel tabs, and a compression tool. Temperature range is -40° to 200° F.

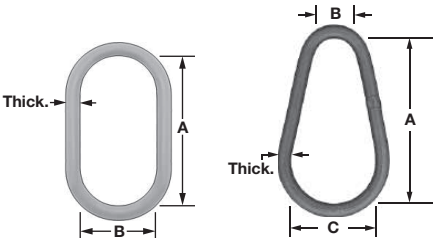
1 1/16″	4″	1 1/2″	1/8″	8893T1	$15.75

Oblong and Pear-Shaped Links—For Lifting



Also known as master and sling links, a large inner diameter provides room to attach multiple connectors or legs on a sling. All meet ASME B30.26. Forged links offer greater strength than welded links.

Pear-Shaped—The narrow end of these links restricts the movement of the rope and chain, while a wide end allows room to attach multiple connectors.

Extra high-strength (Grade 120) are the strongest links we offer. When used with chain of the same grade, they are approximately 20% stronger than Grade 100 links and about 35% stronger than Grade 80 links. They are alloy steel.

High-strength (Grade 100) links are approximately 20% stronger than Grade 80 links when used with chain of the same grade. They are alloy steel.

General purpose (Grade 80) links are alloy steel.

Corrosion resistant (Grade 63) and **(Grade 50)** connecting links are approximately 60% as strong as Grade 80 links when used with chain of the same grade. Links are 316 stainless steel (unless noted). They have excellent resistance to salt water and chemicals.

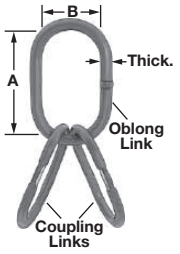
Oblong Link Assemblies—For Lifting



Providing better load distribution and alignment than single oblong links, these reduce wear in three- and four-leg slings. All links are alloy steel. Maximum lifting angle is 60°.

Extra high-strength (Grade 120) links are the strongest links we offer. When used with chain of the same grade, they are approximately 20% stronger than Grade 100 links and 35% stronger than Grade 80 links.

High-strength (Grade 100) links are approximately 20% stronger than Grade 80 links when used with chain of the same grade.

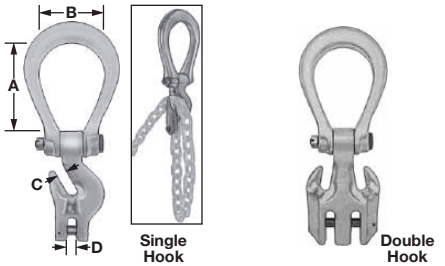
Links with Chain-Shortening Hooks—For Lifting



A pear-shaped link and hook for chain shortening allow you to create an adjustable-length chain sling. All are forged Grade 100 alloy steel with a silver powder-coated finish. They meet ASME B30.9.

For Chain Trade Size	(A)	(B)	(C)	(D)	Cap., lbs.		
Single Hook							
1/4	3 7/8"	3"	7/16"	3/8"	4,300	9168T1	$77.23

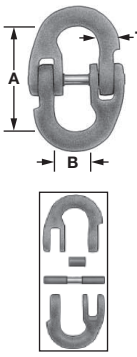
Figure-Eight Connecting Links—For Lifting



Also known as sling links, these are often used to connect the legs of a chain sling to a master link. All are forged.

Removable—These connecting links are also known as hammer locks.

Nonremovable—For security, these connectors must be cut off to be removed.

Extra high-strength (Grade 120) connecting links are the strongest links we offer. When used with chain of the same grade, they are approximately 20% stronger than Grade 100 links and about 35% stronger than Grade 80 links. They are alloy steel. All meet ASME B30.26.

High-strength (Grade 100) connecting links are approximately 20% stronger than Grade 80 links when used with chain of the same grade. They are alloy steel. All meet ASME B30.26.

General purpose (Grade 80) connecting links are alloy steel. All meet ASME B30.9.

Corrosion resistant (Grade 63) connecting links are approximately 60% as strong as Grade 80 links when used with chain of the same grade. These 318LN stainless steel links have excellent resistance to salt water and chemicals. All meet ASME B30.9.

1/2	7/8"	7 13/32"	1"	2 51/64"	12,000	3697T83	101.00

Rings—For Lifting

These welded rings meet ASME B30.26. They rotate for even wear.

General purpose (Grade 80) rings are alloy steel.

Corrosion resistant (Grade 50) rings are approximately 60% as strong as Grade 80 rings when used with chain of the same grade. They are 316 stainless steel and have excellent resistance to salt water and chemicals.

For Chain Trade Size	Thick.	(A)	Cap., lbs.		
General Purpose (Grade 80)					
9/32	1/2"	2 1/2"	4,300	3569T21	$40.44

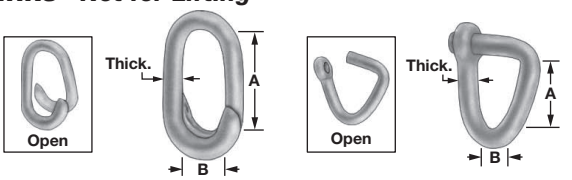
Bend-Close Connecting Links—Not for Lifting



An economical option to join chain links and attach fittings. Connectors must be completely closed to perform at capacity. They cannot be reused after they've been closed. **Zinc-plated steel** connecting links are mildly corrosion resistant.

Light Duty—These connecting links are also known as lap links or repair links.

Medium Duty—Drive the end through the eye and flatten or weld it to keep closed. These connecting links are also known as cold shuts.

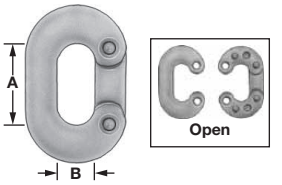
Hammer-Close Connecting Links—Not for Lifting



Strike the prongs with a ball peen hammer and they expand to hold the connecting link together.

Steel links meet Fed. Spec. RR-C-271D. They are forged.

Galvanized steel links have a thick coating for corrosion resistance. They are forged.

316 stainless steel links have excellent resistance to salt water and chemicals. They are cast.

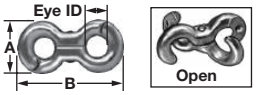
Twist-Close Connecting Links—Not for Lifting



Often used to create wire rope barriers, these galvanized iron connecting links close under tension and open under slack. They're not for use in overhead lifting applications or as a link for chain or to repair chain.

Thick.	(A)	(B)	Eye ID	Cap., lbs.		
3/8"	13/16"	1 3/4"	1/4"	100	3346T21	$6.28

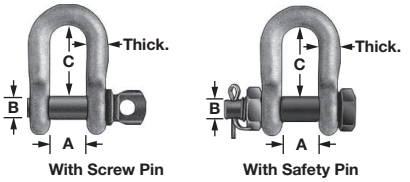
Chain Shackles—For Lifting



A narrow inner opening restricts the movement of wire rope and chain. These chain shackles are also known as D-shackles. All meet ASME B30.26 and Fed. Spec. RR-C-271F. Shackles are forged. **Galvanized steel** shackles have a thick coating for corrosion resistance. Pin is alloy steel. **316 stainless steel** shackles have excellent resistance to salt water and chemicals. Pin is 316 stainless steel.

Chain Shackles with Screw Pin—Screw the pin into position by hand for quick installation and removal. They're for use in low-vibration applications where the shackle remains stationary.

Chain Shackles with Safety Pin—A bolt fastened with a nut and cotter pin makes these shackles more secure than screw-pin shackles.

Shackles—For Lifting

Also known as anchor and bow shackles, the wide body provides room to attach multiple connectors. All are forged. They meet ASME B30.26 and Fed. Spec. RR-C-271 (unless noted). **Black-oxide steel** shackles have a dark surface color. **Galvanized steel** shackles have a thick coating for corrosion resistance. **Galvanized alloy steel** shackles are stronger than steel shackles. **316 stainless steel** shackles have excellent resistance to salt water and chemicals.

Shackles with Screw Pin—Screw the pin into position by hand for quick installation and removal. They're for use in low-vibration applications where the shackle remains stationary.

Shackles with Safety Pin—A bolt fastened with a nut and cotter pin makes these shackles more secure than screw-pin shackles.

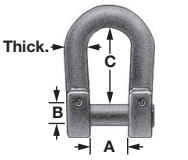
Heavy Duty Shackles—For Lifting

The strongest shackles we offer, these connectors have a pin with flush ends that prevents snagging and accidental disengagement. They can be assembled and disassembled with a hammer. Shackles are red powder-coated alloy steel. They meet ASME B30.26.



For Chain Trade Size	Thick.	(A)	(B)	(C)	Cap., lbs.

Web Sling Shackles—For Lifting

Also known as flat shackles, these have an extra-wide body so web slings and straps don't slide and bunch. These shackles are forged red-painted alloy steel. All meet ASME B30.26.

Shackles **with screw pin** are for use in low-vibration applications where the shackle remains stationary. Screw the pin into position by hand for quick installation and removal. Shackles **with safety pin** have a bolt fastened with a nut and cotter pin for a more secure connection than screw-pin shackles.

Optional spools (sold separately) fit on the pin to center attachments and keep rope from sliding across the pin.

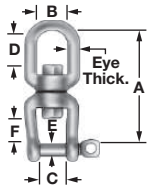
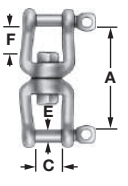
Swivels—Not for Lifting

Eye-to-Eye

Eye-to-Clevis with Cotter Pin



Eye-to-Clevis with Screw Pin



Clevis-to-Clevis

Rotate these swivels into position before a load is applied. They are not designed to swivel under load. **Galvanized steel** swivels have a thick coating for corrosion resistance. They are forged. All meet Fed. Spec. RR-C-271. **316 stainless steel** swivels have excellent resistance to salt water and chemicals. They are cast.

Eye-to-Eye—These swivels have an extra-large eye opening for oversized chain and rope.

Eye-to-Clevis—These swivels are used where frequent attaching and detaching is required.

Clevis-to-Clevis—These swivels connect combinations of chain and fittings. The screw pins allow quick and easy attachment without tools.

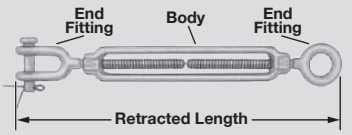
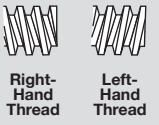
About Turnbuckles and End Fittings





Turnbuckles are mechanical coupling devices that adjust length and tension. They consist of two threaded end fittings and a threaded body. One end fitting has right-hand threads (fitting tightens clockwise), and the other end has left-hand threads (fitting tightens counterclockwise). The turnbuckle body has matching right- and left-hand internal threads. Turning the turnbuckle body adjusts the end fittings an equal amount on each end.

Turnbuckles

Suited to your toughest applications, these turnbuckles have a strong, seamless, forged construction (unless noted).

Clevis end fittings include a clevis pin with cotter pin. **Stub end fittings** are unthreaded. **Stud end fittings** are fully threaded. End fittings with **oval eyes** have more room than round eyes to attach connectors.

Galvanized steel turnbuckles have a thick coating for corrosion resistance. Meet ASTM F1145-05 Type 1, Grade 1. **316 stainless steel** turnbuckles have excellent resistance to salt water and chemicals. Meet ASTM F1145-92 Type 1.

Also Available: Jam nuts for galvanized steel turnbuckles. Please ask for 3000T751 and specify thread size.

Weld-Mount Turnbuckles

These weldable turnbuckles and bodies are forged steel and meet ASTM F1145-05 Type 1, Grade 1. Stub and stud ends are steel. **Stub ends** are unthreaded. **Stud ends** are fully threaded. **To Order:** For replacement end fittings, please specify right- or left-hand thread.

Also Available: Jam nuts. Please ask for 2995T911 and specify thread size.

★ Capacity is 10,000 lbs.

Closed-Body Turnbuckles

The closed body protects threads from damage and debris and has a slim profile to fit in tight spaces. Made of 18-8 stainless steel, they have excellent resistance to salt water and chemicals. Jam nuts are included.

Clevis end fittings pivot for easier connections and include a clevis pin with cotter ring.

Also Available: Replacement bodies and end fittings.

For replacement bodies, please ask for 3082T666 and specify thread size.

For replacement end fittings, please ask for 3082T888 and specify type of end fitting (eye, clevis, or hook), thread size, and right- or left-hand thread.

Light Duty Turnbuckles

Made of cast 316 stainless steel (unless noted), these turnbuckles are the economical choice when you need corrosion resistance.

Clevis end fittings include a clevis pin with cotter ring.

Also Available: For replacement bodies, ask for 30315T666 and specify thread size. For jam nuts and replacement end fittings, ask for 30315T333 and specify jam nut or type of end fitting (eye, clevis, hook, or stub), thread size, and right- or left-hand thread.

Miniature Turnbuckles

If you have small-wire applications that require low tension, these are the turnbuckles you need.

Closed-body turnbuckles protect threads from damage and debris and have a slim profile to fit in tight spaces.

Zinc-plated steel is mildly corrosion resistant. **Aluminum** is lightweight and has good corrosion resistance. **18-8 stainless steel** has excellent resistance to salt water and chemicals.

To Order: Please specify end fittings: eye to eye, hook to eye, or hook to hook.

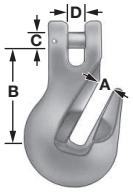
Grab Hooks—*For Lifting*



With Clevis

With a narrow opening and contoured sides, these securely hold a single link of chain. All are forged alloy steel. Maximum temperature is 300° F. They meet ASME B30.10.

Extra high-strength (Grade 120) hooks are the strongest hooks we offer. When used with chain of the same grade they are approximately 20% stronger than Grade 100 hooks.

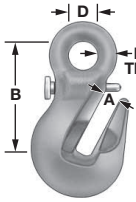
Grab Hooks with Securing Pin—*For Lifting*



High-Strength (Grade 100)

A spring-loaded pin ensures chain won't separate from the hook when the load slackens. All hooks are forged alloy steel. They meet ASME B30.10.

High-strength (Grade 100) hooks are approximately 20% stronger than Grade 80 hooks when used with chain of the same grade. Hooks have a maximum temperature of 400° F.

General purpose (Grade 80) have a maximum temperature of 300° F.

Also Available: Securing pin repair kit for general purpose (Grade 80) hooks. Please ask for 3702T88 and specify chain trade size.

■ Has a clear finish.

Hooks—For Lifting

A spring latch ensures rope, chain, and fittings won't separate from the hook when the load slackens. The hook opening accommodates large anchor points. Hooks have a spring latch.

Extra high-strength (Grade 120) hooks are the strongest hooks we offer. When used with chain of the same grade, they are approximately 20% stronger than Grade 100 hooks and about 35% stronger than Grade 80 hooks. They're alloy steel. Maximum temperature is 300° F. All meet ASME B30.10.

High-strength (Grade 100) hooks are approximately 20% stronger than Grade 80 hooks when used with chain of the same grade. They are alloy steel. Maximum temperature is 300° F. All meet ASME B30.10. *Epoxy-coated hooks* are more corrosion resistant than powder-coated hooks.

General purpose (Grade 80) hooks are alloy steel. Maximum temperature is 400°. They meet ASME B30.9 (unless noted). *Hooks with half link* have a built-in half-link connector.

Corrosion resistant (Grade 63) hooks are approximately 60% as strong as Grade 80 hooks when used with chain of the same grade. They're 318LN stainless steel for excellent resistance to salt water and chemicals. Maximum temperature is 700° F.

Replacement latches include a latch, spring, and installation hardware.

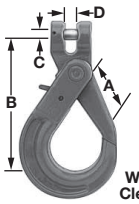
Load-Locking Latch Hooks—For Lifting



With Clevis

With Eye

For a more secure connection than standard hooks, the latch locks closed when a load is applied and stays closed until you press the trigger. **High-strength (Grade 100)** hooks are approximately 20% stronger than Grade 80 hooks when used with chain of the same grade. All are forged alloy steel. Maximum temperature is 400° F.

Hooks with clevis meet ASME B30.10.

Hooks with eye meet ASME B30.10.

Hooks with eye and swivel rotate for easy positioning before a load is applied. They meet ASME B30.9.

Hooks with clevis and ball-bearing swivel rotate under load. They meet ASME B30.9.

Replacement latch springs include a spring and installation hardware.

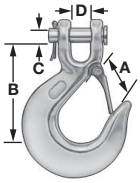
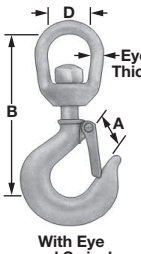
★Capacity is 7,100 lbs.

Hooks—Not for Lifting



With Clevis



With Eye and Swivel

The latch ensures rope, chain, and fittings won't separate from the hook when the load slackens. Maximum temperature is 400° F. **Galvanized steel** hooks have a thick coating for corrosion resistance. **316 stainless steel** hooks have excellent resistance to salt water and chemicals.

Hooks with Clevis—These hooks are forged.

Hooks with Eye and Swivel—These hooks are cast and rotate for easy positioning.

Replacement latches include a latch, spring, and installation hardware.

Oversized Eye Hooks—For Lifting

If you've got large wire rope thimbles and heavy duty chain connectors, these hooks have a large eye to accommodate them. A spring latch ensures rope, chain, and fittings won't separate from the hook when the load slackens. All are forged. Maximum temperature is 199° F. They meet ASME B30.10.

Hooks with swivel have an eye that rotates for easy positioning.

Alloy steel hooks are painted gold. Maximum temperature is 199° F. **Steel** hooks are painted red. Maximum temperature is 199° F. **Stainless steel** hooks have excellent resistance to salt water and chemicals. Maximum temperature is 600° F.

Replacement latches include a latch, nut and bolt, and spring.

Latch Kits for Hooks—For Lifting

Add functionality by installing a latch on your hook, or extend the life of your hook by replacing a damaged latch. All latches come with a nut and bolt (hooks not included). They meet ASME B30.10.

Spring Latch Kits for Hooks with Pinhole

These kits fit most hooks with a drilled pinhole. To select the correct size, check the capacity (measured in tons) of your hook. These latches are 18-8 stainless steel for excellent resistance to salt water and chemicals.

Latch Kits for Hooks without Pinhole

Choose the latch that matches the neck diameter and hook opening of your hook, and clamp it in place.

Zinc-plated steel latches have mild corrosion resistance.

18-8 stainless steel latches have excellent resistance to salt water and chemicals.

Spring Safety Latch Kits for Hooks with Pinhole

Prevent accidental release and keep the tip from snagging. These two-way safety spring latches are 18-8 stainless steel and resist salt water and chemicals. They fit most hooks with a drilled pinhole.

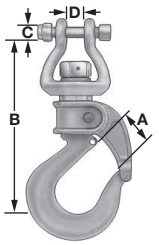
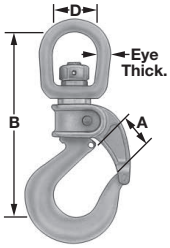
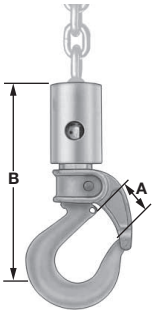
Spring-Close Locking Latch Hooks—For Lifting



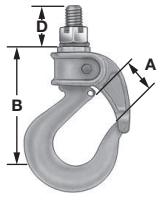
With Clevis and Swivel



With Eye and Swivel



With Clevis and Ball-Bearing Swivel



With Threaded Shank

Easily shut with one hand, the spring-loaded latch on these hooks swings 150° and snaps back in place to secure your load. Once closed, the latch can only be opened by releasing the locking mechanism. Hooks are forged alloy steel. Maximum temperature is 199° F. They meet ASME B30.10.

Hooks with clevis and swivel and **hooks with eye and swivel** rotate for easy positioning before a load is applied.

Hooks with clevis and ball-bearing swivel rotate under load. Attach to chain by inserting the included pin through a link.

Hooks with threaded shank attach by screwing the hook into place and securing with the included nut.

Replacement latches include a latch, spring, and installation hardware. Latches are steel.

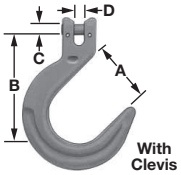
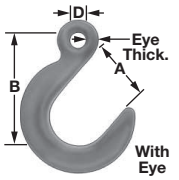
Wide Mouth Hooks—For Lifting



With Clevis



With Eye

Also known as foundry hooks, use these on thick molds, castings, and objects that don't have attachment points. They're forged alloy steel. All meet ASME B30.10.

High-strength (Grade 100) hooks are approximately 20% stronger than Grade 80 hooks when used with chain of the same grade. Maximum temperature is 400° F.

General purpose (Grade 80) hooks have a maximum temperature of 500° F.

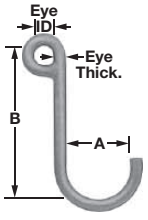
Narrow Body Eye Hooks—For Lifting



Welded

Forged

Insert in eyes, links, rings, and other connectors with small openings. Also known as sorting hooks or J-hooks. Maximum temperature is 400° F.

Forged hooks are stronger than welded hooks.

316 stainless steel hooks have excellent resistance to salt water and chemicals.

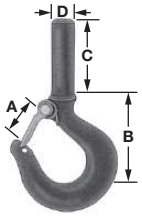
Unthreaded Shank Hooks—Not for Lifting

Cut your own threads or weld the shank in place. A drilled pinhole allows you to install an optional latch. All hooks are forged alloy steel with a black-painted finish. Maximum temperature is 199° F.

Optional latches include a latch, spring, and installation hardware.



Shown with Optional Latch

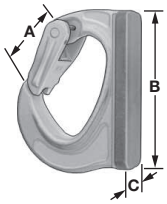
Weld-On Hooks—Not for Lifting

Weld these hooks into place. They have a spring-loaded latch. All are forged general purpose (Grade 80) alloy steel with a yellow powder-coated finish. Maximum temperature is 400° F. They meet ASME B30.10.

Replacement latches include a latch, spring, and two pins.



Cap., lbs.	(A)	(B)	(C)	Hooks		Replacement Latches	
6,600	1 3/16"	5 3/16"	3/8"	34685T31	$118.64	34685T41	$56.32

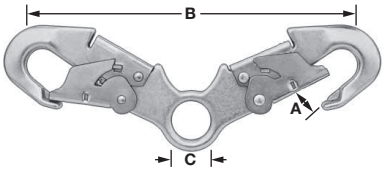
Trigger-Release Snaps with Eye—Not for Lifting



Snap with Trigger-Release Latches on Both Ends

Trigger-Release Snap with Eye

Safety Trigger-Release Snap with Eye

Wide-Mouth Trigger-Release Snap with Eye

A locking mechanism secures the latches on these snaps. Snaps are alloy steel.

Snaps with trigger-release latches on both ends and **trigger-release snaps with eye** have a latch that can be quickly released by squeezing the trigger.

Safety trigger-release snaps with eye have a more secure connection than standard trigger-release snaps. Squeeze the trigger and slide the latch grip down to release.

Wide-mouth trigger-release snaps with eye have a wide opening that accepts large diameters of rope and pipe. Squeeze the trigger to release.

Cap., lbs.	(A)	(B)	(C)

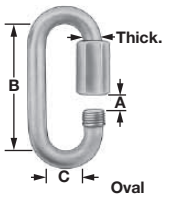
Threaded Connecting Links—Not for Lifting



Square

Pear-Shaped

Triangle

Also known as quick links, screw the nut onto the threaded end to secure end fittings. They can be reused.

Square—Flat sides allow webbing and strapping to lay flat, so they won't slide and bunch.

Pear-Shaped—The narrow end restricts the movement of rope and chain, and a wide end allows room to attach multiple connectors.

Triangle—Use for three-sided connections. Flat sides ensure webbing and strapping lay flat, so they won't slide and bunch.

Zinc-plated steel links are mildly corrosion resistant. **316 stainless steel** links have excellent resistance to salt water and chemicals.

Also Available: Brass oval connectors. For connectors with a standard opening, please ask for 8947T888 and specify thickness.

For connectors with a large opening, please ask for 3711T888 and specify thickness.

Zinc-plated steel carabiners are mildly corrosion resistant.

Aluminum carabiners are more corrosion resistant than zinc-plated carabiners.

Black anodized aluminum carabiners blend into dark backgrounds and offer excellent corrosion resistance.

316 stainless steel carabiners have excellent resistance to salt water and chemicals.

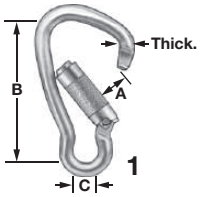
Locking Carabiners—Not for Lifting



1

2

3

4

5

A locking latch ensures a secure connection. **Zinc-plated steel** carabiners are mildly corrosion resistant. **Aluminum** carabiners are more corrosion resistant than zinc-plated carabiners. **316 stainless steel** carabiners have excellent resistance to salt water and chemicals.

Twist-Locking—To open, lift and twist the latch 90°.
Screw-Locking—Lock by screwing the latch into the body.
Slide-Locking—A lock slides upward over the latch to lock. The latch opens outward to accept large diameters of rope.

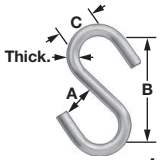
S-Hooks—Not for Lifting



1

Zinc-plated steel hooks are mildly corrosion resistant. **Black-oxide steel** hooks have a dark surface color. **Brass** hooks are more corrosion resistant than zinc-plated hooks. **Galvanized steel** hooks have a thick coating for good corrosion resistance. **Stainless steel** hooks have excellent resistance to salt water and chemicals. **Black plastic** hooks are lightweight and won't scratch your surface.

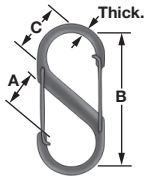
S-Hooks with Latch—Not for Lifting



Latches on Both Ends

Latch on One End

For extra security, latches on these hooks snap back into place to secure your load.

Black plastic hooks are lightweight and won't scratch your surface.

Black powder-coated 400 series stainless steel hooks have excellent corrosion and abrasion resistance.

316 stainless steel hooks have excellent resistance to salt water and chemicals.

About Pulleys

To Calculate the Load on a Single Pulley

Rope Angle	Multiply Load By
0°	2.00
30°	1.93
45°	1.84
60°	1.73
90°	1.41
120°	1.00
150°	0.52
160°	0.35
180°	0.00

Pulleys are wheels with a groove. **Mounted pulleys** have a housing with mounting holes. **Hanging pulleys** have a housing and hardware such as a hook for suspending.

Use multiple pulleys to reduce the force needed to move a load and to reduce the amount of load movement for finer motion control.

Use pulleys **for horizontal pulling** to assist with horizontal pulling or to guide a rope.

Capacity—The rope angle affects the load on a pulley. Use the chart to determine the capacity you'll need based on the angle of your rope. For example, if you are lifting a 100-lb. load at 0° straight down with a single pulley, then the load on your pulley is 200 lbs.

Size Selection—To minimize the bending stress on your rope, you should choose the largest possible pulley OD.

Pulley Diameter Checkers—Also known as groove gauges, these measure the groove of your pulley to check for wear as well as determine the correct wire rope size. Includes 14 gauges in 1/4" to 1 1/2" wire rope diameters.

Machinable Pulleys

Customize the groove and bore to fit your application. The center of the pulley has a pilot hole so you can drill a bore to match a specific shaft size. Made of nylon, pulleys are easy to machine yet resist impact and corrosion. They are for use with wire rope and rope. Capacity is not rated.

Mounted Pulleys for Wire Rope

Double Pulleys—Use with another pulley to reduce the force needed to move a load and to reduce the amount of load movement for finer motion control.

Stainless steel pulleys are more corrosion resistant than steel.

Pulleys *with ball bearings* are easier to turn than pulleys without ball bearings.

Style 8 pivots up to 200° for different pull directions.

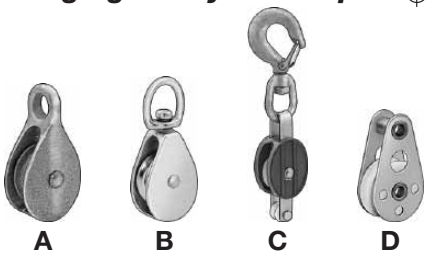
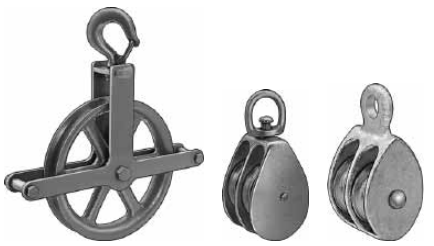
Load-Assist Hanging Pulleys for Rope—For Horizontal Pulling

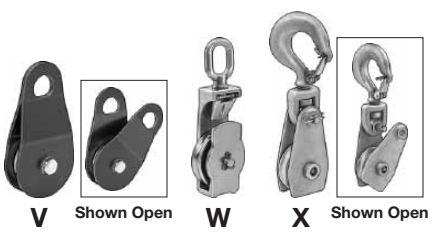
Reduce the force needed to hold your load in place. Unlike standard pulleys, these have a V-groove for more grip on your rope, and they ratchet when under load so they won't slip in the other direction. Pulleys are aluminum with a nylon housing. Pulley *for 3/8" dia. rope* can be set to ratchet even when not under load.

For Rope Dia.	Cap., lbs.	Attachment Type	Eye Dia.	Overall Ht.	OD		
5/16"	375	Swivel Shackle	3/8"	3 1/8"	1 9/16"	3195T54	$64.95
3/8"	550	Swivel Shackle	3/8"	3 7/8"	2 3/16"	3195T53	89.95

Hanging Pulleys for Rope







Double Pulleys—Use with another pulley to reduce the force needed to move a load and to reduce the amount of load movement for finer motion control.

Easy-Open Pulleys—Also known as snatch blocks, these pulleys open so it's easier to feed the rope through the housing—a free rope end is not needed.

Pulleys *with ball bearings* are easier to turn than pulleys without ball bearings.

Styles C, G, H, M, and *U* have a bracket on the bottom for tying off one end of a rope.

Hanging Pulleys with Carabiner for Wire Rope—For Horizontal Pulling

Versatile and lightweight, you can mount this pulley to steel framing or hang as part of your rigging system. It is nylon with an aluminum housing and has ball bearings for easy turning.

For Rope Dia.	Cap., lbs.	Attachment Type	Eye Dia.	OD	Overall Ht.		
3/16"	900	Rigid Carabiner	3/4"	3 3/8"	7 3/8"	9466T11	$189.00

Hand-Held Puller Hooks

Pull crates, boxes, and bales with these steel hooks. Also known as manhole hooks and chain hooks.

Note: Not for lifting.

Lg.	Point Size	Eye Lg.	Eye Wd.		
18"	1/2"	2 1/2"	4 1/4"	2029T2	$27.62

Manhole-Cover Lifters

With Chain Lift

With Magnet Lift

A long handle gives you the leverage to safely remove manhole covers by yourself.

Lifter **with chain lift** is adjustable to fit most covers. It includes a chain and hook to attach to the side openings of the manhole cover. Made of steel.

Lifter **with magnet lift** has a retractable handle that can be adjusted to lift at 90°, 105°, and 120°. It folds up for easy storage and has two 10" dia. wheels for easy transportation. Made of aluminum. Requires a lifting magnet (sold separately).

Lift Mechanism	Cap., lbs.	Handle Lg.		
Chain	500	36"	8906T65	$220.01
Magnet	400	41"-64"	8906T75	497.74
Magnet for 8906T75			3384T75	574.47

Hand-Held Puller Tongs

Also known as skidding tongs, these steel tongs have fine points that grab and hold even the hardest wood. The grip increases when tension is applied.

Note: Not for lifting.

For Material Thickness	Closed Ht.	Closed Wd.	Eye Dia.		
3 9/16"-16"	9 1/2"	19 1/2"	2 1/2"	3374T16	$119.33

7"-32"	15 1/4"	33"	3 1/4"	3374T21	241.45

Wire Rope with Hook

This flexible wire rope includes a hook with latch on one end for use with winches. It is preformed to prevent it from unraveling when cut, and it's lubricated to reduce wear. Rope is 7×19 galvanized steel wire rope, except 7/16" diameter and larger rope is 6×37 plain steel. Rope has an IWRC core.

Note: The safety factor for capacity is 5:1.

Rope Dia.	Capacity, lbs.	Hook Opening		10 ft.	15 ft.	20 ft.	25 ft.	30 ft.	40 ft.	50 ft.	100 ft.	200 ft.	Other Lgs., ft.

Rope with Hook—Not for Lifting

This rope has a hook with a latch on one end for use with winches. Made of polypropylene, the rope floats in water, resists rot, and doesn't lose strength when wet. It also resists acid, oil, and gas. The twisted construction gives rope a grooved surface, allowing you to grip it tight without it slipping. Color is black.

Note: The safety factor for capacity is 5:1.

Rope Dia.	Capacity, lbs.	Hook Opening		10 ft.	15 ft.	20 ft.	25 ft.	30 ft.	40 ft.	50 ft.	Other Lgs., ft.
5/16"	300	3/4"	2302T81	$19.07	$19.87	$20.67	$21.47	$22.27	$23.87	$25.47	10 to 50

Straps with Hook for Winches

Straps are low-stretch polyester and have a hook with latch on one end. They include hardware for attachment to the winch.

Note: Breaking strength is the force at which straps will break, and should never be considered the work load limit. The work load limit depends on the application and is always significantly lower than the breaking strength.

Strap Wd.	Strap Lg., ft.	Breaking Strength, lbs.	Hook Opening		
2"	15	4,000	1/2"	3169T23	$12.83
2"	20	4,000	1/2"	3169T25	14.71
2"	25	4,000	1/2"	3169T27	16.42
3"	20	6,500	1/2"	3169T41	24.75

Warning: Never use to lift people or items over people.

Hand Winches for Horizontal Pulling

Pull at your own pace with these manual winches. They are steel.

Standard winches with a maximum capacity of 2,300 lbs. and up have two speeds; they wind quickly in high gear and more easily in low gear.

Note: Capacity is highest for the first layer of rope or webbing (at least five wraps of rope or webbing on the winch) and decreases as each additional layer is wound on the winch.

Winches for Rope and Winches for Wire Rope

Standard without Rope

Precise Positioning with Rope and Hook

Precise-Positioning Heavy Duty without Rope

Precise-positioning winches move loads more gradually than standard hand winches. They take longer to wind but require less effort. *Drill-wind precise-positioning* winches have a removable handle and a 5/8″ hex shank so you can wind these winches with a power drill. Maximum drill speed is 600 rpm. *Precise-positioning heavy duty* winches have one-piece gears that provide more durability than the riveted gears of other hand winches.

For additional rope lengths, see page 1511.

Optional Gear Covers for Standard Winches

Protect winch gears from debris with these plastic covers. Fasteners are included.

For 600- and 900-lb. Max. Capacity Winches	3644T14	$7.32
For 1,200- and 1,400-lb. Max. Capacity Winches	3644T15	7.94

Hand Winches for Wire Rope—*For Lifting*

Open Body with Rope and Hook

These winches are designed for occasional use. An automatic brake holds the load when the handle is released. To lift, mount winches above the load or use winches with a pulley that's mounted above the load. Winches also pull horizontally and up an incline. They are steel. For additional wire rope lengths, see page 1511.

Enclosed gears offer protection from dirt and debris.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

Heavy Duty Hand Winches for Wire Rope—For Lifting

Tackle frequent lifting jobs with these rugged winches—their one-piece machined gears stand up to daily use. An automatic brake holds the load when the handle is released. To lift, mount winches above the load or use winches with a pulley that's mounted above the load. Winches also pull horizontally or up an incline. They are steel, except corrosion-resistant winches are stainless steel. For additional wire rope lengths, see page 1511.

Precise-positioning winches move loads more gradually than other winches. These take longer to wind but require less effort. They have enclosed gears for protection from dirt and debris. *Drill-wind precise-positioning* winches have a removable handle and a 1⅛" hex shank so you can wind these winches with a power drill. Maximum drill speed is 400 rpm.

Wall-mount winches are fully enclosed for protection from dirt and debris.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

Electric Winches for Rope—For Horizontal Pulling

Rope does not accumulate on this winch, so it can handle longer lengths of rope than a standard winch. Attach one end of your rope to the load, wind a few wraps on the winch, then pull the free end of the rope as the winch turns to make pulling easier. Also known as a capstan winch. It has enclosed gears for protection from dirt and debris. Winch is aluminum and steel and has a foot control with a 10-ft. cord. Pulling direction is reversible. It operates on 120 volts AC and has a 15-ft. power cord with a three-prong plug. Current is 20 amps. Rope is not included (see pages 1454-1457).

Cap., lbs.	Minimum Line Speed, fpm	Duty Cycle @ Max. Cap.	Overall Lg.	Overall Wd.	Overall Ht.	For Rope Dia.		
800	30	15 min. on, 45 min. off	18¼"	13"	13⅛"	½"-¾"	3744T18	$1,975.00

Electric Winches for Wire Rope—For Horizontal Pulling

Plug In with Enclosed Gears

Plug In Fully Enclosed

Battery Powered with Enclosed Gears

Battery Powered Fully Enclosed

Winches are aluminum and steel. Pulling direction is reversible. For additional wire rope lengths, see page 1511. Winches **with enclosed gears** are partially covered for protection from dirt and debris. **Fully enclosed** winches are completely covered for protection from dirt and debris.

Plug In—Winches have a 6-ft. power cord with a three-prong plug and a hand control with a 6-ft. cord. Current is 10 amps. Winches with two capacities listed include a pulley, which must be used to achieve the higher capacity. *Fully enclosed* winches have a plastic housing.

Battery Powered—Winches include a 5-ft. cord for hardwiring to a 12-volt DC battery (not included). They have a hand control with a cord that is at least 15 ft. long. Winches have a manual brake and an automatic-reset circuit breaker to protect the motor. Winch *with enclosed gears* has a plastic housing. Current is 220 amps. *Fully enclosed* winch has a current of 340 amps.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

Hydraulic Winches for Wire Rope—For Horizontal Pulling

For high capacities and long life, these winches have a powerful hydraulic motor and hardened steel gears. They have an automatic brake that holds the load when the motor stops and enclosed gears for protection from dirt and debris. Winches pull horizontally or up an incline. They are aluminum and steel and have a 7/8″-14 UNF inlet. For additional wire rope lengths, see page 1511.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

Portable Electric Winches for Wire Rope—For Horizontal Pulling

With a handle and mounting hook for portability, these winches can move from job to job. Overload protection prevents operation if the load exceeds capacity. Winches are completely covered for protection from dirt and debris. They are aluminum and steel with a plastic housing and include wire rope with a hook.

Plug-in winch has a 1-ft. power cord with a three-prong plug.

Battery-powered winch includes rechargeable batteries.

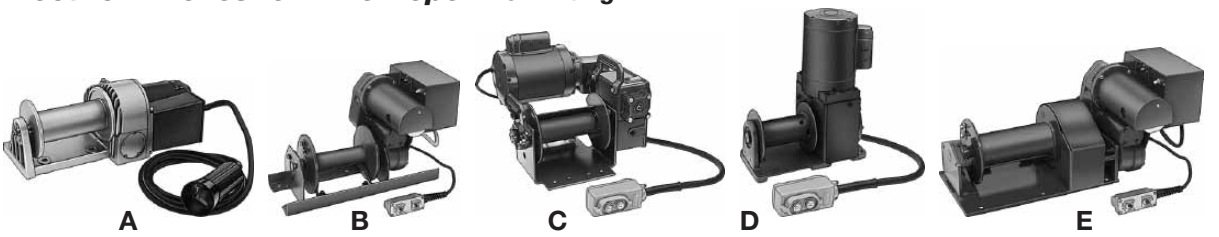
1,000	15	7/32″	0-5	1 min. on, 30 min. off	7/8″	3630T62	453.25

Electric Winches for Wire Rope—For Lifting



An automatic brake holds the load, even when power is lost. To lift, mount winch above the load or use winch with a pulley that's mounted above the load. Winches also pull horizontally or up an incline. Pulling direction is reversible. Winches are aluminum and steel and have enclosed gears for protection from dirt and debris. They have a hand control with a 6-ft. cord. Winches operate on 120 volts AC and have a 6-ft. power cord with a three-prong plug. Current is 19 amps. For additional wire rope lengths, see page 1511.

Heavy duty winches operate longer than standard winches.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

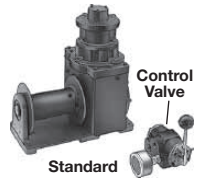
Air-Powered Winches for Wire Rope—For Lifting



Because these winches run on compressed air, they give you a longer operating time than electric winches. They have an automatic brake that holds the load when the motor stops. To lift, mount winch above the load, or use winch with a pulley that's mounted above the load. Winches also pull horizontally or up an incline. Pulling direction is reversible. Winches are aluminum and steel and have enclosed gears for protection from dirt and debris. They have a 1/2 NPT female inlet. Air hose is not included. For additional wire rope lengths, see page 1511.

Standard winch has a duty cycle of 15 minutes on, 45 minutes off at maximum capacity. Minimum line speed is 13 fpm. Air consumption is 80 cfm @ 100 psi.

Heavy duty winches have a duty cycle of 30 minutes on, 10 minutes off at maximum capacity. Minimum line speed is 40 fpm. Air consumption is 100 cfm @ 90 psi.

Note: Capacity is highest for the first layer of rope (at least five wraps of rope on the winch) and decreases as each additional layer of rope is wound on the winch.

Ratchet Pullers with Rope

Pullers provide the capacity of a winch in a versatile, portable tool. All have forged steel hooks. Pullers with two capacities listed include a pulley for twice the capacity but half the reach.

With Wire Rope—Wire rope is stronger than rope and webbing but not as bulky as chain.

With Rope—Fibrous rope is lighter and softer than wire rope and chain.

Compact pullers have a folding handle for storage in the included carrying case. Pullers and wire rope are steel.

Standard pullers are aluminum and steel. Pullers *with wire rope* have steel wire rope.

Heavy duty pullers have a thick, rugged frame for long life. Wire rope is steel. *Style D* are iron. *Style E* are aluminum. 3349T23 has a telescoping handle for compact storage.

Rapid-unwind pullers unwind four times faster than other pullers. They are aluminum with steel wire rope.

Corrosion-resistant pullers are made of anodized aluminum with stainless steel rope for corrosive environments.

Style E have a handle that is designed to bend when the load exceeds capacity. Pullers have an RFID (radio frequency identification) chip for location tracking.

Also Available: Replacement handles for Style E. Please ask for 3349T888 and specify puller part number.

Ratchet Pullers with Webbing

These pullers have a soft, wide strap so they won't damage surfaces. They are steel with forged steel hooks.

Compact—Fold the handle for storage in the included carrying case. Webbing is nylon.

Standard—Webbing is nylon.

Heavy Duty—Have a thick, rugged frame for long life. Webbing is polyester.

Ratchet Pullers with Chain

Hardened steel chain makes these the strongest, most durable pullers we offer. A stop on one end of the chain prevents it from pulling completely through the ratchet. Pullers are aluminum and have forged steel hooks. Meet ANSI/ASME B30.21.

Heavy Duty—A thick, rugged frame gives these pullers long life.

Lever Hoists & Pulley Hoists

Lever Chain Hoists

Compact

General Duty

Heavy Duty

Heavy Duty with Enclosed Gears

Use the ratcheting lever to lift and position your load, and the mechanical brake will securely hold it in place. A stop on one end of the chain prevents the chain from pulling completely through the hoist. All hoists have hardened steel chain and forged steel hooks. Body is steel, except compact heavy duty hoists and hoists with enclosed gears have an aluminum body. Hoists can be used outdoors, unless otherwise stated. All hoists meet ANSI/ASME B30.21.

Compact—Hoists are small enough to fit in your toolbox and can be used in tight spaces. They have a 360° rotating lever for use in any position. *Compact heavy duty hoists* have a thick rugged frame for long life.

General Duty—Not for outdoor use.

General Duty with Overload Protection—Hoist will not operate when the load exceeds capacity. They have a 360° rotating lever for use in any position.

Heavy Duty—These hoists have a thick, rugged frame for long life. *Heavy duty hoists with overload warning* have a lever that folds inward and alerts you with a click and an indicator light when the load exceeds capacity.

Heavy Duty with Enclosed Gears—These hoists have a thick, rugged frame that's enclosed for protection from debris and a 360° rotating lever for use in any position. Hoists with 12″ and 17″ long levers are not for outdoor use. *Heavy duty hoists with enclosed gears and overload protection* won't operate when the load exceeds capacity.

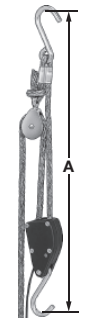
Pulley Hoists



With Mechanical Brake

With Lever-Lock Brake

With Cleat Brake

These hoists come with fibrous rope that is lighter in weight and easier to handle than chain.

Mechanical brake automatically holds your load in place when you stop pulling the rope. Hoist and hooks are steel.

Lever-lock brake has a lever that locks against the rope to hold the load in place. Hoists and hooks are forged steel.

Cleat brake locks by pulling the rope through the cleat to hold your load in place. Hoists are corrosion-resistant stainless steel and plastic; hooks are stainless steel.

***Warning:* Never use to lift people or items over people.**

Hand Chain Hoists

Pull the hand chain to lift and position your load, and the mechanical brake will securely hold it in place. Hoists have a steel body, hardened steel chain, and forged steel hooks, except fast-lift hoists have an aluminum body and spark-resistant hoists have an aluminum body, stainless steel chain, and bronze hooks. Hand chain is 2 ft. shorter than the lift. All hoists meet ANSI/ASME B30.16 and HST-2.

Hoists *with overload protection* will not operate when the load exceeds capacity.

General duty with enclosed gears and overload protection hoists have a frame that's enclosed to protect gears from debris and contamination for smooth operation.

Heavy duty hoists have rugged construction for long life.

Rotating with overload protection hoists have a body that spins 360° so you can operate them from any direction.

Fast lift with overload protection hoists have large gears to allow them to lift faster with each pull. Good for frequent lifting operations where user fatigue is a concern.

Trolley-Mount Hand Chain Hoists

A built-in trolley provides stability as these hoists travel along your beam. They can be mounted on fixed beams as well as on cranes with beams. Pull the hand chain to lift and position your load, and the mechanical brake will securely hold it in place. Hoists have hardened steel chain and a forged steel hook. Body is steel, except fast-lift hoists have an aluminum body. Hand chain is 2 ft. shorter than the lift, unless noted. All hoists meet ANSI/ASME B30.16 and HST-2.

