(Continued on following page)

General Purpose High-Speed Steel Jobbers' Drill Bits *(Continued from previous page)*

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

135° Point Angle— Perform better than 118° point angle bits on hard materials and produce smaller chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type B aerospace specifications, unless noted.

Black-oxide bits are for use on steel, stainless steel, and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide and black-and-gold-oxide bits. For use on alloy steel, stainless steel, cast iron, brass, bronze, plastic, and fiberglass. *Extra-life TiCN (titanium carbonitride) coated* bits last longer than long-life TiN-coated bits. For use on alloy steel, stainless steel, cast iron, bronze, and fiberglass. *Super-life TiAlN (titanium aluminum nitride) coated* bits last longer than extra-life TiCN-coated bits. For use on alloy steel, stainless steel, cast iron, nickel alloys, titanium alloys, brass, bronze, and fiberglass.

118° Point Angle— *Metric-size 118° point angle* bits are made to DIN length specifications.

Uncoated (bright finish) bits are for use on carbon steel, aluminum, copper, brass, bronze, and plastic. *Black-oxide* bits are for use on steel and cast iron. *Black-and-gold-oxide* bits are for use on steel, stainless steel, aluminum, copper, and plastic. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated, black-oxide, and black-and-gold-oxide bits. For use on steel, cast iron, brass, and bronze.

General Purpose High-Speed Steel Jobbers' Drill Bits *(Continued from previous page)*

High-speed steel combined with ideal reach, drilling depth, and rigidity make these bits highly versatile.

118° Point Angle— All 118° metric size bits are made to DIN length specifications. *Black-oxide* bits are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide bits. For use on steel, cast iron, brass, and bronze.

Heavy Duty Chip-Clearing High-Speed Steel Jobbers' Drill Bits

Also known as parabolic-flute drill bits, these resist breakage better than Chip-Clearing High-Speed Steel Jobbers' Drill Bits on page 2453 and have wider flutes to lift chips out of the hole, reduce clogging, and improve coolant flow. They have a 135° split point that keeps the bit centered without a pilot hole.

Uncoated (bright finish) bits are for use on steel, stainless steel (300 and 400 series), cast iron, aluminum, copper, and brass.

Black-oxide bits have improved chip flow and wear resistance compared to uncoated bits. For use on steel, stainless steel (300 and 400 series), and cast iron.

Long-life TiN (titanium nitride) coated bits last longer than uncoated and black-oxide bits. For use on steel, stainless steel (300 and 400 series), cast iron, aluminum, brass, and copper.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Chip-Clearing High-Speed Steel Jobbers' Drill Bits

The flutes on these bits are more tightly spiraled than the flutes on General Purpose High-Speed Steel Jobbers' Drill Bits, improving their ability to lift chips out of the hole. Also known as fast-spiral bits, they have a 135° point angle with a split point that keeps the bit centered without a pilot hole. All have a black-oxide finish and are for use on most metals including steel, stainless steel, and cast iron. Also for use on plastic.

Also Available: Uncoated (bright finish) fractional sizes 1/16" to 1/2" with a 118° point angle; uncoated (bright finish) wire gauge sizes 80 to 1 with a 118° point angle; and black-oxide metric sizes 1 to 8.5 mm with a 135° point angle. Please ask for 2912A71 for fractional sizes; 2912A72 for wire gauge sizes; or 30055A91 for metric sizes. Also specify exact size.

Heavy Duty Chip-Clearing Cobalt Steel Jobbers' Drill Bits

Resist heat and reduce clogs when drilling stainless steel (300 and 400 series), nickel alloys, and titanium (unless otherwise stated). Also known as parabolic-flute drill bits, these are made of cobalt steel and have wide flutes to lift chips out of the hole. They have a 135° split point that keeps the bit centered without a pilot hole. ***TiN (titanium nitride) coated*** drill bits last longer than uncoated (bright finish) drill bits. They are not for use on titanium.

Also Available: Wire gauge sizes 52 to 1. All are uncoated (bright finish) with a 135° point angle. Please ask for 28555A11 and specify exact size. See chart on page 2449 for overall length and drilling depth.

Cobalt Steel Jobbers' Drill Bits for Shallow Holes

Short flutes make these bits ideal for drilling shallow holes. They are also more rigid and provide straighter drilling compared to our other jobbers' drill bits. All are made of cobalt steel with a black-oxide surface treatment for heat resistance. For use on alloy steel, stainless steel, hardened steel, nickel alloys, and titanium alloys. Bits have a 135° point angle that produces small chips to prevent clogging. They also have a split point that keeps the bit centered without a pilot hole.

6-1	3146A611	4.18	3.56

Heat-Resistant Cobalt Steel Jobbers' Drill Bits

If your bits can't take the heat, replace them with these cobalt steel bits. Unlike high-speed steel bits, these stay sharp at the high temperatures generated when drilling materials such as stainless steel and nickel alloys. All have a 135° point angle, except Ultra-Life TiN/TiAlN-coated bits, that produces small chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole and meet NAS 907 Type J aerospace specifications, unless noted.

Uncoated (bright finish) bits are for drilling stainless steel, alloy steel, tool steel, nickel alloys, and titanium alloys.

Long-life TiN (titanium nitride) coated bits last longer than uncoated bits. For use on stainless steel, alloy steel, tool steel, and cast iron.

Ultra-life TiN/TiAlN (titanium nitride/titanium aluminum nitride) coated bits offer the longest life for drilling stainless steel, alloy steel, tool steel, cast iron, and nickel alloys.

High-Speed Steel Jobbers' Drill Bits for Tight-Tolerance Holes

Also known as double-margin drill bits, these have a flute construction that keeps them centered as they drill, giving you rounder holes with a tighter tolerance than other bits provide. All are TiN (titanium nitride) coated high-speed steel and have a 118° point angle. For use on steel and cast iron.

Also Available: Solid carbide fractional sizes 1/8" to 1/2" with a 145° point angle and an AlTiN (aluminum titanium nitride) coating. Please ask for 8980A91 and specify size.

Drill Bits

For information about drill bits and decimal equivalents, see pages 2444-2445.

Smooth-Finish Three-Flute Carbide Jobbers' Drill Bits

With three cutting edges instead of the typical two, these uncoated (bright finish) solid-carbide bits drill holes with a smoother finish than other drill bits. For use on steel, stainless steel, nickel alloys, aluminum, copper, bronze, and cast iron. All bits have a 150° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 36 to 1 and letter sizes A to Z. For wire gauge sizes, please ask for 3171A96 and specify size. For letter sizes, please ask for 2792A81 and specify size.

Carbide-Tipped Drill Bits for Difficult-to-Drill Materials

A steel body and a carbide cutting edge give these bits the perfect combination of long life and vibration resistance for difficult-to-drill materials. For use on cast iron, aluminum, copper, brass, bronze, titanium, plastic, and composites. All bits are uncoated (bright finish).

Short-length bits have a shorter overall length for maximum rigidity. They drill straighter, shallower holes than jobbers' length bits. Also known as screw-machine and stub-length drill bits.

135° point angle bits perform better than 118° point angle bits on hard materials and produce smaller chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole.

Fractional Size—Jobbers' Length

Drill Bit Size	O'all Lg.	Drilling Depth	*135° Point Angle*	Each	*118° Point Angle*	Each

Fractional Size Drill Bit Sets—Jobbers' Length

Sets include the 118° point angle fractional size bits above. Come in a metal case.

Drill Bit Size Range	No. of Bits		Per Set
1/8"-1/2" (increments of 1/32")	13	2940A61	$263.80
1/8"-1/4" (increments of 1/64")	9	2940A62	137.09

Also Available: Wire gauge, letter, and metric sizes. Please specify exact size within the range listed.

Drill Bit Size Range	Point Angle	Style	
32-1	135°	Jobbers' Length	31575A71
40-1	118°	Jobbers' Length	2940A81
A-Z	118°	Jobbers' Length	2940A82
A-Z	135°	Jobbers' Length	31575A72
3.5-14.0 mm	118°	Short Length	28805A401

Super Duty Carbide Jobbers' Drill Bits

Made from a solid piece of carbide, these bits are harder and more wear resistant than our other jobbers' bits. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications. All have a 118° point angle with a four-facet point (unless noted) that keeps the bit centered without a pilot hole.

Uncoated (bright finish) bits are for use on soft metals such as aluminum and copper as well as soft plastics. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium. ***Super-life TiAlN (titanium aluminum nitride) coated*** bits last longer than TiN-coated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium.

Also Available: Wire gauge sizes with a long-life TiN coating or super-life TiAlN coating. For long-life TiN-coated sizes 56-1, please ask for 8825A61 and specify size. For super-life TiAlN-coated sizes 30-1, please ask for 8879A91 and specify size.

Fractional Size

To Order: For coated bits, please specify coating: long-life TiN or super-life TiAlN.

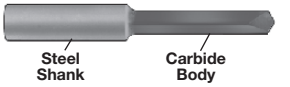
Ultra Duty Carbide Drill Bits for Tool Steel and Dies



Four straight cutting edges and a carbide body give these bits the strength to drill steel with a Rockwell hardness up to C70 such as tool steel and dies. All have an uncoated (bright finish) carbide body with a steel shank and a 120° point angle. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 50 to 1. Please ask for 8839A95 and specify exact size.

Drill Bits

For information about drill bits and decimal equivalents, see pages 2444-2445.

Straight-Flute Carbide-Tipped Drill Bits for Hard Steel

The 118° notched point and straight flutes on these carbide-tipped bits withstand the heavy feed pressure necessary to penetrate hard steel with a Rockwell hardness between C45 and C60. Bits also produce a smooth finish.

Also Available: Metric sizes 5 to 14 mm. Please ask for 2973A61 and specify size.

Straight-Flute Carbide Short-Length Drill Bits for Hard Steel

The best choice for drilling hard steel, these solid carbide bits are shorter than jobbers' length bits for maximum rigidity and have straight flutes to withstand the heavy feed pressure necessary to drill hard steel (hardness of Rockwell C50 and higher), stainless steel, and high-temperature alloys. Bits have two flutes and a 135° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling operations. TiN (titanium nitride) coated bits last longer and resist heat and friction for cleaner holes than uncoated (bright finish) bits.

Also Available: Uncoated (bright finish) letter sizes A to Z. Please ask for 8944A669 and specify size.

High-Performance Carbide Jobbers' Drill Bits for Aluminum

The specially designed cutting edge, heavy duty chip-clearing flutes (also known as parabolic flutes), and 130° point angle on these solid carbide drill bits make them ideal for drilling all types of aluminum. They are also for use on copper and bronze. ***TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits.

Also Available: Wire gauge sizes 30 to 1. Please ask for 8822A91 for uncoated or 8822A92 for TiN-coated and specify size.

For information about drill bits and decimal equivalents, see pages 2444-2445.

High-Speed Steel Jobbers' Drill Bits for Stainless Steel

Made of powdered steel with an ultra-life TiN/TiAlN coating for long life and resistance to heat, these bits are tough enough to drill all types of stainless steel as well as nickel alloys and tool steel. They have a heavy duty chip-clearing flute design (also known as parabolic flute) and a 130° point angle with a split point that keeps the bit centered without a pilot hole.

Fractional Size Drill Bit Set—7 Pieces

Includes one each of the following bit sizes: 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", and 1/2". Overall lengths differ from those listed above by approximately 1/8". Comes in a metal case.

27465A94 ..... Per Set $58.85

Also Available: Wire gauge, letter, and metric sizes. Please specify exact size within the range listed.

Drill Bit Size Range	
Wire Gauge Nos. 31-1	27465A31
A-Z	27465A21
3-17.5 mm	27465A41

Carbide-Tipped Drill Bits for Glass and Ceramics

Here's a smooth solution to the tricky job of drilling through glass, ceramics, and other nonmetals. Bit sizes 1/8"-1/2" require a coolant such as water. All are steel with a carbide-tipped spear point.

Drill Bit Size	O'all Lg.	Shank Dia.		Each
1/8"	2 3/16"	7/64"	2954A1	$6.00

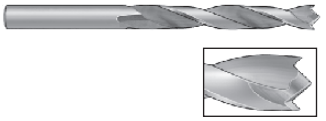
Carbide Jobbers' Drill Bits for Fiber-Reinforced Composites



Also known as brad-point drill bits, these have three drill points that make a clean hole in fiber-reinforced composites without fraying or delaminating the material. Bits are made of uncoated (bright finish) solid carbide and stay centered without a pilot hole. Also for use on wood; soft plastics such as polyethylene, polypropylene, and ABS; fiberglass; and carbon fiber. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Also Available: Wire gauge sizes 60 to 1 and letter sizes A to Z. For wire gauge sizes, please ask for 2828A84 and specify size. For letter sizes, please ask for 2828A81 and specify size.

Carbide Jobbers' Drill Bits for Composites

Made of solid carbide with a diamond coating, these bits are wear resistant and last longer than other drill bits when drilling abrasive composites such as plastic, carbon fiber, graphite, and fiberglass. Also for use on copper, brass, and aluminum. Bits have a 118° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

Carbide Short-Length Drill Bits for Composites

Shorter than our Carbide Jobbers' Drill Bits for Composites, these have maximum rigidity to drill straighter, shallower holes than jobbers' bits. For use on carbon fiber, graphite, and fiberglass as well as copper, brass, aluminum, and plastic. Also known as screw-machine and stub-length bits, they are made of solid carbide with a diamond coating. All have a 118° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

High-Speed Steel Drill Bits for Sheet Metal

Single End

Double End

Also known as body drills, these bits are short and sturdy for all of your sheet metal drilling needs. They are also for use on thin-wall tubing and for general shallow-hole drilling. All are high-speed steel with a black-oxide treatment. They have a 135° point angle with a split point that keeps the bit centered without a pilot hole. Full package quantity is 12. ***Double-end*** bits can be turned around if one end becomes worn.

Carbide Spade Drill Bits for Sheet Metal

A combination of two flat flutes and a short length prevent pulling and breakage when drilling thin sheets of steel and stainless steel. All bits are made of solid carbide and have a 118° point angle. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Hole-Starting Drill Bits

120° Point Angle

With a short flute and a short overall length, these bits stay straight to give you accurate placement when starting holes that will be drilled deeper with a longer bit. Also known as spotting bits, all are uncoated (bright finish). ***Cobalt steel*** bits are heat resistant for drilling stainless steel, nickel alloys, and titanium. ***Carbide*** bits are more rigid and maintain their sharp edges longer than cobalt bits. For use on cast iron, aluminum, brass, bronze, fiberglass, plastic, and graphite.

90° point angle bits are for centering and chamfering holes that will be followed by a smaller drill bit size. ***120° point angle*** bits are for starting a hole that will be followed by a drill bit with a point angle from 90°–118°. ***140° point angle*** bits are for starting a hole that will be followed by a drill bit with a point angle from 118°–135°.

Left-Hand (Reverse Flute) Drill Bits

Commonly used for drilling into broken screws, these bits have flutes that spiral in the opposite direction of other bits and are for use in reverse tool operation only. Bits are uncoated (bright finish), except the jobbers' length bits, which have a black-and-gold oxide treatment. All have a 135° point angle with a split point that keeps the bit centered without a pilot hole, unless otherwise stated. ***Jobbers' length high-speed steel*** bits are for use on steel, cast iron, and plastic, unless otherwise stated. ***Maintenance-length cobalt steel*** bits provide more heat resistance and rigidity and drill shallower holes than jobbers' length high-speed steel bits. For use on stainless steel, nickel alloys, and titanium alloys.

Also Available: High-speed steel fractional sizes 1/32" to 1/2", wire gauge sizes 60 to 1, and metric sizes 1 to 12 mm. All have a 118° point angle and are uncoated (bright finish) except metric sizes larger than 2.5 mm, which have a black-oxide treatment. For fractional sizes, please ask for 2876A61 and specify size. For wire gauge sizes, please ask for 3024A41 and specify size. For metric sizes, please ask for 29855A91 and specify size.

Fractional and Wire Gauge Size Drill Bit Sets—Jobbers' Length, High-Speed Steel

Come in a metal case with folding panels that are marked with the drill bit sizes. All have a 118° point angle and are uncoated (bright finish). For use on carbon steel, alloy steel, and cast iron.

Drill Bit Size Range	No. of Pieces	Per Set
1/16"-1/2" (increments of 1/64")	29	29505A51 $353.50
Wire Gauge Nos. 60-1	60	29505A71 187.82

High-Speed Steel Maintenance-Length Drill Bits

Shorter than jobbers' length drill bits for better rigidity; longer than short-length drill bits for extra depth. All are high-speed steel with a black-and-gold-oxide treatment that adds wear resistance and improves coolant flow. Three flats on the drill bit shank provide a secure grip to eliminate slipping in the drill chuck. Drill bits have a 135° point angle with a split point that keeps the bit centered without a pilot hole. For use on steel, stainless steel, cast iron, aluminum, brass, copper, and plastic.

High-Speed Steel Short-Length Drill Bits

Maximum rigidity and a shorter overall length make these bits better for drilling straighter, shallower holes than jobbers' and maintenance-length bits. Also known as screw-machine and stub-length bits. ***Drill bit sets*** come in a metal case.

135° Point Angle—Better for hard materials than 118° point angle bits. All have a split point that keeps the bit centered without a pilot hole, except size 3/64″ and wire gauge sizes 60-53. *Black-oxide* bits are wear resistant and are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than black-oxide bits and are for use on steel, stainless steel, aluminum, brass, nickel alloys, and plastic.

118° Point Angle—*Uncoated (bright finish)* bits are for use on steel, cast iron, and plastic. *Black-oxide* bits are more wear resistant than uncoated bits and are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated* bits last longer than uncoated bits and are for use on steel, aluminum, brass, bronze, plastic, and composites.

Fractional Size—135° Point Angle

A-Z	26	2953A88	146.31				

Super Duty Carbide Short-Length Drill Bits

More wear resistant than high-speed steel with a shorter length for better rigidity and shallower drilling than jobbers' bits. Also known as screw-machine and stub-length drill bits, all have a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling applications. ***Uncoated (bright finish)*** bits are for use on aluminum, copper, and soft plastic. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated bits. For use on steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium. ***Super-life TiAlN (titanium aluminum nitride) coated*** bits last longer than TiN-coated bits. For use on most metals such as steel, stainless steel, cast iron, aluminum, copper, nickel alloys, and titanium.

Ultra Duty Carbide Short-Length Drill Bits

Stronger than our Super Duty Carbide Short-Length Drill Bits, these are for use on hard steel with a Rockwell hardness up to C65 as well as titanium, nickel alloys, stainless steel, and cast iron. All have a long-life TiN (titanium nitride) coating and a 140° point angle with a split point that keeps the bit centered without a pilot hole. They require rigid toolholding to prevent breakage and should not be used in hand-held drilling operations.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Heat-Resistant Cobalt Steel Short-Length Drill Bits

A combination of cobalt steel and a short overall length keeps these bits sharp at high temperatures while providing rigidity for drilling straight, shallow holes. Also known as stub-length and screw-machine length bits. For use on alloy and tool steels, stainless steel, nickel alloys, and hard plastic. All have a 135° point angle that produces small chips to reduce clogging. They also have a split point that keeps the bit centered without a pilot hole, except 28765A886 and A885, which do not have a split point. ***Long-life TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits.

Fractional, Wire Gauge, and Letter Size Drill Bit Sets—Uncoated (Bright Finish)

All sets come in a metal case.

Drill Bit Size Range	No. of Pieces		Per Set
1/16"-1/2" (increments of 1/64")	29	3148A68	$209.29
1/16"-1/2" (increments of 1/32")	15	3148A62	113.65
Wire Gauge Nos. 60-1	60	3148A72	$152.82
A-Z	26	3148A76	225.77

Extended-Reach Drill Bits

Reach recessed locations and drill deep holes—these bits have longer flutes and a longer overall length than jobbers' length and maintenance-length bits.

High-Speed Steel—All have a 118° point angle. *Uncoated (bright finish)* bits are for use on steel, stainless steel, aluminum, copper, brass, and bronze. *Black-oxide* bits are for use on steel, cast iron, and plastic. *TiN (titanium nitride) coated* bits last longer than uncoated (bright finish) and black-oxide bits. For use on steel, cast iron, copper, brass, and bronze.

Cobalt Steel—All are uncoated (bright finish) and have a 135° point angle with a split point that keeps bits centered without a pilot hole. For use on steel, stainless steel, nickel alloys, and titanium.

Also Available: Carbide-tipped steel fractional sizes 1/8″ to 1″ with a 118° point angle (please ask for 29465A75 and specify size); cobalt steel wire gauge sizes 40 to 1 with a 135° point angle (please ask for 88555A91 and specify size); and uncoated (bright finish) high-speed steel metric sizes 1 to 16 mm with a 118° point angle (please ask for 3083A3 and specify size).

(Continued on following page)

Extended-Reach Drill Bits *(Continued from previous page)*

Reach recessed locations and drill deep holes—these bits have longer flutes and a longer overall length than jobbers' length and maintenance-length bits.

High-Speed Steel— All have a 118° point angle. *Uncoated (bright finish)* bits are for use on steel, stainless steel, aluminum, copper, brass, and bronze. *Black-oxide* bits are for use on steel, cast iron, and plastic. *TiN (titanium nitride) coated* bits last longer than uncoated (bright finish) and black-oxide bits. For use on steel, cast iron, copper, brass, and bronze.

Cobalt Steel— All are uncoated (bright finish) and have a 135° point angle with a split point that keeps bits centered without a pilot hole. For use on steel, stainless steel, nickel alloys, and titanium.

Also Available: Carbide-tipped steel fractional sizes 1/8″ to 1″ with a 118° point angle (please ask for 29465A75 and specify size); cobalt steel wire gauge sizes 40 to 1 with a 135° point angle (please ask for 88555A91 and specify size); and uncoated (bright finish) high-speed steel metric sizes 1 to 16 mm with a 118° point angle (please ask for 3083A3 and specify size).

● Have a bright finish.

Chip-Clearing High-Speed Steel Extended-Reach Drill Bits

Long, wide flutes and a long overall length allow you to drill deep holes in hard-to-reach areas without worrying about clogs. For use on steel, stainless steel, aluminum, and plastic. All are uncoated (bright finish) high-speed steel and have a 135° point angle with a split point that keeps the bit centered without a pilot hole.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Short-Flute Extended-Reach Drill Bits

A long overall length allows you to reach deep, inaccessible spots while a short flute maximizes rigidity for drilling straighter holes. All bits meet NAS 907 aerospace standards and have a 135° point angle with a split point that keeps the bit centered without a pilot hole (unless noted).

High-speed steel bits are for use on steel, stainless steel, and cast iron. They have a black-oxide treatment. ***Cobalt steel*** bits provide better heat and abrasion resistance than high-speed steel. For use on stainless steel, cast iron, and nickel alloys. They have a bright finish. ***Carbide-tipped*** bits provide better wear resistance when drilling materials such as cast iron, brass, bronze, hard plastic, fiberglass, and graphite.

High-Speed Steel

High-Speed Steel Multi-Diameter Step Drill Bits

Each bit has cutting steps with progressively larger diameters for drilling a range of hole sizes in thin materials. All bits are high-speed steel and stay centered without a pilot hole, unless noted. ***Uncoated (bright finish)*** bits are for use on steel, aluminum, brass, bronze, and plastic. ***Long-Life TiN (titanium nitride) coated*** bits last longer than uncoated (bright finish) bits. They are for use on steel, stainless steel, nickel alloys, and titanium.

Chamfering, Counterboring, and Countersinking Drill Bits

Style 1

Style 2

Style 3

With a point that matches the profile of common fasteners, these bits save time by chamfering, counterboring, or countersinking the hole as they drill. When you're done drilling, tap the hole and install your fastener. Each bit produces a range of hole diameters. They are uncoated (bright finish) high-speed steel with a 118° point angle. For use on carbon steel, alloy steel, and cast iron.

Styles 1 and 2— Also known as subland drill bits, these last longer than Style 3 bits because their diameters will not change, even after sharpening.

Style 1 is for drilling and chamfering holes (creating a beveled edge around the top of the hole) prior to tapping. The body has a large diameter and produces a 90° countersink angle that guides the tap. Percent of thread refers to the amount of thread engagement between interlocking threads. *Style 2* is for drilling and counterboring holes for socket head cap screws.

Style 3— Also known as step drill bits. Choose from bits for drilling and counterboring socket head cap screw holes and bits for drilling and countersinking 82° flat head machine screw holes. *Note:* After multiple sharpenings, the drill bit diameter may become smaller.

Style 1—Chamfering Bits

1/4″ and 3/8″ Diameter Reduced-Shank Drill Bits

1/4″ Shank Diameter

When you need to drill a large hole, but your chuck only accepts 1/4″ or 3/8″ shank diameter bits, these bits come to the rescue. The shank diameter of these bits is smaller than the drill bit size. For use in steel, stainless steel, aluminum, brass, and plastic. Bits with a 135° point angle have a split point that keeps the bit centered without a pilot hole. ***1/4″ shank diameter*** bits are uncoated (bright finish) high-speed steel with black-oxide treated flutes. They are about 20% shorter than jobbers' bits, unless noted. ***3/8″ shank diameter*** bits are black-oxide high-speed steel for more wear resistance than uncoated (bright finish) bits. They are the same length as jobbers' bits. ***Drill bit sets*** come in a metal case. All are uncoated (bright finish) unless noted.

1/4″ Shank Diameter—118° Point Angle

♠ Sizes 1/16″-1/4″ are jobbers' length. Sizes 17/64″-1/2″ have black-oxide flutes.

1/2″ Diameter Reduced-Shank TiN-Coated Cobalt Steel Drill Bits

Protect against heat and abrasion with these long-life TiN-coated cobalt steel drill bits. Also known as Silver and Deming bits, the 1/2″ dia. shank allows you to drill large holes using a tool or machine with a 1/2″ or 3/4″ chuck. The shank dia. is smaller than the drill bit size. All have a 118° angle with a split point that keeps the bit centered without a pilot hole. Drilling depth is 31/8″. For use on steel and cast iron.

Drill Bit Size	O'all Lg.		Each	Drill Bit Size	O'all Lg.		Each

3/4″	6″	3322A27	56.91	1″	6″	3322A45	89.25

For information about drill bits and decimal equivalents, see pages 2444-2445.

1/2" Diameter Reduced-Shank Drill Bits

Also known as Silver and Deming bits, these have a 1/2" diameter shank that allows you to drill large holes using a tool or machine with a 1/2" or 3/4" chuck. The shank diameter is smaller than the drill bit size. Overall length is 6" and drilling depth is 2.1". ***Slip-resistant shank*** bits have three flats to prevent the bit from slipping in the chuck.

135° Point Angle— A split point keeps the bit centered without a pilot hole. *Black-oxide high-speed steel* bits are for use on steel, cast iron, brass, bronze, and plastic. ***118° Point Angle—****Black-oxide high-speed steel* bits are for use on steel and cast iron. *Long-life TiN (titanium nitride) coated high-speed steel* bits last longer than black-oxide high-speed steel bits and are for use on steel, aluminum, brass, bronze, nickel alloys, and plastic. *Uncoated (bright finish) cobalt steel* bits perform better than high-speed steel bits on hard metals. They have a split point, which keeps the bit centered without a pilot hole. Use on carbon and alloy steel, stainless steel, ductile iron, nickel alloys, titanium, and fiberglass. *Carbide-tipped* bits resist wear better than high-speed steel and cobalt steel bits. Use on cast iron, brass, bronze, and plastic.

★ Uncoated (bright finish) with black-oxide flutes. ■ Bits have a split point, which keeps the bit centered without a pilot hole.

Drill Bits

For information about drill bits and decimal equivalents, see pages 2444-2445.

Extended-Reach 1/2" Diameter Reduced-Shank Drill Bits

Drill deep, large holes using toolholders that accept a 1/2" diameter bit—the shank diameter on these bits is smaller than the drill bit size. For use on cast iron and steel. Drill bits are black-oxide high-speed steel with a 118° point angle. Overall length is 12" and drilling depth is 9".

Also Available: Bits with an 18" overall length and 12" drilling depth. Please ask for 2464A71 and specify size.

Hole-Enlarging 1/2" Diameter Reduced-Shank Drill Bits

Enlarge an existing hole using your 1/2" capacity toolholder (unless noted) without altering the hole depth. These bits have four flutes for precise hole enlarging and a slip-resistant shank. All are tool steel with a black-and-gold-oxide treatment for use on steel, stainless steel, cast iron, nickel alloys, aluminum, brass, titanium, and plastic. Bit length is 4 5/16" and drilling depth is 1 3/4".

Drill Bit Size	Min. Starting Hole Size		Each
3/8"	1/4"	30455A61●	$20.61
1/2"	5/16"	30455A62	26.92
9/16"	3/8"	30455A63	35.07

● Shank dia. is 3/8".

Drill Bit Size	Min. Starting Hole Size		Each

11/16"	7/16"	30455A65	43.71
3/4"	15/32"	30455A66	47.66

8-Piece Hole-Enlarging Drill Bit Set—Includes hole-enlarging drill bit sizes 3/8", 1/2", 5/8", and 3/4". Also includes 1/4", 5/16", 25/64", and 15/32" hole-starting bits with a 135° point angle. Comes in a metal case.

30455A71 ..... **Per Set** $128.40

3/4" Diameter Reduced-Shank Drill Bits

Our largest drill bit sizes have a 3/4" shank diameter for use in your 3/4" capacity or larger toolholder. Overall length is 6" and drilling depth is 2.1".

High-speed steel bits are uncoated (bright finish) with black-oxide treated flutes and a 118° point angle. For use on steel, stainless steel, cast iron, aluminum, brass, and plastic. ***Cobalt steel*** bits stay sharp at the high temperatures generated when drilling stainless steel, nickel alloys, and titanium alloys. They are uncoated (bright finish) and have a 135° point angle with a split point that keeps the bit centered without a pilot hole.

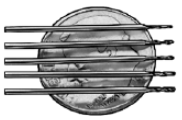
Micro-Size Drill Bits



The smallest of our drill bit sizes, these bits are for drilling extremely small holes. They are uncoated (bright finish) steel.

High-speed steel bits are for use on steel, cast iron, aluminum, brass, and bronze. They have a 118° point angle. The shank diameter is the same as the drill bit size.

Cobalt steel bits maintain a sharp edge at the high temperatures generated when drilling stainless steel and titanium. Also for use on steel, aluminum, copper, brass, and plastic. They have a 120° point angle, except 8904A11-A14, which have a 118° point angle. These bits have a 0.0394" (1 mm) shank diameter.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Carbide Small-Diameter Drill Bits with 1/8" Shank

A 1/8" shank diameter allows for fast changes between small drill bit sizes—eliminating the need for different collets to hold each bit size. All bits are made of uncoated (bright finish) solid carbide for use on steel, stainless steel, aluminum, brass, fiberglass, and plastic. They have a 130° point angle.

Fractional Size

Drill Bit Size	O'all Lg.	Drilling Depth		Each
1/64"	1 1/2"	0.27"	2841A91	$6.95
1/32"	1 1/2"	0.39"	2841A92	4.51

55-31	1 1/2"	0.41"	2841A21	5.60

Taper-Shank Drill Bits

The Morse taper shank on these bits fits directly into the tapered spindle hole of machines such as drill presses as well as Morse taper size adapters (also known as sleeves and sockets; see Morse Taper Adapters on page 2443). ***Black-oxide high-speed steel*** bits have a 118° point angle. For use on steel, cast iron, and plastic. ***Cobalt steel*** bits offer more heat resistance than high-speed steel. They are uncoated (bright finish) and have a 135° point angle with a split point that stays centered without a pilot hole.

Also Available: Black-oxide high-speed steel metric size bits with a 118° point angle. Please ask for 3070A41 and specify size.

High-Speed Steel Hex-Shank Drill Bits

Slide these high-speed steel bits into your power screwdriver and other holders and drivers that accept a 1/4" hex shank. All bits have a titanium treatment and a 130° point angle, except sizes 1/16" and 3/32", which have a black-oxide treatment and a 118° point angle. For use on steel, cast iron, aluminum, brass, copper, and plastic, unless noted.

Drill Bit Size	O'all Lg.	Drilling Depth		Each

♠ Not rated for use with impact drivers. For use on steel and wood only.

7-Piece Drill Bit Set—Includes two each of size 1/8" and one each of sizes 5/32", 3/16", 7/32", 1/4", and 5/16".

29305A61 ..... **Per Set** $34.71

Cases and Stands for Drill Bits

Organize your individual drill bits in these compact cases and stands. They have one hole for each bit size listed. Holes are marked with the size and decimal equivalent, unless noted. All are made of steel, except 2961A61, which is made of high-impact plastic and is waterproof.

●Decimal equivalents are not indicated.

Drawer Cabinets for Drill Bits

Keep multiple drill bits of each size in order. Drill bit sizes and decimal equivalents are permanently marked on the drawers, unless noted. All cabinets are made of steel. ***Combination cabinets*** have a built-in lock with two keys. The bottom drawer is undivided for general storage. Stack up to three high. ***Standard cabinets*** can be stacked up to three high. *Fractional size 1/2" reduced-shank diameter drill bit cabinets* hold two of each drill bit size. ***Undermount cabinets*** mount underneath a workbench or shelf with 1/4" screws (not included). They have a built-in lock with two keys.

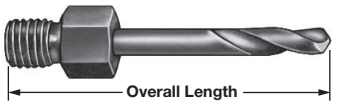
●Decimal equivalents are not indicated.

For information about drill bits and decimal equivalents, see pages 2444-2445.

Threaded-Shank Drill Bits



All bits have a 1/4″-28 threaded shank and 135° point angle with a split point that keeps the bit centered without a pilot hole. Bits are black-oxide high-speed steel. Use on steel, stainless steel, cast iron, aluminum, brass, and bronze. Meet NAS (National Aerospace Standard) 965, Type B.

Diamond-Core Drill Bits for Masonry

Diamond particles attached to the hollow steel barrel provide fast cutting. Use for wet drilling of concrete and masonry as well as light to moderate amounts of steel reinforcing bar (rebar). Bits are 15 1/2″ long and have a drilling depth of 13″. Bit ID is approximately 1/4″ less than the OD. *Note:* Not suitable for dry drilling. Not for use with portable electric drills or grinders.

1″-1 1/2″ bits have 5/8″-11 threaded hubs. Add an optional thread adapter (sold separately) and use in drilling rigs (see 3165A31 on this page). *1 3/4″ and larger bits* have 1 1/4″-7 threaded hubs.

Bit OD		Each	Bit OD		Each
1″	2872A51	$113.40	3″	2872A57★	$173.68

2 3/4″	2872A35	199.20	12″	2872A23	761.28

★ Overall length is 16 1/2″ and drilling depth is 14″.

Optional thread adapter lets you use core drill bits with 5/8″-11 threaded hubs on drilling rigs that have a 1 1/4″-7 threaded spindle. Overall length, including threads, is 5 3/8″.

2872A99 ..... **Each** $101.25

Hollow Drill Bits for Paper and Fabric

Razor-sharp cutting edges quickly cut through paper, fabric, and other soft materials. All bits are steel and have a 11/16″ shank diameter and a 3 1/8″ overall length.

These are standard Style A bits for use with Casco, Challenge, Climax, Lassco, Ottawa, and Super Speed paper-drilling machines.

Drill Bit Size	Max. Material Thickness		Each
1/8″	1″	3164A21	$32.82

Drill Press Diamond-Core Drill Bits for Glass and Nonmetallic Materials

Hard, abrasive nonmetallic materials such as glass, alumina, quartz, ruby, and silica are no match for these bits. An adapter (sold separately below) is required for use. Bits are 2″ long with a 1/4″ of 100-grit diamonds.

Recommended operating speed is 1,800-2,400 rpm for OD sizes up to 1/2″ and 1,250-1,800 rpm for OD sizes 9/16″-1 1/4″. Recommended coolant is plain water.

Also Available: Other sizes from 9/64″ to 5″ OD. Please ask for 2868A999 and specify bit OD.

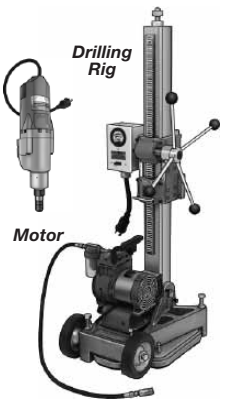
1/2″	2868A11	142.81

Milwaukee Diamond-Core Drilling Rig



Roll this portable drill to where you need it and cut holes up to 10″ diameter in masonry, reinforced concrete, tile, marble, and natural stone. Drilling rig and motor are sold separately.

Drilling Rig— Has a rack-and-pinion feed mechanism and feed wheel that mounts on either side of the column. The column is 43 1/2″ high and it can be set at any angle up to 45° for 28″ of smooth and precise drill alignment. The base is cast aluminum and has two rubber wheels and a mounting slot to secure it to the floor or wall.

Rig includes a bubble level and vacuum base. The 1/3 hp, 115 VAC vacuum base provides 1,800 lbs. of holding force. Power cord is 6-ft. long with a three-prong plug. Rig also has a 360° adjustable, 30 amp, 120 VAC meter box that indicates proper drilling pressure and speed. Power cord for meter box is 9” long with a NEMA L5-20P twist-lock plug. Overall height is 47”; weight is 106 lbs. For drill bits, see 2872A on this page.

Motor— Has triple gear reduction and a clutch to protect against overload. A built-in water swivel and adapter accepts a standard water hose and water control valve. Spindle thread size is 1 1/4″-7. Comes with a 2-ft. long power cord with NEMA L5-20P twist-lock plug. Operates on 120 VAC, 60 Hz, 20 amps. No load rpm is 450/900. Weight is 24 lbs.

Optional Spacer Assembly— Increases core bit OD capacity from 10″ to 14″.

		Each
Drilling Rig (Milwaukee No. 4136)	3165A31	$1,765.00
Motor (Milwaukee No. 4096)	3165A32	812.50
Optional Spacer Assembly	3165A33	89.00

About Masonry Drill Bits

Bits have alloy steel bodies with carbide tips that can be resharpened. Bits are made to ANSI standards (where applicable).

Hammer Drilling Bits

Also called percussion or impact bits, these bits drill holes using simultaneous rotary and hammering action to break masonry materials, such as concrete, into tiny granules. This dual action allows bits to drill faster and penetrate materials with less pressure than drilling-only bits. These bits can be used with hammer drills or rotary hammers. If you need a shank adapter, see our 89385A series on page 2476.

Drilling-Only Bits

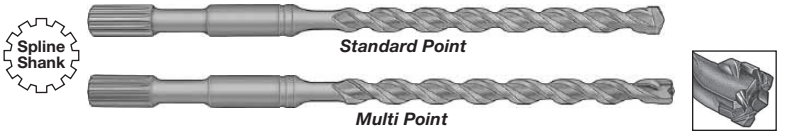
These bits drill holes using rotary action. They don't break up masonry materials like hammer drilling bits, but they do grind it up when you apply pressure. Use these bits with portable electric drills, cordless drills, and hammer drills (rotary-mode only).

Drill Bit Shank Styles

How to Avoid Premature Bit Failure

1. Do not let bit come into contact with embedded rebar (reinforcing bar). If you do encounter rebar, move the hole or switch to a rebar cutting bit, such as our 28655A series on page 2477.
2. Frequently withdraw the bit from the hole to clean out dust to lessen the chance of the drill bit binding in the hole.
3. Keep the bit's shank clean and lubricated.
4. Do not pour water into the hole while drilling. The extreme change in temperature may cause the bit's carbide tip to fail.

Spline-Shank Masonry Drill Bits for Rotary Hammers



The shank has 12 splines to keep an optimum fit between the bit and the bit holder during the heavy impact produced by a spline-drive rotary hammer. Shank is ¾″ dia. ***Multi-point*** bits have five carbide cutters in the tip, resulting in less vibration, smoother and rounder holes, faster drilling, and longer bit life.

Tapered Round-Shank Masonry Drill Bits for Rotary Hammers

Also known as A-taper bits, they fit all rotary hammers with a taper-shank chuck. An adapter (sold separately) is required for use in spline-drive and SDS-Plus drive rotary hammers.

Adapters are made of steel and include a bit removal tool (also called a drift pin).

Spline-Shank Adapter for Spline-Drive Rotary Hammers	2813A47	$56.15
SDS-Plus Shank Adapter for SDS-Plus Drive Rotary Hammers	2813A53	43.14

SDS-Shank Masonry Drill Bits for Rotary Hammers

Designed to withstand the heavy blows from a rotary hammer.

SDS-Plus shank drill bits have two deep slots and two shallow slots on the shank for additional hold in your rotary hammer. Shank dia. is 0.393″. Use with an SDS-Plus drive rotary hammer and Hilti brand rotary hammer models TE-1 through TE-25.

SDS-Max shank drill bits have five slots on the shank—three deep slots for driving the bit in a rotary motion and two shallow slots for keeping a secure hold in the rotary hammer. This design adds strength and maximizes impact at the drill tip while minimizing wobble and vibration. Bits 5⁄8″ dia. and larger have five cutting edges rather than two, which enhances hole accuracy. Shank dia. is 0.708″. Use with an SDS-Max drive rotary hammer and Hilti brand rotary hammer models TE-50 through TE-94. Cannot be used with an SDS-Plus drive rotary hammer.

SDS-Max shank core bits have a one-piece design that provides power at impact. Multiple carbide tips cut on the outside edge for easier drilling of larger holes. Shank dia. is 0.708″. A pilot drill and ejector key are included. Use with an SDS-Max drive rotary hammer. Cannot be used with an SDS-Plus drive rotary hammer.

Chisels with Spline, SDS-Plus, and SDS-Max Shanks for Rotary Hammers

Chisels with spline shank have a combination 5⁄8″ dia. round and 3⁄4″ hex shank that works with all spline-drive rotary hammers.
Chisels with SDS-Plus shank have a 0.393″ dia. shank and work only in SDS-Plus rotary hammers.
Chisels with SDS-Max shank have a 0.708″ dia. shank and work only in SDS-Max rotary hammers.

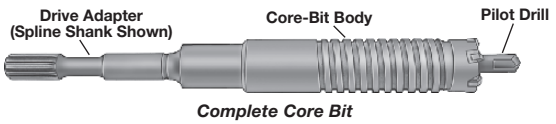
SDS-Max Drive and Hilti Rotary Hammers	SDS-Plus Shank	8″	89385A32	87.81
SDS-Max Drive and Hilti Rotary Hammers	Spline Shank	10¾″	89385A34	116.27

Three-Piece Large-Hole Masonry Drill Bits for Rotary Hammers



Complete Core Bit

Because they cut only on their outside edge, these bits are effective for drilling holes from 1″ to 5″ in diameter in demanding applications.

A complete core bit consists of a core-bit body, a drive adapter, and a pilot drill (each sold separately). Each component is made of alloy steel and has ¾″-10 threads for easy assembly and replacement of individual parts. Drilling depth is achieved in 4″ increments.

Core-bit bodies have carbide tips.

Spline-shank drive adapter fits all spline-drive rotary hammers.

SDS-Max shank drive adapter fits all SDS-Max shank rotary hammers.

Pilot drill has a carbide tip to make starting a hole easier.

Optional drive extensions are for use with 1¼″ to 5″ dia. core-bit bodies. Made of alloy steel.

Core-Bit Bodies

Hex- and Round-Shank Masonry Drill Bits for Hammer Drills

Standard Hex Shank

Premium Round Shank

Use in hammer drills that have a three-jaw drill chuck.

Standard hex-shank bits are for use in concrete and masonry.

Premium round-shank bits penetrate faster than standard hex-shank bits. In addition to concrete and masonry, you can also use them on marble, granite, tile, hard metals, and plastics. Bits have serrations on the edges of the tips for faster, cooler cutting and longer life. Bits with shank diameters ⅜″ and larger have three flats on the shank for more secure gripping. *Note:* Bits should be used in a drill press when drilling hard metals.

Round-Shank Masonry Drill Bits for Portable Drills

Designed for nonhammer drilling.
Slow spiral bits are better than fast spiral bits for drilling concrete.
Fast spiral bits are for more brittle, soft to medium materials such as block and brick.

▲Flute length is 4". Drill in 4" increments to achieve drilling depth.

4-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 1/4"×4", 5/16"×4", 3/8"×4", and 1/2"×6". Comes in a vinyl pouch.

Slow Spiral	2943A4	$23.27
Fast Spiral	2943A1	19.97

6-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 1/4"×4", 5/16"×4", 3/8"×4", 1/2"×6", 5/8"×6", and 3/4"×6". Comes in a vinyl pouch.

Slow Spiral	2943A5	$42.80
Fast Spiral	2943A2	54.42

6-Piece Round-Shank Drill Bit Set—
Includes one each of sizes (bit size×o'all lg.) 3/16"×3", 1/4"×4", 5/16"×4", 3/8"×4, 1/2"×6", and 5/8"×6". Comes in a vinyl pouch.

Slow Spiral	2943A6	$33.37
Fast Spiral	2943A3	40.47

Round-Shank Large-Hole Masonry Drill Bits for Portable Drills

Drill large holes using a portable drill. Bits are rotary only and work well on thin or brittle materials that might be damaged by the impact of rotary-hammer bits. All have a removable shank. To achieve maximum drilling depth, break up and remove the core every 4" of depth before drilling deeper.
Optional carbide-tipped pilot drill makes starting a hole easier.

Bit Size	Shank Dia.	Drilling Depth	O'all Lg.	Bits		Optional Extensions

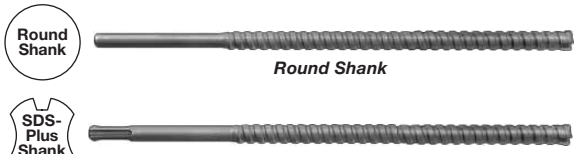
♣Shank is 3/4" stepped down to 1/2".
Optional Carbide-Tipped Pilot Drill for Bit Sizes 1 3/4" and Larger — 2942A89 — $22.18

Drill Bits for Concrete-Embedded Rebar

When you encounter rebar (reinforcing bar), stop drilling and mount one of these bits in your tool. Drill through the rebar and resume drilling with your masonry drill bit. *Note:* Bits are for rotary drilling only—hammer drilling will damage the bit.
Round-shank bits have three flats on the shank for a secure hold. Use with portable drills with a 1/2" chuck. Shank diameter is 5/16" for 3/8" bit size; 3/8" for 1/2"-9/16" bit sizes; and 1/2" for 5/8" and larger bit sizes.
SDS-Plus shank bits are used with SDS-Plus drive rotary hammers. Shank diameter is 0.393". Bit sizes 7/8" and larger have a removable shank.



Bit Size	Drilling Depth	O'all Lg.	Round Shank		SDS-Plus Shank

Deep-Hole Drill Bits for Wood

Bits start easily and cut holes in construction lumber, railroad ties, and utility poles. All are made of heat-treated steel and have a screw point. Overall length includes the screw point.

Extra Long

Also called pole auger bits, these are our longest bits for deep-boring jobs. All have a single cutting edge. The hex shank can be cut off to expose a 1/2" round shank.

Bit Size	Hex Size	Drilling Depth	O'all Lg.		
9/16"	7/16"	24"	29"	2907A31	$72.70

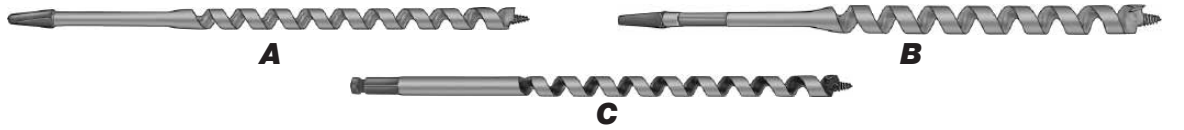
1 1/16"	7/16"	24"	29"	2907A39	107.34

Regular Length



Break through obstructions in wood to produce a smooth hole. Bits have a single cutting edge and a hollow center. They can be resharpened.

Bits ***with tapered square shank*** are also known as pole auger bits. The tapered square shank can be cut off to expose a round shank. All have an extra-long twist.

Bits ***with quick-change hex shank*** are also known as ship auger bits.

General Purpose Drill Bits for Wood

Flat Blade

Fast Cut

An economical choice for drilling large holes in hard and soft woods, including plywood.

Flat-blade bits are also known as spade bits. They have a grooved point and extended cutting edges for fast, clean boring. Made of steel. Bits are for use with quick-change chucks and drill chucks, except 16" length bits, which cannot be used with quick-change chucks. For holders, see 7179A series on page 2816.

Fast-cut bits have a cutting angle on the flute for fast chip removal, and a self-feed screw tip for faster cutting than flat-blade bits. Made of heat-treated steel.

3188A33 ... $178.00

Smooth-Finish Drill Bits for Wood

Bore accurate, smooth-finish holes at a wide range of angles in soft wood, thin stock veneer, and laminates. Also known as Forstner bits, they can produce partial-arc and end-grain holes, pilot holes for mortising and grooving, and perfectly finished flat-bottom holes. The rim scribes the hole while the two cutters rapidly remove the chips. A center guide point keeps the bits from wandering, making them good for use in portable electric tools and drill presses. Overall length includes the center guide point.

Carbide-tipped bits outlast steel bits and can cut tough, abrasive materials such as plywood, hard wood, and solid surface materials.

3216A41 ... $107.98

16-Piece Steel Drill Bit Set—Includes sizes 1/4" to 2 1/8" in 1/8" increments. Comes in a wood case.

3216A42 ... $320.95

Optional 4" Bit Extension—For use with carbide-tipped steel bits that have a 3/8" shank diameter. Includes two set screws and a hex key.

3216A66 ... $14.23

Fast-Cutting Smooth-Finish Drill Bits for Wood

Ideal for use in a drill press, bits have multiple outlining teeth that bore clean holes without chipping and splintering your wood's surface—even when cutting across the grain. Also known as multispur bits, they are excellent for boring overlapping holes, holes on close centers, and straight boring in wood and veneered stock. Bits are heat-treated steel. The cutting edges are precision ground for quick chip removal. A center guide point prevents the bit from wandering. The overall length includes the center guide point.

Drill Press Adjustable-Hole Drill Bits for Wood

Cut a variety of hole sizes with one bit by sliding the blade to the desired cutting diameter. Two adjustable cutter blades have easy-to-read markings and are securely held in position by the screw. Bits are forged steel and have three flats on the shank for extra grip. Bits require the torque and rpm of a drill press and are not recommended for use in portable electric drills. Use in standard drill chucks.

Clean-Cut Drill Bits for Wood

Bore smooth and accurate holes across the grain. Also known as brad-point bits. A center guide point prevents the bit from wandering so even overlapping holes can be bored without splintering. Overall length includes the center guide point. Use in portable power tools, power-feed boring machines, and drill presses. ***High-speed steel*** bits can be run at higher speeds than steel bits.

Drill Bits for Wood Screws

Bits are cut to match a wood screw's thread and shank, resulting in a perfect fit for your screw. They produce clean edges when cutting soft and hard woods. Bits are high-speed steel and have a bright finish. Shank diameter is the same as the bit size. Use in drill presses and portable drills.

Standard length bits are equivalent to a jobbers' length bit; ***long length*** bits are equivalent to a taper length bit.

Wire-Installing Drill Bits

Also known as bell hanger drill bits, a hole in the flute near the tip lets you pull wire through after holes are drilled. Bits drill through wood, plaster, metal lath, stucco, light masonry, and concrete. Bits are steel with carbide tips.

Bit Size	Shank Dia.	Drilling Depth	12" O'all Lg.		18" O'all Lg.		24" O'all Lg.		36" O'all Lg.		48" O'all Lg.

Dowel Hole Drill Guide

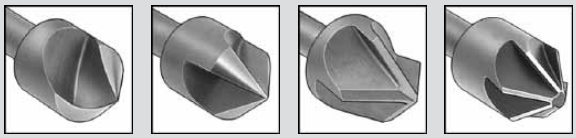
Drill holes for dowels that require exact alignment in the edge, end, or surface of your work. Clamp the jig onto your material, lift and turn the turret to select the drill hole size you need, and drill. The turret has 3/16", 1/4", 5/16", 3/8", 7/16", and 1/2" drill hole sizes. Use the graduations to set the jig to the centerline of your workpiece. Designed for material up to 4" wide.

3123A11 ..... $48.94

About Countersinks

Countersinks form a cone-shaped opening at the top of a hole, which acts as a seat for the head of a screw or rivet. They can also be used for chamfering, deburring, and creating openings for holding material between centers.

Flutes



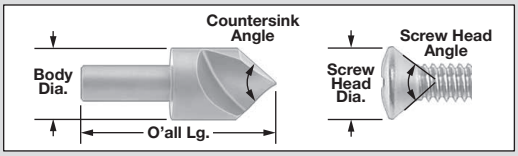
Fast Cut (Single Flute) — *General Purpose (Three Flutes) (Four Flutes)* — *Smooth Finish (Six Flutes)*

***Fast Cut*—** Have one flute and won't vibrate at high speeds. Also great for cutting smaller holes.

***General Purpose*—** Have two, three, or four flutes. Tool life increases with more flutes because the cutting load is distributed over more edges. However, fewer flutes provide better chip clearance, which is a consideration when machining stringy materials like plastic.

***Smooth Finish*—** Have six flutes. These remove more material per revolution and have a longer life than other countersinks.

Body Diameter and Countersink Angle



The countersink body diameter must be equal to or larger than the head diameter of the screw, center, or rivet being countersunk. Use a pilot hole that's larger than 10% of the countersink body diameter.

- ***60° Countersink Angle:*** For holding workpieces between the centers on a lathe.
- ***82° Countersink Angle:*** For flat- and oval-head inch screws.
- ***90° Countersink Angle:*** For flat- and oval-head metric screws. They're also great for chamfering.
- ***100° Countersink Angle:*** For rivets.
- ***120° Countersink Angle:*** For rivets.

Drill-Bit Countersinks

When used in combination with your drill bit (not included), these tools let you drill and countersink wood-screw holes in one quick operation. They attach to the body of your drill bit with two set screws and can be easily adjusted up and down for any length wood screw. All countersinks have four flutes.

Carbon steel countersinks have an 82° angle and are for use in wood and plastic.

High-speed steel countersinks come in your choice of an 82° or 90° angle and are for use in wood, plastic, and most metals. **To Order:** Please specify 82° or 90° countersink angle.

Stop collars control the cutting depth of your countersinks. The inside diameter of the stop collar fits the outside diameter of your countersink. Collars attach easily with two set screws and can be easily adjusted for depth. Made of steel with a black-oxide surface treatment.

Drill Bit Not Included

Stop Collar Sold Separately

Hex Shank Combination Drill Bits and Countersinks for Wood

Make holes for wood plugs in one easy operation. These combination tools consist of a general purpose, high-speed steel jobbers' drill bit and a hardened steel countersink. Tools have an 82° countersink angle and a hex shank that fits all quick-change and standard drill chucks. Bits are securely held by a set screw and can be adjusted up to 1″ for different screw lengths.

***Five-Piece Sets*—** You'll get one countersink in each of the following body diameters: 1/4″, 3/8″, 1/2″, 5/8″, and 3/4″. Furnished in a plastic case. **To Order:** Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

2742A601 ..... **Per Set** $88.24

High-Speed Steel and Cobalt Steel Countersinks

Single End Fast Cut (Single Flute)

High-Speed Steel—For use on ferrous and nonferrous metals such as steel, brass, and bronze.
Cobalt Steel—Heat and abrasion-resistant, these are for use on hard-to-machine metals such as cast iron, stainless steel, Inconel, and titanium.
TiN (titanium nitride) coated countersinks last longer and withstand more heat than uncoated.
To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle, unless noted. Smooth-finish (six-flute) individual countersinks are also available with a 110° countersink angle, except for double-end countersinks.

● Has 3/8" shank dia. ◆Overall length may vary depending on the countersink angle.
▲Choose from 60°, 82°, or 90° countersink angle. ★ Uncoated countersinks have a black oxide treatment.

Double-End Smooth-Finish (Six-Flute) Countersinks

When one end becomes dull, simply turn the countersink around. All are high-speed steel.

Body Dia.	O'all Lg.		Each	Body Dia.	O'all Lg.		Each

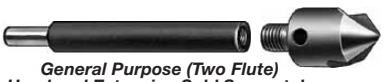
Long-Reach Countersinks

Fast Cut (Single Flute)



General Purpose (Two Flute) Head and Extension Sold Separately

All countersinks are high-speed steel for use on materials including steel, brass, and bronze. ***Fast-cut*** and ***smooth-finish*** countersinks are made with an integral long-reach shank. Add a carbon steel ***extension*** to give ***general-purpose heads*** a long reach.

Solid-Carbide Countersinks for Hard and Abrasive Materials

Harder and longer lasting than high-speed steel countersinks, these tools are more effective for cutting hard and abrasive materials. They are not for use in hand-held applications.

TiCN (titanium carbonitride) coated tools last longer than uncoated tools and are best for general purpose cuts in steel and cast aluminum. ***TiAlN*** (titanium aluminum nitride) is the best choice for materials up to a Rockwell hardness of C50. ***AlTiN*** (aluminum titanium nitride) is for high-speed machining on materials with a Rockwell hardness up to C70. Not for use on aluminum.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle. For coated countersinks, also specify TiCN, TiAlN, or AlTiN coating.

Single End Fast Cut (Single Flute)

Double End Smooth Finish (Six Flute)

Single-End Countersinks

Sizes 1/8″ through 1/4″ are made entirely of carbide. Sizes 5/16″ and larger have a solid carbide body that's brazed onto a hardened steel shank. *Note:* Overall length may vary slightly depending on the countersink angle.

Five-Piece Single-End Countersink Sets

You'll get one countersink in each of the following body diameters: 1/4″, 3/8″, 1/2″, 5/8″, and 3/4″. Furnished in a metal case.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle. For coated countersink sets, also specify TiCN, TiAlN, or AlTiN coating.

	Uncoated Per Set		Coated Per Set	
Fast Cut (Single Flute)	2922A421	$214.15	2944A71	$288.37
General Purpose (Three Flute)	29485A21	236.10	2944A72	330.31
Smooth Finish (Six Flute)	2923A523	220.86	2944A73	300.11

Double-End Smooth-Finish (Six-Flute) Countersinks

When one end is worn, simply turn the countersink around for a sharp cutting edge. All are uncoated solid carbide.

To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

Body Dia.	O'all Lg.		Each
1/8″	1 1/2″	27655A11	$19.60

Carbide-Insert Countersinks

Instead of sharpening your countersink, rotate the carbide insert in these tools to reveal a fresh cutting edge. When all of the edges are used, just replace the insert. You can use them on ferrous and nonferrous metals including steel, aluminum, and copper. An uncoated carbide insert and a Torx wrench are included with each tool.

Uncoated carbide inserts are for general purpose use. ***TiN (titanium nitride) coated carbide inserts*** offer higher heat resistance and reduced friction for increased productivity and tool life.

To Order: For countersinks, please specify 60°, 82°, 90°, or 100° countersink angle.

Precision Countersinks for CNC Applications

A tight tolerance ensures accuracy and precision on computer-controlled machines. All have six flutes and the tolerance is +0.001″/-0.001″. ***High-speed steel*** is for use on a wide variety of materials including wood, steel, brass, and bronze. Carbide is harder and longer lasting than high-speed steel and is for use on hard and abrasive materials such as cast aluminum and fiberglass.

To Order: Please specify 60°, 82°, 90°, or 100° countersink angle.

Repair Tools for 60° Countersunk Holes

Made with a large number of flutes and cutting edges to lightly shear off material, these tools repair and clean out holes used for machining between centers. The countersink angle is 60°. Sizes 5/16″ to 3/4″ have a solid-carbide head brazed to a steel shank. The 1/4″ size is made entirely of carbide.

Body Dia.	Shank Dia.	O'all Lg.	No. of Flutes		Each

3/4″	3/8″	2 3/4″	10	27865A16	89.52

Anti-Vibration Through-Hole Countersinks

Also known as zero-flute countersinks, all have a single flute that passes through the center of the tool. This design reduces vibration (chatter) for smooth cuts and prevents chips from clogging. These countersinks are also great for deburring.

Single End and ***Double End***—*High-speed steel* is for use on steel and other ferrous metals. *Cobalt steel* has higher heat and abrasion resistance for use on high-tensile alloys, stainless steel, and other hard-to-machine materials. Double-end countersinks can be turned around when one end becomes worn.

Single-End with Pilot—The pilot acts as a guide to maintain alignment in the hole. All are high-speed steel for use on steel and other ferrous metals. They have an 82° countersink angle.

To Order: Please specify countersink angle when a choice is given.

Single-End with Pilot Set—All have an 82° countersink angle. You'll get one each of the piloted-style tools above furnished in a wood block stand.

2739A29 ..... **Per Set** $93.67

Drill-Tip Countersinks for Flat- and Oval-Head Screws

One tool is all you need to drill and countersink for flat- and oval-head screws. All countersinks are high-speed steel and have two flutes. ***Machine screw and fractional sizes*** have an 82° countersink angle. ***Metric sizes*** have a 90° countersink angle.

Machine Screw and Fractional Sizes

Screw Size	Body Dia.	Shank Dia.	Drill Tip Dia.	O'all Lg.		Each

Step-Saver Countersinks

Single-End High-Speed Steel

Double-End Solid Carbide

A drill point is blended into two of the four flutes, so you can drill a starter hole and countersink in one step—no need for separate tools.

Double-End—When one end becomes dull, simply turn the countersink around.

To Order: Please specify 60°, 82°, 90°, 100°, or 120° countersink angle.

For information about countersinks, see page 2481.

Drill-Point Countersinks

Plain Style

Radius Style

Bell Style

The tips of these countersinks have small drill points and are also double-ended (unless noted)—if one end becomes worn, simply turn the tool around.

Plain Style—For general purpose use.

Radius Style—The surface formed by these tools minimizes contact between the material and the centers, preventing damage and allowing for more precise machining between centers than 60° plain style tools.

Long Plain Style—A great choice when a longer reach is needed.

Bell Style—For applications where accuracy is important and where the material will go through several machining processes. The tool bevels the outer edges and gives an additional 120° chamfer to prevent damage to the center hole.

Use ***60° countersinks*** to create the holes needed to machine material between centers. The drill tip creates a small gap that prevents damage to the points of live or dead centers. The tips on ***82°*** and ***90° countersinks*** create a small pilot hole at the bottom of the countersunk hole to facilitate drilling.

High-speed steel countersinks are for use on steel and other ferrous metals. ***Cobalt steel countersinks*** have higher heat and abrasion resistance for use on high-tensile alloys, stainless steel, and other hard-to-machine materials. ***TiN (titanium nitride) coated high-speed steel countersinks*** have a wear- and heat-resistant coating that improves tool life and reduces friction. In most applications, the user may be able to increase speeds, and in many cases improve feed rates as well.

Solid-Carbide Drill-Point Countersinks

Longer-lasting than high-speed steel drill-point countersinks and great for hard and abrasive materials. The tips of these countersinks have small drill points and are double-ended—if one end becomes worn, simply turn the tool around.

Use ***60° countersinks*** to create the holes needed to machine material between centers. The drill tip creates a small gap that prevents damage to the points of live or dead centers. The tips on ***82° and 90° countersinks*** create a small pilot hole at the bottom of the countersunk hole to facilitate drilling.

Uncoated tools are for use with hardened steel, nonferrous metals such as aluminum, and nonmetallic materials. ***Coated tools*** offer superior performance and longer life. *TiCN* (titanium carbonitride) coated tools last longer than uncoated tools and are best for general purpose cutting of steel. They are also the best option for cuts in cast aluminum. *TiAlN* (titanium aluminum nitride) is the best choice for materials up to Rockwell hardness C50. Not for use on aluminum. *AlTiN* (aluminum titanium nitride) is for high-speed machining on materials with a Rockwell hardness between C50 and C70. Not for use on aluminum.

To Order: Please specify 60°, 82°, or 90° countersink angle. For coated tools, also specify TiCN, TiAlN, or AlTiN coating.

Six-Piece Countersink Sets

You'll get one countersink in each of the following trade sizes: 1, 2, 3, 4, 5, and 6. Furnished in a metal case.

To Order: For coated countersink sets, please specify TiCN, TiAlN, or AlTiN coating.

	Uncoated Per Set	Coated Per Set
60° Countersink Angle	2925A22 $227.81	2936A31 $267.42
82° Countersink Angle	2925A72 227.81	2936A32 267.42
90° Countersink Angle	2925A73 227.81	2936A33 267.42

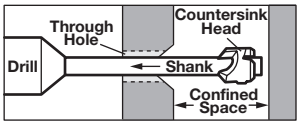
Hand-Driven Countersinks

A manually powered, angled shank makes it easy to countersink and debur next to a shoulder and in hard-to-reach holes.

Complete tool is furnished in a plastic case and includes a 5″ long plastic handle and four high-speed steel countersinks with a 90° countersink angle in 1/8″, 1/4″, 5/16″, and 3/8″ body diameters.

		Each
Complete Tool	28775A61	$58.71
Replacement Parts		
5″ Long Plastic Handle	28775A67	6.61
1/8″ Countersink	28775A62	6.32
1/4″ Countersink	28775A63	17.26
5/16″ Countersink	28775A64	17.63
3/8″ Countersink	28775A65	17.54

Tight-Spot Reverse Countersinks



When you can't get at your work with a regular tool, these reverse countersinks do the trick. Simply put the shank (sold separately) in your drill chuck, insert shank into a through hole, and attach the countersink head on the end. Pull back on the drill to countersink the backside of the hole. Shanks are 6″ long and are tempered steel; countersink heads are high-speed steel.

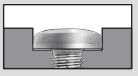
About Counterbores

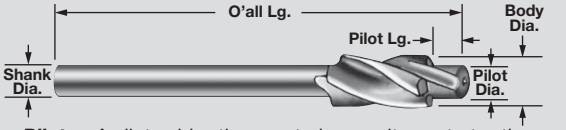


Counterboring

Counterboring—Enlarge the top portion of an existing hole, forming a cylindrical-shaped opening with a flat bottom that acts as a seat for the head of a screw or wood plug.

Shallow Counterboring

Shallow Counterboring—Bore a shallow spot (1/8″ or less) around a hole so that the head of the screw, bolt, or nut is slightly raised above the surface of the material (also known as spot facing).



Pilots—A pilot guides the counterbore as it penetrates the material, keeping it centered over the drilled screw hole and ensuring a level seat for the screw head. ***Counterbores with built-in pilots*** have a counterbore and pilot made from one piece of steel. ***Changeable-pilot counterbores*** have a removable pilot, allowing you to use various pilot diameters in a single tool.

Drill-Bit Counterbores for Wood and Plastic

Drill Bit Not Included

Stop Collar Sold Separately

Simply position one of these counterbores on your standard jobbers' or guide-point (brad-point) drill bit and lock it into position with the two set screws. You can now drill and counterbore in a single step.

All are made of steel and have four flutes. Drill bits are not included. For general purpose jobbers' drill bits, see pages 2448-2452.

Stop collars control the cutting depth of your counterbore. They attach with two set screws and are made of steel.

Six-Piece Drill-Bit Counterbore Set—Includes one each of the above counterbores marked with a ✓. The set comes in a wood stand.

3105A31 ..... **Per Set** $205.93

For information about counterbores, see page 2486.

Large-Diameter Drill-Bit Counterbores for Wood

Also known as multi-spur counterbores, these counterbores have two set screws to secure them to any woodworking bit that has a 1/2" shank and a cutting diameter of 1/2" and larger. Counterbores are made of carbon steel and are for wood applications only. The drill bit is not included.

Drill-Tip Counterbores

In one timesaving operation, drill and counterbore holes with sufficient clearance for socket-head cap screws. All counterbores have round shanks and are made of high-speed steel for use on most metals.

Counterbores with Built-In Pilots

High-Speed Steel

Carbide Tipped

Also known as cap-screw and solid-pilot counterbores, these round shank tools have four spiral flutes (unless noted) for easy cutting with no chip clogging.

High-speed steel counterbores are for use on most metals.

Choose *TiN (titanium nitride) coated high-speed steel counterbores* when you need increased wear and heat resistance. For use on ferrous metals such as steel and stainless steel.

Grade C-2 carbide-tipped counterbores are for cast iron and nonferrous metals such as aluminum, brass, and copper.

Grade C-5/C-6 carbide-tipped counterbores are for use on steel.

Machine Screw and Fractional Sizes— Choose from standard size, 1/64" oversize, and 1/32" oversize styles. Use the 1/64" and 1/32" oversize counterbores when screw holes in sheets or layers of material are misaligned. **To Order:** Please specify size: standard, 1/64" oversize, or 1/32" oversize.

Metric Sizes— All are high-speed steel and 0.5 mm oversize.

Adjustable-Diameter Counterbores

Straight Shank

Counterbore a variety of diameters with one tool. Simply turn the set screw and adjust the blades to the diameter you need. Use these counterbores to machine tough steel forgings, cast iron, and aluminum alloys. They have a steel body with replaceable high-speed steel blades and carbon steel pilots. The replaceable pilots provided are the minimum size recommended for use with these counterbores. If your job requires a larger pilot size, see 3103A series pilots for changeable-pilot counterbores (sold separately on this page). *Note:* Not for use in hand-held, portable tools.

Body Dia. Range	Shank Dia.	Pilot Shank Dia.	Pilot Head Dia.	*Counterbores*	Each	*Set of Two Repl. Blades*	Per Set

Changeable-Pilot Counterbores

Narrow-Shank Counterbore Shown with Pilot (Pilot Sold Separately)

Pilot

Unlike counterbores with built-in pilots, these tools allow you to change pilots so you can use the right pilot diameter for your application. All have three flutes, except the narrow-shank high-speed steel counterbores, which have four flutes. *Note*: Changeable counterbore pilots are sold separately.

Standard-Shank Counterbores— Use *high-speed steel* tools on most metals and plastic. *Carbide-tipped* tools come in two grades. **To Order:** For carbide-tipped counterbores, please choose grade for steel or grade for nonferrous metals (such as aluminum, brass, and bronze) and cast iron.

Narrow-Shank Counterbores— These have a narrower 1/4" diameter shank and are designed to fit in tools that use a smaller shank size. *High-speed steel* tools are for use on most metals and plastic. *Carbide-tipped* tools are for soft nonferrous metals such as aluminum, brass, and bronze.

Steel Pilots for Changeable-Pilot Counterbores

When selecting a pilot, be sure the pilot shank diameter is compatible with your counterbore. The length of the pilot head is equal to its diameter. All are carbon steel. **Also Available:** Other sizes. Please ask for 3103A999 and specify pilot diameter and shank diameter.

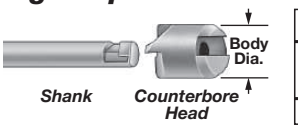
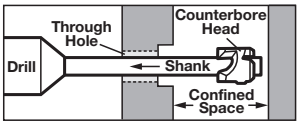
Standard-Shank High-Speed Steel Changeable-Pilot Counterbore Set

15-Piece Set— You'll get five high-speed steel counterbores in sizes 1/4" - 1/2" x 16ths. You'll also get 10 pilots: 1/8", 5/32", 3/16", and 1/4" diameters with a 3/32" shank; 3/16", 7/32", 1/4", and 5/16" diameters with a 5/32" shank; and 1/4" and 5/16" diameters with a 3/16" shank. Come in a wood case.

2817A71 ..... **Per Set** $395.38

Tight-Spot Reverse Counterbores





If limited space makes it difficult to counterbore your hole, access it from the other side with this tool. Simply put the shank (sold separately) in your drill chuck, insert shank into a through hole, and attach the counterbore on the end. Pull back on the drill to counterbore the backside of the hole. All are high-speed steel with four flutes; for use on most metals. Shanks are 6″ long and made of steel.

Contouring Router Bits

A ball-nose design with upward chip removal provides accurate, smooth carving and modeling in CNC routers. These solid-carbide router bits allow for contours and curved corners and are for use on modeling foam, soft and hard plastics, and aluminum blocks and plates. All have two spiral flutes.

Router Bits for Aluminum

Machine aluminum on your CNC router with these solid-carbide bits. All have one flute.

Grooving and Slotting— Have a spiral flute for upward chip removal. They machine multiple sheets and plates.

Edging— Have a straight flute and do not pull up on your material, making them great for edges.

Grooving and Slotting

Router Bits for Fiberglass and Ceramics

Fiberglass Cutting— The diamond-pattern cutting edge creates small chips for a fine finish on fiberglass-reinforced polyester, graphite-composite laminates, and some grades of Kevlar. Bits are made of solid carbide. ***Plain end*** are for side routing. ***Bur end*** are for side and bottom routing. ***End-mill end*** are for side and bottom routing, as well as for plunge cuts. ***Drill-point end*** are for fast plunge cutting and slotting.

Ceramic Cutting— Not to be confused with plated tools, a 40-grit diamond coating is firmly bonded to the router bit body using a high-temperature metal alloy. These bits stay sharper longer than solid carbide for longer tool life. Use for routing nonmetallic composites such as graphite, fiberglass, phenolics, and ceramics.

Router Bits for Plastic

Carbide-tipped bits outlast ***high-speed steel*** bits. ***Solid-carbide*** bits last longer than carbide-tipped bits and are not for hand-held applications.

(1 & 2) Bits for Hard and Soft Plastic

1

Up Cut

Down Cut

(1) Smooth-finish bits produce a smooth groove or slot in soft and hard plastic. All have two spiral flutes and are pilotless. *Up-cut bits* provide upward chip removal and the best finish on the bottom of your material; *down-cut bits* push chips down and give the best finish on the top of your material.

(2) Edge-rounding bits create round edges on soft and hard plastic sheets. Bits have 3/8″ cutting length. All have one straight flute and are pilotless.

2

Cutting Dia.	Cutting Lg./Radius	Shank Dia.	O'all Lg.		Each
(1) Smooth-Finish Solid-Carbide Bits—Up Cut					
1/4″	3/8″ length	1/4″	2 1/2″	8782A11	$18.76
1/4″	3/4″ length	1/4″	2 1/2″	8782A12	20.04

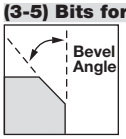
1/4″	1/4″ radius	1/4″	2 1/2″	3144A23	38.22

(3-5) Bits for Plastic Laminates



Great for trimming and edging laminate countertops and other laminate materials. All have straight flutes.

(3) Flush/22° bevel-cutting bit has two flutes and a ball-bearing pilot for flush and 22° bevel cuts.

(4) Flush-cutting and ***7° bevel-cutting*** bits have one flute and a solid pilot for either flush or 7° bevel cuts.

(5) Smooth-edging bits have two flutes (unless noted) with a ball-bearing pilot for flush cuts. The bearing diameter is equal to the cutting diameter.

★ Has three flutes.

(6) Bits for Hard Plastic and Composites

6

For plunge and profile cuts in fiberglass, phenolics, reinforced acetal, cast acrylic, melamine, nylon, rigid PVC, vinyl, and solid-surface materials such as Corian. All have two straight flutes and are pilotless.

Cutting Dia.	Cutting Lg.	Shank Dia.	O'all Lg.		Each

(7 & 8) Bits for Soft Plastic

7

Fast Cutting

8

Smooth Finish

For plunge and profile cuts in soft- to medium-density plastics such as ABS, polycarbonate, polyethylene, polystyrene, polypropylene, HDPE, UHMW, extruded acrylic, and some PVCs. All have straight flutes and are pilotless.

(7) Fast-cutting bits have one flute.

(8) Smooth-finish bits have two flutes.

Router Bits for Wood and Laminates

9

Up Cut

Down Cut

The spiral flutes on these bits cut soft and hard natural woods, wood composites such as plywood and particleboard, and solid-surface materials such as Corian. Made of solid carbide.

Up-Cut Bits—Designed for effective, upward chip removal. These bits are the best choice for straight grooving and slotting applications where a smoother finish on the bottom of the material is desired. Because these bits are designed to lift, it is necessary to securely clamp your material.

Down-Cut Bits—Push chips down from the cut. Use this style for grooving and slotting applications where a smoother finish on the top of your material is desired. They are the best choice for laminates because they eliminate edge chipping. Also good for small parts that would be difficult to clamp down.

(9) Smooth-finish bits have two flutes and make fast, clean cuts with a smooth finish.

(10) Ultra-smooth-finish bits have three flutes and provide a smoother finish than smooth-finish bits. Also for use on hard plastics.

Router Bits for Wood

Create decorative and functional edges in wood and wood composites such as plywood and particleboard. All bits have two flutes, unless otherwise stated. ***Square-cut*** bits come in your choice of high-speed steel or carbide-tipped. All other styles are carbide-tipped. ***Carbide-tipped*** bits outlast ***high-speed steel***.

Electric and Air-Powered Routers

Electric routers are CSA certified, UL listed, and meet OSHA requirements, unless noted. All are double insulated and have a two-prong plug.

Style A router comes with a 1/4" collet. *Styles B* and *C* come with 1/4" and 1/2" collets.

Style C router is variable speed with plunging capability. It has a six-position speed control that matches rpm to your material and circuitry that maintains constant speed under full load. An eight-position turret and depth-rod control maintain cutting depth. Also has a swing-away chip shield. C-UL listed.

Air-powered router *(Style D)* includes a 6-ft 3/8" air hose and a 3/8" collet. Recommended operating pressure is 90 psi. Air consumption is 38 cfm. Air inlet is 1/4" NPT. Additional collet sizes are sold separately below.

About Chucking Reamers and Hand Reamers

Reamers are rotary cutting tools used to enlarge an existing hole to an exact size, as well as provide a smooth finish to the walls of the hole. Reaming may be done with a variety of machine tools or by hand. *Note:* When using a reamer, never rotate it in the reverse direction of the cut. This will ruin its accuracy.

Types of Reamers

Chucking Reamers—Also known as machine reamers, they are used in drill presses, turret lathes, screw machines, and other machine tools. The shank is round or Morse taper and the cutting end of the reamer is ground with a 45° chamfer angle for easy hole entry.

Hand Reamers—A square portion on the end of the shank allows the reamer to be turned by hand with an adjustable wrench or a straight-handle tap wrench. Most hand reamers have a slight taper at the cutting end for easy hole entry.

Reamer Material

High-speed steel is used on a wide variety of materials including tool steel, cast iron, and aluminum.

Cobalt steel can be run up to 25% faster than high-speed steel and has better abrasion and heat resistance for longer tool life. Use on hard-to-machine materials such as nickel alloys, stainless steel, Inconel, and titanium.

Carbide tipped and ***solid carbide*** have better abrasion resistance and retain a sharper, harder edge at higher temperatures than high-speed steel and cobalt steel. Typically used on abrasive materials such as cast iron, nonferrous alloys, plastics, and hardened steels.

Solid carbide offers more wear resistance for the most accuracy but requires rigid tool holding to prevent breakage.

High-Speed Steel and Cobalt Steel Chucking Reamer Sets

All reamers have a round shank.

Standard-Length Reamers—Shank diameter is slightly smaller than the reamer cutting diameter except 3008A5, which is equal to the reamer cutting diameter.

Drill-Length Reamers—Have the same overall length as a jobbers' twist drill bit for added rigidity. The shank diameter is the same as the cutting diameter.

Straight-flute reamers are used for most jobs. ***Spiral-flute*** reamers are right-hand spiral, right-hand cut. They are ideal where chip removal is necessary, such as in blind holes. They also give a smoother finish and work well where there is an interrupted cut, such as in keyways.

High-Speed Steel and Cobalt Steel Chucking Reamers

Straight-flute reamers are used for most jobs.

Spiral-flute reamers have right-hand spiral, right-hand cut. They are ideal where chip removal is necessary, such as in blind holes. They also give a smoother finish and work well where there is an interrupted cut, such as in keyways.

High-Speed Steel Fractional Sizes—Round Shank

Shank diameter is slightly smaller than the reamer cutting diameter. *Straight flute* cutting diameter tolerance is +0.0002", –0.0000" for 1/32" to 1/2"; +0.0003", –0.0000" for 17/32" to 5/8"; and +0.0004" to +0.0001" for 21/32" to 1 1/2". *Spiral flute* cutting diameter tolerance is +0.0002", –0.0000" for 1/32" to 1/2"; +0.0003", –0.0000" for 17/32" to 5/8"; and +0.0004" to +0.0001" for 21/32" to 1 1/2".

TiN-Coated High-Speed Steel Fractional Sizes—Round Shank with Spiral Flutes

TiN-coated (titanium nitride) reamers run faster than uncoated high-speed steel and last twice as long. The coating acts as a barrier against high temperatures and abrasion. They are right-hand spiral, right-hand cut. Use on free-machining steels as well as nonmetallic materials and plastics. Not for use on aluminum and titanium alloys. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

High-Speed Steel and Cobalt Steel Oversize/Undersize Sizes—Round Shank with Straight Flutes

Allow for a slightly tighter or looser fit than the common fractional reamer diameters. Oversize reamers are 0.001" larger than the fractional size, and undersize are 0.001" smaller. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

High-Speed Steel Decimal Sizes—Round Shank with Straight Flutes

Flute length, overall length, and number of flutes are equivalent to dimensions of fractional, letter, and wire gauge size chucking reamers. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002", –0.0000".

To Order: For standard decimal sizes in increments of 0.0005" (size must end in 0 or 5), please ask for the part number in the appropriate size range below and specify the exact size.

Also Available: Other decimal sizes in 0.0001" increments. Please ask for 8803A999 and specify the exact size.

High-Speed Steel and Cobalt Steel Chucking Reamers *(Continued from previous page)*

Straight Flute

High-Speed Steel Decimal Sizes (Cont.)—Round Shank with Straight Flutes

Flute length, overall length, and number of flutes are equivalent to dimensions of fractional, letter, and wire gauge size chucking reamers. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

Also Available: Other decimal sizes in 0.0001″ increments. Please ask for 2777A999 and specify the exact size.

High-Speed Steel and Cobalt Steel Wire Gauge Sizes—Round Shank with Straight Flutes

High-speed steel wire gauge sizes 71-80 and *cobalt steel wire gauge sizes 61-80* have shank diameters equal to the reamer cutting diameter. All other sizes have shank diameters slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

To Order: Please specify exact wire gauge size within the range listed.

★ Size 22 has 6 flutes. ● Overall length is 2½″.

High-Speed Steel and Cobalt Steel Dowel-Pin Sizes—Round Shank with Straight Flutes

Size holes in preparation for installing dowel pins. Two reamer diameters are listed for each dowel-pin diameter so holes can be made for a slightly tighter- or looser-fitting pin. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0000″, –0.0002″.

High-Speed Steel Metric Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.005, –0.000 mm for 1.0 to 12.5 mm and 30.0 mm; +0.008, –0.000 mm for 13.0 to 15.5 mm; and +0.01, +0.0025 mm for 16.0 to 25.0 mm.

Also Available: Cobalt steel reamers in sizes 1.5 through 12.5 mm. Please ask for 2735A51 and specify size.

