Barbed Garden Hose Connectors

Screw-On Clamp Gripper Barbed

Also known as hose menders and splicers, these fittings can be used to repair damaged hose. Cut out the damaged section of hose and join the two remaining pieces by securing them to each end of the fitting.

Screw-On Clamp Connectors—Connectors have an internal barb. Clamp to your hose end and tighten with the included screws. They provide a more secure hold than gripper connectors.

Gripper Connectors—Crimp the steel gripping tabs to your hose with pliers.

Barbed Connectors—Barbed shanks grip the hose while hose clamps (required and sold separately) secure the hose to the connector. **Hose clamps** are worm-drive style and made of 301 stainless steel.

Garden Hose Fittings with Threaded Ends

All have 3/4" garden hose threads (GHT). Female hose ends include rubber seals.

Garden Hose-to-Garden Hose Connectors

Fittings are brass for good corrosion resistance.

Male Female

GHT	Max. Temp.	Pkg. Qty.		Pkg.
Male	195°F	2	72105T89	$9.31
Female	195°F	2	72105T88	10.75
Male/Female	195°F	1	72105T87	8.49

Threaded Garden Hose-to-Threaded Pipe Adapters

A B C D E F

Fittings that swivel until tightened are easy to install.

Brass fittings have good corrosion resistance and are softer and easier to thread than stainless steel fittings.

Stainless steel fittings have very good corrosion resistance.

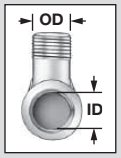
Spray Nozzles



Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual size. To determine pipe size, measure the inside diameter (ID) or outside diameter (OD), as shown at left. Then, round up to the closest fitting ID or OD listed in the chart and select the corresponding pipe size. For example, if your fitting ID or OD measures 1 3/16", the next highest ID or OD in the chart is 1 3/8", and its corresponding pipe size is 1".

Fitting ID or OD	3/8"	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/8"	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"

About Spray Nozzles

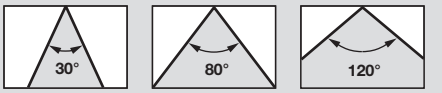
Spray nozzles are used for jobs such as cleaning, cooling, rinsing, controlling dust, applying coatings, humidification, pressure washing, and air drying. Use the chart at the top of the page to determine the proper pipe size.

Brass offers good corrosion resistance. ***Copper-nickel*** is more corrosion and rust resistant than brass. ***Stainless steel*** has better corrosion, abrasion, and chemical resistance than brass. It also has good internal abrasion resistance. ***PVC*** offers very good corrosion and chemical resistance. ***PVDF*** offers excellent chemical and corrosion resistance. ***PFA*** and ***PTFE*** are chemical resistant and the most corrosion-resistant materials we offer.

Spray Patterns

Flat | *Full Cone* | *Hollow Cone* | *Square* | *Solid Stream*

Spray Angles



Flat Spray Nozzles

All nozzles produce a flat, thin spray pattern. Good for washing parts and jobs that involve products moving on a conveyor.

Flat Spray Nozzles

Flat

Great for general cleaning, washing asphalt and concrete, air drying, etching, foam control, and applying coatings. Maximum pressure is 1,000 psi. All have an NPT male connection.

Brass nozzles have a maximum temperature of 450° F. ***Type 303 stainless steel nozzles*** have a maximum temperature of 800° F.

To Order: For all nozzles, please specify spray angle: 30°, 50°, 65°, 80°, or 120°.

Wide-Angle Deflected Flat Spray Nozzles

Flat

An extra-wide spray angle is deflected 75°, producing a low-impact spray for maximum coverage. The angle makes these nozzles a good choice for rinsing and cooling jobs as well as for foam control and applying coatings. Maximum pressure is 60 psi. All have an NPT male connection.

Brass nozzles have a maximum temperature of 800° F. ***Type 303 stainless steel nozzles*** have a maximum temperature of 1400° F.

(Continued on following page)

Flat Spray Nozzles *(Continued from previous page)*

High-Impact Deflected Flat Spray Nozzles

Spray is deflected off the face of the nozzle at a narrow angle to create the highest impact of all our flat spray nozzles. Use them for foam control and for washing vehicles, gravel, asphalt, and concrete. Spray angle is 50°. Maximum pressure is 500 psi. All have an NPT male connection.

Brass nozzles have a maximum temperature of 450° F. ***Type 303 stainless steel nozzles*** have a maximum temperature of 800° F.

Food-Grade Chemical- and Corrosion-Resistant Plastic Flat Spray Nozzles

Not only do these nozzles offer excellent abrasion, chemical, and corrosion resistance, they are also made of FDA-compliant PVDF for use in many food applications. All nozzles are good for washing asphalt and concrete as well as for foam control and applying coatings. Spray angle is 80°. Maximum pressure is 150 psi. Maximum temperature is 200° F. All nozzles have an NPT male connection.

Maximum Chemical- and Corrosion-Resistant Plastic Flat Spray Nozzles

Caustics, organic solvents, acids, and ultrapure liquids (such as deionized water) are no problem for these nozzles. They are clog resistant and are good for washing asphalt and concrete as well as for applying coatings. Choose one that projects spray from the side or straight out. Made of PFA. Maximum pressure is 40 psi. Maximum temperature is 75° F. All nozzles have an NPT male connection.

Quick-Change No-Drip Brass Flat Spray Nozzles

These multipiece nozzles make it quick and easy to remove and replace spray tips. Good for washing asphalt and concrete as well as for foam control and applying coatings.

Each nozzle consists of a nozzle body, cap, ball check valve, and spray tip. Simply unscrew the cap to clean or replace the spray tip. The ball check valve eliminates dripping when nozzle has been turned off and has a filter with a strainer (100×100 mesh strainer for 1/8" pipe size; 50×50 mesh strainer for 1/4" pipe size). Maximum pressure is 500 psi. Maximum temperature is 500° F. All nozzles have an NPT male connection. **To Order:** Please specify spray angle: 40°, 80°, or 110°.

Quick-Mount Swivel Flat Spray Nozzles

Just drill a 9/16" hole anywhere along a pipe and snap on these nozzles. They make it quick and easy to remove and replace spray tips. Made of reinforced plastic, all have a 300 Series stainless steel clamp that grips the pipe and an EPDM rubber gasket that prevents leaks. All nozzles are good for foam control. Nozzles swivel 52° for directional spraying. Spray angle is 65°, unless noted. Maximum pressure is 100 psi. Maximum temperature is 175° F.

With Quick-Change Tips— These nozzles have replaceable tips (simply give them a 1/4 turn to remove) that maintain spray pattern alignment. All tips have two O-rings to prevent leaks.

Full Cone, Hollow Cone, and Square-Pattern Spray Nozzles

An excellent choice for cooling as well as dust- and foam-control applications. ***Full cone*** and ***square-pattern spray nozzles*** provide a uniform distribution of droplets. ***Hollow cone spray nozzles*** produce a fine, more atomized droplet.

Full Cone Spray Nozzles

Full Cone

The full cone spray pattern and low flow rates of these nozzles make them good for distributing fluids, cooling, washing, and rinsing. Maximum pressure is 400 psi. ***Brass nozzles*** have a maximum temperature of 450° F. ***Type 303 stainless steel nozzles*** have a maximum temperature of 800° F.

To Order: For all nozzles, please specify spray angle (60°, 90°, or 120°) and NPT connection (male or female).

High-Volume Clog-Resistant Full Cone and Hollow Cone Spray Nozzles

Full Cone

With a unique spiral design, these nozzles produce higher flow rates and have a fine, atomized spray. They're great for dust control, cooling, and humidification applications. Connection is NPT male. ***Brass nozzles*** have a maximum pressure of 400 psi. Maximum temperature is 450° F. ***Type 316 stainless steel nozzles*** have a maximum pressure of 400 psi. Maximum temperature is 800° F. ***PTFE nozzles*** have a maximum pressure of 60 psi. Maximum temperature is 300° F.

To Order: Please specify spray angle: 60°, 90°, or 120° for full cone; 50° or 120° for hollow cone.

Quick-Mount Swivel Full Cone Spray Nozzles with Quick-Change Tips

Just drill a 9/16" hole anywhere along a pipe and snap on these nozzles. They make it quick and easy to remove and replace spray tips while maintaining spray pattern alignment. Made of reinforced plastic, all have a Series 300 stainless steel clamp that grips the pipe and an EPDM rubber gasket that prevents leaks. Nozzles swivel 52° for directional spraying and have replaceable tips (simply give them a 1/4 turn to remove). The tips also have two O-rings to prevent leaks. Excellent for cooling as well as dust- and foam-control applications, these nozzles provide a uniform distribution of droplets. Maximum pressure is 100 psi. Maximum temperature is 175° F.

To Order: For all nozzles, please specify pipe size from those available below.

Solid Stream Spray Nozzles

The precise, concentrated, high-velocity spray pattern of these nozzles reaches longer distances than our other spray patterns. Use them to handle tough cleaning and paper trimming applications. Spray angle is 0°. Maximum pressure is 100 psi. Maximum temperature is 200° F. Connection is NPT male.

Type 303 stainless steel nozzles offer better corrosion, abrasion, and chemical resistance than brass.

Swivel Fittings for Spray Nozzles

Want your spray nozzle to swivel 360° and tilt on a 45° range? Simply attach it to one of these swivel fittings. All fittings have an NPT female outlet for connecting your nozzle and an NPT male inlet for attaching to your piping system. Both the inlet and outlet are the same size. Maximum pressure is 300 psi.

Brass nozzles have a maximum temperature of 800° F.

Type 303 stainless steel nozzles have a maximum temperature of 1400° F.

Quick-Mount Fittings for Spray Nozzles

No need for threaded pipe connections—just drill a 9/32" hole in your pipe, connect one of these fittings, and then thread your nozzle into the fitting. Made of Type 303 stainless steel with zinc-plated steel clamps and bolts. Also has a Buna-N gasket for a leakproof seal. Maximum pressure is 250 psi. Maximum temperature is 180° F.

Stainless Steel Spray Manifolds

24" Spray Manifold with Two Nozzle Positions

Build your spray system by adding your own nozzles to these nozzle-ready spray manifolds. They accept stainless steel or brass nozzles. Maximum pressure is 2,500 psi. Maximum temperature is 200°F.

Manifolds for 1/8" NPT male nozzles are made of 1/2" OD Type 316 stainless steel tubing. Use 1/2" OD Type 316 stainless steel compression tube fittings to connect an inlet pipe to the manifold tubing and to cap the ends (fittings not included, see 5182K on pages 184-186).

Manifolds for 1/4" NPT male nozzles are made of 5/8" OD Type 316 stainless steel tubing. Use 5/8" OD Type 316 stainless steel compression tube fittings to connect an inlet pipe to the manifold tubing and to cap the ends (fittings not included, see 5182K on pages 184-186).

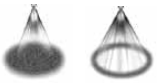
Misting and Fogging Nozzles

Providing the smallest atomized spray droplets of all of our spray nozzles, these nozzles are recommended for cooling, moistening, and humidifying applications. They're also a good choice for applying coatings and controlling dust.

Standard and No-Drip Misting Nozzles



Full Cone | Hollow Cone

These economical misting nozzles have a strainer. Maximum pressure is 500 psi. Maximum temperature is 180° F.

Standard— All nozzles are easy to clean. Strainer has a brass body with stainless steel 120 × 120 mesh. Spray angle is 80° for full cone spray nozzles; 160° for hollow cone spray nozzles. Connection is NPT male.

No-Drip— A built-in check valve eliminates dripping once nozzle is turned off. Check valve closes at 45 psi. Spray angle is 70°. Base is brass and includes a 31-40 micron bronze filter. Connection is NPT female.

Standard

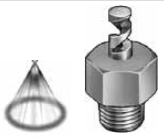
♦ Prices are 10% lower when you buy in quantities of 10 or more. ● Minimum of 160 psi is required.

High-Volume Clog-Resistant Misting Nozzles



Hollow Cone

With a unique spiral tip, these nozzles produce higher flow rates than our other misting nozzles, making them ideal for washing applications. All nozzles are made of brass and produce a hollow cone spray pattern. Spray angle is 90°. Maximum pressure is 100 psi. Maximum temperature is 450° F. Connection is NPT male.

Fogging Nozzles

Full Cone

You'll get the smallest, most atomized spray droplets with these nozzles. All are made of brass and produce a full cone spray pattern. Spray angle is 90°. Maximum pressure is 3,000 psi. Maximum temperature is 450° F. Connection is NPT male.

Ultra-Fine Air-Powered Misting and Fogging Nozzles

Hollow Cone | Full Cone

To create an ultra-fine spray, these nozzles mix compressed air from 70 to 100 psi and pressurized liquids up to 20 psi. All nozzles are made of brass and have a knob to control the flow rate. They have a 5-micron air filter and a bronze 40 × 40 mesh liquid strainer. Maximum temperature is 200° F. Both air and liquid connections are 1/4" NPT female.

Humidifying— Great for mist coating, evaporative cooling, moisturizing, and spray drying.

Fogging— For moisturizing, coating, evaporative cooling, and dust suppression.

Atomizing— For washing and applying lubricants.

Nozzle Style	Spray Pattern	Flow Rate, gph	Spray Angle	Orifice Dia.	O'all Wd.	O'all Lg.		Each

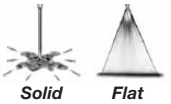
Quick-Disconnect High-Pressure Spray Nozzles



Solid Stream | Flat

To quickly change spray angles, remove the nozzle and snap on a new one. All have a 1/4" connection and are for use primarily with pressure washers. The 0° spray angle produces a solid stream spray pattern; all other angles produce a flat spray pattern. Not rated for maximum temperature.

Liquid Nozzles— Made of Type 416 stainless steel with color-coded nylon guards for easy identification. Maximum pressure is 4,000 psi. **To Order:** Please specify spray angle: 0° (red), 15° (yellow), 25° (green), or 40° (white).

Soap Nozzle— Made of brass with a black nylon cover. Maximum pressure is 500 psi. **To Order:** Please specify spray angle: 25° or 65°.

High-Pressure Spray Nozzles

Use primarily with your pressure washers. A 0° spray angle produces a solid stream spray pattern; all other angles produce a flat spray pattern.

Standard High-Pressure Spray Nozzles

Good for cleaning parts as well as for washing vehicles. Made of Type 416 stainless steel. Maximum pressure is 4,000 psi. Maximum temperature is 1250° F. Connection is NPT male.

All nozzles with a 1/8" pipe size have an overall width (hex size) of 1/2", except those with a 0° spray angle, which have an overall width (hex size) of 9/16".

All nozzles with a 1/4" pipe size have an overall width (hex size) of 9/16".

To Order: Please specify spray angle: 0°, 15°, 25°, 40°, or 65° (unless noted). Where applicable, please specify pipe size: 1/8" or 1/4".

Adjustable Spray Angle High-Pressure Spray Nozzles

No need to juggle different spray-angle nozzles. Simply turn the cover to adjust the spray angle from 0° to 80°. All nozzles have a brass body with a Type 416 stainless steel insert and a black nylon cover. Maximum pressure is 3,000 psi. Max. temperature is 300° F. Connection is NPT female.

To Order: Please specify pipe size: 1/8" or 1/4".

Rotating High-Pressure Solid Stream Spray Nozzles

The superior cleaning ability of a solid stream has been combined with rotating spray action for excellent coverage. Nozzle is brass; cover is black plastic. Overall width is 1 1/2". Overall length is 3 7/8". Maximum pressure is 3,500 psi. Maximum temperature is 200° F. Connection is 1/4" female BSPP (British Standard Parallel Pipe).

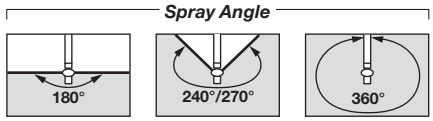
Bottle-, Drum-, and Tank-Washing Nozzles



A&B ***Stationary Nozzles*—** Multiple spray streams provide cost-effective rinsing and cleaning.

***Style A*—** Use with bottles and drums. Maximum pressure is 400 psi. Maximum temperature is 450° F. Connection is NPT male.

***Style B*—** These ball-shaped nozzles provide a wider spray angle for better coverage. Use with drums. Maximum pressure is 150 psi. Maximum temperature is 400° F. Connection is NPT female.

C-F ***Rotating Nozzles*—** Multiple spray streams combine with rotating spray action for superior cleaning power.

***Style C*—** Use with bottles and drums. Maximum pressure is 70 psi. Maximum temperature is 250° F. Connection is NPT male.

***Style D*—** Made of FDA-compliant PVDF for food applications. Use with drums. Maximum pressure is 70 psi. Maximum temperature is 190° F. Connection is female BSPP (British Standard Pipe Parallel).

***Style E*—** Maximum corrosion resistance with minimum weight. Made of PTFE. Use with large-diameter tanks. Maximum pressure is 90 psi. Max. temperature is 200° F. Connection is NPT female.

***Style F*—** Use with tanks. Maximum pressure is 80 psi. Maximum temperature is 250° F. Connection is NPT female.

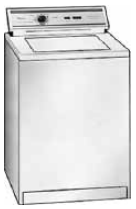
Floor Sweeper

Sweep dust and dirt from your facility with this push-type floor sweeper. Rotary side brush sweeps dirt and dust from walls and corners into the path of the wide main brush. (Sweeping width is 26″.) Main brush then deposits the dirt into the sweeper's 9-gal. plastic hopper.

Base is 15⅜″ Ht. × 31″ Wd. × 40½″ Dp. Frame is steel and brushes are nylon. Sweeper includes two side wheels, one center swivel caster, and height-adjustment knobs. Handle is steel, 36″ long, and folds for easy storage.

7425T15 ..... $695.26

Washer and Dryer



Washer

Dryer

Washer—This top-loading washer has five cycle selections, a single-speed motor, and a safety mechanism that locks the lid at the start of a cycle. The tub is porcelain for rust and corrosion resistance. Self-leveling rear legs and a drain are included. Cabinet is galvanized steel with a white finish. Cord is 5½ feet long with a three-prong plug. UL listed and CSA certified. Estimated yearly energy cost is $16.00 when used with an electric water heater, and $10.00 when used with a natural gas water heater. Your energy cost depends on your utility rates and use. The estimated cost is based on eight washloads a week and 10.65 cents per kWh for electricity and $1.218 per therm for natural gas. For more information, visit www.ftc.gov/energy.

Electric Dryer—This front-loading dryer has three cycle selections (heavy duty, normal, and delicates), an overload protector, and a steel drum. Cabinet is galvanized steel with a white finish. Cord is 4 feet long with a three-prong plug. UL listed.

Magnetic Stud Finders

Economy Magnetic Finder

Standard Electronic Finder

Locate studs before starting your project. For use on most surfaces including drywall, plywood, paneling, and concrete.

Economy Magnetic Finder—Includes a rotating vial for horizontal and vertical alignment. No batteries required.

Electronic Finders—Measure changes in wall density to locate studs. An audible signal sounds when a stud is located. Both use one 9V battery (sold separately).

Standard model has four LEDs that also signal stud location. *Multipurpose model* has an LCD scanner that also locates metal pipes, conduit, rebar, and unshielded "hot" wires. It can also locate ½″ dia. rebar in concrete up to 3″ deep.

	Max. Wall Depth Scanned	O'all Size, Ht. × Wd. × Dp.

Catch Basin Cleaner

Remove sludge and debris from your basins and sewers. Made of 18-ga. steel, cleaner has holes on all sides to drain liquid. It also has a ¾″ NPT female connection for attaching an iron pipe handle (not included).

Cleaner—6″ Ht. × 6″ Wd. × 8⅜″ Dp. **2585K3** $27.48

Tree- and Lumber-Marking Spray Paint

Solvent-based aerosol paint provides bright visual identification at a distance, yet will not soak into wood. One can covers 56 sq. ft. at 1 mil thick. Application temp. is 30° to 100°F. Furnished in a 12-oz. net wt. can. **To Order:** Please specify color: nonfluorescent light blue, orange, or yellow; fluorescent pink or red.

58495T71 ..... 1-11 $4.66 12-Up $4.16

Ground Probing Rods

Before you dig, use these rods to locate sewer and water mains, drain tile, and other underground installations.

Steel rod has a ½″ diameter shaft. Handle is 15¾″ long and has vinyl grips.

Fiberglass rods are excellent for areas where electrical components are buried. They have a ⅝″ diameter shaft with a nonreplaceable 1⅝″ pointed steel tip. Handles are 13¼″ long and have polyethylene end caps.

	Steel		Fiberglass	
4-ft. Rod	**1070T25**	$27.00	**1070T21**	$31.79
5-ft. Rod	———	———	**1070T22**	33.20

Metal Detectors

Compact

This hand-held detector finds metallic objects through most nonmetallic construction materials (including concrete) up to 6″ deep. An LCD display and audible signal pinpoint both the location and the depth of your target. Made of water-resistant polystyrene, detector is only 9″ Lg. × 4″ Wd. × 2″ Ht. Operates on one 9V battery (included).

Detector **1379T66** $174.26

Deep Reach

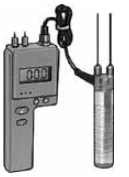
Speaker sound and needle movement alert you when buried ferrous and nonferrous metal objects are present in soil, asphalt, and concrete. Detector has a submersible, 8″ dia., ABS plastic search coil that resists false readings from wet foliage, wet pavement, and mineralized soil. It can locate a manhole cover buried approximately 3 feet deep. Handle adjusts from 38″ to 50″ long. Battery check system and two 9-volt batteries are included.

Stereo headphones screen noisy distractions.

Hard-shell carrying case provides protection during storage and transport.

Detector	**1166T1**	$664.62
Stereo Headphones	**1166T2**	83.64
Hard-Shell Carrying Case	**1166T4**	156.92

Digital Moisture Detectors



With 3¼″ Insulated Pins

Check the moisture content of wood and other building materials. Detector uses two ⁵⁄₁₆″ noninsulated integral electrode pins that are mounted directly to the meter (two replacement pins are also included). For deeper penetration, two 3¼″ insulated electrode pins attach to the meter with a 3-ft. cord (pins and cord included).

Detector has three scales. The wood scale measures moisture from 6% to 40% in lumber, studs, and flooring. A comparative reference scale reads from 0 to 100 and is used in nonwood materials such as concrete, insulation, and roofing. The gypsum scale measures moisture from 0.2% to 50% in sheetrock (drywall). Detector also accumulates up to 100 readings and gives you an average. Operates on one 9V battery (included).

Detector—8″ Lg. × 3″ Wd. × 1⅝″ Ht.	**1094T19**	**Each**	$538.42
Repl. 3¼″ Insulated Pins	**1094T16**	**Each**	$22.53
Repl. ⁵⁄₁₆″ Noninsulated Pins (Pkg. of 4)	**1094T15**	**Pkg.**	$11.23

Underground Cable and Pipe Warning Tape

To prevent damage, bury this tape above piping and cable to warn excavators. The tape combines a continuous CAUTION message with one of the messages below.

Polyethylene tape is highly visible. ***Aluminum*** tape can be located using nonferrous metal detectors.

High-Traffic Scraping Mats

These durable mats withstand heavy indoor and outdoor use.

Rubber Mats— Elevated edges on all four sides hold dirt and moisture away from shoes and keep floors clean. The edges are tapered to prevent tripping. Mats are slip resistant and flexible, even in cold and wet weather. Color is black.

Finger mats have flat-topped rubber bristles to scrape and brush dirt away. *Raised-surface mats* have oblong, molded rubber projections to scrape dirt away.

Nylon Mats— A nylon fiber surface scrapes dirt and moisture from shoes while the rubber backing provides durability. Mats have edging on all four sides. Color is black.

Scraping and Drying Mats

Keep your floors clean and dry. The surface of these mats scrapes your shoes and absorbs moisture. Mats have a vinyl backing and black edging on all four sides. For indoor use.

Ribbed and Multidirection Ribbed Mats— The ribbed polypropylene surface aggressively scrapes shoes and absorbs moisture, while the channels trap dust, moisture, and dirt. Mats are quick drying and easy to clean. **To Order:** Please specify blue, brown, or dark gray.

Ribbed mats have a straight rib design that runs from one end of the mat to the other. *Multidirection ribbed mats* have a zig-zag rib design for scraping in multiple directions.

Dual-Surface Mats— A two-in-one surface cleans and dries shoes. Mats have polypropylene loop for scraping and olefin for quick-drying. **To Order:** Please specify blue or dark gray.

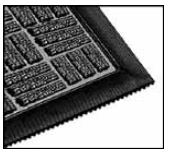
High-Traffic Scraping and Drying Mats



Dry floors are safer floors. These durable, rubber-backed mats hold up to 1½ gallons of water per square yard and have elevated rubber edges on all four sides to contain moisture. Plus they have polypropylene-topped rubber ribs to scrape and provide traction. Grippers on the back prevent movement. For indoor use.

To Order: Please specify blue or dark gray.

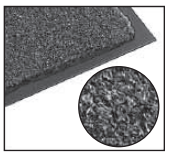
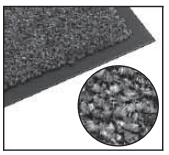
Drying Mats



Olefin



Nylon

Topped with carpet, these mats provide excellent moisture absorption while reducing the amount of dirt being tracked into your facility. They work well in conjunction with scraping mats. All have a vinyl backing and black edging on all four sides. For indoor use.

To Order: Please specify brown, dark gray, or red/black (more red than black).

***Quick-Drying Olefin Mats*—**Compared to nylon, olefin mats dry faster.

***Wear-Resistant Nylon Mats*—**Resist crushing for better wear resistance than olefin mats as well as better water absorption.

Sample Packs—Include small swatches of each color available.

Edging for Vinyl-Backed Mats

Give your mats a finished look. Edging is vinyl and 1″ wide and can be used with vinyl-backed mats from 1/4″ to 3/8″ thick. Color is black. For indoor and outdoor use.

Complete kit includes a 25-ft. long piece of edging, a 4-oz. brush-top can of adhesive, and an application roller. For additional adhesive, see 7507A on page 3459.

		Per Ft.
Edging	68005T46	$1.15
Complete Kit	68005T43	Each $50.99

Sticky-Surface Mats

Dirt, dust, and other contaminants from shoes and wheels stick to the tacky surface instead of getting tracked into your facility. Ideal for contamination control.

Peel-Off Disposable Sticky-Surface Frameless Mats

Always have a clean mat. When the top sheet gets dirty, pull the numbered corner tab to remove it and expose the next clean sheet. Made up of layers of adhesive-coated polyethylene sheets with an adhesive backing. Apply to any clean, dry surface. For indoor use.

To Order: Please specify blue, light gray, or white.

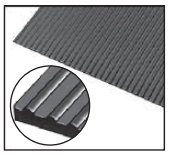
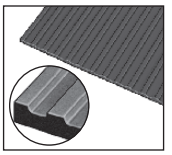
Round- and Flat-Rib Antislip Traction Mats



Vinyl Round Rib



Rubber Flat Rib

Round- and flat-rib mats are easier to clean than V-rib mats, yet still give you sure footing while scraping dirt off your shoes. Ribs run lengthwise. For indoor and outdoor use. Color is black.

***Vinyl Round-Rib Mats*—**Resist grease and chemicals.

***Rubber Flat-Rib Mats*—**More durable with greater slip and abrasion resistance than the vinyl mats. They absorb shock, resist impact, and remain flexible at low temperatures.

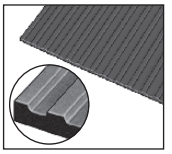
High-Traffic Traction Mats

Smooth



Flat Rib

Nylon reinforcement gives these rubber mats exceptional strength and durability. Plus, they remain flexible at low temperatures. For indoor use. Color is black.

***Smooth Mats*—**Resist damage from spikes, cleats, and even fork-lift traffic. They're easier to clean than flat-rib mats. Use where high traction is not essential.

***Flat-Rib Mats*—**Get abrasion and slip resistance. Mats resist punctures and impact and absorb shock. Ribs run lengthwise.

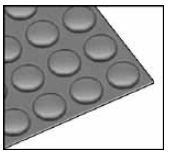
Raised-Disc Antislip Traction Mats and Floor Tiles



The raised-disc surface provides traction and is easy to clean. For indoor use. **To Order:** Please specify black or light gray.

Vinyl Mats— Resist grease and chemicals.

Rubber Floor Tile— More durable with greater slip and abrasion resistance than vinyl mats. Plus, tile remains flexible at low temperatures. Install with the adhesive sold separately. *Adhesive* is a two-part solvent-free epoxy. Application time, after mixing, is 40 to 50 minutes. Fully dry in 72 hours. One gallon covers approximately 125-150 sq. ft.

Temporary Carpet and Floor Protectors

Film with Optional Applicator

Cover your carpets and floors during painting and remodeling work. Protectors withstand high traffic. For indoor use.

Adhesive-Backed Polyethylene Film

Made of tear-resistant polyethylene film, these protectors have a pressure-sensitive adhesive backing. The adhesive keeps the protectors in place, but does not permanently bond to the floor. You can leave them in place for up to 30 days without harming floors or carpets. *Optional applicators* (sold separately below) reduce installation time; applicators only work with 200-ft. and 500-ft. long protectors.

Protectors for Carpets— Not for use on wool or other natural fiber carpets. Color is clear.

Protectors for Floors— Great for linoleum and ceramic tile. Not for use on hardwood floors. Color is a green tint.

Paper Floor Protector

Similar to heavy kraft paper, this temporary floor protector is made of recycled paper and offers moisture resistance. Keep in place with masking tape. For use on most floors. Color is tan. Size is 35″ Wd. × 166 ft. Lg. × 8 mils Thick.

2848T12 ..... **Roll** $12.11

Nonskid Matting Tape and Underlay

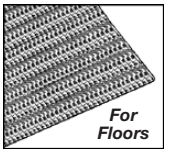
Bunching, creeping, and sliding mats and rugs can be as dangerous as they are annoying. Keep them in place with this tape or underlay. Both can be cut to size with scissors. For indoor use.

Tape

Mesh-lined tape has an odorless, pressure-sensitive adhesive on both sides. For carpets and floors. Color is off-white.

Wd. × Lg.		Roll
2 1/2″ × 25 ft.	76375A76	$12.43
6″ × 25 ft.	76375A61	21.38

Underlay



For Floors

Underlay for Carpet— Made of an adhesive-coated polyester fabric, this underlay is reusable. Color is off-white.

Underlay for Floors— Made of plant-based plastic which resists odor, bacteria, mold, and mildew. It contains no adhesives. Color is off-white.

Fits Mat/ Rug Size	*For Carpet*			*For Floors*

Antifatigue Sponge Mats

Thousands of tiny air bubbles embedded inside the mats create a soft, comfortable cushion. Mats are vinyl and resist grease, oil, and chemicals, but should be cleaned immediately after spills. They have tapered edges on all four sides, unless noted. Color is black. For indoor use.

***Smooth Mats*—** Have an easy-to-clean surface. Use where high traction is not essential.

***Ribbed Mats*—** For scraping and moderate traction.

***Textured Mats*—** Have good traction. **To Order:** Please specify with or without yellow borders on the two length sides.

***Diamond-Tread Mats*—** Have a multidirectional surface pattern for the best traction. **To Order:** Please specify with or without yellow borders on the two length sides.

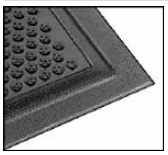
Wear-Resistant Antifatigue Sponge Mats

Durable and cushioned, mats are made of nitrile rubber, which doesn't absorb liquids so they're ideal in wet environments. They have a textured surface for traction and tapered edges on all four sides. For indoor use.

Standard Mats



Without Borders

A cushioned sponge is sealed between hard top and bottom layers of nitrile rubber for cushioned comfort and wear resistance. Resist oil, grease, and chemicals. Color is black.

Mats with borders have yellow and black striped borders on the two length sides for safety and visibility.

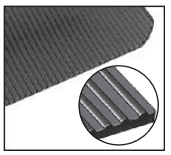
Ribbed Wear-Resistant Antifatigue Sponge Mats



The ribbed top gives traction and a durable surface for scraping while the sponge backing provides soft cushioning. The round rib makes mats easy to clean. Made of vinyl, they resist chemicals. They have tapered edges on all four sides, and the ribs run lengthwise. Color is black. For indoor use.

7/8″ thick mats have more cushioning and comfort.

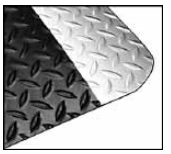
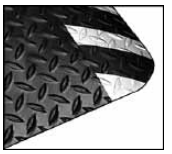
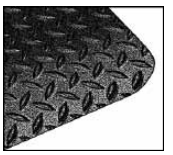
Diamond-Tread Wear-Resistant Antifatigue Sponge Mats



Uncoated with Solid Borders



Uncoated with Striped Borders



Grit Coated without Borders

The comfort of an antifatigue sponge mat is combined with a durable top layer of vinyl that protects the sponge from wear. Mats also have a diamond-tread surface pattern for excellent traction. Resist grease, oil, and chemicals. Mats have tapered edges on all four sides. Color is black. For indoor use.

Mats with borders have borders on the two length sides for safety and visibility. **To Order:** Please specify border color: solid yellow or yellow and black striped.

Grit-Coated Mats— An abrasive coating is added to the surface for even better traction and durability.

Smooth Wear-Resistant Antifatigue Sponge Mats

The wear-resistant vinyl or rubber tops create a durable and easy-to-clean surface while the inner sponge reduces fatigue. Use where high traction is not essential. Mats have tapered edges on all four sides. For indoor use.

Vinyl Mats— Resist grease, oil, and chemicals. **To Order:** Please specify black or dark gray.

Marbled Rubber and Marbled Vinyl Mats— The mat surface has a marbled pattern. *Rubber mats* are more durable and abrasion resistant than vinyl. *Vinyl mats* are thicker for extra cushioning and comfort; and they resist grease, oil, and chemicals. **To Order:** Please specify pattern color. For rubber choose black or light gray. For vinyl choose black, dark gray, or light gray.

Reinforced-Rubber Mats— For exceptional strength and durability, the mat surface is reinforced with nylon. Mats resist damage from spikes, cleats, and blades—they even withstand forklift traffic. Excellent for use in high traffic areas. Color is black.

Extended-Life Antifatigue Mats

Designed to endure years of continuous use, these polyurethane mats are the ultimate in durability and comfort. Plus, unlike rubber and vinyl, polyurethane mats won't lose their elasticity. They resist chemicals and have tapered edges on all four sides. For indoor use.

Sponge Mats— A cushioning sponge is sealed between top and bottom layers of durable polyurethane. Plus, a textured surface provides slip resistance. Color is black.

Solid Mats— Made from solid polyurethane with firm, yet cushioned domes. Color is dark gray. Rated for use in Class 100 clean rooms.

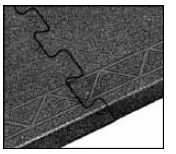
Textured Antifatigue Mats

Interlocking End

Interlocking Center

Individual



A waffle-shaped backing cushions your feet and absorbs shock while a textured surface provides traction. Color is black. For indoor and outdoor use. *Grease- and chemical-resistant mats* resist oil, grease, chemicals, and acids.

Interlocking Mats— Have integrated connectors to link multiple mats together. Connect two end sections or combine end sections with one or more center sections to create the length you need. All exposed edges are tapered.

Individual Mats— All edges are tapered. *Note:* Not compatible with interlocking mats.

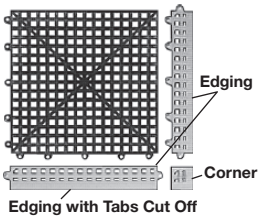
Interlocking Drainage Floor Tiles

Create a custom floor layout by interlocking tiles in any direction. Arrange them to fit around corners and machinery—just trim to size with a utility knife. Tiles are cushioned vinyl for comfort and have an open-grid design to drain liquids. They resist grease, oil, and chemicals. For indoor and outdoor use. *Optional tapered edging* prevents tripping.

Flexible Tiles



Flexible tiles easily roll up and out of the way for cleaning the floor underneath. Drainage openings are ⅜″ × ⅜″.

Optional tapered edging has male tabs and female slots for installation along any side of the tile. Cut off tabs on the edging when installing on the male edge of the tile.

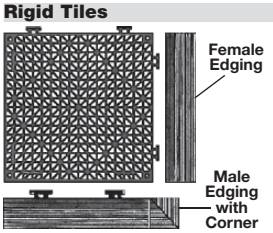
To Order: For tiles and edging, please specify black, blue, dark gray, or yellow.

	Size	Thick.		1-49	50-Up
Tiles	12″ × 12″	9/16″	6813T1	$5.89	$5.00

	Size		
Optional Tapered Edging	12″ × 2″	6813T2★	$3.43
Optional Tapered Corner	2″ × 2″	6813T3	1.34

★ Fits both the male and female edges of the tile.

Rigid Tiles



Rigid tile is more durable than flexible tile, withstanding heavy loads and rough use. Tiles have 7/16″ × 7/16″ × 9/16″ triangular drainage openings. Color is black. *Grit-coated tile* has an abrasive coating for additional traction.

Tiles have two sides with male tabs and two sides with female slots. *Optional male tapered edging* fits in the female slots. *Optional female tapered edging* fits on the male tabs.

Female with Corner	14″ × 2½″	69025T28	7.81	69025T29	9.98

Diamond-Tread Interlocking Antifatigue Mats

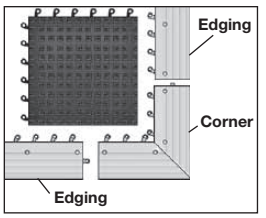
Create the mat size you need. Mats have integrated connectors to join them in any direction. Cut connectors off for a finished look. Both are rubber with a diamond-tread surface for exceptional traction. Color is black. For indoor and outdoor use.

General Purpose Mat— For dry areas.

Grease-Resistant Mat— Stands up to occasional contact with grease and chemicals.

	Size	Thick.		
General Purpose Mat	36″ × 36″	½″	8018T13	$69.65
Grease-Resistant Mat	36″ × 36″	½″	8018T14	99.36

High-Traffic Interlocking Antifatigue Tiles



Get a custom floor layout that withstands heavy use and cart traffic. Tiles interlock with each other in any direction—simply add or remove tiles as needed. They're cushioned for comfort and have a textured surface for good traction. Plus, these vinyl tiles resist grease, oil, and chemicals. Color is black. For indoor use.

Grit-coated tile has an abrasive coating for increased traction and durability.

Optional Tapered Edging— Prevents tripping and has four ¾″ dia. mounting holes (fasteners not included) for permanent installation. Color is yellow.

	Size	Thick.		Each	Pkg. Qty.

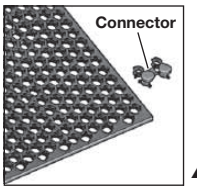
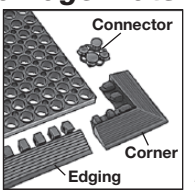
Food-Grade Flexible Drainage Mats



A



B

Mats resist mildew and bacteria making them perfect in food applications. Plus they're flexible, cushioned rubber for comfort and can easily roll up and out of the way for cleaning underneath. Mats meet NSF/ANSI standards. For indoor use. *Style A* has ¾″ dia. drainage holes. *Style B* has ⅞″ dia. holes. *Optional connectors* (sold individually) join two or more mats. Use one connector every 12″.

Grease-Resistant Mats— For occasional contact with grease. Color is brown.

Greaseproof Mats— For constant contact with grease and oil. Color is red.

Modular Rigid Drainage Mats

Design a custom floor layout. Rigid and lightweight, these corrosion-resistant polyethylene mats also resist acids, salt, gasoline, solvents, and chemicals. Drainage openings are 2½″×1¾″ to let liquid, dirt, and small debris pass through. Cut to size with a circular saw or handsaw. Color is black.

Optional tapered edging minimizes tripping. Attaches with connectors (sold separately) and can be cut to size with a handsaw. The *60″ wide tapered edging* includes tapered corners.

Connectors join flooring and edging. Use at least two for 24″ and 48″ edges; four for 96″ edges.

Rubber feet keep flooring in place. Use 15 rubber feet with 6273T41; 25 with 6273T21.

Antislip Drainage Mats with Yellow Safety Borders

For safety and visibility, mats have a high-traction surface and tapered yellow safety borders on three edges. The fourth edge can be fitted flush against machinery. Mats are made of heavy duty cushioned vinyl that withstands heavy loads and resists grease, oil, and chemicals. Drainage holes are 5/8″ dia. Color is black with 6″ wide yellow borders. For indoor use.

Grit-coated mats have an abrasive coating for exceptional traction.

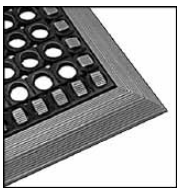
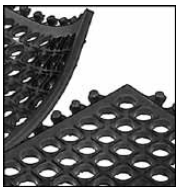
Flexible Grease-Resistant and Greaseproof Drainage Mats

A&B



C



D

E

Get the benefits of a drainage mat combined with a comfortable, cushioned surface. Mats are flexible rubber so they roll up for access to clean the floor underneath. Color is black. Use *grease-resistant mats* for occasional contact with grease; use *greaseproof mats* where grease and oil are constantly present.

***(A) Grease-Resistant Mats*—** Have 1″ dia. drainage holes and tapered edges. For indoor and outdoor use.

***(B) Heavy Duty Grease-Resistant Mats*—** Thicker than our other grease-resistant mats for added durability. All have 7/8″ dia. drainage holes. For indoor and outdoor use. Optional connector lets you join two or more mats. Use two for 18″ wide sides, three for 24″ wide sids, and four for 36″ wide sides. Optional tapered edging prevents tripping; it's 2″ wide and can be cut to size. Color is yellow.

***(C) Heavy Duty Grease-Resistant Mats with Colored Border*—** Have 1 1/8″ dia. drainage holes. For indoor use. Mats with three-sided border have a tapered border along three edges. Fourth edge is not tapered so it can fit flush against machinery. Mats with four-sided border have a tapered border on all four edges. **To Order:** Please specify border color: orange or yellow.

***(D) Grease-Resistant and Greaseproof Interlocking Mats*—** Have built-in connectors to link multiple mats together in any direction. Connectors can easily be cut off for a finished look. Mats have 7/8″ dia. drainage holes. For indoor and outdoor use.

***(E) Nitrile Rubber Greaseproof Mats*—** They're treated to protect the mat against odors and degradation. They also resist oil and cutting fluid and are safe for welding applications. All have 3/4″ dia. drainage holes and tapered edges. For indoor and outdoor use.

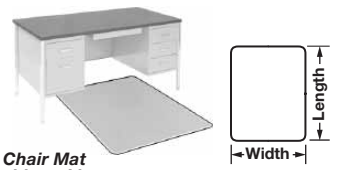
Clear Chair Mats

Chair Mat with Lip



Chair Mat without Lip

Protect your carpets and floors from the wear of constant foot traffic and chair casters. Mats are vinyl with a slip-resistant textured surface. Color is clear. For indoor use.

***Mats for Carpets*—** Have a gripper backing to keep them firmly in place. *Antistatic mats* dissipate static electricity.

***Mats for Hard Floors*—** Have a smooth backing.

Foot-Warming Mats

Rubber Mat

Keep feet warm in cold, drafty rooms. Mats can be used on any dry surface, even carpet. All have a 6-ft. power cord with two-prong plug. For indoor use.

***Rubber Mats*—** Made of flexible, corrugated rubber and thermostatically controlled to maintain a constant temperature. Color is black.

***Carpet Mat*—** Made of polyester with a carpet top and a felt-padded bottom. Mat includes a high/low heat switch with 8-ft. cord. Color is light gray. UL and C-UL listed.

About Static Control Mats

Static electricity discharge (also known as electrostatic discharge or ESD) is one of the most common causes of electrical equipment damage and malfunction. Walking on a static control mat drains the electrical charge from you before it causes problems. Some static control mats require ground cords for best performance (see individual presentations).

For additional static control products, see page 977.

Effectiveness in Draining a Static Charge

The three types of static control mats are classified by their surface resistivity range (see chart). Expressed in ohms, surface resistivity measures how much a mat resists draining a static charge. The lower the surface resistivity (the lower the resistance), the faster and more effectively the mats drain the electrical charge.

Type of Mat	Draining Rate	Surface Resistivity
Antistatic	Slowest	10^9-10^{11} ohms
Static Draining	↓	10^6-10^9 ohms
Conductive	Fastest	10^3-10^6 ohms

Antistatic Antifatigue Sponge Mats

Get static control and comfort. Mats have a surface resistivity of 10^9 ohms for draining static electricity without a ground cord. Plus they're made of cushioned vinyl sponge to reduce fatigue. A textured surface provides traction. Mats resist stains and chemicals, but should be cleaned immediately after spills. Have tapered edges on all four sides. For indoor use.

To Order: Please specify black, brown, or light gray.

Standard Size Mats

Wd. x Lg.	Thick.		Each
24″ x 36″	3/8″	6930T21	$29.49

48″	3/8″	60 ft.	6930T52	22.21

Conductive Antifatigue Mats

With surface resistivity of 10^6 ohms, these mats offer the fastest, most effective draining of static electricity. All require a ground cord (sold separately) that plugs directly into the grounding snap located on one corner of each mat. Color is black. For indoor use.

Wear-Resistant Antifatigue Sponge Mats

Mats have a hard layer of diamond-tread vinyl to provide excellent traction and durability, along with a vinyl sponge backing to reduce fatigue. They have tapered edges on all four sides.

Wd. x Lg.	Thick.		
18″ x 36″	9/16″	69065T2	$79.38

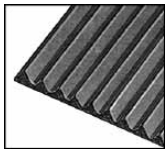
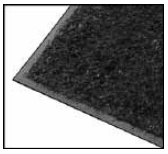
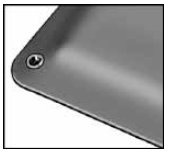
Static-Draining Mats



V-Rib



Carpet Top



Wear-Resistant Antifatigue Sponge

***V-Rib Mats*—** Have a surface resistivity of 10^8-10^9 ohms for good static draining without a ground cord. Plus, the V-ribs provide more traction than the carpet-top and wear-resistant mats. Mats are vinyl and resist grease, oil, and chemicals. Color is light gray. For indoor and outdoor use.

***Carpet-Top Mats*—** With a surface resistivity of 10^7-10^8 ohms, they provide better static control than the V-rib mats and still don't need a ground cord. They have a nylon carpet top that removes dirt and moisture from your shoes and a rubber backing that keeps mats in place. Mats also have tapered edges on all four sides. Color is black. For indoor use.

***Wear-Resistant Antifatigue Sponge Mats*—** Have a surface resistivity of 10^7 ohms and require a ground cord (sold separately). Cord plugs directly into the grounding snap located on one corner of each mat. The top and bottom of these mats are smooth, hard vinyl for durability, with a vinyl sponge center for cushioning. They have tapered edges on all four sides. Color is dark gray. For indoor use.

Switchboard Mats

Tested to withstand the stated dielectric test voltage, mats protect workers from electrical shock when working around high-voltage equipment.

Mil. Spec. Vinyl Switchboard Mats

Diamond Tread

Mats meet Mil. Spec. DTL-15562G. Made of vinyl, they're UV resistant and also resist grease, oil, and chemicals. Mats have a textured backing to prevent skidding. For indoor and outdoor use.

Smooth, Type II mat is easy to clean. It's for use where high traction is not crucial. Color is black.

Diamond tread, Type III mat has a diamond-tread surface for excellent traction. Color is light gray.

Wd.	Maximum Recommended Use Voltage	Mil. Dielectric Test Voltage	Full Roll		Per Ft.
Smooth, Type II (1/8" Thick.)

Antislip Tape

Abrasive Antislip Tape

Roll

Disc

Strip with Conformable Backing

Tape has an adhesive back. For indoor and outdoor use.

Abrasive Antislip—Tape has a high-traction surface. You can walk on it immediately after installation. *Strips, squares, and discs* are sold in packages of 10, unless noted. **To Order:** For Choose-a-Color, please specify clear, light gray, red, or yellow.

Extreme-Traction Abrasive Antislip—Has an extra-coarse surface for excellent traction. Great for muddy and greasy areas and also for occasional contact with water. You can walk on tape immediately after installation. Color is black.

Abrasive Antislip with Conformable Backing—An aluminum backing conforms to corners and uneven surfaces, making tape perfect for ladder rungs and diamond tread plates. After installation, wait one hour before walking on this tape. Color is black.

Antislip Floor Coatings

Antislip coatings contain grit and also are designed to last longer than antislip tape. These coatings meet OSHA standards and ASTM requirements for durability, slip resistance, and impact resistance. Also, they help comply with ADA when properly applied. Use indoors and outdoors on concrete, wood, and metal.

Ready-to-Use Antislip Floor Coatings

Aerosol Epoxy— Can also be used on fiberglass. Good for areas with pedestrian traffic. Not tested for compliance with OSHA and ASTM standards. This epoxy is compliant under all state VOC rules in effect on September 1, 2011.

One-Part Epoxy— Offers greater durability and slip resistance than aerosol epoxy. It requires no mixing and is good for areas with pedestrian traffic. Apply over a primer, using the phenolic roller cover (sold separately). This epoxy is compliant under all state VOC rules in effect on September 1, 2011.

Water-Based Acrylic— Has low VOCs and quick and easy cleanup. Great for pedestrian traffic. Apply with a roller over a primer. This acrylic is compliant under all state VOC rules in effect on September 1, 2011.

High-Traction Two-Part Antislip Floor Coatings

Heavy Duty Epoxy— Perfect for heavy vehicular traffic areas. They must be mixed before use. Apply with a roller. Epoxy is compliant under all state VOC rules in effect on September 1, 2011, except in the Los Angeles area.

Low-Odor Chemical-Resistant Epoxy— Has zero VOCs and a low-odor formula yet can withstand pedestrian, cart, and hand-truck traffic. Apply with a roller. Primer is not required. This epoxy is compliant under all state VOC rules in effect on September 1, 2011.

Extreme-Traction Two-Part Antislip Floor Coatings

Provide the highest traction and impact resistance. Apply with a roller over a primer. Not tested for compliance with OSHA, ASTM, and ADA standards. Epoxy is compliant under all state VOC rules in effect on September 1, 2011, except in the Los Angeles area.

Mil. Spec. Standard Epoxy— Meets MIL-PRF 24667C Types 2 and 4, Composition G.

Mil. Spec Heavy Duty Epoxy— Provides even more wear and impact resistance. Meets MIL-PRF 24667C Types 1 and 2, Composition G.

Two-Part Epoxy Primers

These do not contain grit. They must be mixed before use. Epoxies are compliant under all state VOC rules in effect on September 1, 2011, except in the Los Angeles area.

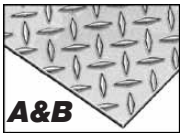
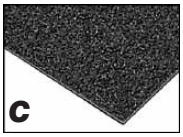
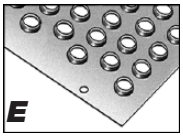
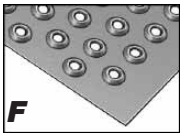
Antislip Floor Plates and Drainage Floor Plates









Add slip resistance to floors, ramps, stairs, and dock areas.

(A-D) Antislip Floor Plates

(A) Adhesive-Backed Diamond-Tread Aluminum Plates— Quick and easy to install; peel off the backing and stick plates on smooth, clean surfaces. They have a raised diamond-tread pattern for slip resistance that's easy on your hands, knees, and shoes.

(B) Diamond-Tread Aluminum Plates— Have a raised diamond-tread pattern for slip resistance that's easy on your hands, knees, and shoes.

(C) Abrasive Steel Plates— A unique grit-like metal coating provides a long-lasting, aggressive slip-resistant surface. Color is black.

(D) Abrasive Plastic Plates— Virtually maintenance free, these corrosion- and UV-resistant plates have an embedded abrasive-grit coating on both sides for slip resistance. They can be cut to size using a circular saw with carbide-tipped blade. Color is black.

(E-G) Antislip Drainage Floor Plates

(E) Galvanized Steel Plates— Excellent traction at an economical price. Drainage holes are 5/16″ dia. Plates have 1/8″ dia. mounting holes (fasteners not included).

(F) Carbon Steel Plates— Have 1/8″ dia. drainage buttonholes for traction without rough edges.

(G) Ultra-Antislip Serrated Galvanized Steel Plates— Serrated diamond-shaped openings provide superior traction while allowing liquids to drain and debris to pass through. Openings are 1 7/8″ × 11/16″.

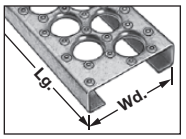
Metal Plank Grating

Ideal for platforms, stair treads, ramps, and decks. For indoor and outdoor use.
To Order: Please specify length from those listed.

Antislip Plank Grating



Raised projections provide traction, while 1⅜" dia. drainage holes let light and liquid pass through and prevent debris buildup. The surface is not serrated so it's easier on your hands, knees, and shoes. Cut to size with a band saw, hack saw, circular saw, or shears.

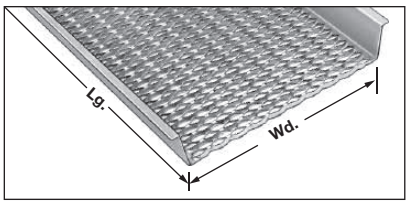
Ultra-Antislip Serrated Walkway Plank Grating



Diamond-shaped openings provide excellent traction while edge guards prevent tools and parts from falling over the side. Grating is galvanized steel and can be cut with a cutting torch, circular saw, or reciprocating saw. The diamond-shaped openings are 1⅞" × 11⁄16" for *24" wide* grating, 3⅞" × 1¼" for *30"* and *36" wide* grating. All meet OSHA requirement 1910.23 for elevated walkways. For indoor and outdoor use.
To Order: Please specify length from those listed.

Wd.	Ht.	Gauge	2-, 3-, 4-, 5-, 6-, 8-ft. Lengths	Per Ft.	10-, 12-ft. Lengths	Per Ft.

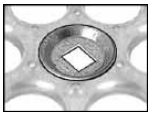
Plank Grating Fasteners



A

B

Secure plank grating to your support structure. Installation requires a hole in your support structure, as well as a square-neck carriage screw (sold separately, see pages 3178-3179).
(A) Antislip Plank Grating Anchor— Made of galvanized steel, this fits into the 1⅜" dia. drainage holes of our Antislip Plank Grating. Requires a ½" dia. screw.
(B) Ultra-Antislip Serrated Plank Grating Anchor— Designed to fit our Ultra-Antislip Serrated Plank Grating. 7012T5 is galvanized steel and fits grating with an 1⅞" × 11⁄16" diamond-shaped opening. Requires a 5⁄16" dia. screw. 7012T6 is Type 304 stainless steel and fits grating with a 3⅞" × 1¼" diamond-shaped opening. Requires a ⅜" dia. screw.

	Grating Height	Pkg. Qty.	Pkg.	
A	Any	10	7012T23	$7.69
B	Any	20	7012T5	14.94
B	5"	1	7012T6	5.53

Metal Bar Grating

Able to support heavier loads than plank grating, bar grating is good for trenches, mezzanines, walkways, work platforms, and floors. This grating has an open design that allows air, light, and debris to flow through. Cross bars hold the bearing bars in place; they are spaced 4″ apart center-to-center. Bearing bars provide uniform weight distribution. Fasteners are required for installation (not included, see page 2133).

Grating *with narrow openings* provides a higher load bearing surface and reduces the chance of something falling through. *Serrated* grating provides better traction.

Black-Finish Steel Bar Grating—Great for dry, noncorrosive areas. For indoor use only.

Galvanized Steel Bar Grating—Corrosion resistant. For indoor and outdoor use.

Stainless Steel Bar Grating—Better corrosion resistance than galvanized steel. Has a matte finish. For indoor and outdoor use.

Aluminum Bar Grating—Lightweight and rustproof, it's also nonmagnetic and nonsparking. For indoor and outdoor use. *Note:* 4-ft. wide grating is reinforced with banding.

To Order: Please specify length from those listed.

To Order: For custom sizes, please specify width and length. Steel and stainless steel bar grating has a max. width of 3 ft. and a max. length of 24 ft. Aluminum bar grating has a max. width of 6 ft. and a max. length of 24 ft. *Note:* All grating less than 17″ long and aluminum grating greater than 3-ft. wide is reinforced with banding.

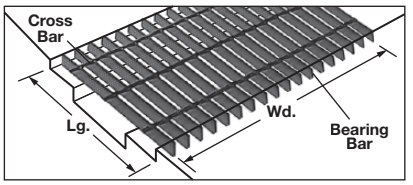
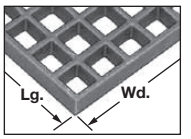
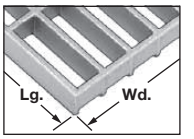
Grit-Top Corrosion-Resistant Fiberglass Grating

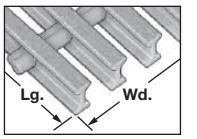




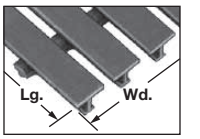
A&B



C



D



E

In addition to corrosion resistance, get better traction than our Steel, Stainless Steel, and Aluminum Bar Grating. This fiberglass grating has an abrasive grit surface and is lightweight, nonconductive, and nonmagnetic. Use it on trenches, walkways, catwalks, work platforms, ramps, and floors in washdown areas. To cut, use a circular saw with diamond-tipped blade. Cut ends need to be sealed with an epoxy sealer (sold separately). For fasteners, see page 2133. For indoor and outdoor use.

(A&B) Maximum Corrosion-Resistant Grating

Layers of resin and fiberglass strands are molded to form this grating—this construction provides maximum corrosion resistance and excellent impact resistance. It has an abrasive grit surface for added traction.

(A) Standard grating is green.

(B) Food-grade grating is formulated to protect against odors, stains, and degradation. Color is light gray. USDA accepted.

Also Available: Custom sizes; please ask for 6919T888 (Style A) or 7075T888 (Style B) and specify opening size (from the available choices listed in the table), height, width, and length.

(C-E) High Load Bearing Bar Grating

Grating is made from a higher percentage of fiberglass strands to handle heavy loads while spanning greater distances than the Maximum Corrosion-Resistant Grating. Bearing bars provide uniform weight distribution. Cross bars hold the bearing bars in place. **To Order:** Please specify length from those listed.

(C) Standard grating has a one-piece molded design. Color is light gray.

(D) High-strength grating has exceptional strength. It has bearing bars that are held in place with cross bars every 6″ to form a bonded interlocking assembly. Color is yellow.

(E) Narrow-opening grating has a smaller gap between bearing bars to prevent items from falling through, as well as to make it easier for carts to roll across. It has bearing bars that are held in place with cross bars every 6″ to form a bonded interlocking assembly. Grating, except 66035T57, T58, and T59, helps comply with ADA when properly installed. Color is dark gray, except 66035T57, T58, and T59 are yellow.

Also Available: Custom lengths; please ask for 6780T888 (Style C), 6228T888 (Style D), or 66035T888 (Style E) and specify bearing bar height, grating length, and grating width.

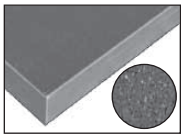
Solid Surface Grit-Top Corrosion-Resistant Fiberglass Grating



When open-surface grating won't do, choose this solid-surface grating—it is ideal for areas with wheel traffic and anywhere you would not want small items and debris to fall through. Grating has a grit-embedded top surface that provides good traction. It is nonconductive and nonmagnetic. To cut, use a circular saw with a diamond-tipped blade; cut ends need to be sealed with an epoxy sealer (sold separately). Color is green. For indoor and outdoor use.

Installation requires drilling through the grating as well as your structural support; fasteners are included.

Also Available: Custom sizes; please ask for 4638T999 and specify height, width, and length.

Bar Grating Fasteners

1

2

3

4

5

Secure bar grating, such as our Steel, Stainless Steel, and Aluminum Bar Grating on page 2131, to your support structure.

(1) Swivel-Lock Fasteners— Just tighten the bolt and the fastener swivels into place for easy installation, adjustment, and removal. Bottom flange is cast iron.

(2) Flat-Head J-Bolt Fasteners— A J-bolt wraps around the bearing bar and a plate secures the bearing bar to the support structure.

(3) Saddle Clip Fasteners— Bridge two bearing bars. Fasteners require a hole in the support structure as well as a threaded stud and hex nut (see pages 3182-3204 and pages 3206-3218). Overall height of the saddle plate is 1/2". Mounting slot is 3/8" × 9/32".

(4) C-Clip Fasteners— These fasteners hook onto the support structure and are connected by a bolt to the plate on top of the grating. They tighten from above the grating for easy installation.

(5) Grating Connector— Use a connector to tie two sheets of bar grating together. It lessens trip hazards by holding edges of sheets together as you walk on them.

To Order: For Styles 4 and 5, please specify bearing bar height in 1/4" increments from 1" to 2".

	Material	Fits Bearing Bar Ht.	Fits Bearing Bar Wd.	Fits Bearing Bar Spacing, Ctr.-to-Ctr.	Fits Support Structure Thick.	Bolt Included	Pkg. Qty.		Pkg.

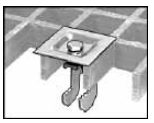
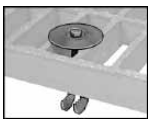
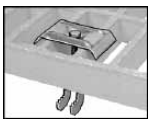
7



8



9



10

11

12

Made of Type 316 stainless steel, these fasteners are specifically designed for use with the Grit-Top Corrosion-Resistant Fiberglass Grating and the Solid Surface Grit-Top Corrosion-Resistant Fiberglass Grating on page 2132.

(6) Standard Fastener— Requires a hole in the support structure and secures to the structure with a 1/4"-20 hex head cap screw (not included, see page 3161).

(7) Saddle Clip Fasteners— Bridge two bearing bars and require a hole in the support structure. Overall height of the saddle plate is 1/2".

(8-11) Fasteners with C-Clip and Bolt— Hook onto the support structure and are connected by a bolt to the plate on top of the grating. They tighten from above the grating for easy installation.

To Order: For Styles 8-11, please specify grating height, except for 7010T52.

(12) Solid-Surface Grating Fastener— Requires a hole in the support structure as well as in the grating top (mounting hardware included).

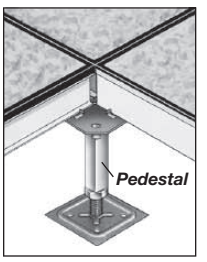
Elevated Steel Flooring

Create an elevated floor system. The floor panels lift out for easy access to wiring, telephone lines, and piping—great for computer rooms. Measuring 24" × 24" × 1" Thick., floor panels have a wooden core encased in galvanized steel with a marbled gray and white laminated surface. Uniform load rating is 250 lbs. per sq. ft. (Uniform load rating is the maximum evenly distributed load the floor can support.) Clean with a broom, vacuum, or damp mop only (do not use cleaning agents or wet mopping).

Pedestals adjust 3/4" up or down to accommodate uneven floors. They have a 4" square base plate with steel lugs to provide stability and support a corner of up to four panels. Secure pedestal to floors with the two 1/4" dia. mounting holes (mounting hardware not included).



Floor Panel with 1/16" Laminate	**68025T61**	$42.87
Floor Panel with 1/8" Laminate	**68025T62**	48.38
Pedestal (For 8" Floor Ht.)	**68025T66**	9.38

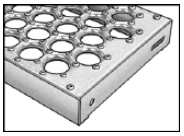
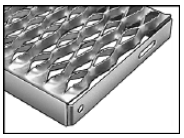
Stair Treads

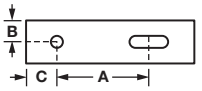
Plank-Grading Style



Antislip



Ultra-Antislip Serrated



Mounting Dimensions

Made of galvanized steel for corrosion resistance, these are the most economical stair treads we offer. Treads have two mounting holes on each depth side; one 7/16″ round and one 7/16″ x 1 3/4″ slotted. For indoor and outdoor use.

Antislip Surface— Small projections are combined with large, 1 3/8″ dia. drainage holes for a high-traction surface.

Ultra-Antislip Serrated Surface— Serrated openings provide superior traction while allowing drainage.

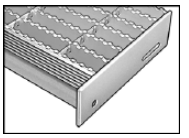
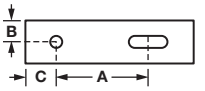
Heavy Duty Bar-Grating Style

Smooth-Surface High-Strength Steel



Ultra-Antislip-Surface Lightweight Aluminum

Corrosion-Resistant Stainless Steel



Mounting Dimensions

Choose these stair treads for durability. The *ultra-antislip surface* is serrated to provide superior traction.

High-Strength Steel— An open bar-grid pattern prevents debris from accumulating and a diamond-tread nosing provides traction. *Black-finish treads* have two mounting holes on each depth side; one 7/16″ round and one 7/16″ x 17/16″ slotted. They are for indoor use in dry, noncorrosive areas. *Galvanized treads* have two mounting holes on each depth side; one 7/16″ round and one 7/16″ x 7/8″ slotted. They offer better corrosion resistance than black-finish treads and are for indoor and outdoor use.

Lightweight Aluminum— Have better corrosion resistance than the galvanized steel treads. Plus, they're nonsparking and nonmagnetic. All have a ribbed nosing for traction. Treads have two mounting holes on each depth side; one 7/16″ round and one 7/16″ x 17/16″ slotted. For indoor and outdoor use.

Corrosion-Resistant Stainless Steel— Made of Type 304 stainless steel, these treads have better corrosion resistance than the steel or aluminum treads. They have a matte finish and a gritted nose for traction. Treads have two mounting holes on each depth side; one 7/16″ round and one 7/16″ x 17/16″ slotted. For indoor and outdoor use.

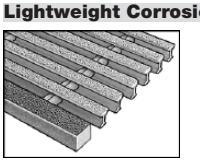
Lightweight Corrosion-Resistant Bar-Grating Style



These lightweight fiberglass treads are corrosion resistant, nonconductive, and nonmagnetic. They're yellow with gray nosing and have a grit-impregnated surface for traction. They do not have mounting holes. Cut treads with a circular saw using a diamond-grit blade and seal the cut end with an epoxy sealer (sold separately). For indoor and outdoor use.

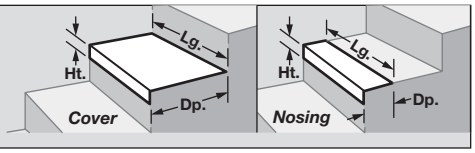
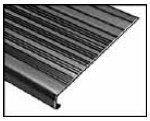
About Stair Tread Covers and Nosing

Stair tread covers and nosing not only protect worn stairs, they also provide a slip-resistant surface.

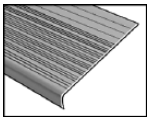
Covers protect the entire stair surface. On worn stairs, they provide a new stair surface. ***Nosing*** protects the front portion of the stair.



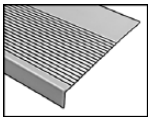
Stair Tread Covers



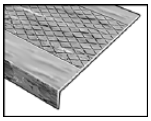
A



B



C



D

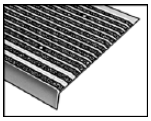
F



G

H

(A&B) Oil- and Chemical-Resistant Vinyl Covers— Fit square-nose concrete and wood stairs. To install, use stair tread adhesive sold separately. For indoor use.

(C-F) High-Traffic Rubber Covers— Fit square-nose concrete and wood stairs. To install, use stair tread adhesive sold separately. *Style F* comes with two 1″ wide abrasive strips for added traction. For indoor use.

(G) Corrosion-Resistant Aluminum Covers with Grit— A grit top gives these covers excellent traction in high-traffic areas. The color in the table below refers to grit. Covers have 1/4″ dia. countersunk mounting holes. To install, use construction adhesive sold separately on page 3455, or screw in place; see pg. 3353 for concrete screws or see 90031A on page 3020 for #10 wood screws. For indoor and outdoor use.

(H) Corrosion-Resistant Plastic Covers with Grit— Made of fiberglass reinforced plastic (FRP) for superior corrosion resistance in harsh environments. Cover has a yellow glow-in-the-dark nose for high visibility. To install use construction adhesive sold separately on page 3463, then drill and screw in place; see pages 3002 and 3049-3050 for stainless steel truss-head screws. For indoor and outdoor use.

Stair tread adhesive for Styles A-F covers 125-150 sq. ft./gal. Color is white. For indoor use.

To Order: For all stair tread covers, please specify color and length from the available choices listed in the table.

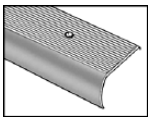
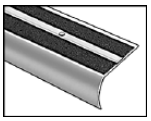
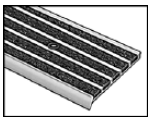
Stair Tread Nosing



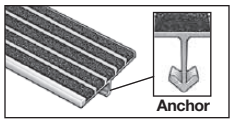
J



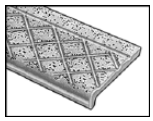
K



L



M



N

(J&K) Aluminum Nosing— An etched and anodized finish provides a slip-resistant surface. Simple to install, just screw nosing into place. For wood stairs, use #4 wood screws (see 90031A on page 3020). For indoor and outdoor use.

Style J has a ribbed surface. *Style K* has two abrasive strips for added traction.

(L&M) Aluminum Nosing with Grit— Five channels embedded with grit provide excellent traction and slip resistance. For indoor and outdoor use.

Style L can be installed in fresh concrete as well as on existing stairs. It has 1/4″ dia. countersunk holes for concrete screws (see page 3353). *Style M* has an integral anchor for installation in fresh concrete; no fasteners required.

(N) Cast Aluminum and Cast Iron Nosing with Grit— Embedded with abrasive grit for traction, this durable nosing can handle heavy traffic and rough environments. Ideal for concrete-filled, steel framed stairs. Mounting hardware included.

Cast aluminum is for indoor and outdoor use. *Cast iron* is for indoor use.

Nosing epoxy compound is for use between nosing and front edge of a stair to prevent cracks. Covers 75 lin. ft./qt. For indoor and outdoor use.

To Order: Please specify length.

Hole Diggers

Post hole diggers cut through soil to create a smooth, round hole. Pierce the ground with the curved, steel blade. Separate the handles to lift out the soil.

Digging bar is made of steel. One end has a flat, round platform for tamping; the other end has a straight-edged blade for digging.

Broadcast Spreaders

Evenly distribute ice-melting products and other small particles with these spreaders. They can also be used with fertilizer, except Styles J and L.

(E) Hand-held spreader has a hand-crank design.

(F-K) Push spreaders have a steel frame and pneumatic tires. *Style J* comes with a clear plastic hopper cover.

Optional clear vinyl hopper cover for Style H keeps contents dry. *Optional deflector kit for Style H* limits the spread pattern to 22″.

(L) Vehicle-mount spreader attaches to a 1¼″ or 2″ hitch receiver. For hitch receivers, see page 1346. It has a 12-volt motor with cigarette plug adapter.

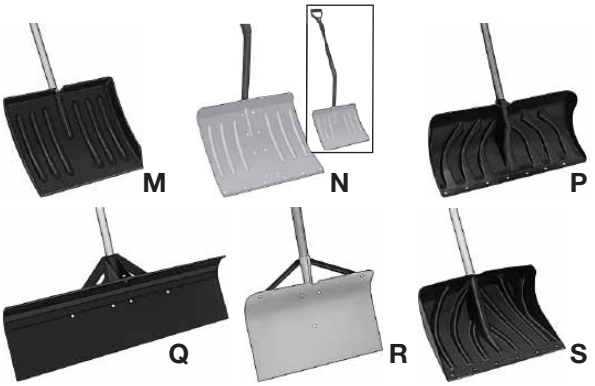
Ice and Snow Melters

Rock salt melts ice and snow in temperatures above 25° F. Made of sodium chloride.

Ice melt inhibits refreezing and will not harm vegetation. Made of calcium, magnesium, potassium, and sodium chlorides, it melts ice and snow in temperatures as low as –12° F.

Rock Salt (50-lb. Bag)	**6235A65**	$11.69
Ice Melt (50-lb. Box)	**6320A12**	18.18
Ice Melt (100-lb. Box)	**6320A14**	34.58

Snow Shovels and Pushers



Whether you need to dig through a snow drift or clear a sidewalk, these durable shovels and pushers can handle the job.

Style M—All have a wood handle. *Steel blade* has a nonstick coating. *Aluminum blade* has a steel wear strip.

Style N—Ergonomic steel handle is angled to reduce back strain. Blade has a steel wear strip.

Style P—For added strength, the blade on this pusher is ribbed and has a steel wear strip. *Plastic blade* has a fiberglass handle. *Aluminum blade* has a nonstick coating. Handle is wood.

Styles Q&R—The blade and handle on these pushers are reinforced for added durability. *Style Q* handle is fiberglass. *Style R* blade has a nonstick coating. Handle is wood.

Style S—Sized to lift snow and deep enough to push it. Blade has a galvanized steel wear strip. Handle is fiberglass.

Sprinkler Timers

Program these timers to water throughout the day. Housing is made of plastic.

Garden Hose Timers

Timer can be set to water every 6 hours, 12 hours, 24 hours, or up to 7 days—from 1 minute to 4 hours per cycle. It comes with one male and one female ¾″ garden hose thread fitting for programmed and manual use. Timer measures 6⅝″ Wd.×3″ Dp.×10¼″ Ht. and requires two AA batteries (sold separately).

Timer	70965K8	$42.87
AA Batteries (Pkg. of 2)	7745K55	6.25

Multizone Timers for Sprinkler Systems

Water six different zones up to four times a day, with cycles from 1 minute to 4 hours. Timer measures 8″ Wd.×3¾″ Dp.×6¼″ Ht. It operates on 110 volts AC. Includes a 5-ft. power cord with two-prong plug, quick-connect terminals, and two ⅞″ diameter unthreaded conduit entry connections on the bottom. Mount indoors or outdoors (fasteners included). ETL listed.

Timer	76675T34	$87.60

Sprinklers

Attach to a standard garden hose, and sprinklers are ready to water.

		Max. Coverage		
E	Oscillating	56×63 ft.	70145T6	$35.89
F	Impulse	86 ft. dia.	63225T37	26.54

Roof Repair Patching Compounds

Repair holes and seal gaps in roofing and gutters with these durable, water-resistant patching compounds. Cartridges fit standard caulk guns; patch in cans should be applied with a trowel.

Plastic—Patch has a petroleum-asphalt base. One gallon covers 12 sq. ft. at 1/8″ thick. Meets ASTM D4586.

Acrylic—This water-based patch is for use on metal, aluminum, concrete, and foam roofs. It can also be applied with a brush or roller. One gallon covers 25 sq. ft. at 1/16″ thick.

Heavy Duty—This neoprene rubber patch is the most flexible and watertight roof patch we offer. Developed for use on flashing, chimneys, and other high-stress areas, it's highly vibration resistant. One gallon covers 8 sq. ft. at 1/4″ thick.

	Size	Adheres to Surface

■ This product cannot be sold in the Los Angeles area.

Adhesive-Backed Roof Repair Rolls

Roll out a fast fix for leaky roofs and gutters with these peel-and-stick rolls—no additional coatings are required. Rolls work on clean, smooth, dry surfaces including wood, metal, masonry, and asphalt roofs. Backing is rubberized asphalt adhesive. Roll can be cut to size.

Use *aerosol primer* for optimal adhesion. One can covers 35 sq. ft.

Width	Thick.	Lg.	Reflective Aluminum		White-Coated Aluminum

Roof Shingle Removers

With the right leverage, prying old shingles off the roof is no problem. This remover has a notched blade for scraping and a reinforced pivot point for lifting. Blade is steel and measures 6 7/8″ Wd. × 10 1/2″ Ht. Handle is wood and measures 48″ long.

6321A12 ..... $44.00

Roof Coatings

Restore and reinforce your roof by filling cracks and forming a water-resistant seal.

Reinforced Roof Coatings

Use these petroleum-asphalt-based coatings on metal, composition, built-up, and other roof types. They're reinforced with fiber for durability. Not VOC compliant in California.

Black coating can also be used to protect foundation walls. One gallon covers 25 sq. ft. at 1/16″ thick. Coating meets ASTM D4479. Apply to a dry surface with a brush.

Reflective coating cuts cooling costs by reflecting the sun's rays. Made of aluminum, one gallon covers 50 sq. ft. at 1/32″ thick. Coating meets ASTM D2824, Type 3. Apply to a dry surface with a sprayer or brush.

	Size	Black Coating		Reflective Coating	
Can	1 gal.	7747T28	$16.54	7747T29	$33.00
Can	4.7 gal.	7747T31	78.24	7747T32	151.14

Heavy Duty Flexible Roof Primers and Coatings

Reflect up to 90% of the sun's rays with this flexible, water-based primer and coating. They provide long-lasting protection for metal, concrete, and foam roofs. Apply to a dry surface with a roller or brush. One gallon covers 80 sq. ft.

Gray primer extends the life of the coating. It's recommended for use on bare rubberized and aged asphalt roofs.

	Size	Gray Primer		White Coating	
Can	0.9 gal.	7687T3	$49.78	7687T75	$49.17
Can	4.7 gal.	7687T4	186.28	7687T85	186.27

Temporary Roof Leak Sealants

Seal roof cracks in minutes in standing water and rain. Sealant is a gray powder that forms a thick gel when poured directly into water, making a temporary patch to repair cracks up to 1″ wide in any flat roof. One 25-lb. pail covers 40 sq. ft. at 1/2″ thick.

Pail (25 lbs.) ..... 7635T15 ..... $38.74

Roof Repair Mesh Fabric

Reinforce hot- and cold-applied asphalt patches and coatings with this flexible fabric.

Asphalt-coated fiberglass fabric meets ASTM D1668-86, Type 1.

Fabric Material	Color	Wd.	Lg.		
Polyester	White	4″	50 ft.	76405T28	$9.79

Asphalt-Coated Fiberglass	Black	36″	150 ft.	7574T4	78.88

Roof Coating Brushes

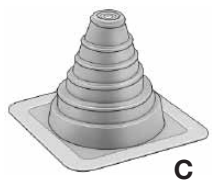
Designed for applying roof patches and coatings, this heavy duty brush has 4 1/8″ long tampico fiber bristles securely attached to a 6 1/4″ × 1 3/4″ wood block. Handle is wood and measures 54″ long.

7233T3 ..... $18.18

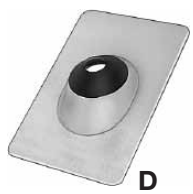
Roof Flashing for Pipes

A

B



C



D

Prevent leaks before they start. Flashing allows pipes that penetrate your roof to expand, contract, and vibrate without disturbing the watertight seal. *Styles A, C,* and *D* are for a single pipe; *Style B* fits four pipes.

(A-C) Cut-to-Fit Flashing—Slice the rubber cap to fit a range of pipe sizes. Base is flexible aluminum. Stainless steel clamps required for installation are included. Temperature range is –60° to 270° F.

(D) Slide-Over Flashing—Use this flashing on plumbing vent pipes and two-walled, air-insulated vent pipes (also known as Type B roof vents). It has a rubber collar and a galvanized steel base. Maximum temperature is 180° F.

Flat-Roof Drains

Unthreaded PVC

Threaded Cast Iron

Unthreaded PVC—These lightweight PVC drains have a UV-resistant body and a corrosion-resistant, cast-aluminum dome. Each comes with a rubber connector to attach the drain to a pipe. Installation kit is also included.

Threaded Cast Iron—These heavy duty drains have a flanged collar to secure flashing and roofing material without puncturing. Connections are NPT female.

Cast Iron

Two-Piece Threaded

Two-Piece Unthreaded

Hinged

Drains *with inside caulk connection* fit over a drainage pipe. Attach with lead caulk (see 9031K on page 3827).

Two-Piece—Clamp these drains together with included screws. *Drains with threaded connection* have NPT female threads that connect drains to drainage pipe. Grate surface is 2″ above flange. *Drains with unthreaded connection* require a pipe coupling (not included). Both have an adjustable-height, threaded drain grate. For pipe couplings, see page 105. Choose 6820K23 for pipe size 3; 6820K24 for pipe size 4. *Drains with inside caulk connection* have a grate surface that is 2″ above the flange.

Hinged—Lift open for cleaning.

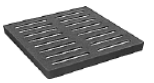
Cast Iron—For Floor Drains

Light Duty

Heavy Duty



Heavy Duty

Light duty grates provide firm support in areas where there is light pedestrian traffic.

Heavy duty grates are made of cast iron, so they're strong enough to handle a high volume of traffic on pavement, sidewalks, and plant floors.

Floor Drain Backflow Preventers

Put an end to water damage from backed-up sewers. All backflow preventers have a rubber collar, rubber float, and metal parts. To install, place a preventer into your floor drain pipe and tighten the screws—the rubber collar will expand for proper fit. When water backs up, the rubber float will rise to seal off the drain. When water recedes, the float will drop for normal drainage.

Mouse and Rat Control

Mouse and Rat Bait Stations

Made of plastic, stations have a semi-clear lid to check the poison. Both are for indoor and outdoor use.

Mouse station is refillable and includes eight 1-oz. blocks of poison. It measures 1½″ Ht. × 4″ Wd. × 4½″ Dp.

Mouse Station	9802T21	1-7	$9.13	8-Up	$8.22

Mouse/rat station is disposable. It has one 4-oz. poison block sealed inside. It's 3″ Ht. × 5⅜″ Wd. × 7½″ Dp.

Mouse/Rat Station	9802T22	1-3	$11.74	4-Up	$10.56

Mouse and Rat Traps

Spring Loaded—These classic, wood-based traps require bait, except *scented mouse* trap has an aroma to attract mice. For indoor and outdoor use.

		1-11	12-Up
Mouse Trap (Pkg. of 2)	7552T44	$1.70	$1.49
Scented Mouse Trap (Pkg. of 2)	7552T66	1.80	1.57
Rat Trap (Pkg. of 1)	7552T2	2.62	2.29

For Mouse

Glue Traps—Peel the liner to expose the glue, and these traps are ready to use. For indoor use.

Mouse Trap (Pkg. of 2)	75365T46	1-17	$2.41	18-Up	$2.11
Rat Trap (Pkg. of 2)	75365T48	1-11	6.65	12-Up	5.76

Multicatch Mouse Traps

Bait these traps once and catch up to 30 mice. Lid is hinged, offering access for releasing and discarding. It's made of galvanized steel and measures 2″ Ht. × 6″ Wd. × 10″ Dp. For indoor use.

	9836T1	$16.71

Mouse and Rat Zappers

Rat Zapper

The fastest, most hands-off way to kill mice and rats. Just add bait and these zappers electrocute pests instantly upon entry. For indoor use.

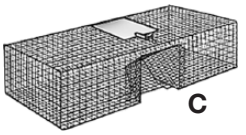
Mouse Zapper—Up to 100 kills per pkg. of batteries. Zapper is 1¾″ Ht. × 3¼″ Wd. × 6¼″ Dp. Requires four AA alkaline batteries (sold separately).

Rat Zapper—Up to 50 kills per pkg. of batteries. Zapper is 4¾″ Ht. × 4¼″ Wd. × 9¼″ Dp. Requires four C alkaline batteries (sold separately).

Mouse Zapper	7499T61	$28.04
Rat Zapper	7499T31	66.48
AA Batteries (Pkg. of 4)	71455K53	2.94
C Batteries (Pkg. of 6)	71455K54	6.49

Animal Catch-and-Release Traps

A&B



C

Lightweight, portable traps safely capture a variety of animals. A spring-loaded door allows animals to enter but not leave until you release them. Traps are made of galvanized steel wire mesh with 1″ × 1″ openings. For indoor and outdoor use.

	Use For	Ht.	Wd.	Dp.

Rodent Repellents

Ward off mice, rats, squirrels, voles, shrews, and chipmunks with granules made from predator urine. Shake lightly over areas in need of protection, and pests will instinctively avoid the perceived threat. For outdoor use.

9541T1		$15.98

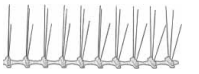
Bird Control

Roosting Prevention Pastes

Apply this clear, sticky paste to keep birds from roosting. It's weather-resistant and nonpoisonous. Use on roof edges, window sills, gutters, and ledges. One ounce of paste will produce a ¼″ line that's 1 ft. long. Apply with a standard caulk gun (not included).

10-oz. Cartridge	7127T2	1-11	$12.51	12-Up	$11.11

Roosting Prevention Spikes



To keep birds from landing, nail, screw, or glue these flexible strips on straight and curved surfaces. Both have a hard plastic base.

Plastic spikes have snap-off notches every 5″. They're clear and have ten ¼″ dia. mounting holes (fasteners not included).

Stainless steel spikes can be cut with a hack saw. They have thirty-two ¼″ dia. mounting holes (fasteners not included).

	Base Wd.	Ht.	Top Wd.	Strip Lg.	Pkg. Qty.		Pkg. 1-3	Pkg. 4-Up

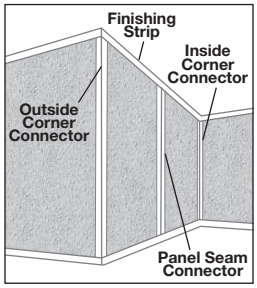
Indoor Fiberglass-Laminate Wall Panels

Cover wallboard, masonry, and studs with these durable, washable, and mildew-resistant panels. They're 0.090″ thick with a pebbled texture and can be cut with a fine-tooth carbide-tipped power saw. To install, use a trowelable construction-grade adhesive, nylon drive rivets, or a combination of the two (sold separately). Temperature range of panels is –40° to 150° F, and they're Class C fire rated.
Connectors and **finishing strip** are 8 ft. long and made of polypropylene.



To Order: For panel, connectors, finishing strip, and nylon drive rivets, please specify almond or white.

Adhesive (1-gal. can; covers 60-90 sq. ft.)	7534A28	23.48

Steel Studs and Bases

Use a stud with a base to create non-load-bearing interior partitions and wall framing. Both are made of 25-gauge, corrosion-resistant galvanized steel.
Stud has knockouts approximately 12″ from each end to accommodate conduit and pipe.
Base aligns and anchors stud to floors and ceilings.

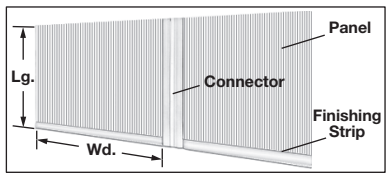
Stud	3⅝″	10	77095T42	$9.37	$7.96
Base	3⅝″	10	77095T43	9.04	7.68

Indoor/Outdoor Polycarbonate Wall and Roof Panels



Virtually unbreakable, these polycarbonate panels are impact, heat, chemical, and weather resistant. To cut panels to size, use a circular saw with a fine-tooth blade. **Connectors** join two panels side by side. **Finishing strips** keep the top and bottom ends clear of dirt and dust.
Flat panels consist of two polycarbonate layers; the top layer is UV-resistant. They're ¼″ thick. Roofing applications require a minimum 5° slope. Temperature range is –40° to 250° F. Color is clear. Panels meet UL-723 for flammability and have an ASTM flame spread rating of 5. *Connectors* and *finishing strips* are made of polycarbonate.
Corrugated panels are 1/16″ thick with 1¼″ high corrugations. Temperature range is –50° to 260° F. Color is white. Panels have an FM flame spread rating of 6. *Connectors* are a Type 304 stainless steel screw with grommet, nut, and neoprene washer. Use one connector for every foot of panel length. *Finishing strips* are polyethylene foam.

To Order: For corrugated finishing strips, please specify top or bottom end.

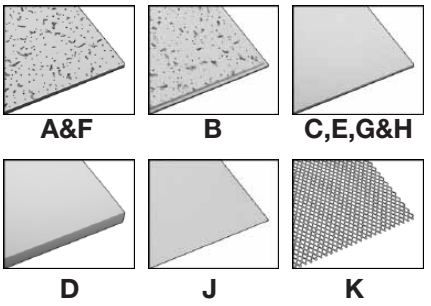
Ceiling Tiles and Suspension Framing

Create a new drop ceiling that allows access to pipes and wiring, expand your existing ceiling, or replace old tiles. For indoor use. Color is white, unless otherwise stated.

Ceiling Tiles



Tiles have a Class A fire rating. They meet ASTM E84 surface burning characteristics with a flame spread rating of 25 or less.

Standard—*Style B* are indented on all four edges so the installed tile face extends below the support framing.

Sound Absorbing—*Style C* are black on one side and white on the other. *Style D* are thick, lightweight tiles encased in vinyl for a smooth, easy-to-clean surface. *Style E* reflect up to 90% of light striking their surface to brighten your space.

Specialty—*Style F* are constructed for use in UL fire-rated ceiling assemblies. *Style G* are for use in clean rooms up to Class 100. Constructed for use in various UL fire-rated ceiling assemblies, they also resist humidity. *Style H* are washable for food-processing areas. *Style J* offer high humidity resistance for food-processing areas. They're washable and resist mold and mildew. *Style K* are durable, perforated metal that offers 70% open area for lighting and sprinklers. Color is silver.

Optional Sound Barrier Panels—Set on top of ceiling tiles to prevent sound penetration. Panels are melamine foam with a vinyl center and measure 5/8" thick.

		Material	Thick.	2 ft. × 2 ft. Tiles Case Qty.		Case	2 ft. × 4 ft. Tiles Case Qty.		Case

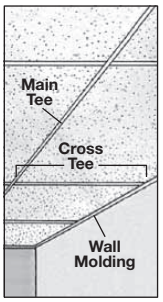
Suspension Framing for Ceiling Tiles



Use these components to design your own frame to support ceiling tiles. For indoor use. Color is white. *Main* and *cross tees* snap together. *Wall molding* secures the frame you've made to the wall. *Hanger rods* suspend and secure your frame to the ceiling. *Hold-down clips* prevent ceiling tiles from fluttering in entryways.

Steel—Main and cross tees are approved for use in UL fire-rated ceiling assemblies. The wall molding and hanger rod aren't required to be fire rated and won't reduce the overall fire protection of the ceiling system.

Corrosion-Resistant Aluminum—These components withstand higher humidity than the steel components.

	Wd.	Steel Lg.			Corrosion-Resistant Aluminum Lg.		
Main Tee	15/16"	12 ft.	62765T31	$12.87	12 ft.	8014T51	$24.00
Cross Tee	15/16"	2 ft.	62765T33	2.25	2 ft.	8014T53	4.00
Cross Tee	15/16"	4 ft.	62765T32	4.24	4 ft.	8014T52	8.01
Wall Molding	7/8"	12 ft.	62765T34	7.88	10 ft.	8014T54	12.42
Hanger Rods—Made of 12 gauge steel; 12 ft. long (Pkg. of 10)						62765T65	11.04
Hold-Down Ceiling Tile Clips—Made of galvanized steel; fit 1/16" to 5/8" thick tiles (Pkg. of 10)						62765T81	7.36

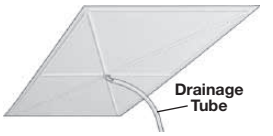
Ceiling Tile Spray Paint

Restore existing water- and smoke-stained ceiling tiles to their original appearance. This water-based paint comes in an aerosol can. One can covers 12 sq. ft. Application temperature is 50° to 90° F; maximum temperature is 250° F. For indoor use only. Finish is flat.

New white provides a bright, new-tile look. *Old white* matches older, aged white tiles.

Color	Net Wt., oz.	Dry Time Touch	Dry Time Overall		1-11	12-Up
New White	16	15 min.	1 hr.	9556T11	$9.20	$8.26
Old White	16	15 min.	1 hr.	9556T12	9.20	8.26

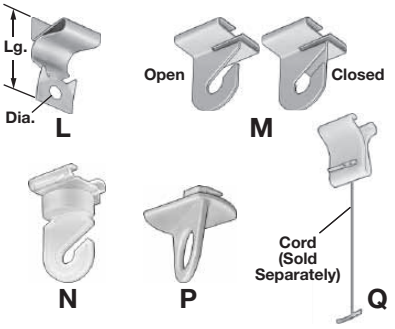
Suspended Ceiling Drainage Tiles



Get overhead leaks under control with these white plastic drainage tiles. They temporarily replace existing tiles to trap and divert up to 1/2 quart of liquid per minute. Tiles measure 1/16" thick. Mounting clips for the tile and tube are included. Each comes with 25 feet of tubing.

2 ft. × 2 ft. Tile	7575T4	$157.50
2 ft. × 4 ft. Tile	7575T6	176.25

Suspended Ceiling Hangers



Slide these reusable hangers onto your ceiling tile framing to suspend signs, cords, and cable.

Style L mounts items flush with the wall. **Style M** has a two-piece design that can form a closed or open hook. **Style N** hook swivels 360°. **Style P** twists to lock in place. **Style Q** is designed for suspending lightweight signs when used with hanging cord (sold separately). Cord is thin, white polyester and has metal barbs at both ends.

Breathable Water-Resistant Canvas Tarps

Prevent condensation buildup with these canvas tarps. They're double-stitched, have reinforced corners for durability, and will stay flexible in low temperatures. Grommets are brass and spaced 2 feet apart.

Medium duty tarps are 20 mils thick with 3/8" ID grommets; *heavy duty tarps* are 30 mils thick with 1/2" ID grommets.

Flame-resistant tarps meet California Fire Marshal requirements and will not support combustion.

Waterproof Tear-Resistant Polyethylene Tarps

Keep covered items dry with these durable, UV-resistant tarps. They have heat-sealed seams to prevent tearing and rope-reinforced hems, except clear tarps. Grommets are spaced 2 feet apart, except choose-a-color tarps have grommets spaced 3 feet apart.

Choose-a-color tarps have 1/2" ID aluminum grommets.

Flame-resistant tarps meet California Fire Marshal requirements and will not support combustion. They have reinforced corners and 1/2" ID aluminum grommets. Color is white.

Reflective tarps are black on one side for UV resistance and silver on the other side for reflectivity. *Medium duty* have 1/2" ID aluminum grommets. *Heavy duty* have 3/8" ID brass grommets.

Clear tarps keep covered items visible. All are seamless and have 3/8" ID brass grommets.

To Order: For *choose-a-color tarps*, please specify blue, brown, or green.

Puncture-Resistant Tarps

The most puncture-, abrasion-, and tear-resistant tarps we offer. Made of vinyl-coated polyester, they're water and UV resistant, and they remain flexible in extremely low temperatures.

20 mil-thick tarps meet MIL-C-20696. They have 3/8" ID brass grommets spaced 2 feet apart.

23 mil-thick tarps have 1/2" ID brass grommets spaced 2 feet apart.

To Order: For *20 mil-thick tarps*, please specify black, blue, green or tan. For *23 mil-thick tarps*, please specify black, blue, or green.

Flame-Resistant Tarps

For protection that won't combust in the face of flames, choose these tarps that are California Fire Marshal approved and meet MIL-C-43006B. Made of durable vinyl-laminated polyester, they're water, UV, and tear resistant. They won't break down when exposed to chlorine, and they remain flexible in extremely low temperatures. Each side has 3/8" ID brass grommets spaced 2 feet apart. All tarps are 15 mils thick.

To Order: Please specify black, blue, green or tan.

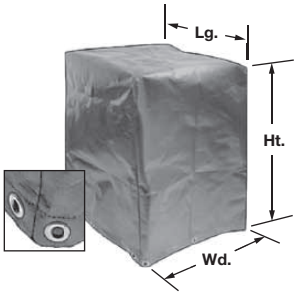
Box-Shaped Tarps



Designed to provide a snug fit while protecting machinery and other objects. All have 3/8" ID brass grommets on the corners and center bottom edges.

Polyethylene tarps are water resistant, and they won't rot or tear. They are black on one side for UV resistance and silver on the other for reflectivity. They're 12 mils thick.

Vinyl-coated polyester tarps offer high tear strength and are abrasion resistant. They're waterproof and remain flexible in extremely low temperatures. They're 20 mils thick.

To Order: For *vinyl-coated polyester tarps*, please specify black, blue, green, or yellow.

Heavy Duty Tarps with D-Rings

When you need to keep the tension high, the steel D-rings on these durable tarps allow a tight hold. Made of vinyl-coated polyester, they're abrasion, puncture, and tear resistant. They're also moisture and UV resistant and remain flexible in extremely low temperatures. Tarps have two rows of equally spaced 1" Ht.× 1" Wd. D-rings sewn along the length. Each edge also has 3/8" ID brass grommets spaced 2 feet apart. Tarps are black and 20 mils thick. Meet MIL-C-20696.

Ventilating Mesh Tarps

For maximum airflow, these tarps have you covered. Use for truck and flatbed covers, shade, cargo netting, and wind screens. All have a 2" wide reinforced hem.

Polyethylene—Mesh openings are 1/16"×1/16". Each side has 1/2" ID brass grommets spaced approximately 2 feet apart. Shade rating is 60%. Hem is polypropylene. Color is black.

Polyester—Stronger and more UV resistant than polyethylene. Mesh openings are 1/4"×1/4". Each side has 3/8" ID brass grommets spaced approximately 2 feet apart. Shade rating is 40%. Tarps are white with a black polypropylene hem.

Vinyl-Coated Polyester—Coating resists deterioration. Mesh openings are 1/16"×1/16". Each side has 3/8" ID brass grommets spaced approximately 2 feet apart. Shade rating is 55%.

Corrosion-Inhibiting Water-Resistant Tarps

Protect equipment against condensation buildup and corrosion with these treated, lightweight tarps. Made of breathable polyester-lined polyethylene, they're UV and rot resistant, as well as heat shrinkable. Tarps are beige and measure 18 mils thick.

Five-Sided with Drawstring—Cover equipment and pull the drawstring-style closure for a snug fit. Rope is sewn into the hem along the perimeter of the base. A 1" fabric loop provides a tie-off point.

Six-Sided with Zipper—Fully encase equipment on all sides and secure with a zipper.

Flat with Sewn-In Fabric Loops—Secure these tarps by using the 1" long fabric loops sewn along all four sides.

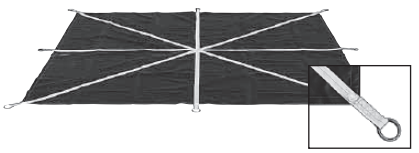
Debris Collection Tarps



Pile debris on one of these heavy duty tarps for convenient removal. Also called roofers tear-off tarps, they are made of durable vinyl-coated polyester with sewn-on strips of cargo webbing for support. Steel O-rings at the end of each strip allow secure lifting when attached to a clevis hook (not included). Tarps are also waterproof and puncture resistant. They're black with yellow webbing and measure 40 mils thick. Not rated for capacity.

Tarps & Tarp Accessories

Leak Drainage Tarps

Ceiling Leak Drainage Tarp

Pipe Leak Drainage Tarp

Protect work areas and equipment from overhead leaks with these rot- and chemical-resistant tarps. To drain, connect the threaded drain spout to any ¾ female garden hose (GHT) fitting.

Ceiling Leak Drainage Tarps

For convenient hanging, these tarps have 1″×1″ steel D-rings sewn into each corner. 12′×12′ and larger tarps also have D-rings at the center of each side. **Polyethylene tarps** are silver on the side that faces the ceiling, and the exposed side is black. **Flame-resistant tarps** meet California Fire Marshal requirements. *Vinyl-coated polyester tarps* remain flexible in extremely low temperatures. Color is semi-clear white. *PVC tarps* are clear to allow visibility.

Pipe Leak Drainage Tarps

Capture leaks by hanging this tarp beneath a problem pipe. It has ⅜″ ID brass grommets spaced approximately 14″ apart. Includes four bungee cords with hooks. Color is yellow.

Size	Vinyl-Coated Polyester	
18″ Dia.×18″ Lg.	6942T81	$86.13

Tarp Accessories

All are made of plastic. For bungee cords, see page 1564. For rope, see pages 1453-1457. For metal grommets, see pages 3869 and 3870.

Tarp Fasteners

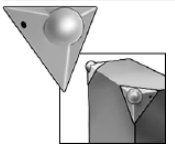
Grommets— Add these to your canvas and synthetic tarps. Place tarp between grommet halves and tap with a hammer for permanent installation. Opening size is ½″ ID. Color is black.

Light Duty Tie-Down Buttons—Secure lightweight synthetic tarps with these reusable, nonpiercing fittings. The opening size is 1″ ID. Color is white.

Heavy Duty Tie-Down Buttons—Secure canvas and synthetic tarps. Buttons are reusable, nonpiercing, and can even be used to join tarps. Maximum opening size is 2¾″. Color is white.

Grommets (Pkg. of 4)	78905T91	$3.10
Light Duty Tie-Down Buttons (Pkg. of 10)	9565T7	4.76
Heavy Duty Tie-Down Buttons (Pkg. of 2)	9565T4	10.35

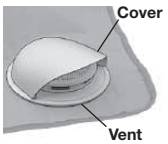
Tarp Protectors



Slip over sharp corners and then cover with your tarp. Protectors are 8″ long on each side. Color is yellow.

Pkg. of 4	7830T76	$13.44

Tarp Vents



Prevent the build up of mildew, odors, and heat with this vent. Designed for use with canvas tarps, it measures 4″ Dia.× 2″ Ht. and comes with a snap-on cover. To install, cut a hole in the tarp and snap the vent into place.

	8274T2	$9.77

Telescoping Wall-Support Poles

Use these poles with tarps, drop cloths, and plastic sheeting up to 8 mils thick to create a sturdy, temporary wall to control dust and debris. Made of heavy duty aluminum, the pole has a rubber foot and a plastic, spring-loaded head plate with a nonskid pad to protect your ceiling. Head plate measures 5¾″×2¾″. Pole adjusts from 4′9″ to 12′ long.

Optional Dust Seal—These 4-ft. long aluminum bars have a foam edge that presses tightly to the ceiling. Install by replacing the head plate from the support pole (sold separately) with the dust seal.

Optional Doorway Zipper Kit—Kit includes two 7-ft. long, adhesive-back zippers and a knife to cut sheeting. Use one zipper for a narrow opening; use both to create a larger, roll-up entryway.

Support Pole with Head Plate	7926T11	$78.81
Optional Dust Seal	7926T35	33.20
Optional Doorway Zipper Kit	7926T38	21.15

Concrete Curing Vibrators

Improve the strength of your concrete mix by eliminating trapped air. This lightweight, portable vibrator consolidates the mix. It operates on 115 volts AC, 1-phase at 10,500 vibrations per minute. The vibrator has a flexible shaft, a sturdy plastic frame, and a 14″ long power cord with two-prong plug. UL and C-UL listed.

Shaft Lg.	Head Size	Motor hp	Amps		
7 ft.	1″ Sq.	3	15	7693T18	$1,111.75

Crack-Filler Applicators

Fill cracks without a mess. The U-shaped cavity on this squeegee can hold and distribute crack filler into cracks up to 2″ wide. It has a steel frame and a 60″ long wood handle. The head measures 3″ Wd. × 9½″ Dp. and has a 5/16″ thick rubber blade.

Applicator	8032T4	$78.85
Replacement Blade	8032T5	32.31

Sealant and Floor-Coating Applicators

(R&S) Sealant Applicators

Apply concrete and asphalt sealants as well as floor coatings. Both applicators have a squeegee.

Style R is a roller applicator. The roller has a plastic frame.