Hoists *with overload protection* will not operate when the load exceeds capacity.

Chain-Driven Trolley Mount—A separate hand chain makes these hoists and their built-in trolleys easier to move.

Fast-lift hoists have large gears to lift faster with each pull. Good for frequent lifting operations where user fatigue is a concern.

★ Hand chain for 30-ft. lift is 3 ft. shorter than the lift.

Warning: Never use to lift people or items over people.

Electric Chain Hoists

Compact

General Duty

Dual Brake

Continuous Use

Dual Speed Precise Positioning

Use the handheld control to effortlessly lift your load. Overload protection prevents hoists from operating if the load exceeds capacity. Hoists can run for 30 minutes per hour, except continuous use hoists. They meet ANSI/ASME B30.16 and ANSI/ASME H4, unless otherwise stated.

Hoists are aluminum and can be used outdoors. Chain and hooks are steel, unless otherwise stated. They have a brake, a hook for mounting, and a chain container (except corrosion-resistant hoists do not have a chain container). Power cord does not include a plug, unless otherwise stated. For plugs, see pages 819-822.

120-volt AC hoists have single-phase motors; *240- and 460-volt AC* hoists have three-phase motors.

Compact (CM Shopstar) hoists are small and lightweight so you can easily move them between jobs. Power cord is 6 ft. C-UL listed. 120-volt AC hoists have a three-prong plug.

General duty (CM Valustar) hoists have a 5-ft. power cord. 120-volt AC hoists meet ANSI/ASME H3.

General duty (CM Lodestar NH) hoists have adjustable maximum and minimum height limit switches to let you set the lifting range. Power cord is 15 ft.

Corrosion-resistant (CM Lodestar NH Cleanchoice) hoists have stainless steel chain and hooks to reduce corrosion and prevent contamination. Adjustable maximum and minimum height limit switches let you set the lifting range. Power cord is 5 ft.

Variable-speed precise-positioning (CM Lodestar NH) hoists allow you to change or hold the speed at any time during operation. Adjustable max. and min. height limit switches let you set the lifting range. Power cord is 5 ft.

Dual-brake (CM Budgit) hoists have a disc friction brake as well as a mechanical brake to stop the load and hold it in place when you're not lifting. Power cord is 5 ft.

Continuous-use (Harrington NER 2) hoists have a fan-cooled motor for continuous running times and a flip-down cover for quick maintenance. The electromagnetic brake provides quick, secure braking and works when there is no power. Power cord is 15 ft.

Dual-speed precise-positioning (Ingersoll Rand Quantum) hoists have a low speed for precise positioning and a high speed for quick lifting. A multiple-disc friction brake provides long life. Adjustable maximum and minimum height limit switches let you set the lifting range. Power cord is 15 ft. UL listed.

Also Available: CM Lodestar NH hoists in 40- and 50-ft. lifts. Please specify part number below, AC voltage, and lift.

★ Harrington NER 2, SNER

Warning: *Never use to lift people or items over people.*

Trolley-Mount Electric Chain Hoists

Hoists come mounted to a trolley for a stable ride on your beam. Use the handheld push-button control to effortlessly lift your load. Overload protection prevents hoists from operating if the load exceeds capacity. They can run for 30 minutes per hour. Hoists are aluminum with a steel trolley, chain, and hooks. All have a brake and chain container and can be used outdoors. They meet ANSI/ASME B30.16 and ANSI/ASME H4.

120-volt AC hoists have single-phase motors and include a three-prong plug. *230-* and *460-volt AC* hoists have three-phase motors and do not include a plug (please see pages 819-822).

With Motorized Trolley—Hoists travel along beams at 75 fpm.

Single-speed (CM Lodestar NH) hoists have a 5-ft. power cord.

Dual-speed precise-positioning (Ingersoll Rand Quantum) hoists have a low speed for precise positioning and a high speed for quick lifting. A multiple-disc friction brake provides long life. Power cord is 15 ft. UL listed.

Variable-speed precise-positioning (CM Lodestar NH) hoists allow you to change or hold the speed at any time during operation. Power cord is 5 ft.

Also Available: CM Lodestar NH hoists in 40- and 50-ft. lifts. Please specify hoist part number, AC voltage, and lift.

Inverted Electric Chain Hoists

These hoists hang upside down and rise along with your load, making them great for lifting lighting and backdrops for trade shows, concerts, and theaters. They are easier to mount than standard electric chain hoists since you connect the hook to the lifting point, rather than the entire hoist body. Use the handheld control to effortlessly lift your load. Overload protection prevents hoists from operating if the load exceeds capacity. A maximum height limit switch prevents the load from hitting the hoist; a minimum height limit switch prevents the load from hitting the ground. Hoists can run for 30 minutes per hour. They meet ANSI/ASME B30.16 and ANSI/ASME H4.

Hoists are made of aluminum with steel chain and hooks. They have a push-button control, a disc friction brake, and a chain container. Power cord is 20 ft. for hoists with 15-ft. lift, 35 ft. for hoists with 30-ft. lift, and 65 ft. for hoists with 60-ft. lift (except 120-volt AC hoists with 60-ft. lift, which have a 50-ft. power cord). Power cords do not include a plug (please see pages 819-822).

120-volt AC hoists have single-phase motors; *230-* and *460-volt AC* hoists have three-phase motors.

Replacement Parts for Electric Chain Hoists

Minimize your downtime—original manufacturer parts keep your hoist in operation.

To Order: For bottom hooks, latches for hook, and chain containers, please specify capacity and lifting speed. For chain containers for CM Valustar and CM Lodestar/Lodestar NH, please also specify material (steel or fabric). For additional parts such as brake components, please specify serial number, manufacturer part number, hoist capacity, and voltage.

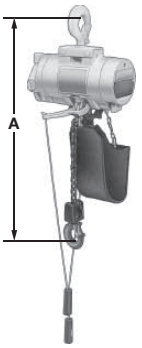
Air-Powered Chain Hoists



General Duty and Spark Resistant with Pull Control

General Duty with Overload Protection with Pull Control

Variable Speed with Lever Control

General Duty and Spark Resistant with Lever Control

Hoists have a cool-running motor for continuous operation. The brake stops the load and holds it in place when you're not lifting. All hoists meet ANSI/ASME B30.16. A filter-regulator-lubricator is required to lubricate the gears and clean and regulate the incoming air (not included; please see pages 1026-1032).

Hoists *with overload protection* will not operate when the load exceeds capacity.

General duty and **spark-resistant (CM Budgit Series 2200** and **6000)** hoists have an aluminum body. Inlet pipe size is 3/8 NPT for 2200 series hoists; 3/4 NPT for 6000 series hoists.

General duty hoists have a steel chain, chain container, and hooks. *Spark-resistant* hoists have a stainless steel chain, bronze hooks, and stainless steel latches.

General duty with overload protection (Harrington TCR) hoists have a durable cast-iron housing for a longer life, a chain container, and steel chain and hooks. Inlet pipe size is 1/2 NPT.

Variable-speed precise-positioning compact with overload protection (CM ShopAir) hoists allow you to change or hold the speed at any time during operation so you can start the hoist softly and gradually decelerate. They are small and lightweight so you can easily move them between jobs. Hoists have an aluminum body, steel chain and hooks, and a chain container. Inlet pipe size is 3/8 NPT.

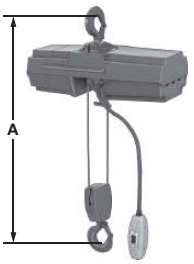
Powered Wire Rope Hoists



Electric

High-Speed Electric Shown with Optional Mounting Bracket

Air Powered

These hoists are quieter and more stable than electric chain hoists.

Electric hoist has a handheld push-button control and thermal motor protection to prevent overheating. It has an aluminum body, steel wire rope, and steel hooks. The electromagnetic brake provides quick, secure braking and works when there is no power. Control cord is 6 ft. long; power cord is 1 1/2 ft. long with a three-prong plug. Operates on 120 volts AC. UL listed.

High-speed electric hoist has an electromagnetic and a mechanical brake that provides quick, secure braking and works when there is no power. Maximum and minimum height switches keep your load from hitting the hoist or the ground. Body, wire rope, and hooks are steel. Control cord is 23 ft. long; power cord is 16 ft. long with a three-prong plug. Operates on 120 volts AC. Meets ANSI/ASME B30.16.

Optional *mounting bracket* mounts to pipe or scaffolding up to 2 1/8″ OD.

Air-powered hoist allows you to change or hold the speed at any time during operation. The gears are enclosed to protect them from debris and contamination for smooth operation. Hoist has a cast iron body, steel wire rope, and steel hooks. Operates on 21.2 cfm at 90 psi. Inlet pipe size is 3/8 NPT.

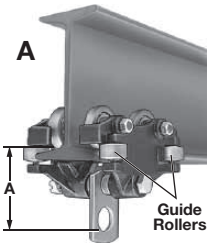
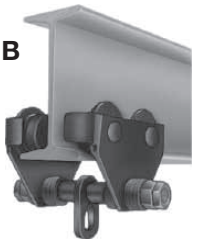
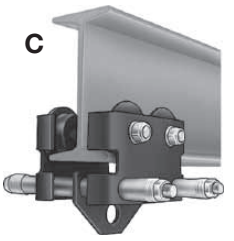
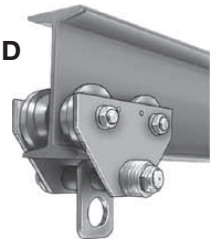
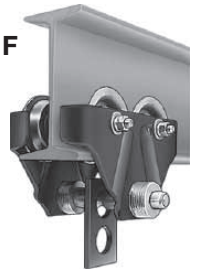
Hoist Trolleys

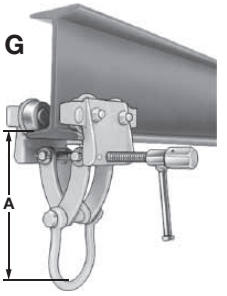












Transport hook-mount hoists along a beam. For use on flat as well as tapered beams, unless noted.

Trolleys **with mounting bar** take up less vertical space than mounting eyes and are good for applications with low clearance. Trolleys **with mounting bar and eye** allow you to remove the mounting eye and use the mounting bar for applications that require lower clearance.

Styles A-F include spacing washers that can be added and removed to fit a range of beam widths. Trolleys have bumpers to protect wheels from collisions with other equipment on your beam. Style A also has side guide rollers to prevent the trolley from wobbling.

Styles G & H have a screw adjustment, so they can be quickly and easily adjusted to fit your beam. Style G has wheel bumpers to protect wheels from collisions with other equipment on your beam and a trolley lock to prevent the trolley from coming loose after it is mounted. It fits beams with a maximum thickness of 1″.

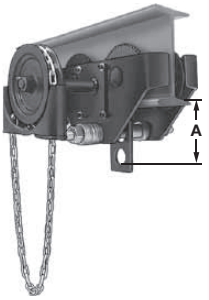
★ For use on tapered beams only.

Warning: *Never use to lift people or items over people.*

Chain-Driven Hoist Trolleys



A separate hand chain makes these trolleys easy to move. Use with hook-mount hoists. The included spacing washers can be added and removed to fit a range of beam widths. The trolley and chain are steel. Wheels are cast iron or steel. For use on flat as well as tapered beams, unless noted.

General duty trolleys have bumpers that protect wheels from collisions with other equipment on your beam.

Heavy duty trolleys have a rugged construction for long life.

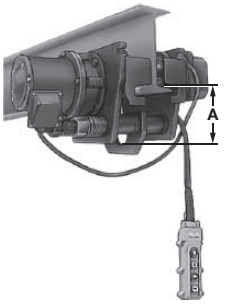
Motorized Hoist Trolleys



With the touch of a button, these trolleys effortlessly move hook-mount hoists along your flat or tapered beam. Trolleys have a mounting eye and the included spacing washers can be added and removed to fit a range of beam widths. Hardwire your hoist to the trolley to operate both the trolley and your single-speed hoist with the hand-held control. The maximum trolley speed is 78 fpm. The control cord is 17 ft. Trolleys and wheels are cast iron.

120V AC trolleys have single-phase motors. *240V-* and *460V-* AC trolleys have three-phase motors.

Cap., lbs.	For Beam Wd.	For Min. Beam Ht.	Clearance (A)	Min. Curve Radius	Eye Dia.	Choose a Voltage (AC)

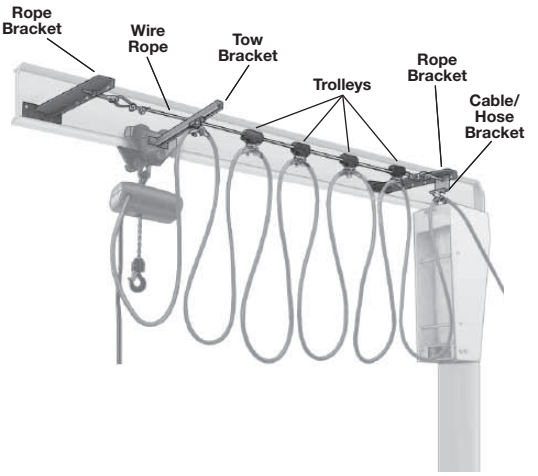
Warning: Never use to lift people or items over people.

Wire-Rope-Travel Hoist Cable Trolley Systems

Also known as festoon kits, these systems keep your hoist's cable or hose tangle-free and out of the way. They consist of a series of small trolleys that travel on the included wire rope, carrying your cable or hose along with them. Because these systems mount to the side of your crane, they require minimal structural support. Round cable, air hose, and flat cable are sold separately. Please see page 844 for round cable, page 839 for flat cable, and pages 264-270 for air hose.

Trolley systems include nylon trolleys, wire rope, rope brackets, a cable/hose bracket, and a tow bracket.

Additional parts can be used to expand a trolley system or build your own trolley system.



For 0.6″-0.94″ OD Round Cable/Air Hose

Minimum required cable/hose length is based on 6 ft. of cable or hose between trolleys plus an additional 7½ ft. at each end.

Max. Travel Lg., ft.	O'all Lg., ft.	Min. Required Cable/Hose Lg., ft.	Cap., lbs.		
Trolley Systems

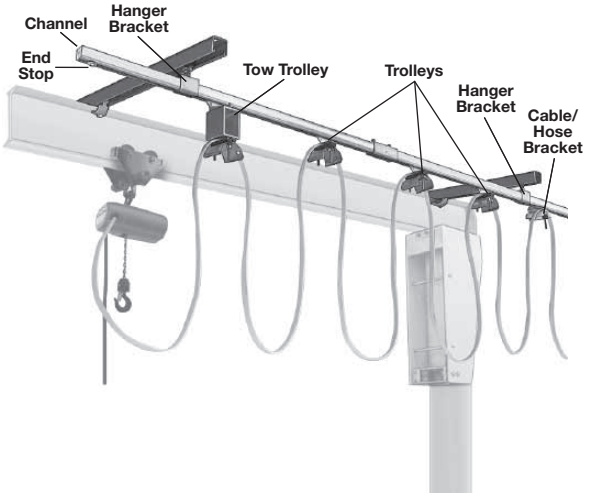
Channel-Travel Hoist Cable Trolley Systems

Also known as festoon kits, these systems keep your hoist's cable or hose tangle-free and out of the way. They include a series of small trolleys that travel along steel channel so they are stronger and run straighter than wire-rope-travel systems and are better for high speeds. Round cable, air hose, and flat cable are sold separately. Please see page 844 for round cable, page 839 for flat cable, and pages 264-270 for air hose.

Trolley systems include steel trolleys, a tow trolley, steel channel, cable/hose bracket, and end stops.

Additional parts can be used to expand a trolley system or build your own trolley system.



For Flat Cable

Minimum required cable/hose length is based on 6 ft. of cable or hose between trolleys plus an additional 7½ ft. at each end.

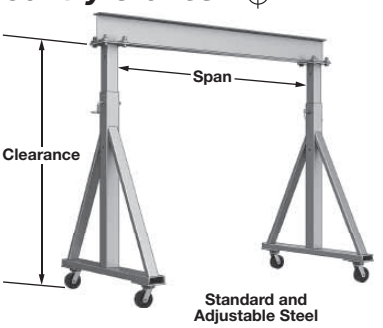
Warning: ***Never use to lift people or items over people.***

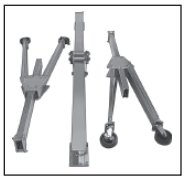
Gantry Cranes



Standard and Adjustable Steel

Adjustable Aluminum

Easy-Store Adjustable



Disassembled

These cranes can be rolled into your work area for infrequent lifts and then rolled away to free up space. They have four swivel casters. Meet CMAA standards.

Standard—Wheels are polyurethane.

Adjustable—Adjust the vertical clearance and horizontal span to suit your needs. *Aluminum* cranes are lightweight. Clearance adjusts in 6″ increments. Casters have brakes and polyurethane wheels. *Yellow-painted steel* cranes adjust vertically in 12″ increments. Legs pivot for maneuverability in tight places and wheels are steel, except 3110T22 and 3110T23 have legs that do not pivot and their wheels are phenolic.

Easy-Store Adjustable—Cranes can be quickly broken down into three pieces for convenient transport and storage. Clearance adjusts in 6″ increments. Cranes include a trolley that slides along the beam. The trolley has a mounting slot to hang your lifting device. It is 1½″ Ht. × 15⁄16″ Wd. for 1,000-lb. capacity cranes, 1⅞″ Ht. × 1 3⁄16″ Wd. for 2,000-lb. cranes, and 2″ Ht. × 1 7⁄16″ Wd. for 4,000-lb. cranes. Casters have brakes and phenolic wheels. Meet ANSI/ASME B30.11.

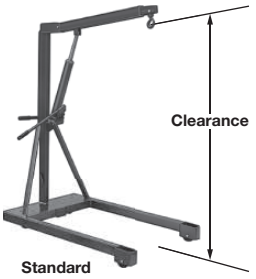
Hydraulic Cranes



Standard

Easy Store

Shown Folded

Close Lift

Also known as engine cranes, a hydraulic hand pump raises and lowers the arm (boom) to lift items without the need for a hoist. Cranes are steel and have a steel latching hook that swivels. The hook opening is 1″.

Standard—Have two rigid and two swivel casters. Cranes meet ASME PASE specifications.

Easy Store—Fold these cranes for convenient transport and storage. Cranes have three rigid and two swivel casters. Meet ASME PASE specifications.

Close Lift—With no legs in front, these cranes let you lift close to your load. Cranes have two rigid and two swivel casters. Meet ANSI Z535 and ASME PALD-12.

Repair kits contain hydraulic components subject to wear such as O-rings, gaskets, and seals.

Lift Helper Cranes

Designed for small jobs such as lifting jigs and dies in tight work spaces. Cranes have a hand winch and an automatic brake that holds your load securely when the handle is released. Cranes are yellow powder-coated steel, and have a steel roller chain and a steel latching hook that swivels. The hook opening is 3/4". Meet ANSI/ASME B30.16.

Tabletop- and **floor-mount** cranes rotate 360°.

Mobile crane can be disassembled for convenient transport and storage. It rotates 30° and has two rigid and two swivel casters. Wheels are plastic. Distance between legs is 28".

Hand-Winch Cranes

Also known as davit cranes, these lift objects out of holes such as sewers. An automatic brake holds your load securely when the handle is released.

Floor Mount and **Wall Mount—**Cranes rotate 360°.

Mobile—Cranes have two rigid and two swivel casters. Wheels are rubber and steel. *Fixed-arm* cranes are for openings up to 2 ft. in diameter. *Adjustable-arm* cranes are for openings up to 3 ft. in diameter.

Steel cranes have a galvanized steel wire rope and a steel latching hook that swivels. Hook opening is 7/8". *Powder-coated steel* cranes offer some corrosion resistance. *Galvanized steel* cranes have more corrosion resistance than powder-coated steel.

Stainless steel cranes have the most corrosion resistance. They have a stainless steel wire rope and latching hook. Hook opening is 11/16" for fixed-arm cranes; 3/4" for adjustable-arm cranes.

Also Available: 15" extension bases for cranes with adjustable arm lengths. Please ask for 3276T888 and specify the McMaster-Carr part number of your crane.

Pallet Lifters

Use these lifters with a hoist as an alternative to forklifts to lift items on pallets. Forks slip under pallets and remain balanced whether the pallets are full or empty. Lifters are steel with a yellow-painted finish. They have built-in guiding handles. Lifters conform to ASME B30.20.

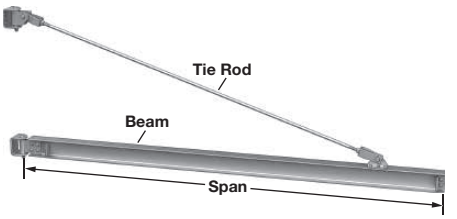
Column-Mount Rotating Cranes

Designed to save valuable floor space, these cranes mount to structural columns. Also known as jib cranes, the beam accommodates most trolleys. Use ASTM A325 structural bolts (not included, see page 3176) to mount cranes to columns that are able to support the thrust force of the cranes under load. Cranes are yellow-painted steel and have beam stops to limit trolley travel.

With 200° Rotation



Cranes are supported by a steel tie rod to handle high amounts of thrust force.

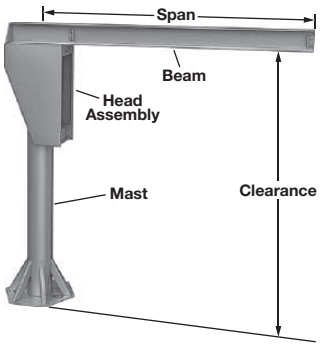
Foundation-Mount Rotating Cranes



Install these cranes with anchor bolts (sold separately) set in a reinforced-concrete foundation. They rotate 360° to maximize floor space. Also known as jib cranes, they consist of a mast, head assembly, and flat beam that accommodates most trolleys. They are yellow-painted steel. Use the included base plate pattern as a template to properly set anchor bolts into the foundation.

Anchor bolts include leveling nuts and securing nuts with washers to hold the mast's base plate. They are steel.

Floor-Mount Rotating Cranes

No need to pour a special foundation—you can install these cranes on a reinforced concrete floor. Also known as jib cranes, they rotate 360° to maximize floor space and have enclosed-track beams that keep the trolley running smoothly by preventing debris from collecting on the track. The trolley has a mounting bar for your lifting device. Cranes are blue-painted steel. Use Grade 5 steel stud anchors for concrete (not included, please see pages 3350-3351) to mount cranes to a minimum 6″ deep reinforced concrete floor.

Workstation Cranes

Able to cover a larger work area than rotating cranes, these allow you to position your load anywhere inside the four posts. They do not require installation in a foundation—you can install them on a reinforced concrete floor. Cranes have two fixed beams, a moving beam that travels along the fixed beams, a trolley, a cable travel system, and four posts. Beams have an enclosed track that keeps the moving beam and trolley running smoothly by preventing debris from collecting on the track. The trolley has a mounting bar for your lifting device. The cable travel system includes 14-gauge flat cable and cable trolleys to carry your lifting device's power cable. Fixed beams and posts are gray-painted steel; moving beam is yellow-painted steel. Use steel stud anchors for concrete (not included, please see pages 3350-3351) to mount cranes to a minimum 6″ deep reinforced concrete floor.

Build-Your-Own Workstation Cranes

Create your own crane with or without posts. Mount beams to your structural ceiling supports for a post-free crane, to four posts for a traditional crane, or to a combination of ceiling supports and posts to free up some floor space. All components are orange powder-coated steel.

Beam—Each beam can be installed as either a fixed or moving beam. Beams have an enclosed track that prevents debris from collecting on the track. The trolley slides along the beam and has a 1¼″ dia. eye for mounting your lifting device. Wheels are plastic. Fasteners are included. **Connection bracket** joins fixed beams together to extend the length of your crane.

Post—Mount each post to a minimum of 4″ deep reinforced concrete floor with steel stud anchors for concrete (not included, please see pages 3350-3351).

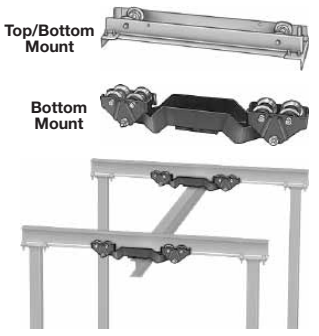
1,000	14′	16′	4281T55	492.96

Beam Trolleys

Also known as end trucks, use these trolleys with your own beams to create a crane. For example, use two trolleys to allow a beam to move along two structural beams. Trolleys are steel with iron wheels and are for use on tapered as well as flat beams. Bumpers on the trolley body protect the wheels. Fasteners are included.

Top/bottom-mount trolleys allow you to run your moving beam along either the top or bottom of your fixed beams.

Bottom-mount trolleys are used on the bottom of fixed beams.



Bottom-Mount Trolleys Used with I-Beams to Create a Crane

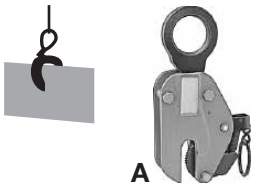
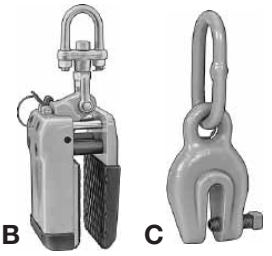
Plate-Lifting Clamps

Get a grip on metal plates when you need to lift and position them. Clamps are steel. Meet ANSI/ASME B30.20.

Vertical Lift





Use these clamps to raise your plate straight up from its original vertical position.

(A) Teeth Grip with Lock and Remote Release—Clamps close under their own weight; as the load increases, so does the grip. Clamps have a pull chain so you can open them remotely when they are not under load. They lock when open for easy loading and lock closed to prevent accidental release. For use with plates that have a hardness of less than Rockwell C33/300 Brinell.

(B) Nonmarring Pad Grip—Clamps close under their own weight and have pads to grip your plates without damaging them; as the load increases, so does the grip. Clamps open automatically when they are not under load so you can easily insert a new plate. They can be used with any material including plates of any hardness, composites, and stone.

(C) Screw Grip—Clamps have a screw that you manually adjust to grip and release plates. For use with plates that have a hardness of less than Rockwell C33/300 Brinell. Not for use on hardened alloy plates.

Replacement Lifting Eyes—Please specify clamp part number								8857T555	

Vertical Lift with 90° Tilt

Clamps can take a plate that is stacked horizontally and tilt it up 90° so it can be lifted in a vertical position. After lifting, clamps can place the plate back down in the original position (plate can not be flipped over). These clamps close under their own weight; as the load increases, so does the grip. For use with plates that have a hardness of less than Rockwell C43/400 Brinell.

(D) Teeth Grip with Plate-Separating Leg—Clamps have one long, pointed leg to pry stacked plates apart. They open manually.

(E) Teeth Grip with Lock and Remote Release— Clamps have a pull chain so you can open them remotely when they are not under load. They lock when open for easy loading and lock closed to prevent accidental release.

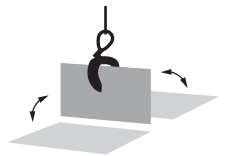
Vertical Lift with 180° Flip



Take a plate that is stacked horizontally, lift it vertically, and then place it down horizontally on its other side. Clamps *with lock* allow for easy loading when open and prevent accidental release when closed.

Teeth grip and *nonmarring pad grip* clamps close under their own weight to grip your load; as the load increases, so does the grip.

(F) Teeth Grip—For use with plates that have a hardness of less than Rockwell C43/400 Brinell.

(G) Teeth Grip for Odd Shapes—Clamps are designed for securely gripping oddly shaped items. For use with plates that have a hardness of less than Rockwell C43/400 Brinell.

(H) Teeth Grip with Sling—Clamps come with a two-leg chain sling to make it easier to lift large or flexible plates. 8857T21 has a 20 3/4" long sling; 8857T22 has a 30" long sling. For use with plates that have a hardness of less than Rockwell C43/400 Brinell.

(J) Teeth Grip with Lock—For use with plates that have a hardness of less than Rockwell C45/420 Brinell.

(K) Compact Teeth Grip with Lock—For use with plates that have a hardness of less than Rockwell C37/345 Brinell.

(L) Teeth Grip with Lock and Pivoting Eye—The lifting eye pivots to allow lifting angles up to 45° without reducing the capacity. The eye adjusts to accommodate unbalanced loads. For use with plates that have a hardness of less than Rockwell C37/345 Brinell.

(M) Nonmarring Pad Grip with Lock and Pivoting Eye—Clamps have pads to grip your plates without damaging them. The lifting eye pivots to allow lifting angles up to 15° without reducing the capacity. The eye adjusts to accommodate unbalanced loads. They can be used with any material including plates of any hardness, composites, and stone.

(N) Screw Grip—Clamps have a screw that you manually adjust to grip and release plates. For use with plates that have a hardness of less than Rockwell C43/400 Brinell. Not for use on hardened alloy plates.

Horizontal Lift

Use in pairs with a two-leg sling (not included) to transfer metal plates in a horizontal position. Unlike other plate-lifting clamps, these can pick up multiple plates at the same time. For use with plates that have a hardness of less than Rockwell C45/420 Brinell.

(P) Teeth Grip—Clamps close under their own weight to grip your load; as the load increases, so does the grip.

(Q) Teeth Grip with Lock—Clamps lock when open for easy loading and lock closed to prevent accidental release.

Lifting Beams

Also known as spreader beams, these beams adjust to stabilize long or unbalanced loads when lifting. All are steel with a yellow painted finish and are marked with capacity. Meet ANSI/ASME B30.20.

With Shackles—Shackles and lifting eye have screw pins to adjust every 3" for the 250-lb. capacity beam, 4" for the 500-lb. capacity beam, and 6" for the 1,000-lb. capacity beam.

With Latching Hooks—Hooks are adjustable.

With Brackets—Brackets and lifting eye are adjustable every 2".

Plate-Lifting Clamps & Lifting Magnets

Light Duty Plate-Lifting Clamps

Lift metal plates that weigh up to 500 lbs. and have a hardness of less than Rockwell C43/400 Brinell. Clamps close under their own weight; as the load increases, so does the grip. They open automatically when they are not under load so you can easily insert a new plate. Clamps are made of steel and are for vertical lifting only.

Style A—Use the handle to lift metal plates by hand.

Style B—Has a 1½″ Lg.×1″ Wd. eye for lifting.

	Cap., lbs.	For Max. Thick.	Opening Ht.	Overall Wd.	Overall Ht.		
A	500	5/16″	1 7/8″	4″	6″	**3359T14**	$212.71
B	500	5/16″	1 7/8″	3 3/4″	8″	**3359T15**	242.81

Coil-Lifting Hooks

These hooks have a pivoting tip to lift and move bulky, hard-to-maneuver coils of wire from a horizontal to a vertical position. They are made of steel with a yellow painted finish. Meet ANSI/ASME B30.20.

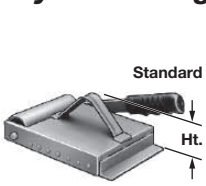
Cap., lbs.	Lifting Eye Opening Lg.	Lifting Eye Opening Wd.	Coil Size Max. Wd.	Coil Size Max. Radius	Coil Size Min. ID		
1,000	3 1/4″	2″	6″	13″	9″	**3595T14**	$890.84
2,000	3 1/4″	2″	8″	16″	10″	**3595T17**	898.76
4,000	4″	2 5/8″	10″	18″	12 1/2″	**3595T18**	1,089.87

Industrial Battery Lifters

Lift forklift batteries and other large, heavy batteries. Beams are made of lightweight, nonconductive fiberglass and have acid-resistant polyester straps.

Cap., lbs.	For Battery Lg.	Lifting Eye Opening Lg.	Lifting Eye Opening Wd.			
4,800	30″-42″	38″	6″	3″	**70605K43**	$731.40
7,000	30″-42″	38″	5 1/2″	2 3/4″	**70605K44**	834.08

Pry-Off Lifting Magnets



Also known as permanent lifting magnets, these magnets hold your load until you pull the lever and pry off the magnet. They have a lifting eye for attaching a hook or sling. Housing and lifting eye are stainless steel. Maximum operating temperature is 260° F.

Nonmarring roller release prevents scraping and gouging your load as it is released. Magnets meet ANSI/ASME B30.20.

Note: Capacities listed are based on lifting flat metal that has a clean, smooth surface. If used on dirty, oily, thin, or curved surfaces, the capacities will be reduced.

Switch-Off Lifting Magnets

Manual

Manual with Vertical Lift

Remote

No need to pry these permanent lifting magnets off your load—an on/off switch makes it easy to separate loads. Also known as permanent lifting magnets. They have a lifting eye for attaching a hook or sling. Housing and lifting eye are steel, unless noted. Maximum operating temperature is 180° F. Meet ANSI/ASME B30.20.

Manual On/Off Control—Use the on/off handle to engage the magnet. The handle locks in both the on and off positions to prevent accidental release.

Magnets *with vertical lift* are for horizontal and vertical lifting. 3384T83 has a pivoting lifting eye for both horizontal and vertical lifting. 3384T54 has an extra detachable eye that mounts on the side to lift loads vertically.

Remote On/Off Control—With the help of a battery and a remote control, this magnet remotely turns on and off with the push of a button. If the battery loses power, the magnet will stay in the on position until you use the secondary manual release. Rechargeable batteries and charger are included.

Note: Capacities listed are based on lifting flat, rigid metal that has a clean, smooth surface. If used on dirty, oily, thin, or curved surfaces, the capacities will be reduced. Do not use on metal that flexes.

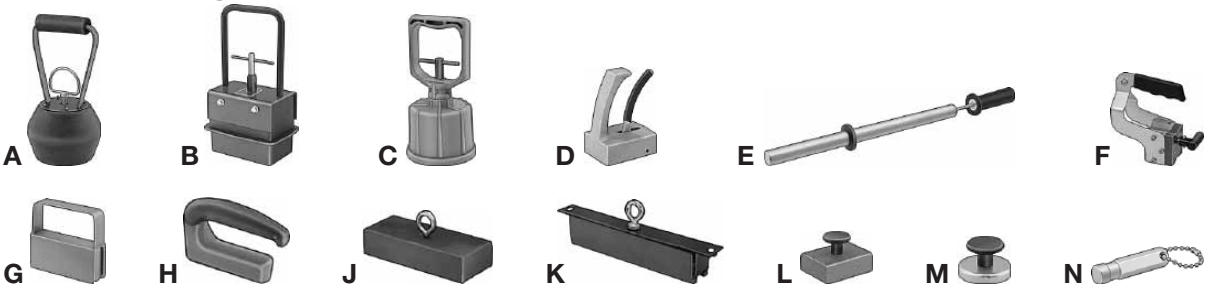
Warning: Never use to lift people or items over people.

Hand-Held Magnetic Pullers

Slide steel plates and blocks at least 1/8" thick off a stack then push the handle to release materials. Made of aluminum.

Cap., lbs.	Overall Lg.	Wd.	Ht.		
250	6 1/4"	7 1/4"	9 1/2"	7421A32	$188.27
600	6 1/4"	7 1/4"	9 1/2"	7421A34	259.55

Hand-Held Magnetic Lifters



Easily grab iron and steel fasteners, small sheets, and other parts from work areas, bins, and hard-to-reach places.

Style H has an easy-grip handle and includes slide-on shields to cover the magnet when not in use.

Styles J and **K** have a lifting eye for attaching a hook, rope, or chain to lower magnets into hard-to-reach spaces. Eye diameter is 5/8" for Style J; 1/2" for Style K.

Styles L and **M** are also known as blueprint holders.

Magnetic Sheet Metal Separators

Separate stacked steel sheets without prying, scratching, or bending them. These stainless steel separators have a magnet which causes your stacked sheets to fan out. When you remove the top sheet, the next sheet automatically moves up. Separators have two nonmagnetic bars to keep plates moving freely. Maximum temperature is 400° F.

How to Select a Separator—Using the chart below, locate the sheet width and thickness you're working with to determine the style and number of separators you'll need. Note: The chart is approximate and you may need to add more separators.

Sheet Wd.	Sheet Thickness 20-26 ga. Style (Qty.)	12-18 ga. Style (Qty.)	7-10 ga. Style (Qty.)	1/4" Style (Qty.)
6"	A (2)	B (2)	C (1)	C (1)
12"	A (1)	B (1)	C (2)	C (2)
18" to 24"	A (2)	B (2)	C (2)	C (4)
36" to 48"	A (2)	B (2)	C (3)	C (4)

Style	Max. Stack Ht.	O'all Size Lg.	Wd.	Ht.

Push-Button Pen-Sized Small Parts Lifters

Press the button on this lifter to create a vacuum to pick up and release small, delicate parts. Use on smooth, nonporous, flat surfaces. The body is aluminum and has a storage compartment to hold extra tips (includes one straight tip with a 1/4" dia. cup and three angled tips with 1/8", 1/4", and 3/8" dia. cups). All tips are metal with conductive (10^4 ohms/sq.) silicone rubber cups. It can lift up to 2 oz. using the tip with the 3/8" dia. cup.

Replacement tips with **silicone rubber** cups are conductive (10^4 ohms/sq.) and have a maximum temperature of 445° F; **rubber** cups are antistatic (10^{11} ohms/sq.) and have a maximum temperature of 250° F.

Lifter

Cup Material	Cup Color	Overall Lg.	Max. Temp.		
Silicone Rubber	Black	5 3/4"	445° F	3718A11	$71.25

Replacement Tips with Cups

Cup Dia.	Choose a Cup Material	Straight Tips		Angled Tips	
1/8"	Silicone Rubber, Rubber	3718A21	$5.28	3718A31	$5.28
1/4"	Silicone Rubber, Rubber	3718A22	5.28	3718A32	5.28
3/8"	Silicone Rubber, Rubber	3718A23	5.28	3718A33	5.28

Warning: Never use to lift people or items over people.

Suction-Cup Lifters

Push-to-Grip—Horizontal Lifting Only

A

B

C

D

E

F

G

H

J

Push down to create a vacuum and grip your items. Use on smooth, nonporous surfaces. Lifters are for flat or curved surfaces, except the lifter with a vinyl plastic cup is for flat surfaces only. Max. temperature is 200°F for lifters with rubber cups, 125°F for the vinyl plastic cup, and 445°F for the silicone rubber cup. Cups are black, except the silicone rubber cup is red.

Style E—Handle is aluminum.

Style F—Have two cups that are 3½″ center-to-center for 5717A16; 6″ for 5717A21 and 5717A22. Handle is aluminum.

Style G—Handle is steel.

Pump-to-Grip—Horizontal and Vertical Lifting

K

L

M

N

P

Q

A built-in pump generates more suction for lifting and holding heavier items than push-grip lifters. An indicator on the pump lets you know when you have suction loss. Use on smooth, nonporous surfaces. Lifters are for flat or curved surfaces, except Style K are for flat surfaces only. Lifters have a pull tab to release materials, except Style K have a release valve. Cups are black rubber. Maximum temperature is 120°F.

Style M has a 180° pivoting handle for lifting flexibility.

Style N has a 180° pivoting tie-down ring instead of a handle to secure loads with a rope, chain, or cord.

Note: Capacities are for both horizontal and vertical lifting.

Lock-to-Grip—Vertical Lifting Only

R&S

T

U

For a strong, continuous grip, these lifters have levers to lock them in place. Flip the levers back to release the suction. Use on smooth, nonporous, flat surfaces. Cups are black rubber. Maximum temperature is 100°F.

Style U has swiveling cups for mounting flexibility.

Replacement cup kit includes a cup, a lever, and a spring.

Holder mounts to a wall for quick access. It is orange plastic, 14″ Ht.×9″ Wd., and includes mounting fasteners.

Note: Capacities are for vertical lifting. Not recommended for horizontal lifting.

Squeeze-Bulb Pen-Sized Small Parts Lifters

Squeeze and release the finger-size bulb to create a vacuum; squeeze the bulb again to release. Use on smooth, nonporous, flat surfaces. They have a rubber body and metal tips. A plastic box holds the lifter and extra tips.

Rubber Cups—You'll get five straight tips with 3/32″, 1/8″, 1/4″, 3/8″, and 1/2″ dia. cups and two angled tips with 1/8″ and 1/4″ dia. cups. Cups are static dissipative (10^8 ohms/sq.).

Silicone Rubber Cups—You'll get five straight tips with 3/32″, 1/8″, 3/16″, 1/4″, and 3/8″ dia. cups and two angled tips with 1/8″ and 3/16″ dia. cups.

Silicone Rubber	Clear	100°F	3″	**54195A52**	67.49

Electric Pen-Sized Small Parts Lifters

This lifter uses a quiet continuous-vacuum system and fingertip control to pick up and release small, delicate parts. It can lift up to 1/2 lb. at 5″ Hg. Press the button on the probe to release suction. Use on smooth, nonporous, flat surfaces. Lifter includes a 5-ft. long coiled vacuum hose and nine metal tips (four straight tips with 1/8″, 1/4″, 3/8″, and 1/2″ dia. cups; five angled tips with 3/32″, 1/8″, 3/16″, 1/4″, and 3/8″ dia. cups). It has an aluminum body and is static dissipative (10^8 ohms/sq.). It operates on 120 volts AC.

Cup Material	Color	Max. Temp.	*Overall* Lg.	Wd.	Ht.		
Rubber	Black	250°F	7¼″	2½″	3″	**5670A2**	$259.21
9-Piece Replacement Cup Kit						**5670A66**	39.10

Warning: Never use to lift items over people.

Pick-and-Place Grippers

Use these grippers with your gripping fingers to lift and move items in pick-and-place applications. Housing is aluminum. Temperature range is 20° to 140°F, except steel parallel grippers have a temperature range of -30° to 180°F.

Spring Jaw Return—Have a single air port to close the jaws and grip items from the outside. An internal spring opens the jaws to release the grip.

Forced-Air Jaw Return—Have two air ports: one to move the jaws open and another to move them closed. The jaws allow you to grip items from the outside as well as the inside.

Angular grippers allow a more secure grip on irregularly shaped loads.

Note: Choose a gripper with a holding force at least 10 times your item's weight.

Create-a-Vacuum Lifters

These lifters power your vacuum cup without an installed vacuum system.

Complete Lifters

These all-in-one lifters include a rubber vacuum cup and a device to generate suction. They have an aluminum housing.

Air Powered—Also known as venturi devices, these lifters connect to any compressed air source and operate at 45 psi. Air consumption is 1 scfm. Air connection is ⅛ BSPP female. Maximum vacuum is 27″ Hg. Maximum temperature is 120°F.

Electric—Hardwire lifter to your electrical source to create a vacuum (cable sold separately below). It operates on 24 volts DC and draws 0.5 amps. Maximum vacuum is 5″ Hg. Maximum temperature is 140°F.

Air Powered

Electric

Cup Dia.	Overall Ht.	Overall Wd.	Cap., lbs. @ Max. Vacuum	Lifters		Replacement Cups

12-ft. Connection Cable for Electric Lifter						6897K36	32.02

Air-Powered Create-a-Vacuum Fittings

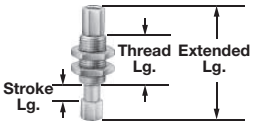
Connect these fittings to your vacuum cup (not included) and compressed air source to create a vacuum generating system. Also known as venturi devices. Air connection is ¼ BSPP female. Fittings are aluminum.

Air Consumption, scfm @ 26.5″ Hg	Overall Ht.	Overall Wd.	Choose a Pipe Size		
0.42	1⅜″	1¼″	⅛ BSPP Female, ¼ BSPP Female	5293A1	$39.96
0.74	1⅜″	1¼″	⅛ BSPP Female, ¼ BSPP Female	5293A2	39.96
1.26	1⅜″	1¼″	⅛ BSPP Female, ¼ BSPP Female	5293A3	39.96

Vacuum Cup Fittings

For Height Adjustment

Use these fittings to accommodate items with variable height. Fittings have an internal spring and are also known as spring plungers. They have M5 female connections. Fittings include two ⅛ BSPP male adapters and washers.



Extended Lg.	Stroke Lg.	Thread Lg.		
1⅝″	¼″	23/32″	5306A1	$47.06
1⅞″	⅜″	⅞″	5306A2	48.92
2⅞″	¾″	1 9/16″	5306A3	59.92
4⅝″	1½″	2 17/32″	5306A4	59.92

For Angle Adjustment

Able to rotate 360° and flex to 45°, these fittings help your vacuum cups grip items that are positioned at an angle. They have one male connection and one female connection with the same size NPT threads.

Pipe Size	Overall Lg.		
¼	2⅜″	6176A4	$60.36
⅜	2⅜″	6176A6	66.07

Warning: Never use to lift people or items over people.

Vacuum Cups

Use cups with a vacuum system to grip, lift, and move items.
Flat Surfaces—Lift flat items such as glass and metal sheets.
Textured and Curved Surfaces—Cups have a single bellows for lifting textured as well as curved items such as bottles and cylinders.
Varied-Height Surfaces—With multiple bellows, these cups are commonly used on a conveyor line to lift objects with differing heights, shapes, and orientations.

Standard

Flat Surfaces

Textured and Curved Surfaces

Varied-Height Surfaces

Rubber cups are abrasion resistant and have better oil resistance than vinyl cups. Color is black, except 15-, 30-, and 55- to 275-lb. capacity cups are blue. Maximum temperature is 230° F.
Vinyl plastic cups have excellent wear resistance. Color is blue. Maximum temperature is 120° F.
Cups *with UNC threads* have an additional connection with NPT threads. *80-lb. capacity cup* has a 1/8 NPT connection; *100-* and *160-lb. capacity cups* have a 1/4 NPT connection; and the *275-lb. capacity cup* has a 3/8 NPT connection.

(Continued on following page)

Warning: Never use to lift people or items over people.

Vacuum Cups *(Continued from previous page)*

Long Wear

Made of flexible, durable polyurethane, these cups will last longer than rubber cups. They are good for lifting cardboard boxes and other items with abrasive surfaces. Maximum temperature is 120° F.

Textured and Curved Surfaces—Color is blue and yellow.