High-Speed Steel Hand Reamers for Morse Taper-Socket Holes

Turn existing straight, drilled holes into Morse taper holes. Reamers are also good for sizing and smoothing existing Morse taper holes and for removing nicks and burs in machine spindles. All have straight flutes. Use an adjustable wrench or straight-handle tap wrench (sold separately).

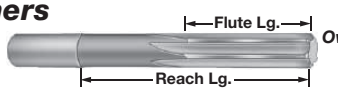
Chucking Reamers

For information about reamers, see page 2492.

Solid Carbide Chucking Reamers

Fractional, Wire Gauge, and Metric



Oversize/Undersize, Decimal, and Dowel Pin

Solid carbide construction provides superior accuracy. Reamers are shorter and have better abrasion and temperature resistance than standard-length high-speed steel, cobalt steel, and carbide-tipped chucking reamers. They require a rigid machine setup.

Fractional Sizes—Round Shank with Straight Flutes

Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″ for 1/16″ to 1/4″ and +0.0003″, –0.0000″ for 9/32″ to 1/2″.

Oversize/Undersize Sizes—Round Shank with Straight Flutes

Allow for a slightly tighter or looser fit than the common fractional reamer diameters. Oversize reamers are 0.001″ larger than the fractional size, and undersize are 0.001″ smaller. Flute length is half the reach length. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0002″, –0.0000″.

Carbide-Tipped Chucking Reamers

Carbide tips brazed to a one-piece hardened tool steel body provide better abrasion resistance and retain a sharper, harder edge at higher temperatures than high-speed steel and cobalt steel. Reamers have a round shank and straight flutes. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″.

Carbide-Tipped Expansion Chucking Reamers

Slots allow expansion as the adjusting screw is tightened. Bodies are made of one-piece tool steel. The carbide-tipped cutting edges run the full length of the flutes. All have a round shank and straight flutes. Shank diameter is slightly smaller than the reamer cutting diameter. Cutting diameter tolerance is +0.0003″, –0.0000″. Minimum expansion is 0.006″ for 3/8″ and 7/16″; 0.010″ for 1/2″ to 7/8″; 0.013″ for 1″ to 1 1/2″; and 0.015″ for 1 3/4″.

Note: These reamers are not designed for producing holes larger than the listed diameter or for producing holes of various sizes. The expansion screw should never be loosened.

High-Speed Steel Hand Reamers

A slightly tapered cutting end eases hole entry for final sizing of drilled holes. Use on most ferrous and nonferrous materials. All have a round shank and are for use with a straight-handle tap wrench (not included; see page 2561).

Straight-flute reamers are for general purpose reaming.

Spiral-flute reamers have a left-hand spiral, right-hand cut and are preferred for use on holes that have an interrupted cut, such as a keyway.

Straight Flute

Spiral Flute

Fractional Sizes

Cutting diameter tolerance is +0.0002″, –0.0000″ for 1/8″ to 1/2″; +0.0003″, –0.0000″ for 9/16″ and 5/8″; and +0.0001″, +0.0004″ for 11/16″ to 1 1/4″. Recommended tap wrench is 2546A13 for 1/8″ to 1/4″; 2546A16 for 5/16″ to 9/16″; and 2546A19 for 5/8″ to 1 1/4″.

High-Speed Steel Expansion Hand Reamers

Straight Flute

Spiral Flute

Slightly enlarge previously drilled holes for proper fit. The undersized pilot on these reamers acts as a guide to maintain alignment with the hole to be reamed. Slots in the hollow center permit expansion as the adjusting screw is tightened. Recommended expansion limit is 0.010″ for 1/4″ to 5/8″ diameters and 0.013″ for 3/4″ to 1″. Cutting diameter tolerance is +0.0000″, –0.0005″. Use with an adjustable wrench or straight-handle tap wrench (sold separately).

Straight-flute reamers are for general purpose reaming.

Spiral-flute reamers have a left-hand spiral, right-hand cut and are for use on holes that have an interrupted cut, such as a keyway. They provide a smoother finish.

Replaceable-Blade Adjustable-Size Hand Reamers

Angle and Straight Blade

Extra-Long Angle Blade

Handle multiple hole sizes with just one tool—loosen one nut and tighten another to move the six adjustable blades within their size range. They're an excellent choice for reaming bushings to a precise fit when size needs to be determined during assembly. Blades can be reground and replaced. To measure size, adjust blades to a known size (such as a bushing or ring), or measure across two opposite blades with a micrometer.

Also Available: Optional reamer extensions for all except extra-long angle-blade reamers. Use in place of the end adjusting nut to align holes that are spaced far apart. Made of steel. Please ask for 3004A22 and specify McMaster-Carr part number.

Angle-blade reamers are for general purpose use and for use on holes that have an interrupted cut, such as a keyway. ***Also Available:*** Replacement blades. Please ask for 2987A48 and specify diameter range.

Straight-blade reamers are for general purpose reaming. Blades outlast angle-blade reamers. ***Also Available:*** Replacement blades. Please ask for 3141A4 and specify diameter range.

Extra-long angle-blade reamers are great for aligning holes that are spaced far apart. They have an extra-long, permanently mounted pilot. A floating sleeve steadies the pilot. ***Also Available:*** Replacement blades. Please ask for 3027A3 and specify diameter range.

For 2987A and 3141A reamers with an overall length of 12″ and longer.

2546A19 ..... $283.49

High-Speed Steel Reamers for Taper-Pin Holes

Accurately ream previously drilled holes for standard taper pins. All reamers have a round shank and are tapered 1/4" per foot.

Straight- and ***spiral-flute hand reamers*** are square drive. For pin size Nos. 7/0-4/0, use a common adjustable wrench or a pin vise (see 8455A on page 2576). Others are used with a straight-handle tap wrench (see 2546A on page 2561). Recommended tap wrench for Nos. 3/0-7 and 2.00-5.00 mm is 2546A13; Nos. 4-10 and 3.00-13.00 mm, use 2546A16; Nos. 8.00-20.00 mm, use 2546A18.; and Nos. 11-14, use 2546A19.

Straight-flute reamers are used in easy-to-ream materials, such as aluminum and brass. *Spiral-flute* reamers have a left-hand spiral, right-hand cut that operates with ease in hard-to-ream materials, such as high-carbon steel and cast iron.

Helical-flute chucking reamers have left-hand helical construction, which moves chips forward to prevent chips from packing in flutes. This reduces breakage and produces a fine finish.

High-Speed Steel Combination Drill Bit and Reamer for Taper-Pin Holes

Drill and ream tapered holes for taper pins in one operation. All are tapered at 1" per 50" and have chip breakers on the cutting edge, a straight shank, and a 118° point. Designed for machine reaming.

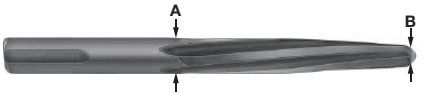
Reamers for Structural Steel

Also known as bridge reamers, car reamers, and aligning reamers. Use them to ream, true, enlarge, align, and debur holes in structural steel. Ends are tapered for easy entry into out-of-line holes. All are made of high-speed steel and have a left-hand spiral and right-hand cut. Not for reaming tapered holes.

Round Shank



Three flats provide a secure fit in portable electric and air tools. Cutting diameter tolerance is +0.010″, –0.000″.

♦ Shank does not have flats.

Round Shank with Safety Collar

A collar prevents overpenetration and a fast spiral clears away chips. Use in portable electric and air tools. Cutting diameter tolerance is +0.005″, –0.000″.

Hex Nut Shank with Safety Magnet

A strong magnet on two of the hex surfaces holds the reamer in the tool. The magnets can also keep the reamer from accidentally falling when not in the socket (see OSHA standard 1926.759 for falling object protection). Use with square-drive impact wrench sockets. Cutting diameter tolerance is +0.010″, –0.000″.

Tube Reaming and Deburring Tools

Ream and debur the inside and outside edges of 3/16"-1 1/2" PVC and CPVC tubing and 3/16"-1 1/2" metal tubing with one tool. Tools have three cutters on each end and a die cast zinc body. They cut both clockwise and counterclockwise.

Tool with Tungsten Tool Steel Cutters—Use on PVC, CPVC, stainless steel (including Type 304 and Type 316), brass, hard and soft copper, and aluminum tubing.

2737A11		$71.82

Tool with Hardened Steel Cutters—Use on PVC, CPVC, brass, soft copper, and aluminum tubing.

2709A12		$19.36

High-Speed Steel Deburring Reamers for Sheet Metal

Also known as repairmen's reamers.

Spiral-flute reamers not only countersink, enlarge, and smooth the edges of holes in sheet metal, they also remove burs from pipe and conduit.

Straight-flute reamers remove burs and enlarge holes in thin sheet metal.

Reamers with a ***round shank*** are for portable drills. Reamers with a ***T-handle shank*** are for hand use.

Threaded-Shank High-Speed Steel Reamers

Ream hard, high-strength alloys and tough, heat-resistant materials. All have a 1/4"-28 threaded shank and straight flutes. The pilot is 1/4" long and has a 45° cutting chamfer. Overall length includes the pilot and threaded shank. Reamer cutting diameter tolerance is +0.0002", –0.0000". Pilot cutting diameter tolerance is +0.000", –0.001".

Drill Guides for Countersunk Holes

Save time when drilling holes for hinges, latches, and other hardware that requires screws. Each guide has a beveled tip that fits into countersunk hardware, ensuring centered pilot holes.

Round-shank guides are also known as Vix Bits. ***Hex-shank*** guides fit all quick-change and standard drill chucks.

Guides are spring loaded. Drilling pressure compresses the guide body and extends the drill bit into the material. All are made of steel. ***Replacement drill bits*** are high-speed steel.

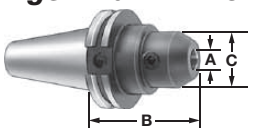
CAT-V40 Flange End Mill Holders



Holders securely grip end mills in machines with a 40 taper spindle. All are made of case-hardened alloy steel and have 5/8″-11 threads on the tapered end to hold retention knobs that fit your machine. End mill holding set screws are included.

For End Mill Shank Dia. (A)	Projection (B)	Dia. (C)

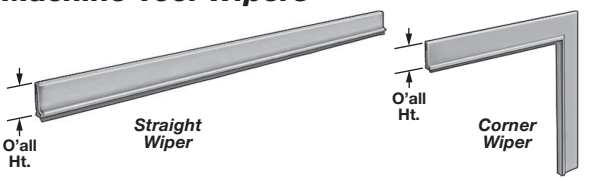
Machine Tool Wipers



Attach wipers to your milling machine and as the table moves, wipers sweep away chips and other contaminants, preventing them from wearing down sliding parts.

Housing is made of 0.18″ thick Type 304 stainless steel and has a 0.33″ thick extended lip to protect the wiper blade from hot chips. Wiper blades are made of polyurethane, so they withstand exposure to most oils, coolants, and contaminants. Wipers can be cut to length. To mount, counterbore holes and attach with 1/4″-20 socket head cap screws (not included).

R8 Right-Angle Milling Machine Attachments

Simplify right-angle work by reducing the need for special tooling. Ideal for cavities and pocket-milling jobs, this attachment requires a drawbar (sold separately) to operate.

Attachments

Has hardened and ground spiral bevel gears (1.33:1 ratio), sealed bearings, R8 collet spindle, and a grease fitting. Body is ductile iron and has alignment flats on the sides.

29155A11 ..... $1,156.91

Drawbars

Required for the attachment above. They are made of heat-treated alloy steel and have 1 1/2″ long 7/16″-20 threads.

R8 Shank End Mill Holders and Adapters

End Mill Holder

Morse Taper Adapter

Designed to hold end mills, drills, and reamers securely in Bridgeport and similar milling machines with an R8 taper spindle. All are made of heat-treated alloy steel and are ground to accurate size. Their R8 shanks have a 7/16″-20 internal drawbar thread.

R8 Shank End Mill Holders

All include set screws.

Holders for ***1/8″***, ***5/16″***, and ***1/2″ to 1 1/2″*** diameter end mills accept single-end end mills only. Holders for ***3/16″***, ***1/4″***, and ***3/8″*** diameter end mills accept single- and double-end end mills.

End Mill Storage Cabinets

Three drawers and 29 compartments make it easy to organize and store your 1/8″ to 1″ end mills. Size is marked on each drawer for easy identification. Cabinets are steel with a gray epoxy finish. Overall size is 14 5/8″ Lg.×7 3/8″ Wd.×7 3/4″ Ht.

Cabinet holds one each of sizes 9/16″, 11/16″, and 7/8″; two each of sizes 3/16″, 5/16″, 7/16″, 5/8″, and 1″; three each of sizes 1/8″, 1/4″, 3/8″, and 3/4″; and four of size 1/2″.

28345A17 ..... $91.88

Milling Machine Power Feeds

Convert your milling machine from manual feed to motorized power. Designed for general purpose machining on Class 1 mills up to 3 hp, you'll get smooth power and rapid traverse. Speed is variable so you can make adjustments for material, cutter, and coolant. Install on the X (left/right) or the Y (in/out) motion axis. Feeds fit below the table surface for unobstructed workpiece mounting, and a limit switch prevents damage caused by over-travel. Single-lever control engages and disengages as well as starts and stops feeds. Feeds also have a central control knob for speed adjustment, on/off switch, pilot light, protective breaker, travel stop/limit switch assemblies, and 110 VAC, 50/60 Hz motor.

Standard Torque— Peak torque is 140 in.-lbs., intermittent torque is 105 in.-lbs., and continuous torque is 90 in.-lbs.

High Torque— For applications where it's necessary to maintain stable feed control for a smooth surface finish at speeds as low as 1/2″/min. at full torque. Peak torque is 150 in.-lbs., intermittent torque is 120 in.-lbs., and continuous torque is 100 in.-lbs.

To Order: Select the power feed of your choice and a mounting kit (sold separately below) designed to fit your milling machine.

Also Available: Other mounting kits that fit milling machines not listed below. Please ask for 30815A999 and specify the make and model number of your milling machine.

Power Feeds

Machine Tool Depth Stops

Attach a depth stop to your milling machine to accurately set machining depth. Also known as quill stops, they fit all ½″-20 threaded rods.

Clamp-on stop is spring-loaded. Squeeze knobs toward each other to set depth. Made of aluminum.

Push-button stop installs on the quill and lets you adjust the depth in two ways. Push the button and slide the stop to the desired position, or turn the nut and make adjustments in 0.001″ increments. Made of carbon steel. Can also be used on drill presses.

Concave- and Convex-Radius End Mills for Curved Edges

Machine curved edges into your workpiece. End mills have six flutes and a radius tolerance of ±0.001″. All are made of high-speed steel.

Concave-radius end mills produce a rounded outward-curving shape.

Convex-radius end mills produce a hollow inward-curving shape.

★Four flutes. ◆Overall length is 4″.

Corner-Rounding End Mills

Round off sharp corners on the edge of your workpiece. End mills have four flutes and a radius tolerance of ±0.001″. ***Cobalt steel*** provides better heat and abrasion resistance than high-speed steel. Use on tough materials such as cast iron, cast steel, and heat-treated steel.

High-Speed Steel End Mills

For information about end mill cut styles, see page 2503.

High-Speed Steel Two-Flute End Mill Sets

Sets pack mill diameters 1/8", 3/16", 1/4", 5/16", 3/8", and 1/2" into a wood block stand. End mills have a 3/8" shank diameter, except the 1/2" mill dia. size, which has a 1/2" shank. Overall lengths range from 2 5/16" to 3 3/4". All are center cutting and have a 30° hex angle. Mill diameter tolerance is +0.001", –0.000" for single-end tools; +0.0000", –0.0015" for double-end tools.

Square-end end mills allow plunge cuts. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at much higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Maximum working temperature is 750° F. Color is blue-gray.

	Uncoated		Long-Life TiN Coated		Extra-Life TiCN Coated	
Single Square End	88505A24	$92.45	88505A31	$99.02	88505A34	$104.54
Single Ball End	88505A26	125.03	88505A33	133.91	88505A36	141.35
Double Square End	88505A27	124.10	88505A32	132.93	88505A35	140.25

High-Speed Steel Two-Flute End Mills

An economical alternative to cobalt and carbide tools, two flutes maximize chip clearance for slotting applications. All are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001", –0.000". *Note:* The 7/8", 1", and 1 1/4" shank diameters should be secured with an end mill holder (see page 2502).

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

♦ Shank diameter is 3/4"; length of cut is 1 1/2"; overall length is 3 3/4".

Tight-Tolerance High-Speed Steel Two-Flute End Mills

Made to a closer tolerance than standard two-flute end mills for cutting keyways. Use for materials such as alloy steel, carbon steel, and cast iron. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.0000", –0.0015". *Note:* The 7/8" and 1" shank diameters should be secured with an end mill holder (see page 2502).

Metric High-Speed Steel Two-Flute End Mills

Two flutes provide maximum chip clearance for slotting applications. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001", –0.000". *Note:* End mill with a 1" shank diameter should be secured with an end mill holder (see page 2502).

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Long-life TiN (titanium nitride) coated end mills last longer and can be run at much higher feeds/speeds. Use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold.

High-Speed Steel End Mills

For information about end mill cut styles, see page 2503.

High-Speed Steel Three-Flute End Mills

Three flutes make smoother cuts and produce a finer finish than two flutes, though they do not provide the same chip clearance. Use on alloy steel, carbon steel, and cast iron. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″. *Note:* End mills with a 1″ shank diameter should be secured with an end mill holder (see page 2502).

High-Speed Steel Four-Flute End Mill Sets

You'll get six end mills in diameters 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, and 1/2″ in a wood block stand. All have a 3/8″ shank dia., except the 1/2″ mill dia. size, which has a 1/2″ shank. They are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. ***Single end*** overall lengths range from 2 5/16″ to 3 1/4″. Mill diameter tolerance is +0.001″, –0.000″. ***Double end*** overall lengths range from 3 1/16″ to 4 1/8″. Mill diameter tolerance is +0.0000″, –0.0015″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron. ***Coated*** end mills last longer and can be run at higher feeds/speeds. *Long-life TiN (titanium nitride)* coating is good for use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold. *Extra-life TiCN (titanium carbonitride)* coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Maximum working temperature is 750° F. Color is blue-gray.

	Uncoated		Long-Life TiN Coated		Extra-Life TiCN Coated	
Single-End Set	88505A25	$119.84	88505A41	$126.12	88505A43	$128.33
Double-End Set	88505A28	158.52	88505A42	166.86	88505A44	179.23

High-Speed Steel Four-Flute End Mills

Center Cutting

Try four flutes for a fine finish and feeds twice as fast as two-flute end mills. All are square end and have a 30° helix angle. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 7/8″, 1″, and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502).

Noncenter cutting end mills are designed for operations where the peripheral teeth do most of the work. ***Center cutting*** end mills allow plunge cuts into a surface.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron. ***Coated*** end mills last longer and can be run at much higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

Metric High-Speed Steel Four-Flute End Mills

The metric version of our inch size four-flute end mills, they produce a fine finish and can be fed up to twice as fast as two-flute end mills. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″. *Note:* End mill with a 1″ shank diameter should be secured with an end mill holder (see page 2502).

High-Speed Steel Six- and Eight-Flute End Mills

More flutes means these end mills produce a finer finish. They can also be fed at faster rates and resist wear better than tools with fewer flutes. Use for machining alloy steel, carbon steel, and cast iron. All are square end and noncenter cutting. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 7/8″, 1″, and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502).

High-Speed Steel End Mills

For information about end mill cut styles, see page 2503.

Double-End High-Speed Steel Two-Flute End Mills

Double the life of your tool—when one end wears out, switch to the opposite end. They are an economical alternative to cobalt and carbide tools. Two flutes maximize chip clearance for slotting applications. All are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″. *Note:* The 7/8″ and 1″ shank diameters should be secured with an end mill holder (see page 2502).

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

Metric Double-End High-Speed Steel Two-Flute End Mills

The metric version of our inch size end mills, all are square end and center cutting for plunge cuts. Use on alloy steel, carbon steel, and cast iron. Helix angle is 30°. Mill dia. tolerance is +0.003″, –0.000″.

Mill Dia., mm	Shank Dia.	Lg. of Cut	O'all Lg.

18.0	3/4″	1 5/16″	5 5/8″	8855A75	39.32

Double-End High-Speed Steel Three-Flute End Mills

Two cutting ends double the life of these tools and three flutes produce smoother cuts and a finer finish than two-flute tools. Use on alloy steel, carbon steel, cast iron, and nonferrous metals. All are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″. *Note:* The 7/8″ and 1″ shank diameters should be secured with an end mill holder (see page 2502).

Double Ball-End High-Speed Steel Two-Flute End Mills

Machine rounded details into alloy steel, carbon steel, and cast iron workpieces. All have two cutting ends for extended life. They are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.0000″, –0.0015″.

Mill Dia.	Shank Dia.	Lg. of Cut	O'all Lg.		
1/8″	3/8″	3/8″	3 1/16″	3060A11	$36.94

3/4″	3/4″	1 5/16″	5″	3060A25	101.67

Double-End High-Speed Steel Four-Flute End Mills

Switch to the opposite cutting end when one end wears out and double the life of your tool. Four flutes produce a fine finish. All are square end and have a 30° helix angle. *Note:* The 7/8″ and 1″ shank diameters should be secured with an end mill holder (see page 2502).

Noncenter-cutting end mills are for operations where the peripheral teeth do most of the work. Mill diameter tolerance is +0.001″, –0.000″.

Center-cutting end mills allow you to make plunge cuts into a surface. Mill diameter tolerance is +0.0000″, –0.0015″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Noncenter Cutting

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

■ Mill diameter tolerance is +0.000″, –0.0015″.

Ball-End High-Speed Steel Two-Flute End Mills

Machine rounded details into a workpiece. End mills are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 7/8″ and 1″ shank diameters should be secured with an end mill holder (see page 2502).

Uncoated end mills are for general purpose milling of alloy steel, carbon steel, and cast iron. ***Long-life TiN (titanium nitride) coated*** end mills last longer and can be run at higher feed/speeds. Use on alloy steel, aluminum, and plastic. Max. working temp. is 1100° F. Color is gold.

Cobalt Steel End Mills

For information about end mill cut styles, see page 2503.

Cobalt Steel Two-Flute End Mills

Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 7/8″, 1″, and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502).

Premium Cobalt Steel Four-Flute End Mills

Built to last, these particle metal tools resist chipping and can be run at higher feeds/speeds than standard cobalt steel end mills. Use on high-temperature alloys such as titanium, Inconel 718, Monel, and Hastelloy. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 35°. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 7/8″, 1″, and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502).

Extra-life TiCN (titanium carbonitride) coated end mills have better wear resistance than uncoated tools. Maximum working temperature is 750° F. Color is blue-gray.

Rounded-Edge Cobalt Steel Four-Flute End Mills

Rounded edges on the tips of the flutes reduce chipping and lengthen the life of the tool. Also known as corner radius end mills, they work well for making molds. Use on cast iron, cast steel, and heat-treated steel. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.0015″, –0.000″; corner radius tolerance is ±0.001″.

To Order: Please specify corner radius.

For information about end mill cut styles, see page 2503.

Double-End Cobalt Steel Two-Flute End Mills

Two cutting ends extend working life. Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″. *Note:* End mill with a 1″ shank diameter should be secured with an end mill holder (see page 2502).

Double-End Cobalt Steel Four-Flute End Mills

Ball End

Four flutes provide a fine finish and two cutting ends extend tool life. Cobalt steel provides higher heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are center cutting with a 30° helix angle. *Note:* The 7/8″ and 1″ shank diameters should be secured with an end mill holder (see page 2502).

Square-end end mills allow plunge cuts in a surface. Mill diameter tolerance is +0.0000″, –0.0015″. ***Ball-end*** end mills machine rounded details into a workpiece. Mill diameter tolerance is ±0.0005″.

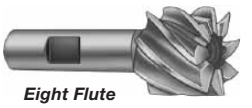
Reduced-Shank End Mills



Eight Flute

Also known as Bridgeport end mills, these tools have a reduced shank for use in milling machines and a shorter cutting length for extra rigidity. The more flutes, the finer the finish. Made of cobalt steel, unless noted. All are square end with a 30° helix angle.

Two-flute end mills are center cutting so you can make plunge cuts in a surface. Mill diameter tolerance is +0.0015″, –0.000″. ***Four-, six-,*** and ***eight-flute*** end mills are noncenter cutting for operations where peripheral teeth do most of the work. Mill diameter tolerance is +0.0015″, –0.0000″.

♦High-speed steel. ♥High-speed steel. Mill diameter tolerance is +0.002″, –0.000″.

Cobalt Steel Two-Flute Drill/Mills

A 90° point angle turns these end mills into drills for slotting, side milling, beveling, and profiling. Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All have a 30° helix angle. Mill diameter tolerance is +0.0015″, –0.0000″. ***Long-life TiN (titanium nitride) coated*** end mills offer higher heat and abrasion resistance and longer tool life. Use on stainless steel, alloy steel, cast iron, and nickel alloys. Maximum working temperature is 950° F. Color is gold.

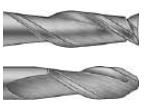
Miniature & Tapered End Mills

For information about end mill cut styles, see page 2503.

Miniature Double-End End Mills



Thanks to small mill diameters, these tools are well suited for detail work. All have a 3/16″ shank diameter, which allows you to use one holder for all sizes. They are center cutting and have a 35° to 40° helix angle. ***Cobalt steel*** provides better heat and abrasion resistance than high-speed steel.

Square-end end mills allow plunge cuts into a surface. *Four-flute* end mills have a mill diameter tolerance of +0.002″, –0.000″. ***Ball-end*** end mills machine rounded details into a workpiece.

High-Speed Steel Two-Flute End Mills for Aluminum

A helix angle of 37° allows for greater chip removal than a 30° helix angle. All are center cutting and have a mill diameter tolerance of +0.001″, –0.000″. *Note:* The 7/8″, 1″, and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502). ***Square-end*** end mills allow plunge cuts in a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

High-Speed Steel Three-Flute End Mills for Aluminum

Three flutes provide a fine finish and a helix angle of 37° allows for greater chip removal than a 30° helix angle. All are square end and center cutting, allowing plunge cuts into a surface. Mill diameter tolerance is +0.001″, –0.000″. *Note:* The 1″ shank diameters should be secured with an end mill holder (see page 2502).

Extra-life TiCN (titanium carbonitride) coated end mills have better wear resistance than uncoated tools. Maximum working temperature is 750° F. Color is blue-gray.

Double-End High-Speed Steel Two-Flute End Mills for Aluminum

When one cutting end wears out switch to the opposite end. They have a 37° helix angle for greater chip removal than a 30° helix angle. All are square end and center cutting so you can make plunge cuts into a surface. Mill diameter tolerance is +0.0000″, –0.0015″.

Roughing High-Speed Steel End Mills

For some applications speed is more important than a smooth finish. Roughing end mills remove large amounts of material up to three times faster than conventional end mills. Their coarse pitch also removes large chips. Use for milling alloy steel, carbon steel, and cast iron. All are square end, noncenter cutting, and have a 30° helix angle, except three flute are center cutting and have a 35° helix angle. Mill diameter tolerance is ±0.005″.

Cobalt Steel & Carbide End Mills

For information about end mill cut styles, see page 2503.

Roughing Cobalt Steel End Mills

Four Flute Coarse Pitch

Not only do these end mills quickly remove chips, they resist heat and abrasion better than uncoated high-speed steel end mills. All are square end and noncenter cutting. Helix angle is 30°. Mill diameter tolerance is +0.003″, –0.000″ for 3/16″ to 1″ diameters and +0.006″, –0.000″ for 1 1/8″ to 2″ diameters. *Note:* The 1″ and 1 1/4″ shank diameters should be secured with an end mill holder (see page 2502).

Coarse-pitch end mills produce large chips. Use for milling low- to medium-carbon steel and alloy steel. ***Fine-pitch*** end mills last longer and produce smaller chips. Use on high-temperature alloys, stainless steel, and nickel-based alloys.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coated. Maximum working temperature is 750° F. Color is light gray.

Roughing Cobalt Steel End Mills for Aluminum

Three wide flutes, a 36° helix angle, and a coarse pitch provide maximum chip removal when milling aluminum. End mills can also be used on other soft metals such as brass and bronze. All are square end and center cutting so you can make plunge cuts into a surface. Mill diameter tolerance is +0.005″, –0.000″. *Note:* End mill with a 1″ shank diameter should be secured with an end mill holder (see page 2502).

Carbide Chamfer End Mills

Make bevelled and angled cuts without the need for hand deburring. All are made of premium submicrograin carbide. Two flutes provide better chip clearance, while four flutes produce a finer finish. Shank diameter is equal to mill diameter. Mill diameter tolerance is +0.000″, –0.003″.

For information about end mill cut styles, see page 2503.

Ultra Duty Carbide End Mills

Use these tools for strong, fast, and long-lasting aggressive machining on hardened steel, stainless steel, titanium, Monel, and workpieces with interrupted cuts. Premium sub-micrograin carbide provides excellent wear and fracture resistance. Sharper cutting edges improve lubricity and provide a finer finish than our other carbide end mills. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.000", –0.002".

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 840° F. Color is gold.

Four Flute Square End

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or TiAlN.

Carbide End Mills

Four Flute

Speed up your milling operation—these micrograin carbide tools can be run two to five times faster than high-speed steel end mills. They're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1110° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is light violet.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds and high-temperature applications. Maximum working temperature is 1450° F. Color is dark gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or AlTiN.

Long-Reach Rounded-Edge Carbide End Mills for Mold Steels

Use to mill hardened steel for die and mold work. A rounded-edge cutting surface with recessed teeth won't scratch your workpiece like other end mills. Plus, they have a long neck for deep cuts. Also known as torus end mills. All are made of micrograin carbide and have four flutes. They are coated with a multilayered blend of TiN (titanium nitride) and TiAlN (titanium aluminum nitride) for extended life and use in temperatures up to 1470° F. Color is red-violet. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.001″.

For information about end mill cut styles, see page 2503.

Metric Carbide End Mills

Micrograin carbide end mills can be run two to five times faster than high-speed steel. They're also harder for better resistance to abrasion and high cutting temperatures. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°. Mill diameter tolerance is +0.000 mm, –0.051 mm.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 840° F. Color is gold.

Four Flute

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or TiAlN.

Double-End Carbide End Mills

Two ends are better than one when it comes to tool life. These micrograin carbide tools can be run two to five times faster than high-speed steel end mills. They're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Two flutes provide better chip clearance, while four flutes produce a finer finish. End mills with 3″ or greater overall length have a flat on the shank for better gripping power. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.000″, –0.002″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1110° F. Color is gold.

Four Flute Ball End

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is light violet.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1470° F. Color is dark gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or AlTiN.

Also Available: Ball-end end mills with TiN coating. Please ask for 27375A7 and specify mill diameter, overall length, and two or four flutes.

Tight-Tolerance Carbide End Mills

Four Flute

Made for precision machining, tools have a +0.001″, –0.000″ mill diameter tolerance. The shank diameter is equal to or slightly smaller than the mill diameter, allowing you to make deep cuts. They are premium sub-micrograin carbide. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds. *Long-life TiN (titanium nitride)* coating has a maximum working temperature of 840° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify TiN, TiCN, or TiAlN.

Tapered Carbide End Mills

2° Taper

Also known as taper degree end mills, these premium sub-micrograin carbide tools machine angled slots in dies and molds. Three flutes provide efficient chip ejection and a smooth finish. All are center cutting, allowing plunge cuts in a surface. Mill diameter tolerance is ±0.002″.

● Four flutes.

Spherical Carbide End Mills

Four Flute

A 220° tip provides a greater curve than a ball-end tool with a 180° tip. Made of premium sub-micrograin carbide with a high-temperature AlTiN (aluminum titanium nitride) coating for very high feeds/speeds. Mill titanium, nickel-based alloys, cast iron, and stainless steel.

Two flutes provide better chip clearance, while four flutes produce a finer finish. All are center cutting to allow plunge cuts in a surface. Helix angle is 15°. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 1450° F. Color is black.

Corner-Rounding Carbide End Mills

Single End

Round off sharp corners. All are noncenter cutting and have straight flutes.

Single-end four-flute end mills are premium sub-micrograin carbide and have a radius tolerance of ±0.0005″. *Note:* Those with a mill dia. greater than 1/2″ have a carbide head brazed on a steel shank. ***Double-end three-flute*** end mills are micrograin carbide and have a radius tolerance of ±0.002″.

Ball-End Carbide End Mills

These end mills cut rounded grooves up to 2½ times faster than high-speed steel end mills. Made of micrograin carbide, they're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Two flutes provide maximum chip clearance, while three and four flutes produce a finer finish. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1100° F. Color is gold.

Four Flute

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is dark gray.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1650° F. Color is black.

To Order: For coated end mills, please specify TiN, TiCN, or AlTiN.

Rounded-Edge Carbide End Mills

Put an end to chipped corners. Rounded edges on the tips of the flutes reduce chipping and extend tool life. Also known as corner radius end mills, they work well for mold applications. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are micrograin carbide and center cutting. Helix angle is 30°. Mill diameters 3/8″ and 1/2″ have a flat on the shank for better gripping power. Mill diameter tolerance is –0.001″, –0.002″; corner radius tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Long-life TiN (titanium nitride) coated end mills can be run at higher feeds/speeds and resist heat better than uncoated tools. Maximum working temperature is 1110° F. Color is gold.

Four Flute

To Order: Please specify corner radius from the table.

Miniature Carbide End Mills

Use where short, precise cuts are necessary. Made of premium submicrograin carbide. Shank diameter is 1/8". Overall length is 1 1/2". Two flutes provide better chip clearance, while four flutes produce a finer finish. All are center cutting and have a 30° helix angle. Mill diameter tolerance is ±0.0005".

Square-end end mills allow plunge cuts in a surface. *Short flute* length of cut is the mill diameter multiplied by 1.5. *Regular flute* length of cut is the mill diameter multiplied by 3. *Long flute* length of cut is the mill diameter multiplied by 5.

Ball-end end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds. *Extra-life TiCN (titanium carbonitride)* coating resists wear. Maximum working temperature is 750° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiCN or TiAlN.

High-Performance Carbide End Mills for Titanium

Designed with titanium in mind—three flutes and a 45° helix angle provide superior shearing and chip removal. All are micrograin carbide coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Use on titanium alloys and nickel-based alloys. Max. working temp. is 1470° F. Color is red-violet. All are square end and center cutting for plunge cuts. Mill diameter tolerance is +0.000", –0.003".

For information about end mill cut styles, see page 2503.

High-Performance Carbide End Mills for Mold Steels

Two Flute Ball End

Six Flute Rounded Edge

Get better results milling mold steels at high feeds/speeds. All have a high-temperature AlTiN (aluminum titanium nitride) coating for extended life, heat resistance, and dry or semidry machining. Mill diameter tolerance is +0.000″, –0.001″. Maximum working temperature is 1650° F. Color is purple-gray. Choose end mills based on the Rockwell hardness of material to be machined. *End mills for hardness up to C52* are standard carbide; *end mills for hardness up to C62* are premium sub-micrograin carbide.

Two-flute ball-end end mills provide better chip clearance for rough and finish milling of contours and complex shapes. They are center cutting and have a 15° helix angle.

Six-flute rounded-edge end mills, also known as corner radius end mills, produce a fine finish. They are square end and noncenter cutting. Helix angle is 45°. Corner radius is 0.020″.

High-Performance Carbide End Mills for Stainless Steel and High-Temp. Alloys

Three Flute Rounded Edge

Three Flute Ball End

Five Flute Square End

Machine stainless steel and high-temperature alloys with ease. Made of extra-fine grain carbide with a super-life AlTiN (aluminum titanium nitride) coating for extended life, heat resistance, and higher feeds/speeds in dry applications. End mills are center cutting and have a mill diameter tolerance of +0.000″, –0.002″. Maximum working temperature is 1470° F. Color is purple-gray.

Three-flute end mills provide good chip clearance and have a 35° helix angle. *Rounded-edge* end mills' corner radius is 0.008″-0.010″ for mill diameters 1/8″-3/16″, 0.015″-0.020″ for mill diameters 7/32″-7/16″, and 0.030″-0.035″ for mill diameters 1/2″-1″. *Ball-end* end mills machine rounded details into a workpiece.

Five-flute square-end end mills allow plunge cuts into a surface and produce a fine finish. Helix angle is 45°.

High-Performance Diamond-Coated Carbide End Mills for Nonmetals

Square End

Designed for machining graphite and other nonmetals, diamond-coated tools are stronger, last up to 30 times longer, and can run 2-3 times faster than other carbide end mills. Made of premium sub-micrograin carbide. Four flutes provide a fine finish. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.001″.

Square-end end mills allow plunge cuts. ***Ball-end*** end mills machine rounded details into a workpiece.

Carbide End Mills

For information about end mill cut styles, see page 2503.

High-Performance Carbide End Mills for Aluminum

Two Flute Square End

With their premium extra-fine grain carbide composition and extra-life TiCN (titanium carbonitride) coating, these end mills are engineered to mill aluminum and soft coppers. They resist wear and shock better than other carbide end mills for aluminum. Two flutes provide better chip clearance, while three flutes produce a finer finish. All are center cutting. Helix angle is 45°. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 750° F. Color is purple-gray. ***Square-end*** end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Carbide End Mills for Aluminum

Four Flute

These micrograin carbide end mills machine smooth cuts in aluminum as well as other nonferrous metals and nonmetallic material. They can also be run at higher feeds/speeds than other carbide end mills. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Reduced-Vibration Carbide End Mills

Square End with Chamfer Corner

Unequal spacing between the flutes reduces vibration for smooth, silent machining. Also known as variable-helix end mills, these tools remove large amounts of material and leave a fine finish at high feeds/speeds. All have four flutes and are center cutting. Mill diameter tolerance is +0.000″, –0.002″.

Square-end end mills allow plunge cuts in a surface. They have a super-life TiAlN (titanium aluminum nitride) coating. Maximum working temperature is 1500° F. Color is purple-gray.

Square-end with chamfer corner end mills have a 45° corner chamfer for improved cutting edge strength in roughing cuts. Chamfer width is 0.020″. All have a super-life TiAlN (titanium aluminum nitride) coating. Maximum working temperature is 1500° F. Color is purple-gray.

Ball-end end mills machine rounded details into a workpiece. They have a high-temperature AlTiN (aluminum titanium nitride) coating. Maximum working temperature is 1470° F. Color is blue-gray.

Reduced-Vibration Carbide End Mills for Stainless Steel and High-Temp. Alloys

Finishing

A variable helix angle of 36°-38° reduces vibration for smooth machining. All are solid carbide coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 1650° F. They are square end and center cutting, allowing plunge cuts into a surface.

Roughing end mills remove large amounts of material at high speeds. ***Finishing*** end mills produce a fine finish.

For information about end mill cut styles, see page 2503.

Diamondlike-Coated Carbide End Mills for Nonmetals

Four Flute Square End

The diamondlike carbon coating is very hard and highly abrasion resistant. Tools are premium sub-micrograin carbide for roughing and finishing cuts in composites, green ceramics, carbon fiber, PVC, acrylic, ABS, nylon, PTFE, and fiberglass. Two flutes provide chip clearance, while four flutes produce a finer finish. All are center cutting and have a 33° helix angle. Mill diameter tolerance is ±0.0005″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Miniature Diamondlike-Coated Carbide End Mills for Nonmetals

Square End

Small mill diameters cut fine details in hard-to-reach spots. Their diamondlike carbon coating is very hard and highly abrasion resistant for use on graphite and other nonmetals. They are made of premium sub-micrograin carbide and have three flutes, except 3/16″ and 1/4″ mill diameters have four flutes, for a fine finish. All are center cutting and have a 35° helix angle. Mill diameter tolerance is +0.000″, –0.001″, except 1/8″ to 1/4″ mill diameters are +0.000″, –0.002″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Smooth-Finish Fast-Spiral Carbide End Mills

A high 60° helix angle increases the cutting force while three flutes produce a smooth finish on stainless steel, titanium, and Inconel. All are made of micrograin carbide. They are square end and center cutting, allowing plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.0015″, except 1/8″ is +0.000″, –0.001″.

Long-life TiN (titanium nitride) coated tools last longer than uncoated tools and can be run at higher feeds/speeds. Maximum working temperature is 930° F. Color is gold.

Finishing Carbide End Mills

You won't believe the smoothness of a five-flute finish. End mills also excel at cutting tough-to-machine materials such as stainless steel, titanium, and titanium alloys. Made of premium sub-micrograin carbide, they are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 45°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Extra-life TiCN (titanium carbonitride) coating resists wear. Maximum working temperature is 750° F. Color is light gray.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1650° F. Color is blue-gray.

To Order: For coated end mills, specify coating: TiCN or AlTiN.

Light-Finish Carbide Bur End Mills

Fine

Coarse

Multiple intersecting flutes make these the choice for light stock removal. They can also be used for finishing on heat-treated die steels, stainless steel, and graphite. All are made of micrograin carbide. They are square end and center cutting, allowing plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.003″ for 1/8″ through 1/4″ mill diameters and +0.000″, –0.004″ for all others.

Coarse end mills remove material faster than fine end mills, but leave a rougher finish.

Roughing Carbide End Mills

Remove large amounts of material at high speeds on medium- to high-tensile steels, stainless steels, and high-temp. alloys. All are premium sub-micrograin carbide and have four flutes. They are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0035″.

Long-life TiN (titanium nitride) coated end mills are good for basic milling jobs. Maximum working temperature is 840° F. Color is gold.

Super-life TiAlN (titanium aluminum nitride) coated end mills are best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

Roughing Carbide End Mills for Aluminum

Specially designed for aluminum, these incorporate a staggered pitch angle the full length of the cutting edge for complete chip removal. All are solid carbide and have three flutes. They are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Mill Dia.	Shank Dia.	Lg. of Cut	O'all Lg.

Reduced-Vibration Roughing Carbide End Mills

Four flutes with variable helix angle of 30° to 32° remove large amounts of material and reduce vibration for smooth machining. All are made of solid carbide and are coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Max. working temp. is 1470° F. All are square end and center cutting, allowing for plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.002″.

Square Tool Bit Flat-Surface Cutters

Also known as fly tool cutters, these are used with grind-your-own tool blanks (sold separately on page 2532) for machining flat surfaces. Compared to standard end mills, they make wider cuts, produce less vibration, cut thin materials easily, and can be run at faster speeds. Made of hardened steel.

Straight-Flute Carbide End Mills

Make light cuts on cast iron and other very hard, abrasive materials, as well as on thin sheeting where spiral flutes would lift the material. All are premium sub-micrograin carbide and have two flutes. They are center cutting for plunge cuts. Mill diameter tolerance is +0.000″, –0.002″.

Carbide Drill/Mills

Four Flute

A pointed tip on these tools makes them capable of drilling, slotting, spotting, and other milling operations. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are made of premium sub-micrograin carbide and have a 90° point angle and a 30° helix angle. Mill diameter tolerance is +0.000″, –0.003″.

Coated end mills last longer and can be run at higher feeds/speeds. *Long-life TiN (titanium nitride)* coating has a maximum working temperature of 1110° F. Color is gold. *High-temperature AlTiN (aluminum titanium nitride)* coating is best for very high feeds/speeds. Maximum working temperature is 1450° F. Color is purple-gray.

To Order: For coated end mills, please specify TiN or AlTiN.

Three-piece set includes an uncoated two-flute drill/mill in 1/4″, 3/8″, and 1/2″ mill diameters. Comes in a plastic case.

For information about end mill cut styles, see page 2503.

Replaceable Carbide-Insert End Mills

Use on low-horsepower Bridgeport and similar milling machines. Add positive-rake triangular carbide inserts which can be replaced when worn or chipped (sold separately). Tool body is steel. All are noncenter cutting. ***R8 shanks*** have a 7/16″-20 internal thread.

Carbide inserts have a long-life TiN (titanium nitride) coating and are for use on steel, stainless steel, and nickel. **To Order:** Please specify tip radius: 1/64″, 1/32″, 3/64″, or 1/16″.

Large-Diameter High-Speed Steel Face Milling Cutters

Also known as shell cutters, these tools have a large diameter for face and side milling. All require the use of an R8 shank arbor (sold separately below). Milling cutters are noncenter cutting and have a 30° helix angle. Mill diameter tolerance is +0.015″, –0.000″.

Mill Dia.	Hole Dia.	Face Wd.	No. of Teeth

R8 Shank Arbors for Large-Diameter Face Milling Cutters

An arbor is required to hold large-diameter milling cutters securely in Bridgeport and similar milling machines with an R8 taper spindle. All are heat-treated alloy steel. Shank has an internal 7/16″-20 thread.

Large-Diameter Replaceable Carbide-Insert Face Milling Cutters

Create versatile face mills, also known as indexable face mills, by combining a cutter body and carbide inserts (both sold separately).

Cutter Bodies

Remove metal 2-5 times faster with these carbide cutter bodies than comparable high-speed steel face mills. An R8 shank arbor is required (sold separately above). All cutter bodies accept octagon, round, and square carbide inserts (sold separately).

Shown with Octagon Inserts (Sold Separately)

Carbide Inserts

Octagon inserts are for general face milling. They generate smooth cuts with eight cutting edges.

Round inserts are the strongest. Use for roughing and heavy cuts.

Square inserts are used when a shoulder is required, with or without a radius.

To Order: Please specify shape.

For Use On	Available Shapes		
Carbon Steel	Octagon, Round, Square	8826A31	$18.06

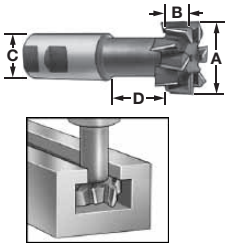
T-Slot Cutters



Mill T-slots in machine tool tables, indexing tables, and other work-holding surfaces. All are made of high-speed steel and have staggered teeth for efficient chip clearance. Cutter diameter tolerance is +0.000″, –0.010″. Face width tolerance is +0.000″, –0.005″. For T-slot bolts, see page 3180.

Note: Before using the cutter, mill a slot in the work surface so the neck of the cutter can enter the cut.

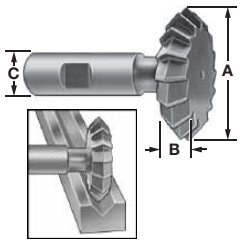
V-Slot Cutters



A single pass cuts a V-shaped slot. Also known as double-angle milling cutters, they can also mill notches, serrations, angles, and chamfers. All are high-speed steel. Overall length ranges from 2 3/8″ to 3 1/8″. Cutter diameter and face width tolerances are +0.015″, –0.000″.

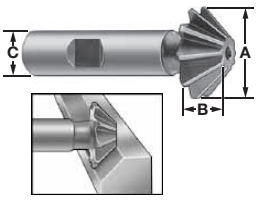
Bevel Cutters



Make uniform bevel cuts in your workpieces. All cutters are high-speed steel with a long-life TiN (titanium nitride) coating for heat resistance and faster feeds/speeds. Overall length ranges from 2 1/8″ to 2 3/4″. Cutter diameter tolerance is +0.010″, –0.000″. Maximum working temperature is 1100° F. Color is gold.

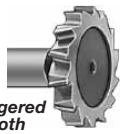
Keyseat Cutters

Straight Tooth



Staggered Tooth

Also known as Woodruff keyseat cutters, tools mill precise notches in shafts. They can also be used for slot milling. Cutters have a 1/2″ diameter shank and an overall length of 2 1/16″ to 2 3/8″. Face width tolerance is +0.0000″, –0.0010″.

Straight-tooth cutters work well on high-carbon steel and cast iron. *Carbide* cutters are premium sub-micrograin carbide for fast, smooth cuts. ***Staggered-tooth*** cutters have an alternating right- and left-hand helix for efficient cuts in mild steel, aluminum, and brass.

Narrow-Width Keyseat Cutters

Cut narrow Woodruff keyseats. All cutters are high-speed steel and have straight teeth. Shank is 2″ long from under the head and has a 1/2″ diameter. Face width tolerance is +0.0000″, –0.0005″.

Also Available: Cobalt steel cutters. Please ask for 2970A81 and specify face width and cutter diameter.

Straight- and Staggered-Tooth Milling Cutters

With peripheral and side teeth, cutters remove chips for consistent cutting width. All are made of high-speed steel and have a standard keyway. Cutter thickness tolerance is ±0.001″.

Straight-tooth cutters are thinner, have more teeth, and leave a finer finish than staggered-tooth cutters. Use for thin slots and plunge cuts. Cutter diameter tolerance is ±0.015″.

Staggered-tooth cutters are for deep slots and other applications requiring maximum chip clearance. Also known as side-milling cutters, they have alternating right- and left-hand helical teeth to remove more metal at higher feeds/speeds than straight-tooth cutters. The keyway lets you interlock two or more cutters of the same diameter so you can customize the thickness of the cutter to match the slot width you require. Cutter diameter tolerance is +0.015″, –0.000″.

Vibration-Reducing Arbors for Milling and Slitting Cutters

A low-profile cap on these arbors absorbs vibration and adds support and rigidity. Made of heat-treated steel. Use with straight-tooth milling cutters on this page and the slitting cutters on page 2528.

High-precision arbors are for use with carbide cutters and high-rpm CNC machines.

Three-piece arbor sets include a wood stand.

Arbors for Slitting Cutters

2807A22

2807A41

2807A1

2807A33

Arbors hold and center your slitting cutters. All are made of steel, have spring-loaded centering, and include a hex key for installation. Use with high-speed steel slitting cutters on page 2528.

2807A33 has a 5/16″-24 thread.

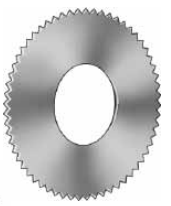
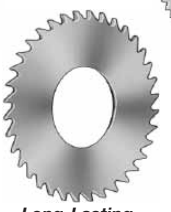
Slitting Cutters

General Purpose High-Speed Steel



Smooth Finish High-Speed Steel



Long-Lasting Solid Carbide

Also known as metal slitting saws, these cutters do not have side teeth, making them the choice for thin slitting and slotting jobs. They are ground concave for free cutting through your workpiece. See page 2527 for arbors.

When choosing a cutter, consider the diameter and the number of teeth. A cutter with a smaller diameter provides better rigidity.

To determine how many teeth your cutter should have, follow these guidelines:

1. Always have at least three teeth in the cut.
2. Use more teeth for thin and hard materials.
3. Use fewer teeth for soft materials and larger sections.

General purpose high-speed steel cutters are best for cutoff, slitting, and slotting applications. Cutters with a 2¾″ dia. are also known as screw slotting saws; other diameters are also known as plain metal slitting saws. All have a standard keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.001″.

Smooth-finish high-speed steel cutters are also known as jewelers' slotting saws. Use for very thin materials, such as wire, tubing, and extrusions requiring delicate cuts. Cutters do not have a keyway, except those with a 1″ hole diameter have a standard keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.001″.

Long-lasting solid carbide cutters can be used for climb (down) milling rather than conventional (up) milling for better tooth engagement and finish. Cutters do not have a keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.00025″.

Gear Cutters

Mill spur or pinion gears with a 14½° pressure angle. Also known as involute gear cutters, cutters may be sharpened repeatedly. All are high-speed steel and have a standard keyway. Determine the cutter number you need based on the number of teeth in your gear.

To Order: Please specify the cutter number (1-8) from the chart at right.

No. of Teeth to Be Cut	Please Specify Cutter No.	No. of Teeth to Be Cut	Please Specify Cutter No.

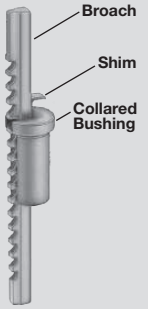
About Keyway Broaches

Keyway broaches are straight, multitoothed, high-speed steel cutting tools for making keyways. Each tooth's cutting edge is a few thousandths of an inch larger than the one before. The cutting edges increase until they reach the required size. Broaches are for use in hand and hydraulic arbor presses and are great for maintenance and short-run production operations.

Bushings for keyway broaches rest inside the arbor hole of your workpiece. They have a slot that works as a guide for broaches. With bushings, you can use a single broach in a variety of arbor holes. Bushings for smaller arbor holes are collared for easier handling. The collar rests on top of the workpiece rather than being supported from below.

Shims for keyway broaches slide between the broach and bushing to set the depth of the keyway.

Note: Broaches have a style designation of A, B, B1, C, C1, D, D1, or E. For proper fit, broaches, bushings, and shims used together must have the same letter designation.



Keyway Broach Sets

Sets contain combinations of broaches and bushings and include the necessary shims. They come in a wood box.

Shims for Keyway Broaches

When broaching in multiple passes, shims are necessary to ensure full keyway depth. All are made of steel. Use with the keyway broaches on page 2530.

Keyway Broaches

Cut precision keyways with these push-style broaches. All are made of high-speed steel and include the required shims. A bushing is also required (sold separately on this page). Metric broaches meet ISO standards.

Long-life TiN (titanium nitride) coated broaches offer increased hardness, heat resistance, and lubricity for extended life.

Bushings for Keyway Broaches

Collared

Plain

Use individual keyway broaches in a variety of arbor hole sizes. Bushings act as guides to ensure rigid and accurate keyway cutting. Use with the keyway broaches on this page. Made of steel.

To Order: Please specify bushing diameter from those listed in the table.

Square and Hexagon Broaches

Square

Hexagon

Transform round holes into finely finished square- and hex-shaped holes. Broaches are push style and made of high-speed steel. Square/hex size tolerance is ±0.0005" for inch sizes; –0.0102 mm to +0.0127 mm for metric sizes. Tolerances are based on actual size. Drill a pilot hole into your workpiece using the drill size listed. Use with hand and hydraulic arbor presses. No shims or bushings are required.

Square broaches have a square shank.

Hexagon broaches have a round shank, except 5/8" and larger hex size have a hex shank.

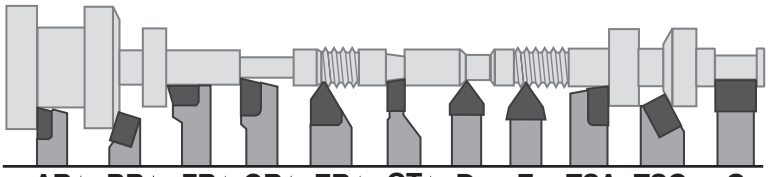
Carbide-Tipped Lathe Tools

Right Handed

Left Handed



★ Right-hand tool shown.

A carbide tip is brazed onto a ground-steel shank to provide the strength needed for precise lathe work. The carbide tip can be sharpened when it dulls. When used in a lathe, right-handed tools cut from right to left, left-handed tools cut from left to right, and non-handed tools can cut from either direction.

Tools for steel have a grade C-6 carbide tip.

Tools for brass, bronze, and aluminum have a grade C-2 carbide tip. They're the best choice for cutting nonferrous materials, as well as cast iron.

Tools for all materials provide a good finish on materials such as plastic, stainless steel, titanium, and nickel alloys, making them useful when you're not sure what material you'll encounter next. They have a micrograin carbide tip.

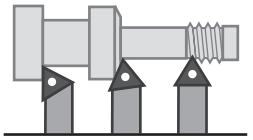
Never-Sharpen Carbide-Insert Lathe Tools



★Right-hand tool shown.

Right Handed

Left Handed

When one point becomes dull, rotate the carbide insert on these lathe tools to use a sharp point. When all three points are dull, replace only the insert and not the tool. All tools include a carbide insert for use on steel. The insert has a 1/64″ tip radius, a built-in chipbreaker, and a single-side cutting edge (also known as positive rake).

Styles AR and AL are for turning and facing to a 90° square shoulder.

Styles BR and BL are for turning and facing where a square shoulder is not required.

Style E is for turning, cutting threads, boring, facing, chamfering, and V-grooving.

Replacement carbide inserts for steel are grade C-5; **long-life for steel** are grade C-5 with a TiN (titanium nitride) coating that extends insert life; and **for brass, bronze, and aluminum** are grade C-2.

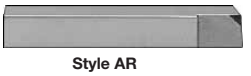
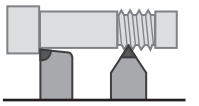
Fast-Cutting Diamond-Tipped Lathe Tools



Style AR

Style AL



★Right-hand tool shown.

With a diamond tip, these tools can be used at faster speeds than carbide-tipped tools on nonferrous and nonmetallic materials. They cut aluminum, copper, fiberglass, rubber, ceramics, plastics, and carbon. Diamond tip length for all tools is 0.1″. **Styles AR and AL** are for turning, facing, and boring. **Style E** is for threading, chamfering, and undercutting.

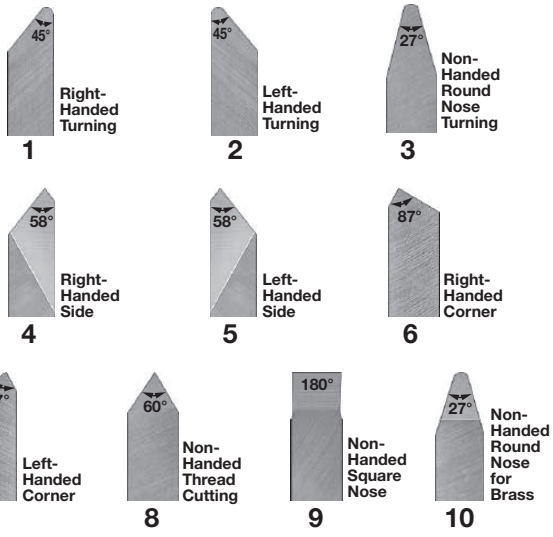
High-Speed Steel Lathe Tools



No matter what material you need to cut, these high-speed steel tools can get the job done. **Style 10** is the best choice for use on brass because of its shape. **Styles 1, 2, 3, and 10** have a tip radius of 1/16"; others do not have a tip radius.

10-piece sets contain one each of the bit styles shown above.

Lathe Tools

Shank Size, sq.	O'all Lg.	Style 1	Style 2	Style 3	Style 4	Style 5

10-Piece Lathe Tool Sets

1/4" Sq. x 2 1/2" O'all Lg.	3364A12	$140.80
5/16" Sq. x 2 1/2" O'all Lg.	3364A13	200.31
3/8" Sq. x 3" O'all Lg.	3364A14	281.61

Lathe Tools for Thread Cutting

Make standard 60° threads from 8 to 36 pitch. These tools come with one insert for use on steel and stainless steel and one insert for use on aluminum, brass, bronze, and plastic. Tip radius is 0.004". **3/8" and 3/4" shank size tools** make external threads only. **1/2" shank size tool** makes external threads or internal threads in a 1 3/8" min. dia. hole.

Lathe Tools—Include two high-speed steel inserts

Shank Size, sq.	O'all Lg.	Insert Size		
3/8"	4 1/2"	3/8"	3264A11	$91.54

3/4"	4 3/8"	3/8"	3264A13	107.69

Replacement Inserts

For Use On		
Stainless Steel, Steel	3264A21	$13.77
Aluminum, Brass, Bronze, Plastic	3264A22	15.00

Hand Knurling Tools

Bring this tool with you for on-the-job knurling of steel and stainless steel. It includes three straight-pattern knurls with 25 teeth per inch. Knurls are high-speed steel.

Knurling Tool

Knurling Cap.	Knurl (Knurl Dia.)	Knurl (Face Wd.)	Knurl (Hole Dia.)	O'all Lg.		
1/8"-1"	1/2"	1/4"	3/16"	12 1/2"	3328A1	$161.17

Replacement Knurls (Set of 3)—Choose the teeth per inch (TPI)

Diamond Pattern—16, 25, or 33 TPI	3328A15	$47.08
Straight Pattern—16, 25, or 33 TPI	3328A16	47.08

Lathe Knurling Tools

Attach these tools directly to your lathe for more powerful knurling than hand tools. They come with a pair of knurls with 14 teeth per inch, a pair with 21 teeth per inch, and a pair with 33 teeth per inch. All the included knurls have a right- and left-hand spiral to produce a male diamond pattern. They are made of high-speed steel and can be used on any material. For replacement knurls, see High-Speed Steel and Cobalt Steel Knurls sold below.

Shank Wd.	Shank Ht.	Knurling Cap.	Knurl (Knurl Dia.)	Knurl (Face Wd.)	Knurl (Hole Dia.)	O'all Lg.		
5/16"	3/4"	1/4" and Up	5/8"	5/16"	7/32"	6 1/2"	3332A51	$303.88

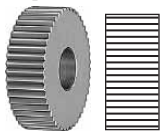
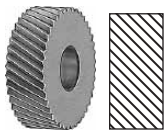
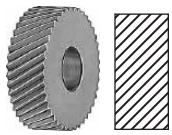
High-Speed Steel and Cobalt Steel Knurls



Straight



Right-Hand Spiral



Left-Hand Spiral

Create patterns on your workpiece to improve your grip. These knurls have a ground finish for close tolerances, and their smooth teeth provide a clean knurled surface. To produce a diamond pattern, choose one right-hand and one left-hand spiral knurl.

High-Speed Steel—These knurls are made of M-1 high-speed steel and can be used on any material, except cast iron.

Cobalt Steel—Made of M-42 tool steel, these knurls are harder and last longer than high-speed steel.

Long-Life Cobalt Steel—With a convex shape, these knurls are long-lasting and produce a smoother finish than other knurls. Made of M-42 tool steel.

Knurl Dia.	Face Wd.	Hole Dia.	Choose the Teeth per Inch	Straight		Right-Hand Spiral		Left-Hand Spiral

Carbide Inserts

When the cutting edge becomes dull, rotate these carbide inserts in their tool holder to use a sharp edge. A larger tip radius provides a stronger cutting edge than a smaller tip radius, but it results in a rougher finish. Inserts for steel, stainless steel, nickel and titanium, cast iron, and all materials are coated carbide. Inserts for brass, bronze, and aluminum are uncoated carbide.

Long Life—Also known as negative-rake inserts, these have cutting edges on both the front and back to give you twice the life of comparable smooth-finish inserts. They have 90° corners and sit at an angle in the tool holder to provide strong cutting force in heavy duty applications.

Smooth Finish—Also called positive-rake inserts, these inserts have corners that are smaller than 90° for more clearance than comparable long-life inserts when machining inside workpieces. They sit flat in the holder and generate a lower cutting force than long-life inserts, providing a better finish.

Cutoff Blades & Boring Tools

High-Speed Steel Cutoff Blades

One End Beveled 10° and One End Square

Both Ends Beveled 10°

With beveled and ground edges, these blades cut through a range of materials. Blades with one end beveled 10° and one end square fit 31805A cutoff blade holders on page 2539. Blades with both ends beveled 10° fit 3307A cutoff blade holders on page 2539.

Blades for steel, brass, and aluminum are M-2 tool steel. **Blades for stainless steel and nickel** are M-42 tool steel to withstand high heat while cutting. **Blades for all metals and plastic** are wear-resistant T-15 tool steel.

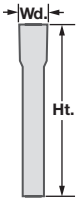
Chipbreaking High-Speed Steel Cutoff Blades



End View of Blade

The T-shape of these tools allows chips to move away from the cut, which reduces friction for fast cutting. Use them with 31805A cutoff blade tool holders on page 2539.

Blades for steel, brass, and aluminum are M-2 tool steel. **Blades for stainless steel** are M-35 steel and can be used on materials that are difficult to machine.

Grind-Your-Own Boring Tools

Create the exact boring tool you need. The bit holders have one end angled at 45° and one at 90°. They are made of steel and are suitable for right- and left-hand use. The tool bits are M-2 tool steel, which cuts steel, aluminum, brass, and bronze. Grind them to the specific shape you need. Use bit holders and tool bits with the Quick-Change Tool Posts and Holders on page 2539.

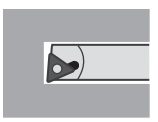
High-Performance Carbide-Insert Boring Tools



Combine these holders and replaceable carbide inserts to make a tool for the toughest boring applications on materials such as steel, stainless steel, and nickel-based alloys. **Insert holders** have a round shank with a through hole for coolant. All are right-handed. **Long-life carbide inserts** have a TiN (titanium nitride) coating for extended tool life, and they have a built-in chipbreaker.

To Order: For replacement torx screws and keys, please specify torx screw or key and the insert holder part number.

Replacement Torx Screws and Keys 3315A91

Carbide-Insert Cutoff and Grooving Tools

Versatile and time saving, these tools have a carbide insert for cutting and grooving applications. When it dulls, you change only the carbide insert instead of the entire blade.

Use a carbide insert and a shank-style insert holder with workpieces up to 3″ in dia. For larger diameter workpieces, combine a carbide insert, a blade-style insert holder, and a tool block for blade-style insert holder.

Carbide Inserts

Inserts for steel are Grade C-5 carbide for general machining. **Inserts for steel and stainless steel** are TiN (titanium nitride) coated Grade C-5 carbide so they last longer and run at faster speeds than uncoated inserts. **Inserts for brass, bronze, and aluminum** are Grade C-2 carbide, which is best for nonferrous metals as well as cast iron.

Never-Sharpen Carbide-Insert Boring Tools

When one point dulls, rotate the replaceable carbide insert for a new cutting point.

Boring tools include a carbide insert for steel with a 1/64″ radius and built-in chipbreaker. **Sets** include one each of the tools listed.

Carbide inserts have a built-in chipbreaker. **Inserts for steel** are Grade C-5 carbide for general purpose machining. **Inserts for brass, bronze, and aluminum** are Grade C-2 carbide, which is best for nonferrous metals as well as cast iron.

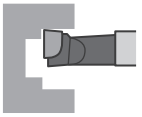
Carbide-Tipped Boring Tools

Combining strength and rigidity, these tools are the right choice for all types of boring operations. They have an offset taper that provides additional clearance to prevent chips from clogging the hole. Their round shank is ground to fit standard holders.

Standard Depth



All tools are right handed. **Tools for steel** have a Grade C-6 carbide tip for general machining. **Tools for brass, bronze, and aluminum** have a Grade C-2 carbide tip, which is best for nonferrous metals as well as cast iron.

Sets include one of each tool listed under the shank diameters.

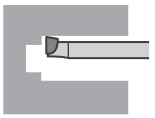
Deep Boring



The long steel shank bores deeper than standard-depth tools, and it can be cut to length depending on the depth of the hole you need. Use on steel, stainless steel, nickel alloys, and titanium. All have a micrograin carbide tip, which is tougher than Grade C-6 and Grade C-2 carbide.

5-pc. set includes one tool each in 1/4", 3/8", 1/2", 5/8", and 3/4" shank diameters.

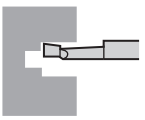
Small-Diameter Solid-Carbide Boring Tools



The smallest boring tools we offer. All are solid micrograin carbide and have flats on their shanks for quick setups. They are right handed. Use on most metals and plastics.

6-pc. set includes one each of the sizes marked with a ★ under 1/8" shank diameter.

Cutoff Blade Holders

Straight Shank

Right-Hand Offset

Place your cutoff blade into a holder to reduce breakage and keep it firmly in place in your lathe. Holders are made of alloy steel and come with a wrench. They adjust so you can modify blade length. Use with blades that have a 10° bevel on each end. Cutting tools are not included (please see page 2536).

To Order: Please specify straight shank or right-hand offset.

Quick-Change Tool Posts and Holders

Position and secure your tools on manual and CNC lathes. Slide-in dovetail mounts on the tool posts allow you to quickly change from one tool holder to another. Posts and holders (sold separately) are interchangeable with systems from Aloris, Dorian, and Armstrong. Use with cutting tools (sold separately) that have a shank diameter that matches the tool holder capacity.

Tool Posts

Posts have a handle for positioning and two slide-in dovetail mounts for tool holder changes. The mounts are set 90° apart so you can mount tool holders on either side. A locking system eliminates vibration and ensures repeated accuracy within millionths of an inch. All tool posts include a T-bolt for mounting on your lathe.

Tool Holders

A height-adjustment screw provides a secure fit every time without shimming.

Square-Shank Tool Holders—Grip shanks close to the post for good rigidity. Use with high-speed steel and carbide square-shank tools.

Square- and Round-Shank Tool Holders—Hold high-speed steel and carbide square-shank tools. They also have a V-groove that enables them to grip round-shank boring tools of the same capacity, except 31805A36 round shank capacity is 13/16″.

Heavy Duty Round-Shank Tool Holders—Four flat-head screws lock down on the tool for maximum rigidity.

Cutoff Blade Holders—Use with standard beveled blades with one beveled end, T-shaped cutoff blades, and high-speed steel blades.

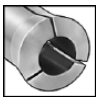
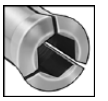
5C, 16C, 3J, and R8 Collets

5C Collet

R8 Collet



Round



Hexagon

Square

The most popular collets we offer, these are used for machining a large number of parts that have the same diameter. All have slots in the body that allow them to tightly grip your workpiece. The diameter of the workpiece should be within +0.000″, –0.004″ of the collet size. Collets up to 13/32″ (11 mm) have an accuracy of 0.0007″; all others have an accuracy of 0.0011″.

5C Collets—Main body diameter is 1 1/4″. Overall length is 3.270″. They have 1.041″×24 internal right-hand threads and 1.238″×20 external right-hand threads.

16C Collets—Main body diameter is 1.89″. Overall length is 4.31″. They have 1 11/16″×20 internal right-hand threads and M47.5×1.75 external right-hand threads.

3J Collets—Main body diameter is 2″. Overall length is 3 3/4″. They have 1.988″×20 external right-hand threads.

R8 Collets—Main body diameter is 0.95″. Overall length is 4.089″. They have 0.4375″×20 internal right-hand threads.

Machine-Your-Own 5C, 16C, and 3J Collets

Also known as emergency collets, their soft face allows you to bore or machine an opening. They are especially useful for workpieces that are an unusual size and shape. All have a 1/16″ dia. pilot hole on the face. 5C collets have 1.041″×24 right-hand internal threads and 1.238″×20 right-hand external threads, 16C collets have 1 11/16″-20 right-hand internal threads and M47.5 × 1.75 external right-hand threads, and 3J collets have 1.988-20 right-hand external threads.

Steel collets have a hardened body and threads. **Brass collet** is recommended for holding soft and delicate workpieces.

Large-Diameter Machine-Your-Own 5C Collets

Collet

Replaceable-Head Collet and 5C Body

Create the setup you need with these collets that have a large head to handle unusual or odd-shaped workpieces and a soft face for machining.

Collets—Also known as step collets, these are made of steel and have a hardened body. Collets have 1.238″×20 right-hand external threads.

Replaceable-Head Collets—Save time when switching to a new workpiece. Also known as clutch collets, these allow you to switch head sizes instead of replacing the entire collet. Overall length refers to the length of the collet when assembled with the required 5C body (sold separately).

5C Body for Replaceable-Head Collets—Has 1.238″×20 right-hand external threads. Made of steel.

Inside-Grip 5C Collets

Eliminate the need for a mandrel—these collets expand to hold the inside of your workpiece. They have 1.234″×20 external right-hand threads, which are the same as 5C collets. They hold concentricity within 0.0005″ during machining. All are made of steel. Use on any machine with a 5C spindle.

Lathe Chuck to 5C Collet Adapters

When a job calls for a 5C collet, save time by using this adapter instead of removing your lathe chuck. Adapter is made of hardened steel and fits most conventional lathe chucks. A lock at the front of the adapter holds collets in place. A hex key is included. Often used for short-production runs on a lathe or CNC machine.

Dia.	Lg.		
3″	3 1/2″	3302A21	$437.50

5C Collet Fixtures for Milling Machines

These fixtures use 5C collets to grip and release parts on your milling machine. 5C collets are sold separately.

Manual Collet Fixture

A spring-loaded handle allows you to operate this fixture from any position. It is made of cast iron and has four 11/16″ slots for mounting vertically or horizontally. Maximum collet size is 1 1/16″.

Ht.	Wd.	Dp.		
4″	5″	3 3/4″	3174A42	$254.71

Compact Air-Operated Collet Fixture

Small enough to mount multiple fixtures in limited space, this fixture has a maximum collet size of 1 1/16″. It has four 3/8″ dia. mounting holes and two air ports (1/4″-18 straight pipe thread, male). Holding power is 7 1/2 times the air-line pressure. Housing is aluminum.

Compact air-operated collet fixture kit includes the compact air-operated fixture, four-way foot-operated air valve, and three air hoses.

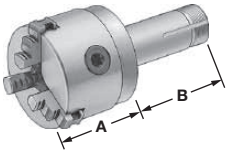
5 1/2″	3 1/4″	150	5317A13	$268.29
Compact Air-Operated Collet Fixture Kit			5317A21	437.81

5C Collet to Lathe Chuck Adapters



No need to remove the spindle and install a chuck when your workpiece is too large for a 5C collet. Install one of these self-centering adapters in your 5C spindle and its three jaws securely grasp the workpiece. Adapters have 7/8″×20 internal right-hand threads and 1.238″×20 external right-hand threads. Two sets of hardened steel jaws (internal and external) and a chuck key are included.

Adjustable 5C Collet Stops

Collet Stop

Collet Stop with Optional Ejector

Keep parts from being pushed back into the collet while machining. Stops have an aluminum and plastic body and an adjustable rod with a set screw that allows you to set the appropriate depth for your 5C collet. Slide the expanding sleeve into the back of your collet and tighten the nut with the included wrench. Use with 5C collets that have internal or external threads.

Optional ejector has a spring plunger for taking out small parts that are difficult to remove.

Stop for Collets Up to 63/64″ Dia.	3256A21	$27.82
Stop for 1″ to 1 1/16″ Dia. Collets	3256A25	27.82
Optional Ejector	3256A31	33.82

5C Collet Block Chucks

Pair block chucks with a 5C collet to hold your workpiece, and you can accurately machine different shapes or drill crossholes at 60°, 90°, and 120°. All are made of steel. A tightening ring to close the collet is included.

The 5C collet capacity is 3/64″ to 1 1/8″ for round collets, 1/8″ to 3/4″ for square collets, and 1/8″ to 7/8″ for hexagon collets.

Optional lever collet closer replaces the tightening ring for faster opening and closing.

ER-16, ER-32, and 100-TG Collets

ER-32 Collet

100-TG Collet

Collet Chuck for ER-16 Collets

These collets are commonly used on swiss-style CNC machines, milling machines, and drills. All are made of hardened steel.

ER-16 collets have a collet diameter that compresses up to approximately 1/32". Tolerance at the collet nose is 0.0001". Maximum body diameter is 0.677" and overall length is 1.06".

ER-32 collets have a collet diameter that compresses up to approximately 1/32". Tolerance at the collet nose is 0.0001". Maximum body diameter is 1.30" and overall length is 1.57".

ER-32 tap collets have a square back end to securely hold taps. Collet diameters compress up to approximately 1/32". Tolerance at the collet nose is 0.0001". Maximum body diameter is 1.30" and overall length is 1.57".

100-TG collets work on large-size workpieces and tools. Collet diameters compress approximately 1/64". Tolerance at the collet nose is 0.0003". Maximum body diameter is 1.278" and overall length is 2.386".

Collet chucks and nut wrenches—Collet chucks securely hold collets. Taper is CAT 40. Use a nut wrench to tighten the chuck nut.

Solid Mandrels

When centers cannot be used, mandrels support hollow or bored workpieces during machining of the outside diameter. Use an arbor press to tighten the mandrel into the hole of the workpiece. Made of steel. They are tapered, have flat ends, and are 0.0005" undersized on the tapered end. Taper is 0.0005" per inch over entire body.

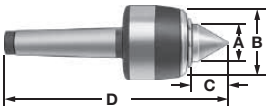
Live Centers



With bearings to support their free-turning point, live centers are exceptionally accurate and produce minimal friction between the center and your work. For increased tool life, the bearings are lubricated and sealed to protect them from fluids and chips. All centers have steel points with a 60° angle.

Maximum rpm is 6,000 for Morse Tapers 1 and 2; 5,000 for Morse Taper 3; 4,000 for Morse Taper 4, except Standard is 4,500; and 3,500 for Morse Taper 5. Please see page 2443 for Morse Taper dimensions.

Economy—For intermittent use on manual lathes. The point is ground for accuracy to ±0.0002" TIR between the shank and the point.

Standard—For continuous use, these have a high load capacity for turning heavier parts and reducing vibration. The body and point are hardened for extra strength and wear resistance. Use on manual and CNC lathes. Point is ground for accuracy to ±0.00005" TIR between the shank and the point.

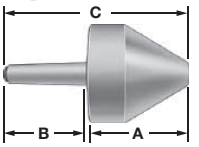
Pipe and Tubing Live Centers



Also known as bull-nose centers, these have a wide head to hold pipe and large-diameter tubing. They have ball and roller bearings for a free-turning point. They consist of an arbor with a snug-fitting head that is 1" dia. at the tip and 4" dia. at the base. All are made of hardened steel. Please see page 2443 for Morse Taper dimensions.

Morse Taper	Point Lg. (A)	Shank Lg. (B)	O'all Lg. (C)

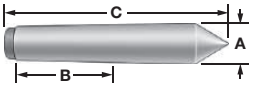
4	5 29/32"	4 1/16"	8 11/32"	3265A23	604.86
5	6 29/32"	5 3/16"	9 15/32"	3265A24	604.86

Dead Centers



Commonly used in grinders, dead centers stay stationary and support the end of your workpiece in high-speed turning applications where friction is not a concern. They have a 60° angle and accuracy to ±0.00005" TIR between the shank and the point. Made of hardened steel. Please see page 2443 for Morse Taper dimensions.

Carbide-tipped dead centers have better wear resistance than steel centers.

Morse Taper	Point Dia. (A)	Taper Lg. (B)	O'all Lg. (C)	Steel		Carbide Tipped

Expanding-End Mandrels

Also known as arbors, the end on these mandrels expands 0.002" to tightly hold the inside diameter of your workpiece without the use of an arbor press. Made of steel. Use with milling machines, lathes, and grinders.

Body Dia.	Shank Dia.	O'all Lg.			Body Dia.	Shank Dia.	O'all Lg.

8-Pc. Set—Includes 1/4"-1 1/4" mandrel sizes								2779A19	83.71

Wide-Diameter Range Mandrels

With an expanding sleeve that holds workpieces in a range of diameters, these mandrels are more versatile than solid and expanding-end mandrels. Also known as arbors, they have a steel tapered body and expanding sleeve that is accurate to 0.001". The sleeve mounts on the body, resulting in a large bearing surface that provides a strong grip and prevents vibration.

Mandrel OD ranges from 1/2"-9/16" to 7/8"-1" include one expanding sleeve.

Mandrel OD ranges from 1"-1 1/4" to 2 3/4"-3 3/4" have two expanding sleeves.

Mandrel OD Range	O'all Lg.	Sleeve Lg.		
1/2"-9/16"	5"	2 1/2"	3276A31	$38.84

Lathe Chuck Wrenches

The long T-handle on these wrenches gives you the leverage you need to open tight lathe chucks. They're also known as lathe chuck keys.

Self-ejecting wrenches prevent you from leaving the key in the machine by automatically coming out of the chuck when hand pressure is released.

Square Size	Handle Lg.	O'all Ht.	Standard		Self Ejecting

Lathe Drivers

A set screw grips your workpiece and the bent tail connects to your lathe to spin the workpiece. Also known as lathe dogs, these drivers are used to turn your workpiece when you are machining between centers.

Lathe Guards

Lathe Chuck Guards

Block chips while maintaining an unobstructed view of your workpiece.

Complete guards have a 3/16" thick clear plastic shield and mounting bracket with mounting hardware included. They can be locked in the swing-away or down position.

Optional headstock mounting bracket (Style 1) allows mounting on the top or back of lathe headstock.

Optional headstock extension mounting bracket (Style 2) can be mounted on the top or back of lathe headstock, and it has an extension tube.

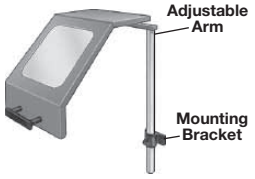
Base Bracket (Included)

Optional Style 1 Bracket

Optional Style 2 Bracket

Cutting-Point Lathe Guards

Cover the spot where your tools cut the workpiece to protect yourself from flying chips and coolant splash. Guards have a heavy gauge steel frame and a 3/16" thick clear polycarbonate window that provides a clear view of your workpiece. The front panel lifts for quick access. Guards mount and travel on the cross slides and are fully adjustable in all directions. The adjustable arm swivels and the mounting bracket adjusts vertically. Both lock for easy positioning.



Max. Chuck Dia.	Panel Size, Lg. x Wd.	Window Size, Ht. x Wd.		
20"	13" x 11 7/8"	8 1/2" x 8 1/2"	32635A31	$273.52
28"	14 1/2" x 14"	10 3/4" x 9 3/4"	32635A32	299.85

3D Prototype Printers

Save time going from concept to production when you create your own models and prototypes. These printers convert digital files and lay down thin layers of plastic material to create your part in 3D. Minimum printable feature is 0.0039". Accuracy is within 0.0004". Printers operate on 120/240 volts AC and include a cord with plug.

PLA printer has USB, Ethernet, and WiFi connectivity. The included software converts .sti and .obj files to printable .makerbot files. It offers single-color printing and includes a spool of white PLA plastic. PLA is best for large parts and has a glossier finish than ABS.

ABS printer has USB and SD card connectivity. The included software converts .stl and .obj files to printable .x3g files. It offers dual-color printing and includes a spool of natural ABS plastic. ABS is stronger than PLA and is good for designs that have interlocking pieces.

Replacement plastic spools allow you to print in different colors.

For Use With	Overall Size, Lg. x Wd. x Ht.	Maximum Print Size, Lg. x Wd. x Ht.	Printers		Replacement Plastic Spools Available Colors

General Purpose Taps

For Starting Threads

For Through-Hole Threading

For Closed-End Hole Threading

These taps are made of uncoated high-speed steel and are for use on most metals and plastics. Also known as hand taps, use them with a tap wrench.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

For drill bit size equivalents, see page 2544.

General Purpose Taps *(Continued from previous page)*

For Starting Threads

For Through-Hole Threading

For Closed-End Hole Threading

These taps are made of uncoated high-speed steel and are for use on most metals and plastics. Also known as hand taps, use them with a tap wrench.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

General Purpose Taps *(Continued from previous page)*

These taps are made of uncoated high-speed steel and are for use on most metals and plastics. Also known as hand taps, use them with a tap wrench.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

Thread Repairing Taps

For Starting Threads

For Through-Hole Threading

For Closed-End Hole Threading

Also known as hand taps, use these with a tap wrench to repair rusted and damaged threads on most metals and plastics. Taps are uncoated carbon steel.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish repairing of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading repair threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

Long-Life General Purpose Taps

For Starting Threads

For Through-Hole Threading

For Closed-End Hole Threading

Coated to extend tap life, these high-speed steel taps are for use on most metals and plastics. They're also known as hand taps and are for use with a tap wrench.