Style S is a brush applicator. It has plastic bristles secured to a wood frame. It can also be used to apply roof coatings.

Wood Touch-Up and Repair

Wood Touch-Up Markers

Use these felt-tip markers to touch-up nicks and scratches on wood. They have a 3/16″ stroke width and dry in seconds. For indoor use.

Available Colors		
Dark Maple, Dark Walnut, Light Oak, Red Mahogany	2022T6	$3.75

Wood Repair Fillers

Fill cracks and holes up to ⅛″ thick. Press these fillers in place with a putty knife or gloved fingers; let dry for one to two hours; and then sand, saw, drill, paint, stain, or varnish. Color is natural wood.

Solvent Based—Ready to use.

Epoxy Based—Twist or cut off filler from the roll and activate by kneading. Application time, after kneading, is 15-25 minutes.

Solvent Based—For indoor use		
4-oz. Can	7590T1	$3.03
16-oz. Can	7590T2	6.34
Epoxy Based—For indoor and outdoor use		
⅞″ Dia. × 7″ Lg. Roll	70835T7	8.83

Epoxy Wood Restorers

Fix damaged wood or build up and replace missing wood. This two-part, nonshrinking, putty-like restorer fills any size hole. When dry, it can be sawed, planed, drilled, sanded, and painted. Mix and apply with a knife or trowel. Restorer resists chemicals and can be used on concrete, metal, fiberglass, and glass. Application time after mixing is 20 minutes; fully dry in 3 hours. For indoor and outdoor use. Color is tan.

12-oz. Container	6257T3	$29.06

Concrete Surface Preparers

Concrete Cleaner and Surface Preparers

Prepare concrete floors for coatings and patching compounds. Pour this solution on your floor and scrub with a stiff-bristle brush or broom. This solution removes dirt and leaves a rough etched finish for strong coating adhesion. Application temp. is 60° to 100°F. Coverage is 400 sq. ft. per gallon. For indoor and outdoor use. Color is pink.

1-gal. Jug	94315T6	$34.96

Concrete Bonding Epoxy

Bond new concrete to existing concrete with this two-part epoxy. First, apply epoxy with a brush, roller, or sprayer. Then, pour new concrete over the wet epoxy to ensure absorption and a strong bond. Application temp. is 50° to 100°F. Application time, after mixing, is 30 to 45 minutes. Fully hardens in 8 to 12 hours. Coverage is 150 sq. ft. per 3/4 gallon. For indoor and outdoor use. Color is amber.

3/4-gal. Can	9432T57	$62.71

Concrete Crack Repair

Ready-to-Use Pourable Crack Fillers

Pour this filler into cracks up to 1/2" Wd. x 1/4" Dp. Application temp. is 50° to 90°F. Fully hardens in 24 to 48 hours. A 1-qt. bottle fills 35 ft. of a 1/2" Wd. x 1/4" Dp. crack. For indoor and outdoor use. Color is gray.

1-qt. Bottle	75855T45	$11.16

Flexible Crack Filler Cartridges

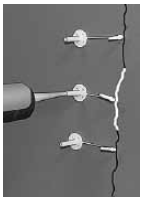
These fillers flex as concrete expands and contracts with temperature changes. Use a standard caulk gun (see page 3484) to apply filler into cracks. Each comes in a 10.1-oz. cartridge. Application temp. is 40° to 90°F. Fillers fully harden in 7 days. For indoor and outdoor use. Color is gray.

Polyurethane filler allows for more joint movement than acrylic filler. **Acrylic** filler is textured to blend in easily and cleans up with water.

	For Crack Width	Coverage		
Polyurethane	Up to 1"	24 ft. @ 1/4" Dp.	1589T3	$8.96
Acrylic	Up to 3/8"	50 ft. @ 3/16" Dp.	7650T11	3.21

Epoxy Deep-Crack-Repair Cartridges

Apply with a standard caulk gun (see page 3484). Application temp. is 50° to 90°F. Fully hardens in 24 hours. Color is light amber.



Vertical- and Overhead-Crack Repair Kit

Floor and Sidewalk Repair Cartridges— Repair 4" to 6" deep cracks. Also use on wood, fiberglass, and metal surfaces. Epoxy is shrink, impact, and chemical resistant. It is furnished in a 10-oz. cartridge. Application time, after opening, is 15 minutes at 77°F.

Vertical- and Overhead-Crack Repair Kit— Repair cracks up to 10" deep. Kit includes 34 oz. of a two-part epoxy crack sealer, two epoxy cartridges, and seven injection ports. To use, secure the ports to the crack with the sealer and spread sealer over the entire crack. Allow sealer 24 hours to cure. Use epoxy to fill the rest of the void. Application time for sealer, after mixing, is 40 minutes.

For Crack Width	Coverage		
Floor and Sidewalk Repair Cartridges			
Up to 1/16"	24 lin. ft. @ 4" Dp.	76005T84	$24.56

Up to 1/4"	6 lin. ft. @ 4" Dp.	76005T85	25.84
Vertical- and Overhead-Crack Repair Kit			
Up to 1/8"	4 lin. ft. @ 10" Dp.	75095T11	70.91

Concrete Epoxy Repair Putty and Paste

Repair indoor and outdoor concrete surfaces. Color is gray.

Putty

Use this putty to patch virtually any size crack or hole in concrete floors, stairs, and walls. Also use it to anchor bolts. Application temp. is 40° to 110° F. Application time, after kneading, is 2 minutes. Fully hardens in 1 hour. Once hardened, it can be drilled, tapped, sanded, and painted. Coverage is 4 cu. in. per roll.

7/8" Dia. x 7" Lg. Roll	75895T1	$9.17

Paste

This nonsagging, easy-to-spread paste bonds to horizontal, vertical, and overhead concrete surfaces. Also use it on metal, wood, brick, and fiberglass. It resists oil, grease, water, alkalies, and chemicals. Apply this two-part epoxy with a putty knife or trowel. Application temp. is 60° to 90°F. Application time, after mixing, is 1 hour. Fully hardens in 4 hours. Coverage is 231 cu. in. per gallon.

Size		
1/2-gal. Jar	6230T1	$76.54
2-gal. Jar	6230T2	203.65

Concrete and Cement Mixes

To use, add water and mix. For indoor and outdoor use. Color is gray.

Sand, Concrete, and Mortar Mixes

Application temp. is 40° to 90°F for all mixes.

Sand and **fast-set sand** consist of cement and sand. Use these mixes when thickness will be less than 2". *Sand* is ready for foot traffic in 24 hours. *Fast-set* is ready for foot traffic in 4 hours.

Concrete and **fast-set concrete** consist of cement, sand, and gravel. Use when thickness will be more than 2". *Concrete* is ready for foot traffic in 24 hours. *Fast-set* is ready for foot traffic in 8 hours.

Mortar consists of fine sand and masonry cement. Use for brick, block, and stone laying and for repairing masonry. Fully hardens in 24 hours.

Mix Type	Size	Coverage		
Sand	40-lb. Bag	3.6 sq. ft. @ 1" Dp.	76805T82	$8.02
Fast-Set Sand	10-lb. Pail	1 sq. ft. @ 1" Dp.	76805T81	11.48
Concrete	40-lb. Bag	1.8 sq. ft. @ 2" Dp.	76805T83	6.97
Fast-Set Concrete	50-lb. Bag	2 sq. ft. @ 2" Dp.	76805T93	10.07
Mortar	40-lb. Bag	20 Bricks	76805T84	8.02

Leak-Stopping Hydraulic Cement Mixes

Stop leaks even as water is running through. Apply with a trowel. Application temp. is 40° to 95°F. The cement begins to harden in 5 minutes; fully hardens in 2 hours. You can fill 2 1/2 ft. of a 3/4" Wd. x 3/4" Dp. crack with 1 lb. of mix.

10-lb. Pail	7685T31	$23.55

Anchoring and Patching Cement Mixes

Use this nonshrinking cement to anchor bolts, railings, and posts as well as to patch floors, stairs, and walls. It bonds firmly to surrounding concrete. Pour or trowel in place. Application temp. is 25° to 100°F. It begins to harden in 15 minutes; fully hardens in 1 hour. When used outdoors, apply a sealer for best results. A 50-lb. pail yields approx. 1/2 cu. ft. of cement.

Size			Size		
5-lb. Box	7569T92	$8.68	50-lb. Pail	7569T94	$70.03
10-lb. Pail	7569T97	17.34	125-lb. Drum	7569T96	165.89
25-lb. Box	7569T93	35.06			

Concrete Repair Patch

Patch holes and build up worn/uneven spots in concrete. All are for indoor and outdoor use.

Epoxy Concrete Repair Patch Cartridges

Inject this two-part epoxy into cracks and holes in horizontal, vertical, and overhead surfaces. It even works underwater. Application requires a heavy duty caulk gun with a 26:1 ratio (sold separately below). Cartridge comes with a mixing nozzle. Application temp. is 35° to 110°F. Application time, after mixing, is 8 min. Hardens in 2 hrs. A 9-oz. cartridge fills 10 ft. of a 3/4" Wd. x 1/2" Dp. crack. Color is gray.

Size		
9-oz. Cartridge	7579T21	$23.02
Heavy Duty Caulk Gun	7579T22	32.27
Replacement Mixing Nozzle	7579T23	4.66

Epoxy Concrete Repair Patch

This three-part epoxy patch resists oil, gas, water, chemicals, and impact. When mixed, the *10-lb. pails* produce 1 gallon of patch and cover 4.5 sq. ft. at 1/4" thick; *50-lb. pails* produce 4 gallons of patch and cover 20 sq. ft. at 1/4" thick. All fully harden in 72 hours.

Standard— Application temp. is 50° to 100°F. Application time, after mixing, is 30 to 45 minutes. Ready for foot traffic in 8 to 12 hours.

Low Temperature— Application temp. is 34° to 90°F. Application time, after mixing, is 30 minutes at temperatures below 50°; 5 minutes at temperatures above 75°F. Ready for foot traffic in 8-12 hours.

To Order: Please specify beige, gray, or red.

Patch Type	10-lb. Pails		50-lb. Pails	
Standard	7579T12	$49.07	7579T13	$94.53
Low Temperature	7579T34	54.28	7579T45	100.91

Quick-Set Epoxy Concrete Repair Patch

Ready for traffic (including forklifts) in just 2 hours, this tough three-part epoxy patch resists chemicals, impact, and steel wheels.

Standard— Application temp. is 50° to 90°F; hardening time is longer when applied below 70°F. Application time, after mixing, is 5 to 15 min.

Freezer— Use on freezer and indoor cold storage floors. Application temp. is –20° to 40°F. Application time, after mixing, is 10 to 20 minutes. Color is beige.

To Order: For standard patch, please specify beige, black, gray, or red.

Patch Type	Size	Coverage @ 1/8" Thick		
Standard	2-gal. Pail	10 sq. ft.	7689T49	$68.00
Standard	5-gal. Pail	30 sq. ft.	7689T51	130.20
Freezer	2-gal. Pail	15 sq. ft.	75795T3	107.35

Super-Fast-Set Polyurethane Concrete Repair Patch

This two-part epoxy fully hardens in 10 minutes at 70°F, 3 hours at –20°F. Use it in heavy traffic areas (including forklifts). Application temp. is –50° to 100°F. Application time, after mixing, is 5 to 10 minutes. Coverage is 80 lin. ft. of 1/2" Wd. x 1/2" Dp. cracks. Color is gray.

1/2-gal. Pail	7570T11	$285.61

Concrete Epoxy Joint Sealants

This sealant not only reinforces joints in concrete but also protects joint and saw-cut edges from chipping. It's a two-part, self-leveling, semi-rigid sealant that is made from a shrink- and corrosion-resistant epoxy. To use, mix the two components together, pour into joint, and allow sealant to settle. Application time, after mixing, is 1 hour. Sealant begins to harden in 6 to 8 hours; fully hardens in 24 hours. Coverage is 200 linear ft. per gallon for a 1/8" Wd. x 3/4" Dp. joint. For indoor and outdoor use. Color is gray.

Standard—Application temp. is 50° to 100° F.

Low Temperature—Application temp. is 34° to 100° F.

Sealant Type	1-gal. Cans		2-gal. Cans	
Standard	75735T4	$68.45	75735T6	$130.15
Low Temperature	75735T7	77.98	75735T8	142.88

Concrete Sealers

Reduce maintenance by protecting concrete from mild chemicals, salts, soaps, and detergents with this water-based coating. Apply with a brush, roller, or sprayer. For indoor and outdoor use. Color is clear.

1-gal. Can—Use on concrete that's at least 30 days old. Application temperature is 50° to 90° F. Dries to the touch in 1 hour; fully dries in 3 days. Coverage is 150 to 500 sq. ft. per gallon.

5-gal. Pail—Can be used on freshly finished concrete. Application temperature is 40° to 90° F. Dries to the touch in 2 to 3 hours; fully dries in 12 hours. Coverage is 300 sq. ft. per gallon.

Size		
1-gal. Can	7572T71	$39.38
5-gal. Pail	7572T49	145.78

Concrete Floor Resurfacers

Give new life to damaged and worn concrete floors. These resurfacers also fill minor depressions and cracks. For indoor and outdoor use.

Latex—Add water, mix, and spread using a trowel. Application temp. is 40° to 90° F. Ready for foot traffic in 3 to 4 hours. Fully hardens in 12 to 24 hours.

Epoxy—This three-part epoxy can handle heavy traffic. Apply with a trowel. Application temp. is 50° to 100° F. Application time, after mixing, is 30 to 45 minutes. Ready for foot traffic in 8 hours. Fully hardens in 48 to 72 hours.

Heavy Duty Epoxy—Not only can this three-part epoxy stand up to severe abrasion, wear, and impact, it also withstands heavy steel-wheel traffic and heavy blows without cracking. Apply with a trowel. Application temp. is 50° to 90° F. Application time, after mixing, is 30 minutes. Ready for foot traffic in 12 hours. Fully hardens in 12 to 24 hours.

Acid- and Chemical-Resistant Epoxy—Choose this three-part epoxy for corrosive environments. It stands up to acid and chemical spills, and it withstands steel-wheel traffic and heavy impact. Apply with a trowel. Application temp. is a minimum of 50° F. Application time, after mixing, is 15 to 20 minutes at 70° F. Ready for foot traffic in 12 hours. Fully hardens in 12 to 24 hours at 70° F.

Concrete Floor Coatings

These stain-resistant, high-gloss finishes not only look good, but also protect your floors from moisture, chemicals, foot traffic, and hand carts. Be sure to repair cracks and holes prior to application.

Ready-to-Use Acrylic—This low-odor, water-based coating requires no mixing. Apply with a brush or roller. Application temp. is 60° to 90° F. It's ready for foot traffic in 8 hours; fully hardens in 18 hours. For indoor and outdoor use.

Water-Based Epoxy—More durable than the ready-to-use acrylic, this two-part epoxy is a low-odor coating. Apply with a brush, roller, or sprayer. Application temp. is 50° to 90° F. Application time, after mixing, is 2 hours. It's ready for foot traffic in 24 hours; fully hardens in 72 hours. For indoor use only.

Heavy Duty Epoxy—Durable enough to handle forklift traffic, this two-part epoxy goes on thick and contains no solvents. Apply with a brush, roller, or sprayer. Application temp. is 50° to 100° F. Application time, after mixing, is 20 to 30 minutes. It's ready for foot traffic in 24 hours; fully hardens in 72 to 96 hours. Allow 7 days for forklift traffic. For indoor and outdoor use.

High-Performance Polyurea—Our best coating succeeds where others have failed. It's a two-part coating that offers fast dry times; excellent chemical, abrasion, and UV resistance; and low hardening temps. Apply with a roller, sprayer, or squeegee. Application temp. is 35° to 135° F. Application time, after mixing, is 30 minutes. It's ready for foot traffic in 6 hours; fully hardens in 48 hours. For indoor and outdoor use.

Asphalt Repair

All are ready to use—no mixing required. Color is black.

Asphalt Crack Fillers

Liquid—Comes in an easy-to-pour 1-gal. jug for filling cracks up to 1/2" wide. Application temp. is 50° to 90° F. Ready for traffic in 2 to 5 days.

Flexible Rope—This rope filler is 1/2" dia. The 30-ft. length comes in a clamshell package; the 125-ft. length in a 2-gal. pail. Cut the length you need, pack it in the crack, and heat with a propane torch (see pgs. 3438-3439 for torches). It's self-leveling and fills cracks from 1/4" to 1" wide. Application temp. is a minimum of 32° F. Ready for traffic in 20 minutes.

Filler Type	Coverage, lin. ft.		
Liquid	160 (1/4" Wd. x 1/2" Dp. Cracks)	7686T32	$15.80
Flexible Rope	30 (1/2" Wd. x 1/2" Dp. Cracks)	7686T36	17.10
Flexible Rope	125 (1/2" Wd. x 1/2" Dp. Cracks)	7686T38	65.44

Asphalt Hole Patch

Apply this patch to dry, wet, and even water-filled holes and then compress with a tamper or shovel. It's immediately ready for traffic. Application temp. is –20° to 140° F.

Size	Coverage @ 1" Thick		
5-gal. Pail	6.2 sq. ft.	9412T61	$24.81

Asphalt Sealers

Protect and revitalize your asphalt surfaces with this tar-free emulsion that forms a weather- and water-resistant seal. Apply with a brush or squeegee. Application temp. is 70° to 90° F. Ready for traffic in 24 hours. A 5-gal. pail covers 350 to 450 sq. ft.

Sealer with filler has grit for traction and filling hairline cracks.

Sealer	5-gal. Pail	75775T21	$23.63
Sealer with Filler	5-gal. Pail	75775T23	25.00

Tile Grout Repair

Tile Grout—Suitable for indoor floor and wall tiles. To use, mix with water and apply with a rubber grout float (sold separately). This grout dries in 2 to 3 hours. Coverage is 16 sq. ft. per lb. Color is white.

Grout Float—Use this tool to smooth and spread grout between tiles. Float has a 5/8" thick rubber pad with aluminum backing and plastic handle.

Grout Sealer—Spray this water-based sealer on grout to form a barrier against dirt, water, mildew, and discoloration.

Grout Whitener—Restore discolored grout with this bleach-based coating. Apply with a sponge.

Grout Float

About Paint and Protective Coatings

Use the table below to select a paint or coating based on the properties most important to your application. ● Excellent ◓ Good ○ Poor

Paint		Fade Resistance	Abrasion Resistance	Fast Drying	Adhesion	Low Odor
	**Water Based (Page 2156)—**Also called latex paint, these clean up with soap and water.	●	◓	●	◓	●
	Solvent Based (Pages 2155–2157)—Also called oil or alkyd paint, these clean up with solvent-based thinners and removers.	◓	●	◓	●	○

Protective Coatings		Fade Resistance	Abrasion Resistance	Corrosion Resistance	Chemical Resistance	Moisture Resistance
	**Polyurethane (Page 2158)—**Many of these coatings are ready to use without mixing. They're often used in outdoor applications on dumpsters, hoppers, and structural steel.	●	●	◓	●	◓
	**Rubber (Page 2158)—**Waterproof and insulate surfaces with these durable coatings. They can be used to create tool grips, seal leaks, and reduce vibration.	◓	●	◓	◓	●
	**Epoxy (Page 2159)—**Often a two-part mix, these thick coatings can be used in high-humidity environments. Apply on pipes, storage tanks, and equipment that is immersed in water.	○	●	●	●	●
	**Stainless Steel and Galvanizing (Pages 2159–2160)—**These permanent coatings bond to the surface for long-term protection against rust and corrosion. Use on bare metal, machinery, tools, and dies.	●	○	●	●	◓
	**Peel Away Coatings and Corrosion-Inhibiting Films (Pages 2160–2161)—**Remove these temporary coatings after use. They're for short- and long-term protection of metal during shipping and storage.	—	◓	●	◓	●

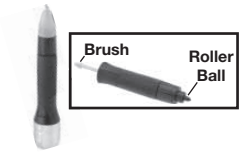
Surface Preparation and Clean Up

For proper adhesion, make sure that all surfaces are completely free of moisture, grease, dirt, and rust before applying paint or coating. For rust, paint, and coating removers, see pages 2160-2161.

Primers—For optimal adhesion, use these undercoats to extend the life of paint and coatings. Primers are listed with corresponding paint and coatings; for additional primers, see page 2157.

Thinners—Use to dilute thick paint or for clean-up. For paint thinners, see page 2156.

Touch-Up Paint Pens



Roller-Ball/Brush Pen

Fillable Brush Pen Set

Corrosion-Inhibiting Felt-Tip Pen—Seal out moisture on scratched painted metal. Paint is water based.

Roller-Ball/Brush Pen—This touch-up paint applicator has both a roller-ball pen and a tapered brush tip for precision application on painted metal. Paint is solvent based.

Fillable Brush Pen Set—Fill these pens with water-based paint for a tidy touch-up. Use the included syringe to fill the pen. Then snap on the brush tip and twist to lock it in place. Pens are reusable.

	Cap., oz.	Colors		
Corrosion-Inhibiting Felt-Tip Pen	1/8	Clear	9959T21	$8.83
Roller-Ball/Brush Pen	1/2	Flat Black	9959T52	12.97

Aerosol Clear Protective Coatings

Add a tough, long-lasting protective coating to your surfaces. All are solvent based.

Acrylic Coatings—These flexible coatings protect against rust and corrosion. Use on metal, paper, and wood surfaces.

Shellac—Use this coating to seal, finish, and protect brass, ceramic, copper, glass, metal, tile, and wood. It has a slight yellow tint.

Lacquers for Nonferrous Metals—Protect brass, bronze, copper, and silver from moisture, chemicals, oxidation, and abrasion. The outdoor coating provides UV resistance.

Lacquers for Wood—Apply these wear-resistant coatings to wood. They protect surfaces from scuffs, water, and oil damage.

	For Use	Finish	Size, net wt.	Dry Time Touch	Dry Time Overall	Max. Temp.		1-11	12-Up
Acrylic Coating	Outdoor	Flat	12 oz.	5 min.	24 hrs.	150° F	7850T5	$5.70	$5.12

Lacquer for Wood	Indoor	Gloss	12 oz.	15 min.	4 hrs.	250° F	20035T57	10.83	9.95

Aerosol Paint

Grab one of these convenient spray paints or primers and you're ready to coat—no brushes or rollers required. Use indoors and outdoors on metal, wood, concrete, and masonry, unless otherwise stated. Paint and primers are solvent based, except fluorescent paint is water based. Comparable to Rust-Oleum or Krylon.

Standard

Any Angle—Can is designed to spray at any angle without clogging, even upside down.

Any Angle with Twist-to-Spray Cap—Attached locking cap eliminates accidental spraying when opening, transporting, and storing. Primer is required when used on concrete and masonry.

Low Odor—Formulated for use in enclosed spaces, it can also be used on plaster.

Direct-to-Metal Rust-Stopper

Hard Shell—Stop rust from starting and prevent existing rust from spreading. Do not use on galvanized steel or aluminum.

Fast Dry—Keep dust and debris from damaging your drying surface. This corrosion-resistant paint dries fast, ensuring a quality finish. It can also be used on ceramic, glass, and plaster. Do not use on galvanized steel or aluminum.

High Performance—This durable paint forms a barrier to seal out moisture, preventing future rust from starting. It has a hammered finish, textured to hide surface flaws. Apply directly to firm, rusty surfaces. Primer is required when used on galvanized steel and aluminum.

Specialty

Direct-to-Plastic—Spray onto plastic surfaces (including PVC, hard vinyl, resin, and fiberglass) without sanding or priming.

Chalkboard—Creates a washable surface that can be used as a chalkboard. It can also be used on glass and plastic; do not use on concrete or masonry. For indoor use.

Rough-Textured Finish—Stone-like finish hides surface blemishes.

Fluorescent—Use these paints for high visibility. Primer is required for use on wood.

Reflective—Make items visible under emergency lighting and in the dark with this paint. Excellent for signs and emergency equipment. Paint is clear so it won't obscure the color of your item. It can also be used on plastic.

Glare Reducing—Put a temporary dull finish on plastic, glass, and other glossy surfaces. Wipe to remove. For indoor use.

Glow-in-the-Dark—Illuminate emergency exit routes, ramps, and doors in case of power outages. Requires a minimum 2-hour exposure to light. Both colors glow luminescent green. For indoor use.

Metallic Finish—Highlight machinery, piping systems, and equipment. Outdoor exposure can result in accelerated weathering.

Equipment, **Material Handling**, **High-Temperature Engine, and Furniture and Storage**—Match the manufacturers' equipment colors. *Equipment* paint is for use on metal and wood. *High-temperature engine* paint has an intermittent maximum temperature of 500° F. *Furniture and storage* paint is for use on metal.

To Order: Please specify finish and color.

Paint

Enhance, renew, and protect surfaces with this liquid paint. It's for indoor and outdoor use and can be applied with a brush, roller, or sprayer on concrete, masonry, steel, and wood, unless otherwise stated. Comparable to Rust-Oleum.

Standard

General Purpose—Resists weather and mild chemicals. Water based. *Paint* and *primers* cannot be sold in the Los Angeles area.

Low Odor—This zero-VOC paint is for use in enclosed occupied areas such as hospitals, schools, and offices. Water based. *Gray primer* is for use on non-metal surfaces.

No-Mess Ceiling—Eliminate paint splatter clean-up. Drops dry to a powder as they fall from ceilings 10 ft. and higher. Paint can also be used on drywall and plaster. Primer required for iron, steel, and wood. Water based and for indoor use.

Direct-to-Metal Rust-Stopper

General Purpose—Stop rust from starting and prevent existing rust from spreading. Paint is water based and resists weather and mild chemicals. Requires a primer when used on abrasive-blasted steel and aluminum. *Paint* and *primer* cannot be sold in the Los Angeles area.

Low VOC—For use on steel only, this paint resists weather, salt spray, mild chemicals, and abrasion. Not for use on galvanized steel. Solvent based.

Fast Dry—Keep dust and debris from damaging your drying surface with this quick-drying paint. Water based.

Hammered Finish—Prevent corrosion and hide surface flaws with the textured surface of this paint. For use on metal only; do not use on galvanized steel or aluminum. Solvent based.

Specialty

Magnetic and **Magnetic Chalkboard**—Create a magnetic surface with these paints. They can also be used on plastic, glass, and ceramic. Not for use on masonry. Both are water based.

Magnetic is an undercoat to be covered with water-based paint.

Magnetic chalkboard dries with a flat black finish and works as a chalkboard. For indoor use only. Do not apply with a sprayer.

EMI/RFI Shielding—Protect electronics from electromagnetic interference (EMI) and radio frequency interference (RFI). Adheres to most plastics and concrete; do not use on masonry, steel or wood. Apply with an HVLP sprayer. Water based.

Conductive and **Static Dissipative**—Reduce the buildup of static electricity with these durable, low-odor paints. They can also be used on ceramic and tile. Both are water based.

Conductive has a surface resistivity of 10^3 to 10^5 ohms sq.

Static dissipative has a surface resistivity of 10^6 to 10^{11} ohms sq.

To Order Please specify finish and color.

Powder Coatings

More durable and scratch resistant than liquid paint. Apply directly to unpainted metal and heat-cure in an oven for a smooth, baked-on finish. Maximum temperature is 350°F.

Size, net wt.	Dry Time	Coverage, sq. ft.	Choose a Color: Satin	Semi-Gloss	Gloss		
8 oz.	25 min.	10	Black	Black	Black, Dark Blue, Dark Green, Orange, White	6356T11	$13.44

High-Temperature Paint

High-Temperature for Metallic Surfaces—Stop corrosion on carbon steel and stainless steel exposed to high temperatures. This heat-resistant, silicone-resin paint can be used on firm rusty surfaces such as smokestacks, incinerators, heaters, and heat exchangers. All paint is solvent based and for indoor and outdoor use.

Aerosol Paint—Spray on, and then increase the temperature two to three times (450° to 650°F), allowing surface to cool between firings. Primer is not required; scrape rusty areas clean.

Paint—Apply with a brush, roller, or sprayer and allow surface to air dry before heating. For best results, use a primer with colors except aluminum, which cannot be used with the primer.

Primer—Prevent further corrosion on surfaces with tightly-adhered rust. Primer can be applied with a brush, roller, or sprayer.

Ultra-High-Temperature for Nonmetallic Surfaces—This ceramic-filled paint is for use on ceramic and other nonmetallic heat-resistant surfaces in heaters, furnaces, and ovens. Apply with a brush or sprayer. Allow surface to air dry before heating. Paint is water based and for indoor and outdoor use.

Heavy Duty Acid-Resistant Coatings

Protect surfaces against chemical fumes and splashes. This solvent-based phenolic coating resists acids, alkalies, and inorganic salts. It's highly durable and offers excellent adhesion. For indoor and outdoor use on concrete, metal, and wood.

	Size, net wt.	Dry Time: Touch	Dry Time: Overall	Coverage, sq. ft.	Max. Temp.	Color		
Aerosol	11 oz.	6 hrs.	7 days	25	200°F	*Semi-Gloss:* Dark Brown	7610T5	$30.42

Primers

Extend the life of your paint and coatings with these primers. They can be used with both solvent- and water-based topcoats and are for indoor and outdoor use, unless otherwise stated.

Aerosol

Stain Blocker—Cover stains from smoke, water, and ink and prevent them from bleeding through your topcoat. For use on concrete, drywall, tile, and wood. Solvent based.

Filler—This primer provides a smooth, rust-resistant basecoat that fills surface cracks and is sandable. Use on fiberglass, metal, and wood. It's solvent based and should only be used with solvent-based topcoats. Use gray for light-color topcoats; red for medium-color topcoats; and black for dark topcoats.

Plastic Surface—Excellent adhesion to plastic. Solvent based.

Corrosion Inhibiting—Forms a rust-resistant basecoat that stands up to marine exposure and salt spray. For use on metal, including aluminum and galvanized steel. Solvent based.

Heavy Duty—Both parts of this durable epoxy primer are contained within the can, which mixes and activates the primer when sprayed. For use on all bare metal and previously coated surfaces. Solvent based.

Liquid

Stain Blocker—Cover stains from smoke, water, and ink; prevent them from bleeding through your topcoat; and seal out odors. Use on aluminum, brick, concrete, drywall, PVC, tile, and wood. Apply with a brush, roller, or sprayer. Solvent based. For indoor use.

Porous-Surface Filler—Also known as block filler, this primer fills in cracks and smoothes out surface irregularities. Apply on cinder block, concrete block, and masonry with a brush, roller, or sprayer. Filler is water based.

Low Odor—This zero-VOC primer covers stains on drywall, plaster, and wood. Apply with a brush, roller, or sprayer. Water based.

Bare Steel—For long-term corrosion protection on uncoated steel. Apply with a brush or sprayer. Water based. Use gray primer for light-colored topcoats; use red for dark topcoats. Use with water-based topcoats only.

Tool Blackeners

An alternative to purchasing black-oxide tools, these kits create a flat, black protective finish on metal to resist corrosion and reduce glare. Dip or swab tool at room temperature. Blackeners are water based and have a maximum temperature of 250°F. For indoor use.

For Ferrous Metals—Use on iron and steel (not stainless).

For Nonferrous Metals—Use on aluminum, brass, and copper.

Polyurethane Coatings

These solvent-based coatings resist moisture, corrosion, and abrasion better than paint and have excellent color retention. They're for indoor and outdoor use and can be applied with a brush, roller, or sprayer (unless otherwise stated).

Aerosol—Spray this oil-resistant coating onto metal, paper, and wood surfaces.

General Purpose—For use on metal only, this coating is excellent for frequently cleaned surfaces. Not for use on stainless steel. *Primer* cannot be sold in the Los Angeles area.

Direct-to-Metal—This two-part coating can also be used on concrete, but not stainless steel. Application time after mixing is 2½ hrs.

High Humidity—*Choose-a-color* and *clear coatings* resist yellowing and chalking on metal and primed concrete. Use with *primer* to prepare lightly cleaned rusted steel and aluminum surfaces.

Black tar coating provides chemical and corrosion resistance on grit-blasted concrete and primed steel in immersion, underground, and waste-water treatment applications. Not UV resistant. Use with *primer for black tar coating* to prepare steel surfaces.

Thinner cannot be sold in California or Utah.

Super Abrasion-Resistant—Brush onto concrete, fiberglass, metal, rubber, and wood. Designed for hoppers, chutes, and pumps, one application of this two-part coating forms a 50-mil thick protective layer. Application time after mixing is 45 min. Not for outdoor use. Do not apply with a roller or sprayer.

To Order: Please specify finish and color.

Rubber Coatings

Multipurpose

Protect surfaces with these slip-resistant, flexible coatings. They protect against moisture and can be used indoors and outdoors on metal and wood.

Multipurpose—Dip, brush, or spray these solvent-based coatings to insulate, create grips, and color-code components. They resist chemicals, salt, and extreme temperatures and can also be used on fabric, plastic, rope, and wire. Comparable to Plasti-Dip. *Topcoat* gives rubber-coated surfaces a glossy finish. *Thinner* cannot be sold in California or Utah. *Primer* is required for use on metal.

Fast-Dry Multipurpose—With the same properties as multipurpose, this coating has a shorter dry time and can also be used on fiberglass and rubber.

Leak Stopper—Stop leaks and deaden sound with this petroleum-asphalt based coating. It resists rust, salt, and acids. Not VOC compliant in CT, DE, MD, ME, NJ, NY, PA, RI, UT, the D.C. area, Northern Virginia, or the Los Angeles area.

Chemical-Resistant Extreme Temperature—Resist oils, acids, and UV light in temperatures from –40° to 400° F with this solvent-based coating. Also for use on ceramic, fabric, and rubber.

Water-Repellent Extreme Temperature—This silicone-rubber coating resists chemicals, blocks UV light, encapsulates lead paint, and withstands temperatures from –30° to 320° F. Apply with a brush, roller, or sprayer. It can also be used on fiberglass.

Thermal-Insulating Waterproof—Reflect up to 85% of the sun's heat with this low-odor, water-based elastomeric coating. Two coats provides the protection of 3″ to 6″ of polyurethane foam. Coating can also be used on concrete, fiberglass, masonry, roof shingles, and tile. Apply with a brush, roller or sprayer. Not for use on surfaces containing silicone.

Epoxy Coatings

Thicker than polyurethane and paint, these coatings offer high moisture resistance. They also protect against abrasion and chemicals, except the porcelain finish. Coatings are solvent based and can be applied with a brush, roller, or sprayer (unless otherwise stated). They have two parts that must be mixed, and are for indoor and outdoor use, except aerosol and porcelain finish do not require mixing and are for indoor use only. Coatings may chalk with exposure to sunlight.

To Order: Please specify finish and color.

Aerosol—Spray this stain-resistant coating directly onto drywall, metal, plaster, and sealed wood.

General Purpose—Apply this durable coating to concrete, wood, and metal (except aluminum and galvanized steel). *Primer* contains 61% zinc for corrosion resistance.

Direct-to-Metal Rust-Stopper—Use this self-priming, corrosion-resistant coating on metal, concrete, and masonry. Comparable to Rust-Oleum. Not VOC compliant in the Los Angeles area.

Low Odor—For enclosed, high-traffic spaces, use this water-based coating on aluminum, concrete, steel, painted surfaces, and primed rusted metal. Comparable to Rust-Oleum.

Low Temperature—Apply in temperatures as low as 20° F. This coating has high corrosion resistance. It can also withstand immersion into salt water and fresh water; not for use with drinking water. Use on aluminum, concrete, galvanized steel, steel, and iron. Not for use on stainless steel. Maximum temperature is 100° F when immersed in water.

Severe Environment—Also known as coal tar epoxy, this coating is our most resistant to abrasion, chemicals, and corrosion on concrete and steel. It can be immersed in salt water and fresh water; not for use with drinking water. Maximum temperature is 120° F when immersed in water. Comparable to Rust-Oleum. This product cannot be sold in California or Utah.

Underwater—Use and apply this Kevlar-reinforced, solvent-free coating below the water line. It bonds to damp or submerged steel and concrete in salt water and fresh water, offering excellent corrosion and impact resistance. Apply with a brush, mitt, or spatula. Not for use with drinking water.

Low-Friction Ceramic—Brush on this ceramic-based coating to protect and repair heat exchangers, condensers, valves, and pumps. It creates a smooth, corrosion-resistant surface on aluminum, carbon steel, iron, and stainless steel.

Porcelain Finish—Refinish porcelain sinks, tubs, and tile and give a high-gloss finish to laminates. Coating should be applied with a brush. This coating is not chemical or abrasion resistant.

Stainless Steel Coatings

With Type 316L stainless steel flakes for durability, these coatings provide superior corrosion resistance. Apply with a brush, roller, or sprayer. Comparable to Steel-It.

Heavy Duty Polyurethane—For metal and other nonporous surfaces that need to withstand high-pressure washdowns, use these solvent-based coatings. They resist abrasion and chemicals. For indoor and outdoor use.

Epoxy—This two-part coating is solvent based and resists chemicals and other solvents. Application time after mixing is 6 hours. For indoor use on metal and other nonporous surfaces.

Fast-Dry Low Odor—Protect concrete, masonry, and metal with this water-based, UV-resistant coating. For indoor and outdoor use. It can also be used on primed wood (indoors only).

High Temperature—Use these self-priming, solvent-based coatings for boilers, stacks, piping, and similar indoor applications. After the coating has completely dried, the surface requires heating at 400° F for 30 minutes. All are chemical resistant.

Galvanizing Coatings for Rust Prevention

Keep iron and steel free of rust and corrosion. These zinc-rich, solvent-based coatings offer the protection of hot-dip galvanizing. Designed for outdoor use, these coatings can also be used indoors in well-ventilated areas. Brush, roll, spray, or dip to apply.

Cold Galvanizing—Coatings contain 93% pure zinc and meet MIL-P-21035.

High-Temperature Cold Galvanizing—Withstand temperatures up to 750°F with this coating. It contains 99% pure zinc and meets MIL-P-21035.

Bright Galvanizing—Protect and restore the shiny gray finish of hot-dip galvanizing or use as a topcoat for cold-galvanizing coatings. Both contain 65% pure zinc.

Chrome Galvanizing—Preserve or refresh the reflective finish of hot-dip galvanizing on chrome or use as a topcoat for cold-galvanizing coatings. This spray-on coating contains 10% pure zinc.

Peel-Away Protective Coatings

Protect tools, dies, and other parts during shipping and storage with these durable, removable coatings.

Reusable Coatings

Use these coatings on metal. They're abrasion, moisture, and corrosion resistant (unless otherwise stated). For indoor use, except *long-term storage* can also be used outdoors. To apply, heat coating and dip the object. Coating dries in 2 minutes and can be melted again for repeat use.

General Purpose—After peeling, these mineral oil-based coatings leave a greasy film for continued corrosion protection.

Heavy Duty—The most durable peel-away coating we offer, this oil-based coating is highly abrasion resistant.

Flexible—Absorb shock with this soft and pliable oil/rubber-based coating. Not recommended for long-term protection against corrosion.

Long-Term Storage—These resin-based coatings won't dry out, even when stored over a long time. They do not contain solvents.

Disposable Coatings

Prevent rust, abrasion, and moisture penetration with one of these temporary coatings.

Aerosol—Spray this solvent-based coating onto nonporous, indoor surfaces such as anodized aluminum and unpainted metal. Often used on castings, dies, glass, and mirrors. Maximum temperature is 150°F; apply between 70°F and 90°F. Color is light gray.

Liquid—This clear, water-based coating has almost no odor and cleans up with water. Brush, roll, or spray it onto aluminum, asphalt, ceramic, concrete, glass, hard plastic, wood, and steel. Maximum temperature is 150°F; apply between 40°F and 100°F. It's for indoor and outdoor use but not recommended for surfaces in direct sunlight.

Enclosed-Area Corrosion Inhibitors

Foam

Plastic Cup

Keep metal components in electrical enclosures, tool boxes, and cabinets free from corrosion for up to two years with these adhesive-backed inhibitors. They emit a vapor that coats metal components and stops moisture from causing corrosion.

Foam is for tight spots. It has a maximum temperature of 180°F. Meets MIL-PRF-81705D.

Plastic cup has a slow-release membrane and won't break apart. Maximum temperature is 185°F. Meets MIL-I-22110C.

Style	Size	Area Protected, cu. ft.		
Foam	3″ Lg. x 1¼″ Wd. x ¼″ Ht.	1	78125T24	$3.52
Plastic Cup	2¼″ Dia. x 1¼″ Ht.	11	78125T26	14.37

Paint and Coating Removers

Prepare surfaces for refinishing with these fast-acting removers. They cut through paint and other coatings on concrete, glass, masonry, metal, and wood (unless otherwise stated). Comparable to Goof-Off.

General Purpose Removers—Strip paint, varnish, and urethane with these solvent-based removers.

Aerosol remover will also take off shellac and lacquer.

Liquid removers can penetrate several layers with one application. They also work on epoxy and marine coatings. Apply with a brush or roller.

Low-Odor Removers—Apply these soybean-based removers with a brush or sprayer to take off paint, varnish, urethane, and epoxy coatings. Not for use on plastic, rubber, or drywall.

Heavy Duty Kits—For tough jobs, apply the thick, high-strength paste from these kits and cover with the included absorbing paper. Peel the paper from the surface and dispose.

Kit for paint removes up to 30 layers of water- and solvent-based paint per application. Apply with a trowel (included) or sprayer. After stripping, apply a neutralizer (included) so new paint isn't affected. Will not remove epoxy, polyurethane, or baked coatings; do not use on aluminum, glass, or wood. Water based.

Kit for coatings removes up to 10 layers of epoxy, polyurethane, and marine coatings per application. Apply with a brush, roller, or sprayer. Solvent based.

Powder-Coating Removers—Use this low-odor, solvent-based remover on powder-coated metals and plastics (except silicone).

Removable Rust- and Corrosion-Inhibiting Films

For long-lasting protection against rust and corrosion, these films can be sprayed, dipped, or brushed onto surfaces and then removed.

Aerosol

All aerosol films are amber.

General Purpose—Designed for tool and die storage, this solvent-based coating forms a greasy, elastic film that won't harden or crack. Remove with mineral spirits or a solvent-based cleaner.

High Temperature—This petroleum-based coating leaves a tacky film. Remove with a degreaser. Not for outdoor use.

Heavy Duty—Spray on this petroleum-based coating for a waxy film that resists high humidity. Remove with mineral spirits. It meets MIL-C-16173, Grade 4.

Heavy Duty LPS #3—This oil-based coating produces a self-healing, waxy film that dries slightly tacky. Remove with mineral spirits or a degreaser. Coating meets MIL-C-16173D, Grade 2. It is not VOC compliant in the Los Angeles area.

Liquid

Food Grade—This petroleum-based coating is USDA H1 approved for incidental food contact. It forms a tacky film. Remove with an alkaline cleaner. Color is clear.

Low Odor and **Heavy Duty Low Odor—**These water-based coatings can be removed with an alkaline cleaner.

Low-odor coating forms a waxy film similar to lube oil, so parts can remain coated for assembly. Color is amber.

Heavy duty low-odor coating forms a hard, waxy film and meets MIL-C-16173, Grade 1. Color is amber.

Heavy Duty LPS #3—This oil-based coating produces a self-healing, waxy film that dries slightly tacky. Remove with mineral spirits or a degreaser. Color is amber. This coating meets MIL-C-16173D, Grade 2. It's not VOC compliant in the Los Angeles area.

Painting Mitts

When painting poles, railings, pipes, and fences, this lightweight mitt comes in handy. It's made of a soft, washable polyester. Nap is 7/8" thick. Each mitt comes with two plastic liners.

Painting Mitt	9525T14	$5.23
Liners (Box of 500)	9737T273	19.16

Rust Removers

Rid surfaces of rust with these removers, inhibitors, and converters.

Naval Jelly Rust Remover—This acid-based jelly is for use on iron and steel. Apply with a brush or sprayer, leave it on for 5 to 10 minutes, and then rinse with water. Not for use on aluminum, chrome, or marble.

Noncorrosive Rust Remover/Inhibitors—Dip iron, steel, and stainless steel into these water-based liquids. To use as a remover, rinse after immersing; to use as an inhibitor, immerse again and allow liquid to dry on the item. Not for use on aluminum, brass, or copper.

Nonflammable Rust Remover/Inhibitors—Dip, brush, or spray these water-based liquids onto aluminum, chrome, iron, and steel to dissolve rust and prevent it from returning. Wipe off excess and allow to dry.

Rust Converter/Inhibitors—Convert rust into a layer of protection that prevents new rust from forming. These also act as a primer and can be painted.

Aerosol can be used on all metal. It's solvent based and turns treated surfaces black.

Liquid is for use on steel, aluminum, cast iron, and galvanized metal. It's water based and can be applied with a brush, roller, or sprayer.

About Paint Brush Bristles

Natural bristles are best for oil- and solvent-based paint and coatings. They're made of animal hair (typically hog).
Synthetic bristles are best for water-based paint and coatings. They're made of nylon, polyester, or polyolefin.

Paint Brushes

Brushes have black bristles, unless otherwise stated.
Professional brushes hold more paint than the other brushes.

Paint Brush and Roller-Cover Cleaners

Pump the handle to spin paint off your brush or roller cover. Cleaner holds brushes with handles up to 6" wide and 1/2" thick and roller covers up to 18" long. Made of stainless steel, it's 15" long.

9065T11 ..... $21.94

♦ ***Prices are 10% lower when you order full package quantities.***

Roller Covers and Frames

Roller Covers

All covers are 1½″ diameter and have a solvent-resistant plastic core.

Shed Resistant—Use these rollers to produce a clean finish.

Fast Apply—The fabric nap on these covers has a nonstick PTFE coating for quick, smooth application and speedy clean-up.

Foam—Not for use with shellacs or lacquers. 95535T94 has slits to better conform to uneven surfaces.

For Epoxies and Adhesives—Give thick coatings a textured finish with this short-nap cover.

Roller Frames

Standard

No-Slip Telescoping

Extra Long

Spatter Resistant with Cover

Frames have a plastic handle, except no-slip telescoping handle is rubber. Each has a ¾″ threaded hole for an extension handle (sold separately on page 2165).

No-Slip—Keep covers secured with the gripping tabs on these frames. *No-slip telescoping* handle extends from 18″ to 34″.

Extra Long—Handle sold separately.

Spatter Resistant with Cover—This frame has a no-mess shield and includes a roller cover (1½″ dia. with ⅜″ nap).

Miniature Paint Rollers

Touch-Up

Trayless

Long Reach

Adjustable

When painting a tight spot, these rollers cover spaces where standard-size rollers won't fit. Rollers (except touch up) have a ¾″ threaded hole for an extension handle (sold separately on page 2165). All have plastic handles.

Touch-Up—For quick jobs without the clean-up, this roller comes with a small plastic tray. Cover is ¾″ Dia. × 3″ Lg. Handle is 5½″ long. For smooth and semi-smooth surfaces.

Trayless—Small enough to slip into a 1-gal. paint can, this roller needs no tray. Cover is 4″ long. Handle is 16″ long. For semi-smooth surfaces.

Long Reach—Apply paint in hard-to-reach areas with the longest mini-roller we offer. Cover is 6½″ long. Handle is 24″ long. For semi-smooth surfaces.

Adjustable—Designed to cover odd-shaped spaces, this roller has a frame that tilts to switch angles. Cover is 6″ long. Handle is 14″ long (10½″ to pivot point). For semi-smooth to rough surfaces.

Paint Rollers for Round Surfaces

Small Diameter

Large Diameter

Use these rollers for well-rounded coverage when painting columns, cylinders, pipes, and other curved surfaces. Both have a ¾″ threaded hole for an extension handle (sold separately on page 2165).

Small-diameter roller conforms to round surfaces up to 2½″ diameter. It has a steel frame and an 11¾″ long plastic handle. Not for use with shellacs or lacquers.

Large-diameter roller is flexible to bend around curved surfaces. The cover is 7″ long with ¾″ polyester nap. It has an aluminum frame and a 12″ long wood handle.

Easy-Pour Paint Can Lids

Get a controlled, no-drip pour every time. Snap this plastic lid onto a 1-gal. can. The spout collapses for storage. Color is red.

8047T3 ..... $4.69

Air Brush Kits

Basic-Control Multi Air Brush Kit

Easy-Adjust Single Air Brush Kit

Basic-Control Kits—Both have a single-action trigger that controls airflow. You must adjust the nozzle to control paint flow.

Single air brush with compressed air can includes one siphon-feed air brush with medium spray head for 1/32″-2½″ thick lines, a 4-ft. air hose, and three ¾-oz. glass jars. It can also be used with an air compressor adapter; requires 0.25 cfm of air @ 30 psi.

Multi air brush with air compressor connection includes two siphon-feed air brushes for medium and thick lines, and a gravity-feed flow pencil for thin lines. Medium brush makes 1/16″-1½″ thick lines; heavy brush makes 1″-2″ thick lines. The brushes require 0.6 cfm of air @ 20 psi. The gravity-feed flow pencil makes 1/32″ thick lines, has a 1-oz. aluminum cup, and does not require an air source. Kit includes two plastic jars (3 oz.) and a 6-ft. air hose with ¼″ NPT female connection.

Easy-Adjust Kit—*Single air brush with air compressor connection* has a convenient dual-action trigger that controls both airflow and paint flow. It includes one siphon-feed air brush with two spray heads: medium for 1/32″-2½″ thick lines; heavy for 1/16″- 3″ thick lines. Kit also includes a 5-ft. air hose with ¼″ NPSM female fitting and three jars (¼, ¾, 2 oz.). Requires 0.25 cfm of air @ 30 psi. Air brush can also be used with aerosol can adapter and compressed air can.

Also Available: Replacement parts not listed below. Please ask for 9546T88 and specify part required.

Air-Powered Paint Sprayers

A

B-D&F

E

G

For fast, uniform paint application, connect one of these sprayers to your air compressor. The air inlet connection is 1/4" NPS male; fluid inlet connection is 3/8" NPS male, unless noted. All have an adjustable spray pattern, except Style A has a nonadjustable tip. *Styles A-F* are conventional sprayers. For hoses, see page 294.

Choose a sprayer based on the thickness of the paint or coating you plan to spray: *thin* includes stains, dyes, and solvents; *medium* includes paint and lacquers; *thick* includes urethanes and epoxies.

Light Duty—These economical siphon-feed spray guns use suction to draw liquid out of a reservoir cup. Nozzles are black-oxide steel. *Style A* is excellent for mold-release agents; it's nylon with brass fluid passages. *Style B* provides a finer finish than Style A; it's aluminum with stainless steel fluid passages.

Heavy Duty—Change from siphon to pressure feed for thick paint and coatings. Sprayers can handle high-volume projects and still provide a fine finish. Body is aluminum and fluid passages and nozzle are stainless steel, except Style C has a black-oxide steel nozzle. *Style D* can be used with road-marking paint. *Style E* can be used with adhesives.

High Volume/Low Pressure (HVLP)—Produce less overspray than conventional sprayers, wasting less paint. Made of aluminum with stainless steel nozzle and fluid passages.

Repair kits include commonly worn parts.

Also Available: Replacement parts for Styles D-G. Please specify part required and ask for 7841T88 for *Styles D* and *E*; 77745T66 for *Style F*; and 77745T77 for *Style G.*

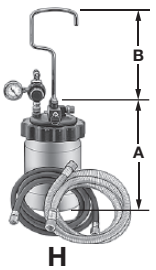
Pressurized Paint Tanks for Air-Powered Paint Sprayers



H

J

K

L

M&N

Attach one of these large-capacity tanks to your paint sprayer for high-volume application of paint and coatings. Each tank has a pressure regulator with gauge, a safety relief valve, and a cover with gasket.

Styles H-L include air and fluid hoses. *Styles M* and *N* do not include air and fluid hoses. The hose set sold below is compatible with all tank styles.

Easy-cleanup tanks are PTFE coated inside and out. *Tank with agitator* has a 1/2 hp motor to keep thick coatings mixed.

Also Available: Replacement parts. For *Styles H, K,* and *L,* please ask for 7853T5 and specify part required. For *Styles J, M,* and *N*, please ask for 9590T5 and specify part required.

Electric Paint Sprayers

A

B

C

D

These portable, airless sprayers apply paint and coatings faster than air-powered sprayers. They have a suction tube that draws paint from a container and include a fluid hose, except Style D does not require a hose. All operate on 120 volts AC and have a cord with three-prong plug.

Choose a sprayer based on the thickness of the paint or coating you plan to spray: *thin* includes stains and dyes; *medium* includes paint.

(A) Light Duty—This convenient sprayer can be used two ways: with the included 1½-qt. plastic cup or with the 5-ft. fluid hose and 1½-gal. backpack. It has three speeds and a low-paint indicator. Spray tip has two fixed openings. Liners are sold separately below.

(B) Medium Duty—This sprayer includes a 50-ft. fluid hose and has plastic wheels.

(C) Heavy Duty—Choose this durable sprayer for high-volume applications. Its wear-resistant motor automatically adjusts to changes in pressure. The spray tip has a guard and is reversible for quick cleaning. Sprayer comes with a 50-ft. fluid hose.

(D) High Volume/Low Pressure (HVLP)—This efficient hand-held sprayer produces low overspray, so it wastes less paint than other sprayers. It has an adjustable spray pattern and comes with an attached 1½-qt. plastic cup.

Repair kits include commonly worn parts.

Replacement tips come in various sizes for *Styles B* and *C*. Choose small tips for thin coatings; large tips for medium coatings and faster spray speeds. **To Order:** Please specify tip size. For *Style B*, choose 0.011″, 0.013″, 0.015″, or 0.017″. For *Style C*, choose 0.017″, 0.019″, 0.021″, or 0.023″.

Also Available: Replacement parts. For *Style B*, please ask for 78505T87 and specify part required. For *Style C*, please ask for 74485T34 and specify part required.

Spray Booths

Contain overspray and discharge fumes with these galvanized steel spray booths. Not for use with hazardous, flammable, or explosive materials.

Bench Top

Use this portable spray booth for small projects. It has an exhaust motor, a 4″ duct connection, and two 8″×17″ filters (one polyester; one carbon). The exhaust motor operates on 120 volts AC and draws 0.43 amps; air flow is 235 cfm. It has a cord with three-prong plug.

	Overall Size Wd.	Dp.	Ht.	No. of Filters		
Spray Booth	22″	20″	18″	2	**9559T51**	$326.27
Replacement Polyester Filter					**9559T52**	2.95
Replacement Carbon Filter					**9559T53**	7.50

Full Size

Booths have a three-phase exhaust motor that must be hardwired; it operates on 208-230/460 volts AC and is UL listed. Both booths come with 20″×20″ polyester filters that meet UL 900 for flame retardance, filter frames, and a filter-change indicator. Booths ship unassembled. Both conform to OSHA and NFPA regulations.

36″ wide booth has a ⅓ hp motor that operates on 230 volts AC and draws 1.5 amps. The air flow is 1,200 cfm. Exhaust fan duct diameter is 12″.

60″ wide booth includes four 32-watt, 48″ fluorescent bulbs. It has a ½ hp motor that operates on 230 volts AC and draws 2.4 amps. The air flow is 2,000 cfm. Exhaust fan duct diameter is 18″.

Spray-Booth Accessories

Filters

Fiberglass—These filters provide moderate efficiency. *20″ wide filters* are 2″ thick; *24″* and *48″ wide filters* are 2½″ thick.

Fiberglass with Backing—Thicker than standard fiberglass filters, these have a layer of polyester for added efficiency. They're 3½″ thick.

Expanded Paper—More efficient than fiberglass filters, these are made of layered paper. All are ½″ thick.

Polyester—The most efficient filter we offer, these are moisture resistant and ⅝″ thick.

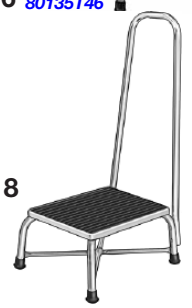
6 *80135T46*

7



8

9

Get a secure and stable step up. All stools have nonskid rubber feet and slip-resistant tops.

Style 1 has a 10¾″ Ht. × 16″ Lg. storage space, a removable 1 7/16″ Ht. × 16″ Lg. three-compartment tray, an extension cord holder, and a recessed handle that folds flat when not in use. Top surface has a diamond pattern. Color is gray.

Style 2 is stackable. Top surface is urethane and vinyl. Color is yellow.

Style 3 has an abrasive top surface.

Style 4 has a serrated top surface. Meets OSHA requirements.

Style 5 has three spring-loaded swivel casters. Top surface is grooved. Meets OSHA requirements.

Style 6 have cross bracing. 80135T46 has a perforated top surface; *T48* has a vinyl top surface. Both meet OSHA requirements.

Style 7 moves on spring-loaded swivel casters. Top surface is ribbed vinyl. Some assembly is required. **To Order:** Please specify color: beige, black, blue, gray, or red.

Style 8 has cross bracing and a handrail for extra stability. Overall height with handrail is 36″. Top surface is rubber. Some assembly required.

Style 9 are corrosion resistant. They have a reinforced platform. Top surface is vinyl.

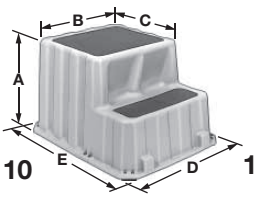
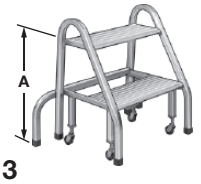
Step Stands



10

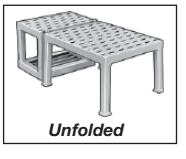
11&12



13

14&16

15



17

18

Stands have nonskid rubber or vinyl feet. *Styles 11-17* meet OSHA requirements.

Style 10 are durable, yellow polyethylene with a nonskid base. *Two-step stand* has urethane-coated steps and a 20″ Wd. × 5″ Dp. lower step. *Three-step stand* has abrasive strips on the steps and a 18¾″ Wd. × 8¾″ Dp. middle step and a 19 7/8″ Wd. × 8¾″ Dp. lower step.

Styles 11 and ***12*** have 3″ deep ribbed aluminum lower steps and molded plastic top steps. *Style 11* is orange and meets ANSI A14.5 Type 1A. Style 12 meets ANSI A14.2 Type 1A.

Style 13 has four spring-loaded swivel casters. Steps have a grooved surface. Lower step is 16″ Wd. × 7 1/2″ Dp. Includes an optional outrigger for added stability (assembly required).

Style 14 have serrated steps. Lower steps are 9 1/2″ deep. *8255T16* requires some assembly.

Style 15 has a hinged top step so it can be folded down to create a 12″ Ht. × 19″ Wd. × 32¾″ Dp. one-step stand. Steps are serrated. Color is yellow.

Styles 16 and ***17*** have serrated steps. Lower steps are 9 1/2″ deep. *8126T5* and *T2* require some assembly. *Style 17* has four spring-loaded swivel casters.

Style 18 is corrosion-resistant stainless steel with vinyl steps. Lower step is 18″ Wd. × 11 1/2″ Dp. Does not meet OSHA requirements.

Note: Number of steps listed in table includes top step.

Step Stands with Handrails

Handrails give these step stands extra stability. They also have slip-resistant tops and rubber feet.

Steel-Frame Step Stands— Have polypropylene steps. Lower steps are 15″ Wd. × 8″ Dp. Fold for storage. Meet OSHA requirements.

Deep-Step Steel-Frame Step Stand— Has rubber covered steps. Lower step is 17¼″ Wd. × 12¼″ Dp. Some assembly required.

Steel-Frame Step Stands with Casters— Two rigid casters on the front provide easy mobility. Stands have perforated steps. Lower steps are 16″ Wd. × 7″ Dp. Fold for storage. Meet OSHA requirements; 9754T77 does not meet CAL-OSHA requirements and is not available in California.

Aluminum-Frame Step Stands with Casters— Two tilt-to-roll casters on the back allow you to roll stands anywhere. Stands have rubber treads on the steps and plastic feet. Lower steps are 14″ Wd. × 9″ Dp. Fold for storage. *Three-* and *four-step stands* have a tool tray mounted on the handrail. Meet OSHA requirements.

Note: Number of steps listed in table includes top step.

Deep-Step Low-Height Step Ladders

These step ladders have ribbed aluminum lower steps that are about twice the depth of other step ladders so they're more comfortable for prolonged standing. Top step is molded plastic with a slip-resistant diamond tread. Fold for storage. Meet OSHA requirements. *Step ladders with handrail and casters* have a handrail and two tilt-to-roll casters on the rear legs to easily move the ladder. ***Fiberglass ladders*** have orange nonconductive fiberglass rails. ***Aluminum ladders*** have aluminum rails.

Note: Number of steps listed in table includes top step.

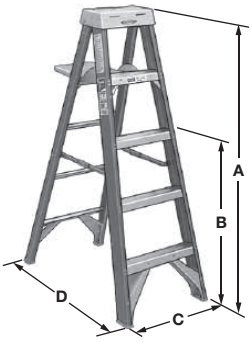
Fiberglass Step Ladders



Standard Ladder with Shelf

Big Foot Ladder without Shelf

Rails are nonconductive fiberglass. Ladders fold for storage and have slots in the top to hold your tools. Meet OSHA requirements. ***Big foot ladders*** provide firmer footing than standard ladders on open flooring such as grating.

300-lb. Capacity Step Ladders— Rails are orange. Steps are ribbed aluminum; top is molded plastic.

375-lb. Capacity Step Ladders— Rails are yellow. Steps and top are ribbed aluminum.

500-lb. Capacity Step Ladders— Rails are yellow. Steps and top are aluminum.

Optional Black Pail Shelf— Attaches to all 300- and 375-lb. capacity ladders without a shelf. Hardware is included.

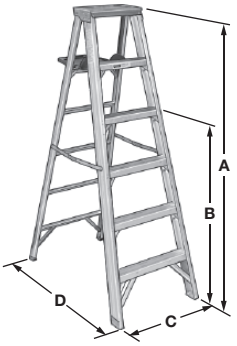
Aluminum Step Ladders



Light and easy to carry, these ladders have a black plastic shelf and slots on the top to hold your tools. Steps are ribbed for slip resistance. Fold for storage. Meet OSHA requirements.

300-lb. Capacity Step Ladders— 3-ft. to 10-ft. ladders have a plastic top; 14-ft. and 16-ft. ladders have an aluminum top.

375-lb. Capacity Step Ladders— Top is aluminum.

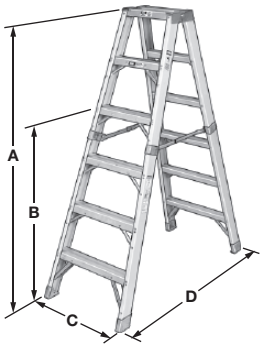
Two-Side Access Step Ladders



With steps on both sides you can climb from either side or have one person on each side. Steps and top are ribbed aluminum. Ladders fold for storage. Meet OSHA requirements.

Fiberglass Step Ladders— Rails are nonconductive fiberglass. Ladders have orange rails, except the 300-lb. capacity, 7-ft. high ladder has yellow rails.

Aluminum Step Ladders— Rails are aluminum.

Ladder Levelers and Stabilizers

Ladder Levelers

Keep your ladder level even when the surface isn't. Leveler adjusts one side of most Type I, IA, and IAA fiberglass and aluminum extension ladders by up to 10″. A foot lock allows for hands-free operation. Leveler is aluminum and has a heavy duty swivel ladder shoe.

7948T65 ..... **Each** $123.62

Rolling Roof Hooks

Roll your ladder to a roof's peak. Then flip the ladder over and the steel hooks hold it in place. Use with straight and extension ladders with round and D-rungs.

8204T73 ..... **Pair** $78.80

Ladder Cable Hooks

Attach these hooks to keep your ladder stable on cable and wire rope. Hooks are aluminum and work with extension and straight ladders.

For Aluminum Ladders... 80205T75 **Pair** $59.42
For Fiberglass Ladders... 80205T77 **Pair** 43.55

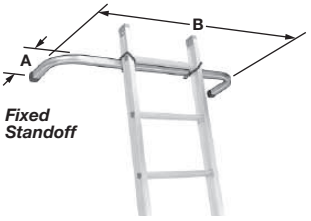
Ladder Safety Tie-Off

Secure your ladder to any diameter pole to keep it stable. Made of nylon, tie-off is 23 ft. long and has buckles to tighten it securely to the pole and your ladder. Use with straight and extension ladders up to 40 ft. high.

2209T71 ..... **Each** $75.86

Ladder Accessories

Ladder Standoffs



Secure straight and extension ladders at a comfortable distance from the supporting surface. Made of aluminum, standoffs have protective tips to prevent scuffs and scrapes. For use on flat surfaces.

Adjustable standoff adjusts in 2″ increments.

	Standoff Distance (A)	Span (B)	Each
Fixed Standoff	12″	48″	7970T63 $33.82
Adjustable Standoff	13″ to 25″	48″	7970T64 60.83

Ladder Rail Caps

Protect supporting surfaces from damage with these PVC caps. Use with straight and extension ladders. Fit rail ends approximately 3″ to 3¼″ × 1″ to 1¼″.

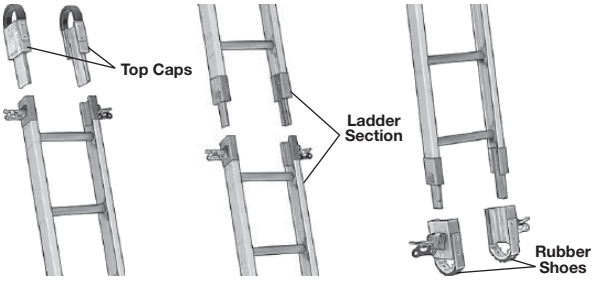
80195T6 ..... **Pair** $11.47

Ladder Dolly

Easily roll ladders anywhere. Dolly secures temporarily through a rung of most aluminum and fiberglass extension ladders up to 40 ft. Can be used on rugged terrain. Wheels are polypropylene.

7740T59 ..... **Each** $121.43

Sectional Fiberglass Ladders



Add or remove sections to make a ladder up to 18 ft. high. Each ladder section is 6 ft. high and you can join up to three sections. Insert the bottom rails into the top rails and secure them with the included tension clamps. Quick assembly and disassembly makes the ladders easier to transport and store than other straight ladders. Rungs are round, ribbed aluminum; rails are yellow nonconductive fiberglass. Meet OSHA requirements.

Note: Two top caps and two shoes are required to complete each ladder.

Ht.	Base Wd.	
250-lb. Capacity—*ANSI A14.5 Type 1*		
6′ Section	12″	7951T35 $152.07

Narrow-Width Ladders

Fiberglass

Aluminum

Ideal for getting in and out of tight, narrow places, these ladders are also known as manhole ladders. Rungs are round, ribbed aluminum. Meet OSHA requirements.

Fiberglass Ladders— Ladders have 3-ft. long plastic rail sleeves at the top to prevent damage to rails. They also have plastic hoop ends to easily pull ladder up. Rails are yellow nonconductive fiberglass.

Aluminum Ladders— Have aluminum rails.

Fiberglass Extension Ladders

Adjust these ladders to the height you need. They have two equal-length, movable sections and spring-loaded locks to keep the raised section securely in place after adjustment. Ladders have yellow nonconductive fiberglass rails, except the 300-lb. capacity ladders with aluminum rungs which are orange. Meet OSHA requirements.

Fiberglass rungs are yellow, round, and ribbed.
Aluminum rungs are flat and ribbed.

Aluminum Extension Ladders

Lighter in weight than fiberglass extension ladders, aluminum ladders are easier to carry. Ladders have two equal-length, movable sections that adjust to create the ladder height you need. Spring-loaded locks keep the raised section securely in place after adjustment. All have flat, ribbed rungs. Meet OSHA requirements.

Telescoping Extension Ladders

Get multiple heights in one ladder. Ladders extend and lock in 1-ft. increments to give you the exact height you need. To close the ladder, pinch tabs on the second rung to release the locking mechanism and then slide each section down one by one. When closed, these aluminum ladders are smaller and easier to carry and store than ordinary extension ladders.

Rungs are grooved and have a stainless steel spring-loaded pin that automatically locks ladder in place. Nonskid feet and top bumpers protect against scratches.

Telescoping Multifunction Ladders

375-lb. capacity ladder pictured.

Easily configure these ladders into a step ladder, a straight ladder, a stairwell ladder, or two scaffolding stands. Ladders consist of a straight inner ladder and a flared-base outer ladder, connected with hinge locks. When used as scaffolding stands, use with 12″ wide planks placed at 3 ft. from the ladder base. When used as scaffolding stands, fiberglass ladders require brackets, sold separately. Meet OSHA requirements.

Fiberglass Ladders—Have black nonconductive fiberglass rails and ribbed aluminum rungs. All include two wheels for mobility.

Aluminum Ladders—Have aluminum rails and ribbed aluminum rungs. *300-lb. capacity* ladder includes two wheels for mobility.

Steel Hook-Top Sectional Ladders

Ladders consist of multiple 3-ft. sections that slide apart for use. Pull the cord and slide sections back together for easy carrying and storage. Ladders must be fully extended for use.

All are tubular steel with a gray finish. They have flat, perforated rungs. Ladders hang from two 6¾″ deep hooks at the top. Standoffs on each section provide 3⅜″ of toe room. Capacity is 250 lbs.

Extended Height	No. of Sections	Base Wd.		
6′	2	14¾″	8192T61■	$467.59
9′	3	14¾″	8192T62	683.08
12′	4	14¾″	8192T63	915.52
15′	5	14¾″	8192T64	1,113.00

■ Due to shorter length, ladder does not have a retrieval cord.

Steel Hook-Top Ladders

Double side rails give these hanging ladders stability and 3⅜″ of toe room. Ladders are tubular steel with a gray finish. A 5¼″ deep hook along the top holds ladders in place. Rungs are flat and perforated. Capacity is 300 lbs. Meet OSHA requirements.

Optional swivel safety shoes are recommended when using ladders on floors. Mounting hardware is included.

Shown with Optional Safety Shoes

Nylon Rope Ladders with Wood Rungs

Attach one of these ladders to a fixed object and drop it into a tank, manhole, pit, or temporary work area. They're lightweight so you can easily carry them anywhere.

Ladders consist of ⅝″ diameter nylon rope connected to 15″ wide hardwood oval rungs. The ladder top has either two 3″ ID loop ends or two 1″ ID×5¾″ Ht. locking snap hooks. Overall width is 15″. Capacity is 300 lbs.

Dual-Rung Chain Ladders

Tough and portable, ladders have steps made of two rungs with a space between and ¾″ Thick.× 3″ ID rings on the top and bottom. Overall step depth is 4⅞″. Ladders are made with nonkinking, lock-link chain. Capacity is 500 lbs.

Steel Ladders— Rungs are zinc-plated steel; chains and fittings are galvanized steel. Overall width is 15½″.

Aluminum Ladders— Rungs, chains, and fittings are aluminum. Overall width is 19¼″.

Unassembled Fiberglass Rolling Platform Ladders

Mobility is combined with the nonconductive, noncorrosive benefits of fiberglass. Ladders have a yellow fiberglass platform and side rails, 1″ OD steel handrails and bracing bars, ribbed aluminum steps, and a steel base. Platform has a nonskid coating and a 4″ high toeboard on three sides. Handrails are coated with a nonconductive plastic.

Ladder with six steps has two locking swivel casters in front and two rigid casters in back; all other ladders have two locking swivel casters in front, two rigid casters in the center, and two rigid casters in back. Assembly required. Capacity is 300 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

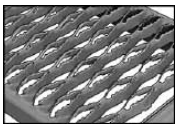
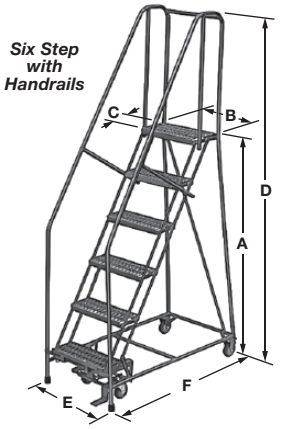
Steel Rolling Platform Ladders with Serrated Steps



Serrated



For maximum slip resistance, the platform and steps are serrated. Ladders have a gray finish. Ladders *with spring-loaded retractable casters* include four swivel casters; *step-lock* ladders lock in place and include two swivel and two rigid casters.

Shipped assembled. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

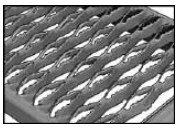
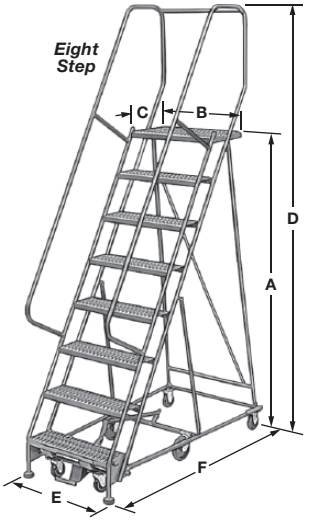
Tight-Turning Steel Rolling Platform Ladders



Serrated



Two rigid casters in the center allow these ladders to easily turn in narrow aisles and tight spaces. Ladders also have two swivel casters and two rigid casters. All ladders lock in place.

Ladders have a gray finish. Platform and steps are serrated for maximum slip resistance. Shipped unassembled. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

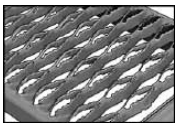
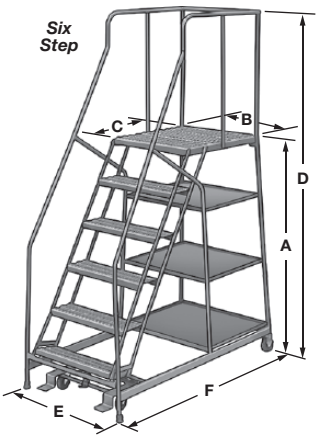
Steel Rolling Platform Ladders with Shelves



Serrated



Picking and putting away material just got easier. Ladders have three 20″×24″ shelves with raised edges that each hold 70 lbs. All lock in place and have two swivel and two rigid casters.

Ladders have a gray finish. Platform and steps are serrated for maximum slip resistance. Shipped assembled. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

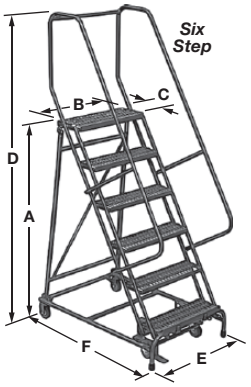
Extra-Rugged Steel Rolling Platform Ladders



Serrated

Heavy duty tubing and extra bracing in the base and back make these ladders tough enough to handle harsh environments. Platform and steps are serrated for maximum slip resistance. Ladders have a gray finish. All lock in place and have two swivel and two rigid casters. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

80055T21 has a 4″ high toeboard on three sides of the platform.

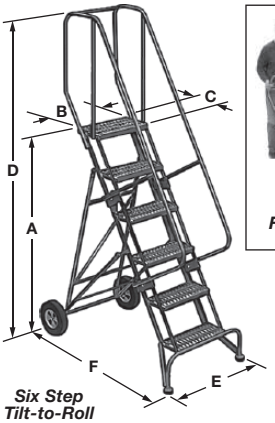
Folding Steel Rolling Platform Ladders

Serrated



Six Step Tilt-to-Roll

Folded

Fold these ladders for easy transport and compact storage. When ready to use, unfold and secure with two bolts and hex nuts (ladders with 14 or more steps have four bolts and hex nuts). They have large rugged wheels on the rear for rolling. Ladders with five to seven steps are tilt-to-roll; those with eight or more steps lock in place and have two swivel and two rigid casters. All have a gray finish. Platform and steps are serrated for maximum slip resistance. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California. Shipped assembled.

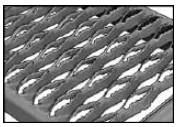
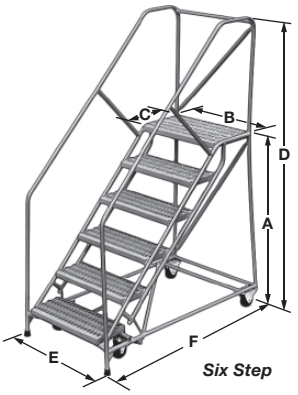
Gradual-Incline Steel Rolling Platform Ladders



Serrated



Six Step

A gradual 50° incline makes these ladders easier to climb than standard ladders and allows for a forward descent. All ladders have a gray finish. Platform and steps are serrated for maximum slip resistance. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

Ladders *with spring-loaded retractable casters* have four swivel casters. *Step-lock ladders* have two swivel and two rigid casters.

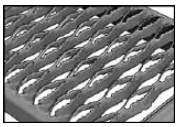
Steel Rolling Ladders with Extra-Large Platform



Serrated

With an oversized platform two people can easily work side by side. Plus, ladders have a high load capacity to handle extra boxes and tools. They also have a 50° incline for an easy forward descent.

Ladders have a gray finish. Platform and steps are serrated for maximum slip resistance. All lock in place and have two swivel and two rigid casters. Shipped assembled. Capacity is 800 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

Two-Side Access Steel Rolling Platform Ladders

Climb on either side; two people can use the oversized platform simultaneously. Finish is gray. Platform and steps are serrated for maximum slip resistance. All lock in place and have four swivel casters. Shipped assembled except the handrails require assembly. Capacity is 800 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

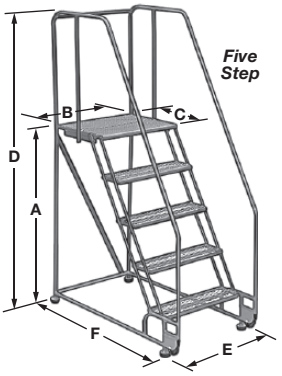
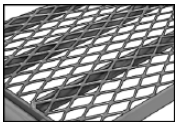
Tilt-to-Roll Platform Ladders





Expanded Metal

Serrated

Tilt and roll these ladders to where you need them. When tilted, ladders roll on two wheels. When stationary, four rubber pads keep ladders in place. Shipped assembled. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

Expanded metal steps provide good slip resistance and are more comfortable than serrated steps. *Serrated steps* are more slip resistant than expanded metal.

Steel Ladders— Capacity is 450 lbs. **To Order:** Please specify color: gray or safety yellow.

Aluminum Ladders— Lighter weight than steel or stainless steel. Capacity is 350 lbs.

Stainless Steel Ladders— Made of corrosion-resistant Type 304 stainless steel with a matte finish. Capacity is 450 lbs.

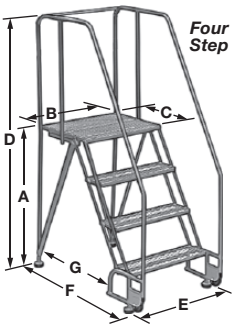
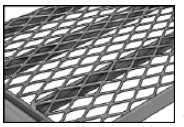
Straddle Base Tilt-to-Roll Steel Platform Ladders





Expanded Metal

Get close to your work even when pipes or other objects are in the way. With no horizontal braces, these ladders can straddle obstructions. Tilt ladders to roll on two wheels. When stationary, four rubber pads keep ladders in place.

Ladders have a gray finish. Platform and steps are expanded metal for good slip resistance. Shipped assembled. Capacity is 350 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

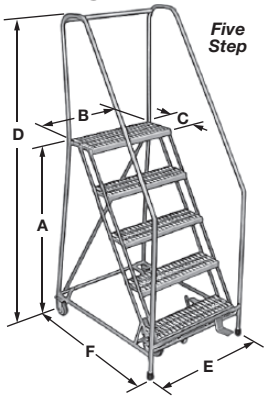
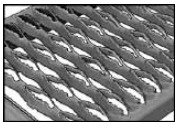
All-Stainless Steel Rolling Platform Ladders





Serrated

Made entirely of corrosion-resistant Type 304 stainless steel, these ladders withstand repeated washdowns, making them perfect for use in food-service applications. Ladders have a matte finish. Platform and steps are serrated for maximum slip resistance. Ladders lock in place and have two swivel and two rigid casters. Capacity is 450 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

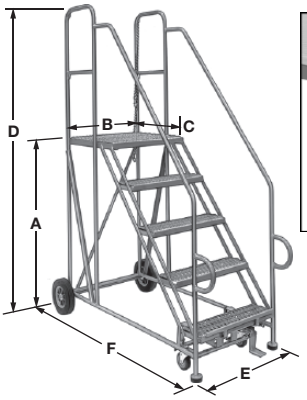
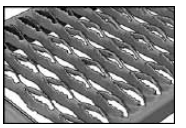
Trailer-Unloading Steel Rolling Platform Ladders





Serrated

With a walk-through platform, you can easily unload and load trailers. Plus, a gradual 50° incline makes this ladder easier to climb than standard ladders and allows for a forward descent. Ladder locks in place and has two swivel and two rigid casters. It also has a removable chain across the back of the platform.

Platform and steps are serrated for maximum slip resistance. Finish is gray. Shipped assembled. Capacity is 800 lbs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

Accessories and Replacement Parts for Rolling Platform Ladders

Slip-Resistant Handrail Tape— Sticks to ladder handrails for a solid grip. Made of self-adhesive textured vinyl blend. Roll is 2″ Wd.×8′ Lg.

5484T79 ..... $13.94

Replacement Rubber Pad— Provides slip resistance. Pad is 2½″ dia. and has a ⅜″ Dia.×1″ Lg. mounting bolt that threads into a ladder's front legs.

79975T88 ..... $7.46

Replacement Rubber Tips— A washer in these tips extends wear. Fit 1″ OD tubing.

79975T99 (Pkg. of 4) $5.95

Steel Fold-Away Mobile Work Platforms

Folded

Height adjusts in 12″ increments for multiple uses. Lock work platform in place by tightening the back brace's bolts. Then fold it up for convenient and portable storage. Work platform has a yellow finish and comes with two 10″ wide steel planks that have a non-slip surface. Has four locking swivel casters. Capacity is 400 lbs.

Note: Before erecting work platform, check federal, state, and local codes.

Platform Ht. Min.	Platform Ht. Max.	O'all Extended Lg.	O'all Extended Wd.	O'all Extended Ht.	O'all Folded Lg.	O'all Folded Wd.	O'all Folded Ht.		
12″	48″	48″	24″	51″	4″	24″	51″	8064T52	$330.24

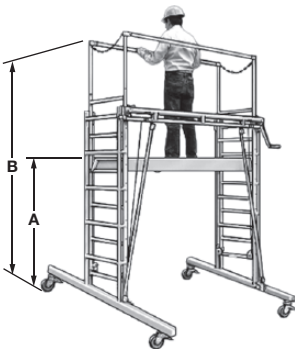
Ladder Scaffolding Supports

Also known as ladder jacks, these supports convert two extension or straight ladders into a scaffold. Use on ladders with round or D-rungs. Supports attach to three rungs and accept planks up to 18″ wide. Eight adjustment notches let you choose the angle. Capacity is 500 lbs. per pair.

Note: Ladders and planks must have a minimum 250-lb. capacity.

8162T24	Pair	$217.10

Steel Telescoping Mobile Work Platforms



Work at the height you need. Use the winch to manually adjust the platform height in 6″ increments. Spring-loaded pins lock it in place. Tools are not needed for assembly.

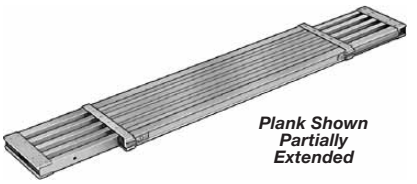
The frame is steel with a yellow finish and has built-in outriggers that extend the base from 31½″ wide to 72″ wide. Work platform is 6′4½″ long overall and rolls on four locking swivel casters. Plank is 5′8″ Lg.×19″ Wd. and has a perforated surface with 4″ high toeboards. Guardrails are 43″ high with midrails and safety chains. Capacity is 550 lbs. Meet ANSI and OSHA requirements.

Optional Add-On Height Section— Adjusts in 6″ increments to increase the platform height from 12′6″ to 17′6″.

Note: Before erecting work platforms, check federal, state, and local codes.

Platform Height (A) Min.	Platform Height (A) Max.	O'all Height (B) Min.	O'all Height (B) Max.		
2′	11′	9′10¼″	14′8″	8004T11	$3,137.23
Optional Add-On Height Section				8004T12	747.45

Aluminum Extension Planks



Plank Shown Partially Extended

Ideal for use with ladder jacks, trestle ladders, and walkways, adjust the length of these planks in 12″ increments. Made of aluminum with a ribbed surface for slip resistance. They have a spring-set lock to secure plank when extended. Automatic stops prevent overextending, and end flanges maintain rigidity. Capacity is 250 lbs.

Min. Lg.	Max. Lg.	Ht.	Wd.		
6′	9′	2″	14″	7947T41	$221.17

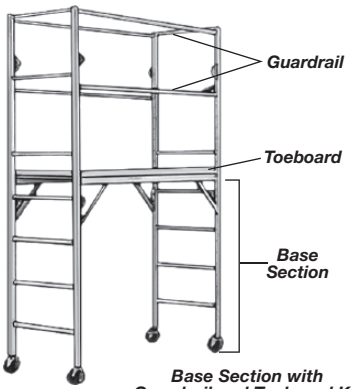
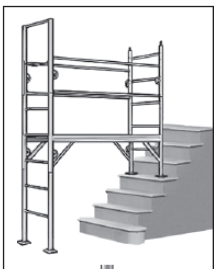
10′	17′	2″	14″	7947T43	364.23

Steel Adjustable End-Frame Scaffolds



Base Section with Guardrail and Toeboard Kit



Base Plate

Even if your surface isn't level, your scaffold can be. The end frames adjust independently so each side can be a different height. Scaffolds are steel with a yellow finish and have spring-loaded pins to change the height in 4″ increments. Meet ANSI A10.8 and OSHA requirements.

Base Sections— Base sections include a 28½″ wide plywood plank. Positioning guides hold the plank within the frame. Maximum plank height is 6′4″. Sections roll on four locking swivel casters; install base plates (sold separately) when used on stairs. Capacity is 1,000 lbs.; add-on height sections decrease capacity.

Add-On Height Sections— One add-on plus a base section has a capacity of 850 lbs.; two add-ons plus a base section has a capacity of 700 lbs. Do not stack more than two add-ons per base section. ***Guardrail/toeboard kits*** are required by OSHA when add-on height sections are used. Kits include 40″ high guardrails and 4″ high toeboards. ***Outriggers*** are required by OSHA when add-on height sections are used. They extend the base by 20″ per side. Come with four additional locking swivel casters.

Base Plate— When scaffold is used on stairs, casters should be replaced with 4⅝″×4⅝″ base plates (sold individually).

Note: Before erecting scaffolds, check federal, state, and local codes.

Planks for Steel Scaffolds

Hooks with a 2″ opening at each end secure planks to end frames. Rungs on the underside are for use as hand grips. Capacity is 75 lbs. per sq. ft. of plank area. Meet ANSI A10.8 and OSHA requirements.

Aluminum planks have a perforated surface for slip resistance and to reduce debris buildup. End hooks are offset to allow for continuous planking on large scaffolds.

Plywood planks have a 1/2″ thick plywood deck with an aluminum frame.

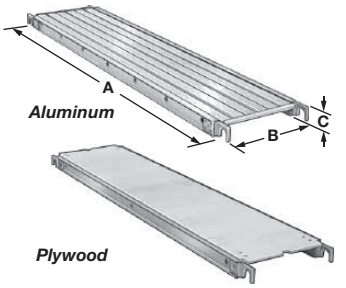
▲Measured from center-to-center of plank hooks.



Aluminum Scaffolds

Reach the height you need with these lightweight, corrosion-resistant scaffolds. All hardware is included. Each plank is rated at 25 lbs. per sq. ft.; the maximum scaffold capacity is 500 lbs. Meet ANSI A10.8 and OSHA requirements.

Base Sections— Consist of two end frames with threaded adjustable legs, horizontal and diagonal braces, and one plywood plank with aluminum I-beam side rails. Sections fold for storage and roll on four locking swivel casters.

Add-On Height Sections— Stack on base sections for additional height. They do not fold. You can stack up to two add-on sections on each base section. *Guardrails, toeboards,* and *outriggers* are required by OSHA when add-on sections are used. ***Guardrail kits*** include a 42″ high guardrail with midrail. ***Toeboard kits*** provide a 4″ high toeboard on all four sides. ***Adjustable outrigger*** fits both scaffold base sections listed. Legs have swivel shoes and adjust from 12″ to 66″ to extend the overall base width for stability.

Note: Before erecting scaffolds or adding additional sections, check federal, state, and local codes.

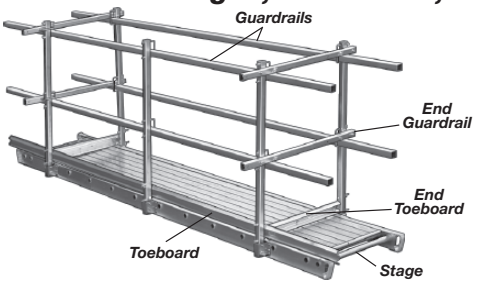
Aluminum Stages, Guardrails, and Toeboards



Create catwalks, bridges, gangways, and mezzanines by combining these stages, guardrails, and toeboards. They also work well between trestles, ladder jacks, and ladder scaffolding supports. All hardware is included. Meet ANSI A10.8 and OSHA requirements.

Stages— Have heavy duty aluminum construction and a slip-resistant surface for sure footing. Vinyl caps on the ends eliminate sharp edges and act as hand grips when moving the stages.

Guardrails and ***Toeboards—*** Mount to either side of the stage. Guardrails are made of aluminum tubing and come with midrails and vertical posts. You can mount them so the upper rails are 38″ to 42″ above the stage surface. Toeboards are 3½″ high and clamp to guardrail posts.

Note: Before erecting stages and guardrails, check federal, state, and local codes.

Forklift Cages

Transform your forklift into an elevated work platform. A chain secures the cage to the mast of your forklift and a backguard protects you from moving parts. Cages are made of steel. Meet ANSI B56.1.

(A) Cage with Chain Gate and Casters— Has two chains on the front that form the gate and four swivel casters for mobility. Cage has an 84″ high backguard to meet CAL-OSHA requirements and a platform with antiskid strips for slip resistance. Includes 42″ high steel tubing guardrails with midrails, 4″ high toeboards, and a tool tray. Cage has a yellow finish. Shipped unassembled (fasteners included).

(B) Cages with Swing Gate— Gate opens inward and outward. Platforms have a diamond plate surface for slip resistance. Cages have a 66″ high backguard. Include 42″ high steel tubing guardrails with midrails, 4″ high toeboards, and a fork lock to secure cage. They also have two attachment points for fall restraints. Cages have a gray finish. Shipped assembled. For cages with an 84″ high backguard that meets CAL-OSHA requirements, order 7952T64 and specify platform width and depth. *Optional swivel casters* (sold individually) can be added for mobility.

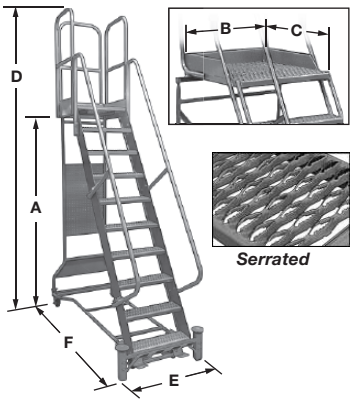
Extra Heavy Duty Steel Rolling Platform Ladders



With a 1,000-lb. capacity and storage supports on the base, these ladders can store tools and supplies as well as support personnel. They have a built-in pegboard on the back and 4″ high toeboards on three sides. The front legs adjust to level the ladder on your work surface and lock to keep it in place. Ladders have two swivel and two rigid casters. Platform and stairs are serrated for maximum slip resistance. Ladders are gray with yellow handrails, guardrails, and front legs. Meet ANSI A14.7 and OSHA; meet CAL-OSHA if sold in California.

Antislip Step Bars

Ideal for use as ladder rungs, these step bars have a serrated surface for slip resistance. Cut bars to size with a metal-cutting saw; maximum cut length is 24″.

Bars up to 18″ long have a 540-lb. capacity; bars 18″ to 24″ have a 250-lb. capacity. All step bar lengths must be welded at each end with welds able to support the rated capacity.

Telescoping Ladder Support Posts

Add safety and convenience to your wall and tank ladders. Posts are 1 1/2″ square, extend 42″ above the ladder top, and lock in place to guide you and provide stability. A release lever lets you lower the post when it's not in use. Posts fit 3/4″ to 1 1/4″ diameter rungs on ladders with up to 14″ center-to-center rung spacing. They mount to the top two rungs (hardware included).

Wall-Mount Walk-Through Steel Dock Ladders

Our highest capacity dock ladders—they're made of steel pipe with a yellow finish. Walk-through is 18″ wide, and the handrails have 4 1/2″ long vinyl handgrips. Rungs have a smooth surface. Ladders are offset 8″ for toe clearance.

They mount to the wall with brackets. Brackets have one 3/8″ dia. mounting hole (fasteners not included). Ladders with 2′2″ to 4′2″ top rung height have four mounting brackets; 5′2″ to 8′2″ height to top rung have six mounting brackets; and 9′2″ height to top rung have eight mounting brackets. Capacity is 500 lbs. Meet OSHA requirements.

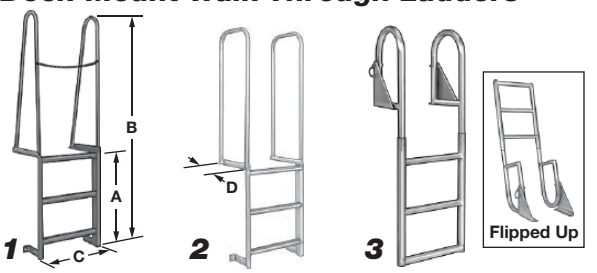
Dock-Mount Walk-Through Ladders



(1) Steel Ladders— Have serrated rungs for maximum slip resistance and are offset 6″ for toe clearance. Walk-through is 19″ wide. Ladders have welded-on mounting brackets; the two at the top have two 3⁄8″ dia. mounting holes and the two at the bottom have one 3⁄8″ dia. mounting hole (fasteners not included). Capacity is 300 lbs. Meet OSHA requirements. Optional safety chain stretches across ladder to deter access.

(2) Aluminum Ladders— Have serrated rungs for maximum slip resistance and are offset 6″ for toe clearance. Walk-through is 19″ wide. All have welded-on mounting brackets with two 3⁄8″ dia. mounting holes (fasteners not included). Ladders up to 5′6″ height to top rung have four mounting brackets; all others have six mounting brackets. Capacity is 300 lbs. Meet OSHA requirements.

(3) Flip-Up Aluminum Ladders— Flip up or down in seconds and easily secure with a retainer pin (included). They have ribbed rungs for slip resistance. Walk-through is 15 1⁄4″ wide. Ladders have two mounting brackets each with two 1⁄2″ dia. mounting holes (fasteners not included). Capacity is 400 lbs.

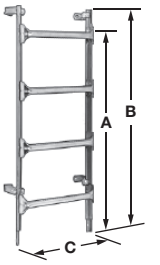
Offset-Rung Wall-Mount Steel Ladders



Rungs are offset and when used with the included mounting brackets you get 7″ of toe clearance to meet OSHA requirements. Made of galvanized steel, these ladders have dimpled rungs for slip resistance.

Mounting brackets have one 13⁄32″×3⁄4″ slotted hole (fasteners not included). The 4-ft. ladder has four mounting brackets; all others have six mounting brackets. Ladders have built-in connectors so they can be connected to each other to create the ladder height you need. Capacity is 250 lbs.

Note: The first rung of the ladder cannot be more than 12″ from the floor.

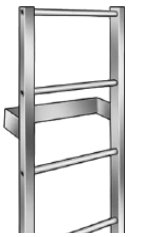
Versatile-Mount Steel Ladders



Ladder with Mounting Bracket

Mount these galvanized steel ladders to walls, tanks, and pipes or connect multiple ladders for more height. They have knurled rungs for slip resistance. Ladders can be mounted or connected to another ladder with a mounting bracket (sold separately). Capacity is 300 lbs. Meet ANSI A14.3.

Mounting bracket provides 7″ for toe clearance to meet OSHA requirements. It must be drilled to the desired bolt hole size for mounting to a surface (fasteners not included) so you can adapt it to your needs. For instance, use U-bolts (not included) to connect ladder to pipes. Hardware is included to mount the bracket to the ladder. Bracket is galvanized steel. Each ladder requires two brackets (one for the top and one for the bottom). If connecting multiple ladders, one mounting bracket is required for each additional ladder section.

Wall-Mount Ladders

With Walk-Through Extension

Metal ladders have welded construction; fiberglass are constructed of high-strength fiberglass. All have wall-mounting brackets that offset the ladder 7″ for toe clearance and two floor-mounting brackets. Mounting brackets have one 7⁄16″ dia. hole (fasteners not included). The first rung is 9″ off the floor. Meet OSHA requirements.

Steel and ***Type 304 Stainless Steel Ladders—*** Have serrated rungs for slip resistance. The 8- and 10-ft. ladders come with two wall-mounting brackets; all others come with four. Steel ladders have a gray finish. Capacity is 350 lbs. *Ladders with walk-through extension* have a 21″ wide walk-through with handrails that extend 42″.

Aluminum Ladders— Have serrated rungs for slip resistance. The 8-ft. ladder comes with two wall-mounting brackets; the 10- and 12-ft. come with four; and the 14- and 16-ft. come with six. Capacity is 350 lbs. *Ladders with walk-through extension* have a 21″ wide walk-through with handrails that extend 42″.

Fiberglass Ladders— Have rungs embedded with grit for slip resistance. The 8-, 10-, and 12-ft. ladders come with four wall-mounting brackets; all others come with six. Color is yellow. Capacity is 500 lbs. *Ladders with walk-through extension* have an 18″ wide walk-through with handrails that extend 42″.

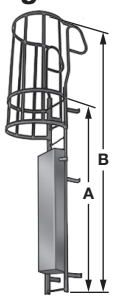
Steel Ladders with Welded-On Cage

A cage is already welded to these ladders for quick assembly. Plus, ladders come in sections no longer than 7 feet for easy handling. Bolt ladder sections together end-to-end (fasteners included). Cages start 7 feet above the bottom of the ladder and extend beyond the top rung by 42″. Walk-through is 24″ wide and has a 42″ high handrail. Inside dimensions of the cage are 30″ Wd.×27″ Dp.; the flared bottom is 36½″ Wd.×30″ Dp.

Ladders have ribbed rungs and a gray finish. They also include welded-on mounting brackets with one 9/16″ dia. hole (fasteners not included). Mounting brackets offset the ladder 7″ for toe clearance. Capacity is 300 lbs. Meet ANSI A14.3 and OSHA requirements.

Optional security cover prevents unauthorized access to ladders. Can be welded or bolted on (holes must be drilled) to open from either side (fasteners not included). Cover is made of steel with a gray finish and is 6′ Ht.×19½″ Wd.×6½″ Dp. The hasp accepts a padlock (not included) with a 3/8″ or smaller shackle diameter.



With Optional Security Cover

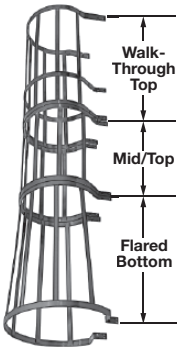
Steel Modular Cages

Create the cage you need. OSHA requires a ladder cage when ladder heights are greater than 20 feet from the floor to the top rung. Meet ANSI A14.3 and OSHA requirements.

Each section is fully welded and mounts to the side rails of stationary ladders (not to walls or other cages) that have an overall width of 16″ to 20″. Inside dimensions for the top section and mid/top sections are 30″ Wd.×30″ Dp.; the flared bottom section is 38″×34″ with a 38″ Wd.×38″ Dp. base. All sections have a gray finish and attach with included clamps that accommodate side rails 2″ wide or less. OSHA requires cages to start between 7 and 8 feet from the ground.

Top section is required for walk-through applications and should extend 42″ above the top rung. ***Mid/top sections*** extend the length of the cage, or can act as a top section for hatch opening use. ***Bottom section*** flares out for entry and exit.

Note: At least one top or mid/top section and one flared bottom section are required for a complete assembly.



5′ Top Section for Walk-Through	8271T11	$248.20
2′ Mid/Top Section	8271T14	191.44

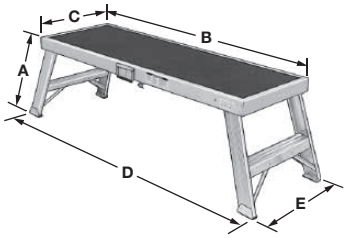
Fold-and-Carry Work Platforms



Take your platform anywhere. Folding legs and a carrying handle make this lightweight platform easy to transport. Legs fold up and under the platform and lock in place with safety clips. Frame is aluminum; deck is plywood with a slip-resistant coating. One 2⅛″ Dp. step at each end lets you climb up from either side. Shipped assembled.

Steel Ladders

Ladders with Cage

Made of galvanized steel, these ladders include a cage for added safety. Cage is unassembled (assembly hardware, connecting kit, and mounting brackets are included) for flexibility in mounting and lower freight costs.

Cages start between 7 and 8 feet from the ground and extend beyond the highest rung by 42″ with a walk-through exit. Inside dimensions of cage are 27″ Wd.×28½″ Dp.; flared bottom is 35″ Wd.×32½″ Dp. Ladders resist corrosion and weather. They have knurled rungs. Capacity is 300 lbs. Meet ANSI A14.3 and OSHA requirements. OSHA requires a cage when the distance from the floor to the top rung is more than 20 feet.

Optional security cover prevents unauthorized access. It covers five rungs and is secured by two hooks at the top and a U-clamp at the bottom. It is galvanized steel and is 5′6″ Ht.×19½″ Wd.×2″ Dp. Hasp accepts a padlock (not included) with a 3/8″ or smaller shackle diameter.

Ladders without Cage

Connect different sized ladders for the perfect height. Use the connecting kit (sold separately) to connect ladders with no drilling required. Mount to the wall with the mounting bracket kit (sold separately). Ladders are galvanized steel to resist corrosion and weathering. They have knurled rungs. Capacity is 300 lbs. Meet ANSI A14.3 and OSHA requirements. OSHA requires a cage when the distance from the floor to the top rung is more than 20 feet.

Connecting kit includes splice plates and fasteners. Order one connecting kit for each additional ladder section.

Mounting bracket kit comes with wall-mounting brackets that offset the ladder 7″ for toe clearance (fasteners for mounting the brackets to the ladder are included). The brackets have two 13/32″×¾″ slots for mounting to the wall (fasteners not included). Two kits are recommended for 4- to 8-ft. ladders; three kits are recommended for the 10-ft. ladder.

Optional walk-through extension is 24″ wide with handrails that extend 42″.

Fixed-Height Fiberglass Work Platforms

Nonconductive and noncorrosive, these lightweight fiberglass platforms cushion your movements to ease strain on your feet, legs, and back. Top has a slip-resistant grit surface. Platforms have rubber feet and are easy to clean and move. Capacity is 750 lbs.

