Use Torx-Plus bit sockets for increased surface contact and 25% more torque on Torx-Plus fasteners. The bit is not compatible with standard Torx fasteners. Sockets are chrome-plated. Not for use with impact or power tools.

8-Piece Set

Includes 1/4" square drive sockets in sizes IP9, IP10, IP15, and IP20; 3/8" square drive sockets in sizes IP25, IP27, IP30 and IP40 on a clip rail; and a hex key.

8637A41 ..... $56.19

Individual Sockets

1/4" Square Drive Sockets— Overall length is 1 1/2". Available in sizes IP6, IP7, IP8, IP9, IP10, IP15, IP20, IP25, IP27, IP30, and IP40.

To Order: Please specify size.

8637A52 ..... $7.06

3/8" Square Drive Sockets— Overall length is 1 11/16". Available in sizes IP9, IP10, IP15, IP20, IP25, IP27, IP30, and IP40.

To Order: Please specify size.

8637A62 ..... $8.07

About Selecting a Square Drive Size

Select the square drive size of your socket based on the size of your fastener and your space and torque needs. Some fasteners are compatible with multiple drive sizes. For work in confined areas, select the smaller drive size. If you are applying a lot of torque and space is not an issue, select the larger drive size.

Fastener Size	Fits Square Drive	Pages
1/8" to 5/8" and 4 to 15 mm	1/4"	2776–2778
1/4" to 1" and 5.5 to 26 mm	3/8"	2779-2784
3/8" to 1 1/2" and 10 to 36 mm	1/2"	2782-2786
3/4" to 2 3/8" and 19 to 55 mm	3/4"	2786-2787
1 1/16" to 3 1/2"	1"	2787

1/4" Square Drive Socket Sets

58455A14

58455A27

Sockets are chrome-plated steel. Not for use with impact or power tools. **6-point** and **12-point sockets** are for use with hex fasteners. The 6-point sockets prevent rounding. The 12-point sockets are easier to position.

Premium sets are the finest tools available. They have gone through additional machining, grinding, and/or polishing for superior fit and finish. Made in the U.S.A. **Value sets** are high-quality tools offered at an economical price. Made in the U.S.A. **Economy set** is imported.

1/4" Square Drive Sockets

All of these premium-quality sockets are chrome-plated steel. Not for use with impact or power tools.

4-point and **8-point sockets** are for use with square fasteners. The 4-point sockets prevent rounding, but the 8-point sockets are easier to position. **6-point** and **12-point sockets** are for use with hex fasteners. The 6-point sockets prevent rounding. The 12-point sockets are easier to position.

Also Available: 12-point deep metric sockets. Please ask for 7195A2 and specify size (5-14 mm).

1/4" Square Drive Wrenches & Accessories

For information about drive size, see page 2776.

1/4" Square Drive Ratchet Wrenches

Wrenches are steel.

Quick Release—Push a button to release the socket with one hand. This wrench is good for applications where your sockets may get wet or oily.

Sealed Head—A gasket seals in permanent lubrication and keeps out contaminants such as dust, dirt, and moisture.

Fast Driving—Rotate the grip of the handle to rapidly turn the socket or use like a traditional ratchet wrench.

Flex Head—The head pivots up to 90° in either direction for access to tight spots.

Silent—Because these wrenches do not have teeth, they do not make the traditional "click" sound when turned. They use a series of rollers to engage the ratchet.

Note: The smaller the turn to ratchet angle the less clearance needed to engage the ratchet.

3/8" Square Drive Sockets

Sockets are premium quality and made of steel. Not for use with impact or power tools. **4-point** and **8-point sockets** are for use with square fasteners. The 4-point sockets prevent rounding, but the 8-point sockets are easier to position. **5-point sockets** are for use with water and gas valves. **6-point** and **12-point sockets** are for use with hex fasteners. The 6-point sockets prevent rounding on fasteners. The 12-point sockets are easier to position. **Spark plug sockets** have a rubber insert that grips the plug's insulator to prevent damage.

Also Available: 12-point flex inch sockets with black finish. Please ask for 5484A83 and specify size: 3/8", 7/16", 1/2", 9/16", 5/8", or 3/4".

Also Available: 12-point flex metric sockets with chrome finish. Please ask for 5849A112 and specify size: 9-19 mm.

Universal-Fit Sockets—Chrome-Plated Finish

Fit many sizes of inch and metric fasteners with one socket. Place over the fastener and 54 pins move to grip it securely. These sockets are not for use with impact or power tools.

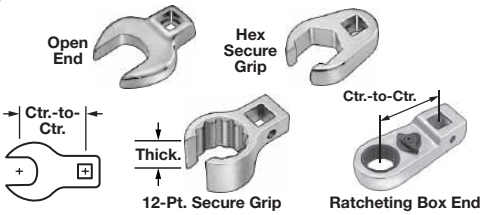
For Fastener Sizes	O'all Lg.		
1/4"-3/4", 7 mm-19 mm	2"	5398A66	$15.22

3/8" Square Drive Tight-Clearance Offset Sockets

Also known as crowfoot wrenches, these sockets provide access to hard-to-reach fasteners and fittings. Made of chrome-plated steel. **Hex** and **12-point** sockets are for use with hex fasteners. The hex sockets prevent rounding. The 12-point sockets are easier to position but provide less surface contact.

Open-end sockets have the thinnest head. **Secure-grip** sockets, also known as flare-nut or line wrench sockets, are often used with flared tube fittings and fuel and hydraulic lines. **Ratcheting box-end** sockets allow you to use the ratchet to fasten and unfasten quickly.

Also Available: 1/4" square drive open-end inch sizes. Please ask for 1213A101 and specify size: 1/4", 5/16", 3/8", 7/16", 1/2", or 9/16".



Sets

10-Pc. Inch Open-End Set—Includes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", 3/4", 13/16", 7/8", and 1" sizes on a metal clip rail.
5844A25 ... $116.87

7-Pc. Inch Hex Secure-Grip Set—Includes 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4" sizes and a plastic tray.
7306A53 ... $189.34

8-Pc. Inch 12-Pt. Secure-Grip Set—Includes 5/8", 11/16", 3/4", 13/16", 7/8", 15/16", 1", and 1 1/16" sizes on a metal clip rail.
5845A21 ... $177.92

9-Pc. Inch 12-Pt. Ratcheting Box-End Set—Includes 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", 11/16", and 3/4" sizes; 10" extension; and a plastic tray.
5844A36 ... $215.00

55805A45 ... $140.35

3/8" and 1/2" Square Drive Ratchet Wrenches

Wrenches are made of steel, except fingertip style is rubber-coated plastic.