Long Life—Coated with titanium nitride (TiN), these taps last up to two times longer than uncoated taps.

Extra-Long Life—These taps are coated with titanium carbonitride (TiCN) to last up to three times longer than uncoated taps.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

Long-Life General Purpose Taps *(Continued from previous page)*

For Starting Threads

For Through-Hole Threading

For Closed-End Hole Threading

Coated to extend tap life, these high-speed steel taps are for use on most metals and plastics. They're also known as hand taps and are for use with a tap wrench.

Long Life—Coated with titanium nitride (TiN), these taps last up to two times longer than uncoated taps.

Extra-Long Life—These taps are coated with titanium carbonitride (TiCN) to last up to three times longer than uncoated taps.

Taps for starting threads have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Tap sets include a starting, through-hole, and closed-end hole tap.

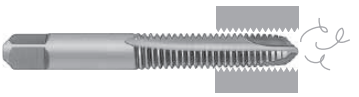
Machine Tool Taps for Through-Hole Threading



These taps have straight flutes with a spiral point that pushes chips ahead of the tap and out of the hole. They're also known as gun taps. All are made of high-speed steel and are for use on most metals and plastics. Use these plug-chamfer taps for start-to-finish threading of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole. Drive them with a drill press or CNC machine.

Standard—Taps are uncoated.

Long Life—Coated with titanium nitride (TiN), these taps last up to two times longer than uncoated taps.

Extra-Long Life—Coated with titanium carbonitride (TiCN), these last up to three times longer than uncoated taps.

Machine Tool Taps for Closed-End Hole Threading

These taps have spiral flutes that pull chips back toward the tap. All are made of high-speed steel. Drive them with a drill press or CNC machine.

Standard—These uncoated taps are for use on nonferrous metals and plastics.

Long Life—Coated with titanium nitride (TiN), these taps last up to two times longer than uncoated taps. Use them on most metals and plastics.

Plug-chamfer taps are for starting holes. They have 3-5 tapered threads at the tip to guide the tap into the hole.

Bottoming-chamfer taps thread close to the bottom of closed-end holes. They have 1-2 tapered threads to guide the tap into the hole, but they're not as good for starting threads.

Taps for Hardened Steel and Nickel

Use these hand taps with a tap wrench. They're cobalt steel for cutting through materials with a Rockwell hardness up to C45, such as mold and tool steels and nickel. These plug-chamfer taps are for start-to-finish threading of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole.

Standard—Taps are uncoated.

Long Life—Coated with titanium nitride (TiN), these taps last up to two times longer than uncoated taps.

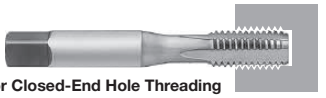
Taps for Aluminum, Brass, and Plastic

For Through-Hole Threading



For Closed-End Hole Threading

Also known as hand taps, turn these with a tap wrench. They have specially shaped cutting threads that create smooth and accurate threads when tapping holes in soft materials. Taps are vanadium steel.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole.

Machine Tool Taps for Titanium

For Through-Hole Threading

For Closed-End Hole Threading

The cutting threads on these taps are shaped to plow through titanium. They're plug-chamfer taps with 3-5 tapered threads at the tip to guide the tap into the hole. Drive them with a drill press or CNC machine.

Taps for through-hole threading have straight flutes with a spiral point that pushes chips ahead of the tap and out of the hole. They're also known as gun taps. Taps are oxide-over-nitride coated cobalt steel.

Taps for closed-end hole threading have spiral flutes that pull chips back toward the tap. Taps are uncoated cobalt steel.

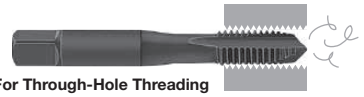
Machine Tool Taps for Steel, Stainless Steel, and Fiberglass



For Through-Hole Threading

For Closed-End Hole Threading

The flutes on these taps are designed to guide chips out of the hole so you don't have to reverse your machine to prevent material buildup. They're oxide-coated vanadium steel for cutting threads in steel, stainless steel, and fiberglass. These plug-chamfer taps have 3-5 tapered threads at the tip to guide the tap into the hole. Drive them with a drill press or CNC machine.

Taps for through-hole threading have straight flutes with a spiral point that pushes chips ahead of the tap and out of the hole. They're also known as gun taps.

Taps for closed-end hole threading have spiral flutes that pull chips back toward the tap.

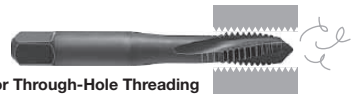
Machine Tool Taps for Hardened Steel and Nickel



For Through-Hole Threading

For Closed-End Hole Threading

A blend of cobalt and vanadium steel cuts through materials with a Rockwell hardness up to C40, such as mold and tool steels and nickel. These plug-chamfer taps have 3-5 tapered threads at the tip to guide the tap into the hole. Drive with a drill press or CNC machine.

Taps for through-hole threading have spiral flutes with a spiral point that pushes chips ahead of the tap and out of the hole. They're also known as gun taps.

Taps for closed-end hole threading have spiral flutes that pull chips back toward the tap.

For Through-Hole Threading

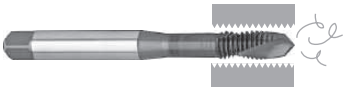
Machine Tool Taps for Aluminum, Brass, and Plastic



Taps have specially shaped cutting threads that produce smooth and accurate threads in soft materials. Also known as gun taps, these have straight threads with a spiral point that pushes chips ahead of the tap and out of a through-hole. Taps are titanium nitride (TiN) and chromium carbide-coated vanadium steel. Use these plug-chamfer taps for start-to-finish threading of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole. Drive them with a drill press or CNC machine.

Chip-Free Machine Tool Taps

Also known as cold-forming and fluteless taps, these high-speed steel taps press threads into material so no chips are formed. Drive them with a drill press or CNC machine.

For Aluminum and Brass—The threads are specially shaped to produce smooth, accurate threads in soft materials. Taps are uncoated.

For Steel and Stainless Steel—Coated with titanium nitride (TiN).

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have 3-5 tapered threads at the tip to guide the tap into your hole. They're also known as plug-chamfer taps.

Taps for closed-end hole threading thread close to the bottom of closed-end holes. They have 1-2 tapered threads to guide the tap into your hole. They're also known as bottoming-chamfer taps.

Taps for Deep Holes

Flutes are widely spaced to leave extra room for chips to accumulate. Use to tap holes with depths more than 1 1/2 times the tap diameter. These taps are made of high-speed steel for use on most metals and plastics. Also known as hand taps, use them with a tap wrench.

Standard—Taps are uncoated.

Long Life—Coated with titanium nitride (TiN), these taps last up to twice as long as uncoated taps and produce smooth threads.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole.

Portable Power Tool Taps

The shank fits a standard 1/4" insert-bit holder for use with portable drills and screwdrivers. These taps are made of uncoated high-speed steel and are for use on most metals and plastics. They're plug-chamfer taps and they are for start-to-finish tapping of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole.

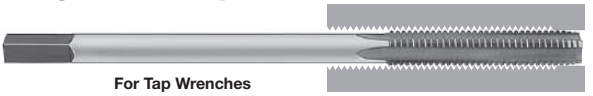
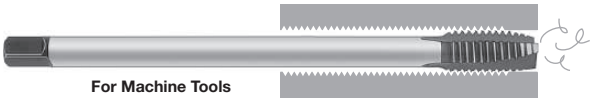
Long-Reach Taps



For Tap Wrenches



For Machine Tools

A long, narrow shank allows you to thread holes three times deeper than standard taps. Use these plug-chamfer taps for start-to-finish threading of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole.

For Tap Wrenches—Taps are uncoated high-speed steel and are for use on most metals and plastics. Also known as nut taps, the nuts accumulate on the shank as you finish tapping each one. They're also known as hand taps.

For Machine Tools—Made of oxide-coated vanadium steel, these taps last up to two times longer and create smoother threads on steel, stainless steel, and malleable iron than uncoated high-speed steel taps. Also known as gun taps, they have straight flutes with a spiral point that pushes chips ahead of the tap and out of a through-hole. Drive them with a drill press or CNC machine.

For drill bit size equivalents, see page 2544. For information about pipe thread types, see pages 2-3.

Pipe and Conduit Thread Taps

Produce tapered threads to connect pipes. Turn them by hand with a tap wrench. Tap shank fits standard size tap wrenches.

Thread Repairing—Taps are uncoated carbon steel. Use these taps on most metals and plastics.

General Purpose—Taps are uncoated high-speed steel for making threads in most metals and plastics.

Long-Life General Purpose—Made of high-speed steel with titanium nitride (TiN) coating, these taps last up to two times longer than uncoated taps. Use them on most metals and plastics.

Long-Reach for Tight Spaces—A long shank accesses hard-to-reach areas. These taps are uncoated high-speed steel and are for use on most metals and plastics.

For Steel and Iron—Extra space between cutting teeth on these high-speed steel taps leaves room for the chips from hard metals to accumulate so they don't damage the newly cut threads. Taps are uncoated high-speed steel.

For Hardened Steel—Made of cobalt steel, these taps are for use on materials with a Rockwell hardness up to C45, such as hardened steel, mold steel, and tool steel.

For Stainless Steel and Plastics—These vanadium steel taps are coated with titanium nitride (TiN) to cut through stainless steel and plastic. They have straight flutes with a spiral point that pushes chips ahead of the tap and out of the hole.

For Aluminum, Copper, and Brass—The teeth on these uncoated high-speed steel taps are designed to thread soft materials that produce long, continuous chips.

Pipe and Conduit Taps for Shallow Holes

Also known as short-projection taps, these have fewer tapered threads at the tip than standard pipe taps so you don't have to drive them as deep to produce full threads. They make tapered NPTF (Dryseal) threads. Turn them by hand with a tap wrench. They're high-speed steel for threading most metals and plastics.

General purpose taps are uncoated.

Long-life taps are coated with titanium nitride (TiN) so they last up to two times longer than uncoated taps.

Pipe Size	Threads per Inch	Thread Lg.	Overall Lg.	Drill Bit Size	General Purpose		Long Life

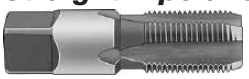
Straight Pipe and Conduit Thread Taps



Create straight threads to connect pipes in low-pressure applications. Taps are uncoated high-speed steel for making threads in most metals and plastics. Turn these taps by hand with a tap wrench. Tap shanks fit standard size tap wrenches.

Pipe Size	Threads per Inch	Thread Lg.	Overall Lg.	NPS Drill Bit Size			NPSF Drill Bit Size

Garden Hose, Spark Plug, and Compressed Gas Thread Taps

Tap the unique thread sizes for garden hose, spark plug, and compressed gas connections. These taps are made of uncoated high-speed steel. Thread close to the bottom of closed-end holes with these bottoming-chamfer taps. They have 1-2 tapered threads to guide the tap into the hole. Turn them by hand with a tap wrench.

Compressed gas thread taps are also known as National Gas Outlet (NGO) taps.

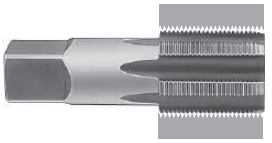
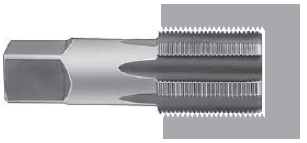
Large Diameter Eight- and Twelve-Pitch Taps



For Through-Hole Threading



For Closed-End Hole Threading

Also known as constant pitch taps, these have the same number of threads per inch across all thread sizes. They're often used for high-pressure oil field and power generation applications. Taps are uncoated high-speed steel and are for use on most metals and plastics. Turn them by hand with a tap wrench.

Taps for through-hole threading are for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole.

Taps for closed-end hole threading make threads close to the bottom of closed-end holes. They have a bottoming chamfer with 1-2 tapered threads to guide the tap into the hole.

European Conduit Thread Taps

These taps match European (PG) thread standards for conduit. They are uncoated high-speed steel for use on most metals and plastics. Also known as plug-chamfer taps, they're for start-to-finish tapping of through-holes and have 3-5 tapered threads at the tip to guide the tap into the hole. Turn them by hand with a tap wrench.

Thread Size	Thread Lg.	Overall Lg.	Drill Bit Size

Combination Drill Bit/Taps

Drill holes and cut threads in a single step. These taps have spiral flutes that pull chips back toward the tap. They are uncoated high-speed steel for use on most metals and plastics. They're plug-chamfer taps that have 3-5 tapered threads at the tip to guide the tap into the hole.

For Portable Power Tools—The shank on these taps fits a standard 1/4" insert-bit holder for use with portable drills and screwdrivers.

For Machine Tools—Drive them with a drill press or CNC machine.

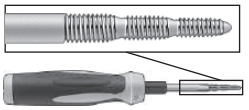
Tap Assortments & Storage

For drill bit size equivalents, see page 2544.

6-in-1 Thread Repairing Tools



Restore six internal thread sizes with one tool. Combine the included plastic handle, tap holder, and one of the two carbon steel taps; each taps three sizes. Thread sizes are 6-32, 8-32, 10-24, 10-32, 12-24, and 1/4″-20. Thread length per thread size is 1/4″. Overall length is 8 1/2″.

Replacement tap set includes a holder and two taps.

Assortment with Plastic Case

Assortment with Plastic Pouch

Assortment with Wood Case

Also known as hand taps, use these with a tap wrench. They're plug-chamfer taps for start-to-finish tapping of through-holes. They have 3-5 tapered threads at the tip to guide the tap into the hole. *60-piece assortment* also includes taps for starting threads and taps for closed-end hole threading in each thread size. It fits the tap cabinet 2543A46 sold separately below. *113-piece assortment* fits the tap cabinet 2543A49 sold separately below.

Pipe and Conduit Taps—Use to create NPT threads.
General purpose taps are uncoated high-speed steel.
Thread repairing taps restore damaged screw threads. They are uncoated carbon steel.

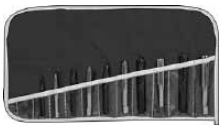
Tap and Drill Bit Assortments



Assortment with Plastic Pouch

Assortment with Plastic Case (2609A12)

Assortment with Plastic Case (2608A14)

Assortment with Metal Case

Taps and their matching drill bits are combined in these assortments. Use these taps for start-to-finish tapping of through-holes. They have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole. *29-piece assortments* also include taps for starting threads and taps for closed-end hole threading. Drill bits are black-oxide coated high-speed steel, unless noted. See page 2444 for information about drill bits.

For Tap Wrenches—Also known as hand taps, use the taps in these assortments with a tap wrench.

For Machine Tools—Drive the taps and drill bits with a drill press or CNC machine. The taps have a spiral point that pushes chips ahead of the tap and out of the hole. They're also known as gun taps.

★Drill bits are uncoated.

Tap Wrenches

Attach a tap to a wrench so you can turn it by hand.

Sliding T-handle moves from side to side for accessing tight spaces.

Sliding ratcheting T-handle adjusts for right- or left-hand ratcheting and locks in a fixed position.

Sliding machine-mount T-handle has a guide shank that fits into the chuck on your drill press and holds the tap steady so you can manually thread holes after drilling without moving the workpiece.

Straight handle is long to provide more leverage than a T-handle. These wrenches can also be used with larger diameter taps than T-handle wrenches.

T-Handle Tap Wrenches with Aligner

The aligner squares your tap to your work surface to tap straight holes and prevent tap breakage. The base of the aligner has a V-groove for stability on round surfaces. Made of steel. It includes two sets of hardened jaws that hold tap size Nos. 0 to 1/2″ (1.6 to 12.5 mm).

Tap Wrench with Aligner	2548A12	$55.19
Replacement Jaws (Two Sets)	2548A42	15.24

Tap and Die Wrench Sets

Switch from internal to external threading with interchangeable tap and die adapters.

Set includes a tap adapter for tap size Nos. 4 to 12, a tap adapter for tap sizes 1/4″ to 1/2″, and a die adapter for 1″ wide hex dies. Use them with the included ratcheting wrench. The attachable sliding T-handle moves from side to side for accessing tight spaces.

Tap Extensions

With Knurled Ring for Hand Tapping

For Machine Tapping

Extend the length of your tap to access hard-to-reach areas. Made of steel.

For Hand Tapping—These extensions are for use with a tap wrench. *5″ long* extensions come in a set of two that can be used separately or together as a 10″ extension. Extensions *with knurled ring* adjusts to fit many different tap sizes.

For Machine Tapping—Use these extensions in an auto-reversing tap holder for drill presses and milling machines. They have a close-fitting deep socket and two set screws to securely hold the tap. They're also for use with tap wrenches.

Tap and Drill Bit Alignment Guides

Hold taps and drill bits in place for accurate threading and drilling with these guides. They have holes for common sizes, and a V-groove on the bottom keeps them stable on round surfaces. They're made of alloy steel.

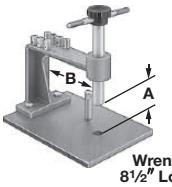
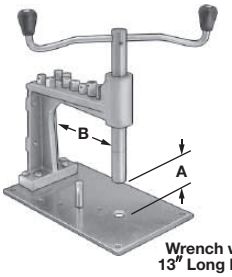
Mounted Tap Wrenches



Wrench with 8 1/2″ Long Base



Wrench with 13″ Long Base

Also known as hand tappers, these wrenches mount to a flat surface and guide the tap straight into the hole for accurate threading. They come with a tap guide, work table, and spindle wrench. For best results, use machine tool taps for through-holes with these mounted wrenches.

Wrench with 8 1/2″ Long Base—Includes seven holders, two for tap sizes Nos. 0 to 6 and one for each of the following tap sizes: No. 8, No. 10, No. 12, 1/4″, and 5/16″. Also for use with metric tap sizes 1.6, 1.8, 2, 2.2, 2.5, 3, 3.15, 3.5, 4, 4.5, 5, 6, 6.3, 7, and 8 mm.

Wrench with 13″ Long Base—Has a removable spindle wrench. Includes nine holders; one for each of the following tap sizes: No. 8, No. 10, 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 5/8″, and 3/4″. Also for use with metric tap sizes 4, 4.5, 5, 6, 6.3, 7, 8, 10, 12, 12.5, and 16 mm.

Hole Makers for Tapping Sheet Metal

Use friction heat to melt through sheet metal and quickly produce a hole with a lip. The lip that is formed is approximately three times the material thickness. Use on metal that is 0.0339″-0.094″ thick. Thread the hole with a chip-free thread-forming tap (not included).

Mount this hole maker in drill presses, milling machines, and CNC machines with 1.5-2 hp and 3,000 maximum rpm. It's made of tungsten carbide and is for use on steel, stainless steel, aluminum, copper, and brass.

Hole maker comes with a Morse taper 2 tool holder/cooler that dissipates heat; a Morse taper 3 adapter; and 6, 8, 10, and 14 mm collets.

Auto-Reversing Tap Holders for Portable Drills

Designed with a clutch to instantly reverse, these holders allow you to back out of a hole without stopping the drill's motor. They're not for use in drill presses. Use with tap size Nos. 6-10 and 3.5-5 mm. For best results, use them with machine tool taps for through-holes (see page 2550).

Kit includes collets for tap sizes No. 6, 8, 10, wrench pin, and a bushing wrench. To use the holder without removing the drill chuck, attach the included 1/4" shank adapter. When the drill chuck is removed, this holder fits drills with a 1/2"-20 arbor thread. Use the arbor adapter (sold separately) for drills with a 3/8"-24 arbor thread.

Auto-Reversing Tap Holders for Drill Presses and Milling Machines

These instantly reversing tap holders allow you to back out of a hole once it has been tapped without stopping the machine's motor. They're also known as tapping heads. Use them for fast, precise tapping on manually operated drill presses and milling machines. Collets (sold separately) are required to connect the tap to the holder.

Chip Retrievers for Tapped Holes

Insert the chip retriever into a tapped hole and pull out to remove chips. Tools are aluminum. Overall length is 5¾".

3-piece retriever set comes in a wood case.

Retriever for threaded hole sizes No. 10 to ¾"—Blue handle	2681A11	$16.00
3-Piece Retriever Set for threaded hole sizes No. 5 to 1½"—Gold, blue, and red handles	2681A21	52.00

Tap Extractors

Remove broken taps and save threads. Extractors have hardened steel fingers that fit in the straight flutes of a broken tap so you can remove the tap without damaging the workpiece threads. Use them on hand taps and taps for through-holes. They're made of tool steel and have a square shank that fits standard tap wrenches.

Drill Out Tap Removers

Drill a broken tap out of your workpiece in three steps. Make a starter hole in the broken tap with a larger diameter cobalt steel or carbide drill bit (not included). Then choose the correct size tap remover and drill through the broken tap. Remove the remains with a scriber or pick. Tap removers are made of solid carbide.

7-piece set includes the four tap removers, a pin vise, and two picks. It comes in a plastic case.

Screw Thread Dies

Use these dies to create external threads on bolts, studs, and rods. Loosen and tighten the die with the included set screw to adjust thread depth. Turn these dies by hand with a die wrench.

General Purpose—Made of carbon steel. Use these dies on most metals and plastics.

Long Life—Made of high-speed steel, these last longer than carbon steel dies. Use them on most metals and plastics.

Long-Life for Stainless Steel—Made of high-speed steel coated with titanium nitride (TiN), these dies last up to twice as long as uncoated dies when used on stainless steel.

For information about pipe thread types, see pages 2-3.

Screw Thread Dies *(Continued from previous page)*

Use these dies to create external threads on bolts, studs, and rods. Loosen and tighten the die with the included set screw to adjust thread depth. Turn these dies by hand with a die wrench.

General Purpose—Made of carbon steel. Use these dies on most metals and plastics.

Long Life—Made of high-speed steel, these last longer than carbon steel dies. Use them on most metals and plastics.

Long-Life for Stainless Steel—Made of high-speed steel coated with titanium nitride (TiN), these dies last up to twice as long as uncoated dies when used on stainless steel.

Long-Life Metric—Thread sizes are in mm

Bearing-Locknut Shaft Thread Repairing Dies

Use these dies to restore and clean the fine threads on power transmission shafts that are used with bearing locknuts. They also remove thread-locking compound that has built up in the threads. All are hex shaped for use with conventional wrenches. Use them on most metals and plastics. Dies are sized according to the American Bearing Manufacturer's Association (ABMA).

General Purpose—Made of carbon steel.

Long Life—Made of high-speed steel, which lasts longer than carbon steel.

Tap and Die Assortments

Tap and die wrenches are included in these assortments. The inch and metric tap sizes are for start-to-finish tapping of through-holes; they have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads. The pipe size taps are for starting threads; they have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole. Dies are hex shaped for thread repair, except the 19-piece long-life assortment comes with round dies for cutting threads. Assortments come in a plastic case, except the 19-piece long-life assortment comes in a metal case.

General Purpose—Made of carbon steel, these taps and dies are for occasional use.

Long Life—Made of high-speed steel, which lasts longer than carbon steel.

Tap, Die, and Drill Bit Assortments

Cut and repair threads and drill holes in many different sizes. Taps, dies, and drill bits are made of carbon steel and are for use on most metals and plastics. The inch and metric tap sizes are for start-to-finish tapping of through-holes; they have a plug chamfer with 3-5 tapered threads at the tip to guide the tap into the hole, but they're not as good for starting threads. The pipe size taps are for starting threads; they have a taper chamfer with 7-10 tapered threads at the tip to guide the tap into the hole. The dies are hex shaped for thread repair. The assortment comes in a plastic case and includes 36 drill bits, 3 tap wrenches, 2 die wrenches, 2 thread gauges, and 5 extractors.

No. of Pieces	Tap and Die Sizes: Inch	Tap and Die Sizes: Metric, mm	Tap and Die Sizes: Pipe	No. of Taps	No. of Dies		
116	4-40 to 1/2"-20	3×0.5 to 12×1.75	1/8 NPT, 1/8 BSPT	34	34	82955A11	$389.78

Thread Repairing Tap, Die, and File Assortments

Repair screw threads in a wide range of sizes. Taps, dies, and files are made of carbon steel and are for use on most metals and plastics. Taps have hex shanks and dies are hex shaped. Both are for use with conventional wrenches. The taps are for through-holes; they're also known as plug-chamfer taps and have 3-5 tapered threads at the tip to guide the tap into the hole. The assortment comes in a plastic case and includes two files: one for 11 to 24 threads per inch and one for 0.8 to 3 mm thread pitches.

No. of Pieces	Tap Sizes: Inch	Tap Sizes: Metric, mm	No. of Taps	Die Sizes: Inch	Die Sizes: Metric, mm	No. of Dies		
53	1/4"-20 to 9/16"-18	6×1 to 12×1.75	19	1/4"-20 to 3/4"-20	6×1 to 20×1.5	32	25325A14	$114.87

Pipe and Conduit Thread Repairing Tap and Die Assortments

These 12-piece sets are for use on most metals and plastics. The taps are for starting threads; they're also known as taper-chamfer taps and have 7-10 tapered threads at the tip to guide the tap into the hole. The dies are hex shaped for use with conventional wrenches. Assortments contain one tap and one die in each of the following NPT pipe sizes: 1/8, 1/4, 3/8, 1/2, 3/4, and 1.

General Purpose—Made of carbon steel, these taps and dies are for occasional use. Come in a wood case.

Long Life—The taps in these assortments are high-speed steel, which lasts longer than carbon steel. The dies are made of carbon steel. Come in a plastic case.

General Purpose	2549A76	$232.78
Long Life	2549A78	376.85

Bench-Top Ridgid Electric Pipe and Conduit Threaders

Thread and cut pipe and conduit with these bench-top tools. Dies and die heads are included. They're for use on most metals and plastics. Threaders operate on 120 volts AC. All have a machine-mounted forward/off/reverse switch, safety foot switch, quick-opening die head, pipe reamer, pipe/rod/bolt cutter, and cutter wheel for steel and iron. Threading oil (sold separately, see page 2207) is required.

Ridgid 300 Electric Pipe and Conduit Threader

This machine has a 1/2-hp, single-speed (38 rpm) motor; manual chuck; eight alloy steel dies for steel; manual oiler; cutter for pipe sizes of 1/8-2 and bolt sizes 5/16"-1"; tripod stand; and a 15-ft. cord with three-prong plug.

Ridgid 535A Electric Pipe and Conduit Threader

With Cabinet Stand (Optional)

This machine threads faster than the Ridgid 300 and includes a self-lubricating die head and automatic chuck. It also cuts pipe and conduit. It has a 2-hp, three-speed (16, 46, and 58 rpm) motor; eight high-speed steel dies for steel; cutter with length guide for pipe sizes of 1/8-2 and bolt sizes 1/4"-2"; and a 17-ft. cord with three-prong plug. Pipe nipple chuck adapter kits are required to use this threader with the pipe nipple chucks (both sold separately below).

Dies for Bench-Top Ridgid Electric Pipe and Conduit Threaders

Use these dies with the Ridgid No. 811A die heads on Ridgid 300 and 535A pipe and conduit threaders. They're also for use with Ridgid No. 504A, 711, 815A, 816, and 817 die heads, except the dies for pipe sizes of 2 1/2-4 are for the Ridgid No. 714 die head only.

Pipe and conduit thread dies for steel are made of alloy steel. The other dies are made of high-speed steel and have teeth designed to cut through specific materials.

Screw thread dies are made of high-speed steel and are for use on steel, iron, and stainless steel.

Pipe and Conduit Thread Square Dies

Use these dies in square-die pipe threader and conduit threaders. They have special threads that pull the die onto a pipe or conduit making it easy to start threading. Dies are made of tool steel and are for use on steel and stainless steel.

Hand-Held Ridgid Electric Pipe and Conduit Threaders

Carry this pipe and conduit threader to your work site. It operates on 120 volts AC and has an 8½-ft. cord with three-prong plug. The motor is reversible, ½ hp, and single speed (30 rpm). The body is cast aluminum and overall length is 28¼". It's CSA certified.

Use this threader with Ridgid 12-R die heads (not included) to thread ⅛ to 2 conduit and NPT pipe sizes. Stabilize your threader with the *support clamp* when threading conduit and NPT pipe sizes 1 and larger. Thread pipe and conduit sizes of 2½ to 4 with the *large size threader adapter* and the *square drive adapter*. To use the threader with Ridgid No. 00-R and 11-R die heads, use the *die head adapters*.

Hand-Held Ridgid Pipe and Conduit Threaders

Threader Set

Ratchet for Standard Die Head

Ratchet for Enclosed Die Head

Threader Sets

Each set includes a ratchet with handle, die heads, and alloy steel dies for cutting NPT threads in steel pipe and conduit. **12-R** sets also include a plastic case.

Standard die heads have a round bottom.

Enclosed die head keeps chips out for smooth operation and has a squared bottom.

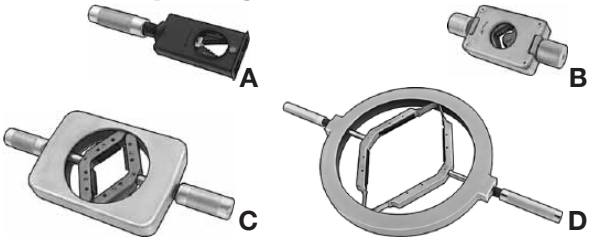
Thread Repairing Die and File Assortments

Renew external threads in a wide range of sizes. Dies and files are carbon steel. Dies are hex shaped and have a small width across the flats for use in tight spots. Use them with drive sockets and other conventional wrenches.

No. of Pieces	Thread Sizes	Widths	No. of Dies	File Sizes	No. of Files		
Inch							
15	¼"-20 to ⅝"-18	7/16" to 15/16"	14	For 11 to 24 threads per inch	1	**2616A19**	$36.61
18	¼"-20 to ¾"-16	7/16" to 1 1/16"	16	For 9 to 32 threads per inch	2	**2616A21**	45.35
Metric—Thread sizes are in mm							
13	6×1 to 14×1.5	11mm to 21mm	12	For 0.8 to 3 mm thread pitches	1	**2616A22**	35.91

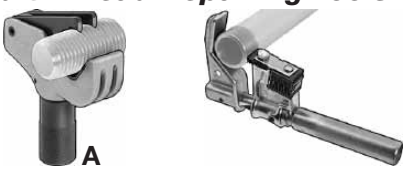
External Screw, Pipe, and Conduit Thread Repairing Tools



Slide over the end of threaded rod, pipe, and conduit to the area where threads are damaged, then tighten and rotate to repair threads. Tool is for thread sizes of 6 to 28 threads per inch and thread pitches from 1 to 4 mm. The blade is hardened steel. Minimum clearance required is measured from the center of the tool to the end of the handle.

	For OD	Min. Clearance Required		
A	1/4″-1″	8 1/2″	**2615A11**	$106.84
B	1/4″-1″	3 1/4″	**2615A12**	204.43
C	1″-2 9/16″	5 3/8″	**2615A14**	329.53
C	1 3/4″-4″	7″	**2615A15**	411.60
C	4″-6″	7 7/8″	**2615A16**	525.12
D	6″-12″	17″	**2615A17**	1,269.35

Side-Grip External Screw, Pipe, and Conduit Thread Repairing Tools



Clamp onto threaded rod, pipe, and conduit from the side to repair threads in tight spaces and where threaded ends are not exposed.

Style A includes two replaceable steel blades that adjust to any inch or metric pitch.

Style B includes hardened steel dies that you can replace once they become worn rather than replacing the entire tool. The dies are for 4, 5, 6, 7, 7 1/2, 8, 9, 10, 11, 11 1/2, 12, 14, 16, 18, 20, and 24 threads per inch.

External Thread Repairing Tools

4-Piece Set			
One of each file in a plastic pouch		**2542A61**	148.14

Internal Screw, Pipe, and Conduit Thread Repairing Tools

Repair straight and tapered threads in holes with an ID from 3/4″ to 6″. The dies line up with threads to start and stop repair at any point. Change the dies once they become worn rather than replacing the entire tool.

The included dies are for 14 threads per inch on a 3/4″ ID; 11 1/2 threads per inch on 1″ to 2″ IDs; and 8 threads per inch on 3/4″ to 6″ IDs. Dies are hardened steel. Overall length is 9″.

Thread Repairing Files

Internal Threads and External Threads

Universal External Threads

Repair rusted and damaged threads on any diameter screw or pipe. Pipe thread files can also be used on conduit. All files are steel.

Internal Threads—Files are 7/16″ square and 10″ long.

External Threads—Files are 7/16″ square (unless noted) and 8 3/8″ long. Thread sizes are marked on each file.

Universal External Threads—File is 7/8″ Wd. × 1/8″ Thick. × 9″ Lg. It has a plastic handle.

10-Piece External-Thread Set—Includes six files and four handles in a plastic case.

Optional File Handles—Slip them over the file for a comfortable grip. They fit the files listed below, except 2616A14 and 2617A12.

Thread Type	For Thread Pitch		
Internal Threads (threads per inch)			
Pipe	8 and 10	**2616A16**	$19.67
Pipe	8 and 11 1/2	**2616A17**	19.67
Pipe	10 and 14	**2616A18**	19.67

Wilton Bench Vises

Also known as machinists' vises, these have an Acme-threaded main screw that's enclosed to keep contaminants out and lubricants in for long life. They have an iron body with a built-in anvil and replaceable steel top jaws with serrated faces for a firm grip. Mounting fasteners not included.

Vises **with swivel base** swivel 360° and lock in place. Vises **with pipe jaws** allow you to securely hold round objects. The pipe jaws are steel and are replaceable.

Bench Vises

Vises have an Acme-threaded main screw and replaceable steel top jaws with serrated faces (unless otherwise stated). Mounting fasteners not included.

Vises **with swivel base** swivel 360° (unless noted) and lock in place. Vises **with pipe jaws** allow you to securely hold round objects.

Standard vises have an iron body. *Standard vises with swivel base and pipe jaws* have a built-in anvil and replaceable steel pipe jaws. Their top jaws can be flipped; they're serrated on one side and smooth on the other side.

Corrosion-resistant vises have a 304 stainless steel body making them good for corrosive and washdown environments. They come with three sets of interchangeable top jaws: stainless steel with smooth faces, stainless steel with serrated faces, and plastic with smooth faces. Vises *with pipe jaws* have replaceable stainless steel pipe jaws.

Compact vises have an iron body with built-in pipe jaws and an anvil.

High-visibility compact vises are yellow-painted steel and conform to OSHA regulation No. 1910.144. They have built-in pipe jaws and an anvil.

Weather-resistant compact vises have a black-enamel painted steel body. Vises come with built-in pipe jaws and an anvil.

Extended-opening vise can be used with its top jaws in their standard 6″ jaw-opening position, or reverse one jaw to extend the jaw opening to 9¾″. Body is iron with built-in pipe jaws and two anvils.

Rotating multijaw vise has three sets of steel jaws (top jaws, pipe jaws, and V-jaws) and a head that rotates 360° and locks at 45° intervals. Body is iron with a built-in anvil. Maximum V-jaw opening is 4½″.

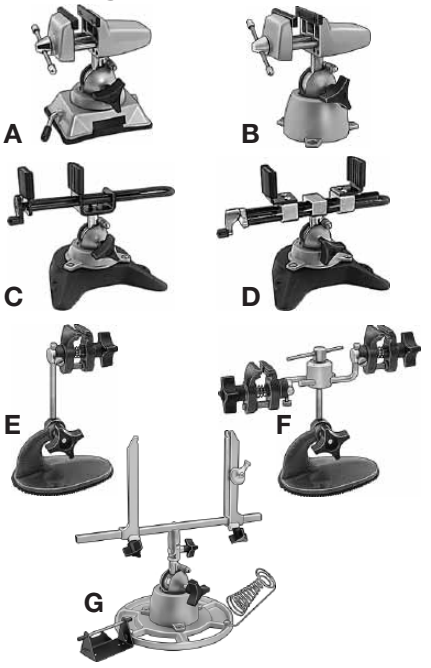
Pivoting Vises



The head not only swivels 360° and locks in place with a knob, but it also tilts up and down 90° (except Styles E and F adjust in all directions). Vises have an aluminum and zinc body (except Styles E and F are aluminum).

(A) Vacuum Base—Use the mounting lever to attach and release the rubber suction pad from smooth surfaces. Vise has replaceable nylon jaws with smooth faces.

(B) Bolt-Mount Base—Vise has replaceable nylon jaws with smooth faces. Mounting fasteners not included.

(C) Weighted Base—A 5-lb. base is heavy enough to hold most parts, but light enough to be portable. Vise has reversible, replaceable neoprene jaw pads that are ribbed on one side and have V-grooves on the other side.

(D) Self-Centering with Weighted Base—Jaws move at the same time to position parts in the center while a 5-lb. base is heavy enough to hold most parts, but light enough to be portable. Vise has reversible, replaceable neoprene jaw pads that are ribbed on one side and have V-grooves on the other side.

(E&F) Small-Opening Vise Head(s) with Bolt-Mount Base—Jaws are aluminum. One jaw has a horizontal V-groove; the other jaw has a horizontal and a vertical V-groove. Mounting fasteners not included.

Style E has one vise head. *Style F* has two vise heads.

(G) Extra-Deep Vise Head with Bolt-Mount Base—Accommodates flat objects such as circuit boards from 1/4″ to 12″ wide and up to 5/32″ thick. Vise has replaceable aluminum jaws with V-grooves. It comes with a six-compartment tool tray base, solder holder, and soldering iron holder. Mounting fasteners not included.

Optional C-Clamp Base for Styles B, C, and D—Convert the bases on Styles B, C, and D to a C-clamp base. Clamp is 10 1/8″ long and is for use on bench tops up to 3″ thick.

	Jaw Wd.	Max. Open.	Throat Dp.	Mounting Holes Dia.	Mounting Holes Qty.

Portable Vises

Take these lightweight vises anywhere. Mounting fasteners (where applicable) are not included.

With Fixed Base—Vises have an iron body and built-in top jaws with smooth faces.

Vise with *1 3/32″ jaw width* clamps onto bench tops up to 1″ thick.

Vise with *3″ jaw width* clamps onto bench tops up to 2″ thick and has built-in pipe jaws and an anvil.

With Swivel Base—Vises swivel and lock in place.

Vise with *1 1/4″ jaw width* has a steel body and built-in top jaws with smooth faces. Base swivels 180°.

Vises with *2 1/2″* and *4″ jaw widths* clamp onto bench tops up to 3″ thick. They have an iron body, replaceable steel top jaws with V-grooves, and a built-in anvil. Base swivels 45°.

Vise with *3″ jaw width* clamps onto bench tops up to 1 7/8″ thick. Body is iron and has built-in top jaws with smooth faces, pipe jaws, and an anvil. Base swivels 360°.

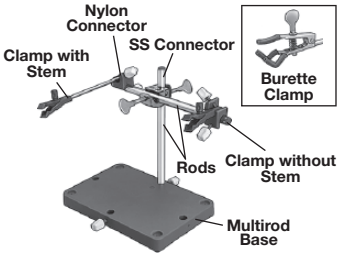
Create-Your-Own Workholders

Build a custom clamping system for holding lightweight objects. First select a base, then choose the rods, connectors, and clamps. The clamps require a connector to attach to rods. Not rated for holding capacity.



Bases

Single Rod—Base is nylon and 2 1/2″ dia. It holds one 1/2″ dia. rod and has three 1/4″ dia. mounting holes (fasteners not included).

50165A11 ..... $11.64

Multirod—Base is nylon and 6″ Wd.×9″ Lg. It holds up to four 1/2″ dia. rods, weighs 3.3 lbs. for stability, and has rubber feet.

50165A12 ..... $61.09

Rods

Made of corrosion-resistant 304 stainless steel, rods are 1/2″ dia.

Length			Length		
6″	50165A21	$41.36	20″	50165A23	$29.09
10″	50165A22	23.27	24″	50165A24	33.45

Connectors

Nylon Clamp-to-Rod Connector—Offers good resistance to chemicals.

50165A31 ..... $8.73

316 Stainless Steel Rod-to-Rod and Clamp-to-Rod Connector—This connector holds two rods at a 90° angle or connects a clamp to a rod.

50205A6 ..... $51.32

Clamps

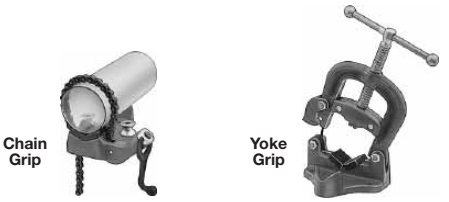
Nylon Clamps—These clamps won't mar surfaces and have good resistance to chemicals. Adjust opening size with the thumb screw.

Opening Size	With Stem: Stem Lg.			Without Stem	
0″-5/8″	5″	50165A41	$35.38	50165A51	$26.18
0″-1 3/4″	6″	50165A42	41.60	50165A52	32.27
1/8″-3 5/16″	6″	50165A43	52.24	50165A53	42.34

304 Stainless Steel Burette Clamp—This clamp has a stem and nonmarring rubber pads. Opening size is 0″-1″; turn the thumb screw to adjust. Overall length is 10″.

50205A61 ..... $72.44

Pipe Vises



Securely hold various sizes of pipe, tubing, and conduit for cutting and threading.

Chain Grip—Crank the handle to tighten the chain and secure your object against the base jaws.

Bolt-mount vises have an iron body with serrated steel jaws (unless noted). Mounting fasteners not included.

Vises *with tripod stand* have steel jaws that are serrated on both sides.

Vise *with tripod stand for clean rooms* has 410 stainless steel jaws (serrated on one side; with bonded rubber on the other side) and a clear plastic tube over the chain. The chain is lubricated with food-grade, nonpetroleum-based oil.

Yoke Grip—Turn the handle to firmly clamp your object between the top and bottom steel jaws. Vises have a hinged side opening with a locking latch. You can reverse the yoke to open on the left or right. Not recommended for plastic pipe.

Bolt-mount vises have an iron yoke and base. Mounting fasteners are not included.

Vise *with tripod stand* has an iron yoke and aluminum base.

★ Jaws are neoprene-coated to grip objects without marring them.

Pivoting Positioning Bases

A

B

C

Ball joint swivels 360°, tilts up and down 90°, and locks in place to position objects. To use, attach your object to a fixture such as a plate, stem, or sheet of metal (not included) and then mount the fixture to the attaching point on the base. All of these bases are made of iron. Mounting fasteners not included.

Style A—The attaching point is cadmium-plated steel and has a 1/2″ ID×1/2″ Dp. hole with a set screw. Base has four 1/4″ wide mounting slots.

Style B—The attaching point is aluminum and has a 3″ dia. pad with two 1/4″-20 threaded holes (includes screws and washers). Base has four 9/32″ wide mounting slots.

Style C—The attaching point is iron and has two 5/16″-18 threaded holes that are spaced 1″ center-to-center (includes screws and washers). Base has three 3/8″ dia. mounting holes.

Specialty Vises

Pin Vises

Hollow-Handle Single End

Hollow-Handle Double End

Hollow-Handle Slide Grip

Swivel Handle

Comfort-Grip Swivel Handle

Chuck

A steel collet in these vises firmly holds pins, wires, scriber points, taps, drills, and other small objects. Turn the collet collar to adjust the collets (unless otherwise stated).

Hollow-handle single-end vises have a nickel-plated steel body that is hollow to accept long wires and rods.

Hollow-handle double-end vise has a collet on each end of the body. Made of nickel-plated steel, the body is hollow to accept long wires and rods.

Hollow-handle slide-grip vise allows one-handed operation—slide the knurled ring forward to close the collet. Body is aluminum and is hollow to accept long wires and rods.

Swivel-handle vise has an aluminum body with a rotating cap. Apply pressure to the cap with your index finger or palm and turn the body of the vise for precision control. Vise comes with two collets that can be stored in the body.

Comfort-grip swivel-handle vises have a plastic handle with cushioned rubber grip and rotating cap. Apply pressure to the cap with your index finger or palm and turn the body of the vise for precision control. Drills, taps, and collets can be stored in the handle.

Chuck vises have a collet with three chuck-style gripping jaws and a plastic handle.

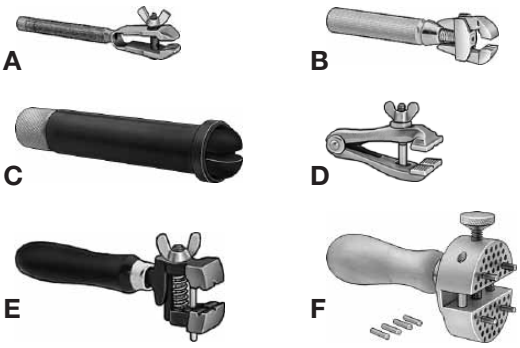
4-Piece Hollow-Handle Single-End Vise Set—Includes one of each hollow-handle single-end vise listed. Furnished in a plastic pouch.

8455A14 ..... $58.76

Hand Vises



Save your fingers by using these vises to tightly grip small objects.

Style A—Vises are steel with a hollow handle for wires to pass through. Turn the wing nut to adjust the jaws, which have serrated faces.

Style B—Twist the handle to adjust the jaws, which have serrated faces. Vise is steel and the handle is hollow for wires to pass through.

Style C—Vise has an aluminum body and steel jaws with plastic inserts to grip without marring. Turn the knurled end to adjust the jaws, which have smooth faces.

Style D—Vise is steel and has a spring-action grip that keeps the jaws open. Turn the wing nut to adjust the jaws, which have serrated faces.

Style E—This steel vise has a contoured wood handle. Turn the wing nut to adjust the jaws, which have V-grooves.

Style F—Arrange the eight removable pins in the jaw's positioning holes to hold objects at various angles. Vise is aluminum with a contoured wood handle. Turn the screw to adjust the jaws.

Micro Hand Vises

For Round Objects

For Flat Objects

For delicate handling of small and lightweight objects, these tiny vises grip firmly without damaging. Squeeze the body to open the jaws; release the body to grip. Body is stainless steel.

Jaw Material	Max. Open.	Jaw Size Lg.	Jaw Size Wd.	O'all Size Lg.	O'all Size Ht.

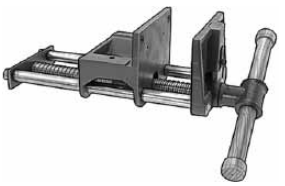
Woodworkers' Vises



Iron jaws apply pressure across a large surface area to hold wood pieces without marring. Turn the handle to disengage the screw and slide the back jaw to quickly move items in and out of the vise. Turn the handle in the other direction to engage the screw and grip your item. Vises fit flush with the top of 2 1/4″ thick bench tops. Mounting fasteners not included.

Wide-Grip Micro Hand Vises

Measuring 1 7/8″ Lg. x 1 1/4″ Wd. x 1″ Ht., this miniature vise opens wide for its size—from 1/2″ to 1 3/8″ wide. The vise is plated brass. Use the thumb screw to adjust the jaws.

5123A16 ..... $29.90

Ultra-Precision Vises

Also known as toolmakers' vises, these are built for precision grinding and inspection jobs. The base and bed are parallel to within 0.0002″ and the jaws are square to within 0.0002″. The movable jaw pulls into the base at a 45° to 60° angle to prevent jaw tilt and lift and ensure a secure grip. Tighten jaws with a 1/4″ hex key.

Body and jaws are steel. The fixed jaw has a smooth face. The movable jaw has horizontal and vertical V-grooves. Vises have holes for bench mounting (fasteners not included). The vise with a *3″ wide jaw* also has end pockets for clamping to sine plates (see page 2578 for sine plates).

Drill-Press Vises

Mount these vises on drill presses for drilling, tapping, and reaming applications. Vises have an iron body (except quick-lock vises with slide screw and lug base are steel) and replaceable steel jaws.

Standard—These traditional vises have a threaded main screw and an open base that allows through-hole drilling.

Vises *with side-slot base* and *lug base* have slots or lugs for mounting (fasteners not included).

Vises *with smooth base* can be mounted in the standard position and turned on either side or on end. Mount with clamps (not included).

Vises *with side-grooved base* have a groove to clamp the vise to a machine table.

Quick Lock—It's easy to tighten and lock the jaws on these vises. The jaws have steps to elevate the workpiece to allow through-hole drilling. Vises have lugs for mounting (fasteners not included).

Vises *with slide bar* have a center lever you push to slide the movable jaw to your workpiece and a locking lever you press to exert final holding pressure. An open base allows additional depth for through-hole drilling.

Vises *with pump-action slide bar* have a locking lever you pump to move the jaws for final holding. Vises have an open base that allows additional depth for through-hole drilling.

Vises *with slide screw* have a handle you turn to disengage the screw and slide the back jaw to quickly move items in and out of the vise. Turn the handle in the other direction to engage the screw and grip your item.

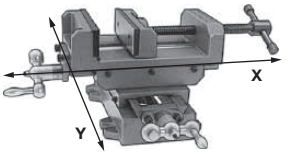
Cross-Slide Drill-Press Vises



Accurately position work on two axes (X and Y). Vises have an iron body and replaceable steel jaws; one is smooth, the other is grooved. Mounting fasteners not included.

Standard vises have dials that are graduated in 0.1 mm increments. They have five mounting lugs; vise with *3″ jaw width* uses 7/16″ bolts, vises with *6″* and *8″ jaw widths* use 5/8″ bolts.

Precision vise has jaws that are parallel to 0.001″ and dials that are graduated in 0.001″ increments. The base has a 5/8″ keyway. Vise has four mounting lugs that use 5/8″ bolts. You can remove the vise from the base and use it as a traditional drill-press vise.

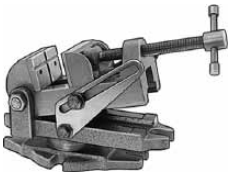
Variable-Angle Drill-Press Vises



Frequent angle changes aren't a problem for these vises—they hold your work at any angle between 0° and 90°. Vises have an iron body and replaceable steel jaws; one is smooth, the other is grooved. They have lugs for mounting (fasteners not included).

Vises **with swivel base** rotate 360° and lock in place. Vise with *2 7/8″ jaw width* is graduated in 5° increments; with *4″ jaw width* is graduated in 1° increments.

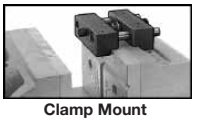
Workstops for Milling-Machine Vises

Attach these steel workstops to a vise to create a stop for positioning your parts.

Clamp-mount workstop clamps onto 1/2″-1″ thick vise jaws. Turn the screw to adjust tension. Size is 1 7/16″ Lg.×1″ Wd.

Magnetic-mount workstop can be placed anywhere on the vise. It has adjustable stop pins on both ends. Size is 2 5/8″ long.



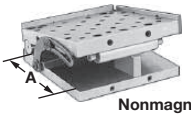
Clamp Mount

Magnetic Mount

Clamp Mount	51985A67	$17.19
Magnetic Mount	51985A68	39.00

Sine Plates & V-Blocks

Sine Plates



Nonmagnetic

Magnetic

In addition to holding work for inspecting and grinding, use these hardened-steel sine plates with surface plates and height gauges to measure and duplicate angles. The 4″ and 6″ long plates are square and parallel within 0.0002″; the 12″ long plate is square and parallel within 0.0003″.

Note: Do not use for milling and drilling machine processes.

Magnetic sine plate has a removable handle that turns the magnetic force on and off.

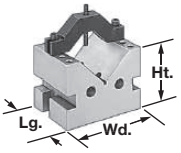
Precision V-Blocks

Steel



Steel with Clamp

For accurate layout, machining, and inspection work, these V-blocks are ground to tight tolerances. The V is 90° and is square with the sides and parallel to the base within 0.0002″ for 2½″ and 3″ long blocks; within 0.0003″ for the 6″ long blocks. The blocks have slots on the sides for securing to the work surface.

The V-blocks **with clamp** have multiple holes in the top for a variety of clamping positions to secure your workpiece.

Hardened steel V-blocks have greater strength and durability than the plain steel.

Also Available Matched V-block pairs for use with long workpieces. Please ask for 2361A888 and specify V-block part number.

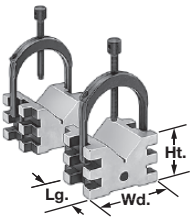
Starrett V-Blocks with Clamps



Starrett No. 568C

Furnished as matched pairs, these precision-ground hardened-steel V-blocks securely hold work for drilling, grinding, and milling operations. The V is 90° and is square with the sides and parallel to the base within 0.0002″. These V-blocks come with clamps and have tapped holes.

Starrett No. 278—Hold round workpieces.

Starrett No. 568C—In addition to round stock, these V-blocks can hold square workpieces up to 1 7/16″. The clamps can be mounted in two positions to accommodate small and large work; they do not project beyond the sides of the block, so the block can be used on its base, ends, or sides.

	Max. Workpiece Dia.	Lg.	Wd.	Ht.	Tapped Hole Size	V-Blocks with Clamps	Pair	Replacement Clamp	Each

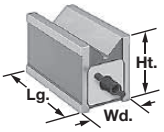
Magnetic V-Blocks



No clamps or mounting bolts are needed for these V-blocks—a turn of the lever switches the magnetic force on and off. These V-blocks are magnetic on the V face, bottom, and back. The V is 90° and is square with the sides and parallel to the base within 0.0008″ for 2202A1 and within 0.001″ for 2202A4.

Holding Force	Max. Workpiece Dia.	Lg.	Wd.	Ht.		Each
65 lbs.	2″	3⅛″	2⅜″	2⅞″	2202A1	$204.55
99 lbs.	2″	4⅞″	2⅜″	2⅞″	2202A4	318.18

Miniature Steel V-Block Sets

Place these V-blocks into a larger V-block to hold shafts and cylinders from 1/32″ to 9/32″ dia. or square. The V-blocks are precision-ground hardened steel. The V is 90° and is square with the sides and parallel to the base within 0.0002″. The set includes two miniature V-blocks with clamps; one for 1/32″-5/32″ workpieces and one for 3/64″-9/32″ workpieces.

20115A41 ..... $99.00

Kurt® Milling-Machine Vises

The jaws on these vises pull your part down and keep it seated firmly on the vise bed for precise machining. Vises have an iron body. The jaws are hardened steel and reversible with smooth faces. Mounting fasteners not included.

Standard and **high-precision** vises have jaws that can be attached to the outside ends of the jaw plates to extend the jaw opening. The *high-precision* vise is commonly used with CNC equipment. It delivers repeatable clamping accuracy of ±0.0005″.

5-axis vises are for use in multi-axis machining equipment. They deliver repeatable clamping accuracy of ±0.0002″ and are self-centering, which means both jaws move at the same time to position parts in the center. Jaws grip items from the outside as well as the inside.

Optional Swivel Bases—Rotate 360°, lock in place, and are graduated in 1° increments. Fasteners for mounting a base to a vise are included.

Milling-Machine Vises

Vises have replaceable hardened-steel jaws. Mounting fasteners not included.

Vises **with fixed base** have an iron body. One jaw is smooth, the other is grooved. Base and bed are parallel to within 0.001″.

Vises **with swivel base** swivel 360°, lock in place, and are graduated in 1° increments. They have an iron body and two smooth jaws. Base and bed are parallel to within 0.002″. The swivel base can be removed for use as a stationary model.

Self-centering vise with swivel base has two smooth jaws that move at the same time to position parts in the center. The body is steel with a base that swivels 360°, locks in place, and is graduated in 1° increments. Base and bed are parallel to within 0.0012″.

Any-Angle Milling-Machine Vises

Three-way angle positioning provides the most adjustability of any vises we offer. Vises tilt 45° to each side and 90° vertically. The base swivels 360°, locks in place, and is graduated in 1° increments. Vises have an iron body and hardened, precision-ground steel jaws. The jaws are replaceable and have smooth faces. Mounting fasteners not included.

Air-Powered Milling-Machine Vises

Grip your workpieces hands-free—step on the foot control to instantly close the moving jaw; step again to release it. Vises have an iron body (except single-acting vise is iron and aluminum). Furnished with two 5-ft. long air hoses (except double-acting vises have three). Mounting fasteners not included. To calculate the gripping force on your workpiece, multiply your operating pressure by the gripping force factor. To control force, add an air regulator (see pages 1021-1025).

Single-acting vise has a maximum travel of 5/8″. The foot control includes a guard. Hose connections are 1/4 NPT male.

Single-acting spring-return vises have a spring-return air cylinder that returns the moveable jaw faster than the single-acting vise. Maximum travel is 3/8″. Hose connections are 1/4 NPS male.

Double-acting vises have a double-acting air cylinder that returns the moveable jaw under air pressure for more jaw control than single-acting vises. Maximum travel is 3/8″. Hose connections are 1/4 NPS male.

Granite Flat-Surface Plates

Plate with Ledges

In addition to being noncorrosive and nonmagnetic, granite plates also resist warping and abrasion. They provide an accurate reference plane for layout and inspection work. Choose plates with ledges to hold fixtures and instruments with clamps. All meet or exceed Fed. Spec. GGG-P-463C and ISO 10012. They include a NIST certificate of accuracy.

Covers keep abrasives from damaging flatness and finish. They are heavy duty felt-lined vinyl.

Stands are steel with a 36″ overall working height.

Also Available: Other sizes. Please ask for 2245A999 and specify grade, length, width, thickness, and the number of ledges (0 or 2).

To Order: When ordering a stand, please specify if the stand is for a plate without ledges or for a plate with ledges.

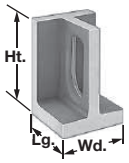
Angle Plates



1

2

3

4

Standard

With Step

5

Use angle plates for positioning, holding, and inspecting. **Machined-finish** plates are square and parallel within 0.002″ per 6″. **Ground-finish** plates are square and parallel to better than 0.0005″ per 6″, except the ends for *Styles 2* and *3* are machined and are parallel to 0.002″ per 6″.

(1) Cast Iron with Handle

Because the handle extends the full length and height of these angle plates, you can use them on any of their six sides and they'll remain square. They can be rotated through three planes without the need for reclamping.

Lg.	Wd.	Ht.	Wt., lbs.	Machined Finish		Ground Finish

Fine-Adjust Rotary Tables

Turn the crank handle to rotate these tables 360° and accurately position your work. You can bolt the tables to your drill press, milling machine, or grinder for milling slots. Tops are cast iron with 1° graduations, a 1⅝″ center bore, and two ⅝″×1″ T-slots at 90°. The handle that controls the rotation of the top has a dial with 1/20° graduations. Mounting fasteners are not included.

Cross Slide—These tables not only rotate 360°, but also travel side-to-side in two directions with crank handles. The handles have a dial with 0.001″ graduations. Tops are ground flat to ±0.001″. Tables *with 90° tilt* also adjust anywhere from 0° to 90° for added positioning versatility.

Horizontal/Vertical—You can mount these tables in either the horizontal or vertical position. Tops are ground flat to ±0.002″.

Fine-Adjust Cross-Slide Tables

Precisely position work on two axes (X and Y). Use these tables for inspection and layout jobs, as well as for boring, drilling, grinding, and milling operations. The table tops are made of cast iron. The base has four mounting lugs for ⅝″ dia. bolts (not included).

With Two T-Slots—The top is ground flat to ±0.002″ and has two ½″ T-slots that are 2⅜″ center-to-center. Hand wheels on both ends allow you to position your work from either side. They have a dial with 0.001″ graduations.

With Four T-Slots—The top is ground flat to ±0.001″ and has one longitudinal T-slot and three equally spaced cross T-slots. All T-slots are 7/16″×¾″. Turn the crank handles to position your work. Handles have a dial with 0.001″ graduations and a thumb screw for zero setting. In addition to the lugs, the base has a keyway for mounting. The table *with 90° tilt* also adjusts anywhere from 0° to 90° for added positioning versatility.

Precision Positioning Slides CAD

You'll get precise, repeatable low-friction movement along a single linear axis (X) or double linear axes (X and Y)—good for positioning parts that are part of a larger automated system. Slides have a spring-loaded drive mechanism and a micrometer with 0.001″ graduations (double axes slides have two micrometers). They also have tapped holes on the top for fixture mounting and drilled counterbored holes on the bottom for installation (fasteners not included).

Precision—Straight line accuracy is 0.0005″ per inch of travel. Carriage is black anodized aluminum with steel ball bearings.

Ultra Precision—Straight line accuracy is 0.00008″ per inch of travel. Carriage is black anodized aluminum with precision-ground top and bottom surfaces and Type 440C stainless steel ball bearings. Slides have a knurled screw to lock the carriage without affecting position (except the 105-lb. capacity slides do not).

Turntables, Support Stands & Positioning Arms

Turntables

Tables rotate for easy access to every side of your object.

Manual—Spin these turntables by hand. They are steel and include a rubber platform pad.

Motorized—Turntables operate on 120 volts AC and rotate in a clockwise direction at 2 rpm. They are made of steel and aluminum and have a 6-ft. power cord with three-prong plug. The base has four 3/16″ dia. holes for bench mounting (fasteners not included).

Style E also has a three-prong electrical outlet to power a mounted object.

Adjustable-Height Support Stands

Also known as laboratory jacks, these stands are good for positioning small shop and laboratory equipment. They are made of stainless steel and have a plastic control knob for height adjustments. Note: Do not make height adjustments with weight on the stand.

Ratchet Handle for 150-lb. Capacity Stand—Replace the stand's control knob with this 6 3/4″ long ratchet handle for easier height adjustments.

Load Cap., lbs.	*Platform Size* Lg.	Wd.	Height		
20	3″	3″	2 1/2″-5″	9967T42	$142.35

Flat-Panel Monitor Positioning Arms

Ceiling Mount

Ceiling Mount

Arms swivel 360° and are made of black powder-coated steel. Fasteners are included.

Arms for **10″-23″** and **25″-37″** monitors tilt down 20° and up 5°. Both are compatible with 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole patterns. Arm for 25″-37″ monitor is also compatible with 200 mm and 100 mm×200 mm VESA mounting hole patterns.

Arm for **37″-70″** monitors tilts down 15°. You can route cables through the mounting pole. Arm supports a mounting hole pattern of up to 500 mm×860 mm.

Fits Monitor Size	Load Cap., lbs.	Distance From Ceiling	Base Lg.	Base Wd.		
10″-23″	25	17″-27″	4 11/16″	4 11/16″	4653T11	$71.56
25″-37″	75	18″-30″	5 1/2″	5 1/2″	4653T12	110.89
37″-70″	180	23″-35″	7 1/2″	7 1/2″	4653T13	212.22

Surface Mount

Surface Mount

Arm swivels 360° and raises your monitor up to 21 1/4″ above your work surface. The attaching end tilts up and down 320° and moves side-to-side 320°. Arm is made of steel, aluminum, and rubber. It is compatible with a 75 mm VESA (Video Electronics Standards Association) mounting hole pattern and has four 0.34″ dia. mounting holes on the base (fasteners not included).

Fits Monitor Size	Load Cap., lbs.	Projection	Base Lg.	Base Wd.		
10″-32″	10	7 1/4″	3 1/2″	3 1/2″	5031T133	$114.24

Counterbalanced Surface Mount

Counterbalanced Surface Mount

For easy positioning, these die cast aluminum arms have gas springs that counterbalance the weight of your monitor. Arms swivel 360° and raise your monitor up to 14″ above your work surface. The attaching end tilts up and down 20° and moves side-to-side 320°. Arms include mounting plates for 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole patterns.

Bolt mount is for surfaces up to 2 1/4″ thick. Fasteners are included. **Clamp mount** is for surfaces up to 3 5/8″ thick.

Fits Monitor Size	Load Cap., lbs.	Projection	Base Dia.	**Bolt Mount**		**Clamp Mount**	
10″-24″	7-20	4″-22″	4″	1993A3	$328.12	1993A5	$343.27

Wall Mount

Wall Mount

The attaching end tilts up and down 15° and moves 30° side-to-side. Arms are black powder-coated aluminum and attach to a separate wall plate (included) that has a level and a hook for cords. Arms are compatible with 75 mm, 100 mm, 200 mm, and 400 mm VESA (Video Electronics Standards Association) mounting hole patterns. Arm for 10″-50″ monitor is also compatible with a 600 mm VESA mounting hole pattern. Mounting fasteners are included.

Optional Desktop Mounting Clamp—Mount the arm (including the wall plate) on the clamp to position your monitor from 8″ to 15″ above the work surface. Clamp is die cast aluminum and can be used on most desktops.

Fits Monitor Size	Load Cap., lbs.	Projection	Base Lg.	Base Wd.		
10″-32″	45	6″-10 1/2″	7 1/8″	1 13/16″	1133A1	$41.45
10″-50″	70	6″-14″	7 1/8″	1 13/16″	1133A2	65.45
Optional Desk-Top Mounting Clamp (21″ Ht.×6″ Wd.×5″ Dp.)					1133A3	36.36

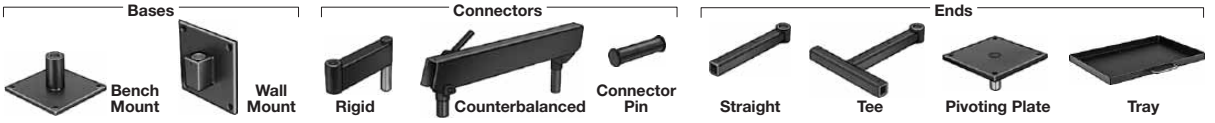
Easy-Adjust Wall Mount

Easy-Adjust Wall Mount

Attaching end tilts up and down 140° and can be easily pulled into position. Arms rotate side-to-side 180° for added viewing versatility, except arm with 3″ projection only rotates up and down. All arms are silver powder-coated aluminum and steel. They are compatible with 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole patterns (fasteners are included).

Fits Monitor Size	Load Cap., lbs.	Projection	Base Lg.	Base Wd.		
10″-30″	40	3″	3 13/16″	2 7/16″	4628T11	$45.45
10″-30″	40	3 5/8″-10 11/16″	3 13/16″	2 7/16″	4628T13	90.91
10″-30″	40	4 11/16″	3 13/16″	2 7/16″	4628T12	63.64

Positioning Arms



Select a base, connector, and end to build your own arm, or choose a complete arm. Components are steel with a black finish and do not include fasteners (except tray is aluminum with a black finish and includes fasteners).

Build-Your-Own Arms—The load capacity of an assembled arm is determined by the component with the lowest capacity.

Bases have four 13/32″ dia. mounting holes. When using a wall-mount base with a counterbalanced connector, a rigid connector is also required.

Rigid connectors move horizontally and have a friction adjustment to control drift. Combine one with a counterbalanced connector for both vertical and horizontal movement. You can connect multiple rigid connectors up to a maximum length of 48″.

Counterbalanced connectors tilt 40° up and 35° down and have an adjustable load capacity. You can attach them directly to a bench-mount base. If used with a wall-mount base, a rigid connector is also required.

Connector pin is required when connecting a straight or a tee to a rigid connector.

Straight and **tee** have 9/32″ dia. mounting holes (two for straight; four for tee). When connecting these ends to a rigid connector, a connector pin is also required. *Tee* can be used with a tray.

Pivoting plate allows 360° rotation of your load. It has four 13/32″ dia. mounting holes and can be used with a tray. It is not for use with a counterbalanced connector.

Tray can be used with a tee or a pivoting plate. It has eight 13/32″ dia. mounting holes.

Complete Wall-Mount Arms

Arms consist of a wall-mount base, two rigid connectors, and a pivoting plate.

Projection	Load Cap., lbs.		
6″-27 3/4″	100	5164T1	$302.61
6″-39 3/4″	100	5164T2	340.43

Ball-Grip Positioning Arms

Arms use a ball-and-socket system that allows 360° positioning. Pick a base, connector, and end to create an arm for lightweight objects up to 10 lbs. Components have a black finish. Mounting fasteners are not included.

Bases

(A) Surface Mount—The most popular base.
(B) Rectangular Bar Mount—Maximum opening size is 1 27/32″ Ht. × 2 1/2″ Wd.
(C&D) Pipe Mount—*Style C* fits a maximum OD of 1 1/4″. *Style D* fits an OD of 2″ to 2 1/2″.
(E) Surface Mount with Flexible Arm—Bends into position. It does not have a ball; use with Style A to attach a connector.
(F) Surface Mount with Locking Arm—The arm swivels 360°, tilts 165°, and locks into any position. Maximum extension is 14 1/2″.
(G&H) Wall/Pipe Mount with Swinging Arms—The arms swivel 360°. Two 1/2″ wide hose clamps (not included) are required for mounting to pipe. *Style G* has one arm for a maximum extension of 9 1/4″. *Style H* has two arms for a maximum extension of 15 1/4″.

	Ball Dia.	*Base Size* Lg.	Wd.	Max. Ht.	Material	*Mounting Holes* Dia.	Qty.

Ultra-Flexible Positioning Arms

Bend and flex these support arms to hold small equipment such as lights and microphones in almost any position.

Surface Mount

This arm has a plate-style attaching end that swivels and tilts for added flexibility. Arm is made of black die cast zinc and steel. Mounting fasteners are not included.

Clamp Mount, Clamp/Surface Mount, and Magnetic Mount

Clamp Mount—Clamp arms onto surfaces up to 2″ thick. Polyurethane pads on the clamp protect your mounting surface from marring. Arms are black vinyl-coated steel.

Clamp/Surface Mount—A dual base lets you mount these arms by bolting through or clamping onto surfaces up to 2″ thick. Arms are hollow and have a 1/4″ dia. opening at the base so you can run wires through them. Made of steel with a gray powder-coated finish. Mounting fasteners are not included.

Magnetic Mount—Arms stay put on magnetic surfaces. Made of black vinyl-coated steel.

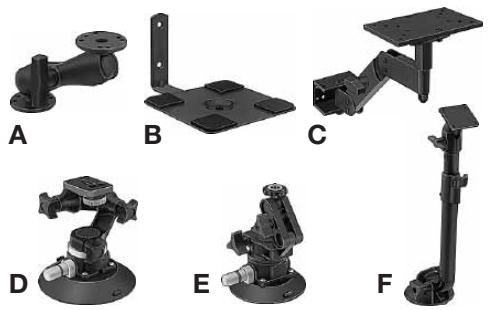
Support Arms



(A-C) Bolt Mount—All have a black finish.

Style A has two ball joints that can be locked into position with the hand knob. Made of aluminum, rubber, and nylon. Mounting fasteners are not included.

Style B is made of steel and includes slip-resistant pads that attach to the platform to reduce vibration. Mounting fasteners are not included.

Style C have two joints that tilt 45° for added adjustability. Knobs lock the arms into position. Made of aluminum. Mounting fasteners are included.

(D-F) Suction-Cup Mount—The rubber suction cup attaches to smooth, dry surfaces such as glass and polished metal. Arms lock into position with a knob. All have a black finish.

Style D has two joints (one that swivels 360° and another that tilts 180°) for a wide range of motion. Made of aluminum.

Style E has a joint that tilts 225° for a wide range of motion. Made of polycarbonate.

Style F has a knob to lock the attaching plate into position. Made of aluminum.

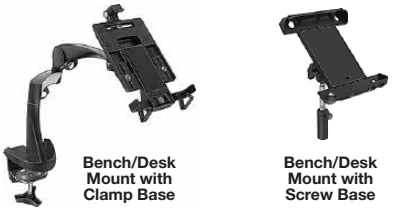
Mounts for Tablet Computers



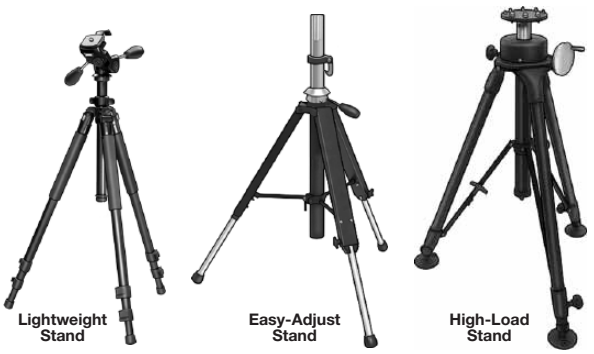
Keep your tablet accessible in your work area. Mounts have a pivoting head that holds your device vertically or horizontally.

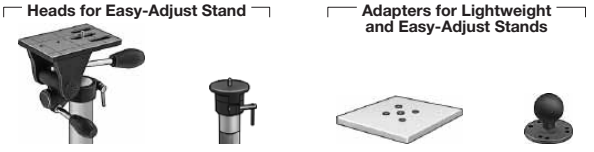
Bench/desk mount with clamp base has a pivoting arm and fits surfaces up to 1 13/16″ thick. Remove the clamp and you can mount through a 3/8″ to 2″ dia. hole.

Bench/desk mount with screw base secures into a 1/4″-20 threaded hole and holds your tablet 1″ to 3″ off your work surface. Use the knob to adjust position.

Mount Type	Holds Devices Ht.	Holds Devices Wd.	Holds Devices Dp.		
Bench/Desk—Clamp Base	8″-9.7″	5.5″-8″	Up to 0.75″	3796T12	$141.76
Bench/Desk—Screw Base	8.5″-10.7″	Up to 7.7″	Up to 0.56″	3796T13	86.40

Adjustable-Height Positioning Stands





Various mounting options make these stands more versatile than a standard tripod.

Lightweight Stand—Is easy to transport and includes a storage case. The head has a 1/4″-20 mounting connection and quick-release attachment plate. Head swivels 360° and tilts up 75°, down 90°, and left 90°. Made of aluminum.

Easy-Adjust Stand—The central column has a gas cylinder for smooth height adjustment. Heads are sold separately. Made of aluminum.

High-Load Stand—Handles up to 150 lbs. and has 4″ self-leveling footplates with a 5/8″ hole for staking. Includes a 6″ dia. head with eight 1/4″-20 and eight 5/8″-16 mounting holes for easy attachment (four fasteners for each hole size are included). Made of aluminum.

Heads for easy-adjust stands have a 1/4″-20 stud and locking pin to attach to stand. Made of aluminum. *Rectangular head* swivels 360°, tilts up 15°, tilts down 90°, and measures 3 1/2″ Wd. x 6″ Lg. *Round head* is 2 1/2″ dia.

Adapters for lightweight and **easy-adjust stands** attach to stand heads. *Adapter plate* is made of aluminum. It's 4″ square with a 1/4″-20 center hole and four 0.225″ unthreaded holes spaced 1 1/2″ x 1 13/16″ apart. *Ball-grip adapter* has a 1 1/2″ dia. rubber ball. It can be used with our Ball-Grip Positioning Arm connectors and ends on page 2583. Adapter has a 2.44″ dia. aluminum base with seven 0.22″ dia. holes for attachments.

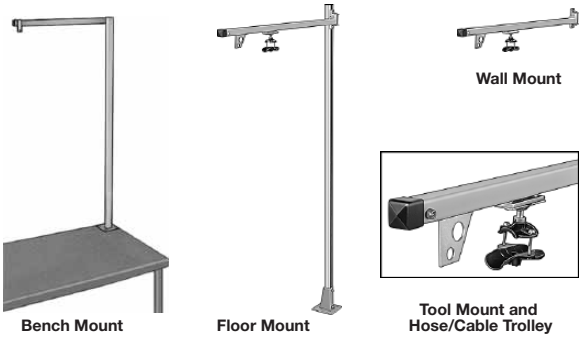
Flexible-Leg Tripod

Stand this tripod on its own three feet, or bend, flex, and wrap the legs around almost anything while keeping a level mounting surface. Legs are made of 1 1/8″ dia. plastic sections. The feet and the rings around each section are rubber to prevent slipping.

Tripod has a 1 3/4″ dia. head with 1/4″-20 threaded mounting stud. Includes a 3/8″-20 male adapter. Color is black and gray.

Height	Load Cap., lbs.		
9 13/16″	6.6	1050A1	$49.74

Tool Supports



Suspend and position your power tools to keep them organized and within reach for assembly work. Supports include a tool mount that slides along the length of the arm.

Bench Mount—Made of stainless steel. The support arm swivels 360°. Mounting fasteners are included.

Optional bench-mount clamp allows you to clamp a support to workbenches up to 2 1/4″ thick.

Floor Mount and **Wall Mount—**Made of steel. The support arm swivels 180° and includes a hose/cable trolley and end clamp. Mounting fasteners are not included.

Tool Counterbalancing Arms

Able to support the full weight of a tool as well as absorb any torque the tool puts out, these articulating arms will reduce your hand fatigue when performing continuous fastening and grinding work. Arms rotate 360° and have in-and-out movement for effortless tool positioning. They include a mount that holds a 1″-2″ dia. tool.

Arms are made of black powder-coated aluminum with a cast iron base. The base is 5 1/2″ dia. and has four 13/32″ dia. mounting holes.

Projection	Max. Torque of Tool, ft.-lbs.	Choose a Load Range, lbs.		
19″-37″	10	1-3, 4-7, 8-10	1641A11	$570.00

30″-57″	10	1-3, 4-7, 8-10	1641A31	675.00

Tool Positioners

Keep your tool in any position throughout the 4 1/2-ft. cable travel the entire time you're working. When you've finished, lift the tool up until the cable retracts into the housing. Cable tension is adjustable.

Positioner has a load range of 1-10 lbs., a 1/16″ dia. nylon cable, and a plastic housing. It has a hanger with 1/2″ opening at the top and includes an adjustable cable stop with snap-style tool clip. In addition to the tool, total weight for the load should include tool fittings, hose, and cord. Size is 8 1/2″ Lg. x 1 1/2″ Wd.

6739A41 $21.06

Tool Counterbalancers

Designed to make your suspended tool feel weightless, counterbalancers allow you to keep the tool within reach and move it up, down, and around with minimal effort. They also minimize hand fatigue in applications that require continuous tool use. All have a 360° swivel hanger at the top and include a cable stop with snap-style tool clip for quick tool changes. Cable tension is adjustable. Choose a counterbalancer where the total weight of your tool (including fittings, hose, and cord) falls in the middle of the capacity range listed.

Counterbalancers with ratchet lock have a ratchet mechanism that slows the cable retraction and halts the cable at set positions so you can control the movement of your tool. Tug on the cable to release the lock.

A **secondary restraint** is required for over-head mounting.

Air-Controlled Tool Counterbalancers

For precise tool positioning, this counterbalancer has an air regulator to adjust cable tension. Once tension is set, it remains constant to keep your suspended tool feeling weightless throughout the 5-ft. cable travel. Good for applications that require continuous tool use to minimize hand fatigue.

Counterbalancer has a load capacity of 2-50 lbs., a 1/8″ dia. steel cable, and a 10¼″ wide aluminum housing. It has a 360° swivel hanger with 1″ opening at the top and includes a snap-style tool clip for quick tool changes. Maximum air pressure is 100 psi. Air inlet connection is ¼ NPT. Minimum clearance is 20⅛″.

48005T86 ..... $1,290.94

Air-Tool Counterbalancers with Built-In Hose Reel

Furnished with their own retractable air hose so you can directly attach your air tool, these counterbalancers eliminate clutter and tangles. They have adjustable tension to make your suspended tool feel weightless and minimize hand fatigue in applications that require continuous tool use.

Counterbalancers have a 7½″ wide plastic housing and 360° swivel hanger with ¾″ opening at the top. Maximum air pressure is 145 psi. Air inlet connection is ¼″ hose barb. Air tool connection is ¼ NPT female. Minimum clearance is 10″.

A **secondary restraint** is required for over-head mounting.

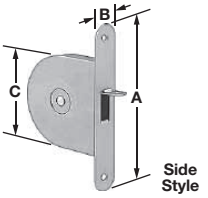
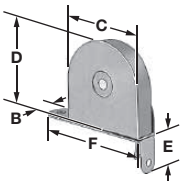
Spring Counterbalancers



Side Style



Overhead Style

Use these counterbalancers to suspend, lift, or retract objects that are moved vertically in a track such as tools, windows, and doors. Counterbalancers are made of steel with a stainless steel spring. Once your object is attached to the load clip, the spring is released until the object is counterbalanced. Mounting fasteners are included.

Note: The load capacity stamped on each counterbalancer is the load capacity for a pair. When using counterbalancers on windows, two are required for each sash.

Side style mounts on a vertical frame. **Overhead style** mounts in the corner of a horizontal frame.

Tool Retractors

Suspend your tool to keep it within reach, but out of the way until it's needed. Pull your tool down when you're ready to work and let it go when you're finished—the cable automatically pulls the tool back up. Cable tension is adjustable.

Retractors have a hanger at the top and include an adjustable cable stop with snap-style tool clip for quick tool changes. Choose a retractor where the total weight of your tool (including fittings, hose, and cord) falls in the middle of the capacity range listed.

Retractors with ratchet lock have a ratchet mechanism that slows the cable retraction and halts the cable at set positions so you can control the movement of the tool. Tug on the cable to release the lock.

A **secondary restraint** is required for over-head mounting where listed below.

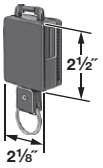
Portable Tool Retractors



Attached to your belt, these retractors keep tools handy when you're on the go. Pull your tool down when you're ready to work and let it go when you're finished—the cable automatically pulls your tool back up. Retractors have a 1″ stainless steel split ring for tool changes. Made of nylon, the cable is 1/16″ dia. with a travel length of 32″. Housing is plastic.

Belt loops fit belts up to 2″ wide. **Strap** has a snap-style mounting hook with 1 5/16″ opening.

Style	Load Cap., lbs.		
With Belt Loop	1.5	30155T12	$33.86
With Belt Loop and Strap	1.5	30155T11	33.86
With Stainless Steel Belt Clip	1.5	30155T13	40.09

Constant-Force Retractors

With Two Storage Drums

An alternative to electric motors, counterweights, and power springs, these retractors provide constant force to their cable for controlled extension and retraction. They are powered by a stainless steel spring housed in one or two storage drums. They also have an output drum which holds the cable. When you attach an object to the cable (object weight should be equal to or close to cable tension weight), the spring will automatically pull the cable and your object back.

Retractors have a zinc-plated steel base, 1/16″ dia. stainless steel cable, acetal drums, and four 0.177″ dia. mounting holes (except 61115A1 has a stainless steel base, 1/16″ dia. nylon cable, nylon drums, and no mounting holes). Mounting fasteners are not included.

Spring-Powered Retractors

Stem Mount

Shaft Mount

Bracket Mount

Covered Bracket Mount

When you attach an object to the cable, the spring will automatically pull the cable and your object back. The cable reels do not lock in place. Mounting fasteners are not included.

Stem Mount—Have a steel spring, plastic-coated galvanized steel cable, zinc-coated steel cable reel, and 1 1/2″ Wd. × 8 3/4″ Ht. zinc-coated steel mounting stem.

Shaft Mount—Have a steel spring, plastic-coated galvanized steel cable, and steel cable reel that mounts directly on a 5/16″ square arbor (except 6653A25 and 6653A26 mount directly on a 7/16″ square arbor).

Bracket Mount—Has a stainless steel spring, plastic-coated stainless steel cable, and zinc-coated steel bracket with two 0.238″ dia. mounting holes.

Covered Bracket Mount—Have a stainless steel spring, plastic-coated stainless steel cable, and aluminum bracket with four 3/16″ dia. mounting holes.