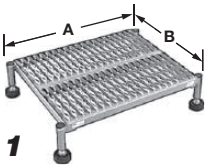
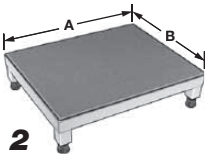
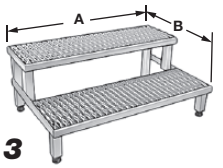
Adjustable-Height Steel Work Platforms



1



2



3

4

Adjustable leg screws raise and lower platform height.

(1) One-Step Platforms with Serrated Surface— Legs have 2½″ dia. rubber pads and are on the outside of the platform. Have a gray finish. Capacity is 800 lbs. Meet OSHA requirements.

(2) One-Step Platforms with Matting Surface— A vinyl sponge matting covers the solid surface of the platform to provide comfort and reduce fatigue. Legs have rubber tips. All have a safety-yellow finish and blue matting. Capacity is 500 lbs.

(3&4) Two-Step Platforms with Serrated Surface— Gain more height with these two-step platforms.

Style 3 has a bottom step that adjusts from 6″ to 8¼″ when the overall height is adjusted, making the space between the floor and the first step greater than the space between the two steps. Steps are 12″ deep. Legs have rubber tips. Platforms have a safety yellow finish. Capacity is 500 lbs.

Style 4 allows you to maintain equal rise between steps when overall height is adjusted. Therefore, the distance between the floor and the first step is always the same as the distance between the first step and the second step to meet OSHA requirements. Bottom step is 19″ deep; top step is 12″ deep. Platforms have a gray finish. Capacity is 800 lbs.

Modular Stackable Work Platforms

Stack platforms vertically and connect them horizontally to create various sizes and configurations. No tools required. Made of chemical-resistant, high-density black polyethylene. Platforms and antifatigue mats have an open-grid design that allows liquids to drain and debris to fall through.

Base platforms are 2⅞″ high and have rubber feet to keep them stable. To connect multiple platforms side-by-side or end-to-end, use two horizontal connectors (sold separately) on each joining side.

Additional height platforms are 2⅝″ high. You can stack up to five additional height platforms on top of a base platform for a total height of 16″. Additional height platforms come with vertical connectors—four for the 3- and 5½-ft. long platforms; eight for the 8-ft. long platforms.

Antifatigue mats enhance comfort and safety. Made of rubber, they fit snugly on top of the platform and stay in place with the included lock plugs. *Black mats* are ½″ thick. *Black mats with yellow border* are ⅞″ thick and comply with OSHA 29 CFR.

Build-Your-Own Work Platforms

Configure the work platform you need. All work platforms should be secured to a supporting surface. Meet OSHA requirements.

First, determine how high your work platform needs to be and choose the stairs that accommodate that height. Then, choose a platform based on the desired length. Next, choose platform supports that correspond to the height of your stairs—each end of the platform must be supported by one end support (or stairs for aluminum). Finally, choose handrails for the stairs and platform.

Aluminum—Lightweight and corrosion resistant, they're made of aluminum and assemble with included stainless steel fasteners. Capacity is 50 lbs. per sq. ft. ***Stairs*** are 28½″ wide and have a 45° climbing angle. Steps are 27″ Wd.×9½″ Dp. and are serrated for slip resistance. All units have one 9⁄16″ dia. hole on each side for securing to the floor (fasteners not included). ***Stair handrails*** are 32″ high. ***Platforms*** are drilled for assembly and perforated for slip resistance. ***Platform handrails*** are 42″ high and have 5″ high built-in toeboards. ***Platform supports*** are required to support each end of a platform when not using stairs. They have one 9⁄16″ dia. hole in each leg for securing to the floor (fasteners not included). 120″ length platform requires one additional support for the middle. ***T- and L-adapter*** attaches one platform to the side of another platform to create a "T" or "L" shape. ***Stair adapter*** connects the stairs to the platform when using a handrail on only one side of the stairs.

Fiberglass—Nonconductive with better corrosion resistance than aluminum, they're made of fiberglass and assemble with included stainless steel fasteners. Capacity is 60 lbs. per sq. ft. ***Stairs*** are 30″ wide and have a 45° climbing angle. Steps are 25¾″ Wd.×10½″ Dp. and have a grit surface for slip resistance. All units have one 9⁄16″ dia. hole on each side for securing to the floor (fasteners not included). ***Stair handrails*** are 32″ high. ***Platforms*** are drilled for assembly and perforated for slip resistance. ***Platform handrails*** are 42″ high and have 4″ high built-in toeboards. ***Platform supports*** are required to support each end of a platform. They have one 9⁄16″ dia. hole in each leg for securing to the floor (fasteners not included). 120″ length platform requires one additional support for the middle.

Note: Before erecting platforms, check federal, state, and local codes.

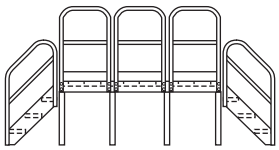
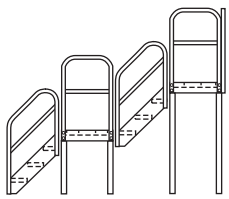
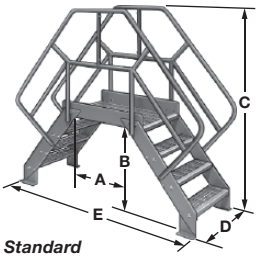
SAMPLE CONFIGURATIONS





Crossover Bridges



Standard

Space Saver

Easily walk over conveyors, machines, and pipes. Bridges have 24 1/8″ wide steps and 42″ high handrails. Platforms have a 4″ high toeboard on each side. Legs each have one 5/8″ dia. hole for floor mounting (fasteners not included). Shipped unassembled. Capacity is 500 lbs. To calculate the platform height add 2″ to the clearance height (B). *Steel bridges* are gray.

Standard Crossover Bridges— Have a 50° climbing angle and 7″ deep steps. Meet OSHA requirements.

Space-Saver Crossover Bridges— Have a steeper stairway than standard crossover bridges, so they don't extend as far. Climbing angle is 70° and steps are 4 7/8″ deep.

Note: Before erecting crossover bridges, check federal, state, and local codes.

To Order: Please specify serrated or diamond plate steps and platforms. *Serrated* offer excellent slip resistance and an open-grid design that allows dirt and liquids to fall through. *Diamond-plate* also provide slip resistance, but do not allow anything to fall through.

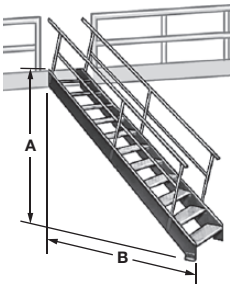
Steel Adjustable-Height Stairways



Adjustable mounting brackets allow these stairways to accommodate slight differences in landing heights. Mount from 36° to 42°.

Stairways are galvanized steel with 33 1/2″ high steel handrails. Handrails have a safety-yellow finish. Steps are 8 3/4″ deep and perforated for slip resistance. Stairways include two floor mounting brackets, each with two 1/2″ dia. holes. They also include two landing mounting brackets, each with four 11/32″ dia. holes, two 11/32″ x 3/4″ slots, and two 11/32″ x 1/2″ slots (fasteners not included).

Shipped unassembled. Meet OSHA requirements for fixed stairways.

Note: Before erecting stairways, check federal, state, and local codes.

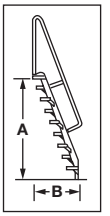
Offset-Step Space-Saver Stairways



Taking up only as much space as a ladder, these stairways have a 68° climbing angle and offset steps for a comfortable forward descent.

Stairways are steel with a safety-yellow finish. Steps are 9″ Wd. x 10 1/2″ Dp. and are perforated for slip resistance. Handrails are 42″ high. Stairways have one floor mounting plate and one landing mounting plate; each has one 9/16″ dia. hole and one 9/16″ x 1″ slot (fasteners not included). Shipped assembled, except handrails (fasteners included). Meet OSHA requirement 1910.24 for offset steps.

Note: Before erecting stairways, check federal, state, and local codes.

Also Available: Landing heights (dimension A) up to 20 feet. Please ask for 7946T9 and specify height.

Steel Space-Saver Stairways

Get access to pits, trenches, wells, and other tight spaces. Also known as ship's ladders, these galvanized steel stairways have a 75° climbing angle to fit in spaces others won't. Steps are perforated for slip resistance. The top step is 24″ Wd. x 11 7/8″ Dp.; lower steps are 24″ Wd. x 7 1/4″ Dp. Handrails are steel with a safety-yellow finish and extend 42″ beyond the top landing for a walk-through exit. Stairways have two floor mounting brackets, each with four 13/32″ dia. holes; also have two landing mounting brackets, each with one 13/32″ dia. hole (fasteners not included). Shipped unassembled. Meet OSHA requirements for fixed ladders.

Note: Before erecting stairways, check federal, state, and local codes.

About Lubricants, Grease, and Oil

	Features/Applications	Pages
Multipurpose Lubricants	Easy to apply, these lubricants penetrate tight spots that grease and oil can't reach. Use them to free and lubricate moving parts and equipment.	2192-2194
Coating Lubricants	Select Petroleum Jelly to protect metal parts and equipment surfaces, O-Ring Lubricants to reduce friction between mating parts, and Mold-Release Lubricants to protect and free molded parts.	2195-2196
Antiseize Lubricants	A combination of solid lubricants, grease, and anticorrosion additives, these lubricants prevent the sticking or jamming as well as corrosion that can occur in metal-to-metal contact.	2196-2198
Grease	Compared to penetrating lubricants and oil, grease adheres better and lasts longer so you don't have to apply it as often. Additives such as PTFE and molybdenum disulfide improve performance.	2198-2203
Oil	Oil is typically used where it can be circulated through a piece of equipment or machinery. Choose oil when spraying or splashing are contained, as in a gearbox or engine compartment.	2202-2208

Lubricants

LPS, CRC 3-36, Sprayon Rust Breaker Penetrant, 3-in-1, and ***Starrett M1*** are NSF registered H2 for applications with no possibility of food contact. ***Aerosols*** have a male stem except for Dow Corning Molykote Silicone 557 and Loctite Silicone, which have a female stem.

Biodegradable Lubricants

These lubricants boast a natural lubricity that outperforms petroleum-based oils. Use them anywhere you need a thin, protective film. Temperature range is –22° to +295°F. The aerosol has a female stem.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
11-oz. Aerosol	1475K412	$15.71	12	$168.48

Graphite Lubricants

Made with graphite, these lubricants are capable of conducting heat and electricity. ***Dry film*** quickly evaporates, leaving a dry coating that won't attract dirt. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dry Film— Aerosol has a male stem.

High-Temperature Dry Film— NSF registered H2 for applications with no possibility of food contact. Aerosol stem is female.

Brush-On Dry Film— This extremely durable lubricant resists moisture. Apply with a brush.

Sprayable Dry Film— Thin enough to be applied with a spray gun, this lubricant can cover a large area quickly. For HVLP spray guns, see 77745T and 9383T on page 2166.

No-Drip Stick— No drips or spills. Just apply to a hot surface and let it melt. Size is 2″ Dia. × 10″ Lg.

Powdered— Small particles fit into hard-to-reach spots. Use dry or mixed with oil or grease, unless noted.

Flaked— Large particles conduct more heat and electricity than powders. Use dry or mixed with oil or grease.

♠ Temperature range is –75° to +700°F. Use dry.

Food-Grade Lubricants

Choose these lubricants for food-processing and food-handling applications. They're NSF registered H1 (except for 3M, which complies with FDA specification 21 CFR 178.3570) for applications with incidental food contact. The aerosols have a male stem except for dry-film lubricant, which has a female stem. These products are compliant under all state VOC rules in effect on October 1, 2010.

Silicone Lubricants— These lubricants retain their consistency and thickness to reduce friction as they lubricate. ***3M*** is also moisture resistant and can be used as an effective mold release.

Lubricants with PTFE— The PTFE nonstick coating reduces friction as it lubricates. ***Dry film*** quickly evaporates, leaving a dry coating that won't attract dirt.

Equipment Wipe-Down Lubricants— Great for lubricating equipment between processes, these lubricants resist rust and corrosion without solvent odors.

Biodegradable Lubricants— These lubricants boast a natural lubricity that outperforms petroleum-based oils.

Moisture-Free Lanolin Lubricant

Pure Grade AAA lanolin, this clean, odorless, moisture-free lubricant stops rust. Use it to coat gauges and heat-treated parts, which are prone to rusting. It's also good for lubricating while tapping metals and plastics, and can even be used as an antiseize.

This product is compliant under all state VOC rules in effect on October 1, 2010. *Note:* Not rated for temperature.

Size		Each	Pkg. Qty.	
2-oz. Tube	10135K112	$7.69	12	$83.64

Extreme-Pressure Moly Lubricants

Containing moly (molybdenum disulfide), these lubricants are formulated to handle your high pressure applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dri Slide—A combination of moly and graphite, these lubricants dry to a gray film that resists rust and corrosion. They repel dirt and dust, and won't harm steel, paint, or plastic. Aerosols have a male stem.

Dow Corning Molykote D-321 R—This moly and graphite lubricant dries to a dark gray film that won't attract dirt. Use on tools, gears, taps, drills, and splines. Aerosol stem is female.

Dow Corning Molykote Z Moly-Powder—Rub this dry lubricant on metal surfaces to prevent corrosion, galling, and seizing. Color is black. Meets MIL-M-7866.

Dry Film—Quickly evaporates, leaving a dark gray coating that won't attract dirt. Use it on slides and hinges, and as a thread lubricant. Aerosol stem is female.

Marine Grade—Reduce the effects of water and salt spray with these water-resistant lubricants. They form a black shield that prevents corrosion, galling, and heat freeze on open gears, open spur gears, marine transmission gears, and other exposed metal parts. Aerosol has a male stem.

Extreme-Temperature Ceramic Lubricants

In applications where graphite and molybdenum disulfide can't take the heat, choose these ceramic lubricants, which withstand a maximum temperature of 1562° F in oxidizing environments and 3272° F in vacuum environments. Made of white, high-purity boron nitride crystals, they also form an electrical insulating barrier and are effective as a mold release agent. Aerosol has a male stem. 1-gal. container is water based. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
13-oz. Aerosol	10515K352	$34.94	12	$382.32
1-gal. Container	10515K68	111.72	—	—

Nonstaining Powder Lubricant

This mica lubricant leaves behind a thin, stain-free white coating that is barely visible compared to other lubricants such as graphite and molybdenum disulfide. Use it on metal, plastic, rubber, and wood surfaces. Temperature range is 32° to 1100° F.

Size		
0.21-oz. Tube	1667K32	$3.00

Open Gear, Wire Rope, and Cable Lubricant

Guard against rust and displace moisture with this black molybdenum disulfide lubricant. It penetrates the pores of metal surfaces and adheres under high speeds. Stem is female. Temp. range is 14° to 240° F. This product is compliant under all state VOC rules in effect on October 1, 2010, except in California.

Size		Each	Pkg. Qty.	
12-oz. Aerosol	1073K742	$10.34	12	$112.08

Chain Lubricants

Protect your chains and moving metal parts, such as assembly lines, to avoid costly downtime. Aerosols have a male stem, unless noted.

Dow Corning Molykote C-40—Lubricates in high-temperature applications, including oven chains. This low-viscosity fluid evaporates to leave a dry, black graphite film. Apply at temperatures up to 250° F. NSF registered H2 for applications with no possibility of food contact.

DuPont Teflon® Lubricant with Moly—Use on chain-driven vehicles. Goes on wet to penetrate, then dries to a white fluoropolymer wax film. It contains molybdenum disulfide, provides rust and corrosion protection, repels dirt, and is safe for use with O-rings.

Standard—This amber-colored, oil-like film repels dirt. 1- and 5-gal. containers are not VOC compliant in California.

With Moly—Reduce stress of startups with this lubricant, that contains molybdenum disulfide. It also provides protection against corrosion. Color is dark gray. This product is not VOC compliant in California.

Water Resistant—Highly viscous, these lubricants cling to wet surfaces and displace water for excellent rust and corrosion protection. Color is amber. NSF registered H2 for applications with no possibility of food contact. Aerosol is not VOC compliant in California.

For Ovens—Formulated with heat-resistant graphite, these lubricants protect oven-chain pins and bushings from baking heat. Use in kilns, bakery ovens, and industrial ovens. Color is gray/black. NSF registered H2 for applications with no possibility of food contact. *Oil Based*—Apply at temperatures up to 140° F. This product is not VOC compliant in California. *Water Based*—No need to cool down the oven, this lubricant contains no combustible oils so it can be applied at temperatures up to 450° F.

Food Grade—These lubricants contain additives that resist oxidation. NSF registered H1 for applications with incidental food contact. 6159K752 and K772 are amber; 2923K272 and K29 are white.

Water-Resistant Food Grade—Highly viscous, this lubricant clings to wet surfaces and displaces water for excellent rust and corrosion protection. Color is amber. NSF registered H1 and FDA compliant with specification 21 CFR 178.3570 for applications with incidental food contact. This product is not VOC compliant in California.

Direct-Contact Food Grade—NSF registered H3 for direct food-contact applications. Color is clear.

Extra-Thick Food Grade—Formulated extra thick to stay on the chain longer even as it moves, this amber-colored lubricant contains additives that resist oxidation. NSF registered H1 for applications with incidental food contact.

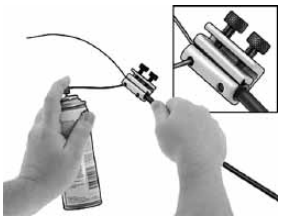
▲Has a female stem. ■Temperature range is 0° to +150° F. ★Temperature range is +10° to +150° F.

Control Cable Lubricating Kit



Lubricate your 3/16" to 3/8" dia. shrouded control cables without removing them. This kit includes 6.25-oz. of lubricant and a unique tool that displaces moisture to clean and lubricate in seconds.

To use, attach tool to either end of your cable and then tighten it around the cable. Insert the aerosol extension tube into the tool and spray. Temperature range is –20° to +250°F. This product is compliant under all state VOC rules in effect on October 1, 2010.

Lubricating Kit	1437K1	$24.24
Replacement 6.25-oz. Aerosol	1437K3	8.22

Woodworking Lubricants

The absence of silicone ensures that these lubricants won't stain or affect the paint or finishes you apply to wood. Both are 10.75-oz. aerosol with a female stem. These products are compliant under all state VOC rules in effect on October 1, 2010.

Blade and Bit Lubricant— Reduces cutting friction and resin buildup on saw blades, drill bits, and knives. Temperature range is –67° to +440°F.

Table- and Tool-Surface Lubricant— Reduces sliding friction on metal, laminate, and plastic surfaces. Temperature range is –40° to +135°F.

		1-11	12-Up
Blade and Bit	11615K33	$22.37	$18.96
Table and Tool Surface	11615K77	18.69	15.84

O-Ring Lubricants

Apply directly to O-rings to prevent drying and cracking, which will extend O-ring service life. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote 55— For use on most rubbers. Not recommended for use on silicone rubber, polycarbonate, or ABS thermoplastic.

Food Grade— Compatible with most O-rings and seals. NSF registered H1 for applications with incidental food contact.

Barium Based— Use with silicone rubber O-rings and seals in open systems.

Silicone— Use with virtually any rubber polymer including Buna-N and neoprene.

Size		Each	Pkg. Qty.	
Dow Corning Molykote 55 *(–85° to +350°F)*				
5.3-oz. Tube	1325K542	$28.76	12	$313.32

Silicone *(–65° to +400°F)*				
2-oz. Tube	9463K332	23.71	12	249.00

Dow Corning Molykote Assembly Lubricants

Choose these lubricants to reduce torque on metal parts, such as threaded fasteners, during assembly work. They also reduce friction while breaking in new or rebuilt equipment, such as gears and bearings. These products are compliant under all state VOC rules in effect on October 1, 2010, except for aerosol which cannot be sold in California.

Dow Corning Molykote G-n— Mineral oil and molybdenum disulfide are blended with white solid lubricants. Color is dark gray. Aerosol has a female stem.

Dow Corning Molykote D— Mineral oil is blended with white solid lubricants. Color is white, which provides a clean appearance where thin-film applications are not possible.

Size		Each	Pkg. Qty.	
Dow Corning Molykote G-n *(0° to +750°F)*				
2.8-oz. Tube	1204K332	$11.46	12	$124.80

1-lb. Container	4328T372	51.27	6	279.24

Wire and Cable Pulling Lubricants

Get a smooth, consistent pull while decreasing the chance of damage to your insulation. These products are compliant under all state VOC rules in effect on October 1, 2010. They are also UL listed.

Standard— Good for most surfaces except composite rubber, these lubricants are easy to clean up. They're specially formulated to reduce tension in high-stress electrical and communications applications.

With PTFE— The superior lubricity of PTFE handles the most difficult pull.

Size		Each	Pkg. Qty.	
Standard *(28° to 180°F)*				
32-oz. Squeeze Bottle	7431K362	$8.29	12	$88.44

1-gal. Container	7431K422	22.66	4	80.56

Leather Lubricant and Conditioners

These products are compliant under all state VOC rules in effect on October 1, 2010.

Lubricant— Also known as castor oil, this nondrying oil lubricates and preserves leather.

Conditioners— Also known as neatsfoot oil, these oils recondition, waterproof, and preserve leather.

Size		Each	Pkg. Qty.	
Lubricant *(0° to 200°F)*				
1-gal. Container	1025K111	$36.28	6	$195.00
Conditioners *(Not rated for temperature)*				
32-oz. Bottle	1022K11	12.96	—	—
1-gal. Container	1022K12	47.30	—	—

Petroleum Jelly

Nondrying and nonhardening, these lubricants won't dissolve in water. Use them to coat and protect your metal surfaces. Not rated for temperature. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard— Color is white.

Technical Grade— Meets military specification VV-P-236. Color is amber.

Mold-Release Lubricants

Apply these lubricants prior to molding to facilitate removal. Aerosols have a male stem, unless noted. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Dow Corning Molykote 316*—**Suitable for use on metal food and beverage equipment, this lubricant is FDA compliant with specification 21 CFR 175.300 for applications with incidental food contact. Stem is female.

***Dow Corning Molykote 7*—**An excellent release agent for plastic and metal surfaces, these lubricants also work well as a mold break-in treatment. Meet NSF/ANSI Standard 51 for use in food processing equipment and Standard 61 for use in drinking (potable) water applications. FDA compliant with specification 21 CFR 175.300 for applications with incidental food contact.

***Multipurpose*—**Use these water-based lubricants on acrylic, cellulose, ABS resin, polystyrene, rubber, melamine, and metal.

***For Urethane and Styrene*—**This lubricant protects ultra-sensitive materials such as urethane and styrene from chemicals.

***For Rubber*—**This hydrocarbon-based lubricant forms a semipermanent bond with molds so you can apply it less frequently. It's suitable for all types of elastomers (synthetic rubbers) including EPDM, nitrile, and neoprene. Stem is female.

***Dry Film with Moly*—**Containing moly (molybdenum disulfide), this lubricant provides excellent rust protection. It quickly evaporates, leaving a dry coating that won't attract dirt.

***Food Grade*—**For all plastic molding operations, including injection and compression molding. FDA compliant with specification 21 CFR 121.101 for applications with incidental food contact.

Size		Each	Pkg. Qty.

Paintable Mold-Release Lubricants

Post-finishing painting is possible when you use these lubricants. Apply prior to molding to facilitate removal and protect mold surface. Aerosols have a male stem, unless noted. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Honey Wax*—**This carnauba wax compound lets you release a mold several times before it needs to be reapplied. To apply, spread an even layer on the surface using the included sponge applicator or a clean cloth. Commonly used in the fiberglass industry.

***For Epoxy*—**Synthetic and wax-based, this lubricant works well for epoxy, polyester, and phenolic molds.

***For Thermosets*—**Release thermoset parts quickly and easily with this wax-based lubricant. Stem is female.

***Dry Powder Zinc Stearate*—**Resists dust, making it good for thermoplastic parts.

***Dry Film with PTFE*—**This PTFE lubricant won't transfer to finished parts and gives multiple releases per application. Suitable for most resins, elastomers (synthetic rubbers), urethane, and styrene.

***Silicone*—**This nonstick lubricant is compatible with plastic, rubber, wax, moldable resins, and elastomers (synthetic rubbers).

***Soybean Fluid*—**Also known as lecithin, this clear soybean fluid quickly and cleanly releases thermoplastic parts. NSF registered H2 for applications with no possibility of food contact.

***Food Grade*—**These hydrocarbon-based lubricants comply with FDA specification 21 CFR 184.1400 (c) for incidental food contact. *With Lubricant for Ejector Pin* acts as a mold release agent and reduces friction in ejector pins and other moving parts. Complies with FDA specification 21 CFR 178.357 for incidental food contact.

Size		Each	Pkg. Qty.

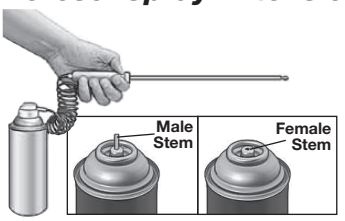
Aerosol Spray Extensions



Extend the reach of your aerosol can by popping off the spray button and snapping on this extension. Both consist of a 16″ long steel probe with brass tip attached to a 24″ long nylon recoil hose. Compatible with all of the aerosol lubricants we offer.

For Aerosols with Male Stem	1428K1	$10.23
For Aerosols with Female Stem	1428K2	10.23

Water-Resistant Antiseize Lubricants

High-moisture environments are no problem for these mineral oil-based antiseize lubricants, which also provide corrosion protection. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Food Grade*—**NSF registered H1 for applications with incidental food contact. Meets MIL-A-907E.

***For Aluminum*—**Formulated to meet military specification CID-A-A-59313, these lubricants are especially effective on aluminum.

Antiseize Lubricants

Made of copper, graphite, and other additives, pick these lubricants for your general-purpose antiseize applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Bostik Never-Seez*—**Protects parts in high-pressure and corrosive environments. Meet MIL-A-907.

***Dow Corning Molykote 1000*—**Resists corrosion and won't dry out.

***Standard*—**Meet MIL-A-907E. *Aerosol* has a female stem. *Stick* allows no-mess application and measures 1⅜″ Dia.×4¾″ Lg.

***Marine Grade*—**Prevent corrosion in harsh marine environments. Meet MIL-PRF-907E.

Corrosion-Resistant Antiseize Lubricants

Aluminum lubricants contain aluminum and graphite for good corrosion resistance.

Loctite— Meet MIL-PRF-907E. *Aerosol* has a female stem. This product cannot be sold in California.

Standard— Also contain copper. Meet MIL-A-907E. NSF registered H2 for applications with no possibility of food contact.

Stainless steel lubricants contain stainless steel, graphite, and aluminum for use in extremely corrosive environments.

Bostik Never-Seez— Meet MIL-A-907E.

Bostik Never-Seez Nuclear Grade— Specially formulated to meet the purity and performance requirements of the nuclear industry. Meets MIL-A-907.

High-Temperature Antiseize Lubricants

Able to withstand temperatures from –350° to +2987°F, these are the highest temperature antiseize lubricants we offer. All are made of a pure metallic lead powder combined with a petroleum lubricant. Great for sealing as well as high-pressure applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	Color		Each	Pkg. Qty.

Copper-Free Antiseize Lubricants

Copper can act as a catalyst in some chemical reactions—that's why we offer copper-free lubricants, which contain nickel, aluminum, and graphite. The presence of nickel makes these lubricants excellent for applications where dissimilar metals such as brass and steel are used together. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard— NSF registered H2 for applications with no possibility of food contact. Aerosol has a female stem. Meet MIL-A-907E.

Bostik Never-Seez Pure Nickel— Meet MIL-A-907.

Premium— Exceptionally smooth and easy to spread, this lubricant has finer nickel particles to fill and protect even the smallest imperfections in your metals. Meet MIL-A-907E.

Bostik Never-Seez Nuclear Grade— Specially formulated to meet the purity and performance requirements of the nuclear industry. Furnished with certified test reports. Meet MIL-A-907.

Nuclear Grade— Specially formulated to meet the purity and performance requirements of the nuclear industry. Furnished with certified test reports. NSF registered H2 for applications with no possibility of food contact. Meet MIL-PRF-907E.

Metal-Free Antiseize Lubricants

Free of metal particles, these lubricants prevent galling in stainless steel and other sensitive alloys. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote P37— Consists of molybdenum disulfide, zirconium, and graphite.

Standard— Made of graphite blended with high-temperature lubricating solids, extreme-pressure additives, and corrosion preventatives. Meet MIL-PRF-907E.

Graphite/Petrolatum— Made with graphite and petrolatum, this lubricant meets MIL-T-5544.

Loctite Food Grade— These nonstaining lubricants work particularly well on stainless steel parts. NSF registered H1 for applications with incidental food contact.

Food Grade with PTFE— These nonstaining lubricants contain nonstick PTFE as well as corrosion inhibitors. They work particularly well on stainless steel parts. NSF registered H1 for applications with incidental food contact.

Antiseize Lubricants & Grease

For information about lubricants, grease, and oil, see page 2192.

Antiseize Lubricating Tapes

Allowing easy, no-mess assembly and disassembly, these lubricants won't run or rub off your threaded connections—just wrap tape tightly around threads. Size is ½" Wd. x 50 ft. Lg. These products are compliant under all state VOC rules in effect on October 1, 2010.

Copper— Made of copper and PTFE. Not recommended for stainless steel.

Nickel— Made of nickel and PTFE. Excellent for metals, especially stainless steel and aluminum. Color is silver.

Temperature Range			Roll 1-4	Roll 5-Up
Copper	–450° to +2200° F	2290K1	$10.30	$9.25
Nickel	–450° to +2400° F	2290K2	15.43	13.86

Clean-Hands Antiseize Dispenser

Neatly, quickly, and efficiently apply antiseize to parts with this trigger-gun dispenser. It threads directly to the top of most 8-oz. and 1-lb. brush-top antiseize lubricant cans. Dispenser is made of steel and comes furnished with a brush tip.

1800K8 ..... $51.42

About Grease

There are several reasons to use grease as a lubricant: It adheres better than oil; it tends not to leak or run; and it can be formulated for conditions such as high temperatures, extreme pressure, and varying loads and speeds. It also resists moisture to prevent corrosion.

Grease Components— Grease is a semisolid made of base oil, thickener, and additives.

Base oils do the lubricating. Petroleum oil is the most economical. Synthetic oil (nonpetroleum) lasts longer and can generally withstand higher temperatures. Semisynthetic oil (a blend of petroleum and synthetic) balances lower cost with longer-lasting performance.

Thickeners are solid particles that hold the base oil in place. The chart below is a guide for comparing the relative properties of the most common thickeners.

Thickener	Heat Resistance	Moisture Resistance	Oxidation Resistance★
Aluminum	Fair	Good	Excellent
Calcium Sulfonate	Good	Excellent	Excellent
Carbon Black	Excellent	Fair	Good
Clay	Excellent	Fair	Good
Elastomer	Excellent	Good	Good
Lithium	Good	Good	Fair
High-Performance Lithium	Excellent	Excellent	Fair
PTFE	Good	Good	Good
Silica	Excellent	Excellent	Good
Silicone	Excellent	Excellent	Good
Sodium	Excellent	Poor	Poor

★ Oxidation of lubricants can produce sludge, varnish, gum, and acid.

Grease Consistency— The NLGI (National Lubricating Grease Institute) rates grease by its consistency on a numeric scale. The most common NLGI number is 2. Lower numbers are softer and flow better, while higher numbers are firmer, tend to stay in place, and are a good choice when leakage is a concern.

The table below compares the most common NLGI grades with household products that have similar consistencies.

NLGI No.	Consistency Comparison
0	Brown Mustard
1	Tomato Paste
2	Peanut Butter
3	Vegetable Shortening

Lithium-Thickened Grease

These multipurpose lubricants offer good heat and moisture resistance. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobilux EP 111— Made of oil and molybdenum disulfide, these black greases are wear resistant and suitable for high-speed rotating couplings as well as low-speed open gears and plain bearings.

Mobilux EP 1 and ***EP 2—*** This brown multipurpose grease offers rust and corrosion resistance for use in moist or wet conditions.

Dow Corning Molykote BR-2 Plus— Contain molybdenum disulfide to withstand extreme pressures. These black greases are suitable for moderate- to high-speed ball and roller bearings, conveyors, and shop equipment.

Dow Corning Molykote 44 with Silicone— Use these off-white silicone-based synthetic greases for antifriction bearings; plastic and rubber parts under light loads; and moderate- to high-speed applications.

■ Temperature range is –22° to +350°F.

Shell Gadus S2 High-Speed Coupling Grease— Suitable for low and high speeds and heavy loads, use this dark brown grease on geared and flexible chain couplings.

Shell Gadus S2 V220— Fortified with extreme-pressure additives, this brown grease can handle heavy, suddenly applied (shock) loads in bearing applications.

Shell Gadus S2 V100— This is a low-noise grease. Color is brown.

White Lithium— This grease is for general lubrication. Stem is male.

White Lithium with PTFE— PTFE additive provides protection from friction. Aerosol has a female stem.

Marine Grade— These purple greases cling to surfaces, so they won't be washed away by water or salt.

Synthetic— Long-lasting with a wide temperature range, this light gray grease is great for bearings and gears as well as most plastics.

Bio-Based— This ester-based grease resists water and protects from rust. It also contains extreme-pressure additives for heavy duty applications. Color is brown.

High-Performance Lithium-Thickened Grease

Additives improve performance in severe operating conditions.

Mobilgrease XHP 222—The choice for marine applications, this blue grease offers excellent adhesion plus rust and corrosion resistance.

Mobilgrease XHP 222 Special—Contains moly (molybdenum disulfide) for extreme-pressure applications. Color is dark gray.

Shell Gadus S3 V220C—Formulated for extreme-pressure applications, these red greases are also suitable for heavy loads and wet conditions.

Dow Corning Molykote G-4700—This black synthetic grease contains moly (molybdenum disulfide) for extreme-pressure applications.

DuPont Teflon®—Teflon® fluoropolymers give these white greases nonstick and chemical-resistant properties. They are also corrosion resistant. Aerosol has a male stem.

DuPont Teflon® with Moly—In addition to Teflon® fluoropolymers for nonstick and chemical-resistant properties, these black greases have moly (molybdenum disulfide) to withstand extreme pressures.

Standard—Contains extreme-pressure additives. Color is dark red. *Aerosol* has a female stem. It cannot be sold in California.

Aluminum-Thickened Grease

Thickened with aluminum, these greases offer excellent oxidation resistance for long lubricant life. These products are compliant under all state VOC rules in effect on October 1, 2010, unless otherwise stated.

With Moly—Contains moly (molybdenum disulfide) for extreme-pressure applications. Color is black.

Water Resistant—Lubricate and protect surfaces from corrosion in wet environments. Color is red.

Super Adhesive—Clings to surfaces, including vertical, for long-lasting protection. Stem is female. Color is red. This product is compliant under all state VOC rules in effect on October 1, 2010, except in California.

High Temperature—In addition to high temperatures, these greases also resist water. Color is green.

All ***food-grade greases*** are NSF registered H1 for incidental food contact.

Dow Corning Molykote—All greases are white. *Molykote G-4500FM* and *4501FM* are synthetic.

Standard—Color is clear.

With PTFE—PTFE additive provides protection from friction. Color is white.

Dow Corning Molykote 1122 Chain and Open Gear Grease

Formulated for extreme-pressure applications involving chains and open gears, these black greases with moly (molybdenum disulfide) also resist wear. NSF registered H2 for applications with no possibility of food contact. Temperature range is 32° to 320°F. Aerosol has a female stem. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		Each	Pkg. Qty.	
11-oz. Aerosol	2-3	4328T312	$31.81	12	$346.44
14-oz. Container	2-3	4328T282	51.14	12	557.04

Clay-Thickened Grease

Even at their highest temperatures, these greases maintain their consistency. These products are compliant under all state VOC rules in effect on October 1, 2010.

Extreme Pressure—These black greases contain moly (molybdenum disulfide) to withstand extreme pressures. Apply *cartridge for caulk gun* with a standard caulk gun (see page 3484).

Antispatter—An additive holds this green grease in place and protects it from spattering or pounding out, a common occurrence in heavy duty applications.

Semisynthetic—A blend of synthetic and petroleum-based oils, these amber greases last longer than petroleum-based grease.

High-Temperature Standard—Adheres to metal. Color is amber.

High-Temperature Acid Neutralizing—These white greases contain lead-free zinc oxide to neutralize acid.

High-Temperature Extreme Pressure—These black greases contain moly (molybdenum disulfide) to withstand extreme pressures.

High-Temperature Semisynthetic—A blend of synthetic and petroleum-based oils, these silver greases contain moly (molybdenum disulfide) and aluminum for increased wear resistance.

Ultra High-Temperature Food-Grade Grease

With a temperature range of –40° to +800° F, this white grease can take the heat. It's thickened with calcium sulfonate, which makes it great for wet, extreme-pressure applications. NSF registered H1 for incidental food contact. This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		Each	Pkg. Qty.	
Cartridge for Grease Gun (16 oz.)	2	2136K112	$36.35	12	$391.92

DuPont Grease with Teflon®

Teflon® fluoropolymers give these multipurpose greases nonstick and chemical-resistant properties. They are thickened with calcium sulfonate, which makes them great for wet, dirty applications. Temperature range is –40° to +350° F. Color is red. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		Each	Pkg. Qty.	
Cartridge for Grease Gun (14 oz.)	2	8708T442	$9.71	10	$83.90
16-oz. Container	2	8708T462	10.59	12	109.80

High-Temperature Grease with PTFE

The PTFE additive in these elastomer-thickened greases reduces friction and waterproofs metal surfaces, preventing rust and corrosion. They are NSF registered H2 for applications with no possibility of food contact. Temperature range is –35° to +458° F. Color is green. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote Chemical-Resistant Grease

A fluorosilicone base means these greases have excellent chemical resistance. They're also synthetic, which means they are long lasting. These products are compliant under all state VOC rules in effect on October 1, 2010.

1292—Thickened with elastomer. Color is off-white.

3451—Thickened with fluorocarbon. NSF registered H2 for applications with no possibility of food contact. Color is white.

Long-Lasting Synthetic Grease

Synthetic base oils allow these greases to last longer than petroleum-based grease. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobilith SHC 100—Meets the requirements of most electric motor manufacturers for grease-lubricated bearings. Color is red.

Mobilith SHC 220—Use this red grease in extreme-pressure applications.

Mobilith SHC PM 460—Resists rust and corrosion. It's suitable for bearings under heavy loads at low speeds. Color is off-white.

Mobiltemp SHC 32—This red grease offers excellent wear resistance for long service life.

Mobilgrease 28—Offers excellent wear and corrosion resistance for extreme-pressure applications in a wide range of temperatures. Meets MIL-PRF-81322G. Color is red.

Silica-Thickened—Dry to a long-lasting, water-resistant white film.

Silicone-Thickened Food Grade—These clear greases are NSF registered H1 for applications with incidental food contact.

For information about lubricants, grease, and oil, see page 2192. For more on grease, see page 2198.

High-Temperature Synthetic Grease

Increase the time between applications with these synthetic greases that handle your high-temperature applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning Molykote 41— Thickened with carbon for excellent heat resistance. Color is black.

Dow Corning Molykote 3451— Fluorocarbon thickener adds chemical resistance to these white greases. NSF registered H2 for applications with no possibility of food contact.

Standard— Thickened with silicone, grease is blue.

Food Grade with PTFE— These silica-thickened greases have a PTFE additive that reduces friction and waterproofs metal surfaces. NSF registered H1 for applications with incidental food contact. Color is white. Aerosols have a female stem.

With Moly— As temperature increases, so does the performance of this gray grease. It is thickened with sodium and contains molybdenum disulfide to withstand extreme pressures.

Size	NLGI No.		Each	Pkg. Qty.

Electrically and Thermally Conductive Grease

Take on heat and electricity transfer applications with these nonsilicone greases—a high silver content (80-90%) gives them excellent conductivity. These greases are suitable for ESD (electrostatic discharge) and EMI (electromagnetic interference) shielding applications. Their volume electrical resistivity, a measure of how well a material opposes the flow of electricity, is less than 0.005 ohm-cm. Thermal conductivity, a measure of a material's ability to transfer heat, is 60 Btu-in./hr.-sq. ft. °F. Resistivity is the opposite of conductivity, so a low resistivity number means high conductivity.

These silver-colored greases have a temperature range of –40° to +302° F. NSF registered H2 for applications with no possibility of food contact. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		Each
0.5-oz. Container	2	1219K57	$94.80
1-oz. Container	2	1219K59	190.88

Water-Safe Synthetic Grease

Meets NSF/ANSI Standard 61 for use with drinking (potable) water; this silica-thickened grease holds up in harsh, wet environments. Synthetic oil base increases the time between applications. Temperature range is –40° to +400° F. This product is compliant under all state VOC rules in effect on October 1, 2010.

Size	NLGI No.		Each	Pkg. Qty.	
8-oz. Tube	2	2982K222	$22.91	12	$252.48

High-Vacuum Grease

The firm consistency of these white synthetic greases is excellent for high-vacuum applications. The synthetic oil base increases the time between applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning— Made of silicone with silica thickener, these greases are suitable for clean room use.

With PTFE— Comparable to Fomblin grease, this grease is thickened with PTFE to reduce friction and resist chemicals.

Size	NLGI No.		Each	Pkg. Qty.

Electrical Contact Grease

Lubricate, clean, deoxidize, and prevent corrosion all with one performance-enhancing grease, which is designed to improve the performance of your electrical contacts. Temperature range is –40° to +500° F. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard— Particle free. Color is amber.

Aluminum— Has aluminum particles and is for use on aluminum parts that won't come in contact with each other. Color is gray.

Copper— Has copper particles to assist oxide breakup and resist abrasion on surfaces that require conductivity. Color is red.

Graphite— Has graphite particles to absorb and dissipate heat. Color is gray.

	Size	NLGI No.

Graphite	8-oz. Container	2	9050T8	36.79

Electrical Insulating Grease

Also known as dielectric grease, these insulating greases lubricate electrical devices and systems. Synthetic oil base increases the time between applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

Dow Corning 4— These translucent white greases act as a moisture barrier. Meet NSF/ANSI Standards 51 and 61 for use with food and drinking (potable) water. Also meet FDA 21 CFR 175.300 and SAE-AS8660.

Dow Corning 5— Use this translucent gray grease on insulators, bushings, and high-current switches.

Standard— These translucent white greases are corrosion resistant and contain a silica thickener that won't react with rubber. Suitable for use on O-rings, gaskets, and seals in vacuum systems.

Food Grade— These clear greases are NSF registered H1 for applications with incidental food contact.

DuPont/Chemours Krytox Grease and Oil

Extreme temperature swings are no problem for these Krytox greases and oils. They also resist aggressive chemicals and are long lasting. These products are compliant under all state VOC rules in effect on October 1, 2010.

Food-grade greases and ***oils*** are NSF registered H1 for applications with incidental food contact.

Grease

Greases are thickened with PTFE to reduce friction except for ***High-Temperature XHT-BDX greases***, which are thickened with boron nitride for added thermal stability. Color is white, unless otherwise indicated.

***Corrosion Resistant*—**Sodium nitrite additives give these greases better resistance to moisture and oxygen than standard grease.

***Extreme Pressure*—**Made with molybdenum disulfide, this grease is effective on highly loaded gears and bearings. Color is black.

***High Temperature*—**Does not evaporate under high temperatures.

***High Vacuum*—**This insoluble grease has a low vapor pressure and gives superior performance in vacuum systems.

***Electronics Grade*—**High purity for use in clean rooms and electronic assembly. They are not conductive.

***Mil. Spec.*—**Meet MIL-PRF-27617 specifications.

Oil

Use these clear oils when temperatures are consistently high and oil flow is needed to remove heat, or when you want to remove debris from your system using oil and a filter. Container size is 9 fl. oz.

***Vacuum Pump*—**Low vapor pressure makes these the choice for vacuum pumps and compressors.

For information about lubricants, grease, and oil, see page 2192. For more on grease, see page 2198.

Extreme-Pressure Grease and Oil

Able to withstand pressures up to 50,000 psi, these lubricants also repel water and resist corrosion. Use them on lathes, machine ways, cams, and bearings. Grease is thickened with petroleum wax and is green; oil is black. These products are compliant under all state VOC rules in effect on October 1, 2010. *Note:* Not rated for temperature.

No-Spill Fluid Containers

Even when turned upside down, these containers keep fluids inside. Use them to hold lubricants, cutting fluids, and many other liquids without worrying about spills. Containers are made of polyethylene. They include an applicator brush as well as a plug for storing liquids. Size is 3″ Dia.x2½″ Ht.

Color of Container Top	Capacity

About Oil

Viscosity is the thickness, or resistance to flow, of an oil. Various organizations have different scales on which oil viscosity is measured. The *International Organization for Standardization (ISO) and Society of Automotive Engineers (SAE)* each assign a grade number. Oils with higher numbers are thicker than those with lower numbers. The *Saybolt Seconds Universal (SSU)* viscosity test measures the number of seconds it takes for 60 cc (cubic centimeters) of oil to flow through a specified diameter hole. The *American Gear Manufacturers Association (AGMA)* has its own grading system specific to industrial gear oil.

Additives improve specific characteristics of an oil, such as load capacity and corrosion resistance. *Detergent additives* prevent sludge and other engine deposits by keeping unwanted particles suspended in the oil. These suspended particles are later removed when the oil passes through a filter. Detergents are most commonly found in engine oils. *Nondetergent oils* are suitable for applications in which the formation of sludge and other deposits is not a problem and no filter is present.

Machine Oil

Meet your general purpose needs with these nondetergent oils. Suitable for machine tools, circulating systems, and reciprocating equipment, they all resist rust and oxidation.

Mobil DTE—Color is amber.

Standard—Also known as turbine oil, these oils are comparable to Regal R&O and Vitrea/Turbo. ISO grade 22 and 32 are yellow; ISO grade 46-150 are amber.

Food Grade—NSF registered H1 for applications with incidental food contact. Color is clear.

Extendable-Spout Oiler—Filled with standard machine oil, this oiler telescopes to 7″ and flexes to reach lubrication points. Oil is yellow.

Gear Oil

Extreme pressure additives strengthen these nondetergent oils to withstand heavy loads found in gears and gear-drive systems.

For open gear lubricants, see page 2194. For chain and open gear grease, see page 2199.

***Mobilgear*—**The choice for industrial as well as marine applications. Color is amber.

***Mobil SHC*—**These oils are synthetic, which means less frequent oil changes. Color is orange.

***Standard*—**Comparable to Meropa and Omala. Color is amber.

***Food Grade*—**NSF registered H1 for applications with incidental food contact. Color is clear.

***Semisynthetic*—**A blend of synthetic and petroleum oils, these oils are more economical than synthetic oils. Color is yellow.

***Synthetic*—**Change oil less often with these long-lasting synthetic oils. Color is yellow.

For information about lubricants, grease, and oil, see page 2192. For more about oil, see page 2203.

Air Tool Oil

Keep air-powered equipment running longer and cleaner for greater power and less downtime. These nondetergent oils absorb water to reduce potential condensation problems and keep gum and sludge from forming. They contain corrosion inhibitors as well as antiwear and extreme-pressure additives.

These products are compliant under all state VOC rules in effect on October 1, 2010.

***Mobil Almo 525*—**Color is amber.

***Standard*—**Color is clear.

***Food Grade*—**NSF registered H1 for applications with incidental food contact. Color is clear.

***Winter Grade*—**Resists temps. as low as –50° F. Color is green.

***Synthetic*—**This oil reduces the frequency of oil changes. It's highly compatible with most rubber and plastics. Color is clear.

***Cleaner*—**Removes rust, dirt, and varnish from air tools. Just apply to the inlet of your air tool and connect tool to air line. Color is yellow.

Engine Oil

Primarily for use in automotive applications, these oils also work well with machinery. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Single-Grade Gasoline Engine Oil*—**Good for heavy duty jobs, these single-grade oils are detergent oils that neutralize acids and prevent sludge and varnish deposits. Color is amber.

***Multigrade Gasoline Engine Oil*—**These all-climate, multiviscosity oils protect engines in warm and cold environments. They are also detergent oils that neutralize acids and prevent sludge and varnish deposits. Color is amber.

***Mobil Delvac 1230 Diesel Engine Oil*—**In addition to excellent oxidation and thermal stability, this oil prevents rust and corrosion to keep engines clean and extend oil life. Color is brown.

***Mobil Delvac MX Diesel Engine Oil*—**The choice for high-performance diesel applications, this oil provides outstanding rust protection and thermal stability, which prevents sludge and deposits to extend engine life. Color is brown.

***Mobil Delvac 1300 Super Diesel Engine Oil*—**Use this extra-high-performance diesel engine oil in your most severe applications. It controls soot to improve engine efficiency and extend engine life. Color is brown.

***Diesel Engine Oil*—**This heavy duty oil works with all diesel engines to protect against wear and deposits. Color is amber.

***Synthetic Oil for Gasoline and Diesel Engines*—**Even in severe conditions, this long-lasting oil extends engine life as well as the time between oil changes. Compatible with petroleum-based oils, you can add it without draining your existing oil first. Color is amber.

Cutting and Tapping Fluids and Compounds

Use full strength while machining for easier and faster tapping, drilling, and milling. These fluids also improve surface finishes, extend tool life, and help you meet closer tolerances.

Standard fluids are for use on all metals. ***Water-based*** fluids are for use on all metals except magnesium.

Tap Magic—*Extra Thick* is for hard metals such as titanium and stainless steel. *Protap* is for all metals.

Cool Tool II—For use on all metals.

LPS Tapmatic Edge—*Cream* works especially well for vertical applications and is also good for forming and bending. *Stick* is perfect for use on rotating and stationary cutting tools and grinding belts. It's 2 3/16″ Dia. × 9 9/16″ long.

Tap Magic—Aerosols have a female stem.

Marvel Mystery Gasoline and Oil Additive

Simply add these additives directly to gasoline and oil to improve your engine performance. In gas it cleans fuel injectors, prevents sticky rings and valves, and limits the buildup of varnish and gum. In oil it eases start-up in cold temperatures, extends oil life, and prevents the formation of acid and sludge. It can also be used with marine and diesel engines. Color is red.

These products are compliant under all state VOC rules in effect on October 1, 2010.

For information about lubricants and oil, see page 2192. For more about oil, see page 2203.

Two-Cycle Engine Oil

Take care of your two-cycle engines. These oils reduce engine wear and provide superior rust protection. Color is brown. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size	SSU @ 100° F		Each	Pkg. Qty.	
8-oz. Container	150	1274K153	$2.77	24	$60.96
32-oz. Container	150	1274K172	5.68	12	62.52

Gas Stabilizer

Just add to the gas tank of your two- or four-cycle engines and you can store your engine without draining the gas. One ounce of stabilizer treats 2.5 gallons of gasoline. Color is red. These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
32-oz. Container	10385K472	$21.01	12	$224.04

Cutting and Threading Oil

The choice for a variety of cutting, pipe threading, and broaching operations. Use full strength except for Mobil Mobilcut, which must be diluted. These products are compliant under all state VOC rules in effect on October 1, 2010.

Mobil Mobilmet*—*426 is for light to moderate duty use. It is chlorine free, sulfur free, and nonstaining. *766* is for heavy duty use on difficult-to-machine steels.

***Mobil Mobilcut*—**Offers excellent rust protection. It forms a milky emulsion when mixed with water.

***Heavy Duty*—**These sulfur-based oils are designed for use with ferrous metals; they can stain nonferrous metals. Use alone or blended with other oils. *Light-colored oil* allows you to see your workpiece and is chlorine free. *Dark-colored oil* is a high-lubricity oil that allows increased speeds and is especially effective for machining tough ferrous metals.

***Nonstaining*—**Also known as plumber's lard oil, this oil provides excellent lubricity for fine surface finishes and extended tool life. It's chlorine free and sulfur free.

***Food Grade*—**NSF registered H1 for applications where there is incidental food contact. It contains anticorrosion additives.

Stamping and Drawing Vanishing Oil

Shortly after application, this oil evaporates to leave only a thin residue to protect your machined parts. Evaporation time is 15 minutes to 2 hours, depending on factors such as humidity and temperature. Oil is nonstaining, chlorine free, and sulfur free. Use it full strength on all metals up to 0.025″ thick.

***Standard*—**These products are compliant under all state VOC rules in effect on October 1, 2010 except in the Los Angeles area.

***Food Grade*—**Complies with FDA specification 21 CFR 178.3910 for applications with incidental food contact. These products are compliant under all state VOC rules in effect on October 1, 2010.

Misting Coolant Concentrates

These synthetic coolants are fortified with rust inhibitors and prevent foul odors. Dilute them with water to suit your drilling, milling, tapping, sawing, turning, and grinding operations on all types of metal. They can even be used for flooding applications. These products are compliant under all state VOC rules in effect on October 1, 2010.

For coolant dispensers, see pages 2232-2233.

***Kool Mist*—**Sulfide free. *Formula 78* is for light duty applications. *Formula 77* provides greater lubricity for tougher machining jobs.

***Tri-Cool*—**Contain extreme-pressure additives that reduce heat buildup and extend tool life. Chlorine free and sulfur free.

Coolants for Near-Dry Machining

Only a minimal amount of coolant is needed, which means you'll have near-dry workpieces that require little to no cleanup and disposal costs. Apply these coolants to your tool's cutting edge to reduce friction between the tool and the workpiece. Great for shallow drilling, reaming, and tapping operations as well as on band saws and circular saws.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
1.6-oz. Stick	1503K102	$4.51	50	$206.50
4-oz. Liquid	1503K502	11.54	36	377.60
12-oz. Paste	1503K302	22.29	12	245.19

Sawing Fluid Concentrates

Able to take the heat off of tough metalworking jobs, these fluids cool while they lubricate, preventing metal distortion and corrosion in sawing applications. Use them with power hacksaws, circular saws, and band saws. All fluids are chlorine free and sulfur free. *Synthetic* and *Nonstaining* are odorless. Dilute them with water to suit your application. These products are compliant under all state VOC rules in effect on October 1, 2010.

***Semisynthetic*—**A blend of synthetic and mineral oils for extra lubricity. Use them on all metals, including yellow metals.

***Synthetic*—**Use this oil with all metals except aluminum, brass, bronze, and copper.

***Nonstaining*—**You can use this synthetic oil on nonferrous metals, including aluminum. Not for use on yellow metals.

	1 Gallon				5 Gallon	
		Each	Pkg. Qty.			Each
Semisynthetic	1197K803	$19.28	4	$68.72	1197K9	$83.74

Stamping and Drawing Concentrate

Replace the multiple oils you're using with just one. These water-soluble synthetic oil concentrates are designed to handle all of your light to heavy duty stamping and drawing applications. They're nonstaining, chlorine free, and sulfur free. Suitable for all metals. Dilute with water to suit your application.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
1-gal. Container	1077K202	$50.56	6	$273.00
5-gal. Container	1077K5	210.00	—	—

Machining and Grinding Concentrates

Dilute these nonstaining, water-soluble concentrates with water to meet your specific machining and grinding applications. They are for use with most metals. These products are compliant under all state VOC rules in effect on October 1, 2010.

Light Duty—This economical, general purpose concentrate is formulated for intermittent service.

Medium Duty—Increases tool life and is designed for more demanding applications.

Heavy Duty—Tough enough to handle difficult-to-machine alloys as well as the most severe applications, this concentrate is the best product for extending tool life.

Semisynthetic and ***Synthetic—***All are chlorine free and sulfur free. *Long-lasting semisynthetic* provides excellent cooling and is for use where traditional soluble oils can't adequately cool.

	1 Gallon				5 Gallon

Quenching Oil

To minimize cracking and distortion, these nonstaining oils cool parts uniformly and more slowly than water. Use them to harden production parts, taps, dies, and forming tools. Chlorine and sulfur free. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		28-Second Quench Time		11-Second Quench Time
1-gal. Container	3202K5	$18.29	3202K4	$19.13
5-gal. Container	3202K1	76.50	3202K7	79.94
30-gal. Container	3202K2	423.21	3202K9	449.23

Polishing Oil

Apply these oils to abrasive belts and wheels for extended life and improved surface finishes. They increase production by allowing belts and wheels to handle more workpieces. They also work well as general purpose grinding oils. Suitable for use on all metals as well as glass. These oils are nonstaining, chlorine free, and sulfur free. Use full strength. Aerosol has a female stem.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
11-oz. Aerosol	1165K262	$5.24	12	$56.64
1-gal. Container	1165K282	36.27	6	195.84

Lubricants for Smoothing and Sharpening Stones

These solutions lubricate and prevent material buildup.

Water-Soluble Lubricants—Easier to clean from your workpiece than oil-based lubricants.

Oil-Based Lubricants—Nonstaining, chlorine free, sulfur free, and won't corrode metals. Use full strength. Meet U.S. Pharmacopeia standards for mineral oil purity.

Size		
Water Soluble		
8 oz.	44555A11	$5.30
1 gal.	44555A77	23.02
Oil Based		
4½ oz.	1386K41	6.74
16 oz.	1386K42	12.67
32 oz.	1386K43	20.71

Honing Oil

Oil keeps cylinder hones clean, which allows them to continue abrading and polishing. It's nonstaining and chlorine free. Contains sulfur. Use full strength on all metals.

Size		
1 gal.	1823K1	$28.33
5 gal.	1823K2	110.00

Machining and Grinding Concentrate for Carbide

To keep the leaching of cobalt from carbide to a minimum, use these synthetic concentrates that are specially formulated for carbide applications. They provide excellent lubricity, cooling, and corrosion protection for use on carbide, carbon steel, cast iron, high alloy steels, and stainless steels. They are also free of mineral oil, chlorine, and sulfur. Dilute with water.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
1-gal. Container	1537K102	$53.11	4	$191.20
5-gal. Container	1537K2	230.92		

Electric Discharge Machining Fluid

Demanding EDM (electric discharge machining) applications are no problem for these fluids. They are low viscosity, which means they allow faster machining speeds for fine surface finishes. They are also long lasting and extend tool life. Use them on a variety of hard metals. Use full strength.

These products are compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
1-gal. Container	1496K102	$20.91	4	$75.83
5-gal. Container	1496K2	94.57		

Pipe and Tube Bending Lubricant

Make bending and forming pipe and tube easier with this lubricant. It's a pourable gel that produces a high-strength lubricating film on your metal surface. Great for use on ferrous metals as well as high-strength alloys.

Lubricant offers excellent rust protection. It is chlorine, sulfur, and phosphorous free. Use full strength.

This product is compliant under all state VOC rules in effect on October 1, 2010.

Size		Each	Pkg. Qty.	
1-gal. Container	1529K102	$40.10	4	$143.40

Cutting Fluid and Coolant Deodorizers

Neutralize and eliminate acidic and alkaline gases, including hydrogen sulfide and ammonia. These deodorizers dissolve odors from recycled water-soluble coolant and cutting fluids. They're also suitable for wastewater and trash collection areas. Use full strength or dilute and use as a spray. These products are compliant under all state VOC rules in effect on October 1, 2010.

Standard—Until it reacts completely with odorous gases, this neutralizer emits a fresh scent.

Extra Strength—Strong enough for use in sludge treatment.

	Container Size		
Standard	70 oz.	63545T22	$54.76
Extra Strength	77 oz.	63545T21	83.72

Reservoir Cleaner and Anti-Foaming Liquid

Clean and defoam your coolant systems to keep them running in tiptop shape. Dilute with water. These products are compliant under all state VOC rules in effect on October 1, 2010.

Reservoir Cleaner—Removes oily residue, soap deposits, and heavy soils from your reservoir without harming paints, coatings, seals, and hoses.

Anti-Foaming Liquid—Simply add this liquid to your reservoir to reduce foam in your coolants.

	Container Size		1-3	4-Up
Reservoir Cleaner	1 gal.	2147K1	$36.09	$31.65
Anti-Foaming Liquid	64 oz.	2147K3	46.62	40.19

Grease Guns

Apply your grease to the precise lubrication point desired with these steel-barreled grease guns. All guns have a 1/8" NPT female connection for attaching nozzles and a nozzle with coupler for standard grease fittings, unless noted. Fill in one of three ways (unless otherwise stated): insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or bulk load using a filler pump or by scooping grease into the gun barrel.

Pistol Grip—Designed for one-hand operation, these grease guns allow you to access hard-to-reach areas. Filler nipple (sold separately) is required for bulk loading with a filler pump.

High Pressure Lever Grip—Put yourself in complete control of your grease output. When you're using a thick grease or need to force the grease through clogged fittings, use short, quick strokes. Use longer strokes to dispense larger amounts at lower pressures. Guns include a 1/8" NPT male filler nipple for bulk loading.

Lever Grip for Grease and Oil—Similar to the grease gun shown above, with the additional ability to dispense both grease and oil. Bulk load only by pouring in oil or scooping in grease.

Dual Output—Switch the latch pin to toggle between low-pressure and high-pressure settings. Use the low-pressure setting to dispense more grease with each stroke. Make use of the high-pressure setting when you're dispensing thicker grease or need to force grease through clogged fittings. Include a 1/8" NPT male filler nipple for bulk loading.

High Output—Dispense large quantities of grease quickly with little effort. Includes a 1/8" NPT male filler nipple for bulk loading.

Extreme Pressure—Easily dispense even the thickest grease with the highest-pressure-rated gun we offer. Screw the T-handle into the barrel to prime the gun and produce 20 or more strokes without priming or screwing down the handle again. Has a 1/4" NPT female connection for attaching nozzles. Includes a coupler for button-head grease fittings, 1/8" NPT male filler nipple for bulk loading, pressure gauge, relief valve, and carrying strap. Suction load or bulk load only.

Battery-Powered Grease Guns

Powered by a rechargeable battery, these guns require less work than a manual gun. Plus, with no air hose to tie you down, they offer more freedom than air-powered guns. Hold the trigger for a continuous flow of grease, or deliver 1 oz. of grease per 50 strokes.

Guns have a steel barrel plus a 7/16" female UNEF connection for attaching nozzles, and a 30" long flexible nozzle that has both a coupler for standard grease fittings and a steel spring guard to prevent kinking. A rechargeable battery, battery charger, and a carrying case are also included. Fill in one of three ways: insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or use a filler nipple and filler pump to bulk load. Load capacity is 16 oz.

Standard—Delivers a continuous flow of 2.9 oz. of grease per minute. Maximum pressure is 6,000 psi. Requires a 12-volt NiCad battery (included).

High Output—Delivers a continuous flow of 8.5 oz. of grease per minute. Maximum pressure is 7,500 psi. Requires a 14.4-volt NiCad battery (included).

Replacement 30" Flexible Nozzle					1524K82	35.24

Air-Powered Grease Guns

Use air power to dispense grease without the effort that manual grease guns require. One-hand operation allows you to access hard-to-reach areas. Gun has a steel barrel and a coupler for standard grease fittings. Fill in one of three ways: insert a cartridge of grease, draw grease from a container using the bottom handle to suction load, or use a filler nipple and filler pump to bulk load. Hold the trigger to deliver a continuous flow of 10 oz. of grease per minute. Gun has a 7/16" UNEF female connection for attaching nozzles and includes a 30" flexible nozzle. It requires a 40-150 psi air supply. Air inlet connection is 1/4" NPS female.

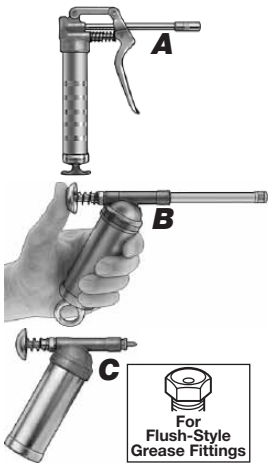
29	6,000	16	1454K38	$106.11
Replacement 30" Flexible Nozzle			1524K82	35.24

Grease Guns & Grease Injector Needles

For information about grease, see page 2198. For grease gun nozzles, see page 2211.

Compact Grease Guns



Designed for one-hand operation, these grease guns allow you to access hard-to-reach areas that larger guns can't. Guns have a steel barrel.

Style A—Includes a 1/8" NPT female connection for attaching nozzles and a nozzle with coupler for standard grease fittings. Use the included 3-oz. black NLGI No. 1.5 lithium grease cartridge or suction load. *Replacement grease gun cartridges* have a temperature range of 0° to 280° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

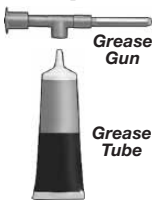
Styles B & C—The palm and finger-grip design of these guns allows for easy operation. Push the plunger with your thumb to dispense grease. Guns include a 1/8" NPT female connection for attaching nozzles.

Style B also includes a nozzle with coupler for standard grease fittings. Suction load or bulk load only.

Style C also includes a nozzle with coupler for flush-style fittings. Bulk load only.

Nozzle Type	Strokes per oz.	Max. psi	Load Cap., oz.		
For Standard Grease Fittings					
A ... 6" Rigid	80	4,500	3	1060K52	$15.82
B ... 4" Rigid	150	3,000	3	10225K93	18.10
B ... 4" Rigid	150	3,000	5	10225K95	19.32
For Flush-Style Grease Fittings					
C ... 13/16" Needle	150	3,000	3	10225K97	17.08
Replacement 3-oz. Grease Gun Cartridges for Style A					
Black NLGI No. 1.5 Lithium Grease (3/Pkg.)				1060K31	$11.93
White NLGI No. 2 Lithium Grease (4/Pkg.)				1060K63	13.18

Compact Light Duty Grease Guns



Thread this handy 6" gun directly onto a tube of multipurpose lithium grease (sold separately), and push the plunger to dispense.

Grease is rated NLGI No. 2 and has a temperature range of –25° to +280° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

Grease Gun	1348K22	$7.55
8-oz. Tube White Lithium Grease	1348K13	5.85

Ready-to-Use Grease Guns

Eliminate the time and mess of manual filling. This 6 5/16" long gun comes loaded with 2 oz. of blue NLGI No. 2 lithium grease. When the gun is empty, simply throw it away. Push-action allows easy one-hand operation. It has a transparent body for a clear view of the grease level and a universal nozzle that fits standard grease fittings. Maximum pressure is 3,700 psi. Grease temperature range is –31° to +302° F. Grease is compliant under all state VOC rules in effect on October 1, 2010.

8648K5 ... $11.17

Grease Gun Holders

Keep your grease guns close at hand. Holder is steel and mounts to walls, vehicles, and other machinery. The center latch secures any standard 2 1/4" dia. grease gun. Holder has two 1/4" dia. mounting holes.

Compatible with the grease guns on page 2209 (except 1059K).

1275K33 ... $7.73

Pinpoint Grease Injector Needles

Perfect for dispensing precise amounts of grease, these needles lubricate sealed bearings and allow pinpoint penetration of boots and gaskets in hard-to-reach areas.

Snap-In Needles

Snap directly into the coupler of your grease gun for speed and convenience. Made of Type 304 stainless steel.

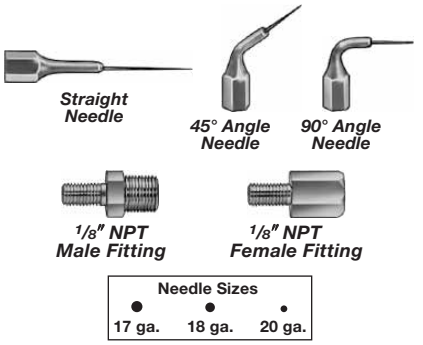
Thread-On Needles



Choose from straight, 45° angle, and 90° angle needles. Threads are 1/4"-28 female. Needles are made of Type 304 stainless steel; fittings are brass.

Needles with 1/8" NPT male fitting thread directly into your grease gun barrel.

Needles with 1/8" NPT female fitting thread into your grease gun nozzle.

Replacement needles have 1/4"-28 female threads.

To Order: Please specify needle size: 17 ga. (0.058" OD), 18 ga. (0.050" OD), or 20 ga. (0.035" OD).

1/4"	8829T4	36.50

Grease Gun Filler Pumps

Simplify bulk loading your grease guns. Insert the grease gun's filler nipple into the socket located on top of the unit, then pump the lever handle.

Pump for ***35-lb. containers*** delivers 1 oz. of grease per stroke; pump for ***120-lb. containers*** delivers 2.6 oz. of grease per stroke.

Pumps are steel and include a 1/8" NPT male steel filler nipple, steel drum cover, and follower plate for pumping extra-thick grease. Pail and drum are not included.

Fits Container	Max. Container Size Dia.	Ht.		
35 lb. (5 gal.) Container	12"	13 1/4"	1014K21	$90.31
120 lb. (16 gal.) Drum	15"	27"	1008K25	320.16
Repl. Filler Nipple (1/8" NPT male connection)			1014K31	7.13

Lincoln Grease Gun Filler Nipples

Attach this steel nipple to a manual grease gun so you can load the gun using a Lincoln brand filler pump. Size is 11/32" Dia. x 3/4" Lg. Connection is 1/8" NPT male.

1099K11 ..... $5.00

Grease Fitting Cleaning Tools

Easily open clogged grease fittings. To use, fill the tool with a light oil, place the tool's coupler on the grease fitting, and tap it with a light hammer. This tapping action forces oil through the fitting and quickly removes contamination from its bearings, joints, and other mechanical parts. Tool is steel with a corrosion-resistant coating. Includes a flexible rubber, nylon reinforced extension hose for hard-to-reach fittings. Furnished in a plastic case.

5059K1 ..... $58.98

Rigid Grease Gun Nozzles

One end has a 1/8" NPT male connection that threads into your grease gun barrel, while the other end has a coupler for standard grease fittings, unless noted. Use with manual grease guns, unless noted.

(A) Rigid Nozzle with Coupler—Combination nozzle/coupler fits standard grease fittings.

(B) Rigid Nozzle with High-Pressure Coupler—Same as Style A but built for heavy duty use.

(C) Rigid Nozzle with 180° Swivel Coupler—A sliding, spring-loaded sleeve locks coupler in place for straight applications and at any angle up to 90°.

(D) Rigid-to-Flexible Nozzle with Coupler—Slide the sleeve along this nozzle to shift from a rigid to a flexible nozzle. For use with both manual grease guns and air-powered grease guns.

(E) Nozzle without Coupler—Has a 1/8" NPT male connection at each end.

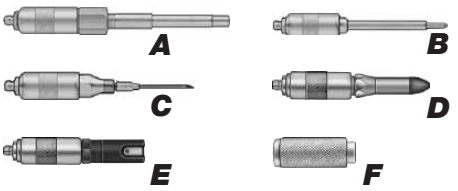
Snap into the coupler of your grease gun to access hard-to-reach lubrication points.

Straight



(A) Coupler for Recessed Lubrication Points— For use with standard grease fittings. 6″ long. Max. pressure is 4,000 psi.
2906K94 ..... $15.00

(B) Needlepoint Coupler— For use with flush-style grease fittings and bare lubrication points. 5 1/4″ long. Max. pressure is 4,000 psi.
2906K92 ..... $13.22

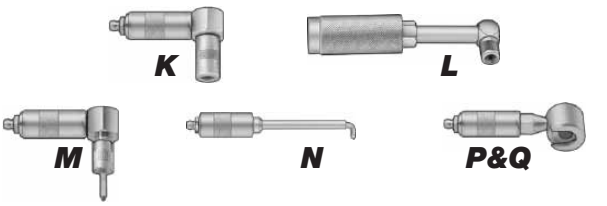
(C) Injector Needle— For precise applications. Needle is 14-ga. (0.08″ OD) and 1 1/2″ long. Overall length is 5 1/4″. Max. pressure is 4,000 psi.
2906K91 ..... $9.89

(D) Coupler for Bare Lubrication Points— 4″ long. Max. pressure is 4,000 psi.
2906K82 ..... $9.00

(E) Slide-On Coupler— For use with standard grease fittings. 3 1/2″ long. Max. pressure is 4,000 psi.
2906K81 ..... $20.30

(F) Locking Sleeve— Has a 1/8″ NPT female connection to connect any 1/8″ NPT male nozzle to a coupler. 2 1/2″ long. Max. pressure is 7,500 psi.
1090K65 ..... $20.32

90° Right Angle



(K) 90° Coupler— For use with standard grease fittings. 2 13/16″ long. Max. pressure is 4,000 psi.
2906K96 ..... $11.61

(L) 90° Coupler for Recessed Lubrication Points— For use with standard grease fittings. 4 3/4″ long. Max. pressure is 7,500 psi.
1090K52 ..... $26.18

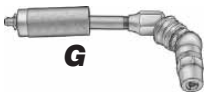
(M) 90° Needlepoint Coupler— For use with flush-style grease fittings and bare lubrication points. 2 1/4″ long. Max. pressure is 4,000 psi.
2906K95 ..... $16.06

(N) 90° Needlepoint Coupler— For use with flush-style grease fittings and bare lubrication points. 4 1/2″ long. Max. pressure is 4,000 psi.
2906K93 ..... $12.98

(P) 90° Coupler for 5/8″ Head Dia. Button-Head Fittings— 3 5/8″ long. Max. pressure is 4,000 psi.
2906K97 ..... $12.50

(Q) 90° Coupler for 7/8″ Head Dia. Button-Head Fittings— 3 5/8″ long. Max. pressure is 4,000 psi.
2906K83 ..... $16.77

360° Swivel Coupler



(G) 360° Swivel Coupler— Includes a 2″ long steel nozzle with a coupler for standard grease fittings. Overall length is 7 1/2″. Max. pressure is 7,500 psi.
1090K44 ..... $49.25

Flexible Nozzle

(R) Flexible Nozzle— This rubber nozzle is 18″ long and has a steel spring guard to prevent kinking. Max. pressure is 3,000 psi.
2906K89 ..... $15.74

Grease Fitting Tools

(H) Easy-Out Grease Fitting Tool— Use this tool to remove and retap 1/4″-28 grease fittings.
2906K98 ..... $7.31

(J) Easy-Out Grease Fitting Tool— Use this tool to remove and retap 1/8″ NPT grease fittings.
2906K99 ..... $7.37

10-Piece Grease Gun Accessory Kit

Contains: Three straight extensions (Styles A-C), two grease fitting tools (Styles H and J), four 90° right angle extensions (Styles K, M, N, and P), and a flexible nozzle (Style R).
2906K7 ..... $132.87

Grease Lubricators

Efficient and easy to use, these hand-operated lubricators are made of steel. All include a grease pump plunger system, container cover, and delivery hose.

Use with NLGI Nos. 0-2 grease. For containers, see pages 1735-1736.

Styles A and ***B*** have a gun with 6″ rigid nozzle, ⅛″ BSPT female coupler for standard grease fittings, and follower plate. The gun has a switch for moving between low-pressure or high-pressure settings. The low-pressure setting dispenses more grease with each stroke. Make use of the high-pressure setting when you're dispensing thicker grease or need to force grease through clogged fittings. Maximum pressure is 10,000 psi.

Style C dispenses over 50% more grease per stroke than the other manual lubricators we offer. It has a ⅛″ NPT female coupler for standard grease fittings. Maximum pressure is 5,000 psi.

	Fits Container	Strokes per oz.	Container Included	Delivery Hose Lg.		
Dual-Output Lubricators						
A	7 lb. (1 gal.)	23 or 63	No	5 ft.	1368K16	$216.90
A	11 lb.	23 or 63	Yes	5 ft.	1368K19	243.28
B	35 lb. (5 gal.)	23 or 63	No	10 ft.	1368K24	395.85
	13″ Flexible Nozzle				1368K22	30.48
High-Output Lubricator						
C	35 lb. (5 gal.)	7.5	No	5 ft.	10465K31	498.67

Battery-Powered Grease Lubricator

Attach this lubricator to a battery for go-anywhere convenience. Battery sold separately. Lubricator dispenses 5 oz. of NLGI Nos. 0-2 grease per minute. It has a steel housing and includes a grease pump, cover assembly, delivery hose, universal z-swivel fitting for connecting the delivery hose to your gun, and a gun with coupler for standard grease fittings. Container is not included. For containers, see pages 1735-1736.

Optional steel cart holds grease pump and 35-lb. container. It has two pneumatic tires and a plastic box to hold the battery.

Lubricator with Battery and Optional Steel Cart (Container Not Included)

Fits Container	Max. psi	Delivery Hose Lg.		
35 lb. (5 gal.)	5,000	25 ft.	1412K42	$1,768.31
Battery (12 VDC)			71805K82	123.57
Optional Steel Cart			1412K43	522.89

Air-Powered Grease Lubricators

Dispense grease without the effort that manual lubricators require. These air-powered lubricators have a follower plate that moves down the inside of the container as the grease level drops; this compresses the grease and prevents vapor pockets from forming as the grease is dispensed. Lubricators are steel and include a grease pump, cover assembly, delivery hose, and a coupler for standard grease fittings. Air inlet connection is ¼″ NPT female for low- and high-volume lubricators and ¼″ NPTF female for medium-volume lubricators.

Styles D-G also have a universal z-swivel fitting for connecting the delivery hose to your gun, and either a standard gun or a booster gun (see table below). Guns dispense grease at the same pressure as your existing grease system, up to the maximum grease outlet pressure. In addition, booster guns allow you to increase the pressure up to the maximum gun pressure. *Note*: Do not use flexible nozzles with these booster guns. *Styles D* and *F* include a four-caster dolly; *Style G* includes a two-wheel hand truck.

Style H has a ⅜″ NPT male connection and can be used with standard gun 1306K13 on page 2214. Includes a 3-ft. long air inlet hose.

Containers and drums are not included. For containers, see pages 1735-1736; for drums, see pages 1740-1741.

	Fits Container	Max. Grease Outlet psi	Gun Type	Max. Gun psi	Max. Air Inlet psi	Delivery Hose Lg.		
Low-Volume Lubricators—*Dispense 16 oz. of NLGI Nos. 0-2 grease per minute.*

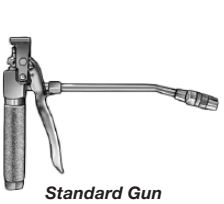
Grease Lubricator Accessories & Grease Cups

For information about pipe size, see pages 2-3. For information about grease, see page 2198.

Guns for Powered Grease Lubricators



Standard Gun

Booster Gun

Team these guns with any air-powered or electric grease system. All are made of steel; nozzle extensions include a coupler for standard grease fittings.

Standard Guns—Dispense grease at the same pressure as your existing grease system, up to 7,500 psi.

Booster Guns—Increase the pressure of your existing grease system to deliver greater pressure when you need it. *Note:* Do not use flexible extension hoses with these booster guns.

Thread Size	Nozzle Type	Max. psi		
Standard Guns				
1/4" NPTF Female	6" Rigid	7,500	1306K11	$130.74
3/8" NPT Female	6" Rigid	7,500	1306K13	139.21
Booster Guns				
1/8" NPT Male	8" Rigid	10,000	14195K66	261.88
1/8" NPT Female	6" Rigid	12,000	14195K25	125.47

No-Kink Grease Hose Swivels

Straight, Male x Female

90° Angle, Male x Female

Universal, Male x Male

Make handling your manual or air-powered grease dispensing system easier while preventing damage to hoses. These steel fittings connect the delivery hose to the gun and swivel 360° to keep hoses from twisting.

Thread Size	Max. psi		
Straight			
1/8" NPT Male x 1/8" NPT Female	4,500	1092K21	$17.69
1/8" NPT Male x 1/8" NPT Male	4,500	1092K19	45.23
1/2"-27 Male x 1/4" NPT Male	7,500	1092K18	35.04
90° Angle

1/4" NPT Male x 1/4" NPT Male	7,500	1092K24	88.69
1/2" NPT Male x 3/8" NPT Male	5,000	1092K25	158.52
1/2" NPT Male x 1/2" NPT Male	5,000	1092K26	144.75
1/2"-27 Male x 1/4" NPT Male	7,500	1092K11	79.38

Metering Grease Dispensing Nozzles

Rigid Nozzle

An LCD display allows you to precisely monitor the grease you dispense. These nozzles are great when you need to dispense a specific amount of grease or when you can't see how much grease you're dispensing. Measure batch total in oz. (resettable) and cumulative total in lb. (nonresettable).

Nozzles have a universal z-swivel fitting for connecting the inlet to your grease supply, and a coupler for standard grease fittings. Operate on two AA batteries (included). Inlet connection is 1/4" NPT female; outlet connection is 1/8" NPT female.

Nozzle Type	Max. psi		
6" Rigid	7,250	2446K14	$515.42
12" Flexible	7,250	2446K22	531.02

Grease Cups

Turn the lid clockwise to force grease down into the bearing. As grease is dispensed, cups compress slightly. Made of steel. Temperature range is 32° to 150° F. Use with NLGI Nos. 1-3 grease.

Cap., oz.	Thread Size, NPT male	Dia.	O'all Ht.		
0.25	1/8"	15/16"	1 5/8"	1112K41	$6.02
1	1/4"	1 3/4"	2 5/16"	1112K44	16.16
2	3/8"	2 1/4"	2 9/16"	1112K45	23.18
3.5	1/2"	2 11/16"	2 15/16"	1112K46	23.95

See-Through Automatic Grease Cups

With a transparent polycarbonate dome, these grease cups won't leave you wondering how much grease you have left. Cups come with three interchangeable springs, each with a different wire diameter. To achieve your desired flow rate, choose the most appropriate spring for the thickness of your grease.

Furnished with a 1/4"-28 straight thread grease fitting for refilling. Pipe size is 1/8" NPT male. Temperature range is –10° to +250° F. Use with NLGI Nos. 0-4 grease.

Polycarbonate Base—An economical choice when there's minimal vibration, shock, or impact.

Aluminum Base—Strong enough to withstand vibration, shock, or impact.

Double-Plated Aluminum Base—Nickel and chrome plated for corrosion resistance.

	1-oz. Capacity				***2-oz. Capacity***				***6-oz. Capacity***			
Base	Dia.	O'all Ht.	1-5	6-Up	Dia.	O'all Ht.	1-5	6-Up	Dia.	O'all Ht.	1-5	6-Up

Heavy Duty Automatic Grease Cups

Made of steel to perform under rugged conditions. Cups are designed to feed slowly and to work with close- or tight-fitting bearings. They have a metering pin you can adjust to increase or decrease the feed rate. A stem at the top of the cup descends to show when it needs refilling.

Furnished with a 1/4" NPT grease fitting for refilling, except the 0.5-oz. cup has a 1/8" NPT fitting. Temperature range is 32° to 180° F. Use with NLGI Nos. 1-3 grease.

Cap., oz.	Thread Size, NPTF male	Dia.	O'all Ht.		1-2	3-Up
0.5	1/8"	1 1/4"	4 3/16"	1110K22	$67.33	$60.36
1.75	3/8"	2 1/2"	4 5/16"	1110K23	102.11	91.73

8	3/4"	3 1/4"	9 3/4"	1110K25	219.81	197.46

For information about grease, see page 2198.

Ready-to-Use Automatic Grease Cups

Grease Cups

Whether you need a large quantity of grease or just a few drops, these automatic grease cups adapt to your application. They have a 4.25-oz. capacity and dispense a precise amount of grease over a set period of time (1 to 12 months). They're filled with NLGI No. 2 grease, eliminating the time and mess of filling.

To use, screw the grease cup directly into the point of lubrication; no tubing or other connectors are needed. Grease cups are made of transparent polyamide and allow easy viewing of the grease level. Pipe size is 1/4" BSPT male with a plastic fitting. Units are 2 1/8" Dia. x 4 5/8" Ht.

Food Grade grease is NSF registered H1 for applications with incidental food contact.

Time-Set Dial

Type of Grease	Type of Thickener	Temperature Range	Grease Color		1-2	3-Up
Multipurpose	High-Performance Lithium	–22° to +284° F	Amber	3176K4	$49.04	$41.72
Multipurpose with Moly	Lithium	–4° to +250° F	Black	3176K7	48.56	41.31

Adapter

Remote Grease Cup Filler Kit

No more climbing and reaching to fill your remote grease cups. This filler kit delivers grease to cups (not included) up to 10 ft. away. Kit includes 10 ft. of 1/4" dia. polyethylene tubing, a 1/4"-28 grease fitting and adapter, two 1/8" NPT male connectors, and a 1/8" NPT female bulkhead nut and fitting. Temperature range is –10° to +180° F.

Optional adapter has a straight connection that is 1/8" NPT female x 1/4"-28 male.

		1-5	6-Up
Kit	1395K25	$41.41	$37.34
Optional Adapter	1303K21	$3.56	

Pressure-Relief Vents

When pressure climbs into and beyond the ranges shown in the table, vents open to reduce pressure. They close as pressure drops within and below the pressure-relief range. All are made of steel. 1/8" PTF vents meet Mil. Spec. 35670.

Pressure-Relief Range, psi	O'all Ht.	Hex Size		1-9	10-Up
1/8" Pipe Thread Size (PTF)					
1/4 to 1	1/2"	7/16"	1093K11	$2.58	$2.31

45 to 80	1/2"	7/16"	1093K63	4.61	3.83

Flow-Stop Grease Fittings

Stop grease flow to prevent over-lubrication and damage to bearing seals. These steel fittings positively shut off within the pressure ranges listed. As the pressure drops below its closing pressure the fitting reopens and grease flow can resume. Fittings have a 60° angle and a 1/8" PTF male pipe thread.

Shut-Off Pressure, psi	O'all Ht.	Hex Size		1-9	10-Up
5 to 20	1"	5/8"	10425K15	$7.14	$6.25
60 to 110	1"	5/8"	10425K17	6.95	6.08

Bearing Grease Packers

Efficiently lubricate bearings without the mess of hand packing. These packers force out the old grease and replace it with your new grease. Include a dust cover.

Portable bearing packer is small enough for hand-held operation and strong enough to be used in a vise for more demanding applications. Made of polycarbonate and glass-filled polypropylene. Fill with bulk grease. Use with NLGI No. 2 grease.

Bench-mount bearing packer has a built-in fitting for connecting to your grease gun's coupler. Grease gun must have a 1/8" NPT female connection. For larger bearing applications, mount directly to your workbench. The base plate is 6 1/2" dia. and has three 1/4" dia. mounting holes (mounting hardware not included). Made of steel. Use with NLGI Nos. 0-2 grease.

Portable

Bench Mount

	Bearing Size Range			
	Min. ID	Max. OD		
Portable	3/4"	3 1/2"	8434K7	$26.88
Bench Mount	3/4"	6"	1074K9	170.42

Continuous Pressure-Relief Vents

Continuously vent excessive pressure from your bearing housings, gear boxes, and reservoirs. Vents are steel and have a 40-micron filter that prevents contamination.

Vents with deflector prevent fluid from splashing out of the vent hole.

Vent

Vent with Deflector

Hydraulic Bleeder System

Perform multiple maintenance tasks without compressed air or electricity. This hand-operated system lets you flush hydraulic fluid using pressure or vacuum; bleed clutches and brakes; bench bleed any master or slave cylinder; and meter and inject liquids. Maximum hydraulic injection pressure is 125 psi. Maximum vacuum is 30" Hg. Injection stroke is 12.5 ml.

System comes furnished in a plastic case with fittings, adapters, and an instructional DVD. For use with D.O.T. (Department of Transportation) 3, 4, and 5 fluids.

6944A81 ..... $151.98

Grease Fittings

For information about pipe size, see pages 2-3.

About Grease Fitting Threads

In general, grease fitting threads follow pipe thread conventions and are either tapered or straight.

Tapered Pipe Threads

PTF and NPTF—Also known as Dryseal, these threads are tapered for leakproof installations. Compatible with NPT threads, but some leak-free characteristics are lost.

Metric and British Pipe Threads—Tapered in accordance with DIN standards established by the German Institute for Standardization and adopted by ISO (International Organization for Standardization).

Straight Threads

1/4"-28 Taper—Threads are tapered but they are designed to be installed into a 1/4"-28 straight threaded hole. Also known as SAE-LT threads (Society of Automotive Engineers Lubrication Threads).

UNF and UNEF—Similar to threads on a machine screw or bolt. They require a sealant, such as an O-ring, to minimize leakage.

Grease Fittings

Satisfy most general purpose lubrication requirements. All have a ball check to keep out dirt and other contaminants, unless noted. Max. pressure is 10,000 psi, unless noted. Threads are male, unless noted.

Steel fittings are zinc plated. ***Stainless steel***, ***brass***, and ***Monel*** fittings withstand corrosive conditions. Stainless steel is more corrosion resistant than brass; Monel is the most corrosion resistant.

Metric, BSPT, and ***BSF*** fittings meet DIN 71412 standards.

Straight Fittings

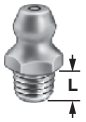
Self-Threading Leakproof Grease Fittings



Straight

90° Angle

65° Angle

45° Angle

Metric 90° Angle

Metric 45° Angle

Create a leakproof seal in untapped holes with these zinc-plated steel fittings, which form threads as you install them. Use a power or hand wrench to spin in fittings. If spun in, fittings have a maximum pressure of 10,000 psi, unless noted. You can also drive them in, but they aren't pressure rated under this installation method. Connections are male.

Metric 90° angle and 45° angle fittings have a square face; straight fittings have a hex face.

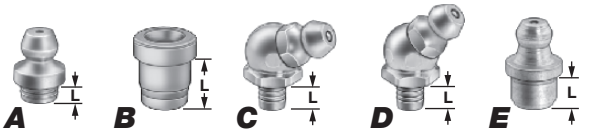
● Max. pressure is 8,000 psi.

Drive-In Grease Fittings



A B C D E

Drive these fittings into an untapped hole to speed production and reduce threading costs. All have a ball check, unless noted. Not rated for pressure.

Inch fittings have a serrated shank that forms a tight seal and prevents leaks, except Style B with 1/4" hole dia., which has a plain shank. ***Metric*** fittings have a plain shank.

Tools

For Straight Fittings

Tap these tools once or twice with a hammer to install fittings.

	Each
For Straight Fittings	2318K19 $23.56
For Angle Fittings	2318K29 25.36

For information about pipe size, see pages 2-3. For information about grease fitting threads, see page 2216.

Button-Head Grease Fittings

For a quick, positive grip, choose these rugged button-head fittings.

Inch zinc-plated steel fittings have a plunger-style check valve to allow for greater grease flow than other fittings. ***Inch stainless steel*** fittings have a ball check.

Metric and ***BSPP*** fittings meet DIN 3404 standards.

Grease Fitting Blocks for Hard-to-Reach Areas

Attach tubing to these blocks for easier lubrication of hard-to-reach and remote machine bearings. One side of each block has 3, 6, or 10 grease fittings, and the opposite side has compression-fitting connections for 1/4" OD tubing (not included). Overall block depth is 3/4". Use with grease up to NLGI No. 2.

Large-Capacity Oilers

Minimize refilling time during big oiling jobs, such as filling large oil cups and reservoirs. Made of steel.

	Cap., oz.	Spout		
Standard	64	6 1/4″ Angled Rigid	1390K11	$52.71
With Handle	64	6 1/4″ Angled Rigid	1390K12	71.85

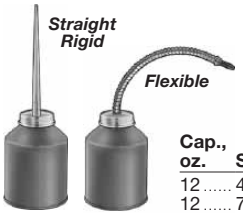
Air-Powered Easy-Lube Oilers

Connect to your shop air supply and pull the trigger to effortlessly deliver oil. Adjust the spout tip to modify the spray volume. A brass knob on the handle adjusts the spray pattern from medium to fine mist.

Made of aluminum with a brass tip. Air inlet connection is 1/4″ NPT female. Operates on 80 to 120 psi.

Cap., oz.	Spout		
32	12″ Straight Rigid	13945K41	$96.30

Economy Oilers



Push the bottom of these simple oilers to dispense oil with ease. Body is steel; spout is zinc-plated steel.

Flexible spout has a zinc tip.

Cap., oz.	Spout		
12	4 1/2″ Straight Rigid	1258K71	$6.40
12	7″ Flexible	1258K72	6.64

Easy-Lube Oilers

6-oz. with Angled-Rigid Spout ***20-oz. with Flexible Spout*** ***10-oz. with Angled-Rigid Spout***

Simply squeeze the trigger to operate these oilers. Made of steel.

Standard— Deliver a single drop or solid stream of oil.

Adjustable Spray— Tighten the aluminum tip for a fine mist of oil; loosen it to deliver a solid stream.

Angled-rigid spouts are steel. *Flexible spouts* are zinc-plated steel.

Cap., oz.	Spout		1-5	6-Up
Standard

Replacement Adjustable Spray Tip		1238K51	Each	$4.22

Precision Oilers

Apply lubricant in tight spaces with the push of a button. This all-aluminum oiler has a needle-like spout, convenient pocket clip, and cap. Overall length is 5 5/8″.

Cap., oz.	Spout Lg.		
1.5	1 1/2″	9044T7	$10.06

Sheet Stock Oilers

Oilers lubricate both sides of metal sheet stock before stamping or forming to extend die life and ensure high quality. Made of steel.

Oilers for up to 2½″ Wide and 4″ Wide Sheet Stock

Oiler for up to 2½″ Wide Stock

Clip these oilers directly to sheet stock; their two felt pads spread lubricant evenly. Use for sheet stock up to 0.104″ thick as well as wire. Mount either horizontally or vertically.

Oiler for sheet stock up to 2½″ wide has four 0.1″ ID tube connections.

Oiler for sheet stock up to 4″ wide has eight 0.1″ ID tube connections.

Optional reservoir is polyethylene and has eight feed points and eight 6-ft. polyurethane feed tubes with adjustable flow. Capacity is 1 gal.

Max. Sheet Stock Width	Overall Size Lg.	Wd.	Dp.		Each
2½″	5″	¾″	3″	2277K1	$29.42
4″	6½″	¾″	3″	2277K2	31.45
Optional Reservoir				2277K3	142.54

Oilers for up to 8″ Wide Sheet Stock

Two carpet-covered rollers lubricate sheet stock up to ¼″ thick. Top roller is fed by a 32-oz. reservoir with a drip tube; bottom roller picks up lubricant from a pan below.

Oiler with valve has an overflow valve in the bottom pan to prevent excess lubricant from spilling.

Optional stand extends from 24″ to 42″ high.

Replacement rollers handle oils, soluble oils, and low pH (acidic) lubricants. *Optional heavy duty rollers* work well with high pH (alkaline) lubricants. *Optional vinyl rollers* can be used to apply a very thin coating, such as vanishing oil.

Optional wipers control the amount of lubricant on sheet stock.

Overall Size Lg.	Wd.	Ht.	Oiler	Each	Oiler with Valve	Each
10½″	4½″	13¾″	1354K11	$220.14	1354K51	$256.67

Replacement Rollers	1354K41	Pair	42.00
Optional Heavy Duty Rollers	1354K71	Pair	61.09
Optional Vinyl Rollers	1354K81	Pair	81.45
Optional Wipers	1354K31	Pair	29.27

Oil-Dispensing Guns

When you need to use oil to lubricate bearings or fittings, these guns work just like grease guns. They have a steel lever and include a coupler for standard grease fittings. *18-oz. capacity gun* has a plastic barrel; *26-oz. capacity gun* has a steel barrel.

Cap., oz.	Strokes per oz.	Max. psi	Nozzle Type		
18	15	5,800	6¾″ Rigid	1879K48	$102.49
26	7	1,800	6⅝″ Rigid	1879K21	208.06
Replacement Coupler				1879K23	7.62

No-Drip Oil-Dispensing Nozzles

Without Meter Angled-Rigid Nozzle

With Meter Flexible Nozzle

A safety lock on the handle prevents spills and accidental dispensing. Use these nozzles with motor oil, gear oil, and transmission fluid. Each has a ½″ NPT female swivel inlet connection that attaches to your bulk oil delivery system. Outlet connection is ¼″ NPT female.

Nozzles with meter have an LCD that registers in pints, quarts, gallons, or liters and totalizes in gallons or liters (up to 999.99). Meter is powered by a 3.6-volt ½ AA lithium battery (included).

Nozzle Type	Without Meter Max. psi			With Meter Max. psi		
11″ Angled Rigid	2,000	2254K21	$102.00	1,000	2254K23	$489.46
14″ Flexible	2,000	2254K22	112.14	1,000	2254K24	487.24
Replacement Nozzle Tip					2254K31	12.02
Replacement ½ AA Lithium Battery					6951K59	5.19

Oil-Removal Guns

Produce a strong suction to remove old lubricant from gear cases, transmissions, and differentials. You can also use these steel guns for transferring and adding fluid lubricants.

Cap., oz.	Nozzle Type		
12	10″ Flexible Steel	1050K11	$22.92
16	12″ Super-Flexible Vinyl	1061K11	10.25

Oil-Dispensing Pumps

Cover Pump (Container Not Included)

Self-Contained Pump

Dispense lubricants right at your job site with these mobile, easy-to-fill pumps. Pumps are perfect for neat and fast refilling of transmissions, differentials, and gear cases. All components are steel. Pump head and lid are red powder-coated; handle is zinc plated.

Cover pump dispenses oil and clamps directly onto a 5-gal. container (not included). It includes a cover assembly with a 5-ft. rubber delivery hose with a curved nozzle. For containers, see pages 1735-1736.

Self-contained pump dispenses grease rated up to NLGI No. 3 and oil. Includes a 3.7-gal. capacity steel container and a 5½-ft. nitrile delivery hose with a curved nozzle. It is 17⅛″ high and has a 7⁵⁄₁₆″ wide base.

Air-Powered Oil-Dispensing Pumps

Drum Not Included

Pneumatic power lets you quickly and conveniently dispense motor oil, gear oil, and transmission fluid from 55-gal. drums (not included). Pump is made of cast aluminum and polyurethane. It includes an air regulator and gauge, 6-ft. long Buna-N rubber air hose with ⅜″ NPT male connection, 6-ft. long nitrile oil hose with ½″ NPT male connection, and a bung adapter with a 2″ NPT male connection for mounting on a drum.

Air inlet: ⅜″ NPT female. Air inlet pressure: 40-180 psi. Air volume @ 100 psi: 8.5 scfm. Oil outlet: ½″ NPT female. Maximum oil pressure: 540 psi. Flow rate: 2 gpm.

For drums, see pages 1740-1741.

Fits Container			
55-gal. Drum	2332K5	$1,095.78	

Lubrication Manifolds

4 Feeds

Simultaneously deliver equal lubrication to multiple points. Connect the included tubing to the lubrication points for access to remote and hard-to-reach areas. Manifolds work with grease rated up to NLGI No. 2 and oil.

Inlet and outlet feeds are ⅛″ NPT female. Tube fittings are ¼″ and made of brass. Manifolds are corrosion-resistant die cast aluminum alloy. Furnished with 6 ft. of nylon tubing per feed and steel tube clamps with self-tapping mounting screws.

About Oil-Hole Covers and Oil Cups

Oil-hole covers and oil cups are convenient and dependable ways to apply oil to parts in hard-to-reach areas. Install them on machinery, motors, bearings, blocks, and all kinds of moving parts. They have a self-closing hinged cover (unless noted) that keeps contaminants out of your oil and equipment. ***Oil-hole covers*** do not hold oil. Any oil poured in the cover passes into the part to be lubricated. ***Oil cups*** have a reservoir that holds oil. Oil that is poured in the cup is held in the reservoir and passes through gradually. For this reason, we list a capacity for all of our oil cups. The advantage of oil cups is that they decrease the frequency of manual lubrication.

Choose from drive-in and threaded styles. ***Drive-in*** covers have plain walls and are designed to be lightly tapped into a hole. ***Threaded*** covers and cups provide a more secure fit. There are several different thread types: NPT is National Pipe Taper; UNF is Unified National Fine; and UNEF is Unified National Extra Fine.

Installation clearance is a measurement that represents the overall diameter of the path of a cover or cup as you rotate it into place on your machinery.

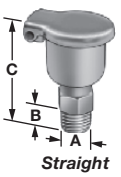
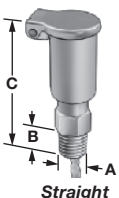
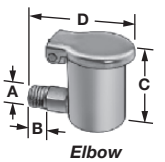
Oil Cups



Straight



Straight Wick-Feed



Elbow

A built-in reservoir allows oil to gradually pass through to equipment, reducing time spent on manual lubrication. Cups are zinc-plated steel and have NPT male connections.

Straight wick-feed oil cups protect bearings from dust and foreign matter. The wick extends through the threaded connection of the cup and keeps the bearing moist, even after the oil cup is drained.

Elbow style is for side-mounted applications and where vertical space is limited.

About Oil Reservoirs

Oil reservoirs serve as a central dispenser for lubrication systems.

Adjustable-Flow Oil Reservoirs—Adjust the oil flow from a drop to a steady stream. Some of these oil reservoirs have special features such as multiple outlets, brushes for chain lubrication, and a solenoid to start oil flow when equipment starts running and to stop oil flow when equipment stops.

Constant-Level Oil Reservoirs—Used primarily on equipment that requires a constant supply or bath of oil.

Outlet Connections—Many of our reservoirs and sight-flow needle valves have outlets with NPTF or PTF pipe threads (also known as Dryseal). Connections prevent leaks and ensure pressure-tight joints without a lubricant or sealer. They connect to NPT threads but may lose some of their leakproof qualities.

Oil Reservoirs

Reservoirs have aluminum top and bottom plates around a clear plastic bowl and a self-closing vented fill cap. When using these reservoirs in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2226). Maximum temperature is 140° F.

Pressure-Equalizing Oil Reservoirs

A venting tube equalizes pressure between the reservoir and bearing so you can lubricate non-vented, closed, and sealed bearing housings while keeping out contaminants. A ball check valve below the sight chamber prevents sudden back pressure from affecting flow. Turn on and off using the toggle switch on top of the unit.

Reservoirs have aluminum top and bottom plates around a clear acrylic bowl and include a fill cap. When using them in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2226). Maximum temperature is 160° F.

16	3 1/2"	8 13/16"	1/2"	1157K26	116.08

High-Temperature Oil Reservoirs

Made of polycarbonate, these reservoirs withstand temperatures up to 225° F. They include a self-closing vented fill cap. When used in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2226).

Reservoirs ***with filter*** have an aluminum filter with Type 304 stainless steel wire cloth. Filter is 100 mesh (100 openings per linear inch of mesh) and removable. For information about mesh openings and particle filtration, see page 433.

High-Temperature Large-Capacity Oil Reservoirs

A high maximum temperature of 250° F combined with large capacity makes these reservoirs suitable for circulating oil systems and hydraulic power units.

Reservoirs are heavy duty steel. They have a 40-micron filter built into their removable fill/breather cap and include a liquid-level gauge. When using them in flow-regulating applications, they require a sight-flow needle valve (sold separately on page 2226). Outlet is 1/2" NPT female. Mounting fasteners not included.

5-Gallon Capacity

1- and ***2-gallon reservoirs*** have four 11/32" dia. mounting holes. ***5-*** and ***10-gallon reservoirs*** contain a baffle that prevents surging or sloshing of return fluid. They have four 17/32" dia. mounting holes.