Silent—Because this wrench does not have teeth, it does not make the traditional "click" sound when turned. It uses a series of rollers to engage the ratchet.

Quick Release—Push a button to release the socket with one hand. These wrenches are good for applications where your sockets may get wet or oily.

Sealed Head—A gasket seals in permanent lubrication and keeps out contaminants such as dust, dirt, and moisture.

Fast Driving—Rotate the grip of the handle to rapidly turn the socket or use like a traditional ratchet wrench.

Flex and Offset Flex Head—The head pivots up to 90° in either direction for access to tight spots.

Note: The smaller the turn to ratchet angle, the less clearance needed to engage the ratchet.

½" Square Drive Sockets

Sockets are premium quality and made of steel. Not for use with impact or power tools. **Spark plug sockets** have a rubber insert that grips the plug's insulator to prevent damage.

5-point socket is for use with water and gas valves. **6-point** and **12-point sockets** are for use with hex fasteners. The 6-point sockets prevent rounding on fasteners. The 12-point sockets are easier to position. **8-point sockets** are for use with square fasteners.

Also Available: 12-pt. flex sockets. For chrome-plated finish, please ask for 5545A34 and specify size: ½", 9/16", 5/8", 11/16", or 3/4". For black finish, please ask for 5491A11 and specify size: ½", 9/16", 5/8", or 3/4".

Universal-Fit Sockets—Chrome-Plated Finish

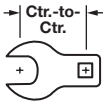
Fit many sizes of inch and metric fasteners with one socket. Place over the fastener and 54 pins move to grip it securely.

For Fastener Sizes	O'all Lg.		
7/16"-1 1/4"; 11 mm-32 mm	3½"	6021A11	$35.60

1/2" & 3/4" Square Drive Sockets

For information about drive size, see page 2776.

1/2" Square Drive Tight-Clearance Offset Sockets



Also known as crowfoot wrenches, these sockets provide access to hard-to-reach fasteners and fittings. Made of chrome-plated steel. **Open-end** sockets have head thicknesses from 13/32" to 39/64". **Secure-grip** sockets are for flared tube fittings as well as for fuel and hydraulic lines. Head thickness ranges from 29/32" to 1 3/32".

Sets

7-Pc. Open-End Set—Includes 15/16", 1", 1 1/16", 1 1/8", 1 1/4", 1 7/16", and 1 1/2" sizes on a metal clip rail.
5831A41 ..... $137.20

8-Pc. 12-Pt. Secure-Grip Set—Includes 1 1/8", 1 1/4", 1 5/16", 1 3/8", 1 1/2", 1 5/8", 1 3/4", and 2" sizes on a metal clip rail.
5832A31 ..... $302.33

3/4" Square Drive Sockets

These premium quality sockets are chrome-plated steel. Not for use with impact or power tools. **6-point** and **12-point sockets** are for use with hex fasteners. The 6-point sockets prevent rounding on hex fasteners. The 12-point sockets are easier to position.

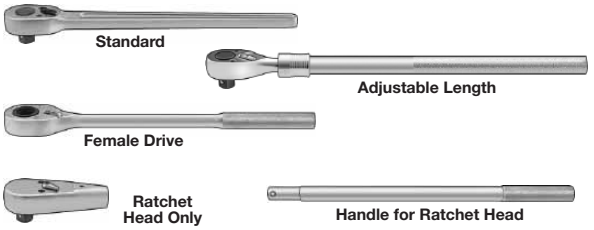
3/4" Square Drive Ratchet Wrenches and Handles

Wrenches and handles are made of chrome-plated steel, unless otherwise stated.

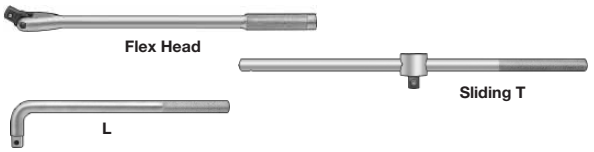
Ratchet Wrenches



Wrenches require a 15° turn for the ratchet to engage.

	O'all Lg.		
Standard	20"	5524A11	$112.74
Standard with Black Finish	20"	5524A15	104.21
Adjustable Length	24"-40"	5524A14	125.74
Female Drive	20"	5524A17	106.23
Ratchet Head Only	6"	5524A12	117.33
Handle for Ratchet Head	19 1/4"	5524A16	40.80

Handles



Also known as breaker bars, use these nonratcheting handles to get the high torque required to break fasteners free. **Flex head** pivots for access to tight spots. **Sliding T** allows you to position the head anywhere along the bar.

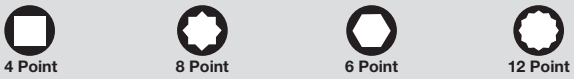
About Impact Sockets and Power Sockets



4-point and **8-point sockets** are for use with square fasteners. 4-point sockets provide more surface contact to prevent rounding while 8-point sockets are easier to position.

6-point and **12-point sockets** are for use with hex fasteners. 6-point sockets provide more surface contact to prevent rounding while 12-point sockets are easier to position.

Fastener-holding sockets have a magnet that holds fasteners in place. They are good for self-tapping screws.

Impact sockets (pages 2788-2794) are made to withstand the high torque and force of impact tools. While they can be used in hand-driven and nonimpact power tools, they will wear more quickly than the sockets designed for those tools.

Note: 3/4" square drive size and larger impact sockets require a locking retainer. Use with an impact wrench that has a pin-style socket retainer, or use a socket retaining ring with tools that have a hole- or hole-and-ring style socket retainer.

Power sockets (pages 2794-2795) have the durability required for nonimpact powered fastening applications such as high-volume production and assembly. They are not for use with impact tools.

1/4" Square Drive Impact Sockets and Accessories

1/4" Square Drive Impact Sockets and Accessories

These premium-quality sockets, adapters, and extensions are steel with a black finish, unless noted.

Also Available: 6-point impact sockets in metric sizes. For deep sockets, please ask for 53115A42 and specify size: 6, 7, 8, 10, 11, 12, or 13 mm. For flex sockets, please ask for 53115A43 and specify size: 7, 8, 10, 12, or 13 mm.