C-Clamps

Regular Duty and Heavy Duty

Extra Heavy Duty

The choice for general purpose clamping applications.
Iron clamps have a steel screw, swivel pad, and sliding handle.
Steel clamps are stronger than iron clamps. All have a swivel pad and a sliding handle, except extra heavy duty clamps have a square-head screw that can be tightened with a wrench.
Regular duty welders' clamps have a copper-plated screw, swivel pad, and sliding handle to resist weld splatter.

Compact C-Clamps

When space is tight, use these clamps that are smaller and thinner than other clamps. They have a steel sliding handle (unless noted).
Iron clamps have a corrosion-resistant, powder-coated body and a steel screw and swivel pad.
Iron with nonmarring tips have pads on the clamping surfaces to protect soft and delicate material. They have a steel swivel pad that is not replaceable.
Steel clamps have a corrosion-resistant zinc-plated screw and swivel pad. The swivel pad is not replaceable.

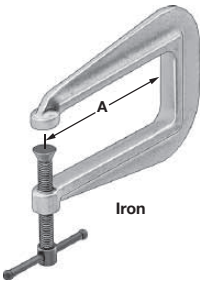
Replacement Swivel Pads for C-Clamps

No tools required—pressure from your clamp pops the pad onto the end of the screw. All are made of steel and have a steel-toothed internal washer to ensure a tight grip. Pads are flat.
To determine which pad you need, remove the existing pad from your clamp. Measure the ball diameter on your screw and refer to the ball diameter ranges listed.

Pad Dia.	Ball Dia. Range		
1″	0.395″-0.400″ (25/64″)	5076A1	$2.60
1¼″	0.395″-0.400″ (25/64″)	5076A41	3.12
1¼″	0.452″-0.457″ (29/64″)	5076A21	3.75
1⅜″	0.570″-0.575″ (37/64″)	5076A31	4.12

Extended-Reach C-Clamps



Clamp farther in from the edge of your workpiece. These have a longer reach than other C-clamps.

Iron clamps are powder-coated and have a black-oxide steel screw, swivel pad, and sliding handle.

Steel clamps are stronger than iron clamps. They have a swivel pad and a sliding handle.

Square welders' clamps have a zinc-plated screw, swivel pad, and handle to resist weld splatter.

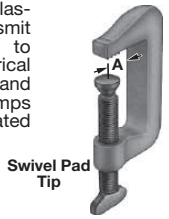
Nonconductive C-Clamps

Made from fiber-reinforced plastic, these clamps won't transmit electricity and are resistant to chemicals. Use around electrical equipment as well as in plating and anodizing applications. Clamps have a wing-nut handle. Not rated for holding capacity.



Opening Max.	Opening Min.	Reach (A)

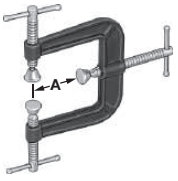
Three-Way C-Clamps

Three screws let you apply pressure on three sides of your workpiece during gluing, welding, and cutting applications. Clamp has sliding handles. Body is iron. Handles, screws, and swivel pads are steel.



Opening Max.	Opening Min.	Reach (A)	Holding Cap., lbs.		
2½″	0″	2½″	300	5143A15	$10.43

Corrosion-Resistant C-Clamps

Use these clamps anywhere from clean rooms to marinas.

Stainless Steel—Clamps offer the most corrosion resistance. All have a swivel pad.

Aluminum—Clamps with *sliding handle* have a copper-plated screw and swivel pad to resist weld splatter.

Opening Max.	Opening Min.	Reach (A)	Holding Cap., lbs.

Low-Profile C-Clamps

No handle or protruding screw means these clamps will fit into tight spaces. They're aluminum with textured pads and a steel screw. Not rated for holding capacity.

Hinged clamp pivots for easier positioning in limited space.

Opening Max.	Opening Min.	Reach (A)		
Standard				
1″	0″	1⅞″	1705A12	$8.00
1½″	0″	1⅞″	1705A11	8.17
Hinged				
⅝″	0″	1½″	1705A21	8.06

Fast-Action C-Clamps

Make large or frequent adjustments in less time—push the quick-release button, position the clamp, then let go of the button. Final pressure is applied by turning the screw. Clamps have an iron body. Screw, swivel pad, and sliding handle are steel.

Opening Max.	Opening Min.	Reach (A)	Holding Cap., lbs.		
3¼″	0″	1¾″	1,500	50275A76	$9.46

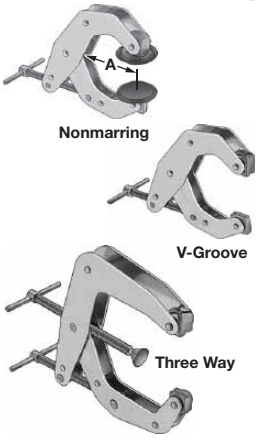
6¼″	0″	3⅞″	1,500	50275A78	14.89

No-Twist C-Clamps



The jaws of these clamps move in unison to apply even pressure and the clamping surfaces rotate to grip your workpiece without twisting. Clamps have a T-handle (unless noted).

Steel clamps have a corrosion-resistant, zinc-plated frame and copper-plated screw and clamping surfaces to resist weld splatter.

Nonmarring clamps have a plastic pad on the clamping surfaces.

V-groove clamps have a V-groove on the clamping surfaces to hold round material.

Three-way clamp has a V-groove on the clamping surfaces and an additional screw with swivel pad so you can apply pressure on the top, bottom, and side of your workpiece.

Stainless steel clamps are the most corrosion resistant. They have a V-groove on the clamping surfaces to hold round material.

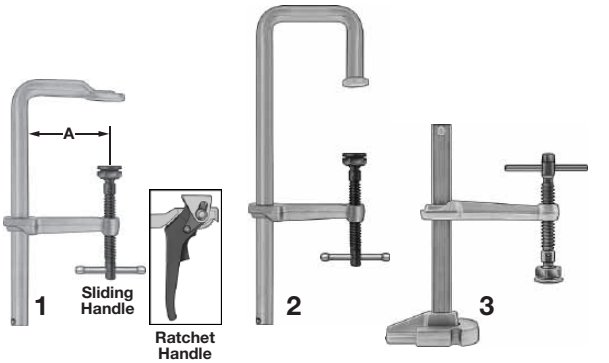
Fast-Action Bar Clamps



Also known as F-, J-, or L-clamps, these offer the strength of a C-clamp with the adjustability of a bar clamp. Slide the head into position, then use the handle for final tightening. Clamping surfaces are nonmarring.

Sliding-handle clamps have a corrosion-resistant zinc-plated bar, head, and sliding handle (unless noted). Screw and pad are steel.

Regular duty clamps for recessed areas provide extra clearance into areas up to 4" deep. *Regular duty welders'* clamps have a copper-plated screw, pad, and handle to resist weld splatter. The included bracket permanently mounts to a surface and allows you to easily move the clamp in and out.

Ratchet-handle clamps lock in place for use in applications where vibration could cause other clamps to move. Made of steel.

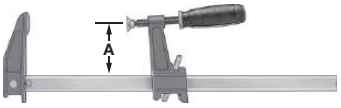
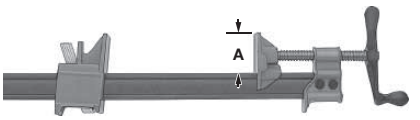
Bar Clamps



Regular Duty and Heavy Duty

Heavy Duty Extended Reach



Extra Heavy Duty

All have a sliding head for easy positioning and adjustment. A clutch in the sliding head securely grips the bar, except 5032A55, A56, and A58 do not have a clutch.

Regular duty clamps have a rubber handle. Heads and nonmarring clamping surfaces are iron; bar and screw are steel.

Heavy duty clamps have a wood handle. Heads are iron, clamping surfaces are iron with plastic pads, and bar and screw are steel.

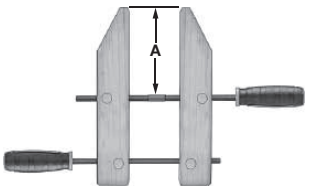
Adjustable-Angle Bar Clamps

Also known as handscrews, these clamps have two screws that turn independently so you can change the angle of the heads to hold round, angled, or odd-shaped material. The screws are steel; heads and handles are wood. Clamping surfaces are nonmarring. Not rated for holding capacity.



Opening Max.	Opening Min.	Reach (A)		
3″	0″	3″	**5104A13**	$22.11
5″	0″	4″	**5104A15**	24.16

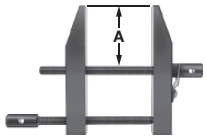
9¼″	0″	6″	**5104A17**	31.72
10¼″	0″	7″	**5104A18**	38.58

Parallel Bar Clamps

The heads on these clamps stay parallel when opening and closing to apply even pressure to your workpiece during tapping, drilling, and other machine setups. The clamping surfaces are tapered for use in recessed areas. The screw heads have a hole so you can add a pin to create a handle for additional tightening. Made of steel. Not rated for holding capacity.



Opening Max.	Opening Min.	Reach (A)	Screw Head Hole Dia.		
1¼″	0″	¾″	⅛″	**5008A51**	$9.13

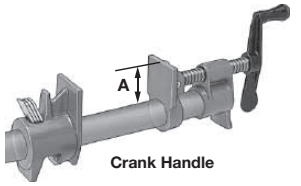
3″	0″	1⅞″	3/16″	**5008A53**	14.34

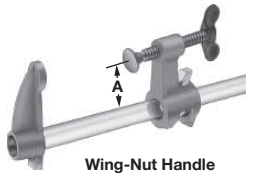
Any-Length Bar Clamps

Place these heads on a pipe (not included) that is at least 12″ long and threaded on both ends to create your own bar clamp. Also known as pipe clamps. Heads and handle are iron; screw is steel. Clamping surfaces are nonmarring with plastic pads. Not rated for holding capacity.

Clamp with wing-nut handle is for use in confined spaces as all adjustments can be made from one end.



Crank Handle



Wing-Nut Handle

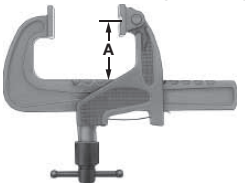
Extra Heavy Duty Bar Clamps



With their thick, all-steel construction, these clamps are stronger and more durable than other clamps. Slide the spring-loaded head into a notch and turn the sliding handle to tighten. The head has a V-groove on the clamping surface to accommodate round material.

Opening Max.	Opening Min.	Reach (A)	Holding Cap., lbs.

Band Clamps

Polyester Band

Nylon Band Ratchet Handle

Nylon Band Twist Handle

An easy-to-tighten band encircles and holds round and odd-shaped objects with even pressure. A lock holds and releases the band. Not rated for holding capacity.

With Polyester Band—Clamps are steel.

With Nylon Band—Clamps are made of steel and plastic and include four removable clamping surfaces.

Corner Clamps

Fixed Angle (200-lb. cap.)

Fixed Angle (1,000-lb. and 1,250-lb. cap.)

Fixed Angle with Third Axis

Perfect for gluing, welding, soldering, and other assembly operations. All can be mounted to a work surface (fasteners not included).

Fixed-angle clamps align and hold two workpieces at a 90° angle. The jaws pivot to allow simultaneous clamping of materials with unequal thicknesses. *200-lb capacity* clamp is metal with nylon jaws and a steel screw. It has two sliding handles and two 13/64″ mounting holes. *1,000-lb.* and *1,250-lb. capacity* clamps are iron with a sliding handle. Screw is copper plated to resist weld splatter. They have two 1 3/4″ Lg. × 2 7/16″ Wd. mounting slots.

Fixed-angle with third axis clamp aligns and holds up to three workpieces at a 90° angle. Press a button to move the threaded holding screws in or out. The third axis clamping arm swings out of the way for easy material removal. Clamp is steel and iron with copper-plated holding screws that resist weld splatter. Has two 1 1/2″ Lg. × 7/16″ Wd. mounting slots.

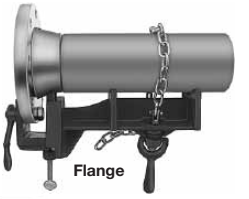
Pipe-Welding Chain Clamps

Straight



Flange

Adjustable

The combination of chains and support bars allows these clamps to hold a wide range of pipe sizes together for tack welding. Not rated for holding capacity. *Aluminum* clamps are lighter in weight and easier to handle than iron clamps. *Iron* clamps are the choice for heavy duty jobs.

Straight clamps are for use with two lengths of straight pipe and with eccentric reducers. **Flange** clamp is for standard or extra heavy duty neck flanges and straight pipe. **Adjustable** clamp is used with straight pipe, elbows, tees, angles, reducers, and risers.

Magnetic Quick Clamps

Regular Duty

Heavy Duty with Magnetic-Release Switch

Heavy Duty with T-Handle

Hold ferrous metals for welding, brazing, and assembly jobs.

Regular duty clamp is compact and has two 13/64″ dia. mounting holes.

Heavy duty clamp has two 1/4″ dia. mounting holes.

Heavy duty with magnetic-release switch clamps provide the quickest and easiest placement and release of your work.

Heavy duty with T-handle clamp provides a way to disengage your work. It has four 1/4″ dia. mounting holes.

Spring Clamps

Standard
(Shown with Padded Tips and Grips)

Nonmarring

Extended Reach

High Strength

Overhead Use

Adjustable Jaw

Squeeze the handle to open these clamps; release the handle and a spring holds them tightly in place. Clamping surfaces are parallel when fully opened.

Stainless steel clamps are the most corrosion resistant. Good for plating and anodizing applications.

Nonmarring clamps have pivoting clamping surfaces.

Extended-reach clamp has a long, narrow nose for use in tight spaces.

High-strength clamp has a fiber-reinforced body for more strength than other plastic clamps. Clamping surfaces are serrated.

Overhead-use clamp has a snap hook on the handle for suspending. The snap hook rotates 360° and the clamping surfaces pivot.

Adjustable-jaw clamps let you slide jaws in and out to quickly set the opening size. 50065A24 and 50065A25 have one adjustable jaw; 50065A26 has two adjustable jaws.

Miniature Spring Clamps

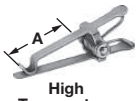
Antistatic

Locking

Adjustable Locking

Nonmarring

Corrosion Resistant



High Temperature

High Temperature with V-Shaped Jaws

Smaller than other spring clamps, use these with thin and flat materials or in areas where space is tight.

Antistatic clamp is made of nonconductive fiberglass-reinforced nylon for use in clean rooms and PC board applications. Clamping surfaces are serrated. Handles have a hole for grounding.

Locking clamp has a lever that locks the clamp onto material. Made of zinc-plated steel with nonmarring clamping surfaces.

Adjustable locking clamp has a lever to adjust the opening size. Press the lever down to lock clamp onto material. Made of zinc-plated steel with nonmarring clamping surfaces. Has mounting holes.

Nonmarring clamp holds work firmly but gently. Made of zinc-plated steel and has mounting holes.

Corrosion-resistant clamp is made of stainless steel. Clamping surfaces are smooth. Has a mounting hole.

High-temperature clamps withstand temperatures up to 700° F. All are stainless steel and have smooth clamping surfaces. *With V-shaped jaws* has mounting holes.

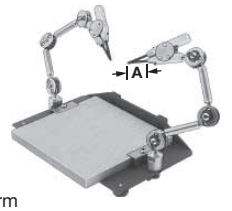
Base-Mounted Any-Angle Spring Clamps

Twist, rotate, and bend the jointed arms to place these steel spring clamps in the exact position you need. The 8½″ Wd. × 6¼″ Dp. base provides a work surface for soldering small items. Not rated for holding capacity.



Opening Max.	Opening Min.	Reach (A)	Clamp Lg.	Arm Lg.		
¾″	0″	1¼″	3½″	6½″	5162A76	$181.51

Spring Clamps & Plier Clamps

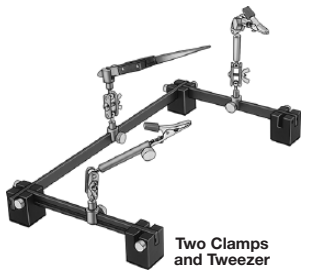
Base-Mounted Spring Clamps

One Clamp

One Tweezer

Two Clamps

Two Clamps and Magnifier



Two Clamps and Tweezer

Keep your hands free to work—these clamps are mounted to swivel arms attached to a base. Great for soldering, gluing, and assembling applications. Made of steel, unless otherwise stated. Not rated for holding capacity.

One Tweezer—Tips are serrated on the inside. Made of stainless steel.

Two Clamps and **Two Clamps and Magnifier—**Swivel arms are on a 5½″ rail. Magnifier is 2½″ dia.

Two Clamps and Tweezer—Tweezer is self-locking. Arms are mounted on two 6″ and one 12″ adjustable rails.

Plier-Activated Edge and Hole Clamps

Pliers with Edge-Grip Clamp

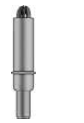
Grip sheet material for gluing, fastening, riveting, and soldering. These clamps are smaller and quicker to use than standard C-clamps, and several of them can be used together. Clamps require special pliers (sold separately) for positioning and removal. Not rated for holding capacity.

Clamps and Pliers

Edge-Grip Clamp

Edge-grip clamps grab the edges of the workpiece. Jaws are made of aluminum.

Opening Max.	Opening Min.	Jaw Depth	O'all Lg.		
½″	0″	1″	2⅛″	5099A41	$4.47
¾″	0″	1″	2½″	5099A44	4.47



Hole-Grip Clamp

Hole-grip clamps are for use in drilled holes to grab and align material up to ¼″ thick. Made of steel.

Fits Hole Dia.	Drill Size	O'all Lg.		
3/32″	#40	2¼″	5099A29	$1.62

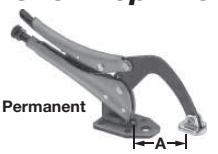
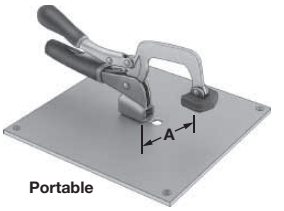
Bench-Top Plier Clamps



Permanent



Portable

Clamps have locking handles and are made of steel.

Permanent—Once mounted to your drilling table or workbench the clamp can be used in nearly any position. A knob lets you adjust the opening size and the clamping surface swivels. Has one ½″ dia. hole and four 5/16″ dia. holes for mounting (fasteners not included). Not rated for holding capacity.

Portable—The base plate does not have to be permanently mounted for use, so you can move this clamp from place to place. Clamp swivels 360°. Clamping surface is nonmarring. Base plate is 10″ Lg.×10″ Wd.×¼″ Thick. Rubber feet and mounting hardware are included. Holding capacity is 400 lbs.

	Opening Max.	Opening Min.	Reach (A)	O'all Lg.		
Permanent	4″	0″	3¼″	12″	4987A84	$59.42
Portable	4″	0″	3″	10½″	5060A22	64.98

Fast-Action Plier Clamp

The ratchet action of this nylon clamp gives you rapid adjustment and a secure hold. A release trigger opens the clamp instantly. Clamp has long, narrow jaws for clamping further into your workpiece, or using in tight spots. Not rated for holding capacity.

Opening Max.	Opening Min.	Reach (A)	O'all Lg.		
2¾″	0″	3½″	10″	4972A2	$8.76

Quick-Grip Plier Clamps

Squeeze the handle to clamp; use the release trigger to unclamp. Clamps are made of plastic and have textured clamping surfaces.

Opening Max.	Opening Min.	Reach (A)	Holding Cap., lbs.	O'all Lg.		
1½″	0″	1½″	25	5″	5070A11	$5.28

♣ Includes a no-pinch, fast-release cushioned grip.

Vise-Grip Plier Clamps for Sheets

Finger-shaped clamping points on these clamps get a secure grip on thin sheets and panels. Turn the knob to adjust the opening size, then squeeze the handle to lock the clamp in place. A release trigger opens the clamp. Clamps are made of steel and have smooth clamping surfaces. Not rated for holding capacity.

Welding clamp grips sheet metal, bars, pipe, and parts.

Panel clamp has a bottom jaw that moves forward to clamp panels and sheets at a 90° angle.

Squeeze-Action Toggle Plier Clamps

These portable handheld clamps provide fast, positive-lock clamping where stationary toggle clamps can't be used. Clamps are made of steel. Turn the threaded holding screw to adjust the opening size.

Nonmarring holding screws have a plastic tip to protect delicate material. For replacement nonmarring holding screws, see page 2601.

(1-4) Standard clamps open by pulling the handles apart.

(5-7) Trigger-release clamps open by pulling the two-way trigger up or down.

(8) Right-angle clamps work well in tight spaces. Pull the handles apart to open them.

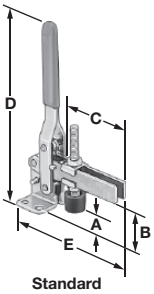
Hold-Down Toggle Clamps



Standard

Double Locking

The most common style of toggle clamp, these clamps offer exceptional holding force with minimal hand pressure. The arm opens a minimum of 90° for easy workpiece removal. Clamps have plastic-covered handles. *High-Capacity* have a six-hole base; all others have an industry-standard four-hole base. All clamps are supplied with both a metal and nonmarring holding screw, unless noted. The holding screw moves to any position along the arm, unless noted.

Note: Position the holding screw closest to the base (as shown) to achieve maximum holding capacity. Capacity decreases by as much as 65% when the screw is positioned at the end of the arm.

Dual Mount—This clamp has mounting holes on the bottom and sides of the base for mounting versatility.

Double Locking—Useful for high-vibration applications, they have a locking lever to secure the clamp.

Cut-to-Length—Clamps have a solid arm that can be cut to your desired length. Weld the holding screw holder (included) to the end of the arm.

High Capacity—Clamps provide two to three times the holding capacity of similar-size standard clamps.

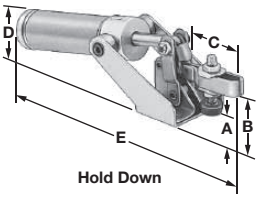
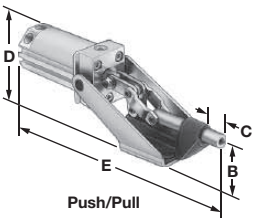
■ Holding screw does not travel along the arm. ▲Supplied with metal holding screw only.

Air-Powered Toggle Clamps



Hold Down



Push/Pull

For repetitive clamping and clamping in hard-to-reach locations, air-powered toggle clamps are a useful alternative to manually operated clamps. Use fittings (not included) to connect the clamp's ports to a control valve and an air line. Clamps lock against the workpiece and maintain the full-rated holding capacity, even with a loss of air pressure. They have an industry-standard four-hole base, except the 2,500-lb. capacity push/pull clamp has a six-hole base. Made of steel with a temperature range of –10° to 165° F.

Hold-Down—The holding screw opens a minimum of 90° for easy workpiece removal. Holding screw moves to any position along the arm.

Note: Position the holding screw closest to the base (as shown) to achieve maximum holding capacity. Capacity decreases by as much as 65% when the screw is positioned at the end of the arm. Clamps with 100 and 200 lbs. max. holding capacity have a nonmarring holding screw; all others have a metal holding screw.

Push/Pull Action—Plunger end is drilled and tapped to accommodate threaded holding screws and other threaded fixtures (not included). Clamps lock in the extended position only.

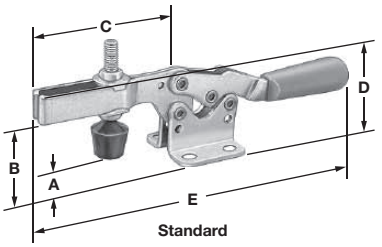
Low-Profile Hold-Down Toggle Clamps



Standard

Double Locking

Secure materials in tight spaces. The clamping arm opens a minimum of 70° for easy workpiece removal. Clamps have a plastic-covered handle and include both a metal and nonmarring holding screw, unless noted. The holding screw is adjustable along the length of the arm, unless noted.

Note: Position the holding screw closest to the base (as shown) to achieve maximum holding capacity. Capacity decreases by as much as 65% when the screw is positioned at the end of the arm. All have an industry-standard four-hole base, unless otherwise stated.

Extra Hand Clearance—Additional space between the handle and the arm in the open position reduces pinch points.

Double Locking—A locking lever secures the clamp in the closed position and must be manually released before changing positions. Use for high-vibration applications.

High Capacity—These clamps have two to three times the holding capacity of similar-size standard clamps.

♦Includes both a nylon and nonmarring holding screw. ★Handle is not plastic covered. ■Holding screw does not travel along the arm. ♣Length is 10 1/2″.

Compact Hold-Down Toggle Clamps

Achieve full-size force in a small clamp. Often used for circuit boards, gluing, and assembling, these clamps have plastic-covered handles and an industry-standard four-hole base. They include both a metal and nonmarring holding screw. The holding screw can be moved to any position along the arm.

Note: Position the holding screw closest to the base (as shown) to achieve maximum holding capacity. Capacity decreases by as much as 30% when the screw is positioned at the end of the arm.

Double Locking—Built in lock/release lever prevents accidental openings.

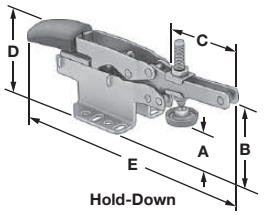
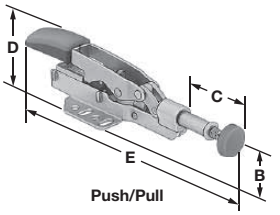
Auto-Adjusting Toggle Clamps



Hold-Down



Push/Pull

You don't have to move the holding screw to fit different workpieces; these clamps have an internal mechanism that compensates for various thicknesses. Clamps have a nonmarring holding screw head that pivots to clamp angled surfaces, and a screw on the handle to modify clamping force.

Hold-Down—Arm opens a minimum of 70° for workpiece removal. They have a holding screw that moves to any position along the arm; holding capacity stays the same along the length of the arm.

Push/Pull—Clamps lock in the extended position only.

Hold-Down

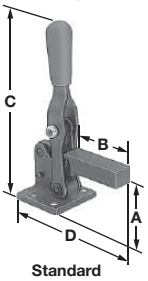
Heavy Duty Hold-Down Toggle Clamps



Standard

Use these clamps for your most demanding applications; their steel construction maintains high holding capacities. The arm opens a minimum of 80° for easy workpiece removal. Use the solid clamping arm as supplied, or drill and tap a hole to add a threaded holding screw (not included). All have an industry-standard four-hole base.

Standard—Has a plastic-covered handle.

Self-Adjusting—Compensate for slightly different workpiece thicknesses.

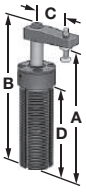
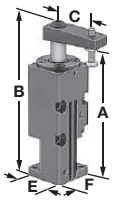
Air-Powered Swing Clamps



Threaded Body



Block Style

Adjust the air pressure to apply the correct amount of clamping force without damaging delicate parts. These clamps have an arm that swings 90° before clamping down on a workpiece. Those with 15/32" vertical travel during rotation have a metal holding screw, and those with 3/4" vertical travel during rotation have a nonmarring holding screw. Use threaded fittings (not included) to connect the clamp's ports to a control valve and an air line. Clamps are aluminum with a temperature range of –14° to 140° F.

Threaded Body—To mount, screw clamp into a tapped hole in a fixture.

Block Style—Clamps have holes on the bottom and sides of the base for mounting versatility.

For additional swing clamp specifications and optional switches and mounting blocks, go to mcmaster.com and search for the clamp part number from the options below.

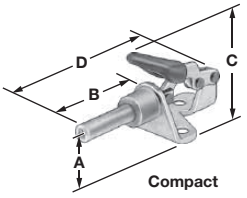
Push/Pull-Action Toggle Clamps



Compact

Standard

Easy Grip

Sealed

High Capacity Compact

High Capacity

Hole Mounted

Reverse Action

Double Locking Handle

Use the motion that's right for you to get fast clamping action for assembly areas, fixturing, and welding. Use for push-action clamping; those that lock in the open and closed positions can also be used as pull-action clamps. They have a plastic-covered handle, unless noted. Plungers accommodate threaded holding screws and other threaded fixtures (not included). For metal holding screws, see pages 3145-3167. For nonmarring holding screws, see page 2601.

Double locking clamps have a built-in lock/release lever to prevent accidental openings in high-vibration applications.

Compact—Often used in electronic and small fixturing applications. 5093A73 locks in the closed position only; all others lock in the open and closed positions.

Standard—6124A21 locks in the closed position only; all others lock in the open and closed positions.

Easy Grip—Clamps have a large handle for a secure grip. Lock in the open and closed positions.

Sealed—Moving parts are sealed to prevent dirt and particles from clogging the clamp. Clamp locks in the open and closed positions.

High Capacity Compact—5093A26 and 5093A77 lock in the open and closed positions; all others lock in the closed position only.

High Capacity—Clamps lock in the open and closed positions.

Hole Mounted—Mount through a panel or drill and tap a hole to flush mount. Lock in the open and closed positions.

Reverse Action—Move the handle back (or downward) to move the plunger forward. Clamps lock at the end of plunger travel, in the closed position only.

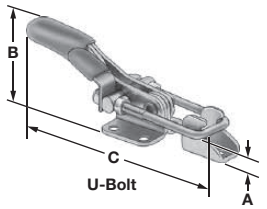
Pull-Action Toggle Clamps



U-Bolt Double Locking

U-Bolt Right Angle

J-Hook

Latch

Threaded Holding Screw

When you need to pull it together, these clamps secure lids and doors on drums and containers. Pull the handle back to engage the draw arm. You can adjust the length of the draw arm, unless noted. Clamps have plastic-covered handles, unless noted.

U-bolt clamps include a latch plate, unless noted.

Double locking clamps have a locking lever that keeps the draw arm in the locked position, making these suitable for high-vibration applications.

Right angle clamps can be mounted on a lid with the latch plate mounted on the side of a container.

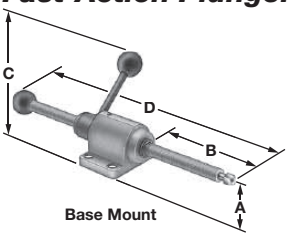
Fast-Action Plunger Clamps



Base Mount

Flange Mount

Quick clamping action makes it easy to secure workpieces. Push the plunger forward until it contacts the workpiece, then rotate the locking lever handle to apply clamping force and lock the plunger. Mounting base is aluminum alloy, knobs are plastic, and all other parts are steel. The *base-mount* clamp mounts to a flat surface; drill a hole to mount *flange-mount* clamp into a surface.

Mount Style	Max. Holding Cap., lbs.	*Plunger* Travel	*Plunger* Ht. (A)	*Plunger* Lg. (B)	*Plunger* Dia.	*Plunger* Thread Size	*Plunger* Thread Dp.	*Plunger* Ht. (C)	*Plunger* Lg. (D)

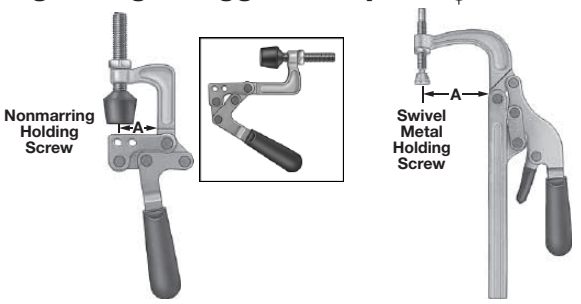
Right-Angle Toggle Clamps



With jaws that open 85°, these clamps make workpiece removal easy. Weld or bolt them to containers for clamping lids and covers. All have a plastic-coated handle.

Clamps *with metal holding screw* are 8 3/8" long; clamps *with nonmarring holding screw* are 9 3/4" long; and clamps *with swivel metal holding screw* are 10 7/8" long.

Max. Holding Cap., lbs.	Max. Opening	Arm Lg. (A)	Steel		Stainless Steel

Press Screws

Often used for gluing, welding, and veneering, these clamps have a screw nut that mounts into a drilled 1" hole, allowing the threaded rod to move in and out. Made of stainless steel with a steel screw. Include a crank handle and a removable 1 3/8" Ht. x 1 3/4" Wd. swivel pad. Clamping surface is smooth. Not rated for holding capacity.

Max. Screw Lg.		
9"	5096A14	$19.98

Holding Screw Caps

Caps provide a nonmarring grip on surfaces that could be damaged by metal holding screws. *Push-on caps* slip over the head of a metal holding screw. *Screw-on caps* have internal threads and screw onto the headless end of a holding screw.

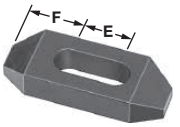
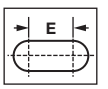
Step



Tapered Nose

Edge Holding

Low-Profile Edge Holding



Slot length is measured center to center

Use to hold dies and fixtures on planers, punch presses, milling machines, boring mills, and drill presses. Also known as strap clamps. Made of steel, except the corrosion-resistant clamps are made of non-magnetic stainless steel.

Step clamps have one serrated end to fit into serrated step blocks. See page 2603 for step blocks.

Tapered nose clamps mount to the top of a pair of step blocks or straddle workpieces that have a mounting hole.

Edge holding and **low-profile edge holding** clamps, also known as toe clamps, have a serrated edge that exerts clamping force both forward and downward when tightened.

Edge holding clamps come with a removable aluminum cap that can be placed over the serrated edge to prevent damage to workpieces.

Low-profile edge holding clamps allow you to machine a workpiece thinner than your clamp.

Setup Clamping Kits

Kits have a full range of clamps, blocks, studs, and nuts. They include 24 studs—four each in 3", 4", 5", 6", 7", and 8" lengths or 80 mm, 110 mm, 140 mm, 150 mm, 175 mm, and 200 mm lengths (unless noted). They also include four T-slot nuts, four flange nuts, four coupling nuts, six step blocks, and six step clamps. Clamps, nuts, and blocks are steel.

Standard kits include everything listed above plus a T-slot cleaner. The kits with wall-mount holder include two additional T-slot nuts and flange nuts. 8957A51 includes two additional T-slot nuts.

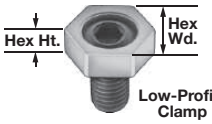
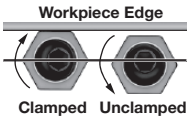
▲Includes 125 mm studs instead of 140 mm studs.

Low-Profile Clamps



Low-Profile Clamp



Clamped Unclamped

Give the screw a half-turn to press the hex head against the workpiece for quick and effective clamping. Use these clamps in tapped holes. They have a steel offset socket head cap screw and a brass hex head, except where noted. Clamps are often used in conjunction with T-slot nuts (sold separately below).

Clamps

Swivel-Hook Clamps

Also known as swing or hook clamps, these clamps have a steel hook that rides on a spring-loaded socket head cap screw. They hold workpieces securely, yet can be swiveled out of the way for a quick release. The screw is flush with the top of the clamp, permitting use in tight spaces. Clamp body is steel.

Hook to Base (A)	Clamp Lg.	Clamp Wd.	Hook Lg. (B)	Thread Size	Thread Lg.	Hex Key Size

Swivel Pads

Also known as toggle or swivel-foot pads, these pads apply uniform clamping pressure on uneven and angular surfaces. They tilt up to 10° to clamp against the workpiece. Thread them onto clamp bolts or studs that have a matching thread size.

Pads with a **serrated bottom** grip better on rough surfaces. Pads with a **nonmarring bottom** are made of acetal to protect soft metals and polished surfaces.

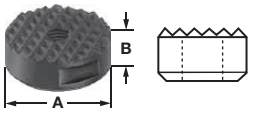
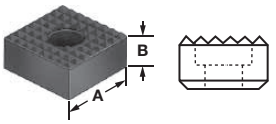
Serrated Grippers



Standard Round Gripper



Counterbored Square Gripper

Attach to chuck jaws, clamps, and other fixturing devices to provide additional holding strength and prevent wear. Made of steel.

Standard grippers have a threaded hole for fast mounting and replacement. Thread size is 10-32 (unless noted). They also have flat notches on the side for set screw mounting. *Round carbide-tipped* grippers are more wear resistant and have a 7/32″ deep blind hole.

Counterbored grippers mount with a socket head cap screw (not included).

To Order: Please specify extra-fine or fine pattern. Extra fine teeth are close together and lightly penetrate while holding. Fine are further apart for more aggressive holding. Standard 3/8″ size (A) are only available with extra-fine pattern.

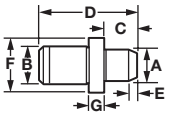
Shoulder-Style Locating Pins

Round-Head Press Fit

Round-Head Removable

Diamond-Head Press Fit

Diamond-Head Removable



Diamond Head

A shoulder on these pins keeps them from being pressed through the fixture. Use round-head pins and diamond-head pins to locate and align parts. Diamond-head pins minimize contact with the workpiece to reduce sticking and jamming.

Press-fit pins have a tapered end for easy installation. Made of steel. Rockwell hardness is C60-C64. Diameter (A) is slightly undersized up to 0.0015″; (B) is slightly oversized up to 0.001″.

Removable pins, also known as slip-fit and lockscrew locating pins, are reuseable. Made of steel. Rockwell hardness is C60-C64. Diameter (A) is slightly undersized up to 0.0025″; (B) is slightly undersized up to 0.0002″.

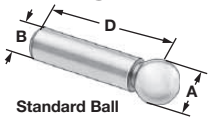
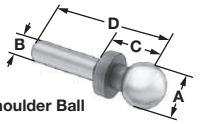
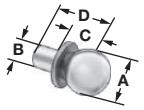
Tooling Balls



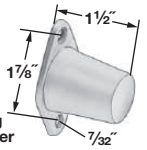
Standard Ball



Shoulder Ball



Shoulder Ball with Internal Thread



Tooling Ball Cover

Determine hole centerlines and distances between hole centerlines using tooling balls to establish a precise reference point. Made from one piece of steel, unless noted. Rockwell hardness is C52-C60. Tolerances for (A) and (C) dimensions are ±0.0002″.

Slip Fit—Shank is slightly undersized for temporary mounting. Tolerance for (B) dimension is +0.0000″ to -0.0004″.

Press Fit—Shank is slightly oversized for temporary or permanent mounting. Tolerance for (B) dimension is +0.0003″ to -0.0000″.

Shoulder balls provide a consistent height reference point. To install the **shoulder ball with internal thread**, push it through a bushing or hole and then insert a cap screw (not included) into the 6-32×1/4″ tapped shank. The screw will pull the shank through without marring the ball or changing the ball's location.

Tooling ball cover protects the tooling ball when not in use. Made of zinc alloy. Fits all balls listed.

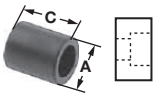
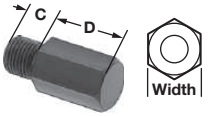
★Made from two pieces of steel (ball welded to the shank).

Fixture Supports

Press-Fit Support



Circular Head Support



Threaded Hex-Head Support

Use with jigs and fixtures to support and position workpieces. Made of steel. **Press-fit supports** press into a hole in your jig or fixture. Diameter tolerance for (B) is ±0.001″. **Circular-head supports** are counterbored for mounting with a socket head cap screw (not included). **Threaded hex-head supports** screw in for a secure fit.

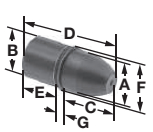
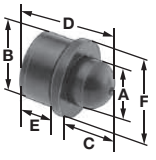
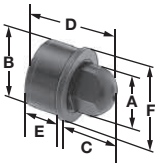
Alignment Dowels and Pins



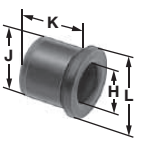
Dowel



Round Pin



Diamond Pin



Liner

Install a dowel or pin in your jig plate and a liner in the tooling that holds the workpiece to keep fixtures and jigs aligned with other tool parts. Made of steel. Rockwell hardness is C50-C64. Diameter (A) is slightly undersized up to 0.0002″; (B) is slightly oversized up to 0.0021″.

Dowels—Have a long, tapered nose for easy entry into the liner.

Pins—The pin shank diameter (B) and liner OD (J) are the same size, so fixture pieces can be drilled at the same time.

Liners—Dimension (H) is slightly oversized up to 0.0002″; (J) is slightly oversized up to 0.0021″.

Press-Fit Drill Bushings

Use as a guide to prevent drill bits from wandering. Also known as "P" bushings, they are permanently installed and mount flush with jig plates. Also suitable for use as spacers, shims, and machinery bushings. Made of hardened steel. Rockwell hardness is C61-C65.

Also Available: Other sizes. Please ask for 8491A901 and specify ID, OD, and length.

(Continued on following page)

Press-Fit Drill Bushings *(Continued from previous page)*

Use as a guide to prevent drill bits from wandering. Also known as "P" bushings, they are permanently installed and mount flush with jig plates. Also suitable for use as spacers, shims, and machinery bushings. Made of hardened steel. Rockwell hardness is C61-C65.

Also Available: Other sizes. Please ask for 8491A901 and specify ID, OD, and length.

Press-Fit Metric Drill Bushings

Guide drill bits with these metric bushings, also known as "PM" bushings. They permanently mount flush with jig plates. Also suitable for use as spacers, shims, and machinery bushings. Made of hardened steel. Rockwell hardness is C61-C65.

Also Available: Other sizes. Please ask for 8486A901 and specify ID, OD, and length.

Tolerances

ID	ID Tolerance

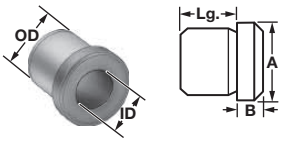
Press-Fit Drill Bushings with Head



A head prevents these bushings from being pushed through the jig when drilling pressure is extreme. Also known as "H" bushings (unless noted). Sizes marked with a sq. are also known as "HL" liners and are compatible with the removable drill bushings on pages 2613-2614. Made of hardened steel. Rockwell hardness is C61-C65.

Also Available: Other sizes. Please ask for 8492A901 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 bushings of the same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

■ HL liners. Compatible with removable drill bushings on pages 2613-2614.

Corrosion-Resistant Press-Fit Drill Bushings

Use these stainless steel bushings as drill guides, spacers, shims, and machinery bushings. Also known as "P" bushings, they mount flush with jig plates and are permanently installed.

Type 303 stainless steel bushings have excellent corrosion resistance in chemical and marine environments.

Type 440C stainless steel bushings are hardened to Rockwell C58-C60 for better wearability, but offer less corrosion resistance than Type 303 stainless steel bushings.

Also Available: Other sizes. Please ask for 8504A999 and specify ID, OD, and length.

Wear-Resistant Press-Fit Drill Bushings

Made of durable tungsten carbide, these bushings outlast steel bushings. Rockwell hardness is A89. Also known as "PC" bushings. ID tolerance is +0.0001″ to +0.0005″. OD tolerance is +0.0013″ to +0.0018″. Length tolerance is ±0.01″.

Also Available: Other sizes. Please ask for 33455A999 and specify ID, OD, and length.

Finish-Your-Own Press-Fit Drill Bushings

With precision-ground IDs and oversized ODs you can finish these bushings to your specifications. They should be machine ground. Made of hardened steel. Rockwell hardness is C61-C65.

Serrated & Knurled Groove	
1/4″-1″	+0.010″ to +0.015″

Serrations grip soft materials to prevent rotation and spin out. Rockwell hardness is C61-C65.

Serrated—Press into magnesium, aluminum, and masonite wood. Also known as "SP" bushings.

Serrated Groove—Press or encase into plastic tooling. Also known as "SG" bushings.

Knurled Groove— Encase in plastic tooling. Knurls resist force and provide better holding strength than serrated grooves. Also known as "DG" bushings.

Also Available: Other sizes. Please ask for 3377A999 for serrated bushings, 3378A999 for serrated groove bushings, or 3379A999 for knurled groove bushings. Specify ID, OD, and length.

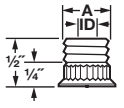
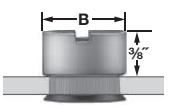
Removable Drill Bushings for Thin Materials

Bushing



Lock Ring



Lock Ring and Bushing (Sold Separately)

Unlike most bushings, these won't buckle the material or distort the hole when installed in thin-gauge aluminum and steel plates (1/64″ to 3/8″ thick). Insert bushing into drilled hole and twist the lock ring (sold separately) to secure. Bushings and lock rings can be removed and reused. Threads are left-handed to prevent bushing from loosening while drilling.

Bushings are made of 1144 carbon steel. Rockwell hardness is C59-C64. ID tolerance is +0.0001″ to +0.0015″; flange OD tolerance is +0.003″ to +0.005″.

Lock rings are aluminum.

Thread Size	ID (Drill Size)	Bushings OD (A)			Lock Rings OD (B)

Removable Drill Bushings

Also known as slip-fixed ("SF") renewable bushings, these bushings are easy to replace and are held in place by a lock screw or locking sleeve (lock screws and locking sleeves sold separately on page 2614). Made of hardened steel. Rockwell hardness is C61-C65. Length tolerance is ±0.015".

Also Available: Other sizes. Please ask for 8493A901 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 bushings of the same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

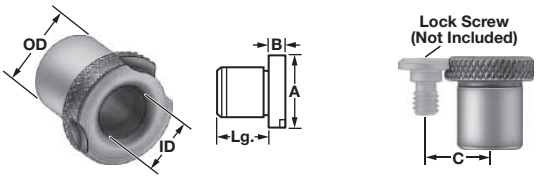
Removable Drill Bushings *(Continued from previous page)*



Also known as slip-fixed ("SF") renewable bushings, these bushings are easy to replace and are held in place by a lock screw or locking sleeve (lock screws and locking sleeves sold separately below). Made of hardened steel. Rockwell hardness is C61-C65. Length tolerance is ±0.015".

Also Available: Other sizes. Please ask for 8493A901 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 bushings of the same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

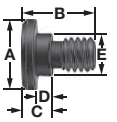
Lock Screws for Removable Drill Bushings

Slotted Head

Hex Socket Head



To secure removable bushings, also known as slip-fixed ("SF") renewable bushings, insert lock screws into the notches on the head of the bushings. Made of case-hardened steel.

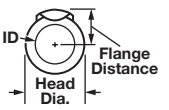
Locking Sleeves for Removable Drill Bushings



The locking flange on these sleeves will keep removable bushings, also known as slip-fixed ("SF") renewable bushings, in place. Install the sleeve in a jig plate and place bushing inside; a slight twist holds the bushing. Sleeves fit bushings with an OD equal to the sleeve ID. ID tolerance for 3/16" and 5/16" ID is +0.0001" to +0.0004"; ID tolerance for 1/2" ID is +0.0002" to +0.0005". Made of hardened steel. Rockwell hardness is C61-C65.

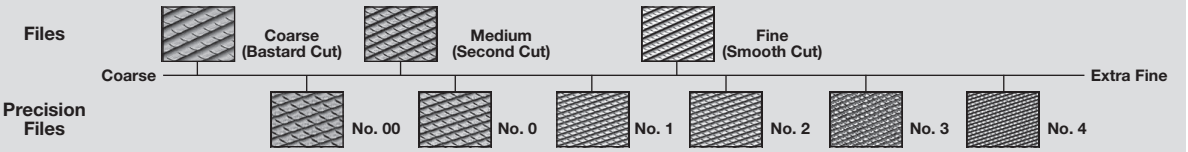
About Files

Most files do not include a handle but do have a tang that fits into a handle (see page 2622). File length listed does not include the tang.

Files, also known as American-pattern and machinists' files, are used to remove material quickly.

Precision files, also known as Swiss-pattern files, are made to exacting measurements to ensure smoothness and are useful for finishing delicate and intricate parts.

Finishes

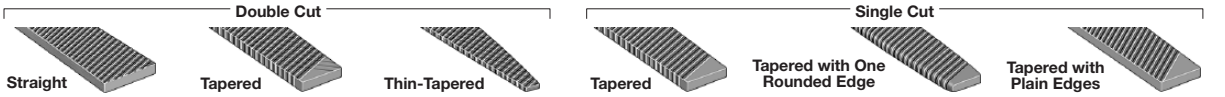


Cut Patterns

Double-cut files have two sets of diagonal rows of teeth on one or both sides of the file. They are often used with heavier pressure than single-cut files for rapid material removal.

Single-cut files have one set of diagonal rows of teeth on one or both sides of the file. They are often used with light pressure to slowly remove material and sharpen tool-cutting surfaces.

Rectangular Files



Files for deburring, sharpening, and polishing.

Double-cut straight files are also known as hand files. They are double cut on both sides. One edge is plain (without teeth) to protect adjacent surfaces and the other edge is double cut (except the 8″ long, ½″ wide file has a single-cut edge).

Double-cut tapered files are also known as flat files. They are double cut on both sides and single cut on both edges.

Double-cut thin-tapered files are also known as warding files. They are double cut on both sides, single cut on both edges, and taper extremely. Files are often used to make notches in keys.

Single-cut tapered files and **single-cut tapered files with one rounded edge** are also known as mill files. They are single cut on both sides and both edges. Files are often used to sharpen milling and circular saws.

Single-cut tapered files with plain edges are also known as lathe files. They are single cut on both sides and have plain edges (without teeth) to protect adjacent surfaces. Files are often used to shape material on a lathe.

Half-Round Files

Use on concave, convex, and flat surfaces. **Double-cut** files are double cut on both sides. The 4″ long medium-finish file is tapered. **Single-cut** files are single cut on the convex side and double cut on the flat side (except the coarse-finish file is single cut on both sides).

Lg.	Wd.	Thick.	Coarse Finish		Medium Finish		Fine Finish

Round Files

Also known as rat-tail files, these are good for filing holes and concave surfaces. Files are single cut (except 14″ files are double cut) and tapered.

Lg.	Dia.	Coarse Finish		Medium Finish		Fine Finish	
4″	1/8″	4233A11	$6.37	4233A17	$7.02	4233A24	$7.65

Round Files for Chain Saws

Get between teeth on chain saws to sharpen their cutting edges. Also known as blunt round chain saw files, these fine-finish files have a knurled cut, similar to a double cut.

Lg.	Dia.			Lg.	Dia.		
6″	1/8″	4246A8	$2.07	8″	1/4″	4246A3	$2.47

8″	7/32″	4246A2	1.97				

Triangular Files

With three filing surfaces, these tapered triangular files work in spots other files can't.

Double-cut files are double cut on all sides. Use them on grooves and corners. Not suitable for filing saws.

Single-cut files are single cut on all sides. Use them on saws to file between the teeth. *Standard taper* is for saws with 5 to 11 teeth per inch. *Slim taper* is for saws with 8 to 14 teeth per inch. *Extra-slim taper* is for saws with 12 to 16 teeth per inch.

Scratch-Free Files

Rigid Rectangular | Flexible Rectangular | Half Round | Two-Hand File Holder

Also known as auto-body and milled-tooth files, these have curved rows of teeth on both sides that are designed to clear chips and create a scratch-free finish.

Rectangular files have plain edges (without teeth) to protect adjacent surfaces. *Flexible rectangular* files bend to get into hard-to-reach spots. They do not have a tang and can be used with the *two-hand file holder* (sold separately).

Half-round file is for use on concave, convex, and flat surfaces.

Integrated-Handle Rectangular Files

No need for a separate file handle—these files come with one built-in. They have a black-oxide coating to resist rusting and clogging.

Combination files are double cut on one side and single cut on the other side. They have one single-cut edge and one plain edge (without teeth) to protect adjacent surfaces. Files have a coarse finish.

Double-cut file is double cut on both sides, single cut on both edges, and tapered. File has a coarse finish.

Single-cut file is single cut on both sides and both edges, and tapered. File has a coarse finish.

Rapid-cut file has diamond-shaped teeth on both sides for rapid material removal with a smooth finish. File is single cut on both edges and tapered. It has a fine finish.

File Sets

Sets are furnished in a canvas roll pouch, unless otherwise stated.

5-Piece File Set with Wood Handles—Files are 8″ long. Set includes four coarse-finish files and one rapid-cut fine-finish file.

Coarse Finish—Double cut: half round, tapered round, and tapered square. Single cut: tapered rectangular.

Rapid-Cut Fine Finish—Tapered rectangular.

8181A12 ..... $58.42

5-Piece File Set with Rubber Handles—Includes four coarse-finish files and one slim-taper file furnished in a plastic pouch.

Coarse Finish—Double cut: 8″ tapered rectangular and 10″ half round. Single cut: 8″ and 10″ tapered rectangular.

Slim-Taper—Single cut: 6″ triangular file.

8181A21 ..... $66.28

6-Piece Short File Sets—Files are 4″ long. Sets include five fine-finish files and one slim-taper file.

Fine Finish—Double cut: tapered rectangular, thin-tapered rectangular, half round, tapered round, and tapered square.

Slim-Taper—Single cut: triangular.

With Wood Handles ..... 8192A12 ..... $59.87
Without Handles ..... 8192A11 ..... 55.73

6-Piece Short File Set with Wood Handles—Files are 4″ long, medium finish, and double cut: rectangular, thin-tapered rectangular, tapered half round, tapered round, tapered square, and tapered triangular. Furnished in a metal case.

8171A11 ..... $53.96

6-Piece File Set with Wood Handles—Files are 10″ long and double cut. Set includes two coarse, two medium, and two fine-finish files (tapered rectangular and half round).

42415A41 ..... $92.15

9-Piece File Sets—Include five 10″ coarse-finish files, one 10″ fine-finish file, one 7″ slim-taper file, one 10″ rasp, and a file cleaner.

Coarse Finish—Double cut: tapered rectangular, half round, tapered round, and tapered square. Single cut: tapered rectangular.

Fine Finish—Double cut tapered rectangular.

Slim-Taper—Single cut triangular.

With Wood Handles ..... 8173A12 ..... $109.24
Without Handles ..... 8173A11 ..... 101.58

10-Piece File Set with Wood Handles—Includes five coarse- and medium-finish files: 10″ tapered rectangular, half round, tapered round, and tapered square files; and 6″ knife file.

42415A43 ..... $141.18

13-Piece File Sets—Include five coarse-finish files, one coarse-finish file for aluminum, two medium-finish files, four fine-finish files, and a file cleaner.

Coarse Finish—All are 10″. Double cut: tapered rectangular, half round, tapered round. Single cut: tapered rectangular. Double cut one side/single cut one side: rectangular.

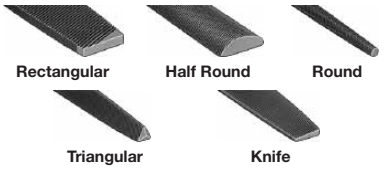
Coarse Finish for Aluminum—10″ double-cut tapered rectangular.

Medium Finish—10″ double-cut tapered square and 8″ double-cut tapered triangular.

Fine Finish—All are 10″. Double cut: tapered rectangular, half round, and tapered round. Single cut: tapered rectangular.

With Wood Handles ..... 8176A12 ..... $166.05
Without Handles ..... 8176A11 ..... 154.42

Black-Oxide Files



Coated with black oxide to resist rusting and clogging, these files last longer than uncoated files.

Rectangular double-cut files are double cut on both sides, single cut on both edges, and tapered. **Rectangular single-cut** files are single cut on both sides and both edges, and tapered. **Half-round double-cut** files are double cut on both sides. **Round** and **triangular double-cut** files are double cut on all surfaces and tapered. **Knife double-cut** files are double cut on both sides and tapered. The sharp edge is single cut and the other edge is plain (without teeth) to protect adjacent surfaces.

File Sets—Furnished in a canvas roll pouch

5-Piece File Set with Rubber Handles—Set includes four 8″ coarse-finish files and one 8″ rapid-cut fine-finish file.

Coarse Finish—Double cut: half round, tapered round, tapered square. Single cut: tapered rectangular. *Rapid-Cut Fine Finish*—Tapered rectangular.

42605A81 ..... $62.87

9-Piece File Set with Rubber Handles—Includes five 10″ coarse-finish files, one 10″ fine-finish file, two 10″ rapid-cut fine-finish files, and one 6″ slim-taper file.

Coarse Finish—Double cut: tapered rectangular, half round, tapered round. Double cut one side/single cut one side: rectangular. Single cut: tapered rectangular.

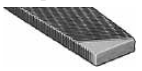
Fine Finish—Single-cut tapered rectangular.

Rapid-Cut Fine Finish—Tapered rectangular and half round.

Slim Taper—Single-cut triangular.

42605A82 ..... $102.31

Rapid-Cut Rectangular Files



Quickly remove material while leaving a fine finish thanks to the diamond-shaped teeth. Files are rapid cut on both sides, single cut on both edges, and tapered.

Files for Stainless Steel

File stainless steel and other hard-to-file metals with little to no clogging. Files are corrosion resistant. **Rectangular** files are double cut on both sides. One edge is single cut and the other edge is plain (without teeth) to protect adjacent surfaces. **Half-round** files are double cut on both sides and tapered. **Round, triangular,** and **square** files are double cut and tapered.

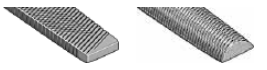
Files for Aluminum



Specially designed teeth resist clogging when files are used on aluminum and other soft metals. These fine-finish files are double cut on both sides and tapered.

Rectangular files are single cut on both edges.

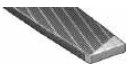
Files for Laminates and Plastics



Extra sharp and fast cutting, these rectangular files are for use on laminates, plastics, and fiberglass. They have single-cut edges and are tapered.

Single-cut files are single cut on both sides for a fine finish.

Rapid-cut files have diamond-shaped teeth on both sides for rapid material removal with a fine finish.

File Cleaners

File Cleaner with Brush

Also known as file cards, these cleaners have sharp steel bristles that clear metal shavings from file teeth.

File cleaner with brush has hard plastic bristles on the flip side for cleaning fine-finish files.

File Cleaner with Brush	10″	4333A14	9.09

Rasps

With their sharp individual teeth, rasps quickly remove large amounts of soft, clog-prone materials better than regular files. Use them on wood, leather, plastic, and soft metals.

(A) Rectangular rasp has rasp teeth on one side, double-cut teeth on the other side, and single-cut teeth on both edges.

(B) Rectangular rapid-cut rasp has rasp teeth on one side, rapid-cut teeth on the other side (diamond-shaped teeth for rapid material removal with a fine finish), and single-cut teeth on both edges.

(C) Rectangular double-ended rasp has rasp teeth on both ends of one side, double-cut teeth on both ends of the other side, and single-cut teeth on both edges.

(D) Half-round rasps have rasp teeth on both sides and single-cut teeth on both edges.

(E) Half-round double-ended rasps are also known as shoe rasps. Each side has rasp teeth on one end and double-cut teeth on the other end. The edges are plain (without teeth) to protect adjacent surfaces.

(F) Round rasp has rasp teeth and is tapered.

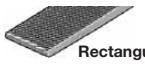
Precision Files



Rectangular

Rectangular Thin-Tapered

Half Round

Round

Triangular

Also known as Swiss-pattern files, these files are made to measurements that are more exact than regular files to ensure smoothness. Use them to finish delicate and intricate parts. Finish ranges from coarse No. 00 to extra fine No. 4.

Rectangular files are also known as pillar files. They are double cut on both sides and have plain edges (without teeth) to protect adjacent surfaces.

Rectangular thin-tapered files are also known as warding files. They are double cut on both sides, single cut on both edges, and taper extremely toward the point to fit into tight spaces.

Half-round files are double cut on both sides and tapered.

Round files are double cut and tapered.

Triangular files are double cut on all sides and tapered.

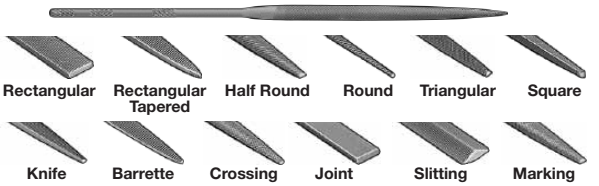
Precision & Diamond Files

Precision Needle Files



The small tips of these files allow precise work in tight spots. Files are 6¼″ long, are double-cut on both sides (unless otherwise stated), and are tapered (except rectangular, joint, and slitting files are not tapered). Finish ranges from medium No. 0 to extra-fine No. 4. **Rectangular** files have single-cut edges. **Knife** files have one single-cut edge and one plain edge (without teeth). **Barrette** files have one double-cut side and two plain sides (without teeth). **Joint** files have plain sides (without teeth) and double-cut edges.

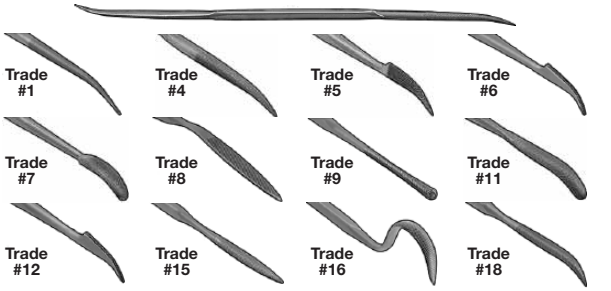
Integrated-Handle Diamond Files

A wood handle is built into this file that is good for use on hard materials such as carbide, ceramics, and glass. File has a coarse 100-grit side, fine 200-grit side, and plain edges (without teeth) to protect adjacent surfaces. Size is 13″ Lg.×1″ Wd.×0.125″ Thick. Diamond surface length is 8″.

42345A11 ..... $64.93

Precision Detail Files



Also known as riffler files, these reach into the smallest holes, grooves, and slots to perform detailed work. Tools are 6″ long with a file at each end and a smooth portion in the middle for a comfortable grip. Finish No. 0 is medium and No. 2 is fine. Note: Simonds trade numbers are preceded by the letters DS.

Thin-Face Diamond Files

File with Holder (Sold Separately)

Compared to other diamond files, these have a thinner filing surface to reach into small slots and narrow spaces. Use them on hard materials such as carbide, ceramics, and glass. A **file holder** is required and sold separately. Holder has a plastic handle.

Diamond Surface, sq.	Medium Finish (120/140 Grit) File Thick.			Fine Finish (170/200 Grit) File Thick.

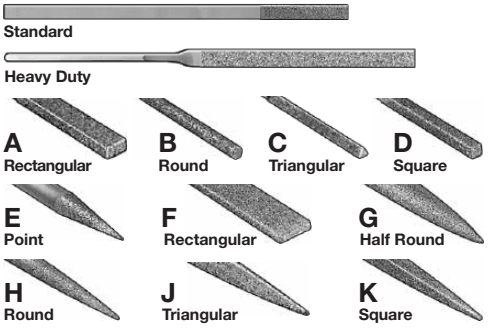
File Holder					8142A21	46.50

5-Piece Set—Includes one of each file listed and one holder. Furnished in a plastic case.

8142A31 ..... $131.71

Diamond Files



Diamonds provide the strength you need to file hard materials such as carbide, ceramics, and glass. *Styles E* and *G-K* are tapered.

Standard files are 6″ long. Diamond surface is 1½″ long for Styles A-D; ½″-⅞″ long for Style E.

Heavy duty files are approximately 8⅝″ long and have a 4.328″ long diamond surface.

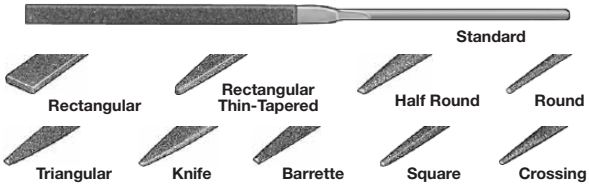
Diamond Precision Needle Files



Small, diamond-covered tips are good for intricate work on hard materials such as carbide, ceramics, and glass. Files are 5½″ long and tapered (except rectangular files are not tapered).

Standard files have a 2¾″ long diamond surface. **Miniature** files are also known as escapement files. Diamond surface is 1⁹⁄₁₆″ long.

Flexible Diamond Files

Tough, diamond-covered files flex to reach hard-to-access spaces. Use them on hard materials such as carbide, ceramics, and glass.

Rectangular files are approximately 6¾″ long and have a 3.465″ long diamond surface.

Wire files are approximately 5⅛″ long and have a 2.756″ long diamond surface.

Pocket-Size Abrasive Contact Files

Keep files close at hand to remove corrosion on relay and switch contacts. You'll get six fine-finish files and a pen-shaped plastic holder. Files are 1½″ long and store in the holder, which is 4½″ long.

Holder with Files

Holder **with files and rods** includes six 1¼″ Lg.×0.02″ Dia. ball-end rods for cleaning pits on contacts.

File Wd.	File Thick.	Holders		Individual Repl. Files		Individual Repl. Rods

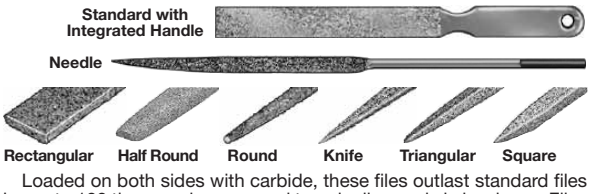
Carbide Files



Loaded on both sides with carbide, these files outlast standard files by up to 100 times and are second to only diamonds in hardness. Files are tapered (except rectangular files).

Standard Files

Files **without handle** have a coarse 60-grit surface.

Files **with integrated handle** have a built-in plastic handle. The *1⁄8″ thick* file has an extra-coarse 46-grit surface on one side and coarse 80-grit surface on the other. The *3⁄16″ thick* file has an extra-coarse 24-grit surface.

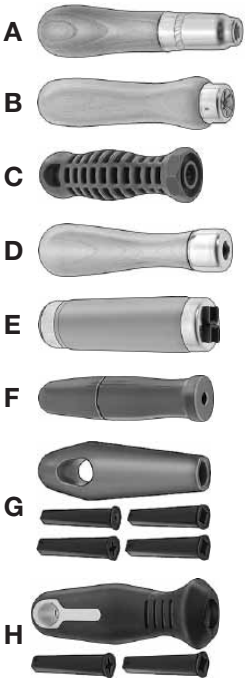
File Handles, Air-Powered Filers & Deburring Tools

File Handles



(A) Push-On Long Ferrule—These wood handles have a long, heavy-gauge steel ferrule that is especially good for holding long files.
(B) Push-On Short Ferrule—These economical wood handles have a metal ferrule.
(C) Ergonomic Push-On—Handles are plastic, contoured for comfort, and have air vents to reduce hand moisture.
(D) Screw On—A steel insert cuts threads onto file tangs to securely hold files. Handles are wood with a heavy-gauge steel ferrule.
(E) Jaw Grip—Turn the bottom knob to lock and unlock the steel chuck-style jaws to grip tangs and shanks that are 1/64" to 19/32" in diameter. Handle is plastic.
(F) Ergonomic Jaw Grip—Twist the upper and lower halves in opposite directions to lock and unlock the clamping jaws that grip tangs and shanks 1/8" to 9/64" in diameter. Handle is plastic and contoured for comfort.
(G) Interchangeable Grip—Four interchangeable inserts accommodate different files. Handle is plastic.
(H) Ergonomic Interchangeable Grip—Handle is plastic with a rubber coating and contoured shape for a secure, comfortable grip. It has two interchangeable inserts to accommodate different files.

Air-Powered Filers

Remove material with minimal effort. Tools include a double-cut rectangular file, tapered half-round file that is single cut on the convex side and double cut on the flat side, tapered round file (single cut for economy tool; double cut for heavy duty tool), double-cut tapered triangular file, air hose, and a hex key. Air inlet is 1/4 NPT female.

Economy tool is for light, intermittent use. Recommended operating pressure is 90 psi. Air consumption is 4 cfm.

Heavy duty tool is for heavy, continuous use. Recommended operating pressure is 85 psi. Air consumption is 8.5 cfm.

Quick-Change Deburring Bits

Insert Bit

1/4" Hex Power Bit

3/8" Hex Power Bit with V-Shaped Cutters

Quickly attach and remove these deburring bits from interchangeable-bit screwdrivers.

Insert bit is for hand drivers. Blade swivels 360° and deburs steel and aluminum.

1/4" hex power bit is for power tools. Blade swivels 360° and deburs steel and aluminum.

3/8" hex power bit with V-shaped cutters is for power tools and deburs both sides of sheet metal or the front and back edges of a hole (3/4" dia. and larger) in one stroke. It includes a pair of replacement cutters and is for use on steel, stainless steel, copper, brass, and aluminum up to 10-ga. thick.

	O'all Lg.

Deburring Tool Sets

7-Piece Set—Includes 16.5 mm and EX-18 countersinks, an O-ring blade with a 0-3 mm groove width, a thread-cleaner blade, a S100 cobalt blade, a blade for holes up to 1.5 mm in diameter, and a handle. Furnished in a plastic case.

4289A78 ..... $67.27

11-Piece Set—Includes a reversible countersink; 3.2 mm, 10.4 mm, 16.5 mm, and EX-18 countersinks; E-100, E-200, and E-300 blades; a blade holder; and two handles. Furnished in a plastic case.

4289A79 ..... $122.70

28-Piece Set—Includes F-12 and F-20 countersinks, 18 blades (three B-10, two B-20, one B-30, one B-50, one B-70, one C-40, one C-42, one D-80, one D-82, two E-100, one E-200, one E-300, one E-600, and one E-601), two wrenches, five telescoping blade holders, and a handle. Furnished in a plastic box.

4289A36 ..... $139.84

High-Visibility Deburring Tools

Individual Tool

With colored handles, these tools are easy to spot and keep organized. Blades swivel 360° and debur hard and soft metals.

Individual tools include a handle and a blade. **Sets** include a blue, green, red, and yellow handle. *Same-blade* sets include a blade for each handle. *Standard duty multi-blade set* includes a B-10, B-11, B-20, and B-30 blade. Handle length is 4¾". *Heavy duty multi-blade set* includes an E-100, E-100A, E-100T, and E-200 blade. Handle length is 5⁹⁄₁₆".

To Order: For individual tools, please specify handle color: blue, green, red, or yellow.

	Handle Lg.	Blade Trade No.	Individual Tools		Same-Blade Sets

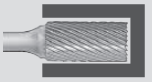
Heavy Duty	4⅝"	E-100	4493A31	4.25	4493A42	18.35
Standard Duty Multi-Blade Set					4493A43	$16.11
Heavy Duty Multi-Blade Set					4493A44	16.78

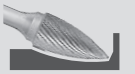
About Bur Cut Patterns

Cylindrical—Flat End
Straight edges, flat surfaces



Cylindrical—Flat End, End Cut
Straight edges, flat surfaces, flat-bottom holes and slots

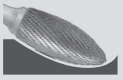
Cylindrical—Radius End
Curved surfaces and slots, round-bottom holes and slots



Tree—Pointed End
Curved surfaces and slots, curved holes with pointed bottoms

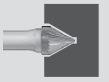
Tree—Radius End
Curved surfaces and slots, curved holes with rounded bottoms

Ball
Curved surfaces, round slots, round-bottom holes

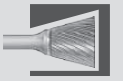


Flame
Contoured surfaces, slots, and holes

Oval/Egg
Oblong slots and holes



Cone
Beveled edges, countersunk holes



Inverted Cone
Inverted-angle holes, dovetailed slots

Tapered Cone—Pointed End
Tapered holes and slots with pointed bottoms

Tapered Cone—Radius End
Tapered holes and slots with rounded bottoms

Carbide Burs

Debur virtually any material. Overall length is 1½" for ³⁄₃₂" shank dia.; 1½"-2⅛" for ⅛" shank dia.; 2" for ³⁄₁₆" shank dia.; 2"-3⅜" for ¼" shank dia. **Double cut** is for rapid metal removal with a coarser finish than single cut. **Single cut** is for gradual metal removal with a fine finish.

Long-Life Carbide Burs

Coated with TiAlN (titanium aluminum nitride), these burs have more heat and wear resistance than uncoated burs for long life. Overall length is 2″ to 3″. **Double cut** is for rapid metal removal with a coarser finish than single cut. **Single cut** is for gradual metal removal with a fine finish.

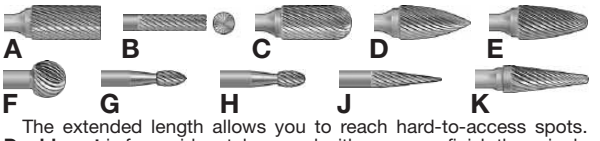
Extra-Long Carbide Burs



The extended length allows you to reach hard-to-access spots. **Double cut** is for rapid metal removal with a coarser finish than single cut. **Single cut** is for gradual metal removal with a fine finish.

Rigid Shank

Burs with a 1/8" shank dia. have an overall length of 3". Burs with a 1/4" shank dia. have an overall length of 6 1/4" to 7 1/4".

8-Piece 1/4" Shank Dia. Sets: Includes one each of the following burs (Head Dia. x Lg. of Cut): 1/4" x 1/2" and 1/2" x 1" cylindrical—flat end (A); 1/4" x 1/2" and 1/2" x 1" cylindrical—radius end (C); 1/4" x 1/2" tree—pointed end (D); 1/4" x 1/2" tree—radius end (E); 1/4" x 7/32" ball (F); and 1/4" x 5/8" 14° tapered cone—radius end (K). Furnished in a wood box.

Double Cut	4324A51	$220.25
Single Cut	4324A52	220.25

Flexible Shank

The shank flexes to reach around bends.

Single Cut **4308A32** $212.90

High-Speed Steel Burs

Choose high-speed steel to debur mild steel and softer, nonferrous materials. Burs with a 1/8" shank dia. have an overall length of 1 1/4"-1 1/2". Those with a 1/4" shank dia. have an overall length of 2"-3 1/2".

8-Piece 1/4" Shank Dia. Set: Includes one each of the following burs (Head Dia.×Lg. of Cut): 3/8"×1 1/2" and 3/4"×3/4" cylindrical—flat end (A); 7/16"×7/16" ball (E); 5/8"×1" oval/egg (G); 5/16"×1 1/8" convex-concave (H); 3/4"×5/8" inverted cone with 34° cut angle (M); 5/8"×13/16" tapered cone—radius end with 36° cut angle (P); and 5/16"×5/8" tapered cone—radius end with 19° cut angle (P). Furnished in a wood box.

4306A2 $205.32

Grinding Bits for Metals

Made of aluminum oxide, these bits are for use on steel, iron, stainless steel, and other materials that are not heat sensitive. They are also known as mounted points and die grinder bits. Grits are 36 (rough, blue-gray); 46 (rough, blue-gray); 60 (rough, orange); or 120 (smooth, blue). Shank is 1½″ long. Head diameter is measured at the widest point.

Caution: *As bit shank is exposed beyond ½″, max. safe rpm decreases significantly. Refer to ANSI standard B7.1.*

Grinding Bit Sets for Metals

Each set contains a selection of grinding bits. They are also known as mounted points and die grinder bits. Use on steel and iron. Bits are aluminum oxide, which is the most common abrasive used for grinding metal. Grit is 60 (rough). Shank is 1½″ long. Packed in a foam block stand. For dimensions, illustrations, and max. rpms for these bits, see page 2628.

Shank Dia.	No. of Pieces	Includes		
⅛″	12	Two each: B42, B44, B46, B52, B53, B103	6165A11	$19.84

Miniature Grinding Bits for Metals

The small 3⁄32″ diameter shank and small head makes these bits good for precise and intricate jobs. They are also known as mounted points and die grinder bits. Use on nickel, stainless steel, steel, titanium, brass, bronze, copper, aluminum, and iron.

Bits are aluminum oxide, which is the most common abrasive used in grinding metal. Bits for smooth surface texture are red; bits for extra-smooth surface texture are white. Shank is 1½″ long. Head diameter is measured at the widest point. Maximum rpm is 35,000.

	Head Dia.	Head Lg.	For Smooth Surface Texture Grit			For Extra-Smooth Surface Texture Grit

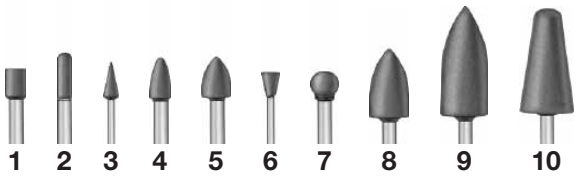
Rubber-Cushioned Abrasive Grinding Bits and Discs for Metals

The abrasive grains are blended with rubber, which cushions during grinding to produce a smoother surface texture than other bits and discs with similar grits.

Bits with Shank



Bits are also known as mounted points and die grinder bits. They have 1½″ long shanks. Head diameter is measured at the widest point.

Bits for steel are aluminum oxide.

Bits for aluminum, brass, and bronze are silicon carbide, which cuts through soft metals without causing material buildup.

To Order: Please specify grit: 46 (rough, brown); 70 or 90 (smooth, black); 120 (smooth, green); 180 (smooth, red); or 240 (extra-smooth, red), unless noted.

Bit and Disc Set

200-Piece Set— Includes 16 aluminum oxide and 48 silicon carbide 15⁄16″ Lg. × 1⁄4″ Dia. bits, ⅞″ dia. tapered-edge discs, and ⅞″ dia. × ⅛″ thick straight discs. Grits are 120 (smooth) and 240 (extra-smooth). Also includes five ⅛″ dia. shanks, two spiral shanks with hex nut, one 1″ Lg. × ½″ Wd. block, and a plastic case. Maximum rpm is 21,000.

4772A15 ..... $95.89

Caution: *As bit shank is exposed beyond ½″, max. safe rpm decreases significantly. Refer to ANSI standard B7.1.*

Grinding Bits

Hex-Shank Grinding Bits for Metals

Use bits in any drill chuck that accepts a 1/4″ hex shank. They are also known as mounted points and die grinder bits. Use on iron and steel.

Bits are 60-grit (rough, gray) aluminum oxide. Shank is 1 1/2″ long. Head diameter is measured at the widest point.

	Head Dia.	Head Lg.	Max. rpm	Shape No.		
1	3/8″	1″	55,200	W178	**4087A18**	$1.63

12-Piece Set—Contains one each of A12, A15, and W178; two each of A21, A24, A38, and W218. Packed in a foam block stand.

4087A21 ..... $20.08

Long-Life Grinding Bits for Metals

Bits are made of boron nitride, which is harder than aluminum oxide and lasts longer. Bits are also known as jig grinding pins and mandrels. Use on steel, stainless steel, and iron. Grit is 120 (smooth, silver), unless noted. Overall length is 2 1/4″. Head diameter is measured at the widest point.

★ Grit is 220 (extra-smooth, silver).

Grinding Bits for Stainless Steel

Bits stay cool so they won't mar or discolor stainless steel. They are also known as mounted points and die grinder bits.

Bits are 30-grit (rough, gray) zirconia alumina, which lasts longer than aluminum oxide. Shank is 1/4″ Dia. × 1 1/2″ Lg. Head diameter is measured at the widest point.

	Head Dia.	Head Lg.	Max. rpm	Shape No.		
1	1/4″	3/4″	66,000	W164	**44005A24**	$2.96

Grinding Bits for Nonmetals

Almost as hard as diamond, these tungsten carbide bits cut through nonmetals without generating heat. They are also known as mounted points and die grinder bits. Use on composites, plastic, rubber, wood, plaster, and fiberglass. Grit is 36 (rough, bronze). Maximum rpm for bits with 1/8″ dia. shank is 20,000; 1/4″ dia. shank is 23,000. Head diameter is measured at the widest point.

	Head Dia.	Head Lg.

Long-Life Grinding Bits for Nonmetals

The diamond abrasive in these bits lasts longer than tungsten carbide. They are also known as mounted points and die grinder bits. Use on carbides, ceramics, and glass. Grit is 120 (smooth, silver) and overall length is 2 1/4″, unless noted. Head diameter is measured at the widest point. For longer tool life and improved finish, use a water- or oil-soluble mist or coolant.

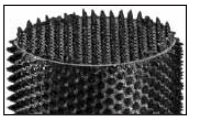
★ Grit is 220 (extra-smooth, silver). ■ Overall length is 2″.

Caution: ***As bit shank is exposed beyond 1/2″, max. safe rpm decreases significantly. Refer to ANSI standard B7.1.***

Sharp-Tooth Bits for Nonmetals

Made of tungsten carbide, these bits grind nonmetals such as fiberglass, wood, plaster, composites, rubber, and plastics. They have pointed teeth that last longer and leave a smoother finish than other grinding bits. Shanks are 1/4" Dia. x 1"-1 1/4" Lg.

To Order: Please specify grade: coarse (red) or fine (blue).



Tooth Detail-Coarse

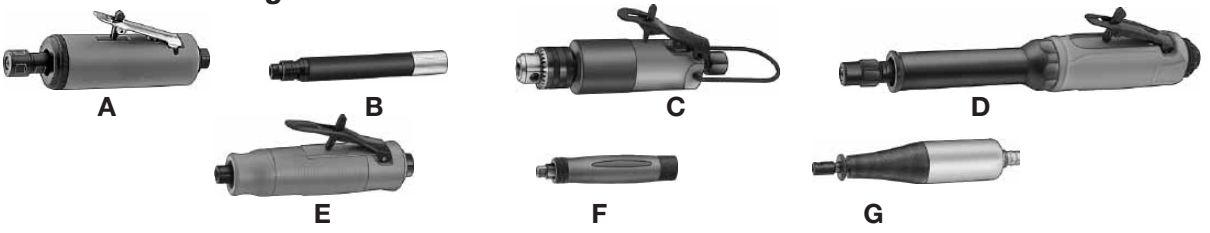
Air-Powered Straight Grinders for Bits and Burs



Smaller and lighter than electric grinders, these connect to a compressed air system. They are also known as die grinders. They have variable speed control, except Style G. *Styles A, C, D,* and *E* have a lever lock to prevent accidental start-ups. They are furnished with a collet and at least one collet wrench, except Style C.

Light Duty Grinders—Use these grinders for light, intermittent grinding, deburring, and finishing. *Style B* has a ring-style throttle to regulate airflow and comes with a 5-ft. air hose.

Medium Duty Grinders—More durable than our light duty grinders, these are designed for more frequent use. *Style C* includes a 1/4" chuck instead of a collet.

Heavy Duty Grinders—High-quality bearings ensure long spindle life, even when grinders are used continuously. *Style F is* a high-speed, lightweight, pencil-sized tool with a ring-style throttle to regulate airflow. It includes a 5-ft. air hose. Exhaust can be changed from rear to front, when stated.

Maintenance-Free Heavy Duty Grinder—Powered by an air turbine, this grinder doesn't require oil or have gears to maintain. It has high-quality bearings for long spindle life, even when used continuously. Grinder sustains constant speed under load, operates at high speeds for long cutting-tool life, and is lightweight to reduce operator fatigue. It comes with a 5-ft. hose with shut-off valve.

Light Duty Air-Powered Straight Grinder Kits for Bits and Burs

Kits include a light duty grinder, a variety of tools for intermittent grinding on most metals, and a plastic case.

Grinder and Bit Kit—Includes five aluminum oxide grinding bits, a collet, two wrenches, and a 1/4" to 1/8" reducing bushing.

Grinder and Bur Kit—Includes seven solid carbide double-cut burs, a collet, and two wrenches.

Electric & Cordless Straight Grinders

Electric Straight Grinders for Bits and Burs

A

B

C

D

Also known as die grinders. Grinders are UL listed. They come with a collet, collet wrench, and a cord with plug..

Style A—Grinder has a toggle switch. It meets OSHA requirements, and is CSA certified and C-UL listed.