Varied-Height Surfaces—Color is green and yellow.

Bend Preventing

The oval shape of this cup provides a greater surface area for gripping—good for lifting long, thin objects without bending them. It has a center vacuum connection and two outside mounting holes.

Standard cups are made of rubber for good oil and abrasion resistance. Connection is 3/8 NPT female. Mounting holes have 5/16 UNC female threads. Maximum temperature is 225° F.

Long-wear cups are made of flexible, durable polyurethane to last longer than rubber cups. They are good for lifting cardboard boxes and other items with abrasive surfaces. Connection is 3/8 NPSF female. Mounting holes are 0.12″ dia. Maximum temperature is 120° F.

Push-On Vacuum Cups

These cups have an unthreaded mounting hole for use with vacuum systems that have an unthreaded fitting such as a barbed fitting. Made of vinyl, cups have excellent wear resistance but low oil resistance. Color is blue. Maximum temperature is 120° F.

Style D cups have a single bellows for lifting textured and curved items as well as objects of differing heights.

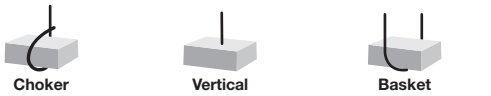
About Sling Configurations and Capacity

Slings can be used in different configurations depending on the type of load you are lifting. The charts below show how capacity is impacted by different sling configurations. For example, a one-leg sling that is used vertically with a rated capacity of 2,400 lbs. will have a reduced capacity of 1,900 lbs. when used as a choker and an increased capacity of 4,800 lbs. when used as a basket.

One-Leg Slings

Lowest Capacity → Highest Capacity



Choker
- Holds irregular or unbalanced loads securely
- Wraps around thin objects for lifting

Vertical
- Most common lift configuration
- Attaches to your load with a hook

Basket
- More stable, distributes the load evenly
- Strongest one-leg configuration

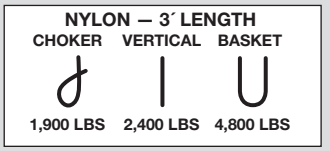
Multi-Leg Slings

Lowest Capacity → Highest Capacity

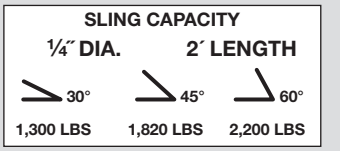
30° Angle | **45° Angle** | **60° Angle**

- Multi-leg slings provide more stability and control to the load being lifted than one-leg slings.
- The sling's lift angle affects rated lifting capacity. As the angle of the sling decreases, the sling capacity also decreases.
- 30° angle significantly reduces capacity, but can be used when you have limited vertical clearance. Slings should never be used at an angle less than 30°.

One-Leg Capacity Label—Slings are labeled with capacity in the choker, vertical, and basket configurations.



Multi-Leg Capacity Label—Slings are labeled with capacity at a 30°, 45°, and 60° angle.



Web Slings

Lightweight and flexible, web slings are less likely than other slings to mar, scratch, or dent fragile loads. They include a tag that shows the material, length, and capacities in each configuration. Maximum temperature is 180°F. Slings meet OSHA 1910.184 and ANSI specification B30.9.

Note: Web slings are susceptible to cuts and abrasion and should not be exposed to sharp edges. They have a red warning core that becomes visible when the sling is worn and should be removed from use.

Nylon slings stretch more than polyester, minimizing shock to the load. Choose nylon when greasy conditions exist.

Polyester slings have minimal stretch to provide more control over the load. They resist most acids and have blue thread sewn through the material to distinguish them from nylon.

Flat Eye

Also known as Type 3 slings, the eyes lie in a flat position for easy removal from beneath loads.

Web Slings with Hooks

Securely hook these slings to a load that has lift attachments. Lightweight and flexible, web slings are less likely than other slings to mar, scratch, or dent fragile loads. They include a tag that shows the material, length, and capacities in each configuration. Made of nylon, slings are stretchy to minimize shock to the load and are good for when greasy conditions exist. Maximum temperature is 190° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

Web Sling Protectors

Increase the life of your slings by positioning these protectors over areas prone to wear. Wrap the protector around your sling and secure with the hook-and-loop closure. Maximum temperature is 190° F.

For Web Wd.	Overall Size Lg.	Wd.	Thick.

2″	12″	4″	½″	3339T2	15.45
4″	12″	6″	½″	3339T3	21.79

Warning: Never use to lift people or items over people.

Wear-Resistant Web Slings

More wear and abrasion resistant than other slings, these tough slings are reinforced for extreme environments. They include a tag that shows the material, length, and capacities in each configuration. Maximum temperature is 190° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

With Plastic-Coated Edges—Slings have plastic-coated fibers woven into the edges for added abrasion resistance.

With Nylon Outer Layer—Thick, abrasion-resistant nylon fibers are woven into the outer layer of the webbing for extra protection.

With Cordura Outer Strips—Also known as Cordura-reinforced, these slings have a layer of ultra-abrasion-resistant nylon strips sewn on each side.

Nylon slings stretch more than polyester, minimizing shock to the load. Choose nylon when greasy conditions exist. **Polyester** slings have minimal stretch to provide more control over the load. They resist most acids and have blue thread sewn through the material to distinguish them from nylon.

Flat Eye

With Cordura Outer Strips

Also known as Type 3 slings, the eyes lie in a flat position for easy removal from beneath loads.

Extra-Wide Basket Slings

Also known as cargo slings, these wide slings give you extra stability and balance when lifting your bulkiest loads. Their eyes are reversible to allow both sides to wear equally, and they include a tag that shows the material, length, and capacity. Maximum temperature is 190° F. Meet OSHA 1910.184 and ANSI specification B30.9.

Nylon slings stretch more than polyester, minimizing shock to the load. Choose nylon when greasy conditions exist.

Polyester slings have minimal stretch to provide more control over the load. They resist most acids and have blue thread sewn through the material to distinguish them from nylon.

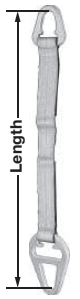
Warning: Never use to lift people or items over people.

For information about sling configurations and capacity, see page 1536.

Web Slings with Choker Fittings



Designed for use in the choker configuration, the end fittings keep these slings correctly positioned during use. They include a tag that shows the material, length, and capacities in each configuration. Maximum temperature is 180° F. Meet OSHA standard 1910.184 and ANSI specification B30.9. End fittings are steel.

Wear Resistant—Slings have plastic-coated fibers woven into the edges for added abrasion resistance.

Nylon slings stretch more than polyester, minimizing shock to the load. Choose nylon when greasy conditions exist.

Polyester slings have minimal stretch to provide more control over the load. They resist most acids and have blue thread sewn through the material to distinguish them from nylon.

Round Slings

Flat Eye

Choose these slings when you need a flexible sling with more strength and wear resistance than web slings. Slings are made of polyester cords encased in a polyester sleeve for strength and wear resistance. They include a tag that shows the material, length, and capacities in each configuration. They are color coded by capacity and resist most acids. Maximum temperature is 190° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

Wear Resistant—Slings have nylon strips sewn into the sleeve to slow deterioration, making them three times more abrasion resistant than other round slings.

Flat Eye

Also known as Type 3 slings, the eye on each end allows you to quickly change your sling into the choker, vertical, or basket configuration.

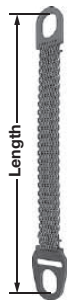
Mesh Slings



Made of galvanized steel mesh to be more cut and abrasion resistant than web or round slings, yet maintain the flexibility to conform to your load. End fittings are zinc-plated steel. They are stamped with capacities in each configuration. Maximum temperature is 550° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

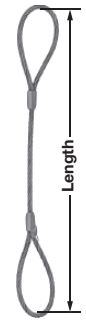
Wire Rope & Adjustable Chain Slings

For information about sling configurations and capacity, see page 1536.

Wire Rope Slings



Crimped Eye

Crimped and Reinforced Thimble Eye

Woven Eye

These slings are more abrasion and cut resistant than web and round slings, yet lighter in weight than mesh and chain slings. They include a tag that shows capacities in each configuration.

Crimped Eye—Ends are secured with a metal sleeve. Maximum temperature is 400° F. *General purpose* slings are made of cut- and abrasion-resistant 6×19 IWRC steel wire rope. *Corrosion-resistant* slings are made of 7×7 IWRC galvanized steel wire rope, which is easier to handle and bend than 6×19 IWRC and 6×19 fiber core steel wire rope.

Crimped and Reinforced Thimble Eye—A metal thimble in each loop prevents fraying. Ends are secured with a metal sleeve. Slings are made of cut- and abrasion-resistant 6×19 IWRC steel wire rope. Maximum temperature is 400° F.

Woven Eye—Ends are woven back into the sling body, reducing the chance of the sling catching when lifting a load. Slings are made of flexible 6×19 fiber core steel wire rope. Maximum temperature is 180° F.

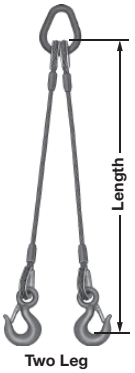
Wire Rope Slings with Hooks



Two Leg

Securely hook these slings to a load that has lift attachments. Made of cut- and abrasion-resistant 6×19 IWRC steel wire rope, these slings are more abrasion and cut resistant than web and round slings, yet lighter in weight than mesh and chain slings. They include a tag that shows capacities in each configuration. Ends are secured with a metal sleeve. Slings with two, three, and four legs have a steel top connecting link. Maximum temperature is 400° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

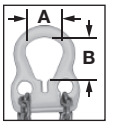
Adjustable Chain Slings

One Leg

Two Leg



Adjust the chain length and number of legs without changing slings. The chain provides strength and ruggedness to withstand your harshest working conditions. The top link is powder-coated steel and is stamped with capacities in each configuration. Hooks have a replaceable latch (for replacement latches, see page 1497). Maximum temperature is 390° F. Meet OSHA standard 1910.184 and ANSI specification B30.9. Note: Do not use slings at an angle less than 45°.

Made-to-Order Chain Slings

Select a chain grade, hook style, and chain length to create your own sling.

Grade 80 steel slings have a maximum temperature of 400° F. They meet OSHA standard 1910.184 and ANSI specification B30.9.

Grade 100 steel slings are approximately 20% stronger than Grade 80 steel. Maximum temperature is 400° F. They meet OSHA standard 1910.184 and ANSI specification B30.9.

Grade 63 stainless steel slings are more corrosion resistant than steel slings. Made of 318LN and 316L stainless steel. Maximum temperature is 700° F.

Latching hooks allow you to quickly release your load and have a replaceable latch (for replacement latches, see page 1497).

Locking hooks prevent accidental hook openings and have a replaceable latch spring (for replacement latch springs, see page 1496).

Chain-shortening hooks, also known as grab hooks, securely hold a single link of chain in the opening to shorten an adjacent leg.

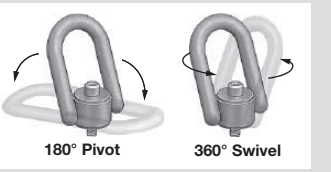
★Stainless steel slings are only available with latching hooks.

Warning: Never use to lift people or items over people.

About Lifting with Hoist Rings

Designed for angular lifting, hoist rings resist stresses that would bend or break an eyebolt. They have a lifting ring that pivots 180° front to back and a base that swivels 360° to compensate for pitch, roll, and sway when lifting heavy or unbalanced loads.

Safety Note: Hoist rings should never be used at an angle less than 30°. Install the base of the hoist ring flush to the mounting surface and tighten to the recommended torque that is stamped on the ring. For torque wrenches, see pages 2800-2804.



180° Pivot 360° Swivel

Hoist Rings—For Lifting

Forged

Machined

With a lifting ring that pivots 180° front to back and a base that swivels 360°, hoist rings resist stresses that would bend or break an eyebolt. All are made of black-oxide steel.

Machined hoist rings have a smooth finish to protect slings and hooks from damage and excess wear during lifting.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Corrosion-Resistant Hoist Rings—For Lifting

Use outdoors and in other environments where corrosion is a factor.

316 stainless steel hoist rings are more corrosion resistant than nickel-coated steel hoist rings.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

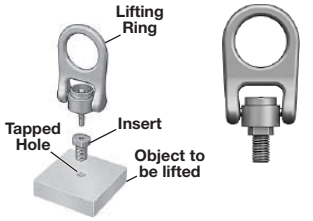
Quick-Connect Hoist Rings—For Lifting

Save time when lifting by quickly connecting and disconnecting your hoist ring. Thread the included insert into a tapped hole on your load, then lock the lifting ring into the insert. A button releases the lifting ring from the insert and is recessed to prevent accidental release. Hoist rings are made of 17-4 PH stainless steel.

Extra inserts let you use one hoist ring on multiple items.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.



Thread Size	Thread Lg.	Eye Dia.	O'all Ht.	Vertical Cap., lbs.	Insert Hole Dia.	Hoist Rings with Insert		Extra Inserts	
1/2"-13	13/16"	1 1/2"	4 1/2"	400	1/4"	2986T72	$141.27	2986T81	$35.14

Warning: Never use to lift people or items over people.

Wide-Base Hoist Rings—*For Lifting*

The wide, round base has more contact with the load than conventional hoist rings. Hoist rings are made of black-oxide steel.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Thread Size	Thread Lg.	Inside Wd.	O'all Ht.	Vertical Cap., lbs.

Shackle Hoist Rings—*For Lifting*

Remove the shackle after lifting while keeping the base installed for future use. Hoist rings have a black-oxide steel base and a zinc-plated steel eye.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Side-Mount Hoist Rings—*For Lifting*

Choose these hoist rings when you need to lift your load from the side. They are made of steel.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Wrench-Tighten Hoist Rings—*For Lifting*

Compact

Large Eye

No need for a torque wrench—install hoist rings using an adjustable wrench.

Large Eye—The large eye opening gives you more hook size options for connecting to your load. *17-4 PH stainless steel* hoist rings are more corrosion resistant than steel.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Nonswiveling Hoist Rings—*For Lifting*

Top View Two Mounting Holes

Top View Four Mounting Holes

The fixed base provides added stability and allows you to lift heavy loads with smaller thread sizes. The lifting ring pivots for angular lifts. Hoist rings are made of black-oxide steel and include mounting bolts.

Note: Capacities listed are for vertical lifting only. As the lift angle changes from vertical, the amount of weight the hoist ring can lift is significantly reduced. For example, when lifting a 1,000 lb. load at a 45° angle, you must choose a hoist ring with a capacity of at least 1,400 lbs.

Warning: Never use to lift people or items over people.

Eyebolts—For Lifting

Also known as machinery eyebolts. **Zinc-plated steel** eyebolts offer good corrosion resistance.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Metric Eyebolts with Shoulder—For Lifting

Steel and Galvanized Steel

Zinc-Plated Steel and Stainless Steel

Also known as machinery eyebolts. Zinc-plated steel and stainless steel eyebolts meet DIN 580.

Zinc-plated steel eyebolts offer good corrosion resistance. **Galvanized steel** eyebolts have a hot-dipped finish for more corrosion resistance than zinc-plated steel. **304 stainless steel** eyebolts are more corrosion resistant than galvanized steel. **316 stainless steel** are the most corrosion-resistant eyebolts.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544.

Eyebolts with Nuts—For Lifting

With Shoulder

Without Shoulder

Also known as nut eyebolts, these are designed for through-hole applications.

Galvanized steel eyebolts have a hot-dipped finish for corrosion resistance. **304 stainless steel** eyebolts are more corrosion resistant than galvanized steel. **316 stainless steel** are the most corrosion-resistant eyebolts.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Corrosion-Resistant Eyebolts—For Lifting

With Shoulder

Without Shoulder

Use these eyebolts outdoors and in other environments where corrosion is a factor. **316 stainless steel** are the most corrosion resistant eyebolts.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Rotating Eyebolts—For Lifting

Unlike conventional eyebolts, you can rotate the eye 360° to match the angle of your load. Eyebolts are made of steel with a pink powder-coated finish. They include a removable key for tightening the bolt.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544.

Low-Temperature Eyebolts—For Lifting

With Shoulder

Without Shoulder

These eyebolts retain their strength in temperatures as low as -40° F. All are made of steel and meet ASTM F541.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Thread Size	Thread Lg.	Eye Dia.	Vertical Cap., lbs.	With Shoulder		Without Shoulder

1 1/2"-6	3 1/2"	2 1/2"	26,600	3049T52	117.52	—	—

Warning: *Never use to lift people or items over people.*

Low-Visibility Eyebolts—For Lifting

The matte black-oxide finish won't reflect light, allowing the eyebolts to blend into the background. All are made of steel.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Eye Nuts—For Lifting

Create your own lifting eye by adding an eye nut to a stud or bolt.

Zinc-plated steel eye nuts offer good corrosion resistance. **Galvanized steel** eye nuts have a hot-dipped finish for more corrosion resistance than zinc-plated steel. **304 stainless steel** eye nuts are more corrosion resistant than galvanized steel. **316 stainless steel** are the most corrosion resistant eye nuts.

Note: Capacity applies to the eye nut only. The stud or bolt you use will affect the overall capacity. Eye nuts are for vertical lifting only.

Nylon-Coated Eyebolts—For Lifting

Route wire and cable through the smooth eye without snagging. Made of steel. Temperature range is 30° to 275° F.

Note: Capacities listed are for vertical lifting only. Eyebolts with shoulder can be used for angular lifting up to 45°, but the capacities will be significantly reduced. For angular lifting, we recommend hoist rings, sold on pages 1542-1544. Eyebolts without shoulder are for vertical lifting only.

Unthreaded Routing Eyebolts—Not for Lifting

Also known as blank eyebolts, you can weld or thread these to suit your application.

316 stainless steel eyebolts are the most corrosion resistant.

Routing Eyebolts with Nuts—Not for Lifting

Also known as nut eyebolts, these bent-closed eyebolts are designed for through-hole applications. Use them for routing wire and for other light duty applications.

Zinc-plated steel eyebolts offer good corrosion resistance. **Black-oxide steel** eyebolts are more corrosion resistant than zinc-plated steel. **304 stainless steel** eyebolts are more corrosion resistant than black-oxide steel. **316 stainless steel** are the most corrosion resistant eyebolts.

Closed-Eye Routing Eyebolts with Nuts—Not for Lifting

These eyebolts are welded closed to keep wire and cable from slipping out. They are stronger than bent-closed and open-eye routing eyebolts.

Zinc-plated steel eyebolts offer good corrosion resistance. **316 stainless steel** are the most corrosion resistant eyebolts. They also include two washers.

Routing Eyebolts for Wood—Not for Lifting

Also known as screw eyes, use the sharp point of these bent-closed eyebolts to mount directly into wood.

Zinc-plated steel eyebolts offer good corrosion resistance. **Brass** and **300 series stainless steel** eyebolts are more corrosion resistant than zinc-plated steel.

Routing Eyebolts for Wire Rope—Not for Lifting

Also known as thimble eyebolts, the large, contoured groove in the eye reduces kinks and minimizes the wear on your wire rope. They are made of steel and have a hot-dipped galvanized finish for corrosion resistance.

Warning: Never use for lifting.

Nonconductive Plastic Routing Eyebolts with Nuts—Not for Lifting

These plastic eyebolts won't conduct heat and electricity, preventing damage to your wire and cable. They are lightweight and corrosion resistant. Temperature range is -40° to 185° F.

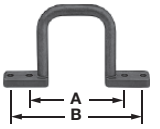
Nonconductive Routing Rings



The smooth, nonconductive surface prevents damage when routing wire, cable, and other light materials. Also known as distribution rings, these have a large opening to route multiple cable runs. Made of plastic. Mounting hole diameter is 7/32" (fasteners not included). Temperature range is -30° to 465° F.

Inside Ht.	Inside Wd.	Mounting Holes Center-to-Center (A)	(B)

Removable Routing Ringbolts—Not for Lifting

With Eyebolt Ring | With D-Ring

Install these ringbolts where you need them for your routing application, then remove the ring when not in use. Each includes two rings and two mounting bolts. Made of zinc-plated steel.

Ringbolt with D-ring has a pivoting routing ring that accommodates bends in your wire and cable.

Thread Size	Mounting Bolt Thread Lg.	Eye Dia.		Pair

Open-Eye Routing Rings for Cable

Without Insert

With Insert

Also known as bridle rings, the open-eye design allows you to quickly install wire and cable for routing. Made of zinc-plated steel.

Rings with Insert—The plastic insert provides a larger surface area to prevent kinking and damage when routing. Temperature range is -30° to 190° F.

Standard thread rings mount onto beam clamps and threaded rod hangers.

Wood screw thread rings have a sharp point to mount directly into wood.

Magnetic Tie-Down Rings

Powerful rare earth magnets attach to ferrous metal surfaces with a turn of the handle. The base has two 1 1/8" dia. holes for tie-down applications. Housing is nickel-plated steel. Handle is aluminum with a black powder coating. Work load limit is based on direct contact on a flat, smooth, untreated 1/4" thick surface. Variations in mounting surface conditions will reduce the work load limit.

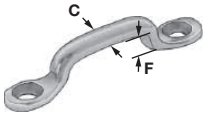
Work Load Limit, lbs.	O'all Ht.		
35	2 3/4"	3154T4	$54.77
110	4 3/4"	3154T5	183.33

Adhesive-Backed Tie-Down Rings

Create anchor points without drilling or welding. Strong polyethylene rope is sewn to an adhesive-backed foam rubber base. Base flexes to mount on curved surfaces and adheres to glass, metal, or plastic. Adhesive is acrylic. Begins to harden in 20 minutes and reaches full strength in 72 hours. Temperature range is –95° to +165° F.

Work Load Limit, lbs.	Base Wd	Base Lg.		
140	2 1/2"	3 1/8"	8310T13	$11.00

Webbing Guides



Also known as footman's loops, guides are made of zinc-plated steel. They can also be used as anchor points in tie-down applications.

Also Available: 300 series stainless steel webbing guides. Please ask for 8030T888 and specify maximum webbing width and (F).

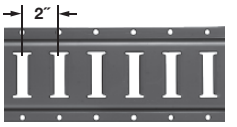
Cargo-Securing Track, Straps, and Accessories

Start with track and add the straps and accessories you need to keep your cargo from shifting inside vans, trucks, and trailers.

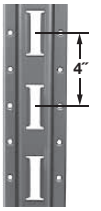
Track

Also known as E-track, this track has connection slots for a variety of cargo securement and organizing options. Track has 1/4″ dia. mounting holes (mounting fasteners not included).

Powder-coated steel is gray. *Galvanized steel* is more corrosion resistant.



Horizontal Track



Vertical Track

Lg.	Wd.	Powder-Coated Steel		Galvanized Steel	
Horizontal Track					
5 ft.	5″	88525T11	$16.38	88525T8	$18.76
10 ft.	5″	88525T17	33.88	88525T18	38.14
Vertical Track					
5 ft.	3 7/16″	88525T42	13.62		
10 ft.	3 7/16″	88525T51	26.48		

Plates

Plates are a smaller version of the track. ***Single-slot plates*** have 5/16″ square mounting holes (mounting fasteners not included). ***Double-slot plate*** includes fasteners for mounting.

Zinc-plated steel and *black-finish steel* are corrosion resistant. *Type 304 stainless steel* provides more corrosion resistance.

Single-Slot Plate

Double-Slot Plate

Lg.	Wd.	Zinc-Plated Steel		Black-Finish Steel		Type 304 Stainless Steel	
Single-Slot Plate							
1″	5 3/4″	88525T93	$4.78	88525T95	$4.78	88525T94	$5.98

Straps

With Track Fittings on Both Ends and Ratchet-Tight Buckle

Quick-Tight Buckle

Latch Hook and D-Ring on One End

D-Ring and Wire Hook on One End

Also known as logistic straps. All buckles, fittings, and hooks are made of zinc-plated steel. Track fittings snap into slots on the track.

Ratchet-tight buckles let you apply maximum tension on the strap, but take longer to tighten.

Torque-limiting ratchet-tight buckles prevent damage caused by overtightening. You set the amount of tension applied.

Quick-tight buckles, also known as cam buckles, tighten the fastest. Pull the strap through; push the spring-loaded cam down to release.

Buckle Type	Webbing Wd.	Max. Lg.	Work Load Limit, lbs.	Low-Stretch Polyester Webbing Color			Abrasion-Resistant Polyester Webbing Color		
Track Fittings on Both Ends

Ratchet-Tight	1″	4 ft.	1,000	Blue	8837T11	27.51			

Accessories

Accessories have fittings that snap or lock into the track and are made of zinc-plated steel.

Track fitting with slot has a slot for 2″ wide webbing (see page 1561).

Track fitting with D-ring has a 6″ Lg.×2″ Wd. polyester webbing strap with a D-ring sewn on the end.

Coupling connects two track fittings so you can change the end fitting on your strap or connect two straps together.

Adjustable aluminum beams provide lightweight decking and bracing. Beams have a zinc-plated steel track fitting on each end. Work load limit is based on an evenly distributed load.

Wood beam bracket allows you to mount a 2×4 to the track for economical bracing.

Storage bag has a track fitting on each end. Made of vinyl.

Cargo net has a track fitting and tightening buckle in each corner. Made of nylon mesh. Includes a vinyl storage bag.

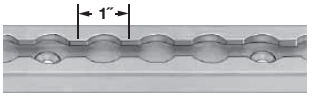
Warning! ***Never exceed work load limits. Never use for lifting applications.***

Quick-Adjust Cargo-Securing Track

Slide fittings between anchor points on the track for quick adjustment. Also known as logistics track or L-track.

Track and Plate



Track

Plate

Track and plate are made of aluminum.

Track has 1/4″ dia. mounting holes (mounting fasteners not included). Meets MS-33601.

Plate is a smaller version of the track that provides an attachment point for single-mount fittings. Plate has 3/16″ dia. mounting holes (mounting fasteners not included).

Length	Width		
Track			
2 ft.	1 3/8″	39695T31	$14.45

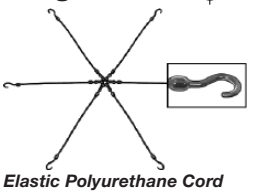
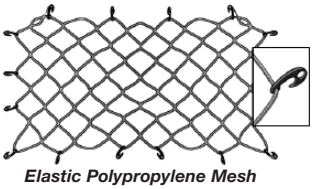
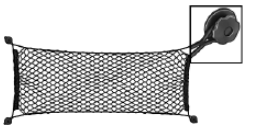
Cargo Nets



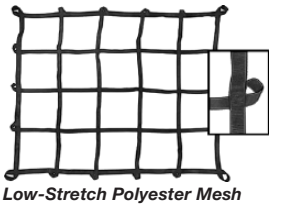
Elastic Polyurethane Cord



Elastic Polypropylene Mesh



Polypropylene Mesh



Low-Stretch Polyester Mesh

Secure and contain material in vans and trailers.

Elastic polyurethane cord nets are weather and chemical resistant. Cords are strung together on a central ring and have a plastic 1 1/2″ ID mounting hook on each end. **To Order:** Please specify black, red, or yellow.

Elastic polypropylene mesh nets include plastic 1″ ID mounting hooks. Net color varies.

Polypropylene mesh nets are woven and framed with elastic cord. Nets have a loop in each corner and include plastic adhesive-backed mounting knobs. For a more secure hold, use the included fasteners to mount the knobs. Opening size is 1″×1 1/4″. Color is black. The 45″ long net folds in half to create a basket; each mounting knob securely holds two loops. Usable width is 12″ when used as a basket.

Low-stretch polyester mesh nets are stronger than polypropylene and polyurethane nets. They are made of quick-drying black polyester webbing. Opening size is 10″×10″. Nets have loops for anchoring every 11″.

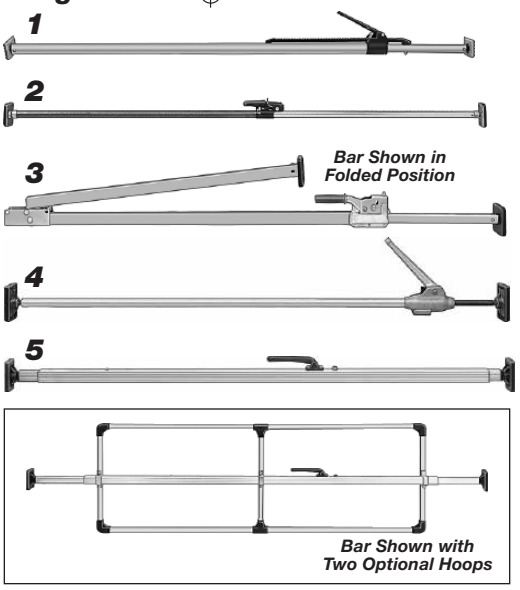
Cargo Bars



Bar Shown with Two Optional Hoops

Place bars against trailer or truck bed walls to brace your loads. All have pivoting rubber pads at each end for slip resistance. Lengths under 80″ are for use in trucks and vans. Lengths over 80″ can be used in full-sized trailers. Steel provides high strength. Aluminum is lightweight yet strong.

(1) Lever Lock— Lift the lever and pull the bar to extend length, then press down to lock. Lift lever again to release.

(2-4) Ratchet— Have a ratchet handle with a spring-loaded release. Press the spring-loaded release to manually adjust the length, then ratchet the handle to tighten the bar.

(3) Folding ratchet style folds at a center hinge for storage.

(4) Heavy duty ratchet style is more durable than other ratchet-style bars.

(5) Pump Tight— Push the spring-loaded button to adjust the length in 3″ increments, then pump the handle to further tighten the bar. Internal hydraulics prevent the bar from overtightening. Has a separate push-button release.

Optional hoops provide added protection against cargo shifting. Two hoops are provided, unless noted. Hoops are aluminum, except Styles 1 and 3, which are galvanized steel.

Style	Length Range	OD	*Bars* Each		*Optional Hoops* Set

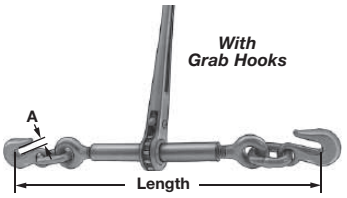
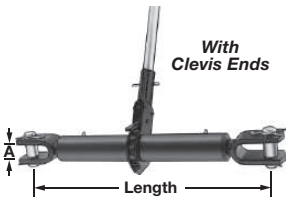
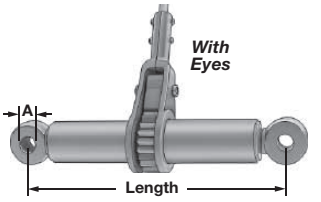
♦ Set includes one hoop.

Warning! ***Never exceed work load limits. Never use for lifting applications.***

Ratchet Load Binders







Also known as ratchet jacks, these steel load binders have a reversible ratchet that lets you incrementally tension or release your load without kickbacks.

***With Grab Hooks*—**Bind loads on heavy equipment in transit and during construction activities. Meet D.O.T. (Department of Transportation) 393.102 specifications and CVSA (Commercial Vehicle Safety Alliance) requirements.

***With Clevis Ends*—**Push apart or pull together walls, structural members, steel plates, and more. Pin diameter is 1″.

***With Eyes*—**Tighten down loads in heavy duty applications such as connecting barges and constructing bridges.

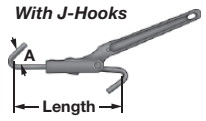
▲Pulling/pushing.

Lever Load Binders



Pull the lever on these binders to take up the slack in the chain. Made of steel.

***With J-Hooks*—**Has one rigid and one swivel hook.

***With Grab Hooks*—**Have two swivel hooks. Meet D.O.T. (Department of Transportation) 393.102 specifications and CVSA (Commercial Vehicle Safety Alliance) requirements.

***Easy Release with Grab Hooks*—**The body pivots as you release tension on the chain, preventing kickback. Has two swivel hooks. Meets D.O.T. 393.102 specifications and CVSA requirements.

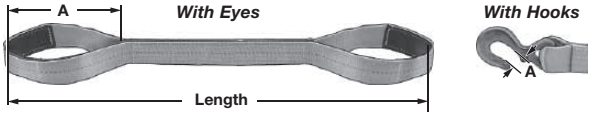
Tow Straps

Standard Straps



Lighter and easier to handle than chain, these straps absorb shock and will not scratch or damage the contact surface. ***Straps with eyes*** are silver polyester webbing with a reinforced eye at each end. ***Straps with hooks*** are made of orange nylon webbing and have a steel hook at each end.

To Order: Please specify length: 15, 20, 25, or 30 ft.

Webbing Width	Work Load Limit, lbs.	(A)	15-ft. Length	Each	Extra Length Per Ft.

***Warning!* Never exceed work load limits. Never use for lifting applications.**

Tie-Down Winches and Straps

Winches

Weld On (Side Mount)

Bolt On

Weld On/Bolt On

Easy-Ratchet Cap

Tensioning Bar

Tensioning Bar with Ratchet End

Pair these winches with a strap (sold separately) to secure loads for transit. Designed for right-hand operation. Meet D.O.T. (Department of Transportation), California Highway Patrol, and North American Cargo Securement Standard requirements. Winches and accessories are made of steel.

Weld-on and ***bolt-on*** winches require a tensioning bar (sold separately). Winches have a black finish. *Bolt-on* winches have two mounting bolts.

Weld-on/bolt-on winch tensions with a 1⅛″ hex wrench (see 5163A86 on page 2763). Weld or bolt in place. Winch has two ½″ dia. mounting holes (fasteners not included). It has a spring-loaded release. Frame has a black finish; all other components have a zinc-plated finish.

Easy-ratchet cap slips onto the winch to allow continuous tensioning without removing the tensioning bar. ***Tensioning bar with ratchet end*** has a built-in ratchet so you can quickly tighten the winch. The other end can attach to lever load binder handles for safe opening and closing.

Straps

Flat Hook — Delta Ring — Loop Eye

Thread one end of the strap through a winch (sold separately); the ratcheting of the winch tensions the strap. Straps have a flat hook, delta ring, or loop eye on the other end. *Flat hook* and *delta ring* are zinc-plated steel, except flat hooks on low-stretch polyester webbing and ultra abrasion-resistant polyester webbing, which have a black finish.

Low-stretch polyester webbing is quick drying. Color is yellow.

Abrasion-resistant polyester webbing is yellow with black cut-resistant edges.

Ultra abrasion-resistant polyester webbing is impregnated with PVC for the most abrasion resistance and UV protection. Color is orange.

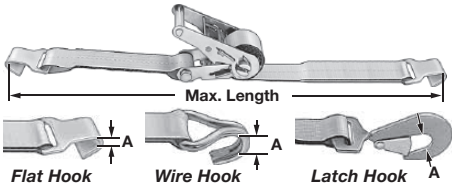
● Work load limit is 5,000 lbs.

Heavy Duty Ratchet Tie-Down Straps



Flat Hook — Wire Hook — Latch Hook

Tough jobs are no problem—these straps have high-strength webbing, buckles, and hooks to handle demanding applications. Meet D.O.T. (Department of Transportation), CVSA (Commercial Vehicle Safety Alliance), and California Highway Patrol regulations. Straps have ratchet-tight buckles for maximum tension. *Zinc-plated steel* offers some corrosion resistance. *300 series stainless steel* provides more corrosion resistance.

Low-stretch polyester webbing is quick drying. Color is yellow. *Zinc-plated steel flat hooks* have a black finish.

Abrasion-resistant polyester webbing is yellow with black cut-resistant edges.

Ultra abrasion-resistant polyester webbing is impregnated with PVC for the most abrasion resistance and UV protection. Color is orange. *Flat hooks* have a black finish.

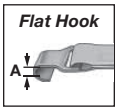
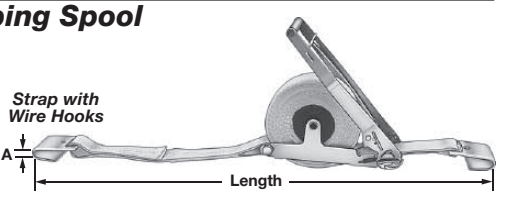
Heavy Duty Ratchet Tie-Down Straps with Webbing Spool

Excess webbing spools onto the ratchet-tight buckle of these straps to keep it neatly out of your way during use. The buckle and fittings are made of galvanized steel; the webbing is yellow polyester. Max. length is 27 ft.



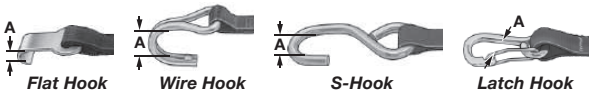


Hook Type	Webbing Wd.	Work Load Limit, lbs.	(A)		
Flat Hooks	2″	3,333	3/4″	29665T57	$42.46
Wire Hooks	2″	3,333	13/16″	29665T56	42.46

Ratchet Tie-Down Straps

Ratchet-tight buckles let you apply maximum tension to the straps. All straps come with your choice of webbing material: ultra-abrasion-resistant nylon or low-stretch polyester.

Straps with Hooks



Straps with Zinc-Plated Steel Hooks—1″ wide nylon webbing is black; 2″ wide nylon webbing is gray. 1″ wide polyester webbing is white; 2″ wide polyester webbing is brown.

Straps with Stainless Steel Hooks—Also has a stainless steel buckle. Nylon webbing is black; polyester webbing is blue.

To Order: Please specify nylon or polyester webbing as well as length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.

2″	1,670	7/8″	9575T52	23.79	.50

Retractable Ratchet Tie-Down Straps

A lever handle with spring release dispenses and retracts the webbing, while a ratchet applies the right amount of tension.

Straps with S-Hooks on Both Ends

Ratchets and hooks are black plastic-coated steel. Webbing is black nylon, except 9116T12 is polyester.

Webbing Wd.	Max. Lg.	Work Load Limit, lbs.	(A)		
1″	6 ft.	500	1″	9116T61	$18.30
1″	10 ft.	400	7/8″	9116T12	18.85

2″	10 ft.	1,100	1 1/8″	9116T64	22.30

Multi-Mount Straps with S-Hook on One End

Strap has a 3/8″ dia. mounting hole in the ratchet housing and includes fasteners. The ratchet housing is black plastic. The hook is black plastic-coated steel; webbing is black polyester.

Latch hook is black plastic-coated steel with a zinc-plated steel mounting plate. Overall length is 10″.

Cargo track fitting has a zinc-plated steel mounting plate on one end and an E-track style connector on the other. Overall length is 7″.

Webbing Wd.	Max. Lg.	Work Load Limit, lbs.	(A)

1/2″	10 ft.	500	1 1/2″	29925T24	28.64
1/2″	15 ft.	500	1 9/16″	29925T26	31.98

■ Rope is braided polyester.

Create-Your-Own Tie-Down Ropes

Add one of these ratchets to rope sold separately on pg. 1457 to make your own tie down. Ratchets include a hook for the end of the rope.

For Rope Dia.	(A)		
1/4″	1 1/8″	29925T51	$6.86
3/8″	1 1/4″	29925T52	10.86

Retractable Seatbelt-Style Tie-Down Straps

Securing your load can be as simple as using a seatbelt. Permanently mount the spring-retracting strap on one side and the buckle on the other—they both have a 3/8″ dia. mounting hole (fasteners not included). The housing is black plastic, the webbing is black polyester, and the end fitting and buckle are zinc-plated steel.

Webbing Wd.	Max. Lg.		
1″	5′9″	3285T71	$22.61
2″	4′11″	3285T72	21.66

Pull-Tight Tie-Down Straps

Try these pull-tight straps in low-tension applications for faster tightening than ratchet-style straps. All straps have a zinc-plated steel quick-tight buckle. Quick-tight buckles are also known as cam buckles; lift the cam, pull the webbing through, then release the cam to hold.

Straps with Hooks

Straps have a zinc-plated steel hook on each end. Comes in your choice of webbing material: ultra-abrasion-resistant gray nylon or low-stretch brown polyester. **To Order:** Please specify webbing material, as well as length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.

Hook Type	Webbing Wd.	Work Load Limit, lbs.	(A)	3-ft. Length	Each	Extra Length Per Ft.

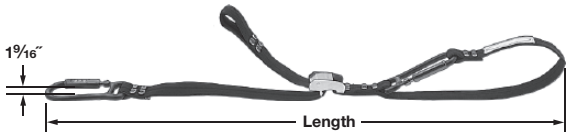
Protective Covers for Buckles

Avoid damage to your load caused by buckle vibration during transport with these black vinyl covers. Hook and loop edging secures the cover around buckles for up to 2″ wide webbing.

88405T8 ..... $14.00

Locking Pull-Tight Tie-Down Straps

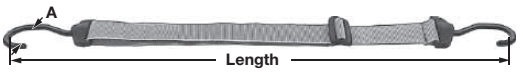


Combination-lock carabiners on each end of this strap keep your items securely tied down. One end of the strap has an easy-to-grip loop for tightening; the other end slips onto the carabiner to form a soft loop that prevents scratches. Strap has a zinc-plated steel quick-tight buckle, also known as a cam buckle. Braided stainless steel cable reinforces the black nylon webbing, creating a strong, thick strap that won't pull all the way out of the buckle. Carabiners are steel with a black finish.

Webbing Wd.	Max. Lg.	Work Load Limit, lbs.		
1 3/8″	7 ft.	500	3840T1	$39.90

Warning! *Never exceed work load limits. Never use for lifting applications.*

Elastic Tie-Down Straps



Elastic strap stretches and adjusts for easy load securing. Strap is made of rubber with a polypropylene cover and has nonmarring plastic-coated steel swivel hooks on each end.

Webbing

Create your own straps, belts, and tie downs. Webbing has a finished end and a locking stitch that won't unravel when cut. To prevent fraying after cutting cotton, Nomex, and Kevlar webbing, fold and sew or use a finishing tip. For a finished end when cutting polypropylene, nylon, and polyester, use a hot-blade knife (see page 2379).

Note: Breaking strength is the force at which new webbing will break, and should never be considered the work load limit. The work load limit depends on application and the method used to create a finished assembly, and is always significantly lower than the breaking strength.

Extra-strength cotton has a nylon core. ***Lightweight polypropylene*** is economical and resists moisture. ***Shock-absorbing nylon*** has good stretch and recovery with abrasion and mildew resistance. ***Ultra-abrasion-resistant nylon*** is tightly woven for abrasion and slip resistance. ***Low-stretch polyester*** is soft and quick drying. ***Slip-resistant polyurethane-coated polyester*** has good cut resistance and stays flexible in low temperatures.

To Order: Please specify length from those listed. Please also specify color where necessary.

Also Available: Additional lengths. Please ask for 3643T888 and specify webbing material, width, length, and color (where necessary).

Standard Lengths

Wd.	Thick.	Breaking Strength, lbs.	Available Lengths, ft.		Per Ft.

Buckles for Webbing

Add these buckles to webbing (see page 1561) to create your own cinching and tie-down straps.

Light Duty

Buckles are not load rated. *Sew-on* buckles require at least one end of the webbing to be permanently attached. *No-sew* buckles have a gripper bar on each side that holds webbing in place without sewing.

(1&2) Feed-through buckles are easy to thread and cinch quickly. *Plastic* buckles release by lifting up on the end. *Nickel-plated steel* buckles have a movable center bar for tightening and releasing.

(3) Hinged buckles hold tight upon cinching; push down on the end of the buckle to release.

(4) Squeeze-release buckles can be released with one hand.

(5) Easy-release buckle needs just a pinch on the sides to release, making it ideal for gloved hands.

(6) Spring-loaded clamp buckle has a clamp that holds the webbing. To release, push down on the clamp.

(7) Quick-tight buckles are also known as cam buckles. Lift the cam up to release.

Heavy Duty

Choose these sew-on buckles for higher-tension applications.

(8) Feed-through buckles are easy to thread and cinch quickly. Lift the end of the buckle to release.

(9) Flip-tight buckles, also known as over-center buckles, tighten by flipping and locking the buckle into position.

(10) Quick-tight buckles, also known as cam buckles, tighten the fastest. Push down on the cam and pull strap through the buckle.

(11-13) Ratchet-tight buckles let you apply maximum tension on the webbing but take longer to tighten.

Cut-to-Length Cinching Straps

Polypropylene Webbing and Feed-Through Buckle

EPDM Rubber and Squeeze-Release Buckle

Cut rolls to length and add the included no-sew buckles. Webbing and rubber are black. Buckles are black plastic.

Polypropylene webbing is lightweight, economical, and moisture resistant. Comes with feed-through buckles, which are easy to thread quickly.

EPDM rubber is weather resistant and stretches to hold tarps and bundles tight. Comes with squeeze-release buckles, which can be released with one hand.

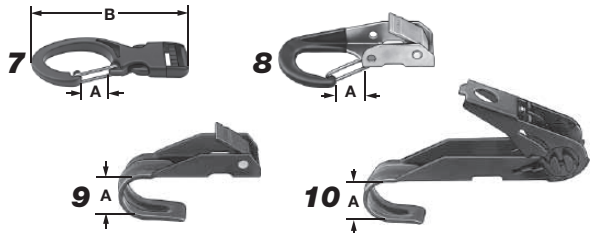
●Hook is black plastic-coated steel.

No Sew



A built-in no-sew buckle allows you to quickly attach webbing to the hook.

Style 7 has a squeeze-release buckle with a gripper bar that holds webbing in place.

Styles 8 and ***9*** have a quick-tight buckle, also known as a cam buckle. Push down on the spring-loaded cam and pull webbing through the buckle.

Style 10 has a ratchet-tight buckle for maximum tension.

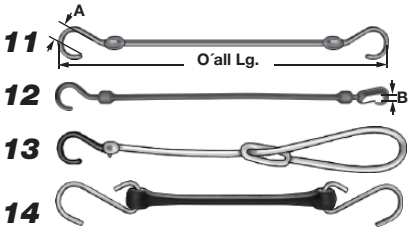
Chemical-Resistant Polyurethane Tie-Down Cords and Straps



Polyurethane stands up to oil, grease, fuel, ozone, and salt water. *Plastic hooks* protect the contact surface. *Zinc-plated steel hooks* are stronger than plastic and offer some corrosion resistance. *Stainless steel hooks* provide superior corrosion resistance.

Style 13 has a loop end you can cinch around large anchor points.

To Order: Please specify black, blue, orange, red, or yellow.