Cap., gal.	Overall Size: Ht.	Wd.	Dp.	No. of Outlets/ Return Lines	Return, NPT female

Adjustable-Flow Oil Reservoirs

The precision needle valve on top of these reservoirs allows you to adjust the flow rate using the attached toggle switch. Reservoirs have aluminum top and bottom plates around either a clear plastic or glass bowl and include a vented fill cap. A sight glass allows you to view the flow. Maximum temperature is 160° F for the plastic bowl and 250° F for the glass bowl.

Direct Mount—Thread directly into bearing housings, pumps, and other machinery.

Remote Mount—Connect a pipe or tube fitting to reach remote or isolated equipment. Furnished with a nut and washer for mounting.

Oil Reservoirs

For information about oil reservoirs and threaded connections, see page 2223.

Electric Adjustable-Flow Oil Reservoirs

A solenoid valve is closed unless energized (normally closed) and dispenses lubricant only while equipment is running so there's no need to manually control flow. The sight-flow needle valve controls flow rate. Reservoirs have aluminum top and bottom plates around a clear plastic bowl, and a vented cap. Valve has a 1/4" OD tube outlet. Mounting threads are 5/8"-18 UNF male. Maximum temperature is 160° F.

120 VAC reservoirs draw 0.1 amps.
24 VDC reservoirs draw 0.4 amps.

Add-On Multiple-Outlet Adjustable-Flow Oil Reservoirs

Additional Valve

Customize these reservoirs to the number of outlets you need. Each includes two adjustable sight-flow needle valves to control flow rate, and will accommodate up to 22 additional valves (sold separately). Sight-flow valves interlock and seal with one another to form a multiple-outlet lubrication system. Reservoirs include a vented fill cap, vented sight, and clear plastic bowl. Turn flow on and off with the manual toggle switch at the bottom of the reservoir. Each valve has a 1/4" OD tube outlet. Mounting threads are 5/8"-18 UNF male. Maximum temperature is 225° F.

Cap., oz.	Bowl Dia.	O'all Ht.

Additional Valve			1328K57	18.96

Multiple-Outlet Adjustable-Flow Oil Reservoirs

Manual Toggle Switch with 2 Outlets

Electric with 4 Outlets

Serve multiple lubrication points from a single location with these reservoirs. They have aluminum top and bottom plates around a clear plastic bowl, a vented fill cap, and an adjustable sight-flow needle valve to control flow rate. Needle valve has a 1/4" OD tube outlet. Mounting threads are 5/8"-18 UNF male. Maximum temperature is 140° F.

Manual Toggle Switch— Turn on and off with the switch on top of the reservoir. **To Order:** Please specify number of outlets. **Also Available:** Reservoirs with up to 30 outlets. Please ask for 1067K999 and specify number of outlets and capacity.

Electric— A solenoid valve is closed unless energized (normally closed) and dispenses lubricant only while equipment is running so there's no need to manually control flow. **To Order:** Please specify number of outlets and 120 VAC or 24 VDC (except 1065K5 with three outlets, which is AC only). 120 VAC reservoirs draw 0.1 amps; 24 VDC reservoirs draw 0.4 amps. **Also Available:** Reservoirs with up to 30 outlets and other voltages. Please ask for 1065K999 and specify number of outlets, capacity, and voltage.

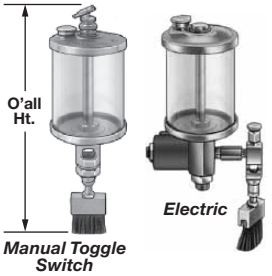
Even-Coat Adjustable-Flow Oil Reservoirs



The flat nylon brush attached to these reservoirs ensures even oil application. Reservoirs have aluminum top and bottom plates around a clear plastic bowl, and a vented fill cap. Brush is 1 1/2" wide with 1 5/32" long bristles. Mounting threads are 5/8"-18 UNF male, unless noted. Max. temperature is 140° F.

Manual Toggle Switch— Turn on and off with the switch on top of the reservoir. A sight glass allows you to view the flow.

Electric— Flow is controlled by a solenoid valve that is closed unless energized (normally closed), eliminating the need to manually control flow. Flow rate is adjusted with a sight-flow needle valve. 120 VAC draws 0.1 amps; 24 VDC draws 0.4 amps.

Constant-Level Oil Reservoirs

Vented System With Optional Wire Guard

Closed System

When oil falls below the set level, these reservoirs replenish the supply for proper lubrication. Great for use in a pump bearing housing, gearbox, and other oil sump applications. Body is die cast zinc. Connections are 1/4" NPT female. Max. temperature is 250° F for the glass bowl and 165° F for the clear plastic bowl.

Vented-system reservoirs have multiple air vents for pressure balancing. ***Closed-system*** reservoirs don't require venting, reducing exposure to contaminants.

Air-Powered Oil Reservoirs

Quickly and conveniently apply oil without the work that manual pumps require. These air-powered reservoirs dispense lubricant through a spray valve (sold separately). Air pressurizes the lubricant and atomizes the spray.

Reservoirs have dual regulators that control the pressure of the lubricant and the atomized spray. They have a clear acrylic bowl with aluminum top and bottom plates, and include a 40-micron filter to prevent valve blockage. Air inlet and outlets are 1/4″-18 NPTF female. Outlet is 1/8″-27 NPTF female. Maximum inlet air pressure is 125 psi, and maximum regulated air and fluid pressure is 30 psi. Maximum temperature is 140° F. Tubing and tube fittings are not included.

Lubrication and Coating Brushes

In addition to lubricants, these brushes can also apply paint, sealers, and coatings. They include a feed tube that extends into the 1″ long bristles. Maximum temperature is 400° F for brushes with horsehair bristles and 250° F for brushes with nylon bristles. Brushes have a 1/8″-27 NPS female connection.

Standard—Brush coats wide surfaces uniformly.

Precision—Tube extends farther into the brush for a more controlled, precise application.

Rotating Lubrication Brushes

Without Valve

With Valve

As chain or equipment moves, these brushes rotate to lubricate and clean at the same speed.

Brushes have a steel bracket with a 5/16″ dia. hole for mounting (brushes with valve include mounting fasteners). Oil flows to the brush via a 1/4″ OD tube inlet connection. Maximum temperature is 250° F for nylon brushes and 400° F for Type 304 stainless steel brushes.

Without Valve—Inlet connection is on top.

With Valve—Fine tune flow. Valve is brass with a 5/16″-18 UNC male mounting stud and a side inlet connection.

Replacement brush inserts come in packs of 2.

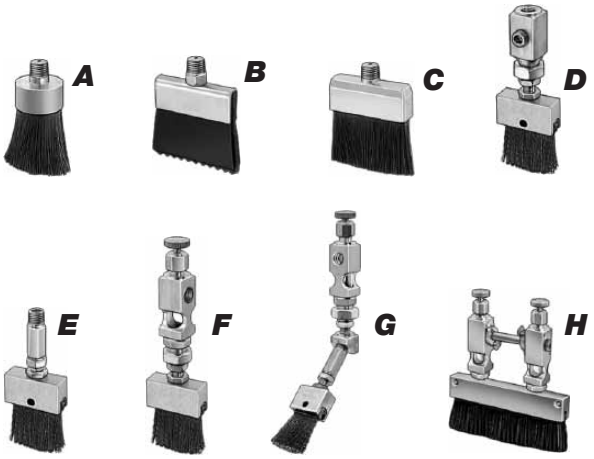
Lubrication Brushes



In addition to lubricating chain, use these brushes to lubricate gears and conveyors. Brushes with Type 304 stainless steel bristles provide excellent cleaning capability in harsh environments and longer life.

(A) Standard Brushes—Bristles are 1 5/16″ long. Housing is zinc. Maximum temperature is 160° F.

(B) Brushes with No-Drip Pad—A neoprene cover over a 5/8″ long felt pad provides even lubrication coverage without dripping. Housing is zinc. Maximum temperature is 200° F.

(C) Brushes with Internal Reservoir—An internal reservoir directs lubricant flow to the interior of the brush for even distribution. Bristles are 1 1/4″ long. Housing is zinc. Maximum temperature is 160° F.

(D&E) Brushes for Remote Installation—Designed for applications where flow can't be adjusted at the point of lubrication. To adjust flow, use with an adjustable oil reservoir or with a sight-flow needle valve. Brushes have 1/2″-20 UNF male mounting threads (unless noted) and 1 1/8″ long bristles. Housing is aluminum. Maximum temperature is 250° F. *Replacement brush inserts* are a strip of bristles that fit in your existing brush housing.

(F-H) Brushes with Sight-Flow Valve—Turn the valve wheel to adjust flow. Choose straight for chains and equipment travelling horizontally and 45° angle for chains and equipment travelling vertically. Brushes have 1/2″-20 UNF male mounting threads (unless noted) and 1 1/8″ long bristles. Housing and valves are aluminum. Maximum temperature is 250° F. *Replacement brush inserts* are a strip of bristles that fit in your existing brush housing.

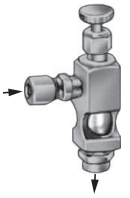
■ Two required.

Sight-Flow Needle Valves

Straight, One Inlet



90° Angle, One Inlet

90° Angle, Three Inlets

Install these gravity-flow valves inline so you can check and adjust flow rate. A glass window allows you to view the flow.

One- and ***two-inlet*** valves have a knurled knob that enables smooth, accurate flow adjustment. Temperature range is –30° to +250° F. Not rated for pressure. *Straight* valves are brass. *90° angle* valves are aluminum.

Three-inlet valves have a T-handle that adjusts flow rate. Temperature range is –15° to +225° F. Made of gold-anodized aluminum. Maximum pressure is 55 psi.

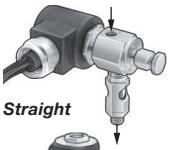
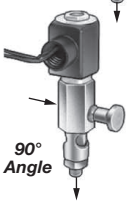
Electric Sight-Flow Needle Valves



Straight



90° Angle

A built-in solenoid in these brass valves is closed unless energized (normally closed), so it dispenses lubricant only while equipment is running. A knurled knob allows you to adjust the flow rate.

Valves are designed for use with oil reservoirs. They operate on 120 VAC; motor draws 0.1 amps. Temperature range is –30° to +250° F. Not rated for pressure.

Inlet, female	Outlet, male	O'all Ht.

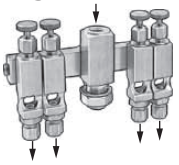
1/4" PTF	1/4" NPTF	5 15/16"	1120K12	142.44

Sight-Flow Needle-Valve Manifolds



4 Valves

There's no need for each machine to have an individual oil reservoir. Just attach these valves to your reservoir and lubricate multiple sites from a single location. Each valve has an adjustable flow and can be removed for cleaning without disturbing the rest of the system.

Valves are made of aluminum. Inlet is 1/4" NPTF female. Outlet is 1/4" OD tube. Mounting threads are 5/8"-18 male. Temperature range is –30° to +250° F.

For Vented Oil Reservoirs— Not rated for pressure.

For Closed Systems— Maximum pressure is 125 psi.

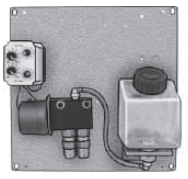
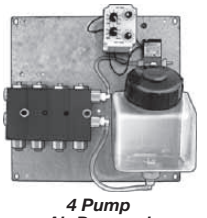
Precision Lubrication Systems



2 Pump Electric



4 Pump Air Powered

Ready to install, these complete systems have an adjustable flow rate for precise lubrication. They're for use with oil and include a pump, timer, and a reservoir with plastic bowl between top and bottom plates.

Components are mounted on a 10 3/4" Ht. × 10 7/8" Wd. galvanized steel panel that has four 3/16" dia. holes with standoffs and four 1/4" × 3/8" slots for mounting (fasteners not included). If your application requires additional protection for this panel, you can mount it in a NEMA enclosure (not included; see pages 896-904). All systems require a 120 VAC power supply and have screw terminals for electrical connections. Lubrication outlet is 1/8" NPT female. Systems draw 0.06 amps.

Electric systems cycle from 1 to 1,440 times per day. Pump output is adjustable from 0 to 0.005 oz. per cycle. Set pump flow rate using a spanner wrench. Temperature range is –15° to +120° F.

Air-powered systems have a solenoid valve and 1/8" barbed tube fittings for 1/4" OD air inlet tube. Required air pressure is 40 to 120 psi. Systems cycle from 1 to 72,000 times per day. Pump output is adjustable from 0 to 0.007 oz. per cycle. Set pump flow rate using a screwdriver. Temperature range is –15° to +180° F.

Air-Powered Modular Lubrication Pumps

Two Pumps with Spray Nozzle

Add-On Pump with Spray Nozzle

Modular design allows you to easily add pumps as your lubrication requirements change. Each pump has an adjustable flow from 0 to 0.007 oz. per cycle. Set the flow rate using a screwdriver. *Note:* For proper operation, pumps require a three-way solenoid valve (sold separately on page 505). The solenoid can be controlled by a timer or PLC (programmable logic controller). Pumps are made of aluminum and have brass fittings. Pump size is 4" Ht. × 1 1/8" Dp. Required air pressure is 40 to 120 psi. Maximum outlet pressure is 1,080 psi. Lubrication inlet, air inlet, and lubrication outlet are 1/8" NPT female. Each pump has 9/32" dia. mounting holes (fasteners not included). Temperature range is –15° to +180° F. Pumps ***with spray nozzle*** provide a broader dispensing pattern. Nozzle flexes and stays in position. It's made of zinc-plated steel and includes an 8" long copper hose.

Oil/grease pumps are for use with oil and grease up to NLGI No. 2.

Grease pumps are for use with grease up to NLGI No. 2. Pumps have a 1.5-oz. capacity reservoir with a clear plastic bowl between aluminum top and bottom plates. Reservoir is 4" high.

Central Lubrication Pumps

Dispense a fixed amount of lubricant with these pumps, which deliver 0.27 oz. of lubricant to single or multiple lubrication points. Reservoir is aluminum and includes a plastic liquid-level gauge. Outlet is 5/16″-24 female. Temperature range is 32° to 120° F. Use with oil. To control flow to each lubrication point, use a metering valve (sold separately on this page).

Vertical pump dispenses lubricant when you pull the handle. Reservoir requires 56 pulls to empty. Pump has four 15/64″ dia. mounting holes (fasteners not included).

Horizontal pumps dispense lubricant when you release the handle. Reservoir requires 69 handle releases to empty. Pumps have three 15/64″ dia. mounting holes (fasteners not included). Pumps come with a handle on the left or right side.

Vertical

Horizontal with Left Side Handle

Handle Position	Cap., oz.	Max. psi	Size Ht.	Size Wd.	Size Dp.		
Vertical							
Bottom	15	200	7 7/8″	3 15/16″	5 29/32″	2287K1	$255.22
Horizontal							
Left Side	19	50	4 31/32″	3 5/32″	9 1/4″	2287K8	255.22
Right Side	19	50	4 31/32″	3 5/32″	9 1/4″	2287K9	255.22

Metering Valves for Central Lubrication Pumps

For precise distribution of lubricant to all of your lubrication points, choose these metering valves. Valves are 1″ long with a 7/16″ hex size and are made of brass. Temperature range is 32° to 120° F.

Each flow rate listed allows about twice the flow of the next smaller size. For example, 0 has twice the flow rate of 00. In addition, the amount of lubricant that's delivered to each point depends on the total number of lubrication points and the flow rate of the metering valves used. **To Order:** Please specify flow rate.

Inlet, male	Outlet, male	Available flow rates	Max. psi		
5/16″-24	5/16″-24	00, 0, 1, 2, 3, 4, 5	200	2293K11	$13.04
5/16″-24	1/8″ NPT	00, 0, 1, 2, 3, 4, 5	200	2293K12	13.04
1/8″ NPT	1/8″ NPT	00, 0, 1, 2, 3, 4, 5	200	2293K13	13.04

Electric Central Lubrication Pumps

Automatically dispense a variable amount of lubricant at a specified time with these pumps. They have transparent plastic reservoirs and a low-level switch that triggers an audible alarm. The switch also can be wired to additional alarms. Pumps operate on 110 VAC and have screw terminals for wiring. Outlet is 5/16″-24 female. Motor draws 0.03 amps. Temperature range is 32° to 120° F. Pumps have two 15/64″ dia. mounting holes (fasteners not included). Use with oil. To control flow to each lubrication point, use a metering valve (sold separately on this page).

Fixed interval pump dispenses lubricant at set increments of time. You can adjust the amount that's dispensed each interval from 0.1 to 0.2 oz. per cycle.

To Order: Please specify one of the following dispensing intervals: 3, 5, 10, 15, 30, or 60 minutes.

Variable interval pump lets you digitally control the time period over which the amount of lubricant is dispensed (adjusts from 1-180 seconds) and the interval time between cycles (adjusts from 3-999 minutes). Maximum dispensing rate is 0.11 oz. per second.

Fixed

Variable

Interval	Cap., oz.	Max. psi	Size Ht.	Size Wd.	Size Dp.

Variable	101	100	10 1/32″	8 27/32″	6 11/16″	2287K4	1,290.95

Antifreeze/Coolant Testers

Check your freeze protection with these testers. Choose 1/8″ dia. floating balls or easy-view 5/8″ dia. discs to provide visual indication.

Temp. Range			
Ethylene Glycol			
Ball	–34° to +20° F	6142A43	$9.55
Propylene Glycol			
Ball	–50° to +20° F	6142A45	10.18
Disc	–50° to +20° F	6142A47	16.62

Coolant Reservoir Deodorizers

Inject air directly into your coolant to keep it odor free and extend its service life. Each air port includes PVC tubing with a bronze air diffuser. Operate on 110 VAC and have a 2½-ft. power cord with two-prong plug. Housing is plastic.

Max. Reservoir Cap., gal.	Flow Rate, cc/min.	No. of Air Ports	Tubing Lg., ft.	Amps		
50	3,000	2	3½	0.032	2000K4	$64.64
100	5,000	1	10	0.041	2000K6	117.70

Stay-Put Flexible Metal Coolant Hose

Made of high-tensile-strength spring steel, these rugged hoses bend easily to any position and stay there. Hoses have a brass NPT male fitting on one end and a standard nozzle on the other. Connection, hose ID, and nozzle ID are the same size, except the 3/8″ NPT hose which has a 5/16″ nozzle ID. Not rated for pressure or temperature.

Corrosion-Resistant Stay-Put Flexible PVC Coolant Hose

Bend, twist, and set these hoses to stay where you want. Made of one-piece flexible black PVC with a zinc-plated steel rod along the inside wall for rigidity, they're impervious to sulfur-based cutting oils. Hoses come with a brass NPT male fitting on one end and a Type 304 stainless steel nozzle on the other. Maximum pressure is 55 psi. Maximum operating temperature is 180° F.

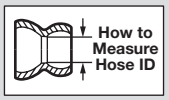
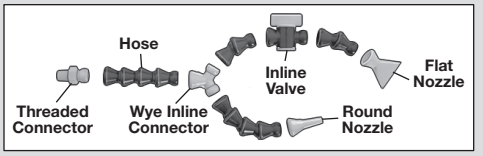
Coolant Hose

For coolants, see page 2206.

About Any-Which-Way Coolant Hose

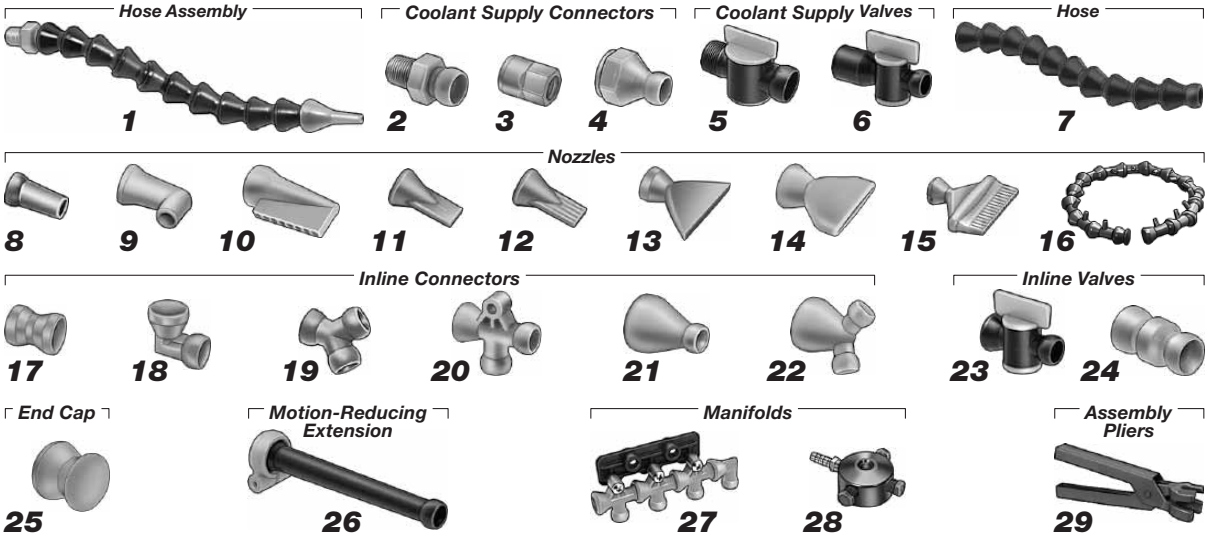




Assemble and disassemble Any-Which-Way coolant hose by snapping components together or pulling them apart. This can be done by hand, but ***assembly pliers*** and ***separation tools*** (sold separately) make the task easier.

Note: To ensure compatibility, select the hose and component color that matches your current system.

Loc-Line Any-Which-Way Coolant Hose



Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Made of acetal. Maximum operating temperature is 170° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(16) Circular nozzle assemblies surround your cutting tool with 15 nozzles that can be precisely aimed to remove chips and debris.

(26) Motion-reducing extensions not only reduce motion at higher pressures, but also reduce sagging in longer lines.

(27) Bracket-mount manifolds have one inlet, four outlets, and two 1/4″ dia. mounting holes (fasteners included). Expand with ***(20) tee inline connectors*** (sold separately).

(28) Magnetic-base manifold has one inlet, four outlets, and a 25-lb. holding force. It also has 1/4″ NPT female connections and comes with three 1/4″ plugs and one 3/8″ barbed connector. Expand with ***(19) wye inline connectors*** (sold separately).

(29) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

Cold-Air Coolant Guns

Replace messy mist systems and eliminate the need to clean coolant off your parts. Cold-air guns convert your filtered shop air into a stream of cold air using a vortex tube. Guns have no moving parts and need no electricity to provide a continuous cold air supply. All have a magnetic base. Guns require 80 to 100 psi air pressure and use 15 scfm @ 100 psi.

Standard guns produce air 50° F below the shop air you're using. Vortex tube is stainless steel with an aluminum housing. Any-Which-Way flexible acetal hose, cone nozzle, flat fan nozzle, and filter separator are included. Air inlet connection is ¼″ NPT male.

With the *dual-hose model*, you will get an additional cone nozzle and flat fan nozzle.

Adjustable guns produce air as cold as 100° F below the shop air you're using. Adjust cooling temperature using the knob on the back of the unit. Vortex tube and housing are aluminum. Any-Which-Way flexible acetal hose, cone nozzle, and 5-micron auto-drain filter are included. Air inlet connection is ¼″ NPT female.

With the *dual-hose model*, you will get an additional cone nozzle.

	Gun Size Dia.	Lg.	Hose Lg.		
Standard					
Single Hose	1½″	10″	11″	1382K12	$328.00

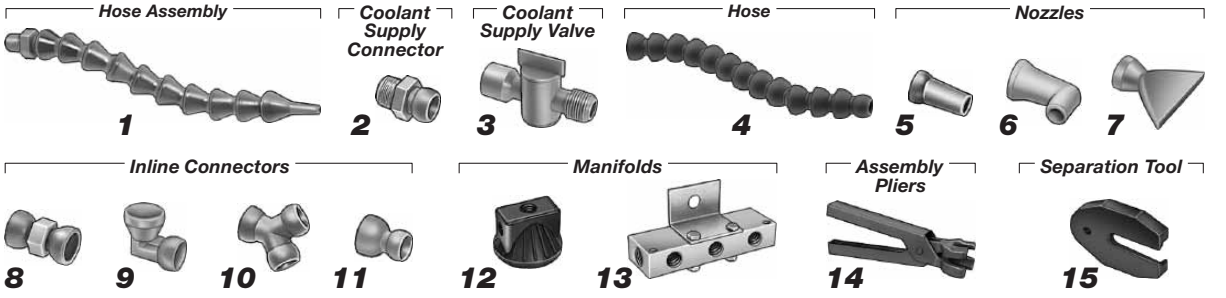
Coolant Hose

For coolants, see page 2206. For information about Any-Which-Way coolant hose, see page 2228.

Snap-Loc Any-Which-Way Coolant Hose



Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Made of acetal, unless otherwise indicated or noted. Maximum operating temperature is 200° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(12) Magnetic-base manifold has one inlet, one outlet, and a 38-lb. holding force. It also has 1/4″ NPT female connections. Expand with ***(10) wye inline connectors*** (sold separately).

(13) Bracket-mount manifold has ports for two 1/2″ NPT male and three 3/8″ NPT male connectors. Bracket is zinc-plated steel and has four 1/4″ mounting holes (fasteners included).

(14) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

(15) Separation tool makes it easier to disconnect the components from your Any-Which-Way coolant hose.

1/4″ ID (0.63″ OD)—Max. pressure is 39 psi. Max. flow rate is 240 gph. Components indicated with a ▲ are made of polypropylene.

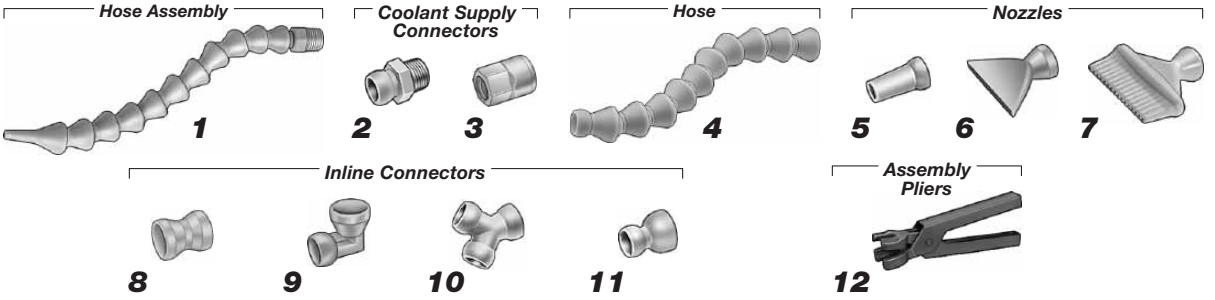
For coolants, see page 2206. For information about Any-Which-Way coolant hose, see page 2228.

Loc-Line Acid-Resistant Any-Which-Way Coolant Hose



Alcohols, aromatic solvents, gasoline, grease, hydrocarbons, oil, salt solutions, and acids are no problem for this polyester hose. Custom build your own system to deliver coolant, cutting oils, water, and air in almost any direction. Once in position, hose stays put—there's no spring back or wandering caused by vibration. Maximum operating temperature is 180° F.

(1) Hose assemblies have a hose, connectors, and round nozzles.

(12) Assembly pliers make it easier to connect your Any-Which-Way coolant hose to the components.

Mist Coolant Dispensers and Dust Removers

You get two air-powered tools in one—a mist coolant dispenser to dissipate heat from short and intermittent machine cycles, plus a dust and shavings remover. Press the lever to stop the coolant flow and start a high-velocity stream of air. Designed for use with oil- and water-based coolants, dispensers include a 6-ft. long siphon line, a flexible plastic coolant hose with medium-spray aluminum nozzle, and a magnetic mounting base. Coolant reservoirs are not included. Air inlet is 1/4" NPT female. Pressure range is 12 to 100 psi.

Dispenser with 12" Hose Assembly	1333K11	$147.17
Dispenser with 20" Hose Assembly	1333K12	149.85
Replacement 12" Hose Assembly	1333K24	33.40
Replacement 20" Hose Assembly	1333K26	37.90
Replacement Medium-Spray Aluminum Nozzle	1333K43	50.25
Optional Fine-Spray Aluminum Nozzle	1333K41	50.25
Optional Coarse-Spray Aluminum Nozzle	1333K45	50.25

Reservoir Fluid Extractors

To make it easy to empty reservoirs and tanks, pair your compressed air with the powerful venturi vacuum of this extractor. It's made of durable, chemical-resistant polyethylene to handle a variety of coolants, gear oil, engine oil, and brake fluids. Extractor has an automatic shut-off to prevent overfilling, a separate air shut-off valve, and a quick-drain pour spout.

Furnished with 0.23" OD × 5-ft. long, 0.26" OD × 5-ft. long, and 0.41" OD × 5-ft. long tubing with tubing adapters. You'll also get a brake/clutch bleeding kit to vacuum bleed hydraulic braking systems. Reservoir capacity is 2.3 gallons. Overall size is 25 1/2" Ht. × 13" Wd. × 9 1/2" Dp. Air inlet is 1/4" NPT female. Pressure range is 60 to 120 psi. Maximum operating temperature is 175° F.

3391T1		$175.48

Adjustable Coolant Nozzles

Position these nozzles in a variety of ways for flexibility as your coolant-placement needs change.

Ball Socket Connection

Designed to fit into the sockets found on CNC (computer numerical control) machines.

Nozzles with Bendable Extension Tube— Made of brass, these nozzles have a 6″ long copper extension tube that can be cut to any length and bent in any direction. Temperature range is –40° to +300° F. Maximum pressure is 500 psi.

Extended Nozzles— Body is plastic; ball is stainless steel. Temperature range is –40° to +160° F. Maximum pressure is 150 psi.

Adapters— Install these plastic adapters in an open socket in your machine. They allow you to use Loc-Line coolant hose or threaded coolant nozzles with your machine. Temperature range is –40° to +160° F. Maximum pressure is 150 psi.

Air-Powered Mist Coolant Dispensers

Shown with Optional Magnetic Nozzle Holder

When you need to cool short or intermittent machine cycles efficiently, use a mist of coolant. Coolant reservoirs are not included.

(A&B) For Water-Based Coolants— *Style A* includes a 4-ft. long siphon line, a 2-ft. long plastic coolant hose with 4″ long brass nozzle, and coolant. Air inlet is ⅛″ NPT female. Mount dispenser to your equipment by using the two 3⁄32″ dia. mounting holes (fasteners not included) or by using the *optional magnetic nozzle holder* (sold separately).

Style B has a 7-ft. long siphon line and magnetic base for easy mounting. Nozzle is 7″ long flexible plastic and stays in place once positioned. Air inlet is ⅛″ NPT female.

(C) For Water- and Oil-Based Coolants— Separate air and liquid controls plus a built-in regulator allow more accurate mixtures. Dispenser has a 10-ft. long siphon line and magnetic base for easy mounting. Nozzle is 13″ long flexible plastic and stays in place once positioned. Air inlet is ¼″ NPT male quick-disconnect.

	For Coolant Type	Nozzle Style	Required Air Pressure

Optional 4-ft. Hose Assembly for Style A				1186K54	39.93

Air-Powered Mist Coolant Dispensers with Reservoir

Disperse heat from short machine cycles and avoid waste with a mist of coolant. These dispensers include hose, nozzles, and adjustable air and coolant controls.

(A) Plastic Reservoir— Use with water-based coolants. These dispensers have a 5-ft. long brass coolant hose with 6″ long straight brass nozzle, unless noted. Inlet is 1/4″ NPT female. Required air pressure is 50 to 100 psi. All include coolant and a mounting bracket with two 5/16″ dia. mounting holes (fasteners not included).

1-qt. reservoirs have a sight gauge. *1-gal. reservoirs* have a liquid level gauge.

Also Available: Repl. parts. Please ask for 1324K83 and specify parts needed.

(B&C) Steel Reservoir— Use with water- and oil-based coolants. These dispensers have a 4-ft. long plastic coolant hose encased in a stainless steel braid. Inlet is 1/8″ NPT female. Required air pressure is 30 to 125 psi. All include coolant and a mounting bracket with two 3/16″ dia. mounting holes (fasteners not included).

Style B reservoirs have a 12″ long Any-Which-Way flexible plastic nozzle with 3″ long stainless steel tip. *Style C reservoirs* have a low-coolant indicator, a 3″ long stainless steel straight nozzle and a magnetic nozzle base.

Also Available: Repl. parts. Please ask for 1199K92 and specify parts needed.

(D) Stainless Steel Reservoir— Use with water-based coolants. These dispensers have a 4-ft. long plastic coolant hose with 6″ long, 45° brass nozzle (unless noted) and a magnetic nozzle base. Inlet is 1/8″ NPT female. Required air pressure is 30 to 120 psi.

Install the *optional on/off air switch* in your air-supply line to save energy and reduce waste.

Also Available: Repl. parts. Please ask for 1131K93 and specify parts needed.

Precision-Control Air-Powered Droplet Coolant Dispenser with Reservoir

Deliver a small, controlled amount of coolant, reducing disposal costs while improving the finish of your work. Use with synthetic and vegetable-based coolants (each sold separately).

Dispenser comes with two 6-ft. plastic delivery hoses and two 18″ long, Any-Which-Way flexible plastic nozzles, each with a brass tip and magnetic base. Reservoir is plastic and has a capacity of 16 oz. Easy-to-set knobs give you precise control of both the air flow and the number of droplets per minute (2 to 16) for each coolant hose.

Dispenser measures 7 1/16″ Ht. × 10 1/16″ Wd. × 7 1/16″ Dp.; operates on 120 VAC, 60 Hz (0.06 amp draw); and has a 6-ft. power cord with three-prong plug. Mount using the two 11/32″ dia. holes (fasteners not included) or the *optional magnetic mounting kit*, which is the choice if you will be moving the unit from one machine to another. Inlet is 1/4″ NPT female. Required air pressure is 60 to 125 psi.

Dispenser	10835K23	$891.53
Optional Magnetic Mounting Kit	10835K48	39.17
Synthetic Coolant (1-gal. Container)	10305K16	111.22
Vegetable Coolant (1-gal. Container)	10305K26	114.49

Flooding Coolant Pumps with Reservoir

When longer machine cycles create more heat than a mist can handle, provide a continuous stream of coolant to disperse heat and extend tool life. The reservoir includes a chip collector and baffle (unless noted) to keep fluid clean. All pumps are powered by a 115 VAC, 60 Hz, single-phase motor.

(E) For Low- to Medium-Viscosity Liquids— *1-gallon pump* has 6 ft. of plastic tubing, an adjustable 6″ plastic nozzle, and a 4-ft. power cord with three-prong plug.

5-gallon pumps have 6 ft. of plastic tubing, a flexible 12″ plastic nozzle, a brass control valve, and a 6-ft. power cord with three-prong plug.

10-gallon pump has 4 ft. of rubber tubing, a flexible 12″ plastic nozzle, a brass control valve, and a 6-ft. power cord with three-prong plug.

(F) For High-Viscosity Liquids— Pumps have 4 ft. of rubber tubing, a flexible 15″ steel nozzle, a brass control valve, and an 8-ft. power cord with three-prong plug. They also have a 3/8″ NPT female outlet.

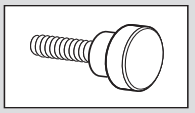
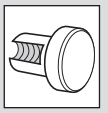
■ Max. height that water-soluble oil can be pumped. ● No baffle.

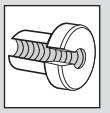
About Knobs



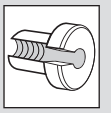
Threaded Stud



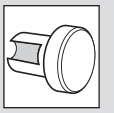
Threaded



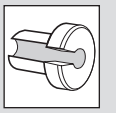
Threaded Through Hole



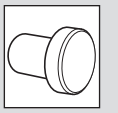
Through Hole with Threaded Insert



Unthreaded



Unthreaded Through Hole



Solid Hub

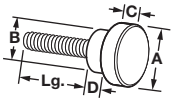
Knobs provide excellent gripping action for positioning, tightening, and holding fixtures, equipment, and machinery. Because knobs require no tools for adjusting, they're a good alternative to fasteners.

***Knobs with Threaded Stud*—**Ready to install. See pages 2234-2238.

***Knobs with Threaded or Unthreaded Hole*—**Mount to your rod, shaft, or fastener. See pages 2239-2247.

***Knobs with Solid Hub*—**Ready for you to machine to your own specifications. See page 2248.

Knobs with Threaded Stud



***Easy Clean*—**One-piece construction eliminates joints that can collect dirt and debris. Excellent for food-processing applications.

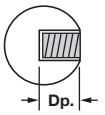
Plastic Threaded Ball Knobs



Phenolic

Polypropylene

Phenolic is shiny, scratch resistant, and very hard. Temperature range is –30° to +400° F, unless noted.

Polypropylene has greater impact resistance than phenolic, plus a textured finish for a better grip. *Black* knobs have a temperature range of –15° to +225° F. *Red* knobs have a temperature range of –15° to +125° F.

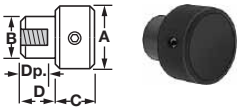
Adjustable-Torque Threaded Knobs

Set torque with a hex key to prevent overtightening that can damage sensitive equipment. Once the torque limit is reached, the knob head disengages and turns freely. Knobs are steel with a black-oxide finish. Use a 3/32″ hex key (sold separately).



Thread Size	Dp.	(A)	(B)	(C)	(D)	Torque Range		Each 1-4	Each 5-Up

Knobs ***with set screw*** allow you to tighten them to a shaft. Set screw size is ¼″-20.

(Style 7) Fast Lock—The angled through hole lets you quickly slide the knob along a threaded shaft. To engage threads, straighten knob and tighten. *Note:* Not recommended for use where vibration is a concern.

Pry-to-Tighten Knobs

When hand-tightening isn't possible, insert a metal bar between the pins of these knobs for the leverage you need. Turn the bar (sold separately on page 3751) to tighten. Knobs are made of zinc-plated ductile iron.

■ No metal insert. Threads are molded into phenolic.

♦ Prices are 10% lower when you buy in quantities of 10 or more.

Indicating Knobs

Be sure of your settings with these knobs. They're made of scratch-resistant black phenolic and have an unthreaded hole. Temperature range is –30° to +400° F. Knobs have a set screw for tightening, except knobs for D-shaped shafts without a set screw size listed, which have a spring. *Styles 1, 2, 3, 5, 11,* and *15* have a silver-colored cap.

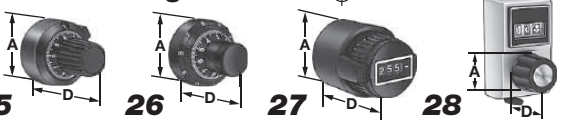
Turn-Counting Knobs



Simple to set and reset, these dial knobs have easy-to-read scales for monitoring the number of shaft turns. Use the included 4-40 set screw and hex key to tighten to the shaft. Flip the locking switch to prevent slipping and ensure long-term precision. Knobs are black.

Choose a knob with a maximum knob turn value that is equal to or greater than the number of turns required.

Styles 25&26 have two scales and a temperature range of 35° to 400° F. *Style 25* is plastic. *Style 26* is aluminum. ***Styles 27&28*** have one scale and are made of plastic. Temperature range is –22° to +185° F. *Style 28* has a 1 3/4" Ht. x 1" Wd. aluminum housing.

For installation instructions, go to mcmaster.com and search for 3148KAC.

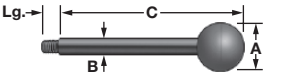
Lever Handles



Handles ***with fixed ball knob*** are an ideal replacement for gear levers. Knob is black phenolic with a temperature range of –70° to +200° F. Shaft is black-oxide steel.

Handles ***with revolving ball knob*** provide a friction-free grip—perfect for hand wheels and cranks. Knob is black phenolic with a temperature range of –4° to +300° F. Shaft is zinc-plated steel.

Quick-Positioning Cam Handles

For fast installation without ratcheting, simply clamp down on these handles. All have a threaded stud with a screwdriver slot at the top for fine-tune adjustment when clamping space is limited.

Aluminum handles have a black powder-coated finish.

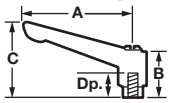
Contemporary Style Adjustable Handles with Threaded Hole



Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. **To Order:** Please specify color: black or orange.
Die cast zinc handles have a powder-coated finish.

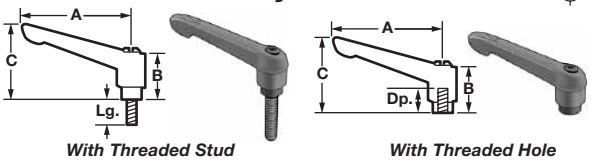
Choose-a-Color Adjustable Handles



With Threaded Stud *With Threaded Hole*

Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. All handles are nylon and have a temperature range of –40° to +200° F.

To Order: Please specify color: blue, green, red, or yellow.

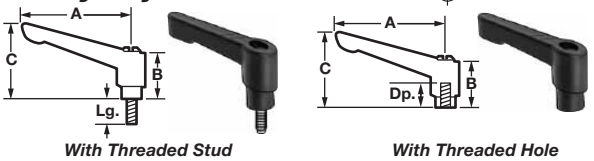
Milling Machine Handles

Unlike ordinary feed handles, these heavy duty handles engage and disengage with a simple flick of the wrist. Also known as quill-feed handles, they speed operations—especially when drilling deep holes. Install using the included 5/16"-18 set screw.

All are 9 1/4" long with a 1" dia. unthreaded hole. Shaft is black-oxide steel and has a black phenolic knob with a maximum temperature of 384° F.

For Bridgeport Series 1 and 2 Mills	2839A71	$49.17
For Lagun Mills	2839A72	49.17

Safety Adjustable Handles



With Threaded Stud *With Threaded Hole*

The gear teeth on these handles engage only after pushing down on the handle. To move handle along the stud, just push down and turn. Once you release the handle, it will spin freely if accidentally bumped. Handles are black nylon and have a temperature range of –50° to +200° F.

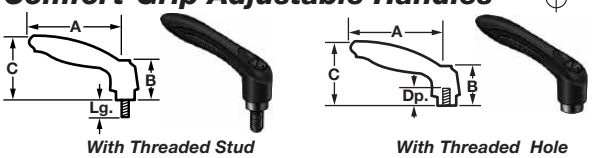
Comfort-Grip Adjustable Handles



With Threaded Stud *With Threaded Hole*

The soft thermoplastic elastomer surface improves grip. Lift the handle to disengage and rotate freely for adjustment; release to engage gear teeth and tighten. These handles are ideal for confined work areas as well as applications requiring quick setups and frequent adjustments. All have a polypropylene core and temp. range of –15° to +210° F. Color is black.

Glass-Filled Nylon Adjustable Crank Handles

Made of glass-filled nylon for impact resistance, these crank handles also feature adjustability. To operate, lift the handle to disengage from internal gear teeth, rotate to desired position, and release handle to engage gear teeth. All have a threaded hole. Handles are black and have a temperature range of 14° to 248° F.

Steel Ratchet Crank Handles

Combination ratchet arm and revolving crank handles make machinery adjustment faster, easier, and safer. Reversing control allows you to quickly reverse cranking direction. Ratchet arm is steel with a black powder-coated finish. The revolving handle is black phenolic and has a maximum temperature of 300° F. Crank handles with unthreaded round through holes have an ANSI standard keyway.

About Hand Wheels

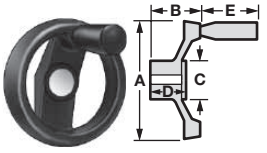
Use hand wheels to manually adjust valves, presses, and a variety of machine components. To rotate the wheel, simply grasp the wheel rim or the handle and turn.

Spoked hand wheels allow a better grip on the rim. ***Solid*** hand wheels are safer, lacking openings that can catch your hands.

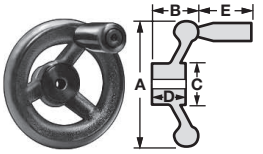
Dished (also known as offset) hand wheels keep your hands away from machinery. ***Straight*** hand wheels are better for tight spaces.

Some hand wheels include ***handles***. Choose from *stationary handles*, *revolving handles* for reduced friction, and *fold-away revolving handles*, which reduce friction and allow you to safely store the handle out of the way.

Spoked Plastic Dished Hand Wheels



Two Spoke with Unthreaded Hole and Revolving Handle



Three Spoke with Unthreaded Through Hole and Revolving Handle

These hand wheels are made of corrosion-resistant plastic with steel hubs. Color is black.

Two Spoke— Hand wheels are thermoplastic. Temperature range is 32° to 195° F.

Three Spoke— Hand wheels are nylon. Temperature range is –50° to +250° F.

Spoked Aluminum Hand Wheels

Made of lightweight, corrosion-resistant aluminum, these hand wheels have an unthreaded through hole.

Two Spoke— These dished hand wheels have a black powder-coated finish that prevents oxidation and won't leave residue on your hands. *Revolving handles* are black phenolic with a temperature range of –4° to +212° F.

Three Spoke— The outer rim is machine-polished to a smooth, high-gloss finish. Hand wheels ***with set screw and keyway*** allow easy installation onto a shaft. *Stationary handles* are polished steel. *Revolving handles* are polished aluminum.

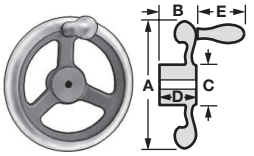
Spoked Cast Iron Hand Wheels

Dished Unfinished Three Spoke without Handle

Straight Polished Three Spoke with Handle



These hand wheels are made of rugged, durable cast iron.

Unfinished— Hubs are solid.

Polished— Hubs have an unthreaded through hole. Handles are polished steel.

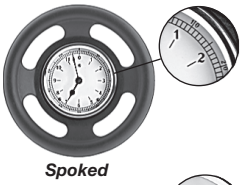
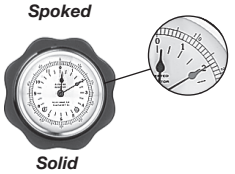
Dial-Indicating Aluminum Hand Wheels



Spoked



Solid

An easy-to-read dial in the center of the dished wheel gives you accurate settings for precision applications. The dials have an impact-resistant acrylic face and two pointers. The small pointer is geared so that 12 turns of the hand wheel equal one rotation of the pointer, while the large pointer is geared so that one turn of the hand wheel equals one rotation of the pointer. Pointers rotate clockwise.

Hand wheels have a black powder-coated finish. All have an unthreaded through hole with a 1/4″-20 set screw and operate on horizontal shafts at angles up to 45°.

Solid Polished Aluminum Hand Wheels

Lightweight and economical, these aluminum hand wheels have a polished rim and an unthreaded through hole. Hand wheels ***with set screw and keyway*** allow easy installation onto a shaft.

Stationary handles are polished steel; *revolving handles* are polished aluminum.

Metric Safety Clutch Aluminum Dished Hand Wheels

Increase operator safety while performing applications with high shaft speeds. A clutch in the hand wheel lets the shaft rotate while keeping the wheel stationary. Wheel is manually adjustable by pulling on it; just release to return it to its stationary position. A fitting in the hand wheel hub lubricates the unthreaded through hole with keyway. Hand wheel is solid aluminum with a polished rim. Clutch is steel.

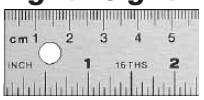
Lightweight Aluminum Rulers



Inch/Metric

Made of aluminum, these rulers are an economical alternative to Corrosion-Resistant Stainless Steel Rulers. All are rigid with black printed graduations.

Quick-reading rulers are labeled with numeric increments that are less than 1″.

Certified rulers include a calibration certificate traceable to NIST with test measurements that confirm accuracy.

Corrosion-Resistant Stainless Steel Rulers

Inch/Metric

Made to last, our most corrosion-resistant rulers are stainless steel and have wear-resistant black etched markings. Rulers are flexible for measuring slightly curved surfaces, unless noted.

Quick-reading rulers are labeled with numeric increments that are less than 1″.

Certified rulers include a calibration certificate traceable to NIST with test measurements that confirm accuracy.

★ Ruler is rigid.

Wood Yardsticks and Rulers

A clear protective coating and metal endcaps add durability to these rulers.

Yardstick is an economical choice for measuring objects up to three feet long. It has black printed graduations.

Rulers are hard-maple with brass endcaps. They have wear-resistant black etched markings.

Lg.	Wd.	Thick.	Hole Dia.

Transparent Rulers

Keep your workpiece in view as you measure with these see-through rulers. Rulers have a center-finding scale and graduations that read left to right and right to left, except Style C does not have a center-finding scale and graduations are left to right only. All are plastic.

Styles A&D have red printed graduations.

Style B rulers have one stainless steel edge and a 1/4″ dia. hang-up hole. They have black printed graduations.

Style C is flexible for measuring slightly curved surfaces. It has black printed graduations and is labeled with numeric increments that are less than 1″ for quick reading.

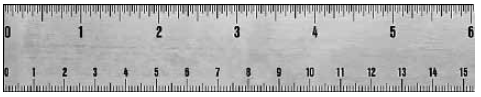
Long-Length Rulers



Left to Right

Create a ruler up to 192″ long by adding continuous segments. Mount them on machinery and tables. All are corrosion-resistant stainless steel and have wear-resistant black etched markings. They're flexible for mounting on slightly curved surfaces. Rulers with mounting holes have a 1/4″ dia. hole at each end. Segments are 48″ (120 cm) long.

Range, Inches/cm	With Mtg. Holes Left to Right	Without Mtg. Holes Left to Right	Without Mtg. Holes Right to Left

Circumference Rulers

Determine the circumference of a circle without calculations. These steel rulers have an inch scale for measuring diameter on the top edge and the corresponding circumference scale on the bottom edge. They're also known as tinners' rules. All are flexible for measuring slightly curved surfaces and have wear-resistant black etched markings. Rulers are 1 1/4″ Wd. × 1/16″ Thick. with a 7/32″ dia. hang-up hole.

Inch—Grad. Marks: 16ths front top and 8ths front bottom			
36″ Dia./113″ Circumference	2132A1		$71.04
48″ Dia./150″ Circumference	2132A2		90.44

Easy-to-Read High-Contrast Rulers

Numbers and graduations etched in light colors are easy to see on a black background.

Aluminum rulers are lightweight and corrosion resistant.

Stainless steel rulers are more corrosion resistant than aluminum rulers.

Flexible rulers are for measuring slightly curved surfaces.

Quick-reading rulers are labeled with numeric increments that are less than 1″.

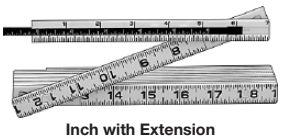
Folding Rulers

Fold these rulers for convenient storage and transport. They are 5/8″ wide and have black and red printed graduations (unless noted).

Extensions are 6″ long and reach into tight spaces that are narrower than the ruler. Wood ruler has a brass extension; fiberglass ruler has a plastic extension.



Inch with Extension

Vertical rulers give you the length of a 45° diagonal without calculations (up to 8 1/2 ft.).

High-Accuracy Rulers

Starrett High-Accuracy Rulers

Front Back
Inch/Metric

Also known as machinists' rules, these steel rulers ensure reliable, repeatable measurements. They meet Fed. Spec. GGG-R-791H, which establishes uniform standards for ruler accuracy, graduations, and size. All have a corrosion-resistant satin-chrome finish that reduces glare and wear-resistant black etched markings.

Flexible rulers are for measuring slightly curved surfaces.

Quick-reading rulers are labeled with numeric increments that are less than 1″.

Certified rulers include a calibration certificate traceable to NIST with test measurements that confirm accuracy.

Starrett High-Accuracy Rulers with Hook

A reversible, removable hook grabs the edge of an object for easy alignment. Also known as machinists' rules, these rigid steel rulers ensure reliable, repeatable measurements. They meet Fed. Spec. GGG-R-791H, which establishes uniform standards for ruler accuracy, graduations, and size. All have a corrosion-resistant satin-chrome finish that reduces glare and wear-resistant black etched markings. These rulers are labeled with numeric increments that are less than 1″ for quick reading.

Printers' Pica Rulers

Rulers are marked with picas for working with type. They have a hook for alignment. Hang-up hole is 1/4″ dia. All are corrosion-resistant stainless steel and have wear-resistant black etched markings. They're flexible for measuring slightly curved surfaces.

Lg.	Wd.	Thick.

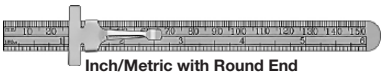
Pocket Rulers



Inch/Metric with Round End

Rulers are narrow and just 6″ long to measure in tight spaces. They have a pocket clip that can also be used as a depth gauge, with the clip as the base. All are corrosion-resistant stainless steel and have wear-resistant black etched markings. They're flexible for measuring slightly curved surfaces.

Quick-reading rulers are labeled with numeric increments that are less than 1″.

Starrett Tapered-End Pocket Rulers

At just 6″ long with a tapered end, this ruler fits into tight spots. It's flexible for use on slightly curved surfaces. It has a corrosion-resistant satin-chrome finish that reduces glare and wear-resistant etched markings.

Adhesive-Back & Center-Finding Rulers

Adhesive-Back Rulers

Inch/Metric, Left to Right

Inch/Metric, Right to Left

Permanently mount these rulers to a machine or workbench.
Flexible rulers are for mounting on curved surfaces.
Stainless steel rulers are corrosion resistant and 3/64″ thick. They have wear-resistant black etched markings. All come in one full-length segment.
Plastic rulers are 0.004″ thick. All have black printed graduations. Rulers longer than 1½ ft. come in 3-ft. long segments, unless noted. Metric rulers come in 1-meter long segments.
Steel rulers are 0.008″ thick and have black printed graduations. They come in one full-length segment.
Paper rulers are 0.004″ thick and have black printed graduations. They come in one full-length segment.

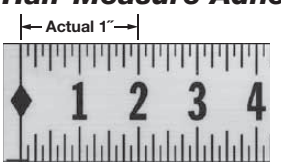
Half-Measure Adhesive-Back Rulers



Left to Right

The graduations on these rulers are half the length of the object you are measuring. Use them to find diameters and centers. All are flexible for mounting on curved surfaces. Rulers are 1″ Wd. × 0.004″ Thick.

Lg.	*Horizontal Rulers* Left to Right	*Horizontal Rulers* Right to Left	*Vertical Rulers* Bottom to Top	*Vertical Rulers* Top to Bottom

Mitutoyo Electronic Rulers

Move the encoder along the edge of an object to show the exact measurement on an easy-to-read digital display. Display resolution is 0.0005" (0.01 mm) and accuracy is ±0.001"/0.03 mm, unless noted. Upload measurement data from the ruler's SPC port to your PC with a 40" Mitutoyo Data Output Cable (sold separately) and a Mitutoyo Data Input Tool (not included; see 1825A on page 2288). These rulers have a zero-set button so you can start measuring at any point along the ruler, and they also have absolute positioning to retain the measuring position when the ruler is turned off. Rulers are made of stainless steel and have two 3/16" dia. mounting holes. Include one 1.5-volt coin cell battery.

♥ Comes in one full-length segment. ♦ Comes in 4-ft. long segments.

Electronic Rulers with Remote Display

A cable between the ruler and display allows you to read measurements from up to 10 feet away. Slide the encoder along the edge of an object to take an exact measurement. Change the scale between fractional inches, decimal inches, and millimeters with the push of a button. These rulers have a zero-set button so you can start measuring at any point along the ruler. They also have absolute positioning to retain the measuring position when the ruler is turned off. Display resolution is 0.001" (0.01 mm) and accuracy is ±0.008"/0.20 mm, unless noted. Operate on the included 3-volt battery or hardwire for 12-24 volts DC. Rulers are made of aluminum.

Range	Ruler Lg.	Ruler Wd.	No. of Mtg. Holes		
0"-10"/0-250 mm	14 1/4"	3/4"	1	8971A71▲	$538.46

0"-120"/0-3 m	124"	2"	16	8971A75	1,260.00
Replacement 3V DC Lithium Battery				7821K63	5.64

▲ Accuracy is ±0.002"/0.05 mm. ♣ Accuracy is ±0.003"/0.07 mm.

Electronic Rulers for Plans and Maps

Slide this ruler across the surface of plans, maps, and blueprints and read the measurement on the digital display in one of 111 different scales including inches, feet, yards, miles, centimeters, meters, kilometers, or a scale you define. Ruler also calculates area and volume. It has a 7-digit display with a 0.04″ (1 mm) resolution. Operates on two AAA batteries (included).

Cable allows data transmission to a PC. It is 8-ft. long with a USB A Male connection.

Quick-Read Tape Measures

Vertical

Fractions are labeled on the blade every 1/8″ for fast reading. Tape measures have a steel blade with a lacquer coating for corrosion resistance, unless noted. Blade is yellow with black and red printed graduations. It locks in place and has an automatic return. The case is impact-resistant plastic that's brightly colored for high visibility and has a belt clip.

Lg.	Wd.	Orientation	Case Color		
Inch—Grad. Marks: 16ths on both edges					
12 ft.	3/4″	Vertical	Orange	6830A11	$11.10
16 ft.	3/4″	Vertical	Orange	6830A12	13.08

30 ft.	1″	Horizontal	Yellow	6830A14★	11.15

★ Blade is acrylic coated.

Stanley Tape Measures

PowerLock

PowerLock with BladeArmor

FatMax

LeverLock

All have a locking blade that automatically rewinds when you release the lock. Slide the lock to hold the blade in place, unless otherwise stated. Cases have a belt clip.

PowerLock—Tape measures have a steel blade with a polyester coating for corrosion and scratch resistance, unless noted. It is yellow with black printed graduations. The case is chrome-plated, impact-resistant plastic.

Corrosion-Resistant PowerLock—Blade, spring, and belt clip are stainless steel for corrosion resistance. The blade is nylon coated for scratch resistance. It has black printed graduations that read horizontally on one side and vertically on the other side. The case is chrome-plated, impact-resistant plastic.

PowerLock with BladeArmor—The first 3″ of the blade is reinforced with a wear-resistant plastic coating. The blade is steel with a polyester coating for corrosion and scratch resistance, and it stays rigid when extended up to 8 feet. It is yellow with black printed graduations. The case is chrome-plated, impact-resistant plastic.

Heavy Duty PowerLock—All have a durable cast metal case that's chrome-plated for corrosion resistance. The blade is steel with a polyester coating for corrosion and scratch resistance. It is yellow with black printed graduations.

Stanley—The case is impact-resistant plastic that's yellow for high visibility. The blade is steel with a lacquer coating for corrosion resistance. It is yellow with black and red printed graduations.

FatMax—The blade on these tape measures remains rigid when extended up to 11 feet. They have a steel blade with a polyester coating for corrosion and scratch resistance. It is yellow with black printed graduations. A double-hook tip grabs from the top and bottom. The case is impact-resistant plastic with a nonslip rubber grip. It's yellow for high visibility.

FatMax with BladeArmor—A wear-resistant plastic coating reinforces the first 3″ of the blade. The blade remains rigid up to 13 feet. It is steel with a polyester coating for corrosion and scratch resistance. It's yellow with black printed graduations. A detachable, double-hook tip grabs from the top and bottom. The case is impact-resistant plastic with a nonslip rubber grip.

LeverLock—The blade automatically locks in place when extended and stays locked until you press the release lever. It is steel with a lacquer coating for corrosion resistance. Blade is yellow with black and red printed graduations. Case is impact-resistant plastic that's yellow for high visibility.

LeverLock with Magnetic-Hook Tip—A magnetic-hook tip attaches to metal surfaces to assist vertical and distance measuring. The blade automatically locks in place when extended and stays locked until you press the release lever. It is steel with a lacquer coating for corrosion resistance. Blade is yellow with black and red printed graduations. Case is impact-resistant plastic that's yellow for high visibility.

Lufkin Tape Measures

Chrome-Plated Case

High-Visibility Orange Case

Hold the blade in place with a toggle while you measure—the blade automatically rewinds when the toggle is released. Blade is steel with a lacquer coating for corrosion resistance. It is yellow with black and red printed graduations, unless noted. Case is impact-resistant plastic with a belt clip.

Magnetic tip attaches to metal surfaces to assist vertical and distance measuring.

Auto-lock blade locks in place when extended until you press the release lever.

▲Graduation marks are black only.

Corrosion-Resistant Tape Measures

All internal parts, including the blade, are stainless steel for corrosion resistance. The blade is nylon coated for scratch resistance. It locks in place and has an automatic return. A double-hook tip grabs from the top and bottom. The blade has black printed graduation marks that read horizontally on the front and vertically on the back. Case is impact-resistant plastic with a belt clip.

Certified Tape Measures

Ensure accurate measurements with certified tape measures. All include a calibration certificate traceable to NIST stating they have passed a test for accuracy. They have a steel blade with a nylon coating for scratch resistance. It locks in place and has an automatic return. Case is plastic and has a belt clip.

Inch tape measures have a yellow blade with black and red printed graduation marks.

Inch/metric and **metric** tape measures have a yellow blade with black printed graduation marks.

Pocket Tape Measures

Pocket Tape Measure

Pocket Tape Measure with Corrosion-Resistant Blade

Compared to standard tape measures, these are about half the size. The blade is nonlocking with an automatic return.

Pocket tape measures have an impact-resistant plastic case. The blade is made of steel with a lacquer coating for corrosion resistance. It is yellow with black printed graduations.

Pocket tape measures with corrosion-resistant blade have a steel blade that is chrome-plated for durability. It is silver with black printed graduations. The case is chrome-plated, impact-resistant plastic.

Easy-to-Read Pocket Tape Measures with Level and Compass

A window with an indicator line clearly shows the measurement. Use this tape measure in tight spaces near walls and inside frames and cabinets; it's about half the size of standard tape measures. Tape measure includes a level and compass. The blade locks in place and has an automatic return. It is made of epoxy-coated steel, and is yellow with black and red printed graduations. Case is impact-resistant plastic.

Certified Tape Measure Accuracy Checkers

Ensure your tape measure is accurate and meets ISO standards. Check measurements at 6″ and 10 cm with this precisely machined steel checker. It includes a calibration certificate traceable to NIST stating it has passed a test for accuracy. Accuracy is ±0.0005″. The checker is 8″ Lg. × 1″ Wd. It is black anodized aluminum.

8107A1	$179.63

Magnetic Holders for Tape Measures

Clip this magnetic holder to your belt and attach the included metal adapter to your tape measure's case.

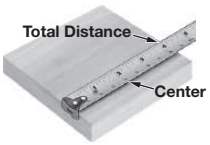
19685A2	$14.22

Leather Holders for Tape Measures

Protect your tape measure with this leather holder. It has a rivet reinforced pocket with a safety strap that snaps in place to securely hold the tape measure. The belt loops fit belts up to 3″ wide.

For Tape Measures		
Up to 30 ft.	6774A15	$6.04

Center-Finding Tape Measures



Find the exact center of your work. Measure the total distance with the upper scale; then find the same number on the bottom scale—that's your center point. The blade is steel with a lacquer coating for corrosion resistance. It locks in place and has an automatic return. It is yellow with black printed graduations. Case is impact-resistant plastic with a nonslip rubber grip and a belt clip. It's yellow for high visibility.

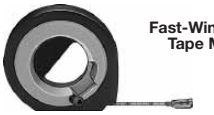
Long Tape Measures

Long Tape Measure



Fast-Winding Long Tape Measure

Measure distances over 35 ft. with these manual-rewind tape measures.

Long Tape Measures—All have a steel case that is vinyl coated for scratch resistance. They have a hook tip, unless noted.

Starrett Certified Long Tape Measures—A calibration certificate traceable to NIST stating they have passed a test for accuracy is included. Tape measures have a loop tip that hangs on a nail or stud. The case is steel that is vinyl coated for scratch resistance, unless noted.

Fast-Winding Long Tape Measures—Grip the tape measure through the hole in the center and quickly rewind the blade with the specially designed reel. They have a hook tip. Case is impact-resistant plastic.

Fiberglass blades are flexible for measuring curved surfaces, nonconductive for work near electricity, and corrosion resistant for use in harsh environments. They're vinyl coated for scratch resistance. Blades are white with black and red printed graduations.

Steel blades are more rigid than fiberglass blades and are lacquer coated for corrosion resistance, unless noted. They are yellow with black and red printed graduations.

Chrome-plated steel blades are more durable and corrosion resistant than lacquer-coated steel blades. They are silver with black printed graduations.

★ Has a loop tip that hangs on a nail or stud.
■ Blade is enamel coated for scratch resistance.

High-Visibility Long Tape Measures

Loop Tip

Easily spot the brightly colored case on these tape measures around your worksite and in your toolbox. The blade is steel and polymer- or lacquer-coated for corrosion resistance. It is yellow with black and red printed graduations, unless noted. Tape measures have a plastic case with a belt clip and manual tape return.

Loop tip hangs on a nail or stud.

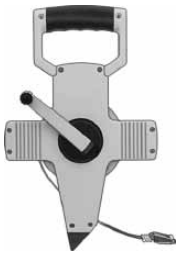
▲ Graduation marks are black only.

Easy-Carry Long Tape Measures



Hold on to the large, rubber-coated handle while carrying these tape measures. Use them outdoors and in dirty environments—an open reel allows dirt, sand, and other debris to fall away. Tape measures have a pointed-hook tip that grabs the edge of an object or drives into wood, unless noted. They also have a manual tape return. Case is orange plastic, unless noted.

Fiberglass blades are flexible for measuring curved surfaces, nonconductive for work near electricity, and corrosion resistant for use in harsh environments. Blades are vinyl coated for scratch resistance. They are white and yellow with black and red printed graduations, unless noted.

Steel blades are more rigid and durable than fiberglass blades. Blades are nylon coated for scratch resistance. They are white and yellow with black and red printed graduations, unless noted.

Certified High-Accuracy Diameter Tape Measures

Accurately measure diameter. These tape measures include a calibration certificate traceable to NIST stating they have passed a test for accuracy. Inch rulers are accurate to ±0.001″; metric rulers are accurate to ±0.03 mm. Wrap them around circular items to determine diameter without the need for calculations. They have wear-resistant etched markings and a loop tip that hangs on a nail or stud.

Stainless steel blades are corrosion resistant.

Diameter Tape Measures

Pointed-Hook Tip

Also known as tree tapes, wrap these tape measures around circular items to determine diameter and measure circumference without the need for calculations. The blade is chrome-plated or lacquer-coated for corrosion resistance. It is ⅜″ wide. The case is steel with a vinyl coating for scratch resistance. It is brown. Tape measures have a manual tape return.

Pointed-hook tip grabs the edge of an object or drives into wood.

Loop tip hangs on a nail or stud.

2″-76″	20 ft.	Loop	Silver Embossed	6832A64	103.18

Pocket-Size Diameter Tape Measures

At about half the size of standard diameter tape measures, these fit in your pocket. Wrap them around circular items to measure circumference and determine diameter without the need for calculations. Tape measures have a steel blade with a lacquer coating for corrosion resistance. The blade is yellow with black printed graduations. It's nonlocking and has a loop tip that hangs on a nail or stud. The case is chrome-plated steel. It has an automatic return.

Pedometers

Record steps or miles while you walk or run. This pedometer measures up to 999 miles or 99,999 steps in miles and kilometers. It has a 1-ft. to 5-ft. stride adjustment. Pedometer has a belt clip. Operates on a 1.5-volt battery (included).

Pedometer	8458T9	$15.00
Replacement 1.5-Volt Battery	7604K76	1.90

Ultrasonic Distance Measurers

An economical alternative to Laser Distance Measurers, this tool uses sound waves to measure distances up to 50 ft. It measures in inches, feet, centimeters, and meters, and stores up to three values. Accuracy is ±3″. This measurer adds, and calculates area and volume. It has a laser to indicate where you are aiming. Use it indoors. Operates on one 9-volt battery (not included).

Measurer	68105A16	$47.79
9-Volt Battery	71455K56	2.75

Distance & Continuous-Length Measurers

Distance-Measuring Wheels

Style A

Style B

Style C

Style D

Style E

Style F

Roll these wheels along a surface to measure distance. Choose 36″ diameter and larger wheels for measuring uneven surfaces.

Styles A&B have a plastic wheel with a rubber tread and a telescoping handle. Counters add and have a zero reset.

Style C has a folding handle and the wheel is aluminum with a rubber tread. Counter has a zero reset.

Style D have a steel wheel with a rubber tread and a folding handle. Counters have a zero reset.

Style E operates on a nonreplaceable battery with a minimum 10 year life. Wheel is plastic with a rubber tread. The digital counter is backlit and has a zero reset.

Style F has a steel wheel with a rubber tread, and a folding handle. The backlit digital counter calculates area and has a permanent memory. It has a zero reset. Measuring wheel operates on two AA batteries (not included).

	Max. Distance	Unit of Measure	Wheel Circumference	*Overall Length* Extended	Folded	Measuring Wheels		Carrying Cases	
A	9,999 ft.	ft., in.	12″	36½″	18″	**1969A11**	$39.16

Laser Distance Measurers

Styles A-F

Style G

Use a laser to determine the distance to an object up to 600 yards away. A target plate (sold separately) is required for measuring distances over 150 ft., and uneven, transparent, and mirrored surfaces. Batteries are included for all measurers.

Style A calculates square and cubic feet.

Styles B-F show distance on an illuminated digital display. They add, subtract, and calculate square and cubic feet.

Style B meets IP65 for protection from dust and water.

Style C includes Bluetooth.

Styles E&F have a color touch screen with up to 4X magnification. They also have Bluetooth. Style F displays the width of objects in the distance. It includes a built-in camera and USB cable.

Style G displays distance in the viewfinder.

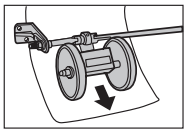
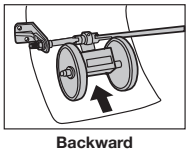
Flat-Material Length Measurers

Single Wheel

Double Wheel



Forward



Backward

Measure sheets, rolls, and strips using these wheels and their attached counters. All counters add, subtract, and have a zero reset. Measurers have a 2½″ Lg. × 2⅜″ Wd. × 6 5/16″ Ht. cast iron bracket with two ⅜″ dia. mounting holes that are 1½″ center-to-center. All wheels have a ⅝″ tread.

Aluminum wheels are for high temperature processes and coarse materials such as sandpaper. The surface is knurled for good contact.

Plastic wheels with polyurethane tread are for textured and abrasive materials, such as burlap and fiberglass fabric. They're also good for jobs with pressure rollers.

Plastic wheels with rubber tread are for smooth materials such as paper and cloth.

Remote Readout Flat-Material Length Measurers

Measurer with Analog Counter

Send sheet, roll, and strip measurements from this measurer to a remote Voltage Actuated Counter (sold separately). Measurer includes a rotary contactor, wheel, and mounting bracket. It operates up to 2,400 ft./min. in forward and backward directions. Overall size is 8 5/16" Lg. x 7 5/16" Wd. x 3 11/16" Ht.

The rotary contactor has a 5/16" dia. shaft and two 12" wire leads for connecting to your counter. Overall size is 3 3/16" Lg. x 2" Wd. x 2" Ht. It has a 12" circumference aluminum wheel with 5/8" wide rubber tread and a 5/16" axle dia. Rotary contactor has a 7 1/4" Lg. x 7 1/4" Wd. x 2 15/16" Ht. mounting bracket that is aluminum and has four 0.221" dia. mounting holes (fasteners not included). Holes are 1 1/2" center-to-center.

Analog counters make 600 counts/minute. They include a reset button and display six digits. Size is 1.2" Ht. x 3.1" Wd. x 2.9" Dp.

Digital counter makes 2,400 counts/minute. It includes a reset button and displays six digits on a battery-powered digital display. Size is 1.8" Ht. x 3.9" Wd. x 3" Dp.

Wire Length Measurers

Feed wire through the wheels inside the counter to take measurements. To build your own wire, cable and cord length measurer, combine a counter, feeder reel, coiler reel and stand.

Complete Wire Length Measurers

Each length measurer includes a counter, feeder reel, coiler reel, and pedestals. The counter adds and subtracts in feet and inches up to 9,999 ft. Wind your wire (1/64"-1/2" OD) around adjustable pins on the feeder reel, or place spooled wire on the 1/2" diameter spindle. Gather the wire on the coiler reel once it has passed through the counter. Coiler reels have a hand crank and collapse for storage. Coiler reel coil ID is 12". It holds up to 500-ft. of 1/2" diameter materials up to 125 lbs.

Urethane-coated wheels are for PTFE-coated wire and fiber-optic cable.

Bench-mount length measurers include three 14" high bench-mount pedestals.

Floor-mount length measurers include a 22" high floor stand and two 14" high pedestals.

	For Use With	*Feeder Reel* Max. Coil OD	Coil ID	Wt. Cap.	With Steel Wheel		With Urethane-Coated Steel Wheel

Counter for Cord and Rope

Bench-Mount Feeder Reels

Feeder reels hold material before it's threaded through a counter. Wind material around adjustable pins on the reel, or place spooled material on the 1/2" diameter spindle. Use with wire, cable, cord, rope and hose.

Max. Coil OD	Coil ID	Coil Weight Capacity		
15"	6 1/2"-10 1/2"	75 lbs.	1686T5	$190.00
24"	6 1/2"-18 1/2"	150 lbs.	1686T65	236.25

Counter for Wire, Cable, and Hose

Bench-Mount Coiler Reels

Coiler reels gather material once it has passed through a counter. These reels have a hand crank and collapse for storage. Use with wire, cable, cord, rope and hose (unless noted).

Coil ID	Coil Weight Capacity	Coil Capacity		
8"	50 lbs.	125' of 1/2" Dia. Materials; 550' of 1/4" Dia. Materials	1686T12	$319.18

15"	200 lbs.	300' of 1" Dia. Materials; 550' of 3/4" Dia. Materials	1686T25	473.86

▲ Not for use with wire.

22" High Floor Stand for Counter

36"-43" High Floor Stand for Counter

Tank-Level Measurers

Tank-Level Rulers

Built to resist corrosion and last in harsh environments, these vertical rulers are iron with a porcelain-enamel finish. Mount them to walls and tanks. Rulers are white with black printed graduations.

Inch—Rulers have six 3/16″ dia. mounting holes.

Long-Length Inch—Rulers connect continuous segments to create a ruler up to 10 ft. long. Rulers have five 3/16″ dia. mounting holes.

Lg.	Measuring Range	Wd.	Thick.		
Inch—Grad. Marks: 1/2″ front right

Water- and Gasoline-Indicating Paste

Use this color-changing paste to determine water or gasoline level in a tank. Apply a thin layer of paste to your tank-level ruler and insert it into the tank. The paste changes color to the level of the liquid.

Water-Indicating Paste (3-oz. Jar)	89775A15	$3.05
Gasoline-Indicating Paste (3-oz. Jar)	89775A17	3.90

55-Gallon Drum-Level Rulers

Measure volume in gallons without calculations. These rulers are varnished to resist gasoline, diesel fuel, and oil. They are made of wood, and are brown with black printed graduations.

Lg.	Wd.	Thick.		
Gallon—Grad. Marks: Gallons front and back				
4 ft.	5/8″	5/8″	1923A53	$4.68

Tank-Level and Depth-Measuring Rope

Attach a plumb bob to the rope's hook and lower it into your tank to take a measurement. Plumb bob not included (see page 2315). Ropes are fiberglass with a vinyl coating that resists abrasion. They are white with black and red printed graduations.

Lg.	Wd.	Thick.		
Inch—Grad. Marks: Inches front and back				
50 ft.	1/4″	1/16″	1931A51	$17.33

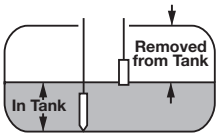
200 ft.	1/4″	1/16″	1931A53	37.98

Liquid-Level Tape Measures

Tape Measure for Measuring Liquid in Tank

Plumb Bob for Measuring Liquid Removed from Tank



Also known as oil-gauging tapes, use these tape measures to check the level of oil and other fluids in deep, large containers such as tanks and vats. All measures have a chrome-plated steel reel.

Liquid in Tank—Tape measures have a cylindrical brass plumb bob that sinks to the bottom of the tank. The blade indicates the distance to the surface of the liquid. The plumb bob is 6 3/4″ Ht. × 1″ Dia., and weighs 20 ounces.

Liquid Removed from Tank—Tape measures have a rectangular brass plumb bob. To find the amount of liquid removed from a tank, lower the plumb bob until it makes contact with the liquid's surface, then add the measurement from the plumb bob to the measurement from the blade. To determine the amount of liquid in the tank, subtract the liquid removed from tank measurement from the overall tank height. The plumb bob is 6 1/4″ Ht. × 3/4″ Wd. × 3/4″ Dp., and weighs 16 ounces.

Chrome-plated steel blades are for measuring dark liquids. Blades are 1/2″ Wd. × 0.014″ Thick. with printed graduations.

Chrome-plated steel blades with black stripe are for measuring dark and clear liquids. The black stripe makes it easy to see the level of clear liquids. Blades are 1/2″ Wd. × 0.014″ Thick. with printed graduations.

Black steel blades are for measuring clear liquids. Blades are 1/2″ Wd. × 0.008″ Thick. with wear-resistant etched markings.

Stainless steel blades are corrosion resistant. Use them in clear and dark liquids. Blades are 1/2″ Wd. × 0.008″ Thick. with wear-resistant etched markings.

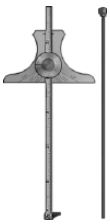
Depth Gauges

Reach deep into small holes and slots for precise depth measurements. Gauges measure 30°, 45°, and 60° angles with a protractor. They are steel. Overall length is 6″. *Gauges with rod* can measure the depth of recesses where the ruler blade won't fit. The rod is 6″ long.

Starrett—Blade has wear-resistant black etched graduation marks at 32nds on the front and 64ths on the back. Graduation marks read from bottom to top and top to bottom. Blade has a hook for alignment. Base is 2 5/8″ wide.



Starrett with Rod

Economy

Economy—Blade has wear-resistant black etched graduation marks at quick-reading 32nds on the front and quick-reading 64ths on the back. Quick-reading graduation marks are labeled with numeric increments that are less than 1″. Graduation marks read from bottom to top. Blade is 2 1/2″ wide.

High-Accuracy Squares

Ensure reliable, repeatable angles. Blades are tool steel.

Starrett squares meet Fed. Spec. GGG-S-656-E, which establishes uniform standards for square accuracy. They come in a wood case.

Economy sets come in a plastic case.

Squares

Also known as try squares, these are square inside and out for checking and marking angles. Blade is stainless steel.

Square with Plastic Handle

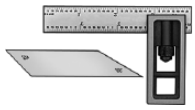
Square with wood handle has wear-resistant black etched graduation marks on both sides of the blade.

Squares with plastic handle measure 45° angles and include a level. They have silver printed graduation marks on both sides of the blade.

Blade Lg.	Handle Material	Handle Lg.	Grad. Marks		
8″	Wood	5 3/8″	8ths and 16ths	8994A64	$15.51
8″	Plastic	5 1/4″	8ths	8994A82	7.71
200 mm	Plastic	5 1/4″	mm	8994A85	7.71

Squares with Adjustable Blade

Measure and mark material exactly where you need to with a sliding blade. The blade has wear-resistant black etched graduation marks at quick-reading 32nds and quick-reading 64ths on the front and at 8ths and 16ths on the back. Quick-reading graduation marks are labeled with numeric increments that are less than 1″. Blade is steel with a corrosion-resistant satin-chrome finish that reduces glare. Handle is cast iron.



30°, 45°, and 90° Angle Square

30°, 45°, and 90° angle squares include a separate beveled blade for measuring 30° and 45° angles.

Blade Lg.	Angle Measured	Handle Lg.		
4″	90°	2 1/2″	8606A54	$39.25

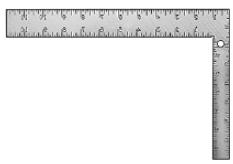
6″	30°, 45°, 90°	2 1/2″	8606A57	50.60

Squares with Graduations on Both Blades



Also known as carpenters' and framing squares, these have graduations on both blades for horizontal and vertical measurements. *Etched* graduation marks are wear resistant. *Steel* blades are lacquer or epoxy coated.

Squares with rafter framing tables are also known as rafter squares.

Squares

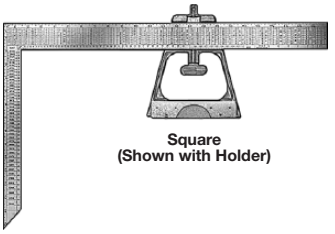
Pipefitters' Squares



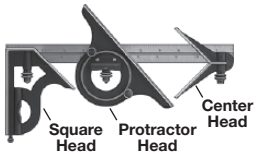
Square
(Shown with Holder)

Pipe fitting sizes and welding charts are shown on this square in wear-resistant black etched markings. Both edges of the blades have graduation marks at 16ths on one side and 12ths on the other side. Square is for pipe sizes of 1 to 24. It also has charts for bolts, 150-lb. and 300-lb. weld neck flanges, 45° weld elbows, diameter of 150-lb. and 300-lb. pipe blinds, OD of 150-lb. and 300-lb. flanges, and weld tees. It is stainless steel and 24″×15⅜″.

Magnetic holder (sold separately) keeps your square in place on a 1″ diameter or larger ferrous pipe. It has two 25-lb. magnets. Holder is aluminum. Overall size is 8¼″ Lg.×2¼″ Wd.×7½″ Ht.

Square	1946A25	$126.00
Magnetic Holder	8990A61	126.67

Starrett High-Accuracy Combination Squares



Replace your try square, miter square, depth gauge, height gauge, center-point finder, and level. The blade on these squares meets Fed. Spec. GGG-R-791H, which establishes uniform standards for accuracy, graduations, and size. Blades are labeled with numeric increments that are less than 1″ for quick reading. They are steel with a satin-chrome finish that is corrosion resistant and reduces glare, unless noted. All have wear-resistant black etched markings. *Hardened-steel* heads are more durable and last longer than cast iron heads.

Square head checks 90° angles. It has a built-in level and a scriber, unless noted.
Center head identifies the center on pipes, rods, and shafts.
Protractor head measures angles from 0° to 180° with graduation marks every 1°.

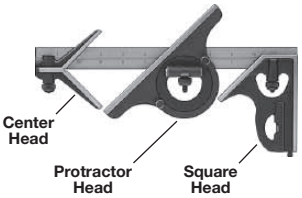
High-Accuracy Combination Squares



Use these squares in place of your try square, miter square, depth gauge, height gauge, center-point finder, and level. Accuracy is ±0.0025″. Blades are labeled with numeric increments that are less than 1″ for quick reading. All are steel with a corrosion-resistant satin-chrome finish that reduces glare and have wear-resistant black etched markings. *Hardened cast iron* heads are more durable and last longer than cast iron heads.

Square head checks 90° angles. It has a built-in level and a scriber.

Center head identifies the center on pipes, rods, and shafts.

Protractor head measures angles from 0° to 180° with graduations every 1°.

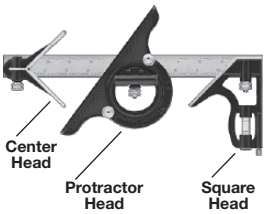
Scratch-Resistant High-Accuracy Combination Squares



A titanium coating protects the blade against scratches and wear. Use these squares to replace your try square, miter square, depth gauge, height gauge, center-point finder, and level. Accuracy is ±0.002″. Blade is steel with wear-resistant black etched graduation marks at quick-reading 32nds and quick-reading 64ths on the front, and at 8ths and 16ths on the back. Quick-reading graduation marks are labeled with numeric increments that are less than 1″. Blade is 12″ long.

Square head checks 90° angles and includes a built-in level and a scriber. It is cast iron.

Center head identifies the center on pipes, rods, and shafts. It is cast iron.

Protractor head measures angles from 0° to 180° and has graduation marks every 1°. It is cast iron.

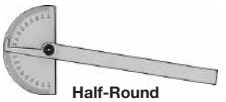
Holding Clamps for Squares

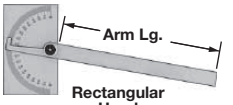
Fix a position on your square for repeat checking and marking. Clamps are brass.

8985A51 ... Pair ... $4.19

Protractors & Pipe Flange Aligners

Protractors





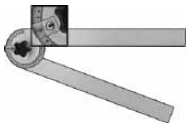
Set bevels and measure angles. Also known as bevel protractors, these have a 6″ long adjustable arm. All have wear-resistant black etched graduations from 0° to 180° in both directions.

Starrett protractors are steel with a corrosion-resistant satin-chrome finish that reduces glare. *Half-round* head is 2″ Ht.×3 1/4″ Wd. *Rectangular* head is 2″ Ht.×3 3/8″ Wd.

Economy protractors are corrosion-resistant stainless steel. Head is 2″ Ht.×3 3/8″ Wd.

Head Shape	Starrett		Economy	
Half Round	2197A12	$80.00	8517A59	$19.34
Rectangular	2197A11	83.01	8517A58	17.99

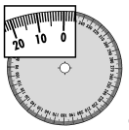
Long-Arm Protractors



Handle big jobs such as sheet metal fabricating and pipe bending with these aluminum long-arm protractors. They measure angles from 0° to 270° with 0.5° black printed graduation marks.

Arm Lg.		
18″	8518A5	$99.00
36″	8518A3	157.95

Adhesive-Back Protractor Dials



360° Counter-clockwise

With an adhesive back, these dials mount on any flat surface. They are polyester-coated plastic for abrasion and chemical resistance. All are white with black printed graduations every 1°. Center hole is 1/4″ dia. Protractors are 1/64″ thick.

Dia.	360° Clockwise	360° Counter-clockwise	180° Clockwise and Counterclockwise

Pipe Flange Aligner Pins

Pins with Horizontal Level

Insert a pair of these nut-and-bolt pins into adjacent flange holes and tighten to align flanges before connecting two pipes. One pin in each pair has a level for vertical alignment. All pins have a threaded connection. They are steel.

Pins require a separate level to align the flange horizontally.

Pins with horizontal level include a level rod that runs between two alignment pins.

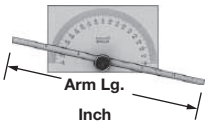
For Flange Hole Dia.	Pins Pair		Pins with Horizontal Level Rod Lg.	Each
1/2″-17/16″	2298A14	$84.21	10″ 2745A241	$103.90
1/2″-115/16″	2298A15	100.96	18″ 2745A242	128.54

Pipe Flange Aligners with Protractor

Line up two pipe flanges and determine pipe angle with the included nut-and-bolt pins, level, and protractor. Flange holes align as you tighten the pins. Nut-and-bolt pins fit any pipe-flange holes spaced 2″ to 5 1/2″ apart. The protractor measures angles from 0° to 90° with graduation marks every 2.5°. Aligner is aluminum.

For Flange Hole Dia.		
3/16″-13/4″	2342A11	$115.63

Protractors with Graduated Arm



Measure angles and dimensions with one tool.

Inch—Protractors have graduations from 0° to 180° in both directions. Also known as bevel protractors, they have an adjustable arm that fits into holes for use as a depth gauge. The head is rectangular (2″ Ht.×3 3/8″ Wd.). **Starrett** protractor is steel with wear-resistant black etched markings. It has a corrosion-resistant stain-chrome finish that reduces glare. **Economy** protractor is corrosion-resistant stainless steel with wear-resistant black etched markings. It has a quick-reading arm labeled with numeric increments that are less than 1″.

Inch/Metric—Protractors have graduations from 0° to 360°. They are plastic with blue printed graduations.

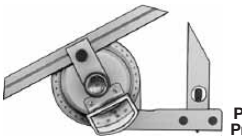
Pocket-Size Protractors

Small enough to fit in your pocket, this versatile tool measures angles and dimensions. It has a center finder, 59° drill point gauge, circle divider, and tap and drill reference table. Also known as a bevel protractor, it has an adjustable arm that is 4 1/2″ Lg.×5/16″ Wd. Protractor measures angles from 0° to 180° with wear-resistant black etched markings every 1°. It has graduation marks at mm, and at 64ths labeled with numeric increments that are less than 1″ for quick-reading. Protractor is corrosion-resistant stainless steel.

2106A11		$11.23

Precision Protractors



Precision Protractor

Precisely measure angles on molds and jigs. Accuracy is ±0.083°. These protractors have angle graduations from 0° to 90° (marked every 1°) in four quadrants and a vernier scale for readings to 5 minutes. Also known as bevel protractors, they have adjustable arms beveled at 45° and 60°. They are stainless steel with a corrosion-resistant satin-chrome finish that reduces glare and have wear-resistant black etched markings. They come with a plastic case and a magnifier.

Precision protractor comes with 6″ and 12″ arms.

Mitutoyo precision protractor comes with a 6″ arm. The 12″ arm is sold separately.

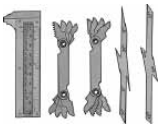
★ Not for use with nuts. ■ Identifier is stainless steel.

Threads per Inch and Center Identifiers

Identify threads per inch on external threads and find the center of your workpiece to line up thread-cutting tools. Use to measure UNC and UNF bolts, threaded rods, and screws. This identifier is steel with a corrosion-resistant satin-chrome finish that reduces glare. Overall size is 2¼″ Lg. × ¾″ Wd. × 3/64″ Thick.

For Threads per Inch		
14, 20, 24, 32	2072A11	$24.00

Thread Identifier Sets



Set includes a caliper, two steel gauges, two steel angle gauges, and an instruction book. Measure external and internal threads on threaded rods, bolts, screws, pipe, and nuts. The set comes in a folding plastic case.

For Thread Type		
UNC, UNF, NPT, BSPT, BSPP	7863K1	$57.04

Acme Thread Identifiers

Identify external Acme threads and use as a guide while grinding and cutting Acme threads to a 29° included angle. Use to measure screws, bolts, and threaded rods with 1 to 10 threads per inch. Identifier is steel. Overall size is 3⅜″ Wd. × 1 5/8″ Ht. × 7/64″ Thick.

8615A69		$22.94

Screw Size Identifiers

Find external thread size, screw size, thread pitch, diameter, or drill bit size. Identifiers are steel, unless noted.

Inch (UNC and UNF)—Use to measure screws, bolts, threaded rods, pins, rivets, and drill bits. Also measures diameters from 0.73″ to 5/16″.

Metric—Use to measure screws, bolts, and threaded rods.

Material	For Thread Size/ Thread Pitch	For Screw Size	Wd.	Ht.	Thick.

Metric	5¼″	3 3/16″	1/64″	98845A660	3.71

All-in-One Identifiers

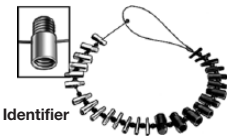
Find tube, pipe, fastener, wire, and drill bit sizes with one tool. Use to measure the size of tubes and tube fittings (copper and CPVC), pipe and pipe fittings (steel, brass, and PVC), screws, bolts, threaded rods, nuts, nails, wire, and drill bits. Identifiers are plastic.

Standard identifier has graduation marks at 16ths of an inch and mm on one side.

Deluxe identifier measures more sizes than standard identifier. It has graduation marks at 32nds of an inch on one side and mm on the other side.

	Wd.	Ht.		
Standard	8 11/16″	4¼″	20165A33	$2.43
Deluxe	10½″	3½″	20165A34	4.93

Thread-It Screw, Bolt, and Nut Size Identifiers



Thread your fastener into holes or onto plugs for quick and accurate size identification. Use to measure internal and external UNC and UNF threads on threaded rods, bolts, nuts, and screws. Identifiers are steel.

Inch—Measure 23 sizes: #6, #8, #10, and ¼″ to 1″.

Inch/Metric—Measure 26 sizes: #6, #8, #10, ¼″ to ½″, and M4 × 0.7 to M12 × 1.75.

Metric—Measure 21 sizes: M3 × 0.5 to M24 × 3.

Wall-Mount Inch/Metric—Mount this identifier to a wall for easy access. It measures 28 sizes: #6, #8, #10, ¼″ to 9/16″, and M4 × 0.7 to M12 × 1.75. Identifier has three 5/16″ mounting holes (fasteners not included). It is 3″ Wd. × 39″ Ht. × ½″ Thick.

Inch	20375A14	$34.90
Inch/Metric	20375A21	36.21
Metric	20375A17	34.90
Wall-Mount Inch/Metric	20375A27	49.00

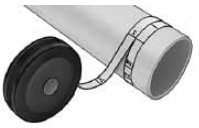
Size Identifiers

Pipe Size Rulers

Measure outer diameter and mark lines around pipe. A pipe size conversion chart is printed on these rulers. They're fiber-reinforced rubber for grease, oil, gasoline, and salt water resistance. Max. temp. is 360° F. Rulers are gray with white graduations at 16ths of an inch and 2 mm.

For Pipe OD	Measuring Lg.	Lg.	Wd.	Thick.		
1″ to 6″/2 mm to 60 cm	28″	30″	2 5/8″	3/64″	8991A71	$11.69
2″ to 16″/2 mm to 78 cm	36″	60″	3 7/8″	3/64″	8991A73	17.54
6″ to 30″/2 mm to 77 cm	36″	120″	5 1/4″	3/64″	8991A75	34.81

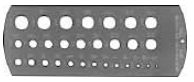
Pipe Size Tape Measures



Wrap this pocket-size tape measure around pipe and fittings to determine size. It measures PVC, galvanized steel, and iron pipe sizes 1/8 to 18, as well as CPVC and copper pipe sizes 1/4 to 12. The blade locks in place and retracts with the push of a button. Rulers are white plastic with red graduations. Blade is 5/16″ Wd. × 1/64″ Thick.

2219A21 ..... $10.72

Drill Bit Size Identifiers



Inch

Measure drill bit sizes with these identifiers. They are steel and have a 1/8″ dia. mounting hole.

Wire gauge 1 to 60 identifier includes a tap size conversion chart.

	Wd.	Ht.	Thick.		
Letter A to Z	2 1/2″	6 1/2″	5/64″	8986A65	$15.94
Inch 1/16″ to 1/2″	2 1/2″	6 1/2″	5/64″	8986A67	15.94

Wire Gauge 61 to 80	1″	3″	5/64″	8986A66	18.64
Metric 1.5 to 12.5 mm	2 1/2″	6 1/2″	5/64″	8986A64	26.75

Drill Bit Point Identifiers

Verify 118° drill point angles after sharpening. The gauge slides along a ruler; has black graduation marks at quick-reading 32nds and quick-reading 64ths on the front, and 8ths and 16ths on the back. Quick-reading graduation marks are labeled with numeric increments that are less than 1″. Ruler has a hook for alignment. It is 6″ Lg. × 3/4″ Wd. Gauge and ruler are steel. Overall size is 6 1/4″ Lg. × 2 5/32″ Wd. × 3/64″ Thick.

8609A51 ..... $64.00

Wire and Sheet Metal Size Identifiers

American Wire Gauge

Read gauge numbers on one side of these identifiers and their decimal equivalents on the other. Identifiers are steel and 3 1/4″ dia.

American wire gauge identifier shows the same markings as Brown & Sharpe gauges. Use it on aluminum, brass, and copper wire.

U.S. steel wire gauge identifier shows the same markings as Washburn & Moen and American Steel and Wire Co. gauges.

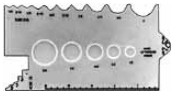
For Gauge Type	For Gauge	For Wire Dia./ Sheet Thick.		
U.S. Standard Iron and Steel Gauge	36 to 0	0.0070″ to 0.3125″	8622A53	$26.36
American Wire Gauge	36 to 0	0.0050″ to 0.3250″	19305A33	26.37
U.S. Steel Wire Gauge	36 to 0	0.0070″ to 0.3125″	19305A34	73.01

Diameter Identifiers

Measure the outside diameter of small round- and hex-shaped objects such as rods, drill bits, bolts, and tubing with this pocket-size tool. It measures diameters from 3/32″ to 1 1/8″ and 4 mm to 26 mm. Identifier has wear-resistant white etched markings at 64ths of an inch and millimeters. It is blue aluminum and 5 1/2″ long. Includes a belt clip.

6821A1 ..... $14.29

Pipe, Tubing, and Hose Size Identifiers



Pipe, Tubing, and Hose

Pipe, Pipe Fittings, and Hose

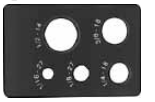
Determine pipe size and inner and outer diameter.

Pipe, Tubing, and Hose—Identifier measures external NPT pipe threads up to 3/4 and tubing OD and hose ID up to 1″. It has a compression fitting chart. Identifier is plastic. Overall size is 9″ Wd. × 3 3/4″ Ht. × 7/64″ Thick.

Pipe, Pipe Fittings, and Hose—Identifier measures external and internal NPT pipe threads up to pipe size 2 and hose ID to 1 1/4″. It is corrosion-resistant stainless steel. Overall size is 3 3/4″ Wd. × 4 1/2″ Ht. × 1/32″ Thick.

Pipe, Tubing, and Hose	1976A22	$4.50
Pipe, Pipe Fittings, and Hose	20195A34	19.91

Pipe Thread Identifiers



Check external NPT thread size and taper. The identifier measures 1/16, 1/8, 1/4, 3/8, and 1/2 pipe size. It is blue aluminum. Overall size is 2″ Wd. × 3″ Ht. × 1/4″ Thick.

1980A1 ..... $17.27

Tap and Drill Reference Rules

One side of this stainless steel rule lists tap and drill sizes for UNF, UNC, metric ISO, and American standard pipe threads. The other side has a decimal equivalent table for 1/64″ to 63/64″ sizes and an easy-to-read 6″ rule graduated in inches to 64ths. Overall size is 7″ Lg. × 1 1/4″ Wd.

2119A21 ..... $6.45

Radius Identifiers

Check convex and concave radii of tools, patterns, and dies with these pocket-size tools. Identifiers are steel.

No. of Identifiers	For Radius	*Folded Size* Lg.	Wd.		
30	1/32″ to 1/4″ (1/64″ increments)	2 3/4″	1/2″	8625A58	$13.66

34	1 to 3 mm (0.25 mm increments); 3 to 7 mm (0.5 mm increments)	2 3/4″	5/8″	8625A78	34.66

Precision Radius Identifiers

Find precise convex and concave radii of tools, patterns, and dies. These identifiers are stainless steel, unless noted. They come in a vinyl pouch.

Certified Starrett identifiers include a NIST calibration certificate stating that they have passed a test for accuracy.

Optional gauge holder is steel. It is 4″ long.

Optional Gauge Holder		2204A6	23.01

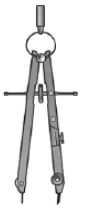
♦ Comes with a gauge holder. ■ Identifier is steel.

Drafting Compasses

Draw or scribe circles and transfer measurements. These compasses have a bow spring to hold the legs in place.

9″ max. circle dia. compass is die cast zinc for rust resistance. It adjusts with a knurled nut and includes a scribe guide for edge marking.

10½″, 14″, and 18″ max. circle dia. compasses are nickel-plated brass. They adjust with a knurled center wheel.



10½″ and 18″

Max. Circle Dia.	Leg Lg.	Marker Type		
9″	4⅛″	Pencil	89675A65	$5.87
10½″	4⅝″	Lead, Scribing Point	1210T4	29.12
14″	4⅝″	Lead	1210T6	41.62
18″	4⅝″	Lead	1210T1	41.62
Replacement Lead (Pkg. of 4)			1210T82	3.37

Scribing Compasses

Ensure accuracy when marking and measuring. Also known as dividers, these compasses have a strong, flexible bow spring that holds the legs in place and a screw with a knurled nut for adjustments. They include a scribing point. Compasses are steel, unless noted.

Max. Circle Dia.	Leg Lg.		
Starrett

▲Compass is nickel-plated brass.

Large-Circle Scribing Compasses

A wing joint opens wide for marking and transferring large circles, arcs, and measurements. Also known as dividers, these compasses ensure accuracy when marking and measuring. They have a spring that holds the legs in place and a knurled nut for adjustments. Compasses have a scribing point. They are steel.

Max. Circle Dia.	Leg Lg.		
15⅞″	6″	2022A1	$42.91
22½″	8″	2022A3	44.18
24″	10″	2022A4	47.20
29⅝″	12″	2022A5	47.35

Edge Scribing Compasses

Mark and transfer distances from the outer edge of an object. An offset divider leg with adjustable point sits on the surface of an object while the outside-caliper style leg reaches around the edge. The compass is steel and comes with a scribing point.

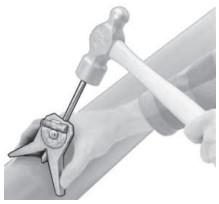
Max. Circle Dia.	Leg Lg.		
10⅝″	6″	1963A36	$59.01

Center-Locating Punches for Curved Surfaces

Locate and mark the centerline on rods, tubes, and pipes, lay out keyways, and establish angles for connections. Locators measure angles from 0° to 90° with graduation marks every 2.5°. They include an adjustable dial protractor and a level. Body is aluminum and punch is steel.

Manual locator is for use with a hammer. Gently strike the rod to mark the center.

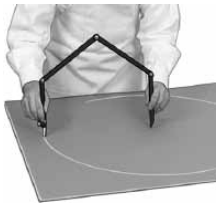
Spring-loaded locator marks the center with the pull of a trigger.



Punch Operation	For Min. Pipe OD		
Manual	½″	2195A1	$84.73
Spring Loaded	1″	2195A2	125.10
Replacement Dial and Level Assembly		2195A11	34.82

Large-Diameter Compasses

Compasses have spring-tension joints that stay rigid to draw large circles up to 100″ diameter. They fold for easy storage. Compasses are aluminum. Include a soapstone crayon.



Max. Circle Dia.	Leg Lg.		
22″	6″	8989A69	$23.30
50″	14½″	8989A71	40.69
100″	26″	8989A73	65.39

Wide Range Tape Measure Compasses

Extend the locking blade to draw circles up to 144″ diameter. The compass has a 3½″ to 72″ radius range. It has graduation marks at 32nds of an inch on the top and millimeters on the bottom. Compass is steel, pin is steel, and marker is lead.

2127A12 ..... $32.78

Expandable Beam Compasses

Draw circles up to 48″ or add extension beams to create even larger circles. A coupling is required for each extension beam. The compass includes two 13″ long beams, one beam coupling, scribing points, a ruling pen, lead tips, and a plastic case. It is aluminum.

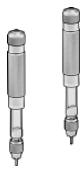
Beam Compass	89645A65	$34.62
Beam Coupling	89645A66	6.70
13″ Extension Beam	89645A67	10.24
26″ Extension Beam	89645A68	21.51

Starrett Expandable Beam Compasses

Transfer measurements and draw large, precise circles. These compasses have expandable point-holding clamps, also known as trammels, that securely grip the flat top of the beam. Adjust the scribing points with the knurled grip on the clamps. One clamp has a screw for making fine adjustments to ensure accuracy when marking and measuring. The scribing points can be replaced with the included caliper legs. These compasses are chrome-plated steel.

Max. Circle Dia.	Beam Lg.	Starrett No.		
18″	10½″	C251A	2124A11	$174.00
26″	14½″	C251B	2124A12	198.00
36″	20″	C251C	2124A13	202.00

Compass Point-Holding Clamps



Ruler Clamps

Beam Clamps

Pipe Clamps

Clamp onto a beam, ruler, or pipe to create a compass of any size. These clamps are also known as trammels.