Style B—Grinder has a toggle switch. It comes with precision 1/8″ and 1/4″ collets, eight grinding bits, a dressing stone, and a carrying case.

Style C—Has a slide switch.

Style D—Also for use with wheel brushes, cup brushes, and cutoff wheels. Grinder has a paddle switch. CSA certified.

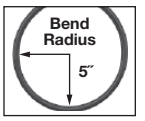
Accessories

Flexible Shaft



Right-Angle Attachment

Safety Shield

Flexible Shaft—Includes 3/4″ dia. handpiece. Shaft is 36″ long. Do not bend to less than a 5″ radius (see illustration).

Tool Hanger—Screws onto workbenches with included fasteners. Adjustable height ranges from 26″ to 41″.

Right-Angle Attachment—Convert your straight grinder into an angle grinder. Quick-connect system allows attachment without tools.

Safety Shield—This 360° shield closes automatically. Accepts up to 1 1/2″ diameter cutoff wheels. Includes one 1 1/2″ diameter wheel.

Battery—This 8-volt lithium-ion battery provides long-lasting power.

Battery Charger—This 1-hour charger is for use with the battery shown above.

Accessory Kit—Kit contains a variety of accessories packed in a plastic storage case. Includes 110 total pieces.

Miniature Bit and Disc Sets

Set contains 134 tools for grinding, sanding, and cutting hard and soft metals on small surface areas.

You'll get 64 cutoff discs, 16 aluminum oxide sanding bands, one rubber drum for sanding bands, 36 sanding discs, one 1/8″ mandrel for cutoff and sanding discs, six aluminum oxide grinding bits, four silicon carbide grinding bits, and six aluminum oxide grinding discs. Packed in a plastic case. Maximum rpm is 30,000.

4475A13 ..... $52.00

Caution: ***Use only accessories that have a greater rpm rating than the maximum speed of the grinder you choose.***

Electric Flexible-Shaft Grinders for Bits and Burs

The bendable shaft with 6″ long handpiece lets these grinders operate smoothly with less vibration, noise, and heat than other hand-held grinders. Grinders have a 120-volt AC motor and a foot pedal for variable speed control, except bench-style intermittent duty grinders have a speed-control dial. All have a cord with plug.

To prevent premature wear and shaft failure, do not bend shaft to less than a 4″ radius (see illustration). For proper operation, clean and lubricate shafts every 50 hours of use. *Intermittent duty* grinders have a 39″ Lg. x 5/32″ Dia. shaft; *continuous duty* grinders have a 63″ Lg. x 3/16″ Dia. shaft. Hanging intermittent duty grinders are CSA certified.

Grinders with 3/4″ dia. collet handpiece come with collets for 3/32″ and 1/8″ shank diameters. **Grinders with 1″ dia. collet handpiece** come with collets for 3/32″, 1/8″, and 1/4″ shank diameters; a lock pin; and a wrench. **Grinders with 1″ dia. chuck handpiece** have a three-jaw chuck that accepts shank diameters up to 5/32″. They are furnished with a chuck key.

Accessories

Seven-Piece Collet Set—For use with 1″ diameter collet handpieces. Includes a 3/32″, 3 mm, 1/8″, 5/32″, 3/16″, 6 mm, and 1/4″ collet. Packed in a plastic case.

4454A56 ..... $47.42

Motor Hanger—Screw hanger onto the top or side of your workbench to suspend hanging-style motors. It has full-swivel capability and a locking screw. A T-rod lets you hang two tools from one hanger.

4454A78 ..... $68.43

Air-Powered Angle Grinders for Bits and Burs

The angled head on these grinders makes it easy to access hard-to-reach places. They are also known as die grinders. They have a lever to control speed and a lever lock to prevent accidental start-up. All come with a collet and collet wrench.

Light Duty Grinders—Use these grinders for occasional light grinding, deburring, and finishing.

Medium Duty Grinders—More durable than the light duty grinders, these are designed for more frequent use. *Style B* has a 60° angled head to get into spots a right-angle grinder can't reach and a soft grip to reduce vibration.

Heavy Duty Grinders—With high-quality bearings and collets for long spindle life, these grinders are rated for continuous use to take on tough jobs. *Style C* has sealed bearings to minimize maintenance. *Style D* has heavy duty gears and precision collets for smooth operation and long tool life; exhaust can be changed from rear to front. *Style E* is a high-speed, lightweight, pencil-sized tool with a ring-style throttle to regulate airflow and includes a 5-ft. air hose.

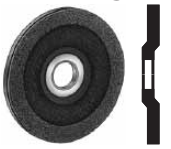
***Caution:** Use only accessories that have a greater rpm rating than the maximum speed of the grinder you choose.*

Grinding Wheels for Angle Grinders



Also known as Type 27 wheels, raised hub wheels, and grinding discs, these are designed for smoothing metal surfaces, removing weld seams, and other grinding. The 1/8" and 3/16" thick wheels can also be used for notching and cutting. Wheels are 24-30 grit, except wheels for soft metals are 46 grit. Wheels remove heavy amounts of material and leave a rough surface texture. Color is black.

General Purpose—A good value for everyday use, these wheels offer an economical balance between heavy material removal and long life. Wheels are aluminum oxide, which is the most common abrasive used in grinding metal.

Long Life—Wheels are a blend of aluminum oxide and zirconia alumina, which removes more material and lasts three times as long as the general purpose wheels.

High Performance—A blend of ceramic alumina and zirconia alumina removes material at a 50% faster rate than the long-life wheels.

Contaminant Free—The absence of iron, sulfur, and chlorine in these aluminum oxide wheels means they won't corrode or discolor stainless steel. They are also known as INOX wheels.

For Aluminum and Soft Metals—Bonded without any wax or rubber filler, these aluminum oxide wheels resist material buildup.

For Concrete and Stone—Made of silicon carbide to cut through nonmetals without generating much heat.

Heavy-Removal Grinding Wheels for Angle Grinders

A large grinding surface combined with a thick layer of abrasive removes more material than other wheels. Often used to grind weld seams and remove flaws from castings, these wheels produce a rough surface texture. They are also known as Type 11 wheels, flared-cup wheels, snagging wheels, and cup stones. The full backing provides more support than a partial backing. All have a 5/8"-11 threaded arbor hole. Color is black.

For Steel—Wheels are 16-grit aluminum oxide.

For Steel and Stainless Steel—Wheels are 24-grit zirconia alumina, which grinds faster and lasts longer than aluminum oxide.

For Concrete and Stone—Wheels are 16-grit silicon carbide, which won't generate much heat.

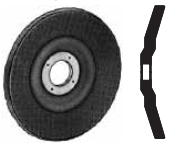
Easy-Use Grinding Wheels for Angle Grinders



The saucer shape lets you hold these wheels at shallower angles than Type 27 wheels. Also known as Type 28 wheels and raised-hub wheels.

Use on aluminum, brass, stainless steel, and steel. Wheels are 24-grit (rough, black) aluminum oxide.

			With 7/8" Unthreaded Arbor Hole			With 5/8"-11 Threaded Arbor Hole

Curved Surface Grinding Wheels for Angle Grinders

The flexible backing on these wheels conforms to curved and rough surfaces. Wheels are aluminum oxide, which is the most common abrasive used in grinding metal. 24- to 60-grit wheels produce a rough surface texture; 80-grit wheels produce a smooth surface texture.

General Purpose Flexible Wheels—Also known as Type 27 wheels and raised-hub wheels. Use on steel and stainless steel. Color is black.

Long-Life Semiflexible Wheels—They have heat-dissipating holes that reduce material buildup. Use on steel, stainless steel, aluminum, and bronze. Backup pads are required. Color is red.

Grinding Wheels with Cotton Laminate for Angle Grinders

A blend of cotton laminate and aluminum oxide creates a smoother surface than other grinding wheels with similar grits. They are also known as Type 27 wheels and raised-hub wheels. Arbor holes are unthreaded, except 5/8″-11 arbor holes are threaded.

24-grit wheels are for use on steel, stainless steel, and aluminum. Color is brown.

36-grit wheels are for use on steel, stainless steel, brass, bronze, and copper. Color is white.

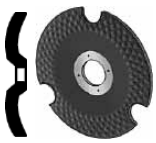
See-Through Grinding Wheels for Angle Grinders

Slots along the perimeter of the wheel allow you to see the work surface while you grind. The upside-down dish shape, known as a notched (AVOS) Type 29 wheel, provides a large contact area.

Wheels are for use on aluminum, steel, and stainless steel. They are aluminum oxide, which is the most common abrasive used in grinding metal. Wheels produce a rough surface texture. They have an unthreaded arbor hole. Color is black.



Dia.	Thick.	Arbor Hole Size	Max. rpm	Grit		1-24	25-Up
4 1/2″	1/8″	7/8″	13,580	36	5606A22	$5.65	$4.80

5″	1/8″	7/8″	12,225	36	5606A25	6.31	5.32

Paint Removal Attachments for Angle Grinders

Use on 7″ and 9″ angle grinders and sanders to remove paint, rust, and scale from iron, nickel, steel, and titanium. They have a 5/8″-11 threaded arbor hole. The maximum rpm is 6,000.

Attachments have hardened-steel cutting discs and a built-in safety guard. They come with one full set of cutters.

	Attachments		Replacement Cutters	
Dia.		Each	Pcs./ Set	Set
4″	9562T14	$106.31	21	9562T22 $15.35
6″	9562T12	174.55	49	9562T16 34.52

Air-Powered Angle Grinders for Grinding Wheels and Sanding Discs

Use these angle grinders for material removal over large surface areas. They have an angled head for accessing hard-to-reach places and a threaded spindle for attaching grinding wheels, sanding discs, and wheel brushes. Grinders have a wheel guard, a lever lock to prevent accidental start-up, and a lever throttle to regulate airflow. They also include a wrench.

Light Duty Grinders—Designed for light, intermittent grinding and sanding.

Medium Duty Grinders—More durable than the light duty grinders, these are designed for more frequent use. The 7″ grinder includes a flange and wheel nut.

Heavy Duty Grinders—Rated for continuous use to take on tough jobs, these grinders have heavy duty gears for smooth operation and long tool life. They include a flange and wheel nut.

Electric Angle Grinders for Grinding Wheels and Sanding Discs

The threaded spindles on these grinders accept raised-hub grinding wheels, such as Type 27 and Type 29. Grinders can also be used with sanding discs, cup brushes, and wheel brushes. They include a wheel guard, except 4656A21, and a cord and plug. They are double insulated and UL listed.

DeWalt—All have a side handle and spindle lock. They are CSA certified and meet OSHA requirements. Grinders for 4½"-6" wheels include a flange and wrench. Grinders for 5"-6" wheels also include a grinding wheel.

Milwaukee—All have a side handle and spindle lock. They are CSA certified, C-UL listed, and meet OSHA requirements. Model 6078 has variable speeds with dial control. Grinders with a paddle switch include a flange and wrench.

Makita—All include a grinding wheel and wrench. Model 9564CV has variable speeds with dial control.

Use to mount 6" to 9" dia. grinding wheels that are 1/16" to 1/4" thick with a 5/8" or 7/8" arbor hole. Fits most angle grinders with a 5/8"-11 threaded arbor. Set includes flange, mounting nut, and hex key.

46225A22 ..... $21.87

Grinding Wheels for Straight Grinders

Use these wheels for heavy material removal in one spot or along a weld seam. They are also known as Type 1 wheels and snagging wheels. Use on stainless steel and iron.

Wheels are aluminum oxide, which is the most common abrasive used in grinding metal. They produce a rough surface texture. Color is black.

Grinding Wheels with Cotton Laminate for Straight Grinders

A combination of cotton laminate and aluminum oxide abrasive creates a smoother surface than other grinding wheels with similar grits. Wheels are also known as Type 1 wheels and snagging wheels. They have an unthreaded arbor hole. Use on aluminum, brass, steel, and stainless steel. Color is brown.

To Order: Please specify grit: 54 (rough); 80 (smooth); 120 (smooth).

***Caution:** Use only accessories that have a greater rpm rating than the maximum speed of the grinder you choose.*

Grinding Cones for Straight Grinders

Longer lasting than grinding bits, these cones remove heavy amounts of material and leave a rough surface texture. They have a threaded insert that attaches to the spindle on a straight grinder. Use in corners and inside castings. Head diameter is measured at the widest point.

For Steel—Cones are aluminum oxide.

For Steel and Stainless Steel—Cones are zirconia alumina, which grinds faster and lasts longer than aluminum oxide.

To Order: Please specify grit: 16 or 24 (rough, gray-brown).

Bench and Pedestal Grinding Wheels for Metals

These wheels are for grinding, deburring, and sharpening. Wheels include one of each reducer bushing listed, except where noted. The smallest bushing size shown is the smallest allowed for that size wheel.

Wheels **for steel and stainless steel** are aluminum oxide. *General purpose wheels* are gray; *heavy-removal wheels* are brown. Wheels **for aluminum, brass, and bronze** are silicon carbide. Color is green.

General Purpose—For light use. **To Order:** For wheels for steel and stainless steel, please specify grit: 24, 36, 46, or 60 (rough); 80 or 120 (smooth). For wheels for aluminum, brass, and bronze, please specify grit: 60 (rough); 80, 120, or 150 (smooth); or 220 (extra-smooth).

Heavy Removal— Designed to stand up to heavy use. **To Order:** For wheels for steel and stainless steel, please specify grit: 24, 36, 46, or 60 (rough); 80 or 100 (smooth), unless noted. For wheels for aluminum, brass, and bronze, please specify grit: 60 (rough); 80, 120, or 150 (smooth); or 220 (extra-smooth).

Replacement Reducer Bushings: Please ask for 4461A8 and specify wheel diameter and thickness.

Other Bushings: Reduces a 1¼″ arbor hole to ⅞″. Please ask for 4461A9.

★ Also includes a ⅞″ bushing. ■ Not available in 36 grit. ▲ ½″ bushing not included. ♣ ⅝″ bushing not included.

Bench Grinders

Heavy Duty Grinder

Grinders are for use with grinding wheels and wire wheel brushes, and come with a 36- and a 60-grit grinding wheel, unless otherwise stated. Grinders have a totally enclosed motor, a vented-exhaust wheel guard (unless noted) and include two adjustable tool rests, two eye shields, and two spark breakers. They have a cord and plug, except three-phase tools and 10″ heavy duty grinders, which have leads for hard-wiring. The 120/240-volt models are wired for 120-volt service.

Light Duty Grinders—Use for occasional bench grinding, tool sharpening, and buffing. Meets OSHA requirements, except 4601A33 and 4601A54, which are UL listed.

Heavy Duty Grinders—Long-lasting lubricated ball bearings make these good for continuous use. Made of iron. UL listed, except 4452A29. Meet OSHA requirements.

Heavy Duty Grinders with Wire Brush—These come with a 36-grit grinding wheel and a 0.014″ wire wheel brush. They are UL listed and meet OSHA requirements.

For accessories, see page 2639.

Replacement Eye Shield for Light Duty Grinders

For *light duty grinders*, except 4601A33 and 4601A54. Includes two eye shields, two brackets, and mounting hardware.

4689A28 $14.30

Optional Pedestal

For *light duty grinders*, except 4601A33 and 4601A54. Pedestal is made of iron and has a water pot and a tool tray. Overall height is 31¾″. Mounting surface is 10″ Wd. × 11″ Dp. Weight is 59 lbs.

4689A26 $141.90

Replacement Tool Rests

Tool rests for *heavy duty grinders* are suitable for right- and left-hand mounting.

For Grinder Sizes	*For Light Duty Grinders* Left-Hand		*For Light Duty Grinders* Right-Hand		*For Heavy Duty Grinders*

♥ Does not fit 4601A33 or 4601A54. ♠ Does not fit 4600A1.

Caution: Use only accessories that have a greater rpm rating than the maximum speed of the grinder you choose.

Pedestal Grinders

Made of steel with an iron pedestal, these grinders use 12″ Dia.×2″ Thick×1¼″ arbor hole grinding wheels and wheel brushes. Pedestal is 30″ high with a 20″ Wd.×17″ Dp. base. They weigh 470 lbs.

Grinders have overload-protected manual starters. They include a water pot and two iron wheel guards with a 4″ dia. vent exhaust, two adjustable tool rests, two spark breakers, two tool trays, and two lighted adjustable eye shields (bulbs not included). They are wired for 240 volts, except 4606A41 is wired for 120 volts. They meet OSHA requirements. 4606A51 and 4606A61 are CSA certified.

Norton Toolroom Grinding Wheels for Soft Metals

Unlike aluminum oxide, silicon carbide won't clog when grinding soft metals. Use on aluminum, brass, bronze, carbide, and titanium, unless noted. Abrasive is type 39C and color is green, unless noted. Wheels have a VK bond.

60-grit wheels produce a rough surface texture; 80-, 100-, and 120-grit wheels produce a smooth surface texture.

★ Not for use on carbide or titanium. Abrasive is 37C. Color is black.

Norton Toolroom Grinding Wheels for Metals

Use these wheels for precision grinding on surface, cylindrical, and tool and cutter grinders. They are also known as Type 1 wheels and straight wheels. The size listed is wheel dia. × thick. × arbor hole size. The rpm listed is the maximum. 46-grit and 60-grit wheels produce a rough surface texture. 80-grit to 150-grit wheels produce a smooth surface texture. Truing and cleaning before first use is recommended.

General Purpose—Wheels are aluminum oxide, which is the most common abrasive used in grinding metal. They have a VBE bond. *38A white* wheels stay cool during use, so they're a good choice for heat-sensitive applications.

Long Life—Wheels have a more durable abrasive so they remove more material and last longer than the general purpose wheels. *32AA purple* wheels are a blend of aluminum oxide and ceramic aluminum oxide, which lasts up to twice as long as 32A wheels. They have a VTR bond. *5SG blue* wheels are ceramic aluminum oxide, which lasts up to five times as long as 32A wheels. They have a VS bond.

About Norton Numbers

To reorder a wheel using a Norton number, match the abrasive type, grit, and grade. Bond is determined by the abrasive type.

Example:

38A60-MVBE

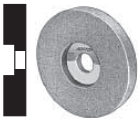
Shaped Norton Toolroom Grinding Wheels for Metals



Recessed (Type 5)

Recessed (Type 7)

Straight Cup

Flared Cup

Curved (Dish)

The special shapes of these wheels provide more clearance than straight wheels. Wheels produce a rough surface texture, except 80-grit wheels produce a smooth surface. Bond is VBE for wheels with 38A and 32A abrasives, VTR for 32AA abrasive, and VS for 5SG abrasive.

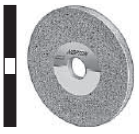
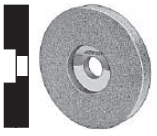
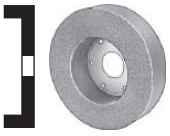
Heavy-Removal Norton Toolroom Grinding Wheels for Metals



Straight



Recessed



Straight Cup

The porous vitrified bond (VBEP or VSP) leaves space between abrasive grains so chips and coolant easily flow through. Wheels produce a rough surface texture, except 70-grit wheels produce a smooth surface.

Grinding Wheel Cleaners for Surface Grinders

Also known as dressers, these attach to the T-slot of your surface grinder or to a magnetic chuck. Base is 6″ Lg.×2½″ Wd. and holds a resettable ¼ carat, 7/16″ dia. shank, single-stone diamond at a 15° angle.

	For Wheel Dia. Range		
Cleaner with Diamond Point	6″ to 10″	4541A11	$68.97
Cleaner without Diamond Point	6″ to 10″	4541A2	31.03
¼-Carat Diamond Point		4541A12	40.09

Toolroom Grinding Wheel Mounting Adapters

Use these adapters to mount grinding wheels with a 1¼″ arbor to a surface grinder.

Adapters are steel and have a hub, adapter nut, and lock washer. Diameter is 2¼″. Choose *left-hand thread* for clockwise spindle rotation or *right-hand thread* for counterclockwise.

The *installation tool* installs and removes spindle and adapter nuts. The *puller* removes the adapter from the spindle.

For Wheel Thick.	Left-Hand Thread		Right-Hand Thread	
Adapters

Hand-Held Cleaning Sticks for Grinding Wheels

Square Stick

Square Holder

Also known as dressing sticks, these can be used to sharpen a variety of abrasive wheels. Silicon carbide is sharper than aluminum oxide. Boron nitride lasts longer than aluminum oxide and silicon carbide.

Square holder is for use with 1″×1″ sticks. Comes with a 24-grit silicon carbide stick. Overall length is 12″.

Round holder is for use with ½″ dia. sticks. Overall length is 10″.

Hand-Held Grinding Wheel Cleaners

With Spur Cutters

With Spiral Cutters (Rough Surface Texture)

With Spiral Cutters (Smooth and Extra-Smooth Surface Texture)

Also known as hooded dressers, these steel cleaners reveal new layers of sharp abrasive and deflect flying chips. They are for use on grinding wheels with a vitrified clay bond.

Cleaners with **spur cutters** are also known as Huntington Pattern Dressers. They are for occasional use. Cleaners with **spiral cutters** are for heavy duty use. They have one-piece cutters that are formed in a continuous spiral for smoother cutting and finer finishes than spur cutters.

Long-Life Hand-Held Grinding Wheel Cleaners

Single Point

Multiple Point

Replaceable Single Point

Cleaners have a diamond abrasive that is extremely hard and wear resistant. They are also known as dressers. Use on grinding wheels with a vitrified clay bond.

Single Point—Removes more material than multiple-point cleaners. Overall length is 9 1/2″.

Replaceable Single Point—Twist the knurled adjustment knob to advance the replaceable point. Cleaners have a guide block for accurate positioning. Overall size is 5″ Lg. × 3″ Wd.

Multiple Point—The 3/8″ × 1 1/2″ diamond face offers better control, while multiple points provide a finer finish than single-point cleaners. Overall length is 11″.

Precision Truing Cleaners for Toolroom Grinding Wheels

Angle Style

Brake-Controlled Style

Reshape worn diamond and CBN grinding wheels with these tools, then sharpen the wheels with a cleaning stick (not included; see page 2641).

Angle Style

Mount cleaners to a T-slot to reshape up to 8″ diameter wheels. Cleaners have an angled wheel for truing 100-grit and finer grinding wheels. Comes with one silicon carbide wheel which leaves a smooth surface texture. Size is 3″ Lg. × 2 1/4″ Wd. × 3 3/16″ Ht.

Angle-Style Cleaner	6166A11	$94.12
2 1/2″ × 1/2″ × 1 1/8″ Rough Surface Wheel	6166A14	9.76
2 1/2″ × 1/2″ × 1 1/8″ Smooth Surface Wheel	6166A12	9.76

Brake-Controlled Style

Cleaners maintain a consistent speed for minimal diamond loss. Use on wheels up to 10″ diameter. Cleaners come with two silicon carbide wheels for truing 100-grit and finer grinding wheels. Wheels produce a smooth surface texture. Size is 7″ Lg. × 4 1/2″ Wd. × 3 1/2″ Ht.

Brake-Controlled Cleaner	6167A21	$585.37
3″ × 1″ × 1/2″ Smooth Surface Wheel	6167A22	17.25
5″ × 1/2″ × 1/2″ Smooth Surface Wheel	6167A24	34.48

Mounted Cleaners for Toolroom Grinding Wheels

Single Point

Multiple Point

Smooth-Finish Multiple Point

Also known as dressers, these cleaners mount onto grinding equipment. They have a diamond abrasive.

Single Point—Removes more material than multiple point cleaners. Overall length is 2″. *Nonresettable* cleaners have one point. *Resettable* cleaners can be turned to expose a second point. **To Order:** Please specify 3/8″, 7/16″, or 1/2″ shank diameter.

Multiple Point—Cleans faster and leaves a more uniform finish than single-point cleaners. Overall length is 1 1/2″; shank dia. is 7/16″.

Smooth-Finish Multiple Point—Also known as impregnated dressers, these produce a finer finish than multiple-point cleaners. Overall length is 1 5/8″; shank dia. is 7/16″.

Toolroom Grinding Wheel Cleaners for Rounded Shapes

Convex Radius — Tip Angle

Concave Radius

Clean or create rounded shapes on wheels up to 8″ diameter. Cleaners have a nonresettable, single-point diamond. They are also known as dressers. **Convex radius** cleaners create a hump on the wheel surface; **concave radius** cleaners create a recess or notch.

Convex Radius

About Sanding Abrasives

Sanding abrasives are either coated abrasives, which have a layer of abrasive grains applied to a paper, fiber, or cloth backing; or nylon mesh abrasives, which have mesh embedded with abrasive grains. Both come in a variety of forms and create a range of finishes.

For Use On	Abrasive	Benefit
Multipurpose	Aluminum Oxide	Tough and fracture resistant, this abrasive can be used on most materials.
	Zirconia Alumina	Sands faster and lasts longer than aluminum oxide, and can also be used on most materials.
	Nylon Mesh	The cushioned structure gives you control over the finish.
Stainless Steel, Titanium, and Hard Metals	Zirconia Alumina	Good for use on hard materials, these abrasives cut faster and last longer than aluminum oxide. Ceramic alumina is harder than zirconia alumina so it lasts longer, but requires you to apply more force to abrade properly.
	Ceramic Alumina	
Aluminum, Brass, and Soft Metals	Abrasives with Special Coating	Aluminum is tough to sand because it is less heat resistant than other metals and tends to build up on the abrasive surface. The best products for aluminum have a clog-resistant feature such as a special coating to prevent material buildup or more space between the grains.
	Silicon Carbide	One of the sharpest abrasives, it's able to cut through aluminum and soft metals without generating much heat, which prevents material buildup.
Wood	Garnet	Used in woodworking, particularly for finishing, garnet abrades more slowly than aluminum oxide, but produces a smoother finish on wood surfaces.
Nonmetals—Plastics, Masonry, and Ceramics	Silicon Carbide	The best choice for soft nonmetals, it's very sharp and abrades quickly under light pressure. It also works on hard nonmetals, but will not last as long.
	Diamond	The best choice for sanding hard nonmetals, this tough abrasive lasts far longer than silicon carbide.

Finishes

Low grit numbers leave a rough finish and a dull appearance, mid-range grit numbers leave a smooth to extra-smooth finish and a brushed or matte appearance, and high grit numbers leave a polished finish and a satin or mirrored appearance. Diamond is very hard and does not break down like most abrasives, so it leaves a rougher finish than other abrasive grains of the same grit. Coated abrasives are generally used for grinding, blending, deburring, finishing, and polishing. Nylon mesh abrasives are good for light smoothing, cleaning, and polishing.

Application	Grinding, Smoothing, and Blending / Deburring / Cleaning, Texturing, and Finishing / Polishing																		
Finish	Rough			Smooth					Extra Smooth					Polished					
Abrasive Grit	16	24	36	60	80	100	120	150	180	220	240	280	320	360	400	500	800	1200	2000+

Sandpaper

When your sanding jobs involve shapes and contours, flexible paper sheets are a good choice. They're coated with aluminum oxide for sanding most materials. All are 9″×11″.

Choose 36-80 grit for a rough finish, 100-220 grit for a smooth finish, 240-400 grit for an extra-smooth finish, and 500-2500 grit for a polished finish.

Clog Resistant—Have a special coating for clog resistance.
Waterproof—Resist deterioration when used wet.

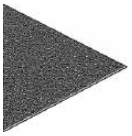
50-Piece Clog-Resistant Sheet Assortment—You'll get 10 sheets each of 60, 80, 120, 180, and 220 grits. 8234A41 $27.77

Sanding Sheets

For information about sanding abrasives, see page 2643.

Multipurpose Cloth Sanding Sheets



Sheets have aluminum oxide abrasive for sanding metal and wood. All have a tear-resistant cloth backing and are 9″×11″.

Standard—36-60 grit sheets have a strong, stiff backing; 80-600 grit sheets have a flexible backing.

Waterproof—Unlike standard sheets, these resist water as well as grease, chemicals, cutting fluids, and other solvents that may be present when sanding. Backing is flexible.

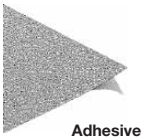
Quick-Attach Sanding Strips and Sheets



Adhesive Back

Choose peel-and-stick adhesive or hook and loop backing to stick to your sanding tool. The 1″×11″ adhesive-back strips are for use on narrow tools such as 4647A57 on page 2645.

For Metal and Wood—Coated with aluminum oxide for use on most materials. The 1″×11″ strips have a tear-resistant cloth backing. The 4½″×4¼″ and 4½″×4½″ sheets have a flexible paper backing and a special coating for clog resistance.

For Nonmetals—Have a tear-resistant cloth backing with a long-lasting diamond coating.

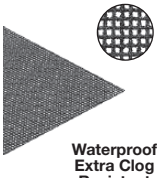
Sanding Sheets for Aluminum, Soft Metals, and Nonmetals



Waterproof Extra Clog Resistant

Get quick results with light pressure—sheets have silicon carbide abrasive that easily cuts through aluminum, brass, bronze, plaster, fiberglass, composites, plastics, and concrete. Sheets are 9″×11″.

Waterproof—Use for wet sanding. They have a flexible paper backing.

Clog Resistant—Have a flexible paper backing and special coating for clog resistance.

Waterproof Extra Clog Resistant—A flexible nylon mesh screen backing allows sanding dust and debris to escape without clogging. These sheets work well on plaster and wood, and can also be used on nonferrous metals, glass, rubber, plastics, and enamel. They have abrasive on both sides.

For information about sanding abrasives, see page 2643.

Super Long Lasting Sanding Sheets for Hard Nonmetals

The abrasive is diamond, which lasts much longer than silicon carbide. Use on concrete, fiberglass, composites, and ceramics. All are 9″×11″. Cloth backing is tear resistant. Sheets with adhesive or hook and loop backing quickly attach to your tool.

	Available Grits					
Backing	Rough	Smooth	Extra Smooth	Polished		Each
Cloth	60, 120	200, 400	800	1800	8167A11	$271.09
Adhesive	60, 120	200, 400	800	1800	8167A31	271.09
Hook and Loop	60, 120	200, 400	800	1800	8167A21	271.09

Sanding Sheets for Sheet Sanders

These sheets are cut to convenient sizes that fit most sheet sanders. For sanders, see pages 2673-2674.

Multipurpose Clog Resistant

Widely spaced aluminum oxide grains resist clogging when sanding wood, soft metals, and fiberglass. They have a flexible paper backing. Choose 36-80 grit for a rough finish and 100-220 grit for a smooth finish.

Waterproof for Aluminum, Soft Metals, and Nonmetals

Coated with silicon carbide, these sheets have a flexible paper backing. Use to finish aluminum and other soft metals. Also used on rubber, glass, plastics, soft woods, and enamel. Choose 60 or 80 grit for a rough finish, 100-220 grit for a smooth finish, 320 or 400 grit for an extra-smooth finish, and 600-2000 grit for a polished finish.

Hand Sanding Blocks

Block—Easy on the hands, this rubber block sands flat and curved surfaces. Slits on both ends of the block allow you to attach sheets over the flat or curved side.

Sheets—Have a paper backing coated with aluminum oxide and resist clogging. All are 2¾″×9″. Use for general purpose sanding of most materials. Choose 80 grit for a rough finish and 100-150 grit for a smooth finish.

Sanding Sheets for Smoothing and Polishing Nonmetals

A clean alternative to messy polishing compounds, these diamond sheets also produce a more consistent finish. They're waterproof and good for use on extremely hard materials such as glass, ceramics, and composites. Sheets are 9″×11″. Backing is plastic and 3 mils thick. Choose 360 grit for a smooth finish, 700-1500 grit for an extra-smooth finish, and 1750-2500 grit for a polished finish.

Approx. Grit	Grain Size, microns (0.001 mm)	Color		Each

Emery and Crocus Sanding Sheets

Use to polish metal. Sheets have a tear-resistant cloth backing and measure 9″×11″.

Emery—Have block-shaped grit particles that cut slowly.

Crocus Cloth—Have a soft abrasive similar to 1500-2000 grit that's good for fine hand-polishing of soft nonferrous metals.

Approx. Grit	Pkg. of 25		Pkg. of 10		Pkg. of 5

■Pkg. of 50

40-Piece Sheet Assortment—You'll get 10 each of the 50, 120, and 180 grit emery sheets, plus 10 crocus cloth sheets.

8233A21	$42.58

Easy-Feed Hand Sanding Blocks

Blocks—Store an adhesive-back sanding roll in these blocks—cut off worn abrasive and pull out new abrasive as needed (rolls sold separately). Blocks have a cushioned pad and molded hand grip. The flat surface sands corners and the rounded end sands curves.

Rolls—These adhesive-back paper rolls have silicon carbide abrasive and resist clogging. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials. Choose 100-180 grit for a smooth finish and 240 or 280 grit for an extra-smooth finish.

★Abrasive is aluminum oxide for 2000 and 2500 grit. ▲Abrasive is aluminum oxide.
♣Abrasive is aluminum oxide for 2500 and 3000 grit.

Sanding Pads

The flexibility of these abrasive pads makes hand sanding easy, especially around curves. Choose 36-80 grit for a rough finish, 100-220 grit for a smooth finish, 320-400 grit for an extra-smooth finish, and 800-1800 for a polished finish.

Multipurpose

The aluminum oxide abrasive is one grit on the top and one side, and a different grit on the bottom and other side. Use on most materials.

3M Scotch-Brite Nylon Mesh Sanding Pads

Use these premium pads for cleaning, deburring, blending, and finishing. Either use by hand or cut them to size to use with portable sanders. Pads are 6″×9″ and approximately 1/4″ thick.

For Metal, Wood, and Hard Materials—Pads are embedded with aluminum oxide.

For Soft Metals, Plastics, and Soft Woods—Pads are embedded with silicon carbide.

Grade	3M No.	Color	Applications		Pkg. of 20

Nylon Mesh Sanding Pads

Sand, scrub, debur, and finish with these hand pads. They can be cut to size to use with portable sanders. Pads are 6″×9″ and approximately 1/4″ to 1/2″ thick.

For Metal, Wood, and Hard Materials—Pads are embedded with aluminum oxide.

For Soft Metals, Plastics, and Soft Woods—Pads are embedded with silicon carbide.

Sanding-Pad Holder—Firmly grips hand pads cut to 3″×6″.

21-Piece Sanding-Pad Kit—Includes five each of the *heavy duty, clean/scour,* and *all purpose* pads for metal, wood, and hard materials; five *clean/finish* pads for soft metals, plastics, and soft wood; and one sanding-pad holder.

Steel Wool

Steel wool is handy for many surface preparation tasks from removing paint and rust to polishing for a fine finish. Pads are approximately 4″×2 3/4″×3/4″. The reels are approximately 4″ Wd.×1/4″ Thick.

Grade 4—Aggressively remove rust and dirt.

Grade 3—Strip lacquer and paint.

Grade 2—Remove rust, wax buildup on floors, and paint on moulding; clean glass, brick, rough metal, and stone surfaces.

Grade 1—Clean cast and wrought iron, copper pipes and fittings, and prepare wood for paint.

Grade 0—Clean bare metals, porcelain, and tile as well as remove rust from metal.

Grade 00—Remove old finishes, restore aluminum, and prepare surfaces before painting.

Grade 000—Polish metal, buff cabinets, and remove paint from wood and rust from chrome.

Grade 0000—Buff woodwork, lacquer, varnish, and clean precision instruments and tools.

Corrosion-Resistant Metal Wool

Unlike steel wool, these metal wools won't leave small fibers that cause rust. Pads are approximately 4″×2 3/4″×3/4″; reels are approximately 4″ Wd.×1/4″ Thick.

Coarse grade is comparable to steel wool grades 3-4. Medium grade is comparable to steel wool grades 1-2. Fine grade is comparable to steel wool grades 0-00.

Bronze—Good for use on hardwood and brass.

Type 434 Stainless Steel—Good for general purpose use on stainless steel.

Type 316 Stainless Steel—Provides even better corrosion resistance than Type 434 stainless steel.

Aluminum—Lighter and softer than other corrosion-resistant metal wools. Good for cleaning and finishing aluminum.

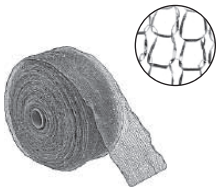
Metal Gauze & Sanding Blocks, Cords, and Rolls

For information about sanding abrasives, see page 2643.

Corrosion-Resistant Metal Gauze



Gauze won't snag or leave strands of metal on your work surface. It creates a smooth finish.

Copper gauze is nonsparking and cleans molds, punches, dies, and plastics processing equipment without harming the finish.

Type 304 stainless steel gauze is suitable for food processing and tough cleaning jobs.

Material	Wd.	Lg.		
Copper	5″	100′	6361T12	$95.93
Type 304 Stainless Steel	5″	100′	6361T14	70.92

Corrosion-Resistant Nylon Wool

Replace your steel wool with nylon mesh. It's waterproof and won't rust, splinter, or shed. Pads are 4 3/8″ × 5 1/2″.

Extra Coarse and Coarse—For aggressive stripping and deburring.

Medium—For deburring and cleaning.

Fine—For light cleaning.

Extra Fine—For blending and finishing.

Super Fine—For scratch free cleaning and buffing.

Grade	Color	Thick.	Pkg. Qty.		Pkg.
Extra Coarse	Green	3/4″	1	44225A86	$3.40
Coarse	Blue	3/4″	1	44225A85	3.40

Extra Fine	Gray	1/4″	2	44225A82	3.75
Super Fine	White	1/4″	2	44225A81	3.75

Sanding Sticks

Rubber or cotton bonds cushion the abrasive so it won't gouge your work surface. Choose 46 to 80 grit for a rough finish, 120-180 grit for a smooth finish, and 240-320 for an extra-smooth finish.

Rubber-bonded sticks are more flexible and longer lasting than cotton laminate sticks. Sticks *for steel* are coated with aluminum oxide. Sticks *for soft metals* are rectangular and coated with silicon carbide.

Cotton laminate sticks *for steel* are coated with aluminum oxide.

Sanding Blocks for Metal

The silicon carbide abrasive in this block wears evenly to maintain a flat surface. It's 180 grit and leaves a smooth finish. Use to remove burs from metal die fixtures and machine parts, and to clean magnetic chucks. Size is 4 1/8″ × 6 1/4″ × 1 5/8″.

42685A55 ..... $60.92

Sanding Blocks for Concrete

Rub down concrete and remove mold marks with these extra coarse, 24 grit silicon carbide blocks.

Wd.	Lg.	Thick.		
3″	6″	1″	4509A2	$17.62
3 1/2″	8″	1 1/2″	4509A1	22.68

Miniature Sanding Cords and Strips

The dental floss of abrasives, these cords and strips slip into areas that standard abrasives cannot. Use for deburring and polishing small holes, narrow slots, keyways, and grooves. Furnished in 50-ft. spools. *Flat strips* have grit on both the top and bottom.

Choose 120-200 grit for a smooth finish and 280 grit for an extra-smooth finish.

Multipurpose—Coated with aluminum oxide for general purpose sanding on most materials.

For Aluminum—Coated with silicon carbide, which cuts fast under light pressure. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

For Cleaning and Polishing Soft Metals—Coated with crocus cloth.

Quick-Attach Multipurpose Sanding Rolls

Coated with aluminum oxide and treated with a special coating for clog resistance, these rolls are easy to attach to your tool. Choose peel-and-stick adhesive or hook and loop backing. Use for general purpose sanding on most materials.

To Order: Please specify grit: 60 or 80 (rough finish); 100, 120, 150, 180, or 220 (smooth finish); 320 or 400 (extra-smooth finish); or 600 (polished finish).

Wd.	Lg.	Adhesive Back		Hook and Loop Back	
4 1/2″	10 yds.	46585A33	$32.78	8223A42	$37.51

For information about sanding abrasives, see page 2643.

Multipurpose Sanding Rolls

Also called shop, utility, and handy rolls, these rolls are coated with aluminum oxide and can be used on most materials. They have a flexible, tear-resistant cloth backing and can be cut to length. 1″-2″ widths come in a dispenser pack.

Waterproof—Unlike standard rolls, these products resist water as well as grease, chemicals, cutting fluids, and other solvents used when sanding, deburring, cleaning, or polishing.

Heavy Duty Multipurpose Sanding Rolls

A heavy, thick backing withstands tough sanding on most materials. Rolls are coated with aluminum oxide. Use on drum sanders or cut to length for use by hand.

Flexible—Have a paper backing that conforms to curved surfaces.

Tear Resistant—Have a cloth backing that is more durable than paper and withstands continual bending and flexing.

	Available Grits

♦ Length of 80 grit roll is 20 yards.

Sanding Rolls for Aluminum, Soft Metals, and Nonmetals

The abrasive is silicon carbide, which cuts faster than aluminum oxide, even under light pressure. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials. They have a flexible paper backing, are waterproof for wet sanding, and can be cut to length.

	Available Grits				
Wd.	Smooth	Extra Smooth	Polished		25 yds.
3″	180	240, 320, 400	600	47415A36	$29.85
3″	—	—	800, 2400, 4000	47415A37	35.26

Clog-Resistant Sanding Rolls for Aluminum, Soft Metals, and Nonmetals

A screen cloth backing allows sanding dust and debris to escape without clogging. Rolls are coated with silicon carbide with a flexible, meshed polyester backing. They are particularly good for use on plaster and wood, and can also be used on nonferrous metals, glass, rubber, plastics, enamel, and other soft materials. Rolls are waterproof, have abrasive on both sides, and can be cut to length. Choose 80 grit for a rough finish, 100-220 grit for a smooth finish, and 240-400 grit for an extra-smooth finish.

Sanding Rolls & Discs

For information about sanding abrasives, see page 2643.

Cushioned Sanding Rolls for Smoothing and Polishing

A flexible, cushioned layer creates consistent finishes. Rolls have a specially bonded abrasive that's long lasting and a tear-resistant cloth backing. They can be cut to length. The grits listed are approximate.

For Metal—Coated with aluminum oxide.

For Plastic and Soft Woods—Coated with silicon carbide.

Wd.	Lg.	Available Grits: Smooth	Extra Smooth	Polished		
For Metal						
1″	16 yds.	220	240, 280, 320	500, 800, 1000, 1200, 1500, 2000, 2500	6810A36	$81.31
For Plastic and Soft Woods

Emery and Crocus Sanding Rolls

Use to polish and clean metals. All have a tear-resistant cloth backing and can be cut to length.

Emery—Have block-shaped grit particles that cut slowly to polish metal.

Crocus Cloth—Has a soft abrasive that's good for hand-polishing of soft nonferrous metals.

Approx. Grit	1″×20 Yds.		1″×50 Yds.		1½″×20 Yds.		1½″×50 Yds.		2″×20 Yds.		2″×50 Yds.

Nylon Mesh Sanding Rolls

Cut these rolls to length and use to smooth, clean, and polish by hand. Choose medium grade for a smooth finish, fine or very-fine grade for an extra-smooth finish, and ultra- or micro-fine grade for a polished finish.

For Metal, Wood, and Hard Materials—Rolls are embedded with aluminum oxide.

For Soft Metals, Plastics, and Soft Woods—Rolls are embedded with silicon carbide.

Three-Roll Assortment—Includes one each of the *long life* and *all purpose* rolls for metal, wood and hard materials; and one *final finish* roll for soft metals, plastics, and soft wood in a dispenser pack. Each roll is 2″×5 yds.

Also Available: 5-yd. rolls. Please ask for 4659A5 and specify grade and width.

Flat Sanding Discs

Plain Hole

Quick Change

A heavy duty fiber backing makes these discs durable and aggressive. *Plain-hole* discs have a 7/8″ dia. arbor hole, except the 4″ dia. discs have a 5/8″ dia. arbor hole. *Quick-change* discs have a metal arbor that threads directly onto a 5/8″-11 threaded spindle. All discs require a backup pad (sold separately on page 2651). Use on angle grinders.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with zirconia alumina.

For Stainless Steel and Hard Metals—Coated with ceramic alumina or a ceramic alumina/zirconia alumina blend.

High Performance for Stainless Steel and Hard Metals—Coated with ceramic alumina.

For Aluminum—Coated with silicon carbide and coated to stay cool and prevent material buildup.

For information about sanding abrasives, see page 2643.

Clog-Resistant Flat Sanding Discs

Plain Hole

Quick Change

Designed to reduce material buildup on the abrasive surface, these discs have a heavy duty fiber backing and require a backup pad (sold separately; see 4728A and 4655A on this page). Use on angle grinders.

Plain-hole discs have a 7/8" dia. arbor hole. *Quick-change* discs thread directly onto a 5/8"-11 threaded spindle.

Multipurpose—Coated with aluminum oxide and an additive to resist clogging.

For Stainless Steel and Hard Metals—Coated with zirconia alumina and an additive to resist clogging.

High Performance for Stainless Steel and Hard Metals—Coated with long-lasting ceramic alumina and an additive to resist clogging.

Backup Pads for Flat Sanding Discs

Stabilize and reinforce your sanding disc with these backup pads, which are required for use with most flat sanding discs. Use the included disc nut to attach the pad to an angle grinder. Pad adapters (sold separately) convert the 5/8"-11 arbor hole to the size listed below.

For Disc Dia.	Arbor Hole	Max. rpm		
4 1/2"	5/8"-11	18,000	4728A29	$44.71
5"	5/8"-11	18,000	4728A31	44.71
7"	5/8"-11	8,600	4728A42	50.24
9", 9 1/8"	5/8"-11	7,000	4728A43	68.60
3/8"-24 Pad Adapter			4728A61	9.40
10 x 1.50 mm Pad Adapter			4728A63	11.77

Cool-Sanding Backup Pads for Flat Sanding Discs

Spiral ribs on these pads form air-flow channels to keep discs operating at a cooler temperature. Pads are made of extra strong rubber, fabric, and fiberboard. A 5/8"-11 disc nut (sold separately) is required for attachment to an angle grinder. Pad adapters (sold separately) convert the arbor hole to the size listed below.

Flexible pads are good for use on curves and contours. **Rigid** pads provide the most support.

For Disc Dia.	Arbor Hole	Max. rpm	Flexible	Medium	Rigid	
4"	5/8"-11	12,000	4655A11	4655A5	4655A21	$16.87
4 1/2"	5/8"	11,000	4655A17	4655A7	4655A33	16.87
5"	5/8"-11	10,000	4655A12	4655A3	4655A22	19.09
7"	5/8"-11	8,500	4655A16 ■	4655A1	4655A24	28.76
9"	5/8"-11	6,500	4655A15	4655A2	4655A26	34.36
Disc Nut for 4", 4 1/2", and 5" Dia. Pads					4655A27	6.47
Disc Nut for 7" and 9" Dia. Pads					4655A28	6.47
3/8"-24 Pad Adapter					4655A31	10.33
7/16"-20 Pad Adapter					4655A32	10.33

■ Max. rpm is 7,000.

Flat Sanding Discs for Concrete

Use to grind and finish concrete after making repairs and patches. These discs have a hard backing coated with silicon carbide, a 7/8" dia. arbor hole, and leave a rough finish. Use on angle grinders. Backup pads are not required.

Dia.	Available Rough Grits	Max. rpm		
4 1/2"	16, 24, 36	13,300	4751A51	$8.90
5"	16, 24, 36	12,000	4751A52	9.16
7"	16, 24, 36	8,500	4751A53	10.20

See-Through Flat Sanding Discs

Holes in the disc let you see the surface as you're sanding. Use on angle grinders that have a 5/8"-11 spindle. Backup pads (sold separately) are required.

Abrasive Discs

Multipurpose—Coated with a ceramic/zirconia alumina blend.

For Stainless Steel and Hard Metals—Coated with a ceramic/zirconia alumina blend.

High Performance for Stainless Steel and Hard Metals—Coated with ceramic alumina.

7"	24, 36, 50	46795A76	6.54	5.71

Nylon Mesh Discs

Discs are embedded with aluminum oxide for use on most materials. **Coarse** grade is for light deburring and removing heavy rust and surface imperfections. Color is brown. **Medium** grade is for moderate blending, cleaning, light deburring, and general cleaning. Color is maroon. **Very fine** grade is for polishing and final finishing. Color is blue.

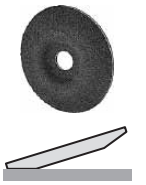
Dia.	Available Grades		1-9	10-Up
4 1/2"	Coarse, Medium, Very Fine	46795A64	$3.45	$2.93
5"	Coarse, Medium, Very Fine	46795A65	3.80	3.22
7"	Coarse, Medium, Very Fine	46795A66	6.11	5.18

Backup Pads

Include a 5/8"-11 disc nut.

For Disc Dia.	Max. rpm		
4 1/2"	13,000	46795A24	$13.27
5"	13,000	46795A25	20.62
7"	8,600	46795A26	30.82

Angled Sanding Discs



Side View

These discs are strong and have an angled edge for aggressive sanding, yet they're flexible so you can control the amount of pressure applied to the work surface. They have a fiber backing and leave a rough finish. Use on angle grinders. Backup pads are not required.

Multipurpose—Coated with zirconia alumina.

High Performance Multipurpose—Coated with zirconia alumina and an additive to resist heat.

High Performance for Stainless Steel and Hard Metals—Coated with long-lasting ceramic alumina.

Sanding Discs & Disc Trimmers

For information about sanding abrasives, see page 2643.

Floor Sanding Discs

Use on commercial floor-buffing machines to sand wood floors and strip tape from concrete floors. All discs have a 2″ slotted center hole.

Multipurpose—Coated with silicon carbide. The *20-grit* discs resist clogging and have a combination cloth and paper backing. The *36-grit* and *80-grit* discs have a strong paper backing.

For Hard Woods—Have a heavy paper backing coated with ceramic alumina.

Dia.	Multipurpose: Available Rough Grits			For Hard Woods: Available Rough Grits		
15″	20, 36, 80	47305A255	$5.19	24, 36, 80	47305A258	$7.19
16″	20, 36, 80	47305A256	5.93	24, 36, 80	47305A259	8.21
17″	20, 36, 80	47305A257	7.96	24, 36, 80	47305A265	9.58

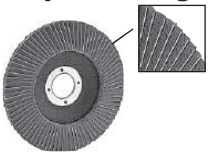
Sanding Disc Trimmers

Save the usable inner part of a worn disc—this tool works like a can opener to trim the perimeter of the disc down to the next smaller size. Works on paper, cloth, and fiber discs from 3″ to 9″ with a 7/8″ center hole. Not for use with flap discs.

Trimmer has two 11/32″ holes for bench mounting.

Trimmer	4710A12	$123.70
Replacement Upper Cutting Blade	4710A13	23.17
Replacement Lower Cutting Blade	4710A14	23.17

Flap Sanding Discs



Angle

Flat

Made from overlapping pieces of cloth sanding strips bonded to a fiberglass backing plate (unless noted), these discs provide consistent material removal and even finishes in one operation. As the top layer of sanding strips wears away, a new layer is exposed. Use on angle grinders to grind, debur, finish, and blend welds.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with a ceramic blend or zirconia alumina. Use for aggressive material removal.

For Aluminum—Coated with ceramic/zirconia blend and an additive to prevent clogging, except the long life flat discs are coated with zirconia alumina. All can also be used on other soft metals.

For Stainless Steel and Hard Metals—Coated with a ceramic blend or zirconia alumina.

High Performance for Stainless Steel and Hard Metals—Coated with premium, long-lasting ceramic alumina.

Angle discs, also known as Type 29 discs, have an angled edge for aggressive material removal. They work well on curves and contours. *Flat* discs are also known as Type 27 discs. *Long-life angle* and *long-life flat* discs have more flaps than standard discs so they last 30% to 40% longer.

Max. rpm is 15,000 for 4″ dia. discs; 12,000 for 4 1/2″ and 5″ dia. discs; 10,000 for 6″ dia. discs; and 8,500 for 7″ dia. discs.

Cool-Sanding Flap Discs

Overlapping cloth abrasive flaps with built-in lubrication aggressively remove material while minimizing heat to reduce discoloration of the work surface. The backing plate is fiberglass. Use on angle grinders to grind and finish in one operation.

Angle discs, also known as Type 29 discs, have an angled edge for aggressive material removal. They work well on contours and curves. *Flat* discs are also known as Type 27 discs.

For Stainless Steel—Coated with zirconia alumina.

For High Alloy Steels—Coated with ceramic alumina.

For Aluminum—Coated with aluminum oxide and an additive for heat resistance. They can also be used on other soft metals.

♣ Not available in 80 grit. ♥Not available in 60 or 80 grit.

For information about sanding abrasives, see page 2643.

Long-Lasting Flap Sanding Discs

Unlike fiberglass, the plastic backing plate on these discs can be sheared away with your workpiece as the abrasive flaps wear down, resulting in longer disc life. All have a cloth backing. Also known as Type 29 discs, they have an angled edge for aggressive material removal and work well on contours and curves. Use on angle grinders.

High Performance Multipurpose—Coated with zirconia alumina for aggressive material removal.

For Stainless Steel and Hard Metals—Coated with premium aluminum oxide that stays cool and prevents material buildup.

Flap Sanding Discs for Corners

The abrasive flaps are set at an angle and widely spaced so they reach into corners. Backing plate is fiberglass; backing is cloth. Use on angle grinders.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with zirconia alumina for aggressive material removal.

For Stainless Steel and Hard Metals—Coated with ceramic alumina.

Flap Sanding Discs for Right-Angle Welds

The abrasive flaps wrap around the outer edge of these discs to sand welds in right angles. They leave a rough finish. Backing plate is fiberglass; backing is cloth. Use on angle grinders.

High Performance Multipurpose—Coated with 40-grit zirconia alumina.

For Stainless Steel and Hard Metals—Coated with 60-grit ceramic oxide.

Aggressive Flap Sanding Discs

A rigid aluminum backing plate provides more support than standard fiberglass backing plates so these discs can be used for very heavy material removal. They have a cloth backing coated with zirconia alumina. Also known as Type 29 discs, they have an angled edge and work well on contours and curves. Use on angle grinders.

Dia.	Arbor Hole	Max. rpm	Available Grits: Rough	Available Grits: Smooth

Quick-Change & Nylon Mesh Sanding Discs

For information about sanding abrasives, see page 2643.

Quick-Change Flap Sanding Discs

Flat

Corner

The plastic fastener (3M Roloc/Norton Speed-Lok TR compatible) on these discs allows for quick disc changes. Fasteners attach to a disc holder with a 1/4″ dia. shank (disc holder required; sold separately). Discs are made of cloth sanding strips and are for use on angle grinders for bits and burs.

Corner discs are designed for use on corners, in tight spaces, and on curved surfaces.

Multipurpose—Coated with aluminum oxide.

For Stainless Steel and Hard Metals—Coated with zirconia alumina for aggressive material removal.

Nylon Mesh Flap Sanding Discs for Finishing

A nylon mesh version of our popular flap sanding discs, these discs have overlapping flaps of nylon mesh embedded with aluminum oxide and mounted in layers on a fiberglass backing plate. This creates a cushion that's good for blending and other finishing tasks. Also known as Type 29 discs, they have an angled edge for aggressive material removal and work well on contours and curves. Use on angle grinders.

Coarse grade is for light deburring, and removal of heavy rust and surface imperfections. Color is red or brown. **Medium** grade is for moderate blending, cleaning, light deburring, and general finishing. Color is maroon. **Fine** grade is for light cleaning and finishing. Color is blue.

Nylon Mesh Stripping and Finishing Discs

Stripping

Finishing

A nylon mesh option for work on flat surfaces, these discs are also known as Type 27 discs. Use on angle grinders.

Stripping Discs—Made of extra-coarse nylon mesh embedded with silicon carbide, these black heavy duty discs handle the toughest jobs. *Multipurpose* discs remove surface coatings and clean welds on metal. They're also for use on curved surfaces. Discs *for stainless steel* eliminate discoloration from heat buildup. They can also be used on titanium and nickel alloys.

Finishing Discs—Made of multiple layers of compressed nylon mesh bonded together. *Multipurpose* discs are light gray and embedded with aluminum oxide. They are more durable than discs for soft materials. Discs *for soft materials* are dark gray and embedded with silicon carbide, which cuts faster than aluminum oxide and leaves a finer finish on most surfaces. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Coarse grade is for light deburring, and removal of heavy rust and surface imperfections. *Medium* grade is for moderate blending, cleaning, light deburring, and general finishing. *Fine* grade is for light cleaning and finishing. Soft and medium density discs conform to surfaces better than hard density discs. Use for blending tool marks and giving a bright surface finish. Hard density discs are more durable for aggressive material removal.

Nylon Mesh Shaft-Mount Finishing Discs

Use one disc for intricate jobs, or stack several for larger jobs. Attach to a 1/4″ dia. shank mandrel (sold separately) or shaft. They're embedded with aluminum oxide for use on most materials. Use on bench and pedestal grinders, and grinders for straight wheels.

Medium grade is for moderate blending, cleaning, light deburring, and general finishing. Thickness is 1/2″. **Fine** grade is for light cleaning and finishing. Thickness is 3/8″. **Very fine** grade is for polishing and final finishing. Thickness is 1/4″.

Quick-Change Sanding Discs

The fastener on the back of these discs allows you to easily swap one disc for another. Choose from three types: Style A compatible with Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles; Style B compatible with 3M Roloc and Norton Speed-Lok TR styles; and Style C snap-on fastener compatible with Merit Power-Lock Type I and Norton TY Power-Lock Type I styles. Disc holder required (sold separately).

Discs have a cloth backing and are used on angle grinders for bits and burs.

Multipurpose—Coated with aluminum oxide. 4″ dia. Style C discs are not available in 320 grit.

High Performance Multipurpose—Coated with zirconia alumina.

Long-Lasting Multipurpose—Coated with aluminum oxide. The abrasive is compressed for longer disc life and a uniform finish.

For Soft Metals and Nonmetals—Coated with silicon carbide. ¾″ dia. discs are only available in 100 and 120 grit. 1″ dia. discs are only available in 50, 100, 120, and 180 grit. 1½″ dia. discs are only available in 36, 50, and 120 grit. 3″ dia. discs are only available in 36, 40, 50, 60, 80, 120, 180, and 240 grit. 4″ dia. discs are only available in 100, 120, and 180 grit.

For Stainless Steel and Hard Metals—Coated with ceramic.

High Performance for Stainless Steel and Hard Metals—Coated with ceramic and an additive to remove material more aggressively and last up to twice as long as standard ceramic discs.

Heavy Duty Quick-Change Sanding Discs

A strong fiber backing makes these discs long-lasting, even for aggressive sanding. A quick-change fastener secures the discs to the required disc holder (sold separately). Choose from two types: Style A metal fastener compatible with Standard Abrasive SocAtt and Norton Speed-Lok TS styles; and Style B plastic fastener compatible with 3M Roloc and Norton Speed-Lok TR styles.

Use on angle grinders for bits and burs. Choose 36-80 grit for a rough finish, and 100 or 120 grit for a smooth finish.

For Steel—Coated with ceramic.

For Aluminum—Coated with premium aluminum oxide and designed to stay cool and prevent material buildup.

Quick-Change Sanding Discs

For information about sanding abrasives, see page 2643.

Quick-Change Sanding Discs for Smoothing

Grind and finish in one step—discs consist of multiple layers of cotton fiber embedded with aluminum oxide. They resist clogging and outlast standard quick-change cloth sanding discs 10:1. A 3M Roloc/Norton Speed-Lok TR compatible plastic fastener allows for fast disc changes. Use discs on angle grinders for bits and burs, for grinding welds, and for blending on flat and contoured surfaces. For best results, use a disc that is one or two grits coarser than a standard cloth sanding disc. A *disc holder* (sold separately) is required and has a 1/4″ shank diameter.

	Available Grits					Disc Holders

Quick-Change Sanding Discs for Contours

The outer 3/8″ edge of these discs is very flexible so it won't mar or gouge your work when sanding a radius or contour. A quick-change fastener allows fast disc changes. Discs have a cloth backing and are used on angle grinders for bits and burs. A *disc holder* (sold separately) is required.

Multipurpose discs are aluminum oxide. **High performance multipurpose** discs are zirconia alumina for long-lasting, aggressive material removal.

Discs

To Order: Please specify disc fastener style: Style A metal fastener (compatible with Norton Speed-Lok TS, Standard Abrasive SocAtt, and 3M TSM styles) or Style C plastic snap-on fastener (compatible with Merit Power-Lock Type I and Norton Power-Lock Type I styles).

Please specify grit: 60 or 80 (rough finish); 100, 120, or 180 (smooth finish). High performance discs are not available in 180 grit.

Nylon Mesh Quick-Change Sanding Discs

Make quick and simple changes from one disc to another. Choose from two types of plastic fasteners: Style A fastener compatible with Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles; or Style B fastener compatible with 3M Roloc and Norton Speed-Lok TR styles. All discs are embedded with aluminum oxide for surface conditioning, cleaning, polishing, and creating specific finishes. Use on most materials with angle grinders for bits and burs. A disc holder (sold separately) is required.

Surface-Conditioning for Flat Surfaces—Extra stiffness makes these more aggressive than finishing and polishing discs for surface preparation work. Also use for cleaning and light deburring.

Finishing and Polishing for Contoured and Flat Surfaces—Thicker, more pliable, and less aggressive than surface-conditioning discs, these are best suited for light duty work.

Coarse grade is for light deburring and removal of heavy rust and surface imperfections. **Medium** grade is for cleaning, blending, and rust removal. **Fine** and **very fine** grades are for light scratch removal, finishing, and polishing.

26-Piece Aluminum Oxide Surface-Conditioning Disc Kits

Kits include four discs each of coarse, medium, and very fine grades in 2″ and 3″ dia. sizes plus one each of 2″ and 3″ dia. disc holders with 1/4″ dia. shank.

Disc Fastener Style		
A	4799A91	$46.79
B	4799A92	47.67

For information about sanding abrasives, see page 2643.

Aggressive Nylon Mesh Quick-Change Discs

Embedded with sharp, fast-sanding ceramic alumina, these discs debur, clean, and blend faster than other nylon mesh discs. Grain particles continuously produce new sharp cutting edges. For fast disc changes they have a plastic fastener compatible with 3M Roloc and Norton Speed-Lok TR styles. Use with an angle grinder for bits and burs on carbon steels, nickel alloys, aluminum, cast iron forgings, and stainless steel.

A *disc holder* (sold separately) is required. Holders have a 1/4" dia. shank.

Coarse grade discs are for deburring and removing heavy rust and surface imperfections. Color is blue. **Medium** grade discs are for moderate to light cleaning, blending, and surface material removal. Color is maroon.

Nylon Mesh Shank-Mount Stripping and Cleaning Discs

For Stripping Soft Materials

Multipurpose for Cleaning

Multiple layers compressed on a shank allow these discs to conform to a variety of tight spots and internal surfaces.

Extra coarse grade discs are for heavy stripping and shaping. **Medium** grade discs are for moderate deburring and cleaning. **Fine** grade discs are for light cleaning, blending, and finishing. **Very fine** grade discs are for polishing and final finishing to a satin or luster finish.

For Stripping Soft Materials—Embedded with silicon carbide for use on wood and plastics. Use with a drill. Color is black.

Multipurpose for Cleaning—Embedded with aluminum oxide. Use with drill presses, grinders for grinding wheels, and finishing tools. Color is maroon.

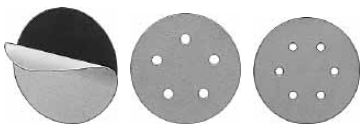
Adhesive-Back Paper Sanding Discs



Disc without Holes on Backup Pad | Disc with Five Holes | Disc with Six Holes

Press the disc on to a portable disc sander, then peel it off to change discs. They are commonly referred to as PSA discs. A backup pad (sold separately) is required. **Discs with holes** allow dust removal when used with vacuum sanders. Holes are 3/8" diameter.

Multipurpose—Coated with aluminum oxide. 4707A118 is not available in 80 grit.

High Performance Multipurpose—These cut faster, last longer, and produce more consistent finishes than standard multipurpose discs. Coated with aluminum oxide and an additive for clog resistance.

For Aluminum and Soft Metals—Coated with silicon carbide. Discs cut faster under light pressure than aluminum oxide discs.

For Stainless Steel and Hard Metals—Coated with ceramic alumina to produce the most consistent finish. Grain particles continuously produce new sharp cutting points.

Sanding Discs

For information about sanding abrasives, see page 2643.

Adhesive-Back Cloth Sanding Discs

Disc and Disc Holder

A tear-resistant cloth backing coated with adhesive sticks to a backup pad, machine platen, disc holder, or hand sanding pad (holders and pads sold separately). They are commonly referred to as PSA discs. Use on grinders for bits and burs, bench sanders, and orbital sanders. To maintain strong adhesion, clean the holder/pad surface with mild alcohol before applying. Do not use aggressive cleaning solvents such as MEK or acetone, which can damage the adhesive.

Choose 36-80 grit for a rough finish, 100-220 grit for a smooth finish, and 240-400 grit for an extra-smooth finish.

Multipurpose—Discs are aluminum oxide.

High Performance Multipurpose—Coated with aluminum oxide and an additive to resist clogging. Use on soft metals, soft woods, fiberglass, and similar materials.

For Aluminum and Soft Metals—Discs are silicon carbide. They abrade faster under light pressure than aluminum oxide discs.

For Stainless Steel and Hard Metals—Coated with zirconia alumina for long life and aggressive material removal.

ⓘ For pricing for other sizes, please go to mcmaster.com and search for the part number.

Adhesive-Back Sanding Discs for Soft Materials

Use on plastics, soft woods, enamel, and other soft materials as well as nonferrous metals and glass. All are waterproof and have a flexible paper backing coated with silicon carbide for fast cutting under light pressure. They are commonly referred to as PSA discs. Use on bench sanders.

Choose 60-80 grit for a rough finish, 120-180 grit for a smooth finish, 240-400 grit for an extra-smooth finish, and 600 grit for a polished finish.

For information about sanding abrasives, see page 2643.

Adhesive-Back Multipurpose Ultra-Fine Sanding Discs

Aluminum oxide abrasive on a conformable plastic backing produces extremely consistent finishes on most materials. Discs are waterproof and have a clog-resistant additive. They are commonly referred to as PSA discs. Use on portable disc sanders. Choose 240-400 grit for an extra-smooth finish and 600-2000 grit for a polished finish.

Grit	5″ Dia. Pkg. of 10		6″ Dia. Pkg. of 10

Quick-Attach Cushioned Sanding Discs for Smoothing and Polishing

5″ Dia. Disc with Holes

6″ Dia. Disc with Holes

Disc without Holes

A flexible cloth backing with a cushioned layer leaves a precise, uniform finish. Choose from discs with adhesive backing, commonly referred to as PSA discs, or discs with hook and loop backing. They're waterproof and for use on bench and portable disc sanders. Choose 180-230 grit for a smooth finish; 240-400 for an extra-smooth finish; and 500-3000 grit for a polished finish.

For Steel—Coated with silicon carbide.
For Aluminum—Coated with aluminum oxide.
For Plastic and Soft Wood—Coated with premium silicon carbide.
Discs with holes allow dust removal when used with a vacuum sander. Holes are ⅜″ dia. The 5″ dia. discs have 5 holes; the 6″ dia. discs have 6 holes.

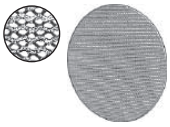
Dust- and Clog-Free Hook and Loop Sanding Discs



Mesh cloth backing on these aluminum oxide discs allows for efficient dust removal, eliminates clogging, and extends disc life. Use on portable disc sanders or five-, six-, and eight-hole vacuum sanders. Choose 80 grit for a rough finish; 100-220 grit for a smooth finish; 240-400 for an extra-smooth finish; and 600-1000 grit for a polished finish.

Sanding Guide

Apply this black powder to highlight scratches and other imperfections in the surface you're sanding. Comes in a 100 gram container and includes an applicator.

6842A11 ..... $34.55

Hook and Loop Sanding Discs

Disc without Holes on Backup Pad

Disc with Five Holes

Disc with Six Holes

Disc with Eight Holes

Unlike adhesive-back discs, these discs can be peeled off and reused. They hold securely to a backup pad (required; sold separately). **Discs with holes** aid vacuum sanders in dust removal. Hole dia. is 7/16". Discs have a flexible paper backing and an additive for clog resistance. Use on portable disc sanders.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with premium aluminum oxide that lasts longer, cuts faster, and produces a more consistent finish than standard aluminum oxide.

For Aluminum and Soft Metals—Coated with silicon carbide, which cuts faster under light pressure than aluminum oxide, but is less durable. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Hook and Loop Sanding Discs for Smoothing and Polishing

Disc without Holes

Disc with Five Holes

Disc with Six Holes

An even coat of aluminum oxide on a plastic backing means these discs produce consistent finishes and can be used on most materials. They're tear resistant, waterproof, and have a clog-resistant additive. Use on portable disc sanders.

Discs with holes aid vacuum sanders in dust removal. Hole dia. is 7/16". Choose 180 or 220 grit for a smooth finish, 240-400 grit for an extra-smooth finish, and 600-2000 grit for a polished finish.

Sanding Disc Adhesives and Cleaners

Adhesive—Attach sanding discs with paper, cloth, or fiber backing to backup pads with this heat-resistant (up to 140° F) adhesive. This item cannot be sold in the Los Angeles area.

5-oz. Tube	4705A5	$22.55

Adhesive Cleaner—Remove adhesive from sanding pads and platens and get a clean surface for new discs. This citrus-based cleaner, also known as Goo Gone, removes grease, tar, oil, solvent-based residue, and other residual dirt. This product is compliant under all state VOC rules in effect on October 1, 2009.

32-oz. Bottle	7984T13	$9.77

Nylon Mesh Hook and Loop Sanding Discs

Disc and Backup Pad

The hook-and-loop style fasteners on these discs securely grab the backup pad (required; sold separately). Discs are embedded with aluminum oxide for use on most materials. Use on angle grinders, grinders for bits and burs, and portable disc sanders.

Coarse grade is for light deburring and removing heavy rust and surface imperfections. *Medium* grade is for moderate blending, cleaning, light deburring, and general finishing. *Very fine* grade is for polishing and final finishing.

Multipurpose Water-Resistant Sanding Belts

Choose these belts when you're using water and cutting fluids while sanding. They have a tough polyester cloth backing coated with aluminum oxide. Use on belt sanders.

For 1″ wide and smaller belts, prices are approximately 15% lower when you buy 25 or more of the same grit and size. For 4″ wide and smaller belts, prices are approximately 15% lower when you buy 10 or more of the same grit and size. For wider belts, prices are approximately 15% lower when you buy 5 or more of the same grit and size.

Also Available: Other belt sizes and grits. Please ask for 4713A999 and specify belt size and grit.

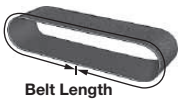
Clog-Resistant Multipurpose Sanding Belts



Especially good for use on soft metals, soft woods, and plastic, the widely spaced aluminum oxide grains on these belts prevent material buildup and clogging. Belts have a tear-resistant cloth backing. Use on belt sanders.

For 1″ wide and smaller belts, prices are approximately 15% lower when you buy 25 or more of the same grit and size. For 4″ wide and smaller belts, prices are approximately 15% lower when you buy 10 or more of the same grit and size. For wider belts, prices are approximately 15% lower when you buy 5 or more of the same grit and size.

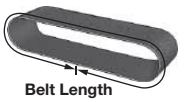
Sanding Belts for Aluminum, Soft Metals, and Nonmetals



A tear-resistant cloth backing is coated with silicon carbide, which abrades quickly and prevents material buildup. Belts are for use on belt sanders and can be used with water and cutting fluids.

For 1″ wide and smaller belts, prices are approximately 15% lower when you buy 25 or more of the same grit and size. For 4″ wide and smaller belts, prices are approximately 15% lower when you buy 10 or more of the same grit and size. For 6″ wide belts, prices are approximately 15% lower when you buy 5 or more of the same grit and size.

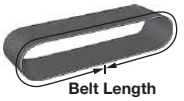
Sanding Belts for Stainless Steel and Hard Metals



The abrasive on these belts is ceramic alumina, which continuously breaks off during use to produce new sharp edges, resulting in longer life. They have an additive to resist heat and prevent material buildup and can be used with water and cutting fluids. The backing is cloth. Use on belt sanders.

For 1″ wide and smaller belts, prices are approximately 15% lower when you buy 25 or more of the same grit and size. For wider belts, prices are approximately 15% lower when you buy 10 or more of the same grit and size.

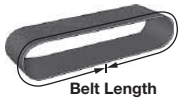
High Performance Sanding Belts for Stainless Steel and Hard Metals



Coated with a higher grade of ceramic alumina than standard belts for stainless steel and hard metals, these belts are long lasting, resist clogging, and stay cool during use. They have a tear-resistant cloth backing and can be used with water and cutting fluids. Use on belt sanders.

For 1″ wide and smaller belts, prices are approximately 15% lower when you buy 25 or more of the same grit and size. For 4″ wide and smaller belts, prices are approximately 15% lower when you buy 10 or more of the same grit and size. For 6″ wide belts, prices are approximately 15% lower when you buy 5 or more of the same grit and size.

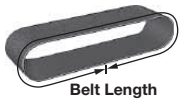
▲Also available in 100 and 150 grit.

Sanding Belts for Hard Nonmetals



Coated with long-lasting, synthetic diamond, these belts work well on hard-to-sand materials such as ceramics and glass. They have a tear-resistant cloth backing and can be used with water and cutting fluids. Use on belt sanders.

			Rough			Smooth

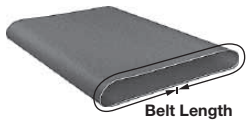
Sanding Belts for Wide-Belt Sanders



Use on wide-belt stationary sanders. Choose 60-80 grit for a rough finish, 120-220 grit for a smooth finish, and 240-320 grit for an extra-smooth finish.

Multipurpose—Have a paper backing coated with aluminum oxide.
High Performance Multipurpose—Have a tear-resistant cloth backing coated with aluminum oxide.
For Aluminum and Soft Metals—Have a paper backing coated with silicon carbide.

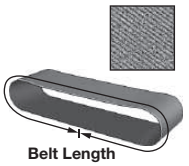
Sanding Belts & Sticks

For information about sanding abrasives, see page 2643.

Sanding Belts for Smoothing and Polishing



Multiple layers of aluminum oxide abrasive arranged in a pattern create extremely consistent finishes. Belts have a tear-resistant cloth backing. Use on belt sanders to sand most materials.

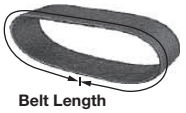
Nylon Mesh Sanding Belts for Cleaning and Polishing



The cushioned mesh structure gives you control over the amount of pressure applied during sanding and the resulting surface finish. Belts are embedded with aluminum oxide for use on most materials, and they can be used with water and cutting fluids. Use on belt sanders.

Coarse grade is for deburring and removing heavy rust and surface imperfections. **Medium** grade is for light cleaning and blending. **Very fine** grade is for removing fine scratch marks and lines, final finishing, polishing, and preparing surfaces for painting.

To Order: Please specify grade: coarse, medium, or very fine.

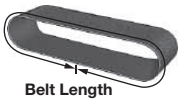
Cushioned Sanding Belts for Smoothing and Polishing



A cloth backing with a cushioned layer allows you to create a precise, uniform finish. Belts are coated with silicon carbide, which abrades quickly and prevents material buildup when sanding metal and hard woods. They can be used with water and cutting fluids. Use on belt sanders.

Belt Sanding Sticks

Easily reach small, compact areas with these sticks. They're spring-loaded to hold a small sanding belt taut, but also allow you to rotate the belt when it becomes worn.

Belt sticks include one 120 grit (smooth finish) aluminum oxide sanding belt with a flexible cloth backing for use on most materials.

Sanding belts are coated with aluminum oxide, which is for use on most materials. They have a flexible cloth backing, except the 500 and 600 grit belts have a stiff cloth backing.

To Order: For sanding belts, please specify grit: 80 (rough finish); 120 or 180 (smooth finish); 240, 320, or 400 (extra-smooth finish); or 600 (polished finish), unless noted.

For Belt Size: Lg.	Wd.	Belt Sticks	Each	Sanding Belts	Pkg. of 10
6"	1/4"	46655A111	$2.29	46655A511★	$8.12
8"	1/2"	46655A112	3.65	46655A512	10.83
10"	3/4"	46655A113	4.48	46655A513	13.75

★ Available in 80, 120, 180, 240, 320, 400, or 500 grits.

Flap Sanding Wheels

With Shank

With Threaded Spindle

Shank Adapter for Wheels with Threaded Spindle

Arbor Hole Adapter for Wheels with Threaded Spindle

Reduce gouging while achieving a uniform finish on flat and curved surfaces with these flexible flap wheels. As the flaps wear, new abrasive is exposed. All have a cloth backing. Use on grinders for bits and burs and similar portable tools. Wheels with 1/4"-20 threaded spindles require adapters (sold separately below).

Choose 60 or 80 grit for a rough finish, 120 or 180 grit for a smooth finish, and 240 or 320 grit for an extra-smooth finish.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with zirconia alumina, which is sharper and lasts longer than aluminum oxide.

Cool Sanding Multipurpose—Coated with aluminum oxide and an additive to resist heat.

For Stainless Steel and Hard Metals—Coated with ceramic alumina, which breaks off during use to produce new sharp edges.

For Aluminum and Soft Metals—Coated with silicon carbide, which abrades quickly and prevents material buildup.

Flap Sanding Wheels

For information about sanding abrasives, see page 2643.

Arbor-Mount Flap Sanding Wheels

A steel center holds the flaps in place for added strength. Flaps are flexible cloth, allowing them to conform to curves and contours while providing consistent, gouge-free finishes when sanding. As the flaps wear, new abrasive is exposed. They can be used as an alternative to wire wheels. Use on portable tools, bench grinders, and pedestal grinders.

Multipurpose—Coated with aluminum oxide.

For Aluminum and Stainless Steel—Coated with aluminum oxide and an additive to resist heat.

Flap Sanding Wheels for Smoothing and Polishing

With Shank

With Arbor Hole

With alternating cloth and nylon mesh abrasive flaps, these wheels are more flexible and produce finer finishes than ordinary all-cloth flap sanding wheels. The cloth is coated with aluminum oxide and the nylon mesh is embedded with aluminum oxide for light deburring, finishing, and polishing on most materials. Use on portable tools and bench grinders.

High-density wheels have a 4:1 ratio of cloth to nylon mesh flaps, providing more aggressive material removal than medium-density wheels.

Medium-density wheels have a 1:1 ratio of cloth sanding flaps to nylon mesh flaps for extra-smooth blending.

Flap Wheels

To Order: Please specify cloth flap grit: 60 or 80 (rough finish), 120 or 180 (smooth finish), 240 or 320 (extra-smooth finish).

Dia.	Wd.	Shank Dia./ Arbor Hole	Max. rpm	High Density		Medium Density

Super-Flex Flap Sanding Wheels

Flaps slit into narrow strips provide a level of flexibility not found with other flap wheels. They have a cloth backing coated with aluminum oxide for use on most materials. All are mounted to a ¼″ dia. shank. Use them on grinders for bits and burs for finishing, polishing, and deburring work on difficult contours and irregular shapes.

Dia.	Wd.	Max. rpm	Available Grits: Smooth	Available Grits: Extra Smooth		
2″	1″	20,000	120, 180	240, 320	47065A15	$8.10

3″	2″	9,600	120, 180	240, 320	47065A13	16.31

Nylon Mesh Flap Sanding Wheels for Cleaning and Polishing

The cushioned mesh structure is less aggressive than standard flap sanding wheels and gives you control over the amount of pressure applied during sanding and the resulting surface finish. Wheels are embedded with aluminum oxide for use on most materials. They're mounted on a ¼″ dia. shank for use on grinders for bits and burs. Color is maroon.

Medium grade wheels are for cleaning, removing oxides, and deglossing plastic.

Very fine grade wheels are for final finishing and polishing.

Dia.	Wd.	Max. rpm	Medium	Very Fine	
2″	1″	12,000	46735A42	46735A41	$11.62
3″	1″	12,000	46735A44	46735A43	15.36
3″	2″	12,000	46735A45	—	31.56

For information about sanding abrasives, see page 2643.

Flap Sanding Wheels for Internal Sanding

3-Flap Bundles and Shank Adapter

4-Flap Bundles and Shank Adapter

8-Flap Bundles and Shank Adapter

Polish, clean, and debur deep inside tubes and cylinders. Flaps automatically adjust to the inside diameter of your workpiece and apply equal pressure to the interior walls for uniform finishes. Use on drills and grinders for bits and burs.

Cloth wheels are coated with aluminum oxide for aggressive material removal on metals. **Combination nylon mesh and cloth** wheels have alternating layers of nylon mesh and aluminum oxide coated cloth flaps. The cushioned mesh structure gives you control over the amount of pressure applied during sanding and the resulting surface finish. Use on metals.

Shank adapters have a 1/4" dia. shank and are required. **Optional extensions** are 1/4" dia. Attach the extension to the shank adapter on 4-flap bundle wheels. Use the extension instead of a shank adapter on 8-flap bundle wheels.

Flap Wheels and Shank Adapters

To Order: Please specify grit: 60 or 80 (rough finish), 120 or 180 (smooth finish), or 240 (extra-smooth finish).

Assortments

Includes 10 cloth flap wheels for internal sanding and two mini flap wheels in various grits and sizes for use on 1"- 5" IDs, plus three shank adapters for use on portable tools that accept a 1/4" dia. shank.

4695A12	$108.98

Nylon Mesh Deburring Wheels for Stationary Grinders

A core wrapped in nylon mesh with an open structure allows material to flow through to prevent buildup. These wheels are also known as convolute wheels.

Medium grade leaves a smooth finish. **Fine** and **very fine** grades leave an extra-smooth finish.

Wheels for *light* deburring have medium density. Wheels for *standard* deburring have hard density. Wheels for *heavy* deburring have extra-hard density.

For Steel—Embedded with aluminum oxide. Color is tan.

For Stainless Steel and Aluminum—Embedded with silicon carbide, which abrades quickly and prevents material buildup. Color is gray.

Nylon Mesh Cleaning and Polishing Wheels for Stationary Grinders

Also known as convolute wheels, these wheels have a core wrapped in dense nylon mesh. **Medium** grade is for cleaning. **Fine** grade is for polishing.

For Steel—Embedded with aluminum oxide. Color is red.

For Stainless Steel and Aluminum—Embedded with silicon carbide, which abrades quickly and prevents material buildup. Color is gray.

Sanding Wheels & Sleeves

For information about sanding abrasives, see page 2643.

Nylon Mesh Deburring and Cleaning Wheels for Portable Tools

Also known as unified wheels, these small diameter wheels are formed from multiple layers of compressed nylon mesh, which allows them to hold their shape and makes them long lasting. Use on straight grinders and grinders for bits and burs.

Deburring and Smoothing—Embedded with aluminum oxide. *Coarse* grade leaves a rough finish. *Medium* grade leaves a smooth finish. *Fine* grade leaves an extra-smooth finish.