Weather-Resistant EPDM Rubber Tie-Down Straps

Standard Strap

Adjustable Strap with Holes

Adjustable Strap with Slide Fitting

Made of black weather-resistant EPDM rubber, these tie-down straps, which are also called tarp straps, stretch for a secure hold.
Zinc-plated steel hooks offer good corrosion resistance. ***Stainless steel hooks*** offer excellent corrosion resistance. ***Plastic-coated steel hooks*** are nonmarring to protect surfaces.

Standard Straps

Also Available: Standard straps without hooks. Please ask for 3891T888 and specify length: 10″, 15″, 21″, 31″, or 41″.

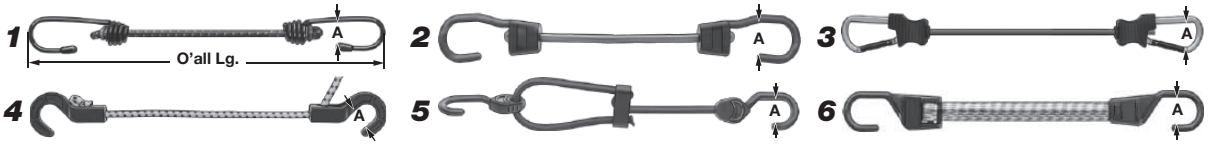
Straps with Zinc-Plated Steel Hooks	3891T42	Pkg.	$15.33
Straps with Stainless Steel Hooks	3891T43	Pkg.	$33.16

50-Pc. Assortment—Includes ten each of 8″, 14″, 19″, 25″, and 35″ long standard straps.

Straps with Zinc-Plated Steel Hooks	3891T41	Pkg.	$84.47

Fabric-Covered Elastic Tie-Down Cords and Straps



You may know these as Bungee cords and shock cords—they have a woven fabric cover that protects the inner elastic cord from abrasion. Cover is polypropylene unless otherwise stated.
Heavy duty cords provide better abrasion resistance and longer life. ***UV-resistant cords*** are ideal for outdoor use. ***Corrosion-resistant cords*** have a nylon cover and stand up to chlorine and salt water.

Elastic Cord and Strap

Make your own elastic tie downs by combining this cord and strap with the fittings on this page.

Latex Rubber Cord and Strap with Cover

Also known as Bungee cord, this stretches up to 1.5 times its length. All have a woven polypropylene cover, unless otherwise stated.

UV-resistant cord and ***strap*** are ideal for outdoor use.

Abrasion-resistant cord has a durable nylon cover that stands up to chlorine and salt water.

To Order: Please specify length and color where necessary; continuous lengths greater than the longest length listed are also available.

Ball Fittings and Locks for Elastic Cord

Position fittings and locks anywhere along your cord. All are black plastic.

Ball fittings include a clamping wire that must be crimped onto the cord ends to hold fitting in place.

Wheel locks have a slide-release serrated wheel that grips the cord as it is pulled through the lock.

Ball, ***barrel***, and ***square locks*** are spring loaded for quick adjustment.

	For Dia.	Pkg. Qty.		Pkg.

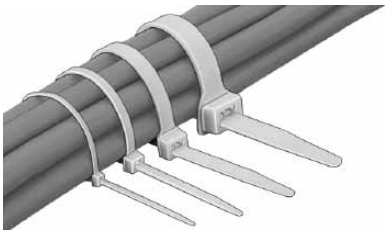
Warning! ***Never use for lifting applications.***

Cable Ties



Bundle and secure your cable, wire, and hose with these nylon cable ties. Also known as zip ties. Temperature range is 32° to 180° F.

Narrow ties are highly flexible and conform to irregularly shaped material better than standard, wide, and extra-wide cable ties.

Standard ties balance flexibility and strength, making them good for most bundling applications.

Wide and **extra wide** ties are stronger but less flexible than our narrow and standard cable ties. Use these ties for heavy duty applications that require extra strength.

Fine-Adjustment Cable Ties

Reduce gaps between your cable tie and bundle—these ties have a smoother body than standard cable ties, allowing you to adjust them to the exact size of your material. The slightly ribbed body keeps the tie from slipping, and the stainless steel tooth in the head ensures a tight hold. Ties are nylon. Temperature range is 32° to 180° F.

Narrow ties are highly flexible and conform to irregularly shaped material better than standard and wide cable ties.

Standard ties balance flexibility and strength, making them good for most bundling applications.

Wide ties are stronger but less flexible than our narrow and standard cable ties. Use these ties for heavy duty applications that require extra strength.

High-Strength Cable Ties

Stronger and wider than our standard cable ties, these ties can be used as an alternative to metal strapping. Color is black.

Nylon ties meet UL 94V2.

Acetal ties resist moisture and chemicals. They meet UL 94HB.

Style A ties have a temp. range of -40° to 180° F. **Style B** ties have a temp. range of -20° to 260° F.

High-Strength Cut-to-Length Cable Ties

Create custom-length cable ties for large bundles and heavy materials. Cut the strap and attach a buckle—no tool required. Color is black. Use the optional tensioning tool (sold separately) to get more tension than with hand tightening.

Acetal ties resist moisture and chemicals.

Style A has a temperature range of -40° to 180° F. *Nylon* ties meet UL 94V2. *Acetal* ties meet UL 94HB.

Style B buckles have a tab that releases the strap. Ties have a temperature range of -20° to 260° F.

Long-Lasting Cable Ties

These tough ties withstand dryness and are less likely to crack and break than standard cable ties.

Polypropylene ties won't get brittle in the driest conditions. They withstand most acids, alcohols, and salts. Temperature range is 40° to 220° F.

Nylon 12 ties are designed for use with solar panels, so they withstand prolonged UV exposure without becoming brittle. They resist most chemicals. Temperature range is -40° to 200° F.

Chemical-Resistant Cable Ties

For use in environments subjected to chemicals, these ties withstand the most corrosive conditions.
ETFE ties, also known as Tefzel ties, resist most chemicals, solvents, and strong mineral acids. Color is blue.
PEEK ties withstand most chemicals and extreme temperatures, making them an alternative to metal ties. Color is brown.

Metal-Detector-Grade Cable Ties

Use these nylon cable ties when detection and retrieval is essential, such as in food processing and pharmaceutical applications. Ties are brightly colored for visibility and can be seen by X-ray equipment and metal detectors. They have a stainless steel tooth for a tight hold, except 8 1/2″ and 11″ lengths have a steel tooth.

Reusable Cable Ties

Whether you plan to change the bundle size or just need a temporary hold, these ties have a convenient release tab for removal and reuse. Temperature range is 32° to 180° F.

Squeeze-release ties are the easiest to release.
Push-release ties are more difficult to accidentally release.
Flip-to-release ties have a tab that flips down to release and adjust, and flips up to lock.

No-Gap Cable Ties

Ties fit tighter around material than standard cable ties to keep them from slipping and moving. Ties are nylon. Temperature range is 32° to 180° F.

Flexible Strap and **Perforated Flexible Strap**—Ties have a thin, flexible strap that fits tightly around irregularly shaped bundles.

Curved Head—The head of this cable tie is contoured to fit against pipe, tubing, and other round material.

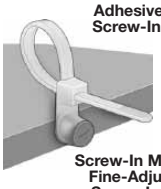
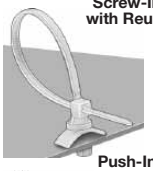
Mountable Cable Ties

Adhesive Back/ Screw-In Mount



Screw-In Mount and Fine-Adjustment Screw-In Mount

Screw-In Mount with Reusable Tie



Push-In Mount

Through-Hole Mount

Attach these nylon cable ties to a surface to keep your bundles in place. Temperature range is 32° to 180° F.
Reusable ties let you adjust the size of your bundle without removing the mounted tie.
Adhesive Back/Screw-In Mount with Reusable Tie—Tie sticks to any clean, smooth surface. It has mounting slots on the base to secure with screws. Tie has a 7/8″ Lg. × 1″ Wd. base.
Screw-In Mount—Use a fastener (not included) to mount.
Fine Adjustment Screw-In Mount—Ties have a smoother body than standard cable ties, allowing you to adjust them to the exact size of your material. Fastener not included.
Screw-In Mount with Reusable Tie—Ties have a 1 1/8″ Lg. × 1 1/8″ Wd. base. Fastener not included.
Push-In Mount—Ties fit into a drilled hole.
Through-Hole Mount—Ties include a separate head and strap. Thread the strap through a drilled hole and secure the head on the other side. The head can be mounted above or below the mounting surface.

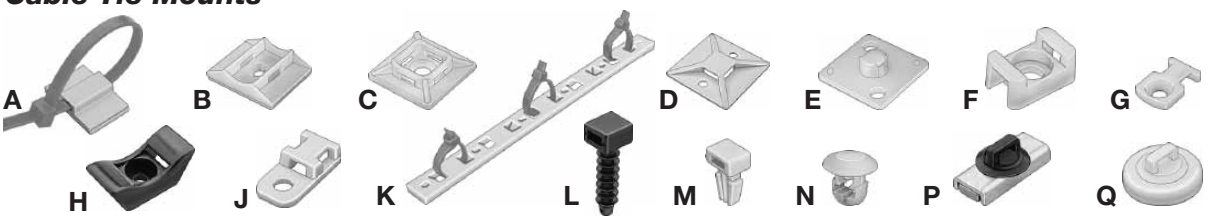
Cable Tie Mounts



Mount these plastic holders to a surface and add a cable tie to secure your bundle.

Screw-In Mount—Requires a fastener (not included) to mount. *Style K* holds up to five bundles.

Push-In Mount—Push through a drilled hole to mount. *Style L* has a ridged shaft to mount in materials such as concrete, brick, and stone.

Magnetic Back—Mount your bundle to steel beams, joists, and rails. The magnet is rated to hold up to 10 lbs.

Two-way mounts allow ties to be inserted from opposite sides. **Four-way** mounts allow ties to be inserted from any side. **Any-way** mounts allow ties to be inserted from opposite sides and have a head that spins 360° to route the cable in any direction.

Cable Holders & Cable Tie Tools

Cable Holders

Mount to a surface to secure and route cable. Holders are plastic, unless otherwise stated.

Styles A and **B** meet UL 94V2. They are white. Temperature range is -40° to 180° F.

Style C is white. Temperature range is -40° to 180° F.

Styles D, E, and **F** meet UL 94V0. They are gray. Temperature range is 32° to 120° F.

Style G has a flexible strap that wraps around bundles. It is steel with a white plastic coating. Temperature range is 70° to 120° F.

Style H holders are white with a 7/32″ dia. mounting hole, except holder for 1/8″ max. bundle dia. has a 5/32″ mounting hole. Holders meet UL 94V2. Temperature range is -40° to 180° F. Fastener not included.

Style J pushes through a drilled 3/16″ dia. hole to mount. Holder is white. Temperature range is -40° to 180° F.

Style K clips onto pipe and conduit. Holder for 1/8″ max. bundle dia. clips onto a 5/8″ dia. tube. Holder for 1/4″ max. bundle dia. clips onto a 13/16″ dia. tube. Holder is white. Temperature range is -40° to 180° F.

Style L has a push-button for quick release. Holder is black. It is not rated for temperature.

Styles M, N, and **P** have a magnet that can hold up to 10 lbs. They meet UL 62275, UL 2043, and UL 94V2, except Style P meets UL 94HB. They are black. Temperature range is -40° to 170° F.

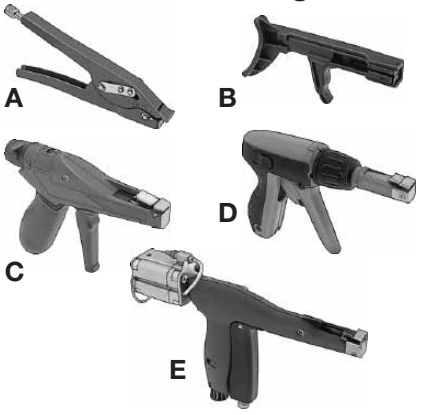
Cable Tie Tensioning Tools



Tools tighten the cable tie and cut off the excess tie.

Precise Adjustment—Multiple tension settings ensure a precise fit around your bundle. *Style D* has a 360° rotating barrel, allowing you to tighten cable ties in small spaces.

Air-Powered Precise Adjustment—Handle high production jobs with minimal effort. Multiple tension settings ensure a precise fit around your bundle. Operates on 100 psi compressed air and includes a 1/8 NPT male connector.

Hook and Loop Cable Ties with Buckle

The buckle allows you to cinch these ties tighter than our standard hook and loop cable ties. Ties are not rated for breaking strength.

Ties

Standard—*6″ and 8″ long* ties have a plastic buckle. *10-ft. and 20-ft. long* ties have a steel buckle.
Choose a Color—Identify your bundles at a glance. Buckles are plastic.
Elastic—These ties stretch to hold material tightly without slipping. Buckles are plastic.
Strong Grip—The hook and loop holds more tightly than other hook and loop. Buckle is steel.
Weather Resistant—Ties withstand exposure to UV rays and water. Buckle is steel. They meet ASTM D6193 and Mil. Spec. A-A-55126B.

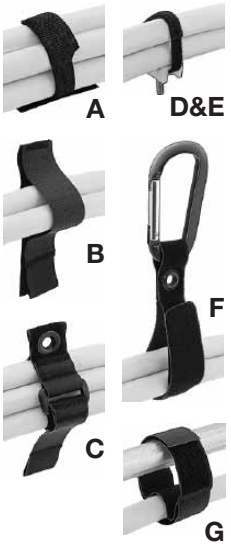
Hook and Loop & Metal Cable Ties

Mountable Hook and Loop Cable Ties



A built-in mount lets you attach cable ties wherever you need them. Ties are not rated for breaking strength.

Style A wraps around material and attaches to itself. The adhesive back sticks to a smooth, clean surface. Temperature range is 40° to 110° F.

Style B presses closed over a bundle and the adhesive back sticks to a smooth, clean surface. Temperature range is -20° to 200° F.

Style C has a plastic buckle that allows you to cinch the tie. It has a brass grommet for mounting. Fastener not included. Temperature range is -70° to 200° F.

Styles D and **E** have a plastic base with an attached screw. Temperature range is 0° to 220° F. *Style D* screw is for use in wood.

Style F has a carabiner to quickly mount. Temperature range is 0° to 120° F.

Style G has a closed loop that allows you to feed material through and loose ends that can attach around pipe or conduit. Temperature range is -70° to 200° F.

Fold Over

Nylon-Coated Fold Over

For use in the harshest environments, these ties withstand chemicals and UV rays. Use the optional tensioning tools (sold separately) for more tension than hand tightening.

Locking—These ties have a locking ball in the head for a strong hold.

Perforated Locking—Ties have teeth in the head that lock into the notches on the strap, providing the most secure hold.

Fold Over—These reusable ties allow you to make changes to bundles. The strap folds over the head to secure.

Nylon-coated cable ties provide additional corrosion resistance. Color is black. Temperature range is -70° to 300° F. Ties meet UL 94V0.

Elastic Cable Ties

These stretchy ties conform to irregularly shaped bundles and grip material more tightly than standard cable ties. Fittings are plastic. Ties are not rated for breaking strength.

Wraparound—Temperature range is 30° to 110°F.

Lanyard—Ties accommodate bundles that frequently change in size. Feed your bundle through the loop and pull the end of the tie to cinch tight. They have a temperature range of -10° to 140°F except 12″ ties are not rated for temperature.

Cinching Straps

Feed Through

Squeeze Release

Quick Tight

Spring-Loaded Clamp

Flip Tight

Ratchet-Tight Buckle with Hook Strap

Also known as lashing straps, use these to tightly secure material.

Nylon is abrasion resistant and strong, yet flexible. **Polypropylene** is water resistant and has some UV resistance. **Polyester** repels water, resists mildew, and won't stretch as much as other materials. It has better UV resistance than polypropylene. **Cotton** is soft and easy to handle.

Feed-through buckles are easy to thread quickly.

Squeeze-release buckles can be released with one hand.

Quick-tight buckles are also known as cam buckles. They tighten faster than feed-through buckles and provide a more secure hold than spring-loaded clamp buckles.

Spring-loaded clamp buckles are easy to release for quick adjustments. Press down on the clamp to release the strap.

Flip-tight buckles are also known as over-center buckles. The buckle flips down to close, adding additional tension to the strap.

Ratchet-tight buckles let you quickly cinch straps more tightly than other buckles.

Buckles with hook strap have a built-in hook on the end to quickly connect to the buckle—no need to spend time threading the end through the buckle.

Straps with Plastic Buckle—Not rated for breaking strength or temperature.

Snap-In Plastic Clamps

Run parallel lines of pipe, hose, or tubing by clicking them into these clamps. Clamps are UV-resistant acetal and can be used outdoors. They have a mounting hole in the center (fastener not included). Color is black. Temperature range is -40° to 210° F.

About Selecting Clamps Using Pipe, Conduit, or Tubing Trade Size

Find your trade size below, note the Clamp IDs that work with that trade size, then match the Clamp ID to the ID provided on the following pages.

For Pipe and Rigid Conduit

Trade Size	Clamp ID
1/8	3/8", 7/16"
1/4	1/2", 9/16"
3/8	5/8", 11/16"
1/2	13/16", 7/8", 15/16"
3/4	1", 1 1/16"
1	1 3/8", 1 7/16"
1 1/4	1 5/8", 1 11/16"
1 1/2	1 7/8", 1 15/16"
2	2 3/8", 2 7/16"
2 1/2	2 13/16", 2 7/8", 2 15/16"
3	3 1/2"
3 1/2	4", 4 1/16"
4	4 1/2"

For Thin-Wall (EMT) Conduit

Trade Size	Clamp ID
1/2	3/4"
3/4	13/16", 7/8", 15/16"
1	1 1/8", 1 3/16"
1 1/4	1 1/2", 1 9/16"
1 1/2	1 3/4"
2	2 1/4", 2 5/16"
2 1/2	2 13/16", 2 7/8", 2 15/16"
3	3 1/2"

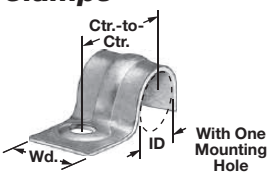
For Medium-Wall (IMC) Conduit

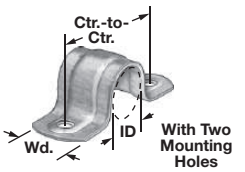
Trade Size	Clamp ID
1/2	13/16", 7/8", 15/16"
3/4	1", 1 1/16"
1	1 1/4", 1 5/16"
1 1/4	1 5/8", 1 11/16"
1 1/2	1 13/16", 1 7/8", 1 15/16"
2	2 3/8", 2 7/16"
2 1/2	2 13/16", 2 7/8", 2 15/16"
3	3 1/2"
3 1/2	4"
4	4 1/2"

For Copper Tubing

Trade Size	Clamp ID
1/4	3/8", 7/16"
3/8	1/2", 9/16"
1/2	5/8", 11/16"
5/8	3/4"
3/4	13/16", 7/8", 15/16"
1	1 1/8", 1 3/16"
1 1/4	1 3/8", 1 7/16"
1 1/2	1 5/8", 1 11/16"
2	2 1/8", 2 3/16"
2 1/2	2 5/8"
3	3 1/8"
4	4 1/8", 4 3/16"

Clamps





Secure pipe, conduit, tubing, and other round material. Fasteners not included.

Heavy Duty—These extra-thick clamps are less likely to bend under heavy loads.

Zinc-plated steel clamps have good corrosion resistance in most environments. **304 stainless steel** clamps are more corrosion resistant than zinc-plated steel. **316 stainless steel** clamps are the most corrosion resistant. **Brass** clamps are excellent for use with copper, since brass won't corrode copper like steel and stainless steel.

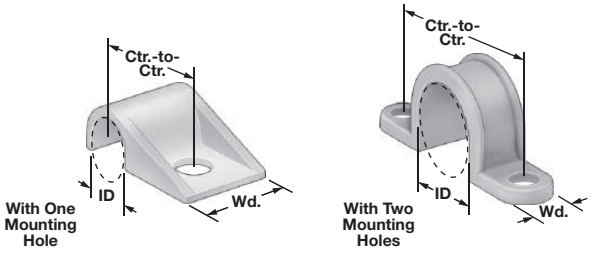
For information about ordering clamps by pipe, conduit, or tube size, see page 1578.

Plastic Clamps



An alternative to metal clamps, use plastic clamps to avoid the corrosion of metal-to-metal contact. They reduce wear on softer materials, such as tubing or cables. Temperature range is –30° to 180° F. Fasteners not included.

Clamps **with one mounting hole** are white nylon; clamps **with two mounting holes** are light gray polypropylene.

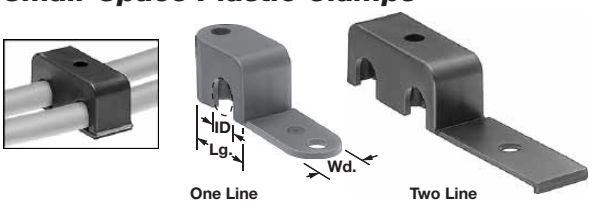
Small-Space Plastic Clamps



Fit these low-profile clamps into tight spaces, such as in pneumatic systems. Clamps are polypropylene to withstand moisture and most chemicals. They have a 9/32" dia. mounting hole (fasteners not included). Color is black. Temperature range is –20° to 190° F.

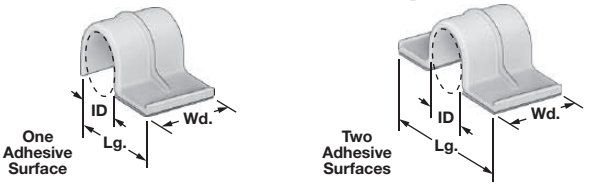
Adhesive-Back Plastic Clamps



Backed with foam adhesive tape, mount clamps to a smooth surface—no fasteners required. They are nylon, making them noncorrosive and nonconductive. Color is white. Temperature range is –20° to 150° F.

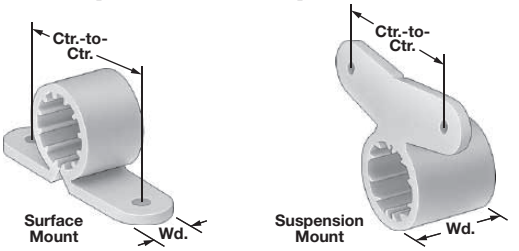
Plastic Expansion Clamps



Flexible grooves inside these clamps allow material to expand and contract. They are polypropylene for moisture and chemical resistance. Fasteners not included. Color is white. Temperature range is 0° to 140° F.

Connectable Plastic Clamps

Use clamps individually or connect them for multiple lines. Clamps are polypropylene, making them moisture and chemical resistant. They have a 11/64" × 31/64" mounting slot in the base (fasteners not included). Color is light gray. Temperature range is –40° to 190° F.

Multiline Plastic Clamps

Organize multiple lines by snapping pipe, hose, or tubing into these black polyethylene clamps. They have good chemical and UV resistance. Temperature range is –80° to 260° F.

Clamps for 10 lines have a mounting hole on the bottom of each slot (fasteners not included). They can be cut to the number of lines you need.

Clamps for 7 and **5 lines** have a mounting hole on each end (fasteners not included).

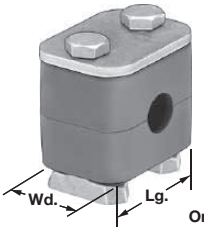
Vibration-Damping Clamps

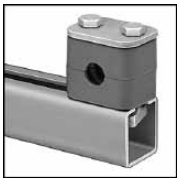
For information about ordering clamps by pipe, conduit, or tube size, see page 1578.

Rail-Mount Vibration-Damping Clamps



One Line

Two Line



Commonly used for pressurized lines in hydraulic systems, these clamps fit tightly around material to lessen vibration and noise. Mount into rails (sold separately below) using the included rail nuts. Clamps include a metal top plate. Temperature range is –20° to 190° F.

Not for use with strut channel. For strut-mount vibration-damping clamps, please see pages 1596-1597.

Standard—Use with lines that have a maximum pressure of 2,000 psi. Color is green (unless noted).

High Pressure—Use with lines that have a maximum pressure of 5,000 psi. Color is black.

Zinc-plated steel has good corrosion resistance in most environments. **304 stainless steel** is more corrosion resistant than zinc-plated steel. **316 stainless steel** is the most corrosion resistant.

Cut-to-Length Clamps

Customize this clamp to your object—clamp has a bend and stay design that allows you to mold it to any size or shape. It is 316 stainless steel with a black plastic coating and withstands abrasion, corrosion, and UV rays. Mount using fasteners (not included). Temperature range is –100° to 140° F.

Wd.	Thick.	Mounting Hole Dia.	Lengths, ft.		Per Ft.
1/2"	3/64"	3/16"	1, 2, 5	1213N1	$3.36

1"	3/64"	5/16"	1, 2, 5	1213N3	7.73

For information about ordering clamps by pipe, conduit, or tube size, see page 1578.

Weld-Mount Vibration-Damping Clamps

For a more secure connection than rail-mount clamps, weld the bottom plate of these clamps onto your rails. They fit tightly around pressurized lines in hydraulic systems to lessen vibration.

Standard—Use with lines that have a max. pressure of 2,000 psi. Color is green (unless noted). Temperature range is –20° to 190° F.

High Pressure—These clamps withstand more than double the pressure of our standard clamps. *Polypropylene* clamps are for use with lines that have a maximum pressure of 5,000 psi. Color is black. Temperature range is –20° to 190° F. *Aluminum* clamps are for use with lines that have a maximum pressure of 10,000 psi. Temperature range is –40° to 570° F.

Zinc-plated steel hardware has good corrosion resistance in most environments. Clamps have a zinc-plated steel top plate and a zinc-phosphate-coated steel bottom plate. **304 stainless steel** hardware is more corrosion resistant than zinc-plated steel.

Two-Line Clamps

Mount parallel lines with a single clamp. Fastener not included.

Zinc-plated steel clamps have good corrosion resistance in most environments. **Brass** clamps are excellent for use with copper, since brass won't cause copper to corrode like zinc-plated steel.

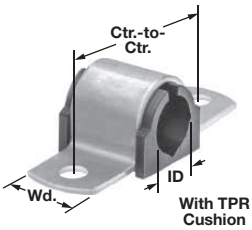
Vibration-Damping Clamps



With TPR Cushion

With SBR Cushion

Rubber cushions in these clamps reduce vibration, noise, and wear from clamp edges. They protect lines from corrosion caused by metal-to-metal contact. Cushions are black. Fasteners not included.

With TPR (Thermoplastic Rubber) Cushion—For use in chemical environments, TPR can withstand most oils, chemicals, and cleaning solvents. Temperature range is –50° to 270°F.

With SBR (Styrene Butadiene Rubber) Cushion—SBR has better vibration and noise control than TPR. Commonly used in HVAC and plumbing applications, SBR withstands abrasion, oxidation, and moisture. Temperature range is –60° to 220°F.

Zinc-plated steel clamps have good corrosion resistance in most environments. **304 stainless steel** clamps are more corrosion resistant than zinc-plated steel.

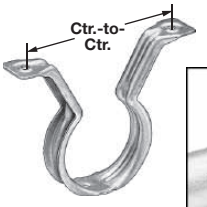
Stand-Off Clamps



Keep your material from coming in contact with the mounting surface without using a spacer. Clamps are zinc-plated steel for good corrosion resistance. Mounting fasteners are included. Clamps meet UL 203.

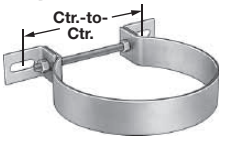
Adjustable Clamps



Secure vertical pipes in sanitation drain applications. Tighten the included bolt and nut for an exact fit around material. Clamps are 304 stainless steel. They include a mountable bracket that has two 1 1/4" × 7/16" mounting slots for 3/8" dia. screws.

Riser Clamps

Use these clamps to support vertical pipes through floors. Mounting fasteners are included. Clamps meet Manufacturers' Standardization Society SP-58 and SP-69, Type 8.

Zinc-plated steel clamps have good corrosion resistance in most environments. They meet Fed. Spec. WW-H-171, Type 8.

304 stainless steel clamps are more corrosion resistant than zinc-plated steel.

For information about ordering clamps by pipe, conduit, or tube size, see page 1578.

Loop Clamps

Wrap these clamps around your line. Fasteners not included.

Galvanized steel clamps have good corrosion resistance in most environments. 1/2" wide clamps have a 9/32" dia. mounting hole; 3/4" wide clamps have a 13/32" dia. mounting hole.

Aluminum clamps are more corrosion resistant than galvanized steel. Mounting hole diameter is 7/32".

321 stainless steel clamps have excellent corrosion resistance. Mounting hole diameter is 13/64".

Plastic Loop Clamps

Prevent corrosion to your material caused by metal-to-metal contact with these nonconductive plastic clamps. They surround your material, keeping it from coming in contact with the mounting surface. Fasteners not included.

Nylon clamps are nonconductive and noncorrosive. Temperature range is –40° to 180° F. Material meets ASTM D-4066.

Polypropylene clamps resist moisture and UV rays, making them good for outdoor use. Temperature range is –40° to 200° F.

Snug-Fit Vibration-Damping Loop Clamps

Clamps have a molded cushion for a tighter fit around material than our other vibration-damping loop clamps. Mounting hole diameter is 13/64" (fasteners not included). They meet MS-21919.

Neoprene Cushion—Use in environments where clamps are exposed to oil and ozone. Cushion is black. Temperature range is –40° to 210° F.

Silicone Cushion—Silicone withstands ozone, sunlight, oxidation, and high temperatures. Cushion is white. Temperature range is –80° to 450° F.

Aluminum clamps have good corrosion resistance. **304 stainless steel** clamps are more corrosion resistant than aluminum.

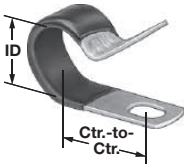
Vibration-Damping Loop Clamps



Made of metal with a wear-resistant cushion, these clamps combine good corrosion resistance with vibration resistance. Fasteners not included.

Vinyl Cushion—Durable vinyl withstands moisture and some chemicals. Cushion is black. Temperature range is –30° to 180° F. 1/2″ wide clamps have a 9/32″ dia. mounting hole; 3/4″ wide clamps have a 13/32″ dia. mounting hole.

EPDM Cushion—Use in environments where clamps are exposed to water and steam. EPDM withstands ozone and aging. Clamps have a 17/64″ dia. mounting hole. Cushion is black. Temperature range is –40° to 210° F.

Silicone Cushion—Silicone withstands ozone, sunlight, oxidation, and high temperatures. Clamps have a 17/64″ dia. mounting hole. Cushion is red. Temperature range is –60° to 450° F.

Zinc-plated steel clamps have good corrosion resistance in most environments. **304 stainless steel** clamps are more corrosion resistant than zinc-plated steel.

Clamping Hangers

With Bolt and Nut

Also known as conduit hangers, these hangers are molded to fit tightly around material. They load from the bottom so you can add or remove material without disassembling the hanger. Hangers have an unthreaded hole on top for mounting with threaded rod or a fastener (not included). UL listed.

Galvanized steel hangers have good corrosion resistance in most environments. **304 stainless steel** hangers are more corrosion resistant than galvanized steel.

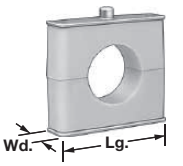
Sanitary Clamping Hangers



With Top Plate

With Stacking Bolts

Shown Connected

The smooth surface of these hangers prevents debris buildup and makes it easy to remove residue. Hangers are beige Santoprene with 304 stainless steel hardware. Temperature range is –40° to 270° F.

Hangers with top plate have a threaded hole on top for inserting 3/8″-16 threaded rod (not included). They include a top and bottom plate.

Hangers with stacking bolts allow you to run parallel lines. They include a top plate and stacking bolts. To mount, these hangers must be connected to a hanger with top plate (sold separately).

Note: All hangers must be the same length and height. Do not exceed the capacity of the individual hanger in multiple hanger applications.

For information about ordering clamps by pipe, conduit, or tube size, see page 1578. For threaded rod, see pages 3182-3197.

Two-Piece Clamping Hangers

Load your material between the two halves of the ring and tighten the included bolts for a snug hold. Hang using a threaded rod (not included). They meet Fed. Spec. WW-H-171E, Type 25 and Manufacturers' Standardization Society SP-69 and SP-58, Type 12.

Iron hangers are for use in applications where corrosion is not a factor. **Zinc-plated iron** hangers offer some corrosion resistance. Use **304 stainless steel** hangers in corrosive environments.

Stackable Clamping Hangers

Connect hangers together to organize multiple lines. Hang using a threaded rod (not included) or mount using the included screw. Hangers are 303 stainless steel. They have two halves that fasten with the included screws.

Stacking clamps have a flat side with a 1/4"-20 threaded hole and a flat side with a 10-24 threaded hole to connect to another stacking clamp or an end clamp.

End clamps have a flat side with a 1/4"-20 threaded hole for mounting to threaded rod or to connect to the 10-24 threaded hole of the stacking clamp.

Stacking Clamp

Vibration-Damping Clamping Hangers

Hangers have a cushion that surrounds pipe, conduit, or tubing to reduce vibration and protect your material from damage. They have a threaded nut on top for threaded rod (not included). Hangers are zinc-plated steel with a black rubber cushion. Temperature range is –50° to 230° F.

Washdown Vibration-Damping Clamping Hangers

These 316 stainless steel hangers provide maximum corrosion resistance in wet environments. Designed to prevent debris buildup, clamps have rounded edges and include acorn nuts to conceal fastener threads. The cushion fits tightly around material to lessen vibration and noise. Hangers have a threaded hole on top for mounting with a threaded rod (not included). Temperature range is –60° to 400° F.

With Silicone Cushion—Silicone withstands steam cleaning, as well as ozone, sunlight, and oxidation. Cushion is made of FDA listed materials. Color is blue.

With PTFE Cushion—PTFE withstands most chemicals. Cushion is made of FDA listed materials. Color is white.

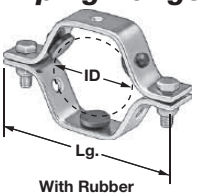
Weld-Mount Washdown Clamping Hangers



With Rubber Inserts

With Plastic Insert

Mount these clamps by welding a rod to the top for a strong, secure connection when hanging lines (rod not included, see pages 3777-3778). Hangers are corrosion-resistant 304 stainless steel for use in wet environments. They have an insert to lessen vibration and minimize movement. Temperature range is 10° to 230° F.

With Rubber Inserts—Hangers have three rubber pads to tightly grip material. Inserts are black.

With Plastic Insert—The insert completely surrounds material to compensate for material expansion and contraction. Insert is white.

Adjustable Push-Close Clamping Hangers

Clamps fit around a range of material sizes and lock by pushing the sides together. They have an unthreaded hole to mount with a fastener or use with an adapter (sold separately) to suspend from strut channel or threaded rod (not included). Hangers are gray plastic. Temperature range is 20° to 180° F. Meet UL 2239.

Strap-Mount Loop Hangers

Hang material from different heights using the 12" Lg. x 1" Wd. strap. The strap has mounting holes spaced on 7/8" centers and alternate between 9/32" and 7/32" diameter (fasteners not included). Hangers are zinc-plated steel with a black vinyl coating on the loop to prevent corrosion caused by metal-to-metal contact. Temperature range is –20° to 150° F.

6 5/8"	150	1"	9 1/2"	1/16"	30565T9	12.12

Swivel Loop Hangers

Hangers include a swivel nut to adjust the direction of the hanger after installation. They are also known as teardrop hangers. They have a threaded hole on top for mounting with threaded rod (not included). Meet Fed. Spec. WW-H-171E, Type 10 and Manufacturers' Standardization Society SP-69, Type 10.

Zinc-plated steel hangers have good corrosion resistance. UL listed and FM approved.

Copper-plated steel hangers won't corrode copper material.

PVC-coated steel hangers reduce wear on material. Coating is black. Temperature range is –30° to 200° F.

For information about ordering clamps by pipe, conduit, or tube size, see page 1578. For threaded rod, see pages 3182-3197.

Hinged Loop Hangers

Also known as clevis hangers, these hangers include a bolt that can be adjusted to compensate for line movement and vibration. Hangers have an unthreaded hole on top to mount using a threaded rod or fastener (not included). They meet Fed. Spec. WW-H-171, Type 1 and Manufacturers' Standardization Society SP-69 and SP-58, Type 1.

Steel—1 1/16" to 12 3/4" ID hangers are UL listed.

Zinc-Plated Steel—Hangers have good corrosion resistance in most environments. 2 7/8" to 8 5/8" ID hangers are UL and C-UL listed and FM approved.

304 Stainless Steel—Choose these hangers when you need more corrosion resistance than zinc-plated steel. 1 1/16" to 8 5/8" ID hangers are FM approved; 2 7/8" to 8 5/8" ID hangers are UL listed.

316 Stainless Steel—The most corrosion resistant hangers. UL listed and FM approved.

Stainless Steel Loop Hangers

Use these stainless steel hangers in environments where they are exposed to chemicals and other corrosive materials. They are also known as teardrop hangers. Hangers have an unthreaded hole on top for mounting with a threaded rod or fastener (not included). They require two nuts for mounting.

316 stainless steel clamps are the most corrosion resistant.

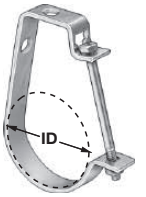
Side-Load Loop Hangers



Access your material without removing the mounted hanger. Hangers include a removable bolt for side loading material. They have two mounting holes—one on the side for wall mounting and another on top for mounting with a threaded rod or fastener (not included).

Zinc-plated steel hangers have good corrosion resistance in most environments. **304 stainless steel** hangers are more corrosion resistant than zinc-plated steel.

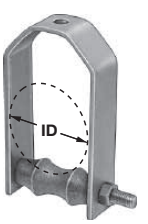
Loop Hangers with Roller



A roller on the bottom of these hangers compensates for moving material, such as in hydraulic applications. They have an unthreaded hole on top for mounting with a threaded rod or fastener (not included). Hangers are steel with a cast iron roller.

About Selecting U-Bolts Using Pipe, Conduit, or Tubing Trade Size

Find your trade size below, note the U-Bolt IDs that work with that trade size, then match the U-Bolt ID to the ID provided on the following pages.

For Pipe and Rigid Conduit

Trade Size	U-Bolt ID
3/8	3/4"
1/2	1"
3/4	1 1/8"
1	1 1/2"
1 1/4	1 3/4"
1 1/2	2"
2	2 1/2"
2 1/2	3"
3	3 1/2"
3 1/2	4", 4 1/16"
4	4 1/2"

For Thin-Wall (EMT) Conduit

Trade Size	U-Bolt ID
1/2	13/16"
3/4	1 1/16"
1	1 1/4"
1 1/2	1 13/16"
2	2 3/8"
2 1/2	3"
3	3 1/2"
3 1/2	4", 4 1/16"
4	4 1/2"

For Medium-Wall (IMC) Conduit

Trade Size	U-Bolt ID
1/2	15/16"
3/4	1 1/8"
1	1 3/8"
1 1/4	1 3/4"

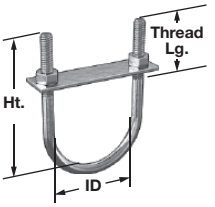
U-Bolts with Mounting Plates



One Mounting Plate

Two Mounting Plates

The mounting plate provides a more secure hold at the mounting surface.

Black-oxide steel U-bolts offer some corrosion resistance. **Zinc-plated steel** U-bolts have good corrosion resistance in most environments. **Galvanized steel** U-bolts have better corrosion resistance than black-oxide and zinc-plated steel. **304 stainless steel** U-bolts offer excellent corrosion resistance. U-bolts with one mounting plate come with two hex nuts; U-bolts with two mounting plates come with four hex nuts.

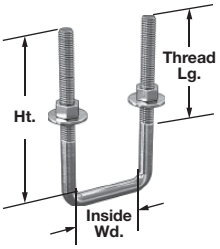
Square U-Bolts



Suspend and route flat-bottomed objects such as strut channel and small duct. All come with two hex nuts and two washers. Capacity is 1,075 lbs.

Zinc-plated steel U-bolts have good corrosion resistance in most environments. **304 stainless steel** U-bolts offer excellent corrosion resistance.

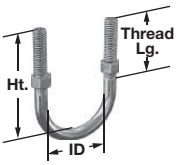
Aluminum and 316 Stainless Steel U-Bolts



Aluminum U-bolts are lightweight and corrosion resistant. **316 stainless steel** U-bolts are the most corrosion resistant.

Add an optional **mounting plate** for a more secure hold at the mounting surface.

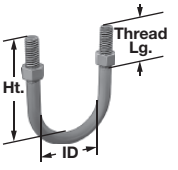
Nonconductive U-Bolts



Made of polyurethane, these U-bolts have no metal parts to conduct electricity or cause metal-to-metal corrosion. They are abrasion, chemical, and UV resistant. All come with two polyurethane hex nuts. Color is gray. Temperature range is –40° to 150° F.

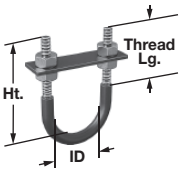
Rubber-Cushioned U-Bolts



Prevent your pipe, conduit, and tubing from vibrating and reduce corrosion caused by metal-to-metal contact with these cushioned U-bolts. Cushion is black. All come with four hex nuts and a rubber mounting plate. Temperature range is –67° to 250° F.

Galvanized steel U-bolts have good corrosion resistance in most environments. **304 stainless steel** U-bolts offer excellent corrosion resistance.

Note: Not rated for capacity.

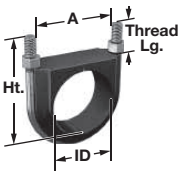
Vibration-Damping U-Bolts



Reduce vibration and noise in your lines—a black plastic cushion grips pipe, tubing, and conduit tightly to prevent movement. All come with two nylon-insert locknuts. Temperature range is –50° to 270° F.

Zinc-plated steel U-bolts have good corrosion resistance in most environments.

316 stainless steel U-bolts are the most corrosion resistant.

Strut-Style Supports

Place these supports on any horizontal surface to secure pipe, conduit, and tubing with strut-mount clamps. The zinc-plated steel channel on top works with clamps that fit a 1⅝" wide strut channel. Supports have a black plastic base. Base is weighted for stability without mounting. Temperature range is -40° to 150° F.

Clamping U-Bolts

The rounded mounting plate on these U-bolts fully surrounds pipe, conduit, and tubing for a more secure fit than other U-bolts. They are also known as muffler clamps.

Inch U-bolts come with two hex nuts. Not rated for temperature.

Metric U-bolts come with four hex nuts. Temperature range is –22° to 194°F.

Zinc-plated steel U-bolts have good corrosion resistance in most environments. **Chrome-plated steel** U-bolts are more corrosion resistant than zinc-plated steel. **304 stainless steel** U-bolts offer excellent corrosion resistance.

Note: Not rated for capacity.

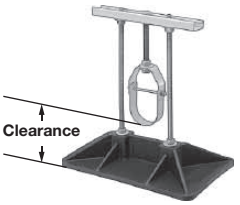
Adjustable-Height Strut-Style Supports

Adjust supports to the exact height you need to route pipe, conduit, and tubing. They have a 1 5/8" Wd.×13/16" Ht. galvanized steel strut channel for use with strut-mount clamps. Supports have galvanized steel threaded rods and a black plastic base. Base is weighted for stability without mounting. Fits up to pipe size 2 1/2, unless noted. Temperature range is –30° to 180°F.

Support with strut channel and loop hanger has a galvanized steel hanger.



With Strut Channel and Loop Hanger

Strut Lg.	Cap., lbs.	Base Lg.	Base Wd.	Base Thick.	For Max. OD	Clearance		
With Strut Channel

12"	150	16"	10"	3"	4 1/8"	4 1/2"-12"	8487T16★	58.25
With Strut Channel and Loop Hanger								
12"	150	16"	10"	3"	3"	3"-6"	8487T18	68.07

★ Fits up to 3 1/2 pipe size.

Floor-Mount Supports

Set supports at the height you need. To install, add a pipe size 2 steel extension pipe (not included) that is approximately 4" shorter than the desired height. Tack weld extension pipe to the base and support, then bolt the base to the floor. Fine-tune the overall height using the adjustment screw. Height adjustment range is 7" to 10".

Clamp-Style

The clamp fully surrounds pipe and conduit to reduce vibration and provide a secure hold. Clamp has a black rubber cushion.

Supports for pipe sizes 2 and 3 have a 6" Lg.×4" Wd.×1/4" Thick base with two mounting holes; Supports for pipe sizes 4 to 12 have an 8" Lg.×8" Wd.×1/4" Thick base with four mounting holes.

Temperature range is –70° to 200°F. Capacity is 10,000 lbs.

Saddle-Style

Support has an open design for access to your pipe and conduit after installation. Cushion is black rubber.

Supports for pipe sizes 2 and 3 have a 6" Lg.×4" Wd.×1/4" Thick base with two mounting holes; supports for pipe sizes 4 to 12 have an 8" Lg.×8" Wd.×1/4" Thick base with four mounting holes.

Temperature range is –70° to 200°F. Capacity is 10,000 lbs.

Beam Clamps for Threaded Rod

A

B

C

D

E

F

G

H

J

Designed for use on flat or tapered beams, unless noted.
Zinc-plated iron clamps offer some corrosion resistance.
Zinc-plated steel clamps offer good corrosion resistance.
304 stainless steel clamps offer excellent corrosion resistance.
316 stainless steel clamps offer maximum corrosion resistance.
Styles A, B, C, F, and **J**—Clamps have a locknut to prevent loosening.
Styles D, E, and **H**—Clamps have a threaded hole on the side for supporting a hanger or routing ring.
Styles A and **C** meet Fed. Spec. WW-H-171, Type 23 and Manufacturers' Standardization Society MSS-SP-69, Type 23. **Style A** are UL listed and FM approved. **Style C** meet UL 203.
316 stainless steel Style B meet ASTM A351 and ASTM F593.
Style F meet Fed. Spec. WW-H-171, Type 19; Manufacturers' Standardization Society MSS-SP-69, Type 19; and UL 203.
Styles G and **H** meet Fed. Spec. WW-H-171, Type 23; Manufacturers' Standardization Society MSS-SP-58, Type 19; and Manufacturers' Standardization Society MSS-SP-58, Type 23.
Style J meet Manufacturers' Standardization Society MSS-SP-69, Type 19 and Manufacturers' Standardization Society MSS-SP-69, Type 23. **Zinc-plated iron Style J** meet UL 203; **304 stainless steel Style J** are UL listed.