Ruler clamps fit rulers from ½″ to 1⅛″ thick. They include two lead point markers and two steel scribing point markers. Clamp is aluminum.

Beam clamps fit beams from ⅝″ to 1½″ thick. They include two 6″ long steel scribing points. The points may be replaced with a pen or soapstone crayon markers. Clamp is painted steel.

Pipe clamps fit pipe sizes of ½ that are at least 3½″ long. They include a hex key, one movable head with a marking tool holder, one stationary head with a hardened-steel center point, a soapstone crayon, and a steel scribe. Clamp is aluminum.

Ruler Clamps	19355A52	$17.68
Beam Clamps	2023A24	36.95
Pipe Clamps	1920A42	51.13

Straightedges

Beveled Edge

Square Edge

Use these highly accurate straightedges as a guide to scribe and cut straight lines and to check surface straightness. Accuracy is the straightness tolerance over the entire length of the straightedge.

Stainless steel is corrosion resistant.

Aluminum is lightweight.

Angle Transfers

Duplicate or transfer any angle. Adjust the blades to an angle and tighten the nut to lock them in place. These transfers are also known as bevel squares and sliding bevels. Blade is stainless steel. It is 10″ Lg. × 1 1/8″ Wd. Handle is wood and 5 1/2″ long.

2020A2 ..... $10.15

Ice Picks

Wood Handle with Metal Cap

Plastic Handle

Chip ice, start holes in thin metal and wood, and punch holes in leather, plastic, and other soft materials. Use the wood handle pick with metal cap to break ice.

Handle Material	Blade Material	Blade Lg.	O'all Lg.		
Wood	Steel	4 1/2″	8 3/4″	3603A1	$4.03

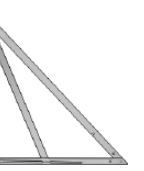
Folding Triangle Straightedges



Unfold and lock the corners to form a triangle for marking angles. Straightedges are aluminum.

Straightedge with etched graduation marks has wear-resistant markings at 16ths of an inch and measures 45° and 90° angles. It is 1 1/2″ Wd. × 9/16″ Thick. Unfolded size is 16″ × 16″ × 22 5/8″.

Straightedge without graduation marks measures 90° angles. It is 2″ Wd. × 3/8″ Thick. Unfolded size is 36″ × 48″ × 60″.

With Etched Grad. Marks	2200A2	$42.23
Without Grad. Marks	2200A1	68.87

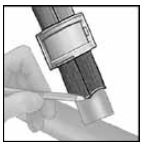
Contour Transfers

Transfer contours, patterns, and shapes for applications such as fitting floor tile and installing pipe insulation. A series of narrow probes slide within a frame to duplicate any shape.

For Contour Lg.	Wd.	Probe Material	Lg.		
5 1/4″	2″	Stainless Steel	6″	2181A12	$8.31
10″	1 1/4″	Plastic	11 1/8″	19065A32	20.58

Pipe Contour Transfers

1. Push down on the pipe.



2. Slide up and mark.

Probes take the shape of a pipe joint so you can transfer the exact outline to the pipe before you cut. The probes are stainless steel.

For Pipe Size	For Pipe OD		
1	1 5/16″	7317A71	$46.31
1 1/4	1 5/8″	7317A72	52.77

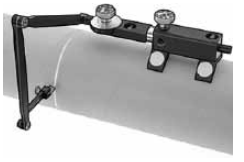
2	2 3/8″	7317A74	61.38
2 1/2	2 7/8″	7317A75	118.46

Pipe Contour Transfer Markers



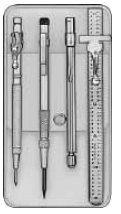
Lay out pipe and structural steel for any type or size of pipe fitting—elbows, tees, and wyes of all angles. These transfer markers measure angles from 0° to 90° with graduation marks every 2.5°. They are lightweight, anodized aluminum.

Transfer marker for 1 1/2″ to 18″ pipe OD includes calibrated protractor dials, a soapstone crayon marker with holder, level, magnetic base, and triple-jointed marking arm.

Transfer marker for 8″ to 48″ pipe OD includes a built-in bubble level, calibrated protractor dials, a soapstone crayon marker with holder, magnetic base, and triple-jointed marking arm.

For Pipe OD		
1 1/2″ to 18″	7981A1	$186.28
8″ to 48″	7981A3	268.16

Scriber, Punch, Magnet, and Ruler Sets



Use this four-piece set for scribing alloy steel, ceramic, glass, stainless steel, steel, and tool steel. The set comes in a vinyl pouch and includes a scriber, center punch, magnet, and ruler.

Scriber is 5 5/16″ long with a retractable carbide tip that stays inside the handle for protection when it's not in use. A knurled grip on the handle ensures a secure hold. Body is aluminum.

Center punch is 5 3/4″ long with a 1/8″ dia. steel point and aluminum handle.

Magnet adjusts from 5 1/2″ to 23 1/2″ long to retrieve ferrous particles from hard-to-reach places. It has a nickel-plated steel handle.

Ruler is 6″ long with graduation marks at 32nds and 64ths of an inch on the front. It is stainless steel.

3458A11 ..... $28.53

Scribers

For Steel and Plastics—Use the steel tip on these scribers to mark steel and plastics, or as a pick for cleaning and probing.

For Hardened Steel and Stainless Steel—A carbide tip marks hard materials such as hardened steel, stainless steel, and ceramics. It also lasts longer than steel tips on steel and plastics.

Long-Life for All Materials—Mark almost any surface including the hardest tool steel and glass. The diamond tip on these scribers lasts longer than carbide tips on hard materials.

For Steel and Plastics

90° Hook and Straight Steel-Tipped Scriber—A knurled grip ensures a secure hold. Body is aluminum. Overall length is 8″.

6808A12 ..... $3.86

90° Hook and Straight Steel-Tipped Scriber—A knurled grip ensures a secure hold. Body is aluminum. Overall length is 8⅝″.

Scriber	6808A11	$6.06
Repl. Steel Tip	6808A31	3.84

Scraper and Straight Steel-Tipped Scriber—A knurled grip ensures a secure hold. Body is steel. Overall length is 6½″.

19375A11 ..... $4.28

Hook and Straight Steel-Tipped Scriber—A knurled grip ensures a secure hold. Body is aluminum. Overall length is 8″.

6808A13 ..... $4.00

Compact Retractable Steel-Tipped Scriber—The tip stays inside the handle for protection when it's not in use, and the knurled grip ensures a secure hold. Body is aluminum. Overall length is 3¾″.

Scriber	6808A14	$4.24
Repl. Steel Tip	6808A32	.71

For Hardened Steel and Stainless Steel

Carbide-Tipped Scribers—A knurled grip ensures a secure hold on these scribers. They have a pocket clip. Body is aluminum. Overall length is 5½″.

Scriber with magnet has a magnetic tip on one end for retrieving ferrous particles from hard-to-reach places.

Scriber	2157A11	$6.74
Scriber with Magnet	2157A12	8.68
Repl. Carbide Tip	2157A14	3.86

Retractable Carbide-Tipped Scriber—The tip stays inside the handle for protection when it's not in use. Scriber has a knurled grip that ensures a secure hold. It has a pocket clip. Body is aluminum. Overall length is 6½″.

Scriber	1981A51	$26.81
Repl. Carbide Tip	1981A81	12.28

90° Hook and Straight Carbide-Tipped Scriber—Hex body shape prevents the scriber from rolling. Body is aluminum. Overall length is 8″.

68085A65 ..... $19.65

Compact Retractable Carbide-Tipped Scriber—The tip stays inside the handle for protection when it's not in use, and the knurled grip ensures a secure hold. Body is aluminum. Overall length is 3¾″.

Scriber	6808A15	$7.90
Repl. Carbide Tip	2157A14	3.86

Long-Life for All Materials

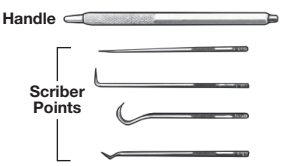
Retractable Diamond-Tipped Scriber—The tip stays inside the handle for protection when it's not in use. Includes a pocket clip. Body is black-coated brass. Overall length is 5¼″.

Scriber	1984A16	$22.08
Repl. Diamond Tip	1984A17	9.93

Diamond-Tipped Scriber—Body is plastic. Overall length is 5⅜″.

2018A51 ..... $19.21

Set for Steel and Plastics



These sets include a handle with four interchangeable steel points: 90° hook, double angle hook, hook, and straight. The handle has a knurled grip for a secure hold and a hex-shaped body that prevents rolling. Body is aluminum. Overall length is 7½″. Comes in a vinyl pouch.

Scriber with magnet has a magnetic tip on the handle to retrieve ferrous particles from hard-to-reach places.

Scriber	68095A69	$7.54
Scriber with Magnet	68095A68	8.88

Straight Line Scribers

Also known as a marking gauge, this scriber draws precise, straight lines without the need for a straightedge or ruler. Lock the sliding head in place at the desired length and use it as a guide as you drag the scriber along the edge of your work surface. Scriber has graduations marked at 16ths of an inch for measurements up to 5″. Use it on alloy steel, plastic, and stainless steel. The body is nickel-plated steel, and the tip is steel. Overall length is 6″.

Scriber	2011A1	$17.12
Replacement Steel Tip	2011A22	.86

Marking Fluid Removers

Remove marking fluid and paste. *Aerosol* also cleans surfaces in preparation for fluid application.

16-oz. Aerosol Can (Net 12 oz.)	19215A21	$11.27
1-qt. Can	19215A79	11.47
1-gal. Can	19215A18	31.74
Optional Empty Brush-Top Bottle (Holds 5 oz.)	19215A251	14.10

Marking Fluids

Stain metal items such as bearings, springs, nuts, and other components. These fluids repel oil, adhere without flaking and scaling, and won't interfere with part performance.

Opaque fluids conceal the color of the part.

Transparent fluids allow the color of the part to show through and are thinner and dry faster than opaque fluids.

	Choose a Color		
Opaque			
8-oz. Brush-Top Can	Dark Blue, Red, White, Yellow	2131A68	$13.00

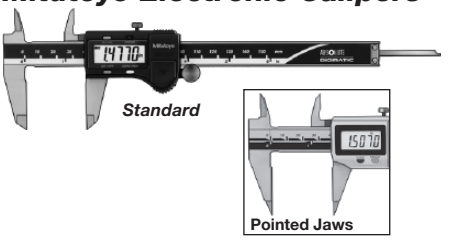
16-oz. Can (Net 12 oz.)	Blue, Red	2131A64	11.96
1-qt. Bottle	Blue, Red	2131A65	17.71
1-gal. Bottle	Black, Dark Blue	2131A2	78.89

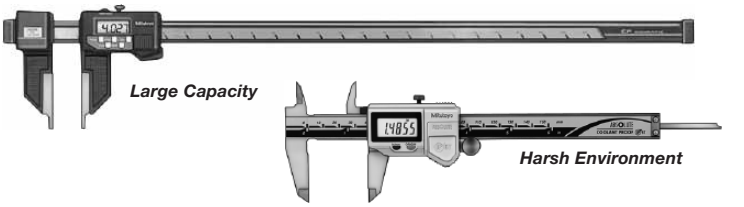
High Spot Blue Marking Paste

Identify high spots, interference points, and improper fit on bearings, gears, and valves. Apply this opaque blue paste, also known as engineers' blue, to parts or components and assemble them into working position. Any improper fit will show up as a blue streak. It comes in a 0.55-oz. tube. Remove paste with marking fluid remover (sold separately above).

6165K11 ..... $6.73

Mitutoyo Electronic Calipers





An LCD gives you a clear view of your measurements. Calipers take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. They are made of stainless steel. All have zero-position memory, also known as absolute (ABS) positioning. Batteries (where required) are included. A case is also included.

Standard Calipers with Pointed Jaws and SPC Data Output— Measure small holes and grooves.

Large-Capacity Calipers— A deep jaw makes measuring large and hard-to-reach material easier, and a carbon fiber beam makes these lighter to use than other large-capacity calipers. Minimum inside measuring length is ½″ for 24″ caliper and 1″ for 40″ and 60″ calipers.

Harsh Environment Calipers— IP67 rated for dust and temporary water submersion.

Accessories— *Depth base attachments* secure the caliper on a base for easier depth measurements. *Display freeze adapter* keeps a measurement displayed even if the jaw is repositioned. *SPC data output cables* connect calipers with SPC data output to a Mitutoyo miniprocessor (sold separately on page 2287) or to your PC also using an input tool (sold separately on page 2288).

Certificates of calibration are traceable to NIST.

Starrett Electronic Calipers

Your precision measurements stand out on the LCD. Calipers take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. All are stainless steel and have zero-position memory, also known as absolute (ABS) positioning. A case and batteries are included.

Standard Calipers— 21335A124 only takes inside and outside measurements and does not have top jaws. Instead, it has notches on the bottom jaws to take inside measurements.

Harsh Environment Calipers— IP67 rated for dust and temporary water submersion. They have SPC data output and can be connected to a PC using an SPC data output cable (sold separately below) .

Depth base attachment secures caliper on a base for easier depth measurements. ***Certificates of calibration*** are traceable to NIST.

Brown & Sharpe Electronic Calipers

Easy to use and easy to read—these calipers have an LCD and take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments. Accuracy is ±0.001″ and ±0.025 mm. All are made of stainless steel and have zero-position memory, also known as absolute (ABS) positioning. A case and battery are included.

Harsh Environment Calipers— IP67 rated for dust and temporary water submersion. They have SPC data output and can be connected to a PC using an SPC data output cable (sold separately below).

Depth base attachment secures caliper on a base for easier depth measurements. ***Certificates of calibration*** are traceable to NIST.

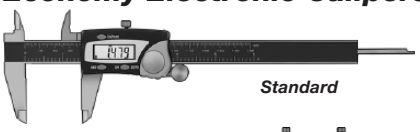
Caliper Tip Assortment

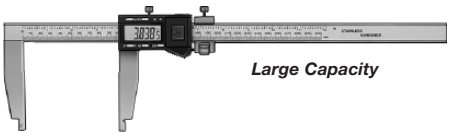
Attach these tips to your 4″, 6″, or 8″ electronic, dial, or vernier caliper for the added versatility of measuring slots, inside pockets, shoulders, and holes. All are made of stainless steel. Assortment contains two tip bodies, four pairs of tips (flat, conical, stem, and ball end), set screws, hex key wrench, instructions, and case.

20095A31 ..... $42.40

Economy Electronic Calipers



Standard



Large Capacity

Take accurate measurements at a fraction of the price of other electronic calipers. Calipers have an LCD and take inside, outside, and depth measurements in 0.0005″ and 0.01 mm increments, unless noted. All are made of stainless steel, unless otherwise stated. Include a case and two batteries.

Fraction and ***Plastic Fraction Calipers—*** Also display 1/64″ increments.

Water-Resistant Caliper— IP54 rated for dust and splashing water.

Large-Capacity Calipers— A deep jaw makes measuring large and hard-to-reach materials easier.

Caliper Range Extenders

Expand your 6″ electronic, dial, or vernier caliper to measure larger items. Extenders are aluminum and come with a 6″ calibration rod. They have two pins that project ½″ when installed and act as jaws for the extension (longer pins sold separately).

If you need to drill holes in the item you are measuring, use ***centerline gauge pins*** (sold separately) to determine the center-to-center distance between holes. They are 0.620″ dia. and taper to a sharp point. Include an end block, set screw, and instructions.

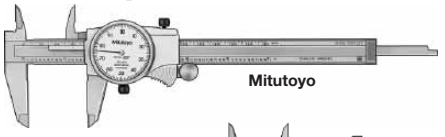
Length		
26″	85635A11	$174.91
36″	85635A12	243.73
51″	85635A13	275.53
71″	85635A17	345.47
91″	85635A18	483.52
1½″ Projection Length Pins (Set of 2)	85635A16	31.79
Centerline Gauge Pins (Set of 2)	85635A2	57.62

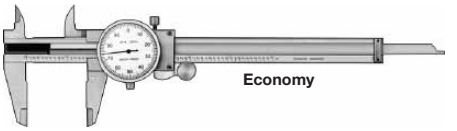
Centerline Gauges for Calipers

Measure the center-to-center distance between two holes. Gauges attach to the jaws of your electronic, dial, or vernier caliper. They have a 60° cone shape and fit snugly into the holes. Include two stainless steel gauges, set screws, and a hex key wrench.

Fits Caliper Sizes	Slot Width	Dia.	Lg.		
4″, 6″, 8″	0.127″	0.375″	2 5/16″	20415A51	$22.78
12″	0.144″	0.500″	2¾″	20415A52	49.22

Dial Calipers





A dial lets you check your measurements at a glance. Calipers take inside, outside, depth, and step measurements. All have dials with built-in backlash control to prevent the needle from deviating. Inch calipers have a white dial face; metric calipers have a yellow dial face (unless noted). Made of stainless steel and include a case, unless otherwise stated.

Mitutoyo Calipers— Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Accuracy is ±0.001″ for 6″, ±0.002″ for 8″ and 12″, and ±0.03 mm for 150 mm and 200 mm.

Starrett Calipers— Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Accuracy is ±0.001″ for 6″, ±0.0015″ for 9″ and 12″, and ±0.03 mm for 150 mm. 8586A13 *and A18* require a *depth rod* (sold separately) to take depth measurements.

Brown & Sharpe Calipers— Measure in 0.001″ increments. Accuracy is ±0.001″. *Optional mahogany case* (sold separately) holds a caliper and one depth base attachment.

Economy Calipers— Inch calipers measure in 0.001″ increments; 2289A76 *and A78* also measure in 0.02 mm increments. Metric caliper measures in 0.02 mm increments. *Fraction caliper* measures in 1/64″ and 0.01″ increments and has a blue and white dial face.

Accuracy is ±0.001″ for 4″, 6″ and 8″, ±0.002″ for 12″, and ±0.03 mm for 150 mm.

Depth base attachments secure caliper on a base for easier depth measurements. ***Certificates of calibration*** are traceable to NIST.

Plastic Dial Calipers

Lightweight yet durable. Calipers take inside, outside, depth, and step measurements.

Fraction caliper measures in 0.01″ and 1/64″ increments. Color is black with a green and white dial face.

Metric caliper measures in 0.1 mm increments. Color is black with a white dial face.

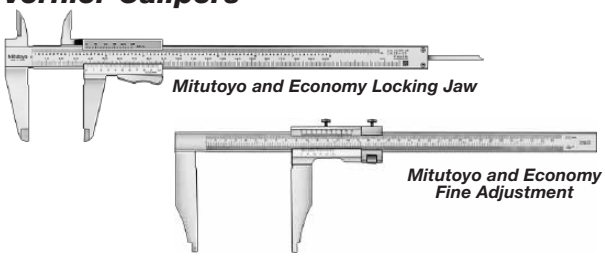
Type	Range	Range per Dial Rev.	Jaw Dp.	Accuracy		
Fraction	0-6″	1.000″	1½″	±0.001″	8588A13	$28.54
Metric	0-150 mm	10 mm	1½″	±0.0254 mm	8588A11	29.89

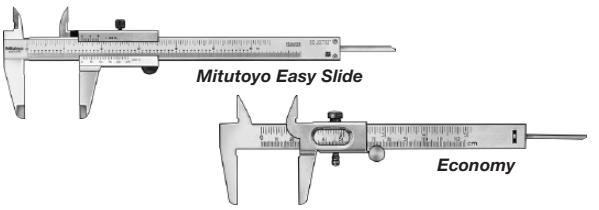
Holster for Dial Calipers

Keep your caliper protected and within reach. Holster is leather and includes a belt loop. Fits 6″ and 150 mm dial calipers.

3278A41 ..... $18.27

Vernier Calipers





Graduations on the sliding vernier scale coupled with graduations on the main scale allow you to take precise inside, outside, and depth measurements. Calipers are graduated in 0.001″ and 0.02 mm increments. Made of stainless steel, except 2192A21 is steel.

Locking-jaw calipers move only when the thumb lock is depressed.

Easy-slide calipers have a slider knob to move the jaws.

Fine-adjustment calipers have an additional screw for finer adjustments. *Mitutoyo fine-adjustment calipers* have bottom jaws only; *economy fine-adjustment calipers* have top and bottom jaws.

♣Graduated in 1/128″ and 0.001″ increments. ●Only takes inside and outside measurements. ★ Graduated in 1/16″ and 0.1 mm increments.

Slide Calipers

Move the jaw along the scale to take inside and outside measurements. Made of stainless steel.

Starrett Caliper—Has a thumb grip to open and close the jaw and a stop to prevent slide detachment. Scale is graduated in 1/32″ and 1/64″ increments on the front and 1/32″ on the back.

Economy Calipers—2287A17 is graduated in 1/32″ and 1 mm increments; 2287A21 is graduated in 1/32″ increments; 2287A22 is graduated in 1/16″ and 1 mm increments.

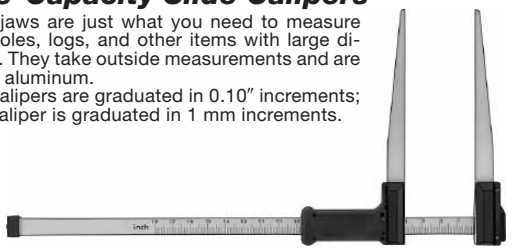
Large-Capacity Slide Calipers

Deep jaws are just what you need to measure pipes, poles, logs, and other items with large diameters. They take outside measurements and are made of aluminum.

Inch calipers are graduated in 0.10″ increments; metric caliper is graduated in 1 mm increments.



Outside Range	Jaw Dp.	Accuracy	O'all Lg.		
0-18″	11½″	±0.10″	28″	**19185A21**	$160.36

Caliper Calibration Masters

Check your caliper's inside and outside measurements. Calibration masters work with electronic, dial, and vernier calipers. They are made of steel and come with a certificate of calibration traceable to NIST. A case is included.

Inch master is graduated in 1″ increments; metric master is graduated in 25 mm increments.

Inside Range	Outside Range	Accuracy		
½″-4½″	1″-6″	±0.0002″	**2415A33**	$629.45

Mitutoyo SPC Miniprocessor

Process data from your Mitutoyo electronic tool with SPC data output—just connect it to this compact unit with a Mitutoyo data output cable (sold separately on page 2288).

Miniprocessor performs the following functions and prints results: Maximum and minimum values; range (R); mean ($\bar{x}$); standard deviations (σn and σn-1); number and percentage defective (±NG, P); process capability index (Cp and Cpk); histograms; displacement charts; and Go/No-Go discrimination via green and red LEDs.

In print mode, the miniprocessor will print up to 100,000 measurements; in statistical calculation mode, it'll perform and print statistical calculations on up to 9,999 measurements. Operates with included AC adapter or on four AA alkaline or rechargeable batteries (sold separately). Comes with a 157-ft. roll of printer paper. Size is 7.9″ Lg.×3.7″ Wd.×2.9″ Ht.

		Each
SPC Miniprocessor (DP-1VR)	**20815A85**	$506.00
Replacement Printer Paper (157-ft. Roll)	**20815A88**	15.20

Mitutoyo Electronic Micrometers

An LCD allows quick and clear measurement readings. Micrometers measure in 0.00005″ and 0.001 mm increments. They have a cast iron frame with carbide spindle and anvil faces. Spindle and anvil are 0.250″ dia. A case and battery are included.

Standard Micrometers— Accuracy is ±0.0001″ and ±0.0025 mm.

Harsh Environment Micrometers— IP65 rated for dust and spraying water. Accuracy is ±0.00005″ and ±0.001 mm. They have zero-position memory, also known as absolute (ABS) positioning. *Micrometers with SPC data output* can be connected to a Mitutoyo miniprocessor using a data output cable (sold separately below) or to your PC using a data output cable and an input tool (sold separately on this page).

Certificates of calibration are traceable to NIST.

Economy Micrometers

Electronic Micrometers— Measure in 0.00005″ and 0.001 mm increments. Spindle and anvil faces are carbide and 0.250″ dia. A case and battery are included.

Standard micrometer has a steel frame.

Harsh environment micrometers are IP54 rated for dust and splashing water. Frame is hardened brushed steel.

Nonelectronic Micrometers— Thimble is graduated in 0.0001″ increments. They have a steel frame with carbide spindle and anvil faces. Spindle and anvil are 0.250″ dia. A case is included.

Nonelectronic Sets— Case is included. *3-piece set* contains one each of 0-3″ range micrometers with a round frame; *6-piece set* contains one each of all the nonelectronic micrometers.

Mitutoyo Data Input Tools

Transmit data from your Mitutoyo electronic tool with SPC data output to your PC. A data output cable (sold separately on this page) is required to connect your Mitutoyo measuring tool to the input tool.

Data input tools with PS/2 or ***USB connector*** allow you to import data into spreadsheet programs such as Microsoft Excel.

Data input tool with RS-232C connector lets you import data into SPC software such as MeasurLink. Has a D-subminiature 9-pin female connector for PCs with RS-232C interface.

Data Input Tool with PS/2 Connector	1825A11	$138.00
Data Input Tool with USB Connector	1825A14	197.00
Data Input Tool with RS-232C Connector	1825A12	278.00

Mitutoyo and Starrett Data Output Cables

Mitutoyo— Cables connect Mitutoyo electronic tools with SPC data output to Mitutoyo SPC data output miniprocessors and Pocket PCs.

Starrett Micrometers

Micrometers have a steel frame with carbide spindle and anvil faces. A case is included, except for Starrett No. T232XRL.

Series 436 Micrometers— Spindle and anvil are 0.250″ dia.

Also Available: Starrett No. T436XRL micrometers with ranges up to 12″. Frame is cast iron. Spindle and anvil are 0.300″ dia. They do not include case. To order, please ask for 2044A8 and specify range: 6-7″, 7-8″, 8-9″, 9-10″, 10-11″, or 11-12″.

Series 232 and 230 Micrometers— Spindle and anvil are 0.235″ dia., except Starrett No. T232XRL, which is 0.200″ dia. All 1″ micrometers also have decimal equivalents on the frame.

Micrometer Sets— Include Series 436 micrometers with ratchet thimble and a case.

Certificates of calibration are traceable to NIST.

Holster for Micrometers

Keep your micrometer protected and close at hand. Holster is leather and has a belt loop. Fits 1″ and 25 mm micrometers.

21145A21 ..... $16.31

Micrometer Stand

Put your micrometer in a stand to make inspection easier. Position and angle are adjustable. Clamp holds a micrometer up to 3/4″ thick and has a rubber face to prevent marring. Made of cast iron with a rubber bottom to prevent movement.

2312A16 ..... $27.53

Brown & Sharpe Micrometers

Two thimble styles in one tool—reversible thimble sleeves let you convert these micrometers from plain thimble to friction thimble. Frame is chrome and has decimal equivalents. Spindle and anvil have carbide faces and are 0.250″ dia.

Brown & Sharpe No. 599-1-31 also has slanted graduations that remain visible through a complete revolution of the thimble.

Range	Graduations	Throat Dp.	Accuracy	Brown & Sharpe No.

Starrett Calibration Rods

Also known as calibration standards, these rods let you check and set the calibration of micrometers and other measuring tools. They include insulated plastic handles to minimize heat expansion. All are Starrett Series 234.

Also Available: Calibration rods with a certificate of calibration traceable to NIST. Please ask for 8570A26 and specify length.

Mitutoyo Micrometers

Series 101

Series 103 with Friction Thimble

Quickly get easy-to-read measurements. Spindle and anvil have carbide faces and are 0.250″ dia. A case is included.

Series 101 micrometers have a steel frame. Certificate of calibration is traceable to NIST. ***Series 103 micrometers*** have a cast iron frame.

Micrometer Sets— Contain Series 103 micrometers with ratchet thimble, except 0-1″ and 1″-2″ sizes have a friction thimble. A case is included.

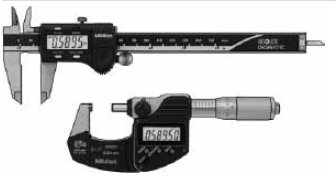
Precision Measuring Tool Sets

Electronic Tool Sets



Mitutoyo Tool Set

Sets include a caliper, a micrometer, batteries, and a case. All have zero-position memory, also known as absolute (ABS) positioning.

Caliper takes inside, outside, and depth measurements. Range is 0-6″ and 0-150 mm. Measures in 0.0005″ and 0.01 mm increments.

Micrometer has a range of 0-1″ and 0-25 mm. Measures in 0.00005″ and 0.001 mm increments.

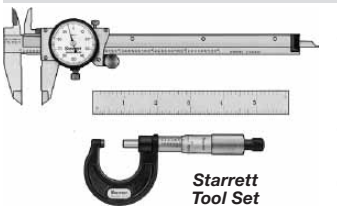
Nonelectronic Tool Sets



Starrett Tool Set

Sets include a dial caliper, a micrometer, a 6″ long rule, and a case.

Dial caliper takes inside, outside, and depth measurements. Range is 0-6″. Dial is graduated in 0.001″ increments.

Micrometer has a range of 0-1″. It has a friction thimble graduated in 0.0001″ increments, except Starrett has a ratchet thimble.

	Rule Graduations, Inch	Mfr. No.

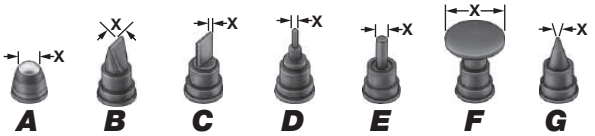
Tips for Micrometers



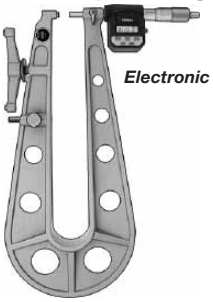
Turn your micrometer into a specialty micrometer capable of measuring slots, grooves, holes, angles, cylindrical walls, and other surfaces. Each tip comes with a 0.28″ long rubber holding device that fits 0.235″ and 0.250″ spindle and anvil diameters.

Style A ball (inch) tip also fits 0.270″ spindle and anvil diameter; *Style A ball (metric)* tip also fits 0.270″ and 6 to 7 mm spindle and anvil diameter. Both include two balls.

		Tip Size (X)	Lg.		
A	Ball (Inch)	0.200″ Dia.	0.20″	**2313A11**	$4.13
A	Ball (Metric)	5 mm Dia.	0.20″	**2313A12**	5.56
B	Knife	30°	0.50″	**2313A13**	15.91
C	Blade	0.030″ Thick	0.50″	**2313A17**	15.91
D	Spline	0.050″ Dia.	0.50″	**2313A14**	15.91
E	Spline	0.100″ Dia.	0.50″	**2313A18**	15.91
F	Disc	0.500″ Dia.	0.50″	**2313A15**	16.74
G	Cone	30°	0.50″	**2313A16**	15.91

8-Piece Tip Kit— Includes the following tips listed above and a case: two of Style A ball (inch) tip and one each of Styles B-G.
2313A21 ..... $52.09

Mitutoyo Long-Reach Micrometers



Electronic

Nonelectronic

An extra-deep throat gives you a longer reach for measuring sheet metal and other large items. Micrometers have a ratchet thimble and cast iron frame with carbide spindle and anvil faces. All include a case.

Micrometers with a 13″ throat depth have a 0.31″ dia. spindle and anvil. Micrometers with a 6″ throat depth have a 0.25″ dia. spindle and anvil.

Electronic Micrometers— Have an easy-to-read LCD and zero-position memory, also known as absolute (ABS) positioning. Battery is included.

They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2287) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2288).

Harsh environment micrometer is IP65 rated for dust and direct water splash.

Mitutoyo and Starrett Wide-Range Micrometers

Change out the anvil to increase the micrometer's range. All micrometers have a ratchet thimble and a cast iron frame. A case, measuring rod, and wrench are included.

Mitutoyo Electronic Harsh Environment Micrometers— Have an LCD and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2287) using an SPC data output cable and an input tool (sold separately on page 2288). Spindle and anvil have carbide faces and are 0.250″ dia. A battery is included. All are IP65 rated to protect from dust and direct water splash.

0-6″ micrometer measures in 0.00005″ and 0.001 mm increments; *6″-12″* micrometer in 0.0001″ and 0.001 mm increments.

Starrett Nonelectronic Micrometers— Graduated in 0.001″ and 0.03 mm increments. Spindle and anvil have steel faces and are 0.300″ dia.

Micrometer Check Gauge

Check for out-of-parallel anvils and determine other wear on your 1″ micrometer. Gauge is steel and has nine steps that measure from 0.140″ to 0.964″. Sizes correspond to a 45° turn of a micrometer's lead screw. Each step is accurate to ±0.0001″. Overall length is 2 13/16″. A case and certificate of calibration traceable to NIST are included.

8564A12 ..... $317.45

Mitutoyo and Starrett Micrometer Heads

Use these micrometer heads with special equipment, such as jigs/fixtures, machine tools, and equipment with movable tables, where precise movement and adjustments are required. Heads are held in place by the cylindrical mounting hub using your existing brackets or fixtures. Spindle length listed is the maximum extended distance when micrometer is set at zero. *Nonrotating* spindles are ideal for delicate and high-accuracy applications.

Electronic Micrometer Heads— Have an LCD and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so they can be connected to a Mitutoyo miniprocessor (sold separately on page 2287) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2288). They display in 0.00005″ and 0.001 mm increments. Spindle face is carbide. Battery is included.

8283A22 and *A23* have a mounting-hub hold-down nut for extra support.

Nonelectronic Micrometer Heads— Have a steel spindle face.

Style C inch heads are graduated in 0.001″ increments. Metric heads are graduated in 0.01 mm.

Style D have a mechanical digital counter that displays in 0.001″ increments. Thimble is graduated in 0.001″ increments.

Mitutoyo Electronic Pocket Thickness Gauges

Do quick thickness checks on paper, film, and other flat stock. Push the thumb button to operate. Gauges have an LCD and measure in 0.0005″ and 0.01 mm increments. Accuracy is ±0.001″. Spindle and anvil faces are steel. Include a battery and case.

Certificate of calibration is traceable to NIST.

Mitutoyo Electronic Thickness Gauges

A

B ***Flat Anvil Face***

B ***Ball Anvil Face***

C

An LCD gives you instant readings. Gauges measure in 0.0005″ and 0.01 mm increments, except for Style A, which measures in increments selectable between 0.00005″, 0.0001″, 0.0005″, 0.001 mm, and 0.01 mm. They have zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor (sold separately on page 2287) using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2288). A battery is included.

Flat anvil faces measure paper and other flat stock. Spindle and anvil faces are ceramic, except for Style A, which has carbide faces.

Ball anvil face measures wall thickness of pipes, tubes, and other cylindrical shapes. Spindle and anvil faces are steel.

Certificates of calibration are traceable to NIST.

Economy

Glance at the dial to check thickness measurements. A case is included. *Inch* dial faces are white; *metric* dial faces are yellow.

Mitutoyo loop-handle gauges have a comfortable hand grip with a thumb lever that raises the spindle.

Starrett pocket gauges fit between your thumb and index finger. Pull the serrated finger slide to raise the spindle.

Economy gauge operates with a serrated finger slide that raises the spindle.

Certificates of calibration are traceable to NIST.

Starrett Inside Hole Micrometers

Series 823

Series 124

Find the inside diameter of cylinders and rings, as well as the distance between two surfaces. Micrometers measure in 0.001″ increments. Accuracy is ±0.0001″. They have a plain thimble and steel measuring faces. A case is included.

***Series 823*—** Have lightweight 3/8″ dia. tubular steel extensions that attach at each end of the micrometer head.

Starrett Nos. 823AZ, 823BZ, and *823FZ* include a 5 1/2″ long handle.

***Series 124*—** Have solid steel extensions with individual length adjustment. *Starrett Nos. 124AZ* and *124BZ* have 1/4″ dia. extensions; *Starrett No. 124DZ* has 1/4″ dia. and 11/32″ dia. extensions; and *Starrett No. 124CZ* has 11/32″ dia. extensions.

Inside Hole Dial Calipers

With short, narrow contacts, these calipers have no problem measuring shallow recesses. Push the button to close the arms and release to obtain the diameter. Inch calipers measure in 0.001″ increments; metric in 0.025 mm increments. Bezel rotates to set zero anywhere on the dial and has a lock screw. Dial face is white. Arms are 3 1/4″ long and have carbide measuring points.

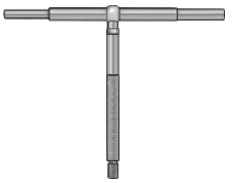
Telescoping Hole Gauges



Spring tension forces two telescoping steel contacts to expand inside the hole and a screw in the handle locks the contacts. To determine hole size, measure the distance across the locked contacts with a micrometer (not included).

Sets include a pouch.

Starrett gauges are steel.

Economy gauge sets are chrome-plated brass and steel.

★ Measures in 0.0001″ increments.

Hole Gauges

Use the interchangeable anvils to measure the inside diameter of holes and cylindrical bores, as well as identify out-of-roundness problems. Also known as bore gauges.

***Dial Gauges*—** Have a 2 1/4″ dia. (AGD Group 2) dial indicator with white face. A case is included.

Mitutoyo dial gauges measure in 0.0001″ increments and have a jeweled bearing to prevent excessive wear. Anvils have carbide steel points, except Mitutoyo No. 526-123, which has alloy steel.

Mitutoyo 3-piece dial gauge set includes Mitutoyo Nos. 511-751, 511-752, and 511-753.

Economy dial gauges measure in 0.0005″ increments. Anvils are carbide steel; probes have carbide steel points.

***Economy Electronic Gauge*—** Has an LCD to make reading measurements easier, and zero-position memory, also known as absolute (ABS) positioning. Measures in 0.00005″ increments. A battery is included.

Small-Hole Gauges

Full Ball

Insert into small holes, slots, grooves, and recesses and turn the knob on the handle to expand the contacts. To get your reading, measure the distance across the contacts with a micrometer (not included).

Full-ball gauges are great for deep through holes. ***Half-ball gauges*** are best for flat, shallow areas.

Starrett Gauges— Full-ball gauges are Series 829; half-ball gauges are Series 831.

Starrett 4-piece gauge set includes one gauge in each range listed and a pouch. **To Order:** Please specify full-ball or half-ball for all Starrett gauges.

Economy 4-Piece Gauge Set— Includes a full-ball gauge in each of the following ranges: 0.125″-0.200″, 0.200″-0.300″, 0.300″-0.400″, and 0.400″-0.500″. Comes in a pouch.

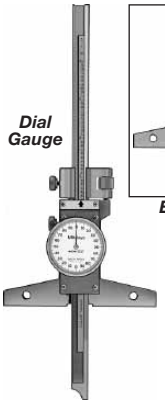
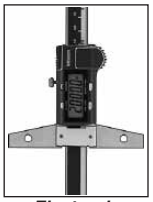
Mitutoyo Depth Gauges



Dial Gauge



Electronic Gauge

A curve on the tip of the measuring blade lets you access narrow spaces. Base is 4″ long. A pouch is included.

Dial Gauges— Measuring blade is 0.43″ wide (0.16″ at the tip). Gauges measure in 0.001″ increments. Both have a white dial face and a fine-adjustment screw.

Electronic Gauges— Measuring blade is 0.63″ wide (0.20″ wide at the tip). Gauges have an LCD and measure in 0.0005″ and 0.01 mm increments. They also have zero-position memory, also known as absolute (ABS) positioning, and SPC data output so they can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2288). Battery is included.

Electronic harsh environment gauge is IP67 rated for dust and temporary water submersion.

Optional base extensions increase the base length to measure larger diameter holes.

Dial Depth Gauges

Measure depths up to 22″ using the included connectable rod extensions. Extensions are 1″, 2″, 3″, 4″, 5″ and 6″ long with a 0.2″ dia. Without extensions, gauge has 0-1″ range and measures in 0.001″ increments. Range per dial revolution is 0.100″ and accuracy is ±0.001″. Includes three interchangeable contact points with 4-48 threads—one 0.118″ dia. carbide ball, one 1″ Lg. x 0.078″ dia. point, and one 1″ long needle point. Dial face is white. Base is 4″ long. A case and a clamping screw to lock settings are included.

8645A11 ..... $176.43

Electronic Depth Micrometers

Mitutoyo

Micrometers have an LCD, interchangeable steel rods in 1″ incremental lengths for measuring a variety of depths, and a ratchet thimble. A battery and case are included.

Mitutoyo Micrometers— Accuracy is ±0.00012″. Micrometers have zero-position memory, also known as absolute (ABS) positioning, and SPC data output that allows them to be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (see page 2288).

Mitutoyo No. 329-350-30 measures in 0.00005″ and 0.001 mm increments; *Mitutoyo No. 329-351-30* in 0.0001″ and 0.001 mm increments.

Economy Harsh Environment Micrometer— IP54 rated for dust and splashing water. Micrometer measures in 0.00005″ and 0.001 mm increments. Accuracy is ±0.0001″.

Replacement Battery				7604K83	2.34

Mitutoyo Electronic Indicators

Indicators have an LCD, ability to count forward or backward from zero, and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so they can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below), or to your PC using an SPC data output cable and an input tool (sold separately on page 2288). Mounting stem is 3/8" dia. and contact point has 4-48 threads. A battery is included where required.

(B&C) Easy-read indicators have a larger display than the other indicators and a rotating dial face. You can set any starting value, and they have go/no-go operation for tolerance checking.

(D) Compact indicator has a slim design for use in tight spaces.

(E) Backlit quick-read indicators' LCD changes from green to red so you can quickly identify out of tolerance. Indicators perform TIR (total indicating runout), which determines range of high and low spots of round parts. You can set any starting value. They have an analog bar display with adjustable range and tolerance indicators and a function lock. Operate on 120 VAC and have a 6 1/2-ft. long power cord with a two-prong plug.

(F) Harsh environment indicators are IP53 rated for dust and water droplets.

Certificates of calibration are traceable to NIST.

Economy Electronic Indicators

An economical alternative to our other electronic indicators. They have an LCD, a 3/8" dia. mounting stem, a 1/4" lug back, and a contact point with 4-48 threads. A control button provides go/no-go tolerance checking. Battery is included. ***Fraction*** indicator also measures in 1/64" increments.

Depth-Gauge Bases for Indicators

Convert electronic and dial indicators into depth gauges. All are made of steel.

Economy bases come with a set screw to hold a 3/8" dia. indicator mounting stem. Size is 5/8" Wd. x 3/4" Ht.

Standard bases come with one holding collet that accepts a 3/8" dia. indicator mounting stem. Additional mounting holes add adaptability. Size is 3/4" Wd. x 5/8" Ht.

Starrett Electronic Indicators

Indicators have an LCD and the ability to count forward or backward from zero. They have a 3/8″ dia. mounting stem, a 1/4″ lug back, and a contact point with 4-48 threads. Battery is included.

Economy indicator is AGD Group 2.

Basic indicator has a rotating dial (AGD Group 2) for reading in any position and an SPC data output so it can be connected to your PC using an SPC data output cable (sold separately below).

Advanced indicator has a rotating dial (AGD Group 2) for reading in any position, go/no-go tolerance checking, and zero-position memory, also known as absolute (ABS) positioning. It also has SPC data output so it can be connected to your PC using an SPC data output cable (sold separately below).

Wisdom Plus indicator is AGD Group 3 and has everything the advanced indicators have plus display freeze, capability to set any starting value, function lock, and selectable display increments (increment listed in the table is the most accurate). It also has SPC data output so it can be connected to your PC using an SPC data output cable (sold separately below).

Dial Indicators with Magnetic Base

Place on any flat steel surface—a magnetic base provides a solid mount. A case is included.

Indicators have a 0-1″ range, plain bearings, a 3/8″ dia. mounting stem, a 1/4″ lug back, and contact point with 4-48 threads. They also have a 2 1/4″ dia. (AGD Group 2) rotating continuous dial with a white face that reads 0-100 in both directions. Dial measures in 0.001″ increments. Accuracy is ±0.002″.

Base has a 45-lb. magnetic pull and is 2″ Lg.×1 3/8″ Wd.×1 7/8″ Ht. The upright post is steel and 5/16″ Dia.×4″ Ht. Indicator holding rod is 4 1/2″ long. A swivel clamp and indicator holding clamp are included.

2316A11 ..... $105.27

Precision Dial Indicator Stands

Get precise measurements and the convenience of a stand. Stands have a black granite base with a steel upright post.

Economy stands have an indicator holding arm. 86285A51 also has a fine-adjustment knob on the indicator holding arm. 86285A51 and 86285A54 have a 1/4″ lug-back mount; 86285A55 and 86285A56 accept a 3/8″ dia. mounting stem.

Standard stands provide stability for close tolerance inspection as well as nearly frictionless workpiece movement. All include a certificate of accuracy traceable to NIST. 8628A44 has a rigid indicator holding arm. 8628A45 and 8628A46 have a fine-adjustment knob on the indicator holding arm. 8628A46 also includes a case.

To Order: Please specify 1/4″ lug-back mount or flat-back mount.

Dial Indicators with Precision Stand

A high-quality granite base provides stability for close tolerance inspection as well as nearly frictionless workpiece movement.

Indicators have a 0-1″ range, jeweled bearings, a 3/8″ dia. mounting stem, and a contact point with 4-48 threads. They also have a 2 1/4″ (AGD Group 2) rotating continuous dial with a white face that reads 0-100 in a clockwise direction. Dial measures in 0.001″ increments. Accuracy is ±0.001″. Include a certificate of calibration traceable to NIST.

Bases have a steel upright post. 8628A41 has a rigid indicator holding arm; 8628A42 has a fine-adjustment knob on the indicator holding arm.

To Order: Please specify indicator back style: 1/4″ lug back or flat back.

	Base			Upright Post		Throat Dp.	Surface

	6″	6″	2″	1 1/4″	8″	1 3/4″	±0.00005″	8628A41	$256.56
	8″	12″	2″	1 1/4″	12″	5″	±0.0001″	8628A42	415.59

Dial Indicator Stands

Stand with One Anvil

Use with your AGD electronic or dial indicator (not included) to take accurate comparative measurements. Stands fit 3/8″ or 8 mm dia. mounting stem. Base is made of cast iron and is 5 3/4″ Lg.×3 1/2″ Wd.×1 1/2″ Ht. Upright post and anvils are steel. The indicator holding arm has a fine-adjustment knob.

Stand with one anvil includes an anvil with a serrated face.

Stand with two anvils includes one anvil with a serrated face and one with a flat face.

	Upright Post		Throat Dp.	Anvil Face		
	Dia.	Ht.	from Post	Dia.		
With One Anvil	1″	8″	2 1/2″	2″	7386A12	$203.08
With Two Anvils	1″	14″	2 3/4″	2 3/8″	7386A14	219.77

Electronic Test Indicators

An LCD provides instant, easy-to-read measurements. Indicators have a dovetail mount, measure in selectable increments of 0.00005″, 0.0005″, 0.001 mm, and 0.01 mm, and display both digits and a bar graph. Dial face is 1 1/2″ dia. and rotates 360°. Contact point is 0.080″ dia. and swivels 270°. Operate on one 3-volt battery (included). IP65 rated for dust and spraying water.

Replacement Battery								7701K34	1.92

Dial Indicators

Indicators have a rotating dial face, a 1/4" lug back, and a contact point with 4-48 threads, except 2434A11 has 0-80 threads. All have jeweled bearings, unless noted. Mounting stem is 3/8" dia. except 2434A11, which is 7/32" dia. Inch dial faces are white; metric dial faces are yellow.

Continuous dials are numbered in a clockwise direction for direct measurements. ***Balanced dials*** are numbered on each side of zero (+ and -) for comparative measurements. ***Combination dials*** have a continuous scale numbered in a clockwise direction and a balanced scale numbered on each side of zero (+ and -).

Certificates of calibration are traceable to NIST.

Also Available: Replacement indicator backs in additional styles.

For Mitutoyo indicators, please ask for 20625A911 and specify 1/4" lug back, flat back, or magnetic base and AGD Group.

For Starrett indicators, please ask for 20625A711 and specify 1/4" lug back, flat back, universal back, or magnetic base and AGD Group.

For standard indicators, please ask for 20625A811 and specify 1/4" lug back or flat back and AGD Group.

Dial Indicator/Magnetic-Base Set— Includes indicator 20715A69 and magnetic-base holder with rigid arm (1958A31 on page 2302).

20715A44 ..... $40.19

● Has plain bearings. ♣ Dial face is black with high-visibility markings. ■ Can read inch and metric simultaneously (to 25 mm).

Starrett Plunger-Style Dial Test Indicators

Indicators

Rugged plunger-style construction has few moving parts to wear out. Indicators have jeweled bearings; a 1/4″ dia. mounting stem; 0.125″, 0.3″, and 0.5″ dia. contact points; and a tip adapter for 4-48 threaded contact points. They also have a 1 3/8″ dia. rotating dial with a white face. Dial hand moves clockwise.

Certificate of calibration is traceable to NIST.

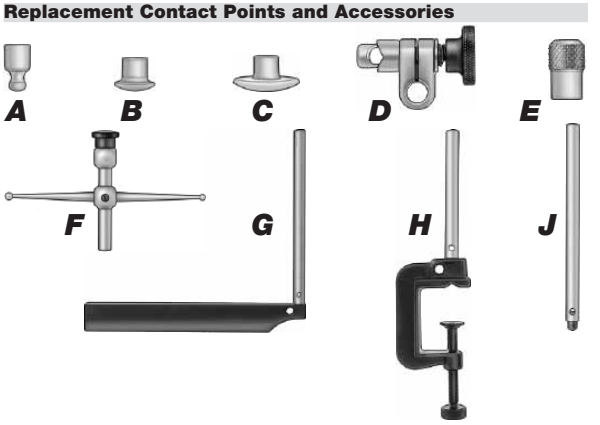
Replacement Contact Points and Accessories



(D) Swivel clamp has a 5/16″ dia. mounting hole and a 3/32″-1/4″ dia. hole for holding indicators, upright posts, and holding rods.

(E) Tip adapter allows you to use an AGD dial indicator with 4-48 threaded contact point.

(F) Hole attachment is for inside holes up to 1 5/8″ deep.

(G) Tool post holder measures 6″ Lg. x 3/4″ Wd. x 3/8″ Thick. and has a 5/16″ Dia. x 4 1/2″ Lg. upright post.

(H) Clamp allows the indicator to be securely attached to machine tools. It has a 5/16″ Dia. x 3″ Lg. upright post.

(J) Upright post is 5/16″ Dia. x 4 1/2″ Lg.

Starrett No. 711 Last Word Dial Test Indicators

Standard Indicator

Indicator with Universal Shank

Half of the dial face is white and the other half is shaded yellow to make measurements easier to read. Indicators have jeweled bearings and a 1″ dia. rotating dial. The dial hand moves clockwise and counterclockwise. The contact point is steel, 0.120″ Dia. x 5/32″ Lg., swivels 180°, and has a ratcheting positioner joint to adjust to various angles.

Standard indicators include a mounting clamp that fastens to a 1/8″-1/4″ dia. indicator holding rod. ***Indicators with universal shank*** mount to a lathe tool post or height gauge. A mounting clamp with two arms to hold the indicator is included.

Indicator sets include an indicator with universal shank and 0.035″, 0.062″, and 0.120″ dia. contact points. They also include a body clamp, a holder with 3/16″ dia. shank, a tool post holder with 1/4″ dia. swivel post, a two-joint extension, a female coupling with 3/16″ opening on each end, a height gauge attachment, and a surface gauge attachment.

Starrett Dial Test Indicators

An angled head provides a better reading position and three dovetail mounts give you mounting versatility. Indicators are lever style and have jeweled bearings and a 1 3/8″ dia. rotating dial with a white face. Contact point is carbide, 0.078″ dia., and swivels 180°. Dial hand moves clockwise. A case is included.

Indicator sets include an indicator and 0.078″ dia. contact point. They also include a dovetail clamp with 3/16″ dia. stem, a tool post holder with 1/4″ dia. upright post, a swivel clamp with dovetail mount, and a swivel-clamp rod unit with one 1/4″ Dia. x 4″ Lg. rod and one 3/8″ Dia. x 4″ Lg. rod. **To Order:** For 20965A16 and 20965A12, please specify black, red, or white dial face.

Starrett Swivel-Head Dial Test Indicators

A 1 3/8″ dia. rotating dial pivots 90° so indicators can be used in vertical, horizontal, and angular positions. They are lever style and have jeweled bearings and two dovetail mounts. Contact point is 0.078″ dia. and swivels 180°. Dial hand moves clockwise.

Indicators include a dovetail mounting clamp with 3/16″ mounting stem; tool post holder with 1/4″ Dia. x 1 5/16″ Lg. upright post and 1/4″ x 1/2″ body; swivel clamp with dovetail mount that fits 3/32″-1/4″ dia. rods; and a swivel clamp with two 4″ long rods (one is 1/4″ dia., the other is 3/8″ dia.). A case is included.

To Order: For 8591A62 and A61, please specify black, red, or white dial face. 8591A13 has a yellow dial face.

Brown & Sharpe BesTest Dial Indicators

Indicators are lever style and have jeweled bearings, a rotating dial, and two dovetail mounts. Contact point is carbide, 0.080″ Dia.×1/2″ Lg. (except 2047A63 and A64 are 1 7/16″ long), and swivels 180°. Dial hand moves clockwise and counterclockwise. A case is included.

Indicators with white dial face and ***indicators with yellow dial face*** come with a 3″ Lg.×3/16″ Wd.×5/16″ Ht. tool post mounting bar with a 0.22″ dia. mounting stem and swivel clamp with 7/32″ and 3/8″ dia. holes.

Indicators with black dial face have a high-visibility orange hand and come with a dovetail mounting clamp with a 1/4″ Dia.×1/2″ Lg. stem.

Miti-Mite Magnetic-Base Set

Includes test indicator 2047A72 and a magnetic V-shaped base. The base is 1 1/4″ Sq.×1 3/4″ Ht., has a 23-lb. magnetic pull, and attaches to rounded and flat surfaces. Ball-and-socket action of the posts and a fine adjustment screw allows a variety of setups. Set also includes one 7/32″ Dia.×1 1/2″ Lg. and one 5/16″ Dia.×1 1/2″ Lg. upright post as well as a 7/32″ Dia.×4 3/8″ Lg. indicator holding rod. A case is included.

23185A65 ..... $375.11

Wide-Range Interapid Dial Test Indicators

Interapid indicators measure larger ranges than other indicators. They're lever style and have jeweled bearings, a 5/32″ dia. mounting stem, a 0.080″ Dia.×0.65″ Lg. carbide contact point, a white dial face, and a rotating dial with a revolution counter to keep track of hand revolutions. Dial hand moves clockwise and counterclockwise. A case is included.

Horizontal indicators have two dovetail mounts. Contact point swivels 210°. ***Vertical indicators*** have one dovetail mount. Contact point swivels 190°.

Replacement contact points fit all Interapid indicators listed.

Mounting Stem Adapter

Increase the diameter of your indicator mounting stem from 5/32″ to 3/8″ so your indicator can mount to magnetic-base holders that fit 3/8″ diameter stems.

19515A86 ..... $20.68

Economy Dial Test Indicators

These lever-style test indicators have a 0.078″ Dia.×1/2″ Lg. carbide contact point that swivels 180°. They also have jeweled bearings, a 1 9/32″ dia. rotating dial with white face, and two dovetail mounting clamps (one with 5/32″ dia. mounting stem, one with 3/8″ dia. mounting stem). Dial hand moves clockwise. Accuracy for 0.008″ gauge is ±0.00015″; 0.030″ gauge is ±0.0004″. A case is included.

Indicator/base sets include indicator 3295A15 and a rigid- or jointed-arm magnetic base.

Chain-Clamp Holders

18″ chain-clamp holder has a 2″ Lg.×3/4″ Wd. steel body with four 5/16″ dia. threaded holes (three on the side; one on the top). Includes one 5/16″ Dia.×4″ Lg. and one 5/16″ Dia.×6″ Lg. steel holding rod and an ANSI No. 35 chain with 6″ dia. capacity.

24″ chain-clamp holder has an aluminum body with one 5/16″ Dia.×3″ Lg. and one 5/16″ Dia.×6″ Lg. stainless steel holding rod and an ANSI No. 41 chain with 9″ dia. capacity.

Alignment Kit— Includes two chain clamps, an inspection mirror, and a case.

Alignment Kit with Test Indicators— Two chain clamps position the two Starrett 196B1 indicators (included) at different points along a shaft to find any misalignment. Indicators have a 0-0.2″ range and are graduated in 0.001″ increments with a 0-100 dial reading. Kit also includes two swivel clamps, an inspection mirror, and a case.

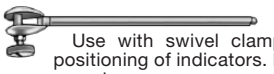
Alignment Kit with Test Indicators	2593A13	1,025.00

Electronic and Dial Indicator Attachments

Attachments fit electronic and dial indicators that conform to AGD (American Gauge Design) standards. All are made of steel, unless otherwise stated.

Holding Rods



Use with swivel clamps for easy positioning of indicators. Have 1/4" lug mount.

■ Made of aluminum with stainless steel roller.
★ Made of stainless steel.

Contact Point Sets

Starrett No. 25 R

The most popular indicator points with 4-48 threads. Length doesn't include threads.

Starrett No. 25 R— Has 14 points on an aluminum ring for fast, easy selection. Includes one regular 1/4" lg. point; nine special-form points; one anvil; and three extra-long regular points (1/2", 3/4", and 1" long).

Economy— Has 22 points in a case. Includes nine flat points 0.175" to 1.250" long; five regular points 0.225" to 0.825" long; four tapered points 0.500" to 0.875" long; three needle points 0.935" to 1.35" long; and one bent needle point 0.312" long. Made of Type 303 stainless steel.

Starrett No. 25 R		2193A11	$127.01

Backs

Flat Back

Lug Back

Universal (Starrett Only)

Starrett— Only fit Starrett indicators, not all AGD. **To Order:** Specify AGD Group No. and flat, 1/4" lug, universal, or magnetic back.

Chicago Dial (CDI)— **To Order:** Specify AGD Group No. and flat or 1/4" lug back.

Mitutoyo— **To Order:** Specify AGD Group No. and flat, 1/4" lug, or magnetic back.

Manufacturer

Starrett	20625A711
Chicago Dial (CDI)	20625A811
Mitutoyo	20625A911

Thread Adapter

Has 4-48 female threads at one end and M2.5 male at the other. 7/32" Dia. x 1/2" Lg. Length doesn't include external threads. Made of Type 303 stainless steel.

20625A155 ..... $4.71

Tungsten Carbide and Ruby Contact Points

Replace your standard steel point. Points are hard, smooth, and precision ground to 0.000025" (Grade 25). They fit indicators that conform to AGD Groups 1, 2, 3, and 4. Tip length doesn't include threads.

Tungsten carbide provides excellent wear resistance and lasts much longer than standard steel contact points. ***Ruby*** provides excellent chemical and thermal stability with extremely low friction.

Tip Lg.	Ball Size	Thread Mount	*Tungsten Carbide*		*Ruby*	
1/4"	3 mm	4-48	1851A11	$15.22	1853A11	$16.75

3/4"	4 mm	4-48	1851A19	17.97	1853A19	20.33

Ball Contact Points

Precision ground to 0.000025" (Grade 25), these hard, smooth points have a large contact area ideal for measuring contoured shapes. Attach them directly to your indicator, replacing standard steel points. They fit indicators that conform to AGD Groups 1, 2, 3, and 4. Body is Type 303 stainless steel; ball is chrome-plated steel.

To Order: Please specify size needed.

Available Ball Sizes	Thread Mount

● Distance from center of mounting clamp (A) to end of arm (B) when both are extended.

Test Indicator Attachments

Universal Shank

Mount an indicator to a lathe tool post or height gauge. An elbow connects the 3/16" dia. shank and 1/2" Wd.×1/4" Thick. body. Length is 4 1/4".

1987A32 ..... $40.50

Double-Jointed Attachment

Flexes in two directions. Has one 1/4" dia. shank and one 3/8" dia. shank. Length is 5 3/8".

1987A19 ..... $23.47

Tool-Post Holder

Body is 1/2" Wd.×1/4" Thick. Mounting rod is 1/4" Dia.×1 5/16" Lg.

1987A16 ..... $24.00

Body Clamp

Has a 3/8" dia. hole and a hole that adjusts from 1/8" to 1/4" dia.

1987A23 ..... $14.40

Swivel Clamp with Dovetail Groove

Has a dovetail groove and a hole that adjusts from 3/32" to 1/4" dia.

1987A69 ..... $24.00

Long and Short Arm

Has two 3/16" dia. shanks with an elbow. Tool is 2" Lg. Short arm is 13/16" Lg.; long arm is 1 3/16" Lg.

1987A21 ..... $12.27

Dovetail Holder with Shank

Has a dovetail groove and a 5/8" long shank.

To Order: Specify shank dia.: 5/32", 7/32", 1/4", or 5/16".

1987A146 ..... $12.72

Universal Dovetail Holder

Has a swiveling dovetail groove and 1/4" dia. shank. Length is 3".

1987A65 ..... $14.65

Swivel Support Dovetail Holder

Has a swiveling dovetail groove and a 3/8" dia. shank. Length is 2".

1987A53 ..... $34.28

Dovetail Body Clamp

Has a dovetail groove and a 3/16" dia. rotating ball shank. Length is 2".

1987A7 ..... $24.00

Double-Jointed Holder with Dovetail Groove

Flexes in two directions. Has a dovetail groove and 3/8" dia. shank. Length is 4 1/2".

1987A52 ..... $40.40

Combination Stem/Dovetail Holder

5 1/2" long and it flexes in three directions. Has a dovetail groove, one 5/32" and one 1/4" dia. hole, and a 3/8" dia. shank.

1987A51 ..... $34.28

Height Gauge Attachment

Has a 3" Lg.×1/4" Wd.×1/2" Ht. gauge bar and a 0.218" Dia.×0.343" Ht. post. Has a dovetail groove and two 7/32" dia. and one 5/32" dia. mounting holes for holding indicators.

1987A28 ..... $49.53

Starrett Rotating Friction Attachment for Last Word Indicators

Fits into the end plug located on top of an indicator to provide a rotating ball mount. Shank is 3/16" dia. Overall length is 2".

1987A24 ..... $13.95

Indicator Swivel Clamps

Secure indicators, upright posts, and indicator holding rods at any angle. All wing nuts are nylon with brass inserts. *Dual wing nuts* tighten the two sides independently.

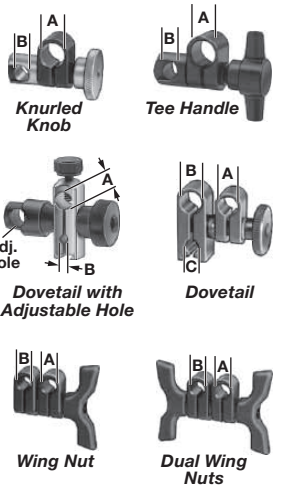
★ Bottom hole (C) dia. is 5/32". ■ Has two top holes. Does not have bottom hole (C).



Low-Profile Magnetic-Base Holders

Confidently position indicators in areas where vertical space is limited. Bases have 50 lbs. of magnetic pull and a magnetic-release switch.

Standard holder has a fine-adjustment knob for precise positioning. Holding rod is 1/4" Dia.×6" Lg. and sits in a ball socket for versatile positioning.

Universal holder has a swivel block that holds the arm at any angle and a fine-adjustment knob for precise positioning. Holding rod is 1/4" Dia.×6" Lg. and can be removed to hold a 1/4" lug back.

Direct-mount holder has a nut and bolt to mount a 1/4" lug back to the base.

	Base Lg.	Base Wd.	Base Ht.		
Standard	3 1/2"	1 1/8"	1"	2122A2	$47.03
Universal	3 1/2"	1 1/8"	1 1/2"	2098A2	64.95
Direct Mount	3 1/2"	1 1/8"	1"	2098A1	26.13

Magnetic-Base Holders for Uneven Surfaces

A specially designed bottom allows base to conform to any shape and grip most surfaces. Bases have 120 lbs. of magnetic pull and a magnetic-release switch. The hole on top of the base has M8×1.25 mm threads. Holders are 2 1/2" Lg.×2" Wd.×2 1/4" Ht.

Rigid arm holder has a fine-adjustment knob. Arm is 15/32" Dia.×3 1/2" Lg. and has a swivel clamp at the end that accepts a 5/32" to 3/8" dia. stem or a 1/4" lug back. Upright post is 15/32" Dia.×7" Lg.

Flexible arm holder has a ball-and-socket segmented arm for flexibility in accessing awkward spots. Arm is 12 1/2" Lg. and has a swivel clamp at the end that accepts a 5/64" to 1/2" dia. stem.

Arm Style		
Rigid	1951A84	$114.57
Flexible	1951A85	222.26

Magnetic Bases

Standard

Easily moved from place to place, bases have threaded mounting holes to hold upright posts and fixtures. All have a magnetic-release switch.

Economy and ***standard*** bases have one top mounting hole and a V-grooved bottom, except standard bases with 38 and 337 lbs. of pull have a flat bottom.

Starrett base has one top and one side mounting hole and a V-step on top.

Flexible-Arm Magnetic-Base Holders

Adjust the arm to nearly any position for use in tight spots. Holders have a ball-and-socket segmented arm that locks in place with a lever. Base has a magnetic-release switch.

(A) Standard— Arm is 12½″ long and has a swivel clamp that accepts a 5⁄32″ to ½″ dia. stem. Base has a V-grooved bottom.

(B) Fine Adjustment— Has a knob for precise positioning. Arm is 14″ long and has a swivel clamp that accepts a ⅛″ to ½″ dia. stem. Base has a flat bottom.

(C) Super-Fine Adjustment— A micro-screw thumb adjuster allows exact positioning. Arm is 15¼″ long and has a swivel clamp that accepts a ⅜″ dia. stem or an indicator with dovetail mount. Base has a V-grooved bottom.

Vise-Grip Flexible-Arm Holders

Clamp securely to a variety of surfaces to position an indicator around any obstruction. Holders have a 13″ long flexible arm attached to Vise-Grip locking pliers. The pliers have two threaded holes to mount the arm horizontally or vertically. A lever locks the arm. A swivel clamp at the end of the arm accepts a ⅛″ to ½″ dia. stem.

Holder	23165A75	$93.76
Replacement Arm	23165A76	51.83

Starrett Electronic Height Gauges

Read measurements from both the LCD and the graduated scale on the column. LCD measures in 0.0005″ and 0.01 mm increments; scale in 0.100″. Accuracy for 12″ gauge is ±0.0015″ and ±0.002″ for 24″ gauge. Set the gauges to zero at any position. A carbide-tipped scriber with clamp and batteries are included.

♦ Does not have a fine-adjustment knob.

Jointed-Arm Magnetic-Base Holders

Standard

Control the joints at the top, middle, and bottom of the arm with the locking knob. A fine-adjustment knob allows precise positioning and a swivel clamp provides a wide range of positions. Holders accept a ⅜″ dia. stem or an indicator with dovetail mount. Base has a magnetic-release switch and V-grooved bottom.

Mitutoyo Electronic Height Gauges

Series 192 *Series 570*

Gauges have a low-battery indicator and zero-position memory, also known as absolute (ABS) positioning. They also have SPC data output so you can connect them to a Mitutoyo miniprocessor using an SPC data output cable, or to your PC using an SPC data output cable and an input tool (output cable is sold below; see pages 2287-2288 for Mitutoyo miniprocessor and input tool). A carbide-tipped scriber with clamp and a battery are included.

Series 192 gauges have a dual-column design and an error alarm. They measure in 0.0005″ and 0.01 mm increments. Accuracy is ±0.001″ and 0.03 mm for 12″ gauge; ±0.002″ and 0.04 mm for 18″ gauge; and ±0.002″ and 0.05 mm for 24″ gauge.

Series 570 gauges have a handwheel for smooth movement along the column. They measure in 0.0005″ increments. Accuracy is ±0.0015″ for 12″ gauge; ±0.002″ for 18″ and 24″ gauges.

Mitutoyo Dial Height Gauges

Gauges have a chrome-coated steel column for wear resistance and a fine-adjustment knob for precise positioning.

They measure in 0.001″ increments. Accuracy is ±0.001″ for the 12″ gauge; ±0.002″ for the 18″ and 24″ gauges. A carbide-tipped scriber with clamp is included.

Economy Dual-Reading Height Gauges

In addition to the dial, two mechanical digital counters display measurements (one counts up; the other counts down).

Dial measures in 0.001″ increments; the counters in 0.1″ increments. A carbide-tipped scriber with clamp is included.

Starrett Surface Gauges

Use these versatile gauges as height and depth gauges, as indicator holders, or for transferring lines from one part to another. All have a fine-adjustment screw, a scriber with clamp, and a V-grooved bottom.

Gauge pins can be pushed down for use against the edge of a surface plate or T-slot for linear work.

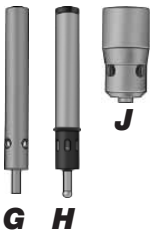
Easy-View Electronic Edge Finders



A bulb lights up to give you 360° visibility when positioning work surfaces and tools. Batteries are included.

Note: These items will not work with nonconductive materials such as plastic and wood or with rotating surfaces such as spinning wheels.

(G) Standard finder emits light when the sensor shaft reaches the edge of the surface. Made of Type 304 stainless steel.

(H&J) Precision finders have a highly perceptive sensing system with a spring-loaded probe to allow for overrun without breaking. Made of steel. *Style H* finds workpiece edges. *Style J* is for measuring and setting cutting tool height.

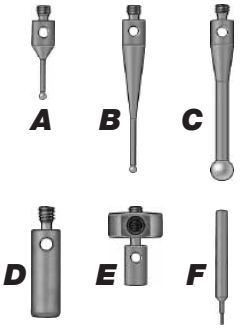
Replacement Styli and Accessories for Renishaw CMM Probes



Mount styli and accessories into coordinate-measuring machine (CMM) probes. ***Also Available:*** M4 threads for all items. Please ask for 85175A999.

(A-C) Styli—300 series stainless steel bodies with Grade 10 ruby balls. Sphericity tolerance is ±0.00001″ and diameter tolerance is ±0.00001″.

(D) Stylus Extensions—Allow for added penetration. Made of 300 series stainless steel.

(E) Five-Way Stylus Crosshead Center—Holds up to five styli. Made of 300 series stainless steel.

(F) Universal Stylus Wrench—Fits all Renishaw CMM styli. Has two diameters (1.27 mm and 1.73 mm). Made of steel.

Starrett Wiggler/Center Finder Sets

Determine tool spindle position in relation to work surface, layout lines, holes, and slots.

Set includes a chuck, an offset indicator holder, a 0.10″ dia. disc contact, a 0.25″ dia. ball contact, and a needle point. Attachments are interchangeable.

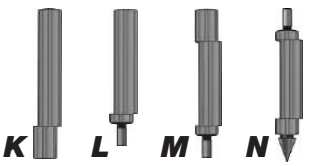
8632A72 ..... $61.01

Center Finders for Round Bar and Pipe

Find the center point on round workpieces. Mount center finder into your drill chuck or collet, place it over round bar stock, and line up the pointer with the mark on the shaft. Capacity is 5″. Made of steel with a corrosion-resistant chrome finish.

22025A11 ..... $16.71

Edge Finders



Locate working edges, shoulders, center points, and lines. All are made of steel.

Audible edge finders make a distinct sound when tip runs concentric with shank (for edge positioning; not for center points).

Feeler Thickness Gauges

Check gaps, alignment, and narrow slots. All gauges are ½″ wide. ***12″ Lengths—*** Have rounded ends and are marked with thickness. ***Rolls—*** Come in a dispenser box. Cut to length needed. Thickness is marked every 6″.

Steel is polished and magnetic. ***Type 302/304 stainless steel*** is corrosion resistant and mildly magnetic. ***Type 316 stainless steel*** has superior resistance to corrosion and is mildly magnetic. ***Brass*** is corrosion resistant and nonmagnetic.

Feeler Thickness Gauge Sets

Sets have ½″ wide leaves nested in a steel frame. Each leaf is marked with the thickness. A lock keeps individual leaves secure in any position (except metric tool steel sets with 15 and 25 leaves).

Plastic Color-Coded Feeler Thickness Gauges

Each thickness is a different color—no more stopping to read the thickness each time you check gaps. Gauges are also nonmagnetic, nonmarring, noncorrosive, nonsparking, and resistant to oil.

Gauges have square ends and can be cut with scissors. Size is 12″ Lg. × ½″ Wd.

Gauge sets have a fan design to keep gauges together and easily accessible. Leaves are ½″ wide and have rounded ends.

Gauges

Clamp on Both Ends

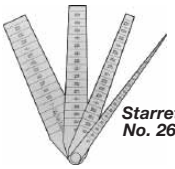
Thickness, Ring & Plug Gauges

For information about go/no-go measurement, see page 2307.

Starrett Tapered Thickness Gauges

Starrett No. 270

Starrett No. 269A and No. 269B



Starrett No. 267

Starrett No. 270 gauge tapers in thickness throughout its length. One side measures in 0.001″ increments, the other in 0.05 mm increments. Made of tool steel. Size is 6¼″ Lg. × 7/16″ Wd. *Certificate of calibration* is traceable to NIST.

Starrett No. 269A and ***269B*** gauges measure in 0.001″ increments. Made of tempered steel. Closed size for 8611A55 is 2½″ Lg. × ½″ Wd.; 8611A56 is 2¾″ Lg. × 1″ Wd.

Starrett No. 267 gauge measures in 1/64″ increments. Made of spring-tempered steel. Closed size is 5¼″ Lg. × 1″ Wd.

Range	No. of Leaves	Starrett No.		
Gauges

1/16″ to 1 1/16″	4	267	8611A54	132.00
Gauge with Certificate of Calibration				
0.010″ to 0.150″ (0.3 to 4 mm)	1	270	8611A62	137.69

Combination Wire and Thickness Gauges

Get a tapered gauge, a wire gauge, and an assortment of thickness gauge leaves in one tool. All are steel and closed size is 4¾″ Lg. × ½″ Wd.

Inch—*Tapered gauge* range is 1/64″ to 3/16″ in 1/64″ increments. *Wire gauge* is Birmingham Standard. It has sizes numbered from 19 to 36 plus 1/16″ and 1/8″. The reverse side gives equivalents in 0.001″. *Thickness leaves* are sizes 0.002″, 0.003″, 0.004″, 0.006″, 0.008″, 0.010″, 0.012″, 0.015″, and 1/16″.

Metric—*Tapered gauge* range is 0.5 to 5 mm in 0.5 mm increments. *Wire gauge* is English Standard. It has sizes numbered from 19 to 36 plus 1/16″ and 1/8″. The reverse side gives equivalents in 0.001″. *Thickness leaves* are sizes 0.04, 0.05, 0.06, 0.07, 0.08, 0.10, 0.15, 0.20, 0.30, 1, and 2 mm.

Inch	2323A11	$119.02
Metric	2323A13	187.01

Tapered Thickness Gauges

Replace a set of feeler thickness gauges with just one tapered gauge. Capable of measuring clearance, narrow slots, and gaps, these tools are more durable than other thickness gauges. They measure in 0.005″ increments. Made of black-oxide steel with white numerals for visibility.

Range	Blade Wd.	O'all Lg.		
0.005″ to 0.250″	1/4″	18″	8626A12	$448.04
0.020″ to 0.500″	1/4″	18″	8626A13	571.47
0.020″ to 0.500″	3/8″	18″	8626A14	610.56
0.370″ to 1.000″	3/8″	18″	8626A65	722.29

Ring Gauges

All are made of tool steel. Rockwell hardness is C60-C62. Surface smoothness is 8 microinches for Class Z gauges and 4 microinches for Class X gauges. A certificate of accuracy traceable to NIST is included. **To Order:** Please specify size in 0.0001″ increments.

Go/no-go gauges let you inspect parts, shafts, and rods to determine if they pass or fail the tolerances.

Master gauges set inside micrometers, dial bore gauges, and other precision tools.

Plug Gauge Handles

Holding 0.03″ to 0.50″ plug gauges is easier with a handle. Go/no-go ends are clearly marked and bushings are not required. Made of aluminum.

Colored Handles— **To Order:** Please specify green, purple, red, or yellow.

Natural Aluminum	2302A55	$17.55
Colored	2302A11	22.80

Universal Plug Gauge Handles

No bushings needed—one handle covers a range of pins. Made of aluminum. One end is green and the other is red.

Black-Oxide Class ZZ Plug Gauges

A black-oxide treatment shows wear patterns when calibration or replacement is necessary. Gauges are made of tool steel and are 2″ long. Rockwell hardness is C60-C62; surface smoothness is 10 microinches or better. A certificate of accuracy traceable to NIST is included. Gauges 0.0610″ and larger are marked with size and direction of tolerance.

Go gauge tolerance is +0.0002″. *No-go gauge* tolerance is –0.0002″.

Gauges— **To Order:** Please specify size in 0.0005″ increments.

Gauge Sets— Measure in 0.001″ increments. A case is included.

About Go/No-Go Measurement

A go gauge checks the minimum hole diameter. A no-go gauge checks the maximum hole diameter. If the go gauge enters the hole and the no-go gauge is unable to enter, the design specifications of the hole have been met.

Plug Gauges

Also known as pin gauges, use plug gauges for precision go/no-go measuring of hole sizes and depths, checking hole location and distance, and setting micrometers.

Gauges are heat-treated tool steel. Rockwell hardness is C60-C62. They are 2″ long, except extra-long Class ZZ inch style, which are 4″ long. All come with a certificate of accuracy traceable to NIST.

Class Z and ***Class ZZ*** gauges 0.0610″ and 1.52 mm and larger are etched with the size and "+" (go) or "–" (no-go).

	Inch Gauge Tolerances

Plug Gauge Sets & Thread Gauges

For information about go/no-go measurements, see page 2307.

Target-Size Plug Gauge Sets

Get your choice of one target-size gauge with 12 larger gauges and 12 smaller gauges, graduated in increments of 0.0001″. Also known as “tenth step” gauges, they’re often used in metrology labs, quality control departments, and tool rooms for setting snap gauges and comparators. Sets are Class X and Rockwell hardness is C60-C62; surface smoothness is 2 microinches or better. All are 2″ long and made of heat-treated tool steel. Gauges 0.0610″ and larger are etched with size. A case and a certificate of accuracy traceable to NIST are included. **To Order:** Please specify nominal (target) size.

Go gauges have a tolerance of +0.00004″. ***No-go gauges*** have a tolerance of –0.00004″.

Nominal (Target) Size	Go Gauges	No-Go Gauges	
0.0110″ to 0.0609″	2149A11	2149A51	$425.12
0.0610″ to 0.2509″	2149A13	2149A53	211.48
0.2510″ to 0.5009″	2149A15	2149A55	243.82
0.5010″ to 0.7499″	2149A17	2149A57	336.47
0.7500″ to 0.8129″	2149A19	2149A59	471.08

Thread Gauges

Inspect internal and external threads on parts. All are tool steel and include a certificate of accuracy traceable to NIST.
Plug gauges have external (male) threads to measure internal (female) threads.
Ring gauges have internal (female) threads to measure external (male) threads.

Inch and Metric Thread Gauges

Plug Gauge

Ring Gauge

Plug Gauges— Have a taperlock handle with a go gauge on one end and a no-go gauge on the other. They are chrome plated and marked with thread size. Rockwell hardness is C70-C72.

Ring Gauges— The no-go gauges are also known as “lo” gauges. Rockwell hardness is C60-C62.

Inch gauges meet Class X tolerance for pitch diameter: ±0.0002″ for 80 to 36 threads/in.; ±0.0003″ for 32 to 9 threads/in.; and ±0.004″ for 7 threads/in.

Threads have different classes of fit. “Fit” designates the tightness or looseness of the mating threads. For example, inch threads with a 3A fit have tighter tolerances than threads with a 2A fit. *Plug gauges* are offered in 2B and 3B thread fit; *ring gauges* are offered in 2A and 3A thread fit. **To Order:** Please specify thread fit.

Metric gauges meet Class X tolerance for pitch diameter: ±0.005 mm for 0.35 to 0.7 threads/mm and ±0.008 mm for 0.8 to 2 threads/mm. *Plug gauges* have a 6H thread fit; *ring gauges* have a 6g thread fit.

Also Available: Thread gauges with certificate of calibration traceable to NIST.
For *inch plug gauges* please ask for 3157A9 and specify part number and thread fit.
For *inch ring gauges* please ask for 3160A9 and specify part number and thread fit.
For *metric plug gauges* please ask for 3206A9 and specify part number.
For *metric ring gauges* please ask for 3227A9 and specify part number.

NPT Pipe Thread Gauges

Plug Gauge

Ring Gauge

Meet Class X tolerance for pitch diameter: ±0.0002″ for 1/16″-27 to 3/8″-18 thread size and ±0.0003″ for 1/2″-14 to 2″-11 1/2 thread size. Rockwell hardness is C60-C62. Plug gauges have a taperlock handle and also have a notch that indicates when the thread being measured is within tolerance.

Also Available: Thread gauges with certificate of calibration traceable to NIST. Please ask for 2121A9 and specify thread size and plug or ring gauge part number.

Thread Size	Plug Gauges		Ring Gauges

About Gauge Block Grades and Tolerances

Gauge blocks are classified by grades based on tolerance—the smaller the tolerance the greater the accuracy.

Sizes (S)	Inch Size Tolerances	
	Grade 0	Grade AS-1
0-0.050″	+0.000006″, –0.000006″	+0.000012″, –0.000012″
0.051″-1″	+0.000006″, –0.000006″	+0.000012″, –0.000012″
2″	+0.000008″, –0.000008″	+0.000016″, –0.000016″
3″	+0.000010″, –0.000010″	+0.000020″, –0.000020″
4″	+0.000012″, –0.000012″	+0.000024″, –0.000024″
5″	+0.000016″, –0.000016″	+0.000032″, –0.000032″
6″	+0.000016″, –0.000016″	+0.000032″, –0.000032″

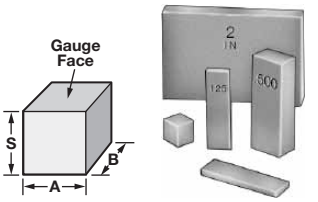
Gauge Blocks

Precision gauge blocks are vital to dimensional quality control. They're commonly used for exacting layout, machine setup, and production of close-tolerance dies and fixtures. They are also excellent for checking the accuracy of measuring instruments such as micrometers. Blocks are high-carbon, high-chrome steel and have excellent stability and resistance to thermal expansion. They are individually numbered for recalibration at a later date. All meet ASME B89.1.9.

Block size (S) refers to the distance between the block's two measuring surfaces. To get a size that isn't offered below, press two clean blocks together with a twisting/sliding motion.

Rectangular Blocks—Dimension (A) is 0.354″ (9 mm). Dimension (B) for 0″ to 0.400″ blocks is 1.181″ (30 mm); Dimension (B) for 0.450″ blocks and larger is 1.378″ (35 mm).

Square Blocks—Dimensions (A) and (B) are both 0.949″ (24.1 mm).



Mitutoyo Grade 0 Gauge Blocks

All include a certificate of accuracy traceable to NIST. **To Order:** Where applicable, specify size from ranges shown in the table.

Also Available: Rectangular Grade AS-1 blocks in inch and rectangular Grade 0 blocks in metric sizes. Ask for 1809A3 for inch or 2249A21 for metric and specify size.

Gauge Block Sets

Sets consist of rectangular blocks in a case. A certificate of calibration traceable to NIST is included, except Mitutoyo sets, which include a certificate of accuracy traceable to NIST.

9-Block Inch Sets—One block each in sizes 0.0625″, 0.100″, 0.125″, 0.200″, 0.250″, 0.300″, 0.500″, 1.000″, and 2.000″. 2210A12 and A67 include an optical flat to check flatness and parallelism.

34-Block Inch Set—Nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; nine blocks in sizes 0.110″ to 0.190″ in 0.01″ increments; one block each in sizes 0.100″, 0.200″, 0.300″, 0.500″, 1.000″, 2.000″, and 4.000″.

35-Block Inch Set—One block in size 0.10005″; nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; 10 blocks in sizes 0.100″ to 0.190″ in 0.01″ increments; one block each in sizes 0.200″, 0.300″, 0.500″, 1.000″, 2.000″, and 4.000″.

36-Block Inch Sets—Nine blocks in sizes 0.1001″ to 0.1009″ in 0.0001″ increments; nine blocks in sizes 0.101″ to 0.109″ in 0.001″ increments; nine blocks in sizes 0.110″ to 0.190″ in 0.01″ increments; five blocks in sizes 0.100″ to 0.500″ in 0.1″ increments; one block each in sizes 0.050″, 1.000″, 2.000″, and 4.000″.

★ Has one horizontal, one vertical, and one 45° vial.

Aluminum with Pitch Gauge

Standard

One of the horizontal vials is a pitch gauge that reads slope in ⅛″ increments. Also called torpedo levels, they have a V-groove for stability on curved surfaces and two top-reading windows.

Standard level is 1⅝″ Ht.×⅝″ Wd.

Heavy duty level is 2″ Ht.×¾″ Wd.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	No. of Vials: 45°	Magnetic	
Standard					
12″	2	1	1	2169A1	$13.86
Heavy Duty					
12″	2	1	1	2151A14	23.48

Compact Aluminum

Nonmagnetic

Commonly called torpedo levels, all have tapered ends for fitting into small spaces, a V-groove for stability on curved surfaces, and a top-reading window.

Standard levels have a lightweight frame and are 1¾″ Ht.×⅝″ Wd.

Heavy duty level is 2″ Ht.×¾″ Wd.

Glow-vial level has glow-in-the-dark vials that make it easy to read in low light.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	No. of Vials: 45°	Nonmagnetic		Magnetic

Optional Plastic Case for 2138A2			21375A65	12.15
Optional Plastic Case for 2138A3			21375A67	19.10

Heavy Duty Aluminum with Angle Indicator

In addition to the vials, these digital levels have an LCD that shows angle in degrees, % of slope, and pitch (in./ft.). Levels have a sturdy box-style frame and are 2⅜″ Ht.×1″ Wd. Battery is included.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	Nonmagnetic	
24″	1	1	21425A61	$137.38
48″	1	1	21425A62	147.14
Optional Padded Vinyl Case for 21425A61			23325A73	19.74
Optional Padded Vinyl Case for 21425A62			21425A81	32.53

Bamboo Mason Level

Strong and durable, bamboo is also lightweight and wet cement won't stick to it. Levels have a top-reading window and are 2½″ Ht.×1⅜″ Wd.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	Nonmagnetic	
24″	1	2	2139A6	$44.90
48″	1	2	2139A7	55.46

Black Plastic with Angle Indicator

Nonmagnetic

Magnetic

The LCD on these digital levels shows angle in degrees and % of slope. Batteries are included.

Nonmagnetic level is 2⅛" Ht.×1⅜" Wd. The display inverts when you turn the level upside down. Also measures pitch (in./ft.).

Magnetic level is 1¾" Ht.×¾" Wd.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	Nonmagnetic		Magnetic	
6⅝″	—	—	23325A12	$117.67	—	—
7⅞″	1	1	—	—	23325A11	$45.64

Economy Plastic

Standard

The high-impact plastic frame on these torpedo levels has tapered ends for fitting into small spaces and a V-groove for stability on curved surfaces. Levels are approximately 1½″ Ht.×⅝″ Wd.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	No. of Vials: 45°	Nonmagnetic		Magnetic	
Standard							
9″	1	1	1	2332A42	$6.55	2332A41	$7.14
High-Visibility							
9″	1	1	1	—	—	21535A68	8.78

Pocket Levels

Nonmagnetic

Magnetic

At ⅝″ high, these levels are small enough to carry around with you.

Nonmagnetic level is plastic and has a magnetic pick-up for retrieving metal parts, a V-groove for stability on curved surfaces, and a pocket clip.

Magnetic level is aluminum.

Lg.	No. of Vials, Horizontal	Nonmagnetic		Magnetic	
4″	1	—	—	2182A24	$17.31
5″	1	2034A15	$3.27	—	—

Mini-Levels with Pipe-End Attachment

A thumbscrew on this aluminum level secures to the end of your pipe or conduit to ensure accuracy when bending. It also has a V-groove for stability on curved surfaces and a top-reading window. Level is 1½″ Ht.×¾″ Wd.

Lg.	No. of Vials: Horizontal	No. of Vials: Vertical	No. of Vials: 45°	No. of Vials: 30°	Magnetic	
5½″	1	1	1	1	3860A67	$46.95

Starrett Precision Levels

No. 98 Machinist

199Z Master Precision

With a precision-machined leveling surface and a highly sensitive, graduated horizontal vial, these cast iron levels provide superior accuracy. *6″-18″ levels* also have a small vial set at a 90° angle to the main vial for checking two planes at the same time.

No. 98 Machinist—Levels have a V-groove for stability on curved surfaces. The 12″ level also has a vertical vial; the 18″ level also has two vertical vials. Sensitivity is 0.014″ to 0.016″/ft. for the 4″ level; it is 0.005″/ft. for all others.

199Z Master Precision—Sensitivity is 0.0005″/ft.

Lg.	Wd.	Ht.	Levels		Replacement Horizontal Vial

Digital Precision Levels

A color LCD and highly accurate sensor allow you to level horizontally or both horizontally and vertically at the same time. Both levels are 2 3/8″ Ht. x 1 1/2″ Wd. They require four AAA batteries (included).

Precision levels with vibration meter also display a real-time vibration graph. They come with USB cable and software, which allows for remote data display.

Levels with NIST certificate include a calibration certificate that's traceable to NIST and includes the test measurements that confirm accuracy.

Lg.	Sensitivity	Levels		Levels with NIST Certificate	
Precision Levels

Precision Levels with Vibration Meter					
7 3/8″	0.002″/ft.	8617T12	1,004.35	8617T22	1,254.35

Precision Levels

Cross

Horizontal

Square

Triangular Magnetic

Check the accuracy of horizontal and vertical surfaces with these precision-machined levels. All have two highly sensitive vials set at 90° angles for checking two planes at the same time. Levels are insulated to protect the vials from heat transfer that may affect level sensitivity, except cross level is not insulated.

Cross level is cast iron and has two 0.220 dia. mounting holes.

Horizontal levels are cast iron and have a V-groove for stability on curved surfaces.

Square and **triangular-magnetic** levels are steel, except 2330A12 is cast iron. All have two V-groove edges for stability on curved surfaces.

Lg.	Wd.	Sensitivity

Line Levels

Aluminum

Plastic

Lg.	No. of Vials, Horizontal	Aluminum		Plastic	
3″	1	2141A11	$3.02	2141A12	$2.04

Multi-Plane Levels

Two-Plane Cross Aluminum

Three-Plane L-Shape Brass

Adjust a surface into a level position on multiple planes.

Two Plane—Two vials are set at 90° angles to allow you to level in two directions simultaneously. The *plastic* and *aluminum* levels have two 5/32″ dia. mounting holes.

Three Plane—This level has two vials set at 90° angles, but also has a third vial for checking squareness.

	Material	Lg.	Wd.	Thick.		
Two Plane						
L-Shape	Cast Iron	2 3/4″	2 3/4″	5/8″	2212A52	$38.72

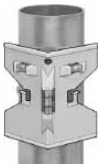
Three Plane						
L-Shape	Brass	3″	2″	1/2″	2212A51	52.62

Post Levels

Use these 90° levels to position posts and corners. They're made of plastic and have a rubber strap. Each leg is 3 1/2″ long.



Ht.	No. of Vials: Horizontal	No. of Vials: Vertical	Nonmagnetic		Magnetic	
5 1/8″	2	1	2186A17	$5.29	2186A18	$6.95

Levels for Long Distances

One person is all you need to determine level around corners and over long distances. Mount this plastic level with the tubing installed at your desired height. Fill the other end of the tubing with water and raise it until the electronic sensor buzzes, marking the matching level point. Add more tubing (sold separately below) to find a level point up to 100 feet away. Requires one 9-volt battery.

	Accuracy		
Level with 25-ft. Tubing	±1/16″	2223A62	$32.92
Extra 25-ft. Tubing Section with Connector		2223A63	16.35

Tilt Indicators

Single Axis

Dual Axis

A ball inside a level tube indicates the side-to-side tilt angle. Indicators are black plastic with white lettering.

Single-axis indicators have an adhesive strip on the back for mounting, except indicator with 0° to 3° range.

Dual-axis indicators measure 40° front-to-back tilt in addition to side-to-side tilt. They come with a mounting bracket and fasteners.

Side-to-Side Range	Side-to-Side Accuracy	Graduations	Lg.	Ht.	Thick.

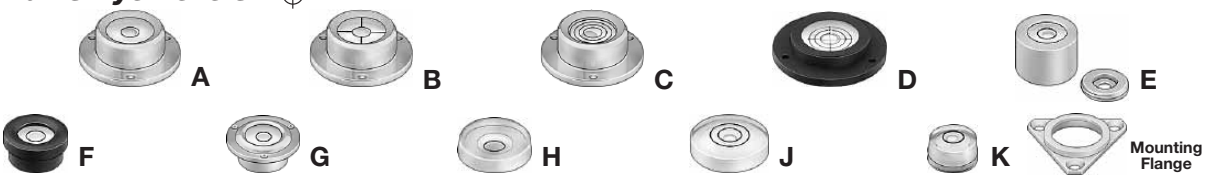
Bull's Eye Levels



Be spot-on in all directions of a horizontal plane with these circular levels. **Glass** offers better resistance to temperature variations and chemicals than plastic. **Plastic** is more durable than glass.

Glass Surface-Mount Levels—Have a chrome-plated brass housing and three mounting holes. *Style B* has cross lines. *Style C* has concentric circles.

Plastic Surface-Mount Levels—All have concentric circles and three mounting holes. 2308A34 and 2308A35 have a plastic housing, while 2308A37 and 2308A38 have an aluminum housing.

Glass Two-Piece Surface-Mount Level—This level has a mounting disc that attaches to your surface with an included fastener; the level has an aluminum housing and screws into the mounting disc.

Glass Recess-Mount Levels—These levels slip into a drilled hole. *Style F* has a brass housing with a black finish and fits into a 47/64″ dia. hole. *Style G* is chrome-plated brass, fits into an 1 1/16″ hole, and has three mounting holes.

Glass Level Vials—The bottom of the vial may not be completely level; you must level the vial when mounting.

Plastic Level Vials—*Style K* can be used with the optional mounting flange; the flange requires three No. 4 flat head screws.

Digital Angle Indicators

Indicators display highly accurate angle, level, and tilt measurements. They come set at true 0°, but you can choose an alternate zero point with the push of a button. Another button will freeze the reading on the display. Indicators are aluminum with machined leveling surfaces, a V-groove for stability on curved surfaces, and two 6-32 threaded holes for mounting. Overall accuracy is ±0.2°. They are 6″ Lg. × 1 1/4″ Wd. × 2″ Ht. Battery is included.

21465A82 and 21465A72 have an RS-232 compatible serial port, which can be used for ASCII output.

Indicators with NIST certificate include a calibration certificate that is traceable to NIST and includes the test measurements that confirm accuracy.

Range	Measuring Increments	Accuracy	Indicators		Indicators with NIST Certificate	
360° (90° × 4)	0.1°	±0.1° (0° to 10°)	21465A81	$198.15	21465A71	$363.15
360° (90° × 4)	0.01° (0° to 10°)	±0.05° (0° to 10°)	21465A82	337.04	21465A72	502.04

Mini Digital Angle Indicators

Only 2 1/4″ square and 1″ thick, these magnetic indicators provide digital angle readings. They allow you to choose an alternate zero point with the push of a button. These indicators also have auto shutoff.

Indicator has an aluminum housing. Accuracy is ±0.2°. Requires one AAA battery.

Indicator with level also shows level on the display and has a hold button that freezes the reading. The display pops up for easy viewing. It has a plastic housing with an aluminum V-groove for stability on curved surfaces. Accuracy is ±0.1°. It requires two AAA batteries.

Indicator

Indicator with Level

Range	Measuring Increments	Indicator		Indicator with Level	
±180°	0.1°	3353A67	$38.10	3353A78	$50.57

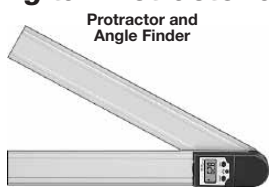
Digital Angle Indicators with Remote Display

Electronic sensor and display are connected by a 4-ft. cable so you can measure angles from a distance. They can be mounted up to 200 feet apart by replacing the included cable with a longer cable length (sold separately). The display unit has a plastic housing; size is 5″ Lg. × 3 1/2″ Ht. × 1 1/4″ Dp. The sensor is 2 1/2″ Ht. × 3/4″ Dp. Requires one 9-volt battery.

Also Available: Longer cable lengths. Please ask for 21955A31 and specify 10, 20, 30, 40, 50, 100, 150, or 200 ft.

Range	Measuring Increments	Accuracy		
±19.99°	0.01°	±0.1° (0° to 10°)	21955A58	$515.00
±45°	0.1°	±0.1° (0° to 10°)	21955A57	515.00

Digital Protractor and Angle Finders



Protractor and Angle Finder

Protractor and Angle Finder with Level

Large digital displays on these aluminum tools provide easy-to-read angle calculations. Batteries are included.

Protractor and Angle Finders—These magnetic tools have one digital display and a lock to hold the arms in position. Closed size is 2″ Ht. × 1/2″ Thick.

Protractor and Angle Finder with Level—This tool has front and back digital displays, as well as horizontal and vertical vials. It also has a memory that stores angle measurements, a calculator to determine exact angles of cuts, a hold button that freezes the display, and auto shutoff. Closed size is 2 3/8″ Ht. × 1 3/8″ Thick.

Protractor and Angle Finder with Level and Laser—A dot laser extends the working distance 200 feet beyond the tool length. It has two digital displays that invert when turned upside down; one shows the base angle and the other shows the moveable arm angle. This magnetic tool also has a lock to hold the arm in position, a hold button that freezes the display, auto shutoff, and 1/4″-20 threads for connecting to a tripod. Closed size is 2 1/2″ Ht. × 1 1/2″ Thick.

Angle Indicators

These indicators have a dial that is divided into four quadrants for reading any angle in a 360° range.

Plastic Pitch and Angle Indicator—Two quadrants read angles from 0° to 90°; the opposite two quadrants read pitch (in./ft.).

Plastic Angle Indicators—Have four quadrants that each read any angle from 0° to 90°.

Aluminum Angle Indicator—Reads any angle from 0° to 90° in each of four quadrants. Base is precision machined for accuracy.

Center Locators and Angle Indicators

Find the center of square and round materials, such as structural framing and pipe, and determine setup angles on milling machines and grinders. These instruments have a magnetic V-base with a pointed punch to accurately mark the center of workpieces. Made of aluminum, all are 5 1/4″ Ht. × 5″ Wd. × 1″ Dp. and have a 2″ dia. dial.

Use the **clockwise dial** for moving in a counterclockwise direction. Use the **counterclockwise dial** for moving in a clockwise direction.

Sight Levels

Nonmagnifying

Magnifying

Use these compact instruments to establish a level sight line. All have an enclosed vial.

Nonmagnifying level has crosshair and reference lines on the lens. Level is aluminum and has a pocket clip.

Magnifying level has a telescoping eyepiece that provides 2X magnification; extended length is 7 1/2″. Level is brass and comes with a case.

	Lg.		
Nonmagnifying	5″	19225A62	$19.40
Magnifying	6″	19225A67	72.02

Telescoping Leveling Rods

An integral component of sight leveling, use these telescoping rods in conjunction with sight levels. They extend to the length you need, then collapse for convenient storage.

Fiberglass rods are nonconductive.

Overall Length Open	Closed	Graduations		
Aluminum Rectangular				
8 ft.	3 ft., 0 in.	ft./in./8ths	19235A55	$43.39

Optional Case for Fiberglass Rectangular			19235A61	18.95

Long Distance Sight Levels

Commonly seen in the hands of surveyors, sight levels rotate 360° to find horizontal level when grading for elevation. All have 5/8″-11 female threads for mounting on a tripod.

Level with angle indicator, also called a transit level, tilts up and down to determine incline and can be set to use only as a level. It has three leveling screws to adjust line of sight.

Sets—In addition to the instrument, both come with an aluminum leveling rod that telescopes from 3- to 8-ft. high and an aluminum tripod that adjusts from 38″ to 63″ high.

Level

	Magnification	Accuracy	Working Distance	Horizontal Range	Horizontal Grads.	Vertical Range	Vertical Grads.	Individual Instruments		Sets

Tripods

Sharp-point feet on this tripod provides stability on turf, dirt, and gravel. It's aluminum and has a flat head. An opening in the head allows use with optical and laser plumb instruments. It comes with changeable rubber pads for the feet.

Mounting Threads, Male	Ht.		
5/8″-11	42″ to 65″	8973A81	$88.02

Chalk Line Reels

Fill these reels with powdered chalk and you'll be ready to snap a line. Chalk is sold separately.

Compact—Small enough to fit in your pocket. Case is aluminum.

Quick Return—Rewinds three times faster than compact reels. Case is plastic with an aluminum front.

High Capacity—With over five times the chalk capacity of other reels, these handle big jobs and make bold lines. Case is orange plastic.

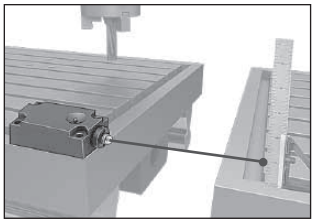
Reflective Red	4″	3″	5741T32	49.40

Mountable Aligning Lasers

Flat-Body Lasers



Position these lasers directly on a flat surface—they have four mounting holes and do not require an additional mount. Range is 0-300 ft. Lasers produce a red dot that is best viewed indoors. Twist the knob to focus the dot so it is more precise at short distances. The dot size is 1/16″ at distances up to 2 ft. and 3″ at 300 ft. *Portable laser* requires a 3-volt lithium battery. *Plug-in laser* operates on 120 volts AC and has a cord with plug.

Dot-to-line converter produces a 12″ line at 1 ft.

Optional pivoting magnetic mount pivots 180°.

	Application	Overall Lg.	Overall Wd.	Overall Ht.		
Portable Laser	Align machine tables during set up	4″	1½″	1″	20005A41	$434.55

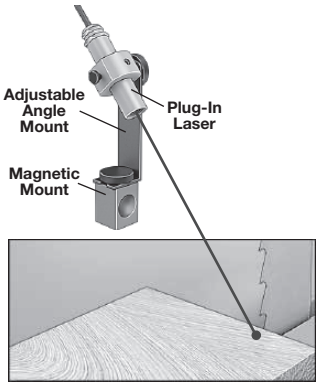
Optional Pivoting Magnetic Mount					20005A53	107.28
3-Volt Lithium Battery					7821K63	5.64

Dust- and Moisture-Resistant Cylindrical-Body Lasers



A sealed lens keeps these lasers free of dust and moisture. They project a red dot that is best viewed indoors. The dot size is 3/8″ at 100 ft. *Portable laser* includes a battery and has a horizontal vial to check level. *Plug-in laser* operates on 120 volts AC and has a cord with plug.