Cleaning and Polishing—*Medium* grade are embedded with aluminum oxide and leave a smooth finish. *Fine* grade are embedded with silicon carbide and leave an extra-smooth finish.

3″	2 1/2″	46605A36	9.10

Sanding Sleeves

Also known as spiral bands, these sleeves are good for shaping, deburring holes, and sanding edges and internal surfaces. All have a strong, stiff cloth backing. Mount them on rubber drums (required, sold separately on page 2669) for use with grinders for bits and burs and similar portable tools, except sleeves 5 1/2″ or longer are for use with stationary spindle sanders.

Choose 36-80 grit for a rough finish, 120 or 180 grit for a smooth finish, and 240 or 320 grit for an extra-smooth finish.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with zirconia alumina, which is sharper and lasts longer than aluminum oxide.

For Aluminum and Soft Metals—Coated with silicon carbide, which abrades quickly and prevents material buildup.

For Stainless Steel and Hard Metals—Coated with ceramic alumina, which continuously breaks off during use to produce new sharp edges, resulting in longer life.

Sanding Sleeves for Hard Nonmetals

Tungsten carbide bonded to a steel sleeve provides superior durability when used on plastics and other nonmetallic materials. These sleeves are a good choice for shaping, hole sizing, and general sanding. Mount them on rubber drums (required; sold separately on page 2669). Use on grinders for bits and burs and similar portable tools.

Long-Life Multipurpose Flap Sanding Sleeves

Similar to flap wheels but more aggressive, these sleeves have tightly packed aluminum oxide flaps that wear down evenly to expose new layers of abrasive. Mount them on rubber drums (required; sold separately) for use on straight grinders and grinders for bits and burs.

Rubber Drum and Sanding Sleeve Assortments

Our assortments contain the most popular rubber sanding drum sizes and aluminum oxide sanding sleeves for use on most materials. Drums are secured with a hex fitting.

Five 1/8" Dia. Shank Drums with 15 Sleeves—You'll get the following drums (Dia. × Lg.): 3/8" × 1/2", 1/2" × 1/2", 1/2" × 3/4", 3/4" × 1/2", and 3/4" × 3/4" plus one 50-grit, one 80-grit, and one 120-grit sleeve for each size.

4648A14 ..... $7.95

Four 1/4" Dia. Shank Drums with 12 Sleeves—You'll get the following drums (Dia. × Lg.): 1/2" × 2", 3/4" × 2", 1" × 2", and 1 1/2" × 2" plus one 50-grit, one 80-grit, and one 120-grit sleeve for each size.

4648A13 ..... $13.46

Five 1/4" Dia. Shank Drums with 15 Sleeves—You'll get the following drums (Dia. × Lg.): 1/2" × 1/2", 3/4" × 1", 1" × 1", 1 1/2" × 1 1/2", and 2" × 1 1/2" plus one 50-grit, one 80-grit, and one 120-grit sleeve for each size. Note: The 1/2" × 1/2" drum has a 1/8" dia. shank.

4648A12 ..... $15.05

Six 1/4" Dia. Shank Drums with 90 Sleeves—You'll get the following drums (Dia. × Lg.): 1/2" × 1/2", 3/4" × 1", 1" × 1", 1 1/2" × 1 1/2", 2" × 1 1/2", and 3" × 1" plus five 36-grit, five 50-grit, and five 120-grit sleeves for each size. Note: The 1/2" × 1/2" drum has a 1/8" dia. shank and the 3" × 1" drum has a 1/2" unthreaded arbor hole.

4735A11 ..... $71.08

Nylon Mesh Sanding Sleeves for Cleaning and Polishing

A cushioned mesh structure gives you control over the amount of pressure applied during sanding and the resulting surface finish. Sleeves are embedded with aluminum oxide for use on most materials. Mount them on rubber drums (required; sold separately below) for use on straight grinders and grinders for bits and burs.

Coarse grade is for deburring and removing heavy rust and surface imperfections. **Medium** grade is for light cleaning and blending. **Very fine** grade is for finishing and polishing.

Rubber Drums for Sanding Sleeves

Drums have a shank for use with grinders for bits and burs and similar tools. Slide a sleeve on the drum and tighten to securely hold the sleeve—no adhesive is needed. Drums are required for use with sanding sleeves.

Standard drums have a fitting that, when tightened, causes the drums to expand and securely hold a sleeve.

Twist-n-lock drums do not require any tools to secure the sleeves.

Arbor-Mount Rubber Drums for Sanding Sleeves

Use these drums on bench and pedestal grinders. Tighten the fitting on the drum to expand it and securely hold a sleeve. Drums are required for use with sanding sleeves.

Unthreaded Arbor Hole—Use on grinders with unthreaded arbors. Set screws are included.

Threaded Arbor Hole—Use on grinders with threaded arbors.

Spiral-Wound Sanding Rolls

Straight Roll and Shank Adapter

Tapered Roll and Shank Adapter

Also known as cartridge rolls, as the outer layer wears away on these rolls, new abrasive is exposed. They have a strong cloth backing. Use on grinders for bits and burs and flexible shaft tools. Shank adapters are required (sold separately). Max. rpm is 26,000 for 1/4″-1/2″ diameter sizes and 18,000 for 5/8″-1″ diameter sizes.

Choose 36-80 grit for a rough finish, 120 or 180 grit for a smooth finish, and 240 or 320 grit for an extra-smooth finish.

Straight rolls are for use in channels, fillets, recesses, contours, sidewalls, and other hard-to-reach spots. **Tapered** rolls are for use on angles, corners, concave contours, funnel-shaped recesses, and other intricate shapes. The diameter listed is for the large end of the roll.

Multipurpose—Coated with aluminum oxide.

High Performance Multipurpose—Coated with zirconia alumina, which is sharper and lasts longer than aluminum oxide.

For Steel and Stainless Steel—Coated with ceramic alumina, which continuously breaks off during use to produce new sharp edges, resulting in longer life.

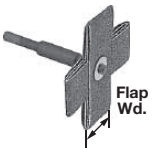
Assortments

You'll get 120 of the most popular 80- and 120-grit, straight and tapered multipurpose rolls from 1/4″ to 1/2″ diameter sizes in 1″ and 1 1/2″ lengths, plus two shank adapters. Packed in a compartmented plastic case.

4690A91 ..... $79.16

Sanding Pads for Internal and Irregular Surfaces

Square Pad and Shank Adapter



Cross Pad and Shank Adapter

Folded bands of cloth coated with aluminum oxide work on interior surfaces of pipes and tubes as well as on an angle to reach into corners and slots. Use on drills and angle grinders for bits and burs. Shank adapters (required; sold separately) are 3″ long with a 1/4″ dia. shank.

Square pads sand quickly and won't leave swirl marks because of the alternating stroke of the pad corners.

Cross pads allow you to see through the pad when in motion to better control material removal.

To Order: Please specify grit: 60 or 80 grit (rough finish) or 120 grit (smooth finish).

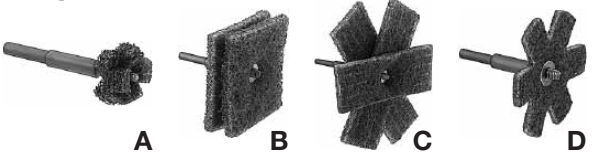
Nylon Mesh Pads for Internal and Irregular Surfaces



Flexible nylon mesh conforms to the inside of hard-to-reach spots. They're embedded with aluminum oxide for use on most materials. Use with straight grinders and drills. Shank adapters (required; sold separately) are 3″ long with a 1/4″ dia. shank.

Coarse grade is for deburring and removing heavy material. **Medium** grade is for light cleaning and blending. **Very fine** grade is for finishing.

Style A—Max. rpm is 20,000. *Medium* is blue. *Very fine* is red.

Style B—Max. rpm is 8,000. Color is maroon.

Style C—Max. rpm is 3,000. Color is maroon.

Style D—Max. rpm is 23,000 (unless noted). *Coarse* is brown. *Medium* is maroon. *Very fine* is blue.

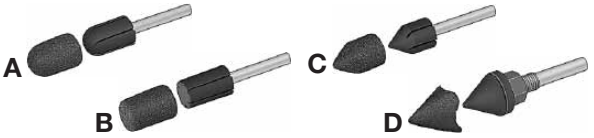
Shank Adapter for Styles B-D 46665A32 $4.85

For information about sanding abrasives, see page 2643.

Replaceable-Cap Sanding Bits



Slip a sanding cap onto the rubber head of the shank bit (sold separately) and use on small, recessed, and hard-to-reach areas. Caps have a cloth backing coated with aluminum oxide for use on most materials. Use on grinders for bits and burs, straight grinders, and drills.

Multipurpose

The 1/8″ dia. shank bits are 1″ long, and the 1/4″ dia. shank bits are 1 1/2″ long.

To Order: For sanding caps, please specify grit: 60 (rough finish), 150 (smooth finish), or 280 (extra-smooth finish), unless noted.

Nylon Mesh Sanding Bits

Sized to fit into small and hard-to-reach areas, these bits have a cushioned mesh structure. Shanks are 1 1/2″ long. Use on grinders for bits and burs and straight grinders.

Coarse grade bits are embedded with aluminum oxide. Use for aggressive deburring and cleaning. Color is dark gray. **Medium** grade bits are embedded with aluminum oxide. Use for deburring and polishing. Color is blue. **Fine** grade bits are embedded with silicon carbide for light blending and finishing. Color is black.

To Order: Please specify grade: coarse, medium, or fine.

Belt Sanding Wheels for Bench and Pedestal Grinders

Turn your 6″ grinder into a sander. As the wheel rotates, the rubber tire expands and holds the sanding belt in place. All have a 1″ arbor hole and a durometer hardness of 60A. Max. rpm is 3,650. See page 2661 for belts.

To Order: For reducer bushings, please specify ID: 1/2″, 5/8″, 3/4″, or 7/8″.

♦ Arbor hole is 1/2″-13.

Sanding Belt and Disc Cleaners

Hand Held

Bench Mount

For Disc Sanders

Remove material buildup from the abrasive surface of a moving belt or disc in seconds. These cleaners extend sandpaper life up to four times.

Hand Held Cleaners—Use on stationary and portable tools.

Bench Mount Cleaners—Use with portable tools. Mounting screws are included.

Cleaners For Disc Sanders—Set a running disc sander on the free-spinning pad.

Stationary Disc and Belt Sanders

A&B

C-G

Optional Floor Stand for C-G

H

J

Disc Sanders—Use with adhesive-back sanding discs. For sanding discs, see pages 2657-2659.

Style A has a built-in dust fan and hose that attaches to any standard shop vacuum. Includes a 6-ft. power cord with three-prong plug. The optional miter gauge has adjustable stop locks at 90° and 45°.

Style B include a totally enclosed fan-cooled motor, disc guard, miter gauge for angled sanding operations, on/off switch, and an 8-ft. power cord with three-prong plug.

Belt Sanders—Include a totally enclosed fan-cooled motor, belt control for proper tension, and belt guard. Also include an on/off switch and 8-ft. power cord with three-prong plug, unless noted. For sanding belts, see pages 2661-2664.

Styles C and *D* include a contact wheel and a platen that detaches for contour sanding. Style D operates in vertical and horizontal positions. A full-length hinge on the belt guard allows easy access to the belt.

Styles E and *F* operate in vertical and horizontal positions. Style F is mounted on a 100 cfm, 32″ Ht.×14″ Wd.×12″ Dp. dust collector.

The belt on *Style G* operates in a horizontal position, vertical position, and at any angle in between. 8249A34 does not include an on/off switch, power cord, or plug.

Combination Sanders—Offer the convenience of a belt and disc sander in one tool. Sanders have a totally enclosed fan-cooled motor, adjustable belt tracking control, and a dust port for connecting the unit to a dust collector or vacuum system. Furnished with an on/off switch. Belt tilts to operate in the horizontal and vertical position.

Style H has a 2¾″ dia. dust port. Includes an 8-ft. power cord with three-prong plug.

Style J have a belt guard and an adjustable platen that can be removed. They have a one-piece heavy duty steel stand and 4″ dia. dust port. 4739A51 includes a 6-ft. power cord with three-prong plug.

Electric Disc Sanders

Sander operates in a random-orbital sanding pattern, which produces swirl-free finishes. It comes with a variable-speed control dial, speed lock-on button, removable front handle, and backup pad. Includes a dust-collection canister and an 8-ft. power cord with two-prong plug. Operates on 3.3 amps @ 120 volts AC. It is C-UL and UL listed and meets OSHA requirements. For sanding discs, see pages 2657-2660.

For Disc Dia.	Type of Sanding Disc Used	No-Load Orbits/Minute	O'all Lg.	Wt., lbs.	Sander		Replacement Backup Pad

Electric Narrow-Belt Sanders

Turn to these compact sanders for sanding in cramped quarters. They include an 8-ft. power cord with two-prong plug. Both are UL listed, CSA certified, and meet OSHA requirements. For sanding belts, see pages 2661-2664.

With Adjustable Head—This sander is hard to beat when it comes to intricate work. The head adjusts 180°. It has a three-position handle and a paddle switch. Operates on 5.5 amps @ 120 volts AC.

Without Adjustable Head—Belt speed is adjustable, so you can use this sander on a variety of materials. It has a removable multiposition side handle, variable-speed control dial, speed lock-on button, and a trigger switch. Operates on 5 amps @ 120 volts AC.

Air-Powered Narrow-Belt Sanders

The narrow belts on these air-powered tools can reach into corners and other tight spots. Sanders have adjustable belt tracking (except the 0.35-hp sander), and a 1/4″ NPT female air inlet. Use with 3/8″ ID hose. For sanding belts, see pages 2661-2664.

Maintenance Sanders—The head on these sanders pivots a full 360° and locks in place. They have a front exhaust (except the 0.35-hp sander has a rear exhaust), an exhaust muffler, and a variable-speed throttle control lever.

Heavy Duty Sanders—These tools sand, debur, blend, and polish. Their insulated housing reduces vibration and won't transmit cold air to the operator's hand. They have a front exhaust and a control screw for speed adjustment.

Sander *with adjustable handle* includes a variable-speed throttle control lever.

Sanders *with pivoting head* adjust a full 360° for reaching difficult spots.

ⓘ For replacement parts for heavy duty sanders, please go to mcmaster.com and search for 4669A68.

Air-Powered Disc Sanders

Rotary

High-Speed Rotary

Rotary/ Orbital

Swirl Free

Achieve a consistent finish with these sanders. They have a ¼" NPT female air inlet and come with one backup pad, unless noted. For sanding discs, see pages 2650-2660.

Maintenance Sanders— Designed for light duty, intermittent sanding. Use with ⅜" ID hose.

Rotary—This compact sander is designed to get into tight spaces. It has a built-in speed regulator and rear exhaust. Use with quick-change discs. Backup pad is not included.

High-Speed Rotary—This pistol-grip sander has a ⅜" NPT female air inlet and comes with three backup pads. Exhaust is in the handle. Use with flat sanding discs.

Rotary/Orbital—Produces a scratch-free finish. Sander has a built-in speed regulator and front exhaust. Use with adhesive-back sanding discs.

Heavy Duty Sanders— Rated for continuous use. All have rear exhaust. Use with ¼" ID hose.

Swirl Free—Also known as random orbital sanders, they have a speed control lever. Use with adhesive-back sanding discs.

Dust-Collecting Swirl Free—Similar to the swirl-free sander, but with a self-generating vacuum that comes ready to hook up to a self-contained dust-collection system (sold separately).

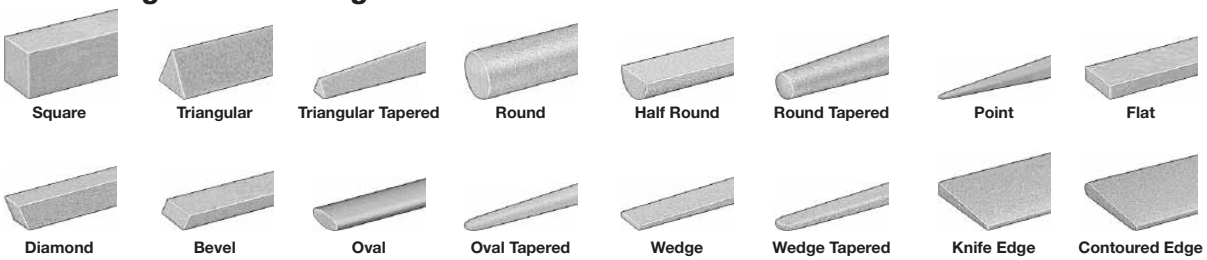
About Finishing

Finishing removes surface imperfections resulting in a precise, flat finish at a microscopic level. Achieving the flattest finish may require multiple steps using progressively higher grits or lower micron ratings.

Texture and Appearance	Smooth → Extra Smooth → Polished												
Metal Finish Equivalent	Semi-Reflective (#2B)		Dull (#3)	Brushed (#4)		Satin (#6)	Buffed (#7)			Mirror (#8)			
Grit Size	120	180	280		320		400	600	800	1000	1200	1600	2000	>2000
Micron Size	100	70	40		34		24	18	10	8	5	3	1	<0.5
Grade	Medium	Fine	Very Fine			Ultra Fine			Micro Fine					
Surface Flatness at a Microscopic Level (Approx. $R_{a\ \mu m}$)	200-150				100-50				20-10				<1	

Smoothing and Polishing Stones



Choose the shape that best matches the contour of your work surface. Use these stones to maintain tools, molds, and dies.

Smoothing—Oil filled and made of aluminum oxide, which abrades slowly to create a consistent surface. Also known as India stones.

Choose 100 grit (gray, except knife- and contoured-edge stones are brown) for a smooth finish and 240 grit (brown) or 320 grit (orange) for an extra-smooth finish.

Polishing—Have fine grains that produce a polished finish. Also known as Arkansas stones. Color is gray, unless noted. Grit is approximate. We recommend using a water-soluble or oil-based lubricant (see page 2678) with these stones.

♦ Made of 1800-grit ceramic alumina. Color is white. ★ Color is white. ■ Not available in 100 grit.

Four-Piece Sets

4″ Polishing Set—Stones are approximately 900 grit. Also known as Arkansas stones. Includes one each of: 1/4″ square, triangular, and round stones; plus a 1/4″×1″ knife-edge stone in a box. Color is off-white. 4433A41 $45.71

6″ Polishing Set—Stones are approximately 900 grit. Also known as Arkansas stones. Includes one each of: 3/8″ square, triangular, and round stones; plus a 3/8″×1″ knife-edge stone in a box. Color is off-white. 4433A42 $75.36

5″ Long-Lasting Polishing Set—Stones are 1800-grit ceramic alumina. Includes one each of: 1/4″ square, triangular, and round stones; plus a 5″ contoured-edge stone in a sheath. Color is white. 4456A17 $73.30

Smoothing & Polishing Stones

For information about finishing, see page 2675.

Thin Smoothing and Polishing Stones

Stone

Hand-Held Holder

Tool-Mount Holder

Use by hand or in reciprocating polishing tools to reach into tight spaces on molds and dies. We recommend using a water-soluble or oil-based lubricant (see page 2678) with these stones, except the multipurpose oil-filled stones.

Choose 100-180 grit for a smooth finish, 220-320 grit for an extra-smooth finish, and 400-1200 grit for a polished finish.

Multipurpose—Made of aluminum oxide, which abrades slowly to create a consistent surface. Color is gray, except the oil-filled stones are white.

For Scale Removal—Made of aluminum oxide and specially designed to remove surface scale left by the EDM (electrical discharge machining) process on all types of steel. Color is brown.

Long Lasting and Flexible—Made of specially bonded ceramic, these stones are extremely strong and wear resistant, yet flexible for use on contours and in tight spaces. Color is green (120 grit), gold (180 grit), brown (300 grit), orange (400 grit), black (600 grit), blue (800 grit), white (1000 grit), or red (1200 grit).

For Stainless Steel and Hard Metals—Made of aluminum oxide and specially treated for use on high-grade mold steels such as P-20, H-13, and Type 420 stainless steel. Color is blue.

For Aluminum and Soft Metals—Made of aluminum oxide and specially treated for polishing aluminum and other soft metals. Color is tan.

Fast-Cutting Smoothing Stones

Square

Triangular

Round

Also known as Crystolon stones, these stones are made of silicon carbide, which is very sharp and abrades quickly. They're used to maintain molds and dies. Choose the shape that best matches the contour of your work surface. 150 grit stones are gray and 280 grit stones are black. We recommend using a water-soluble or oil-based lubricant (see page 2678) with stones that are not oil filled.

Sharpening Stones

Single-Grit Rectangular

Two-Grit Round

Three Grit

Three Grit with Oil Reservoir

Quickly sharpen straight-blade tools such as chisels, plane blades, and knives with these stones. Use a water-soluble or oil-based lubricant (see page 2678) with stones that are not oil filled, unless otherwise stated. Three-grit stones include oil.

Initial Sharpening—Made of aluminum oxide, which abrades slowly to create a consistent surface. Also known as India stones. They're oil filled, unless noted.

Fast Sharpening—Made of silicon carbide, which is very sharp and abrades quickly. They're also known as Crystolon stones. These stones are oil filled, unless noted.

Long Lasting—Made of ceramic alumina, which is extremely hard and wear resistant. They're not oil filled. No lubricant is required. Clean with water and a scouring pad.

Final Sharpening—Have fine grains that produce a polished finish. Also known as Arkansas stones. They're not oil filled. The *final sharpening kit* includes a 4″ × 1⅝″ × ½″ pink stone, a 3″ × 1″ × ¼″ gray stone (both are approximately 800 grit), oil, and a 23° angle guide.

Also Available: Replacement stones for three-grit sharpeners with oil reservoir. Please order 4505A8 and specify McMaster sharpener part number and grit (100, 150, or 320).

To Order: For single-grit stones, please specify grit. Choose 100-150 for a smooth finish, 220-320 for an extra-smooth finish, or 400-1800 for a polished finish.

Sharpening Stones for Hard Metals

Sharpen carbide and high-speed steel straight-blade cutting tools with this boron carbide stone, which will last twice as long as diamond stones and up to 10 times as long as silicon carbide stones. The plastic handle has a built-in 2X magnifier. The stone is 1⅝″ Lg. × ½″ Wd. × 3⁄16″ Thick. Overall length is 7″. Color is dark gray.

To Order: Please specify grit: 240 or 320 (extra-smooth finish) or 400 (polished finish).

8737A7	$43.45

Sharpening Stones for Machine-Mount Blades

A groove around the center of the stone provides a secure grip and protects your fingers while sharpening. The stone is made of silicon carbide, which is very sharp and abrades quickly. Also known as Crystolon stones. They're not for use on serrated blades. One side is 120 grit (dark gray, smooth finish); the other is 280 grit (gray, extra-smooth finish). Size is 4″ Dia. × 1½″ Thick.

4474A4	$23.68

Wood-Handled Sharpening Stones

A handle makes these stones easy to use. They're good for sharpening straight blades that are permanently mounted, such as post hole diggers. The stone is made of silicon carbide, which is very sharp and abrades quickly. Also known as Crystolon stones. Color is dark gray. Choose 100 or 150 grit for a smooth finish and 280 grit for an extra-smooth finish.

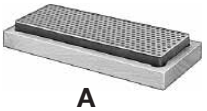
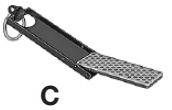
Diamond Sharpening Stones



A

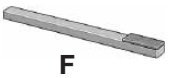
B



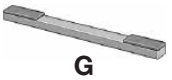
C

D

E



F



G

H

J

K

Sharpen cutting tools and chisels with these diamond stones, which are very hard and long lasting. Use dry or with water; no messy lubricants are needed. To clean, rinse with water.

Choose 100 or 150 grit for a smooth finish, 220-325 grit for an extra-smooth finish, and 400-1200 grit for a polished finish.

Four-Piece Set for Straight Blades—Contains one *standard* (Style B) stone in each of the following grits: 220 and 325 (extra-smooth finish), and 600 and 1200 (polished finish). Overall length is 4 1/4″. They come in a fabric roll pouch. **4598A48** $77.83

Knife and Shear Sharpeners

For Straight Blades

Adjustable Angle for Straight Blades

Pocket Size for Straight and Serrated Blades

Four-Stone Diamond Kit

Restore sharp edges to dull knife and shear blades.

Sharpeners for Straight Blades—The *single-grade* sharpener has coarse carbide stones. The *two-grade* sharpener has coarse carbide and fine ceramic stones.

Adjustable-Angle Sharpener for Straight Blades—Turn the dial to adjust the angle of the stones to match the angle of your blade. It also includes a fixed-angle guide for serrated blades. Stones are coarse carbide and fine ceramic.

Pocket-Size Sharpener for Straight and Serrated Blades—Has a medium diamond stone for serrated blades, a coarse carbide stone for straight blades, and a fine ceramic stone for straight and serrated blades.

Kit—Includes extra-fine (1,200 grit), fine (600 grit), and coarse (325 grit) diamond stones for use on straight blades and a fine (600 grit) diamond stone for use on serrated blades. Stones are 4" long. Kit also includes stone holder, adjustable-angle guide, and carrying case.

Landscaping Equipment Sharpeners

Chain Saw

Tool and Blade

Use this kit and a Dremel-style tool to quickly sharpen blades on tools such as chain saws, hoes, and knives. Kit includes three long-lasting precision-ground bits with a 1/8″ dia. shank and a 30° angle guide for chain saws, plus an aluminum oxide bit with a 1/8″ dia. shank and two angle guides (30° and any- angle) for tools and blades.

4471A13 $20.58

Lubricants for Smoothing and Sharpening Stones

These solutions lubricate and prevent material buildup.

Water-Soluble Lubricants—Easier to clean from your workpiece than oil-based lubricants.

Oil-Based Lubricants—Nonstaining, chlorine free, sulfur free, and won't corrode metals. Use full strength. Meet U.S. Pharmacopeia standards for mineral oil purity.

Size		
Water Soluble		
8 oz.	**44555A11**	$5.30
1 gal.	**44555A77**	23.02
Oil Based		
4 1/2 oz.	**1386K41**	6.74
16 oz.	**1386K42**	12.67
32 oz.	**1386K43**	20.71

Honing Oil

Oil keeps cylinder hones clean, which allows them to continue abrading and polishing. It's nonstaining and chlorine free. Contains sulfur. Use full strength on all metals.

Size		
1 gal.	**1823K1**	$28.33
5 gal.	**1823K2**	110.00

Electric Knife Sharpeners

For Straight Blades

Adjustable Angle for Straight Blades

For Straight and Serrated Blades

Diamond stones restore razor-sharp edges to your knife blades. All sharpeners include an angle guide. Operate on 120 volts AC.

Sharpener for Straight Blades—Has a fixed-angle guide and a 3-ft. power cord with two-prong plug.

Adjustable-Angle Sharpener for Straight Blades—Twist the dial to adjust the angle guide to match the angle of your blade. It includes a ceramic stone and a manual sharpener with a fixed-angle guide for serrated blades. Has a 3-ft. power cord with two-prong plug.

Sharpener for Straight and Serrated Blades—Has a fixed-angle guide and a 7-ft. power cord with three-prong plug. UL listed.

Drill Bit Sharpeners

Standard

Heavy Duty

Quickly sharpen drill bits with these sharpeners. Both include a guide that creates accurate point angles. Operate on 120 volts AC.

Standard Sharpener—Use to sharpen high-speed steel, cobalt steel, and carbide drill bits in sizes 3/32″-3/4″, A-Z, 1-42, and 2.5-19 mm. The angle guide sets the sharpening angle from 115° to 140°. Use on any length bits. The wheel is 1″ Dia. × 3/4″ Thick., 180-grit diamond. Has a 6-ft. power cord with three-prong plug. UL listed.

Heavy Duty Sharpener—Has a wheel that doesn't require coolants and never needs truing or dressing. Use to sharpen high-speed and cobalt steel bits in sizes 1/8″-3/4″, A-Z, 1-30, and 3-19 mm. The angle guide sets the sharpening angle from 118° to 140°. Use on bits 2″ and longer. The wheel is 3″ Dia. × 5/8″ Thick., 180-grit CBN. Has a 6-ft. power cord with three-prong plug. To sharpen carbide bits, use the *optional 180-grit diamond wheel*.

Electric Shear Sharpeners

The angle guides on these sharpeners help you create accurate, sharp edges on your shears. Operate on 120 volts AC.

Sharpener for Straight Blades—Has diamond stones, a fixed-angle guide, and a 3-ft. power cord with two-prong plug.

Sharpener for Straight Blades and Pinking Shears—Comes with two 5″ Dia. × 1/2″ Thick. wheels: a 100-grit aluminum oxide sharpening wheel and a buffing wheel. The angle guide sets the sharpening angle from 0° to 55°. Has a 6-ft. power cord with three-prong plug.

Precision-Finish Cylinder Hones

An adjustable dial allows for quick and precise cylinder sizing in micrometer increments. To use, clip two stones and two felt cleaning wipers onto the four holders. Stones are silicon carbide, which is very sharp and abrades quickly. Use on portable drills to hone most metals. We recommend using them with honing oil to keep the abrasive surface clean (see page 2678).

Hones

The set for *small* cylinders includes six 180-grit stones, six wipers, and four holders.

The set for *large* cylinders includes a 1/2″ dia. driver extension, two 80-grit stones, two 180-grit stones, four wipers, and four holders. Larger holders are sold separately to use the hone on larger cylinders.

For Cylinder ID	Shaft Dia.	O'all Lg.	Stone Lg.	Max. rpm		
Small 1.75″- 2.75″	½″	14″	3.5″	750	**7362A45**	$192.27
Large 3″- 4.25″	½″	17″	5″	500	**6673A12**	179.24

Optional and Replacement Holders for Large Hones

Each set includes four holders: two for stones and two for wipers.

Flexible Precision-Finish Cylinder Hones

Access hard-to-reach areas with the flexible shaft on these hones. An adjustable dial lets you control the amount of pressure applied to the side of the cylinder and the resulting finish. The stones are made of silicon carbide, which is very sharp and abrades quickly. They have a square end that can hone to the bottom of step-cut and closed-end holes. Use on portable drills to hone most metals. We recommend using them with honing oil to keep the abrasive surface clean (see page 2678).

For Cylinder ID	Shaft Dia.	O'all Lg.	No. of Stones Included	Grit	Stone Lg.	Max. rpm	Hones	Each	Replacement Stones Available Grits

2″-7″	¼″	13″	3	220	3″	1,200	**6678A12**	34.73	220, 240	**6678A11** 8.98

Flexible Cylinder Hones

The abrasive in these hones is embedded in balls at the ends of flexible plastic spindles. They press against the inside of a cylinder to remove material and leave a smooth, even finish. Hones are slightly oversized to maximize contact with the work surface. Note: When your cylinder ID falls between two sizes, order the larger size hone.

Stems are twisted wire, except hones for 9″ and 10″ cylinder IDs have hex shanks. Use with portable drills, drill presses, and CNC machines. Hones should be rotating when inserted into or removed from cylinders. We recommend using them with honing oil to keep the abrasive surface clean (see page 2678).

Color-coding on the hone tip identifies the grit: 120 grit has no color (unless noted), 180 grit is red, 240 grit is blue, 320 grit is white, 340 grit is yellow, 600 grit is pink (unless noted), and 800 grit is light blue.

Choose 120 or 180 grit for a smooth finish; 240-340 grit for an extra-smooth finish; and 600 or 800 grit for a polished finish.

Multipurpose—Embedded with silicon carbide, which is very sharp and abrades quickly.

For Aluminum and Soft Metals—Embedded with aluminum oxide, which has blunt edges that won't clog the hone, especially when used with honing oil.

For Stainless Steel and Hard Metals—Embedded with diamond, which is very hard and long lasting. The grits listed are approximate. 120-grit hones have a red tip and 600-grit hones have a light blue tip.

Hones Made of Boron Carbide, Tungsten Carbide, Alumina Zirconia, Levigated Alumina, Ceramic, and Cubic Boron Nitride

To Order: Please ask for 4424A999 and specify abrasive, cylinder ID, and grit.

Expandable Brass Cylinder Laps

Precisely match the inside diameter of a cylinder with these laps, which expand up to 15% with the twist of a screw. They have a soft brass barrel; the shank and adjusting screw are steel. The adjusting screw in *closed-end hole* laps is recessed so the barrel can reach into the bottom of the hole. Use them with lapping paste (see pages 2682-2683).

Metric sizes for Open-End Holes up to 25 mm					4548A8							

Miniature Expandable Steel Cylinder Laps

These laps are narrow enough to fit small open-end holes. They include an expander that widens the lap to fit a slightly larger cylinder ID. Use them with lapping paste (see pages 2682-2683).

18-Piece Set— Includes one each of the sizes listed above, plus an expander. 4545A29 $11.45

Lapping Pastes & Plates

For information about finishing, see page 2675. For lapping paste applicators, see pages 2681 and 2685-2687.

Lapping Pastes

Produce a level, scratch-free surface on most metals with these oil-soluble abrasive pastes. Apply them to your workpiece with cylinder laps, buffing wheels and bobs, and lapping and polishing sticks. The microns and grits listed are approximate.

Multipurpose—Contain aluminum oxide.

Fast Lapping—Contain silicon carbide, which is very sharp and abrades quickly.

Long Lasting—Contains synthetic sapphire, which is denser and more wear resistant than aluminum oxide.

Clover Lapping Pastes

For fast lapping on most metals, these pastes contain silicon carbide, which is very sharp and abrades quickly. Apply them to your workpiece with cylinder laps, buffing wheels and bobs, and lapping and polishing sticks. The microns and grits listed are approximate. Size is 16 oz.

Oil-soluble pastes won't cause corrosion. Use **water-soluble** pastes where oil could contaminate your work surface.

Oil-Soluble Assortment—Includes 2 oz. each of the following microns: 142 (smooth) and 44 (extra smooth). 4779A42 $15.05

Lapping Pastes for Stainless Steel and Hard Metals

Second in hardness only to diamonds, the boron carbide in these oil-soluble pastes works well on hard metals such as stainless steel. Apply them to your workpiece with cylinder laps, buffing wheels and bobs, and lapping and polishing sticks. The microns and grits listed are approximate. Size is 4 oz.

Lapping Pastes for Aluminum and Soft Metals

The garnet abrasive won't embed into soft metals, preventing scratches and material buildup on your work surface. Apply these oil-soluble pastes to aluminum, brass, and bronze with cylinder laps, buffing wheels and bobs, and lapping and polishing sticks. The microns and grits listed are approximate. Size is 12 oz.

Microns	Grit

Lapping Pastes for Curved Surfaces

An additive makes these pastes stick to your workpiece, so they're good for lapping curves and contours. They thin during use for even application and to make cleanup easy.

Pastes are oil soluble and contain both silicon carbide and boron carbide abrasive for use on steel, stainless steel, and hard metals. Apply them to your workpiece with cylinder laps, polishing bobs, and lapping and polishing sticks. The microns and grits listed are approximate.

Microns	Grit	2 oz.		4 oz.

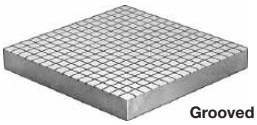
Lapping Plates



Grooved

Use these precision-ground cast iron plates with lapping pastes and slurries to create a flat surface and ensure a tight, level fit on joints and other mating parts.

The plate with **smooth** surface is for very precise lapping with grains that are 15 microns or smaller. The flatness tolerance on both sides is 0.001″. The plate with **grooved** surface has grooves on one side that capture the abrasive and hold it in place during lapping. Flatness tolerance is 0.0005″ per foot. The **combination** plate has one smooth side and one grooved side. Flatness tolerance on both sides is 0.001″.

Surface	Lg.	Wd.	Thick.	Wt., lbs.		
Smooth	5″	3″	3/4″	5	2352A11	$102.67
Grooved	18″	12″	4″	140	2238A1	470.14
Combination	8″	8″	1″	20	2352A12	166.83

For information about finishing, see page 2675. For lapping paste applicators, see pages 2681 and 2685-2687.

Diamond Lapping Pastes

Use these long-lasting pastes on most metals. Apply to your workpiece with cylinder laps, buffing wheels and bobs, and lapping and polishing sticks. They come in a plastic syringe for easy application, except assortments come in a jar. The microns and grits listed are approximate.

Oil-soluble pastes won't cause corrosion. Use **water-soluble** pastes where oil could contaminate your work surface. **Oil/water-soluble** pastes are easier to clean up than oil-soluble pastes.

Assortments—Include 5 grams each of the following microns: 60 and 40 (extra smooth), and 20, 8, 4, and 2 (polished).

Oil Soluble ..... 4752A22 ..... $121.22

Water Soluble ..... 4752A21 ..... $121.22

Lubricants

Use during lapping to prevent the paste from drying. Choose a lubricant that has the same solubility as your paste.

Size		Oil Soluble	Water Soluble	Oil/Water Soluble
4 oz.	4776A1	$6.63	$6.35	$10.19
1 qt.	4776A2	15.90	11.69	35.95
1 gal.	4776A3	49.25	32.18	113.58

Diamond Lapping Slurries

Thinner than pastes, slurries spread evenly over flat surfaces. Use them with a lapping machine or lapping plate (see page 2682 for plates). Slurries are water soluble, so they are easy-to-clean and can be used where oil could contaminate your work surface. Apply to the plate and rub your workpiece on the surface to create a smooth, level finish on most metals. They contain diamond, which is long lasting. The microns and grits listed are approximate. Size is 1 pt. Cannot be sold in California.

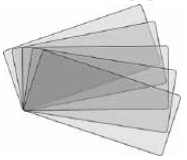
Assortment—Includes 3 oz. each of the eight grits listed above.

4781A61 ..... $77.50

Lapping Film & Paper and Buffing Compounds

For information about finishing, see page 2675.

No-Mess Lapping Film and Paper



Sheets

Disc

Lap without the mess of pastes and slurries. These waterproof sheets and discs have a plastic film or paper backing coated with abrasive. The microns listed are approximate.

Multipurpose—Coated with aluminum oxide.

For Stainless Steel and Hard Metals—Coated with diamond, which is very hard and long lasting.

For Aluminum and Soft Metals—Coated with silicon carbide, which abrades quickly and prevents material buildup.

For Optics and Lenses—Made of foam embedded with cerium oxide.

Glass and Plastic Scratch Removal Kits

Kit for Plastic

Remove minor scratches, scuffs, cloudy surfaces, and hard water etching from glass or plastic. The microns and grits listed are approximate.

Kit for Glass—Includes five 3″ dia. adhesive-back discs coated with cerium oxide: two 10 micron, two 5 micron, and a 1 micron. All produce a polished finish. A cushioned backing pad with 1/4″ diameter shank is also included.

Kit for Glass	4416A21	$41.15
20 Micron (500 Grit) Optional Disc	4416A31	$2.27
10 Micron (800 Grit) Replacement Disc	4416A32	2.27

Kit for Plastic—Includes 1 oz. of 0.5 micron (2500 grit) polishing compound embedded with aluminum oxide, a 3″ foam pad, a 3″ felt pad, and a cushioned backing pad with 1/4″ diameter shank.

4416A22 ..... $35.94

Optics Polishing Grains and Bases

Polish mirrors, lenses, and other glass and ceramic surfaces.

Grains—Mix these cerium oxide grains with water to create a paste or slurry, or use with the base to create a compound. Grains are approximately 0.7 microns (2400 grit). Size is 1 lb.

Base—Melt and mix with abrasive grains to create a polishing compound. Size is 2.2 lbs.

Grains	4335A18	$78.19
Base	4335A16	38.17

Smoothing and Buffing Compounds

Use these long-lasting compounds on most metals. Also known as satin buff bars, they're made of aluminum oxide abrasive embedded in glue so they adhere to your buffing wheel. The grits listed are approximate. Compounds are 2 1/2″ Dia. × 7″ Lg. and approximately 2 1/2 lbs.

Available Grits		
Smooth		
80, 120, 150, 180	4795A1	$7.92
Extra Smooth		
240, 300	4795A2	8.28

Available Grits		
Polished		
400	4795A23	$8.76

Buffing and Polishing Compounds

Apply a layer of compound by holding one of these bars against a revolving buffing wheel. Most buffing processes have two steps. The first step, cutting, removes scratches and surface imperfections. The second process, coloring, produces an even finish. Cut and color compounds remove scratches and produce an even finish, all in one step. The microns listed are approximate.

6 oz. compounds are 5″ Lg. × 1″ Wd. × 3/4″ Ht., **1 lb.** are 6 1/4″ Lg. × 1 1/2″ Wd. × 1 1/4″ Ht., and **3 lb.** are 9″ Lg. × 2″ Wd. × 2″ Ht.

6-Piece Assortment—Includes 1 lb. each of the following compounds: extra smooth cut and color (brown), extra smooth cutting (tan) and polished (white rouge, yellow, white, and red rouge). 4802A7 $40.83

Kit—Includes 1 lb. each of the following compounds: extra smooth (gray) and polished (yellow and white). Also includes one cotton and one sisal 6″ Dia. × 1/2″ Thick. × 1/2″ Arbor Hole buffing wheel, and one flannel 6″ Dia. × 1″ Thick. × 1/2″ Arbor Hole buffing wheel. Max. rpm is 3,600.

4518A21 ..... $67.90

For information about finishing, see page 2675.

Buffing Wheels

Use with lapping pastes and buffing compounds to buff your metal workpiece. Mount these wheels on straight spindles, except the 2″ dia. and smaller wheels have a pin-hole center for use on tapered spindles. The 1½″ dia. and smaller wheels can also be mounted on ⅛″ dia. shanks for use on portable tools.

Buffed-finish wheels are cotton and approximately ½″ thick. **Mirror-finish** wheels are flannel, which is softer than cotton and produces a highly polished surface when used with small micron pastes and compounds. They're approximately ¾″ thick. Also known as Canton flannel buffs.

For Flat Surfaces—Layers of cloth are sewn together, making them more rigid than wheels for curved surfaces. They're 30-ply. *Mirror-finish* wheels are also known as jewelers' buffs.

For Curved Surfaces—Loose layers of cloth conform to curves and contours. Wheels are 20-ply.

Aggressive-Polishing Buffing Wheels

Layers of cotton are sewn and cemented together and covered with an outer layer of heavy canvas to create these rigid wheels. Use them as a first step to remove gouges and scratches from metal workpieces. They're also known as setup and polishing wheels. Mount them on straight spindles and use with lapping pastes and buffing compounds.

Wheels *for curved surfaces* are softer than the wheels for flat surfaces so they conform to curves and contours.

Long-Lasting Buffing Wheels

Pleats in the cloth hold more buffing compound than other buffing wheels, so you can work longer before having to reapply. The cotton is cut at an angle to prevent fraying and extend the wheel life. Use them on flat and curved metal surfaces. Note: These wheels must be used with flanges (sold separately).

Standard—Have a fiber hub that won't fray and unravel. Mount them on straight spindles. All are 15-ply and approximately ⅝″ thick.

Ventilated—Holes in the metal hub allow air to flow through so the wheel stays cool and the compound lasts longer than on standard wheels. Also known as airway buffs. Mount them on tapered and straight spindles. All are 16-ply and approximately ¼″ thick.

Dia.	Arbor Hole	Hub Dia.	Flange OD Required	Max. rpm		
Standard

Buffing Wheels for Hard Metals

Made of woven sisal fiber, these wheels are tough enough to use on hard metals. Mount them on straight spindles and use with lapping pastes and buffing compounds.

For Flat Surfaces—Layers of sisal are sewn together so they're more rigid than wheels for curved surfaces and they resist fraying. Wheels are 5-ply and approximately ⅜″ thick.

For Curved Surfaces—Alternating strips of cotton and sisal make these wheels more flexible than wheels for flat surfaces, so they conform to curves and contours. They also remove less material and leave fewer scratches. Also known as finger-style buffs. Wheels are 2-ply and approximately 1″ thick. The hub is metal. Note: These wheels must be used with flanges (sold separately).

Buffing & Polishing Wheels

For information about finishing, see page 2675.

Buffing Wheels for Irregular Surfaces

Made of long, soft cotton strings, these wheels conform to irregular surfaces and hold on to buffing compounds longer than other buffing wheels. Mount them on straight and tapered spindles and use on most metals.

Dia.	Thick.	String Lg.	Arbor Hole	Max. rpm		
4″	1″	1¼″	½″	3,600	47775A71	$22.13

No-Mess Buffing Wheels

For Tapered Spindles

For Straight Spindles

With these wheels, you won't need messy compounds. They're made of nylon mesh embedded with aluminum oxide for use on most metals. Color is maroon. The grits listed are approximate.

For Tapered Spindles—The 2-ply wheels are approximately ¾″ thick and the 3-ply wheels are approximately 1″ thick.

For Straight Spindles—The 80-grit wheels are 2 ply and approximately 1½″ thick and the 120- and 180-grit wheels are 4 ply and approximately 2½″ thick. Note: These wheels must be used with flanges (see page 2685).

Taper	4903A4	23.39	29.22	—	—

Buffing Wheels for Angle Polishers

A ⅝″-11 threaded arbor hole allows you to mount this cotton wheel on an angle polisher. Use it with buffing compounds to buff most metals. The wheel flares while spinning for use on depressions and curved surfaces. The hub is metal.

	Dia.	Max. rpm		
Wheel with Hub	5″	3,000	4402A11	$59.39
Replacement Wheel	5″	—	4402A12	33.98

Polishing Cement

Coat cotton, canvas, and felt buffing wheels with this glue, and then apply abrasive grains to create your own polishing wheel. Size is 1 gallon.

4796A1	$26.71

Felt Polishing Wheels

Square Edge

Knife Edge

Uniform density makes these felt wheels better balanced than cotton wheels. Use them with lapping pastes and buffing compounds to polish most metals.

Square Edge—Use on right-angle corners and flat surfaces.

Knife Edge—Tapered for polishing joints, grooves, and crevices.

For Tapered Spindles

Wheels have a pin-hole center. The 1½″ dia. and smaller wheels can also be mounted on ⅛″ dia. shanks for use on portable tools. They have a hard density for polishing most metals.

Dia.	Thick.	Max. rpm

Shank-Mount Buffing Wheels

For Flat and Curved Surfaces

For Internal Surfaces

Mount on drills and grinders for bits and burs and use to buff most metals. These wheels are for use with buffing compounds, except the 5″ dia. wheel is for use with metal polishes (see page 2069).

For Flat and Curved Surfaces—Made of loose layers of cotton. They're 40 ply, ½″ thick, and have a ¼″ dia. shank.

For Internal Surfaces—Shaped for use inside cylinders and on irregular surfaces. They're made of cotton and have a ¼″ dia. shank, except the 5″ dia. wheel is made of felt and has a 5⁄16″ dia. shank.

Dia.	Max. rpm	For Flat and Curved Surfaces		For Internal Surfaces

Buffing Wheel Cleaning Rakes

Condition and shape your buffing wheel with this rake. It removes dried paste and compound. The rake is steel and 4½″ Lg. x 2⅛″ Wd. The handle is wood and 15″ long.

Rake with Handle	4764A51	$23.35
Replacement Rake	4764A1	7.84

Polishing Pads for Portable Polishers

Bonnet

Bonnet Cleaning Tool

Pad

Use on portable tools to create a mirror finish on metal and composite surfaces.

Bonnets—Made from lambswool, these bonnets won't leave swirl marks and scratches when polishing waxed surfaces. They have a drawstring that attaches to the backup pad on your portable polishing tool. Order one size larger than the backup pad. Pile height is 1″, except on the 7½″ dia. bonnet it's 1¼″.

The *bonnet cleaning tool* removes buildup and fluffs packed wool to extend the life of the bonnet. Made of steel.

Pad—This foam pad is just what you need for most buffing and polishing jobs on acrylic enamel and clear coat finishes. It's washable and reusable. Pad is 2″ thick and has a ⅝″-11 threaded arbor hole for use on angle polishers.

Dia.	Max. rpm		
Bonnets

Quick-Change Felt Buffing Discs

Style A Metal Fastener

Style B Plastic Fastener

A fastener on the back of these felt discs allows for fast disc changes. They're flexible to conform to curves and internal surfaces. Thickness is ¼″. Use them with drills and grinders for bits and burs to apply lapping pastes and buffing compounds to most metals. Disc holder required (sold separately).

Style A metal fastener is compatible with Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles. **Style B** plastic fastener is compatible with 3M Roloc and Norton Speed-Lok TR styles.

Disc holders have a ¼″ dia. shank.

	Dia.	Max. rpm	Discs		Disc Holders

Felt Polishing Bob and Wheel Kits

This 20-piece kit contains bobs, wheels, and buffing compounds.

Bobs—Includes seven medium-density bobs mounted on ⅛″ dia. shanks in the following shapes and sizes: cylindrical, ball, and oval with ½″ Dia. x ½″ Lg. heads; wide tip and flat-tip cone with ½″ Dia. x ¾″ Lg. heads; and tapered point and conical with ½″ Dia. x 1″ Lg. heads.

Wheels—Includes four ¾″ Dia. x ⅛″ Thick. square-edge wheels, four ¾″ Dia. x ⅛″ Thick. knife-edge wheels, and a ⅛″ dia. shank.

Compounds—Includes ½ oz. each of the following compounds: extra smooth (brown), and polished (red rouge, white rouge, and black).

4791A71 ..... $29.38

Smoothing & Polishing Bobs and Polishers

For information about finishing, see page 2675.

No-Mess Felt Polishing Bobs

Cylindrical | Tapered Point | Conical

With these bobs, there's no need to mess around with lapping pastes and buffing compounds because they're embedded with abrasive grains. Use them on drills and grinders for bits and burs. The grits listed are approximate.

For Aluminum and Soft Metals—Embedded with silicon carbide, which abrades quickly and prevents material buildup.

For Steel, Stainless Steel, and Hard Metals—Embedded with diamond, which is very hard and long lasting.

No-Mess Smoothing Bobs

Cylindrical | Oval | Tapered Point | Tear Drop | Knife-Edge Wheel

Bobs are rubber, which cushions during use for a smooth finish. They're embedded with abrasive so you don't need lapping pastes and buffing compounds. Use them on drills and grinders for bits and burs. The grits listed are approximate.

Multipurpose—Embedded with aluminum oxide.

For Aluminum and Soft Metals—Embedded with silicon carbide, which abrades quickly and prevents material buildup.

To Order: For multipurpose bobs, please specify grit: 240 (extra smooth) or 400 (polished). For bobs for aluminum and soft metals, please specify grit: 240 or 320 (extra smooth), or 400 (polished).

Angle Polishers

Attach buffing wheels for angle polishers (see page 2686) and polishing pads for portable polishers (see page 2687) to the 5/8"-11 threaded spindle. These polishers have a two-position side handle for left- and right-hand operation. A 7" backup pad is included.

Air Powered—Has a speed regulator, front exhaust, and a 1/4 NPT female air inlet. Use with 3/8" ID hose. The motor is 0.4 hp and average cfm @ 90 psi is 8.

Electric—Has variable-speed control and a 10-ft. power cord with two-prong plug. Operates on 12 amps @ 120 volts AC. CSA certified.

No-Mess Long-Lasting Smoothing and Polishing Bobs

Cylindrical | Tapered Point | Conical

Made of polyurethane, these bobs are harder than rubber so they hold their shape, even during heavy use. They're embedded with aluminum oxide, which eliminates the need for lapping pastes and buffing compounds. Use them on drills and grinders for bits and burs to smooth and polish most metals. The grits listed are approximate.

Reciprocating Polishers

Let these air-powered tools take the hard work out of polishing. Also known as profilers, these polishers are for use with lapping sticks (see page 2687) and smoothing and polishing stones up to 1/2" Wd. x 1/4" Thick. (see pages 2675-2676).

Polishers have a rear exhaust and 1/4 NPT female air inlet. Use with 3/8" ID hose. They must be used with an air filter/regulator/lubricator (see 41555K51 on page 1027).

Stroke Lg.	Max. Strokes/ Min.	Avg. cfm @ 90 psi	O'all Lg.	Wt., lbs.

Electric Swirl-Free Polishers

Eliminate swirl marks without damaging painted surfaces. Also known as a random-orbital polisher, it has a counterbalanced bottom plate to reduce vibration. Includes two terry cloth polishing bonnets, two terry cloth applicator bonnets, two polyester polishing bonnets, and a polyester wash mitt. Has a 6-ft. power cord with two-prong plug. Operates on 0.8 amps @ 120 volts AC.

Stationary Buffers

Buffer-Grinder

Buffer-Polisher

Long spindles extend out from the motor giving you enough space to buff workpieces in a variety of shapes and sizes. They operate on 120 volts AC, except the 8″ buffer-polisher also operates on 2.4 amps @ 240 volts AC.

Buffer-Grinder—For occasional tool cleaning, sharpening, and touch-up work. Use with buffing and polishing wheels that have up to a 3/8″ arbor hole and grinding wheels up to 3/4″ thick with a 1/4″ dia. arbor hole. Note: Maximum buffing wheel dia. is 4″ and maximum grinding wheel dia. is 2″.

It includes a buffing wheel, grinding wheel, variable-speed control dial, and a 6-ft. power cord with three-prong plug. Size is 13″ Lg. × 5″ Wd. × 5 1/8″ Ht. CSA certified.

Buffer-Polishers—With ball bearings sealed to keep out contaminants, these machines operate smoothly and last a long time. Use them with buffing and polishing wheels that have an arbor hole the same size as the shaft diameter (see pages 2685-2686).

They have an on/off switch and an 8-ft. power cord with three-prong plug. The 6″ buffer-polishers are 17 1/2″ Lg. × 6 1/2″ Wd. × 7 1/2″ Ht. The 8″ buffer-polisher is 28 1/2″ Lg. × 8 1/2″ Wd. × 11 1/2″ Ht.

Polishing Media for Soft Metals

Use as a final step for an exceptionally polished finish on soft metals. This media also removes tarnish and oxidation without scratching. The ratio of media to parts is 4:1. Run dry in tumbling and vibrating machines.

Corn Cob—Treated with a polishing compound. Use to remove small scratches from parts with fine detail or engraving. Density is 32 lbs./cu. ft.

Walnut Shell—Treated with red rouge for use on colored metals such as brass and gold. Density is 40 lbs./cu. ft.

	Wt., lbs.		
Corn Cob	15	47575A81	$77.12
Walnut Shell	10	4947A21	74.48

Media

Made of ceramic, this media deburs, blends, and polishes most metals. Choose the shape that best matches the contour of your part, and a size that's large enough not to lodge in recesses and holes. Density is 90 lbs./cu. ft. The ratio of media to parts is 3:1. Use with liquid compounds in tumbling and vibrating machines (see page 2690).

Smooth—For deburring and blending grind lines.

Extra Smooth—For light material removal, deburring, and edge rounding. It produces a matte finish.

Polished—For producing a shiny surface.

Polishing Media

V-Cylindrical

Pyramid

Triangular

For a polished finish on most metals, try this mildly abrasive media. Choose the shape that best matches the contour of your part, and a size that's large enough not to lodge in recesses and holes. The ratio of media to parts is 3:1. Use with liquid compounds in tumbling and vibrating machines.

Plastic—Media is lighter and less abrasive than ceramic making it a good choice for use on soft metals. Density is 60 lbs./cu. ft.

Ceramic—This media will finish parts faster than plastic media. Density is 90 lbs./cu. ft.

Mirror-Finish Media

Often used as a final step after ceramic and plastic media, this spherical porcelain media produces a mirror finish on most metals. It's also good for use on fragile parts and won't contaminate nonferrous materials. Choose a size that's large enough not to lodge in recesses and holes in your parts. Density is 125 lbs./cu. ft. The ratio of media to parts is 3:1. Use with liquid compounds in tumbling and vibrating machines.

Liquid Compounds for Tumbling and Vibrating Media

Keep media and liquid solutions clean, rust free, and fast acting. These compounds wash away buildup that could limit the effectiveness of your media. Mix 1 to 4 oz. of compound with 1 gallon of water, and then add the solution to your media.

Cleaner for All Metals—Controls the residue caused by plastic media and can also be used with ceramic and porcelain media.

Degreaser for Steel—Formulated to clean heavy grease and oil from ferrous metals. This compound contains a rust inhibitor and can be used with any media.

Cleaner/Degreaser for Stainless Steel and Aluminum—Use with any media.

Rust Preventer for All Metals—Contains a rust inhibitor and can be used with any media.

Tumbling and Vibrating Machines

Fill with media and run wet or dry to finish multiple parts at the same time. The rotating motion of the *tumbling machines* is good for aggressive deburring and polishing. *Vibrating machines* keep parts and media in constant motion for faster finishing than tumbling machines.

Tumbling

General Purpose—Barrels are rubber and can be filled to a maximum of 60% capacity. Machines include a 4-ft. power cord with two-prong plug.

Heavy Duty—Barrels are rubber-lined steel and can be filled to a maximum of 75% capacity. Machines have bearings for quiet operation and include a 7-ft. power cord with three-prong plug.

About Brushes

Select the Best Bristle Material for Your Application

When choosing a brush, keep the following points in mind:
- Select a bristle that is softer than your workpiece to avoid surface wear and scratches.
- Stainless steel, brass, and nonmetal bristles won't leave behind corrosive debris that could cause rust on your workpiece.

For Use On	*Application*						
	Deburring	Removing Rust and Stains	Removing Paint and Tape	Pipe and Tube Cleaning	Surface Cleaning	Surface Finishing	Polishing

Cleaning Brushes for Buffing Machines

For Steel and for Stainless Steel and Aluminum

For Dusting All Materials

Gently clean your work surface with the thin, flexible bristles on these brushes. Bristles are crimped, except horsehair bristles. Brushes have a wood hub with a lead center so they're easy to mount on tapered spindles (see page 2689).

Arbor-Hole Reducers and Shank Adapters for Wheel Brushes

Change the arbor on a wheel brush to work with your tool.

Snap-in metal and **plastic arbor-hole reducers** decrease the arbor hole of the brush to fit the shaft on your machine.

Use **metal arbor hole to shank adapters** to mount brushes on drills and grinders for bits and burs. Overall length is approximately 1 3/4″.

Snap-in Metal Arbor-Hole Reducers

Reduce Arbor Hole	For Brush Dia.		Pair
2″ to 1/2″	6″	4844A28	$2.24
2″ to 5/8″	6″ and 8″	4844A29	2.24

1/2″	1/4″	Up to 3″	3/8″	4875A12	3.12

Cleaning and Deburring Brushes

For Bench and Pedestal Grinders

Remove light to medium rust and stains and small burs from flat surfaces, contours, and angles with these flexible-bristle brushes. Bristles are crimped, except tampico bristles. Note: If you need a smaller arbor hole, use the 2″ dia. arbor hole brushes with an arbor-hole reducer (see page 2691).

For Angle Grinders—Threaded Arbor Hole

Brush Dia.	Bristle Dia.	Bristle Lg.	Brush Thick.	Max. rpm	Choose an Arbor Hole		
For Steel—Steel bristles							
4″	0.014″	7/8″	1/2″	14,000	3/8″-24, 1/2″-13, 5/8″-11, 10×1.25 mm, 14×2.0 mm	4896A77	$17.10

For Bench and Pedestal Grinders—Plain Arbor Hole. Wheels with two arbor sizes accommodate both sizes.

♦ Has double keyways for shafts with keyway.

For information about brushes, see page 2691. For information about finishing, see page 2675.

Shank-Mount Cleaning and Deburring Brushes

Reach into narrow spaces, angles, channels, cracks, and slots with these slim wheels. They also work on flat surfaces and contours. Mount them on drills and grinders for bits and burs. Shank length is 1½″ for 3⁄32″ and 1⁄8″ diameter shanks and 7⁄8″-1″ for 1⁄4″ diameter shanks.

Brushes **for light cleaning** have flexible bristles for removing light to medium rust and stains and small burs. Bristles are crimped, except horsehair and goat hair bristles. Brushes **for heavy cleaning** have rigid, partially twisted bristles for removing weld slag, heavy surface contamination, and large burs.

Brushes *for no-mess polishing of all materials* remove surface imperfections in addition to contamination without the need for messy buffing compounds. The entire length of the bristle is embedded with 600-grit aluminum oxide abrasive, so the sides of the bristles act like flexible files.

For brushes with 3⁄32″ and 1⁄8″ dia. shanks, prices are approximately 15% lower when you buy 12 or more of the same size brush.

Surface Finishing and Deburring Brushes

Remove workpiece material and light to medium rust and stains in one step. The bristles on these brushes are nylon and their entire length is embedded with silicon carbide abrasive so the sides of the bristles act like flexible files. Use them on flat surfaces, curves, and contours to debur and finish all materials.

Choose 80, 120, or 180 grit for a smooth finish and 320 grit for an extra-smooth finish. Bristle dia. is approximately 0.04″ for 80- and 120-grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 320-grit brushes.

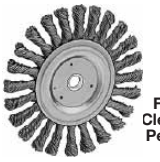
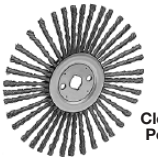
Heavy Cleaning and Deburring Brushes

Standard for Angle Grinders

Fast Cleaning for Angle Grinders



Fast and Aggressive Cleaning for Bench and Pedestal Grinders and CNC Machines



Long Reach, Fast Cleaning for Bench and Pedestal Grinders and CNC Machines

Use these rigid, twisted-bristle brushes for aggressive tasks such as edge rounding and removing weld slag, heavy surface contamination, and large burs from flat surfaces, contours, and angles. They're also known as knot-wire brushes. Note: If you need a smaller arbor hole, use the 2″ dia. arbor hole brushes with an arbor-hole reducer (see page 2691).

Brushes **for steel** can also be used on plastics if corrosive debris is not a concern. They're made of steel. Brushes **for stainless steel and aluminum** can also be used to roughen rubber surfaces and debur plastics, such as PVC pipe. They're made of stainless steel.

Bristles on *standard* brushes are partially twisted with a slightly flexible tuft at the end that conforms to irregular surfaces. Bristles on *long-lasting* brushes are partially twisted in alternating directions, which prevents them from untwisting. *Fast cleaning* brushes have bristles that are twisted all the way to the end so they're more rigid and aggressive than standard brushes.

Fast and aggressive cleaning brushes are also known as stringer bead brushes. They have small clusters of tightly twisted bristles for the fastest and most vigorous brushing. *Long-lasting, fast, and aggressive cleaning* brushes are similar to stringer bead brushes, except they have a mounting nut on each side of the arbor hole so you can use both sides of the brush. Bristles on *long-reach, fast cleaning* brushes are twisted to the end and are extra long for use in concrete joints and cracks.

Long-Lasting Surface Finishing and Deburring Brushes

Bristles are nylon and their entire length is embedded with wear-resistant ceramic. They act like flexible files to remove workpiece material in addition to light to medium rust and stains from all materials. Use these brushes on flat surfaces, curves, and contours. They have a plain arbor hole for mounting on bench and pedestal grinders.

Choose 36 or 50 grit for a rough finish; 80, 120, or 180 grit for a smooth finish; and 220 grit for an extra-smooth finish. Bristle dia. is approximately 0.04″ for 36-120 grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 220-grit brushes.

Brush Dia.	Arbor Hole	Bristle Lg.	Brush Thick.	Max. rpm	Choose a Grit

For information about brushes, see page 2691. For information about finishing, see page 2675.

Cleaning and Deburring Brushes for Flat Surfaces

The broad face of the brush quickly cleans large, flat areas. The bristles are flexible and they'll remove light to medium rust and stains and small burs. Bristles are crimped, except horsehair and goat hair bristles.

Brushes **with guard** deflect sheared off bristle tips. **Long-lasting brushes for steel with guard** have more wires twisted into each bristle for long brush life. The brush **for no-mess polishing of all materials** removes surface imperfections in addition to contamination without the need for messy buffing compounds. The entire length of the bristle is embedded with 600-grit aluminum oxide abrasive, so the sides of the bristles act like flexible files.

Heavy Cleaning and Deburring Brushes for Angles and Corners

Clean around edges, corners, and contours with these dish-shaped brushes. They have rigid, twisted bristles for aggressive deburring and cleaning. Arbor holes are threaded for mounting on angle grinders.

Brushes **for steel** can also be used on plastics if corrosive debris is not a concern. They're made of steel. Brushes **for stainless steel and aluminum** can also be used to roughen rubber surfaces and debur plastics, such as PVC pipe. They're made of stainless steel.

▲ Brushes for stainless steel and aluminum are not available with ½″-13 arbor.

Pilot-Guided Cleaning and Deburring Brushes

Insert the pilot into a hole for precise control while deburring and removing paint, coatings, and sharp edges from the surface surrounding the hole. These brushes are often used prior to installing rivets or other fasteners. Use them with drills and grinders for bits and burs. Bristles are crimped stainless steel. The *five-piece set* includes one each of the ½″ dia. brushes.

Heavy Cleaning and Deburring Brushes for Flat Surfaces

Standard

Standard with Guard

Fast Cleaning

Quickly clean weld slag, heavy surface contamination, and large burs from large, flat areas with the wide face on these brushes. Also known as knot-wire brushes, they have rigid, partially twisted bristles with a slightly flexible tuft at the end, unless noted. Brushes have a threaded arbor hole for use on angle grinders.

Brushes **for steel** can also be used on plastics if corrosive debris is not a concern. They're made of steel. Brushes **for stainless steel and aluminum** can also be used to roughen rubber surfaces and debur plastics, such as PVC pipe. They're made of stainless steel, except low-scratch brushes are brass.

Brushes *with guard* deflect sheared off bristle tips. Bristles on *long-lasting* brushes are twisted in alternating directions, which prevents them from untwisting. Bristles on *low-scratch* brushes are softer than your workpiece so they won't leave scratch marks on the surface. Brushes *for fast cleaning* have two rows of bristles, unless noted.

♦ Bristles are twisted to the end. ■ Have one row of bristles twisted to the end.

Cleaning Brushes for Angles and Contours

Standard for Angles and Corners

Long Lasting for Angles and Corners

For Contours and Open-End Holes

For Contours and Closed-End Holes

Bristles are crimped for flexibility and flared to conform to corners, curves, holes, and other irregular surfaces. Use to remove light to medium rust and stains. Brushes have a ¼″ dia. shank for use on drills and grinders for bits and burs. Shanks are ¾″-1″ long.

Brushes **for steel** can also be used on plastics if corrosive debris is not a concern. They're made of steel. Brushes **for stainless steel and aluminum** can also be used to roughen rubber surfaces and debur plastics, such as PVC pipe. They're made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are brass.

Standard brushes for angles and corners are similar to wheel brushes, but more flexible. *Long-lasting brushes for angles and corners* are coated with a synthetic compound that keeps bristles stiff and straight so they're more aggressive and last longer than standard brushes.

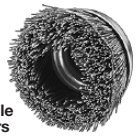
For information about brushes, see page 2691. For information about finishing, see page 2675.

Surface Finishing and Deburring Brushes for Flat Surfaces



For Angle Grinders

For Drills and Grinders for Bits and Burs

These wide-face brushes remove workpiece material in addition to light to medium rust and stains from large, flat areas. The bristles are nylon and their entire length is embedded with silicon carbide abrasive, so the sides of the bristles act like flexible files. Use them on all materials.

Choose 80, 120, or 180 grit for a smooth finish and 320 grit for an extra-smooth finish. Bristle dia. is approx. 0.05″ for 80-grit brushes, 0.028″ for 120-grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 320-grit brushes.

For Angle Grinders—Threaded Arbor-Hole Mount

Brush Dia.	Arbor Hole	Bristle Lg.	Max. rpm	Choose a Grit		
4″	5/8″-11	1 1/2″	6,000	80, 120, 320	4782A29	$51.84

1/4″	3″	7/8″	1 1/8″	5,000	80, 180	44445A59	14.73

Surface Finishing and Deburring Brushes for Tight Spaces

The compact brush face fits into hard-to-reach areas to remove workpiece material and light to medium rust and stains in one step. The bristles are nylon and their entire length is embedded with abrasive, so the sides of the bristles act like flexible files. Mount these brushes on drills and grinders for bits and burs and use on all materials.

Choose 120 or 180 grit for a smooth finish and 220 or 320 grit for an extra-smooth finish. Bristle dia. is approximately 0.04″ for 120-grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 220- and 320-grit brushes.

Standard brushes are embedded with silicon carbide. **Long-lasting** brushes are embedded with ceramic, which is very sharp and wear resistant.

Cleaning and Deburring Brushes for Tight Spaces

A small brush face and flexible bristles make these brushes a good choice for deburring and removing light to medium rust and stains from hard-to-reach places. Bristles are crimped, except horsehair and goat hair bristles. Mount on drills and grinders for bits and burs.

Brushes **for polishing** remove surface imperfections in addition to contamination without the need for messy buffing compounds. The entire length of the bristle is embedded with abrasive, so the sides of the bristles act like flexible files. Brushes **for no-mess polishing of all materials** are embedded with 600-grit aluminum oxide. Brushes **for polishing hard nonmetals** are embedded with 5-micron (1200 grit) diamond abrasive, which is sharper and lasts longer than aluminum oxide. Use them on materials such as ceramics and glass. Brushes **with coated housing** have a plastic coating to protect workpieces from marks and scratches. **Long-lasting** brushes have removable bands around the bristles to keep them from flaring and breaking. Adjust the bands to change the bristle length.

Heavy Cleaning and Deburring Brushes for Tight Spaces

1/4″ Dia. Standard

1″ Dia. Standard

Long Lasting

Made for areas with limited access, these compact brushes remove weld slag, heavy surface contamination, and large burs. They have a 1/4″ dia. shank for mounting on drills and grinders for bits and burs.

Brushes **for steel** can also be used on plastics if corrosive debris is not a concern. They're made of steel. Brushes **for stainless steel and aluminum** can also be used to roughen rubber surfaces and debur plastics, such as PVC pipe. They're made of stainless steel.

Standard brushes have rigid, partially twisted bristles. The 1/4″ dia. brushes are made of a single twist of bristles and work well in even the tiniest spots. Bristles on *long-lasting* brushes are crimped and coated with a synthetic compound that keeps them stiff and straight so they last longer than standard brushes.

Surface Finishing and Deburring Disc Brushes for CNC and Milling Machines

Plain Arbor-Hole Mount

Shank Mount

Precisely remove thin layers of metal from your workpiece in addition to light to medium rust and stains. The bristles are nylon, which can be used with the coolant in your CNC machine. The entire bristle length is embedded with ceramic abrasive so the sides of the bristles act like flexible files.

Choose 80, 120, or 180 grit for a smooth finish and 220 grit for an extra-smooth finish. Bristle dia. is approximately 0.04″ for 80- and 120-grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 220-grit brushes.

Plain Arbor-Hole Mount

An arbor is required (sold separately). **To Order:** For arbor, please specify brush diameter: 3″, 4″, 5″, 6″, 8″, or 10″.

Brush Dia.	Arbor Hole	Bristle Lg.	Max. rpm	Choose a Grit

Surface Finishing and Deburring Disc Brushes

For Angle Grinders

For Drills and Grinders for Bits and Burs

Use on flat and contoured surfaces to remove workpiece material and light to medium rust and stains in one step. The bristles are nylon and their entire length is embedded with abrasive, so the sides of the bristles act like files. Use them on all materials.

For Angle Grinders

The **standard** brush has flexible nylon bristles embedded with aluminum oxide abrasive and a 5/8″-11 threaded arbor hole. Use for light to medium cleaning and deburring. Bristle dia. is 0.05″ and bristle lg. is 3/4″.

Fast cutting brushes have firm nylon bristles embedded with silicon carbide for heavy cleaning, deburring, and edge rounding. All have a 7/8″ plain arbor hole and require a backup pad and a 5/8″-11 disc nut (sold separately). Bristle dia. is 0.06″ for 46-grit brushes, 0.045″ for 60-grit brushes, 0.04″ for 80-grit brushes, 0.028″ for 120-grit brushes, 0.035″ for 180-grit brushes, and 0.022″ for 320-grit brushes. Bristle length is 3/4″.

To Order: Please specify grit: 46 or 60 (rough finish); 80, 120, or 180 (smooth finish); or 320 (extra-smooth finish), unless noted.

Flexible Disc Brushes for Tight Spaces

Bristles are long and flexible to reach into contours, small cracks, angles, and corners. Use on all materials to remove light to medium rust and stains. The bristles are nylon and their entire length is embedded with aluminum oxide so the sides of the bristles act like flexible files. Mount on drills and grinders for bits and burs.

Choose 36 or 50 grit for a rough finish; 80 or 120 grit for a smooth finish; 220 grit for an extra-smooth finish; and 400 grit for a polished finish.

Quick Change

Brushes have a 3M Roloc/Norton Speed-Lok TR compatible plastic fastener that mounts to a disc holder (sold separately) with a 1/4″ Dia. × 1 7/16″ Lg. shank. Bristle dia. is 0.07″ and bristle length is 1″.

Brush Dia.	Max. rpm	Choose a Grit	Disc Brush	Disc Holder
3″	25,000	50, 80, 120	4483A31 $9.12	46465A72 $10.70

Shank Mount

A shank is required (sold separately).

Tube Brushes

Clean inside tubes and holes with these cylindrical brushes. *Twisted-shank* brushes can be used by hand, or in tools with a 1/4″ chuck. *Smooth-shank* brushes have a 5/16″ dia. shank, unless noted. Mount them on drills and grinders for bits and burs. Max. rpm is 2,000.

Brushes **for steel** are made of steel. Brushes **for stainless steel and aluminum** are made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are made of brass.

Brushes *for light cleaning and deburring* have a single spiral of bristles twisted between two stainless steel wires. Use them to remove light to medium rust and stains and small burs. Brushes *for heavy cleaning and deburring* have two spirals of bristles twisted between four galvanized steel wires. They have more bristles and more rigid stems than brushes for light cleaning. Use them to remove weld slag, heavy surface contamination, and large burs.

Prices are approximately 15% lower when you buy 12 or more of the same size brush.

★ Shank diameter is 3/16″ for brushes with smooth shank. ♣ Shank diameter is 1/4″ for brushes with smooth shank.

Threaded-Shank Cleaning and Deburring Tube Brushes

Attach the threaded shank on these brushes to a handle or power tool to reach deep into tubes and pipes. They have a single spiral of bristles that removes light to medium rust and stains and small burs. Bristles are twisted between four galvanized steel wires, unless noted. Overall length is approximately 2″-3″ longer than the brush length. Max. rpm is 1,750. 1 1/4″ dia. and larger brushes have a 1/2″ dia. loop at the tip.

Brushes **for stainless steel and aluminum** are made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are made of brass. **Low scratch for copper** brushes are made of nylon.

▲ Bristles are twisted between two wires. ↙ Brush length is 5″.

Tube Brushes

For information about brushes, see page 2691. For information about finishing, see page 2675.

Miniature Tube Brushes

Use by hand to remove light to medium rust and stains and small burs from very small tubes and holes. These brushes have a single spiral of bristles twisted between two stainless steel wires, unless noted. Overall length is 3″.

Brushes **for stainless steel and aluminum** are made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are made of brass. Brushes **for no-mess polishing of all materials** remove surface imperfections and contamination without the need for messy buffing compounds. The bristles are nylon embedded with 600-grit aluminum oxide abrasive, unless noted.

■ Abrasive is approximately 1000-grit alumina silicate. ♥ Wires are galvanized steel.

Abrasive Nylon Tube Brushes

Flexible Brush with Twisted Shank

Rigid Brush with Smooth Shank

Bristles are nylon embedded with abrasive grains to remove workpiece material in addition to surface contamination. Use on all materials to produce a smooth finish. *Twisted-shank* brushes can be used by hand, or in tools with a 1/4″ chuck. *Smooth-shank* brushes have a 5/16″ dia. shank, unless noted. Mount them on drills and grinders for bits and burs. Max. rpm is 2,000.

Flexible brushes have a single spiral of bristles embedded with silicon carbide and twisted between two stainless steel wires. Use them to remove light to medium rust and stains and small burs. **Rigid** brushes have a single spiral of bristles embedded with silicon carbide and twisted between four galvanized steel wires. Use them to remove weld slag, heavy surface contamination, and large burs.

Prices are approximately 15% lower when you buy 12 or more of the same size brush.

▲ Shank diameter is 3/16″ for brushes with smooth shank. ♣ Shank diameter is 1/4″ for brushes with smooth shank.
★ Bristle dia. is 0.022″ for 320-grit brushes.

Tube Brushes for Internal Threads

Two rows of densely packed bristles remove weld slag, heavy surface contamination, and large burs from threaded tubes. The space between the bristles leaves room for dirt, chips, and burs to escape. Stems are made of two twisted stainless steel wires. Overall length is 2 1/8" to 2 1/4". Use brushes by hand or mount in tools with a 1/4" chuck. Max. rpm is 2,000. Use a *brush holder* for added strength and stability. Holders have a 1/4" dia. shank for mounting in drills and grinders for bits and burs.

Brushes **for steel** are made of steel. Brushes **for stainless steel and aluminum** are made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are made of brass.

Prices are approximately 15% lower when you buy 12 or more of the same size brush.

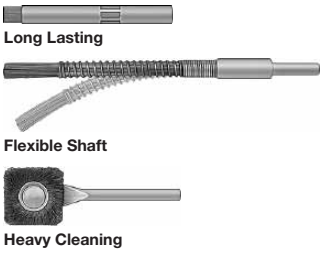
Tube Brushes for Closed-End Holes



Bristles at the tip of these brushes clean the bottom of closed-end holes. Mount them on drills and grinders for bits and burs.

Brushes **for steel** are made of steel. Brushes **for stainless steel and aluminum** are made of stainless steel.

The bristles on *long-lasting* brushes are enclosed in a tube, which prevents them from flaring during use and allows you to control the length of the bristle. As the brush wears, trim the tube with a pipe cutter to expose more of the bristles.

Flexible-shaft brushes bend through curved holes and reach into corners. A flexible spring surrounds the bristles to prevent them from flaring during use. As the brush wears, trim the spring. Caution: Insert the brush into the workpiece before turning on your power tool. If used outside a hole, the brush could break off and become a dangerous projectile.

Heavy-cleaning brushes clean the sides and bottom of closed-end holes in one step. Space between the bristles allows dirt, chips, and burs to escape.

Heavy Cleaning and Deburring Threaded-Shank Tube Brushes

Built to handle tough jobs, these brushes remove weld slag, heavy surface contamination, and large burs from deep inside tubes and pipes. They have two spirals of bristles twisted between four galvanized steel wires. Attach them to a handle or power tool. They have 1/4 NPT male threads, unless noted. Brush length is approximately 4 1/2". Overall length is approximately 7". Max. rpm is 1,750.

Brushes **for steel** are made of steel. Brushes **for stainless steel and aluminum** are made of stainless steel.

Prices are approximately 15% lower when you buy 12 or more of the same size brush.

■ 12-24 female thread.

Abrasive Nylon Threaded-Shank Tube Brushes

A single spiral of nylon bristles embedded with 320-grit silicon carbide abrasive removes surface contamination and produces a smooth finish in one step. Use on all materials. Stem is made of two twisted stainless steel wires. A vinyl tip at the end of the stem protects against scratches. Bristle dia. is 0.024″. Attach to a handle or power tool. Max. rpm is 1,750.

Brush Dia.	Brush Lg.	O'all Lg.	*Choose a Thread* Female	Male		1-11	12-Up

♦ Made of flexible twisted wire.

Food-Grade Threaded-Shank Tube Brushes

Nylon bristles and a stainless steel stem make these brushes suitable for food and beverage applications. A single spiral of bristles is twisted between four wires. Attach brushes to handles and power tools. Max. rpm is 1,750.

Nylon extension rod is 3/8″ Dia. × 48″ Lg. and has one 1/4 NPT male-threaded end and one 1/4 NPT female-threaded end.

Large-Diameter Threaded-Shank Tube Brushes

Round

Square

Similar to chimney-cleaning brushes, these brushes reach across wide tubes such as ducts and flues. They have a galvanized steel stem with 1/4 NPT male threads. Use them in a power tool, unless noted.

Brushes **for steel** have steel bristles twisted between four wires. *Round brushes* are 4 1/2″ long and have two spirals of bristles. Overall length is 7 1/2″. Max. rpm is 1,200. *Square brushes* are 6″ long and have a single spiral of bristles. Overall length is 8 5/8″. Use by hand.

Brushes **for lightly cleaning all materials** have a single spiral of nylon bristles twisted between four wires. Brush length is 6″. Overall length is 8 1/2″. Max. rpm is 1,200.

Brushes **for applying lubricants and buffing compounds** have a single spiral of tampico bristles twisted between two wires. Brush length is 4 1/2″. Overall length is 8″. Use by hand.

Hand-Held Tube Brushes

Grasp the loop at the end of the handle to move these brushes in and out of a tube or pipe.

Brushes **for steel** have stainless steel bristles and galvanized steel wires. Brushes **for stainless steel and aluminum** have stainless steel bristles and wires. **Low scratch for stainless steel and aluminum** brushes have brass bristles and galvanized steel wires.

Brushes for *light cleaning and deburring* have a single spiral of bristles twisted between two wires. Use them to remove light to medium rust and stains and small burs. Brushes *for heavy cleaning and deburring* have two spirals of bristles twisted between four wires. They have more bristles and more rigid stems than brushes for light cleaning. Use them to remove weld slag, heavy surface contamination, and large burs.

Prices are approximately 15% lower when you buy 12 or more of the same size brush.

For Light Cleaning and Deburring

For Heavy Cleaning and Deburring

Hand-Held Low-Scratch Tube Brushes

Bristles are soft so they clean without scratching your workpiece. A loop in the handle makes these brushes easy to hold. They have a single spiral of bristles twisted between two galvanized steel wires, unless noted.

Low scratch for copper brushes are made of nylon. They're resistant to acids and alkalies. Brushes **for dusting all materials** are made of horsehair.

■ Wires are stainless steel. ♦ Brush diameter tapers from 1 1/4" to 3/4".

Tube Brushes

For information about brushes, see page 2691.

Hand-Held Tube Brush Sets

Tube-Size Set

Each set includes our most popular sizes. Brushes have a single spiral of bristles twisted between two stainless steel wires and a loop handle, unless noted.

Brushes **for stainless steel and aluminum** are made of stainless steel. **Low scratch for stainless steel and aluminum** brushes are made of brass. Brushes **for lightly cleaning all materials** are made of nylon.

Tube-size sets include one brush in each of the following diameters: 1/8", 1/4", 3/8", and 1/2". Brush length is 1 1/2" to 2". Overall length is 8". Bristle diameter is 0.003" to 0.012" on the set for stainless steel and aluminum. Wires are galvanized steel and bristle diameter is 0.003" to 0.006" on the low scratch set for stainless steel and aluminum and set for lightly cleaning all materials.

Screw-size sets include one brush in each of the following screw sizes: 0, No. 2, No. 4, No. 6, No. 8, No. 10, 1/4", 5/16", 3/8", 1/2", and 3/4". Brush length is 3/4" to 1 1/2", overall length is 4" to 6", and bristle diameter is 0.003".