★ Designed for use on flat beams only.

Angled Beam Clamps for Threaded Rod

The clamp body wraps around the bottom edge of beams angled at 45° or 90°. Also known as purlin clamps. Clamps are FM approved; and meet UL 2239; Fed. Spec. WW-H-171, Type 23; and Manufacturers' Standardization Society MSS-SP-58, Type 23.
Zinc-plated iron clamp offers some corrosion resistance.

For Threaded Rod Size	Max. Lip Ht. 45°	Max. Lip Ht. 90°	Max. Beam Thick.	Throat Dp.	Cap., lbs.		
Iron

3/8"-16	2"	1 1/2"	1"	13/16"	400	11365T19	10.95

Sloped Beam Clamps for Threaded Rod

Clamp rotates 360° as well as pivots up to 45° to ensure threaded rod hangs straight, even on sloped beams. Designed for use on the bottom of flat or tapered beams. A locknut prevents loosening. Clamps are zinc-plated steel.

For Threaded Rod Size	Max. Beam Thick.	Throat Dp.	Cap., lbs.		
3/8"-16	11/16"	3/4"	325	4725T23	$11.61

Center-Mount Beam Clamps for Threaded Rod

Clamps grip both sides of the beam for a centered and stable load.

Adjustable width clamps have an adjusting screw to fit a range of beam widths. They meet Manufacturers' Standardization Society MSS-SP-58, Type 30.

Fixed width clamps have a hanging bolt that slides through an eye nut for attaching threaded rod (sold separately).

Galvanized steel clamps offer good corrosion resistance. They meet Manufacturers' Standardization Society MSS-SP-69, Type 21 and Fed. Spec. WW-H-171, Type 21.

304 stainless steel clamps offer excellent corrosion resistance. They meet Manufacturers' Standardization Society MSS-SP-58, Type 21 and ASTM A36.

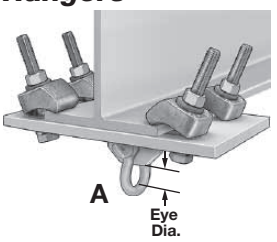
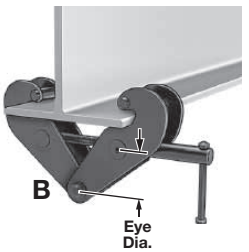
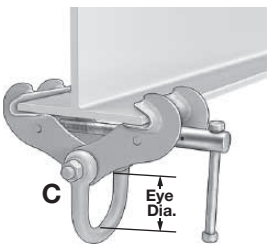
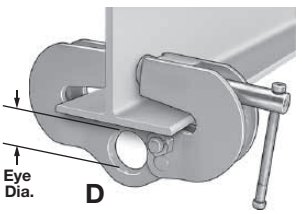
Beam Clamps for Hooks and Hangers









Designed for use on flat or tapered beams. Clamps are steel.

Style A clamps fit in low-headroom areas. Two bolts with spacers grip each side of the beam. Minimum beam thickness is 1/8". Note: Capacity applies only for vertical loads.

Style B-C clamps have a T-handle for quick and easy attachment and removal. Note: Capacity applies only to vertical loads.

Style D clamps grip the sides and center of the beam for securely hanging equipment such as chain hoists and slings that pull down at any angle from the eye. They have a T-handle for quick and easy attachment and removal. Note: Capacity applies to loads 0° to 90° from vertical.

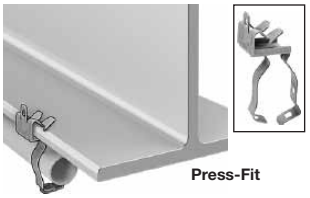
Easy-Position Beam Clamps for Pipe, Tube, and Conduit



Clamps have a swiveling hanger for easy 360° positioning once installed. Designed for use on flat or tapered beams. Clamps are zinc-plated steel.

Press-fit clamps hammer onto the top or bottom of the beam. Minimum beam thickness is 5/16".

Clamp-on clamps attach to the bottom of the beam. They have a 1/4"-20 threaded hole on the side for supporting a hanger or routing ring.

Parallel Beam-to-Beam Clamps

Join two flat beams together without welding or drilling. The bolt can be removed to attach threaded rod (not included; see pages 3182-3197).

Zinc-plated iron clamps offer some corrosion resistance.

Galvanized iron clamps offer better corrosion resistance than zinc-plated iron.

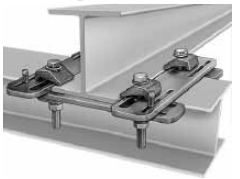
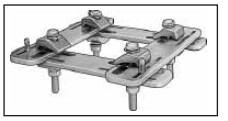
Perpendicular Beam-to-Beam Clamps

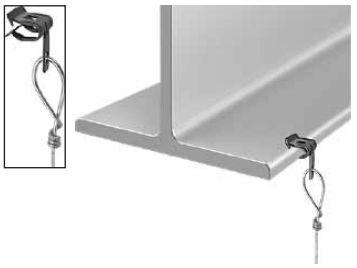




Create a span between two flat beams for lifting equipment, creating overhead conveyor systems, and supporting structural applications—without welding or drilling. Clamps are zinc-plated steel.

For Beam Wd.	For Beam Thick.	Cap., lbs.		
2 1/2"-7 1/2"	1/8"-1"	4,750	3008T12	$328.86

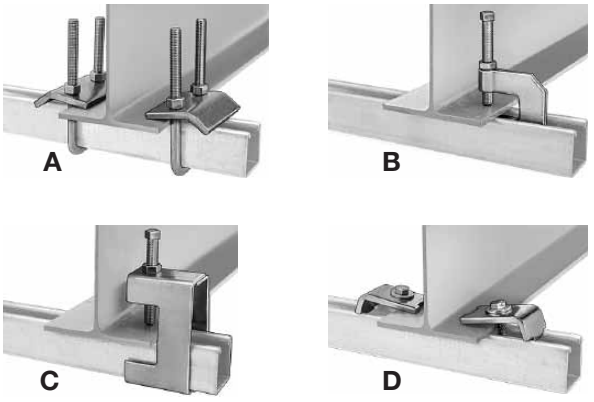
Beam Clamps with Tie Wire Hanger



Hammer these clamps directly to the top or bottom of a beam and use the tie wire in suspended ceiling and other hanging applications. Use on flat beams. Clamps are steel.

For Beam Thick.	Tie Wire Lg., ft.	Tie Wire Gauge		
1/8"-1/4"	6	12	5326K17	$1.69
5/16"-1/2"	6	12	5326K19	1.69

Beam Clamps for Strut Channel



Designed for use on the bottom of flat or tapered beams, unless noted.

Zinc-plated steel clamps offer good corrosion resistance.

304 stainless steel clamps have excellent corrosion resistance.

Style A clamps have mounting plates that grip the beam and square U-bolts that cradle the channel.

Style B clamps have a plate on the bottom that slides into the strut channel and a locknut to prevent loosening. They have a threaded hole on the bottom for supporting threaded rod. Meet Fed. Spec. WW-H-171, Type 23 and Manufacturers' Standardization Society MSS-SP-58, Type 23.

Style C clamp wraps around the strut channel and has a locknut to prevent loosening. It has a threaded hole on the bottom for supporting threaded rod.

Style D clamp fits into strut channel and secures to the beam with a bolt and 1/2"-13 channel nut (sold separately). Minimum beam thickness is 1/4". Mounting hole diameter is 9/16" (fasteners not included).

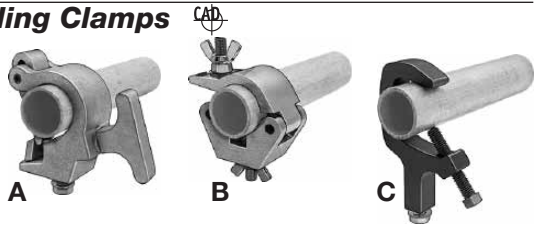
★ Use on flat beams only.

Railing Clamps



Clamp onto pipe and scaffolding to hang lighting fixtures and other equipment from the bolt on the bottom.

Style A clamps have a T-handle for quick and easy attachment and removal. The bolt can be removed to insert threaded rod.

Style B clamps have wing nuts for easy adjustment. Remove the wing nut from the bottom bolt and reattach after mounting equipment.

Style C clamps are grooved on the inside for a superior grip. The bolt can be removed to insert threaded rod.

Threaded Rod Wall Mounts

Designed to hang threaded rod from walls and other surfaces such as beams and joists. Fasteners are not included.

Zinc-plated steel mounts offer good corrosion resistance.

304 stainless steel mounts offer excellent corrosion resistance.

Note: Capacity is for the mount only. Mounting surface and fastening hardware will affect the ultimate capacity.

Offset

Mounts require a nut to secure threaded rod. They have one mounting hole. Meet Fed. Spec. WW-H-171, Type 35 and Manufacturers' Standardization Society MSS-SP-58, Type 34.

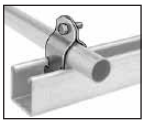
Strut-Mount Metal Routing Clamps



Tighten the screw to secure pipe, tubing, and conduit to your strut channel. Clamps fit 1 5/8" wide strut channel and are 1 1/4" wide.

Zinc-plated steel clamps offer good corrosion resistance.
Copper-plated steel clamps resist corrosion when used with copper tubing.
PVC-coated steel clamps offer mild corrosion resistance and are compatible with PVC pipe and conduit.
304 stainless steel clamps offer better corrosion resistance than zinc-plated steel.
316 stainless steel clamps provide maximum corrosion resistance.

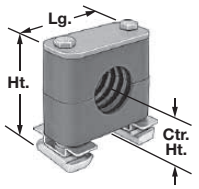
Vibration-Damping Strut-Mount Routing Clamps

Plastic Clamps without Cushion



Dampen vibration and noise when supporting tube and pipe in hydraulic applications up to 2,000 psi. Clamps fit 1 5/8" wide strut channel. They are 1 3/16" wide. Color is green. Temperature range is –20° to 190° F.

Note: Clamps are not rated for capacity.

Clamps with steel hardware offer good corrosion resistance.
Clamps with 316 stainless steel hardware offer better corrosion resistance than clamps with zinc-plated hardware.

(Continued on following page)

Vibration-Damping Strut-Mount Routing Clamps *(Continued from previous page)*

Metal Clamps with Plastic Cushion

The plastic cushion reduces vibration and resists most oils, chemicals, and cleaning compounds. Clamps fit 1⅝" wide strut channel and are 1¼" wide. Cushion is black. Temperature range is –50° to 270° F.

Note: Clamps are not rated for pressure or capacity.

Zinc-plated steel clamps offer good corrosion resistance. Hardware is steel.

304 stainless steel clamps offer better corrosion resistance than zinc-plated steel. Hardware is 304 stainless steel, unless noted.

316 stainless steel clamps provide maximum corrosion resistance. Hardware is 304 stainless steel, unless noted.

★ Screw is 316 stainless steel. ■ Hardware is 316 stainless steel.

Plastic Clamps with Rubber Cushion

The rubber cushion on these clamps reduces vibration and line noise. They are often used in refrigeration, HVAC, and hydraulic applications. Clamps fit 1⅝" wide strut channel and are 1⅝" wide. Color is black. Hardware is 304 stainless steel. Temperature range is –50° to 250° F.

Note: Clamps are not rated for pressure or capacity.

Narrow-Space Strut-Mount Metal Routing Clamps

Even when these clamps are installed side by side, the screws remain accessible. Clamps fit 1⅝" wide strut channel. They are zinc-plated steel.

Style B clamps have an angled screw, making them easy to access with a screwdriver or drill in low-headroom applications. Clamps have a gold finish. They are UL listed.

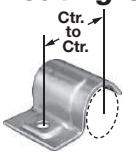
Strut Channel Beam Mounts

Mount strut channel between the sides of a beam to run cables and conduit along the beam without drilling. Position the mounts at either end of a piece of strut channel that is 1"-1½" shorter than your beam opening. Turn the bolt on the mount to tighten. Studded tops hold the mounts securely against the beam. Made of zinc-plated steel.

For Strut Channel Ht.	Wd.	Cap., lbs.		
1⅝"	1⅝"	500	**1815T15**	$11.23

Low-Profile Strut-Mount Metal Routing Clamps



These clamps fit in low-clearance areas. Use with a screw and a strut channel nut (not included) on 1⅝" wide strut channel. Clamps are 1⅝" wide. Mounting hole diameter is ¼". Clamps are zinc-plated steel.
Note: Not rated for capacity.

Lock-Close Strut-Mount Plastic Routing Clamps

Slide clamps into strut channel and snap closed around pipe, tubing, and conduit for quick installation with no tools required. Clamps are black plastic and fit 1⅝" wide strut channel. Temperature range is 20° to 280° F. Meet UL 2043.

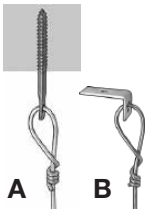
Tie Wire Hangers



Hangers have stiff wire attached to support suspended ceilings and electrical fixtures.
Style A hanger has a 3" long screw for use in wood.
Style B has a ⅝" Lg. × ¾" Wd. × 1 1/4" Ht. steel mounting bracket. The bracket is 1/16" thick with a 5/16" dia. mounting hole.

		Wire Lg., ft.	Wire Gauge		
A	Anchor for Wood	6	12	**5326K21**	$0.86
B	Angle Bracket	6	12	**5326K11**	.92

Strap Hangers

Perforated

Solid

Cut as much strap as you need to hang duct, pipe, and other materials.
Perforated straps that have two mounting hole diameters have alternately spaced large and small mounting holes.
Solid straps allow you to drill your own mounting holes.
Zinc-plated steel straps are corrosion resistant.
Copper-plated steel straps resist corrosion when used with copper tubing.
304 stainless steel straps are more corrosion resistant than zinc-plated steel.
Note: Straps are not rated for capacity.

Threaded Rod Anchors

Anchors suspend threaded rod from the ceiling or parallel to walls or floors. Anchors are zinc-plated steel.

Anchors for steel have a sharp cutting point for mounting directly into steel. Use a drill along with the *drive socket* (sold separately) for installation.

Anchors for wood require a drill along with the *drive socket* (sold separately) for installation.

Anchors for concrete require a hole drilled by an ANSI 1/4" masonry bit. Use a rotary hammer or hammer drill along with the *drive socket* (sold separately) for installation.

Note: Capacity is for the anchor only. Mounting surface will affect the ultimate capacity.

Threaded Rod Vibration Dampers

Reduce vibration and sound on air-handling units, pipe, and duct work suspended from threaded rod. Two lengths of threaded rod and two hex nuts are required for installation. Dampers are zinc-plated steel. Temperature range is –40° to 180°F.

Dampers with cushion provide sound control. Cushion is rubber.

Dampers with spring and cushion have a powder-coated steel spring to dampen vibration and a rubber cushion for sound control.

Note: Capacity is for damper only. Mounting surface and fastening hardware will affect the ultimate capacity.

Threaded Rod Eye Nuts

Add an eye to the end of your threaded rod. All eye nuts are iron.

Turnbuckle eye nuts have a swivel eye. Meet Manufacturers' Standardization Society MSS-SP-69, Type 15 and Fed. Spec. WW-H-171, Type 15.

Note: Capacity is for the eye nut only. Mounting surface and fastening hardware will affect the ultimate capacity.

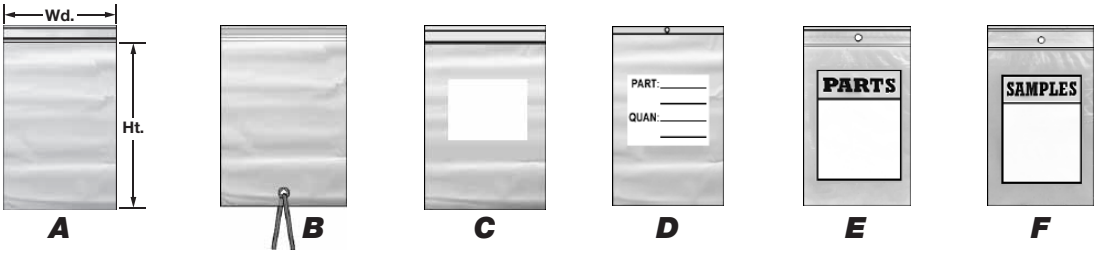
One mil equals 0.001″.

Press-to-Close Bags



Bags are made of FDA-compliant polyethylene resin. 8″×8″ bags have an approximate capacity of one quart. 12″×12″ bags have an approximate capacity of one gallon. The 6- and 8-mil thick bags are more puncture resistant than 2- and 4-mil thick bags.

Standard— Color is clear.

Choose-a-Color— To Order: Please specify opaque black, opaque white, translucent blue, translucent green, translucent red, or translucent yellow.

Bags with Brass Grommet— Bags include a twist tie for hanging tags and instructions. Color is clear.

Mark-On— Bags have a white space to write on. Color is clear. *Style D* bags have black letters. *Styles E* and *F* bags have red letters.

Specialty Press-to-Close Bags

UV Inhibiting—Protect contents from damage caused by ultraviolet light. Bags are polyethylene. Color is translucent brown, except 12″ wide bag, which is opaque brown.

Corrosion Inhibiting—A corrosion inhibitor protects ferrous and nonferrous metals from corrosion. Bags are nitrite-free polyethylene. Color is translucent blue.

Tarnish Inhibiting—Bags are made of polyethylene and have a coating that prevents tarnishing of precious metals. Color is clear.

Antistatic—Bags are made of polyethylene with an additive that prevents static charge from building up on the bag's surface. Color is translucent pink.

Static Dissipative—Bags are made of antistatic, amine-free polyethylene with an additional layer of coated polyester to protect against static discharge. Color is clear.

Static Shielding—Offer multi-layered protection for static-sensitive electronic components. The inner layer is amine-free polyethylene with an additive that prevents static build-up. The outer layer is coated polyester to protect against static discharge. The middle layer is aluminized polyester that stops static from passing through the bag. Color is translucent silver.

Static Shielding Moisture Barrier—Bags have all the benefits of static-shielding bags plus a layer of aluminum for protection from EMI/RFI static fields and moisture. The inner layer is amine-free polyethylene. The outer layer is coated polyester. Meet IPC/JEDEC J-STD-033. Color is opaque silver.

Clean Room—Suitable for Class 100 clean rooms. Bags are polyethylene. Color is clear.

Zipper Bags with Air-Removal Valve

Reduce storage space and shipping costs as well as prevent unwanted movement during shipment. Press any vacuum hose to the one-way valve to remove air from the bag. Bags have a double seal with a zipper for a secure closure. All are made of FDA-compliant resins. The inner layer is polyethylene and the outer layer is nylon. Color is clear.

Wd.	Ht.	Thick., mils		Each
21″	33″	3.3	1665T1	$9.29

Heat-Sealable Bags

One mil equals 0.001″.

Open-Top Bags

Seal the top with heat or close with a twist tie. For heat sealers, see page 1603. For twist ties, see page 1576.

Standard

Flat

Bags are made from FDA-compliant polyethylene resin. Color is clear, unless otherwise stated.
Gusseted bags have an accordion fold on each side that expands to fit bulky items.
Flat-bottom bags have a cardboard insert so they can stand and be filled more easily. Color is translucent white.

Heat Sealers with Timer

Also known as impulse sealers, these sealers have an operating temperature of approximately 550° F and an eight-setting timer that regulates the length of the heating cycle. Seal polyethylene, polyolefin, PVC, and Mylar. All sealers have a flat sealing surface with nonstick covers. Operate on 120 VAC, 60 Hz and have a 5½-ft. cord with a three-prong plug. Sealers have one heating element, except 19475T11, T12, and T13, which have two heating elements. UL listed, unless noted.

Hand-operated sealers with cutter have a built-in blade to cut off excess material.

Foot-operated sealers include a 4¾″ deep shelf that is 29″ high.

Repair kits for hand-operated sealers include two heating elements and three covers (two upper and one lower). *Kits for hand-operated sealers with cutter* also include a replacement cutting blade. ***Repair kits for foot-operated sealers*** include two heating elements and an upper and lower cover.

To Order: For replacement cover, please specify upper or lower cover.

★ Not UL listed.

Hand-Held Heat Sealers

You choose the temperature and control the duration of the heat application. Typically used with thick, tough-to-seal materials. Operate on 120 VAC, 60 Hz. Sealers have one heating element, except 19035T1, 2064T16, and 2064T18, which have two heating elements.

Spot-crimp style has a pliers-style design for sealing vacuum-formed polyethylene, polystyrene, polypropylene, and PVC trays and blister packs. Has a 6-ft. cord with a two-prong plug.

Iron style seals overwraps of irregularly shaped packages and bags. Use on cellophane and foils. Add a nonstick cover (included) for sealing Pliofilm, polyethylene, and vinyl. Has a 4½-ft. cord with a three-prong plug. UL listed.

Clamp style are not only for hand-held use; they have feet under the bottom jaw for table-top operation, as well as a detachable foot pedal for hands-free operation.

2064T13 is suitable for polyethylene, polypropylene, and PVC. It includes nonstick covers and a 4½-ft. cord with a two-prong plug.

2064T16 and *T18* are suitable for cellophane, aluminum foil, and waxed and coated papers. 2064T16 also seals cloth foil, brown-paper foil, and similar laminates. Both have an 8-ft. cord with a two-prong plug.

Rotary style have a wheel to seal large polyethylene and cellophane films. Also have a heat shield and a protective handle. Cord is 6 ft. long with a two-prong plug.

Vacuum Sealers, Bags & Tubes

One mil equals 0.001″.

Vacuum Heat Sealers and Bags

Create an airtight seal around your items. Sealer heat seals the bag and removes air at the same time. It has a 1/4″ NPT inlet for connection to your compressed air line. Air consumption is 2.5 cfm. Working pressure is 80-125 psi. Operates on 120 VAC, 60 Hz and has a 12-ft. cord with a three-prong plug.

Bags have a nylon outer layer and a polyethylene inner layer. Color is clear.

Heat-Shrink Wrapping Systems

Systems include a cradle, a heat sealer, a heat gun, and a roll of clear PVC film that shrinks when heated. Both the sealer and the heat gun have a 9 1/2-ft. cord and plug; they operate on 120 VAC, 60 Hz. The system for 6″-16″ wide rolls comes with a 15″ Wd. x 500 ft. Lg. roll of film. The system for 6″-28″ wide rolls comes with a 26″ Wd. x 500 ft. Lg. roll of film.

Heat-Shrink Film

Film shrinks when heated to create a form-fitting barrier. Rolls are 500 ft. long. Color is clear.

PVC film requires less heat to shrink. Recommended shrink temp. is 200°-275°F.

Polyolefin film is food grade and is more flexible than PVC. Recommended shrink temperature is 270°-300°F.

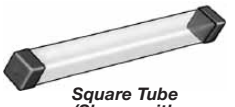
Cut-to-Length Plastic Tubes

Round Tube (Shown with Square End Caps)



Square Tube (Shown with Square End Caps)

Use scissors to cut these clear, semirigid polyethylene tubes to the length you need. Tubes are oil and moisture resistant. Wall thickness is 0.022″.

Round tubes use red vinyl end caps (sold separately). *Sealed-end* tubes have one open end.

Square tubes won't roll away. They can be stacked, and the flat surface is easier to label than a round surface. PVC end caps (sold separately) close the ends of the tubes. **To Order:** For end caps, please specify black or red.

Adjustable-Length Plastic Tubes

Set the length of these tubes to fit their contents. Durable and reusable, tubes are made of rigid PVC and resist oil and moisture. Color is clear. Wall thickness is 0.04″.

Round tubes can be adjusted by twisting the two halves. A hexagon end prevents rolling.

Square tubes are easier to label and stack. To adjust the length, push the ends of the tube together or pull them apart.

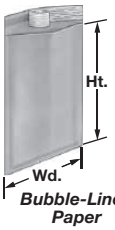
Shipping Envelopes



Bubble-Lined Paper

Envelopes have an adhesive-strip closure, except for *open-top paper* envelopes.

Paper envelopes have a durable exterior. Color is brown.

Plastic envelopes have a water- and tear-resistant exterior. Color is white.

Padded envelopes have a paper-filled liner to cushion contents. Envelopes also have a reinforced bottom.

Bubble-lined envelopes have a puncture-resistant liner with 1/8" high bubbles that protects contents.

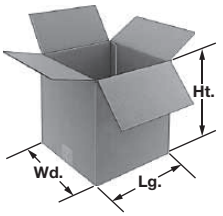
Corrugated Cardboard Boxes



Flaps meet in the center when folded. Boxes are tested to Edge Crush Test (ECT) standards, which measure the amount of force a carton can withstand before the edges collapse. Color is brown. Shipped flat.

Standard boxes meet ECT 32 (32 lbs. per inch), which is comparable to a 200-lb. burst strength. ***Heavy duty*** boxes meet ECT 44 (44 lbs. per inch), which is comparable to a 250-lb. burst strength. ***Double-wall heavy duty*** boxes meet ECT 51 (51 lbs. per inch), which is comparable to a 275-lb. burst strength.

Optional stand has five dividers for sorting boxes. It is made of steel with a black painted finish.

For box sealing tape and sealing tape dispensers, see pages 3485-3489.

Liquid Shipping Containers

Containers are authorized for shipping hazardous materials per CFR Title 49.

Note: It is the responsibility of the shipper to properly package and label all hazardous materials, and ensure appropriate method of shipment in compliance with all applicable regulatory guidelines.

Certified for Packing Groups II and III

Containers consist of a box and a collapsible or rigid jug. Suitable for most liquids, jugs are made of FDA-compliant polyethylene resin. The *5-gal. jugs* have a handle.

Collapsible jug collapses as it dispenses for uninterrupted flow. Jug has a 38 mm screw cap. Box is white and has an opening to access the jug's spout.

Rigid jug has a 70 mm screw cap with threads for attaching a spigot. It also has a pouring vent with a cap. Box is brown.

Cardboard Shipping Crates

Multiple layers of laminated cardboard make these crates a more durable alternative to corrugated boxes. They are also lighter, less expensive, and more shock resistant than wood crates. Crates consist of two U-shaped channels and two U-shaped end caps. They can be cut to any length with a band saw. To assemble, place one channel on top of the other and close off the ends with the end caps. Color is white.

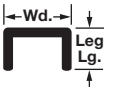
Adjustable Box Staplers

Manual Strip Style

Air-Powered Strip Style

Air-Powered Roll Style



Precisely set staples into corrugated cardboard boxes. These staplers have adjustable settings that control the tightness of the staple clinch and the depth of the staple, which prevents the staple from coming into contact with the box contents.

Staplers for 5/8" leg length are for use on single-wall corrugated boxes. For double-wall corrugated boxes, use staplers for 3/4" leg length.

Air-powered staplers have a 1/4" NPT air inlet and operate on 80-90 psi. *Roll-style staplers* are for high-production applications.

Also Available: Replacement parts. Please ask for 2028T888 and specify repair kit, anvil, or staple tray, as well as stapler part number.

Air-Powered Clinch Staplers for Boxes

Great for packaging applications, these plier-style staplers compress the material as the staple is driven for a tight clinch. Staplers have a 1/4" NPT air inlet and operate on 70-85 psi. They accommodate a range of staple leg lengths. Throat opening is 5 1/2" Lg. x 7/8" Ht.

Box-Bottom Staplers

Manual

Also known as bottomers, these staplers secure the bottoms of boxes. They hold 250 1 1/4" wide staples (sold separately) with either a 5/8" or 3/4" leg length. Staplers are 46" Lg. x 24" Wd. (at the rear legs) x 52" Ht. and have leveling pads for stability. Max. box height is 39".

Air-powered stapler is furnished with a combination filter/regulator. It has a 1/4" NPT air inlet and operates on 60-80 psi.

Paper Roll Cutters

Horizontal

Vertical

A spring-loaded blade provides clean cuts every time. Cutters fit rolls up to 9" in diameter. Made of steel with a gray powder-coated finish. Mounting fasteners not included.

Horizontal cutters mount on a countertop, under a counter, or on the wall. Cutters have four 1/4" dia. mounting holes. Come with rubber feet. Shipped assembled.

Vertical cutters fit in a 14" x 14" area. Four 1/2" dia. mounting holes in the legs let you stabilize the cutter. Shipped unassembled.

Paper Rolls and Sheets

Rolls have a 9″ diameter with a 1″ ID core, unless noted.
White Newsprint—Clean, low-cost packing material.
Brown Kraft—Good as an outer wrap for parcels.
Reinforced Brown—Two sheets of brown paper (also known as kraft paper) are layered and reinforced with high-strength fiberglass to handle heavy products. Also protects contents from moisture.
Raised Pattern Brown—The raised pattern provides absorbency. Ideal as an interleaving material.
Laminated White—Also known as freezer paper, this FDA-compliant paper is coated with polyethylene on one side for resistance to moisture and tearing.

Corrosion- and Tarnish-Inhibiting Wrap

Also known as volatile corrosion inhibitor (VCI) wrap, these chemically impregnated wraps protect metals from corrosion and tarnish. For the best protection, the coated side should be in contact with the metal.

Corrosion-Inhibiting Wrap

Paper—Also known as kraft paper, for use on ferrous metal products. Meets MIL-PRF-3420.
Polyethylene Film—Heat-sealable film that's particularly effective for protecting steel and tin. The *18″ roll* unfolds into 36″×36″ perforated sheets; the *24″ roll* unfolds into 48″×48″ perforated sheets. The *48″ roll* is not folded or perforated.

Protective Wrap

One mil equals 0.001″.

Bubble Wrap

Rolls are perforated every 12″ and have a 3″ ID core. Wrap is polyethylene. Color is clear.

Bubble wrap in dispenser box allows one-hand use. Dispenser for 12″ wide bubble wrap is 20″ Sq.×12½″ Wd.; dispenser for 24″ wide bubble wrap is 20½″ Sq.×25″ Wd.

Self-adhering bubble wrap instantly clings to itself but not the item being wrapped. Wrap continues to adhere after multiple uses.

Disposable Void-Filler Air Bags

Reduce product damage in transit. These inflatable paper bags prevent tipping and provide a cushion between products and walls. Color is brown.

Use the ***inflator nozzle*** (sold separately) to fill bags with compressed air (3 psi maximum). The nozzle connects to your air supply and includes a tip that fits a receptacle in each bag. Puncture bags to deflate.

Heavy Duty Heat-Shrink Wrap

Use wrap for long-term storage and transportation of large and irregularly shaped objects. Wrap is made of thick polyethylene that shrinks when heated to create a skin-tight barrier. Material is folded on the roll for compact storage. Rolls are approximately 5 ft. wide and have a 3″ ID core. Shrink temperature is 275° F. Color is white. ***Tape*** holds seams together and patches holes.

For heat gun, see 30975K11 on page 2727.

Corrosion-Inhibiting Heat-Shrink Bags

Get all the benefits of heat-shrink wrap in a convenient bag. Bags also contain a corrosion inhibitor to protect metals and are UV resistant. They're made of polyester-lined polyethylene that shrinks when heated and have a hook-and-loop closure so it's easy to seal them. Shrink temperature is 210° F. Color is tan. For heat guns, see page 2725.

Specialty Wrap

High-performance wrap has already been through a stretching process, which results in better load holding. Unlike other stretch wrap, it does not decrease in width during application, meaning fewer trips around to cover the load. Color is clear.

Corrosion-inhibiting wrap contains a corrosion inhibitor to protect metals. Color is translucent blue.

Antistatic wrap protects sensitive items from static charges. Color is translucent dark red.

Rolling Stretch Wrap Dispensers

Stretch Wrap Sold Separately

Roll this dispenser to wherever you need it. It has adjustable-height steering handles and four swivel casters for easy maneuverability. Dispenser is made of steel. The stretch wrap holder can be adjusted for varying roll widths and accepts rolls with a max. diameter of 15″ (stretch wrap sold separately). A two-stage brake system provides precise control of how fast the roll spins. Overall size is 20″ Lg.×35″ Wd.×78″ Ht.

Stretch wrap is 50″ Wd.×6,000 ft. Lg. Wrap is made of clear polyethylene and is 0.0008″ thick. Roll has a 10″ diameter and a 3″ ID core.

For Max. Roll Wd.	Fits Core ID		
60″	3″	19575T21	$863.46
Stretch Wrap		19575T43	276.92

Stretch Wrap Machines

A powered platform on these machines turns your pallets while stretch wrap unrolls off the mast for quick and easy coverage. Mast controls the tension while you move the counterbalanced wrap holder up and down.

Max. load size is 55″ Lg.× 55″ Wd.×84″ Ht. Unit accepts 12″ to 20″ wide rolls with a maximum diameter of 6″ and a 3″ ID core (stretch wrap sold separately). Platform is 3″ Ht.×59″ Dia. and rotates up to 15 rpm. Overall size is 92″ Ht.×102″ Lg. Machine is made of steel. It has a ½-hp motor with a knob to control the speed. Operates on 120 VAC @ 15 amps, 60 Hz and includes a 12-ft. power cord with three-prong plug.

Stretch wrap is 20″ Wd.×2,500 ft. Lg. Wrap is made of clear polyethylene and is 0.0008″ thick. Roll has an 4½″ diameter and a 3″ ID core.

Optional pallet truck ramp makes loading and unloading with pallet trucks easier. Size is 60″ Lg.× 48″ Wd. Made of steel.

14385T38

14385T41

Recognized worldwide, these labels are made of paper with an adhesive backing. All are white and have a black and red imprint. Label size is 3″ Wd.×4″ Ht. except 14385T36, which is 4″ Wd.×8″ Ht. Roll diameter is 4¼″, except 14385T36, which is 5¼″. All rolls have a 1″ ID core.

Wd.	Ht.	Labels per Roll	Roll
3″	4″	250	$12.88
4″	8″	100	12.03

Shock-Indicating Labels

You'll know at a glance if your package has incurred shock. All labels are adhesive backed.

Sensitivity is measured in "G" (G-force), which represents the force required to activate the indicator.

Single Use

At the center of these paper labels is a small liquid-filled glass vial with a protective plastic housing. When subjected to shock, the liquid turns a bright color.

Use the table to determine the proper label for your package.

Package Wt.	Package Size 0-1 cu. ft.	1-5 cu. ft.	6-15 cu. ft.	16-50 cu. ft.	50-Up cu. ft.
0-10 lbs.	Green	Green	Orange	Orange	Red
11-25 lbs.	Green	Orange	Orange	Red	Red
26-50 lbs.	Orange	Orange	Red	Red	Purple
51-100 lbs.	Orange	Red	Red	Purple	Purple
101-250 lbs.	Red	Red	Purple	Purple	Yellow
251-1,000 lbs.	Red	Red	Purple	Yellow	Yellow
1,001 lbs.-Up	_____	Purple	Yellow	Yellow	Yellow

Indicator Color	Sensitivity, G-force	Wd.	Ht.	Pkg. Qty.		Pkg.
Green	100 G	3 13/16″	3 13/16″	50	2032T5	$206.67
Orange	75 G	3 13/16″	3 13/16″	50	2032T6	206.67
Red	50 G	3 13/16″	3 13/16″	50	2032T7	206.67
Purple	37 G	3 13/16″	3 13/16″	50	2032T9	206.67
Yellow	25 G	3 13/16″	3 13/16″	50	2032T8	206.67

Resettable

Reset these indicating labels with a paper clip—they can be reused up to 50 times. Labels have arrows that turn from red to blue to indicate which surface of the package sustained impact. *Note:* Mount the labels in the direction you want shock to be monitored. Use three indicating labels to monitor a package in all directions.

A 3¾″ Wd.×3⅞″ Ht. warning label for the outside of the package and a 3¾″ Wd.×¾″ Ht. label for the bill of lading are also included. Indicating labels are made of plastic; warning labels are made of paper.

Indicating Label

Package Tip-Indicating Labels

Quickly identify containers that have been tipped during transit. An arrow-shaped window on the red indicator turns blue if the package is tipped 90° or more. Includes five 2¾″ Wd.×3¾″ Ht. indicating labels, five 3¾″ Wd.×5¼″ Ht. warning labels for the outside of the package, and five 3¾″ Wd.×¾″ Ht. warning labels for the bill of lading. All labels are adhesive backed. Indicating labels are made of plastic; warning labels are made of paper. Warning labels are white with a red imprint.

Indicating Label

Warning Labels

19455T5 ..... Pkg. $10.76

Package-Handling Warning Labels

Get the attention of package handlers. Labels are made of paper with an adhesive backing. Roll diameter is 4½″, except 2031T53, which is 5″. Rolls have a 3″ ID core.

Fragile is white with a red imprint.

Attention electrostatic sensitive devices is yellow with a black imprint.

Heavy is white with black, red, and yellow imprint.

Metal Strapping

Coil

Mini Coil in Dispenser Box

Solid

Punched

Secure your pallet loads, bundles, and crates with this strapping.

Coils are wound like a spool of thread. *Carbon steel* coils weigh approximately 100 lbs. *Type 302 stainless steel* coils weigh approximately 85 lbs. ***Mini coils*** are wound like a roll of tape, so the coil width is equal to the strapping width.

Low-carbon steel has a black painted finish, finished edges, and a wax coating to reduce friction. Meets ASTM D3953.

High-carbon steel is heat treated, providing high strength with elongation for shock resistance. Strapping has a black painted finish, rounded edges, and a wax coating to reduce friction. Meets ASTM D3953.

Type 302 stainless steel offers superior corrosion resistance over carbon steel. This strapping is oiled for lubricity. Meets ASTM A666.

Note: To match strapping with compatible seals, tools, and dispensers, choose items with the same "Strapping Group No." For strapping tensioners and kits, see page 1615. For strapping dispensers, see page 1618.

★ Coil is 1 1/4" wide.

Seals for Metal Strapping

Open

Closed

Seals are crimped onto metal strapping with a sealer (sold separately) to keep strapping under tension.

Open seals are for use on flat surfaces. They snap onto overlapping strap ends during or after application of tension.

Closed seals are for use on irregular surfaces as well as rounded objects. They feed onto strap ends before tension is applied with a tensioner.

Zinc-plated steel seals meet ASTM D3953. ***Type 304 stainless steel*** seals meet ASTM A666.

Note: To match seals with compatible strapping, choose items with the same strapping width or "Strapping Group No."

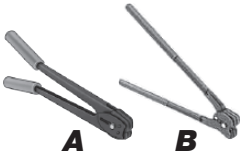
Sealers for Metal Strapping



A B

C

Also known as crimpers, sealers secure seals (sold separately) onto metal strapping.

(A&B) Front-action sealers are for use with lower-capacity (narrow and thin) strapping.

(C) Side-action sealers are for use with higher-capacity (wide and thick) strapping when extra force is needed.

Sealers for open seals cut two notches on each side of the seal with one operation.

Sealers for closed seals cut a single notch on each side of the seal with one operation. For best results, apply two notches per seal.

Note: To match a sealer with compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

Tensioners for Metal Strapping

Tensioners draw strapping tight around your packages.

Tensioners for Open Seals— Use on flat surfaces. Strapping is wrapped around the package and overlapped on top.

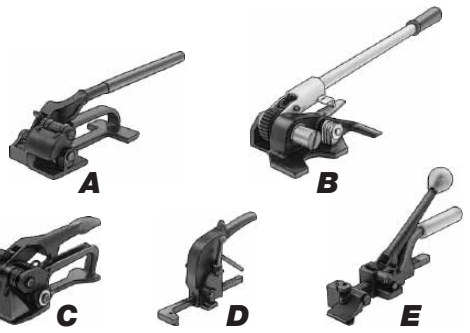
Tensioners for Closed Seals— Use on irregular surfaces as well as rounded objects. Place the seal on one end and fold strapping back to form a hook, then slide the other end of the strapping through the seal. Tensioners push against the seal as they tighten strapping.

Styles A and ***C*** have ratchet action for unlimited take-up. Tensioner holds the bottom strap while a feedwheel bites into the strap and tightens it.

Style B holds the bottom strap and tensions the top strap by winding it around the take-up wheel for maximum tension.

Styles D and ***E*** are a rack-and-pinion style that pushes the seal to create high tension without slip. Pull strapping tight manually before applying tension.

Note: To match a tensioner to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No." For strapping, see page 1614.



Tensioners For Open Seals

Combination Tensioners/Sealers for Metal Strapping

These tools do double duty, pulling metal strapping tight and then sealing it. They create a sealless joint by crimping interlocking notches into the strapping and cutting off the excess.

Note: To match tensioners/sealers with compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No." For strapping, see page 1614.

For Strapping Group No.	For Strapping Width	For Strapping Thickness		
2, 3	1/2"	0.015"-0.025"	20275T91	$1,124.76

Metal Strapping Kits

All kits include a tensioner, a sealer, and a strap cutter.

Open seals are best for flat surfaces. *Closed seals* can be used on irregular surfaces as well as rounded objects.

Kits with mini coils have two 200-ft. mini coils of low-carbon steel strapping in dispenser boxes and 500 open seals. Kits come in a steel carrying case with trays for storing tools.

Dispenser kits include a steel dispenser with a tool tray and wheels and 2,500 seals for high-volume applications. Use with 3" wide coils of strapping (sold separately on page 1614). *Note:* To match a kit to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

Edge and Corner Protectors

Protect the edges and corners of your boxes from strapping indentations and bumps during shipping. All protectors are formed 90° angles.

Cardboard protectors are made of multiple layers of cardboard that are glued and laminated. They also improve the stacking strength of boxes. Color is white.

Plastic protectors have a ridged channel to hold metal or plastic strapping in place during tightening. The outside of the protector is nonslip and nonmarring. Color is black.

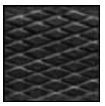
Plastic Strapping

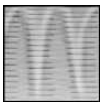
Coil

Mini Coil in Dispenser Box

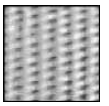


Embossed

Bonded



Woven



Heavy Duty Woven

Lighter and safer than metal, plastic strapping is also more flexible.

Coils are wound like a spool of thread. ***Mini coils*** are wound like a roll of tape, so the coil width equals the strapping width.

Embossed polypropylene is for light duty applications. Color is black.

Smooth polyester is stronger than polypropylene strapping. It can sustain a moderate stretch and return to its original condition. Color is black.

Bonded polyester is pliable and shock resistant. Color is white.

Woven polyester is flexible and shock resistant like bonded polyester but has a cross thread to prevent tearing and fraying. Color is white.

Heavy duty woven polyester is thicker and more durable than woven polyester strapping. Color is white.

Note: To match strapping with compatible seals, tools, and dispensers, choose items with the same "Strapping Group No." For strapping tensioners and kits, see page 1617. For strapping dispensers, see page 1618.

★ Made of smooth polypropylene. ♣ Color is green. ♥ Coil is 3" wide. ▲ Coil is 6 1/4" wide. ■ Coil does not come in a dispenser box.

Buckles and Seals for Plastic Strapping

Buckles and seals hold strapping under tension. *Note:* To match buckles and seals to compatible strapping, choose items with the same strapping material and width or material and "Strapping Group No."

Buckles

Plastic

Steel Wire

Buckles are designed for low-tension applications. Tighten strapping by hand or with a tensioner. ***Plastic*** and ***steel wire*** buckles are for polypropylene and bonded and woven polyester strapping. ***Heavy duty steel wire*** buckles are for heavy duty woven polyester strapping.

For Strapping Group No.	For Strapping Width	Lg.	Pkg. Qty.		Pkg.
Plastic

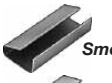
Seals



Smooth

Serrated

Crimp with a sealer after tightening strapping with a tensioner. Seals are made of zinc-plated steel.

Smooth seals meet ASTM D3950. ***Serrated*** seals have teeth on the inside to bite strapping for high-strength applications.

For Strapping Group No.	For Strapping Width	Lg.	Pkg. Qty.		Pkg.

Sealers for Plastic Strapping

Also known as crimpers, sealers secure seals (sold separately) on strapping.

Note: To match a sealer to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

For Strapping Group No.	For Strapping Width	For Strapping Thickness	Handle Length		
For Smooth Seals and Polypropylene Strapping

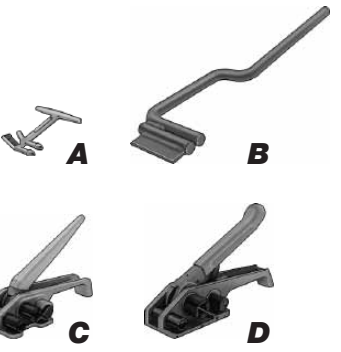
Tensioners for Plastic Strapping

(A&B) Hand-tension styles are designed for use with buckles in low-tension applications. ***Style A*** lets you tighten strapping while threading plastic or wire buckles. It has a built-in cutter. ***Style B*** uses leverage to pull strapping tight.

(C&D) High-tension styles hold the bottom strap and tension the top strap by winding it around a take-up wheel. All have a built-in cutter.

Note: To match tensioners to compatible strapping, choose items with the same strapping material, width, and thickness or material and "Strapping Group No." For strapping, see page 1616.



For Strapping Material	For Strapping Group No.	For Strapping Width	For Strapping Thickness

Combination Tensioners/Sealers for Plastic Strapping

With one tool you can tighten and seal polypropylene and smooth polyester strapping.

(E) Manual tensioners/sealers have multiple levers for tensioning and sealing. They require a separate seal to make the joint in a strapping assembly. Serrated zinc-plated steel seals sold separately.

(F&G) Battery-powered tensioners/sealers use heat and friction to create a sealless weld on strapping.

(F) Has manual tension, so the battery is used only for the sealing and cutting process. An adjustable friction clutch prevents overtightening of the strapping. Comes with a rechargeable 12-volt battery and a battery charger that operates on 120 VAC and has a 6-ft. power cord with a two-prong plug.

(G) Have automatic tension, cutting, and sealing. Come with two rechargeable 18-volt batteries and battery charger that operates on 120 VAC and has a 6-ft. power cord with a two-prong plug.