Socket Sets—Furnished with a metal clip rail.

3/8" and 1/2" Square Drive Impact Screwdrivers and Wrenches

6-Piece Set

Use these tools with impact sockets to break frozen bolts and screws free. You can also remove the bit adapter from the impact screwdriver and use as an impact wrench. Strike with a hammer to tighten and loosen fasteners. Made of steel with a black finish. See pages 2808-2815 for a complete selection of 1/4" and 5/16" hex-shank bits.

Impact Screwdriver Sets

6-Piece Sets—Include impact driver, 5/16" and 3/8" slotted bits, No. 2 and No. 3 Phillips bits, 5/16" hex bit adapter, and a plastic case.

With 3/8" Sq. Drive Impact Driver 5610A2 $35.81
With 1/2" Sq. Drive Impact Driver 5610A33 42.95

9-Piece Set—Includes impact driver; 5/16" slotted bit; No. 2 Phillips bit; 3, 4, 5, 6, and 8 mm hex bits; 5/16" hex bit adapter; and a plastic case.

With 3/8" Sq. Drive Impact Driver 6967A12 $39.74

■ Male end requires a retaining ring. Please ask for 5549A169.

Set of 4 Standard Extensions (2", 3", 5", 10")	5549A209	$47.80
Set of 3 Secure-Hold Extensions (3", 5", 10")	5549A311	94.33

½" Square Drive Torque-Limiting Socket Adapters and Set

These adapters spring back slightly when the set torque is reached to prevent overtightening that can damage your work. Made of steel, each adapter is painted a different color. Overall length is 7 5/8"; outer diameter is 1 1/8". Use with a 1/2" impact wrench rated at 250 ft.-lbs. of working torque with 90 psi.

Torque, ft.-lbs.	Color		
65	Yellow	4491A21	$33.60
80	Blue	4491A22	33.60
100	Gray	4491A23	33.60
120	White	4491A24	33.60
140	Blue-Green	4491A25	33.60

5-Piece Set—Includes one of each extension above and a plastic case.
4491A31 $152.13

¾" Square Drive Impact Sockets

For information about impact sockets, see page 2788.

¾" Square Drive Impact Sockets and Accessories

Made of steel, sockets, adapters, and extensions are premium quality and have a black finish. **Budd-wheel socket**, also called a dual-size socket, is designed to remove and install dual wheels on trucks and trailers. This socket has a 1½" hex recess for accessing lug nuts and a 13/16" square recess to turn the threaded shafts found on inner wheels.

♣ *Note*: Sockets and accessories require a locking retainer. Use with an impact wrench that has a pin-style socket retainer, or use a socket retaining ring with tools that have a hole- or hole-and-ring style socket retainer. The *Ring ID* is the inside diameter of the ring that will fit a particular socket (rings sold separately on page 2793).

Also Available Replacement hex bits. Please ask for 53525A1 and specify size.

1-Pc. Retaining Ring (2.5" ID)	5550A133	7.40

■ Requires two retaining rings—one for adapter, flex adapter, or extension (ring ID listed); one for socket (ring ID depends on socket).

1" Square Drive Impact Sockets and Accessories

Sockets, adapters, and extensions are premium quality and made of steel. Finish is black.

♣ Note: Sockets and accessories require a locking retainer. Use with an impact wrench that has a pin-style socket retainer, or use a socket retaining ring with tools that have a hole- or hole-and-ring style socket retainer. The *Ring ID* is the inside diameter of the ring that will fit a particular socket (rings sold separately on page 2794).

Also Available: 6-point deep metric sockets. Please ask for 54155A69 and specify size.

1" Square Drive Impact Sockets and Accessories *(Continued from previous page)*

♣ Note: Sockets and accessories require a locking retainer. Use with an impact wrench that has a pin-style socket retainer, or use a socket retaining ring with tools that have a hole- or hole-and-ring style socket retainer. The *Ring ID* is the inside diameter of the ring that will fit a particular socket (rings sold separately below).

1/4", 3/8", and 1/2" Square Drive Power Sockets and Accessories

These premium-quality power sockets provide durability in nonimpact powered fastening applications such as high-volume production and assembly. For use with power drivers. Sockets, adapters, and extensions are steel. Sockets are unfinished, unless noted. For bit adapters and insert-bit holders, see 52735A and 7229A on page 2816.

Note: Sockets are not for use with impact tools.

Also Available: 1/4" drive 6-pt. standard inch sockets. Please ask for 54655A5 and specify size: 3/16", 1/4", 5/16", 3/8", 7/16", or 1/2".

Also Available: 3/8" drive 6-pt. deep inch sockets. Please ask for 54885A1 and specify size: 1/4", 5/16", 3/8", 7/16", 1/2", 9/16", 5/8", or 3/4".

Tool-Holding Heat-Shrink Attachments

Also known as tether loops, these have a heat-shrink sleeve for gripping your tool and a D-ring for attaching to a tool lanyard (not included; see page 1826). Slip the sleeve over your tool and apply heat with a heat gun until the sleeve grips tightly. Shrink temperature is 250° F. To ensure the loop won't slip off, the ends of the tool must be wider than where the loop will rest.

About Powered Fastening Tools

The tool you need depends on the fastener you're using. Use the chart below as a general guide. It suggests tightening torque based on using Grade 2 low-strength carbon steel fasteners. Values are approximate. For fasteners smaller than 1/4", see powered screwdrivers on pages 2806-2807 and precision hand-driven screwdrivers on pages 2820-2821.

Air tools require lubrication to operate properly. For air tool oil, see page 2205. For air hose, see pages 264-269.

Grade 2 Carbon-Steel Fastener Size:		1/4"-20	5/16"-18	3/8"-16	1/2"-13	5/8"-11	3/4"-10	1"-8	1 1/4"-7	1 1/2"-6
Max. Tightening Torque:	in.-lbs.	61	126	224	546	1088	1929	2800	5596	9737
	ft.-lbs.	5	11	19	46	91	161	233	466	811
Ratchet Wrenches (5 to 100 ft.-lbs.)										
Impact Wrenches (20 to 3000 ft.-lbs.)										
Impact Drivers (7 to 70 ft.-lbs.)										
Powered Screwdrivers (1 to 30 ft.-lbs.)										
Precision Screwdrivers (0.17 to 11 ft.-lbs.)										