Miniature sets include one brush in each of the following diameters: 0.04", 0.047", 0.063", 0.072", and 0.094". The set for lightly cleaning all materials also includes a 0.032" diameter brush. Brush length is 1/2" to 3/4", overall length is 4", and bristle diameter is 0.003".

■ Includes a combination of loop-handle and plain twisted-stem brushes.

Nozzle-Cleanout Tools

Remove residue and dirt from small nozzles with the wire tip on this tool. It has a knurled plastic handle and comes with five each of 0.008", 0.015", and 0.025" dia., 2" long stainless steel wires. The *replacement wires* contains five of each size.

Nozzle-Cleanout Tool	3160K11	Each	$40.13
Replacement Wires	3160K31	Pkg.	$16.00

Specialty Tube Brushes

Long Reach

High Temperature

Tapered

Rounded Head

Use these brushes to accomplish difficult tasks by hand. Bristles are twisted between galvanized steel wires.

Long Reach—Also known as radiator brushes. The extra-long shaft reaches into small and awkward spaces. The handle is wood. Bristles are nylon on brushes *for lightly cleaning all materials;* bristles are horsehair on brushes *for dusting all materials.*

High Temperature—Has special nylon bristles that handle temperatures up to 500° F and are chemical resistant. The handle is plastic.

Tapered—Also known as a spoke brush. The brush diameter tapers from 2 1/2" to 1 1/4". Bristles are tampico and the handle is wood.

Rounded Head—Also known as bottle brushes, they clean the sides and bottom of closed-end cylinders and holes in one step. Bristles are horsehair and the handle is wire.

Brushes for Cleaning Copper Tubes and Fittings

1/4" Hex-Shank Brush

Mount on a drill and use to clean commonly sized plumbing and refrigeration tubes and fittings. These brushes have a single spiral of bristles twisted between two stainless steel wires, except the round-shank brushes have galvanized steel wires. Max. rpm is 2,000.

Brushes **for plumbing** have steel bristles. Brushes **for refrigeration** have stainless steel bristles, which won't leave behind corrosive debris.

The **kits** include four brushes for cleaning the outside of copper tube sizes 3/8 to 1 (Tube ODs 1/2" to 1 1/8"). They also include five brushes for cleaning the inside of copper tube sizes 3/8 to 1 (Tube ODs 1/2" to 1 1/8") in kits *for plumbing* and 3/8 to 7/8 (Tube ODs 1/2" to 1") in kits *for refrigeration*. Brush length is 3/4", overall length is 2 1/2", and bristle diameter is 0.006" for all brushes. Kits come with one each of 1/4" and 5/16" magnetic nutdriver bits, #1 and #2 Phillips screwdriver bits, and 1/4" and 9/32" slotted screwdriver bits.

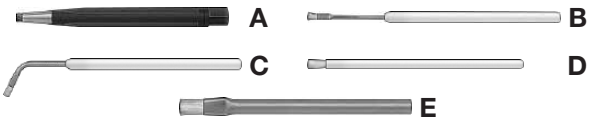
Miniature Hand Brushes



Choose these brushes for light cleaning in tiny spaces and on very small parts.

As bristles on **Style A** brushes wear, turn the handle to expose more bristle. **Style B** and **C** bristles are clamped into the end of the brush so they won't fall out. **Style D** bristles are held in place with a high-temperature epoxy. They won't fall out, even when sterilized in an autoclave. Maximum temperature is 180° F.

Time-Saving Brushes for Cleaning Copper Tubes and Fittings

Clean the inside and outside of plumbing and refrigeration tubes in one step. Brushes have bristles inside the housing and a protruding brush with a single spiral of bristles twisted between two galvanized steel wires. Bristles are stainless steel. Brushes have a 1/4" hex shank for mounting on drills. The *4-piece kit* includes the three brushes shown, plus a 1/4" hex-shank quick-change holder.

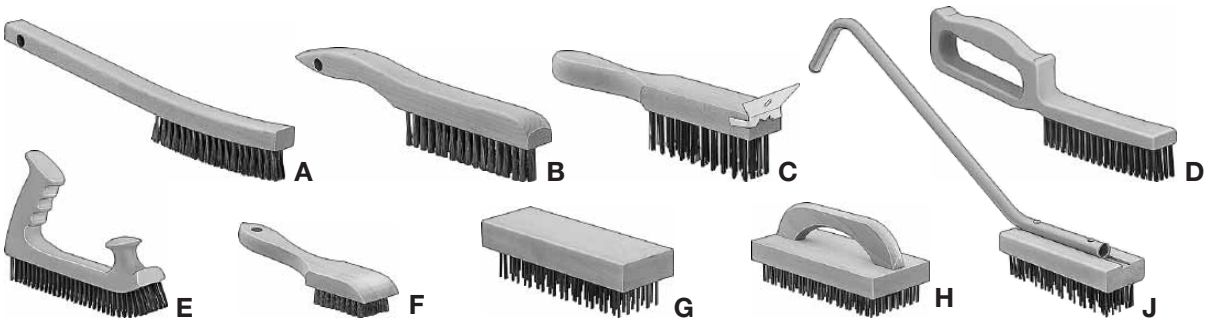
Hand Brushes



From delicate surface cleaning and polishing to heavy rust, weld slag, and scale removal, these brushes get the job done. Brushes with bristle diameters less than 0.012″ and all nylon bristle brushes are for light cleaning. Brushes with bristle diameters of 0.012″ or greater are for heavy cleaning.

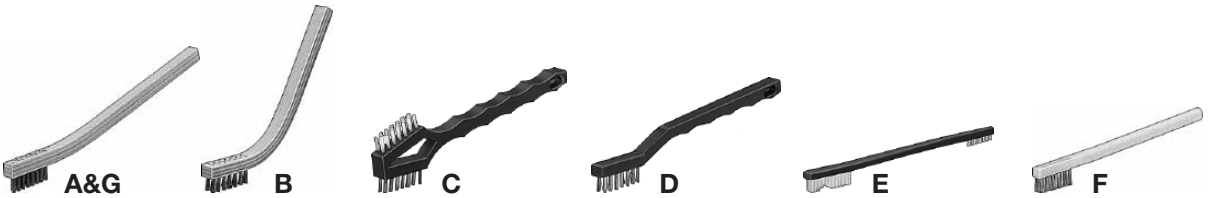
▲ Brush has a scraper. ★ Brush has V-shape bristles that angle inward. ♦ Has brass bristles with an outer row of horsehair.
■ Also has three rows of ½″ long brass bristles angled forward from the tip.

Hand Brushes for Contours

With a flexible plastic handle, this brush conforms to round and uneven surfaces of pipe, moldings, and machinery. Use it to remove heavy rust, weld slag, and scale from steel. The bristles are steel.

Bristle Dia.	Bristle Lg.	Brush Wd.	Brush Lg.	O'all Lg.		1-11	12-Up
0.014″	1 1/4″	2 1/16″	6 5/8″	7″	4414A16	$8.60	$7.31

Small Hand Brushes



Brush faces are narrow for use in hard-to-reach areas and on small workpieces. Brushes with bristle diameters less than 0.012″ and all nylon bristle brushes are for light cleaning, such as removing light to medium rust and stains and small burs. Brushes with bristle diameters of 0.012″ or greater are for heavy cleaning, such as removing weld slag, heavy surface contamination, and large burs.

For Dry Use—Have a wood handle.

For Wet Use—*Styles A* and *B* have a wood handle and hand-laced bristles that won't fall out when the handle gets wet and expands. *Styles C, D,* and *E* have a plastic handle.

For Wet Use with Harsh Cleaning Agents—Have hand-laced bristles and a plastic handle, except Style A have an aluminum handle.

Hand Brushes

For information about brushes, see page 2691.

Applicator Brushes

Apply lubricants, flux, and other compounds to small parts and pipes. These brushes are also used for dusting and cleaning.

Brushes **for all materials** resist deterioration from heat.

Brushes with a *wood handle* are also known as dope brushes. Brushes with a *metal handle* are also known as acid brushes.

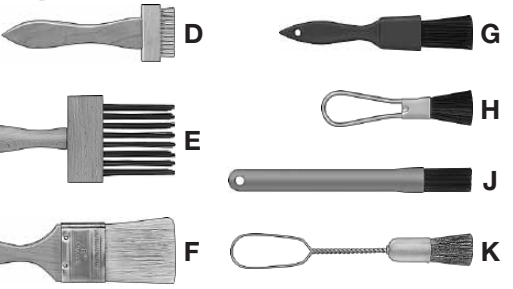
Multipurpose Brushes



Also known as chip brushes, these brushes sweep away debris created during milling, drilling, and cutting. They're also used for light cleaning.

Parts-Washing Brushes

Use with parts-washing solutions to clean dirt, oil, and grease from your parts.

Attach **flow-through brushes** to a parts washer to pump solution through the bristles. For parts washers, see pages 2713-2715. *Style N* have a ⅜″ diameter handle that can be inserted into a rubber hose.

Style P has a slip-on connection that fits any ½″ diameter parts-washer spigot. It comes with 12″ of clear plastic tubing. *Styles Q* and *R* have a push-button control that lets you regulate the flow of washing solution. They come with a 3-ft. nitrile rubber hose for connecting to a ½″-19/32″ diameter spigot.

Abrasive Blasting Media

The harder the abrasive, the deeper it penetrates and the faster it works. Use softer abrasives for delicate applications.

Mesh size is the number of holes in a 1″-square screen. As the mesh number gets larger, the number of holes per inch increases, the size of each individual hole decreases, and the media becomes finer. **Grit** refers to coarseness; the lower the number, the coarser the grit.

Media	Description	Removes Surface Rust	Removes Paint		Etches Steel, Alum., and Plastic	Deburs Steel, Alum., and Plastic
			From Steel	From Alum. and Plastic		
Extra Hard—8 to 9 Mohs						
Aluminum Oxide Grit	Sharp, hard, and durable, it prepares surfaces for coating. It also frosts glass. Typical blast pressure is 60-100 psi.	Best	Best	Better	Better	Good
Silicon Carbide Grit	Quickly cleans granite, ceramics, silicon, quartz, cemented carbides, and other tough materials. Typical blast pressure is 20-120 psi.	Best	Best	Better	Better	Good
Garnet Grit	More aggressive than other blasting media, it cuts faster while producing less dust. Typical blast pressure is 60-120 psi.	Best	Best	Better	Best	Good
Hard—5.5 to 8 Mohs						
Steel Grit	Leaves a textured surface to enhance the bonding ability of paint and other coatings. Typical blast pressure is 100 psi.	Better	Best	Good	Better	Better
Steel Shot	Generates a high-impact force to clean and peen heavy forgings and remove heat-treated scale on steel and other cast metals. Typical blast pressure is 100 psi.	Better	Better	Good	Better	Better
Glass Bead	Round beads remove carbon and surface residue for a smooth, bright finish. It is inert and leaves no residue. Peens aluminum and plastic. Typical blast pressure is 20-60 psi.	Good	Good	Good	____	Better
Black Beauty Grit	Also known as black diamond and black blast, it's the best alternative to silica sand. Contains less than 0.1% free silica. It's inert and moisture free. Typical blast pressure is 100 psi.	Good	Better	____	Good	Good
Stainless Steel Shot	Outlasts glass bead and Black Beauty grit by a ratio of 1,000 to 1. It descales nonferrous metals and peens aluminum and plastic. Typical blast pressure is 60-120 psi.	Good	Good	____	Good	Better
Glass/ Aluminum Oxide Grit	A mixture of glass bead and aluminum oxide removes tough corrosion in applications where 100% aluminum oxide is too aggressive. Typical blast pressure is 20-70 psi.	Better	Good	Good	Good	Good
Ground Glass	A lightweight alternative to sand and grit, it leaves a rough surface. Typical blast pressure is 15-120 psi.	Best	Good	Good	Better	Good
Not Hard—1 to 4.5 Mohs						
Walnut Shells	Soft-grit shells clean, polish, and debur soft metals, fiberglass, plastic, wood, and stone. Typical blast pressure is 20-90 psi.	____	Good	Good	____	Better
Corn Cob	Use for delicate parts. Cleans metal, wood, fiberglass, plastic, and masonry. It won't frost glass, pit aluminum, or damage surfaces. Typical blast pressure is 20-80 psi.	____	Good	Good	____	____
Plastic Grit	Easily removes coatings and build-up without marring and warping. Typical blast pressure is 40-60 psi.	____	Best	Best	____	Better
Baking Soda	Scours almost any material. After use, it can be washed away with water. Typical blast pressure is 20-120 psi.	____	Best	Best	____	____

Abrasive Blasting Cabinets with Dust Collector

Front Door

Flip Top

Also known as suction-feed blasters, these use compressed air to continuously siphon blasting media into the gun so you don't have to stop to refill. The dust collector removes dust from inside the cabinet. Use with most types of dry abrasive blasting media. Not for use with silica sand, steel shot, baking soda, and plastic grit.

All are steel with a window, a steel-screen work table, exterior fluorescent lighting, and a hopper door for media removal. They have a foot-operated 25 cfm gun with a 5/16" ID carbide nozzle and 5/32" ID carbide air jet (except cabinet Style A has a 12 cfm gun, a 1/4" ID nozzle, and 1/8" ID air jet). The air inlet is 3/8" NPT female and the required air pressure is 10-125 psi. All operate on 110 volts AC. A safety switch shuts off airflow when the door is opened. Include blast hose, 5/8" ID air hose, air regulator and gauge, 8-ft. power cord with three-prong plug, and gloves.

With Front and Side Door—Cabinet *Style B* has a side door on the right side. Cabinet *Style C* has a side door on each side.

With Flip Top and Side Door—The top opens 72° to accommodate large parts.

Bench-Top Abrasive Blasting Cabinets

With Dust Collector

Sized to fit on your work bench, these suction-feed cabinets use compressed air to continuously siphon blasting media into the gun so you don't have to stop to refill. Use with most types of dry abrasive blasting media. Not for use with silica sand, steel shot, baking soda, and plastic grit. Cabinets are steel with a front door and window, a steel-screen work table, exterior fluorescent lighting, and a hopper door for media removal. All include 5/8" ID air hose, 8-ft. power cord with three-prong plug, and gloves. Required air pressure is 10-125 psi. Operate on 120 volts AC.

Standard cabinet has a trigger-operated 12 cfm gun with 1/4" ID ceramic nozzle and 1/8" ID steel air jet. Also includes an adjustable steel stand. For dust collection, hook up a shop vacuum to the cabinet's 2¼" dia. port or use the dust collector sold separately below.

Cabinet with dust collector includes a 55 cfm shop-vacuum style dust collector. It has a foot-operated 12 cfm gun with 1/4" ID carbide nozzle, 1/8" ID carbide air jet, air regulator and gauge, and steel stand. Air inlet is 3/8" NPT female. A safety switch shuts off airflow when the cabinet door is opened. Includes 10 lbs. of 100 mesh size glass bead media.

Dust Collector/Separator for Abrasive Blasting Cabinets

Extract the dust from your suction-feed blasting cabinet to prolong media life, increase blasting effectiveness, and improve visibility. Attach to a stationary abrasive dry-blasting cabinet that has a 2″ dia. port and an interior size up to 40″ Ht.×40″ Wd.×30″ Dp. Collector/separator works with all blasting media grits.

A 4″ cleanout drain allows removal of debris and spent media. Comes with a 1½″ Dia.×6 ft. Lg. hose that includes a 2″ cuff, 2″ OD fitting for large cabinets, and 2″ collar for small cabinets.

Collector/separator is made of corrosion-resistant polyethylene and is powered by a 1.3-hp motor that operates on 120 volts AC. A 9-ft. power cord with three-prong plug is included. Overall size is 15″ Dia.×47″ Ht.

Dust Collector/Separator	31205K21	$1,579.85

Replacement 120V AC Electric Motor	31205K25	256.00

Portable Abrasive Blasters

Low Velocity

High Velocity

Roll blasters to where you need them. Use with most types of dry abrasive blasting media. Not for use with silica sand. All come with blast nozzles and blast hose. Required air pressure is 80-125 psi.

Low-velocity blaster is also known as a suction-feed blaster. It has a longer blast time, but delivers media at slower speeds than high-velocity blasters. It has a steel tank, a gun, three air jets (5/64″, 1/8″, and 5/32″ ID), hood, and goggles. Not for use with baking soda.

Also Available: Replacement ceramic and steel nozzles and replacement air jets. For ceramic nozzles please ask for 3425K3 and specify ID. For steel nozzles please ask for 3425K2 and specify ID. For air jets please ask for 3425K4 and specify ID.

High-velocity blasters, also known as pressure-feed blasters, deliver abrasive blasting media at higher velocities to maximize production. All have an ASME certified steel tank, an adjustable abrasive-flow valve, pressure relief valves, a pressure gauge, and a soft blast hood with protective cap and rear breather vents. Blasters also include nozzle shutoff, which stops the abrasive flow at the nozzle while the abrasive hose and tank remain pressurized. Baking soda requires the baking soda conversion kit sold separately below. Blasters with 150- and 250-lb. capacity include a moisture separator for better media flow. For replacement ceramic blast nozzles, see page 2712.

Also Available: Replacement parts. Please ask for 3268K45 and specify part desired.

Hand-Held Abrasive Blasters

Standard Blaster

Pencil-Grip Blaster

Blaster/Sprayer

Small blasting jobs such as cleaning, texturing/etching glass, and removing rust and paint call for these handy blasters. They can be used with all types of abrasive media including baking soda.

Standard blaster is trigger operated and gravity fed. It's made of plastic. Air volume is 10 cfm @ 100 psi. *Optional spot blasting kit* includes four rubber cones that conform to contours and a collection bag to recover reusable media.

Pencil-grip blaster is for precision work on small, delicate parts. It's push-button operated and gravity fed. Made of brass with an aluminum media container. It includes a filter respirator mask, a hanger, an air hose, and 6 oz. of 220-grit aluminum oxide media. Air volume is 0.5 to 1.0 cfm @ 40 psi.

Blaster/sprayers can be used with blasting media and liquid. They are lever operated and siphon fed. Made of zinc with a 3/32″ ID steel air jet and media container. Air consumption is 6.65 cfm @ 80 psi. Not rated for air volume. 3158K41 includes a ceramic nozzle. 3158K11 includes three steel nozzles.

Abrasive Blasting Guns

Standard

Heavy Duty

Suction-feed guns deliver a consistent, uniform spray pattern for surface cleaning and finishing. All are aluminum and have a 1/4″ NPT female air inlet.

Standard gun has a full-length trigger. It includes a 5/16″ ID steel nozzle and a 5/32″ ID steel air jet. Required air pressure is 70-100 psi. Air volume is 18 cfm @ 90 psi. Use with 3/8″ ID hose.

Gun kit with siphon tube comes with a blasting gun, 3/16″ and 5/16″ ID steel nozzles (air volume is 6 cfm @ 90 psi for 3/16″ ID; 18 cfm for 5/16″ ID), 3/32″ and 5/32″ ID steel air jets, a blast hose, and a 14″ long zinc-plated steel tube for drawing media.

Replacement nozzle kit includes a nozzle holder, a 5/16″ ID steel nozzle, and 5/32″ ID steel air jet.

Heavy duty gun has one-piece construction. To operate, it requires the foot pedal (sold separately below) or a shut-off valve on the air line. Use with 5/8″ ID hose. It includes a 7/16″ ID carbide nozzle and 7/32″ ID carbide air jet. Required air pressure is 70-100 psi. Air volume is 45 cfm @ 90 psi.

Abrasive Blasting Nozzles

Tapered

Straight

Venturi

Tapered and **straight ceramic** nozzles are for touch-up jobs and blasting small areas. Rated for up to four hours of continuous use.

Straight tungsten carbide nozzles are for spot blasting from a distance of 12″ or less. They have a narrow pattern. Rated for up to 28 hours of continuous use.

Venturi carbide nozzles handle larger areas than straight nozzles. Rated for up to 40 hours of continuous use (with aluminum oxide), they deliver a uniform blast pattern. They have a brass jacket and carbide liner. Threads are brass 1 1/4″ NPS male.

No-Mess Portable Abrasive Spot Blasters

No more time-consuming clean ups—the abrasive media blasts your surface and is vacuumed back into the blaster. Usable media is then separated from dust and debris and recycled. Use with any type of abrasive media.

Blaster has a polyethylene tank and a steel frame. It is air- and electric-operated and has a vacuum and filtration system for 99% dust-free work and a 4″ clean-out port for media removal. The gun has a 9/32″ ID ceramic nozzle with rubber bellows.

To operate, push the bellows against the work surface. Includes two brushes, a 2″ Dia. x 20-ft. Lg. blast hose, and a 20-ft. power cord with three-prong plug. Motor is 1.3 hp and has a silencer that reduces noise below OSHA requirements. Rated 9 amps @ 120 volts AC. Required air pressure is 75-125 psi.

Cleaning and Rinsing Solutions for Ultrasonic Cleaners

Solvent-Free Water-Based (Aqueous) Cleaning Solutions

Maximum temperature is 150° F. Rinse with water.

General Purpose Degreaser Concentrate—Removes oil, light grease, and soil from metal, glass, and plastic. It's phosphate-free, noncaustic, nonflammable, and nonabrasive. Solution can be diluted with up to seven parts water.

1 Gallon 3175K55 $32.00

Heavy Duty Degreaser Concentrate—Removes the same materials as the solution above as well as baked-on carbon soils. Solution can be diluted with up to 20 parts water.

1 Gallon 3175K45 $64.11

Degreaser Compound for Aluminum and Aluminum Alloys—Use on high levels of contamination of oils, grease, and soil. Prevents soils from redepositing on the metal. It can be diluted with up to nine parts water.

1 Gallon 3175K81 $48.75

Water-Based (Semi-Aqueous) Cleaning Solutions

Easier to dispose than petroleum-based cleaners, solutions consist of water and other naturally derived components, such as terpenes (citrus and pine oil-based components). Rinse with water.

Alkaline Concentrate—Removes wax, grease, oil, and buffing and polishing compounds from glass, plastic, and metal (except aluminum). Dilute with up to 10 parts water. Maximum temperature is 150° F.

1 Gallon 3175K3 $94.11

Heavy Duty Concentrate—Removes soil, lapping compounds, rouge, and heavy grease from most metal and glass. For plastic, test before use. Solution can be diluted with up to seven parts water. Do not heat.

1 Gallon 3175K65 $96.00

Ammonia-Free Concentrate—Handles heavy duty cleanup jobs such as removing heavy soils and grease from most metal and plastic. Solution can be diluted with up to seven parts water. Maximum temperature is 180° F.

1 Gallon 3175K71 $100.22

Petroleum-Based Solutions

Ammonia-Free Cleaning Solution—Use for cleaning all types of metal. It removes gummed oil, grease, oil-soluble cutting oil, asphalt, tar, carbon-based residue, sulfides, wax, flux, and fingerprints. Do not heat. Rinse with the rinsing solution sold below.

1 Gallon 3175K16 $48.00

Rinsing Solution—Dissolves any residue that's left behind from cleaning solutions. This solution is a blend of petroleum-based materials and contains no chlorinated solvents. For plastic, test before use. Do not heat.

1 Gallon 3175K22 $43.33

Bench-Top Ultrasonic Cleaners

Cleaners send sound waves through the cleaning solution to create scrubbing action, also known as ultrasonic cavitation, that removes dirt from crevices and between tightly spaced parts.

Cleaners

All cleaners have a stainless steel tank and include a cover and a 6-ft. power cord with three-prong plug, except Style 2 has a 3-ft. cord with two-prong plug. Baskets and pans for Styles 3-17 are sold separately.

Cleaner with basket includes a stainless steel basket. Housing is stainless steel. 32695K41 is the replacement basket for this cleaner.

Cleaner with timer and basket has a 5-cycle digital timer that can be set for up to 8 minutes. Includes a plastic basket with 1/4"x1/2" perforations. Housing is plastic. 32695K48 is the replacement basket for this cleaner.

Cleaners with timer have a 60-minute mechanical timer. Housing is vinyl-clad steel. All have a drain except Style 3.

Cleaners with heater and timer have a 60-minute mechanical timer plus a heater with a maximum temperature of 160° F. Housing is vinyl-clad steel. All have a drain except Style 8.

Cleaners with digital readout, heater, and timer have an LED display that keeps track of the time and temperature in degrees Fahrenheit or Celsius. They also have an electronic touch-pad for temperature display and calibration, timer, sleep mode, built-in shut-off, and degas settings (degas is a function that removes dissolved gases from the cleaning solution for increased cleaning effectiveness). The timer can be set from 1 to 90 minutes, or the cleaners can run continuously. The heater has a temperature range of 20° to 69° C. Housing is plastic. *Styles 13* and *14* have an indentation on the top for emptying. *Styles 15-17* include a quick-disconnect drain.

Triple-Action Parts Washers—For Solvent-Based Solutions

Three ways to clean your parts: a soaking tub with an agitator moves cleaning solution around to loosen dirt as the parts soak, a neoprene hose with pistol-grip nozzle adjusts the solvent flow from a light spray to a solid stream for spray cleaning parts, and a flexible metal hose allows manual washing under the constant flow of solvent. Use with solvent-based cleaning solutions having a flash point above 104° F. Do not use with flammable liquids. Washers are steel and have two bi-level parts shelves and a 8-ft. power cord with three-prong plug. A fusible link automatically closes the cover in the event of fire. The 42-gal. capacity unit includes casters.

Also Available: For available replacement parts, please ask for 3187K7.

Tank Cap., gal.	Max. Liquid Level	Usable Inside Tank Size Ht.	Wd.	Dp.	Overall Size Ht.	Wd.	Dp.	Pump hp	AC Voltage	Base Cap., lbs.	Shelf Cap., lbs.

Soak-and-Scrub Parts Washers—For Solvent-Based Solutions

Soak your parts in the tub or scrub them under the flow of solvent as it is pumped through the flexible metal hose. Use with solvent-based solutions with a flash point above 105° F. Do not use with flammable liquids.

Washers are steel and include a shelf and a 6-ft. power cord with three-prong plug (unless otherwise stated). A fusible link closes the cover in the event of a fire. Electrical components are UL listed.

3189K61 includes a 4-ft. power cord without plug. A NEMA 6-15 or other compatible plug is required. See page 820 for plugs.

Also Available: For replacement parts, please ask for 3189K8 and specify the McMaster-Carr part number of your parts washer.

Low-Fume Parts Washers—For Solvent-Based Solutions

Cleaning solvent is stored inside the drum, so these have fewer fumes and less solvent evaporation than other washers. Wash parts under the flow of solvent as it is pumped through the flexible metal hose.

Use with solvent-based cleaning solutions having a flash point above 104° F. Do not use with flammable liquids. Washers are steel and include a 7½-ft. power cord with three-prong plug. A UL-listed fusible link closes the cover in the event of a fire.

Also Available: Replacement pumps. Please ask for 9987K67. For other replacement parts, please ask for 3255K9.

Corrosion-Resistant Parts Washers—For Water-Based Solutions

Tough polyethylene construction means this washer won't corrode when used with water-based cleaning solutions. Do not use with flammable liquids.

Solution is pumped through the flexible hose and brush by a pump. Washer has a 1.4 kW heater with thermostat. For safety, the heater and pump shut down when solution level is low. The washer includes an 8-ft. power cord with three-prong plug and a ground fault circuit interrupter. Maximum temperature is 110° F.

Also Available: For replacement parts, please ask for 32555K2.

Small-Parts Washing Cans

Safety Can with Basket

Bench-Top Can

Save space and cleaning solution when you want to clean small parts. Cans are made of steel and have a cover to minimize evaporation.

Safety cans have a fusible link that closes the cover in the event of a fire. Available with and without a parts basket that has 3/32″ dia. perforations. UL listed and FM approved. *Cans with basket* have a steel basket.

Bench-top cans are simple to use. Submerge and agitate the spring-loaded drain plate to clean your parts. Drain plate has 3/16″ dia. perforations and also acts as a flame arrester in the event of a fire. FM approved.

Rinsing/Soaking Tanks—For Solvent-Based Solutions

Roomy tanks let you immerse your parts for rinsing and soaking. A foot pedal opens the cover and a gas spring keeps it from slamming shut, unless otherwise stated. Made of steel. They are FM approved except 3416K12. Use with solvent-based solutions with a flash point above 105° F. Do not use with flammable liquids.

3416K12 has a fusible link that closes the cover in the event of a fire. Also includes an adjustable basket rack. Does not come with a foot pedal.

Double-compartment tanks let you clean parts in one compartment and rinse them in the other compartment. Each compartment holds half the total capacity.

Solvent-Based Parts-Washing Solutions

Remove grease, motor oil, cutting oil, water-soluble oil, gummy deposits, and buffing and lapping compounds from metal, plastic, and painted surfaces. Solvents have a mild odor and contain no chlorinated solvents. These products cannot be sold in California or Utah. *Note:* Do not heat. Use only at room temperature.

Solvent-plus-lanolin solution reduces skin irritation and chapping. Leaves a corrosion-resistant film on parts. Wear rubber gloves for prolonged use. Flash point is 105° F.

High-flash-point solution has a 141° F flash point for local regulations requiring a higher flash point.

High-flash-point lanolin-free solution leaves no residue and has a 141° F flash point.

Water-Based Parts-Washing Solutions

Wash away organic soils (including grease, oil, and soft carbon) and inorganic soils (such as epoxy, hard-water residue, corrosion, oxides, paint, plating salts, and rust) with these alkaline solutions. For faster cleaning, heat up to 140° F. Rinse with water.

General purpose can be diluted with up to nine parts of water.

Low-foaming general purpose solution is for use in spray washers. Dilute with up to nine parts of water.

Solution **for use on nonferrous metals** is for aluminum and other nonferrous metals. Mix three to eight ounces of powder per gallon of water.

Dipping Racks

Combine a frame, crossbar, and hooks (all sold separately) to create your own dipping rack for painting, cleaning, and drying. All components are steel.

Frame is 30″ Wd.×30″ Ht. and holds up to 14 crossbars. It has three ¼″ dia. holes at the top for suspending.

Crossbar holds up to 24 hooks. Holes are 1¼″ apart.

Hooks are 0.062″ dia.

Surface Treaters for Slippery Plastic

Also known as a corona treater, this device prepares plastic for printing and bonding. It produces an electric field that raises the surface energy (dyne level) of the material. Use in low-volume lab and small-parts surface treatment. Treats surfaces up to 3″ wide. Maximum continuous run time is 20 minutes. Operates on 115 volts AC and has a 6-ft. cord with three-prong plug. Power supply is 4⅛″ Lg.×7¾″ Wd.×3⅛″ Ht. Handpiece is 11″ Lg.×2½″ Dia.

5693K14 ..... $756.90

Test Pens for Plastic Surfaces

Test the surface energy (dyne level) of films and other nonabsorbent surfaces before printing, coating, or laminating. Also known as dyne pens, they work like a felt-tip marker. A continuous line will appear if the material meets the pen's dyne level while insufficiently treated material results in air bubbles and a disappearing mark. Overall length is 5″.

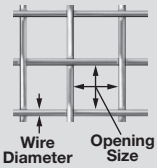
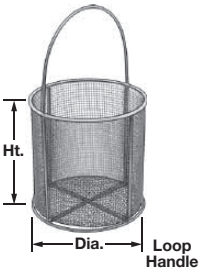
About Wire Baskets



Steel offers high strength at a low cost. Use for applications where corrosion resistance is less important.
Stainless steel withstands a continuous service temperature of 1450° F.
Type 304 stainless steel is corrosion resistant.
Type 316 stainless steel is corrosion resistant and offers additional resistance to acids and salt water.
Wire diameter is the thickness of the wire.
Opening size is the size of the space between adjacent wires.

Steel and Stainless Steel Wire Baskets



Baskets with 0.021″ Opening Size— Wire diameter is 0.012″. Do not use with sharp objects.
Baskets with 5/64″ Opening Size— Wire diameter is 3/64″.
Baskets with 3/16″ Opening Size— Wire diameter is 1/16″.
Also Available: Additional sizes. Please ask for 3287K999 and specify basket size, shape, material, opening size, and handle style.

Round Baskets

When the **swing handle** is laid down it extends beyond the basket diameter, making it easier to grab. **To Order:** Please specify loop, swing, or dual-grip handle and 0.021″, 5/64″, or 3/16″ opening size.

Snap-Lid Steel Wire Baskets

The hinged lid flips out of the way for filling and closes securely with a snap. Baskets are galvanized steel. Wire diameter is 0.025″ and opening size is 0.125″. The lid and bottom are plastic. The lid has a hole that accepts a wire tie or other fastener.

Overall Size Dia.	Overall Size Ht.	Cap., lbs.		
2 1/4″	7 1/4″	2 1/2	3238K6	$10.13
4 3/8″	7 1/4″	5	3238K8	13.67

Long-Handle Steel Wire Baskets

Keep hands clear of solutions. All are chrome-plated steel. Wire dia. is 0.031″ and opening size is 0.134″, except the 13 1/2″ dia. basket has 0.158″ openings. The diameter listed is the top of the basket.

Overall Size Dia.	Overall Size Ht.	Handle Lg.		
9″	5″	7 1/2″	3218K22	$44.73

13 1/2″	6″	11 1/2″	3218K55	66.24

For information about wire baskets, see page 2716.

Light Duty Steel Wire Baskets

Clean and store parts in these economical, general purpose baskets. Both are galvanized steel with a dull finish and 9″ diameter at the widest point. Wire diameter is 0.025″. Opening size is 0.25″. Capacity is 10 lbs.

Tapered basket is 8¼″ high and has a 4½″ high swing handle.

Barrel-style basket is 16½″ high when the two halves are joined together with the included clip.

Tapered

Barrel Style

Stainless Steel Wire Baskets for Small Parts

Use with bench-top ultrasonic cleaners and for holding beakers. All are 300 series stainless steel with a shiny finish.

Round baskets have a 3″ high swing handle. Wire diameter is 0.014″ and opening size is 0.027″.

Rectangular baskets stack for easy storage. All have ½″ long legs and dual-grip handles.

Baskets for Miniature Parts

Nonmarring baskets have nylon mesh and a plastic frame that won't scratch parts.

Bendable-handle baskets can be hung over the edge of an ultrasonic cleaner. They are 18-8 stainless steel with a shiny finish.

Squeeze-handle baskets have 18-8 stainless steel mesh with a shiny finish and a plastic handle.

Screw-together baskets secure your tiniest parts when the two ½″ deep halves are put together. Mesh is 18-8 stainless steel with a dull finish; frame is brass.

Steel and Stainless Steel Perforated Baskets

Baskets are sheet metal with stamped holes, so they are more rigid than wire baskets. Use for degreasing, cleaning, plating, and rinsing parts. All are unfinished.

Round baskets have ¼″ dia. perforations. Two bottom and four side braces add rigidity.

Rectangular baskets have 3⁄32″ dia. perforations and a hinged lid. A handle sticks out 1⅞″ on two sides.

Workstation Static Eliminators

Without Fan

With Fan

Place a unit at your workstation or desktop for protection against ESD (electrostatic discharge). Operate on 120 volts AC.

Without Fan—Controls static over a 12″×16″ area. It won't stir up dust or move lightweight items in the area. Has a 7-ft. cord with three-prong plug.

With Fan—Has a two-speed (21 and 42 cfm) fan and controls static over a 12″×36″ area. Has a swivel stand and a 7½-ft. cord with three-prong plug.

	Ht.	Wd.	Dp.		
Without Fan	5½″	5″	2½″	2240K43	$461.38
With Fan	5⅜″	3⅞″	2⅜″	2240K66	503.12

Static-Eliminating Bars

Stop the buildup of static electricity and ESD (electrostatic discharge) on conveyor and assembly lines. Also known as ionizing bars, they concentrate ionization in one long, thin area. There's no blower, which minimizes contamination. Use where there is little or no air movement. Mount 1″ to 7″ from the material. Do not mount directly over metal parts or rollers; the metal will absorb the ion charge and reduce the effectiveness of the equipment. All bars have a 6½-ft. cable for attaching to the power supply (sold separately).

Power supplies operate one or two static-eliminating bars. They have a 6-ft. cord with three-prong plug. Input is 115 or 220 volts AC.

Optional bar tester is a pen-sized device with a light that indicates if your static eliminator is operating.

Controls: Static Projection	Wd.	Overall Size: Ht.	Wd.	Dp.

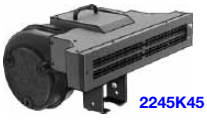
Static-Eliminating Blowers

2245K31

2245K43 and 2245K49



2245K45

2245K61

Project a curtain-like stream of static-eliminating ionized air and protect against ESD (electrostatic discharge). They have a built-in power supply, except 2245K31 has a separate enclosure with a power supply. All operate on 115-120 volts AC and have a 6-ft. cord with three-prong plug.

Blowers have variable controls to tailor airflow and a filter to keep dust and dirt particles out of the airstream.

Blowers with heater reduce wind chill for extra comfort in cool areas. They have three speed settings.

Static-Eliminating Blowers for Large Areas

Eliminate static and minimize ESD (electrostatic discharge) on large processing equipment and products. Suspend these blowers from the ceiling or mount on a wall, floor, bench, or machine frame to create an extra-wide field of ionized air. All have a variable air speed/volume control and a 6½-ft. cord with three-prong plug. Operate on 110-120 volts AC. *Optional air filters* prevent contamination.

Max. Air Volume Output, cfm	Controls: Static Projection	Wd.	Overall Size: Ht.	Wd.	Dp.	No. of Fans

Optional Air Filters (Pkg. of 10)							2241K57	15.94

Static-Eliminating Compressed-Air Blowguns

High Force

Easy Adjustment

Blow off dust and contamination, eliminate static charges, and guard against ESD (electrostatic discharge) in seconds. Blowguns require a clean, dry air supply. For a static charge detector, see page 1854. Meet OSHA requirement for maximum outlet pressure.

High-force blowguns neutralize static with the nozzle 2″ to 10 ft. from the surface of the part being cleaned. Include a 10-ft. cable for connection to required power supply. Operate on compressed air. Air inlet is ¼″ NPT female. Maximum inlet pressure is 250 psi. Air consumption is 11.5 cfm @ 40 psi. Use a 10-micron and smaller air line filter. *Power supply* accommodates two blowguns and includes a 6-ft. cord with three-prong plug. Input is 115 volts AC. UL and C-UL recognized.

Easy-adjustment blowguns have flow control and a power- and ionization-indicating LED. Nozzle should be 4″ to 10″ from the part being cleaned. Meet clean room Class 1000 requirements. Operate on compressed air or nitrogen. Air inlet is ¼″ NPT female. Maximum inlet pressure is 100 psi. Air consumption is 7.4 cfm @ 100 psi. Includes a 0.01-micron filter, 7-ft. cable for connection to required power supply, and a hanger for mounting. *Power supply* has a 6-ft. cord with three-prong plug. Input is 120 volts AC.

High-Force Blowguns		
With Cable and Power Supply	5406K75	$920.45
With Cable	5406K76	503.15
Easy-Adjustment Blowguns		
With Cable and Power Supply	34405K77	885.94

Replacement Filters for Easy-Adjustment Blowguns (Pkg. of 2)	34405K79	$76.31

Blower-Air Air Knives

Connect air knives to a blower for high-speed airflow at low pressure. Use for dust, chip, and water removal; drying; belt wiping; and controlling coating depth. They can also control the movement of smoke or fumes and function as a barrier to keep hot air in ovens and cold air in freezers. The airflow slot is adjustable from 3/64″ to 1/2″. Made of aluminum. Not rated for cfm.

Note: To create a system, you will need a blower (sold below), threaded pipe (see page 6), a hex reducing bushing (see page 5), and a hose fitting (sold below). Connect the hose fitting to round flexible duct hose (see pages 248-250) and then to the air knife using clamps (not included).

Air Knife

Knife Wd.	Air Knives		Optional Blowers: Motor	Air Outlet		
6″	1833K212	$297.60	1 1/2 hp	1 1/2 NPT Female	9960K59	$1,080.40

Hose Fitting (4 1/2″ Lg. × 2 1/2″ OD) 1833K41 36.57

Optional Blower

Compressed-Air Air Knives

Cool parts and blow liquids, chips, and dust from conveyors and other equipment with a high-volume, high-velocity sheet of compressed air. Air flows out of a 0.002″ gap and uses 40-90% less air than open nozzles and drilled or slotted pipe. Use with clean air (filters sold separately). Recommended air pressure is 80-100 psi. Air inlet is 1/4″ NPT female. Knives meet OSHA 1910.242(b) for dead-end pressure and 1910.95(a) for noise level.

Standard knives amplify incoming air by a factor of 30 to 1. They have an air inlet on each end. Knives are 1″ wider than the air slot.

Super-efficient knives use 18% less compressed air and are quieter than standard air knives. They amplify incoming air by a factor of 40 to 1. They have an air inlet on both ends and on the bottom. Air slot runs the full width of the knife.

Also Available: Shim sets to enlarge the gap and adjust the flow and force of air. Sets for aluminum knives include plastic shims in sizes 0.001″, 0.003″, and 0.004″; sets for stainless steel knives include three 0.002″ stainless steel shims. For standard knives, ask for 5191K2 and specify aluminum or stainless steel and air slot width. For super-efficient knives, ask for 6069K41 and specify aluminum or stainless steel and air slot width.

Static-Eliminating Air Knives

Temporarily neutralize static charges and prevent ESD (electrostatic discharge) by flowing positive and negative ions onto the surface or part. Knives are aluminum with an antistatic ionizing bar and a 5-ft. shielded cable for connection to 5kV power supply (sold separately). UL and C-UL recognized.

Accessories

Air filter/regulator combines a 5-micron filter for clean air and a regulator for controlling the consumption, flow, and force of air. Note: Do not use near flammable materials or gases.

Power supply has two ports to handle two air knives at the same time. Operates on 115 volts AC.

Universal mounting arm has a 31″ reach and two locking swivels. Mounts in a 1/2″-13 threaded hole.

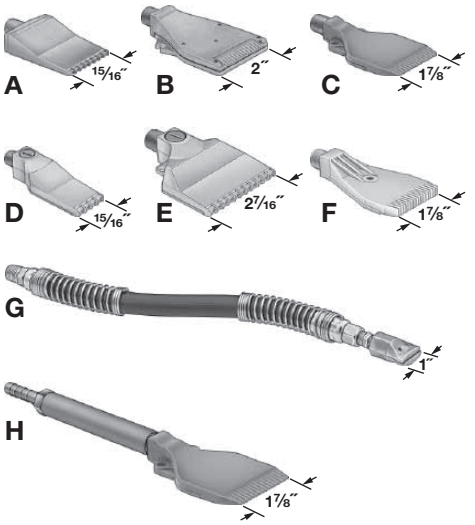
Compressed-Air Blowoff Nozzles

Reduce noise levels, air consumption, and energy costs when drying, cleaning, sorting, and ejecting parts. Compressed-air nozzles are quieter and deliver a stronger blowing force compared to drilled pipe and open nozzles. Nozzles are 90 dB or lower at 3 ft., except Styles A, P, and Q exceed 90 dB.

Wide-Airflow Nozzles



A flat nose distributes air over a wide area.
Styles A-C meet OSHA directives for maximum outlet pressure when used with a pressure regulator set at 30 psi or less. 5329K52 is made from FDA-compliant resin.
Styles D-H meet OSHA directives for maximum outlet pressure.

Compressed-Air Circular-Flow Air Knives

Also known as air wipes, the circular design of these knives provides a uniform 360° airstream. Use with compressed air for blowoff, drying, cleaning, and cooling of pipe, cable, extruded shapes, and hose. They're hinged for easy positioning around the material moving through them. Air inlet is 1/4" NPT female. Meet or exceed OSHA noise and dead-end pressure requirements.

Aluminum knives are rated for temperatures up to 400° F.

Stainless steel knives are rated for temperatures up to 800° F.

Also Available: Optional shim sets. Please ask for 6275A27 and specify inside diameter.

Adjustable Direction Blowoff Nozzles with Magnetic Bases

Adjust the hose to deliver air exactly where you need it, then use the nozzle control valve to fine-tune airflow.

Standard Duty—Have a modular plastic hose that snaps together and a nozzle that produces concentrated airflow. Nozzle also may be used with liquid coolants. Magnetic base pull is 38 lbs. Air inlet is 1/4" hose barb. Hose is 9" long with a 1/4" ID. For replacement hose and fittings, see Snap-Loc Hose on page 2230.

Heavy Duty—Has a 12" long oil- and abrasion-resistant rubber hose. Nozzle is zinc and delivers a broad cone-shaped airflow. Magnetic base pull is 100 lbs. Air inlet is 1/4" NPT female. Meets OSHA directives for maximum outlet pressure.

	Max. Inlet Pressure	Single Hose		Double Hose	
Standard Duty	60 psi	33345K7	$47.37	33345K9	$53.26
Heavy Duty	150 psi	31665K21	187.95		

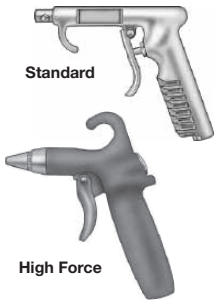
Push-Button Blowguns

Operate your blowgun with the touch of a button. Body is epoxy-coated zinc and nozzle is brass.

Max. inlet pressure is 150 psi. Air inlet is 1/4" NPT female and air outlet is 1/8" NPS female. Air consumption is 10 cfm @ 100 psi. Meets OSHA directives for max. outlet pressure.

5467K14	$10.24

Pistol-Grip Blowguns



Guns fit comfortably in your hand. Maximum inlet pressure is 120 psi. Air inlet is 1/4" NPT female. Meet OSHA directives for maximum outlet pressure.

Standard—Body is chrome-plated zinc and nozzle is brass. Air outlet is 1/8" NPS female.

Easy Grip—Handle is nonslip vinyl, body is aluminum, and nozzle is brass. Air outlet is 1/8" NPT female.

High Force—Tiny air slots around the nozzle circumference increase blowing force. Body and nozzles are aluminum. Air outlet is 3/4"-32 UNF female.

	Air Consumption @ 100 psi		
Standard	10 cfm	5668K21	$21.73

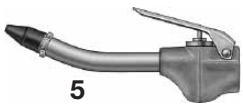
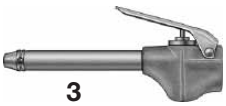
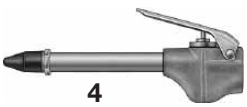
Replacement Nozzle for High Force Blowgun		54615K21	16.14

Lever-Handle Blowguns







Blowguns have an easy-to-maneuver lever handle and are made of zinc. *Styles 1-3* and *6-7* meet OSHA directives for maximum outlet pressure. Maximum inlet pressure is 150 psi.

(1) General purpose blowguns are chrome plated and have a PVC-coated handle. 5650K11 and 5650K12 have a coiled nylon hose.

(2-5) Straight and angled extension blowguns increase your reach. *Style 2* is chrome plated with a 3" safety extension and a PVC-coated handle. *Style 3* has a 4" safety extension and a built-in pressure regulator. *Styles 4* and *5* have a 4 5/16" extension and a nonmarring rubber nozzle.

(6-7) High volume blowguns have large holes in the safety nozzle to increase air volume. *Style 6* is chrome plated and has a PVC-coated handle. *Style 7* has a built-in pressure regulator.

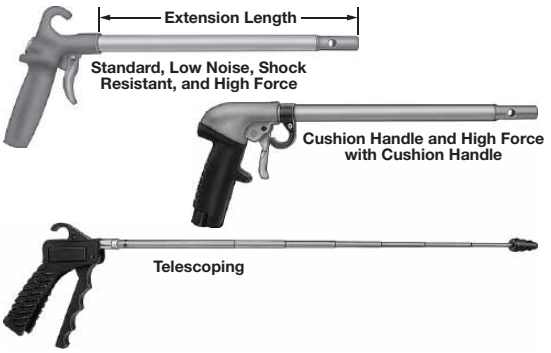
Extended-Reach Blowguns

Reach tight corners and high areas with the long nozzle on these blowguns. Maximum inlet pressure is 120 psi. Meet OSHA directives for maximum outlet pressure, unless otherwise stated.

Pistol-Grip Blowguns



Standard—Have an aluminum body, nozzle, and extension.

Low Noise—Are 20% quieter than standard models but deliver 30% less blowing force. Body, nozzle, and extension are aluminum.

Cushion Handle—Have a rubber handle and an aluminum body, nozzle, and extension.

Shock Resistant—Have a nylon nozzle and extension that won't conduct electricity. Body is aluminum.

High Force—Deliver 30% more blowing force than standard models. Body, nozzle, and extension are aluminum.

High Force with Cushion Handle—Similar to the high force blowguns but with a rubber handle.

Telescoping—Has an adjustable stainless steel extension. Body and nozzle are plastic.

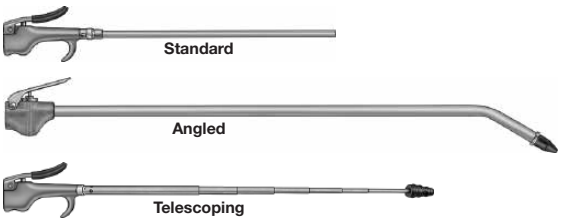
Lever-Handle Blowguns



Standard—Have a chrome-plated zinc body and a vinyl-coated handle. Nozzle is brass and extension is steel.

Angled—Have an angled nozzle for directing air over and around obstacles. Include one brass nozzle and one rubber nozzle. (Blowgun must be used with the brass nozzle to conform to OSHA directives for maximum outlet pressure.) Body is zinc and extension is aluminum.

Telescoping—Has an adjustable stainless steel extension. Handle is vinyl coated, body is chrome-plated zinc, and nozzle is plastic.

Also Available: Replacement extensions for standard, low-noise, and high-force pistol-grip blowguns. Please ask for 5536K135 and specify the McMaster-Carr part number of your blowgun.

For blowgun accessories and air hose, see page 2724.

Lightweight Blowguns

Lightweight design maximizes comfort and minimizes wrist strain. Vary airflow from a puff to a blast with a pull of the easy-grip trigger. Body is plastic and extension is brass. Maximum inlet pressure is 230 psi. Air inlet is 1/4″ NPT female and air outlet is 5 mm×1 mm. Blowguns can be used without a nozzle; however, when used with a safety nozzle, blowguns meet OSHA directives for maximum outlet pressure.

Blowguns with removable extension allow you to change out extensions so you can use different extensions with the same body.

Safety nozzles have holes around the circumference so air can escape if nozzle is blocked. Once clipped to the extension, only air-shield nozzles can be removed. *Standard nozzle* is for general purpose use. *Air-shield nozzle* creates an air curtain around the airstream to protect from flying chips and dust. *High force nozzle* amplifies the airflow by 100% compared to a standard nozzle.

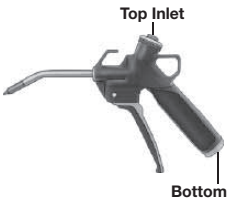
Dual Air-Inlet Blowguns

Two air inlets offer increased versatility. Use the top inlet when blowgun is suspended from an overhead hose and the bottom inlet for bench and floor hoses. Includes a 4″ angled steel nozzle and a stainless steel nozzle tip. Vary airflow from a puff to a blast with a pull of the trigger. Body is plastic.

Maximum inlet pressure is 140 psi. Air inlets are 1/4″ NPT female. Air consumption @ 100 psi is 14 cfm. Meets OSHA directives for maximum outlet pressure.



5932K33 ..... $98.37

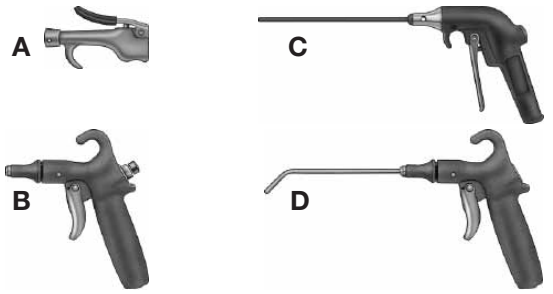
Clean-Air Blowguns

Clean surfaces without transferring dust or moisture that exists in the air hose. Blowgun has a replaceable filter that traps particles as small as 0.01 micron (such as rust and smoke) and absorbs up to 1 oz. of moisture. For critical applications, filter should be changed weekly. Blowgun is chrome-plated zinc with a brass safety nozzle.

Maximum inlet pressure is 100 psi. Air inlet is 1/4″ NPT female and air outlet is 1/4″ NPT female. Meets OSHA directives for maximum outlet pressure.

	Air Consumption @ 100 psi		
Blowgun with Filter	10 cfm	55135K45	$25.55
Replacement Filter		55135K65	14.33

Chip-Guard Blowguns



Also known as air-shield and safety-shield blowguns, a center airstream blows away debris while an outer air curtain protects from flying chips and dust. Air inlet is 1/4″ NPT female and air outlet is 1/8″ NPT female (unless otherwise stated). Meet OSHA directives for maximum outlet pressure.

(A) Lever Handle—Has a vinyl-coated lever handle and a chrome-plated zinc body.

(B) Adjustable Airflow Pistol Grip—Has a knurled adjusting nut to vary the airflow from a puff to a blast. Body is aluminum.

(C) Straight Extension Pistol Grip—Has a 3/16″ OD×6″ Lg. bendable brass nozzle extension. Body is aluminum. Air outlet is 1/8″ NPS female.

(D) Angled Extension Pistol Grip—Has a 6″ brass extension with a 1/8″ OD×2″ Lg. flexible plastic tube attached to the end to clean blind holes. Body is aluminum.

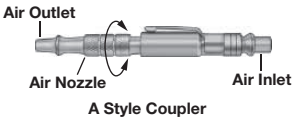
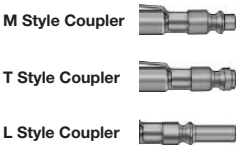
Pipe and Tube Cleaning Blowguns

Flush fluid lines and blow out air lines, pipes, tubes, and other hard-to-reach areas. To activate, press the tip into the tube opening or pull back on the knurled nozzle. Blowguns are brass with a rubber cone-shaped tip. Maximum inlet pressure is 150 psi. Air inlet is 1/4″ NPT female.

	Air Consumption @ 100 psi		
Blowgun	8 cfm	3794K1	$25.84
Blowgun with 12″ Extension	8 cfm	3794K2	31.86
Blowgun with 36″ Extension	8 cfm	3794K4	36.10

Pocket-Clip Blowguns





Clip these pen-sized blowguns to your pocket for easy access. Twist the knurled nozzle to adjust airflow from off to full volume. Overall length is 4 5/8″. Body is aluminum. Maximum inlet pressure is 150 psi. Air consumption @ 100 psi is 16 cfm.

Fits Couplers

Blowguns, Blowgun Nozzles & Air Hose

Wide-Flow Blowguns

Direct a strong stream of air over a wide area. Meet OSHA directives for maximum outlet pressure.
Flat Nozzle Blowgun—Produces a flat airstream. Gun has a zinc nozzle and a plastic pistol grip.
Barrel Nozzle Blowgun—Holes around the 4″ long safety nozzle increase airflow. Gun is chrome-plated zinc with a lever handle. Air outlet is 1/4″ NPT female.

Air Consumption @ 100 psi	Max. Inlet Pressure	Air Inlet, NPT female

★ Air consumption @ 95 psi.

Ultra-Force Blowguns for Large Areas

The most powerful blowguns we sell. Use for industrial and construction applications and for cleaning and blowing large areas and spaces. Holes in the nozzle draw in surrounding air for increased air power at the nozzle tip. Made of lightweight aluminum with a large trigger for comfort and control. Blowgun includes an adjustable second handle for two-hand operation; handle can be mounted anywhere along the extension. Air consumption is 185 @ 100 psi. Maximum inlet pressure is 120 psi and air inlet is 3/4″ NPT female. Guns meet OSHA directives for maximum outlet pressure.

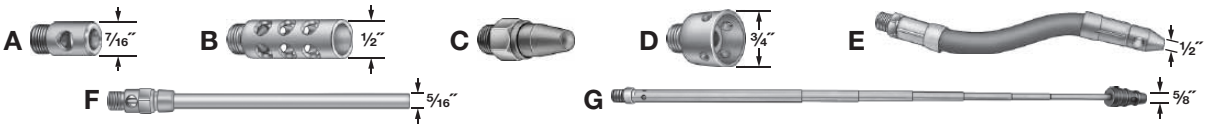
Blowgun Nozzles

Nozzles will fit any blowgun with a 1/8″ NPT female air outlet, unless otherwise stated.

Nozzles with Safety Vents



Nozzles meet OSHA 1910.242(b) directives for dead-end pressure.

(A) Standard Nozzle—Made of brass.

(B) High-Volume Nozzle—Holes in the nozzle increase air volume. Made of brass.

(C) High-Thrust Air-Saver Nozzles—Achieve high thrust with little air. Aluminum nozzle is 3/4″ dia.; brass is 1/2″ dia.

(D) Air-Shield Nozzle—Nozzle creates an air curtain around the air-stream to protect from flying chips and dust. Made of brass.

(E) Flexible Extension Nozzles—Extend your reach with these bend-able rubber hoses with brass fittings.

(F) Rigid Extension Nozzles—Access hard-to-reach areas. Made of steel and brass.

(G) Telescoping Extension Nozzle—Adjust the stainless steel shaft to the length you need.

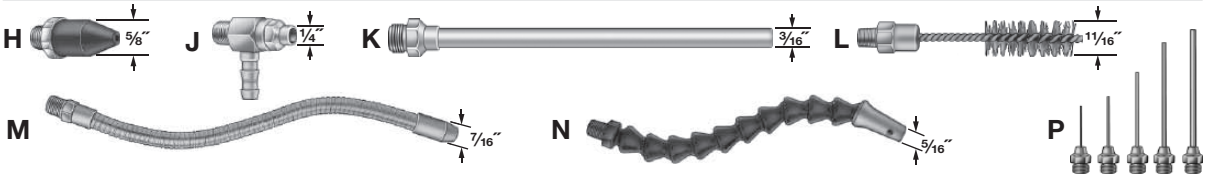
Nozzles



Meet OSHA directives for maximum outlet pressure when used on air lines with a pressure regulator set at 30 psi or less.

(H) Rubber Nozzle—Forms an airtight connection for blowing out molds and lines. Won't mar or scratch delicate surfaces.

(J) Siphon Nozzle—Converts your blowgun to a spray gun. Nozzle has a barbed hose fitting. Includes 7 ft. of 1/4″ ID clear PVC tubing.

(K) Rigid Extension Nozzles—Add length to your blowgun. Choose brass or steel. Brass nozzle has 1/8″ NPS threads.

(L) Round Brush Nozzles—Brush and blow away debris.

(M) Flexible Extension Nozzle—Snakes into hard-to-reach areas. Made of steel tubing with a brass fitting and nozzle.

(N) Flexible Modular Extension Nozzle—Made of flexible plastic with a modular design for easy adjustment.

(P) Five-Piece Needle Nozzle Set—Needles force air to a precise pinpoint. Needles are stainless steel, fittings are brass. Set includes needle sizes (Dia. ×Lg.): 0.134″ ×2 3/4″, 0.095″ ×2 15/32″, 0.072″ ×1 3/4″, 0.050″ ×1 3/16″, and 0.042″ ×15/16″.

Air Hose for Blowguns

Retracting Air Hose—Made from nylon, hose has a 1/4″ ID and comes with a brass 1/4″ NPT male fitting on each end.

	9 ft.		18 ft.	
Air Hose	5245K11	$18.89	5245K12	$23.62

Long-Life Heat Guns

Get long-lasting durability and a ceramic encapsulated heating element that produces constant heat without overheating. Guns with adjustable or programmable temperature settings have an electronic temperature sensor that protects against burn out. All guns have a 7/8" dia. nozzle and a plastic housing. Temperature is measured 1/8" from the nozzle tip. Operate on 120 volts AC and have a 6-ft. cord with two-prong plug (except 3433K82, which has a three-prong plug). UL listed.

Selectable Temperature—Guns have either two or three fixed temperature settings. Air volume adjusts based on the temperature setting selected.

Adjustable Temperature and Air Volume—3433K86 has a nine-position dial to adjust the temperature and 3433K87 has a digital control to adjust temperature in 10°F increments. Both models have a switch to adjust air volume.

Programmable Temperature and Adjustable Air Volume—Save up to four temperature and airflow settings. A lockable override prevents unintentional changes to your settings. Guns have a digital control to adjust temperature in 10°F increments. Air volume is adjustable in 0.1 cfm increments. **Static eliminating gun** prevents electrostatic discharge from damaging electronic components.

★ Not for use with Selectable Temperature guns. ■ Must be used with nozzle 3433K29 (sold separately).

Light Airflow Heat Guns

A low air volume of 4 cfm means you can heat lightweight items without blowing them all over your workstation. Guns operate at a fixed temperature, but you can swap out the heating element for another one with a different temperature setting (sold separately). Heating elements are mica. Guns have a 1" dia. nozzle, a plastic housing, and a 6-ft. cord with three-prong plug. Temperature is measured 1" from the nozzle tip. Guns come with a shrink-tube nozzle for tubing up to 1" OD and a stand for hands-free use.

120 volt guns are UL and C-UL listed. *800°F gun* is grounded to eliminate electrostatic discharge and protect against EMI and RFI interference. **220 volt gun** has a NEMA 6-15 plug. For plug configurations, see page 820.

Heat Guns

General Purpose Heat Guns

Designed to be your go-to for basic heating jobs, these guns come with a nonslip rubber-backed stand for hands-free operation. They have a ceramic heating element, an aluminum housing, and a 6-ft. cord with three-prong plug. Guns have a 1¼″ dia. nozzle. Temperature is measured 1″ from the nozzle tip. Air volume is 23 cfm.

Fixed Temperature—Guns stay within your selected temperature range to prevent overheating materials.

Adjustable Temperature—Use the nine-position dial to adjust the temperature setting.

120 volt guns are UL and C-UL listed. *Gun kits* include a gun, shrink-tube nozzle, 2¼″ wide spreader nozzle, ⅞″ dia. reducer nozzle, and carrying case. **220 volt guns** have a NEMA 6-15 plug. For plug configurations, see page 820.

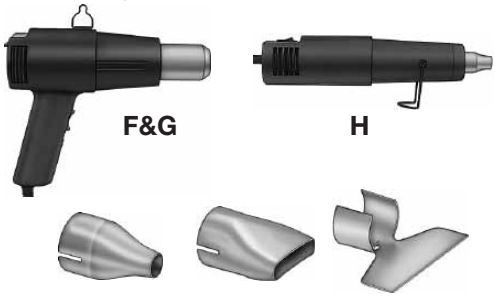
Economy Heat Guns



Nozzle Kit for Styles F and G Heat Guns

When intermittent use is all you need, get performance and value in one gun. Guns have a plastic housing, operate on 120 volts AC, and have a 6-ft. cord with three-prong plug (except Style H, which has a two-prong plug). Temperature is measured at the nozzle tip. UL and C-UL listed. Note: Heating elements are not replaceable.

(F) Selectable Temperature—Has two temperature settings.

(G) Adjustable Temperature—Has a digital control to adjust temperature in 100°F increments and a cool-down setting that automatically turns off the gun.

(H) Fixed Temperature—Has a tapered nozzle for concentrated airflow.

Nozzle kit for Styles F and G comes with a ⅝″ dia. pinpoint nozzle, 2″ wide surface nozzle, and 4″ extra-wide scraper nozzle.

	Temperature Settings	Air Volume, cfm	Watts	Nozzle, dia.		
F	750°F, 1000°F	21	1,200	1″	32605K44	$31.69

Nozzle Kit for Styles F and G					32605K77	15.90

High-Temperature Heat Guns for Tight Spots

J

K

L

If you need industrial-strength heat in hard-to-reach places, these guns will do the trick. Use the rotary dial to adjust the temperature setting in 50°F increments for Style J; and 10°F increments for Styles K and L. Guns have a ceramic heating element and a plastic housing. Temperature is measured at the nozzle tip.

Style J—Has a removable 3⁄16″ dia. pinpoint nozzle (Style P) and a 10-ft. cord with two-prong plug.

Styles K and L—Have a much larger air volume than Style J. An LED shows temperature within 5°F. Style K has a 6-ft. cord with two-prong plug. Style L has a 6-ft. cord with continental European plug.

Propane-Gas Heat-Shrink Guns

Commonly used for shrink wrapping polyethylene film, this gun has a flared nozzle that provides an even heat pattern up to 18" wide. A safety trigger minimizes fire hazards—the propane flame extinguishes upon release. Uses 8 lbs. of propane gas per hour and includes a 25-ft. hose, an adjustable regulator with pressure gauge, and adapters for connection between the gun and tank. Gun has a plastic housing and comes with a safety guard and plastic case. Temperature is measured 6" from the nozzle tip. UL listed. For empty propane tanks, see page 3439.

Temperature Settings	Heat Output		
Up to 1120°F	172,500 Btu/hr. @ 22psi	30975K11	$766.67

High-Volume Hot Air Blowers

Blast your heating, drying, and shrinking projects with 47 cfm of hot air to get any job done fast. A nonslip rubber-backed stand provides hands-free use and 90° rotation for versatile positioning.

Blowers have a steel housing, a mica heating element, a 6-ft. cord with three-prong plug, and a 1⅞" dia. nozzle. Temperature is measured 1" from the nozzle tip. Blowers are 12" Lg.×6" Wd.×9" Ht. UL and C-UL listed.

120 volt blowers have a NEMA 5-15 plug (except 2,160-watt blower, which has a NEMA 5-20 plug); **230 volt blowers** have a NEMA 6-15 plug. For plug configurations, see page 820.

Also Available: Replacement parts. Please ask for 3308K25 and specify part.

High-Volume Gentle-Heat Blowers

Combine high volume airflow with low temperature output for warming and low-heat drying. Head pivots 180° so you can zero-in on an exact spot.

Blower has a coil-wound mica heating element and a steel and aluminum housing. Operates on 120 volts AC and has an 8-ft. cord with three-prong plug. Temperature is measured at the nozzle tip. Blower is 13" Lg.×9" Wd.×18" Ht. and has a 3" dia. nozzle.

Temperature Settings	Air Volume, cfm	Watts		
105°F, 140°F	205	1,800	3092K97	$478.63

High-Temperature Hot Air Blowers

For production drying, heat shrinking, and other applications that require heat over 1000°F, get a heavy duty blower. These blowers have an air volume regulator to adjust heat output. The ceramic heating element has a separate power switch so you can turn off the heat to blow cool air.

Blowers have a plastic housing. Operate on 230 volts AC and have a 10-ft. two-wire cord (plug is not included). For plugs, see page 820. Temperature is measured 3/16" from the nozzle tip. 3,700-watt blower is 13" Lg.×4" Wd.×7" Ht; 3,100-watt blower is 14" Lg.×4" Wd.×7" Ht. Both blowers have a 2 7/16" dia. nozzle.

Temperature Settings	Air Volume, cfm	Watts		
Up to 1165°F	7.1-31.8	3,700	3396K2	$1,269.26
Up to 1345°F	7.1-31.8	3,100	3396K4	1,367.21

High-Force Heatless Air Blowers/ Vacuums

Clear dust and debris, test air ducts for leaks, and dry surfaces; or attach the optional suction cleaning kit to use as a handheld vacuum.

Blowers are built to last with a cast aluminum housing and enamel finish. They have a 21-ft. cord with three-prong plug and a detachable ¾" dia. nozzle. 115 volts AC blowers that are 15½" and 18" long are UL listed.

Suction cleaning kit converts blowers into handheld vacuum cleaners. It includes a dust bag, 4-ft. hose with swivel, 5¼" nozzle with slide-on brush, 11" crevice nozzle, and carrying strap.

Infrared Heaters & Heat Lamps

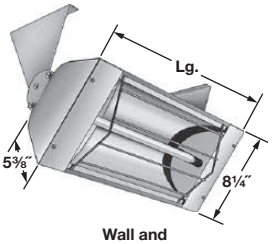
About Infrared Heating

Also known as radiant heating, infrared heating is used to dry and cure; remove moisture; and deliver localized heat. Since radiant heat is absorbed by an object—and not by the air around the object—infrared heaters are good for use in locations where it is difficult to control the ambient temperature.

Consider the following factors that affect infrared heating:

1. The operating temperature, which refers to the surface temperature of the heating element, not the heat output. Output varies with the distance the heater is from the object being heated.
2. The size of the object being heated and its ability to conduct, transmit, and absorb infrared heat.
3. The size of the heater and the presence of reflectors. Reflectors channel radiant energy to get a more concentrated and efficient heat output.
4. If heating items on a moving line, consider your material and exposure time.

Long-Distance Infrared Heaters



Wall and Ceiling Mount

Create radiant heat to warm, cure, and dry from as far away as 8 feet. Heaters have a quartz-tube heating element, an aluminum reflector, and a steel housing. UL listed.

Wall and Ceiling Mount—Designed for horizontal mounting indoors and out. Use the included brackets to permanently mount heaters. Brackets also allow you to tilt heaters up to 60°. Heaters are insulated and must be hardwired. They have a wiring box that accepts ½″ conduit. Can be used for continuous operation.

Portable—Heaters attach to a 6-ft. tall wheeled stand on a 26½″×30″ base and are designed for indoor use. They have a 6-ft. cord with three-prong plug. *1,500-watt heaters* are for intermittent use and have a maximum continuous operation time of 35 minutes. *2,000-watt heaters* are for intermittent use and have a 60-minute timer with automatic shut-off. The heads rotate for use in horizontal and vertical positions.

To Order: For replacement heating elements, please specify 120, 240, or 480 volts AC/DC where available.

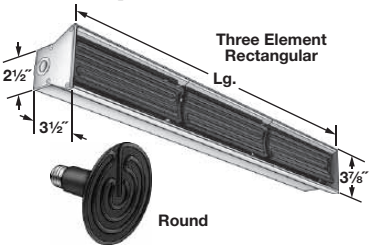
Close-Up Infrared Heaters



Position these heaters 6″-8″ from what you want to dry, cure, or warm. A nickel-chromium resistance wire is embedded in the ceramic body to heat with greater efficiency than our other infrared heaters. Can be used for continuous operation. Operate on 220/230 volts AC (unless noted) and have a wattage tolerance of ±5%. Components are UL recognized. Note: Do not use in hazardous locations such as enclosed areas exposed to fumes.

Rectangular—Heating elements are 9⅝″ Lg.×2⅜″ Ht.×1 7/16″ Dp. and have a slightly concave profile. Heaters come with mounting screws, reflector, and ceramic terminal blocks. Has leads for hardwiring.

Round—Heating elements are 4¾″ Dia.×4⅞″ Dp. and have a flat profile. Heaters have a light-bulb style, screw-in receptacle.

★ Operates on 120 volts AC.

Hand-Held Drying and Curing Heat Lamps

This handy lamp heats, dries, softens, and defrosts while illuminating your work surface. Temperature ranges from 182° F (12″ from the work surface) to 363° F (5″ from the work surface). This lamp is for intermittent use and has a maximum continuous operation time of 30 minutes. Operates on 110 volts AC and has a 9½-ft. cord with two-prong plug. It has a plastic housing with aluminum reflector and insulated swivel handle. Comes with a 600-watt quartz bulb rated for 75 hours of use and a pair of protective glasses.

Optional stand is 6 ft. tall and folds down to 39″.

Heat Lamp	3343K11	$123.98
Optional Aluminum Stand	3343K14	52.73
Replacement Quartz Bulb (600 watts, 75 hours)	1535K96	28.54

Easy-Positioning Drying and Curing Infrared Heaters

Adjust the 42″ extension arm to direct heat where you need it for drying paint and other surface coatings and fillers. Heater clamps to the edge of a bench or table with a maximum thickness of 2″. To surface mount, choose the *optional surface-mount base.*

Operates on 120 volts AC. Includes a 250-watt, 2,000-hour infrared bulb; bulb guard; vented shade; on/off switch; and 7-ft. power cord with three-prong plug.

Heater is intended for intermittent use and has a maximum continuous operation time of 20 minutes. Not rated for temperature.

Surface-Mount Base

Lamp with Screw-Clamp Bracket	3349K51	$236.36
Optional Surface-Mount Base	3349K91	32.00
Replacement R40 Infrared Bulb (250 watts)	1547K15	14.55

Mobile Drying and Curing Infrared Heaters

Heater rolls on casters for spot-drying paint, adhesives, and other surface coatings and fillers. Regulate heat with three switch controls and up to seven infrared bulbs (sold separately). Position the 18″ dia. head anywhere along the 6-ft. high steel stand. Base is 26½″ x 30″.

Operates on 120 volts AC/DC, 1,750 watts, and includes a 6-ft. power cord with three-prong plug. UL listed.

Heater is intended for intermittent use and has a maximum continuous operation time of 15 minutes. Not for use with water-based primers and paint; not rated for temperature.

Heat Lamp (without Bulbs)	3162K5	$257.07
R40 Infrared Bulb (250 watts)	1547K15	14.55
Replacement Stand	3162K81	121.44

Ovens

Also known as gravity convection and laboratory ovens, these ovens are a good option when uniform temperatures aren't critical. Heat flows up into the oven chamber and out through the top vents for quick heating and recovery times.

Made of steel, they have a painted finish, mineral wool insulation, and Incoloy-sheathed heating elements. Include a thermostat, on/off indicator light, and power cord with three-prong plug. Ovens have two 35-lb. capacity wire shelves. Control components are UL and CSA recognized.

Also Available: Replacement shelves, thermostats, and thermometers. Please ask for 3258K18 and specify the McMaster-Carr part number of your oven and the replacement part.

Forced-Air Ovens

Also known as mechanical convection ovens, these ovens have a blower to circulate air quickly and evenly, providing more uniform and accurate temperatures and faster processing than other ovens. The exhaust is located on the top of the oven.

Ovens are made of stainless steel and have Incoloy-sheathed heating elements. They have double doors with rubber gaskets, an adjustable thermostat, on/off indicator light, and two adjustable, 20-lb. capacity wire shelves.

115-volt units have a 4½-ft. power cord with three-prong plug. *230-volt* units must be hardwired.

Also Available: Replacement shelves and floor stands. Please ask for 3302K33 and specify the McMaster-Carr part number of your oven and the replacement part.

Surface-Hardening Compounds for Steel

Create a wear-resistant surface on steel with these heat-treating compounds. They come in a powder form, unless noted.

Pack-In Compound— Harden your carbon steel parts in batches. To use, place parts in a vented steel container, pack compound around parts, seal container tightly, and heat to 1750° F. *100-lb. drum* comes in grain form.

Heat-and-Quench Compound— For use on plain carbon and low-alloy steel parts being heat-treated at 1650° to 1700° F. To use, sprinkle the compound over the heated part, heat again, and quench in water or oil.

Surface Cleaning and Restoring Gels for Stainless Steel

Also known as pickling gel, they remove weld scale, discoloration, black oxides, and other impurities from stainless steel while restoring the corrosion-resistant chromium layer.

1-Quart Jar	8554T11	$95.45
1-Gallon Jug	8554T21	183.25

Furnaces & Melting Pots

High-Temperature Furnaces

Dial Control

The ceramic insulation in these furnaces withstands temperatures up to 2012° F. Made of steel and include a 6-ft. power cord with three-prong plug.

Dial Control—A thermometer displays temperature in ° F and ° C, even with the power off. Heating plates are ceramic. They have a safety door that opens vertically to protect the operator.

Digital Control—The LED shows actual or set-point temperature in °C. An indicator light flashes when set temperature is reached and a safety switch shuts power to heating elements if the door is opened. They have a drop-down door that doubles as a shelf for loading. Rated for continuous temperatures up to 1800° F and for intermittent use (under three hours) up to 2012° F.

Digital Programmable-Control—Build programs in three stages to manage time, temperature, and rate of temperature change. You can link two three-stage programs for a six-stage operation. A maximum of 10 programs can be stored with up to a seven-day delay. An LCD shows internal temperature, countdown time, and program number. Furnace has six programmable parameters: 1) delay start, 2) heat/cool rate, 3) target temperature, 4) temperature timer, 5) memory retrieval, and 6) °C/°F digital display. They have a safety door that opens vertically to protect the operator.

Large-Capacity Digital Programmable-Control—Uses the same controls as Digital Programmable-Control, but has more than three times the working space (1,750 cu. in.). Includes a stainless steel shelf and a safety door that opens vertically to protect the operator.

Digital Control

Also Available: Replacement shelves, thermocouples, and thermometers. Please ask for 31605K25 and specify the McMaster-Carr part number of your furnace and the replacement part.

Heavy Duty Melting Pots

Low Heat

Heating elements wrap around the interior of these pots to ensure fast and even heat transfer. Pots are made of stainless steel and include an adjustable thermostat and on/off indicator light. They operate on 120 volts AC and have a 6-ft. power cord with three-prong plug, unless noted. Pots are intended for continuous use but contents must be stirred periodically to prevent damage.

Low Heat—Melt strippable hot-melt coatings, adhesives, waxes, resins, tar, and asphalt. Bowl is aluminum with insulation; cover is aluminum. Do not use with cerro alloys, acids, or other materials caustic to aluminum.

High Heat—Melt solder, tin, babbitt, and lead. Bowl is iron with insulation. Cover not included.

■ Operates on 220 volts AC and has a 6-ft. 3-wire power cord. Plug is not included. (See page 820 for NEMA plugs.)

Melting Pots for Lead and Solder

A&B

C

D

(A-C) Standard—Use for tinning, stripping, and dip soldering. Pots are made of iron and include a 6-ft. power cord with three-prong plug. Not for use with flux core solder.

Style A are set to a fixed temperature of 750° F; *Styles B* and *C* have an adjustable thermostat control.

(D) With Pour Spout—Has a pour spout to drain melted material plus 4″ of clearance to place molds. Melting time for lead is less than 20 minutes. Housing is aluminum and interior is steel.

110 volts AC pot includes a 6-ft. power cord with two-prong plug; *220 volts AC* pot includes a 6-ft. 3-wire power cord. Plug not included. (See page 820 for NEMA plugs.)

Also Available: Replacement power cords and thermostats. Please ask for 3366K5 and specify the McMaster-Carr part number of your melting pot.

Easy-Pour Cast Iron Melting Pots

Melt lead, solder, and babbitt in these cast iron pots. They have a steel handle and a maximum temperature of 1800° F.

Pots with pouring lip have a lifting eye that provides support while tilting the pot.

With Pouring Lip

Pot Cap., qt.	Load Cap., lbs.	Inside Size Dia.	Inside Size Dp.

High-Temperature Melting Pots

Pots are made of clay-bonded graphite to withstand temperatures up to 2500° F. Use to melt brass, aluminum, copper, and precious metals. They are glazed to resist wear, cracking, and oxidation, and have a molded-in pouring lip. Note: Capacities listed are based on red metals.

General Purpose Hot Plates

Designed to be used with metal containers, these hot plates have individually controlled, coiled burners. Housing is stainless steel. Operate on 120 volts AC and include a 4-ft. power cord with three-prong plug. UL listed.

No. of Burners	Burner Dia.	Load Cap., lbs.	Temp. Range, ° F	Approx. Heat-Up Time	Watts	Overall Size Ht.	Overall Size Wd.	Overall Size Dp.

Uniform-Heat Hot Plates

Made of aluminum to provide the most uniform temperatures, these hot plates also resist warping and buckling at low temperatures. Housing is stainless steel. Include an internal thermostat, on/off indicator light, and 6-ft. power cord with three-prong plug, unless otherwise stated. Use with glass containers. Sand baths are not recommended and metal foil and metal containers should not be used.

(A) Compact—Housing is perforated to prevent overheating. Does not have an on/off indicator light.

(B) General Purpose—*120-volt* unit is UL listed.

(C) Large Capacity—Have a larger surface area and twice the load capacity of our general purpose plates. UL and C-UL listed. 3273K3 and 3273K4 must be hardwired.

(D) Heavy Load—Has stainless steel supports along the bottom and a large surface area for heating, soldering, and glass making. ETL Testing Laboratories listed for conformance to ANSI/UL-499.

Precise-Temperature Hot Plates and Stirring Hot Plates

Fine-tune temperature in 1° F increments with the digital display. The top is ceramic so it cleans easily and resists acids and alkalies. Housing is heat-resistant polymer. A hot surface warning light protects against accidental burns and a ring stand holder accommodates a 1/2" dia. support rod (not included).

Operate on 120 volts AC and include a 7 1/2-ft. power cord with three-prong plug. CSA certified. Use with glass containers. Sand baths are not recommended.

Stirring hot plates have a magnet embedded in the top plate for stirring viscous solutions and separate controls for heating and stirring. Stirring speed is 60-1,600 rpm.

Magnetic Stirring Bars

Made with a PTFE-encapsulated magnet, these stirring bars are noncontaminating, corrosion- and chemical resistant, and FDA compliant for food contact.

Octagonal stirring bars have a large surface area for greater turbulence so they spin well in small, flat containers.

Round stirring bars are self-centering and smooth-running to stir contents at the bottom of larger containers.

Stirring bar retriever is PTFE coated with a magnet at one end to fish stirring bars out of containers. Length is 13".

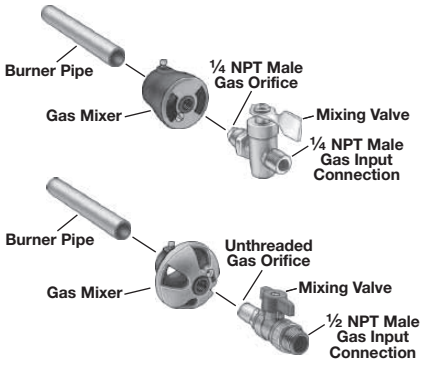
Gas Mixers and Valves



Pair mixers and valves to supply the right amount of natural or LP gas to burners. To choose your mixer and valve, determine the size of your burner pipe and gas input connection. For information about measuring pipe, see pages 2-3.

Gas mixers are made of iron and have adjustable air openings. They slip over the burner pipe's end and attach with the included set screw.

Mixing valves are made of brass. One end connects to the mixer; the other threads into your gas line.

Fits Pipe Size	For ¼ NPT Male Gas Input Connection				For ½ NPT Male Gas Input Connection

Portable LP Gas Burners

With One Burner

POL End Fitting

QCC End Fitting

These powerful, low-pressure burners are made of ⅜″ thick cast iron. Designed for outdoor use, they include ⅜″ male flare fittings and push-turn control knobs.

Optional 5-ft. hose has a low-pressure LP gas regulator with a ⅜″ female flare fitting on one end, and a POL (CGA510) or QCC end fitting on the other end.

High-Velocity Natural Gas Burners

Accelerate gas flow and improve gas-air mixing. Also known as venturi nozzles and buzzer burners, they burn natural gas at atmospheric pressure with minimal secondary air. Burners are designed to resist flashback. Use for drying, air heating, annealing, and melting soft metal, as well as in heat-treating furnaces and ovens. You can also use them as a torch for singeing and heating. Made of cast iron. Gas connection is NPT female.