Note: To match tensioners/sealers to compatible strapping, choose items with the same strapping material, width, and thickness or material and "Strapping Group No." For strapping, see page 1616.

Plastic Strapping Kits

Everything you need to handle plastic strapping tasks. Strapping is black and comes in a dispenser box, except for Style K, which comes on a steel dispenser with wheels.

Smooth polyester strapping is stronger than polypropylene. It can sustain a moderate stretch and return to its original condition.

(H) Include a tensioner with built-in cutter and 300 buckles.

(J) Includes a tensioner, sealer, and 1,000 seals.

(K) Include a tensioner, sealer, and 500 seals.

Strapping Machines

Capable of securing 15 polypropylene straps per minute, this portable machine saves you time and energy. Strapping is manually pulled over the package and fed into the strapping inlet. Machine tensions the strapping around the package, makes a sealless weld, and feeds out strapping for the next package. Use with 8" wide × 8" ID coils of polypropylene strapping (sold separately).

Machine is 35" Lg. × 23" Wd. × 30" Ht. It has four swivel casters, two with brakes. Unit operates on 120 VAC @ 4.6 amps, 50/60 Hz. Comes with a 15-ft. power cord with a three-prong plug.

For Strapping Width

3/8" and 1/2"	1950T5	...	$1,210.64

Plastic Strapping for Strapping Machines

Strapping Dispensers

A

B

C

D

E

Keep strapping coils neat and ready to use. All dispensers are steel with a black painted finish. Include a tool tray, unless otherwise stated.

(A) Has large wheels for better maneuvering and has a spring-loaded brake that prevents strapping from unspooling.

(B) Lays horizontally on a work surface. Does not include a tool tray.

(C) Has rubber tires that work well on rough surfaces and a brake that prevents strapping from unspooling.

(E) Holds up to three mini coils in dispenser box.

Note: To match dispensers to compatible strapping, choose items with the same strapping material, width, coil width, and ID or the same material and "Strapping Group No." For strapping, see pages 1614 and 1616.

Bale and Bundle Wire Ties

Single-loop ties have a loop on one end. Feed the straight end through the loop and twist. They are longer for cardboard, lumber, and other large bundles. *Black annealed steel* is pliable. *Painted steel* is more corrosion resistant than black annealed steel. Color is gray.

Double-loop ties are shorter than single-loop ties and have a loop on each end that can be twisted around each other for a secure closure. Use on bags, cables, and other small bundles. *Black annealed steel* is pliable. *Type 304 stainless steel* offers better corrosion resistance than black annealed steel. *PVC-coated steel* reduces slipping and allows for extra-tight twists. Color is yellow.

High-Strength Rubber Banding

Heavy Duty

An economical alternative to strapping, these reusable bands keep items of all shapes and sizes in place during transit. No tools required. Color is green.

Heavy duty are suitable for drums, barrels, pails, and for securing protective covers.

Light duty hold rolled material and small boxes together.

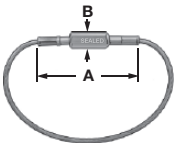
High-Security Tamper Seals

Our strongest tamper seals require cable or bolt cutters for removal. Not offered blank for security reasons. Seals meet C-TPAT (Customs-Trade Partnership Against Terrorism) and U.S. International Customs (ISO 17712) requirements, unless noted.

(1) Wire Rope Seals— Seals are made of strong steel cable with a chrome-plated steel locking end fitting.

(2) Pull-Tight Wire Rope Seals— Insert the free end of the rope into the seal and pull it tight. Seal body is coated zinc, except 2083T34 is anodized aluminum. Wire rope is galvanized steel.

(3) Bolt-Style Seal— Bolt is steel with a plastic coating that resists corrosion yet scratches easily to show evidence of tampering. To install, snap apart the plastic attachment holding the bolt and body together and insert the bolt into the body.



1

2

Stock Seals

Wire rope seals are stamped "Sealed" and have random numbers. *Bolt-style seal* is stamped with one letter and six random numbers. When sealed, overall length is 3½".

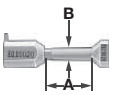
Open



Sealed

Tamper Seals

Insert the free end into the seal body to close. Seals must be cut or broken to be opened. Not offered blank for security reasons. Seals are plastic, unless otherwise stated.

Fixed-loop seals have a set loop size when the seal end is pushed into the seal body. Use on trucks and other containers with large openings. ***Pull-tight seals*** adjust to keep a tight seal on containers.

(5&6) Conform to Mil. Spec. FF-S-2738A. Made of tin-plated steel.

(7) Imprinted with a black bar code. Made of tin-plated steel. *Code 39* seal has M11 identification and eight characters. *Interleaved 2 of 5* seal has M12 identification and 12 characters.

(9) Have a wire hasp loop end.

(10) Has a pull tab for tool-free removal.

Seal Presses

A

B

Squeeze the spring-loaded top handle together with the bottom handle to seal discs.
(A) Presses for lead-disc seals come with two flat dies. Presses are made of steel.
(B) Presses for lead- and aluminum-disc seals have two flat dies. One die is adjustable to fine-tune the depth of the impression on the seal. *Extra die* replaces the adjustable die. Presses are made of malleable iron.
To Order: For engraved dies, please specify up to four characters including spaces for each die.

Bench Scales

Use these small scales to weigh lightweight items. They have a tare function and plastic housing.

Compact—Scales fit in your hand for weighing on the go. They are battery operated (batteries are included) and have a plastic platform. *4-* and *11-oz. capacity* scales measure in ounces, grams, troy ounces, and pennyweights; *42-oz. capacity* scales measure in ounces and grams.

Compact with Flip Cover—The attached cover protects the scale while you carry it. It measures in ounces, grams, carats, and grains. It is battery operated (batteries are included) and has a stainless steel platform.

Standard—Scales have a plastic platform. They are battery operated (batteries are included) or operate with an AC adapter (sold separately). They measure in ounces, grams, troy ounces, and pennyweights; *4-* and *11-lb. capacity* scales also measure in pounds.

Precision—Use when you need high accuracy. They have a stainless steel platform and operate with the included AC adapter or four AA batteries (not included). They measure in ounces, pounds, grams, kilograms, troy ounces, and pennyweights.

Bench Scales with Remote Display

Weigh loads without obstructing the display. Scales have a tare function and include an AC adapter. The display can be mounted up to 9 ft. from the platform and has a plastic housing. The platform is steel.

Standard—*77-lb. capacity* scale can also operate on three C batteries (not included). It includes a mounting bracket with four 3/16″ dia. holes for wall mounting the display (fasteners not included). *150-* and *400-lb. capacity* scales can also operate on a 9-volt battery (not included). The display has two 1/4″ dia. keyhole slots for wall mounting (fasteners not included).

Large Platform—Scales accommodate larger loads. They can also operate on three C batteries (not included) and include a mounting bracket with four 3/16″ dia. holes for wall mounting (fasteners not included).

Legal-for-Trade Bench Scales

For use wherever products are sold by weight. Scales have a tare function and a plastic housing with a stainless steel platform. NTEP approved.

Washdown—Scales are rated IP65 for protection from water projected from a nozzle. They are USDA compliant and operate on six D batteries (not included).

Remote Display—Position the display up to 3 ft. from the platform for an unobstructed view when weighing large loads. The display has two 1/2″ dia. keyhole slots for mounting (fasteners not included), and can also be connected to the platform with the included steel column. Scales have a 2-ft. power cord with plug and can also operate on six C batteries (not included). *25-* and *50-lb. capacity* scales have a 13¾″ high column; *100-* to *500-lb. capacity* scales have a 26¾″ high column.

Dial Bench Scales

Compact

Standard and Corrosion Resistant

Easy Carry

Use for quick, frequent weighing. Scales can be manually reset to zero.

Compact—These small scales have a stainless steel platform and an aluminum housing. They meet NSF/ANSI standards.

Standard—Scales have a steel housing. *10-* to *40-lb. capacity* scales have a stainless steel platform and meet NSF/ANSI standards. *60-* to *200-lb. capacity* scales have a steel platform.

Corrosion Resistant—Scales have a stainless steel housing and platform for use in areas where moisture is a factor.

Easy Carry—With a handle and platform built into the body, these scales are designed for easy portability. *100-lb. capacity* scale is steel; *250-lb. capacity* scale is stainless steel.

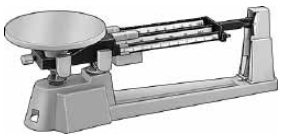
Beam-Balance Scales



Weigh small quantities of lightweight materials. The housing and beams are aluminum; the platform is 6″ dia. and stainless steel.

Scale **with reset** allows you to manually zero out weight up to 225 g.

Optional weight set increases the capacity of the scale. It includes one 500 g and two 1,000 g weights.

Capacity, g				*Accuracy, g*			*Graduations, g*

Counting Scales

A

B

C

Count materials in addition to weighing. Scales have a tare function. Housing is plastic and platform is stainless steel.

Styles A and **C** scales can be set to weigh in ounces, pounds, grams, milligrams, kilograms, carats, troy ounces, pennyweights, grains, taels, mommes, Newtons, and ticals. Include an AC adapter. *Style C* includes a shield to protect from drafts and vibration.

Style B scales have a wide platform for weighing large materials. They show total weight, unit weight, and quantity simultaneously. They have a 5-ft. cord with plug and can also operate on the included rechargeable battery.

Legal-for-Trade Counting Scales

Count loose parts and weigh materials that are sold by weight. The weighing function is legal-for-trade, and the counting function can be turned off for use as a weigh-only scale. Scales have a tare function and a 9-pin RS-232 serial port to connect to your PC (cable not included; see page 1884). They have a 10-ft. cord with plug. Housing is aluminum. *2- and 5-lb. capacity* scales have an aluminum platform; *10- to 200-lb. capacity* scales have a stainless steel platform. NTEP approved.

Optional data-logging software is Windows compatible and allows you to upload data. Furnished on a CD.

Load-Estimating Hanging Scales

Determine approximate weights of large, bulky materials that are not practical to weigh using a floor scale. Scales convert pressure readings (in psi) to weight in pounds. They are often used in loading vehicles and can be suspended from a crane, block and tackle lift, A-frame, or forklift blade. Housing is aluminum and hooks are steel. Dial is 4″ dia.

Capacity, lbs.	Accuracy, lbs.	Graduations, lbs.	Ht.	Wd.	Dp.	Hook Opening

Hanging Scales

Hanging Scales

Hand-Held

Corrosion Resistant

Weigh items that don't fit on a standard bench scale. Scales have a tare function and are battery operated (batteries are included).

Hand-Held—Hang these plastic scales from the top hook, or attach the included bar handle to weigh by hand. They include a plastic carrying pouch.

Corrosion Resistant—A sealed aluminum housing protects these scales in wet environments. Scales have a bottom steel hook with a 3/4" opening.

Legal-for-Trade Hanging Scales

Compact

Washdown

Use these hanging scales wherever products are sold by weight. They have a tare function. NTEP approved.

Compact—Scales are plastic. They operate on four C batteries (not included).

Washdown—Scales have an aluminum housing that is rated NEMA 4 for indoor/outdoor use and protection from dust and washdowns. Scales include a rechargeable battery, an AC adapter, and a certificate of calibration traceable to NIST. They have steel hooks. *2,000-lb. capacity* scale has a 1 1/8" bottom hook opening; *5,000-lb. capacity* scale has a 1 1/2" bottom hook opening.

Dial Hanging Scales

A

B

C

D

E

Scales can be manually set to zero.

Style A housing is brass.

Style B housing is aluminum.

Style C housing is steel.

Style D scales have an aluminum, open-face dial. *70-lb. capacity* scale has a steel housing with an 8" dia. dial; *200-* and *400-lb. capacity* scales have a cast iron housing and a 7" dia. dial.

Style E are also known as crane scales. The heavy duty construction allows them to simultaneously lift and weigh bulk loads. They have an aluminum housing with steel top and bottom hooks and a 10" dia. dial. Include a certificate of calibration traceable to NIST. The *5,000-lb. capacity* scale has a 1 3/8" bottom hook opening; the *20,000-lb. capacity* scale has a 2 1/8" bottom hook opening.

Floor Scales

Weigh large, bulky loads without having to lift them far from the ground. Scales have a tare function.

Portable—Similar in style to a hand truck, this scale tilts back on two rubber wheels to move. Scale is 42″ high. It has a steel frame and aluminum platform, and is battery operated (batteries are included).

Remote Display—Position the stainless steel display up to 14 ft. from the platform to read at a safe distance. The platform is steel with two plastic wheels. It has a ramp on both sides to slide or roll material on and off. Scales have a 9-pin RS-232 serial port to connect to your PC (cable not included; see page 1884). They operate with the included AC adapter or six C batteries (not included).

Optional data-logging software for remote-display scales is Windows compatible and allows you to upload data. Furnished on a CD.

Legal-for-Trade Floor Scales

For use wherever products are sold by weight, these legal-for-trade scales accommodate large loads. They have a tare function. The platform is steel and the display has a stainless steel housing. NTEP approved.

Portable—Roll this scale wherever you need to weigh. It is 49¾″ high, and has four plastic wheels and a 9-pin RS-232 serial port to connect to your PC (cable not included; see page 1884). Operates with the included AC adapter or six C batteries (not included).

Optional data-logging software for portable scale is Windows compatible and allows you to upload data. Furnished on a CD.

Standard and **Large Platform with Remote Display—**Keep a safe distance when weighing large loads. The display includes a 20-ft. cord and has four 5/16″ dia. keyhole slots for mounting (fasteners not included). Scales have a 10-ft. power cord with plug. *Standard with remote display* scales have a smooth platform with 3¼″ high side rails to keep loads in place. *Large platform with remote display* scales have adjustable feet that compensate for an uneven floor.

Legal-for-Trade Counting Floor Scales

Count and weigh loads that are difficult to lift. The weighing function is legal-for-trade—you can use wherever products are sold by weight. Scales have a tare function and automatically adjust graduations to give more exact readings for lighter material. They are 30½″ high and have a stainless steel platform. Operate with the included AC adapter or six D batteries (not included). Accuracy is ±1 graduation. NTEP approved.

English, lbs. Capacity	English, lbs. Graduations	Metric, kg Capacity	Metric, kg Graduations	Platform Size Ht.	Platform Size Wd.	Platform Size Dp.

Load-Estimating Floor Scales

Estimate the weight of large loads that don't fit on a standard floor scale. Scales convert pressure readings (in psi) to weight in pounds. Commonly used to prevent overloading a trailer tongue. They include a removable 2⅜″ long extension and have an aluminum body, a steel piston, and a 2¾″ dia. dial.

Capacity, lbs.	Accuracy, lbs.	Graduations, lbs.	Scale Ht.	Overall Ht. with Extension	Base Dia.		
1,000	±30	20	4½″	6¾″	3¼″	17645T21	$169.78
2,000	±60	50	4½″	6¾″	3¼″	17645T32	169.78
5,000	±150	100	4½″	6¾″	3¼″	17645T45	169.78

Scales & Test Weights

Personnel Scales

Measure a person's weight and height. Scale has an extendable rod that measures height between 28″ and 82″. The base is steel with a plastic top. It has a tare function and includes a rechargeable battery and an AC adapter.

Capacity		Accuracy		Graduations		Platform Size				
lbs.	kg	lbs.	kg	lbs.	kg	Ht.	Wd.	Dp.		
550	250	±0.4	±0.2	0.2	0.1	4″	10 7/8″	14 5/8″	1834T31	$395.00

Test Weights

Calibrate your scale with these stainless steel test weights. They include a statement of accuracy and are marked with their weight.
Legal-for-trade—Class F weights meet NIST Class F tolerances.
Standard—Class 7 weights meet ANSI/ASTM Class 7 tolerances.

Sets

Class F

Class 7

English 11-piece set has a leather case; 17-piece set has a plastic-covered cardboard case with metal corners.
Metric sets are furnished in a plastic case, except the legal-for-trade 13-piece set, which is leather.

Hanging Test Weights

A built-in hook extends for use with a hanging scale and retracts into the weight for use with a bench scale. Weights are marked with their weight and include a statement of accuracy. Made of stainless steel.

Standard—Class 6 weights meet ANSI/ASTM Class 6 tolerances.

Legal-for-trade—Class F weights meet NIST Class F tolerances.

Precision Test Weights

Our most accurate test weights, use these to calibrate precision scales. They are marked with their weight, meet ANSI/ASTM Class 1 tolerances, and include a statement of accuracy. Their accuracy can be affected by the oil from your fingers—weights should always be handled with gloves or forceps.

Individual Weights

Weights come in a protective plastic case and include a cotton glove. Made of highly polished stainless steel.

Interlocking Test Weights

Stack multiple weights to calibrate your scales—they are grooved to fit together. Weights are cast iron and are marked with their weight. They have a 9/16" wide slot for use with a hanger (sold separately) to test hanging scales. Weights meet ANSI/ASTM Class 6 tolerances and include a statement of accuracy.

Counterbalance Weights for Beam Scales

Add these stackable cast iron weights to the end of a beam scale to increase its total capacity. Also known as counterpoise weights. They have a 1/2" wide slot for hanging on a beam or a hanger. They meet ANSI/ASTM Class 7 tolerances and are marked with their weight.

Use the *optional weight hanger* to hang weights on a beam scale. Hanger is 4" Dia. x 5 1/8" Ht.

Air-Actuated Counters

Surface Mount

Panel Mount

Register up to 600 pulses of compressed air per minute. Counts decrease as air hose length increases; the length of your hose should not exceed 2½ feet to reach 600 counts per minute. Pressure must drop to 0 psi between pulses. All counters can be reset to zero. Air inlet is 10-32 female. Mounting fasteners not included. Housing is plastic. Temperature range is 32° to 140° F.

Large-Display Counters

Visible from over 100 feet away, these counters have a large-digit LED display that can be adjusted to suit lighting conditions. All count up or down, have screw terminal connections, and can be wired for remote reset. Counters require a sensor, encoder, or switch for count input (not included; see pages 947-950 and 1631). They operate on 50-250V AC or 21.6-250V DC and have a 6-ft. cord with a three-prong plug. Memory backup retains programming in the event of a power failure. Counters require 10-32 bolts for mounting (not included). Counters have an aluminum housing that offers protection from dust and washdowns and can be used outdoors (meets NEMA 4X). CE marked and UL and C-UL listed. Temperature range is 32° to 140° F.

Counters with output relay send a signal to another device when a set point is reached. Output relay is rated 5 amps @ 120/240V AC or 28V DC.

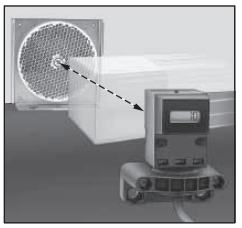
Counters with Light-Beam Sensor



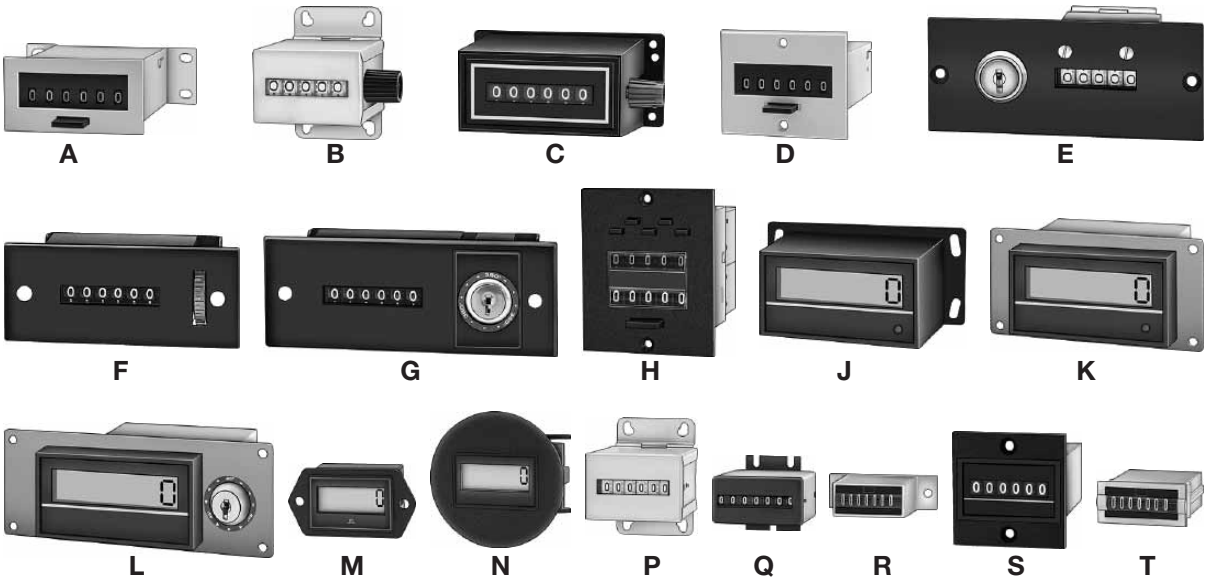
Medium Range

A built-in sensor counts objects as they pass by. Counters count up from zero, have a six-digit LCD, and register up to 2,000 counts per minute. They operate on 10-250V AC or 12-115V DC and have 6-ft. wire leads. To reset the count, touch the top of the display with the included magnet. In the event of a power failure, the memory backup retains the count for up to 100 hours.

Overall size is 2.5″ Ht. × 1.4″ Wd. × 2″ Dp. Counters have a plastic housing that offers protection from dust and washdowns and can be used outdoors (meets NEMA 4X). Temperature range is 32° to 122° F.

Sensing Range	Minimum Object Size		
Short (0″-1½″)	0.06″ Dia.	**4403T51**	$323.97
Medium (6″-30 ft.)	2.65″ Dia.	**4403T52**	328.56
Long (0″-200 ft.)	0.5″ Dia.	**4403T53**	412.02

Voltage-Actuated Counters



Used on machine tools, printing presses, and packaging machinery, these count up as they receive an input from a switch, sensor, or encoder (not included; see pages 947-950). Counters have wire leads, unless otherwise stated. Mounting fasteners not included, except for Styles F, G, and M. Temperature range is 14° to 122° F.

With Reset— Counters have a push-button, knob, or key reset.

Without Reset— Prevent tampering or accidental loss of data.

Analog counters (also known as electromechanical counters) are UL recognized, except Style H.

(H) Analog panel-mount counter with output relay has push-on electrical connections and two resettable displays. One shows a set point and the other counts incoming pulses. When the count reaches the set point, the counter triggers a relay and continues to count. Output relay is rated 5 amps for *120V AC counter* and 2 amps for *24V DC counter*.

Digital counters have a battery-powered LCD. *Styles M* and *N* have 1/4″ spade terminals and are UL and C-UL recognized.

To Order: Please specify input voltage where applicable.

Counter/Ratemeters

Count events while tracking rates in units such as gallons per minute. Counter/ratemeter has a button that toggles between the count and the rate, and its scaling function lets you adjust the unit of measure to suit your application. Meter counts up from zero and accepts switch contact and DC voltage input (2-28V DC high level; 0-1.2V DC low level). It has screw terminal connections and requires a sensor, encoder, or switch for count input (not included; see pages 947-950).

Display is a battery-powered LCD and can be wired for remote reset. It has a plastic housing that offers protection from dust and washdowns and can be used outdoors (meets NEMA 4X). Temperature range is –4° to 158° F.

No. of Digits	*Max. Counts/Minute* Switch Contact	DC Input	*O'all Size* Ht.	Wd.	Dp.	*Panel Cutout* Ht.	Wd.

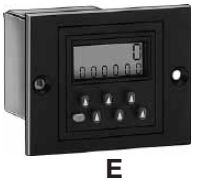
Counters for DIN Panel Cutouts

A

B

C

D



E

F

For quick installation, these counters fit standard DIN panel cutouts. Counters can be reset to zero and have screw terminals. Housing is plastic. Temperature range is 32° to 104°F.

All counters require a device such as a sensor, encoder, or switch for count input (not included; see pages 947-950 and 1631).

Counters with Output Relay—Send a signal to another device to start/stop a process or to signal an alarm when a set point is reached. All have two set points, except Style E has one set point. Output relay is rated 5 amps @ 250V AC, except Style E is rated 0.5 amps @ 230V AC and 2 amps @ 30V DC.

Style A are battery powered. Their housing offers protection from dust and washdowns and can be used outdoors (meet NEMA 4). UL recognized.

Style B are battery powered and have a backlit display for good visibility in low-light conditions (external 5V DC power supply required). UL and C-UL recognized.

Style C operate on 10-30V DC and maintain the count if power is lost. Their housing offers protection from dust and washdowns and can be used outdoors (meet NEMA 4X). 1745T21 has a scaling function so you can adjust the unit of measure to suit your application.

Style D operate on 120V AC and retain the count and the programming if power is lost. They include password lockout and a scaling function so you can adjust the unit of measure to suit your application. Their housing offers protection from dust and washdowns and can be used outdoors (meet NEMA 4X). UL and C-UL listed.

Style E is battery powered and includes a gasket for protection from direct water spray (meets IP65). UL and C-UL recognized.

Style F operates on 85-250V AC or 11-14V DC and retains programming if power is lost. It has a scaling function so you can adjust the unit of measure to suit your application. Counter includes a gasket for protection from direct water spray (meets IP65). UL and C-UL recognized.

♣ Maximum counts per minute for low-level voltage is 1,800.

Counters and Ratemeters for 1/8 DIN Panel Cutouts

Counter/Ratemeter

Counter with Enclosure and Sensor

Keep counts and rates in one meter that fits into a 1.77″×3.62″ cutout. Meters can be reset to zero and have a high-visibility digital LED display. A scaling function lets you adjust the unit of measure to suit your application. Meters have a plastic housing that offers protection from dust and washdowns and can be used outdoors (meets NEMA 4X). UL and C-UL listed. Temperature range is 32° to 122°F.

Counter/ratemeters have screw terminals, accept switch contact or 0-30V DC, and include a 12V DC power source for external sensors. Counter/ratemeters require a device such as a sensor, encoder, or switch for count input (not included; see pages 947-950 and 1631). *Optional output relays* (sold separately) send a signal to start/stop a process or to trigger an indicator when a set point is reached.

Counter with enclosure and sensor has a plastic enclosure and a 3/4″ Dia.×3 1/2″ Lg. stainless steel sensor. Sensor counts metallic objects at a maximum range of 0.059″ and includes a 10-ft. cable. Counter includes a 6-ft. power cord with three-prong plug. It has an output relay and two set points; when a set point is reached, the relay sends a signal to another device to start/stop a process or to signal an alarm. Output relay is rated 5 amps @120V/240V AC or 28V DC.

Count Function	No. of Digits	Max. Counts/Minute	O'all Size Ht.	O'all Size Wd.	O'all Size Dp.	Operating Voltage

DIN Panel-Cutout Adapters

Adapters consist of two steel plates and a rubber gasket that fit over your panel cutout to accommodate a counter that's smaller than the DIN/panel-cutout size. They offer protection from dust and washdowns and can be used outdoors (meet NEMA 4).

For DIN Size From	For DIN Size To	For Panel Cutout Ht.	For Panel Cutout Wd.	For Counter Ht.	For Counter Wd.		
1/4	1/8	3.62″	3.62″	1.77″	3.62″	1647T12	$38.10

1/8	1/16	1.77″	3.62″	1.77″	1.77″	1647T11	51.55

Rotating-Shaft Encoders

Count shaft revolutions by connecting one of these encoders to a voltage-actuated counter (not included). Units require 5-28V DC. Maximum shaft speed is 6,000 rpm. Temperature range is 32° to 185° F.

Units that *count up and down* increase or decrease count depending on the direction of the shaft rotation.

Encoders have a 2 1/4″ Lg. × 2 1/4″ Wd. aluminum housing and a 3/8″ dia. shaft that projects 3/4″ from the housing on two sides. Maximum output is 250 mA @ 5-28V DC. *Cables* (sold separately) connect the encoder to your counter. *Wheels* and *mounting bracket* (sold separately) allow you to use the encoder for length measurement. Choose the *polyurethane wheel* for wear resistance or the *rubber wheel* for good grip. *Bracket* is 8.3″ Lg. × 7.3″ Wd. and requires No. 12 screws for mounting (not included).

Encoder kit consists of an encoder, a mounting bracket, and a 6 1/2-ft. cable. Encoder has a nylon housing and a 1/4″ dia. shaft that projects 1/2″ from the housing on one side. Maximum output is 20 mA @ 5-28V DC. Bracket requires 1/4″ dia. screws for mounting (not included). Overall size is 4 1/4″ Lg. × 2 3/4″ Wd. *Wheel* (sold separately) allows you to use the encoder for length measurement.

Encoder Shown with Optional Wheel and Optional Mounting Bracket

To Order: Please specify counts per revolution.

Rotating-Shaft Counters

Get precise counts from clutches, couplings, rotors, and rotating shafts. All counters can be reset to zero. Counters require No. 5 mounting screws (not included), except counter with shaft on two sides, which requires No. 8 mounting screws. Housing is plastic. Temperature range is 0° to 140° F.

Shaft direction is the direction of rotation when you're looking at the counter from the end of the shaft.

Hour Meter/Counters

Keep track of time while counting events. Units have two displays that cannot be reset. One display counts to 99999.99 hours. The other counts to 9999999 as it receives input from a sensor, encoder, or switch (not included; see pages 947-950). Meter/counters have screw terminals. Housing is plastic. Temperature range is 5° to 140° F.

E

F

G

H

J

K

L

M

N

P

Q

All meters have a plastic housing. Meters show a running time to one decimal place, except eight-digit meters show a running time to two decimal places. They mount in a panel cutout, except Style E mounts on a DIN 3 rail. Meters are UL recognized, unless noted.

1672T22 and *Styles P* and *Q* are sealed to offer protection from dust and water (1672T22 and *Style P* meet NEMA 4X; *Style Q* meets IP67).

AC meters operate on 60 Hz, unless noted.

Without Reset—Prevent tampering or accidental loss of data.

With Reset—Counters have a push-button or knob reset.

(P) Hour meter with digital displays and output relay has two displays. One shows the total running time and cannot be reset; the other shows the time elapsed since the last maintenance and can be wired for remote reset. When a set point is reached, an indicator light turns on and the relay sends a signal to another device. Output relay is rated 0.2 amps @ 265V AC or 40V DC.

To Order: Please specify operating voltage where applicable.

Electric-Motor Hour Meters

With a sensor that's activated by your electric motor's magnetic field, these meters show the motor's running time in hours to one decimal place. Use the adhesive back to mount the sensor to your motor. Display has a battery-powered LCD and requires No. 5 screws for mounting (not included). Cord between the sensor and the display is 4-ft. long. Housing is plastic. Temp. range is –40° to 185° F.

Meter **with reset** alerts the user when a set point is reached.

Vibration-Activated Hour Meters

R S T

Record the running time of machines and vehicles that vibrate while operating. Display is a battery-powered LCD that shows hours to one decimal place. Meters cannot be reset and have a plastic housing that offers protection from dust and temporary submersion in water (meets IP67). Temp. range is –13° to 158° F.

Style R requires #6 screws for mounting (not included).

Heavy Duty Drawer Cabinets

A

B

Store your heaviest tools and parts in these steel cabinets. Drawers have a handle with a label holder.

Cabinets have a lock with two keys. They're shipped assembled. Use cabinets individually or stack up to three high, except the 17-drawer full-height cabinets can only be stacked two high. Note: Only stack cabinets with the same width and depth dimensions. Do not exceed the load capacity of the bottom cabinet.

Style B cabinets have compartmented drawers. They can also be connected side-by-side.

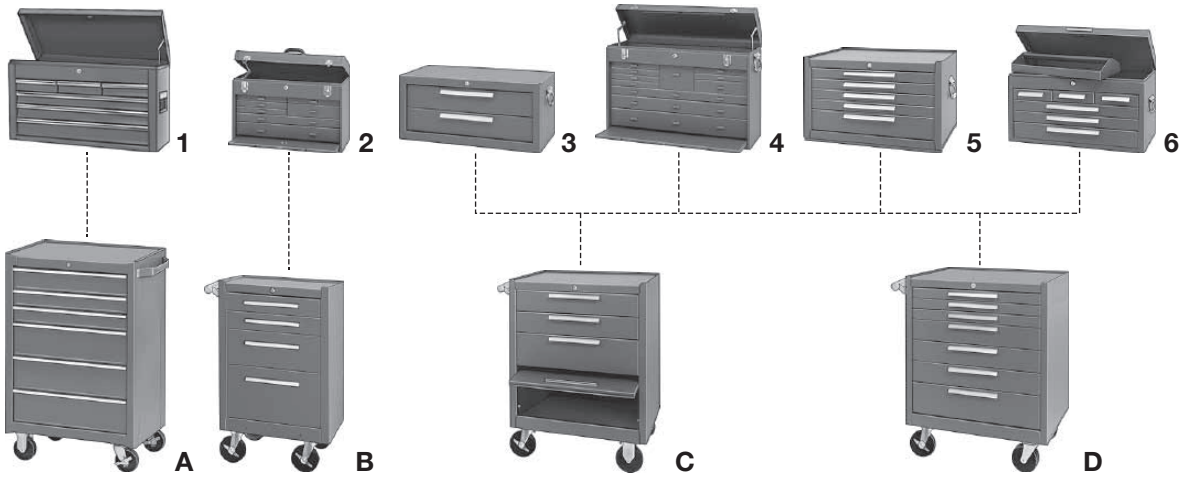
Stackable Drawer Cabinets and Mobile Cabinets



Create a versatile storage solution from the top down. Use cabinets individually or stacked on top of compatible bench-height drawer cabinets. They have a lock and come with two keys. Made of steel, they're shipped assembled.

Note: When stacking, do not exceed the overall capacity of the bottom cabinet. Only stack cabinets with similar width and depth dimensions.

Optional drawer dividers are adjustable and made of aluminum.

Drawer Cabinets

Cabinets **with felt-lined drawers** protect precision tools. They are also known as machinist's chests.

Styles 2&4 come with adjustable steel drawer dividers and a locking drop-front panel that prevents access to drawers for added security.

Style 6 has a removable tote tray with a socket-set divider.

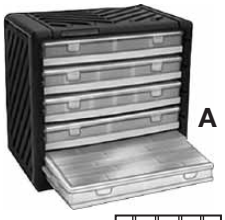
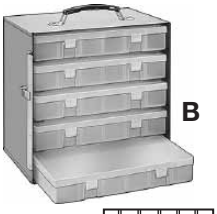
Small-Parts Cabinets with Compartmented Boxes

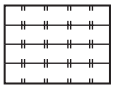


A

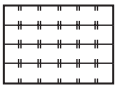


B

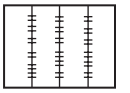
C



4 to 20 Compartments



4 to 24 Compartments



4 to 13 Compartments

Remove individual boxes to take the parts you need without moving the entire storage unit. Use the included dividers to create compartments. Cabinets are shipped assembled.
Style A won't dent, chip, or rust. It is stackable.
Style B has a built-in handle for easy carrying. It has a hinge that can be locked with a padlock (⅜″ max. shackle dia.) to secure boxes. It has two 3/16″ dia. mounting holes for wall mounting (fasteners not included).
Style C are stackable and can be secured with eight 5/16″ dia. mounting holes.

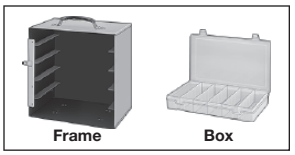
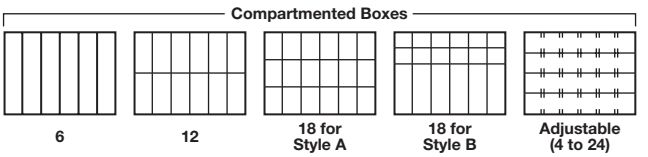
Design-Your-Own Small-Parts Cabinets with Compartmented Boxes

Create your own storage system by choosing a frame and adding boxes, which come in a variety of compartment configurations (sold separately below). Boxes **with adjustable dividers** allow you to create a range of compartment sizes.

Easy-Carry Steel Frames and Plastic Boxes





Carry multiple compartmented boxes at once using the built-in handle. Frames have a locking hinge that can be secured with a padlock (3/8″ max. shackle diameter). They have four 3/16″ mounting holes for wall mounting. Shipped assembled. Frames are gray and boxes are semi-clear.

	Frame Size Wd.	Ht.	Dp.	Frames (without Boxes)		*Box Size* Wd.	Ht.	Dp.	Boxes with Fixed Dividers: Choose a Number of Compartments			Boxes with Adjustable Dividers: Number of Compartments

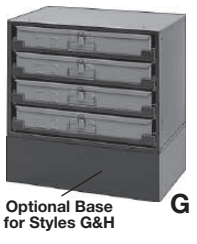
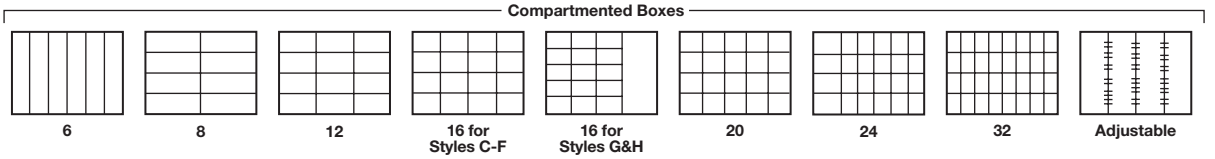
Stackable Steel Frames and Steel Boxes





Frames are stackable with others of the same width and depth. Frames and boxes are shipped assembled. Boxes and frames with friction drawer slides are gray; boxes and frames with a ball bearing drawer slide are black.

Frames **with friction drawer slides** have eight 5/16″ dia. mounting holes for stacking. *Style F* has a locking door and comes with two keys. *Optional locking hinges* for *Styles D&E* secure with a padlock (3/8″ max. shackle diameter). They're chrome-plated steel.

Frames **with ball-bearing drawer slides** offer smoother and quieter operation than friction slides. Boxes have plastic compartments. Mounting fasteners for stacking are included.

Optional bases are 15″ high, except 5158T25 is 15½″ high; *Style F* is 12″ high; and *Styles G&H* are 6″ high.

Revolving Storage Bins

These compact bins spin for access to small parts. They are shipped unassembled. *Plastic* bin units are black; *steel* bin units are gray.

Styles A-C have storage levels that rotate independently. *Style A* storage levels detach to transport or reconfigure without removing contents. *Style B* rolls on four swivel casters with 3″ dia. polyurethane wheels.

Style D has 15 storage levels that each have 12 bins. Pull out the bin boxes for easy access to contents. Overall depth is 31″. The overall diameter is measured from corner to corner. Each bin has a label holder.

Optional dividers are steel, except Style D are plastic. Add them to increase the number of bins per storage level. **17″ dia.** bins hold up to 12 dividers per storage level. **34″ dia.** bins hold up to 25 dividers per storage level.

Bench-Height Bin-Box Racks

Plastic with 36 Bin Boxes

Steel with 48 Bin Boxes

Organize and transport sorted items around warehouses, offices, and assembly lines in these racks. They come with plastic removable bin boxes that have a slot for a label. Racks are shipped unassembled. Color is gray.

Plastic racks are strong but lightweight. They have a compartmented handle for storing supplies. Racks have four casters (two rigid; two swivel with brakes) with 5″ dia. rubber wheels.

Steel racks have four casters (two rigid, one swivel, and one swivel with brake) with 4″ dia. plastic wheels.

Design-Your-Own Bin-Box Racks

Create a unique storage configuration by selecting a rack and corresponding bin boxes (sold separately).

Racks are shipped unassembled. *Wall-mount* and *tabletop* racks have 5/16″ dia. mounting holes, unless noted.

When selecting bin boxes, make sure the total height used by the boxes does not exceed the usable height of the rack, and that the total width of the boxes does not exceed the overall width of the rack.

Steel Bin-Box Racks

Standard racks are gray. *Style H* has four casters (two rigid; two swivel) with 5″ dia. rubber wheels. *Style J* has four casters (two rigid; one swivel; one swivel with brake) and 4″ dia. plastic wheels.

Static-control racks are used with antistatic and conductive bin boxes to protect contents from static buildup. They are painted black. *Style K* bottom rail can only accommodate antistatic and conductive bin boxes with a usable height of 4″.

Optional mobile kits include four casters (two rigid; one swivel; and one swivel with brake) with 4″ dia. wheels. Kit for Style E has plastic wheels; kit for Style K has rubber wheels.

Plastic Bin Boxes

Bin boxes have a slot for a label.

Dividers are black plastic. *Lids* are clear plastic.

Antistatic and **conductive** bin boxes should be paired with static-control holders. *Antistatic* boxes drain static slowly; *conductive* boxes drain static quickly.

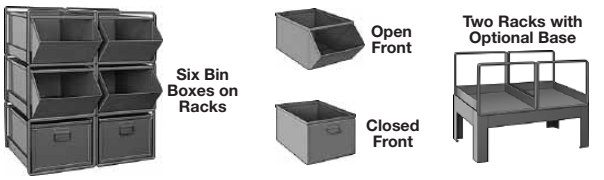
★Comes with five clear plastic dividers to create up to 6 bin compartments.

Extra-Large Stackable Bin-Box Racks



Use these steel components to create storage for large parts. Bin boxes, racks, and bases are shipped assembled. Color is gray.

Open-front bin boxes have a lip that extends 4".

Racks can be used individually or stacked up to nine high. Each rack holds one bin box.

Optional bases secure two racks side-by-side. They're 12" high.

Bin-Box Shelving

Organize your parts, tools, and supplies in the plastic bin boxes on these steel shelves. They're shipped unassembled. Bin boxes have a slot for a label.

Optional dividers are black plastic.

Solid shelving is gray. *Style B* bin boxes are notched to hang from the shelf above them, so they pull out and tilt down.

Wire shelving maximizes air circulation and allows light to pass through for increased visibility. Shelving units are chrome plated and have leveling feet to compensate for uneven floors.

Organize parts and equipment with these cabinets that come with removable plastic bin boxes. Doors have a hasp for a padlock. Bin boxes hang from a panel; they have a slot for a label. Made of steel, cabinets are welded and shipped assembled. Color is gray.

Extra-Heavy Duty—These cabinets have the thickest steel construction that we offer.

Styles A-C—These cabinets come with leveling feet that compensate for uneven floors. Hasp accepts a padlock with a 1/4″ max. shackle dia. *Styles A&B* have shelves that adjust on 4″ centers. *Style A* have six door shelves that adjust on 2″ centers; capacity is 30 lbs. per shelf.

Styles D-F—These cabinets have 6″ high legs that can be bolted to the floor and provide forklift access. Legs have 3/4″ dia. mounting holes, except 60″ wide cabinets have 1/2″ dia. mounting holes. Hasp accepts a padlock with a 3/8″ max. shackle dia. *Styles D&E* have shelves that adjust on 2″ centers, except 60″ wide cabinet shelves adjust on 4″ centers.

C

Stretch your storage capacity with these tall steel cabinets that protect supplies, parts, and equipment. They have a locking handle and come with two keys, except Style D lock is electronic and Style E handle has a hasp for a padlock with a ½″ max. shackle diameter.

Fire-resistant cabinet is double walled with air space in between to insulate contents from heat. Handle is recessed.

Mobile cabinets have four swivel casters (two with brakes) with 4″ dia. plastic wheels.

Cabinet with electronic push-button lock has a dated history of entry, security alarm, and a key to bypass the electronic lock. Keypad lock is mounted on the door and operates on four AA batteries (included).

Heavy duty mobile cabinets have four casters (two rigid; two swivel with brakes) with 5″ dia. plastic wheels.

Extra-heavy duty cabinets have the thickest steel construction that we offer, so they stand up to the toughest applications. They have 6″ legs that offer forklift access and can be bolted to the floor for added stability (¾″ dia. mounting holes).

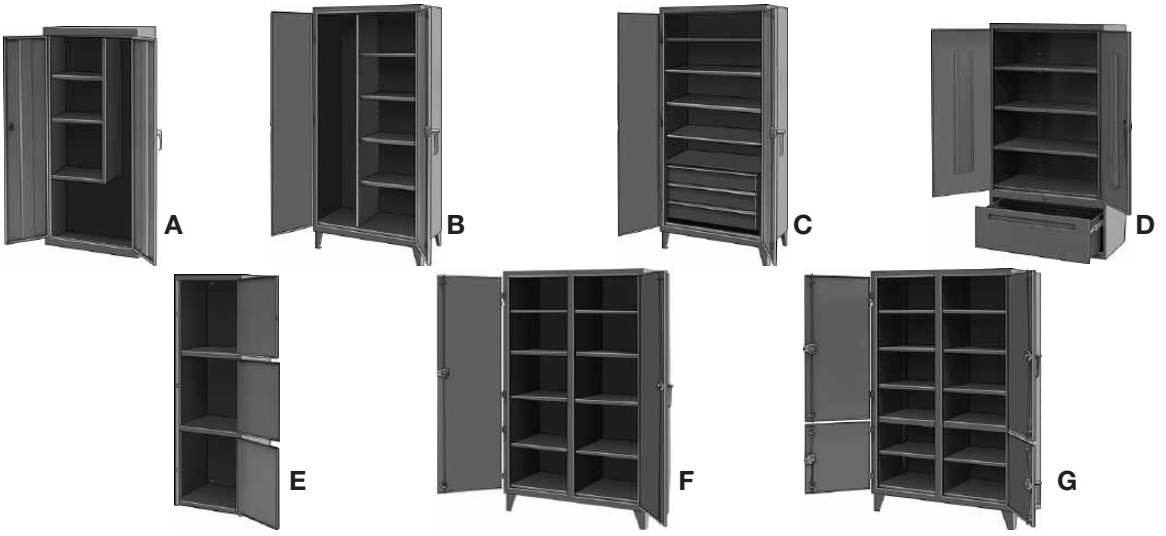
Full-Height Compartmented Shelf Cabinets



Choose from a variety of storage configurations with these compartmentalized steel cabinets. Those with adjustable shelves allow customization; shelves adjust on 2″ centers. Shipped assembled.