Retainer Styles for Ratchet and Impact Wrenches

Quick Change—For quick assembly and changing. *Ball* and *ring* retainers are for sockets. Ball style is spring loaded. *1/4" hex chuck* retainer is for bits.

Positive Locking—For more secure retention of sockets. *Pin* style is spring loaded. *Hole-* and *ring-and-hole* styles require a retaining ring.

Air-Powered Impact Wrenches

A

B

C

D

E

F

G

H

J

Wrenches operate at full torque in both clockwise and counterclockwise direction. Recommended air pressure is 90 psi. Use with impact sockets only. Note: Air-powered tools require lubrication to operate properly.

Light Duty—Use for general shop, maintenance, and automotive work. *Style E* has a removable top handle.

Standard Duty—Use for medium-volume production, general maintenance, and construction applications. *Styles F&H* have an adjustable side handle.

Heavy Duty—Built for durability, these high-performance tools can handle the demands of high-volume production and heavy maintenance applications. *Styles H&J* have an adjustable side handle.

Ring-style socket retainer allows quick socket changes—pull the socket off the retainer and push on another one.

Pin-, hole-, and *ring-and-hole style socket retainers* (also called positive locking) provide a more secure hold than ring-style retainers.

Cordless Impact Wrenches and Drivers

These powerful tools drive screws quickly, even through thick or dense material. Tools operate at full torque in both a clockwise and counterclockwise direction. They have an electric brake, unless noted. All come with a UL listed charger, two batteries, and a carrying case.

Use impact wrenches with impact sockets (see pages 2788-2794) and impact drivers with 1/4″ hex shank screwdriver bits (see pages 2808-2815).

Wrenches with light and **drivers with light** have a built-in light to improve visibility as you're working.

Style J has an angled head. Optional straight-head attachment converts the tool into a straight driver.

Electric Impact Wrenches

No need to fire up your air compressor—just plug in and start working. Our electric wrenches operate on 120 volts AC and deliver full torque in clockwise and counterclockwise direction. All have an 8-ft. cord with two-prong plug. Wrenches are UL listed. Use with impact sockets only (see pages 2788-2794).

Style A wrench has a variable speed setting. **Style B** wrench with ring-and-hole style socket retainer includes a socket retaining ring.

Air-Powered & Cordless Ratchet Wrenches

For information about powered fastening tools, see page 2795.

Air-Powered Ratchet Wrenches

Finish jobs quickly and with less effort using these air-powered wrenches. They have a ball-detent-style socket retainer that allows quick socket changes—pull the socket off the retainer and push on another one. Wrenches operate at full torque in both clockwise and counterclockwise direction. They have a lever speed control, unless noted. Recommended air pressure is 90 psi. Use with impact sockets and power sockets, except standard duty 3/8" square drive Style C is for use with impact sockets only. See pages 2788-2794 for sockets. Note: Air-powered tools require lubrication to operate properly.

Standard duty wrenches are for general shop applications.

Built for durability, **heavy duty** wrenches can handle the demands of high-volume production and heavy maintenance applications.

Torque-Limiting Air-Powered Wrenches

Set your desired torque and the wrench will prevent you from exceeding it. Also known as nutrunners, these tools are commonly used in assembly applications. They have a pin-style (also called positive locking) socket retainer that has a pin that fits into a matching hole in the socket and provides a secure hold. Wrenches operate at full torque in both clockwise and counterclockwise direction. Wrenches have a lever speed control. Recommended air pressure is 90 psi. Use with impact sockets only. Note: Air-powered tools require lubrication to operate properly.

The 1/4" square drive wrench shuts off automatically when the torque setting is reached. The 3/8" square drive wrench disengages the clutch to indicate when the torque setting is reached.

Sq. Drive	Working Torque, ft.-lbs.	Max. Torque, ft.-lbs.	No-Load rpm	Avg. cfm @ 90 psi	Air Inlet, NPT	For Hose ID	O'all Lg.	Wt., lbs.		
1/4"	0.16-3.8	3.8	700	13	1/8	1/4"	12 1/2"	1.8	1132A11	$1,225.07
3/8"	1.25-9.16	9.16	600	16	1/4	1/4"	13 1/8"	3.4	1132A1	1,360.30

3/8" Square Drive Cordless Ratchet Wrenches

The motor stops when the fastener is tight. Wrenches have socket retainers that allow quick socket changes—pull the socket off the retainer and push on another one. Use these wrenches with impact sockets only. Wrenches operate at full torque in both a clockwise and counterclockwise direction.

Both wrenches include a charger. Wrench with 0-44 ft.-lbs. torque includes two lithium ion batteries and a canvas carrying bag. Wrench with 10-45 ft.-lbs. torque includes one lithium ion battery and a plastic case.

Working Torque, ft.-lbs.	Max. Torque, ft.-lbs.	Volts	No-Load rpm	Socket Retainer Style	O'all Lg.	Wt., lbs.	Wrenches		Repl. Batteries		Repl. Chargers	
0-44	44	18	2,000	Ring	15 1/4"	3.7	5483A31	$449.00	27875A15	$114.91	27875A17	$122.97

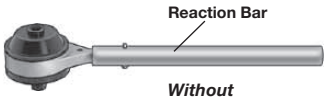
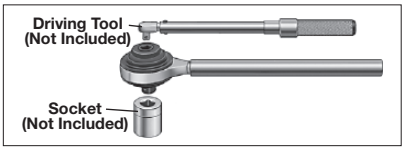
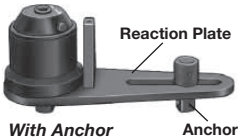
Torque Multipliers







When you need more torque than your wrench can deliver, multipliers help you reach high torque values without a lot of effort. Gears in the housing multiply the amount of force (or torque) that can be applied to the fastener. For example, if the torque ratio is 1:3.3 and you apply 100 ft.-lbs., the torque output would be 330 ft.-lbs.

Multipliers torque in clockwise and counterclockwise directions. Accuracy is ±5% of torque output.

Without Anchor— Place the reaction bar against a stationary object to keep the tool in place. Multipliers for hand tools signal with an audible click when overtorque occurs. When those for hand and nonimpact power tools are overtorqued, the male output square drive shears off to protect the gear housing (an extra male square drive comes with each tool). Models with ½″ female and 1″ male square drive have an anti-backlash feature to prevent wrench from swinging back when torqued.