Gas Burners

3-Ring Burner

Drilled-Pipe Burner

Burners distribute heat evenly to eliminate hot spots.

Ring burners have gas ports, a venturi mixer, and a brass valve on each ring. Made of cast iron. Gas connection is NPT male.

Rectangular burners have a venturi mixer and brass valve. Made of cast iron. Gas connection is NPT female.

Drilled pipe burners have gas ports that are drilled at 45° angles, a gas mixer, and a brass valve. Made of iron pipe. Gas connection is NPT male. **To Order:** Please specify natural or LP gas orifice.

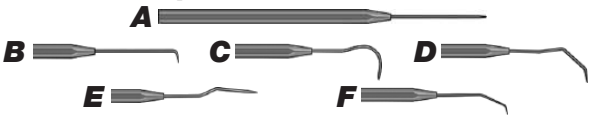
Precision-Tip Picks



Use these needle-sharp picks for precision work around delicate circuits and components. Similar to dental instruments, they have wire tips that are nonrusting and noncontaminating. Handles are hex shaped for a good grip.

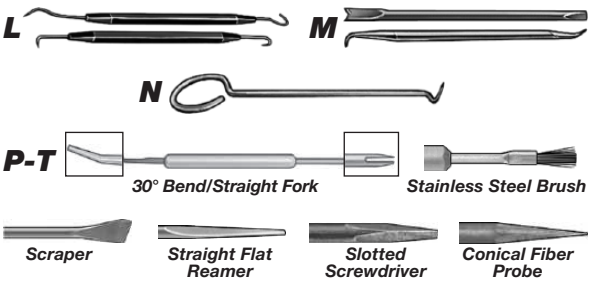
General Purpose Picks



Fish out worn O-rings as well as position stubborn wires, springs, and other small parts. These tools are also good soldering aids.

Style L— Made of steel with plastic handles.

Style M— Made of brass.

Style N— Made of nickel-plated steel.

Styles P-T— Tips are steel with a satin chrome finish that repels solder. Handles have a hex shape and are made of wood, except *Style T*, which is made entirely of fiber. *Styles Q* and *R* have a Type 302 stainless steel brush on one end.

		O'all Lg.		Each

6-Piece Set— Includes Styles L and M plus one 6" 17-4 PH stainless steel conical probe and one 6" 400 series stainless steel tweezer (blunt ends with serrated inside tips). Comes in a canvas bag.

9490K43 **Set** $42.16

4-Piece Set— Includes Styles R, S, and T plus one 8" steel angled flat reamer/straight fork. Comes in a vinyl pouch.

7705A7 **Set** $31.86

Magnetic 4-Piece Set— Includes one straight, 60° double bend, 90° bend, and hook. Tips are steel. Handles are 4⅝" knurled aluminum and have a magnetic end (1.5-lb. pull). Comes in a vinyl pouch.

7705A21 **Set** $20.49

Interchangeable-Tip Picks

Tips and handle are sold separately, so you can create a tool that fits your needs.
(1-4) Tips—Separate wire, remove small fuses and O-rings, and position small parts. Made of steel.
Handle—Hex shaped for a good grip and has a magnetic end (6-oz. pull). Made of aluminum.

	Tip	Lg.		Each
1	Straight	3¼″	7388A31	$1.55

With Cushion Grip

Specially designed for microelectronics and micro-assembly, these tweezers have a smooth grip and smooth inside tips.

Premium Swiss grade are top quality Swiss-made tweezers, crafted for perfect tip symmetry.

High grade are high-quality precision tweezers at an economical price.

Steel—Low corrosion resistance but excellent tip wear resistance. Tweezers are magnetic and have a polished finish, except 5669A81-A87 have a dull finish.

400 Series Stainless Steel—Excellent corrosion resistance and good tip wear resistance. Tweezers are magnetic and have a polished finish.

Nonmagnetic 300 Series Stainless Steel—Excellent corrosion resistance and fair tip wear resistance. *Premium Swiss-grade* tweezers have a polished finish. *High-grade* tweezers have a dull finish.

Nonmagnetic Cushion-Grip 300 Series Stainless Steel—Excellent corrosion resistance and good tip wear resistance. They have an ergonomic antistatic foam grip and a polished finish.

Nonmagnetic Titanium—High corrosion resistance is combined with superior tip wear resistance and strength for extreme durability. These tweezers are also lightweight and have a dull finish.

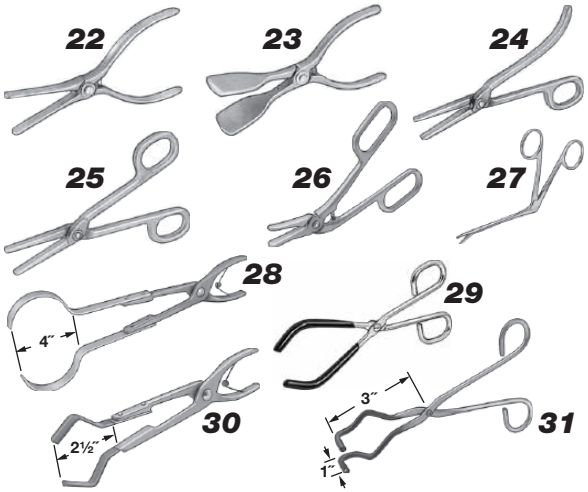
Tongs



Strong enough for heavy production work, yet light enough to reduce fatigue. All have a plain finish.

Hinged-tip jaws open ½″ back from the point.

Nonmarring curved jaws are plastic coated.

Bent-tip jaws and ***nonstick bent-tip jaws*** are noncontaminating (after autoclaving) and inert to most chemicals. All tips have a 30° bend. A second gripping area behind the tips is 1″-1½″ long with an opening of 3¼″ for the 9″ long tongs; 4¼″ for the 18″ long tongs. *Nonstick bent-tip jaws* are PTFE coated.

Gripping Retrievers

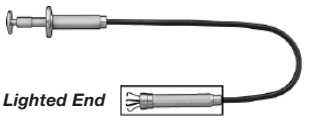
A

B

C

D

E



F

Lighted End

Reach objects with less stretching and bending.

Style A—Have rubber cups that grip and jaws that lock to hold objects.

Style B—Have an extra-sturdy construction and curved rubber-padded jaws.

Style C—7294A3 and *A4* have vinyl-covered jaw tips.

Style D—Upper jaw is smooth and the lower jaw is serrated.

Style E—Shaft is flexible and bounces back after you bend it, except 5681A22, which has a rigid shaft. 5681A15 has a lighted end.

Style F—Shaft is flexible and stays put where you bend it. Also has a lighted end.

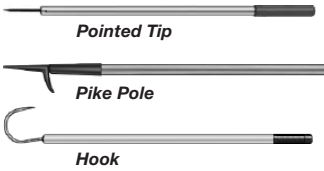
Pole-Style Retrievers



You don't have to get up close and personal with these retrievers—their long lengths allow you to reach objects that are farther away.

Pointed Tip—Tip is steel.

Pike Poles—Tip and hook are steel. *Fiberglass handles* are non-conductive and flame resistant.

Hook—Hook is Type 304 stainless steel. 5918A1 length adjusts anywhere within the range listed; 5918A11 and *A12* lengths adjust to three stop positions.

Hinged Hook—Also known as cant hooks. Head is iron with a hinged steel hook.

Noose—The plastic-coated cable opens to approximately 14″ and locks in place once tightened.

Long-Reach Magnetic Retrievers

Style 1—The magnet is offset 45° from the tubular steel handle. Handle has a plastic grip.

Style 2—Has a horseshoe-style ceramic magnet and a two-piece straight steel handle that can be unscrewed to half the overall length.

Style 3— Have a flat-style Alnico magnet and a 48″ long straight wood handle. They also have a ball-joint base, which lets you pivot the magnet back and forth.

Pliers Sets

All-Purpose Pliers Sets

5-Piece Forged Steel Sets—Pliers are forged steel with cushion-grip handles. Packed in a roll-up vinyl pouch. Each set includes 7 1/2″ long-nose pliers with cutter, 6″ combination jaw slip-joint pliers with cutter, 7″ wire-cutting pliers, 9 1/2″ tongue-and-groove pliers with flat jaws, and 12″ tongue-and-groove pliers with flat jaws.

		Set
Economy	**5797A32**	$40.73
Premium	**5671A21**	93.89

5-Piece Type 420 Stainless Steel Set—Pliers are made of Type 420 stainless steel for good corrosion resistance. All have plain handles and are autoclavable for sterile environments. Packed in a roll-up vinyl pouch. Set includes 6″ long-nose pliers with cutter, 6″ combination jaw slip-joint pliers without cutter, 8″ wire gripping and cutting pliers, 6″ wire-cutting pliers, and 9 1/2″ tongue-and-groove pliers with flat jaws.

5671A22 ..... **Set** $147.33

4-Piece High Visibility Sets—Pliers are made of forged steel and have cushion-grip handles. Grips are neon colored for easy identification. Packed in a roll-up cloth pouch. Each set includes 6″ long-nose pliers, 6″ combination jaw slip-joint pliers with cutter, 6″ wire-cutting pliers, and 10″ tongue-and-groove pliers with flat jaws.

5-Piece Pliers Set with Adjustable Wrench

Pliers are made of forged steel and have cushion-grip handles. Packed in a roll-up vinyl pouch. Set includes 6″ long-nose pliers, 6″ combination jaw slip-joint pliers with cutter, 6″ wire-cutting pliers, 9 1/2″ tongue-and-groove pliers with flat jaws, and 8″ adjustable wrench.

5755A88 ..... **Set** $73.06

6-Piece Miniature Electronics Pliers Sets

All pliers have a spring return.

Regular Sets—Pliers have cushion-grip handles. *Forged steel* set is packed in a zippered vinyl pouch. *Type 420 stainless steel* set has good corrosion resistance and is packed in a roll-up vinyl pouch.

Static-Dissipative (ESD-Safe) Set—Cushion grips dissipate electrostatic charges to protect sensitive electronic components. Comes in a zippered vinyl pouch.

Zippered Vinyl Pouch

Each set includes 4 1/2″ long-nose pliers, 4 3/4″ long-nose pliers with cutter, 5 3/4″ long-nose pliers, 4 3/4″ flat-nose pliers (4 1/2″ for Type 420 stainless steel pliers), 4 1/4″ wire cutting pliers (4 1/2″ for Type 420 stainless steel pliers), and 4 1/2″ end-cutting pliers.

Tongue-and-Groove Pliers

Flat Jaw with Plain Handles

Curved Jaw with Insulated Handles

V-Jaw with Cushion-Grip Handles

Parrot Jaw with Cushion-Grip Handles

Lock the sliding top handle into one of the curved grooves for a strong, nonslip hold. All pliers have serrated jaws, unless noted.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with high-visibility handles*** have neon-colored grips for easy identification. Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. They also have finger guards to keep your fingers away from the jaws. Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

Flat Jaw—*Type 420 stainless steel* pliers have good corrosion resistance and are autoclavable for sterile environments.

Curved Jaw—Ideal for round stock and tubing. *Brass* pliers have softer jaws than steel pliers and will not mar your workpiece.

V-Jaw—Have more points of contact for a better grip on round and irregular workpieces.

Parrot Jaw—Bottom jaw is shorter than the top to get a good grip on the flats of bolt heads and nuts, even those with rounded edges.

5637A72 ..... **Per Set** $34.05

Adjustable Self-Gripping Pliers

Standard with Cushion-Grip Handles

Standard with Insulated Handles

Locking with Push Button, V-Jaw, Cushion-Grip Handles

Locking w/Push Button, Parrot Jaw

Locking with Slide Button

Locking with Push Button and Ratchet Action

Get the gripping power of a pipe wrench while keeping the feel of pliers. Also known as alligator and cobra pliers, these tools are self-gripping; you don't have to squeeze the handles together as you apply downward pressure. The greater the resistance, the tighter the hold. Made of forged steel, pliers have thin-profile serrated jaws (unless noted). A safety stop keeps your fingers from getting pinched between the handles. Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

Standard—Slide the top handle and lock it into one of the holding positions. Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts.

Locking with Push Button—Push and hold the button, adjust the jaws, then release the button to lock the jaws in position.

Locking with Slide Button—Slide and hold the button, adjust the jaws, then release the button to lock the jaws in position.

Locking with Push Button and Ratchet Action—Same as push-button pliers, but have ratcheting action. Designed to provide 10 times the leverage of standard pliers. All have smooth nonmarring jaws (no serrations). The bottom jaw remains parallel to top jaw at all times.

V-Jaw—Have more points of contact for a better grip on round and irregular workpieces.

Parrot Jaw—Have smooth jaws (no serrations) that will not mar objects. Bottom jaw is shorter than the top to get a good grip on the flats of bolt heads and nuts, even those with rounded edges.

2-Pc. Locking with Push Button V-Jaw Pliers Set—Includes 5307A41 and 5307A42 above.

5307A21 ..... **Per Set** $64.55

Self-Adjusting Pliers

Tackle different-size workpieces with ease. Just squeeze the handle on these pliers and the serrated jaws automatically adjust to fit your object, providing a secure hold. These pliers are also self-gripping; you don't have to squeeze the handles together as you apply downward pressure. Made of laminated steel with cushion-grip handles.

Use *V-jaw* pliers to hold hex nuts and irregular shapes.

Jaw Style	O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
Curved	7″	1 3/16″	7/8″	51375A34	$15.73

2-Piece Set—Includes one 7″ curved jaw pliers and one 10″ V-jaw pliers.

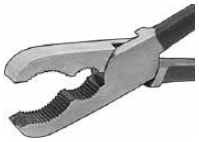
51375A52 ..... **Per Set** $31.62

Adjustable Pliers for Plastic Pipe

The jaws are circular to grip PVC, CPVC, and other plastic pipe without scratching. Jaws are serrated. Made of chrome-plated forged black steel with cushion-grip handles.

O'all Lg.	Max. Jaw Opening	No. of Positions		Each
10″	3″	25	5465A19	$56.47

Double Pipe-Grip Pliers



Fit a range of pipe sizes with one tool—jaws have small and large pipe grips. The round nose gets into tight spaces, especially when you're working on burners and gas pipe fittings. Made of forged steel with plain handles.

O'all Lg.	Jaw Lg.	Pipe Size Min.	Pipe Size Max.		Each
10″	2 1/8″	5/16″	1 1/2″	5622A3	$32.43

Soft-Jaw Adjustable Pliers

With Nylon Insert Pads

With Urethane Insert Pads

Comparable to Cannon plug pliers, all have replaceable pads on their jaws to protect delicate materials from marring. Made of forged steel. Use for plastic pipe, glass, ceramics, electrical connectors, and tubing. Handles have cushion grips.

Pliers ***with nylon insert pads*** have a spring-loaded mechanism that automatically opens jaws. Good for use on irregular shapes.

O'all Lg.	Max. Jaw Opening	Pliers Each	Repl. Pads (Set of 2)	Per Set

Combination Jaw Slip-Joint Pliers

Standard Duty w/Plain Handles

Standard Duty w/ Static-Dissipative Handles

Heavy Duty w/ Cushion-Grip Handles

Heavy Duty Side Cutting

A good all-purpose choice, pliers have a slip-joint design, serrated jaws, and a built-in wire cutter, unless stated otherwise.

Standard Duty—*Type 420 stainless steel* pliers have good corrosion resistance and can be autoclaved for sterile environments. *Brass* pliers have softer jaws than steel pliers and will not mar your workpiece. Pliers *with high-visibility cushion-grip handles* have neon-colored grips for easy identification. Pliers *with static-dissipative (ESD-safe) handles* have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. *Straight thin-nose* pliers reach into confined areas where other pliers won't fit.

Heavy Duty—More rugged than standard duty pliers. *Side-cutting* pliers have a sharp, 7/16″ long edge that acts as a wire cutter.

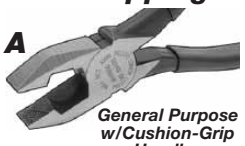
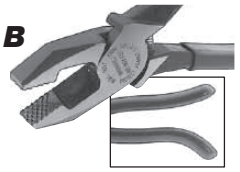
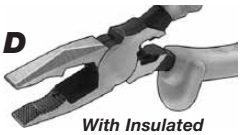
Wire Gripping and Cutting Pliers



General Purpose w/Cushion-Grip Handles



General Purpose



With Insulated Cushion-Grip Handles

Choose these strong, durable pliers for gripping and cutting electrical wiring. Also known as lineman's and side-cutting pliers, tools are made of forged steel (unless indicated otherwise) and have serrated jaws.

Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

High Leverage— The joint rivets are closer to the cutting edges to provide more cutting power than general purpose pliers.

Ultra Cutters— Can cut through steel-reinforced wire (ACSR), hardened wire, and nails.

High Leverage with Ultra Cutters— Same as high leverage pliers above, plus cutters that can cut through steel-reinforced wire (ACSR), hardened wire, and nails.

Insulated Handles with Ceramic Blades— Made entirely of composite material, pliers are lightweight and non-corrosive. They comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts.

Insulated Cushion-Grip Handles— Comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. All have finger guards to prevent contact with the jaws.

♦ Has a crimping die.

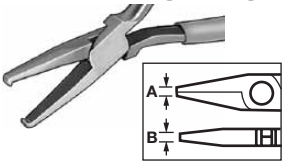
Long-Reach Wire Gripping and Cutting Pliers

Handles are long so jaws can grip, twist, and cut in areas normally out of reach. The joint rivet is located closer to the cutting edges to provide more cutting power than standard side-cutting pliers. Jaws have 1/4" long serrated grippers and 3/8" long cutting edges. Made of forged steel with cushion-grip handles.

O'all Lg.	Jaw Lg.		Each
11"	55/64"	57205A23	$35.13

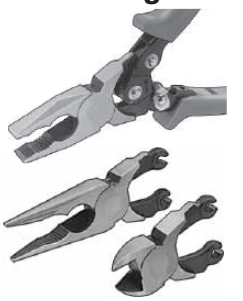
End-Cutting Long-Nose Pliers



The cutting edges extend all the way across the tip of the nose for close, semiflush cutting. Also called end cutters, these pliers are well-suited for use on circuit boards and other delicate electronics. Made of forged steel with cushion-grip handles.

O'all Lg.	Jaw Lg.	Tip Thick. (A)	Tip Wd. (B)	Max. Wire Size, AWG (Dia.)		Each
8"	1 9/16"	9/32"	3/16"	14 (0.064")	5761A15	$25.80

Interchangeable-Head Plier Set



You'll get plier handles and three plier heads you change to fit your application: a wire-cutting head, a wire gripping and cutting head, and a long nose with side cutter head. Pliers have a dual-hinge design that increases leverage and delivers twice the gripping power of standard pliers.

Heads are forged steel and cut steel-reinforced wire (ACSR), hardened wire, and nails. Handles are alloy steel with cushion grips and have a spring return. Set has a nylon carrying holster. *Wire gripping and cutting head* and *long nose head* have serrated jaws.

Head Type	O'all Lg. (w/Handles)	Jaw Lg.	Max. Wire Size, AWG (Dia.)

1105A1 — Per Set — $32.91

Mini Thin-Head Wire-Cutting Pliers

When you don't plan on everyday, repetitive use, these pliers are an economical alternative to our other miniature wire-cutting pliers. All have a thin, angled head that allows cutting in confined areas. Pliers make a flush cut and have a spring return.

Steel pliers cut soft wire. ***Type 420 stainless steel*** pliers have good corrosion resistance and cut soft wire and medium hard wire.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with ultra-grip handles*** have grips made of both hard and soft materials for a more comfortable grip than cushion grips.

● Has a catch to hold cut wire.

About Wire-Cutting Pliers

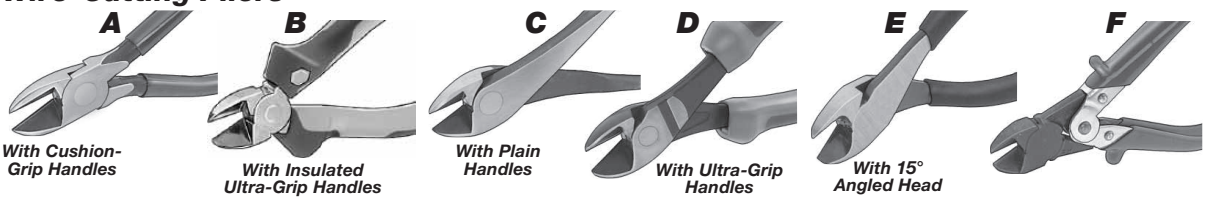
Wire-cutting pliers, also known as diagonal-cutting pliers, produce one of three cuts: standard, semiflush, or flush. These styles refer to the amount of "pinch" left on the tip of the wire after it has been cut.

Standard— These pliers produce a deep, pointed, pinched end. Use for electrical and general applications.

Semiflush— The most widely used cut for electronics assembly, these pliers produce a slightly pointed pinched end. They are generally more accurate than standard-cut pliers.

Flush— Pliers produce a cut with virtually no "pinch," creating clean connections for easy soldering. Flush-cut pliers are not as long lasting as standard and semiflush.

Wire-Cutting Pliers



With Cushion-Grip Handles | *With Insulated Ultra-Grip Handles* | *With Plain Handles* | *With Ultra-Grip Handles* | *With 15° Angled Head*

Also known as diagonal-cutting pliers and dike pliers, these tools have cutting edges that are beveled for close cutting and hardened for long-lasting sharpness and durability. Pliers have oval-shaped heads and are made of forged steel unless indicated otherwise.

General Purpose— For cutting soft steel wire and copper wire. The *Type 420 stainless steel* pliers offer good corrosion resistance. *Type 420 stainless steel pliers with plain handles* are also autoclavable for sterile environments.

High Leverage— The joint rivets are closer to the cutting edges to provide more cutting power than general purpose pliers. In addition to cutting soft steel wire and copper wire, pliers can cut most hardened wire.

Ultra High Leverage— Have super-tough cutting edges to cut through steel-reinforced wire (ACSR), hardened wire, and nails (in addition to cutting soft steel wire and copper wire).

Compound Leverage— The jaws and the handles have leverage points to permit easy cutting of soft steel wire and copper wire.

Pliers ***with spring return*** have jaws that automatically open after the cut is made to reduce operator fatigue.

Pliers ***with high-visibility handles*** have neon-colored grips for easy identification; grips are available in green, orange, and red.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components.

Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1000 volts; they have finger guards to keep your fingers away from the jaws.

Pliers ***with ultra-grip handles*** have grips that are made of hard and soft materials to offer a more comfortable grip than cushion grips.

Plastic-Cutting Pliers

Designed for cutting plastics, these extremely sharp pliers make a flush cut that leaves a smooth, finished edge. Not intended for cutting metal or wire.

Pliers are made of forged steel with a tapered and flat head that's ground flat on the back side for close trimming in confined areas. All have a spring return.

Pliers ***with adjustable stop*** have an adjustment screw to prevent the jaws from closing completely, which prolongs cutter life. Pliers ***with fatigue-reducing handles*** have contoured handles to minimize wrist strain and provide maximum comfort.

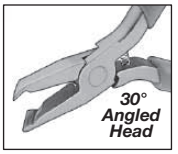
Miniature Wire-Cutting Pliers

For information about wire-cutting pliers and cut styles, see page 2743.

Miniature Wire-Cutting Pliers

Oval Head with Static-Dissipative Cushion-Grip Handles



30° Angled Head

Tapered and Flat Head with Static-Dissipative Fatigue-Reducing Handles

A small head and hardened cutting edges yield good cutting results in most electronics applications. Also known as diagonal-cutting pliers, tools cut soft wire and copper wire. All have a spring return and cushion grips. ***Type 420 stainless steel*** pliers have good corrosion resistance.

Oval head pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces. ***Tapered and flat head*** pliers are ground flat on the back side for close trimming in confined areas. Pliers ***with static-dissipative (ESD-safe) handles*** have grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with fatigue-reducing handles*** have extra-long contoured handles that evenly disperse gripping pressure.

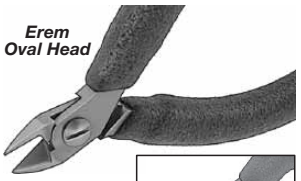
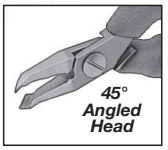
3817A21 ..... **Per Set** $93.60

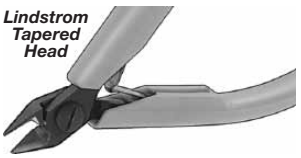
Miniature Precision Wire-Cutting Pliers



Erem Oval Head



45° Angled Head



Lindstrom Tapered Head

You'll find these pliers a cut above the rest. Also known as diagonal-cutting pliers, tools cut soft steel and copper wire. All have a miniature head, precision cutting edges, and an adjustable screw joint that keeps the jaws aligned. Pliers are made of steel with static-dissipative (ESD-safe) handles that dissipate electrostatic charges to protect sensitive electronic components. ***Oval head*** pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces. ***Tapered and flat head*** pliers are ground flat on the back side for close trimming in confined areas.

Erem "Magic" Pliers— Formed by a process that imparts extra strength to the tool. All have an internal "magic" spring that provides constant, uniform tension for superior performance.

Lindstrom Pliers— Have a spring return that automatically opens the jaws to reduce operator fatigue.

Miniature Precision Anti-Glare Wire-Cutting Pliers

Tapered Head

The black chrome finish on these pliers won't cause glare that can interfere with precision work. Made of forged steel, they have hardened cutting edges and a spring return that automatically opens the jaws to reduce operator fatigue. Pliers have ultra-grip handles, which are made of both hard and soft materials to provide a comfortable grip.

Oval head pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces.

Miniature Precision Tungsten Carbide Wire-Cutting Pliers

Oval Head with Ultra-Grip Handles

Tungsten carbide cutting edges are bonded to the jaws for long life and superior cutting of soft, medium, and hard wire. Pliers are made of steel and have a joint that keeps the cutting edges aligned. All have a spring return and static-dissipative (ESD-safe) handles that dissipate electrostatic charges to protect sensitive electronic components.

Pliers ***with ultra-grip handles*** have grips made of both hard and soft materials for a more comfortable grip than cushion grips. ***Oval head*** pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces.

Air-Powered Wire-Cutting Pliers

Use your shop's air supply to power these cutting pliers. They're great for high-volume cutting and trimming of plastic (Style 1 jaw) and soft wire (Styles 2-5 jaws). Jaws can be mounted in the handle for right- and left-hand use. Pliers require 60 to 100 psi air supply. For bolt and cable cutters, see pages 2360 and 2362-2363.

Power Handles— Have an aluminum housing and a safety lever with a thumb latch that must be pushed forward to activate the lever. Come with a 5-ft. hose with 1/8" NPT male connection for power handle and 1/4" NPT male connection for air supply.

Cutting Jaws— Made of steel with a rust-resistant black-oxide finish. Jaws can be sharpened. *Scissor style* is useful for clean cutting of fine wire and nickel ribbon.

Also Available: Repl. parts. Please ask for 56145A21 and specify part name.

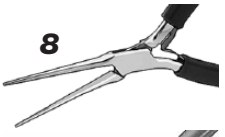
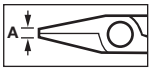
Long-Nose Pliers





Also called needle-nose and chain-nose pliers, these are ideal for tight locations. Made of forged steel with serrated jaws, unless noted.

Pliers ***with wire cutter*** have hardened cutting edges that can cut soft wire. 5614A44 can also cut medium hard and hard wire. Pliers ***with spring return*** have a spring that automatically opens the jaws to reduce fatigue. Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic parts. Pliers ***with high-visibility handles*** have neon-colored grips for easy identification. Pliers ***with ultra-grip handles*** have grips made from hard and soft materials for a more comfortable grip than cushion grips. Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. ***Miniature-head*** pliers are ideal for electronics applications.

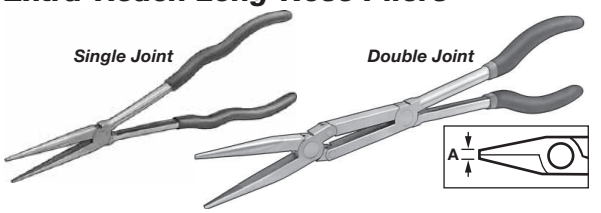
Long-Nose & Hemostat Pliers

For information about wire-cutting pliers and cut styles, see page 2743.

Extra-Reach Long-Nose Pliers

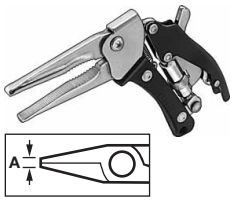


Perfect when you need to extend your reach, the handles on these pliers are longer than those on most long-nose and flat-nose pliers. Made of forged steel with cushion-grip handles. Jaws are serrated.

***Double Joint*—**Pliers have two joints, allowing the jaws to fully open with minimal handle movement. Useful for reaching into narrow areas.

	O'all Lg.	Jaw Lg.	Tip Thick. (A)		Each
Single Joint	11″	2 51/64″	11/64″	5777A22	$26.83
Double Joint	13″	3″	9/64″	5777A16	29.62

Long-Nose Locking Pliers



Get pistol-grip locking pliers and long-nose pliers in one tool. Just turn the pressure adjusting screw in the handle to lock the jaws around your workpiece. Pliers will stay clamped, leaving your hands free. A long nose on the jaws is ideal for use in confined spaces. Jaws are serrated and made of forged steel with a nickel-plated finish.

O'all Lg.	Jaw Lg.	Tip Thick. (A)		Each
8 5/8″	2 1/2″	5/16″	6261A11	$47.35

Flat-Nose Pliers

Although similar to long-nose pliers, these tools have a flat jaw head and wider tips. Also known as duckbill pliers, they're useful for reaching into confined spaces.

***With Cushion-Grip Handles*—**Jaws are serrated. 5567A12 can cut soft and medium hard wire up to 10 AWG (0.102″ Dia.).

***With Static-Dissipative (ESD-Safe) Cushion-Grip Handles*—**Have grips that dissipate electrostatic charges to protect sensitive electronic components. They have smooth jaws and a spring return. Type 420 stainless steel pliers have good corrosion resistance.

***With Insulated Cushion-Grip Handles*—**Meet IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. Jaws are serrated.

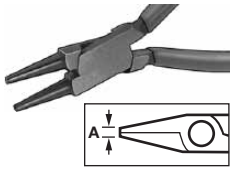
Round-Nose Pliers



Commonly used to loop and form fine wire, pliers have a round nose and smooth jaws. ***Forged steel*** pliers have a cushion-grip handle. ***Type 420 stainless steel*** pliers resist corrosion and have static-dissipative (ESD-safe) cushion-grip handles that dissipate electrostatic charges to protect sensitive electronic components.

Material	O'all Lg.	Jaw Lg.	Tip Thick. (A)	Spring Return		Each
Forged Steel	4 1/2″	1 1/4″	9/64″	Yes	5779A6	$22.05

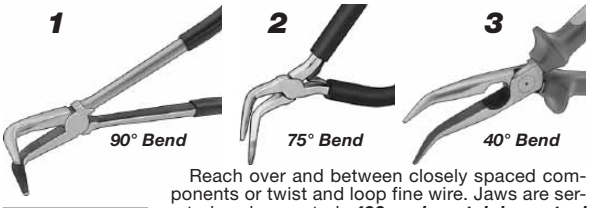
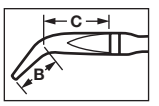
Type 420 SS	6″	1 7/32″	7/64″	Yes	5779A21	32.26

Bent-Nose Pliers





Reach over and between closely spaced components or twist and loop fine wire. Jaws are serrated, unless noted. ***400 series stainless steel*** pliers have good corrosion resistance.

***Style 1*—**5632A16 has a wire cutter for cutting medium and hard wire up to 16 AWG (0.051″ Dia.).

***Style 2*—**Pliers have static-dissipative (ESD-safe) handles with grips that dissipate electrostatic charges to protect sensitive electronic components. A spring return automatically opens the jaws.

***Style 3*—**Handles are insulated to comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. Pliers are chrome plated with hardened cutting edges to cut soft and hard wire.

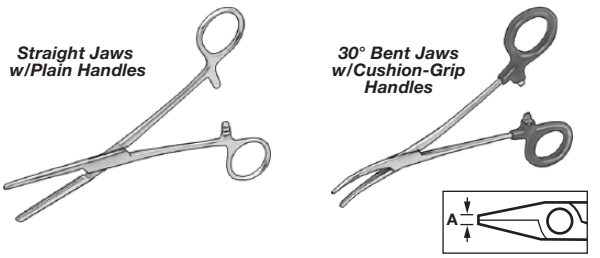
●Smooth jaws.

Stainless Steel Hemostat Pliers



Use hemostat pliers for intricate work in tight spaces. All have a ratchet lock in the handle that allows you to vary the gripping pressure. Jaws are serrated and hold firmly without cutting. Made of 400 series stainless steel for good corrosion resistance.

Bent jaws have a 20° to 30° jaw bend, unless noted.

For information about wire-cutting pliers and cut styles, see page 2743.

Wire-Twisting Pliers

Manual Return

Also known as lock wire pliers, tools twist and cut Type 302/304 stainless steel safety wire (sold separately, see series 8860K on page 3828). Pliers are made of forged alloy steel with a black-oxide finish. Pliers have a diagonal nose and serrated jaws.

Note: If the plier body cannot turn freely, the wire will not twist.

***Manual Return*—** You push the knob back into the housing.

***Automatic Return*—** Simply release the knob and a spring automatically retracts it. Pliers *with wire catch* hold cut wire.

***Set*—** Packed in a plastic case. Wire meets ASTM A580 and MS 20995C. For extra wire, see series 8860K on page 3828.

***5-Piece Set*—** Includes 5296A62 automatic-return pliers above, long-reach wire-twisting pliers (shown on this page), and three 1/4-lb. spools of Type 304 stainless steel safety wire in sizes 0.020", 0.032", and 0.041".

5296A55 ..... **Per Set** $163.56

Hose Pinch-Off Pliers

Once you clamp these pliers onto a hose, their automatic locking ratchet holds the jaws in place, allowing you to squeeze shut nonwire-reinforced hose.

Jaws swivel for parallel clamping and positive shutoff. Pliers virtually eliminate the need for draining the hose when installing thermostats and pumps on pressurized cooling systems. Ideal for radiator and heater hoses and water, air, vacuum, and fuel lines. Pliers are steel and have cushion-grip handles.

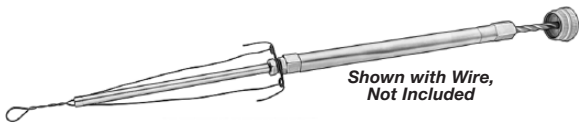
O'all Lg.	Jaw Lg.	OD Capacity		Each
5 1/2"	1 3/8"	3/4"	5774A21	$12.82
9 3/4"	2 1/2"	1 1/2"	5774A14	27.22
14"	4 3/8"	2 1/2"	5774A22	31.00

Fence Pliers

The plier head has a serrated hammer for driving staples on one side, a point for pulling staples on the other, and a 3/4" deep staple grip on top. Plus, there is a wire cutter on each side for double-stranded barbed wire and a wire stretcher between the handles. Made of forged steel with cushion-grip handles.

O'all Lg.	Head Lg.	Max. Wire Size, AWG (Dia.)		Each
10 1/2"	3 3/16"	11 (0.090")	5636A4	$21.27

Long-Reach Wire-Twisting Pliers

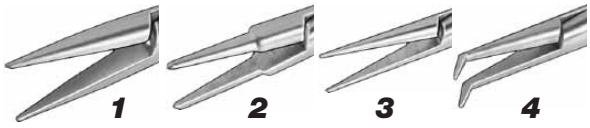


Shown with Wire, Not Included

Twist wire in narrow, hard-to-reach areas. Pliers have a slim design and come with an extension for extra length. Use with Type 302/304 stainless steel safety wire (sold separately, see 8860K series on page 3828). First, thread wire through the plier tip to the outside of the shaft. Then, thread the wire through the eyelets and bend the wire ends over to keep the wire in place. Finally, pull out the knob to twist the wire. Tool rotates clockwise. Shaft is made of chrome-plated steel.

O'all Lg.	Tip Dia.	Max. Wire Cap.		Each
13" or 19"	1/4"	0.057"	5726A9	$51.98

Stainless Steel Precision Micro-Pliers



Easily work in the smallest of spaces, such as under a microscope. Pliers are made of 400 series stainless steel for good corrosion resistance. All can be autoclaved up to 600° F. Handles are designed to act as a spring return.

	O'all Lg.	Jaw Lg.		Each
1 Round Nose	3"	15/32"	5261A12	$31.30
2 Standard Long Nose	3"	15/32"	5261A11	31.30

4 45° Bent Nose	3"	3/8"	5261A14	31.30

Palm-Grip Miniature Pliers

Designed to fit comfortably in the palm of your hand, pliers have stainless steel jaws for good corrosion resistance. Handles are plastic and have a spring return.

Wire-cutting pliers make a flush cut. Max. wire size is 18 ga. (0.040" dia.).

	O'all Lg.	Jaw Lg.		Each
Wire Cutting	4 1/4"	5/16"	5486A3	$43.82

55° Bent Nose	4 3/4"	1"	5486A7	38.45

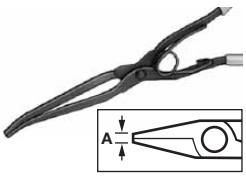
Breakaway Collar Removal Pliers

Remove breakable round collars on 5/32" to 5/16" Hi-Lok, Hi-Lite, Hi-Tigue, Veri-Lite, and C-Lok style fasteners—even those with rounded and stripped collars. Also called Hi-Lok pliers, these get under collars to break them without cutting or damaging the fastener and surrounding material. Pliers work on collars/fasteners that have press-fit installation (hole is slightly smaller than fastener body) and clearance-fit installation (hole is slightly larger than fastener body). For collars/fasteners with clearance-fit installation, use a T-handle hex key (sold separately, see pages 2835-2837) to keep the fastener from turning.

Head is offset 20° and jaws are notched for maximum gripping power. Made of forged steel with a black-oxide finish and cushion-grip handles.

O'all Lg.	Jaw Thick.	Jaw Tip Width		Each
7 1/2"	9/32"	7/8"	1061A1	$37.22

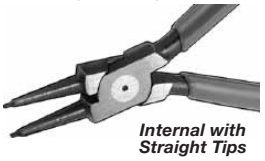
Long-Reach Clamping Pliers



Similar to using a clamp, you squeeze the handles to open the jaws. When you release the handles, a spring snaps the jaws closed to hold your workpiece. Made of steel, pliers have long, serrated jaws and a 35° bend at the jaw tips for reaching into and around tight spaces. Handles have cushion grips.

O'all Lg.	Max. Jaw Opening	Jaw Lg.	Tip Thick. (A)		Each
9 1/4"	1 1/4"	3"	1/4"	5295A41	$42.73

Heavy Duty Fixed-Tip Retaining-Ring Pliers



Internal with Straight Tips

External with 90° Tips

One-piece forged construction from the tips to the handles delivers super strength and long life. Made of hardened and tempered alloy steel. Handles have cushion grips. ***Internal pliers*** are for installing and removing rings inside a bore. ***External pliers*** are for installing and removing rings around a shaft. Pliers have a spring return.

5391A91 ..... **Per Set** $113.92

Twist-Grip Replaceable-Tip Retaining-Ring Pliers Set

Give the handle a turn to open and close the jaws while you install and remove internal and external retaining rings. Use with rings that have bore diameters (for rings in a bore) from 2 7/16″ to 3 1/2″ (62 to 89 mm) and shaft diameters (for rings on a shaft) from 1 1/2″ to 4″ (38 to 102 mm). Made of stamped steel.

Set includes pliers, an extra pair of jaw plates and screws, and one pair each of 15° and 45° angle tips in 0.108″ dia. and 45° angle tips in 0.123″ dia. Pliers require a 3/32″ hex key (not included) to change tips. Overall length is 10″.

5538A11 ..... **Per Set** $51.82

Replacement Tip Set— Includes one pair each of 15° and 45° angle tips in 0.108″ dia. and 45° angle tips in 0.123″ dia., plus replacement jaw plates and screws. Packed in a plastic box.

5538A12 ..... **Per Set** $10.93

Replaceable-Tip Large-Diameter Retaining-Ring Pliers

A ratchet mechanism makes it easy to handle large rings. Compress and expand rings gradually, then lock in at the desired size without the need to keep pressure on the handles. Pliers are made of stamped, heat-treated steel and include a pair of straight steel tips. Require a #2 slotted screwdriver (not included) to change tips, except for 5300A27, which requires a 5/32″ hex key (not included). ***Internal pliers*** are for installing and removing rings inside a bore. ***External pliers*** are for installing and removing rings around a shaft.

Also Available: Extra tips. Please ask for 7131A1 for pliers with cushion-grip handles, 5300A3 for plain-handle pliers, and specify tip diameter and angle (straight, 15°, 45°, or 90°).

Note: 15° angle tips not available for pliers with plain handles.

6 3/4″ -9 1/2″ (171-241 mm)	0.170″	19″	5300A35	161.99

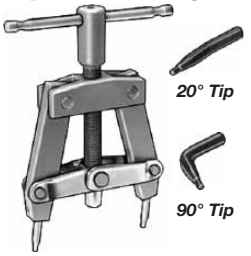
10-Piece Cushion-Grip Set— Includes internal pliers 7131A21, external pliers 7131A31, and one pair each of straight, 15°, 45°, and 90° angle tips in 0.108″ and 0.120″ dia. Packed in a plastic case.

7131A13 ..... **Per Set** $122.13

7-Piece Plain-Handle Set— Includes internal pliers 5300A21 and external pliers 5300A33, both with 0.120″ dia. straight tips. Plus, one pair each of straight, 45°, and 90° angle tips in 0.120″ dia.

5300A61 ..... **Per Set** $198.62

Large-Diameter T-Handle Replaceable-Tip Retaining-Ring Tool Set



Install and remove large-diameter retaining rings easily and securely. The sliding T-handle and compound screw multiplies the force you exert and keeps internal rings contracted and external rings expanded to hold the rings in place. Tool is made of heat-treated steel and comes with one pair each of 20° angle and 90° angle tips in 0.120″, 0.150″, and 0.180″ dia. and a hex key for changing tips. Overall length is 7″. Packed in a plastic case.

Repl. Tip Sets— Include one pair each of 0.120″, 0.150″, and 0.180″ dia. tips.

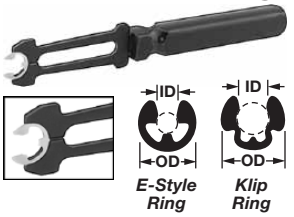
90° Angle Replacement Tip Set			5410A83	14.83

External Retaining-Ring Tools



Choose tools for installing E-style or Klip ring retaining rings. Slide the retaining ring in between the jaws of the tool and push the ring onto a shaft. Remove rings by pulling or prying them off the shaft. Tools have steel jaws and a plastic handle. Overall length ranges from 4 15/16″ to 6 1/8″.

Stainless Steel Locking Pliers

Made of Type 304 stainless steel to resist corrosion, pliers can be sterilized. All have a trigger-release lever handle and a pressure-adjusting screw to create a firm grip. Jaws are serrated.

Jaw Type	O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
Curved	7″	1 7/16″	1″	54645A24	$57.89
Straight	9″	1 3/4″	1 3/8″	54645A31	62.93

Storage Holder for Locking Pliers

Create convenient storage for up to three locking pliers (not included). Great for mounting to a table or bench top, holder has a thumb screw and a swivel pad that act like a C-clamp to firmly grip any surface up to 2″ thick. Made of steel with a corrosion-resistant enamel finish. Holder is 4 15/16″ Ht. × 2 1/2″ Wd.

Fits Pliers Lg.		Each
4″-5″, 6″-7″, 8″-12″	4978A22	$16.00

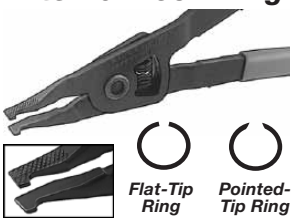
E- and C-Style External Retaining-Ring Tool

E-Style Ring *C-Style Ring*

A spring on one end of the tool holds a ring in position for installation, and a hook on the other end is for removal. Use with external E- and C-style rings with an ID of 0.156″ to 3″ and a thickness of 0.025″ to 0.093″. Made of steel. Overall size is 6 3/4″ Lg. × 9/32″ Wd. × 1/16″ Thick.

5728A2 ..... **Each** $19.44

External Lock-Ring Pliers

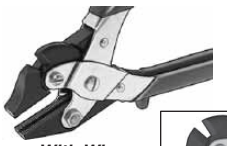


Flat-Tip Ring *Pointed-Tip Ring*

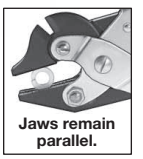
Use pliers with 3/4″ to 1 3/4″ diameter external flat and pointed-tip lock rings (also known as Eaton-style snap rings). Pliers are made of heat-treated steel and have cushion-grip handles with spring return. Jaw tips are offset and finely scored on the outside to prevent slipping. O'all length is 8 1/2″.

5773A14 ..... **Each** $20.03

Parallel-Action Pliers



With Wire Cutter



Jaws remain parallel.

Jaws remain parallel for a stronger grip—this keeps irregularly shaped objects from slipping forward when pressure is applied. Pliers have serrated steel jaws and plain handles made of nickel-plated steel. They also have a V-shaped slot in the lower jaw that allows you to lead wire and pins down the throat of the pliers. Close the pliers to hold the wire or pin firmly in place during pulling operations.

O'all Lg.	Max. Jaw Opening	Jaw Lg.	Max. Wire Size, AWG (Dia.)		Each
Without Wire Cutter					
5″	3/8″	1 3/8″	———	5654A1	$32.02

8″	11/16″	1 5/8″	4 (0.204″)	3728A4	60.00

Self-Adjusting Locking Pliers

Automatically lock onto an object without repeated adjusting. Set the desired clamping pressure and jaws will automatically adjust to your work. An easy-release handle allows you to open with one hand. Pliers have serrated curved jaws and a wire cutter. Made of nickel-plated alloy steel.

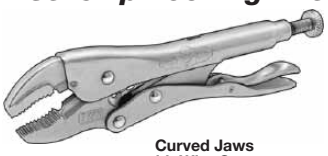
O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
6″	1″	1″	5113A2	$16.09
10″	2″	1 1/4″	5113A3	18.45

Swivel-Jaw Locking Pliers

The swivel action of the jaw pads provides a secure hold on many shapes. Made of steel with knurled pads and a trigger-release lever handle. Use the pressure-adjusting screw to create a firm grip.

O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
9 1/4″	1 3/4″	1 1/2″	5114A51	$32.16
11 3/4″	3 15/16″	3 1/2″	5114A52	36.90

Vise-Grip Locking Pliers



Curved Jaws with Wire Cutter (Trigger-Release Handles)

Long Nose Jaws (Easy-Release Handles)

Hex Jaws

Straight Jaws

Pinch-Off Jaws (Nonserrated)

Turn the pressure-adjusting screw in the handle to lock the jaws in a vise-like grip around your workpiece. Pliers stay clamped on your work, leaving your hands free. Pliers are made of nickel-plated alloy steel. Jaws are serrated, unless noted.

Trigger-Release Handles—To open pliers, press the release trigger on the lower handle.

Easy-Release Handles—You can pull handles open with one hand; handles open twice as easily as trigger-release handles.

Pliers with wire cutter cut up to 3/64″. One bite will cut thinner wires; progressive bites will cut thicker wires.

Pliers with hex jaws lock on three sides of a hex fastener without damaging or slipping off the fastener.

Pliers with pinch-off jaws are for pinching off tubing as well as water and gas lines in general repair work.

Trigger-Release Sets

3-Pc. Set—Includes one each of 5″ curved jaw without wire cutter, 10″ curved jaw with wire cutter, and 6 1/2″ long nose with wire cutter. Packed in a pouch.

5369A46 ..... Per Set $29.74

3-Pc. Set—Includes one each of 10″ curved jaw with wire cutter, 6 1/2″ long nose with wire cutter, and 7″ straight jaw without wire cutter.

5172A42 ..... Per Set $25.79

4-Pc. Set—Includes one each of 10″ curved jaw with wire cutter, 6 1/2″ long nose with wire cutter, and 7″ and 10″ straight jaw without wire cutter. Packed in a pouch.

5369A47 ..... Per Set $42.10

Easy-Release Set

4-Pc. Set—Includes one each of 7″ and 10″ straight jaw and 7″ and 10″ curved jaw; all are without a wire cutter. Packed in a box.

5172A54 ..... Per Set $46.95

Adjustable Wrenches

Adjustability makes these wrenches a popular choice—they fit workpieces in many shapes and sizes.

Wrenches and Wrench Sets

Made of steel. **Automatic Locking—**Prevent accidental adjustment that can cause the jaws to loosen and slip off your workpiece. Apply pressure to these wrenches and the knurls won't turn.

5371A24 ... $29.93

Round-Grip Nonmarring Pipe Wrenches

Jaws and Handle Sold Separately

Build your own pipe wrench. The smooth jaws grip most round surfaces, even highly polished objects. Push down on the wrench and pull the handle toward you—the jaws will encircle the workpiece. Made of steel. Handles have a red painted finish. Jaws and handles are sold separately. Note: Jaws are not interchangeable with other handles.

To Order: For jaws, please specify size from those listed. A separate jaw is needed for each pipe diameter.

Jaw and handle sets include a handle and one of each jaw size listed.

Pipe Wrenches and Heavy Duty Adjustable Wrenches

These tools have a heavy duty handle. Hook jaws and heel jaws are steel. Wrenches meet Fed. Spec. GGG-W-651e, unless noted.

Pipe Wrenches—Have serrated jaws. The *aluminum* wrenches are more corrosion resistant and lighter weight than iron wrenches.

Heavy Duty Adjustable Wrenches—Have smooth jaws and are not for use on pipe.

End style wrenches have an angled head for working in tight spaces. *Offset style* wrenches are similar to end style, but are especially effective for overhead work.

Note: Straight style and end style wrenches have the same replacement parts.

Self-Adjusting Pipe Wrenches

The top jaw is hinged to clamp down without the need for adjustment screws. Jaws are serrated and made of steel.

Standard—Jaws are spring loaded for a snug fit.

Ratcheting—The head rotates to provide leverage in hard-to-reach spots.

Standard

Strap & Chain Wrenches

Strap Wrenches

Grip objects of almost any shape without marring. These wrenches are good for plastic pipe, tubing, hand wheels, filters, and objects with highly polished surfaces.

Styles A&B have an iron handle. Style A has a polyester strap. Style B has a rubber-coated polyester strap. **Style C** have a plastic handle and rubber strap. **Style D** has an aluminum handle and rubber strap. **Style E** have an iron handle and a rubber-coated polyester strap. A shackle holds the strap closed for extra turning force and allows quick adjustment.

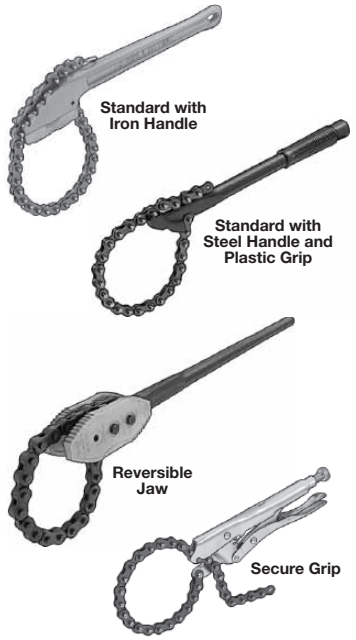
Chain Wrenches



Grip objects of almost any shape with these heavy duty wrenches. Chain is steel. Wrenches meet Fed. Spec. GGG-W-651e, unless noted.

Reversible Jaw—When the teeth on the jaws become burred or dull, reverse them to double the service life of these tools. Also known as chain tongs.

Secure Grip—Turn the adjustment screw and squeeze the handle to lock the chain. Press the lever to release. Add as many 18″ lengths of **extension chain** (sold separately) as you need to the chain already on your wrench.

About Spanner Wrenches

There are two styles of spanner wrenches, pin style and hook style. Both styles are offered in fixed and adjustable versions. **Fixed** wrenches fit a single circle diameter. **Adjustable** wrenches fit a range of circle diameters—a good choice when you are unsure of the exact diameter you're working with.

Pin style spanner wrenches fit into round holes. Holes can be located on the **side** (circumference) of rings, locknuts, and collars or on the **face** of flanges and collars.

Pin Style

Holes on the Side

Holes on the Face

Hook style spanner wrenches fit into slots. Slots are located on the **side** (circumference) of rings, locknuts, and collars.

Hook Style

Slots on the Side

Spanner Wrenches

These wrenches are shaped to fit round holes on the circumference of rings, flanges, collars, bearings, and other machine tool equipment. All are steel with a black finish, except Style F also comes in stainless steel. **Stainless steel** wrenches are corrosion resistant and can be autoclaved up to 600° F.

6724A21 ..... $560.91

Deep-Reach Adjustable Hook Spanner Wrenches

In addition to a 24″ long handle, these wrenches include two heads with different hook widths. They're shaped to fit slots on the circumference of collars, bearings, and other machine tool equipment. Each head has an overall size of 12″ Lg. × 4¾″ Ht. to fit circles from 4¾″ to 12¾″ dia. One head has a ½″ Dp. × ⅜″ Wd. hook; the other has a ½″ Dp. × ¾″ Wd. hook. Made of chrome-plated steel.

5479A11	$266.79

Horizontal Flex-Head Ratcheting Combination Wrenches

The 12-point ratcheting box end pivots 180° horizontally for access to tight spots. It requires a 5° turn to engage the ratchet and has a locking head. The other end is open and rounded. Wrenches are chrome-plated steel and are polished for a mirror-like finish.

8-Piece Set—Includes one of each wrench listed above. Furnished in a plastic caddy.

5125A1	$167.18

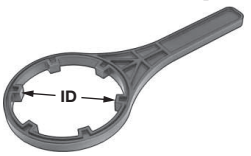
Adjustable-Arm Spanner Wrenches

Use these wrenches for internal and external retaining rings, bushings, and collets. They fit 1½″ to 7″ circle diameters. Set includes 3½″ and 7″ hex steel bars, two 3¼″ aluminum arms, and three pairs of tips: 3/16″ Wd. × 1/32″ Thick., 3/16″ Wd. × 1/16″ Thick., and 1/16″ dia. round point. Each arm has a locking thumb screw for adjustments (arms with tips inserted adjust 2″, 2¾″, and 3½″ below the knob). All tips lock securely into arms with set screws.

Replacement tip set includes the three pairs of tips listed above.

Wrench Set	**5770A1**	$123.08
Replacement Tip Set	**5770A2**	33.26

Water Filter Spanner Wrenches



These wrenches have contact points to grip and loosen water filter housings. To estimate the diameter of your housing, measure its circumference and divide by 3.14. Wrenches are not for tightening.

ID	No. of Contact Points	O'all Lg.		
3¾″	6	11½″	**91824A100**	$3.19

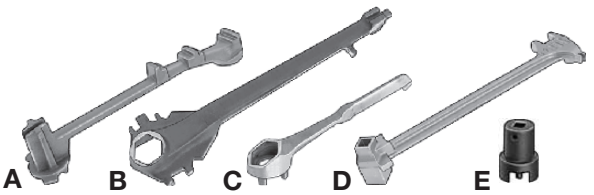
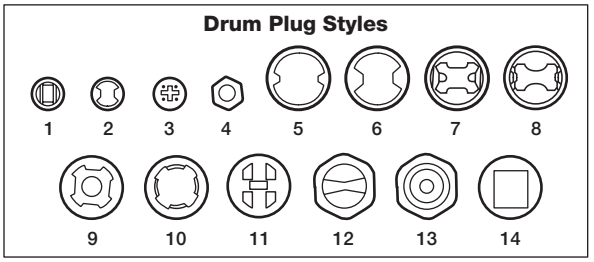
Drum-Plug Wrenches and Square-Drive Sockets





Also known as bung wrenches, these tools are used to install and remove standard screw-in 3/4″ and 2″ steel and plastic drum plugs.

Nonsparking wrenches meet OSHA requirements. *Style C* is nonmagnetic and FM approved.

1/2″ square drive socket allows you to use your ratchet wrench as a handle to install and remove screw-in drum plugs. Size is 1 15/16″ OD × 2 3/4″ Lg.

Multi-Size Open-End Wrenches

The V-shaped head fits multiple hex fastener sizes. Also known as alligator wrenches and water-meter nut wrenches. Wrench is red powder-coated steel with zinc-plated steel jaws and a plastic grip. Head is 5/8″ thick. Overall length is 21″.

Size		
3/4″-2″	5040A17	$99.74

Water and Gas Shut-Off Wrenches

Turn off the main supply of water or gas at the point it enters your facility. Wrench is aluminum with a red powder-coated finish. Head is 1/2″ thick. Overall length is 11 3/8″.

Open End Size	Box Wrench Slot Size		
5/8″	1/2″ Wd. × 1 1/2″ Lg.	51435A21	$12.25

Wide-Opening Tight-Clearance Adjustable Wrenches

The jaws on these wrenches are shaped to turn slip nuts, jam nuts, and large hex nuts. They're lockable and have a cutout for locknut installation. Wrenches are zinc-plated iron.

O'all Lg.	Jaw Cap.		
10 1/4″	1″-3″	5423A12	$14.32

Drum-Plug Torque Wrenches

When you feel the wrench "break," you'll know you've applied the correct pressure to your 3/4″ or 2″ drum plug. Wrenches have a low ft.-lbs. setting for 3/4″ plugs and a higher ft.-lbs. setting for 2″ plugs. Torque is nonadjustable within each setting.

Made of steel with a cushion grip. Overall length is 14″.

Tapered-Handle Wrenches

Use the pointed end of the handle to align bolt holes during assembly. Also known as spud, structural, and construction wrenches. Made of steel with a black finish.

(A) Open End—Wrenches have a head that's angled 15° from the handle.

(B) Offset Open End—Head is offset 45° to provide additional clearance for turning hard-to-reach fasteners.

(C) Offset Box End—Box end is 12-point and offset 60°.

(D) Adjustable—Wrenches adjust to fit a range of sizes.

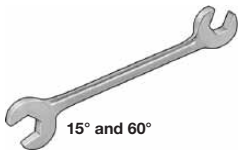
Angled Open-End Wrenches

Get a better angle on hard-to-reach fasteners—one head is angled 15° and the other is angled either 60° or 75°. Made of steel.

15° and 60° Angle Wrenches—The open ends are hex shaped, unless noted. Wrenches have a dull chrome-plated finish or a black finish.

15° and 75° Angle Wrenches—The open ends are rounded. Openings are the same size on both ends. Wrenches have a dull chrome-plated finish.



15° and 60° Angle Wrench Sets—Packed in a roll-up pouch.

9-Piece Inch Set—Includes chrome-plated wrenches in sizes 13/64" x 15/64", 15/64" x 13/64", 7/32" x 1/4", 1/4" x 7/32", 9/32" x 5/16", 5/16" x 9/32", 11/32" x 3/8", and 3/8" x 11/32". First opening listed for each size is the 15° angle end. Also includes one 4 1/16" long bent-nose pliers.

5434A2 ..... $78.31

18-Piece Inch Sets—Include sizes 11/32", 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", 3/4", 13/16", 7/8", 15/16", 1", 1 1/16", 1 1/8", 1 1/4", 1 3/8", 1 7/16", and 1 1/2". Openings are the same size on both ends.

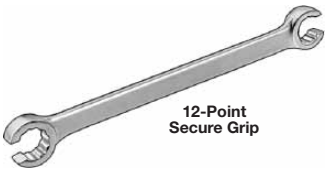
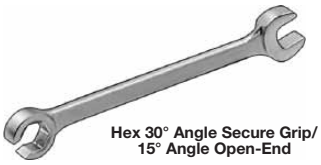
Two-Head Open-End Wrenches

Secure-Grip Open-End Wrenches





Also known as flare-nut or line wrenches, these tools have more surface contact than standard open-end wrenches for a better grip. Secure-grip ends are offset 15° and straight (not angled), except where noted. Made of steel with a dull chrome-plated finish, unless otherwise stated.

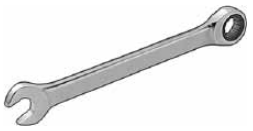
Ratcheting Combination Wrenches



One end has a 12-point box end that requires a 5° turn to engage the ratchet. The other end is open and angled 15°. Wrenches are chrome-plated steel and are polished for a mirror-like finish. **Offset** wrenches have a box end that is offset 15° to give you additional clearance to turn hard-to-reach fasteners.

Premium Sets—The finest tools available. Made in the U.S. Packed in a plastic roll-up pouch.

Economy Sets—Imported tools. *Inch* set is packed in a plastic roll-up pouch. *Metric* set is packed in a plastic tray.

Stubby Ratcheting Combination Wrenches

These shorter wrenches are designed to work in tight areas. Wrenches have a 12-point box end that requires a 5° turn to engage the ratchet. The other end is open and angled 15°. Made of chrome-plated steel that is polished for a mirror-like finish. **Offset** wrenches have a box end that is offset 15° to give you additional clearance to turn hard-to-reach fasteners.

Premium Sets—The finest tools available. Made in the U.S.

Economy Sets—Imported tools.

Ratcheting Wrench Sets

7-Pc. Premium Inch Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Packed in a plastic roll-up pouch.
5666A65 $204.06

10-Pc. Premium Metric Set—Includes sizes 10 through 19 mm. Packed in a plastic roll-up pouch.
5666A67 $294.13

7-Pc. Economy Inch Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Packed in a plastic tray.
4363A11 $90.12

10-Pc. Economy Metric Set—Includes sizes 10 through 19 mm. Packed in a plastic tray.
4363A12 $125.30

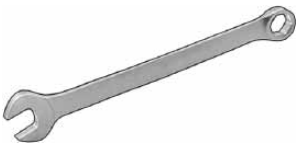
Combination Wrenches



Wrenches have a 15° angle open end and a 15° offset box end with 6 or 12 points. Made of steel. Wrenches with **12-point opening** are easier to position on hex fasteners than wrenches with **6-point opening** but provide less surface contact.

Wrench Sets—Packed in a pouch, unless noted. Choose from four finishes: high-visibility colored, polished (mirror-like) chrome-plated, dull chrome-plated, and black. *High-visibility colored wrench sets* have a bright, powder-coated finish so they are easy to see. **To Order:** For high-visibility wrench sets, please specify red or yellow.

Premium wrenches have additional machining, grinding, and/or polishing for a superior fit and finish. The finest tools available. Made in the U.S. **Value** wrenches offer high quality at an economical price. Made in the U.S. **Economy** wrenches are imported.

Individual Wrenches—Choose from polished (mirror-like) chrome-plated, dull chrome-plated, and black finishes.

Universal-Fit Ratcheting Combination Wrenches

The spline shape of the box end fits multiple fastener styles. It also gives you a better grip on rounded fasteners. The box end requires a 5° turn to engage the ratchet. The open end is angled 15°. Made of steel. *Inch sizes* are chrome-plated and polished for a mirror-like finish. *Metric sizes* have a black finish.

Wrench Sets

11-Pc. Inch Set—Includes sizes 1/4", 9/32", 5/16", 11/32", 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Comes in a plastic caddy.
4950A25 ..... $192.48

10-Pc. Metric Set—Includes sizes 10, 11, 12, 13, 14, 15, 16, 17, 18, and 19 mm. Comes in a canvas roll-up pouch.
4950A91 ..... $158.12

Cushion-Grip Combination Wrench Sets

Wrenches have a 15° angle open end and a 12-point, 15° offset box end. Made of chrome-plated steel that is polished for a mirror-like finish. Overall length ranges from 4" to 13". Packed in a plastic roll-up pouch.

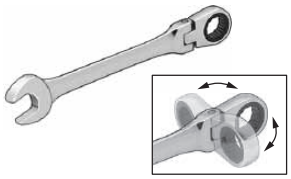
Inch Sets—Yellow Plastic Grip

15-Pc. Inch Set—Includes one each of sizes 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", 3/4", 13/16", 7/8", 15/16", 1", 1 1/16", and 1 1/8".
6114A24 ..... $165.08

Metric Sets—Red Plastic Grip

15-Pc. Metric Set—Includes one each of sizes 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, and 24 mm.
6114A32 ..... $65.09

Flex-Head Ratcheting Combination Wrenches



The 12-point ratcheting box end pivots 180° vertically for access to tight spots. It requires a 5° turn to engage the ratchet. The other end is an open end, angled 15°. Wrenches are chrome-plated steel and are polished for a mirror-like finish.

Wrench Sets

7-Pc. Inch Set—Includes inch sizes listed below.
6445A21 ..... $144.33

Two-Head Box Wrenches

Wrenches have a 12-point opening at each end. Made of steel with a polished (mirror-like) chrome-plated finish, a dull chrome-plated finish, or a black finish. **45° deep offset** wrenches give you additional clearance to turn hard-to-reach fasteners. **Curved** wrenches are also known as half-moon and obstruction wrenches; the shape lets you reach around obstacles and into machinery.

High-Leverage Box Wrenches and Extension Handles

Use these 12-point box wrenches alone or with an extension handle (sold separately) for extra leverage. Extension handles are designed to fit securely over the end of the wrench. Wrenches and handles are made of steel with a black finish. **Offset wrenches** have a 45° offset head that gives you additional clearance to turn hard-to-reach fasteners.

Striking & Ratcheting Box Wrenches

Striking Box Wrenches

Place the wrench on a stuck fastener and strike the handle with a hammer to break it free. Also known as slugging wrenches. Made of steel with a black finish. Wrenches with **12-point opening** are easier to position on hex fasteners than wrenches with **6-point opening** but provide less surface contact.

Offset wrenches have a 45° offset head, giving you additional clearance to turn hard-to-reach fasteners.

Ratcheting Two-Head Box Wrenches

Wrenches require a 25° turn to engage the ratchet. Made of chrome-plated steel that is polished for a mirror-like finish. Meet Fed. Spec. GGG-W-001405.

Wrenches with **12-point openings** are easier to position on hex fasteners than wrenches with **6-point openings** but provide less surface contact.

Wrench Sets—Wrenches have 12-point openings, unless noted.

Wrench Sets—Packed in a plastic pouch, unless noted.

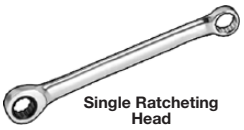
Tight-Clearance Ratcheting Two-Head Box Wrenches



Single Ratcheting Head

Two Ratcheting Heads (Standard)

You don't need a lot of space to turn fasteners; wrenches have ratcheting heads that require only a 5° turn to engage the ratchet. Choose wrenches with a ratcheting head on one or both ends. Openings are 12-point. Made of chrome-plated steel that is polished for a mirror-like finish.

Single Ratcheting Head—Wrenches have one ratcheting box head and one nonratcheting box head. The nonratcheting box head is offset 15°.

Two Ratcheting Heads—Both heads are ratcheting.

Single Ratcheting Head Wrench Sets

7-Pc. Inch Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Packed in a plastic roll-up pouch.
5348A21 ..... $186.22

10-Pc. Metric Set—Includes sizes 10 mm through 19 mm. Packed in a plastic roll-up pouch.
5348A51 ..... $280.88

Two Ratcheting Heads Wrench Sets

4-Pc. Standard Inch Set—Includes sizes 5/16"x3/8", 7/16"x1/2", 9/16"x5/8", and 11/16"x3/4". Packed in a plastic tray.
6443A11 ..... $65.28

4-Pc. Offset Inch Set—Includes sizes 5/16"x3/8", 7/16"x1/2", 9/16"x5/8", and 11/16"x3/4". Heads are offset 15°. Packed in a plastic roll-up pouch.
6443A14 ..... $79.38

6-Pc. Metric Set—Includes sizes 8x9, 10x11, 12x13, 14x15, 16x18, and 17x19. Packed in a plastic tray.
6443A12 ..... $94.27

Electrical-Insulating Box Wrenches

These wrenches have an insulated handle to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet ASTM F1505-01 and IEC 60900. Wrenches have a standard (straight) head with a 12-point opening and require a 5° turn to engage the ratchet. Made of chrome-plated steel that is polished for a mirror-like finish.

Size	O'all Lg.			Size	O'all Lg.

4-Point Ratcheting Two-Head Box Wrenches

The 4-point heads fit shut-off and service valves in air conditioning, refrigeration, and welding systems. Each wrench accommodates four sizes, two on each side. They have standard (straight) heads (unless noted) and require a 25° turn to engage the ratchet. Made of chrome-plated steel that is polished for a mirror-like finish. Meet Fed. Spec. GGG-W-001405.

Size	O'all Lg.		
3/16" and 1/4" sq. x 5/16" and 3/8" sq.	5 1/4"	5473A15♦	$22.58

♦ Heads are offset 25°.

Offset Ratcheting Box Wrenches

The 25° offset heads give you additional clearance to turn hard-to-reach fasteners. Wrenches require a 25° turn to engage the ratchet. Made of chrome-plated steel that is polished for a mirror-like finish. Meet Fed. Spec. GGG-W-001405. **Single-head** wrenches have a plastic handle.

Wrenches with **12-point openings** are easier to position on hex fasteners than wrenches with **6-point openings** but provide less surface contact.

Wrench Sets—Openings are 6-point, unless noted.

Bolt-Through Reversible Ratcheting Wrenches

Square, Reversing Control on Top of Head

6 Point, Reversing Control at End of Handle

Round Bore with Keyway, Reversing Control on Side of Head

Open socket head allows bolts to pass through.

A straight, open socket head allows long bolts to pass through. Wrenches require a 23° handle swing to turn a fastener. Choose square, 6-point, or round bore with keyway wrenches. **Round bore with keyway** wrenches have a channel that allows the female bore to lock onto a male shaft.

Wrenches with **reversing control on side of head** have a lever on the side of the head to reverse direction. Wrenches with **reversing control on top of head** have a lever on the top of the head to reverse direction. Wrenches with **reversing control at end of handle** have a knurled knob at the end of the handle to reverse direction, making them perfect for work in tight areas.

Standard Duty—An economical alternative to the heavy duty wrenches, these are made of stamped steel side plates that are riveted together. Handles are plain (unless noted). Sockets are not replaceable.

Heavy Duty—Made of cast iron, wrenches can be used as hand-held ratcheting tools or can be mounted to machinery to serve as handles for turning, motion control, and adjustments. Sockets are replaceable.

To Order: Please specify size where necessary.

Torx Ratcheting Two-Head Box Wrenches

Both ends have a standard (straight) ratcheting head with a Torx opening. Wrenches require a 5° turn to engage the ratchet. Made of chrome-plated steel that is polished for a mirror-like finish.

4-Pc. Set—Includes one of each size wrench listed below. Set is packed in a plastic tray.

6065A25 ..... $83.82

Size	O'all Lg.			Size	O'all Lg.		
E6/E8	5 1/8"	6065A13	$21.79	E14/E18	7 1/2"	6065A17	$27.23

Snap-Open Ratcheting Box Wrenches

Open the jaws to fit around your fastener like an open-end wrench; close the jaws and it acts like a 12-point ratcheting box wrench. Wrenches require a 30° turn to engage the ratchet. Made of steel with a black finish.

7-Pc. Set—Includes sizes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4". Set is packed in a plastic roll-up pouch.

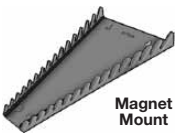
Wrench Organizers

Easy Carry



Magnet Mount

Foam

Easy Carry—Spring tabs marked with the size keep wrenches secure while allowing easy removal. These plastic organizers can also be surface or wall mounted using #11 screws (not included).

Magnet Mount—Mount these plastic racks to steel walls, cabinets, and other metal surfaces with their magnetic mounting base. Tabs hold wrenches in place.

Foam—These low-profile organizers fit inside your tool drawer and have slots marked with the wrench size. They're made of polyethylene foam that resists solvents and petroleum products.

Adjustable Socket Wrenches

Slide the lever to adjust the jaws to fit multiple sizes of square and hex fasteners. Made of aluminum with steel jaws and a black finish. Grip is plastic.

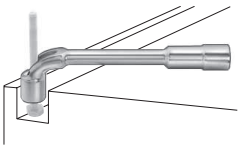
Jaws Expanded

Size	O'all Lg.	Turn Required to Ratchet		
5/16"-17/32" (8-14 mm)	8"	15°	53735A31	$23.81

Bolt-Through Socket Wrenches

Bolts and studs can pass right through the short end of these wrenches. The long end can give you additional leverage on difficult fasteners—slip a bar through the short end to create a T-handle. Wrenches are steel with a dull chrome-plated finish.

Wrenches with **12-point opening** are easier to position on hex fasteners than wrenches with **6-point opening** but provide less surface contact.



Bolts pass through wrench.

Flex-Head Socket Wrenches

A 12-point socket end pivots to access hard-to-reach fasteners. Wrenches are chrome-plated steel.

Open end/flex-head wrenches are polished for a mirror-like finish, unless noted. Both ends are the same size.

Double flex-head wrenches have a dull finish.

Master Inch and Metric Tool Sets

You'll get both inch and metric tools to handle a wide variety of jobs. Sockets and wrenches are forged alloy steel with a chrome finish.

75-Piece Set

Packed in a 16″ Ht. × 11″ Wd. × 3¼″ Dp. plastic case and includes the tools listed below:

- 43-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 32-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extension

57615A61 ..... **Per Set** $82.47

170-Piece Set

Packed in a 15″ Ht. × 15″ Wd. × 4″ Dp. plastic case. Set includes the tools listed below:

- 30-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extensions
- 27-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extensions
- 11-pc. ½″ sq. drive tools: sockets (inch and metric) and ratchet
- 56-pc. ¼″ sq. bits set: 55 bits and 1 holder
- 8 combination wrenches (inch and metric)
- 12 nutdrivers (inch and metric)
- 26 hex keys (inch and metric)

57615A62 ..... **Per Set** $147.42

Economy Inch and Metric Tool Sets

Tools are made of forged steel.

70-Piece Set

Set comes in a 9½″ Ht. × 13″ Wd. × 2½″ Dp. plastic case and includes tools listed below:

- 19-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, extension, and adapter
- 18-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 12 combination wrenches (inch and metric)
- 13-pc. screwdriver set: 10″ magnetic driver with 12 bits (slotted, Phillips, hex, and Torx)
- 8 hex keys (inch)

4090A23 ..... **Per Set** $80.82

147-Piece Set

Set is packed in a 19½″ Ht. × 16″ Wd. × 3½″ Dp. plastic case. Includes the tools listed below:

- 22-pc. ¼″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 32-pc. ⅜″ sq. drive tools: sockets (inch and metric), ratchet, extensions, and adapter
- 12-pc. ½″ sq. drive tools: sockets (inch and metric), ratchet, and extension
- 12 combination wrenches (inch and metric)
- 2 pliers (long nose with cutter and wire cutting)
- 4 screwdrivers (slotted and Phillips)
- 45-pc. screwdriver set: 10″ magnetic driver with 38 bits (slotted, Phillips, hex, Torx, Posi-drive, and square recess), adapters, and holders
- 18-pc. hex key set: 16 hex keys (inch and metric) and 2 holders

6173A27 ..... **Per Set** $131.53

Maintenance Tool Sets

Take care of most maintenance jobs with these sets. Tools are steel.

9-Piece Set

Set comes in a vinyl roll-up pouch and includes the tools listed below:

- Screwdriver set:
  7½″ handle with bits
  Slotted: ¼″, 5⁄16″
  Phillips: #1, #2
  Nutdriver: ¼″, 5⁄16″
- 5 pliers (long nose with cutter, wire cutting, slip joint, tongue-and-groove, and vise grip)
- Fold-up hex key set (inch)
- Adjustable wrench
- Crimper/stripper

5818A66 ..... **Per Set** $139.73

33-Piece Set

Set comes in a nylon bag that has inside and outside tool pockets, strong web straps, and a zipper closure. Bag is 6″ Ht. × 12″ Wd. × 5½″ Dp. Set includes the tools listed below:

- 14-pc. ¼″ sq. drive tools:
  6-pt. standard sockets (9), 3⁄16″ to ½″ in vinyl holder
  5½″ reversible ratchet
  6″ driver handle
  3″ and 6″ extensions
- 6 pliers (long nose with cutter (2), wire cutting (2), tongue-and-groove, and vise grip)
- Fold-up hex key set (inch)
- Adjustable wrench
- Ball peen hammer
- Electricians' knife
- Inch/metric tape rule
- 7 screwdrivers (slotted, slotted narrow blade, and Phillips)
- Screwdriver set:
  8″ driver with bits
  Slotted: 3⁄16″, 17⁄64″
  Phillips: #1, #2
  Torx: T15

55915A65 ..... **Per Set** $298.74

9-Piece Insulated Electricians' Tool Set

Tools are alloy steel with insulated grips that are tested to 1,000 volts. All comply with IEC 60900 and ASTM F1505-07 standards. Set comes in a 13½″ Ht. × 9½″ Wd. × 2″ Dp. zippered vinyl case and includes the tools listed below:

- 5 screwdrivers (slotted and Phillips)
- 2 pliers (long nose w/cutter and wire cutting)
- 6 5⁄16″ wire stripper for 6-25 AWG
- 5½″ circuit tester with ⅛″ tip

5320A11 ..... **Per Set** $238.82

49-Piece Technicians' Tool Set

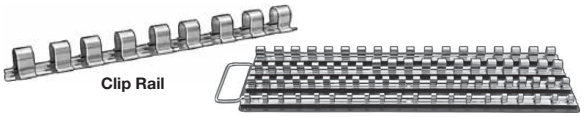
Get the tools you need for servicing electronic equipment, such as PCs and copy machines, in one easy-to-carry set.

The sockets and wrenches are made of forged alloy steel with a chrome finish. Set is furnished in a zippered nylon case with inside and outside tool pockets. Case is 12″ Ht. × 14″ Wd. × 3½″ Dp.

- 13-pc. ¼″ sq. drive tools:
  6-pt. standard sockets (9), 3⁄16″ to ½″ in vinyl holder
  5½″ reversible ratchet
  6″ spinner handle
  3″ and 6″ extensions
- 6-pc. screwdriver set:
  4″ handle with bits
  Slotted: 3⁄16″, ¼″, 5⁄16″
  Phillips: #1, #2
- 7-pc. mini screwdriver set:
  3″ handle with bits
  Slotted: 0.040″, 0.070″, 0.100″
  Phillips: #00, #0, #1
- 2 adjustable wrenches
- 2 pliers (long nose with cutter and wire cutting)
- Fold-up hex key set (inch)
- 6″ straight hemostat pliers
- 3-pc. soldering set
- DIP extractor
- Insertion/extraction tool
- Feeler gauge set (inch and metric)
- Alignment tool (double-end, slotted)
- Trimpot adjusting tool
- Key cap puller
- Spring combination tool
- 5″ to 19″ telescoping mirror and magnetic retriever tool
- #2 round needle file
- Standard duty precision knife
- 6″ stainless steel rule
- 5″ wire stripper/cutter
- Burnisher with 6 blades
- Penlight (AAA batteries included)

57935A45 ..... **Per Set** $384.85

Clip-Rail Socket Organizers



Clip-Rail Socket Tray

Move the sliding clips to any position along the rail to hold a variety of sockets. Rail and clips are nickel-plated steel.

For Sq. Drive	9″ Rails: For No. of Sockets			17″ Rails: For No. of Sockets		
1/4″	9	5605A51	$2.98	16	5605A21	$3.98

1/2" Square Drive Electrical-Insulating Hex Bit Sockets

Made of plastic-coated steel, these sockets are insulated to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet ASTM F1505-01 and IEC 60900. Also known as socket-head bits. Bits are not replaceable. Not for use with impact or power tools.

1/2" Sq. Drive Electrical-Insulating Ratchet Wrench—Tool is 10" long and requires a 5° turn to ratchet. Made of plastic-coated steel.

5556A22 ..... $195.32

Hex, Torx, Phillips, and Slotted Bit Socket Assortments

You'll get 32 sockets made of steel with a chrome-plated finish. Not for use with impact or power tools. Furnished in a plastic case.

- **3/8" sq. drive hex bit sockets:** 1/8", 9/64", 5/32", 3/16", 7/32", 1/4", 5/16", 3/8"
- **3/8" sq. drive metric hex bit sockets:** 4, 5, 6, 7, 8, 9, 10 mm
- **1/4" sq. drive Torx bit sockets:** T10, T15, T20, T25, T27, T30
- **3/8" sq. drive Torx bit sockets:** T40, T45, T47, T50
- **3/8" sq. drive screwdriver bit sockets:** Slotted: 3/16", 1/4", 5/16", 3/8" Phillips: #1, #2, #3

5534A22 ..... $52.95

Square Drive Ball-End Hex Bit Sockets

You don't need exact alignment between the socket bit and fastener—the ball end allows angled entry. Also known as socket-head bits, sockets are chrome-plated steel. Not for use with impact or power tools.

Also Available: Replacement bits for inch sizes, except where noted. Please ask for 54905A32 and specify hex size and square drive size.

Inch Sets—Furnished with a metal clip rail.

Tamper-Resistant Hex Bit Socket Sets

Also known as pin-in-hex or pin-in-socket bits. Set includes nine sockets for tamper-resistant hex screws. Sockets are chrome-plated steel. Set has a clip rail with a 1 1/2" long socket in each of the following sizes: 5/64", 3/32", 7/64", 1/8", 9/64", 5/32", 3/16", 7/32", and 1/4". Not for use with impact or power tools.

Also Available: Replacement sockets and bits. For sockets, please ask for 5536A1 and specify size. For bits, please ask for 5536A2 and specify size.

5536A33 ..... $70.03

Torx Sockets & 1/4" Square Drive Socket Sets

Square Drive Tamper-Resistant Torx Bit Sockets

Also known as pin-in-Torx bits, all of these sockets are for use with tamper-resistant Torx fasteners. Not for use with impact or power tools. **24-piece set** can also be used with Torx fasteners.

13-Piece Set

Sockets are chrome-plated steel. Includes 1/4" square drive sizes T7, T8, T10, T15, T20, T25, T27, and T30, 3/8" square drive sizes T40, T45, T50, and T55, and 1/2" square drive size T60. Furnished with a plastic clip rail.

54055A75 ..... $76.45

24-Piece Set

Set has 22 interchangeable steel Torx bits. All fit 3/8" and 1/2" square drive bit holders (included). Holders are chrome-plated steel and have a ball detent to firmly hold bits in place. You'll get one of each size in 13/16" and 3" lengths: T10, T15, T20, T25, T27, T30, T40, T45, T50, T55, and T60. Furnished in a plastic case.

Also Available: Replacement 3" long tamper-resistant Torx bits. Please ask for 55535A4 and specify size.

55535A42 ..... $75.66