Line/dot size converter set includes one dot-to-line converter that projects a 2-ft. line at 18 ft. and three lens covers that convert the dot that the laser produces into a smaller dot (1/16″, 3/32″, or 1/8″) at distances up to 15 ft.

	Application	Range	Overall Dia.	Overall Lg.		
Portable Laser	Set up blade in cutting machines	0-100 ft.	3/4″	6 3/4″	5198T52	$484.88

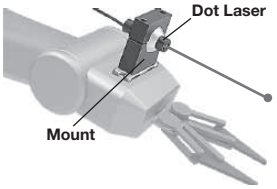
Line/Dot Size Converter Set					5198T1	133.33
Adjustable Angle Mount—Rotates 360°					5198T91	56.00
Magnetic Mount—Attaches to the Adjustable Angle Mount					5198T92	39.00

Compact Cylindrical-Body Lasers



Smaller than other mountable aligning lasers, these are sized for mounting on machinery to ensure tools are properly positioned. You can also use them in conjunction with machine-vision cameras to serve as a reference location for making measurements. All lasers operate on 5 volts DC. They have wire leads for connecting to a DC power source (not included; see the plug-in transformer). For all lasers, the size of the dot or line increases as the distance increases. *Dot* and *line lasers* project a red light that is best viewed indoors. *High-visibility dot laser* projects a green light that can be seen in brightly lit areas. *Adjustable dot laser* projects a red dot that can be adjusted to 1/16″ at distances up to 2 ft. and 1 1/4″ at 100 ft. Laser comes with a fixed mount and a transformer. It works with the dot-to-line converter and the dot-to-crosshair converter (sold separately) for the flat-body lasers on this page.

	Application	Range	Dot/Line Size	Overall Dia.	Overall Lg.		
Dot Laser	Attach to robot arms to mark part placement	0-100 ft.	1/2″ @ 100 ft.	7/16″	1 1/2″	2073A11	$121.00

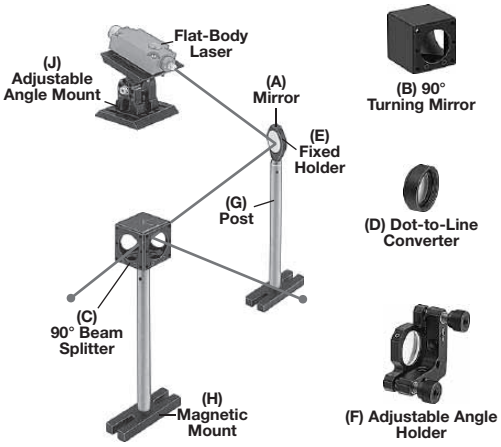
Mount for High-Visibility Dot Laser—Has a magnetic base and mounting holes						2073A16	94.72

Laser Directing Components



Direct laser beams where you need them. Components work with any dot laser.

90° beam splitter converts a single dot into two dots; one continues in a straight line, the other projects at a 90° angle.

Posts have 8-32 male threads on one end and 1/4″-20 female threads on the other. Diameter is 1/2″. For additional lengths, see 94033A posts on page 3297.

Leveling Lasers

Project accurate level references onto walls and ceilings when hanging light fixtures or installing pipe. Also known as torpedo levels, these laser levels project a red light that is best viewed indoors. They have a magnetic leveling base, a V-groove for stability on curved surfaces, and 1/4"-20 threads for tripod mounting. Batteries and a leveling plate are included.

Single dot/line laser has a head that you twist to switch between a dot, a horizontal line, or a vertical line. It comes with a horizontal vial, a vertical vial, and a cross check vial.

3-dot laser projects three dots simultaneously; one horizontally, one vertically, and one to the side. Laser also has a horizontal vial, a vertical vial, a cross check vial, and a 45° vial.

	Application	Accuracy	Range	Overall Lg.	Overall Wd.	Overall Ht.		
Single Dot/Line	Hang light fixtures straight and level	±1/8" @ 50 ft.	0-100 ft.	7 3/8"	1"	2"	2032A7	$97.40
3 Dots	Install shelving units straight, level, and plumb	±1/8" @ 50 ft.	0-100 ft.	9 1/2"	1"	2 1/4"	2032A9	134.76

Long-Distance Leveling Lasers

Mark a dot across your plant with confidence that it's level and accurate. These compact laser levels are also known as torpedo levels. They project a single red dot that is best viewed indoors. Batteries are included.

Laser with horizontal and vertical vials has 1/4"-20 threads for tripod mounting.

Laser with horizontal, vertical, and 45° vials has a magnetic base. Use the leveling plate (sold separately) for tripod mounting.

90° beam splitter converts one dot into two dots set at a 90° angle.

Dot-to-line converter changes the dot into a vertical or horizontal line.

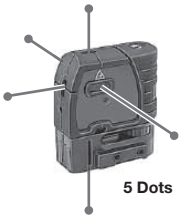
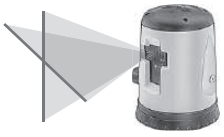
Automatic Leveling Lasers

3 Dots

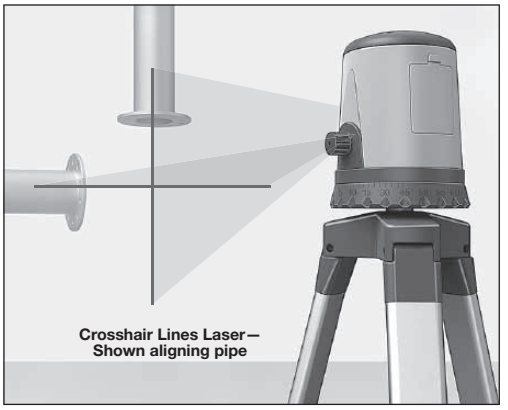


5 Dots



Crosshair Lines

360° Sweeping Lines



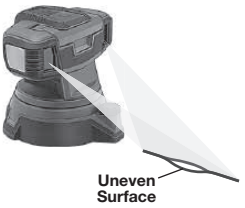
Crosshair Lines Laser—Shown aligning pipe

Set these lasers on any surface, and they'll level themselves within about 4°. Whether you're hanging a drop ceiling or aligning bench tops your installation will be at the right height. Lasers project a red light that is best viewed indoors. They have 5/8"-11 threads for tripod mounting. Batteries are included, except for the crosshair lines laser, which requires three AAA batteries.

3-dot laser and **5-dot laser** come with a magnetic base mount. **Crosshair lines laser** comes with a tripod that extends to 46". **360° sweeping lines laser** has three rotational speeds. It comes with a laser detector, which senses the beam at long distances.

	Application	Accuracy	Range	Overall Lg.	Overall Wd.	Overall Ht.		
3 Dots	Align multiple granite surface plates	±1/4" @ 100 ft.	0-100 ft.	3 1/8"	1 5/8"	4 1/8"	1986A18	$132.92
5 Dots	Level cable trays for multiple machines	±1/4" @ 100 ft.	0-100 ft.	3 1/8"	1 5/8"	4 1/8"	1986A17	223.25
Crosshair Lines	Install intersecting pipes or conduit	±1/4" @ 35 ft.	0-100 ft.	4"	3 1/2"	5"	4098T26	112.67
360° Sweeping Lines	Lay out air line around your plant perimeter	±1/8" @ 100 ft.	0-200 ft.	5"	6 7/8"	6 5/8"	19985A55	522.60

Surface-Flatness Lasers



When a perfectly flat surface is essential, this laser checks for uneven spots on floors and other horizontal surfaces that are at least 18″. The laser projects two red beams that are best viewed indoors. The base sweeps the beams in a circle around the floor; the beams form a single line on flat surfaces, and separate into two lines when the surface is uneven. You can also measure the degree of deviation with the included detector. Use when installing machine tools, assembling granite surface plates, and mounting cranes and hoists. Batteries and a remote control are included.

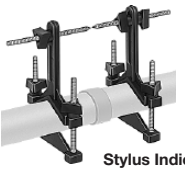
Range		Overall				
Without Detector	With Detector	Lg.	Wd.	Ht.		
0-30 ft.	0-60 ft.	7¾″	8⅛″	8¼″	2207A22	$491.52

Chuck-Mount Lasers

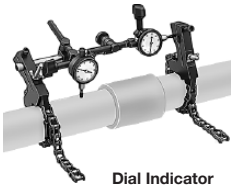
Mount this laser into a ¼″ or larger chuck to precisely indicate the drilling point. Laser projects a 0.1 to 0.5 mm red dot that is best viewed indoors. Use on milling machines and drill presses. Batteries are included.

	Overall			
Range	Dia.	Lg.		
0-12″	¾″	2¾″	2035A7	$134.08

Shaft Alignment Kits



Stylus Indicator



Dial Indicator

Stylus Indicators

Use stylus movement to check for misalignment. Kits include two sets of mounting brackets with adjustment knobs.

For Shaft Size	Stylus Lg. (Qty.)		
7⁄16″-3″	4¼″ (2)	6468K24	$215.00
7⁄16″-7″	4¼″ (2), 6½″ (2)	6468K25	262.78

Dial Indicators

These easy-to-read dials offer more precise measurement of misalignment than stylus indicators. Kits include stainless steel mounting tubes, software for alignment calculation, and two each of the following: alignment frames, dial indicators, indicator mount rods with swivel joints, and roller chains.

For Shaft Size	No. of Stainless Steel Mounting Tubes 5″	7″	9″	12″	15″		
¾″-3½″	2	2	2	—	—	61035K29	$997.74

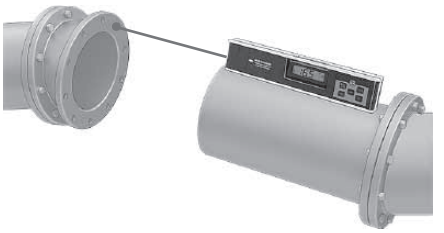
Binoculars

Focus Free

Binoculars come with a case and a strap.
Focus Free—Your subject automatically comes into clear view. An extra-wide field of view makes it easy to track fast-moving objects. Size is 4¾″ Lg. × 7″ Wd. × 2″ Ht.
Night Vision—A built-in illuminator allows you to see in complete darkness at distances up to 750 feet. Not for use in brightly lit areas. Size is 6½″ Lg. × 6¼″ Wd. × 3″ Ht. Requires two AAA batteries.

	Magnification	Lens Dia.	Field of View at 1,000 yds.		
Focus Free	7X	35 mm	578 ft.	6590T11	$74.56
Night Vision	2.5X	40 mm	94 ft.	14175T9	612.58

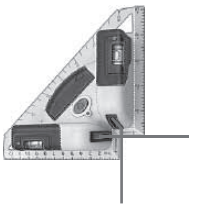
Angle-Indicating Lasers



Align guide rails or lay pipe at specific angles from a flat surface. This laser projects a red dot that is best viewed indoors. The display shows the precise angle of the beam and rotates for overhead measurements. The display is also backlit for viewing in dim areas. Laser has a magnetic base and an audible indicator to tell you the tool is level and plumb. Batteries are included.

		Overall				
Accuracy	Range	Lg.	Wd.	Ht.		
±⅛″ @ 50 ft.	0-200 ft.	10½″	1¼″	2¼″	9182T11	$219.03

Right-Angle Lasers



Lay out machine tables and work stations at precise right angles. This laser generates two red lines that form a 90° angle. A built-in protractor allows you to position the perpendicular lines at angles between 0° and 90°. The laser lines are best viewed indoors. Batteries are included.

		Overall				
Accuracy	Range	Lg.	Wd.	Ht.		
±¼″ @ 60 ft.	0-30 ft.	6⅛″	6⅛″	2″	2019A33	$82.38

Shaft Balancers

Standard Bench Style

Pillow-Block Style

Test parts for balance by placing them on the discs. The discs are 5¾″ dia., hardened and ground steel and they rotate freely on ball bearings.
Standard Bench Style—Can handle heavier loads than the super-sensitive bench style.
Super-Sensitive Bench Style—Detects even slight imbalances in lighter weight materials than the standard bench style.
Pillow-Block Style—Excellent for use with large parts because they can be positioned at any distance and attached to any solid base.
Also Available: Replacement discs. Please ask for 20075A888 and specify shaft balancer part number.

Max. Cap., lbs.	Max. Dia. of Work	Max. Space Between Discs	Overall Ht.	Wt., lbs.		Each
Standard Bench Style						
1,000	21″	20″	13¼″	40	2264A2	$1,152.00

2,000	—	—	7″	50	2337A17	2,472.00

Compact Telescopes

A slide control allows one-finger focusing when viewing objects far away. Telescope has a 9° field of view. It comes with a case and a strap. Size is 3¾″ Lg. × 1½″ Wd. × 1″ Ht.

Magnification		
6X	3118T38	$166.15

Stereo Microscopes

Microscope

Microscope with Adjustable Arm

Zoom Microscope with Digital Imaging

These bench-top microscopes provide exceptionally clear, crisp images for inspection and assembly work. All have a 45° view angle and an adjustable focus. They include a light that operates on 120 volts AC with a cord and plug, except zoom microscope, which does not have a light.

Microscope has an upper and lower light that can be illuminated separately or simultaneously. The head rotates 360°. Field of view is 0.787″ dia. at 10X, 0.26″ at 30X.

Microscope with adjustable arm allows you to choose where you want to view. The head rotates 360°. Field of view is 0.787″ dia. at 10X, 0.26″ at 30X. Includes a ring light.

Zoom microscope offers the widest range of magnification. The head rotates 360°. Field of view is 1.125″ dia. at 7X, 0.052″ at 180X. Microscope does not include a light. It can be used with the fiber-optic light source or microscope illuminator 11505T65 (sold separately).

Zoom microscope with adjustable arm provides the most versatility—you decide where you view and at what magnification. The head rotates 360°. Field of view is 1.126″ dia. at 7X, 0.17″ at 45X. Includes a ring light.

Zoom microscope with digital imaging comes with a 1.3 megapixel camera that has a USB port for interfacing with your computer. Microscope has an upper LED light. Field of view is 1.35″ dia. at 6.7X, 0.14″ at 50X.

Fiber-optic light source has two flexible arms that allow you to position the light where you need it. Operates on 110 volts AC and includes a cord and plug.

Also Available: Replacement bulbs for microscopes. Please ask for 11705T1 and specify microscope part number.

	Magnification		
Microscope	10X and 30X	11705T96	$410.87
Microscope with Adjustable Arm	10X and 30X	11705T93	778.00
Zoom Microscope	7X to 180X	22005A11	872.55
Zoom Microscope with Adjustable Arm	7X to 45X	22005A21	1,070.00
Zoom Microscope with Digital Imaging	6.7X to 50X	22005A49	2,060.00
Fiber-Optic Light Source		22005A22	558.00

Microscopes with Measuring Scale

Precisely measure while magnifying. These adjustable-focus microscopes have an internal scale and a penlight mounted on the base to enhance your view. They are 7½″ high. The base is 2½″ dia. Field of view is 0.094″ dia. for the 60X microscope; 0.057″ dia. for the 100X. Batteries are included.

Magnification	Scale	Graduations		
60X	0″ to 0.080″	0.001″	2158T12	$494.90
100X	0″ to 0.050″	0.0005″	2158T13	505.24

Microscope Illuminators

Maximize your microscope's power by adding 360° of shadow-free light. Illuminators operate on 120 volts AC and have a power cord with plug.

LED illuminator allows you to adjust the light's intensity from 5% to 100%.

LED

Pocket Microscopes

Microscope

Zoom Microscope

Always be prepared to make on-the-job specification checks. These compact microscopes have a light to enhance the view. They produce a distortion-free inverted image, except the image on the zoom microscope is not inverted.

Microscopes—Are 5″ high with a ¼″ dia. eyepiece. Housing is plastic. Field of view is 0.13″ dia. for the 25X microscope; 0.08″ for the 50X microscope. Batteries are included.

Zoom Microscope—Slide the switch to adjust the magnification. Microscope is 6½″ high and has a ½″ dia. eyepiece. Housing is plastic. Field of view is 0.25″. Also comes with a snap-on slide holder. Batteries are included.

Microscopes with Scale—Have an internal scale for precise measuring. **25X microscope** is 5″ high with a ¼″ dia. eyepiece. Housing is plastic. Field of view is 0.13″ dia. Battery is included. **40X microscope** is 5¼″ high with a ½″ dia. eyepiece. Housing is plastic. Field of view is 0.15″ dia. Requires two AA batteries.

Hand-Held Video Microscopes

Capture magnified images as movies or pictures with this portable digital microscope. They include software and a USB cable that attaches to your computer, so you can view the image you are capturing. All have a built-in light and stand. Microscopes with 10X to 200X magnification include a measurement function.

86X to 457X microscope has a focus distance of 1.97″ at 86X. Size is 5″ Lg.×3⅛″ Dia.

10X to 200X microscopes have a focus distance of 4.4″ at 10X. Both are 4⅜″ Lg.×1¼″ Dia.

Magnification	Resolution, megapixel	Computer Compatibility		
86X to 457X	2.0	PC and Mac	1058T28	$92.31
10X to 200X	1.3	PC	1058T23	235.58
10X to 200X	5.0	PC	1058T24	317.81

Digital Microscope/Cameras

Magnify images and snap high-resolution digital pictures for quality control and material inspection. This microscope has a built-in camera with 2 megapixel resolution, 2 GB of built-in memory, and a 2″ LCD screen with a 200X digital zoom. The microscope has a magnification range of 10X to 40X, an adjustable focus, and adjustable LED lights to brighten the magnified area. It includes a rechargeable battery, software, an adjustable stand, and a USB cable. Size is ½″ Ht.×2³⁄₁₆″ Wd.×1″ Dp.

3077T65		$368.31

Digital Cameras

Compact

Use these cameras to capture pictures and video, and then transfer them to your PC or the web. Both have auto-focus, flash, and a self-timer.

Compact camera is 20 megapixels and has a 2¾″ LCD screen, an 8X optical zoom lens, and a 4X digital zoom. Video recordings are HD 720p. Includes USB cable, software, rechargeable battery, and an 8 GB memory card. Size is 3¾″ Wd.×1″ Dp.×2¼″ Ht.

High-speed camera is 16 megapixels and has a 3″ LCD screen, a 50X optical zoom lens, and a 4X digital zoom for a total zooming range of 200X when the digital zoom is paired with the optical zoom. Video recordings are HD 1080p. Includes AC power adapter, battery charger, lens cap, neck strap, and rechargeable lithium ion battery. Size is 4¾″ Wd.×3½″ Dp.×3″ Ht.

	Photography Speed, fps		
Compact	1	1041T71	$165.75
High Speed	10	1041T62	396.18
Optional 32 GB Memory Card		12075T27	12.46

Illuminated Magnifiers

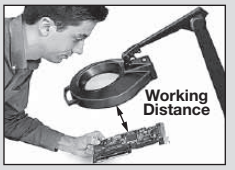
About Magnification

When it comes to magnification, the power you need depends on your application. Higher magnification reveals fine details, but it also results in a smaller field of view, so you will have to move the object around to see more of it. The example below shows the enhancement of a razor blade at different magnification powers.

1.25X to 2.25X enhances details you can already see. Use this range to read serial numbers and assemble circuit boards.

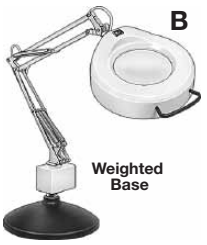
2.5X to 5X brings out details you may otherwise miss. Use this range for general inspection and to find flaws in your workpiece.

7X to 20X picks up features you can't see with your naked eye. Use this range to find imperfections in surfaces.



Working distance is the point where your object will be in the best possible focus. The higher the magnification, the closer you will need to be.

Adjustable-Arm Illuminated Magnifiers



All magnifiers have a glass lens and a metal spring arm that provides smooth positioning. They operate on 120 volts AC and include a cord with plug. Field of view is approximately the same as lens dia. *Styles A-J* come with a bulb; *Style K* requires a 60-watt incandescent bulb. *Clamp-base* magnifiers fit material up to 2¼″ thick.

Fluorescent magnifiers produce a cool, even, white light. *Styles B-D* are UL listed.

Halogen magnifiers provide the brightest light but also generate the most heat. UL listed.

LED magnifiers offer long life; they'll shine for 50,000 hours. They emit a focused, even light beam for distortion-free viewing and are dimmable. UL listed.

Incandescent magnifier is the most economical choice for general inspection work. ETL listed.

Gooseneck Combination Lamp Magnifiers

The lamp and the lens are mounted on separate arms to provide ultimate flexibility. This magnifier is black with plastic-coated steel arms and a 7″ dia. weighted base. The lamp comes with a steel shade and a 20-watt halogen bulb that provides bright, crisp light. The lens is glass. Magnifier operates on 120 volts AC. It has a power cord with plug. UL listed. Cannot be sold in California.

Magnification	Working Distance	Arm Lg.	Lens Dia.		
1.75X	13″	16″	5″	10605T61	$178.36
Add-On 2X Lens				10605T441	30.45

Replacement 1.75X Lens				1035T55	12.03
Replacement 20-Watt Halogen Bulb				1997K23	6.11

Gooseneck Magnifiers

Magnetic Base

Bend the flexible steel neck to any position and it will stay in place. Magnifiers are black steel.

Magnetic-base magnifiers have a 3″ dia. base and a glass lens.

Weighted-base magnifier has a 6″ Lg.×6½″ Wd. base and an acrylic lens.

LED-illuminated with clamp base magnifier offers long life; it will shine for 50,000 hours. It emits a focused, even light beam for distortion-free viewing. Maximum clamping thickness is 1 7/16″. It has an acrylic lens with a 3.5X bifocal lens. Requires three AAA batteries.

Magnification	Working Distance	Arm Lg.	Lens Dia.		
Magnetic Base					
2.25X	8″	9″	4″	2106T11	$54.92

LED Illuminated with Clamp Base					
2X	10″	17″	4″	2106T14	42.84

Illuminated Stand Magnifiers

Two LED bulbs illuminate your work while the stand keeps your hands free. The magnifier detaches from the stand for hand-held use. Lens is acrylic with a 3.5X bifocal. The stand is silver plastic and measures 5½″ Lg.×5¾″ Wd. at the base. Requires two AA batteries.

Magnification	Working Distance	Arm Lg.	Lens Dia.		
2X	5″	7″	4¼″	2122T42	$17.14

Fixed-Focus Stand Magnifiers

Metal Stand

The lens is mounted into a stand to keep it at the optimal distance for focused, hands-free magnification. Also called linen testers, these magnifiers are often used for quality control and thread counting in fabric inspection.

Plastic-stand magnifier has an acrylic lens and a scale that measures lengths to 1″ in 1/16″ and 1 mm increments.

Metal-stand magnifiers have a glass lens. 1493T26 has a scale that measures lengths to 1″ in 1/8″ and 1 mm increments. 1493T27 has a scale that measures lengths to 1/2″ in 1/8″ and 1 mm increments.

Magnification	Working Distance	Lens Dia.	Ht.		
Plastic Stand

10X	1¼″	1/2″	1¼″	1493T27	22.10

Hand-Held Magnifier Sets

Always have a magnifier at arm's reach with this bench-top set. Set includes four magnifiers: 2½″ Dia. (2.75X); 3¼″ Dia. (2.5X); 4″ Dia. (2X); and 4″ Lg.×2″ Wd. (2X). Magnifiers are plastic with an acrylic lens.

2131T41 ..... $59.52

Hand-Held Magnifiers

Nonilluminated

Incandescent Illuminated

LED Illuminated

Magnifiers have a plastic frame and handle.

Nonilluminated magnifiers have an acrylic lens.

Incandescent-illuminated magnifiers are an economical way to shine a light on your inspection work. They have an acrylic lens. Batteries are included, except 2154T44 requires two C batteries.

LED-illuminated magnifier offers long life; it will shine for 50,000 hours. It emits a focused, even light beam for distortion-free viewing. Requires four AAA batteries.

Magnifier Lens	Magnification Bifocal Lens	Working Distance	Lens Size	Lg.

Compact Fine-Detail Magnifiers

Triple Lens

These jeweler-style magnifiers enable you to see fine details in sharp focus.

Triple-lens magnifiers, also called Hastings Triplet magnifiers, have three lenses bonded together for distortion-free images.

Single-lens magnifiers, also known as Coddington magnifiers, have a single lens with a grooved circumference.

		Triple Lens			Single Lens		
Magnification	Working Distance	Lens Dia.			Lens Dia.

■ Also has an 8X bifocal inset.

Flashlight-Style Illuminated Magnifiers

Standard with Scale—The eyepiece has scales on two sides; both are graduated by 1/32″ and 0.5 mm. Magnifiers are made of plastic and have a glass lens. 6559T11 requires two D batteries; 6559T12 requires two C batteries.

Standard with Precision Scale—Comes with a detachable scale on the eyepiece that's graduated by 1/64″ and 0.5 mm. Magnifier is made of plastic and has a plastic lens with scratch-resistant coating. Requires two C batteries.

Extra-Sharp View—Magnifier has a grooved lens, which is also known as a Coddington magnifier, for an extremely clear view. It has a nickel-plated aluminum handle, plastic head, and a glass lens. Requires two AA batteries.

Wide View—This magnifier has an extra-wide plastic lens that's curved on the viewing side to ensure edge-to-edge clarity. Made of plastic. Requires two C batteries.

Extension Magnifiers

Flex Shaft

Telescoping

A long arm and a small, swivel lens allow these magnifiers to slip into tight locations. The lens is acrylic.

Flex-shaft magnifier has a rubber-coated steel arm that bends and holds its shape. **Telescoping** magnifier has a cushion-grip stainless steel handle.

	Magnification	Working Distance	Lens Dia.	O'all Lg.		
Flex Shaft	2X	2″	1½″	22¼″	1099T16	$25.10
Telescoping	2.5X	4″	2″	6⅞″-36″	1330T4	11.23

Magnifiers with Measuring Scales

Magnify and measure in one operation. All are made of plastic with adjustable precision-ground glass lenses. *Triple-lens* magnifiers provide the sharpest focus. *Double-lens* magnifiers come with a measuring scale.

Triple-Lens Magnifiers with Optional Measuring Scales

Also known as Hastings Triplet magnifiers, these have three lenses bonded together for clear magnification. Magnifiers are 2″ high. The measuring scales are sold separately below.

General purpose scale measures radii from 1/16″ to 3/8″; angles up to 90° in 1° increments; lengths up to 1/2″ in 0.005″ increments; lengths up to 10 mm in 0.1 mm increments; and line widths of 0.001″, 0.002″, and 0.003″.

Protractor scale measures angles up to 360° in 1° increments.

Inch scale measures up to 3/4″ in 0.005″ increments.

Metric scale measures up to 20 mm in 0.1 mm increments.

Magnification	Working Distance	Lens Dia.		
7X	1½″	¾″	1502T2	$56.42
10X	1″	⅝″	1502T3	60.31
General Purpose Scale			1502T4	33.86
Protractor Scale			1502T7	33.86
Inch Scale			1502T5	33.86
Metric Scale			1502T6	33.86

Double-Lens Magnifiers with Included Measuring Scale

Standard

Illuminated

Two lenses provide distortion-free viewing. Magnifiers are 2 5/16″ high. They include a general purpose scale that measures circles from 0.002″ to 0.0625″; radii from 1/16″ to 3/8″; angles up to 90° in 5° increments; lengths up to 0.5″ in 0.005″ increments; lengths up to 10 mm in 0.2 mm increments; and line widths from 0.016″ to 0.250″.

Illuminated magnifier has a 4½″ long handle. Requires two C batteries.

Optional Thread Accuracy Scale—Measures the following threads per inch: 50, 32, 28, 24, 20, 18, 16, 14, and 8.

Magnification	Working Distance	Lens Dia.	Standard Magnifier		Illuminated Magnifier	
7X	¾″	1″	1755T17	$90.43	1755T11	$105.58
Replacement General Purpose Scale					1755T22	22.54
Optional Thread Accuracy Scale					1755T23	22.54

Adjustable-Focus Eyeglass Magnifiers

A dial on each arm of this eyeglass magnifier allows you to focus the lenses independently. Magnifier has 1 1/4″ dia. plastic lenses.

Magnification	Working Distance		
2X	16″	3102T45	$124.75

Distortion-Free Magnifiers

A long-standing favorite for precision work, this magnifier has two lenses for a wide, distortion-free field of view. It is made of plastic with glass lenses.

Magnification	Working Distance	Lens Dia.		
3.5X	3″	1⅝″	1494T1	$45.27

Fine-Detail Magnifiers

Bring detailed work into focus. Also known as watchmakers' loupes, these magnifiers are made of plastic with glass lenses.

Extra-sharp magnifier has three lenses bonded together for sharp magnification without distortion.

Magnification	Working Distance	Lens Dia.		
Standard				
4X	2½″	1″	8539T65	$14.56
5X	2″	1″	8539T64	14.56

Extra Sharp				
10X	1″	⅝″	8539T35	55.10

Adjustable-Magnification Fine-Detail Magnifiers

Turn the eyepiece until you reach the magnification you need. Also known as a loupe, this magnifier has a scale that measures length to 0.6″ in 0.005″ increments and another that measures length to 16 mm in 0.1 mm increments. Magnifier is made of metal and plastic with a glass lens.

Magnification	Lens Dia.		
8X, 10X, 12X, 14X, 16X	⅜″	13765T21	$396.46

Eyeglass Magnifiers

Always there when you need them, these eyeglass magnifiers flip out of the way when not in use. The lens is acrylic and measures 1⅛″ Lg. × 3⅛″ Wd.

Clip-on magnifiers attach to your glasses with wire clips.

Eyeglass-frame magnifiers are designed for those who don't wear glasses, but they can also be worn over eyeglasses. Frame is plastic.

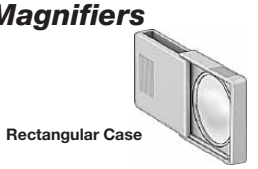
Magnification	Working Distance	Clip On		Eyeglass Frame	
1.5X	20″	6771T36	$18.10	—	—
1.75X	14″	6771T21	18.10	1344T21	$30.70
2X	10″	6771T38	18.10	—	—
2.25X	8″	6771T22	18.10	1344T22	30.70
2.75X	6″	6771T23	18.10	1344T23	30.70
3.5X	4″	6771T24	19.90	1344T24	30.70

Fine-Detail Eyeglass Magnifiers

Clip a magnifier onto the frame of your eyeglasses for viewing fine details—it flips out of the way when not in use. They have 0.94″ dia. acrylic lenses.

Magnification	Working Distance	No. of Lenses		
3X	3½″	1	1340T1	$35.83
4X	2½″	1	1340T11	36.88
7X	1½″	1	1340T2	36.88
4X and 7X	2½″ and 1½″	2	1340T3	33.47
5X and 10X	2″ and 1″	2	1340T8	33.47

Slide-Open Pocket Magnifiers



The plastic case protects these compact magnifiers when in storage and serves as a handle when in use.

Oval case magnifiers come with your choice of one, two, or three lenses; use multiple lenses together to achieve the magnification rating listed. Lenses are glass, unless noted.

Rectangular case magnifiers have an acrylic lens.

Magnification	Working Distance	Lens Dia.	No. of Lenses		
Oval Case					
3X	3″	1⅜″	1	6798T13♠	$8.24
4X	2½″	1⅜″	1	1503T3	18.40

5X	2″	1⅜″	1	2152T2	11.20

♠ Lens is acrylic.

Headband Flip-Up Magnifiers

Designed to fit over prescription and safety glasses, use these magnifiers to read fine print and inspect precision parts.

Economy magnifiers are lightweight and come with a 1½″ Lg. × 4″ Wd. acrylic lens.

Standard magnifiers come with a 1½″ Lg. × 4″ Wd. glass lens.

Antistatic magnifiers are the best choice when working with electronics and in clean-room environments. They come with a 1 3⁄16″ Lg. × 3 5⁄16″ Wd. acrylic lens.

Illuminated magnifiers have a xenon bulb to improve your view by shining a bright, white light on your work. They come with a 1⅛″ Lg. × 3⅛″ Wd. acrylic lens. Batteries are included.

LED-illuminated magnifier is preferred for its long life; it will shine for up to 50,000 hours. It comes with four 1⅞″ Lg. × 4″ Wd. acrylic lenses. Requires three AAA batteries.

Optional 2.5X fine-detail magnifier serves as a bifocal. Also known as a loupe, it attaches to either side of the standard magnifiers and has a glass lens.

Machine Vision Cameras

With Standard Lens

Take a photo of objects as they move along a conveyor. The cameras and lenses are sold separately, so you can create the perfect inspecting tool for your operation. All cameras come with viewing software. They connect to your computer with a USB cord (sold separately below). *0.36 megapixel* cameras have a 752×480 resolution. *1.3 megapixel* cameras have 1280×1024 resolution. All cameras are 1¼″ Lg.×1½″ Wd.×1⅜″ Ht. They have M2×0.4 and M3×0.5 threaded mounting holes, or use the tripod adapter (sold separately) for mounting onto your tripod with ¼″-20 threaded connection.

Monochrome cameras are the best choice when using infrared-light illumination.

Resolution, megapixels	Speed at Full Resolution		
Color Cameras			
0.36	87 fps	6008T11	$707.14
1.3	25 fps	6008T13	952.86

Tripod Adapter		6008T36	35.59
USB Cord		4974T34	15.31

Machine Vision Programmable Inspection and Sorting Cameras

Inspect objects on your conveyor line for defects such as surface flaws, crooked labels, and missing screws. Use the touch screen to select one of four settings: flaw identification, shape verification, feature recognition, or parts sorting. When the camera detects an issue, it sends a signal to remove the item.

Camera operates on 10-30 volts DC and has a 150 mA output signal that can be configured as PNP or NPN to match the input of your PLC or other control device. It comes with a 12 mm lens and a built-in light ring that illuminates up to 12″ from the lens. Maximum camera speed is 98 frames per second. The camera is 3⅛″ Lg.×2″ Wd.×3¾″ Ht. and has a sealed housing that's IP67 rated for keeping out dust and moisture. Mounting hardware and connection cords are included.

Field of view adjustment lens kit includes five lenses: 4.3, 6, 8, 16, and 25 mm. As the lens size decreases, the field of view widens.

Camera	6830T52	$1,830.40
Field of View Adjustment Lens Kit	6830T53	123.43

Surface-Roughness Testers

This portable unit tests for the most popular roughness parameters, such as Ra, Rp, and Rq. You can also set an upper and lower limit for go/no-go readings, or test for a specific standard, such as ANSI, ISO, JIS, or VDA. Tester can save up to 10 readings. It can be connected to a Mitutoyo miniprocessor using an SPC data output cable (sold separately below); it also has an RS-232C port for a direct connection to your PC.

The tester is 6¼″ Lg.×2½″ Wd.×2″ Ht. and has a 1⅜″ Ht.×1⅞″ Wd. color display. The probe tip is 0.0002″ in dia. Tester comes with a rechargeable battery and an AC adapter; it can take 1,000 readings on a single charge. It also includes a roughness sample for calibrating.

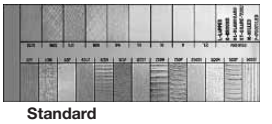
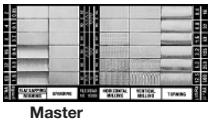
Surface-Finish Scales

Economy



Standard



Master

Compare your surface finish to one of the swatches on these scales. The finishes are expressed in microinches (μ″).

Economy scale has 18 swatches of the most popular AA- and Ra-scale finishes ranging from 16 to 500 μ″ for comparing the following surfaces: ground, end milled, milled, shape turned, and flame cut. It is 5″ Lg.× 3½″ Wd. plastic.

Standard scales have 22 swatches of the most popular Ra-scale finishes ranging from 2 to 500 μ″ for comparing the following surfaces: lapped, ground, blanchard ground, shape turned, profiled, and milled. They're 2″ Lg.× 5⅜″ Wd. and made of solid nickel.

Master scale has 30 swatches of the most popular AA- and Ra-scale finishes ranging from 2 to 500 μ″ for comparing the following surfaces: lapped, reamed, ground, horizontal milled, vertical milled, and turned. It comes with a chart to correlate the finishes with CLA and ISO N scales. Meets ANSI B46.1 standards. It is 3″ Lg.×6″ Wd. and made of solid nickel.

Economy	1005T2	$9.46

Standard with NIST Certificate	8555T16	318.75
Master	85615T1	108.72

Durometer Hardness Testers

Measure the hardness of flat materials, such as plastics, rubbers, and laminates. For more information about durometer scales, please see page 3588.

Standard and **slimline** testers can be held in your hand or mounted to a stand with the included knob. They are 4″ Ht.×2¼″ Wd.×1¾″ Dp.; *slimline* testers narrow to 1″ Wd.×1″ Dp. at the base for access to confined areas. Minimum testing thickness is ¼″. Meet ASTM D2240. A, D, and O scale testers have a pointer that freezes on the highest reading.

Pen-style testers come with a NIST calibration certificate. They are 6⅛″ Ht.×2¼″ Wd. Minimum testing thickness is ¼″. Meet ASTM D2240.

Digital testers have a display that rotates up to 270°. Testers are 6⅛″ Ht.×2¼″ Wd.×1½″ Dp. and come with a NIST calibration certificate. Minimum testing thickness is ¼″. They have a hold function that keeps the maximum reading until reset, high/low buttons for setting tolerances, and USB and RS-232 ports for connecting to a computer. Meet ASTM D2240.

Pocket-style testers have a scale that holds the reading until reset. Testers are 4½″ Ht.×½″ Dia. Minimum testing thickness is ¼″.

Test Kit for Durometer A Hardness—Kit comes with seven 2″×2″ test blocks, ranging from 30 to 90 Shore A hardness.

E Scale	75-100	2″	2″	¼″	12105T56	75.00

Pressure-Grip Rockwell Hardness Testers

Operate these testers with one hand. Squeeze the handles until the penetrator contacts the test material and a reading appears on the dial indicator. For use on metal up to ¼″ thick. Testers come with an extra penetrator and a test strip. Overall size is 8″ Lg.×1″ Wd.×3″ Ht. **Rockwell B scale tester** is for use with aluminum, brass, and low-carbon steel. **Rockwell E scale tester** is for use with aluminum.

For Rockwell Scale	Measuring, Points: Range	Increments	Accuracy		
B	20-100	4	±1	8731T12	$1,396.43
E	25-110	4.25	±1	8731T11	1,396.43

Small Spot Hardness Testers

A microscope measures the indentation made by a 1/16″ dia. carbide ball penetrator to provide a hardness reading for steel alloys ranging from Rockwell C20 to C65. The microscope is illuminated and has 60X magnification with a calibrated scale. Accuracy is ±1.5 points. Tester is 7½″ Ht.×⅞″ Dia. Batteries are included.

1342T13 ..... $857.14

Hardness-Testing Files

An economical way to determine the hardness of steel materials. Files are steel with a curved tip. Handles are marked with Rockwell hardness values.

File Set—Includes six Rockwell C scale files: 40, 45, 50, 55, 60, and 65, and a chart to convert to Vickers scale.

	Choose a Rockwell C Hardness		
Individual Files	40, 45, 50, 55, 60, 65	13705T38	$23.79
File Set		13705T91	104.12

Rockwell Hardness Testers

This lightweight tester is made and calibrated to ASTM E110 standards. It can be used at any angle without affecting accuracy. Tester comes with three anvils (flat, V, and convex) and a 1/16″ ball indenter. Throat size is 4½″ Ht.×2¼″ Dp. The overall size is 11″ Ht.×8″ Wd.×1½″ Dp.

For Rockwell Scale	Measuring, Points: Range	Increments	Accuracy		
A-H and K	0-100	1	±1.5	14065T9	$2,833.33
Optional C-Scale Diamond Indenter				14065T5	390.62

Brinell Hardness Tester Kits

This kit includes everything you need to test the Brinell hardness of steel from 150 to 400. To use, slide a test bar into the tester, place the tester on your surface, and hit with a hammer; a steel ball will make an impression. Measure the impression with the 20X microscope and use the computing disc to determine hardness.

Tester Kit	1347T41	$1,370.67
Individual Test Bars—Choose a Brinell Hardness: 106 to 578	1347T2	42.05

UV Penlights and Mini Flashlights

Detect leaks in piping systems with these UV LED lights. Batteries are included.

Penlight—Clip this small penlight to your pocket. It's aluminum with a black finish. Press the button for momentary light or twist the head for continuous use.

Mini Flashlight—Small enough to fit in your pocket. Body is aluminum with a gray finish. The head is Type 303 stainless steel. Press the button for momentary light or twist the end for continuous use.

	Dia.	Lg.	Battery Type (Qty.)		
Penlight	⅜″	6¼″	AAAA (3)	1159N1	$27.11
Mini Flashlight	⅞″	4¾″	3-Volt Lithium (2)	1159N2	41.67

Magnetic-Field Indicators

Noncalibrated

Calibrated

Place the lower edge of these dial indicators near or against your tools and parts to measure magnetism.

Noncalibrated indicator measures the strength of a magnetic field in gauss. Indicator is 2″ dia. with plastic housing.

Calibrated indicators are calibrated at 72°F. In addition to measuring the strength of a magnetic field in gauss, these also measure the direction of a magnetic field in positive/negative. Indicators are 2½″ dia. Housing is aluminum.

Gauss Range	Noncalibrated		Calibrated		Calibrated with NIST Certificate	
10-0-10	8575T11	$52.50	8450T14	$131.25	8450T21	$204.96
20-0-20	—	—	8450T16	130.00	8450T22	203.64
50-0-50	—	—	8450T18	137.50	8450T23	211.57

Coating-Thickness Gauges

Standard

Pen Style

Digital, Standard

Digital, High-Precision

Use these gauges to measure nonmagnetic coatings such as paint, galvanizing, plating, and enamel on steel. Hold the probe on your material for a quick reading. For readings in mils, one mil equals 0.001″.

Coating-Thickness Gauges

Standard gauges have a wear-resistant carbide probe. A V-groove in the base provides stability on curved surfaces. They have a go/no-go button for rapid measurement and come with a NIST calibration certificate. Accuracy is ±5%. Size is 2″ Ht.×8½″ Wd.×1¼″ Dp.

Pen-style gauge is for use on small, hard-to-reach surfaces. It comes with a NIST calibration certificate. Accuracy is ±10%. Size is ¼″ Dia.×5½″ Lg.

Economy pen-style gauge is ½″ Dia.×5¼″ Lg.

	Scale		
Standard	0-8 mils	1378T21	$330.08
Standard	0-80 mils	1378T22	330.08
Pen Style	0.25-20 mils/5-500 microns	1374T25	227.69
Economy Pen Style	1-15 mils	14055T11	79.28

Digital Coating-Thickness Gauges

These instruments display readings in mils and microns. They have a wear-resistant ruby probe tip. Batteries are included. *Ferrous* gauges measure the thickness of nonmagnetic coatings such as paint and plating on steel. *Ferrous/nonferrous* gauges measure the thickness of nonconductive coatings on steel and other metals such as aluminum and copper.

Standard gauges are 4″ Ht.×1½″ Wd.×1″ Dp. Accuracy is ±3%.

High-precision gauges come with a NIST calibration certificate. They conform to ISO 2808 and meet ASTM B499, D1186, and D1400. Set high/low limits and store 250 readings. Gauges are 5⅜″ Ht.×2⅜″ Wd.×1⅛″ Dp. Accuracy is +1%.

For Coated Material	Scale		
Standard Gauges with Built-In Probe			
Ferrous	0-40 mils/0-1,000 microns	1453T48	$533.08
Ferrous/Nonferrous	0-40 mils/0-1,000 microns	1453T49	748.46
High-Precision Gauges with Built-In Probe			
Ferrous	0-60 mils/0-1,500 microns	1453T61	673.08
Ferrous/Nonferrous	0-60 mils/0-1,500 microns	1453T65	1,050.00
High-Precision Gauges with 3-ft. Cable and Remote Probe			
Ferrous/Nonferrous	0-60 mils/0-1,500 microns	1453T73	1,157.69

Gauss/Tesla Meters

Measure magnetic fields with this hand-held meter to determine electromagnetic interference and detect flaws in welded metal. The meter displays readings in gauss, tesla, and ampere/meters. It has three measurement ranges: 200 gauss in 0.1 gauss increments; 2 kilogauss in 1.0 gauss increments; and 20 kilogauss in 10 gauss increments. Accuracy is 2%. Frequency bandwidth is DC-20 kHz. Meter includes batteries and an AC adapter. Its overall size is 7″ Ht.×4″ Wd.×1½″ Dp.

1488T55 ..... $1,408.82

Ultrasonic Thickness Gauges

Thickness Gauges

The ultrasonic probe provides highly accurate thickness readings to ±0.001″. These gauges display readings in inch and metric units. They come with a USB cord for connecting to your PC. Gauges meet ASTM E797 and come with a NIST calibration certificate. They also include ultrasonic gel for maximum surface contact. Batteries are included.

Thickness gauge measures the wall thickness of materials such as steel and plastic from 0.040″ to 5.000″.

Painted-surface thickness gauge measures the wall thickness of painted steel from 0.100″ to 2.500″ without removing the coating.

Thickness Gauge	8729T71	$1,071.54
Painted-Surface Thickness Gauge	8729T73	1,825.38
Replacement Ultrasonic Gel (4 oz.)	8729T81	17.43
Replacement Ultrasonic Gel (1 gal.)	8729T82	55.25

Calibration Blocks

Use these blocks to calibrate ultrasonic instruments. Steps are 0.75″ square. All blocks have a serial number and a NIST calibration certificate.

		For Aluminum	For Steel	For Stainless Steel
4 Step (0.25″-1.0″)	8489T16	$295.27	$295.27	$438.10
5 Step (0.1″-0.5″)	8489T17	320.00	320.00	484.13

UV Lights

Blacklight Blue

Inspect facilities and equipment with these lights. They operate on 120 volts AC.

Blacklight blue is used for inspection and bug and rodent detection. Housing is black plastic with a clear diffuser. Includes a 15-watt bulb and a cord with plug.

UV curing blacklight can be used for curing as well as inspection. Housing is beige aluminum with a built-in reflector. Includes two 15-watt bulbs and a cord with plug.

Lg.	Wd.	Dp.	Light Intensity, microwatts/cm² at 5″	UV Lights		Replacement UV Bulb	
Blacklight Blue

UV Lights with Stand

This versatile light can be secured in the stand or removed for hand-held use. A switch lets you select between UV and white fluorescent light. Housing is beige metal. Operates on 120 volts AC and includes a cord with plug and two 8-watt bulbs.

With Stand Lg.	Wd.	Ht.	Light Intensity, microwatts/cm² at 3″		
15″	3¾″	10¾″	1,480	1000T11	$419.73
Replacement UV Bulb				1000T31	32.51

High-Intensity UV Lights

Hand Held

Bench Top

View small particles and conduct inspections with the brilliant illumination of these UV lights. They operate on 120 volts AC and come with a cord and plug.

Hand-held light is used for automotive leak detection and magnetic-particle inspection. Light has a plastic housing. It comes with an 90-watt bulb.

Bench-top lights come with a transformer attached and a 100-watt bulb. The lamp head rotates 360°. In addition to inspection applications, use these lights for UV curing and dye-penetrant inspection. *5½″ dia.* light has an aluminum housing. *6″ dia*. light has a plastic housing. *Optional lens filter* reduces output of visible light, reducing glare and enabling finer particles to be seen.

Dia.	Lg.	Wd.	Ht.	Light Intensity, microwatts/cm² at 2″	Light Intensity, microwatts/cm² at 10″

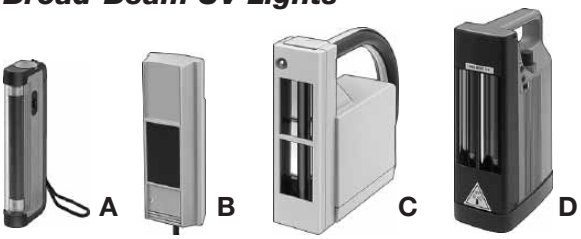
Retractable-Cord UV Lights

Mount this light to your ceiling, and pull it down when you need it (extends 35 feet). When you're done, tug on the cord and it retracts out of your way. Use this light for UV curing, leak detection, and quality-control testing applications. Housing is impact-resistant plastic. Light is 5¼" dia. and 7½" long. It comes with a 6-ft. mounting chain, an 8-ft. cord with plug, and a 100-watt UV bulb.

Light Intensity, microwatts/cm² at 15″		
4,800	13605T73	$950.69
Replacement Bulb	13605T76	114.11

Broad-Beam UV Lights



Shed light over a wide area for security control, rodent detection, UV curing, and magnetic-particle flaw detection. Lights have a plastic housing. Bulb is included.

(A) Economy—The smallest and most economical UV light we offer. It comes with a 4-watt UV bulb and a built-in white-light flashlight. Requires four AA batteries.

(B) Plug-In—Has a filter that blocks most visible light interference. It comes with a 4-watt UV bulb and a cord with plug.

(C) Battery—Has a 6-watt self-filtering UV blacklight blue bulb and a built-in white-light flashlight. Includes two 6-volt lantern batteries.

(D) Rechargeable—A rechargeable lead-acid battery provides approximately five hours of continuous use when fully charged. Includes two 6-watt self-filtering UV blacklight blue bulbs.

	Lg.	Wd.	Ht.	Light Intensity, microwatts/cm² at 3″	Lights		Replacement UV Bulb

Replacement White Bulb for Style C							8519T19	11.56

UV Magnifying Lights

Combination UV/ Fluorescent Light

The combination of UV light and magnifying lens lets you see the smallest traces of fluorescence while inspecting. Lights have a plastic housing with an aluminum reflector. The magnifying lens is made of 2" Lg.×4" Wd. glass and provides 3X magnification at an 8" working distance. Lights operate on 120 volts AC and have a cord with plug.

UV light comes with two 4-watt UV bulbs.

Combination UV/fluorescent light comes with two 4-watt UV bulbs and two 4-watt white fluorescent bulbs that work independently of each other.

Colored-Dye Flaw-Detection Kits

Visible Dye Kit

Fluorescent Dye Kit with UV Light

Reveal cracks and surface flaws in most nonporous material, such as cast iron, steel, stainless steel, carbide, and ceramics. The contents of all kits comply with SAE-AMS-2644, ASTM E1417, MIL-STD 271, MIL-STD 2132, and sulfur-chlorine-halogen requirements.

Visible Dye Kit—Flaws become visible under natural light and appear as a bright red color. Commonly used for weld inspecting, this kit comes with four 16-oz. cans of cleaner, two 16-oz. cans of red dye, and two 16-oz. cans of developer.

Fluorescent Dye Kit with UV Light—Contains everything you need to detect cracks, seams, and pores on machined surfaces. This kit is more sensitive than the visible dye kit. The UV light operates on 120 volts AC and includes a cord with plug and a 100-watt bulb. This kit also contains two 16-oz. cans of cleaner, one 16-oz. can of fluorescent green dye, and one 16-oz. can of developer.

Kits

Visible Dye Kit	1383T3	$178.09
Fluorescent Dye Kit with UV Light	1387T61	876.56

Replacement Chemicals

		1-11	12-Up
Cleaner	1383T7	$16.00	$14.62

Fluorescent Green Dye	1387T8	23.91	21.86
Developer for Visible Red Dye	1383T5	18.40	16.82
Developer for Fluorescent Green Dye	1387T22	20.71	18.93

Magnetic-Particle Flaw-Detection Kits

Kits come with a yoke that creates a magnetic field on the part you're inspecting—apply the powder on ferrous metals and the defects appear. They comply with ASTM E1444 and MIL-STD 2132.

Standard—Operates on 120 volts AC and has a cord with plug. Kit also comes with two 1-lb. bottles of powder (one gray and one red) and a powder dispenser.

Cordless—Operates on a rechargeable battery that provides up to 8 hours of use per charge. Kit also includes a charger, 1 lb. of gray powder, and a powder dispenser. Cannot be sold in California or Oregon.

Standard	1394T1	$576.56
Cordless	1372T1	1,203.12
Replacement Gray Detection Powder—10 lbs.	1394T372	116.02
Replacement Red Detection Powder—10 lbs.	1394T373	116.02
Replacement Powder Dispenser	8572T12	30.00
Cleaner—16-oz. Can	1383T7	16.00

Leak-Detecting Pipe Flange Covers

With pH Patch

See Through

The wrap-around design of these chemical-resistant covers contains acid and caustic pipe leaks, protecting personnel and equipment. All are UV resistant, can be used indoors and out, and are made for 150 psi pipe flanges.

Covers with pH patch have a pH detecting patch that's orange when neutral. When a tiny amount of liquid makes contact with the patch, it changes color to indicate a leak. *Red, white,* and *brown* covers are plastic and have a maximum temperature of 140° F. *Chemical-resistant tan* covers are PTFE-coated fiberglass that's highly resistant to acids, alkalies, and most chemicals except hydrofluoric acid. Maximum temperature is 450° F.

See-through covers have a clear plastic center. Maximum temperature is 300° F.

Pipe Size	Actual Pipe OD	*With pH Patch* Red		White		Brown		Chemical-Resistant Tan		*See Through* Orange

Quick-Spot Leak Detectors

Bubbling action at the source of leaks provides a quick and reliable leak detection method, saving time and energy costs. These noncorrosive, nonflammable detectors find leaks in pipes, tubes, fittings, tanks, and cylinders. They wash off with water.

These products are compliant under all state VOC rules in effect on September 1, 2011.

Foam detector bubbles over pressure leaks and forms a crater over vacuum leaks.

Compressed gas (oxygen-compatible) detectors meet MIL-PRF-25567E and nuclear industry and ASTM standards for halogen and chloride content.

High-visibility detectors are fluorescent green and adhere to vertical surfaces. Use the *optional UV leak detection flashlight* for enhanced viewing.

Viscosity Testers

Also known as Zahn cups, these testers let you calculate viscosity based on the speed at which a liquid drains through a cup with a hole at the bottom. To determine viscosity, dip the cup in a liquid until it is completely filled, lift the cup out of the liquid, and time how many seconds it takes for the liquid to drain out of the hole in the bottom. Use the included formula to convert seconds to centipoise. Testers are 304 stainless steel. Overall size is 13 3/4" Lg. x 1 3/8" Wd. x 2 3/8" Dp. Meet ASTM D4212.

For Testing	Viscosity Range, cP		
Very Thin Oils	18 to 56	8547T31	$139.94
Thin Oils and Lacquers	40 to 230	8547T32	139.94
Medium Oils and Mixed Paints	150 to 790	8547T33	139.94
Heavy Liquids	220 to 1,100	8547T34	139.94
Very Heavy Liquids and Mixtures	460 to 1,725	8547T35	139.94

Leak-Detecting Dye

Easy-to-see colors enable you to visually inspect for leaks without ultraviolet light. For enhanced viewing, you can use the *optional UV leak detection flashlight*.

These products are compliant under all state VOC rules in effect on September 1, 2011.

For Water Systems

Tablets are clean and easy to use.

Liquid is a good choice for larger volumes of water.

One gallon of water occupies 0.1337 cubic ft. Calculate the number of gallons a tank holds by dividing the tank volume by 0.1337. Meets NSF/ANSI Standard 60.

Size	Color	Max. Water Treated, gal.

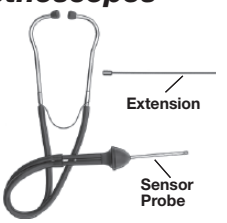
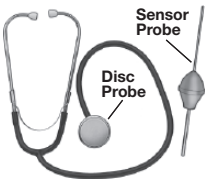
Stethoscopes



1024T28



1024T32

With Sensor Probe and Extension	1024T28	$14.08
With Disc Probe and Sensor Probe	1024T32	46.15

Noise-Filtering Stethoscope

Reduce background noise so you can isolate individual sounds to detect mechanical problems and leaks. Stethoscope has a 9" flexible probe, a 5" sensor probe extension, and headphones that shut out surrounding noise. Operates on one 9-volt battery (included) and comes with a plastic carrying case.

Stethoscope	85465T53	$159.02
Replacement 9-Volt Battery (Pkg. of 1)	71455K56	2.75

Early Warning Ultrasonic Leak Detectors

Sensing inaudible sound waves, this detector converts ultrasonic waves to an audible sound so you can find leaks. An LED display indicates when a leak is identified. Unlike typical leak detectors, this unit doesn't rely only on the presence of a gas to work, making it suitable for a wider range of applications. In addition to gas leaks, it identifies ultrasonic sound caused by failing solenoids, valves, and bearings. Detector includes a 10″ tube extension, 3½″ dia. reflector dish for sound amplification, and plastic carrying case.

For low-pressure systems, use the *ultrasonic sound generator for systems under 10 psi*.

Detector and ultrasonic sound generator each operate on one 9-volt battery (included).

Detector	8402T55	$334.18
Optional Ultrasonic Sound Generator for Systems Under 10 psi	8402T57	160.23
Replacement 9-volt Battery (Pkg. of 1)	71455K56	2.75

Combustible Gas Leak Detectors

Identify gas leaks economically with this compact leak detector. Detects leaks in pipes, valves, storage tanks, and other gas system components. Detector signals with both a red light and a continuous beeping sound. Operates on two AA batteries (sold separately).

Gases Detected	Min. ppm
Methane (natural gas)	5,000
Propane	2,000

Detector	1076T8	$44.55
AA Batteries (Pkg. of 4)	71455K53	2.94

Combustion Efficiency Meters

Measure boiler and furnace combustion efficiency with this hand-held meter, which works with most fossil fuels including natural gas, oil, propane, and kerosene. Accuracy is ±0.3% of oxygen content. Meter automatically calibrates to normal atmospheric oxygen and has an LCD, 6-ft. hose, and 10″ long probe. Operates on four AA batteries (included) and comes with a storage bag.

Measurement Ranges	
Combustion Efficiency of System	0.1 to 100%
Carbon Dioxide Content of Heated Air	0 to 15%
Excess Air Produced by System	0 to 250%
Flue Gas Oxygen Content	0 to 20.9%
Flue Gas Temperature	–4° to 1,202° F

Meter	3937K35	$643.24
Replacement Oxygen Sensor	3937K37	186.33
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Dial Contact Tachometers

- Range: 0 to 4,000 rpm
- Accuracy: ±5% of reading

Housed in steel for durability, this tachometer can measure both clockwise and counterclockwise rotation. It includes a tip for measuring shafts with a center hole and a tip for measuring flat end surfaces.

Optional 12″ extension shaft accesses hard-to-reach areas.

		Each
Tachometer	1416T1	$128.62
Optional 12″ Extension Shaft	1416T2	26.42
Replacement Tips (One for Shafts with Center Hole, One for Flat End Surfaces)	1416T3	Set $5.16

Refrigerant Leak Detectors

An LED display and audible signal alert you to leaks as small as 0.1 oz. per year in air conditioning and refrigeration systems. The audible signal also increases in intensity as you approach the leak. Unit detects halogenated refrigerants such as hydrofluorocarbons (HFCs), chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), R-22 (freon), R-134a, and 410A. Meet SAE J1627. Detector includes a 14″ flexible sensor probe for hard-to-reach areas and a plastic carrying case. Operates on two C batteries (included). UL classified. CE approved.

Detector	1130T61	$201.75
Replacement Tips (Pkg. of 3)	1130T62	40.82
Replacement C Batteries (Pkg. of 6)	71455K54	6.49

High-Sensitivity Combustible Gas Leak Detectors

Identify a variety of small leaks quickly and access hard-to-reach areas with the 14″ flexible probe. Detector has an LED indicator and an audible signal that increases in intensity the closer you get to the leak. It includes a rechargeable NiMH battery pack, a battery charger, and a vinyl carrying case. UL listed Class I, II, and III, Division 1 for hazardous locations.

Gases Detected	Min. ppm	Gases Detected	Min. ppm
Methane (natural gas)	500	Acetone	50
Hydrogen	500	Methanol	50
Butane	500	Ammonia	20
Propane	500	Gasoline	1
		Chlorine	1

Radiation Detectors

Standard

Rough Duty

These hand-held detectors sense alpha, beta, gamma, and X-ray radiation. They provide measurements in mR/hr, µSv/hr, and CPM. A flashing red light with audio beep indicates the presence of radiation. Operate on one 9-volt battery (not included).

Standard detector has a scale to show radiation detected in the air.

Rough duty detector has a rubber protective casing. It detects lower levels of radiation than the standard detector. Use this detector alone to measure radiation in the air, or use it with the optional wipe test plate and sample collection wipes (sold separately) to measure radiation on surfaces. For surface testing, use a wipe on a wet or dry surface, place the wipe in the wipe test plate, and slide the plate onto the detector. Includes software and a USB connection.

	Display		
Standard	Analog	8543T11	$422.67
Rough Duty	4-Digit LCD	8543T12	660.00
Optional Wipe Test Plate for Rough Duty Detector		8543T13	46.67
Optional Sample Collection Wipes for Rough Duty Detector (Box of 250)		8543T14	26.94

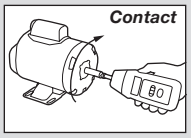
Surface Contact Tachometers

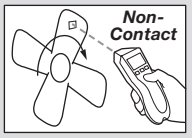
- Range: 1,000 to 4,000 rpm
- Accuracy Range: ±0.5% of reading

Also known as a reed tachometer, this unit is compact for portability. Place it against enclosures of rotating equipment to measure speed. The reeds are precision calibrated and arranged in two easy-to-read rows. Tachometer is 3″ Ht.×2″ Wd.×2½″ Dp. and has an aluminum case. It operates mechanically, so batteries aren't required.

	1419T3	$355.38

About Tachometers





Tachometers measure the speed of rotating parts on machines such as shafts, gears, and belts.

Contact tachometers come in direct contact with an object and are an excellent choice for dirty and dusty environments.

Noncontact tachometers have a beam of light or laser that reflects off a piece of reflective tape attached to the rotating point.

Contact Tachometers

- Range: 0.5 to 19,999 rpm
- Accuracy: ±0.05% of reading

Units of Measure
Revolutions/min.
Feet/min.
Meters/min.

Measure speed in three different units with one tachometer. These units include a tip for measuring shafts with a center hole, tip for measuring flat end surfaces, 4″ circumference speed wheel, and a case. They have an LCD and plastic housing. Operate on four AA batteries (included). Choose with or without a certificate of calibration traceable to NIST.

Tachometer	8714T11	$206.24
Tachometer with NIST Certificate	8714T22	332.13
Tip for Shafts with Center Hole	8714T41	12.92
Tip for Flat End Surfaces	8714T45	12.93
4″ Circumference Speed Wheel	8714T46	12.92
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

High-Accuracy Contact Tachometers

- Range: 0.1 to 25,000 rpm
- Accuracy: ±0.006% of reading

Units of Measure	
Revolutions/min., hr.	Yards/min., hr.
Inches/min.	Meters/min., hr.
Feet/min., hr	Miles/hr.
Total Revolutions	Length—m, cm, in., ft., yd.

The most accurate tachometers we offer. Units include two tips for measuring shafts with a center hole, one tip for measuring flat end surfaces, speed wheel, 3½″ extension shaft, and a case. They have an aluminum housing and come with a certificate of calibration traceable to NIST. Operate on two AA batteries (included).

Choose an ***LCD display*** for use in bright light or ***LED display*** for dimly lit areas.

Note: Units are calibrated to work with either a 6″ or 12″ circumference speed wheel but not both.

Display	Speed Wheel		
LCD	6″ Circumference	11995T71	$292.50
LED	6″ Circumference	11995T72	292.50

12″ Circumference Speed Wheel		11995T75	63.64
Replacement AA Batteries (Pkg. of 4)		71455K53	2.94

High-Accuracy Noncontact Tachometers

- Range: 5 to 99,999 rpm
- Measuring Distance: Up to 3 ft.
- Accuracy: ±0.01% of reading
- Unit of Measure: Revolutions/Minute

Take precise measurements from a distance. This tachometer has an LCD and plastic housing. It includes 12″ of reflective tape and a ¼″-20 female threaded bushing for tripod mounting. Operates on two AA batteries (included).

Tachometer	11765T58	$162.96
Plastic Carrying Case	11765T61	38.89

Panel-Mount Tachometers

Tachometer

Proximity Sensor

Photoelectric Sensor

- Range: 5 to 99,990 rpm
- Accuracy: ±0.05% of reading

Install this tachometer and measure rpm remotely using a proximity or photoelectric sensor (sold separately). Unit has an LED display housed in a 1/8 DIN enclosure with cutout size of 1.8″ Ht.×3.6″ Wd.×3.5″ Dp. Mounting hardware included. Operates on 115/230 volts AC, 50/60 Hz and has screw terminal connections.

Sensors have a 6-ft. cable and two mounting holes. Temperature range is 0° to 130° F.

Proximity sensor magnetically detects moving metal objects, such as gear teeth and fan blades. Range is up to 36,000 rpm. Maximum measuring distance is 0.1″. Size is 1.4″ Ht.×0.71″ Wd.×0.71″ Dp.

Photoelectric sensor generates light beams across a 0.8″ wide gap. When a rotating object enters this gap, the beam is broken. Range is up to 6,000 rpm. Maximum measuring distance is 0.4″. Size is 2.5″ Ht.×2″ Wd.×0.8″ Dp.

Tachometer	14215T11	$212.49
Proximity Sensor	14215T22	62.49
Photoelectric Sensor	14215T33	162.49
Reflective Tape Roll (5 ft. Lg.×1/2″ Wd.)	7178A12	12.00
Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25

High-Accuracy Panel-Mount Tachometers

- Range: Standard: 5 to 99,999 rpm;
  Programmable and Deluxe Programmable: 5 to 999,990 rpm
- Accuracy: Standard: ±0.005% of reading;
  Programmable and Deluxe Programmable: ±0.001% of reading

Combine any of these tachometers and sensors to create the most accurate tachometer system we offer. Install a tachometer in a convenient location and measure speed remotely using a sensor. Mounting hardware included.

Tachometers

They have an LED display housed in a plastic 1/8 DIN enclosure with cutout size of 1.8″ Ht.×3.6″ Wd.×4.5″ Dp. Operate on 115 volts AC, 50/60 Hz and have screw terminal connections.

Standard—Display reads down to one unit. It updates twice per second when the reading exceeds 120 rpm.

Programmable—Has minimum and maximum reading recall and totalizes from 1 to 99,999. It comes with a certificate of calibration traceable to NIST.

Deluxe Programmable—Have the same features as the programmable plus two internal alarms and a USB output. Tachometer *with current output* has a range of 4 to 20 mA. Tachometer *with voltage output* has a range of 0 to 5 volts DC.

Standard	8518T61	$244.55
Programmable	8518T62	293.66
Deluxe Programmable with Current Output	8518T632	471.16

Reflective 1/2″ Sq. Tape Tabs (Sheet of 35)	15975T21	5.25

Sensors

Proximity Sensor

Magnetic Sensor

Optical Sensor

Proximity sensor can be used in dirty and wet environments. Maximum measuring distance is 0.2″ from a 1/2″ minimum size metal target. Size is 0.43″ Dia.×1.3″ Lg.

Magnetic sensor has a maximum measuring distance of 0.005″ from a 0.1″ minimum size ferrous metal target. Size is 0.63″ Dia.×2″ Lg.

Optical sensor performs best in clean environments and works at up to a 45° angle from reflective tape. Maximum measuring distance is 36″. Size is 0.63″ Dia.×2.9″ Lg.

	rpm Range	Operating Temp. Range, °F	Cable Lg., ft.		
Proximity	1-60,000	–4° to +140°	6	8518T92	$123.21
Magnetic	1-99,999	–100° to +225°	8	8518T91	128.57

Contact/Noncontact Tachometers/ Thermometers

- Accuracy: ±0.05% of reading
- Measuring Distance: Up to 6 1/2 ft.
- Range: Contact: 0.5 to 20,000 rpm; Noncontact: 10 to 99,999 rpm

Units of Measure
Revolutions/min.
Feet/min.
Meters/min.

Easily switch modes—these tachometers have a contact tip on one end and a noncontact sensor on the other. They also measure temperatures from –4° to +600° F. Units include one tip for measuring shafts with a center hole, one tip for flat end surfaces, 4″ circumference speed wheel, 24″ of reflective tape, and a case. They have an LCD and plastic housing. Operate on four AA batteries (included). Choose with or without a certificate of calibration traceable to NIST.

Tachometer	8430T22	$334.42

Stroboscopes

- rpm and Flashes per Minute: Stroboscope: 30 to 10,000; Stroboscope with NIST Certificate: 30 to 20,000
- Accuracy: ±0.002% of reading

Inspect rotating equipment and measure rpm. Stroboscopes have a flash duration of 20 to 50 microseconds and a flash power of 13 watts. Display is a backlit LCD. Units have a plastic housing and 1/4″-20 female threaded bushing for tripod mounting.

AC-powered stroboscopes run on 115 volts AC, 50-400 Hz. They have a 5-ft. cord with three-prong plug.

Battery-powered stroboscopes have an internal battery and include a 115/230-volt AC charger.

	Stroboscopes		*Stroboscopes w/ NIST Certificate*	
AC Powered	1177T52	$309.38	1177T71	$490.09
Battery Powered	1177T53	427.23	1177T92	549.02
Optional Plastic Carrying Case			1177T73	$93.60
Replacement Flash Bulb			1177T74	70.50
Replacement Battery Charger			1177T95	52.50

Heavy Duty Stroboscopes

- rpm and Flashes per Minute: 40 to 35,000
- Accuracy: ±0.01% of reading

AC Powered

Battery Powered

An aluminum housing makes these our strongest, most durable stroboscopes. Used to inspect rotating equipment and measure rpm, units have an automatic brightness control, LED display, and a 1/4″-20 female threaded bushing for tripod mounting. Flash duration is 10 to 40 microseconds and flash power is 10 watts. Choose with or without a certificate of calibration traceable to NIST.

AC-powered stroboscopes run on 115 volts AC, 50/60 Hz. They have an 8-ft. cord with three-prong plug.

Battery-powered stroboscopes have an internal battery and include a 100/240-volt AC charger.

	Stroboscopes		*Stroboscopes w/ NIST Certificate*

Replacement Battery Charger			15015T88	116.67

Noncontact Tachometers/Stroboscopes

- Range: Tachometer: 5 to 99,999 rpm; Stroboscope: 100 to 99,999 rpm and flashes per min.
- Measuring Distance: Up to 12″
- Accuracy: ±0.1% of reading

Measure rpm and inspect moving equipment with one compact instrument. Tachometers/stroboscopes have an LCD that shows 0.1 to 1 rpm/flashes per minute and a plastic housing. Flash duration is 60 to 1,000 microseconds. Units include 2 ft. of reflective tape and a case. Operate on four AA batteries (included).

Tachometer/Stroboscope	1412T1	$368.41
Tachometer/Stroboscope with NIST Certificate	1412T2	487.49
Reflective Tape Roll (5 ft. Lg. × ½″ Wd.)	7178A12	12.00

Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Combination Vibration Meters/ Stethoscopes

- Acceleration Range: 0.01 to 19.99 g
- Frequency Range: 10 to 10,000 Hz
- Velocity Range: 0.01 to 19.99 in./sec.
- Accuracy: ±2% of reading

Listen to and record machine performance. In addition to vibration, this meter measures acceleration and velocity.

Meter has an LCD, padded headphones, and a 4½″ long sensor probe for locating problem areas. Housing is plastic. The magnetic base allows you to mount the probe on a machine for constant readings. Enter recorded data into the monitoring software (included) and you can predict when machine maintenance is required. Operating temperature range is –14° to +122° F. Operates on two AA batteries (included) and comes with a case.

Meter	8738T1	$1,230.36
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

Tamper and Vibration Detection Paint

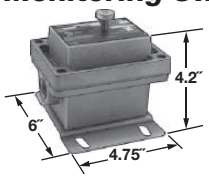
Apply directly to equipment for easy and economical detection. When paint dries it becomes brittle and cracks from any movement caused by tampering or vibration. It's noncorrosive and adheres to most surfaces, including all types of metals.

General-purpose paint is excellent for use on small parts. Temperature range is –50° to 400° F. To Order: Please specify color.

Fast-drying paint is for large jobs such as machinery bolts. Temperature range is –20° to 200° F.

Color		
General Purpose—*1 oz.*		
Gray, Pink, White	1476T51	$4.65
Fluorescent General Purpose—*1 oz.*		
Blue, Green, Orange, Red, Yellow	1476T61	4.65
Fast Drying—*5 oz.*		
White	1476T71	28.44

Hazardous-Location Vibration-Monitoring Switches



Get NEMA 4 and IP66 protection from dirt and water. Switch is rated for hazardous locations for Class I, Groups C and D, Div. 1; Class II, Groups E, F, and G, Div. 1. If vibration or shock exceeds a set point, the contacts actuate to either shut down your machine or activate an alarm. Reset switch with the push of a button. The activation point is adjustable between 0 to 5 gravity units (g's) at 0 to 60 Hz. Switch is SPDT and rated 15 amps @ 125 or 480 volts AC. Conduit connection is ¾″ NPT female. Housing is cast aluminum with ⅜″ mounting slots (fasteners not included). UL and C-UL listed. CE approved.

	1188T31	$718.33

Vibration Meters

- Acceleration Range: 0.02 to 199.9 g
- Frequency Range: 3 to 1,000 Hz
- Velocity Range: 0.02 to 199.9 in./sec.
- Displacement Range: 0.2 to 199.9 mils
- Accuracy Range: ±5% of measuring range

In addition to vibration, this meter measures acceleration, velocity, and displacement. Use to monitor the performance of rotating machines such as fans and pumps. Meter has an LCD that holds the reading for one minute and a plastic housing. It comes with a 1½″ long probe, case, and certificate of calibration traceable to NIST. Operating temperature range is 32° to 122° F. Operates on one 9-volt battery (included).

Meter	8721T1	$823.08
Replacement 9-Volt Battery (Pkg. of 1)	71455K56	2.75

Pocket-Size Vibration Meters

Quickly detect and measure machine vibration with these pen-size tools. A flexible steel wire reed detects vibration while the scale on the side of the meter indicates the machine vibration in cycles per minute (cpm). A simple calculation determines motor speed in rpm for engines with multiple cycles. Meters have an aluminum housing and come with a case.

Combination set contains one of each meter and a case.

Vibration Range	Accuracy		
200-2,000 cpm	±15% of Reading	1353T15	$78.33
2,000-21,000 cpm	±10% of Reading	1353T11	57.33
Combination Set		1353T13	131.53

Vibration-Monitoring Switches

Two easy-to-set dials allow you to adjust set points for vibration and time delay and detect vibration when it first occurs. A 4 to 20 milliamp output signals an alarm if the set point is exceeded. Set a time delay for after normal speed has been reached to avoid false triggering from start-up vibration. Switches don't require a separate power source—plug the included 16-ft. cable with four-wire M12 connector into your data collector or PLC (programmable logic controller). They're normally closed and have a supply voltage of 18 to 32 DC. Housing is 2.9″ high, stainless steel, and rated IP67 for protection from dust and water. Switches have an M8 threaded mounting stud and include a plastic cover. Temperature range is –13° to +176° F.

For temporary mounting, use a ***magnetic base***.

Activation Point		
0-1″	1161T11	$270.91
0-2″	1161T12	270.91
Optional Magnetic Base for Flat Surfaces	1161T22	74.67
Optional Magnetic Base for Curved Surfaces	1161T23	149.33
Optional Glue-On Base	1161T21	26.67
Adhesive for Glue-On Base	7560A54	38.68

Corrosion-Resistant Washdown Vibration Monitors

Continuously monitor vibration in harsh environments. Constructed entirely of stainless steel, this monitor meets IP69K standards for high-pressure washdown service. Plug the included 16-ft. cable with two-wire M12 connector into your data collector or PLC (programmable logic controller) to monitor vibration from 0-1 in./sec. Output is 4 to 20 mA. Supply voltage is 9.6 to 32 DC.

Housing is 2½″ high. Monitor mounts to equipment with an M8 thread and includes a ¼″-28 adapter. Temperature range is –20° to +220° F.

Use a ***magnetic base*** for temporary mounting.

Monitor	3738T1	$280.00

Optional Glue-On Base	1161T21	26.67
Adhesive for Glue-On Base	7560A54	38.68

Force Gauges

Measure tension and compression force with these hand-held gauges. They include two attachments: a hook tip for measuring tension and a flat tip for measuring compression. Gauges have a 10-32 threaded male shaft for connecting additional attachments. They also measure in ounces and have a tare function. All include a rechargeable battery, an AC adapter, and a certificate of calibration traceable to NIST. Furnished in a plastic carrying case.

Standard—Housing is plastic and is 5″ Ht. × 2⅝″ Wd. × 1¼″ Dp.

With Data-Logging Software—Gauges include Windows-compatible software that allows you to upload data and a 6-ft. long USB cable. Housing is aluminum and is 4″ Ht. × 2¾″ Wd. × 1¼″ Dp.

Optional stand for gauges with data-logging software has a steel column with a force-gauge mounting plate and an aluminum base.

Dial Force Gauges

Gauges include a plastic carrying case.

Compact—These small gauges include three force measuring attachments: a hook tip, a flat tip, and a 3″ extension rod. They have an M4 threaded male shaft for connecting attachments and a 2¼″ dia. dial. Housing is plastic and is 4⅜″ Wd. × 1″ Dp. *Optional stand* has a steel column with a force-gauge mounting plate and an aluminum base. *Optional handle* extends 2½″ on each side. Made of stainless steel.

Standard—Gauges include eight force measuring attachments: small, large, and Y-hooks; flat, notched, cone, and chisel tips; and a 3¼″ extension rod. They have a 10-32 threaded male shaft for connecting attachments and a 2″ dia. dial. They can be manually reset to zero. Housing is aluminum and is 9⅛″ Ht. × 2¾″ Wd. × 1⅞″ Dp. *Optional stand* has a steel column with a force-gauge mounting plate and an aluminum base. *Optional handle* extends 4″ on each side. Made of steel.

Gripping Attachments for Force Gauges

A

B

C

D

E

F

G

Attach to the shaft of your gauge to measure tension and compression force of small materials. Attachments have 10-32 female threads and include a 10-32 threaded stud to convert to male, unless otherwise stated.

General purpose attachments are good for gripping most materials. *Style A* has a lever to open the jaws; they close automatically. *Style B* has M6 female threads and includes a 10-32 female adapter. Jaws tighten separately around the material.

Attachments **for wire** hold fine wire and filament. *Style C* can reach into tight spaces. *Style D* allows you to thread wire through the attachment without kinking.

Attachments **for pins** have a chuck-style grip with a round opening for a more secure hold.

Attachment **for sheets** holds paper, film, and thin plastic.

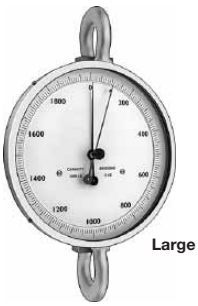
Tension Force Gauges with Scale

Digital

Dial



Large Dial

Measure tension force as well as weight. Gauges are also known as dynamometers and can be manually reset to zero. They have steel shackles on both ends and include a certificate of calibration traceable to NIST.
Digital—Gauges are NEMA 4X rated for protection from dust, water, and mild corrosives. Housing is aluminum. They are battery operated (batteries are included).
Dial—Housing is plastic. They have a 5″ dia. dial and are furnished in a plastic case.
Large Dial—Housing is aluminum. They have a 10″ dia. dial.

Speed Guns

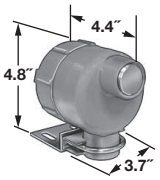
Point and shoot for instant speed readings in mph. Measuring range is 6 to 110 mph for small objects such as a baseball and 6 to 200 mph for large objects such as a car. Maximum measuring distance is 1,300 ft. Accuracy is ±1 mph. Gun has a three-digit LCD and a plastic housing. Operates on two C batteries (sold separately) and comes with a storage bag.

Speed Gun	7790T5	$136.51
C Batteries (Pkg. of 6)	71455K54	6.49

Speed-Monitoring Switches

Set switch to a specified speed to detect unwanted machinery slowdown that can cause damage and downtime. The activation point is adjustable between 5 and 100 rpm. Applications include drive trains, power-driven components, and conveyors. Switch has an SPDT relay contact rated 5 amps @ 115 volts AC. Input voltage is 115 AC, 60 Hz. Conduit connection is 1″ NPT female.

Switch has an aluminum housing and mounting plate with two 0.32″ dia. slots. Rated NEMA 7 (Class I, Group D) and NEMA 9 (Class II, Groups E, F, and G) for indoor hazardous locations, and NEMA 4X for washdown and corrosion protection. UL and C-UL listed.



6177K11 ..... $594.87

Video Display Borescopes

View hard-to-reach areas live on a 3.5″ color LCD or TV monitor with the included video cable. Borescopes have a 0.31″ dia., 39″ long cable and provide a 54° field of view. Maximum viewing distance from end of cable is 10 ft. Cable includes three attachments: a magnetic tool for picking up small metal objects, a hook tool for grabbing, and a mirror for viewing at a 45° angle. Housing is plastic. All include a case. Borescopes are rated IP67 for protection from submersion. Operate on four AA batteries (not included).

Borescope with LCD and USB cable can record video and includes a USB cable for viewing video on a PC monitor.

Optional 0.31″ dia. cable is longer than included cable and has a maximum viewing distance from end of cable of 10 ft.

Optional 0.22″ dia. cable allows access to smaller openings and has a maximum viewing distance from end of cable of 2.4″.

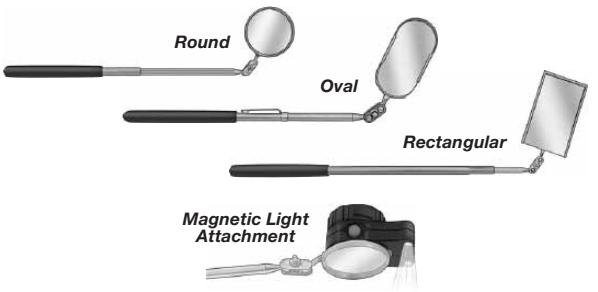
Inspection Mirrors



Position these mirrors to your exact requirements—they're 360° adjustable and have a telescoping handle (except 6″ long handles) with plastic grip. Round 7/8″ and 1 1/4″ dia. mirrors have a pocket clip.

Glass mirrors provide a clearer reflection; ***plastic*** mirrors are break resistant.

Magnetic light attachment has two high-intensity LEDs. Attach to any inspection mirror for convenient illumination. Operates on two lithium batteries (included).

Rolling Inspection Mirrors

Mounted on casters, this mirror maneuvers under and around machinery, vehicles, and other hard-to-reach areas. Handle is aluminum, telescopes from 33″ to 42″, and includes a bracket to hold the included flashlight (D batteries included). Mirror is 12″ dia. convex plastic; casters are 2″ dia.

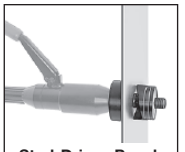
Stud-Driven Hole Punches & Hydraulic Drivers

Stud-Driven Hole Punches

Stud, Die, and Punch



Stud-Driven Punch with Hydraulic Driver

Create round holes in steel, fiberglass, and plastic for conduit, pipe, and electrical controls. Also known as knockout punches, these are made of steel and include a stud, die, and punch. A drilled pilot hole is required for operation. Punches with hole diameters larger than 2″ require an 11-ton hydraulic driver. Other sizes, except time-saver punches, can be used with a ratchet wrench (see pages 2768-2770) or any of the hydraulic drivers sold below.

Also Available: Replacement punches, studs, and dies. Please ask for 34685A1 and specify part required and hole diameter.

Punch Sets for Conduit

Sets include punches with studs and dies.

For Conduit Sizes: 1/2, 3/4, 1, 1 1/4, 1 1/2, 2	34685A51	$372.82
For Conduit Sizes: 1/2, 3/4, 1, 1 1/4	34685A31	205.06
For Conduit Sizes: 1 1/2, 2	34685A32	206.53
For European Standard Sizes: PG-9, PG-11, PG-13, PG-16, PG-21, PG-30.5	34685A135	385.69
For Metric Sizes: 16, 20, 25, 32, 40 mm	34685A136	458.26

Time-Saver Stud-Driven Hole Punch Sets

A locking clamp eliminates the need to thread the punch and stud, so this set offers faster setup and disassembly than standard punches. Punches for conduit sizes 1/2 to 1 1/2 can be used with any hydraulic driver. Punch for conduit size 2 requires an 11-ton driver.

Also Available: Replacement punches, dies, studs, and locking clamps. For punches or dies, please ask for 6186T21 and specify conduit size. For studs, please ask for 6186T22 and specify length. For locking clamps, please ask for 6186T14.

6-Punch Set—For Conduit Sizes: 1/2, 3/4, 1, 1 1/4, 1 1/2, 2	6186T16	$591.69

Hydraulic Drivers for Stud-Driven Hole Punches

8-Ton Straight

8-Ton Right Angle

11-Ton Hand Pump

The power behind your punch, these hydraulic drivers are compatible with the stud-driven punches sold above and on page 2339. Drivers are supplied with hydraulic oil.

8 Ton—All include two studs, a stud adapter, and a spacer. **Straight driver** is for straight-on punching. **Right-angle driver** has a head that rotates 180° to fit into tight spaces.

11 Ton—The hand-pump design facilitates repeated punching and creating larger holes. It comes with two studs, a stud adapter, three spacers, a 3-ft. hose, and a step drill bit that makes holes up to 1/2″.

Drivers with Punch Sets—In addition to the driver, all sets come with six stud-driven hole punches in conduit sizes 1/2, 3/4, 1, 1 1/4, 1 1/2, and 2. **10-punch set** also includes four additional punches for conduit sizes 2 1/2, 3, 3 1/2, and 4.

	Drivers		Drivers with 6-Punch Sets		Driver with 10-Punch Set

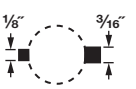
Straight	3484A15	$747.94	34685A61	$1,006.61		
Right Angle	3490A21	868.07	34685A63	1,187.64		
11 Ton						
Hand Pump	3448A1	959.43	34685A62	1,170.47	34685A68	$2,036.29

Keyway Punches



Cut keyways at the edges of existing holes. Also known as a keyway nibbler, this punch makes 1/8″ and 3/16″ keyways. For use on steel up to 1/8″ thick. Punch is steel.

Keyway Punch	3536A11	$261.56

Self-Centering Stud-Driven Hole Punches

Make accurate holes every time—these punches align themselves in the draw stud pilot hole. All are made of steel and include a die and draw stud. Punches with a 7/8" actual hole dia. can be used for 22 mm panel cutout switches; punches with a 1 7/32" actual hole dia. can be used for 30 mm panel cutout switches.

Punches for steel have a ball-bearing drive to reduce friction. Use with a hand wrench, ratchet driver, or any hydraulic driver on page 2338. **Punches for stainless steel** are used with any hydraulic driver on page 2338, except those with 1 15/16" to 2 3/8" actual hole dia. require an 11-ton hydraulic driver.

Punches for Conduit

Stud-Driven Different-Shape Hole Punches

These punches make openings for a variety of panel switches and connectors. Also known as chassis punches, they cut through sheet metal and have an automatic centering design for accurate alignment. Die, draw stud, and nut are included. The 1 13/16" square punch and rectangle punches for power/control connectors can only be used with a hydraulic driver and do not require a stud adapter. All other punches can be used with a manual wrench or hydraulic driver, and they require a **stud adapter** (sold separately) when used with a hydraulic driver.

Stud-Driven DIN-Size Hole Punches

Cut DIN-sized openings for rectangular- and square-shaped instruments. The cutting surface is hardened tool steel to punch through steel, stainless steel, and aluminum. Each punch size includes a die and four draw studs.

Manual wrench-operated punches require a puller adapter (sold separately) and can be used with an adjustable wrench or a hydraulic driver. **Hydraulic driver-operated punches** require a driver ram and are for use with a hydraulic pump (sold separately).

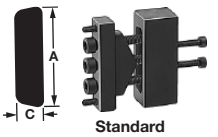
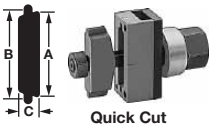
Stud-Driven Computer Connector Shape Hole Punches



Standard



Quick Cut

Punching holes for DB computer connectors is no problem. These steel punches cut through aluminum and steel to make openings for Amphenol, ITT Cannon, TRW Cinch, and equivalent connectors. Die and draw stud are included.

Standard—Use the included hex keys to drive the punch. Not for use with hydraulic drivers. Also comes with a strip of 25 adhesive templates.

Quick Cut—Drill one 7/16" pilot hole and drive with a ratchet wrench or an 11-ton hydraulic driver.

Lever-Operated Hole Punches

Bench-Mount Lever-Operated Hole Punches

Smooth Action

High Force

Extended Reach

Heavy Duty Extended Reach

Secure these punches to your workbench. The lever handle delivers the power needed to punch through tough materials such as steel and iron.

Smooth Action—Roller bearings in the lever provide low-effort punching. Includes a 9/32″ round punch and die and adjustable die holders to punch light-gauge metal. Made of cast iron with three 7/16″ dia. mounting holes. Handle is 24 1/2″ long.

High Force—Offers the greatest force of our punches and cuts through thicker metals. Includes a 1/2″ round punch, die, and coupling nut. Made of cast iron with two 9/16″ × 11/16″ mounting slots. Add your own lever handle to the rotary-action socket to customize the handle length. The socket accepts 1″ unthreaded pipe up to 48″ long.

Extended Reach—Able to reach past the edge of your material, this punch is often used to make holes in signs for fasteners. It includes a 1/4″ round punch and die. Made of cast iron with four 9/16″ × 7/8″ mounting slots. Handle is 29″ long.

Heavy Duty Extended Reach—Use this punch to make round holes in structural steel channels (2 1/2″ flange) and angle iron (2 1/2″ Ht. × 2 1/2″ Wd. × 1/4″ Dp. maximum). A die holder is required (sold separately). Punch is steel with four 1/2″ dia. mounting holes. Handle is 22″ long.

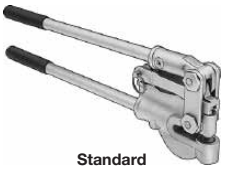
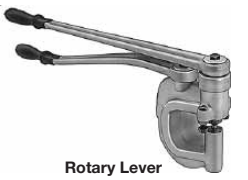
Lever-Operated Hole Punches

Compact



Standard



Rotary Lever

Punching Tool Kit

When you can't bring your work to the punch, bring one of these lightweight punches to your work. They have a lever handle for easy punching of round holes in mild steel and stainless steel.

Compact—Small enough to fit in your tool box, these punches have an adjustable throat to reach varying depths from the edge of your material. Made of cast iron. **Trade No. 5** tool includes a 3/16″ punch and die. **Trade No. XX** tool includes a 9/32″ punch and die.

Standard—For medium duty punching. Made of cast iron and steel. Includes a 7/32″ punch and die.

Rotary Lever—The lever handle rotates 360° for greater punching force than standard punches. Made of steel. Includes a 9/32″ punch and die. Optional ratchet handle can be used in tight spots instead of the rotary handle.

Portable Hydraulic Hole Punches

Often used to punch bus bars, railings, and I-beams, this tool provides 35 tons of punching force. It requires a 10,000 psi hydraulic pumping source (sold separately). Punch is steel and measures 14″ Ht. × 3½″ Wd. × 8″ Dp. It comes with four round punches and dies.

Additional punch and die sets include one round punch and die.

Hydraulic pump provides 10,000 psi and has a ½ hp motor that operates on 120 volts AC, 60 Hz. It has a 16-ft. cord with three-prong plug. Pump controls are attached with a 10-ft. cable. It also includes a 10-ft. hose, all necessary fittings, and is supplied with hydraulic oil. Pump is 15½″ Ht. × 10½″ Wd. × 9½″ Dp.

Gasket & Washer Punch Sets and Hole Punches

Hammer-Driven Gasket and Washer Punch Sets

13-Punch Quick-Release Set

Create gaskets and washers with the swing of a hammer. These steel punches cut through rubber, leather, fabric, and soft metal foil. All come in a plastic case.

Economy set comes with a driving handle.

Quick-release sets include punches, a handle, a centering pin, and a punch-cutting pad. The handle has a quick-release mechanism to change punches for cutting inner and outer holes. The centering pin helps accurately align the punches before cutting.

One-step sets punch inner and outer holes at the same time. All sets include a handle that holds two punch heads. Punches can also be used on foam, cardboard, and fiber.

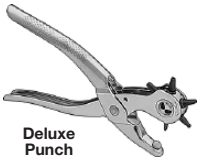
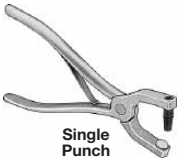
Plier-Action Hole Punches



Deluxe Punch



Single Punch

Punch round holes in leather, canvas, and rubber. These tools have a 1 1/2" throat depth. Made of steel.

Economy punch has a revolving head and six punch sizes. Tool is 8 1/2" long.

Deluxe punch has a revolving head and forged steel construction for extreme durability. It includes six punch sizes. Tool is 8 1/2" long and has spring-return handles.

Single punches have forged steel construction and spring-return handles. Tools are 8 1/4" long.

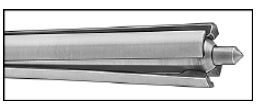
Multi-Diameter Hole-Location Transfer Punches



Expanded

Mark the center of various hole sizes. Insert these punches into an existing hole and twist the handle to open the end of the punch. The point automatically centers once the punch has fit the hole size; strike it with a hammer to mark the center. Punches have a point that is accurate to ±0.005". Made of steel.

3-Punch Set—Contains one of each punch listed and comes in a plastic case.

Diameter Range	Lg.

3-Punch Set		3380A11	137.50

Hole-Location Transfer Punches

When you need to make identical holes in different pieces of metal, these punches mark the spot. They fit through existing holes and mark the center of the hole in a second workpiece. Punches are made of steel and are approximately 5″ long. Diameter tolerance is ±0.0005″. **Punch sets** come in a metal stand.

Cone-Centering Hole-Location Transfer Punches

One tool punches a center mark for a range of hole sizes. Push down on the cone-shaped handle of this punch to center it in round or square holes. Then strike the punch with a hammer to make a precise mark in the center of your workpiece. Use on materials up to 2″ deep. Handle and punch are steel. The handle is spring-loaded with a knurled surface for gripping.

Hole Size Range	Lg.		
3/16″-5/8″; 5-16 mm	3″	8963A1	$16.25
3/16″-1 1/16″; 5-27 mm	4 1/2″	8963A2	19.03

Hole-Location Transfer Punches for Closed-End Holes

Also known as blind-hole spotters, these punches fit into closed-end holes and mark the center of a complementary hole. Once the punch is fitted in a hole, place your workpiece against the punch and strike with a hammer to make an indentation. Punches are steel. **Punch sets** come in a metal case.

Individual Punches

	Choose a Size	Pkg. of 6	
Inch Sizes	1/8″, 5/32″, 3/16″, 1/4″, 9/32″, 5/16″, 11/32″, 3/8″, 13/32″, 1/2″, 17/32″	3414A51	$7.40

Punch Sets—Include six of each punch size listed.

- 66-Punch Set: 11/16″-1″ (in 1/32nds) — 3414A12 — $114.15
- 108-Punch Set: 1/8″-2 1/32″ (in 1/32nds) — 3414A11 — $117.86

Threaded-Hole-Location Transfer Punches for Closed-End Holes

Transfer hole patterns from one workpiece to another. Also known as transfer screws, these punches have a uniform shoulder height of 0.020″ so you can quickly mark multiple holes at once. Thread the punches into closed-end holes and tighten with pliers or a wrench, and then strike the workpiece with a hammer to mark the holes. Punches are steel.

Punch sets include four punches in each size listed.

Threaded-Hole-Location Transfer Punches

Also known as transfer screws, these punches can be used in any threaded hole to transfer the hole location. Use the included handle to screw a punch into a hole. Place your workpiece against the punch and strike it with a hammer to mark the hole location. Each size comes with six steel punches that store in the handle.

16-punch sets include four of each punch size listed and a handle. The handle is only for use with the sizes in the set.

Pin-Removal & Hole-Alignment Punches

Nonmarring Pin-Removal Punches

Round Handle

Hex Handle

Minimize damage to your work surfaces with these brass punches, which are softer than steel punches.

8-punch hex-handle set includes one of each hex-handle punch size listed and comes in a pouch.

Punch and Chisel Holders

Protect your hands from accidental hammer strikes by gripping punches and chisels with these holders.

Style A—Slide this holder over your punch or chisel. Use with tools at least 6" long.

Styles B and C—Turn the handle to tighten. *Style C* has a spring-loaded clamp and foam grip to reduce shock.

Styles D and E—Holders have a knob at the bottom of the handle for tightening. *Style E* also has a brass rivet to resist sparking.

Combination Press, Punch, and Shear

Also known as a 40-ton metalworker, this machine handles a variety of forming tasks. Using hydraulic power, it provides up to 40 tons of punching force. It presses 3/8" thick steel, and it also shears 3/4" dia. steel rods and 3/8" Thick. x 4" Wd. and 1/4" Thick. x 6" Wd. steel sheets. Throat depth is 3 3/4". Overall size is 55 1/4" Ht. x 30" Wd. x 24" Dp. Includes a cord with plug and operates on 110 volts AC. The safety guard complies with ANSI B11-5 standards. Machine requires 1 gallon of Mobil DTE 24-SSU or equivalent hydraulic oil (sold separately).

Optional punches make openings up to 1" in 3/8" thick steel. Each size includes a punch and die.

Combination Press, Punch, and Shear	24695A11	$2,793.33
Optional 8" Sheet Bender—Works with steel up to 1/4" thick	24695A12	592.86

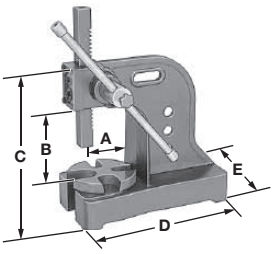
Lever Presses



Economy Bench Mount

Standard Bench Mount with Fixed Base Plate

Standard Wall Mount

High-Force Bench Mount

Hydraulic High-Force Bench Mount

With the pull of a lever, these presses deliver force for staking, riveting, and removing bearings and arbors. They're also known as arbor presses.

Economy—These presses have an adjustable-length arm to modify leverage. The removable rotating base plate fits shafts and arbors of different diameters. Presses have a cast iron frame and steel ram.

Standard—All have an adjustable-length arm to modify leverage. They have a cast iron frame and steel ram. **Fixed base-plate** presses have a flat surface for attaching dies, press-in assemblies, and printed circuit boards. **Removable rotating base-plate** presses accommodate shafts or arbors with different diameters. **Wall-mount press** can be attached to a wall, sturdy column, or machine side.

High Force—With a high-leverage arm, these presses provide more force with less effort than economy and standard presses. They have a cast iron frame and steel ram. *3-ton and 5-ton* presses have a ratcheting device to move the lever to a convenient position and a handwheel to advance the ram.

Hydraulic High Force—For applications requiring the greatest force, this press has a hydraulic pump that provides 10 tons of pressure. It includes a gauge that shows tons and psi, and it has an adjustable safety valve screw so you can set the pressure below the 10-ton maximum. The fixed base plate has a U-shaped notch and two V-blocks. The press frame and ram are steel. The ram tip is removable. The *optional ram size adapter set* includes one each of 1 3/4" long inserts in the following diameters: 3/8", 1/2", 5/8", 3/4", and 7/8".

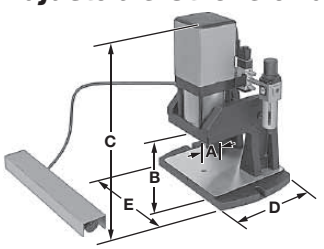
Adjustable Stroke and Force Air-Powered Presses



For punching, pressing, and swaging operations, these presses provide consistent pressure and faster operation than manual presses. The air power controls the pressing and return of the ram. Presses have a maximum stroke length of 3" and come with two-handed safety controls that meet OSHA regulations.

All presses require a minimum of 50 psi and maximum of 100 psi to operate. A four-way control valve, filter regulator, and all necessary polyurethane tubing and fittings are included. Presses are steel and aluminum with a cast iron base and a round stainless steel ram. They can be used with die sets on page 2350. Bases have two mounting holes.

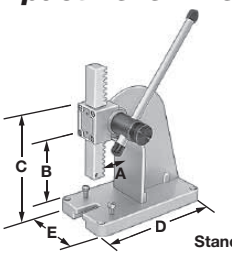
Compact Lever Presses



Standard

Extended Reach—6″ Max. Stroke Lg.

Adjustable Height

Center Handle

For pressing and assembling small parts, these presses provide the right amount of force in a compact size.

Standard—3¾″ max. stroke length press has an adjustable arm to modify leverage. It's die cast zinc with a steel ram. The base has a slot for arbors and two holes for attaching dies and tools. **6″ max. stroke length press** is cast iron with a steel ram.

Extended Reach—These presses reach past the edge of your material, and they accommodate large and unusual-shape workpieces. **1¾″ max. stroke length press** is cast iron and steel with a steel ram. The handle provides low-effort pressing by internally increasing pressing force at the end of the stroke. The handle is also useful for right- or left-hand operation. **6″ max. stroke length press** is cast iron with a steel ram.

Adjustable Height—Move the head of these presses to fit your workpiece. Presses are cast iron and steel with a steel ram. **8⅞″ max. stroke length press** has an adjustable handle for right- or left-hand operation and a T-slot in the base to hold dies.

Center Handle—The handle is at the center of the press head for right- or left-hand operation. The ram rises automatically when the handle is released. The base has a T-slot to hold dies. Press is aluminum with a steel ram.

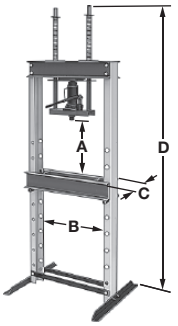
Hydraulic H-Frame Floor-Mount Presses



Hand-Operated Economy

Hand-Operated Standard

Electric

With a large working area and greater capacity than bench-mount presses, these handle bulky items and heavy duty applications.

Hand-Operated Economy—These presses have a jack mounted on the top cross bar that drives down a press plate instead of a ram. The plate automatically returns after pressing. Raise or lower the table by moving the supports in the vertical uprights. Presses are steel and are supplied with hydraulic oil. *Optional accessory kit* contains components for holding workpieces and modifying the press plate: one set of 9″ V-blocks, a 1½″ V-pushing adapter, ¾″ dia. pushing adapter, and 1″ dia. pushing adapter.

Hand-Operated Standard—A release valve controls the ram return. Presses are steel with a steel ram, and they have a self-locking hoist to raise and lower the table. All come with two V-blocks, a pressure gauge, and an attached hand pump. They require Mobil DTE 24 or equivalent hydraulic oil (sold separately). Presses have four ½″ holes for floor mounting. **25-ton press** has a stationary ram. **50-ton and 75-ton presses** have a movable ram that can be positioned around large materials. They also come with a V-ram nose and flat ram nose.