With Anchor— Choose a multiplier with an anchor when you need extra stability in order to apply greater force. The reaction plate is held down by placing a socket on the anchor and attaching it to a secured fastener. The anchor and the male output drive have the same square size. When overtorqued, the male output square drive shears off to protect the gear housing (an extra male square drive comes with each tool). An antibacklash feature prevents wrench from swinging back when torqued.

Square Drive Female	Square Drive Male	Torque Ratio	Max. Input ft.-lbs.	Max. Input Nm	Max. Output ft.-lbs.	Max. Output Nm	O'all Lg.	Multipliers		Replacement Male Output Drive

Adjustable Torque-Limiting Adapters

To prevent overtorquing, adapters click and release when they've reached the torque setting. Pair them with any standard square-drive tool. To set torque, remove the snap ring and locking plate, then adjust the nut. Note: There's no Nm scale on the adapter, so you'll need a torque tester (see page 2805) or torque wrench to check the setting.

All have a female square drive on one end and a male square drive on the other; drives are the same size. Adapters torque in clockwise and counterclockwise directions. Accuracy is 5% of the torque setting. Maximum rpm is 300. Made of steel.

Adaptable to machine and nonimpact power tool applications if used intermittently. Not for use with impact tools. For best results, choose an adapter so that your desired torque setting falls in the middle of its torque range.

Also Available: Factory-set torque-limiting adapters with ⅜″ drive and 60-, 75-, 180-, or 240-in.-lb. torque setting, or ½″ drive with 360-in.-lb. setting. Please ask for 6968A9 and specify drive size and torque setting.

Square Drive	Torque Range in.-lbs.	Torque Range Nm	Dia.	O'all Lg.		
⅜″	24 to 180	2.7 to 20.3	1½″	2⅛″	6968A12	$90.89
⅜″	60 to 300	6.8 to 33.9	1½″	2⅛″	6968A14	90.89

Electronic Torque Analyzers and Sensors

Use an analyzer with a sensor (sold separately) to display, store, collect, and download torque readings for a variety of applications—just switch sensors as you switch jobs. Each sensor has a 4 ft. long cable, except sensor with ¾″ square drive has an 8-ft. long cable. Not for use with power tools.

Torque Analyzer— Stores up to 3,500 readings, which can be downloaded to a PC with an RS-232 cable (sold separately). The LCD shows track display (values as they're measured) or peak display (high value). Torque can be measured in ft.-lbs., in.-lbs., in.-oz., Nm, dNm, m-kg, or cm-kg. Use the keypad to specify high and low torque limits. Also features an audio output jack for use with headphones (the unit beeps at 110% of torque setting). Measures 6″ Lg.×3″ Wd.×2½″ Ht. Includes a rechargeable NiCad battery and charger. Comes in a plastic case.

Attachable Sensors— Sensors fit between your socket and driver and plug into the back of the torque analyzer. They have a female square drive on one end and a male square drive on the other; drives are the same size. Accuracy is ±1% of torque setting for 10-100% of torque range. Come with certificate of calibration traceable to NIST.

Hand-Held Sensors— No need for extra tools; grasp the knurled sensor and let your hand work as the driver for low-torque applications. Sensors have a male square drive. Accuracy is ±2% of torque reading for 10-100% of torque range. Come with certificate of calibration traceable to NIST.

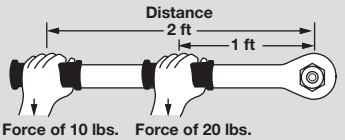
About Torque Tools



Torque is a measure of turning or twisting force. It is calculated by multiplying force by distance. For example, if you applied 10 lbs. of force with a 2-ft. wrench, you would get 20 ft.-lbs. of torque; if you applied 20 lbs. of force with a 1-ft. wrench, you would also get 20 ft.-lbs. of torque.

Selecting the Correct Torque Range— For the most accurate performance, the maximum torque you're applying should fall near the middle of the tool's torque range. For example, if you're applying 50 ft.-lbs. of torque, choose a wrench with a range of 5 to 100 ft.-lbs., rather than a range of 5 to 50 ft.-lbs.

Accuracy— Accuracy is usually given for 20-100% of a tool's torque range. For example, if the torque range is 20 to 120 in.-lbs., the accuracy statement is true for measurements between 40 and 120 in.-lbs. Below 20% of the torque range, the tool's accuracy often drops significantly.

Certificates of Calibration— Torque tools are calibrated by the manufacturer; the certificate provides proof of calibration and the date it was completed. Shelf life does not affect the calibration of a torque tool. Common practice is to consider the calibration life to begin at the date of purchase or first use.

Conversions— The chart below shows how to convert between some of the units used to measure torque:

Nm = Newton meters
dNm = deci Newton meters
cNm = centi Newton meters

To Convert From	To	Multiply By
in.-lbs.	in.-oz.	16

Torque Wrenches

Premium Electronic Torque Wrenches

Track applied torque and tighten fasteners with precision. The large LCD shows track display (values as they're measured) or peak display (highest value). Wrenches store up to 100 torque values and recall up to 100 measurements in order of operation. You can set the desired torque along with high and low tolerance limits. Lights signal when lower limit is met. Lights and audible alarm signal when target is met or upper limit is exceeded.

Accuracy is ±2% of torque setting for indicated torque range (for both clockwise and counterclockwise use). Torque can be measured in in.-lbs., ft.-lbs., and Nm. Download values using the required software and RS-232 cable (sold separately). Wrenches use four AA batteries (included) and come in a plastic case with certificate of calibration traceable to NIST.

Square Drive	Torque Range in.-lbs.	Torque Range ft.-lbs.	Torque Range Nm	Graduations in.-lbs.	Graduations ft.-lbs.	Graduations Nm	O'all Lg.

Electronic Torque Wrenches with Rotating Dial

Rotate the large digital display so you can read it at any angle. Torque wrenches show a track display (values as they're measured) or a peak display (highest value). A touch of a button sets pass/fail mode for quick target tolerance settings from ±1% to ±10%. Colored lights and audible alarm signal to let you know whether you're above, below, or within your target torque range. Accuracy is ±1% of torque setting for entire torque range (for clockwise and counterclockwise use). Wrenches are chrome-plated steel with a plastic grip. They use a 9-volt battery (included), and come in a plastic case with certificate of calibration traceable to NIST.