Extra-heavy duty cabinets have the thickest steel construction that we offer. They have 6″ legs that provide forklift access. Legs can be bolted to the floor for added stability; they have ¾″ dia. mounting holes, except Style C has ½″ dia. mounting holes.

Cabinets have handles with a hasp for a padlock (⅜″ max. shackle diameter), except Style A handle has a lock with two keys.

Cabinets with individually locking doors allow for controlled access by providing compartments that can be locked separately. Each handle has a hasp for a padlock (⅜″ max. shackle diameter), except Style D has a lock with two keys that unlock the shelf cabinet and the file drawer.

Full-Height Wardrobe Cabinets

Hang up coats, uniforms, and other garments in these steel wardrobe cabinets. They have a shelf that adjusts on 2″ centers and a garment rod. Handles have a lock and come with two keys, except extra-heavy duty cabinets have a hasp for a padlock with a ½″ max. shackle diameter.

Mobile cabinet has four swivel casters with brakes and 4″ dia. rubber wheels.

Extra-heavy duty cabinets have the thickest steel construction that we offer, so they stand up to the toughest applications. They have 6″ legs for forklift access; legs can be bolted to the floor for added stability (¾″ dia. mounting holes).

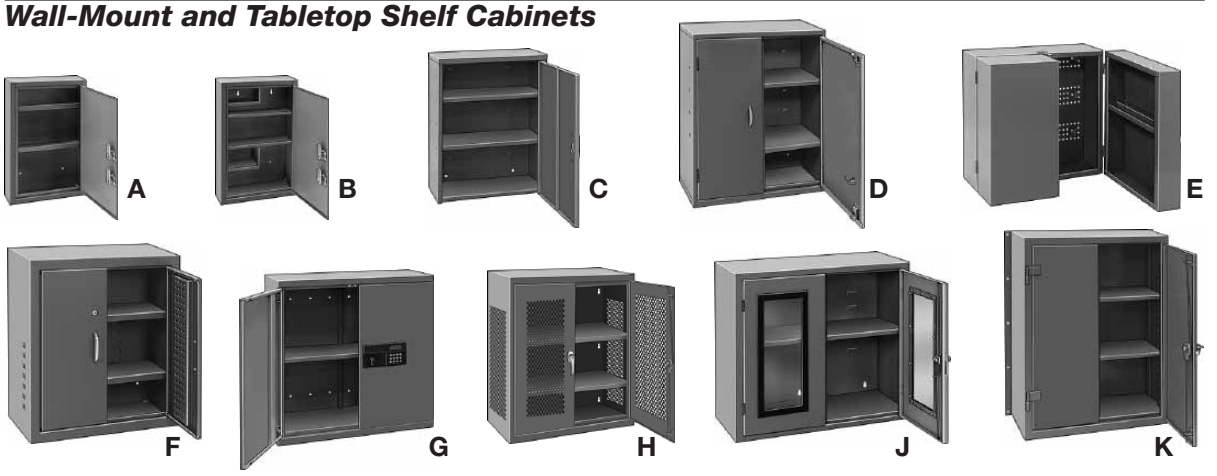
Wall-Mount and Tabletop Shelf Cabinets



Keep floor space clear with these steel cabinets that can be hung on the wall or placed on a table. They are welded and shipped assembled, unless otherwise stated.

Styles A&B have two separately keyed locks for added security (two keys per lock included). They have two 3/16″ dia. and two 3/8″ dia. mounting holes.

Styles C&D have a lock with two keys. They have four 3/8″ dia. mounting holes.

Style E comes with 12 pegboard hooks. One door has two fixed shelves; the other has a tool rack and small parts tray. Handle has a hasp for a padlock with a 5/16″ max. shackle diameter.

Style F has a lock with two keys. Cabinets have four 3/8″ dia. mounting holes.

Style G has a keypad lock powered by four AA batteries (included). It has a dated history of entry, security alarm, low-battery indicator, and a key to bypass the electronic lock. It's shipped unassembled.

Styles H&J have a locking handle with two keys. *Style H* has fifteen 3/8″ wide mounting slots. *Style J* has see-through plastic door panels. Cabinet has eight 1/4″ wide mounting slots.

Style K has a hasp for a padlock with a 1/2″ max. shackle diameter. Includes two mounting brackets; each bracket has five 1/2″ dia. holes.

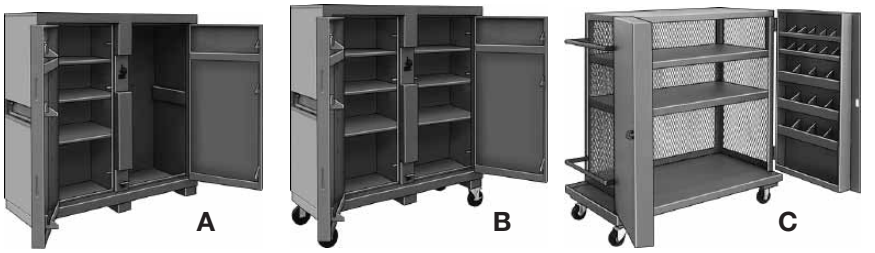
Heavy Duty Outdoor Shelf Cabinets with Forklift Access



The doors on these cabinets open wide for visibility and access. Handle is recessed and accepts a padlock (2″ max. width; 3/8″ max. shackle dia.). Shelves are fixed, except Style B bottom shelf adjusts on 3 1/2″ centers.

Mobile cabinets have four casters (two rigid; two swivel with brakes) with 6″ dia. plastic wheels.

Style B—Cabinet *with four doors* opens from the front and back.

Style C—Mesh sides allow air to flow. Cabinet has 46 door compartments and external storage bars for tools with a long handle.

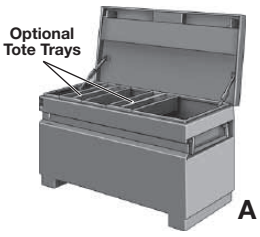
Heavy Duty Outdoor Storage Chests with Forklift Access



A

Mobile B

C

D

Also known as job boxes, these steel chests secure equipment and supplies on site. They have side handles and a 3½″ high base. *Mobile chests* have four casters (two rigid; two swivel with brakes) with plastic wheels, unless noted.

Styles B &C—Chests have a bi-fold lid with gas springs so the lid is easy to open. **Style C** have a fixed top shelf and a hinged bottom shelf that folds away when not in use.

Style D—The hinged lid and drop-front gate allow quick access to large equipment. Casters have polyurethane wheels.

Keep equipment and supplies protected with these versatile chests. They have a hasp for a padlock with a shackle dia. up to ¼″, except Styles B, H, and J have a lock and come with two keys.

Style C has plastic wheels and a retractable handle for mobility.

Styles E-G have side handles, except the 18″ wide chest only has a top handle. *Style F* has a removable tote tray for organizing small tools and items. *Style G* is often used with welding equipment and has a cutout for connected lines.

Style H has floor-mounting baseplates, so it can be locked in place or detached for portability. Mounting hardware included.

Style J door is rimmed with a thick rubber gasket to keep out moisture and dust. These cabinets are often mounted to the underbed of a truck.

Style M are designed for marine environments. Hardware is stainless steel, and the lid has a gas spring so it's easy to open.

Safety Cabinets for Flammables

Full-Height Cabinet with Hinged Doors (Two Shelves)

Bench-Height Cabinet with Sliding Door

Bench-Height Mobile Cabinet with Hinged Doors

Wall-Mount Cabinet

Tabletop Cabinet

These steel storage cabinets meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100° F in a single cabinet. They're FM approved, unless noted.

They have double-wall construction and come with a safety label, key-locking handle, capped air vents, a connection for a grounding wire, and a raised door sill to contain spills. Cabinets are yellow. They're shipped assembled.

Cabinets **with self-closing doors** are required in some jurisdictions. They have fusible links that melt at 165° F to close the doors.

Full- and *bench-height* cabinets come with leveling feet to compensate for uneven floors, except mobile cabinets have four casters (two rigid; two swivel) with 3″ dia. polyurethane wheels.

Safety Cabinets for Flammables in 1-Gallon Cans

Also known as paint and ink cabinets, these have shelves that can be spaced to maximize 1-gallon can storage.

Cabinets are FM approved and meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100° F in a single cabinet.

Made of steel, cabinets have double-wall construction. They have a key-locking handle, capped air vents, a connection for a grounding wire, and a raised door sill to contain spills. Each has a safety label. Shipped assembled.

Self-closing cabinets, required in some jurisdictions, have fusible links that melt at 165° F to close the doors.

Outdoor Safety Cabinets for Flammables

Store your flammables outdoors in these weather- and rust-resistant cabinets. They have a sloped top with a front overhang, a water-resistant seal, and a key-locking handle. They have forklift channels and can be bolted to the floor (7/8″ dia. mounting holes).

Cabinets are FM approved and meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100° F in a single cabinet.

They're made of steel and have double-wall construction, capped air vents, a connection for a grounding wire, and a raised door sill to contain spills. Shipped assembled. Cabinets are yellow and have a safety label.

Self-closing cabinets, required in some jurisdictions, have fusible links that melt at 165° F to close the doors.

Safety Cabinets for Flammables in 55-Gallon Drums

Cabinets are oversized to store and protect flammables in drums. Cabinets meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100° F in a single cabinet.

They're made of steel and have double-wall construction, a key-locking handle, a connection for a grounding wire, and capped air vents. The door sill is raised to contain spills. Leveling feet are included to compensate for uneven floors. Cabinets are yellow and have a safety label. Shipped assembled.

Self-closing cabinets, required in some jurisdictions, have fusible links that melt at 165° F to close the doors.

Optional ramp is 24½″ Wd. x 28″ Dp. Color is yellow.

Full-height cabinets for vertical storage have rollers inside the cabinet making contents easy to load and remove. An adjustable shelf provides space for 5-gallon cans. Cabinets are FM approved. *Optional spill-control pallets* bring full-height cabinets into compliance with EPA 40 CFR 264. They're 6½″ high. Made of steel and plastic.

Bench-height cabinets for horizontal storage store drums horizontally. To allow gravity-flow dispensing, use the *optional drum stand* and drip container (not included).

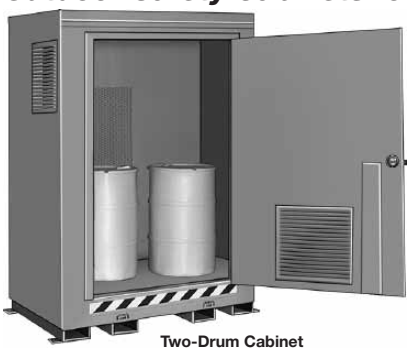
Outdoor Safety Cabinets for Flammables in 55-Gallon Drums



Two-Drum Cabinet

Keep your workplace safe and free up valuable floor space by storing drums outdoors. These steel cabinets have double-wall construction, forklift channels, and an explosion-relief panel. A secondary reservoir holds leaks from damaged drums and has removable grating for easy sump cleaning.

Cabinets are FM approved and meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100°F in a single cabinet; do not exceed 120 gallons of any liquid with a flash point.

They have a safety label, key-locking handle, air vents, and a grounding wire connection. Cabinets have four 7/8" dia. mounting holes for mounting to the floor. Color is gray. Shipped assembled.

21"	27"	18"	24	2	1	4938T1	$831.90

Refrigerators and Freezers for Flammables

Refrigerator

Built for long-lasting safety and service, these refrigerators provide cold storage of flammable liquids in your laboratory or plant. Both are UL listed and meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 99. The housing is steel and has a safety label; interior is plastic. They operate on 120 volts AC. Color is white. **Freezer/refrigerator** also meets NFPA Code 45.

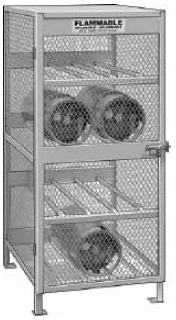
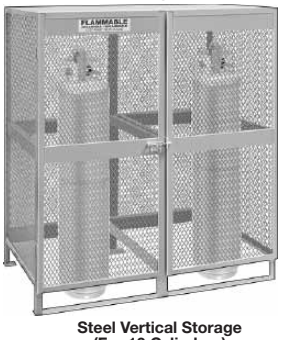
Safety Cabinets for Gas Cylinders



Steel Horizontal Storage (For 8 Cylinders)



Steel Vertical Storage (For 10 Cylinders)

Aluminum Horizontal Storage (For 4 Cylinders)

Store and secure gas cylinders with these ventilated cabinets. They meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 58.

Cabinets have a safety label. Doors are hinged and have a hasp for a padlock (1/4" max. shackle dia.). Legs can be bolted to the floor. Shelves are fixed (where applicable).

Steel—Cabinets are yellow. *Unassembled* cabinets have 9/16" dia. holes for floor mounting. *Assembled* cabinets have 1/4" dia. holes for floor mounting, except the 33" high cabinet has 1/2" dia. holes.

Aluminum—These cabinets are more corrosion resistant than steel. They have 1/2" dia. holes for floor mounting.

Safety Cabinets for Flammable Acids and Corrosives

Protect your work environment by containing flammable acids and corrosives in these safety cabinets. They're FM approved and meet requirements for OSHA and NFPA (National Fire Protection Agency) Code 30, unless noted. OSHA regulations restrict storage of more than 60 gallons of flammables with a flash point below 100° F in a single cabinet.

Cabinets are blue and marked with a safety label. They're made of steel and have double-wall construction. They have a key-locking handle, capped air vents, a connection for a grounding wire, and raised door sills. Cabinets come with spill control trays and leveling feet. Shipped assembled.

Self-closing cabinets, required in some jurisdictions, have fusible links that melt at 165° F to close the doors.

Optional plastic in-cabinet enclosure allows you to store harsh acids such as hydrochloric, nitric, phenol, and sulfuric acids. It fits inside 43" wide full- and bench-height cabinets. Shipped assembled.

Plastic Safety Cabinets for Nonflammable Acids and Corrosives

Secure your harshest nonflammable liquids in these plastic cabinets that resist corrosion—even from acid vapors. They're shipped assembled and come with a safety label. Doors have a hasp for a padlock with a 5/16" max. shackle dia.

Tabletop cabinet is often used in clean rooms. It has a raised door sill to contain spills. Color is white.

Bench-height cabinet has a basin in the cabinet floor to keep spills contained. Color is blue.

Standards and Shelf Supports for Cabinets and Bookcases

These standards can be surface mounted or flush mounted inside a routed groove. Four shelf supports per shelf and four standards are required (sold separately).

Steel and **aluminum** standards have slots on 1/2" centers and mounting holes on 6" centers. Mount standards with No. 3 screws (not included).

Stainless steel standards offer excellent corrosion resistance. Mount standards with No. 5 screws (not included). *Single-slotted standards* have slots on 5/8" centers and mounting holes on 7 3/4" centers. *Double-slotted standards* are more stable than single-slotted. They have slots on 7/8" centers and mounting holes on 7" centers. *Shelf supports for double-slotted standards* have a rubber pad to protect shelves.

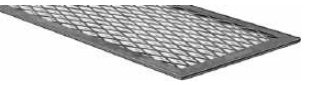
Shelves

Composite Wood with Square Corners

Composite Wood with Round Corners

Black Plastic



Stainless Steel

Composite wood shelves have a plastic-laminate finish that protects them from stains and scratches. Shelves with square corners are 5/8" thick and have a 200-lb. capacity. Shelves with round corners are 3/4" thick and have a 300-lb. capacity.

Black plastic shelves are durable and easy to clean. They are 1/4" thick. Not rated for capacity.

Stainless steel shelves are corrosion resistant and vented to prevent dust buildup. They are 1/8" thick. Not rated for capacity.

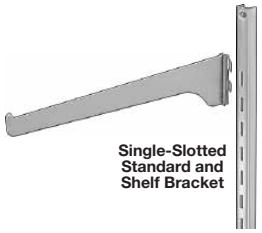
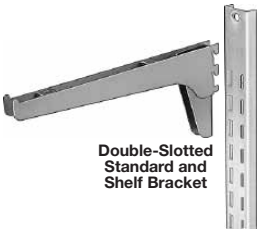
Adjustable Standards and Shelf Brackets





Adjust spacing between shelves quickly with these steel wall-mount shelving components. **Double-slotted** standards and shelf brackets are more stable and hold heavier loads than single-slotted standards and brackets.

Standards

Standards have slots on 1″ centers and mounting holes on 12″ centers.
Single-slotted standards are mounted with No. 8 screws (not included).
Double-slotted standards are mounted with No. 10 screws (not included).

Standards, Shelf Brackets, and Shelves

Design a complete shelving unit with these standards, shelf brackets, and metal shelves (sold separately). All components are corrosion resistant and are often used for quality control, laboratory, and food service applications.
Standards have mounting holes on 12″ centers. Mount with No. 10 screws (not included). They have slots on 2″ centers.
Shelf brackets have a tab that locks them onto the standard.
Shelves attach to brackets with included mounting screws for a sturdy connection. If using other shelves, use **shelf rests** (sold separately) to clip shelves to the top of the bracket.

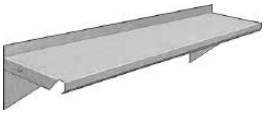
Warning: *Capacity may be reduced due to wall material and fastener choice.*

Wall-Mount Shelving



These smooth, solid shelves are corrosion resistant and easy to clean. They meet NSF/ANSI standards. Shipped unassembled.

Galvanized steel shelves are 8″ high and have 5/16″ dia. mounting holes (fasteners not included).

Stainless steel shelves resist corrosion better than galvanized steel. They have 1/4″ dia. mounting holes (fasteners not included). *12″ deep shelves* are 8″ high; *16″ deep shelves* are 12″ high.

Warning: Shelf capacity may be reduced due to wall material and fastener choice.

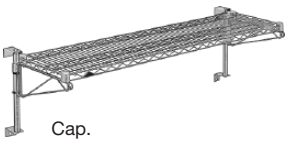
Adjustable-Height Wall-Mount Wire Shelving



The posts have grooves that allow shelves to adjust on 1″ centers. They have 7/8″ dia. mounting holes (fasteners not included). Shelving meets NSF/ANSI standards and MIL-S-40144E. Shipped unassembled.

Chrome-plated steel shelves have good corrosion resistance. **Stainless steel** shelves have excellent corrosion resistance.

Warning: Shelf capacity may be reduced due to wall material and fastener choice.

Heavy Duty Vented Plastic Shelving

Often used in food service areas and laboratories, these shelving units have removable, dishwasher-safe panels that are treated to prevent degradation caused by the growth of stain- and odor-causing bacteria. Shelving meets NSF/ANSI standards. The included split sleeves wedge underneath shelves and snap onto posts. Push the quick-adjust lever down to lock shelves into place. They adjust in 1″ increments. Shelf panels are blue plastic. They rest on epoxy-coated steel posts. Shipped unassembled.

Shelving has leveling feet to compensate for uneven floors.

Mobile shelving comes with four swivel casters (two with brakes) with 5″ dia. plastic wheels. Casters add 6½″ to the height.

Shelf dividers are 8″ high and made of plastic.

Label holder snaps onto the front of the shelf. It's 4″ Wd. × 1½″ Ht. and made of plastic.

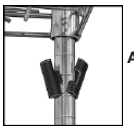
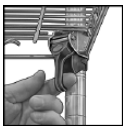
Heavy Duty Wire Shelving

Complete Unit (Four Shelves)

Add-On Unit



Adjustable Shelving



Quick-Adjust Shelving

Mobile Unit

This sturdy wire shelving provides excellent air circulation and visibility and resists dust buildup. Shelves adjust on 1″ centers and meet NSF/ANSI standards. Shipped unassembled.

Zinc-plated and *chrome-plated* steel have good corrosion resistance. *Stainless steel* has excellent corrosion resistance.

Adjustable Shelving—Attach shelves to posts with the included plastic split sleeves. They snap onto the posts to hold shelves.

Quick-Adjust Shelving—Pull up on the lever to adjust shelf height; push it down to lock shelves onto the post.

Complete units come with leveling feet to compensate for uneven floors.

Add-on units connect to the shelves of complete units with S-hooks (included). They can be attached inline or at a 90° angle to fit in a corner.

Mobile units have four swivel casters (two with brakes) with 5″ dia. polyurethane wheels. Casters add 6½″ to the height.

Extra Heavy Duty Wire Shelving

This shelving is reinforced to hold nearly twice as much weight as other wire shelving, and is chrome plated to resist corrosion. Shelf panels are removable for easy cleaning.
Split sleeves snap onto the posts to hold shelves. Shelves adjust on 1″ centers. Posts have leveling feet to compensate for uneven floors. Shelving meets NSF/ANSI standards. Shipped unassembled.
Floor-mounting plate secures shelving to the floor for increased stability. It's made of zinc-plated steel and has three 5/16″ dia. mounting holes.

Heavy Duty Shelving

Open Shelving Complete Unit (Six Shelves)

Open Shelving Add-On Unit

Closed Shelving Complete Unit (Six Shelves)

Store heavy items on this steel shelving. Shelves adjust on 1½″ centers; they attach to shelves with included clips. Shelving is gray. Shipped unassembled.

Open Shelving—These units allow visibility of stored items.

Closed Shelving—The back and side panels stabilize and secure materials better than open shelving.

Add-on units connect to complete units to extend shelving.

Extra shelves come with shelf clips.

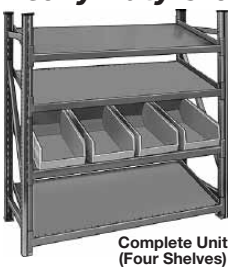
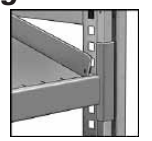
Heavy Duty Gravity-Flow Shelving



Complete Unit (Four Shelves)

Add-On Unit



The sloped shelves on these shelving units allow parts to flow forward, providing access and visibility. Shelves adjust on 2″ centers and have a 15° slope. They have a ¾″ high front lip and 2⅝″ high sides to keep contents in place.

Shelving snaps together quickly. Legs have ⅝″ dia. mounting holes so they can be bolted to the floor. Shipped unassembled. Color is gray.

These units are often used with bin boxes (sold separately on page 1766).

Add-on units connect to complete units to extend shelving.

Optional casters have 5¾″ dia. polyurethane wheels and add 8″ to the overall height. Overall capacity for units with casters is 1,200 lbs.

Heavy Duty Quick-Assembly Shelving

Faster to assemble than other heavy duty shelving, these units require no hardware. The uprights come assembled, and shelves slide into place. Shelves can be tilted 6° or 12° by raising the back of the shelf one or two lug positions, allowing items to flow forward for easy access.

Shelves adjust on 2″ centers. Legs can be bolted to the floor for added stability (½″ dia. mounting holes). Shelving is shipped unassembled. Color is gray.

Open Shelving—Allows visibility of stored items.

Vented Shelving—Keeps materials better contained while allowing visibility.

Complete units include cross braces for added support.

Add-on units connect to complete units to extend shelving.

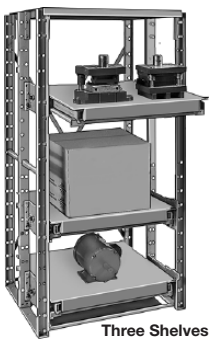
Extra Heavy Duty Shelving with Roll-Out Shelves



Three Shelves

The high-capacity shelves on these units pull out to access heavy dies, machinery, and tools. They slide on ball bearings so you can retrieve contents horizontally with a forklift and vertically with a hoist, crane, or monorail system. When fully extended, they lock in place.

Shelves adjust on 2″ centers and attach to posts with included bolts. Made of steel, they're shipped unassembled. Color is gray.

Warning: Shelving must be securely anchored to the floor (⅞″ dia. mounting holes).

Standard Duty Shelving

For general industrial storage applications, these steel units have shelves that adjust on 1½″ centers. They attach to posts with included shelf clips. Shipped unassembled. Color is gray.

Open shelving allows visibility of stored items.

Closed shelving includes side and back panels to keep materials better contained.

Shelf attachment hardware can be used instead of shelf clips for a sturdier connection.

Tray Racks and Trays

Narrow Steel Shelving Shown with Trays

Wide Aluminum Shelving Shown with Trays

These racks, also known as bakery carts and bun racks, meet NSF/ANSI standards and are often used for food service, electronics, and small-parts assembly applications. Access from either side makes it easy to load and unload the slide-in trays (sold separately). Racks have four swivel casters and 5″ dia. rubber wheels. Shipped unassembled.

Zinc-plated steel racks have good corrosion resistance.

Aluminum racks have excellent corrosion resistance. Two of the casters have brakes.

Heavy Duty Wide and Deep Shelving

Also known as bulk racks, these units offer more storage space per level for large items and boxes. No nuts or bolts are required for assembly—rivets on the ends of the shelf supports insert into keyhole slots on the posts. Posts and shelf supports are black. Shipped unassembled.

Complete units consist of three shelves, 14-ga. posts, and 16-ga. shelf supports. Shelves adjust on 1½″ centers. *Composite wood shelves* are ⅝″ thick. *Wire shelves* are made of 4-ga. steel wire with 2″×4″ openings.

Add-on units connect to the complete units.

Also Available: Replacement parts. To order, please ask for 6946T888 and specify the required part.

Sheet Racks

To create a rack, order a base and the number of dividers you need. The base holds a maximum of 10 dividers. Dividers slide into the base and don't need hardware. They adjust on 3¾″ centers.

Base has forklift entry. It should only be moved with a forklift when empty. It is 14-ga. powder-coated gray steel and has four 9/16″ dia. holes for mounting to the floor (fasteners not included).

Divider is 12-ga. gray powder-coated steel.

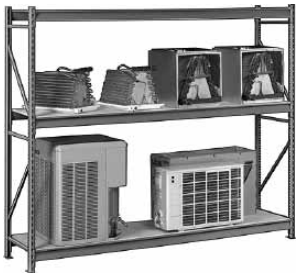
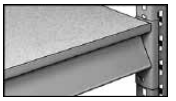
Extra Heavy Duty Wide and Deep Shelving

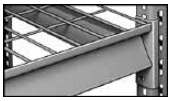


Complete Unit with Three Composite Wood Shelves

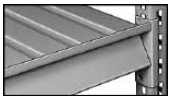
Add-On Unit with Three Composite Wood Shelves



Composite Wood Shelf



Wire Shelf



Steel Shelf

Also known as bulk racks, these units hold oversized equipment and raw material. Color is gray. Shipped unassembled.

Complete and **add-on units** consist of 14-ga. steel posts and shelf supports as well as shelves. Shelf supports have rivets that slide into keyhole slots on posts and adjust on 2″ centers. Posts have foot plates with a 9/16″ dia. hole for anchoring to the floor (fasteners not included). *Add-on units* attach to the posts of a complete unit.

Extra shelves come with components for one shelf.

Composite wood shelves are 5/8″ thick. **Wire shelves** are 5-ga. powder-coated steel wire with 2″×4″ openings. **Steel shelves** are 22-ga. powder-coated steel.

Document Racks

Rack with Three Storage Levels and 60 Boxes

These racks include boxes for convenient document storage. Racks are easy to assemble—rivets on the ends of the shelf supports insert into keyhole slots on the posts. Storage levels adjust on 1½″ centers and include 5/8″ thick composite wood decking. Racks are made of 14-ga. steel. Color is gray. Shipped unassembled. The boxes are made of white corrugated cardboard and are sized to hold letter- or legal-size files; they include a lid, large label area, and hand holds.

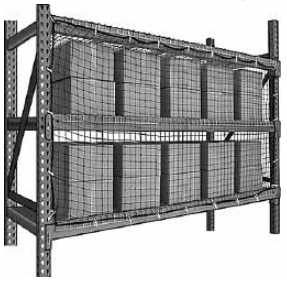
Rack and Conveyor Netting



Attach netting to your racks and conveyors to secure inventory, increase safety, and help meet OSHA requirements. Netting is made of nylon cord with a 5/16″ dia. polypropylene border. To achieve the stated capacity, netting must be properly secured in 1-ft. increments with cable ties that are rated 175 lbs. and higher (not included). Netting meets NFPA (National Fire Protection Agency) Code 701. Color is black.

Warning: Not for use as a personnel restraint.

To Order: Please specify width: 8, 10, 12, 25, 50, or 100 ft.

Heavy Duty Pallet Racks

Store heavy, bulky loads on these racks that are designed to withstand frequent use of power-lifting equipment. Beams insert into keyhole slots on the uprights, adjust on 2″ centers, and secure with locking pins to prevent accidental separation. Racks are RMI (Rack Manufacturer's Institute) compliant. Shipped unassembled.

Uprights are 13-ga. steel with 3″ Wd. × 1⅝″ Dp. posts. Mount to the floor with two ⅝″ dia. concrete anchors per column (not included). Color is green. Beams are 14-ga. steel with a 1⅝″ Ht. × 1″ Dp. step for decking (not included). Color is orange.

Extra storage levels consist of one pair of beams. **Decking** is steel and has an overall capacity of 2,500 lbs., except galvanized steel wire decking has an overall capacity of 2,000 lbs. **To Order:** For wire decking, please specify finish: gray painted or galvanized steel.

Warning: Do not exceed the capacity of uprights or beams, whichever is rated lowest within your rack assembly.

Also Available: Accessories. For pallet supports, please ask for 4940T3 and specify rack depth. For row spacers, please ask for 4940T4 and specify width. For shims, please ask for 4940T151.

Decking for Heavy Duty Pallet Racks

Compatible with pallet racks with 1⅝″ stepped beams. Decking has supports that rest on the step. Overall capacity is 2,500 lbs., except galvanized steel wire decking is 2,000 lbs.

To order, measure the width of the beams in your pallet rack, then use the chart to determine the quantity and width of the decking sections required.

Wire Decking—Gray painted decking is 6-ga. steel; galvanized steel decking is 4-ga. steel. Both have openings up to 2½″ Wd. × 4″ Dp. **To Order:** Please specify finish: gray painted or galvanized.

Solid Decking—Made of 14-ga. gray painted steel.

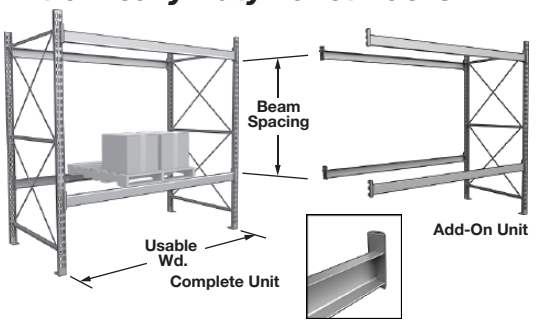
Extra-Heavy Duty Pallet Racks



With up to 9,600 lbs. capacity per storage level, these are the strongest pallet racks we offer. They are built for use with power-lifting equipment. Beams slip into keyhole slots on the uprights, adjust on 2½″ centers, and lock with spring clips to prevent accidental separation. Racks are RMI (Rack Manufacturer's Institute) compliant. They are gray powder-coated steel. Shipped unassembled.

Uprights are 10-ga. steel with 3″ Wd. × 1¼″ Dp. posts. Mount to the floor with four 9/16″ concrete anchors (not included). Beams are channel style. *3″ high beams* are 8-ga. steel. *4″ high beams* are 7-ga. steel. *5″ high beams* are 6-ga. steel.

Extra storage levels consist of one pair of beams.

Warning: Do not exceed the capacity of uprights or beams, whichever is rated lowest within your rack assembly.

Row Spacers

Maintain consistent spacing between pallet racks and increase stability. Use one spacer every 4 feet. Made from 2″ square steel. Fasteners included.

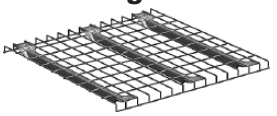
Wd.		
8″	5217T71	$17.16
10″	5217T72	17.56
12″	5217T73	18.78

Beam Ties

Prevent beams from rotating when moving pallets in and out of racks. A minimum of one beam tie is required per pair of beams 107½″ and wider. Fasteners included.

5217T52 ..... $39.31

Wire Decking for Extra-Heavy Duty Pallet Racks



Use with box- and channel-style pallet rack beams. Decking has flanges that rest on the top of the beam for support. Overall capacity is 2,500 lbs.

Painted gray decking is 6-ga. steel wire with 2½″ Wd. × 4″ Dp. openings.

Galvanized decking is 4-ga. steel wire with 2″ Wd. × 4″ Dp. openings.

To Order: Please specify finish: gray painted or galvanized steel.

To order, measure the width of the beams in your pallet rack, then use the chart to determine the quantity and width of the decking sections required.

Beam Wd.	Sections Req'd per Rack Level	Beam Wd.	Sections Req'd per Rack Level

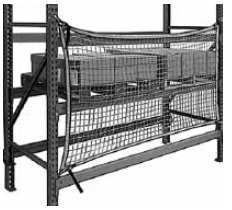
Rack Backing Panels

Create a sturdy barrier to prevent material from falling with this alternative to pallet rack netting. Panels are 8-ga. galvanized steel with 1½″ Wd. × 3″ Ht. openings. They are compatible with most pallet racks with 3″ wide posts and keyhole slots. Panels include four 6″ deep mounting brackets and fasteners.

Overall Wd.	36″ High		48″ High	
98½″	1229N11	$96.62	1229N14	$109.07
122½″	1229N12	107.25	1229N15	122.67
146½″	1229N13	129.50	1229N16	148.75

Quick-Mount Rack Netting



No need for cable ties—this netting includes hardware that slips into any post with keyhole slots. Attach netting to your racks to secure inventory, increase safety, and help meet OSHA requirements.

Adjustable straps allow netting to fit rack openings ±1 ft. the width of the netting. Netting is made from 0.17″ dia. gray nylon cord with 2″ Wd. × 2″ Ht. openings and a 3″ wide nylon border. It meets NFPA (National Fire Protection Agency) Code 701.

Warning: Not for use as a personnel restraint.

Overall Size Wd.	Ht.	Overall Cap., lbs.		
4 ft.	4 ft.	2,500	4563T11	$180.00
8 ft.	4 ft.	2,500	4563T12	225.44

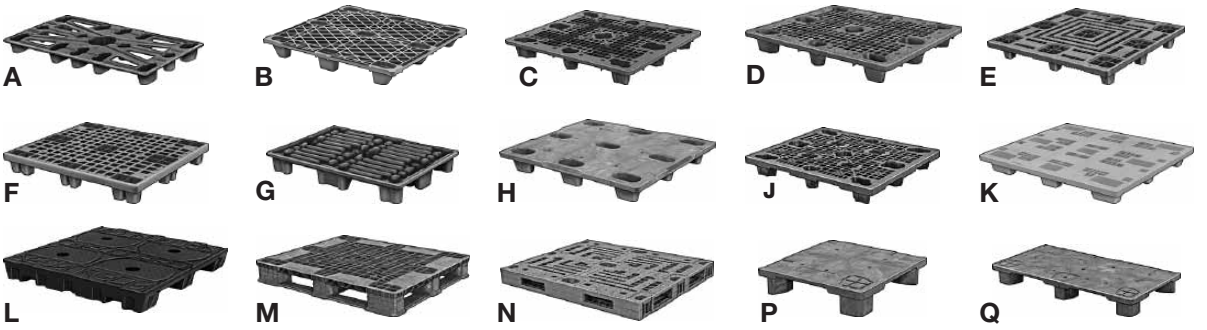
Pallets

Pallets for Racks with Decking



Pallets for Racks without Decking

Unlike nestable pallets, stackable pallets can be stored in stacks for easy forklift access.

Pallets for Racks with Decking—When stored in racks, these pallets require a supporting deck surface. See pages 1669-1670 for pallet racks and decking. *Antislip pallet* has rubber grips to prevent material from sliding off while in transit. *Food-grade pallet* is suitable for food processing environments. It is made from FDA listed materials and is USDA compliant. *Drum pallet* has molded indentations that hold 55-gallon drums while in transit.

Pallets for Racks without Decking—Built to rest directly on the beams of a pallet rack. See pages 1669-1670 for pallet racks. *Food-grade pallet* is designed for use in food processing and other sanitary environments. It is made from FDA listed materials and is USDA compliant.

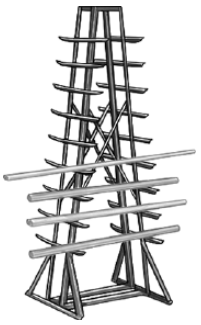
Racks for Pipe & Bars

A-Frame Racks



Horizontal Storage Rack

Vertical-Storage Rack with One Usable Side

Horizontal-storage rack can store 1- to 10-ft. long material. It has straight arms with a 1/2″ high fixed lip. Rack is gray powder-coated steel. Shipped unassembled.

Vertical-storage racks can hold 2- to 12-ft. long material. Shipped unassembled. *Rack with one usable side* has three storage openings and three 150-lb. capacity shelves. It is gray powder-coated steel. *Rack with two usable sides* has six storage openings and four 600-lb. capacity shelves. It is green-painted steel with orange shelves. Rack has four 13/32″ dia. holes to mount to the floor (fasteners not included).

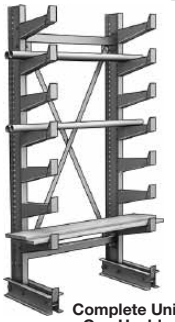
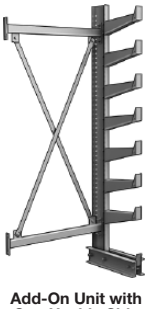
Racks for Pipe and Bars



Complete Unit with One Usable Side



Add-On Unit with One Usable Side

Also known as cantilever racks. Columns are 11-ga. steel and have a flat, 7-ga. steel base that can be used as additional storage. Arms are straight, 14-ga. galvanized steel and have a 2 1/8″ high removable lip that can be reversed to make a flush end for storing flat material. They are 14″ long and adjust on 1 1/2″ centers using nuts and bolts. Color is gray. Shipped unassembled.

Complete units include two columns, 14 arms per usable side, and braces.

Add-on units attach to a complete unit to store longer material. They include one column, seven arms per usable side, and braces.

Warning: Not for use with power-lifting equipment such as forklift trucks.

Design-Your-Own Racks

Use individual components to create your own personalized storage solution. To build a complete rack, order at least two columns, a set of braces, and your desired number of arms.

The length of the braces determines the width of the rack.

Add on to the rack by using another column, a set of braces, and arms. Components are only compatible with other Heavy Duty Racks for Pipe and Bars.

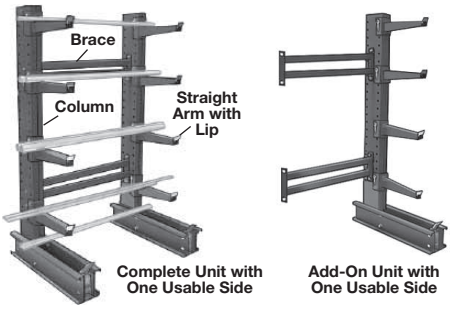
Extra-Heavy Duty Racks for Pipe and Bars



These cantilever racks are made to be used with forklifts and cranes. They have a flat base that can be used as additional storage. Arms connect to columns using pin-and-lock assemblies and adjust on 3″ centers. *18″ and 24″ long arms* are 11-ga. steel; *30″ to 48″ long arms* are 10-ga. steel. Columns are 10-ga. steel, except 96″ high columns are 11-ga. steel. Bases are 7-ga. steel. Racks are gray powder-coated steel and have 11/16″ dia. mounting holes (fasteners not included). Shipped unassembled.

Complete Racks

Arms are straight and have a 1 1/8″ high removable lip that can be reversed to make a flush end for storing flat material.

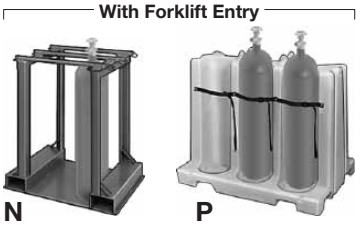
J K L M

With Forklift Entry



N P

All racks meet OSHA requirements. Styles B, E, L, and M also meet NFPA (National Fire Protection Agency) Code 1. Mounting fasteners not included, unless otherwise stated.

Caution: Chains and straps do not support cylinder weight. Cylinders should rest on the floor or in the base of the rack.

Tabletop Racks—Style B have nylon set screws to secure the cylinder inside the rack.

Bench-Mount Racks—Clamp to a bench top without fasteners. Style C are for use with 1/32″ to 2 1/2″ thick bench tops; Style D are for use with 1″ to 2 3/4″ thick bench tops.

Wall-Mount Racks—Style H must rest on the floor in addition to being secured to the wall.

Floor-Mount Racks—Style M include fasteners that meet IBC (International Building Code) 2006.

Racks with Forklift Entry—Racks should be empty when moved with a forklift.

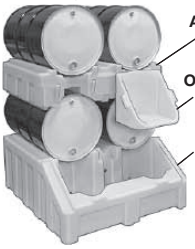
Stackable Spill-Control Racks for Pails, Cans, and Drums



Racks for Drum Storage

Racks are yellow plastic and have forklift channels. Shipped assembled.

Base units meet EPA 40 CFR 264.175. *Base unit for pails and cans* has a reservoir to contain spills up to 8 gallons. *Base unit for drums* has a reservoir to contain spills up to 102 gallons, plus a deep well that holds two 5-gallon pails for dispensing.

Add-on units allow you to create up to two additional storage levels on a base unit.

Optional shelf attaches to the add-on unit for drums.

Quiet-Close Lockers with Recessed Handles

Good for areas where noise is an issue, such as offices and corridors. Doors have a double-wall construction to make opening and closing them quieter than standard lockers. Lockers have 24-ga. steel walls, 20-ga. ventilated steel doors, and a black plastic handle that accommodates a padlock with a max. 7/16″ dia. shackle (not included). You can also install a key lock (sold separately). Shipped unassembled.

One locker down unit has a fixed shelf, a garment rod, and two coat hooks. **Two lockers down unit** has two coat hooks per locker.

Add-on units (furnished without one side panel) mount to either side of a complete unit to make up a row of lockers. Every fifth locker should be a complete unit to maintain stability. Fasteners included.

Four and sixteen total lockers have one garment rod.

To Order: Please specify color: beige or gray.

Sheds

Add valuable storage space with these weather- and rust-resistant sheds. Shipped unassembled.

Style A have 33-ga. galvanized steel walls and 26-ga. steel frames. Doors can be installed at either 49″ wide end and accommodate padlocks with a max. 3/8″ dia. shackle (padlock not included). Color is white.

Style B has 32-ga. vinyl-coated steel walls and 25-ga. steel frames. They accommodate padlocks (not included) with a max. ¼″ dia. shackle. Color is beige.

Foundation Kits—Create the base for installing a floor. Kits accept plywood flooring (not included). They are galvanized steel.

Auger Anchor Kit—Includes four 30″ long augers, a 60-ft. cable, and four cable clamps. Made of steel.

Concrete Anchor Kit—Includes four steel corner gussets, 11 perimeter clips, 16 2″ long bolts, and a ¼″ masonry drill bit.

Shelving Kit—Includes a 30″ high shelving unit with three 34″ Wd. × 12″ Dp. galvanized steel shelves and fasteners. Each shelf has an 85-lb. capacity. Color is gray.

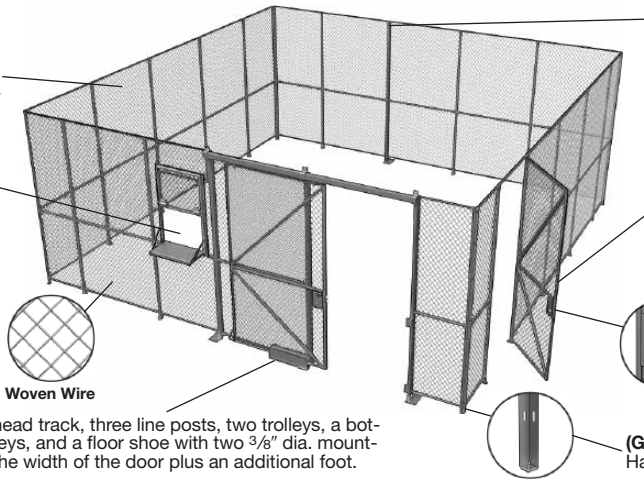
Wire Partitions

(A) Wall Panel
Consists of woven wire framed with vertical and horizontal channels and a center reinforcing bar. Includes a top cap rail and a floor shoe with two 3/8" dia. mounting holes.

(B) Wall Panel with Slide-Up Window
Woven wire is framed with vertical and horizontal channels and has a center reinforcing bar. Window is 22 1/2" Wd. x 17 3/4" Ht. Includes 22 1/4" Wd. x 12" Dp. shelf, top cap rail, and a floor shoe with two 3/8" dia. mounting holes.



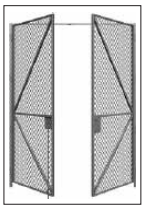
(J) Line Post
Add a line post every 10 feet or every other panel. Has a 5" x 9" baseplate with four 7/16" dia. mounting holes.

(E) Hinged Door
Includes a top cap rail, a lock with two keys, and a floor shoe with two 3/8" dia. mounting holes.

(D) Sliding Door
Includes one door panel, an overhead track, three line posts, two trolleys, a bottom door guide, a lock with two keys, and a floor shoe with two 3/8" dia. mounting holes. Track length is double the width of the door plus an additional foot.

(G) Right-Angle Corner Post
Has one 11/16" dia. mounting hole.

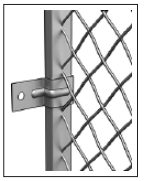
(C) Adjustable Filler Panel
Has an expanded metal panel and two vertical channels for framing. Panel can be cut down from 13" to 2 1/2" wide.



(F) Hinged Double Door
Choose from doors that swing out and doors that swing in. Includes a top cap rail, two line posts, a lock with two keys, and floor mounting fasteners.

(H) Adjustable Corner Post
Adjusts to make corners other than 90°. Has two 3/8" dia. mounting holes.

(K) Tee-Joint Kit
Allows you to attach wall panels perpendicularly, often in order to make smaller compartments within a larger wire enclosure.



(L) Wall Mounting Kit
Has four clamps with 3/8" dia. mounting holes.

Create secure but visible tool and stock rooms. Panels and doors are woven wire, except adjustable filler panels are flattened mesh. All doors lock from the outside only. Door opening direction is determined when standing outside the partition. Components are gray powder-coated steel, except tee-joint kits and wall-mounting kits are galvanized steel. All components include fasteners for assembly. Components with mounting holes include mounting fasteners.