Electric—These presses have a control lever to advance and return the ram. Adjust the table height with the removable table pins. Presses are iron with a steel ram. Both include a 1 hp, 110 volt AC motor, hydraulic pump with fittings, pressure gauge, and 4-ft. cord with plug. They require Mobil DTE 24 or equivalent hydraulic oil (sold separately). Presses have four ½″ holes for floor mounting. **25-ton press** also includes a lifting chain.

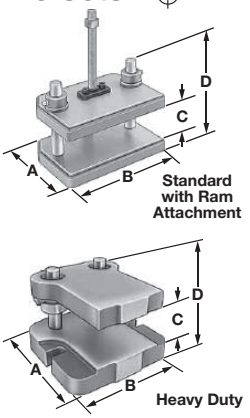
Die Sets



Use these steel die sets to hold punching and staking components on manual, air-powered, and hydraulic presses.

Standard die sets are used for assembly work and light stamping applications.

Standard die sets with ram attachment have a plate on top of the upper die and a 1/2"-13 tool adapter that connects the die and ram for quick set-up. The tool adapter is 4 1/2" long.

Heavy duty die sets handle punching and metal forming. Base has two 3/4" mounting slots.

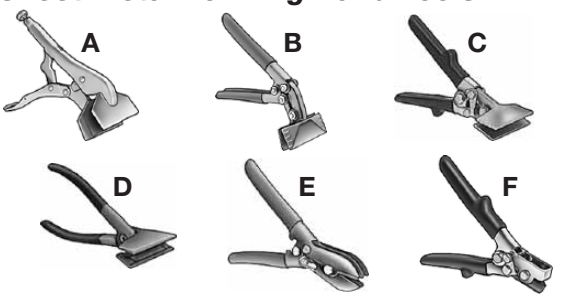
Sheet Metal Forming Hand Tools



All tools are made of steel.

(A-D) Bender/Crimpers— Use to bend and join sheet metal. **Style A** locks onto your material and has a trigger mechanism to prevent the tool from opening while bending and crimping. **Styles B and C** have jaws with V-notches in 1/4" increments to measure depth. **Style B** has offset handles for use in tight spaces. **Style D** has rounded jaws to reduce damage to aluminum and other lightweight metals.

(E) Crimper— Join pieces of metal duct and gutters. This tool has five blades and compound-leverage action for more power with less effort than other crimpers. Jaws have V-notches in 1/4" increments to measure depth.

(F) Punches— Create a 3/8" long raised edge in sheet metal that locks into the rolled edge of another piece.

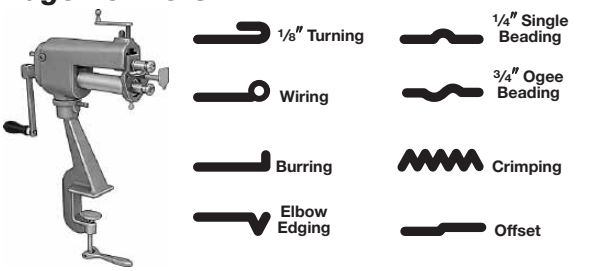
Edge Formers



Make different edge styles on your sheet metal with this forming tool. It forms steel up to 1/64" thick and comes with rollers for 1/8" turning, wiring, burring, 3/4" ogee beading, and crimping. The distance between the roller centers is 2". The C-clamp mounting base attaches to work surfaces up to 2 3/4" thick. Tool is cast iron and rollers are steel.

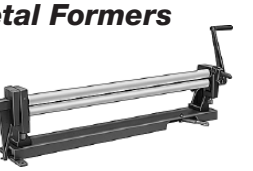
Curved Metal Formers



Create a variety of shapes in sheet metal, such as bends, curves, and circles. Also known as slip rolls, these formers can be mounted on a table or bench top. All have three steel rollers, enclosed gears, and a handle.

Standard former has a minimum bending radius of 1/2" and rollers that are 1" dia. Frame is aluminum. Grooves allow you to form wire in 1/16", 1/8", and 5/32" diameters. Base has two 1/4" dia. mounting holes.

Heavy duty formers have a minimum bending radius of 1" and rollers that are 2" dia. Frame is cast iron. Grooves allow you to form wire in 3/16", 1/4", and 5/16" diameters. Base has four 3/8" dia. mounting holes.

Sheet Metal Benders

Form metal items such as boxes and trays with these benders that attach to your bench top. They can be used with steel as well as with stainless steel and aluminum thinner than 1/16".

Economy benders make bends up to 90°. They have a brake bar and can adjust for different stock thicknesses and bend angles. Made of aluminum. Bender with 18" maximum bending width has four 1/4" dia. mounting holes. Bender with 30" maximum bending width has four 3/8" dia. mounting holes.

Standard benders can be used for vehicle panels and duct work. They make bends up to 135°. They have a clearance of 4" for insertion and removal of large workpieces. The front edge is removable to make bends that are close together. All have three 3/8" dia. mounting holes. Made of steel. *Floor stands* for the standard benders have four 3/8" dia. mounting holes for securing the stands to the floor.

Adjustable-Width Sheet Metal Benders

Position the moveable forming dies, also known as fingers, on these benders to make boxes, trays, and pans in different widths. They bend steel as well as stainless steel and aluminum. Both have a steel body and heavy truss rods. The upper leaf and nose bar are adjustable for radius bending. Minimum reverse bend is 1/4". They also include a removable apron insert, apron stop rod, and counterweights.

Bench model has four 1/2" dia. mounting holes. Handles have plastic grips.

Floor model has reinforced construction and can handle thicker material than the bench model. It has four 5/8" dia. mounting holes.

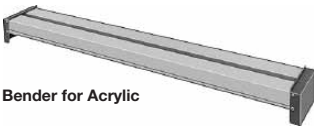
Benders for Plastic Sheets



Bender for Acrylic

Bender for All Plastics

Heat a narrow area across a plastic sheet until it's malleable enough for bending and forming. These benders work with sheets up to 1/2" thick.

For Acrylic—Lay an acrylic sheet across the heating element, and wait three to six minutes for it to soften. Heating unit has an on/off switch, pilot light, and thermostat control. Maximum temperature is 450° F. Bender has a cord with plug and operates on 110 volts AC. Made of steel. CSA certified.

For All Plastics—Use with acrylic, polyethylene, polypropylene, polycarbonate, PVC, CPVC, ABS, and Kydex. Place a sheet between the heating bars to soften it. Heating time varies between 30 seconds and 12 minutes based on material type and thickness. Use wood or metal supports (not included) under the sheet during heating. Each heating bar has a cord that plugs into the control box, and a single on/off switch. Maximum temperature is 400° F. Benders have a cord with plug and operate on 120 volts AC. Made of aluminum.

Optional V-Groove Attachment—Create sharp, nonradius 90° bends in polypropylene and polyethylene sheets. This attachment melts a deep groove in the material where you can bend to form the angle. A raised edge is left along the groove to reinforce the angle. Attachment is aluminum.

Wire Benders and Conduit & Pipe Benders

Wire, Rod, and Flat Stock Benders

Economy Bender

Standard Bender

Use these benders to create hooks, brackets, and pipe hangers. They can be clamped in a vise.

Economy benders bend wire and rods up to 3/8″ in dia. and flat stock up to 1/2″ x 3/16″. Made of aluminum. *Small diameter* has a 12″ long handle and 3″ x 3″ base. *Large diameter* has a 16″ long handle and 4″ x 6″ base.

Standard bender bends wire and rods up to 1/2″ in dia. and flat stock up to 1/4″ x 1″. Made of steel. Overall size is 20″ Lg. x 2″ Wd. x 5″ Ht.

	Die Dia.		
Small-Diameter Economy	1/2″, 3/4″, 1″, 1 1/4″, 1 1/2″	2460A16	$44.44
Large-Diameter Economy	3/4″, 2″, 3″, 4″	2460A18	69.00
Standard	3/4″, 1 1/4″, 1 5/8″	2460A11	75.72

Miniature Wire Bender

For small projects, this wire bender forms steel and other metal wire up to 1/4″ in dia. It measures 4 3/4″ Lg. x 1″ Wd. and is made of aluminum. Bender has two 1/4″ mounting holes or it can be clamped in a vise.

2379A11 ..... $8.88

Wire Benders for Complex Shapes

Squares, coils, and S-shapes may look complex, but they're no problem to form with this bender. **Wire bender** forms wire and rod up to 5/16″ in dia. and flat stock up to 1″ Wd. x 1/8″ Thick. It can be used with steel, brass, and other metals. The bender comes with four circle pins, one sharp-angle die, a bending gauge, and a 1-ft. long handle. Made of steel. Overall size (not including handle) is 9 1/2″ Lg. x 2 1/2″ Wd. x 3 1/2″ Ht. It has two 5/16″ dia. mounting holes, or it can be clamped in a vise.

Edge bender kit includes three discs to bend the edge of flat material. It forms material up to 1/8″ thick and 3/4″ wide. **Additional circle pins** make additional sizes of bends and coils.

Conduit Benders

Conduit Bending Head

Short-Radius Conduit Bending Head

These tools bend conduit according to National Electrical Code (NEC) specifications.

Conduit bending heads have easy-to-read markings for 10°, 22 1/2°, 30°, 45°, 60°, and 90° angles. Aluminum heads are lighter than cast iron heads.

Short-radius conduit bending heads are used to make tight bends.

Handles are labeled with a bending guide. Made of steel.

Conduit Benders for Offset Bends

When you're working with exposed conduit, these benders make offset bends so your conduit matches knockout holes in electrical boxes. Insert the conduit, and press and release the handle to make offset bends up to 9/16″. Benders are aluminum with two 5/16″ dia. mounting holes. Include a 22″ long steel handle. Overall length is 27 1/4″.

For 1/2 EMT Conduit	2458A1	$285.95
For 3/4 EMT Conduit	2458A2	422.93

Multisize Conduit and Pipe Benders

You only need one bender for different conduit and pipe sizes. These benders have ratcheting action to eliminate repositioning of the conduit or pipe when making multiple bends. They include a scale marked for 30°, 45°, 60°, and 90° angles. For use with Schedule 40 pipe. Benders are steel and have a mobile frame. Handle is not included; use a 3- to 4-ft. length of 1″ OD pipe or rigid conduit.

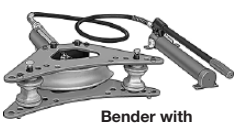
Hydraulic Multisize Conduit and Pipe Benders

Bender with Integrated Pump



Bender with Separate Pump

The hydraulic force of these benders allows you to bend many sizes of rigid conduit and pipe to 90°. Not for use with EMT or IMC conduit. Both benders are supplied with hydraulic oil.

Bender with integrated pump bends Schedule 40 and 80 pipe. Made of steel with aluminum formers. Size is 25 3/4″ Lg. x 22″ Wd. x 7″ Ht.

Bender with separate pump bends Schedule 40 pipe. Made of aluminum. Size is 25 3/4″ Lg. x 25″ Wd. x 8 3/8″ Ht.

	For Conduit and Pipe Sizes	Hydraulic Force		
With Integrated Pump	1/2, 3/4, 1, 1 1/4, 1 1/2, 2	13 tons	2414A2	$1,787.08

Benders for Thick-Wall Metal Tubing

Ratcheting action gives these tools the leverage needed to make bends up to 180° in thick-wall material. They bend steel tubing (up to 1/8″ wall thick.), stainless steel tubing (up to 3/32″ wall thick.), and Types K and L copper tubing. Benders are aluminum.

For Tube OD	Bend Radius	Angle Increments	Lg.		
5/8″	3″	15°	22″	23705A11	$337.68
3/4″	3 3/4″	15°	31″	23705A12	452.23
7/8″	3 3/4″	15°	31″	23705A13	458.78

Tube Benders for Soft and Hard Metals

Whether you're bending soft metals such as copper and brass or harder metals such as steel, stainless steel, and titanium, these tools make bends up to 180°. Made of steel.

Precision benders have an adjustable face plate to compensate for spring-back. They meet ANSI B31.1 and ASME 3 Boiler and Power standards.

For Tube OD	Bend Radius	Angle Increments	Lg.		
Standard					
3/8″	1″	15°	20 3/8″	33745A61	$226.36

1/2″	1 1/2″	15°	24″	2422A13	312.12

Easy-Use Precision Tube Benders for Hard Metals

An easy-to-read dial ensures accurate bends, and ratcheting action provides fast, low-effort bending. This tool makes right- and left-hand bends up to 180° in hard metals such as alloy steel and stainless steel. Tube bender can be bench-mounted with included fasteners. Made of steel. Handle is 36″. Size (not including handle) is 19″ Lg. ×6″ Wd. ×6″ Ht. Tube bender and bending mandrels are sold separately.

Optional pedestal stand is 36″ tall and has four 3/4″ bolt holes for floor mounting.

Small-Diameter Multisize Tube Benders

Bend fuel, brake, and hydraulic lines up to 135°. These benders can be clamped in a vise. Made of steel with a nylon mandrel. Bend radius is 2″. Length is 5″.

For Tube OD			
Copper	Steel		
3/16″, 1/4″, 5/16″, 3/8″	3/16″, 1/4″, 5/16″	2478A12	$19.09

Benders for PVC Conduit and Pipe

Heat PVC conduit and pipe, then manually bend it to your desired angle. This electric blanket wraps around your workpiece and secures with a hook-and-loop strap. It heats any schedule PVC conduit and pipe from 1/2″ to 1 1/2″ in dia. Operates on 120 volts AC and has a cord with plug. Made of silicone rubber and vinyl.

Lg.	Wd.		
13″	8 1/4″	3236A66	$256.37

Precision Tube Benders for Soft and Hard Metals

This bender holds metal tubes securely for accurate bends every time. It has a hand crank and gears to provide high force with low effort. Use it to bend copper, brass, aluminum, steel, stainless steel, and titanium tubing up to 180°. It bends tubes from 0.016″ to 0.083″ wall thickness. It has a bend radius of 3/4″ to 3″. Bender is 16″ long with two 3/8″ mounting holes. It can also be clamped in a vise. Comes with three slide bars for 1/4″ to 3/4″ tube OD and six bending mandrels. Made of steel.

	For Tube OD		
Bender Kit	1/4″, 5/16″, 3/8″, 1/2″, 5/8″, 3/4″	2487A35	$1,956.14
Replacement Mandrels—Choose tube OD: 1/4″, 5/16″, 3/8″, 1/2″, 5/8″, 3/4″		2487A1	

One-Hand Tube Benders for Soft Metals

Make bends up to 90° with one hand. Kit includes the bender and four mandrels. Bender size is 8 1/2″ Lg. ×4 3/4″ Wd. ×3 1/2″ Ht.

	For Tube OD		
Bender Kit	1/4″, 5/16″, 3/8″, 1/2″	2430A32	$317.53
Replacement Mandrels—Choose tube OD: 1/4″, 3/8″, 1/2″		2430A1	

Tube Sleeves for Hand Bending

Protect thin-wall tubing from crimping and collapsing while bending by hand. These sleeves slip over aluminum, copper, and brass tubing. Made of spring steel.

For Tube OD	Lg.			For Tube OD	Lg.

Tube Flaring and Expanding Tools

Flare and expand tubes with different diameters. This tool makes 37° and 45° flares. It also makes 45° double flares (not for 1/8″ or 7/16″ tubing). It works on copper, brass, aluminum, steel, and stainless steel up to 0.049" wall thickness. Type M hard copper should be annealed before flaring. Tool can be mounted in a vise. It's 8″ long and made of steel.

For Tube OD			
1/8″, 3/16″, 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 5/8″, 3/4″	27555A21	$359.11

Tube Expanders

Enlarge the end of a tube to allow a second piece of the same diameter to fit inside. Use these expanders with copper and aluminum tubing up to 0.063″ wall thickness. Expanders are 24″ long with an aluminum body and steel heads.

For Tube OD

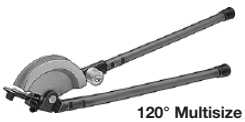
Tube Benders & Flaring Tools

Tube Benders for Soft Metals

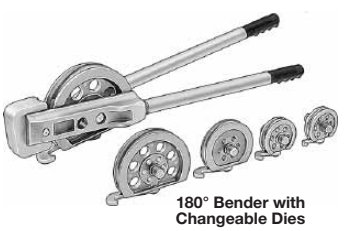
90° Multisize Bender



120° Multisize Bender

180° Bender

180° Multisize Bender



180° Bender with Changeable Dies

Slip these open-sided tools over your tubing to make bends in soft metals. **90° and 180° benders** are for use with copper, brass, and aluminum, except tool with 1″ bend radius is only for use with soft (annealed) copper and aluminum. They have incremental markings so you can accurately bend to the correct angle. **120° bender** is for use on copper and aluminum.

90° multisize benders can bend more than one size of tubing without adjusting the bending head. They're made of aluminum.

120° multisize bender can bend more than one size of tubing without adjusting the bending head. Handle is steel.

180° benders for a single tube OD have a hook to hold your tubing securely in place. All are made of steel.

180° multisize benders can bend more than one size of tubing without adjusting the bending head. They're made of aluminum.

180° benders with changeable dies come with steel handles and dies in the tube OD sizes listed. Dies for 3/8″ OD and larger tubing are only for use with soft (annealed) copper and aluminum.

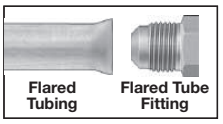
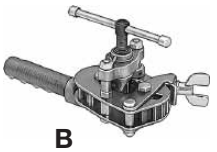
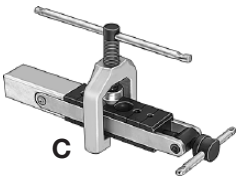
Tube Flaring Tools



A

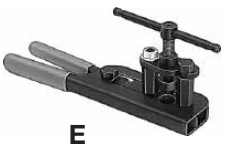


B



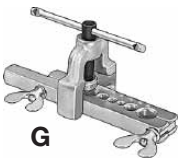
C

D



E

F



G

Create a flared end on metal tubing so it's compatible with flared tube fittings. These tools consist of a flaring head and a tube holder.

Hand-held tools flare soft metal tubing, such as copper, brass, and aluminum, except 2693A16 is not for use with brass. **Vise-mount tools** flare soft metal tubing as well as hard metal tubing including steel and stainless steel. Type M hard copper should be annealed before flaring.

Tools for 37° Flares—37° flares are used in high-pressure applications. The flaring and reaming tool can ream 1/4″ to 5/8″ OD tubing.

Tools for 45° Flares—A 45° flare is preferred for low-pressure applications. *Style F* is for copper only. The double-flare fitting tool can make single or double flares. The flaring and expanding tool expands 3/16″ to 3/4″ OD tubing.

Metal Tube and Conduit Cutters

Cutters have dual grooved rollers (unless otherwise stated) for clearance to cut flared tube ends with little material loss.

(A) Compact Cutters—A small swing radius lets you cut tubing in tight spaces. 2764A12 has a 1 1/4″ swing radius and smooth dual rollers. 2764A14 has a 1 11/16″ swing radius. 2764A13 has a 1 15/16″ swing radius. All have an enclosed adjustment screw to prevent damage from chips and debris.

(B) Economy Cutter—An enclosed adjustment screw prevents damage from chips and debris.

(C) Smooth-Action Cutters—For smooth cuts and trouble-free operation, these cutters have enclosed steel bearings. All have an enclosed adjustment screw to prevent damage from chips and debris. Body is chrome plated. Cutters include a fold-away deburring reamer with file and a replacement cutting wheel.

(D) Combination Cutter and Crimper—After cutting, crimp tubing in preparation for making connections. An enclosed adjustment screw prevents damage from chips and debris. Includes one cutting wheel, one crimping wheel, and a fold-away deburring reamer.

(E) Quick-Adjusting Cutters—An enclosed ratchet feed opens quickly to accept tubing and instantly slides to cutting position. The adjustment screw is enclosed to prevent damage from chips and debris. Include an extra cutting wheel. 2708A2 has four grooved rollers.

(F) Economy Cutter with Fold-Away Deburring Reamer—A good general purpose cutter.

(G) Cutters—Include a fold-away deburring reamer, except 2670A5, which does not have a reamer. 2670A1, A2, and A3 have rollers that are not grooved.

Metal Tube and Conduit Cutters for Tight Spots

(A) Ratcheting Cutters—Ratchet action permits cutting in cramped areas. Cutters are zinc with a plastic handle and a smooth roller. They also cut plastic and PVC tubing. When used with a *heavy duty cutting wheel* (sold separately) cutters can cut steel and stainless steel.

(B) Compact Cutters—A spring-loaded cutting wheel tightens as you spin these cutters around tubing without a handle to get in your way. Cutters have a plastic body, except 27005A31, which is zinc-plated steel. *Optional ratcheting handle* provides extra leverage.

★ Comes with two wheels.

Smooth-Action Corrugated Stainless Steel Tube and Conduit Cutters

This cutter has two sets of guide wheels that ride in the corrugations for stability so you get clean, precise cuts in 3/8" to 1" OD corrugated stainless steel tubing and conduit. Cutter is aluminum with a steel cutting wheel. It's 8 3/4" long when opened and 7" long when closed.

Cutter	3241A16	$62.12
Replacement Wheel	2757A29	6.97

Compact Flexible Tube and Hose Cutters

Fit this compact cutter into your pocket or tool belt. Use it to cut plastic and rubber hose and tubing. It has a plastic spring-loaded frame and a steel blade. Cutting capacity is 1/8" to 3/4" OD. Overall length is 3".

Cutter	8288A51	$7.00
Cutter with Lanyard	8288A52	16.10
Repl. Blades (Pkg. of 5)	8288A54	12.40
Repl. Blades (Pkg. of 10)	8288A53	20.00

Bench-Mount Flexible Tube and Hose Cutters

Use to cut plastic and rubber tubing and hose. Cutter has an aluminum frame with 9/32" mounting holes (fasteners not included). Blade is steel. Cutting capacity is 1/8" to 3/4" OD. Overall length is 9 1/2".

Cutter	3676A11	$82.99
Repl. Blade	3676A12	21.05

Multipurpose Pipe, Tube, and Hose Cutters

Standard

Easy Cut

Standard Cutters—Squeeze the handles to cut plastic pipe and tubing and rubber hose. Cutters are plastic with a black steel blade, unless noted.

Easy-Cut Cutters—Ratchet action increases leverage to cut through Schedule 40 PVC and polyethylene pipe and soft rubber tubing. Cutters are aluminum with a steel blade.

★ Blade is stainless steel.

Clay Pipe Cutters

Access clay and cast iron soil pipe in tight spots. These cutters use ratchet action to score and fracture pipe with a cutting chain. Minimum clearance is 1 1/4". Includes a 15 1/2" long ratchet handle.

For OD Min.	For OD Max.	Lg.		
1 1/2"	6"	26"	24935A41	$581.38
1 1/2"	8"	26"	24935A42	651.72

Polyethylene (PEX) Tube Cutters

Cut PEX tubing with one or two twists. These cutters automatically adjust pressure during cutting to prevent distorting the tube end, so it's easy to attach fittings. Cutters are plastic with a steel cutting blade.

Plastic Pipe and Tube Cutters

Standard

Quick Adjusting

Cutters have dual rollers with a groove for clearance to cut flared tube ends with little material loss. Frame is aluminum and cutting wheel is steel.

Standard Cutters—Make cuts in PVC, polyethylene, and most rigid plastic pipe and tubing. An enclosed adjustment screw prevents damage from chips and debris.

Quick-Adjusting Cutters—A fast-acting release lever opens the cutter to maximum size. Push the handle to quickly slide the cutting wheel onto the pipe. Use to cut ABS and polyethylene pipe and tubing. *Cutting wheels for PVC and CPVC* are sold separately.

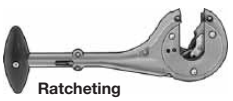
Easy-Cut Plastic Pipe Cutters

The pistol grip makes cutting quick and comfortable and ratchet action increases leverage. Cut Schedule 40 CPVC pipe up to 1 5/8" OD. Cutter is aluminum with a stainless steel blade. Overall length is 8 1/4".

Cutter	24875A75	$64.13
Repl. Blade	24875A77	20.91

Metal and Plastic Pipe Cutters for Tight Spots



Ratcheting

Quarter Turn

Ratcheting Cutter—Ratchet action moves the cutter 360° around pipe with only 10° of handle swing. Cuts semirigid plastic pipe (such as ABS, PVC, and polyethylene) and Schedule 40 and 80 steel pipe. Also cuts plastic, copper, brass, aluminum, and steel tubing. Cutter is aluminum with a steel cutting wheel.

Quarter-Turn Cutters—Cut pipe with just 90°–110° of handle swing and 4" of clearance. Use to cut Schedule 40 steel, stainless steel, and iron pipe. Cutter is iron with four steel cutting wheels.

Metal and Plastic Pipe Cutters

One Wheel with One Handle

Four Wheels

Economy Cutter—Turn this cutter 360° around a pipe to make a cut. Comes with a cutting wheel for soft copper, hard copper, aluminum, and PVC pipe, tubing, and conduit.

Ridgid Cutters—These heavy duty cutters have an iron frame for exceptional durability. Use to cut Schedule 40 iron and steel pipe. *One-wheel* cutters require a 360° turn for a complete cut. *Four-wheel* cutters require only a 180° turn to make a 360° cut. *Two-handle* cutters are for two-person operation. *Ridgid Number 202* cutter has extra-wide rollers to resist wobbling and make straight, clean cuts.

Glass Cutters

Standard

Easy-Cut with Straight Handle

Easy-Cut with Pistol-Grip Handle

Standard Cutters—Make smooth, flake-free cuts in glass. Use these cutters for straight cuts. Handles have a ball end for hitting the glass on the opposite side of the score line to complete the cut except 3867A11, which has a handle with no ball end. Handles are zinc and 5 1/8" long. *Carbide wheels* last 10 times longer than steel.

Easy-Cut Cutters—A reservoir in the handle provides automatic oil-feed to keep the cutting wheel blade sharp and make cutting easy. Cutting oil sold separately. The cutter with *straight handle* is brass and 6 3/4" long. Use for straight and contoured cuts. The cutter with *pistol-grip handle* is more comfortable to hold than a cutter with straight handle. It is plastic and 6" long. Use to make straight cuts. To make contoured cuts, add an *optional carbide blade*.

Optional 1/4" wide carbide blade is for more intricate work.

Glass Tube Cutters

Compact

Standard

Use these cutters on brittle material such as glass and porcelain.

Compact Cutter—Apply fingertip pressure to this spring-loaded cutter while rotating the tubing. Cutter is made from zinc with a replaceable steel cutting wheel.

Standard Cutters—Wrap the cutter chain around tubing, then squeeze the handles while rotating the tubing. Cutters have one steel and one aluminum handle, except 9" long cutter, which has steel handles with plastic grips.

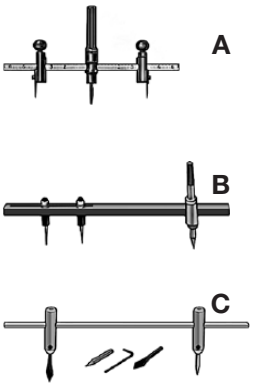
Circular Gasket Cutters



Cut soft materials such as PTFE, fiber, rubber, and cork. Styles A&B simultaneously cut inside and outside diameters.

Style A—Has steel blades, a 5/16″ square shank, and a steel cutter bar. Also cuts graphite. Use by hand or in a hand drill.

Style B—Has steel blades, a 1/4″ tapered shank, and a steel cutter bar. Also cuts stainless steel, brass, tin, and 2-3 mil thick copper. Use by hand, in a hand drill, or in a drill press.

Style C—Includes two steel knife blades with blade holder, two center points with holder, and a hex wrench. Use by hand only; do not use in a hand drill or drill press. The *2″-70″ dia. cutter* has two bars.

	Cutting Dia. Min.	Cutting Dia. Max.	For Max. Material Thick.	Bar Lg.	Cutters		Repl. Blades

Precise-Cut Circular Gasket Cutters with Cutting Pad

Ensure precise cuts with a measuring scale and adjustable blade depth. Use to cut nonmetallic materials such as PTFE, graphite, fiber, rubber, and cork. A rectangular base keeps material flat during cutting to prevent tears and the cutting pad reseals itself after each cut.

Style A—Cutter has top-reading inch and metric scales. Includes one pointed blade for general purpose cutting, one rounded-tip blade for heavy duty cutting, one curved blade for cutting thin materials, and one angled-tip blade for cutting rigid materials. It has one 13/16″ long and one 1 5/16″ long center pin, and one pin for cutting discs. Also cuts strips up to 3 5/8″ wide. It is plastic with steel blades and comes in a metal case.

Style B—Includes six pointed blades for general purpose cutting; six rounded-tip blades for heavy duty cutting; a bolt-hole locator that finds the center point of any size hole; a cutting knob; a dovetail cutting template for cutting circular gaskets in sections held together by dovetail cutouts; and a pin insertion handle. It has one 13/16″ long, one 1 7/16″ long, and one 1 11/16″ long center pin. 3870A21 has one cutting arm. 3870A22 has two cutting arms. All are brass with steel blades and come in a plastic case.

Style C—Includes one pointed blade for general purpose cutting and one rounded-tip blade for heavy duty cutting; top-reading inch and metric scales; a piercing tool; and two extension arms. It has one 13/16″ long, one 1 7/16″ long, and one 1 11/16″ long center pin. It is plastic with steel blades and comes in a plastic case.

Optional extension arms are for cutting larger diameter gaskets with Styles B&C.

Replacement blades have six blades per package.

Packing-Seal Cutters

Cut all kinds of packing including Kevlar, copper-sheathed, and wire-core up to 1″ dia. at 15° and 45° angles. This cutter includes a vernier caliper for accurate measurements and a direct-reading diameter/circumference scale (4″ dia. max. shaft size) to eliminate material waste. Overall size is 21″ Lg. × 6″ Wd.

Cutter	3662A11	$651.89
Replacement Blade	3662A21	29.31

Steel Drum Head Cutters

Remove the top from a steel drum leaving a clean edge and lip. The drum can then be used with drum covers (see page 1743 for covers). Also known as drum deheaders. Cutters operate counterclockwise except for the easy-cut cutter, which can operate in either direction.

Standard Cutter—These cutters are for occasional use. Turn the knob to clamp the cutter onto a drum, then push down and pull up on the handle to cut around the head. Made of steel with a steel blade. Overall length is 20 1/2″.

Nonsparking Cutter—For drums containing flammable materials. Made from aluminum-bronze with a beryllium copper blade. Like the standard cutter, turn the knob to clamp the cutter onto a drum, then push down and pull up on the handle to cut around the head. Overall length is 19″.

High-Force Cutter—Longer handles give you more leverage to cut through drum heads with less effort than other steel drum head cutters. Squeeze the two handles together to quickly penetrate the drum with the cutting tip, then push both handles down and pull them up to cut. Made of steel with a steel blade. Overall length is 24″.

Easy-Cut Cutter—This cutter uses ratchet action to provide more force with less effort than high-force cutters. Clamp the cutter onto your drum lip, then move the 18 3/4″ long handle up and down to cut. Made of steel and aluminum with a steel blade. Size is 18″ Ht. × 7″ Wd. × 12″ Dp. (without handle).

Powered Steel Drum Head Cutters

Make fast cuts without manual effort. A self-propelled round blade makes a continuous cut, leaving a clean edge and lip for use with drum covers (see page 1743 for covers). Also known as drum deheaders. Cutters have an aluminum and steel frame, and a steel blade.

Standard Cutter—For intermittent use, this cutter can remove the heads from up to 10 drums per day. A quiet motor propels the blade. Cutter has a 31 1/2″ long power cord with three-prong plug. It is 1/8 hp and 115 volts. Overall size is 24″ Ht. × 10″ Wd. × 12″ Dp.

Heavy Duty Cutters—Choose these cutters for continuous use. Overall size is 25″ Ht. × 11″ Wd. × 17″ Dp. *Electric cutter* has a quiet motor that propels the blade. Includes a 31 1/2″ long power cord with three-prong plug. It is 1/3 hp and 110 volts. *Air-powered cutter* is for use in areas where work surfaces are wet. Nonmarring rollers guide the cutter around the head. It operates on 60-100 psi, 25 cfm air pressure. Air inlet is 1/4″ NPT male. Hose size is 1/2″ (hose not included).

Optional support stand is portable and can be bolted to the floor. An overhead roller and chain holds the cutter at working height and pivots 360°.

Bolt and Chain Cutters

Hand Cutter

Flush Cut with Offset Handles

Bench-Mount Cutter

General Purpose, Flush Cut, and Hard Chain

Hard Chain and Padlock

Cut metal bolts, chain, rods, and wire. All cutters have an adjustment screw to align cutting edges, steel jaws, and a steel handle with rubber grips. For more leverage, choose a cutter with a longer handle. Not for use on wire rope.

General Purpose—Handle most jobs.

Flush Cut—Blades are flat on one side for close-to-the-surface cuts.

Flush Cut with Offset Handles—Cutting jaw is angled 30° up from the handle to keep work in sight and hands clear of the work surface. Blades are flat on one side for close-to-the-surface cuts.

Hard Chain—Cut hard bolts and up to Grade 70 chain with reinforced blades that stay aligned during repeat cuts.

Hard Chain and Padlock—With a short-nosed jaw, these cutters force the material being cut deeper into the jaw for maximum leverage. The short jaw also allows you to cut one side of a chain link or padlock hasp without hitting the other side.

Bench-mount cutters can be mounted to a workbench for added stability and ease of use during repeated cuts. Base is 6″ Lg. × 3″ Wd. with four ⅜″ dia. mounting holes (fasteners not included).

Replacement cutting heads include lockplate, jaws, and bolts.

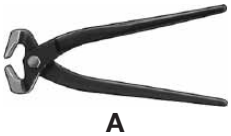
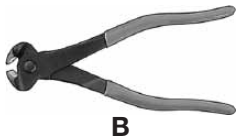
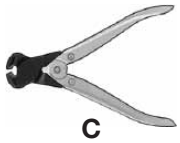
Wire End Cutters for Hard Wire



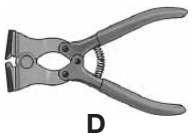
A



B



C



D

Also known as nippers, these have wide jaws that cut steel wire, nails, and small rivets close to the surface.

(A) Standard Cutters—Also great for pulling nails.

(B) Comfort-Grip Cutters—Plastic-cushioned grips make these cutters easy to hold during repeated cuts. They have hardened, precisely aligned cutting edges with a rust-resistant coating for clean, even cuts. Use on hard steel, aluminum, and copper.

(C) High-Force Cutter—A double hinge provides high cutting force with low gripping pressure, and a spring opens the jaws for quick cutting.

(D) Long-Life High-Force Cutters—Sharpen or replace the jaws as they wear. These cutters have a double hinge that provides high cutting force with low gripping pressure. A spring opens the jaws for quick cutting.

Large-Diameter Wire Rope Cutters

Hammer Driven

Hydraulic-Assist Lever Operated

Ideal for cutting steel and stainless steel wire rope.

Hammer-Driven Cutters—With a quick hammer blow, these cutters make cuts without squeezing or flattening wire. Blades are made of steel. For best results, use with Wire Rope Cutting Bands (see 3501T on page 1478).

Replacement Parts: Please ask for 38535A92 and specify the McMaster-Carr part number of the cutter.

Hydraulic-Assist Lever-Operated Cutters—These manually operated cutters make a clean cut with just a few pumps of the handle. They don't require any outside power and are light enough to carry to the job. Handle is steel with a plastic grip.

Repair Kit: Please ask for 39525A81 and specify the McMaster-Carr part number of the cutter.

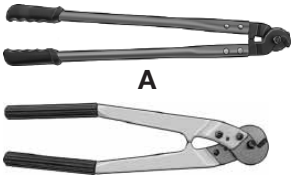
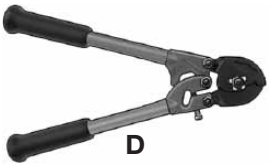
■Up to Rockwell C30/Brinell 285. ♥ACSR = steel-reinforced aluminum cable.

Wire Rope Cutters





Cut steel wire rope with minimal distortion.

(A) Standard Cutter—Operate this cutter with both hands. Also cuts steel-reinforced aluminum cable (ACSR). Cutter is steel with rubber grips.

(B) Heavy Duty Cutters—Keep your hands in a comfortable position so you can apply more force for cutting. The handles are shaped to optimize cutting capacity. Operate them with both hands, or place one handle on a flat surface and apply force to the other handle with your body weight. Also cuts steel-reinforced aluminum cable (ACSR). Jaws are tool steel and handles are aluminum with plastic grips.

(C) One-Handed Cutters—A small grip enables one-handed cutting. These cutters prevent crushed and frayed cable ends. Also cut steel-reinforced aluminum cable (ASCR). Jaws are tool steel and handles are steel with plastic grips.

(D) High-Force Cutters—Cutters have a double hinge that provides high cutting force with low gripping pressure. They are steel with rubber grips.

(E) Lever-Operated Bench-Mount Cutter—Use the lever to make one-handed cuts. Cutter mounts to a workbench for extra stability and ease of use for repeated cuts. Base is 6" Lg. × 3" Wd. with four 13/32" dia. mounting holes (fasteners not included). Cutter is steel with rubber grips.

Nut Cutters

Economy

Standard

Heavy Duty

Hydraulic Powered

Also known as nut splitters, use these cutters to remove frozen, rusted, and stubborn nuts. Nut width is measured across the flats.

Manual Cutters—Turn the adjustment screw with a 3/4" hand wrench to force the cutting blade into one side of a nut. Blade swivels 360° to cut in any position. *Economy* and *standard* cutters split one side of the nut at a time. *Heavy duty* cutter has two blades that split both sides of the nut at once. Can also be used with a 3/4" impact wrench.

Hydraulic-Powered Cutters—Cut all grades of steel nuts up to Rockwell C44 with these powerful cutters. An angled head gets close to the nut for easy splitting. A single-acting 10,000 psi cylinder connects to a 10,000 psi-rated hand, air, or electric pump. Cutters include a chisel, a wrench, and a plastic case. Hydraulic hose and two-speed manual jack pump are required (sold separately).

Hydraulic hose with fittings is 6-ft. long and has a 3/8 NPTF male connection. It includes a male coupler. Rated at 10,000 psi.

Two-speed manual jack pump is rated at 200/10,000 psi. Outlet connection is 3/8 NPTF female. Oil capacity is 45 cu. in.

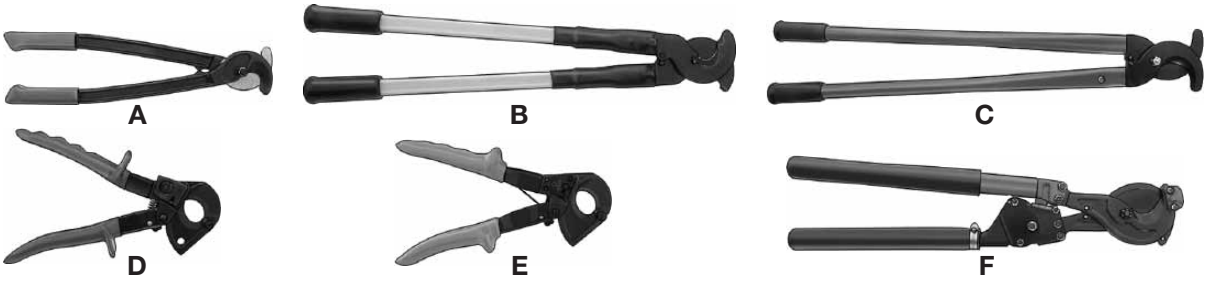
Electrical and Data Cable Cutters



Minimize wire distortion when cutting 11/16″ diameter and larger aluminum and copper power and communication cable. Jaws are steel.

(A-C) Standard Cutters—Operate these cutters with both hands.

(D-F) Easy-Cut Cutters—Jaws ratchet to increase cutting pressure as you open and close the handles. *Styles D & E* are for one-handed use. *Style D* has spring-assisted jaws that open quickly for fast cutting. *Style F* is for use with two hands. It has spring-assisted jaws that open quickly for fast cutting.

✓Moving jaw for 3600A12. Includes assembly hardware. ▲Fixed jaw for 3600A12. Includes assembly hardware.

Small-Diameter Electrical and Data Cable Cutters

Use these one-handed cutters on small-diameter aluminum and copper power and communication cable.

Styles A&C—Cutters are steel with plastic grips.

Style B—The spring-assisted, hardened-steel jaws open quickly for fast cutting. Handle is steel with insulated plastic grips.

Style D—Cutter has spring-assisted stainless steel jaws that open quickly for fast cutting. Handle is plastic.

Style E—Jaws are steel and handle is insulated plastic.

Armored Building Cable and Flexible-Conduit Cutters

Cut armored cable such as BX, MC, and HCF and flexible metal conduit with one hand. Cutting capacity is 1/2″. Cutter is steel with plastic grips. Overall length is 7 5/8″.

3724A2 ..... $40.54

Coaxial and Fiber-Optic Cable Cutters

Produce clean, distortion-free cuts in cable with one-handed operation. Also cuts carbon fiber, copper, fiberglass, and Kevlar. Cuts 3/4″ dia. cable. Overall length is 8 1/4″. Made from steel with plastic-coated handles.

4938A31 ..... $20.43

Self-Healing Die-Cutting Pads

Made from polypropylene, these pads endure pressure from dies and blades. After the pressure is released, they heal themselves to seal surface nicks and cuts. Durometer is 78D. Color is white.

Lg.	Wd.	Thick.		
18″	35″	1″	2967A15	$102.62

Cordless Electrical and Data Cable Cutters

Push the button to cut aluminum and copper power and communication cable. Blades automatically open when the cut is complete. Head rotates 350° so you can cut in tight spots. Cutting capacity is 1 11/32″ dia. (500 MCM).

Cutter has hardened steel jaws and a plastic handle. Operates on one rechargeable 18-volt battery; makes about 100 cuts per battery charge. Includes two batteries, a battery charger, and a carrying case. Overall length is 16″.

2920A13 ..... $1,613.54

Rotary Armored Building Cable and Flexible-Conduit Strippers

Strip armored cable such as BX, MC, and HCF cable and flexible metal conduit. Turn the crank to make a slit in the cable casing, then just twist the casing to remove it without damaging the wires inside or having to debur the ends. Strippers can cut at the end or the middle of a cable roll. Made from die cast zinc.

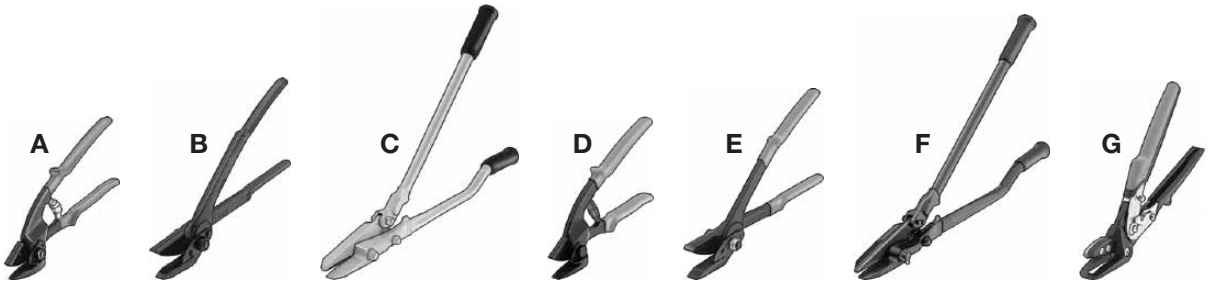
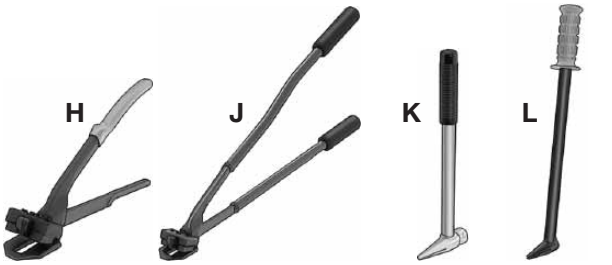
Strap Cutters and Breakers



Strap Cutter

Strap Breaker



Break or cut steel and plastic strapping with ease.

(A-J) Strap Cutters

Economy—Made from forged steel.

Style A has spring-action jaws that open automatically. One-handed operation.

Style B has long handles for better leverage. One-handed operation.

Style C has an offset lower handle for cutting heavy steel strapping easily and preventing bruised knuckles. Two-handed operation.

Standard—Have hardened steel cutting heads and plastic handle grips.

Style D has spring-action jaws that open automatically. It also cuts tie wire. One-handed operation.

Style E has long handles for extra leverage when cutting wide straps. One-handed operation.

Style F makes light work of cutting heavy steel strapping. Offset lower handle prevents bruised knuckles. Two-handed operation.

Safety—Reduce the chance of worker injury from sharp flying strap ends. Cutters hold both ends of properly tightened strapping until tension is released. They're high-grade alloy steel with a plastic-grip top handle; *Styles G* and *J* also have a plastic-grip bottom handle.

Style G uses leverage for additional power. One-handed operation.

Styles H and *J* have rubber compression pads for greater control of tight straps. *Style H* is one-handed operation; *Style J* is two-handed.

(K&L) Strap Breakers

Made from steel with a durable heat-treated cutting head and a vinyl handle grip. For *Style K,* slip the strap into the slot and rotate the handle to snap the strap. For *Style L,* slip the strap into the slot and lift up or push down the handle to snap the strap.

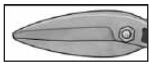
Sheet Metal Cutters

Standard

Standard with Replaceable Blades

Heavy Duty with Offset Handles



General

Notch/Nibble

Tight Spot

Also known as tinners' snips, these cutters make straight cuts and curves.

Standard Cutters—Made of steel with plastic grips. Meet Fed. Spec. GGG-S-291F and ANSI/ASME Standard B107.16M.

Standard Cutter with Replaceable Blade—Replace blades as they wear. Blades are steel and handles are magnesium. *Replacement blade kit* includes two blades with four screws and nuts.

Heavy Duty Cutters—Blades are heat treated then sharpened for increased performance and durability. Made of steel with plastic grips.

Heavy Duty Cutter with Offset Handles—Angled handles keep your hand away from the material as you cut straight lines and curves. The blades are heat treated then sharpened for increased performance and durability. Made of steel with plain handles.

Notch/nibble cutters (also known as bulldog snips) have long handles and short blades for cutting heavy material in any direction.

Tight spot cutters (also known as duckbill snips) have tapered blades to give you more control when cutting straight lines, tight curves, and circles. They're serrated to prevent slipping.

Thin-Gauge Sheet Metal Cutters

Make cuts in steel up to 1/32″ thick and stainless steel up to 3/64″ thick with these compact cutters. They are steel. Overall length is 7 1/8″; cut length is 1 7/16″.

3729A65 ..... $17.52

High-Force Sheet Metal Cutters

A double hinge provides high cutting force with low gripping pressure. These cutters are also known as aviation snips. They cut angles complex patterns, and circles with half the effort required with conventional cutters. A spring opens the jaws for quick cutting, and a locking latch holds them together when the cutter is not in use. Blades are steel. Handles are steel with plastic grips.

(A) Cutters—Blades are serrated to prevent slipping. Cut aluminum, tin, and steel up to 1/32″ thick. 7102A15 also cuts stainless steel up to 1/64″ thick.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Red	9 1/4″	7/8″	3832A11	$22.48
1	Yellow	9 3/4″	1 1/2″	3585A12	15.61
1	Blue	11 1/2″	3″	7102A15	22.50
2	Red	9 3/4″	1 3/8″	3585A13	15.61
3	Green	9 3/4″	1 3/8″	3585A14	15.61

(B) Cutters with Offset Handles—Keep your hands clear of the material being cut with the offset handles on these cutters. Blades are serrated to prevent slipping. Cut aluminum, tin, and steel up to 3/64″ thick. 3558A13 also cuts stainless steel up to 1/64″ thick and 3673A1 and 3673A2 cut stainless steel up to 3/64″ thick.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Yellow	9 5/8″	1 1/2″	3558A13	$21.38
2	Red	9 1/4″	1 1/4″	3558A11	21.47
2	Blue	9 3/4″	1 3/8″	3673A1	26.94
2	Black	11″	2 3/8″	6770A13	32.73
3	Green	9 1/4″	1 1/4″	3558A12	21.47
3	Blue	9 3/4″	1 3/8″	3673A2	26.94

(C) Long-Life Cutters with Offset Handles—Blades are high-speed steel so they stay sharp longer than steel blades, and they can be sharpened. Cut steel up to 3/64″ thick and stainless steel up to 1/32″ thick. Handles are offset to keep your hand away from the material being cut.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Black	10 1/4″	1 5/16″	3545A41	$104.79
3	Black	10 1/4″	1 5/16″	3545A42	104.79

(D) Smooth-Edge Cutter with Offset Handles—This cutter has two blades that cut a 1 3/64″ wide strip—peel it back for smooth edges with little distortion. Cut steel up to 1/32″ thick.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
1	Gray	9 1/4″	9/16″	3908A11	$28.91

(E) Cutters with Offset Handles for Tight Spaces—The handles are angled 90° from the blade so you can cut material from directly above in tight spaces. Blades are serrated to prevent slipping. Cut steel and stainless steel up to 1/64″ thick.

Cutting Pattern (See Chart)	Handle Color	O'all Lg.	Cut Lg.		
2	Red	8 3/4″	1 1/4″	4249A21	$22.85
3	Green	8 3/4″	1 1/4″	4249A22	22.85

Smooth-Edge High-Force Sheet Metal Cutters with Safety Guard

Prevent waste from flying up as you work. A double blade makes two cuts, creating a 7/64″ wide strip that peels back leaving little distortion and smooth edges. Also known as aviation snips, these cutters have a double hinge that provides high cutting force with low gripping pressure. A spring opens the jaws for quick cutting, and a locking latch holds them together when the cutter is not in use. The serrated blade edge prevents slipping.

Sheet Metal Hole Cutters

Make round, square, and irregular-shaped holes in steel and aluminum up to 3/64″ thick; and stainless steel, brass, and copper up to 1/32″ thick with this punch-style hole cutter. Drill a 7/16″ dia. starting hole, then push the cutter through the hole and squeeze the handles together to cut out small pieces of material. Cutter is made of steel. Overall length is 6 3/4″.

Cutter	3623A14	$47.90
Replacement Punch	3623A15	30.00

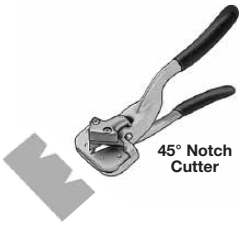
Punch Cutter Attachment for Portable Drills

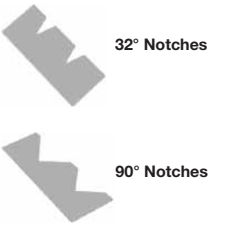
Turn your portable drill into a punch cutter for cutting curved and straight shapes in flat and corrugated sheet metal and plastic. To start cuts in the center of material, drill a 1/2″ dia. starting hole. Use with a drill having a maximum speed of 3,000 rpm. Attachment has a 1/4″ hex shank, steel punch, and plastic housing.

Maximum cutting capacity is 1/8″ thick for steel and aluminum; and 1/16″ thick for stainless steel.

Cutter	7293A11	$117.49
Replacement Punch	7293A14	45.12

Sheet Metal Notch Cutters





Cut up to 1″ deep V-shaped notches in sheet metal such as steel and aluminum up to 1/32″ thick; and stainless steel up to 1/64″ thick. Cutters are steel with rubber grips. Overall length is 9″.

90°	3599A2	166.98	3599A21	89.64

Powered Sheet Metal Nibblers

About Powered Nibblers and Powered Cutters

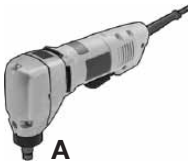
Sheet Metal Nibblers—Create an almost burr-free cut with no edge distortion. A nibbler punches small pieces out of the material, producing some waste.

Sheet Metal Cutters—Also known as right-angle shears, these cut with less effort compared to manual cutters. There's little material waste, but they leave slightly rough edges. They're best for straight patterns on flat material, and they also cut curves and notches.

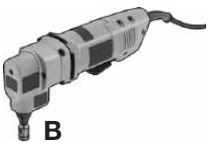
Cutters for Thin, Pliable Materials—These scissor-like cutters minimize material loss and edge distortion in thin, pliable materials.

Smooth-Edge Sheet Metal Cutters—Also known as slotting shears, these make two parallel cuts to create a waste strip that peels away from the remaining material, leaving two smooth edges with little distortion. Use for cutting straight lines, contours, and irregular shapes. They're not for cutting tight curves or corrugated material.

Electric Sheet Metal Nibblers



A



B

C

D

E

Punch small pieces out of material to create an almost burr-free cut with no material distortion. To start cuts in the center of material, drill a starting hole. These nibblers have an aluminum housing, except Style C is magnesium. All include one punch, one die, and instructions.

Style A has a round punch that can rotate 360°. Can cut flat stock up to 60″ per minute. Not for corrugated or uneven material. Nibbler can change cutting direction as desired (no cutting radius required). Has a lever switch. Overall length is 9¾″. Nibbler operates on 120 volts AC/DC, 3 amps, and has an 8-ft. power cord with two-prong plug. UL listed, CSA certified, and meets OSHA requirements.

Style B has a round punch that can rotate 360°. Can cut uneven and corrugated materials up to 84″ per minute. Nibbler can change cutting direction as desired (no cutting radius required). Has a lever switch. Overall length is 10½″. Operates on 120 volts AC/DC, 6.5 amps, and has an 8-ft. power cord with two-prong plug. UL listed, CSA certified, and meets OSHA requirements.

Style C cuts flat stock and uneven and corrugated material up to 105″ per minute. Has a toggle switch and a reversible side handle. Overall length is 12¼″. Operates on 120 volts AC/DC, 4 amps, and has an 8-ft. power cord with two-prong plug. UL listed, C-UL listed, and meets OSHA requirements.

Style D cuts flat stock up to 48″ per minute. Not for corrugated or uneven material. Has a trigger switch with a locking button. Overall length is 13″. Operates on 110 volts AC, 3-5 amps, and has a 10-ft. power cord with three-prong plug.

Style E cut flat stock up to 48″ per minute. Not for corrugated or uneven material. Nibblers have a locking trigger switch and include an extra punch. They can also cut aluminum when used with the punch, die, and stripper for aluminum (sold separately). Overall length is 14¼″. Nibblers operate on 120 volts AC, 15 amps, and have a 10-ft. power cord with three-prong plug.

Air-Powered Sheet Metal Nibblers

A

B

C

D

These nibblers punch small pieces out of material to create an almost burr-free cut with no material distortion. To start cuts in the center of material, drill a starting hole. Nibblers have an aluminum housing and a lever switch, unless otherwise stated. They include one punch, one die, and instructions. Operate on 90 psi air pressure and require a 3/8″ hose (not included), except Style C, which requires 100 psi and a 1/2″ hose.

Style A cuts corrugated material up to 62″ per minute. Overall length is 7 1/16″. Air inlet is 1/4 NPT female. Air consumption is 21 cfm.

Style B cuts corrugated or uneven material up to 46½″ per minute. Includes an extra punch. Overall length is 7″. Air inlet is 1/4 NPT female. Air consumption is 4 cfm. Housing is plastic.

Style C cuts flat stock and corrugated or uneven material up to 55″ per minute. Overall length is 12″. Air Inlet is 3/8 NPT female. Air consumption is 27 cfm.

Style D cuts flat stock up to 48″ per minute. Not for corrugated or uneven material. Has a locking trigger-style switch. Overall length is 12″. Air inlet is 3/8 NPT female. Air consumption is 21-23 cfm.

▲The smallest arc (or curve) the tool can cut. Radius x2 equals the smallest diameter circle the tool can cut.
★ Sold individually. Tool requires two identical blades (upper and lower).

Electric and Air-Powered Cutters for Thin, Pliable Materials

Also known as scissor-blade shears, the bottom blade remains stationary while the upper blade moves up and down to cut. They leave a clean sheared edge. Blades are steel.

(A) Cutters for Thin Metals—Minimize material loss and edge distortion with these scissor-like cutters that cut metal up to 1/64″ thick. Blades close completely when cutting. 3818A18 has a variable-speed trigger. Meet OSHA requirements.

(B&C) Pliable Sheet Cutters—For pliable materials including plastic up to 1/8″ thick and wire cloth up to 3/64″ thick. Blades do not close completely. *Style B* is UL and C-UL listed.

Electric cutters are rated for 5 amps. They have a variable speed motor, operate on 120 volts AC, and have an 8-ft. power cord with two-prong plug.

Air-powered cutters require 90 psi air pressure. Air inlet is 1/4 NPT female. Requires 1/4″ to 1/2″ hose (not included). Air consumption is 4 cfm.

Smooth-Edge Electric and Air-Powered Sheet Metal Cutters

A double blade creates two cuts and a 7/32″ wide waste strip that peels back, leaving two smooth edges with little distortion. These cutters are also known as slotting shears. To start cuts in the center of material, drill a starting hole. They cut sheet metal in straight lines, contours, and irregular shapes. Blades are steel.

(A) Electric Cutter—Rated for 5 amps. Comes with a wrench for head adjustment and lubricant. Cutter operates on 120 volts AC and has an 8-ft. power cord with two-prong plug. UL listed, C-UL listed, and meets OSHA requirements.

(B&C) Air-Powered Cutters—Operate on 90 psi air pressure. Air inlet is 1/4 NPT female. Requires 1/4″ to 1/2″ hose (not included). Air consumption is 4 cfm. Cutters include a wrench for head adjustment and lubricant.

(D) Cordless Cutter—Comes with a charger, hex wrench, bag, and two 20-volt lithium ion battery packs. CSA certified. Meets OSHA requirements.

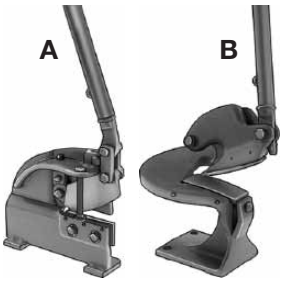
Sheet Metal Cutters

Bench-Mount Sheet Metal Cutters



Make clean cuts in thick sheet metal, as well as rubber and leather. Blades are steel and can be sharpened.

(A) Straight-Cutting Cutter—Frames are steel. Base has two 1/2" dia. mounting holes (fasteners not included).

(B) Curve-Cutting Cutter—Turn your workpiece while cutting to create curves and complex shapes. Frame is steel. Base has three 1/2" dia. mounting holes (fasteners not included). The *4 1/4" cut length cutter* has an adjustable hold-down bar to keep material in place.

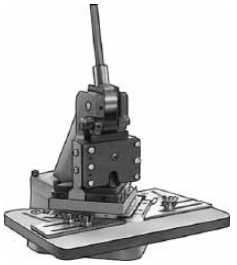
Notch-Cutting Bench-Mount Sheet Metal Cutters



Notch, cut, and pierce a variety of materials including metal, plastic, and vinyl. These versatile cutters have an adjustable stroke length for piercing and knockout operations. Frame is made of cast iron. Blades are steel and are set at 90°. Base has four 1/2" dia. mounting holes (fasteners not included). Tools cut a 90° notch (maximum size 6" x 6") in steel, tin, and iron up to 3/64" thick; stainless steel and nickel up to 1/32" thick; aluminum up to 1/8" thick; and copper and brass up to 1/16" thick.

Replacement blades are sold in a set of four.

Optional floor stand (sold separately) is 30" Ht. x 16 1/2" Wd. x 19" Dp.

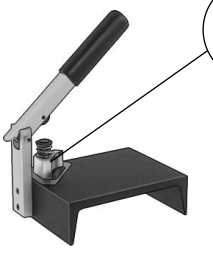
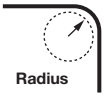
Rounded-Corner-Cutting Bench-Top Sheet Metal Cutters



Cutting Base with Corner Punch



Combine the cutting base and a corner punch to make rounded corners in sheet metal. Cuts steel, brass, and copper up to 1/64" thick, and aluminum up to 1/32" thick.

Cutting base is 8" Lg. x 6" Wd. x 2 1/2" Ht. with a 10 1/4" long handle. Made of aluminum.

Corner punch is hardened aluminum and steel. **To Order:** Please specify radius: 1/8", 3/16", 5/16", 3/8", or 1/2".

Cutting Base	**23805A11**	$123.75
Corner Punch	**23805A92**	118.75

Angle-Iron Cutters

Mount this cutter to the floor and use it to cut through steel angle iron up to 2" x 2" x 1/4". It has a cast iron frame, steel blades, and a long handle for maximum leverage. Base has two 1/2" dia. mounting holes (fasteners not included). Cutters are 13 1/2" Lg. x 7" Wd. x 10" Ht. Handle is 72" long.

Paper Cutters

Standard Tabletop with Wood Base

Floor Model

Large-Capacity Tabletop

Cut most paper products. Not for sheet metal, wood, leather, rubber, or roofing materials.

Tabletop Paper Cutters

Standard—Have a self-sharpening blade, a base marked with a 1/2″ grid, an inch/metric rule, a trigger-locking safety latch, a blade guard, and skid-resistant feet. 3823A42, 3823A44, and 3823A21 also have hold-down clamps to prevent slipping and improve cutting accuracy.

Cutters with a polypropylene base have steel blades and are warp, crack, and peel resistant. Not for mat board.

Cutters with a wood base have steel blades.

Also Available: Replacement blades. Please ask for 3823A51 and specify handle or base blade and paper cutter part number.

Large Capacity—A clamp securely holds the paper in place while roller guides control the blade for easier cutting of large capacities. It has a hardened-steel blade, a safety latch, and protective rubber feet. The back stop is marked with inch and metric scales.

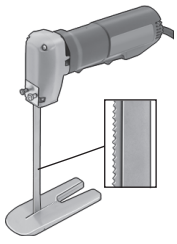
Powered Foam Cutters



Similar to a jigsaw, this cutter uses reciprocating action to cut any density of plastic- and rubber-based foam. It also cuts carpet.

The included footplate guides the blade when cutting corners. For cutouts, remove the footplate.

This cutter comes with an 8″ steel blade and blade guide. Maximum cutting depth is 8″. To install the optional 12″ blade, you will need the *blade guide* (both sold separately).

Operates on 120 volts AC, 3.2 amps; and has a 7-ft. power cord with two-prong plug. UL and C-UL listed. Meets OSHA requirements.

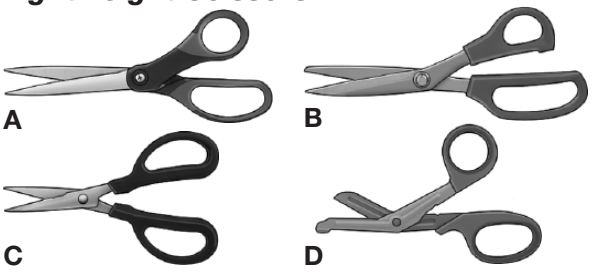
♦ Right-hand use only.

Lightweight Scissors



Minimize hand fatigue with the lightweight handles on these scissors. Works well on fabric, paper, and cardboard. The blades on these scissors are corrosion-resistant stainless steel.

(A&B) General Purpose—Handles are plastic. For right-hand use, unless noted.

(C&D) High Force—For extra leverage to cut through tough materials such as leather, rope, and thick cardboard, these scissors have long handles and short blades. The blades have a serrated edge that grips material to prevent slipping. Handles are rubber, unless noted. Style C is for right- and left-hand use. Style D has points that are rounded to prevent snags and injury. They are for right-hand use.

Offset handles keep your hand clear of the material as you cut on flat surfaces.

PTFE blade coating is nonstick. *TiN (titanium nitride)* coating extends blade life and is nonstick.

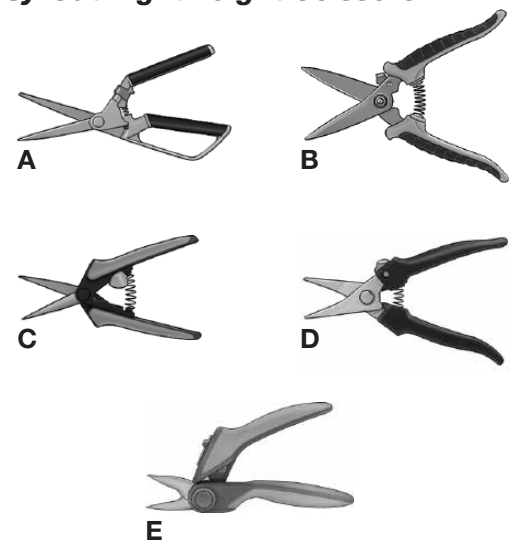
Easy-Cut Lightweight Scissors



Spring action opens the blades for quick repeat cuts. These scissors work well on fabric, paper, and cardboard. Blades are corrosion-resistant stainless steel, and handles have a rubber-cushioned grip, unless noted.

(A&B) General Purpose—Style A is for right-hand use. Style B is for right- and left-hand use.

(C) Fine Point—Tips are narrow and sharp for fine cutting and trimming. Scissors are for right- and left-hand use.

(D&E) High Force—These scissors have long handles and short blades for extra leverage to cut through tough materials such as leather, rope, and thick cardboard. They are for right- and left-hand use.

TiN (titanium nitride) coating extends blade life and is nonstick.

Offset handles keep your hand clear of the material as you cut on flat surfaces.

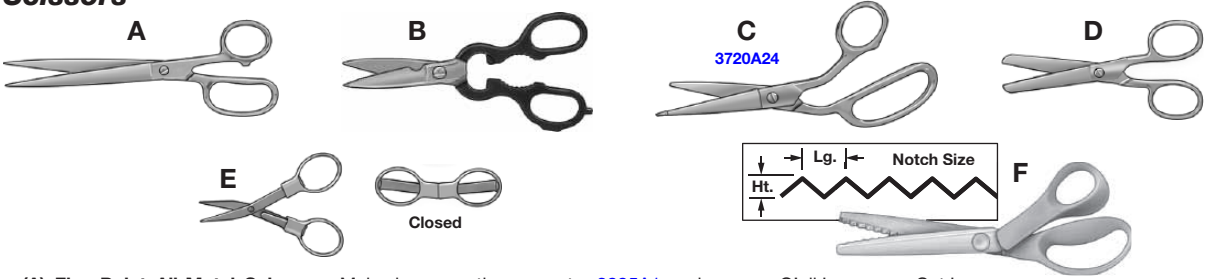
Scissors



(A) Fine-Point All-Metal Scissors—Make long, continuous cuts. 3885A1 and 3885A4 are chrome-plated steel. 3877A12 is stainless steel with plastic-coated handles. For right-hand use.

(B) All-Metal Scissors with Jar/Bottle Opener—Cut twine, rope, cardboard, wire screens, light metals, and more. Also open jars and bottles. Made of stainless steel with painted handles. For right- and left-hand use.

(C) First-Aid Scissors—Slip the rounded points on these scissors under bandages to cut without causing injury. 3720A22 and 3720A23 are stainless steel. 3720A24 has large rings for easy finger insertion and are chrome-plated steel. All are for right-hand use.

(D) Blunt-Point Scissors—Prevent snags and injury with the rounded points on these scissors. Blades are chrome-plated steel. For right- and left-hand use.

(E) Compact Fine-Point Scissors—Folds to cover pointed tips so you can safely tuck it into a pocket or drawer. Blades are stainless steel; handles are chrome-plated zinc. For right- and left-hand use.

(F) Zigzag-Blade Scissors for Fabric—Also known as pinking shears, these leave a ravel-resistant zigzag edge. Blades are stainless steel; handles are plastic. For right-hand use.

Scissors for Leather

These scissors have one serrated edge that grips material to prevent slipping and one knife edge that's precision ground to a sharp angle for fast, clean cutting. Made of steel, the blades have rounded tips to prevent snags and injury. Handles are offset to keep your hand clear of the material as you cut on flat surfaces. Overall length is 9¾"; cut length is 3¼". For right-hand use.

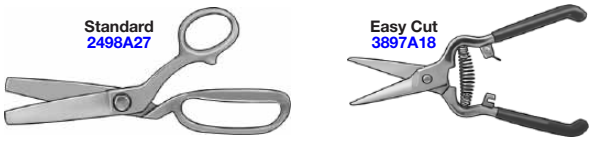
3878A11	$37.38

Scissors for Rubber and Thick Fabric

Cut carpet, rubber, and fabric. Blades are steel that is tempered, precision ground, and double plated with chrome for added durability. The handles are offset to keep your hand clear of the material as you cut on flat surfaces. 3877A15 has plastic-coated handles. Both are for right-hand use.

O'all Lg.	Cut Lg.		
11½"	4½"	3877A15	$49.74
12½"	6"	3877A11	73.51

Scissors for Kevlar and Abrasive Materials



Easily cut abrasive materials such as Kevlar, wire, and metal.

Standard Scissors—The handles are offset to keep your hand clear of the material as you cut on flat surfaces. For right-hand use. 2498A28 is steel with plastic grips and pointed tips. 2498A27 is steel with blunt-point tips that are rounded to prevent snags and injury.

Easy-Cut Scissors—After each cut, the jaws spring open to make continuous cutting easy. The blades are serrated to grip material and prevent slipping. 3897A12 has short, narrow blades for getting into tight spots. All are made of steel with plastic-coated grips. For right- and left-hand use.

No-Fray Hot-Blade Scissors for Fabric

Eliminate fraying and produce a smooth edge when cutting carpet, rope, and synthetic fabrics. These scissors include a temperature control unit with 12 settings that let you choose temperatures from 80° to 540° F to sear thread ends. Scissors generate 100 watts and are made of steel. Operate on 120 volts AC, have a 6-ft. power cord with three-prong plug, and include a stand. Offset handles keep your hand clear of the material as you cut on flat surfaces. For right-hand use.

	O'all Lg.	Cut Lg.

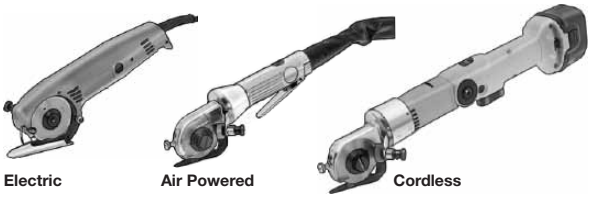
♦ One blade is serrated to prevent wire slippage.

Electric Fabric Cutters



Precisely cut fabric such as burlap, Kevlar, and nylon with the rotary blades on these cutters. They have steel blades and a built-in blade sharpener. Not for cutting carpet, corrugated material, rubber, plastic, or metal.

Electric—Cut straight lines and patterns in fabrics up to ½" thick with the included 2¼" blade. Use the *optional hexagonal blade* to chop through hard-to-cut fabric. Motor is 1⁄10 hp. Operates on 110 volts AC, 0.7 amps, and has an 8-ft. power cord with two-prong plug.

Air Powered—The included 2 1⁄32" semi-square blade is for no-fray cuts. Use for general purpose wet and dry cutting and for cutting fabric up to ⅜" thick. The *optional round blade* trims and edges, but may cause fraying. Motor is ⅓ hp. Recommended air pressure is 90 psi. Air inlet is ¼ NPT male. Hose size is ¼" (hose not included). Air consumption is 4 cfm.

Cordless—Make cuts without a power cord or air line to get in your way. The included 2 1⁄32" semi-square blade is for no-fray cuts. Operates on a 7.2-volt battery. The *optional round blade* trims and edges, but may cause fraying. The *optional octagonal blade* makes no-fray cuts, and chops through hard-to-cut fabric. Cutter has a variable speed motor that operates from 0 to 2,000 rpm and has an adjustable blade guard. Includes two 7.2-volt batteries and a one-hour charger.

Cutters for Laminated Plastics

Prevent chipping, binding, and fracturing when cutting brittle, high-pressure laminated plastic. The blade cuts out a ⅛″ wide strip of material while the material on either side of the strip lays flat. A spring opens the jaws for quick cuts. Not for use on soft plastics. Cutter has steel blades and PVC hand grips. For right- and left-hand use.

O'all Lg.	Cut Lg.

Clean-Cut Utility Cutters

Rope Cutter

Multipurpose Cutter

Rope Cutter—Produce a clean cut in rope with a cutting blade that pushes down on a flat anvil-style jaw. Cutter is also for use on wood dowels and small branches. Made of steel with a brass anvil and steel blade with nonstick coating. Grips are plastic. For right- and left-hand use.

Replacement blade kit for rope cutter includes a steel blade with nonstick coating, brass anvil, and hardware.

Multipurpose Cutters—Produce clean cuts in nonmetallic hose, wood, and leather. Made of steel with a plastic anvil and a steel blade. There are three extra blades in the handle. Grips are plastic. For right- and left-hand use.

Replacement blade kits for multipurpose cutters include three steel blades and a plastic anvil.

Utility Knives

Use the short blades on these knives to make quick, shallow cuts.

(A-J) Retracting-Blade and Self-Retracting Blade Knives—These knives have three cutting positions: blade fully extended, blade halfway extended, and blade tip extended (except Style J, which has one cutting position). Blade retracts into the handle for safety. Extra blades store in the handle (except Style E, which does not store extra blades).

Self-retracting blade is spring-loaded to automatically retract inside knife after losing contact with the cutting surface.

(K-M) Fixed-Blade Knives—For more stability than a retracting-blade knife when cutting with hard pressure, the blade remains fully extended. Extra blades store in the handle.

Curved handle fits your hand for a more comfortable hold than a straight handle.

Utility Knives

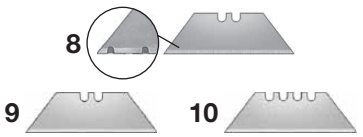
Utility Knife Blades



Make quick, shallow cuts with these short blades. Fits most brands of utility knives, including Ardell, Hyde, Wiss, General, Red Devil, Allway, Starrett, Evans, Great Neck, and Warner. Check the style of blade used in your knife and match it with the images shown here.

Dispenser pack distributes one blade at a time and stores used blades. It can be mounted on a wall. Includes 100 blades, unless noted.

Serrated blade allows for faster cuts with less force than straight blades.

High-speed steel lasts longer than steel. **TiN (titanium nitride) coating** extends blade life, resists corrosion, and is nonstick.

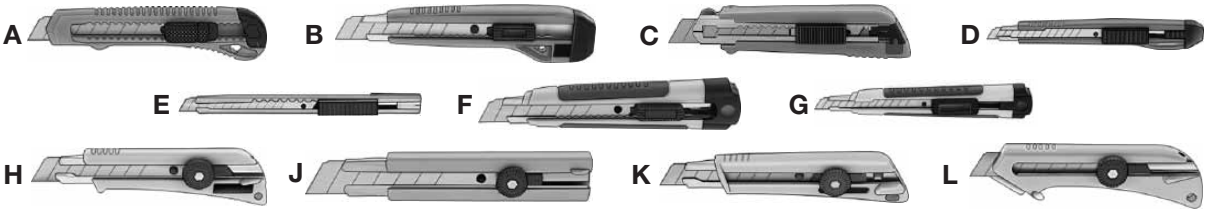
Optional Wall-Hanging Rack for Benchtop		70885A68	13.02

Retracting Rotary-Blade Utility Knives

With a squeeze of the plastic spring-loaded handle, you can cut plastic sheet, cloth, felt, and other sheet material. Includes one 0.024″ thick steel blade that retracts into the handle when the squeeze bar is released. Blade diameter is 1″. Knife is 5 3/4″ long with a cut depth of 1/8″.

4925A11 $23.68

Breakaway-Blade Utility Knives



Snap off a dull blade segment to expose a sharp edge with the built-in blade breaker; ratchet-lock knives require pliers to break off the blade. Knives have a plastic handle, except Style E has a stainless steel handle and Styles F, G, J, and K have a rubber handle. Styles A-D have steel blades. Styles E-G have corrosion-resistant stainless steel blades.

Manual-Lock Knives—A sliding lock holds the blade in place.

(A) Standard—Good general purpose knife.

Auto-Lock Knives—The blade locks in position with the push of a button.

(B) Standard—Extra blades store in the handle.

(C) Multi-Blade Loading—Load six blades at once for quick blade changes.

(D) Slim—Use the narrow blades on this knife to cut in tight spaces. Extra blades store in the handle.

(E) Stainless Steel Slim—Handle and blade are stainless steel. Blade is narrow to cut in tight spaces.

(F) Cushion Insert—A rubber insert provides a comfortable, slip-resistant grip.

(G) Slim with Cushion Insert—Prevent slipping and get a comfortable hold while working in tight spaces—this knife has a rubber insert in the handle and a narrow blade.

Ratchet-Lock Knives—Knives have a wheel that advances or retracts the blade and locks it in place.

(H&J) Standard—Style H has a curved handle that fits your hand for a more comfortable hold than a straight handle. Style J has a rubber cushioned grip for comfort and slip resistance.

(K) Chemical Resistant—The handle is chemical-resistant rubber to resist acetone and solvents.

(L) Carton Cutting—Cut cardboard boxes without damaging the contents. This knife has a depth-cutting guide and a staple puller.

Easy Grip

Swivel Blade

Retracting Blade

A pen-style handle gives you a comfortable hold as you make precise cuts with the sharp blade on these knives. They come with a protective cap except the easy-grip knife. All include one blade.

Standard—Has an aluminum handle.

Choose-a-Color Rubber Grip—Reduce hand fatigue with the cushioned rubber grip on this knife. To Order: Please specify grip color: black, blue, green, purple, or red.

Heavy Duty—This durable knife has a large, aluminum handle that withstands the force needed to cut through tough materials.

Easy Grip—The handle is large, fluted, and made of lightweight plastic so it's easy to hold while applying pressure. Handle is red.

Swivel Blade—Cut curves and circles with a blade that rotates 360°. Handle is aluminum.

Retracting Blade—A retracting blade prevents accidental cuts and allows you to store this knife in your pocket. Slide the button to extend or retract the blade. Handle is plastic.

Safety Pack Plastic Dispensers

Distribute blades without exposing the sharp edge. Dispensers include 15 blades.

Dispenser Pack		
Style D Blades	35435A87	$6.47
Style E Blades	35435A81	5.97
Style F Blades	35435A86	6.47
Style P Blades	38995A82	7.20

Blade Disposal Container

Safely dispose of worn knife blades in this plastic container. A 1 5/8″ long slot on the side of the container slides open to accept precision and breakaway knife blades. Overall size is 2 5/8″ Dia. × 1″ Ht.

24525A3 ..... $3.71

Precision Knife and Blade Sets

Knife and Blade Set—Includes three knife handles (one standard, one easy grip, and one heavy duty) and 14 blades (one each of Styles A-D; two of Style E; one of Style F; three of Style H; two of Style J; and one each of Styles K and M). Comes in a wood case.

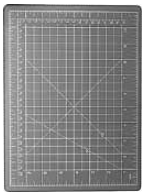
3960A11 ..... $19.59

Knife, Blade, and Tool Set

Knife, Blade, and Tool Set—Includes three knife handles (one standard, one easy grip, and one heavy duty) and 23 blades (three each of Styles C, D, E, F, J, K, and L and one each of Styles N and P). Also includes a screwdriver, pinpoint stylus, miter box, sander block with sandpaper, razor saw blade, and stencil blade. Comes in a wood case.

7055A12 ..... $43.11

Self-Healing Cutting Pads with Grid



Pads are marked with inch and centimeter grid lines and 45° and 60° angles to guide your cut. These vinyl, 1/8″ thick pads heal themselves to seal surface nicks and cuts.

Size	Blue Pads		Clear Pads	
9″×12″	70875A65	$9.64	70875A41	$9.97

Light Duty Hot-Blade Knives

Knife

Temperature-Control Unit

Use heat to cut through gasketing, nylon webbing, slings, and other thin, synthetic materials. Without the optional temperature-control unit, this knife heats up to 1000°F. The cutting tip is copper with a 5/8″ Lg.×3/8″ Wd.×1/16″ Thick. blade. Knife with tip is 10″ long. Maximum cutting depth is 5/8″. Operates on 60 watts, 120 volts AC, and has a 5-ft. cord with two-prong plug.

Optional temperature-control unit allows you to adjust the temperature from 150° to 1000°F. Operates on 120 volts AC and has a three-prong plug. Size is 3 3/4″ Ht.×2″ Wd.×2″ Dp.

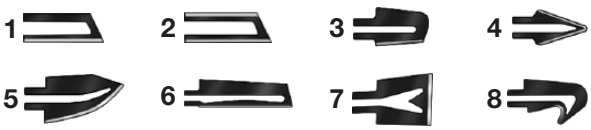
Knife	2453A61	$67.27
Optional Temperature-Control Unit	2453A62	66.39
Optional Knife Stand	2453A64	7.10
Replacement Blade	2453A63	16.68

Hot-Blade Knives

For Intermittent Use

Optional Cutting Sling with Blade

For Continuous Use



Blades heat instantly to cut through plastic and rubber up to 5″ thick. Make straight cuts with the included blade. To cut curves, angles, and other shapes, mount the *optional cutting sling* onto the knife.

Intermittent-Use Knife—Temperature easily adjusts from 0° to 1000°F with a thumb control. Overall length is 9″. Includes a 2″ long Style 1 blade. Operates on 150 watts, 120 volts AC, and has an 11-ft. power cord with three-prong plug.

Continuous-Use Knife—Has a steel handle connected to a base unit by a 9 1/2-ft. cord. Handle is 9″ long; base unit is 11 7/8″ Lg.×7 1/2″ Wd.×8 1/2″ Dp. Temperature adjusts from 220° to 1400°F. Includes one Style 6 blade. Operates on 500 watts, 120 volts AC, and has a 6-ft. cord with three-prong plug.

Optional Cutting Sling—Includes a blade that can be bent once into any shape.

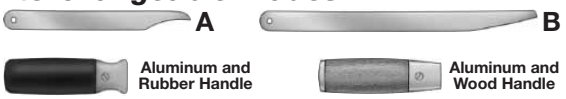
Shop Knives with Interchangeable Blades



Combine a handle and blade that best fit your needs, and replace the blade when it dulls. These knives cut cloth, canvas, leather, and rubber. The blade slides back into the handle and adjusts to the cutting length you prefer. Lock it in place with the set screw in the handle. At certain lengths the blade will extend through the end of the handle. Blades and handles are sold separately.

Blades—Made of steel and 5/8" wide. *Style A* can be positioned in either handle to expose 1/4" to 5" of blade. *Style B* can be positioned in either handle to expose 1/4" to 8" of blade.

▲Has two bit holders with eight double-end bits. ♣Has a 3/16″ slotted screwdriver bit. ◩Pouch not included.

Multitool and Mini Flashlight Kits

Similar to the 53835A64 (shown above), this multitool with fold-out pliers also includes a black leather holster and a pocket-size flashlight with a black aluminum body. Requires two AA batteries (included).

Multitool	3247A5	$98.57
Replacement AA Batteries (Pkg. of 4)	71455K53	2.94

¼″ Hex Bits for Multitools with Slide-Out Pliers

Fits multitools with slide-out pliers except 53835A44. Includes nine ¼″ hex-shaped bits: No. 1, No. 2, and No. 3 Phillips; ⅛″, 3/16″, and 9/32″ slotted; and 3 mm, 4 mm, 6 mm hex (also known as Allen). Includes a nylon pouch for the coupler and bits.

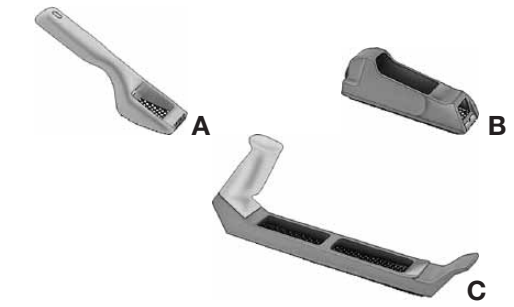
53835A34 $16.79

Replacement Wire-Cutting Inserts for 53835A25 and 53835A42

Includes two carbide inserts, four screws, and a wrench.

53835A46 $18.76

Filing Planes



Remove material from curved and rough surfaces.

Style A has a curved steel blade for contoured surfaces. Blade cuts on the backward stroke. Handle is plastic.

Style B has a metal body and a flat steel blade that cuts on the forward stroke.

Style C works in corners. It has a metal body and a flat steel blade that cuts on the forward stroke. Handle is plastic.

Planes

Replacement Flat Blade for Style C	3696A5	5.54
Optional Curved Blade for Style C	3696A3	5.48

Cutting Planes

Produce smooth cuts on flat surfaces. Planes have a metal body and a chrome-plated steel blade. All have a brass adjustment knob for depth-of-cut and lateral-blade adjustment.

Style A planes are also known as block planes. Their low cutting angle slices through wood more easily than bench planes, but can tear wood along the grain. They're best for planing across the grain.

Style B planes are also known as bench planes. Use them to plane along the wood grain. Handle is plastic.

	Cutting Angle	Blade Wd.	O'all Lg.	Planes		Repl. Blade	
A	13.5°	1 3/8"	6 1/4"	3693A5	$47.02	3693A12	$10.74

B	45°	2"	14"	3692A15	80.55	3692A22	17.02

Electric Planes

Compact and lightweight, this plane is perfect for fast production planning and trimming. It has depth-of-cut adjustment and a D-shaped handle with trigger switch. Includes two reversible carbide blades and a plastic carrying case. Overall length is 11 1/4".

Plane operates on 120 volts AC and has a 9-ft. power cord with two-prong plug. UL listed and meets OSHA requirements.

Nonscratching Plastic Scrapers

Scraper

Scraper/Knife

Angled Scraper

Clean and scrape off sealant and gaskets—the plastic blade on these scrapers won't scratch delicate surfaces. Made of glass-filled nylon for extra strength and longer edge life. Color is blue.

4-piece set includes one of each scraper listed in the table.

	Blade Wd.	O'all Lg.		
Scraper	1″	7″	3618A14	$5.00

Heavy Duty Machinist's Hand Scrapers

Flat

Curved

Get extra-smooth surfaces on slides, bearings, and surface plates with these tough metal scrapers. Blades are made of chrome-vanadium steel and are hardened to maintain a sharp cutting edge. Blades can be sharpened. They have an ultra-grip handle that provides a secure, comfortable grip.

	Blade, Wd. × Lg.	O'all Lg.		
Flat Blade	11/16″ × 37/16″	13¼″	3801A11	$30.80
Curved Blade	15/16″ × 3⅜″	13¼″	3801A12	40.42

Curved Bearing Scrapers

These scrapers leave no vibration marks, so they're perfect for scraping metal bearings, oil grooves, and babbitt metal. Blades are ground tool steel; handles are wood.

3-piece set includes one of each scraper listed in the table.

Blade, Wd. × Lg.	O'all Lg.		
½″ × 3″	10½″	3779A11	$30.40
⅝″ × 3½″	11″	3779A12	31.14
⅝″ × 4″	11½″	3779A13	31.56
3-Piece Set		3779A1	88.44

Adjustable-Blade Scrapers for Metal

A clamp on the shank of these scrapers allows you to easily adjust the blade length. Great for precision, uniform scraping of machine-tool dovetails, surface plates, and mating surfaces.

Scrapers have a solid steel body and a wood handle. They come with one carbide-tipped blade that easily cuts through materials as hard as alloy bronze. Blade is 1/16″ thick and requires sharpening before first use. Occasional touch-up sharpening will maintain its super-sharp edge.

Blade, Wd. × Lg.	O'all Lg.	Scrapers		Repl. Blade	
¾″ × 3¼″	14″	3643A17	$118.79	3643A21	$37.24

Air-Powered Scrapers

Scrape away gaskets, undercoatings, and other tough-to-remove materials with the power of 4,800 strokes per minute. Scraper has a chrome-plated steel handle and a steel blade with a beveled edge for removing thin coatings. Stroke length is 1/8″. Recommended operating pressure is 90 psi; average air consumption is 3 cfm. Recommended hose size is ⅜″; air inlet is ¼ NPT female. Scraper comes with an external air regulator and one blade.

Styles E-G

Replaceable-Blade Scrapers—Blades are steel. Style E blade is beveled to remove thin coatings more easily than straight-edge blades. Handle has a rubber grip. Style F handle is steel.

Nonsparking Scraper—Made of aluminum-bronze, this nonmagnetic, corrosion-resistant scraper inhibits sparking. It's FM approved for use in hazardous environments. It helps meet OSHA requirements that specify nonsparking tools for locations where flammable vapors and combustible residues are present. Handle is sold separately.

Warning: Do not use these tools in direct contact with acetylene due to the possible risk of explosion.

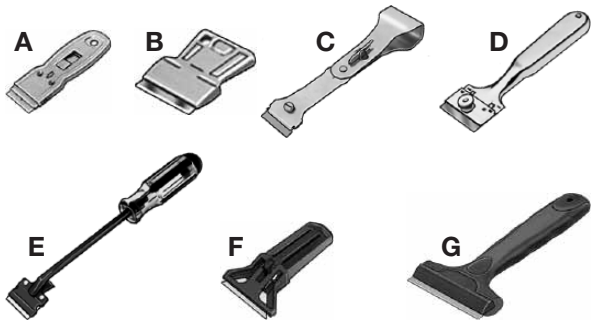
Razor Blade Scrapers



Scrapers—Replacement blades sold below.

Style A include five steel blades.
Style B includes one steel blade.
Style C has a blade that locks in three positions to scrape straight ahead or at an angle. Blade folds into the handle for storage. It includes five steel blades.
Style D has a cadmium-plated steel handle that resists rust. It includes six steel blades.
Style E includes five steel blades and one plastic blade.
Styles F&G include one steel blade.

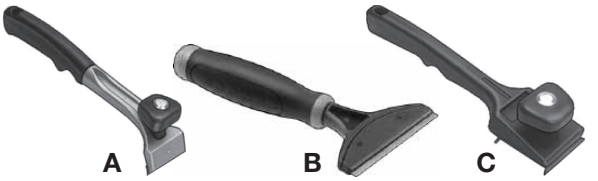
7069A18 $26.03

Paint and Wallpaper Scrapers



(A) Long-Life Carbide Blade Scrapers—Made of carbide, the blade stays sharp longer than steel blades. Scrapers include one reversible blade with two scraping edges.

(B) Steel Blade Scrapers—A beveled-edge blade removes thin coatings more easily than straight-edge blades. Scrapers include one steel blade and can store extra blades in the handle. 7106A11 has a threaded end that allows you to add any standard threaded handle to extend the reach of the scraper.

(C) Long-Life Steel Blade Scrapers—These scrapers have a four-sided blade for longer life—when you need a new edge, turn the blade 90°. 7105A31 and 7105A32 have one steel blade with one wavy edge for scraping thick material and three straight edges. 7105A13 has one steel blade with two serrated and two smooth edges.

2 7/8"	10"	15 1/2"	3633A4	36.44

Putty Knives & Spatulas

Food Processing and High-Temperature Plastic Putty Knives

Food processing putty knives are made from FDA listed material for use near food. Sterilize them with heat. All are non-sparking, chemical and corrosion resistant, and won't scratch metal surfaces. Resist heat up to 176°F. **To Order:** Please specify: blue, green, red, white, or yellow.

High-temperature putty knife resists heat up to 456°F with a glass-filled nylon blade and handle. Color is blue.

Wide-Blade Putty Knives

Two-Piece Putty Knife

One-Piece Putty Knife

Two-piece putty knives with plastic handle meet NSF/ANSI standards.

One-piece putty knife is chemical resistant and FDA listed. **To Order:** Please specify: blue, green, red, white, or yellow.

Spatulas

Stainless Steel Tapered Blade with Wood Handle

Copper Alloy Rounded Blade with Wood Handle

Nylon Straight Blade with Plastic Handle

Plastic Rounded Blade

Stainless Steel Blades—Also known as ink knives, these spatulas mix and spread paints, chemicals, and adhesives. Blades are Type 420 stainless steel and semiflexible except for the spatula with 3/4″ Wd. × 3 5/8″ Lg. blade, which is stiff. *Polypropylene handles* are white and meet NSF/ANSI standards. *Vinyl handles* provide a nonslip grip and have high temperature resistance.

Copper Alloy Blades—Completely nonsparking, these spatulas are the ideal choice when accidental sparks could be hazardous. Blade is stiff and nonmagnetic.

Nylon Blades—Self-sharpening and won't absorb odors. Perfect for food, printing, and paint process industries. Withstand heat up to 300°F intermittently. Spatulas with *stainless steel handles* have white blades. Spatulas with *plastic handles* have red, white, or yellow blades. **To Order:** Please specify color.

Plastic Blades—Are disposable and have flexible blades. Withstand temperatures up to 180°F.

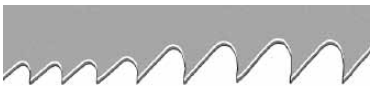
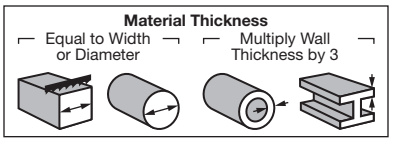
Long-Life Multipurpose Band Saw Blades



Anti-Vibration Blade

Standard Blade



These bimetal blades have a carbon steel body with high-speed steel teeth that last up to four times longer than carbon steel teeth. They're flexible for making straight and curved cuts in steel, stainless steel, aluminum, brass, bronze, wood, and plastic. All have a welded seam and are ready to install on your saw.

For other lengths, please specify length and teeth per inch.

Anti-Vibration Blades—Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration, so they create a smoother finish than standard blades.

Standard Blades—Tooth size and number per inch are constant throughout the blade. Also known as raker-set blades, the teeth are set to the left and right in a repeating pattern.

Anti-Vibration Blades

Long-Life Multipurpose Band Saw Blades *(Continued from previous page)*

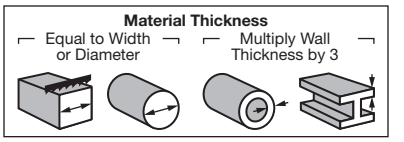
Anti-Vibration Blade

Standard Blade



These bimetal blades have a carbon steel body with high-speed steel teeth that last up to four times longer than carbon steel teeth. They're flexible for making straight and curved cuts in steel, stainless steel, aluminum, brass, bronze, wood, and plastic. All have a welded seam and are ready to install on your saw.

For other lengths, please specify length and teeth per inch.

Anti-Vibration Blades—Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration, so they create a smoother finish than standard blades.

Standard Blades—Tooth size and number per inch are constant throughout the blade. Also known as raker-set blades, the teeth are set to the left and right in a repeating pattern.

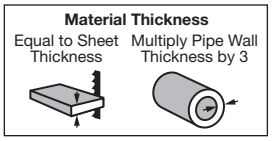
Band Saw Blades

Band Saw Blades for Thin Metal

Anti-Vibration Blade

Standard Blade



The teeth on these blades are set from side to side in a wavy pattern for cutting metal sheets and thin-walled pipe. Use them on steel, aluminum, brass, and bronze. Blades have a welded seam and are ready to install on your saw. *Long-life blades for straight and curved cuts* are bimetal blades with a flexible carbon steel body and high-speed steel teeth that last up to four times longer than carbon steel teeth. They can be used to cut stainless steel. *Blades for straight cuts* are made of rigid carbon steel. *Blades for curved cuts* are made of flexible carbon steel.

Anti-Vibration Blades—Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration, so they create a smoother finish than standard blades.

Standard Blades—Tooth size and number per inch are constant throughout the blade.

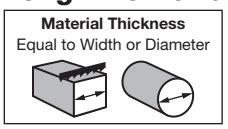
Long-Life Band Saw Blades for Thick Materials



Make clog-free cuts in thick cross sections of steel, stainless steel, aluminum, brass, bronze, wood, and plastic. These blades have forward-angled teeth and plenty of space for chips to collect. They're bimetal blades with a carbon steel body and high-speed steel teeth that last up to four times longer than carbon steel teeth. They're flexible for making straight and curved cuts. Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration and produce smooth cuts. All blades have a welded seam and are ready to install on your saw.

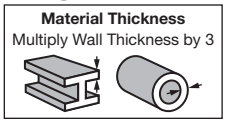
Long-Life Band Saw Blades for Structural Shapes and Bundles



Cut structural shapes such as I-beams and angle iron as well as bundles of structural shapes and tubing with less tooth breakage than other blades. The teeth are reinforced, forward-angled, and widely spaced to leave room for chips to collect. These bimetal blades have a carbon steel body with high-speed steel teeth that last up to four times longer than carbon steel teeth. They're flexible for making straight and curved cuts in steel, stainless steel, aluminum, brass, bronze, wood, and plastic. Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration and produce smooth cuts. All blades have a welded seam and are ready to install on your saw.

Band Saw Blades for Stainless Steel, Nickel, and Titanium

Titanium aluminum nitride (TiAlN) coated, precision-ground teeth cut quickly and leave a smooth edge on stainless steel, nickel, and titanium. These bimetal blades have a carbon steel body with high-speed steel teeth. They're flexible for making straight and curved cuts. Also known as variable set, teeth vary in size, number per inch, and pattern to reduce vibration and produce smooth cuts. All blades have a welded seam and are ready to install on your saw.

Band Saw Blades for Hardened Steel, Super Alloys, and Graphite

Gullet

Continuous

Carbide grit bonded to alloy steel blades cuts through hard materials such as hardened steel, graphite, fiberglass, composites, and nickel alloys including Hastelloy and Inconel. Blades are rigid for making straight cuts. Choose medium grit for less material loss and a smooth finish; choose coarse grit for fast cutting. Blades have a welded seam and are ready to install on your saw. Use coolant (not included, see page 2207) when cutting metals.

Gullet blades quickly cut material that is at least ¼″ thick.

Continuous blades are better than gullet blades for material that fractures and chips easily and material less than ¼″ thick. Use with saw wheels that are at least 24″ diameter.

For other lengths, please specify a length of at least 45″.

Band Saw Blades for Ceramics and Masonry

Blades are stainless steel with a diamond-grit edge that cuts hard, abrasive materials such as carbon fiber, ceramics, masonry, glass, composites, quartz, and silicon. They're not for use on metal. Use them for straight and curved cuts in materials of any thickness. Choose finer grit for less material loss and a smooth finish; choose coarser grit for fast cutting. Blades have a welded seam and are ready to install on your saw. Use coolant (not included, see page 2207) when cutting masonry, glass, quartz, and silicon.

For other lengths, please specify a length of at least 36″.

Band Saw Blades for Fiberglass, Plastic, and Composites

The teeth on these steel blades are carbide tipped, so they'll last longer and produce a smoother cut than other band saw blades when cutting fiberglass, plastic, and composites. Tooth size and number per inch are constant throughout the blade, and the teeth are set to the left and right in a repeating pattern. They're also known as raker-set blades. Use them for straight and curved cuts. They have a welded seam and are ready to install on your saw.

Band Saw Blades

Band Saw Blades for Soft Materials

Scallop-Tooth Blade

Fast-Cut V-Tooth Blade

The edge on these blades is sharpened like a knife blade to cut through soft nonmetal such as foam, rubber, and packing materials of any thickness. All are made of spring steel and are flexible for making straight and curved cuts. Blades have a welded seam and are ready to install on your saw. Coil stock is not welded.

Scallop-Tooth Blades—Also known as scallop-edge blades. They have two teeth per inch.

Fast-Cut V-Tooth Blades—The tightly spaced, V-shaped teeth on these blades cut through soft materials more quickly than scallop-tooth blades. They have 10 or 14 teeth per inch.

Scallop-Tooth Blades

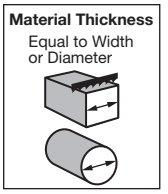
Band Saw Blades for Wood

Blade for Hardwood

Blade for Softwood



Tooth size and number per inch are constant throughout the blade, and the teeth are set to the left and right in a repeating pattern. Blades have a welded seam and are ready to install on your saw. *Blades for straight cuts* are rigid carbon steel. *Blades for curved cuts* are flexible carbon steel.

Blades for Hardwood—Also known as hook-tooth raker-set blades. They have forward-angled teeth that dig into hardwood such as maple, oak, and walnut.

Blades for Softwood—Also known as skip-tooth raker-set blades. These have extra space between the teeth for chips to collect, resulting in clog-free cuts in softwood such as pine, cedar, and redwood.

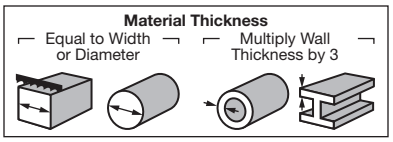
Portable Band Saw Blades



Anti-Vibration Blade

Standard Blade

These bimetal blades have a flexible carbon steel body and high-speed steel teeth. They are ½″ Wd. × 0.02″ Thick and are for use with portable band saws. Use them for straight and curved cuts. All blades have a welded seam and are ready to install on your saw.

Anti-vibration blades, also known as variable set, have teeth that vary in size, number per inch, and pattern to reduce vibration, so they create a smoother cut than standard blades. **Standard blades** have a constant tooth size and number per inch throughout the blade.

Multipurpose Blades—Use on most metals, wood, and plastic. *Anti-vibration blades* are also known as variable-set blades. *Standard blades* are also known as raker-set blades and have teeth that are set to the left and right in a repeating pattern.

Blades for Thin Metal—Cut metal sheets and thin-walled pipe with teeth set from side to side in a wavy pattern. Use them on most metals.

Vertical Band Saw Blade Guards with Light

Increase safety and visibility. This clear plastic guard attaches to the guide bar on your saw and has a built-in light. It fits Atlas, Craftsman, Delta, Delta Rockwell, Grob, Homecraft, J-Line, Monarch, Powermatic, Vega, Walker Turner, Wells, and Yates American saws. The guard requires three AAA batteries (sold separately).

Guard for Saws with 10″-18″ Dia. Wheels	4720A63	$158.16
AAA Batteries (Pkg. of 4)	71455K62	2.82

Band Saw Wheel Tires

Also known as band saw rubbers, these tires provide a cushion between the blade and wheel to preserve tooth shape by reducing vibration and blade slippage. All are approximately 20% smaller than the compatible wheel diameter listed for a stretched fit. Secure them with adhesive (see 7509A816 on page 3472) and trim the width with a razor blade.

Polyurethane tires last longer than rubber tires. Prices are approximately 10% higher.

Band Saw Blade Tension and Alignment Gauges

Tension Gauge

Alignment Gauge

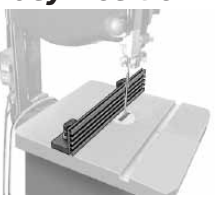
Ensure your blades are tensioned and positioned properly.

Tension gauge measures up to 60,000 psi and 4,000 kg per cm². It also works with power hacksaws.

Alignment gauge makes sure blades are straight between your guides.

Tension Gauge	4177A11	$508.46
Alignment Gauge	4177A12	97.45

Easy-Position Band Saw Fences



Magnets firmly hold these fences in any position and on any size cast iron table to guide straight cuts with your saw. Engage the magnets with the turn of a knob. Fence is 15″ Lg.×3″ Ht. It's made of aluminum.