Electronic Torque Wrenches

Set your torque value with the touch of a button. Digital display, colored lights, and an audible alarm let you know whether you're above, below, or have reached your target torque. Wrenches show a track display (values as they're measured) or a peak display (highest value). They have a reversible ratchet head and come in a plastic case with certificate of calibration traceable to NIST.

Wrenches with 120 to 1,200 and 300 to 3,000 in.-lbs. torque range have a steel body and a rubber grip. Accuracy is ±2% (for clockwise use) and ±3% (for counterclockwise use) of torque setting for 20-100% of torque range. Wrenches use two CR123 batteries (included).

Wrench with 180 to 1,800 in.-lbs. torque range has a steel body and a plastic grip. Accuracy is ±3.5% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). Requires three AA batteries (sold separately).

Square Drive	Torque Range in.-lbs.	Torque Range ft.-lbs.	Torque Range Nm	Graduations in.-lbs.	Graduations ft.-lbs.	Graduations Nm	O'all Lg.

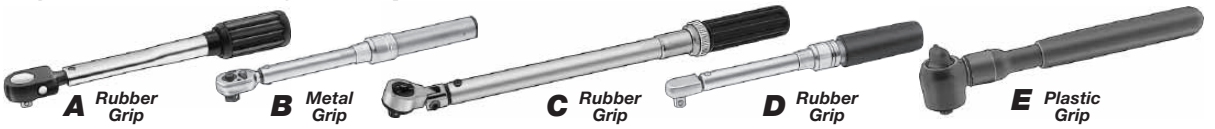
Adjustable Click-Style Torque Wrenches



Turn the handle to the desired torque setting and lock in place. When torque setting is reached, wrenches signal with an audible click and an impulse in the grip. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use) and ±6% of torque setting for 20-100% of torque range (for counterclockwise use), unless noted. Body is steel. Wrenches come in a case (unless otherwise stated) with a certificate of calibration traceable to NIST.

Style C has a head that pivots 15° up and down.

Style E are insulated, tested to 1,000 VAC, and meet IEC 900 specifications. Handle is nonconductive. Case not included.

Note: To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use.

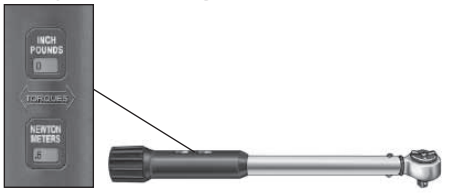
● Accuracy is not rated for counterclockwise use. ★ For clockwise use only. ■ ±3% accuracy for clockwise and counterclockwise use.

Torque Wrenches

For information about torque tools, see page 2800.

Easy-Read Adjustable Click-Style Torque Wrenches



Forget squinting at scales and converting measurements—these wrenches display torque settings in two easy-to-read values. Set the torque using the knob at the end of the grip. When your torque setting is reached, the wrench signals with an audible click, an impulse in the grip, and a momentary release.

Wrenches have a reversible ratchet head, a chrome-plated steel body, and a rubber grip, except 3/4" square-drive wrench, which has a metal grip. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use). Accuracy is not rated for counterclockwise use. Come in a plastic case with certificate of calibration traceable to NIST.

Note: To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use.

Square Drive	Torque Range	Graduations	O'all Lg.		
in.-lbs., Nm

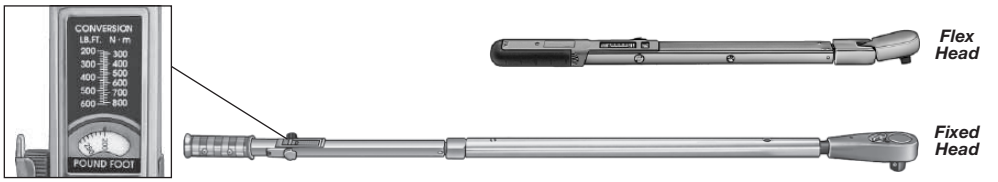
1/2"	25 to 250 ft.-lbs., 35 to 340 Nm	2 ft.-lbs., 2 Nm	21 3/4"	5274A14	192.45
3/4"	100 to 600 ft.-lbs., 135 to 815 Nm	50 ft.-lbs., 65 Nm	43"	5274A15	553.71

No-Reset Adjustable Click-Style Torque Wrenches



Unique split-beam design inside the wrench body minimizes friction and wear and eliminates the need to return to the lowest scale reading after each use. To set torque, turn knob to the desired setting. When your torque setting is reached, the wrench signals with an audible click and a momentary release. Use the chart above the display to convert ft.-lbs. to Nm. Wrenches have a chrome-plated steel body and a metal grip. They come in a plastic case with certificate of calibration traceable to NIST.

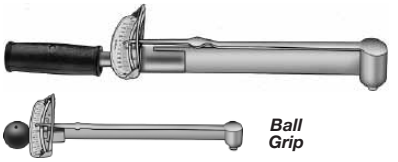
Flex Head—The nonreversing ratchet head flexes 15° to work around obstacles. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use).

Fixed Head—Has a reversible ratchet head. Three components detach for compact storage. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use).

Note: You must use all pieces to obtain correct readings.

Square Drive	Torque Range	Graduations	O'all Lg.		
Flex Head					
3/8"	20 to 100 ft.-lbs.	2 ft.-lbs.	17 5/8"	5387A22	$207.06
1/2"	40 to 250 ft.-lbs.	5 ft.-lbs.	22 1/8"	5387A25	227.31
Fixed Head					
3/4"	200 to 600 ft.-lbs.	10 ft.-lbs.	48 1/2"	5387A56	407.90

High-Accuracy Flat-Beam Torque Wrenches



The most accurate nonelectronic torque tools we offer have almost no moving parts and are virtually maintenance-free. Memory pointers show the torque reached. Body is steel; grip is plastic. Accuracy is ±2% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). Wrenches come with certificate of calibration traceable to NIST.

Also Available: Wrenches with metric (Nm) scales. Please ask for 5358A95 and specify grip style (straight or ball), square drive (1/4", 3/8", or 1/2"), and maximum torque (2.5, 5, 12, 22, 34, 70, 140, or 210 Nm).

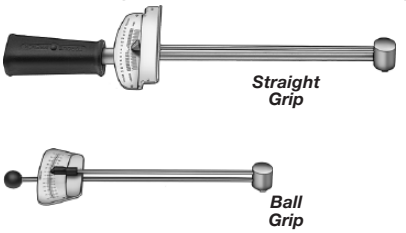
Economy Round-Beam Torque Wrenches



The grip pivots and transmits torque directly to the indicator needle. Body is steel; grip is plastic. Accuracy is ±7% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use).