Note: There's a 3" clearance between the bottom of the wall panels and doors and the floor.

To Order—Please feel free to contact us or email us your drawing if you would like help determining what components you'll need.

1. Make a rough drawing of your partition, including overall width, depth, and height (7-, 8-, 10-, or 12-ft. high).
2. Indicate location, size, and style of door panels.
3. Determine the number and width of wall panels needed. For in-between widths, you may require adjustable filler panels.
4. Order a right-angle corner post for each 90° corner. For corners other than 90°, order an adjustable corner post.
5. Order a line post for every 10 feet or every other panel.
6. If your partition will make use of an existing wall, order one wall mounting kit for each panel you'll connect to a wall.

Complete Wire Partitions

These complete partitions include everything you'll need. We'll supply the wall and door panels with floor shoes, right-angle corner posts, a line post (when necessary), and wall mounting kits (when necessary; fasteners included). Made of gray powder-coated steel.

Use two-sided partitions to create a room in a corner, three-sided partitions to create a room along a wall, and four-sided partitions to create a freestanding room. All partitions include a lock with two keys and floor shoes with two 3/8" dia. mounting holes. Two- and three-sided partitions also include a wall mounting kit.

Partitions are 10-ga. woven wire with 1½" openings. Door opening direction is determined when standing outside the partition. The *8- and 12-ft. wide partitions* have a hinged door that swings left. Actual door opening size is 3'11" Wd. × 7'10½" Ht. The *10-, 20-, and 30-ft. wide partitions* have a sliding door that slides left. Sliding doors are supplied with an 11-ft. long track. Actual door opening height is 1" shorter than listed height; actual door opening width is 5 feet.

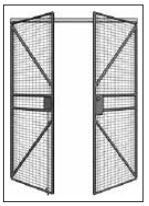
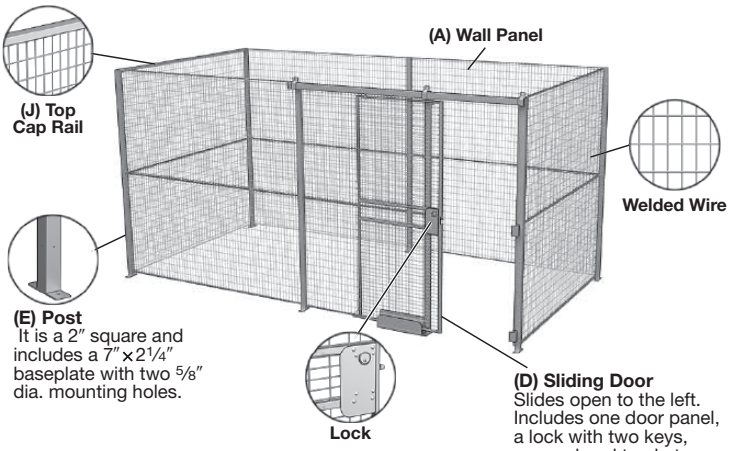
Easy-to-Assemble Wire Partitions

(B) Hinged Door
Swings open to the left. Includes a lock with two keys.

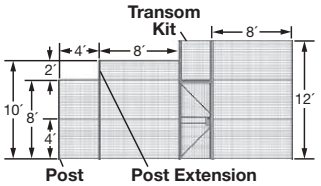


(C) Hinged Double Door
Includes a lock with two keys. Choose from doors that swing in and doors that swing out.



(E) Post
It is a 2" square and includes a 7" × 2¼" baseplate with two 5/8" dia. mounting holes.

(D) Sliding Door
Slides open to the left. Includes one door panel, a lock with two keys, an overhead track, two trolleys, and a bottom door guide.



(H) Transom Kit
Can be used to fill the space above doors on 10- and 12-ft. high partitions. Kits for 10-ft. high partitions are 8' Wd. × 2' Ht. and kits for 12-ft. high partitions are 8' Wd. × 4' Ht.

Due to the welded-wire construction these panels require fewer nuts and bolts, and won't unravel if you need to cut around a pipe or other obstruction. Wall panels and doors are 8-ga. galvanized steel welded wire with 1½" Wd. × 3" Ht. openings. Components include fasteners for assembly and mounting.

Stack wall panels horizontally to form 8-, 10-, or 12-ft. high partitions. All have a modular design, which makes them easier to assemble and relocate than woven-wire models. There are 1" bends around the top and bottom of each wall panel for extra rigidity. Bolt wall panels together horizontally at the bends and then vertically to posts.

To Order—Please feel free to contact us or email us your drawing if you would like help determining what components you'll need.

1. Make a rough drawing of your partition, including overall width, depth, and height.
2. Indicate location, size, and style of door panels. Choose from hinged and sliding doors. Door opening directions are determined when standing outside the partition. If you want to fill the space above the doors on 10- and 12-ft. high partitions, order one transom kit per door. Transoms can be cut to match your door width.
3. Determine the number of wall panels you'll need. Wall panels can be stacked to reach desired partition height and cut if you need them to be less than 4- or 8-ft. wide between posts.
4. Use posts between each wall panel, on both sides of doors, and at corners. Order extensions to make 10- or 12-ft. high posts.
5. For added support and a more finished look, add top cap rails to panels. They can be cut to length.
6. If your partition will make use of an existing wall, order one wall mounting kit for each panel you'll connect to the wall.

Roller-Curtain Partitions

Clear-View Curtain

Curtains resist fire, water, oil, mildew, and most acids. Each partition section includes a vinyl curtain, a 16-ga. galvanized steel roller track, two-wheel nylon rollers with 1″ steel swivel hooks, and steel track connectors. Install track by suspending it from overhead supports with chain or threaded rod (not included). All are CSFM (California State Fire Marshal) approved.

Clear-View Curtains—Typically used for separating work areas such as wash bays, these curtains have a clear center section that allows you to see in as well as out. They have a weighted bottom hem plus hook and loop fasteners along the vertical edge of the curtains to allow easy access. Curtains are 14 mils thick. The top of the curtain is white and the bottom is yellow.

Semi-Clear Curtains—Use curtains to separate warm and cool-air areas and to create a dust barrier, while still allowing light to pass through. They are 13 mils thick. Color is off white.

Privacy Curtains—Curtains block visibility so they are often used to section off locker rooms, in-plant offices, and other restricted areas. They are 14 mils thick. Color is yellow.

In-Plant Office Buildings

With One Window

Easy to assemble and relocate when necessary, these office buildings are just what you need to create private work space in your warehouse or manufacturing facility.

Each building has 3″ thick, R-11 insulated wall panels; 24-ga. steel floor track with screw-on vinyl base; aluminum posts with wiring access on one side; aluminum top caps and corner posts; 22-ga. corrugated steel roof; and a 24″×48″ noncombustible lay-in acoustical ceiling system. You'll also get a 36″ Wd.×84″ Ht.×1¾″ Thick. door that's made of 20-ga. steel and hung on an 18-ga. steel frame. The door has a 24″ Wd.×24″ Ht.×¼″ Thick. tempered glass window and comes furnished with a keyed lock and two keys (keyed differently). All doors swing out and are hinged on the left. Buildings include up to three (see below) factory-installed tempered glass windows that measure 48″ Wd.×36″ Ht.×¼″ Thick., which can be installed in any wall panel location. They also come with an electrical package that includes 24″×48″ recessed fluorescent light fixtures with acrylic lens cover (four 48″ long T8 bulbs required and not included; see page 725), 110 VAC outlet, wall switch, outlet boxes, conduit (wiring not included), and a circuit breaker panel (with breakers) that's rated at 100 amps with a 70-amp main. Buildings come with four walls but do not come with a floor. Wall panels meet ASTM E-84, Class A. Color is beige.

Optional Air Conditioner Cut-Out Kit—Contains one 12-ft. length of 3″ thick wall channel that you cut for an air conditioner opening.

Also Available: Office buildings in different sizes or with additional factory-installed glass windows. Please ask for 6704T777 and specify overall size of building, number of sides, and submit a drawing with the number and location of the additional windows, outlets, and light fixtures.

Clean Rooms

Create a contaminant-free environment for your critical work with these soft-wall clean rooms. All are rated Class 100,000 clean rooms because they come furnished with one motorized HEPA filter that is 99.99% efficient for particles as small as 0.3 microns—great for food and semiconductor applications. The filter operates on 120V AC, 60 Hz, 2.8 amps and is UL listed. To create a Class 10,000, Class 1,000, or Class 100 clean room, simply remove the ceiling panel(s) and add additional motorized HEPA filter modules (sold separately). *Note:* Use the chart to determine how many filters you will need to reach your desired rating.

Each clean room has an 11-ga. tubular steel, white frame; four clear vinyl walls that are 40-mil thick and overlap each other by 6″ for easy entry and exit; and two 120V AC recessed LED light fixtures. *Note:* There's a 6″ clearance between the bottom of the vinyl walls and the floor.

Optional strip door makes it easier for people with carts to enter and exit the clean room. Door has 80-mil thick clear vinyl strips and measures 48″ Wd.×90″ Ht.

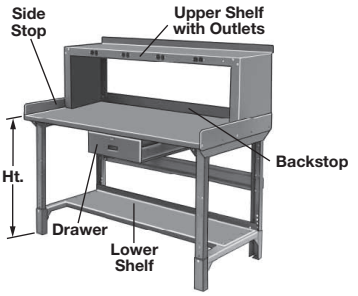
Standard Workbenches

Fixed-Height Workbench



Adjustable-Height Workbench with Accessories

You select the workbench, and we'll supply the steel legs and steel support brace—then you add all the accessories you want. All legs have a foot plate with a 3/8" dia. mounting hole for floor mounting (fasteners not included) and knockouts in the front and back to accept duplex electrical outlets. Shipped unassembled.

Workbenches

Fixed-height workbenches are made of 14-ga. steel and have flared legs. Metal parts are gray.

Adjustable-height workbenches are made of 14-ga. steel and have legs that adjust in 1 1/2" increments. Height adjusts using rivets that tap into keyhole slots. Metal parts are gray.

Steel Top—Made of 12-ga. steel. Color is gray.

Composite Wood Over Steel Top—Composite wood is bonded to 12-ga. steel and is splinter-, warp-, and moisture resistant.

Composite Wood Top—Nonconductive as well as impact and chemical resistant. Tops can be sanded and refinished.

Maple Top—Nonconductive and impact resistant, all have a mineral-oil finish and can be sanded and refinished. Meets NSF/ANSI standards.

Plastic Laminate Top—Extra-smooth surface won't trap dirt or oil, making these tops easy to clean. They are nonconductive. Color is gray.

Static-Dissipative Plastic Laminate Top—All have a surface resistivity of 10^6 to 10^9 ohms/sq., are nonconductive, and are easy to clean. Come with grounding snaps. Color is beige.

Workbench Accessories

All accessories are 20- to 16-ga. steel.

Drawers—Accommodate a padlock (padlock not included; maximum shackle dia. is 3/8"). Drawer size is 15" Wd. x 18" Dp. x 8 1/4" Ht.

Backstop and Side Stops—Extend 3" above the workbench.

Lower Shelves—Each shelf is 14" deep.

Upper Shelves—Have a 1 1/2" backstop and are 12" Ht. x 10 1/2" Dp.

Upper Shelves with Outlets—Have a circuit breaker, power switch, 8-ft. power cord with three-prong plug, and four duplex outlets. They are 18" Ht. x 15" Dp.

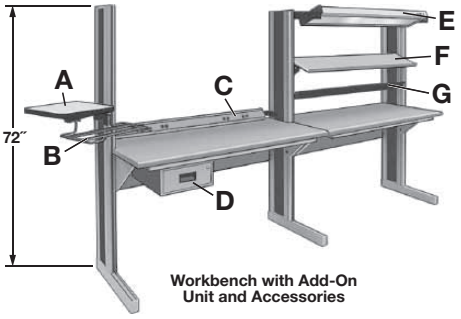
Adjustable-Height Workstations



Workbench with Add-On Unit and Accessories

Create personalized work areas by adjusting the height and adding accessories. These workstations are often used for small-parts assembly. Top is gray. Uprights are blue and gray. Shipped unassembled.

Workstations

Workstations and add-on units have 20-ga. steel uprights that are 2″ Wd. × 12″ Dp. × 72″ Ht. with channels for mounting tops and accessories. Tops are 1¼″ thick plastic laminate. The static-dissipative top protects electronic components and has a surface resistivity of 10^6 to 10^9 ohms/sq.

Workstations consist of two uprights and a top.

Add-on units consist of one upright and a top.

Top	Wd.	Dp.	Ht.	Top Cap., lbs.	Workstations		Add-On Units

Static Dissipative	60″	30″	21″-72″	500	47495T46	1,151.57	47495T47	831.42

Accessories

All accessories are 20- to 14-ga. steel, unless otherwise indicated.

(A) Computer monitor holder rotates 360° on a swing arm and has a 1¼″ thick plastic-laminate top.

(B) Computer keyboard holder is made of ⅜″ dia. wire and attaches to the bottom of the computer monitor holder (A).

(C) Outlet strip has three duplex outlets, an on/off switch, 15-amp circuit breaker, and 8-ft. power cord with three-prong plug. UL listed.

(D) Drawer comes with a lock and two keys.

(E) Light fixture adjusts in any direction and uses two 48″ fluorescent bulbs with medium bi-pin base (not included; see page 725). It comes with an on/off switch and 8-ft. power cord with three-prong plug. UL listed.

(F) Tiltable shelf tilts forward and backward 45°. It has a ⅝″ lip in the front and a plastic-laminate top.

(G) Bin-box rail is fully adjustable and accepts hanging bin boxes (see 4666T on page 1640 for bin boxes).

Adjustable-Height Composite-Wood-Top and Laminate-Top Tables

With Two Optional Drawers

All components are made of 22-ga. steel. All have legs (with knockouts that accept duplex electrical outlets) that adjust in 1″ increments (leg bolts must be removed for positioning). They also have a 12″ deep shelf with a capacity of 150 lbs. Color is gray. Shipped unassembled.

Composite-wood top is brown. **Plastic-laminate top** is gray.

Optional drawer has a capacity of 35 lbs. Overall size is 12″ Wd. × 18″ Dp. × 4″ Ht. Each table can hold up to two drawers. Mounting hardware included.

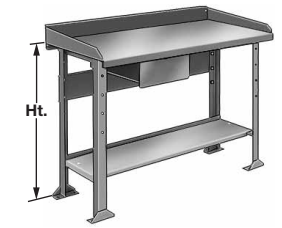
Workbenches with Backstop and Side Stops



To keep your work from falling off the top, each workbench has a 3¾″ high backstop and side stops. Workbenches are 18-ga. steel with a 12-ga. steel top. They have four angle iron legs, except bench with 10,000-lb. capacity top, which has six. Each leg has a foot plate with two ½″ dia. mounting holes (fasteners not included). Workbenches have a 500-lb. capacity steel fixed lower shelf and a 100-lb. capacity steel drawer that accommodates a padlock (padlock not included; maximum shackle dia. is ⅜″). Drawer is 14″ Wd. × 22″ Dp. × 6″ Ht., except benches that are 24″ deep have a 12″ Wd. × 20″ Dp. × 5″ Ht. drawer. Color is green. Shipped unassembled.

Capacities listed are based on an evenly distributed load.

Heavy Duty Tables

All are fully welded and ready to use. Frames are gray.

Fixed-height tables are made of 12-ga. steel. All have foot plates with one 9/16″ dia. hole for floor mounting (fasteners not included). *Steel tops* are gray 12-ga. steel and are reinforced with angle iron. *Composite-wood-over-steel tops* reduce vibration and deaden sound from tools. Top is 1/4″ thick. Color is brown. *Tables with shelf* have a 500-lb. capacity shelf.

Mobile fixed-height tables are steel and come with four swivel casters with 5″ dia. polyurethane wheels and brakes. Made of 14-ga. steel with a 12-ga. steel top. *Tables with shelf* have a 1,000-lb. capacity shelf.

Adjustable-height tables have a 12-ga. steel top that's reinforced with angle iron. Legs adjust in 2″ increments (leg bolts must be removed for positioning). *Tables with shelf* have a 500-lb. capacity shelf.

★ Overall table capacity is 1,000 lbs.

Extra Heavy Duty Tables with Shelf

Mobile with Shelf and Drawer

Adjustable Height with Shelf

Welded for strength and stability, these tables have 7-ga. steel tops that offer our highest top capacities. Made of 12- to 7-ga. steel with angle-iron legs. All have a 500-lb. capacity shelf and come fully assembled. Color is gray.

Tables are available with a drawer that is 30 1/2″ Wd. × 21″ Dp. × 7 1/2″ Ht. The drawer holds 250 lbs. and can accommodate a padlock (padlock not included; maximum shackle dia. is 1/2″).

Fixed-height tables have foot plates with one 5/8″ dia. mounting hole for mounting to the floor (fasteners not included).

Mobile fixed-height tables have two rigid and two swivel casters with 6″ dia. phenolic wheels and a floor lock.

Adjustable-height tables have legs that adjust in 1″ increments (leg bolts must be removed for positioning).

■ Overall table capacity.

Stainless-Steel-Top Tables

Stationary without Backstop

Mobile with Backstop

An economical alternative to all-stainless steel tables, these tables have a 16-ga. stainless steel top with 18-ga. galvanized steel legs and shelves. They have four legs, except 96″ wide models have six. The shelf adjusts in 2″ increments and has a capacity of 195 lbs., except the 96″ wide models have a capacity of 300 lbs. Shipped unassembled.

Stationary tables have leveling feet to compensate for uneven floors.

Mobile tables come with four swivel casters (two with brakes), except 96″ wide models have six swivel casters (two with brakes). All include 4″ dia. rubber wheels.

Tables are available with and without a 2 3/4″ high backstop.

Capacities listed are based on an evenly distributed load.

Stainless Steel Tables

Stationary with Shelf

Stationary with 5″ High Backstop without Shelf

Mobile without Shelf

Mobile with 5″ High Backstop, Shelf, and Drawer

Offering good corrosion resistance, these tables are often used in corrosive environments and food service applications. Frames are 18-ga. stainless steel with a 16-ga. stainless steel top. They have four legs, except the 96″ wide models have six.

Assembled Tables—Come welded and ready to use.

Unassembled Tables—The connectors for bracing are made of die-cast aluminum.

Stationary tables have leveling feet to compensate for uneven floors.

Mobile tables come with four swivel casters with brakes with 5″ dia. wheels.

Adjustable-height tables have legs that adjust in 3″ increments (leg bolts must be removed for positioning) and leveling feet to compensate for uneven floors.

Stainless Steel Tables with Wire Shelves

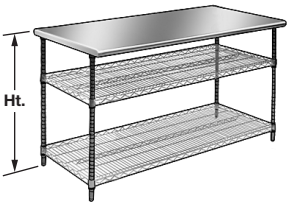

Table with Two Lower Shelves

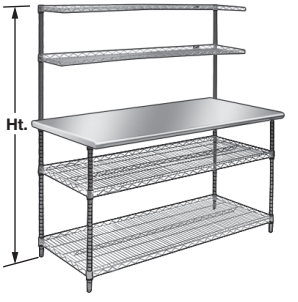

Table with Two Lower Shelves and Two Upper Shelves

In addition to providing a corrosion-resistant, solid work surface, these workbenches have wire shelves that minimize dust collection, allow good ventilation, and permit light penetration for stored items. They are often used in corrosive environments and food service applications. All components are 16-ga. stainless steel with a 16-ga. stainless steel top. Top is 34½″ high. Shelves adjust in 1″ increments and legs have leveling feet to compensate for uneven floors. Meet NSF/ANSI standards. Shipped unassembled.

Tables with upper shelves have a maximum upper shelf height of 28½″. Upper shelves are 12″ deep.

Overall Size Wd.	Dp.	*Capacity, lbs.* Top	Lower Shelf	Upper Shelf

Food-Grade Maple-Top Tables

Not only good looking, these tables are nonconductive and impact resistant. Tables meet NSF/ANSI standards. They have a 1¾″ thick top that consists of solid pieces of maple laminated together and sanded to ensure durability. Tops have a clear mineral oil finish. Frame is 16-ga. galvanized steel. Legs have leveling feet to compensate for uneven floors. Shipped unassembled.

Capacities listed are based on an evenly distributed load.

Workbenches with Drain

The sloped top, drainage hole and plug, and 1½-gal. drain pan contain spills when working with fluids. Lower shelf and top are made of 12-ga. steel; top has a 1½″ lip on all sides. Workbench has ¼″ angle iron legs. Each foot has four 5⁄16″ diameter, four 3⁄8″ diameter, and one 9⁄16″ diameter hole for mounting to the floor (fasteners not included). It also has a 22″ deep steel lower shelf (500-lb. capacity) and a 12½″ Wd. × 18½″ Dp. × 4¾″ Ht. drawer that has a capacity of 100 lbs. (includes a lock and two keys). Color is gray. Shipped assembled.

Wd.	Dp.	Ht.	Top Cap., lbs.		
60″	30″	34″	2,000	44945T57	$641.83

Wall-Mount Workbench-Style Shelving

This shelving offers the space-saving convenience of a workbench without using valuable floor space. These smooth, solid shelves are easy to clean. They are made of 16-ga., corrosion-resistant stainless steel and meet NSF/ANSI standards. They have 5⁄16″ dia. mounting holes (fasteners not included). Warning: Shelf capacity may be reduced due to wall material and fastener choice. Shipped assembled.

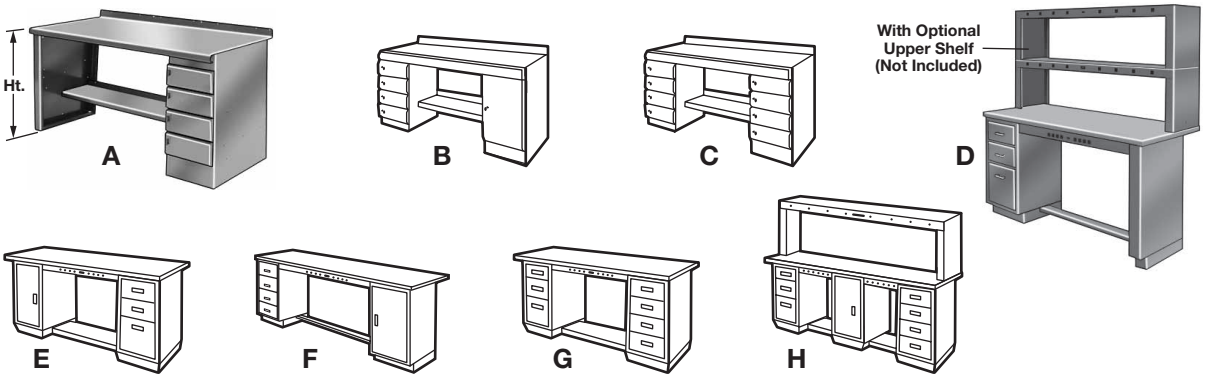
Workbenches with Cabinet-Style Bases



Workbenches are 24-ga. steel and have drawer and/or door bases that offer plenty of storage options for your tools and parts. Color is gray. Shipped unassembled.

(A-C) Workbenches with Backstop

Workbenches have a 3″ high backstop. Drawers have a 60-lb. capacity and are 15″ Wd. × 23½″ Dp. × 6″ Ht. The drawers (and door on Style B) accommodate a padlock (padlock not included; maximum shackle dia. is 9⁄32″).

Style A has four drawers, a lower shelf, and knockouts in the leg for duplex electrical outlets.

Style B has four drawers, a hinged door, and two shelves (one lower shelf and one interior shelf). Interior shelf has a capacity of 100 lbs.

Style C has eight drawers and a lower shelf.

(D-H) Workbenches with Electrical Outlets

Workbenches have eight electrical outlets (except Style H, which has 20). They also have a power switch, a circuit breaker, and a 9-ft. power cord with three-prong plug. Electrical rating is 15 amps, 120 volts AC, 60 Hz. All drawers have a 50-lb. capacity and are 15″ Wd. × 20½″ Dp. × 6½″ Ht. (except the three-drawer base on Styles D, E, G, and H has one drawer that is 15″ Wd. × 20½″ Dp. × 13½″ Ht.).

Styles E, F, and **H** have a hinged door and an interior shelf that adjusts on 2″ centers. Shelf capacity is 50 lbs.

Style H has an upper shelf with electrical outlets. Upper shelf capacity is 150 lbs.

Design-Your-Own Cabinet Workbenches

Workbench Shown with Drawers and Shelf

Start with the workbench then customize the interior by adding the drawers and shelves that best match your needs.

Workbench is made of welded 17-ga. steel with a 12-ga. steel top. It is divided into two compartments; each compartment has 15 notches on 1¾″ centers to hold any combination of drawers and shelves. Keep in mind that the combination you choose can't use more than 15 notches. To see how many notches each drawer and shelf requires, see table below.

Both cabinet doors have an interior storage pocket. For extra security, the workbench can be locked with a padlock (padlock not included; maximum shackle dia. is 1¹⁄₁₆″). It comes with two rigid and two swivel casters with brakes with 6″ dia. phenolic wheels. Color is beige. Shipped assembled.

Drawers and **shelf** are white.

	Wd.	Dp.	Ht.	Overall Cap., lbs.	No. of Adjustment Notches Used		
Workbench	46½″	25″	37½″	1,000	–	9978T27	$1,211.93

Shelf	17½″	21¾″	1″	100	1	9978T6	90.75

Capacities listed are based on an evenly distributed load.

Mobile Cabinet Workbenches

Make your move—these cabinet workbenches have casters so you can roll them where you need them.

(A) Plastic Workbench—You'll find this workbench is not only dent- and rust-resistant, but also sturdy. It has five drawers for tools and other small parts. It also has a locking bar that slides in front of the drawers and can be secured with a padlock (not included; maximum shackle dia. is 1/4″). Drawers are red. Comes with two rigid and two swivel casters with brakes with 4″ dia. plastic wheels. Shipped assembled.

(B&C) Steel Workbenches with Concealed Drawers—For added security, drawers are concealed behind doors that can be locked with a padlock (not included; maximum shackle dia. is 5/16″). Workbenches are made of 16-ga. steel with a 16-ga. steel top. Come with a fixed shelf and two rigid and two swivel casters with brakes with 4″ dia. rubber wheels. Shipped assembled.

(D-F) Steel Workbenches with Composite-Wood Top—Workbenches are made of 18-ga. steel and have a 3/4″ thick composite-wood top with 3″ high backstop and side stops. The doors have a locking handle and two keys; shelves are adjustable on 4″ centers. Come with two rigid and two swivel casters with 5″ dia. polyurethane wheels. Shipped assembled.

(G&H) Narrow-Width Steel Workbenches—At 24″ wide, these compact workbenches provide storage and a work surface even when space is limited. Both are made of welded 20-ga. steel. The top is 14-ga. steel with 3/4″ high backstop and side stops. Each drawer can be locked with a padlock (not included; maximum shackle dia. is 3/8″). Come with two rigid and two swivel casters with 5″ dia. polyurethane wheels. Shipped assembled.

Style G has a door with a locking handle and two keys.

Style H has a tray in the top drawer for storing small parts.

(J) Steel Workbench with Reversible Top—You can turn the top of this workbench over so you can choose a work surface with or without 2″ high backstop and side stops. Workbenches are made of 18-ga. steel with a 14-ga. steel top. Shelf adjusts on 4″ centers. The door has a built-in locking handle and two keys. Comes with two rigid casters and two swivel casters with brakes with 5″ dia. polyurethane wheels. Shipped assembled.

(K&L) Heavy Duty Steel Workbenches—Of all these mobile workbenches, these offer the highest load capacity. Both are made of 18-ga. welded steel. The top is 12-ga. steel with 2″ high backstop and side stops. The shelf is adjustable on 2″ centers; each door and drawer (where applicable) has a built-in lock and two keys per lock. Come with two rigid and two swivel casters with 5″ dia. polyurethane wheels. Shipped assembled.

Style L has three drawers. The top drawer includes a tray for storing small parts.

(M) Harsh Environment Stainless Steel Workbench—Protect against corrosion with this stainless steel cabinet workbench that meets NSF/ANSI standards. It is made of welded 18-ga. stainless steel. The top is 16-ga. stainless steel with a 4″ high backstop. Shelf is fixed. Comes with four swivel casters (two with brakes) with 4″ dia. rubber wheels. Shipped assembled.

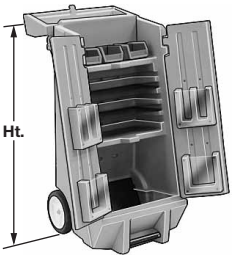
Two-Wheel Cabinet Workbenches



Tilt back and roll this workbench anywhere you need it. Workbench is made from rust- and solvent-resistant plastic. Open the lid to use as a 16″ Wd. × 7½″ Dp. × 3″ Ht. work surface. Inside the cabinet, you'll find three bin boxes, two 30-lb. capacity shelves that adjust on 2″ centers, and a bottom compartment for storing bulky items. Both cabinet doors have two interior storage pockets. You can lock the cabinet with a padlock (not included; maximum shackle dia. is ⅜″). Comes with two 8″ dia. rubber wheels. Color is gray. Shipped assembled.

Wd.	Dp.	Ht.	Overall Cap., lbs.		
20″	20″	40″	150	6376A68	$351.85

Large-Capacity Cabinet Workbenches

Ideal when you need to work with and store many items. Workbenches with doors have backstops and side stops to prevent work from falling off.

(A) Workbenches without drawer are made of 18-ga. steel with a 12-ga. steel top with 3″ high backstop and side stops that taper down to 1½″ high at the front of the workbench. The doors have a built-in lock with two keys. Shelf adjusts on 4″ centers. Shipped assembled.

(B) Workbench without drawer and **workbench with one drawer** are made of 18-ga. steel with a 12-ga. steel top with 3¾″ high backstop and side stops that taper down to 1½″ high at the front of the workbench. Doors have a built-in lock with two keys. Come with a fixed shelf. Each foot has a ½″ dia. mounting hole for mounting to the floor (fasteners not included). Shipped unassembled.

(C) Heavy duty workbenches with three drawers are made of 18-ga. steel with a 1¾″ thick maple top. All drawers and doors have a lock with two keys. The middle drawer includes a tray for holding small items. Both workbenches come with a fixed shelf and kick plate. Each side panel has two ½″ dia. mounting holes for mounting to the floor (fasteners not included). Shipped unassembled.

(D) Workbenches with 16 drawers are made of 20-ga. steel; 28″ deep unit has a 12-ga. steel top and 30″ deep unit has a 1¾″ thick hardwood top. Workbenches include four trays for holding small items. There is also a padlock hasp on each drawer (padlock not included; maximum shackle dia. is ⅜″). Shipped assembled.

(E) Harsh environment workbenches offer good corrosion resistance and meet NSF/ANSI standards. These welded workbenches are 16-ga. stainless steel with a 16-ga. stainless steel top. Both have tops with 6″ high backstops and leveling feet to compensate for uneven floors. Doors can be removed for cleaning. Shipped assembled.

Mobile Large-Capacity Cabinet Workbenches

Ideal when you need to work with and store many items. All have casters and a handle to make maneuvering easy. Shipped assembled.

(A&B) Standard workbenches are made of 18-ga. welded steel with a 12-ga. steel top with 3″ high backstop and side stops. They also have a 12″ Wd. x 24″ Dp. exterior shelf (500-lb. capacity), two doors with lock and two keys, and one fixed interior shelf (1,000-lb. capacity). Come with two rigid and two swivel casters with 5″ dia. wheels. Color is gray.

Style B have four 100-lb. capacity concealed drawers. Top drawer includes a tray for storing small items.

(C&D) Heavy duty workbenches are made of 20-ga. welded steel and have a 12-ga. steel top. Workbenches have two doors (one on the front; one on the back) with a locking handle with two keys, one fixed interior shelf (800-lb. capacity), and 50-lb. capacity drawers. For added security, the drawers can be concealed behind a locking panel (includes two keys) that slides out of the way when not in use. Come with two rigid and two swivel casters with 8″ dia. wheels; a floor lock keeps workbenches in place. Color is gray with red drawers.

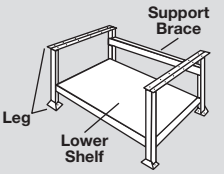
About Designing Your Own Workbench

Create a customized workbench to fit your needs. For a complete workbench, choose a **top** (pages 1691-1692) and either **legs** (pages 1693-1694) or a **base** (page 1695).

Workbenches up to 72″ wide require two workbench legs. Workbenches 96″ wide and larger require at least three workbench legs.

Support braces add stability to your workbench. You may also want to add **drawers** (pages 1695-1696), **lower shelves** (page 1696), or a **backstop and side stops** (page 1696).

Note: Capacities listed for the workbench tops are for the tops only. Once you add legs or legs with casters to make a complete workbench, the capacity will change. The new capacity will be that of the component (**top, legs,** and/or **base**) with the lowest capacity.



Steel Workbench Tops

Made of 12-ga. steel, these heavy duty tops come with a support brace for added stability. All are oil and stain resistant. They have a straight front edge. Fasteners for mounting legs included. Color is gray.

For use with our Standard Duty workbench legs on page 1693.

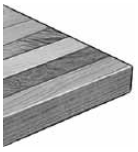
Workbench Tops & Sawhorses

For information about designing your own workbench, see page 1691.

Maple Workbench Tops



Straight

Radius

Solid pieces of wood are laminated together and sanded to ensure durability. All tops are nonconductive, impact resistant, and can be sanded and refinished. They have a mineral-oil finish (for mineral oil, see 3190K on page 2066). Fasteners for mounting legs included. Meet NSF/ANSI standards.

To Order: Please specify straight or radius front edge.

Oak Workbench Tops

Bullnose

Similar to maple tops, except these tops offer higher capacities and are more consistent in color. They're made of solid pieces of oak that are laminated together and sanded to ensure durability. Tops are nonconductive, impact resistant, and have a clear finish. They have a bullnose front edge. Fasteners for mounting legs included.

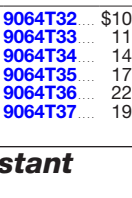
Mounting Fasteners for Workbench Tops

Use to mount nonmetallic workbench tops to legs and bases. Includes 50 zinc-plated Phillips pan-head screws (25 #14×¾″ and 25 #14×1½″) and 50 washers.

5118T33	Pkg.	$8.61

Folding Sawhorses

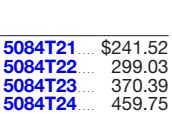


It's easy to store and transport these sawhorses—they fold to a compact 2″ Ht.×38″ Wd.×4″ Dp. Both are 14-ga. steel and have a convenient carrying handle. Color is orange. Shipped assembled.

Adjustable-height sawhorse allows five height adjustments in 4″ increments and can be set up on uneven surfaces. Note: As the adjusted height increases, weight capacity decreases.

	Ht.	Cap. per Sawhorse, lbs. at 25″ Ht.	at 40″ Ht.		
Fixed Height	25″	1,000	—	8055T29	$48.77
Adjustable Height	25″-40″	1,000	800	8055T31	67.61

Sawhorse Brackets



Make your own sawhorse with these brackets and five 2×4s, 2×6s, or 2×12s. The included wing nuts lock legs and rails into place. Made of plastic. Color is black.

	Cap. per Pair, lbs.		Pair
Brackets	500	8092T18	$17.91

Capacities listed are based on an evenly distributed load.

For information about designing your own workbench, see page 1691.

Standard Duty Workbench Legs

Fixed-Height Stationary

Fixed-Height Mobile

Adjustable-Height Stationary

All legs have knockouts on the front and back for adding duplex electrical outlets. They also have sixteen 5/16″ dia. holes for mounting tops (fasteners not included). Color is gray.

Fixed Height—Legs are 13-ga. steel and flared for extra stability.

Adjustable Height—Legs are made of 14-ga. steel and adjust in 1 1/2″ increments; simply remove and reposition leg bolts.

Stationary legs have a 3/8″ dia. hole per foot for securing to the floor (fasteners not included).

Mobile legs have two casters with 5″ dia. plastic wheels for maneuverability.

Support braces add stability and are 14-ga. steel.

Lower shelves are 16-ga. steel.

Heavy Duty Adjustable-Height Workbench Legs

Height is adjustable—loosen the leg bolts to slide legs to any height from 29 1/4″ to 35 1/4″. Legs are 14-ga. steel with one set of knockouts on the front and back for adding duplex electrical outlets. They have four 5/16″ dia. holes for mounting tops (fasteners not included). Each leg has adjustable feet to compensate for uneven floors. They also have two 3/8″ dia. holes and one 7/16″ dia. hole per foot plate for securing to the floor (fasteners not included). Color is gray.

Support braces add stability and are made of 18-ga. steel.

Lower shelves are made of 16-ga. steel.

Extra Heavy Duty Workbench Legs

The all-welded angle iron legs support the highest capacities of all our workbench legs. They also have holes (see below for size and number) for mounting tops (fasteners not included). Color is green.

Adjustable Height—Adjust in 1″ increments by removing and repositioning leg bolts.

Stationary legs have two 1/2″ dia. holes per foot plate for securing to the floor (fasteners not included).

Mobile legs have two casters with 5″ dia. polyurethane wheels.

Support braces add stability and are 16-ga. steel.

Lower shelves are 12-ga. steel with a capacity of 1,000 lbs.

Recessed-Style Workbench Legs

Specially designed to provide more leg room than other leg styles. All legs are 14-ga. steel and have leveling feet to compensate for uneven floors. They also have six 1/2″ dia. holes for mounting tops (fasteners included). Color is gray.

Adjustable-height leg adjusts in 1″ increments.

Support braces add stability and are 16-ga. steel.

Lower shelves are 16-ga. steel with a 50-lb. capacity.

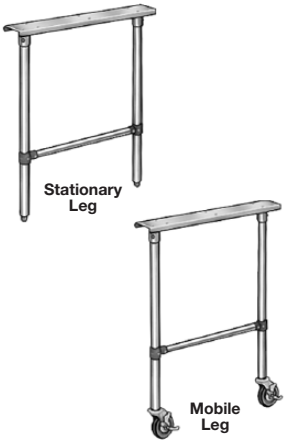
Harsh Environment Workbench Legs



An excellent choice for clean rooms, food-processing plants, and chemical plants, these legs are made of corrosion-resistant 16-ga. stainless steel. The legs are 1⅝″ dia. and come with die cast aluminum connectors. The top mounting channel has ten 5/16″ dia. holes for mounting tops (fasteners included). Meet NSF/ANSI standards.

Stationary—Feet adjust to compensate for uneven floors.

Mobile—All come with swivel casters with a brake and 5″ dia. polyurethane wheels.

Support braces add stability and are made of 18-ga. stainless steel.

Lower shelves are 18-ga. stainless steel; capacity is 200 lbs.

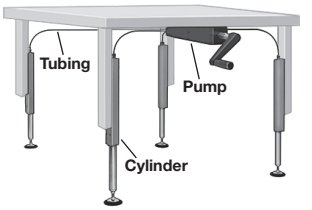
Hydraulic Lift Kits for Workbenches



With Leveling Feet and Pump with Hand Crank (workbench not included)

Transform your fixed-height workbench into an adjustable-height work surface with one of these kits. All come with four aluminum hydraulic-lift cylinders, one hydraulic pump, and two lengths each of 60″ and 96″ tubing (hydraulic lines) to connect cylinders to the pump.

To install, attach each cylinder to your workbench legs with four 1/4″-20 fasteners (not included; length of fastener required depends on leg thickness). Then, mount the pump under the workbench top and connect cylinders to the pump with the included tubing.

Kits with hand crank have a retractable, folding hand crank. Pump has three 1/4″ dia. holes for mounting (fasteners not included).

Kits with electric motor allow you to adjust height with a push of a button. Pump and motor are attached to a plate with seven 1/4″ dia. holes for mounting to workbench (fasteners not included). Motor is 1/9 hp and operates on 110/115 volts AC, 50/60 Hz, single phase. Comes with a rocker switch with two 3/16″ dia. holes for mounting to your workbench (fasteners not included) and an 8-ft. power cord with three-prong plug.

Kits with leveling feet compensate for uneven floors.

Kits with casters have swivel casters with brake and 3″ dia. plastic wheels for mobility.

47105T48 $57.26

Single-Column Table Legs

All are made of 13-ga. steel tubing. Mobile models have casters, and all other models have leveling feet to compensate for uneven floors. Come with fasteners for attaching table tops. Color is black.

Mobile legs have swivel casters with brake and 2″ dia. plastic wheels.

Adjustable-height legs adjust by releasing a spring clip and sliding the leg inside the steel tube.

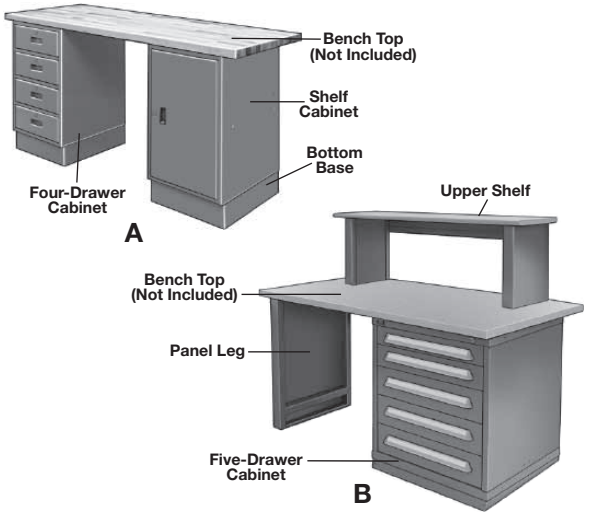
For information about designing your own workbench, see page 1691.

Cabinet Workbench Bases



Create a workbench with the storage space you need by pairing bases with a workbench top (top and fasteners not included). For tops, see pages 1691-1692. Shipped unassembled.

(A) Standard

Cabinets and components are 20-ga. steel. They come with a 5″ high removable bottom base (removing the bottom base will lower the height to 27″). Each drawer and door has one knockout for adding an optional lock (not included; please ask for 48735T11 and specify keyed alike or keyed differently). Color is gray.

Drawer cabinets have 13″ Wd. × 19″ Dp. drawers.

Shelf cabinet has an interior shelf that adjusts on 3″ centers. The cabinet door can open to the right or left by turning the base over.

Wd.	Dp.	O'all Ht.	Drawers: Total No.	Drawers: Ht.

(B) Heavy Duty

Store your heaviest tools and parts in these cabinet workbench bases. Cabinets and components are 20- to 18-ga. steel. Cabinets have a single cylinder lock with two keys that locks all drawers at once. Each drawer is 25″ Wd. × 25″ Dp.

Panel leg acts as a benchtop support when using only one cabinet base.

Upper shelves have a powder-coated steel top.

To Order: For all bases and components, please specify color: blue or gray.

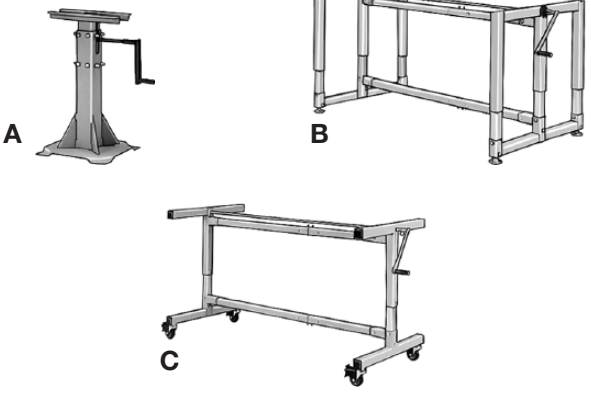
Hand-Crank Adjustable-Height Workbench Bases



Adjust the height of your workbench without clearing off the top or loosening leg bolts. A hand crank makes these bases easier to adjust than our adjustable-height workbench legs. All hand cranks are retractable. Bases have six ⅜″ dia. holes for mounting tops (fasteners not included). Color is beige. Shipped assembled.

Style A is welded 7-ga. steel tubing. Includes a 16″ square mounting plate with four ⅜″ dia. holes for securing base to the floor (fasteners not included).

Style B are made of 11-ga. steel tubing and have leveling feet.

Style C come with four locking swivel casters with 4″ dia. polyurethane wheels. All are made of 7-ga. steel tubing.

Design-Your-Own Stackable Drawers for Workbenches

Stack these drawers underneath your workbench. You can stack drawers with different heights as long as they have the same width and depth. All have ball bearing drawer slides and come with hardware to mount them to each other and to your workbench. Color is gray.

Drawer is made of 22-ga. steel. It has one knockout for adding an optional lock (not included; please ask for 48735T11 and specify keyed alike or keyed differently).

Drawers with keyed lock are made of 18-ga. steel with steel drawer hangers. All come with a lock with two keys.

Workbench Drawers, Cabinets, Shelves & Stops

For information about designing your own workbench, see page 1691.

Drawers for Workbenches

For added storage, mount these drawers below your workbench top.

Plastic Drawers

Perfect for high-moisture areas, this rust-resistant drawer is made of plastic and has plastic glides. It has six 1/8″ dia. holes for mounting (fasteners not included). Color is beige.

Overall Size Wd.	Dp.	Ht.	Cap., lbs.		
17″	17″	4 3/4″	20	4614T32	$20.15

Harsh Environment Drawers

Our corrosion-resistant drawers are 22-ga. stainless steel with plastic slides. They have four 5/16″ dia. holes for mounting (fasteners not included). Meet NSF/ANSI standards.

Overall Size Wd.	Dp.	Ht.	Cap., lbs.		
16″	21 3/4″	5″	40	4405T88	$93.67
21″	21 1/2″	5″	40	4405T89	129.76

Steel Drawers

With Keyed Lock

All drawers have a tamperproof top. They are made of 18-ga. welded steel and have welded-on steel slides. Each drawer top has eight 9/32″ holes for mounting (fasteners included). Color is green.

Drawers with padlockable hasp accommodate a padlock (not included; max. shackle dia. of 3/8″).

Drawers with keyed lock have a tray for small items and a cylinder lock with two keys.