5152A43		$101.64

Vertical Band Saw Blade Guides

Single-Wheel Guide

Dual-Wheel Guide

Mounting Stud

Support Blocks

Thrust Wheel

Support Wheel

Guides adjust to fit various blade widths and thicknesses, and they adapt for right- and left-hand mounting near the top or bottom wheel. Mounting holes on the back of each guide fit onto your saw's mounting stud, and set screws lock the guide in place. These guides fit most band saws.

Single-Wheel Guides—A ball bearing wheel and PTFE rub block support your band saw's blade for more accurate straight and contoured cuts during general purpose cutting.

Dual-Wheel Guides—Two permanently sealed and lubricated ball bearing wheels support band saw blades and accurately guide straight and contoured cuts in more rugged duty applications than a single wheel guide.

Dual-Wheel Guides for Delta, Jet, and Rikon Saws—Include two guides and hardware for installation.

Milwaukee Cordless Band Saws

Model No. 2429-21XC

Model Nos. 2629-22 and 0729-21

Bring your saw anywhere without the hassle of a cord. All have a lithium ion battery and charger. They're UL listed and meet OSHA requirements. Saws accept 1/2″ Wd.×0.02″ Thick. blades. Blades are sold separately, except Model No. 2429-21XC includes a blade for cutting metal, plastic, and wood (18 teeth per inch). All saws come in a plastic case.

Model No. 2429-21XC—Small and light enough to operate with one hand, this saw is a good choice for overhead cuts. Runs on a 12-volt battery. Blade length is 27 1/4″.

Model No. 2629-22—This saw has a larger cutting capacity and is more powerful than Model No. 2429-21XC. It runs on an 18-volt battery. Blade length is 35 3/8″.

Model No. 0729-21—This high-powered portable saw is as powerful as a corded electric tool and makes smooth curved and straight cuts. It runs on a 28-volt battery, and run time is displayed on the battery gauge. Blade length is 44 7/8″.

Blades have high-speed steel teeth for cutting 3/32″-1/4″ thick material (18 teeth per inch), except the blade for Model No. 0729-21 is for cutting 3/16″-3/8″ thick material (14 teeth per inch).

Portable Band Saws

Make smooth curved and straight cuts. Saws operate on 120 volts AC and have a cord with plug. All are UL listed, CSA certified, and meet OSHA standards. Milwaukee saws are also C-UL listed. Saws accept 44⅞" Lg. × ½" Wd. × 0.020" Thick. blades. Milwaukee saws come in a plastic case.

Blades are sold separately, except the DeWalt saw includes a blade. *Blades for Milwaukee saws* are multipurpose style for cutting 3/16"-⅜" thick material (14 teeth per inch). *Blades for the DeWalt saw* cut up to ¼" thick metal (18 teeth per inch).

Optional stand for Milwaukee No. 6225/6226 converts the saw for bench-top use, or you can add legs with ¾ NPT pipe. It has a chain vise to hold material.

Band Saws for Metal

All saws have a single-phase motor and a cord with plug. They come with a multipurpose blade, unless otherwise stated.

(A&B) Bench-Top—Save space with these saws when you only need to make horizontal cuts in small pieces of metal. Use them to cut most metal bars, blocks, pipes, and I-beams. They make straight cuts.

Style A includes a blade for cutting ¼"-1½" thick metal (10-14 teeth per inch). Overall size is 33½" Lg. × 14¼" Wd. × 25¾" Max. Ht. It has a manual feed system, and the blade pivots for miter saw cuts up to 45°. *Optional work table for vertical cutting* turns the saw into a vertical saw for cutting sheets.

Style B includes a blade for cutting ½"-¾" thick metal (8-12 teeth per inch). Overall size is 33½" Lg. × 32¾" Wd. × 23¾" Max. Ht. It has a manual feed system and the blade pivots for miter cuts up to 60°.

(C) Adjustable—Makes both horizontal and vertical cuts. This saw is an economical choice for making straight and curved cuts in large sheets of material. It includes a blade for cutting ¼"-¾" thick metal (14 teeth per inch). It has a 9⅝" × 9½" vertical work table for cutting sheets. Overall size is 36" Lg. × 20" Wd. × 39½" Max. Ht. It has a manual feed system, auto shut-off, and the blade pivots for miter cuts up to 45°.

(D&E) Floor Mount—These saws adjust to cut both horizontally and vertically and they have twice the cutting capacity of the bench-top saws. Use them to make straight and curved cuts. The included blade cuts up to 1½" thick metal (5-7 teeth per inch). Saws have an automatic feed system, auto-shut-off, and the blade pivots for miter cuts up to 45°. *Style D* overall size is 59¼" Lg. × 24¾" Wd. × 47" Max. Ht. Work table is 10" × 16". *Style E* overall size is 66" Lg. × 29" Wd. × 47" Max. Ht. Work table is 11" × 20".

Optional 12¾" × 11¾" Work Table for Vertical Cutting with Style A	4180A14	142.93

Vertical Band Saws

This vertical cutting saw has twice the cutting capacity of an adjustable band saw. Seven speed settings make it versatile enough to make straight and curved cuts in metal, wood, and plastic.

Cutting capacity is 15" deep and 10" high. No-load speeds for metal are 45, 65, 90, 110, 155, and 215 sfpm; no-load speed for wood and plastic is 3,000 sfpm. Motor is single phase and operates on 120/240 volts AC. It has a cord with plug.

Saw includes two 113" Lg. × ½" Wd. × 0.035" Thick. blades: one for cutting 1"-2" thick wood (6 teeth per inch) and one for cutting ¼"-¾" metal (14 teeth per inch).

Saw base and housing are steel. Overall size is 23" Lg. × 20" Wd. × 78" Ht. It has a manual feed system and a 15" × 15" cast iron work table that tilts 10° left and 45° right, a miter gauge, and a material guide fence.

Band Saw	4145A12	$1,923.69
Replacement Blade for Metal	4179A313	41.33

Bench-Top Band Saws for Ceramics and Masonry

The grinding action of the diamond-grit blade creates a smooth finish on hard materials such as glass, stone, tile, brick, and fiberglass. This saw is not for cutting metal. It makes straight and curved cuts.

Maximum cutting depth is 5½" and maximum cutting height is 3½". No-load speed is 3,520 sfpm. Motor is single phase and operates on 120 volts AC. It has a cord with a plug.

Saw includes a 37" Lg. × 9/64" Wd. × 0.020" Thick. diamond-grit blade. Housing is plastic and overall size is 13" Lg. × 14" Wd. × 17" Ht. The saw has a manual feed system. Work table is 12" × 12". A recirculating tap water coolant system extends blade life.

Band Saw	39725A11	$415.38
Replacement Blade	39725A15	75.91
Replacement Blade Guides (Pkg. of 4)	39725A14	7.00

Reciprocating Saw Accessories

Turn your reciprocating saw into a multipurpose tool. Accessories have a ½" universal shank to fit most saws.

Flush-cut adapter offsets your blade 2" to make flush cuts in hard-to-reach areas. Overall length is 6".

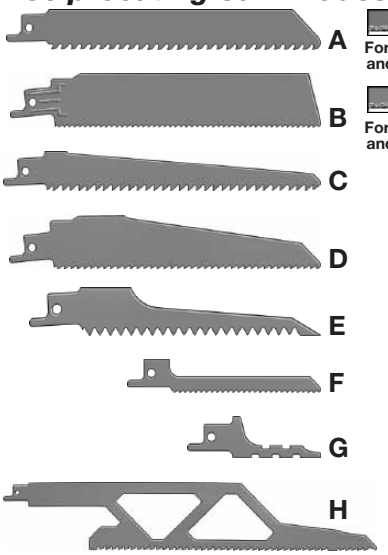
Wood rasp quickly removes and shapes wood. Overall length is 9½".

Flush-Cut Adapter

Wood Rasp

Flush-Cut Adapter	4009A11	$36.13
Wood Rasp	4009A19	25.67

Reciprocating Saw Blades



For Ceramics and Masonry

For Ceramics and Masonry

These blades have a ½″ universal shank that fits most reciprocating saws. Also known as bimetal blades, they have a flexible carbon steel body with high-speed steel teeth, unless noted. Choose blades with more teeth per inch for a smooth finish; choose blades with fewer teeth per inch for fast, rough cutting. Also known as variable set, blades with a range of teeth per inch vary in size and pattern to reduce vibration and produce smooth cuts.

Style A & B blades are for making straight cuts. They're stiffer than other blades, except blades for ceramics and masonry are flexible. *Style B* blades, also known as demolition blades, are wide to cut through multiple layers.

Style C, D, & E blades have a pointed tip that plunges into material. *Style D* blades, also known as demolition blades, are wide for cutting through multiple layers. *Style E* blades have V-shaped teeth to cut on forward and backward strokes for fast cuts.

Style F blades are narrow to cut tight curves. They're also known as scroll-cutting blades.

Style G blade cuts in two directions with teeth on both sides of the blade.

Style H blade cuts close to floors and walls. The truss design keeps the blade rigid for straight cuts.

Long Life Multipurpose—Teeth are coated with titanium nitride (TiN) for wear resistance and longer life than uncoated teeth.

Extra-Long Life Multipurpose—The teeth on these blades are carbide-tipped so they last longer than long-life blades with coated teeth.

Long Life for Metal—Teeth are coated with wear-resistant titanium nitride (TiN) so they last longer than blades with uncoated teeth.

Fast Cut for Metal—The teeth on these blades are set in a pattern specially designed to cut faster than other blades for metal.

For Ceramics and Masonry—Carbide grit is bonded to the edge of these steel blades for cutting through abrasive materials such as fiberglass, masonry, and tile.

Long Life for Ceramics and Masonry—The diamond grit bonded to the edge of these steel blades lasts up to 30 times longer and cuts through abrasive materials twice as fast as blades with carbide grit.

■ Teeth are carbon steel.

Reciprocating Saw Blade Assortments

All include a selection of blades for a variety of applications. Also known as bimetal blades, these have a flexible carbon steel body with high-speed steel teeth. All blades have a 1/2″ universal shank that fits most reciprocating saws.

10-Piece Assortment—Includes four 4″ long blades (6, 10, 18, and 24 teeth per inch) and five 6″ long blades (5-8, 10, 14, 18, and 24 teeth per inch) for metal, plastic, and wood with nails. Also includes one 6″ long blade (7 teeth per inch) for wood.

4034A22 ..... $20.21

27-Piece Assortment—Includes ten 6″ long blades (five each of 5-8 and 6 teeth per inch) for wood with nails; five 6″ long blades (10-14 teeth per inch) for metal, plastic, and wood up to 1/4″ thick; and twelve 6″ long blades (four of 6 teeth per inch and eight of 10 teeth per inch) for metal, plastic, and wood with nails. Comes in a plastic case.

4034A35 ..... $86.70

30-Piece Assortment—Includes ten 6″ long blades (five each of 14 and 18 teeth per inch) for metal up to 1/8″ thick; five 6″ long blades (10 teeth per inch) for metal, plastic, and wood up to 1/4″ thick; and fifteen 6″ long blades (five of 5-8 teeth per inch and ten of 6 teeth per inch) for wood with nails. Comes in a plastic case.

4034A25 ..... $74.72

30-Piece Assortment

Reciprocating Saws & Scroll Saw Blades

Milwaukee Reciprocating Saws

Electric

Cordless Model No. 2420-21

Cordless Model No. 2625-21

These heavy duty saws accept ½″ shank reciprocating saw blades (not included, unless otherwise stated) and have a keyless blade-change system, so you don't need tools to change blades. Saws are UL listed, C-UL listed, and meet OSHA standards. They come in a plastic case.

Electric saws include a cord with plug. *Model Nos. 6536-21* and *6523-21* have a clutch to protect their gears if the blade gets pinched while cutting tough materials. *Model No. 6523-21* also has a detachable Quik-Lok power cord and 360° rotating handle to increase comfort and control.

Cordless saws include a battery, charger, and battery gauge. *Model No. 2420-21* includes two 4″ blades: one with 18 teeth per inch for thin metal and one with six teeth per inch for wood. *Model Nos. 2621-21* and *2720-21* include one 6″ long, 10 teeth per inch multi-purpose blade. *Model No. 2720-21* also has a brushless motor that maintains consistent speed and power for faster cutting.

DeWalt Reciprocating Saws

Electric Model No. DWE357

Electric Model Nos. DWE304 and DW311K

Cordless

Saws accept ½″ shank reciprocating saw blades (not included) and have a keyless blade-change system, so you don't need tools to change blades. They are UL listed, CSA certified, and meet OSHA standards. They come in a plastic case, unless noted.

Electric saws include a cord and plug.

Cordless saw includes a battery and one-hour charger.

Scroll Saw Blades

Use with scroll saws, coping saws, fret saws, and jewelry saws. Blades are steel and 5″ long. Choose more teeth per inch for a smooth cut; choose fewer teeth per inch for fast, rough cutting.

Fast-cut blades have teeth that are designed to cut more quickly than the teeth on general purpose scroll saw blades.

Air-Powered Reciprocating Saws

Use these saws with one hand and in confined spaces to cut straight lines and tight curves. They have a rear exhaust and a locking throttle lever that prevents accidental startup.

Style A—Choose this economy saw for intermittent use. It accepts 1/2″ universal shank saw blades. Three 3 1/8″ long (18, 24, and 32 teeth per inch) long-life multipurpose blades are included.

Style B—Dual pistons make this saw powerful and reduce vibration. It includes two 3 3/4″ long (32 teeth per inch) long-life multipurpose blades and an air hose.

Air-Powered Hacksaws

Use these saws to cut pipe, angle iron, and other structural shapes.

Style A is half the weight of other air-powered hacksaws, so it reduces fatigue during prolonged use. It can also be used under water, in oil, and in slurries. It has a front exhaust and a speed control valve. Meets OSHA standards. It includes ten 12″ long (18 teeth per inch) multipurpose blades, lubricating oil, and a metal case.

Style B has a rear exhaust. An off switch prevents accidental startup. It includes two 12″ long (16 teeth per inch) multipurpose blades.

Accessories for Style B

Chain clamps attach the saw to pipe for demolition work.

Extension chains are for use with the chain clamp for 6″-12 3/4″ dia. pipe.

Saw blade guide keeps the blade centered on the cutting area. It works with blades up to 20 3/4″ long.

Saw support holds the tool while you cut sheet metal. It's not for use with the chain clamps or saw blade guide.

Chain Clamp for 0″-6″ Dia. Pipe	3990A12	$385.53
Chain Clamp for 6″-12 3/4″ Dia. Pipe	3990A13	450.56

RotoZip Spiral Saws, Bits, and Attachments

Make plunge cuts with the rotating cutting bit, or attach a cutoff wheel for straight cuts. Operates on 120 volts AC and has a cord with plug. Saw is 15 1/8″ long and weighs 3.7 pounds. It includes a bit for wood, a bit for precise cuts in drywall, two collets (1/8″ and 1/4″), and a dust collection system.

Right-angle cutoff attachment converts this saw from a spiral saw to a cutoff saw.

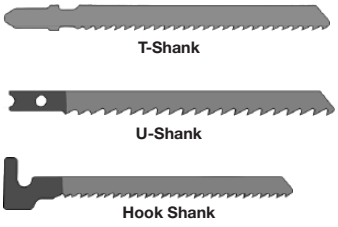
Jigsaw Blades



Blades are high-speed steel, unless otherwise stated.

For blades with teeth, choose more teeth per inch for a smooth cut; choose fewer teeth per inch for fast, rough cutting. Blades with a range of teeth per inch are also known as progressive-tooth blades. They have small, fine teeth near the shank that progress to larger teeth near the tip, resulting in fast cuts.

For blades with a grit edge, choose finer grit for less material loss and a smooth cut; choose coarser grit for fast cutting. Blades with diamond grit last longer than blades with carbide grit when cutting through abrasive materials such as cement, brick, stone, and tile.

Long-life blades have a carbon steel body with high-speed steel teeth that last up to four times longer than carbon steel teeth. They're also known as bimetal blades.

Extra-long life blades have teeth that are carbide tipped to last longer than bimetal blades.

★Blade is carbon steel. ▲Blade is steel.

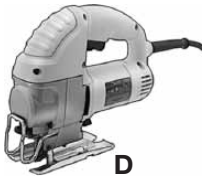
5-Piece T-Shank Blade Assortment—Includes two 3 5/8" long high-speed steel blades (11-14 and 17-24 teeth per inch) for metal; one 3 1/4" long carbon steel blade (12 teeth per inch) for wood; and two 4" long carbon steel blades (6 and 10 teeth per inch) for wood.

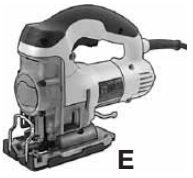
4131A51 $7.98

5-Piece U-Shank Blade Assortment—Also known as bimetal blades, these have a carbon steel body with high-speed steel teeth. Includes two 2 3/4" long blades (18 and 21 teeth per inch) for metal; one 3 5/8" long blade (12 teeth per inch) for metal; and two 4" long blades (6 and 10 teeth per inch) for wood.

4028A41 $10.37

Jigsaws





Saws hold thin blades that make contoured cuts in sheets of material. They have a quick-change blade system that allows you to switch blades without a tool. Bases tilt 45° for angle cutting. All are UL listed. They come in a plastic case.

(A-F) Electric—All have a cord with a plug. *Styles A-C* have a dial for precise speed control and a speed lock-on button. They include one 4 1/2" long, fast-cut blade for wood. *Style F* includes one 4" long, 10 teeth per inch blade for wood and one 3" long, 18 teeth per inch blade for metal. *Styles D&E* blades are sold separately.

(G) Cordless—Comes with a 20-volt battery, a one-hour charger, one 4" long, 8 teeth per inch multipurpose blade, and one 4 1/2" long, 11 teeth per inch blade for wood.

Manual Miter Saws

Use this saw to cut precise angles by hand. Also known as a miter box saw. It has an adjustable cutting depth. Cutting angles are 90°, 75°, 67.5°, 60°, 54°, and 45° for both left- and right-hand cuts. Saw has a cast zinc frame. It includes a 22" Lg. x 1 1/2" Wd., 14 teeth per inch blade for wood.

Maximum cutting height is 4 1/2"; maximum cutting width is 4 1/16" at 45° and 6 1/2" at 90°. Saw length is 28". Base table is 14 1/2" Lg. x 4" Wd. Overall height is 10 3/4".

4201A48 $48.91

Hacksaw Blades

Blades are ½″ Wd. × 0.025″ Thick. Choose more teeth per inch for a smooth cut; choose fewer teeth per inch for fast, rough cutting. The blade with a range of teeth per inch is also known as a progressive-tooth blade. It has small, fine teeth that gradually increase to large teeth for fast cuts.

Economy—Blades are carbon steel. Use them to cut soft materials such as mild steel, copper, plastic, and wood.

Standard—These high-speed steel blades have hardened teeth, so they cut harder metal and plastic than carbon steel blades.

Long Life—Also known as bimetal blades, these have a steel body with high-speed steel teeth. They last twice as long as standard blades. Use to cut metal, plastic, and wood.

Heavy Duty Long Life—Teeth are ground into a forward angle for 30% more cutting power than long-life blades. Also known as bimetal blades, they have a steel body with high-speed steel teeth and last twice as long as standard blades. Use to cut metal, plastic, and wood.

Hacksaw Blades for Ceramics and Masonry

For Straight Cuts

For Curved Cuts

Carbide grit bonded to a steel blade cuts through abrasive materials such as ceramics and masonry as well as hardened steel, cable, and chain.

Blades for curved cuts are also known as rodsaw blades. They cut in any direction, so they're a good choice for contoured cuts.

	For Straight Cuts				For Curved Cuts

Oscillating Tools

Electric

Cordless

Cut in tight spaces. These tools have an oscillating blade that makes flush and plunge cuts without damaging the surrounding material. They accept accessories from most brands of oscillating tools and have a quick-change blade holder, so you don't need tools to change blades.

Electric tool has a cord with plug. It includes a sanding pad, 25 sanding sheets, and three blades: one for plunge cuts in wood, wood with nails, drywall, PVC, and metal; one for plunge cuts in wood and laminate; and one for cutting wood, wood with nails, drywall, PVC, and metal. Saw comes in a cloth case.

Cordless tool has a built-in LED light to illuminate your work surface. It includes an adapter for use with most brands of oscillating tool accessories, a battery, charger, sanding pad, 25 sanding sheets, and two blades: one for cutting wood and one for cutting wood with nails. Saw comes in a cloth case.

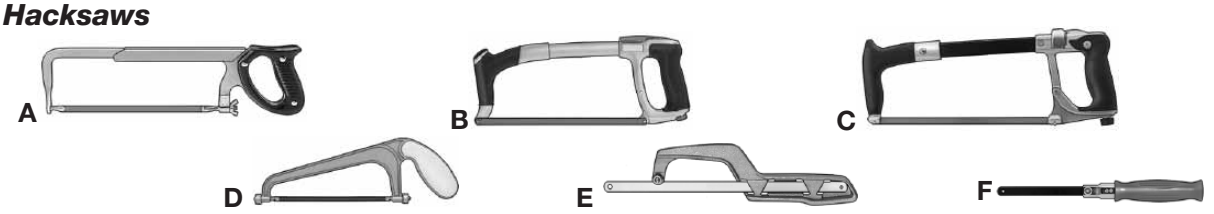
Hacksaws



Choose from a wide range of hacksaw frame styles. All come with a blade that cuts metal, plastic, and wood.

(A) Light Duty—The plastic handle and included economy blade are good for light, general purpose cutting. The frame is steel and expands to hold 10″ or 12″ blades.

(B&C) Heavy Duty—Nonslip, cushioned grips on the handle and front end let you get a tight grip with two hands while cutting tough materials. The frame is aluminum. *Style C* has a blade storage compartment that lets you conveniently store additional blades in the frame.

(D) Compact—Designed with a small aluminum frame with a tapered nose and plastic grip, this saw makes cuts in tighter spots than standard hacksaws.

(E) Flush Cut—The blade extends past the frame to make flush cuts. The frame and handle are aluminum. This saw holds hacksaw blades of any length.

(F) Straight Handle—Hacksaw blades of any length fit this saw to make cuts in holes and tight spaces. Handle is plastic; frame is steel.

Specialty Handsaws and Hacksaws

Find the right saw for your application. All come with a steel blade.

(A&B) High-Precision Handsaws—Also known as backsaws, they have a reinforced back. *Style A* has an ultra-thin replaceable blade.

(C&D) Folding-Pocket Handsaws—Folds like a jackknife. They accept reciprocating saw blades. *Style C* folds to 6½″ long. *Style D* folds to 8″ long.

(E-G) Handsaws for Drywall—Have a pointed tip to make plunge cuts. Blades are not replaceable. *Style F* has long-life, carbide-tipped teeth. *Style G* has teeth on both sides of the blade to cut in both directions.

(H) Handsaw for Masonry—Has a reversible blade.

(J) Handsaws for Plastic—Blade is carbon steel.

(K) Hacksaw for Tight Curves—Also known as a coping saw. Throat depth is 4¾″.

(L) Deep-Cut Hacksaw for Tight Curves—Also known as a fret saw. Throat depth is 12⅞″

(M) Fast-Cut Handsaws for Wood—Cut on both forward and backward strokes. Frame is steel tubing with a knuckle guard. The saw with a 12″ long blade has a 6″ throat depth. It includes an extra blade for metal and plastic (24 teeth per inch). The saw with a 30″ blade has a 7″ throat depth.

(N) Flush-Cut Handsaw for Wood—Has a thin flexible blade with two cutting edges; one for rough cuts and one for finer cuts. Handle has a rubber grip.

Plasma Cutters for Metals

Cutter for 1/8″ Thick Steel

Using compressed air and electricity, these cutters make accurate cuts in conductive materials such as steel, stainless steel, aluminum, brass, and copper. They include a torch that is easier to maneuver and control than a portable saw, so it allows you to make straight and contoured cuts in tight spaces. Use cutters intermittently when cutting the maximum thickness. All systems include a ground cable and clamp; a pressure regulator with gauge; and a cord with plug.

Cutter for 1/8″ thick steel has a built-in compressor. Motor is single phase.

Cutter for 1/4″ and 3/8″ thick steel is wired for 230 volts and includes an adapter cord for 120 volts. Motor is single phase.

Cutter for 1/2″ thick steel is wired for 208 and 230 volts, single phase. It can be wired for three-phase.

Circular Saw Blades for Steel

Make fast, clean cuts in steel sheets, angle iron, rebar, and pipe with the carbide teeth on these steel blades. The blades with multiple arbor diameters come with a reducer bushing. Choose blades with more teeth for a smoother cut. Blades with a narrower width of cut make faster cuts with less material loss. For blades with a diamond arbor, detach the center piece to expose the diamond shape.

Circular Saw Blades for Aluminum

Teeth are carbide tipped and designed to push chips away from the blade to prevent clogging and produce smooth cuts in aluminum sheets, tubing, and T-slotted framing. Blades are steel. Choose blades with more teeth for a smoother cut. Blades with a narrower width of cut make faster cuts with less material loss.

Circular Saw Blades for Copper, Brass, and Bronze

Prevent clogging when cutting soft metal—these steel blades have plenty of space between the carbide-tipped teeth to allow chips to escape. The blade with multiple arbor diameters comes with a reducer bushing. Choose blades with more teeth for a smoother cut. Blades with a narrower width of cut make faster cuts with less material loss. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Cold Saw Blades

Blades and teeth are steel and treated to a Rockwell Hardness between C63 and C65 for increased wear resistance when cutting through metal bars, rods, pipe, and tubing. Maximum speed is 65 rpm. Choose blades with more teeth for a smoother cut.

Blades for stainless steel are coated with titanium carbonitride (TiCN).

Circular Saw Blades for Plastic

Produce smooth cuts in plastic materials including polycarbonate, polyurethane, PVC, and acrylic with the carbide-tipped teeth on these steel blades. Sharpen them if they become dull. Choose blades with more teeth for thin, brittle plastic; choose blades with fewer teeth for thicker, softer plastic. Blades with a narrower width of cut make faster cuts with less material loss. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Circular Saw Blades for Glass and Fiberglass

3″-4″ Diameter Blade

6½″-12″ Diameter Blade

Round Arbor

Round/ Diamond Arbor

The carbide-grit edge on these steel blades cuts brittle and abrasive materials including glass and fiberglass. Blades have a segmented edge, except the 3″ and 4″ diameter blades have a continuous edge. Use them for dry cutting. Blades with multiple arbor diameters come with a reducer bushing. Choose medium grit for less material loss and smoother cuts. Choose coarse grit for faster cuts. For blades with a diamond arbor, detach the center piece to expose the diamond shape.

Circular Saw Blades for Foam Insulation

Round Arbor

Round/Diamond Arbor

A razor-sharp knife edge minimizes dust and makes quick, clean cuts through foam sheets such as expanded polystyrene insulation and extruded polystyrene. Blades are steel. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Circular Saw Blades for Cast Iron

Round Arbor

Round/ Diamond Arbor

Diamond grit bonded to a segmented edge cuts through hard metal such as cast iron. Blades are steel. Diamond depth is 0.2″. Use dry or with water or coolant (not included). All blades come with a reducer bushing to adjust the arbor diameter. Blades with a narrower width of cut make faster cuts with less material loss. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Circular Saw Blades for Masonry and Stone

Smooth Cut

Fast Cut

Round Arbor

Round/ Diamond Arbor

These blades are coated in diamond grit to cut hard, abrasive materials such as masonry, stone, asphalt, and concrete. All have a steel body and a diamond depth of 0.4″. Use dry or with water or coolant (not included). Blades come with a reducer bushing to adjust the arbor diameter. For blades with a diamond arbor, detach the center piece to expose the diamond shape.

Smooth-cut blades have a continuous edge to produce smooth cuts. **Fast-cut** blades have a segmented edge to cut faster than a continuous edge.

Long Life—Blades have diamond grit that lasts up to three times longer than the grit on standard blades in continuous-use applications.

Walk-Behind Flat Saw Blades

Blades are steel with a diamond grit edge for use on concrete. Those with multiple arbor diameters come with a reducer bushing. Choose a narrower width of cut for faster cuts and less material loss.

Dry Cutting—Use these blades with portable cutoff saws and low horsepower (under 20 hp) walk-behind flat saws. Diamond depth is 1/4", unless otherwise stated. **Long-life** dry-cutting blades have a higher concentration of diamonds than other dry-cutting blades, so they last up to three times longer. Diamond depth is 0.35".

Wet Cutting—Use these blades with water or coolant (not included) to produce a smooth cut and minimize heat buildup. Diamond depth is 1/4".

Circular Saw Blades for Tile

A continuous edge coated in diamond grit makes fast, smooth cuts in stone and ceramic tile. Blades with multiple arbor diameters come with a reducer bushing. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Wet Cutting—Use with water or coolant (not included) to produce smoother cuts in stone and ceramic tile than dry-cutting blades. They're also for use on glass.

Smooth-Cut Circular Saw Blades for Wood

Blade for Across-Grain Cuts

Nonstick Blade for Across-Grain Cuts

Nonstick Blade for Across-Grain and With-Grain Cuts

Round Arbor

Round/ Diamond Arbor

The large number of teeth on these steel blades produces a smooth cut across the wood grain. Choose blades with more teeth for a smoother cut. Blades with a narrower width of cut make faster cuts with less material loss. For the blade with a diamond arbor, detach the center piece to expose the diamond shape.

Nonstick blades have a heat-resistant coating to prevent material buildup.

Curve-Cutting Smooth-Cut Circular Saw Blades for Masonry and Stone

Side View

Round Arbor

The blade is curved to cut arcs and circles with a radius of 15″ and up. It has a continuous edge that produces smooth cuts, and it's coated in diamond grit to cut hard, abrasive materials such as masonry, stone, asphalt, and concrete. Use dry or with water or coolant (not included).

Dia.	Arbor Hole Size	Width of Cut	Max. rpm		
Hand-Held Circular Saws

Circular Saw Blade Stiffeners

Ensure straight cuts—these steel stiffeners prevent blades from bending during use on stationary saws. For 10″ minimum blade diameter. Stiffeners are 4″ Dia. × 1/8″ Thick. and have a 5/8″ arbor.

41035A11 ..... Pair .. $20.11

Circular Saw Blade Storage Cases

Protect and store your circular saw blades. Cases are clear plastic.

Circular Saws

DeWalt Electric

Milwaukee Electric

Skil Electric

Evolution Electric

DeWalt Cordless

Makita Cordless

DeWalt Cordless for Metal

Bring these portable saws to your site to cut wood and soft metal. All include a blade. **Saws for metal** operate at a low rpm to make smooth, burr-free cuts in metal without excessive heat or the need for coolant.

Electric—Saws have a cord with plug.
Cordless—Saws include a charger and two batteries, except DeWalt Model No. DCS391P1 includes one battery.

Chop Saws, Miter Saws, and Cold Saws

DeWalt Miter Saw

Makita Miter Saw

Sliding-Arm Miter Saw

Chop Saw for Metal

Cold Saw

All saws come with a blade. They have a cord with plug. **Miter saws** quickly make accurate angled crosscuts. The **chop saw for metal** operates at a low rpm to make quick, straight cuts in metal without excessive heat or the need for coolant. The **cold saw** has a built-in coolant pump and specially designed teeth to cut chips and transfer heat away from this saw's blade for smoother cuts in metal and less distortion.

Chop Saws for Aluminum T-Slotted Framing

Use the included clamps to hold aluminum extrusions at any angle up to 45° while you cut. This saw is also for use on hard plastic, such as fiberglass, garolite, and carbon fiber. It makes smooth, burr-free cuts in steel up to four times faster than a cutoff saw without producing sparks or excessive heat. It has a cord with a plug. For the fastest, smoothest cuts in aluminum, use the blade for aluminum (sold separately) instead of the included general purpose blade.

AC Voltage	Blade Dia.	Arbor	No-Load Speed, rpm	*Maximum Cutting* Ht.	*Maximum Cutting* Wd.	Blade Location	Wt., lbs.		
120	14″	1″	1,450	4″	8″	Right Side	46	2835A2	$281.24
Blade for Aluminum								1125N21	136.35

Circular, Table & Panel Saws

Chop Saws for Hose

Pins hold hose slightly bent, pulling it apart as the knife-edge blade slices a straight, smooth cut. These saws make cleaner cuts than cutoff saws in rubber hose; reinforced air, water, and coolant hose; and hydraulic hose. They have a cord with plug. A blade is included. For smoke-free cuts, connect a wet/dry vacuum to the 2″ dia. dust-hose port.

AC Voltage	Blade Dia.	Arbor	No-Load Speed, rpm	For Max. Hose ID	Wt., lbs.	Saws		Replacement Blades

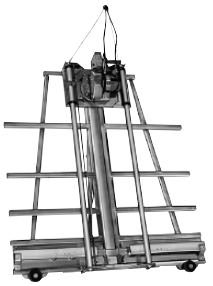
Panel Saws



A circular saw mounted to a track allows you to make straight vertical and horizontal cuts in large sheets of wood and plastic that won't fit on a table saw. Saws have a cord with plug. Blades are not included.

Quick stops are adjustable for repetitive horizontal cuts of any length up to 96″.

Extensions add 20″ to each side of the saw frame for extra support when cutting wide panels.

Dust hose exhaust kit includes a 20-ft. long, 1 1/2″ dia. hose and everything you need to connect it to your saw.

Max. Vertical Cut	Max. Horizontal Cut	AC Voltage	For Blade Dia.	Arbor	No-Load Speed, rpm	Max. Cut Dp.	Wt., lbs.

40″ Length Extension	24775A13	210.00
Duct Hose Exhaust Kit	24775A33	254.44

Portable Panel Saws

Take this saw anywhere and use the included 59″ long track to make precise horizontal and vertical straight cuts in sheets of wood and plastic. It can also make plunge cuts. Saw has a 1 1/4″ dia. dust-hose port and a cord with plug. A blade is included.

Optional 102″ track allows for longer cuts. Use it in place of the included track.

Optional track clamps hold the track to your workpiece.

DeWalt Model No.	AC Voltage	Blade Dia.	Arbor	No-Load Speed, rpm	Max. Cut Dp.	Wt., lbs.		
DWS520SK	120	6 1/2″	20 mm	1,750-4,000	2 1/8″	11.5	4000A5	$518.96

Optional Track Clamps (Set of 2)							4000A33	51.98

Tile Saws

Saw has a water reservoir and pump for wet cutting stone and ceramic tile. It includes an adjustable guide bar for precise straight cuts. Saw has a cord with plug. A blade and blade guard are included.

AC Voltage	Blade Dia.	Arbor	No-Load Speed, rpm	Max. Cut Dp.	Wt., lbs.	Saw		Replacement Blade	
120	7″	5/8″	6,000	2″	33	6446A21	$447.89	6446A31	$53.20

Pipe and Tube Notching Clamps

Hole Saw Not Included

Use this clamp with your 1/2″ chuck capacity drill and a hole saw to cut notches in pipe and tubing to make intersecting connections. Choose a hole saw (see pages 2422-2426) with the same diameter as the OD of the pipe to which you are attaching the notched pipe. The clamp comes with a 1/2″-20 arbor for use with 9/16″-1 1/8″ diameter hole saws and a 5/8″-18 adapter for use with 1 1/4″-2″ diameter hole saws. It holds pipe with an OD up to 2″. Cut angles from 30° to 90° in 1° increments with the built-in protractor. Bolt or clamp the notcher to the edge of your workbench.

Optional mounting bracket secures the notcher to the center of your workbench or to a drill press.

Optional 5/8″-18 arbor can be used in place of the adapter for a more secure hold on 1 1/4″ to 2″diameter hole saws.

Notching Clamp	4104A22	$186.34
Replacement 5/8″-18 Adapter	4104A25	7.68

Optional Mounting Bracket	4104A23	$45.18
Optional 5/8″-18 Arbor	4104A24	19.02

Cutoff Wheels for Metal

Type 1 Side View

Type 27 Side View

Use these wheels to cut through metals. Wheels are aluminum oxide reinforced with a layer of fiberglass mesh. Choose coarser grit for fast cuts; choose finer grit for smooth cuts.

Wheels for Angle Grinders—These wheels have an extra layer of fiberglass reinforcement. **Flush-cut wheels** are also known as Type 27, raised-hub, and depressed-center cutoff wheels. They outperform Type 1 wheels when making flush cuts.

Wheels for Bench-Top and **Floor-Mount Cutoff Saws**—These are not for use on hand-held saws. **Fast-cut wheels** are thinner than standard bench-top cutoff saw wheels, so they cut through metal more quickly.

■ Wheel is a blend of aluminum oxide and silicon carbide. ★Wheel is zirconia alumina.

Warning: *Use wheels that have a greater rpm rating than the no-load rpm of your tool.*

Cutoff Wheels

Long-Life Cutoff Wheels for Metal

Side View

Two layers of fiberglass mesh reinforcement give these wheels at least three times the life of standard cutoff wheels when cutting metal such as aluminum, iron, steel, and stainless steel. All are Type 1 wheels. Choose coarser grit for fast cuts; choose finer grit for smooth cuts.

Wheels for straight and **bench grinders** are aluminum oxide, except extra-long-life wheels are high-density ceramic oxide that lasts up to twice as long as aluminum oxide.

Long-life wheels for floor-mount cutoff saws are zirconia alumina for fast cutting. They are not for use on hand-held saws.

Cutoff Wheels for Hard Metal

Side View

The combination of ceramic alumina and zirconia alumina in these wheels lasts up to ten times longer than aluminum oxide when cutting hard metal such as Inconel, Hastelloy, and tool steel. Wheels are reinforced with a layer of fiberglass mesh. All are Type 1 wheels. Choose coarser grit for fast cuts; choose finer grit for smooth cuts.

Wheels for angle grinders have an extra layer of reinforcement.

Cutoff Wheels for Cutting and Deburring Metal

Side View

Switch between cutting and deburring aluminum, iron, steel, and stainless steel without the need to change your wheel. Three layers of fiberglass mesh reinforce these aluminum oxide wheels. They're also known as Type 27, raised-hub, and depressed-center cutoff wheels, and they outperform Type 1 wheels when making flush cuts.

Dia.	Thick.	Arbor Size	Max. rpm	Grit		
Flush-Cut Wheels for Angle Grinders						
4 1/2″	5/64″	7/8″	13,300	60	4535A111	$5.68
5″	5/64″	7/8″	12,200	60	4535A112	6.23
6″	5/64″	7/8″	10,200	60	4535A113	8.92

Warning: *Use wheels that have a greater rpm rating than the no-load rpm of your tool.*

Cutoff Wheels for Cutting and Notching Metal

Made of premium grade abrasives, these wheels are strong and thick for making notches in metal. They're made of aluminum oxide, unless noted, and reinforced with two layers of fiberglass mesh. Also known as Type 27, raised-hub, and depressed-center cutoff wheels, they outperform Type 1 wheels when making flush cuts.

Cutoff Wheels for Stainless Steel

Wheels are designed to cut stainless steel. They are aluminum oxide with a layer of fiberglass mesh reinforcement, unless otherwise stated. Choose coarser grit for fast cuts; choose finer grit for smooth cuts.

Wheels for Angle Grinders—These wheels have an extra layer of reinforcement. **Flush-cut wheels** are also known as Type 27, raised-hub, and depressed-center cutoff wheels. They make flush cuts more easily than a Type 1 wheel.

Wheels for Bench-Top Cutoff Saws—These are not for use on hand-held saws.

Contaminant-Free Cutoff Wheels for Stainless Steel

Type 1

Side View

Type 27

Side View

Prevent corrosion and discoloration on stainless steel—these wheels contain less than 0.1% iron, chloride, and sulfur contaminants. They have an aluminum oxide grit and are reinforced with two layers of fiberglass mesh. Choose coarser grit for fast cuts; choose finer grit for smooth cuts.

Flush-cut wheels are also known as Type 27, raised-hub, and depressed-center cutoff wheels. They outperform Type 1 wheels when making flush cuts.

Cutoff Wheels for Carbide, Ceramics, and Glass

Side View

These steel wheels have a diamond grit edge, so they last longer than standard bench-grinder cutoff wheels when cutting hard, nonferrous materials such as carbide, ceramics, and glass. All are Type 1 wheels.

Dia.	Thick.	Arbor Size	Max. rpm	Grit

Hole Saws

Attach these saws to a drill or drill press. An arbor with pilot drill (sold separately) is required. Arbor thread size is 1/2"-20 for saws up to 1 3/16" diameter and 5/8"-18 for larger saws. All saws have a steel body.

Multipurpose—These saws have high-speed steel teeth to make circular cuts in wood, plastic, and metals such as aluminum, brass, bronze, steel, and stainless steel.

1 3/4" cut depth saws have specially designed teeth for faster cutting.

Long-Life Multipurpose—The carbide teeth on these saws last up to twice as long as high-speed steel teeth when cutting fiberglass, plastic, wood, and metal such as aluminum, cast iron, steel, and stainless steel.

Long-Life for Ceramics and Masonry—The diamond-grit edge on these hole saws cuts more accurately, leaves a smoother finish, and lasts up to twice as long as carbide-grit-coated teeth. Saws are for use on reinforced plastic, Kevlar, stone, brick, and other abrasive materials with high silicon content. To cut ceramic tile, you must use a 1/4" carbide-tipped pilot drill (see 4066A141 in Hole Saw Arbors with Pilot Drill on page 2423).

For Ceramics and Masonry—These saws have carbide-grit-coated teeth that cut ceramic tile, fiberglass, masonry, plastic, and composites.

Hole Saw Arbors with Pilot Drill

Attach your hole saw to a drill or drill press with one of these arbors and use the built-in pilot drill to guide the hole saw. They fit all brands of threaded hole saws. The included high-speed steel pilot drill is ¼" dia. **Long-life pilot drills** are carbide tipped, so they last up to twice as long as high-speed steel. They're ¼" Dia. × 2⅞" Lg.

Kit for 9/16"-6" Dia. Hole Saws—Includes two ¼" Dia. × 4⅝" Lg. high-speed steel pilot drills and two arbors with ½"-20 threads: one with a ¼" hex shank for 9/16"-13/16" dia. hole saws and one with a 7/16" hex shank for 9/16"-6" dia. hole saws.

Arbor Thread Adapter—Adapt ½"-20 threads to ⅝"-18 threads on 1¼" to 6" dia. hole saws.

For 9/16"-13/16" Dia. Saws

For 1¼"-6" Dia. Saws

Quick-Change Hole Saw Arbors with Pilot Drill

Switch hole saws without using adapters or special tools. These arbors have a spring-loaded quick-release collar that pulls back to let you quickly unthread the hole saw from the arbor instead of using a wrench or loosening set screws. They fit all brands of threaded hole saws. A built-in ¼" Dia. × 4" Lg. high-speed steel pilot drill guides the hole saw.

For Hole Saw Dia.	Hex Shank Size	Thread Size		
9/16"-13/16"	⅜"	½"-20	4043A11	$21.66
1¼"-3"	⅜"	⅝"-18	4043A12	22.54

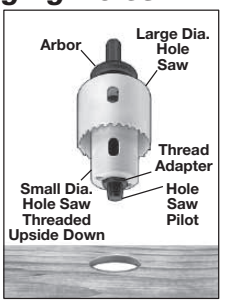
Replacement Pilot Drill			4043A21	3.47

Hole Saw Pilots for Enlarging Holes

Enlarge holes by using an existing hole as a guide. Attach the original hole saw to this pilot and use it to center a larger hole saw. Pilot fits all brands of threaded hole saws. Thread size is ½"-20. Hex shank size is ¼".

Thread adapter is required for use on 1⅛" dia. and larger hole saws to adapt ½"-20 threads to ⅝"-18 threads.



Pilot	4158A11	$20.17
Thread Adapter	4158A12	4.48

Hole Saws

For information about hole saw size selection, see page 2422.

Large Diameter Hole Saws

Multipurpose and Long-Life Multipurpose Saw

Multipurpose Saw with Replaceable Blades

Arbor with Pilot Drill for 3/4" Cut Depth Saws

Arbor with Pilot Drill for 1 1/2" Cut Depth Saws

Arbor for 2" Cut Depth Saws

Pilot Drill

These saws have high-speed steel teeth for cutting wood, plastic, and metals such as aluminum, brass, bronze, cast iron, steel, and stainless steel. Attach them to a drill or drill press. An arbor (sold separately) is required. Arbors come with a pilot drill, except pilot drills for 2" cut depth saws are sold separately. Pilot drills are 1/4" Dia. × 3 1/16" Lg. high-speed steel, unless otherwise stated.

Multipurpose—The body is steel.

Multipurpose with Replaceable Blades—These saws have a titanium-aluminum body and three replaceable steel blades. Pilot drill length is 4 5/16".

Long-Life Multipurpose—The body is steel and the teeth are carbide tipped, so they last up to twice as long as high-speed steel teeth. These saws are also for use on fiberglass and laminates.

Hole Saws with Built-In Arbor

Saw

Pilot Drill

Quickly connect these saws to your drill or drill press with the built-in arbor. All have a 7/16" hex shank. Saws have a steel body and high-speed steel teeth for cutting wood, plastic, and metals such as aluminum, brass, bronze, cast iron, steel, and stainless steel. Cut depth is 1 1/2". A pilot drill (sold separately) is required. Pilot drill is 1/4" Dia. × 4 5/16" Lg. high-speed steel.

Pilot Drills

Pilot Drill	4066A89	$2.75

Hole Saw Kits

All saws have a steel body. Attach them to a drill or drill press with the included arbors. A 1/4" dia. high-speed steel pilot drill is included with each arbor. Kits come in a plastic case, except the 16-piece multipurpose kit comes in a metal case.

Multipurpose—Saws have high-speed steel teeth for cutting wood and metals such as aluminum, brass, bronze, steel, and stainless steel. Saws *with built-in arbor* can also be used on cast iron and plastic.

Long-Life Multipurpose—Teeth are carbide tipped, so they last up to twice as long as saws with high-speed steel teeth. Use on a variety of materials including wood, plastic, fiberglass, laminates, aluminum, brass, bronze, steel, stainless steel, and cast iron.

For Ceramics and Masonry—Carbide-grit-coated teeth cut ceramic tile, fiberglass, masonry, plastic, and composites.

For information about hole saw size selection, see page 2422.

Hole Saws for Hard Metal

The carbide teeth on these steel saws cut hard metal such as steel, stainless steel, cast iron, and titanium. They can be sharpened, so they last longer than saws with carbide-tipped steel teeth. Use them on a drill or drill press. An arbor and pilot drill (sold separately) are required. Pilot drills are carbide-tipped high-speed steel.

Heavy Duty Hole Saws for Stainless Steel Sheets

An extra-thick steel body with carbide teeth can cut through stainless steel structural framing and electrical enclosures. Cut depth is 1/8″. The built-in arbor makes these saws easy to attach to a drill or drill press. It has a 33/64″ hex shank. The included high-speed steel pilot drill is 15/64″ Dia. × 3 1/8″ Lg. It has a spring to push out the slug.

Replacement Pilot Drill 4054A21 4.48

Impact-Driver Hole Saws for Sheet Metal

These saws have high-speed steel teeth to make clean, fast cuts in thin metal and plastic when you use them with an impact driver. Cut depth is 3/8″. The body is steel and widens at the top to prevent the saw from pushing through your workpiece. The built-in arbor has a 1/4″ hex shank that makes these saws easy to attach to your impact drill. The included high-speed steel pilot drill is 5/32″ Dia. × 2 1/2″ Lg. It has a spring that pushes out the slug.

Hole Saws for Fiberglass and Plastic Sheets

These high-speed steel saws are coated with titanium aluminum nitride (TiAlN) to reduce friction and prevent material buildup when cutting fiberglass and plastic. Cut depth is 1/4″. Attach them to your drill or drill press. An arbor with pilot drill (sold separately) is required. The pilot drills for 13/16″-2 1/2″ dia. hole saws have a spring that pushes out the slug.

Hole Saws for Sheet Metal

1/8" Cut Depth Saw

1/4"-1/2" Cut Depth Saw

Arbor with Pilot Drill

Arbor with Pilot Pin

Lower cut depths than standard hole saws make these saws less likely to rip or tear while making smooth, burr-free cuts in sheets. Both the body and the teeth are heat-treated high-speed steel to cut through aluminum, brass, bronze, and steel. Use these saws on a drill or drill press. An arbor (sold separately) is required.

Arbors with pilot drill include a high-speed steel pilot drill to guide your cut.

Arbors with pilot pin require a drilled pilot hole. **Spring-loaded pilot pins** push out the slug as you cut.

Kit with pilot drill includes a 3/16" Dia. x 2 3/8" Lg. high-speed steel pilot drill.

Heavy Duty Hole Saws for Sheet Metal and Plastic Sheets

The carbide teeth on these steel saws cut aluminum, brass, bronze, steel, and plastic sheets and last up to twice as long as high-speed steel teeth. Cut depth is 1/4". The body widens at the top to prevent the saw from pushing through your workpiece. A built-in arbor with a 1/2" hex shank makes these saws easy to attach to your drill press. The included 1/4" Dia. x 2 1/8" Lg. high-speed steel pilot drill has a spring that pushes out the slug.

Hole Saw Slug and Core Removing Tools

Pull-Out Tool

Push-Out Tool

Use these steel tools to remove material from the inside of your hole saw to prevent binding.

Pull-Out Tool—Tool has two reverse-angle hooks that fit through the slots in the side of your saw. Use it to pull out wood, plastic, and metal slugs.

Push-Out Tool—Slide the curved end of each piece into the slot in the side of your saw and use a lever motion to push out metal slugs that have heated and expanded during cutting. Use the tapered end to pick up hot slugs after removing them.

Pull-Out Tool for 1/2"-3" Hole Saws ..... 4067A21 ..... $6.80
Push-Out Tool for Any Size Hole Saws ..... 4067A22 ..... 10.69

Hole Saws for Spot Welds

Cut through spot welds on sheet metal with this 3/8" dia. high-speed steel saw. It makes faster, more precise cuts than drill bits and other hole saws. This saw has a 1/4" hex shank for use with portable drills.

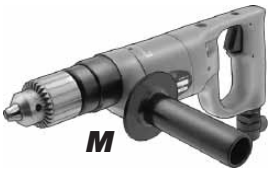
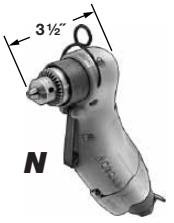
Air-Powered Drills





These drills operate on 90 psi air pressure and have a ¼" NPT female air inlet. All come with a chuck and a key, except Style B, which has a keyless chuck, and Style P, which have a threaded spindle.

Light Duty Drills—Designed for intermittent use. *Style B* has a rubber hand grip for added comfort. *Style D* has a side handle. *Styles E, F,* and *G* have a lever throttle with a lock to prevent accidental starts.

Medium Duty Drills—More durable than our light duty drills, these drills are excellent for general purpose drilling jobs. *Style H* have a rubber hand grip to reduce vibration. *Style J* has a side handle that adjusts 360° and a rubber hand grip for added comfort.

Heavy Duty Drills—Rated for continuous use, these tools take on your tough drilling jobs. They have heavy duty bearings and hardened steel gears. *Style H* has a rubber hand grip to reduce vibration. *Styles L* and *N* have a speed control that lets you set the motor speed at less than the max. rpm. *Style N* has an exhaust deflector/silencer that adjusts 360°.

Heavy Duty Drills for Threaded-Shank Drill Bits—Also rated for continuous use, these drills have a threaded spindle instead of a drill chuck and use ¼"-28 threaded-shank drill bits (sold separately, see page 2473). They have heavy duty bearings and hardened-steel gears.

Multi-Angle Drill Attachment

Drill here, drill there…this attachment lets you drill anywhere. It fits onto your drill and rotates a full 360°, making it ideal for use in recessed locations.

Attachment has a round body with a 3/8" keyless chuck and a 3/8" hex shaft that rotate independently from each other. Simply slide the thumb switch and twist the soft-grip handle to lock and unlock the moving parts. For use with drills that have a 3/8" and larger chuck capacity.

2496A11 ..... **Each** $35.52

DeWalt Cordless Drill/Drivers

Get drilling power where you need it. These cordless drills have a variable-speed reversing motor, a keyless chuck, and a carrying case. All are UL listed and meet OSHA requirements.

Styles A and ***B*** have an adjustable clutch and a cushion-grip handle. Furnished with two batteries and a 1-hr., 120 VAC battery charger. *Style B* has a 360° rotating side handle.

Style C comes with one battery and a 30-min., 120 VAC battery charger.

	Volts	Chuck Cap.	No-Load rpm	Battery, amp-hrs.	Battery Type	Clutch Settings	Lg.	Wt., lbs.	DeWalt Model No.	Each

Milwaukee Cordless Drill/Drivers

A lithium ion battery powers these cordless drills, which means they weigh less and have a longer run-time than Milwaukee cordless drills that use nickel cadmium batteries. All drills have a variable-speed reversing motor; a cushion-grip handle; one or two batteries (as stated); and a carrying case. All are UL listed and meet OSHA requirements.

Styles D, E, and ***F*** have a keyless chuck and an adjustable clutch for adjusting torque. They come with two batteries. *Styles D* and *E* include a 30-min., 120 VAC battery charger. *Style F* has a side handle and includes a 1-hr., 120 VAC battery charger. C-UL listed.

Style G has an angle head that swivels 360° and locks in any position. It also has a 360° adjustable side handle and comes with one 28-volt battery. Includes a 1-hr., 120 VAC battery charger. C-UL listed.

	Volts	Chuck Cap.	No-Load rpm	Max. Torque, in.-lbs.	Battery, amp-hrs.	Battery Type	Clutch Settings	Lg.	Wt., lbs.	Milwaukee Model No.	Each

Makita Cordless Drill/Drivers

These cordless drills have a variable-speed reversing motor. Drills come with two lithium ion batteries, which means they last longer and weigh less than drills that use nickel cadmium and nickel metal hydride batteries. They come with a carrying case. All are UL listed and meet OSHA requirements.

Style H has a ⅜″ keyed chuck. Includes a 30-minute, 115 VAC battery charger.

Style J has a keyless chuck for fast bit changes. It also has a cushion-grip handle and an adjustable clutch that lets you adjust torque for driving various screws. Includes a 30-minute, 120 VAC battery charger.

	Volts	Chuck Cap.	No-Load rpm	Max. Torque, in.-lbs.	Battery, amp-hrs.	Battery Type	Clutch Settings	Lg.	Wt., lbs.	Makita Model No.	Each

Hand Drills

Good for use on wood that is prone to splintering.

K ***Crank-Action Hand Drill—*** Just turn the smooth-running hand crank to drill.

L ***Spiral-Action Ratchet Hand Drill/Screwdriver—*** An up and down stroke turns this drill to quickly drive and remove screws. Set the drill to turn clockwise, counterclockwise, or lock in place for increased power.

M ***Ratchet-Bit Brace Hand Drill—*** Great for use in confined areas. The three-jaw chuck provides a secure fit for driving round shank drills, hex shank tools, and auger bits.

		Chuck Capacity	Lg.		Each
K	Crank-Action Hand Drill	5⁄16″	11″	2297A1	$56.40
L	Spiral-Action Ratchet Hand Drill/Screwdriver	¼″	13″	2297A2	71.98
M	Ratchet-Bit Brace Hand Drill	7⁄64″-9⁄32″	10″	2297A3	114.87

DeWalt 20-Volt Cordless Tool Combination Kits

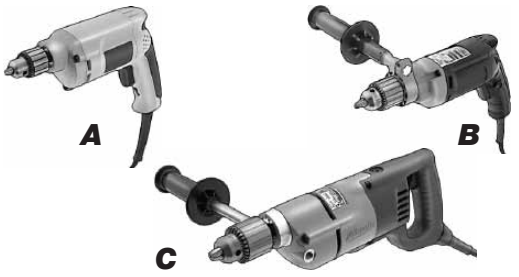
Get the tools you need in an easy-to-carry two- or four-tool combination kit. Both kits come with two 20-volt, 3.0 amp-hour, lithium ion batteries and a 1-hr., 120 VAC charger.

Two-Tool Kit— Includes a hammer drill with ½″ chuck capacity, a reciprocating saw (0-3000 strokes per minute), and a carrying bag.

Four-Tool Kit— Includes a hammer drill with ½″ chuck capacity, a reciprocating saw (0-3000 strokes per minute), a 20V ¼″ impact driver, a flexible-stem flashlight, and a carrying case.

	Each
Two-Tool Kit (Model No. DCK292L2)	8862A53	$374.22
Four-Tool Kit (Model No. DCK490L2)	8862A54	528.35

Pistol-Grip Electric Drills



A traditional pistol-grip shape makes these drills suitable for a variety of drilling applications. All have a variable-speed, reversing motor. Drills include a chuck, a chuck key (except the keyless models), and an 8-ft. power cord with plug. Drills with two-prong plugs are double insulated. All operate on 115/120 VAC, 60 Hz and are CSA certified (except Makita models) and UL listed.

Style A have a trigger lock (except 28925A4) so you don't have to hold down the trigger for continuous use.

Style B have a 360° adjustable side handle for additional control (except 29005A61 and 2829A51, which have a two-position side handle). They also have a trigger lock (except 28135A82) so you don't have to hold down the trigger for continuous use. 2829A51 and 2829A94 have a detachable Quik-Lok power cord.

Style C have a two-position side handle for additional control and a detachable Quik-Lok power cord.

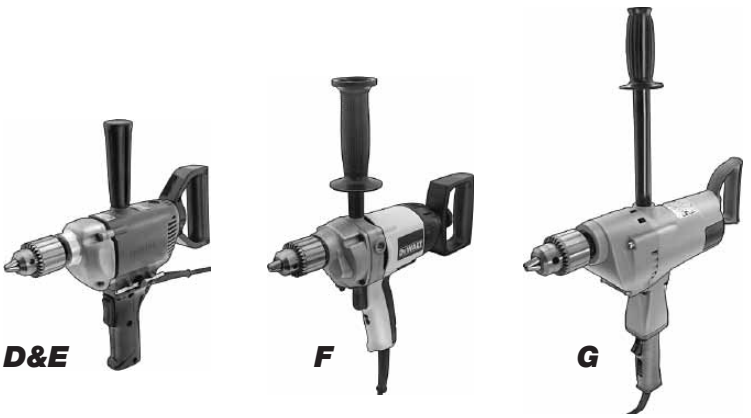
Three-Handle Electric Drills



With a powerful motor, these drills have the strength for big drilling and mixing applications. Their top handle provides additional leverage and stability, and a rear D-handle makes them easy to carry. Motors are single-speed reversing, except Style F, which is variable-speed reversing. Gear housing is metal.

Drills come with a chuck, a chuck key, and an 8-ft. power cord with plug (unless noted). Those with two-prong plugs are double insulated. All are UL listed, CSA certified, and meet OSHA requirements.

Style D has a removable top handle and a rear handle that adjusts 360°.

Style E has removable top and rear handles.

Style F has a trigger lock so you don't have to hold down the trigger for continuous use. Also has a removable three-position top handle and a removable two-position rear handle.

Style G has a removable top handle and a two-position rear handle.

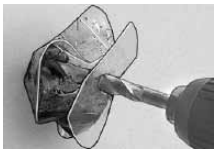
■ Has a 6-ft. power cord.

Milwaukee 28-Volt Cordless Tool Combination Kit

With this selection of powerful portable tools, you'll be ready to tackle any job, anywhere. Kit includes a hammer drill (29735A97); a Sawzall reciprocating saw (24795A7) with two blades; a 5/8″ arbor circular saw (4154A16) with 6 1/2″ blade; a work light; a belt clip; two 28-volt lithium ion batteries; a 1-hr., 120 VAC battery charger; and a heavy duty carrying bag.

2998A11 ..... **Each** $801.25

Drilling-Debris Containment Bubbles

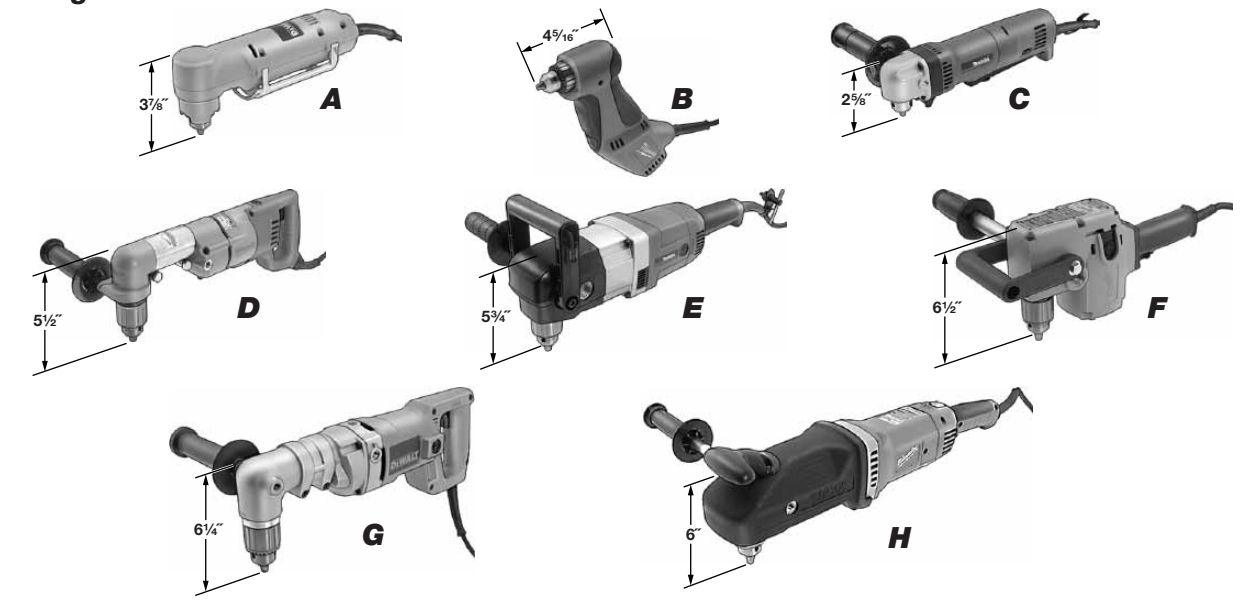


Make cleanup after drilling easy by containing chips and dust in these disposable bubbles. Use the adhesive backing to stick the bubble to the wall and pull the label to inflate. Drill through the bubble to the wall; then gently pull it off the surface to dispose.

Package quantity is 10.

For Use On		Per Pkg.
Metal	8937A13	$22.23
Painted Walls and Wallpaper	8937A21	5.01
Wood and Plaster	8937A22	5.01

Angle-Head Electric Drills



Get a better angle when drilling into hard-to-reach spaces. These durable drills have variable-speed reversing motors (except E, F, G, and H) and operate on 115/120 VAC, 60 Hz. They include a chuck, a chuck key, and an 8-ft. power cord with plug (except Style H, which has a 9-ft. power cord with plug). Drills with two-prong plugs are double insulated. All are UL listed, CSA certified (except Styles C and E), and meet OSHA requirements.

Style C has an LED light and a two-position side handle.

Style D has a 360° adjustable head, a 360° adjustable side handle, a chuck remover bar, a Quik-Lok power cord, and a carrying case.

Style E has a two-speed reversing motor, a rear handle that rotates 90°, a two-position side handle, an adjustable top handle, and a torque limiter that disengages the motor at low speeds if the bit gets stuck.

Style F has a two-position side handle and a three-position front handle.

Style G has a 360° adjustable head, a three-speed nonreversing motor (400 and 900 rpm angle drilling; 600 rpm straight drilling), a multiposition side handle, and a carrying case.

Style H has a rear handle that rotates 90° and a two-position side handle.

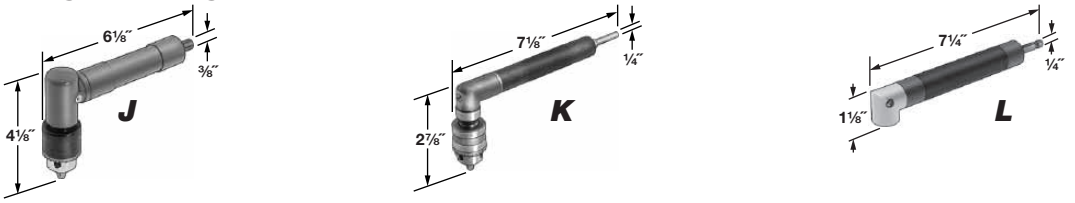
★ With right-angle attachment.

Right-Angle Drilling Attachments



Change your drill into a right-angle tool for access into hard-to-reach spaces. Use with cordless, electric, and air-powered drills.

J General Purpose Attachment—For a variety of maintenance drilling jobs. Comes with a Jacobs drill chuck, a chuck key, and a wrench. Use in drills with ⅜″ and ½″ chuck capacities. Maximum speed is 4000 rpm.

K Long-Life Attachment—The gears, shaft, and spindle are heat-treated alloy steel for long life. Use this attachment in drills with ¼″, ⅜″, and ½″ chuck capacities. Furnished with a 1/32″-¼″ capacity Jacobs drill chuck and key. Maximum speed is 2500 rpm.

L Tight-Spot Attachment—Work in tight spaces with as little as 2″ clearance using your ¼″-28 threaded-shank drill bits. For use in drills with ¼″, ⅜″, and ½″ chuck capacities. Maximum speed is 2500 rpm. *Note:* Do not use with drill bits larger than ¼″ dia.

Tight-Spot Attachment Kit includes the tight-spot attachment above and six ¼″-28 threaded-shank high-speed drill bits in the following sizes: (Dia.×O'all Lg.) 3/32″×2½″, ⅛″×13/16″, ⅛″×1½″, ⅛″×2⅜″, 5/32″×1½″, and 3/16″×1½″. You'll also get a 6″ extension, a chuck adapter, a wrench, and a vinyl storage pouch. For replacement threaded-shank drill bits, see below and page 2473.

	For Drill Chuck Capacity	Attachment Chuck Capacity		Each
J General Purpose Attachment	⅜″, ½″	⅜″	2778A15	$66.72
K Long-Life Attachment	¼″, ⅜″, ½″	¼″	4450A4	160.00

L Tight-Spot Attachment Kit	¼″, ⅜″, ½″	—	8787A11	62.48
Replacement Six-Piece Drill Bit Set for 8787A11			8787A12	31.32

Cordless Hammer Drills

DeWalt

Milwaukee (29735A48)

Makita

One cordless tool for many jobs—these drills have rotary-percussion mode and rotary-only mode for drilling masonry and other materials and an adjustable clutch for fastening applications. Drills also have a variable-speed reversing motor; a side handle (except Makita model); a cushion-grip handle; a keyless chuck; two lithium-ion batteries; a 115/120 VAC battery charger; and a carrying case. All are UL listed and meet OSHA requirements. 29735A48 is also C-UL listed. See pages 2474-2477 for masonry drill bits. See pages 776-777 for replacement batteries and chargers.

Torque ratings are 480 in.-lbs. for 27835A52, 1,200 in.-lbs. for 29735A48, and 750 in.-lbs. for 29735A97. 29835A52 is not rated.

Electric Hammer Drills

Just push a switch or twist the collar ring and these tools will change from a regular pistol-grip electric drill to a hammer drill—great for drilling in masonry materials. Rotary-percussion mode is for drilling masonry materials using round- and hex-shank hammer drill bits (see page 2476). Rotary-only mode is for use with standard drill bits for wood and metal as well as rotary-masonry drill bits (see page 2477).

Drills have a variable-speed reversing motor, a depth gauge, a side handle, a keyed chuck, and a power cord with two-prong plug (unless noted). They are double-insulated (unless noted). All operate on 120 VAC, 60 Hz. UL listed, CSA certified, and meet OSHA requirements.

Style A has a three-prong plug. Drill is not double insulated.

Style B has an overload-protected motor and a trigger lock so you don't have to hold down the trigger for continuous use.

Style C has a detachable Quik-Lok cord. See page 906 for replacement cord.

	Chuck Cap.	Max. Bit Size Concrete	Steel	No-Load Blows per Min.	No-Load rpm	Motor Amps	Cord Lg., ft.	Lg.	Wt., lbs.	Brand	Model No.	Each

Drill Guides for Portable Drills

Drill precise holes without a drill press. Simply attach the chuck on your 3/8" or 1/2" capacity portable drill to the drill guide's drive spindle. A dual-locking knob and handle with an easy-to-read protractor let you position your drill up to 45° in either direction. Guides have a built-in V-groove that centers round material up to 2 1/2" in diameter.

Overall height in vertical position is 11 1/2". Include a chuck and a chuck key.

		Each
Guide with 3/8" Capacity Chuck	**8898A21**	$43.46
Guide with 1/2" Capacity Chuck	**8898A31**	62.77

Variable-Diameter Drill Bits

Drill and enlarge several hole sizes with one bit. To drill a specific hole size, place a washer (sold separately) with an ID of the desired hole size over the tip. The washer acts as a stop and prevents the bit from drilling a larger hole. Bits stay centered without a pilot hole, unless noted. All are high-speed steel with a black-oxide treatment and are for use on carbon steel, aluminum, copper, brass, and plastic. Maximum material thickness is 5/64".

Drill Bit Size Range	O'all Lg.	Shank Dia.	Point Angle		Each
1/8"-9/16"	2 7/32"	1/4"	90°	**8910A11**	$21.16
1/4"-13/16"	2 23/32"	3/8"	90°	**8910A12**	35.24
5/8"-1 3/16"	2 31/32"	3/8"	82°	**8910A13**	64.82
1"-1 5/8"	3 9/32"	3/8"	82°	**8910A14**	85.67
1 1/2"-2 1 1/16"	2 11 1/16"	1/2"	None	**8910A15**♠	116.62

♠ Requires a 1 29/64" dia. pilot hole.

Drill Bit Stop Collars

Stop Collar (Drill Bit Not Included)

Ensure identical hole depths every time. Hex keys for set screws are not included; see pages 2830-2831.

Individual Stop Collars— **To Order:** Please specify exact drill size from the listing below. **Also Available:** Stop collars for drill sizes 5/64" to 51/64", wire gauge sizes 1 to 52, letter sizes A to Z, and some metric sizes. Please ask for 8865A91 and specify the exact drill size needed.

Individual Stop Collars

For Drill Bit Sizes	Hex Key Size		Each
1/16", 3/32", 1/8", 5/32", 3/16", 7/32", 1/4"	3/32"	**8865A11**	$3.04
9/32", 5/16", 3/8", 11/32"	3/32"	**8865A12**	4.72
13/32", 7/16", 15/32", 1/2"	1/8"	**8865A13**	6.80
17/32", 9/16"	1/8"	**8865A14**	10.22
19/32", 5/8"	5/32"	**8865A15**	10.22

5/8", 3/4", 7/8", 1"	4	**8959A19**	6.58

Cordless Rotary Hammer

Get the drilling and hammering benefits of a rotary hammer with the convenience of cord-free operation. Hammer has an SDS drive (also known as SDS Plus) and a variable-speed reversing motor with two modes of operation: rotary percussion and rotary only.

In rotary-percussion mode, the tool provides both a rotary drilling and hammering action. Use SDS-Shank Masonry Drill Bits for Rotary Hammers (see page 2475) for fast penetration into masonry materials. *Note:* SDS and SDS-Max bits are not interchangeable. Use the rotary-only mode for general purpose drilling and driving fasteners (requires a chuck adapter or a magnetic bit holder; sold separately below). In the percussion-only mode, the tool provides only the hammering action. Use percussion-only mode when working with chisels and other masonry tools (for chisels for rotary hammers, see page 2475).

Maximum bit capacity listed is for drilling in concrete. Hammer comes with two 5 amp-hr. batteries, a 1-hour charger, a 360° side handle, and a depth gauge. Length is 11 7/8". UL listed.

Volts	Maximum Capacity Rotary Hammer Drill Bit Size	No-Load Blows per Min.	No-Load rpm	Wt., lbs.	Brand/ Model No.	Battery Type		Each
20	1/2"	0-4600	0-1100	6.8	DeWalt DCH273P2	Lithium Ion	2842A72	$528.35
Repl. 20-Volt Lithium Ion Batteries, DeWalt DCB205							29835A1	145.51
Repl. Charger for 20-Volt Lithium Ion Battery, DeWalt DCB101							29835A2	78.61

Electric Rotary Hammers

A&C

B

D-H

A powerful and durable hammer mechanism lets you drill deeper, larger holes in less time than with hammer drills. In rotary-percussion mode, the tool provides both a rotary drilling and hammering action. In percussion-only mode, the tool provides only the hammering action. Use percussion-only mode when working with chisels and other masonry tools (for chisels for rotary hammers, see page 2475).

Maximum bit capacities listed are for drilling in concrete. All styles have a built-in safety clutch to protect you and the hammer if the bit gets stuck in your material. They also have a depth gauge (unless noted); a double-insulated motor that operates on 120 VAC, 60 Hz; a power cord with two-prong plug; and a carrying case. All are UL listed and meet OSHA requirements. Style B is also CSA-US certified.

***A-E SDS-Drive Rotary Hammers*—** Also known as SDS-Plus rotary hammers, these are lightweight and ideal for overhead work and drilling smaller holes. For use with 0.393" shank diameter SDS-shank drill bits (see 8948A on page 2475). *Note:* SDS and SDS-Max bits are not interchangeable. All have a rotary-only mode in addition to rotary-percussion and percussion-only modes. Use rotary-only mode for general purpose drilling and driving fasteners (requires a chuck adapter or a magnetic bit holder; sold separately on this page).

Styles A-D have reversing motors.

Styles B, C, D, and *E* have a chisel-lock feature that allows you to choose from 36 chisel positions (35 positions for Style D) to match the angle of many surfaces.

***F Spline-Drive Rotary Hammer*—** Designed to drill larger holes than an SDS-drive hammer, this uses spline-shank bits (see 8783A on page 2474 and 3084A on page 2476). Hammer has a variable-speed motor, a cushion-grip handle, and a service-reminder light. It has a vibration reduction in the system for increased user comfort, provides smooth starts, and won't slow down as you drill deeper. Has a chisel-lock feature that allows you to choose from 12 chisel positions to match the angle of many surfaces.

***G&H SDS-Max-Drive Rotary Hammers*—** A deeper drive system minimizes wobble for straighter, more accurate holes and better overall performance compared to other rotary hammers. These have a chisel-lock feature that allows you to choose from 12 chisel positions to match the angle of many surfaces. For use with 0.708" shank diameter SDS-Max drill bits (see 88705A and 88865A on page 2475). *Note:* SDS and SDS-Max bits are not interchangeable.

Style H provides smooth starts and won't slow down as you drill deeper. Has a variable-speed motor, a cushion-grip handle, and a service-reminder light.

Chuck Adapter and Magnetic Bit Holder for SDS-Drive Rotary Hammers

Chuck Adapter

Magnetic Bit Holder

Attach one of these tools to your SDS-drive rotary hammer (also known as SDS Plus) so you can perform regular drilling and driving operations with round- or hex-shank drill bits. *Note:* SDS and SDS-Max bits are not interchangeable.

Chuck adapter works with a standard drill chuck for drilling in wood and metal. It has an SDS shank on one end and is threaded (1/2"-20) on the other end. Use with a drill chuck that has a 1/2"-20 thread mount so it will properly fit the chuck adapter. Drill chucks are shown on pages 2439-2442.

Magnetic bit holder has an SDS shank and accepts all 1/4" hex shank bits for driving masonry screws.

		Each
Chuck Adapter	27845A51	$40.04
Magnetic Bit Holder	8845A21	23.78

Cutters for Magnetic-Base Drills

Cutter

Also called annular cutters, these cut on the periphery of the hole and produce a solid slug. They work with magnetic-base drills that have a 3/4" arbor (see Compact Magnetic-Base Drills on page 2435). You can also pair them with an arbor adapter (sold separately below) when using a manual drill press or milling machine. *Note:* Carbide-tipped cutters are not for use with magnetic-base drill 8837A21 (Model No. USA101) on page 2435.

High-Speed Steel and Cobalt Steel Cutters—*Uncoated high-speed steel* has a bright finish and is for general purpose cutting of a wide range of materials. *TiN (titanium nitride) coated high-speed steel* lasts longer than uncoated high-speed steel. *Cobalt steel* offers better heat and abrasion resistance than high-speed steel.

Carbide-Tipped Cutters—Last longer than high-speed steel and cobalt steel cutters and are for high-volume cutting of difficult-to-machine materials such as stainless steel, cast iron, and titanium. *Note:* These cutters are more sensitive to shock and vibration compared to other cutters.

Pilot Pins—Also called ejector pins, these align the cutter to the desired position and eject the slug.

Arbor Adapters—Allow you to use cutters on a manual drill press and milling machine. *3/4" straight shank* fits a 3/4" capacity drill chuck or a 3/4" R8 collet on a milling machine. *#2* and *#3 Morse taper shanks* are for use on a drill press.

Compact Magnetic-Base Drills

Light enough to carry to your jobsite. All drills have a 3/4" arbor for use with cutters on page 2434. Drills also have a feed handle that mounts on the left or right side of the drill. Holding force (also called drill-point breakaway) is calculated against a 1" thick steel plate. Electromagnetic base attaches to flat ferrous surfaces (such as steel and cast iron) that are at least 3/8" thick.

Hougen Drills— Include an 8-ft. power cord with three-prong plug, a 5-ft. safety chain, a built-in LED light, and a carrying case. 2831A32 and 2831A33 have a 1-pint capacity coolant reservoir (coolant included).

Jancy Drills— Include an 8-ft. power cord with three-prong plug, a 5-ft. safety strap, a retractable chip shield, and a carrying case. They also have a 1-pint capacity coolant reservoir except 8837A21, which has a 13-oz. capacity coolant reservoir. 2840A39 has a rear-mounted control panel and does not have a valve. Coolant flows automatically when pen touches material. 8837A21 and *A22* are UL listed and have a valve to adjust coolant flow and a side-mounted control panel. *Chucks* and *adapters* allow 8837A21 and 8837A22 to accept standard drill bits.

2831A31

Heavy Duty Magnetic-Base Drills with Tapping Capability

Switch these drills from forward to reverse without stopping—ideal for both drilling and tapping applications (not recommended for use with pipe taps). In addition, a dial lets you adjust the speed to match your application, making these great for drilling hard materials at slow speeds.

For use with carbide-tipped cutters sold separately below. Holding force (also called drill point breakaway) is approximately 1600 lbs. and is calculated against a 1" steel plate. Base attaches to flat ferrous surfaces (such as steel and cast iron) that are at least 1/2" thick. Motor is 120 VAC, 60 Hz. All include a spoked feed handle that mounts on either side, a 9-ft. power cord with three-prong plug, and a 6-ft. safety chain. Drills with 1/2" and 3/4" chuck mount style also include a drill chuck and key. Bases and motors are UL listed.

Adjustable-position base drills let you lock the magnet to secure the base and then move the motor to center the cutter for pinpoint accuracy. You can also move the motor 3/4" forward and backward and 20° left and right.

Adjustable-Position Base with 3/4" Chuck

Arbor Adapters

Required when using the carbide-tipped cutters above. They come with an oiler, oil hose, and pilot pin. The ***3/4" straight shank*** arbor adapter fits a 3/4" drill chuck or a 3/4" collet on a milling machine. The ***#3 Morse taper*** shank arbor adapter fits a magnetic-base drill or drill press.

		Each
3/4" Straight Shank	30975A58	$116.98
#3 Morse Taper	30975A61	116.98

Chuck and Arbor Kit

Allows magnetic-base drills with a #3 Morse taper mount style to accept standard drill bits. Includes a 3/4" capacity drill chuck, a chuck key, and a chuck arbor.

2805A61 **Each** $111.00

Cutting Fluid

When mixed with water, this 16-oz. bottle makes 1 gallon of solution.

31625A61 **Each** $7.64

Mini Magnetic Drill Base

Get the accuracy of a drill press when you use this lightweight, portable magnetic drill base with Milwaukee electric drill models 0234-6 and 0244-1 (for Milwaukee model 0234-6, see 2829A51 on page 2430). This powerful electromagnetic base firmly attaches to flat, ferrous surfaces such as steel and cast iron that are at least 0.20″ thick. Holding force (also called drill-point breakaway) is 770 lbs. and calculated against a 1″ steel plate. It operates on 120 VAC and has an on/off toggle switch and 7½-ft. power cord with three-prong plug. Base measures 9½″ Ht. × 9″ Wd. and weighs 12 lbs. Drill travel is 3.9″.

28125A24 ..... **Each** $912.00

Light Duty Multispeed Floor Drill Presses

Select from a number of speeds by repositioning the drive belt before starting the drill press. Motors are totally enclosed fan cooled. Maximum hole size is based on drilling in steel.

All presses have a three-spoke feed handle, depth gauge graduated in 16ths of an inch, drill chuck and key, and 6-ft. power cord with three-prong plug. They're wired for 120 volts. Head, table, and base are cast iron.

Variable-Speed Floor Drill Presses

Turn the dial on these drill presses while they are running to get the optimum speed for your job. All include a depth gauge graduated in 16ths of an inch. Maximum hole size is based on drilling in steel. Head, table, and base are cast iron.

Light Duty 18″ Drill Press— A laser projects a crosshair at the point of bit contact and a digital readout displays the spindle speed. Motor is totally enclosed fan cooled. Press includes a three-spoke feed handle, built-in worklight (bulb included), keyless drill chuck, and 6½-ft. power cord with three-prong plug. It's wired for 115 volts.

Heavy Duty Drill Presses— The weight and rigidity of these presses prevent vibration so you can maintain close tolerances for high-quality metal drilling.

18 1/8″ drill press motor is totally enclosed fan cooled. Press includes a two-spoke feed handle, drill chuck and key, and 8-ft. power cord with three-prong plug. It's wired for 110 volts.

20″ drill press motor is open dripproof. Press includes a three-spoke feed handle, safety guard that swings away for easy tool changes, and 8-ft. power cord with three-prong plug. It's wired for 115 volts. For chucks and arbors, see pages 2439-2443.

Also Available: 220 VAC, 3 ph and 440 VAC, 3 ph versions of 2776A75. Please ask for 2776A71 and specify voltage.

Extended-Reach Tilting-Head Drill Presses

To accommodate large, odd-shaped pieces of material, the head of these drill presses moves 12″ forward and backward and tilts 45° left and 90° right (as viewed when facing the drill press). Graduated in 1° increments with a locking stop at 0°. Presses run at five speeds. Motors are totally enclosed fan cooled.

Maximum hole size is based on drilling in steel. Maximum hole size for drilling in cast iron is 5/8″. Presses include a three-spoke feed handle, graduated depth gauge, drill chuck and key, and 6 1/2-ft. power cord with three-prong plug. Head, table, and base are cast iron.

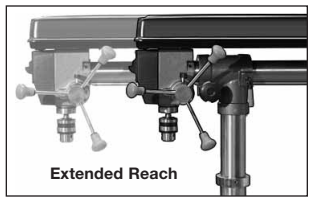
Bench Model



Light Duty Bench Drill Presses

Set these on top of your workbench for light duty drilling jobs.

Maximum hole size is based on drilling in cast iron. All have a three-spoke feed handle, graduated depth gauge, drill chuck and key, and 6-ft. power cord with three-prong plug. Head, table, and base are cast iron.

10″ (5 speed) drill press is our most economical light duty drill press. Motor is totally enclosed fan cooled.

13 1/4″ (16 speed) drill press has an open dripproof motor.

15″ (16 speed) drill press is our largest capacity bench unit. Motor is open dripproof and comes wired for 120 volts.

Safety Guard for Drill Presses

Keep your fingers and hands protected from your drill bit, drill chuck, and flying chips. This guard retracts as the drill penetrates your material, lowers when the spindle is raised, and flips out of the way for quick bit changes. A depth adjustment knob allows for quick adjusting of the guard position.

Body is made from high-impact clear plastic for an unobstructed view. Includes five clamps for 1 3/4″ (45 mm), 2″ (52 mm), 2 3/8″ (60 mm), 2.6″ (66 mm), and 3″ (75 mm) drill press spindle shafts (also known as quills).

1 3/4″-3″	2 1/8″	4 1/2″	6 11/16″	5235A21	$83.64

Shown on Drill Press (Drill Press and Bit Not Included)

Small-Hole Precision Bench Drill Press

A sensitive belt-drive motor reduces drill breakage and damage. Use for drilling small holes in steel, stainless steel, nonferrous metals (such as brass and bronze), plastic, graphite, and printed circuit boards. Also great for diamond drilling in ceramic, sapphire, and glass. Motor is self contained.

Maximum hole size is based on drilling in steel. Includes a one-spoke feed handle, depth gauge graduated in 0.001″ increments, Albrecht keyless drill chuck, and 7-ft. power cord with three-prong plug. Head is cast aluminum and base is cast iron.

	7″ (Variable Speed)

Light-Pressure Drill-Feed Attachment

When drilling small holes with a drill press or milling machine, this attachment lets you apply light feed pressure with your fingers while the machine rotates the bit. A spring-loaded, ball-bearing drill feed automatically retracts when the gripping ring is released. Attachment has a #0 Jacobs taper and a 1/2″ dia. shank that fits into a chuck or holder. Spindle travel is 3/4″.

		Each
Light-Pressure Drill-Feed Attachment	3100A45	$77.70
C15-J0 Albrecht Keyless Chuck 0.005″-1/16″ (0-1.5 mm)	2823A11	442.70
C30-J0 Albrecht Keyless Chuck 0.015″-1/8″ (0-3 mm)	2823A12	333.45
#0 Jacobs Key-Style Chuck 0.0135″-5/32″ (0.35-4 mm)	2812A11	73.74

Small-Hole Drilling Adapter

Drilling extremely small holes with your drill press is easy with this adapter. It securely holds a #99 (0.0051″) to #60 (0.040″) wire gauge drill bit.

For use in any 1/8″ or 3/16″ collet or adjustable drill chuck. Shank diameter is 1/8″. Head diameter is 1/4″. Overall length is 1 5/16″.

30505A5 ..... **Each** $9.63

Drilling/Milling Machines

Precision Variable Speed with Optional Machine Stand

Drill and mill with one machine. Motors are totally enclosed fan cooled.

Maximum hole size, face mill capacity, and end mill capacity are based on machining steel. Both machines have a three-spoke manual-feed handle, table hand wheels with micrometer dials graduated in 0.001″ increments, a depth gauge graduated in 16ths of an inch, and a drill chuck with key and arbor. Head, table, and base are cast iron.

Multispeed machine has 12 speeds. You can adjust the feed of the spindle with rapid- and fine-feed controls. Machine has a head that rotates 360°, a work light (bulb included), and a 6-ft. power cord (no plug). ***Precision variable-speed*** machine includes a digital depth gauge, speed readout, and a 5-ft. power cord (no plug).

8724A41 ..... **Each** $370.69

Optional Multispeed Drilling/Milling Machine Power Table Feed— Make smoother cuts and reduce operator fatigue. This easy-to-install motor-driven feed replaces hand crank for long cuts. It operates in forward/reverse. Adjustable stops allow automatic shut-off. Has a 1 1/2 hp motor that runs on 115/230 VAC, 11.5 amps. Includes a 6-ft. power cord (no plug). Weighs 26 lbs.

8724A44 ..... **Each** $740.32

Optional Variable-Speed Drilling/Milling Machine Stand— Made of steel. Overall size is 37″ Lg. x 25 1/2″ Wd. x 31″ Ht. Weighs 144 lbs. Shipped assembled.

8724A45 ..... **Each** $673.71

Light Duty Jacobs Drill Chucks

Great for occasional use. These chucks thread mount directly onto the threaded spindle of a portable drill. For use in both forward and reverse tool operation. All come with a chuck key and are made of steel. Chuck with a minimum inch capacity of 0.028″ holds a #70 drill bit.

Capacity Inch	Capacity mm	Mount	Key No.	Model No.		Each

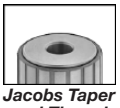
General Purpose Jacobs Drill Chucks



Jacobs Taper and Thread Mount

Slot-Drive Jacobs Taper Mount

Slot-Drive Straight Mount

Pin-Drive Jacobs Taper Mount

The combination of strength and durability makes these chucks the most widely used for general purpose applications. All chucks come with a chuck key and are made of steel. Chucks with a minimum inch capacity of 0.0135″ hold a #80 drill bit; chucks with a minimum inch capacity of 0.040″ hold a #60 drill bit.

Jacobs taper mount chucks require an arbor (sold separately on page 2443). For use in both forward and reverse tool operation.

Thread mount chucks mount directly onto the threaded spindle of a portable drill. Not for use in reverse tool operation, except chucks that contain the letters "BA" in the model number. Jacobs 33BA chucks can be used on a hammer drill.

Slot-drive and ***pin-drive*** (also known as positive drive) chucks mount onto a spindle or arbor for use in high-torque applications.

Corrosion-Resistant Jacobs Drill Chucks

When you need the rust and corrosion resistance of stainless steel, reach for these chucks. For use in both forward and reverse tool operation. All come with a chuck key and are made of Type 416 stainless steel and hold a #70 drill bit. ***Jacobs taper mount*** chucks require an arbor (sold separately on page 2443). ***Thread mount*** chucks mount directly onto the threaded spindle of a portable drill.

Extra-Grip Jacobs Drill Chucks

A ball-bearing design provides increased gripping force to keep bits from slipping, allowing these chucks to take on high-torque drilling applications. Also known as super chucks, these are excellent for use on production drilling machines, milling machines, jig borers, and lathes. All chucks are Jacobs taper mount and require an arbor (sold separately on page 2443). For use in both forward and reverse tool operation. They come with a chuck key and are made of steel. Chucks with a minimum inch capacity of 0.040″ hold a #60 drill bit.

Portable Drill Guides for High-Speed Drilling

Connect this guide to your portable drill for increased leverage so you can quickly power through your most difficult drilling jobs. A lightweight alternative to a magnetic-base drill, use it when drilling into steel plates, pipes, and I-beams. The guide has a V-groove that centers round material. It comes with two steel drill clamps that will fit onto most portable drills that have a round collar, a steel pipe clamp, 1/4″ and 3/16″ hex keys, and a plastic case. Maximum workpiece size is 8″.

Keys for Jacobs and Rohm Drill Chucks—Fixed and Self-Ejecting Pin

All keys are made of steel, except 3169A24 and 3169A25, which are Type 416 stainless steel.

Self-ejecting pin keys have improved safety compared to fixed-pin keys. They have a spring-loaded pin that ejects the key from the chuck when released, preventing it from being left in the chuck.

Extra-long keys have handles that are almost twice the length of standard-length keys and provide more leverage for tightening power.

Multiple-Size Keys for Jacobs Drill Chucks

Key with Fixed Pinions

Key with Replaceable Pinions

Each of these keys fits a number of Jacobs chuck sizes. All keys are made of steel.

Keys with replaceable pinions have a set screw for easy replacement of worn pinions and a magnetic body for easy storage on metal surfaces.

Note: See chart above for Jacobs key and chuck numbers and their compatibility.

Drill Chuck Removal Wedge Sets

Easily remove taper mount drill chucks from arbors and spindles with these steel wedge sets. Each set consists of two wedges. Simply place one wedge on each side of the chuck, and then hammer each wedge end until the chuck is removed.

For Use on Jacobs Taper No.		Per Set
1	29225A34	$9.19
2	29225A35	9.19
3	29225A36	9.19
6	29225A37	9.19

Extra-Grip Keyless Drill Chucks

Ball bearings provide increased gripping force to keep your bits from slipping. For use in both forward and reverse tool operation. All chucks are made of steel unless otherwise stated.

Jacobs taper mount chucks require an arbor (sold separately on page 2443).

Thread mount chucks mount directly onto the threaded spindle of a portable drill. Chucks with a minimum inch capacity of "0" hold a #80 (0.0135") drill bit.

Ratchet-locking thread mount chucks allow easier tightening and releasing of drill bits and other tools. They have carbide jaws, which are harder and grip tighter than steel jaws.

1/2" Chuck Capacity

Hex-Shank Drill Chucks for Power Screwdrivers and Impact Drivers

Convert your power screwdriver or impact driver into a versatile drill. Also known as adapt-a-drive, these chucks have a standard 1/4" hex shank that fits the hex socket of most power screwdrivers and impact drivers. For use in both forward and reverse tool operation.

Choose from keyed or keyless chucks. Keyed chuck is made of steel and is furnished with a chuck key. Chuck holds a #70 drill bit. Keyless chuck has a steel body and a plastic sleeve.

Capacity		Key	Jacobs

Keyed

Keyless

Keyless Drill Chucks for Impact Wrenches

Transform standard impact wrenches into efficient drilling tools. These chucks mount directly onto the square-drive spindle of your impact wrench. Not for use in reverse tool operation. All are made of steel.

Capacity				
Inch	mm	Mount		Each
3/32-3/8	2.5-10	3/8" Square	3167A12	$74.18
1/8-1/2	3-13	1/2" Square	3167A11	93.72

Precision Keyless Drill Chucks

A self-tightening feature causes the chuck to grip tighter as torque increases, which prevents tool-shank slippage and allows for precise drilling. For use with drill presses, jig borers, and milling machines. Not for use in reverse tool operation. Chucks are Jacobs taper mount and require an arbor (sold separately on page 2443), except Albrecht stainless steel precision chucks, which have a through-hole and mount directly onto your machine's threaded spindle.

Albrecht— The original precision keyless drill chucks. ***Albrecht stainless steel precision chucks*** resist rust and corrosion and are ideal when tools have to be sterilized. All are made entirely of stainless steel.

Also Available: Replacement hoods, ball bearing sets, collars, jaws, jaw guides, shells, drive pins, and body and spindle assemblies for Albrecht steel precision chucks. Please ask for 2825A6 and specify part desired and Albrecht chuck number.

Jacobs— Chucks with a minimum inch capacity of 0.012″ hold a #83 drill bit; 0.02″ hold a #76 drill bit; 0.039″ hold a #61 drill bit; and 0.118″ hold a #31 drill bit. ***Jacobs extra-grip steel precision chucks*** have a spanner wrench that allows additional tightening to increase gripping torque up to three times greater than hand tightening. These chucks also resist loosening when used on high-speed machines with instant spindle stop.

Economy Precision Keyless Drill Chucks

Ideal for close-tolerance drilling with drill presses, jig borers, and milling machines, these all-steel chucks are an economical alternative to Albrecht and Jacobs precision keyless chucks. All are Jacobs taper mount and require an arbor (sold separately on page 2443). Chucks with a minimum inch capacity of "0" hold a #80 (0.0135″) drill bit.

Mount★	Max. rpm	*Capacity* Inch	mm		Each

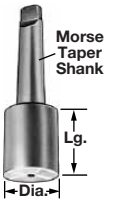
★ JT = Jacobs Taper.

Taper Shank Removal Tools

Also called drill drifts or drift keys, these tools are designed to separate Morse taper shank cutting tools from machinery spindles and Morse Taper Adapters (also known as sleeves and extension sockets; see page 2443). To use, simply insert the removal tool into spindle slot and tap with a hammer to release the cutting tool. Made of steel.

For Morse Taper No.	O'all Lg.		Each
1	4 1/2″	2796A11	$9.29
2	5 3/4″	2796A12	10.55
3	7 7/8″	2796A13	11.78
4, 5	9 1/4″	2796A24	19.18

Machinable-End Morse Taper Arbors



Create your own Morse taper arbors to suit your job requirements. Made of soft steel (Type 1144), these blank-end arbors are easy to machine. Arbors have a Morse taper shank.

Morse Taper No.	*Machinable End* Body Dia.	Body Lg.		Each
2	1 3/4″	2 1/8″	2862A11	$49.83
3	1 3/4″	2 1/8″	2862A12	58.51
4	2 1/2″	3″	2862A13	66.08
5	3″	4 1/16″	2862A14	109.42

Drill Chuck Arbors

Attach your drill chuck to your machine's spindle with one of these arbors. Choose an arbor with one end that fits into your machine spindle (Morse taper, straight shank, or R8 taper) and one end that fits your drill chuck mount (Jacobs taper or threaded). All arbors are made of hardened, precision-ground steel.

The following is a list of machines and some of their spindle types:
Drill Press = Morse Taper Spindle
CNC/Lathe = Straight Shank Spindle
Milling Machine = R8 Taper Spindle

If your machine spindle is Morse taper, measure the internal diameter of the spindle or chuck (which will be equal to the diameter of the arbor you need) and use the tables to the right to determine the taper number.

Morse Taper Adapters

If your Morse taper arbor is too small or large for your machine spindle or you need additional reach, insert it into one of these adapters. All are made of steel.

Adapters are also known as sleeves or shell sockets. They adapt smaller Morse taper arbors to larger Morse taper machine spindles.

Extended-reach adapters are also known as extension sockets and are longer for hard-to-reach spots. In addition to extending your Morse taper arbor, these adapters also adapt larger Morse taper shank tools to smaller Morse taper machine spindles.

About Drill Bits

Bit Materials

High-speed steel bits are for general use in most materials.

Cobalt steel bits are better than high-speed steel for drilling very hard materials such as stainless steel, titanium alloys, and nickel alloys.

Carbide-tipped bits resist wear better than high-speed steel and cobalt steel, particularly in abrasive materials such as fiberglass and aluminum.

Carbide bits are harder, stronger, and offer greater wear resistance than high-speed steel, cobalt steel, and carbide-tipped bits. However, they require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Treatments & Coatings

Uncoated (Bright Finish)— Surface is untreated. For general purpose drilling of most metals, wood, and plastic.

Black-Oxide Treatment— Color is dull black. For drilling of ferrous metals such as steel, stainless steel, and cast iron.

Black-and-Gold-Oxide Treatment— Color is black and gold. Resists breakage better than black-oxide bits when drilling ferrous metals such as steel, stainless steel, and cast iron.

Extended-Life Coatings— These coatings extend the life of bits by forming a barrier against heat and abrasion.

Extended-Life Coating	Color
Long-Life TiN (titanium nitride)	Bright gold
Extra-Life TiCN (titanium carbonitride)	Violet/blue-gray
Super-Life TiAlN (titanium aluminum nitride)	Dark violet/blue-gray
Ultra-Life TiN/TiAlN	Dark violet/blue-gray

Bit Shank Diameter

The shank diameter of each drill bit is the same as or slightly smaller than the drill bit size, unless otherwise stated.

Bit Length

Though ***jobbers' length*** bits are highly versatile, you may require shorter or longer bits for your specific application.

Short-length bits have maximum rigidity and a shorter overall length for drilling straighter, shallower holes than jobbers' and maintenance-length bits.

Maintenance-length bits are more rigid and drill shallower holes than jobbers' length bits.

Extended-reach bits are for hard-to-reach spots and drilling deeper holes than jobbers' length bits.

Short Length

Jobbers' Bits Application Guide

Jobbers' drill bits are the most widely used because they're rigid enough to make accurate hole sizes in a variety of materials and long enough to drill the hole depths required for most applications.

Select a jobbers' drill bit based on the material you plan to drill. Bits with a "Good" rating are both effective and economical; bits with a "Better" rating offer longer life; and bits with a "Best" rating are designed for superior performance.

Note: For drill bits for masonry, concrete, and wood, see pages 2474-2480.

Drill Bit Extensions

Add length to your drill bit for hard-to-reach areas. Insert your drill bit (not included) into the extension collet; then thread the collet onto the extension body and tighten with a wrench. Each includes extension collet and extension body. All are made of steel.

			4 1/2″ O'all		9 1/2″ O'all

Miniature Drill Bit Extensions

Smaller than our other drill bit extensions, these are perfect for extra reach when using small drill bit sizes. Collet and body are one piece and no special tools are needed to change the drill bit. Simply insert the drill bit into the collet end of the extension and tighten the knurled collar. Made of steel.

To Order: Each extension fits a specific drill bit size. Please specify the exact drill bit size to be used in the extension within the range of sizes listed.

Shank Dia.	For Drill Bit Sizes	O'all Lg.		Each

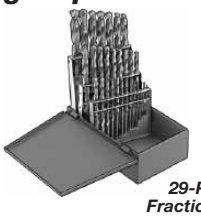
General Purpose High-Speed Steel Jobbers' Drill Bit Sets

Combination Set



29-Piece Fractional Set

Get the drill bit sizes you need for general purpose applications in one convenient set. Sets contain one bit per size. They come in a metal case with holes for drill bits that are marked with the bit size for quick reference.

135° point angle bits perform better than 118° point angle bits on hard materials, and they produce smaller chips to reduce clogging. All have a split point that keeps the bit centered without a pilot hole to meet NAS 907 Type B aerospace specifications (except wire gauge sizes 80-53, metric sizes smaller than 1.6 mm, and where noted).

No. of Pieces	Size Range	Treatment/Coating	Point Angle	Replacement Bits on Page Nos.	Per Set

▲Manufactured to DIN lengths.

General Purpose High-Speed Steel Jobbers' Drill Bit Master Sets

These master sets contain multiple bits of each size—choose from fractional, letter, and wire gauge sizes. Drill bits are black-oxide treated high-speed steel.

All bits have a 135° point angle that produces small chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, except wire gauge sizes 60-53. Sets come in a 14 5/8" Lg. x 7 3/8" Wd. x 7 3/4" Ht. steel drawer cabinet with compartments marked with the bit size for quick reference. Fractional set and letter set have three drawers; wire gauge set has five drawers.

Heat-Resistant Cobalt Steel Jobbers' Drill Bit Sets

Each handy set includes a variety of cobalt steel jobbers' drill bits, which are harder and more heat-resistant than high-speed steel drill bits. For use on hard metals including stainless steel, nickel alloy, and titanium. Sets contain one bit per size. They come in a metal case with holes for drill bits that are marked with the bit size for quick reference.

All bits have a 135° point angle, which produces small chips to prevent clogging. All have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type J aerospace specifications, except short-flute fractional set, wire gauge sizes 80-53, and metric sizes smaller than 1.6 mm.

General Purpose High-Speed Steel Jobbers' Drill Bits

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

135° Point Angle—Perform better than 118° point angle bits on hard materials and produce smaller chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, unless noted.

Black-oxide bits are for use on steel, stainless steel, and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide and black-and-gold-oxide bits. For use on alloy steel, stainless steel, cast iron, brass, bronze, plastic, and fiberglass. *Extra-life TiCN (titanium carbonitride) coated* bits last longer than long-life TiN-coated bits. For use on alloy steel, stainless steel, cast iron, bronze, and fiberglass. *Super-life TiAlN (titanium aluminum nitride) coated* bits last longer than extra-life TiCN-coated bits. For use on alloy steel, stainless steel, cast iron, nickel alloys, titanium alloys, brass, bronze, and fiberglass.

118° Point Angle—*Metric-size 118° point angle* bits are made to DIN length specifications.

Uncoated (bright finish) bits are for use on carbon steel, aluminum, copper, brass, bronze, and plastic. *Black-oxide* bits are for use on steel and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated, black-oxide, and black-and-gold-oxide bits. For use on steel, cast iron, brass, and bronze.