Square Drive	Torque Range	Graduations	O'all Lg.

Interchangeable-Head Click-Style Torque Wrenches

Adjustable Handle | *Nonratcheting* | *Reversible Ratchet* | *Open End* | *Box End* | *Flare-Nut End* | *Hex Key*

Interchangeable heads let you tackle several jobs with one torque wrench. Wrenches have a pin lock for a secure connection between handle and head (handles and heads sold separately). When torque setting is reached, wrenches signal with an audible click and a momentary release. They torque in both clockwise and counterclockwise directions. To reverse direction, remove head, turn handle over, and reattach head. *Note:* Do not exceed maximum torque of handle or head.

Handles— Accuracy is ±4% of torque setting for 20-100% of torque range. Come with certificate of calibration traceable to NIST.

Adjustable handles have a steel body and a metal grip. Turn grip to set torque, then lock in setting. *Note:* To relieve pressure on the spring and maintain calibration, return setting to lowest reading on scale when not in use. *Factory-set handles* have a steel body and a vinyl grip.

Heads— All heads have one-piece construction and a consistent length to the center of the fastener, so you don't need to recalibrate handles when changing heads. Made of cast alloy steel.

Adjustable Handles

1/4" Square-Drive Torque Wrench/Drivers

Check clockwise and counterclockwise torque on small fasteners. The dial faces the user for easy reading. Tools are nonratcheting and have a memory pointer to show maximum torque reached. Body is die cast zinc; grip is plastic. Overall length is 8 5/8". Accuracy is ±2% of torque setting for 20-100% of torque range. Tools with a 0 to 50 and 0 to 75 in.-lbs. torque range have a 1/4" female square drive in handle for extra leverage when applying high torque levels.

Come in a plastic case with certificate of calibration traceable to NIST.

Torque Range		*Graduations*

Adjustable Click-Style Pipe-Head Torque Wrenches

Head is ideal for tightening applications involving pipe, fittings, or plumbing. Just turn the end of the handle to desired torque setting. Wrench signals with an audible click when torque is reached. Accuracy is ±5% of torque setting for entire torque range (for clockwise use). Jaws are serrated. Wrenches have a steel body and a rubber grip, except wrench for 1″-2″ diameters, which has a metal grip. They come with certificate of calibration.

For Dia.	Torque Range	Graduations	O'all Lg.		
½″-1½″	100 to 400 in.-lbs.	5 in.-lbs.	13⅛″	5778A11	$690.32

½″-1½″	30 to 200 ft.-lbs.	2 ft.-lbs.	30⅛″	5778A13	844.48
1″ -2″	60 to 300 ft.-lbs.	2 ft.-lbs.	42½″	5778A14	1,226.48

Factory-Set Click-Style Torque Wrenches

When torque setting is reached, wrenches signal with an audible click and a momentary release. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise use). Wrenches have a reversing ratchet head, a steel body, and a vinyl grip. They come with certificate of calibration traceable to NIST.

To Order: Please specify exact torque from the ranges listed.

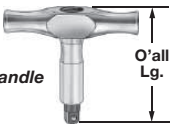
Factory-Set Slip-Release Torque Wrenches

Straight Handle



T-Handle

When torque setting is reached, wrenches slip to prevent overtorquing. All torque clockwise and also have a counterclockwise mode: torque, ratchet (nonreversing), or lock up. Lock-up mode allows you to loosen fasteners. Made of chrome-plated steel. Come with certificate of calibration traceable to NIST.

Straight Handle— Accuracy is ±4% of torque setting for entire torque range (in clockwise mode).

T-Handle— Accuracy is ±0.5 in.-lbs. for 2 to 10 in.-lb. torque settings, ±1 in.-lb. for 11 to 25 in.-lb. torque settings, ±2 in.-lbs. for 26 to 50 in.-lb. torque settings, and ±4 in.-lbs. for 51 in.-lb. and higher torque settings (in clockwise mode).

To Order: Please specify exact torque setting from the ranges listed.

Also Available: Metric factory-set wrenches. For straight handle wrenches, please ask for 7151A999 and specify square drive (¼″, ⅜″, or ½″) and exact torque setting. For T-handle wrenches, please ask for 5507A999 and specify square drive (¼″, ⅜″, or ½″) and exact torque setting.

Dial Torque Wrenches

Dual Scale

Single Scale

Dual Scale

Monitor torque as it's being applied. Tools have a memory pointer to show maximum torque reached. Accuracy is ±4% of torque setting for 20-100% of torque range (for clockwise and counterclockwise use). All have a steel body and a rubber grip. They come in a case with certificate of calibration traceable to NIST.

Single Scale— Shows units in in.-lbs.

Dual Scale— Show units in in.-lbs. and Nm or ft.-lbs. and Nm.

Dial Torque Tool Testers

Check the accuracy of your torque wrenches and screwdrivers. A memory needle remains on maximum torque reading until manually reset to zero. To use with click-style torque wrenches, take the reading from the main dial.

Units measure in both clockwise and counterclockwise directions. Accuracy is ±2% of torque reading for 20-100% of torque range. A female-to-female square drive adapter is included.

In.-lb. testers are 8″ Lg.× 4″ Wd.×2¼″ Ht.; ***ft.-lb.*** testers are 12⅞″ Lg.×4″ Wd.×2½″ Ht. Both testers have ¼″ dia. mounting holes and a steel housing.

Furnished with a certificate of calibration traceable to NIST.

Note: Not for use with power or impact tools.

Low-Torque Precision Gauges

Gauges precisely measure low torque values. They have both a top dial and side scale with memory pointers that remain on the maximum torque reading, unless noted.

To use, finger-tighten the three-jaw chuck on the object to be measured, then twist either the gauge or object.

Gauges measure in both clockwise and counterclockwise directions. Accuracy is ±2% of torque reading for 10-100% of torque range. The housing is aluminum. All have an aluminum chuck except 83395A14, A29, and A13, which have a steel chuck. Plastic storage case included.

Also Available: Gauges with certificate of calibration traceable to NIST. Please ask for 83395A11 and specify torque range.

Electronic Torque Tool Testers

Get quick and accurate torque measurements on the easy-to-read digital display.

Testers feature three modes of operation: track (readings go up and down as torque tool moves), peak hold (holds the top torque value), and first peak (for micrometer click-style wrenches). It also displays range in Nm.

Testers measure in both clockwise and counterclockwise directions. Accuracy is ±1% of torque reading for 10-100% of torque range. A female-to-female square drive adapter is included.

Units are 4½″ Ht.×6″ Wd.×6″ Dp. and have a steel housing with ⅜″ dia. mounting holes. 9-volt battery included.

Furnished with a certificate of calibration traceable to NIST.

Note: Not for use with power or impact tools.

Male Sq. Drive	Torque Range in.-lbs.	Torque Range ft.-lbs.	Graduations in.-lbs.	Graduations ft.-lbs.

Torque Gauges/Screwdrivers

The 3″ dial makes it easy to measure torque as you apply it with these combination gauge and screwdrivers.

Accuracy is ±3% of torque reading for entire range. Drivers have a ¼″ female hex drive and include a ¼″ hex × ¼″ square-drive adapter, plus two ¼″ hex-shank insert bits: one ¼″ slotted and one #2 Phillips. See pages 2808-2815 for additional ¼″ hex-shank insert bits. Plastic storage tube included.

Furnished with a certificate of calibration traceable to NIST.

Nonadjustable Torque Screwdrivers

Maintain precision in repetitive fastening applications with factory set, nonadjustable torque. Tools slip to prevent over-torquing once the torque setting is reached, except Style F, which clicks.

Accuracy is ±6% of torque setting for 20-100% of torque range. Drive is ¼″ hex female and accepts any ¼″ hex-shank bit (see pages 2808-2815 for bits). Drivers have an aluminum housing.

Furnished with a certificate of calibration traceable to NIST.

Styles A and ***D*** torque in both clockwise and counterclockwise directions and include five colored sleeves.

Styles B, C, E, and ***F*** are for clockwise use only. ***Styles B, C,*** and ***E*** are offered in four sleeve colors.

To Order: Please specify the exact torque setting required. For Styles B, C, and E, also specify sleeve color (blue, gold, green, or red).

Adjustable Slip-Release Torque Screwdrivers and Sets

Adjust torque by turning the grip or collar. A slip-release mechanism prevents over-torquing once the setting is reached. Drivers torque in both clockwise and counterclockwise directions. Clockwise accuracy is ±6% of torque setting for 20-100% of torque range. Accuracy is not rated in counterclockwise direction. Drive is 1/4″ hex female and accepts any 1/4″ hex-shank bit (see pgs. 2808-2815 for bits).

Furnished with certificate of calibration traceable to NIST.

Styles A and **C** have an aluminum housing.

Styles B and **E** have a lock that prevents accidental adjustment and an aluminum housing with antistatic rubber grip. *Style E* also have a removable T-bar for extra leverage.

Style D is graduated in both inch and metric scales. It has an aluminum housing and vinyl grip cap.

Adapter

1/4″ Hex × 1/4″ Square-Drive Male Adapter—1″ long

52735A21 ..... $2.25

Sets

22-Piece Set—Includes Style C torque screwdriver, plus miniature and 1/4″ hex-shank insert bits. Miniature bits include slotted size 3/32″; hex size 0.035″; socket size 7/64″; and a miniature bit adapter. The 1/4″ hex-shank bits include slotted sizes 1/8″, 3/16″, 7/32″, and 1/4″; Phillips sizes #0 and #1; hex sizes 0.050″, 1/16″, 5/64″, 3/32″, 1/8″, and 5/32″; socket sizes 1/8″, 3/16″, 1/4″, and 5/16″; and a 1/4″ hex × 1/4″ square-drive adapter. Packed in a plastic case.

8554A61 ..... $492.96

29-Piece Set—Includes Style D torque screwdriver, plus the following 1/4″ hex-shank insert bits: slotted sizes 1/8″, 5/32″, 1/4″, and two 9/32″; Phillips sizes #0, #1, #2, and #3; Torx sizes T10, T15, T20, T25, T30, and T40; square-recess sizes #0, #1, #2, and #3; Pozidriv® sizes #1 and #2; and hex sizes 5/64″, 3/32″, 7/64″, 1/8″, and 9/64″. Set also comes with a 1/4″ hex × 1/4″ square-drive adapter and 1/4″ bit holder. Packed in a plastic case.

5716A52 ..... $281.91

Interchangeable-Blade Click-Style Torque Screwdrivers

Select a handle based on torque, then add a slotted-, Phillips-, or Torx-tip blade that fits your needs. Screwdrivers signal with an audible click when torque is reached. Accuracy is ±6% and calibrated to DIN standard.

Choose from nonadjustable and adjustable torque handles. **Handles** have a slip-resistant rubber grip and are furnished in a plastic case. **Blades** are chrome-plated steel and include a plastic sleeve marked with the blade size. Sleeves are gray on slotted blades, blue on Phillips blades, and green on Torx blades.

Torque-Limiting Electric Screwdrivers

The motor on these drivers stops when you reach your set torque. Tools have a duty cycle of 0.5 seconds on for every 3.5 seconds off. They accept 1/4″ hex-shank bits (see pages 2808-2815 for bits). Tools have an 8-ft. cord with three-prong plug. They operate on 115 volts AC; 50/60 Hz. UL listed.

Push-to-Start—Press the tip against the fastener to start the tool.

Working Torque, in.-lbs.	No-Load rpm	Amps	Lg.	Wt., lbs.	Lever Operated		Push-to-Start

Electric Screwdrivers

These variable speed screwdrivers accept 1/4″ hex-shank screwdriver bits (see pages 2808-2815 for bits). Tools have a 10-ft. cord with two-prong plug. They operate on 120 volts AC, 60 Hz. UL listed and CSA certified.

Standard—Includes three bits and a bit adapter.

Depth Limiting—Twist the nosepiece to set the depth and prevent fasteners from being driven too deep. The nosepiece can be removed to access tight spaces. Furnished with a 5/16″ nutdriver bit.

	Max. Torque, in.-lbs.	No-Load rpm	Amps	Lg.	Wt., lbs.	Milwaukee Model No.

Tight-Clearance Bit Adapters for Power Tools

The head is angled 105° to drive fasteners in tight spaces. These adapters have a groove in the shank to fit in a power-tool chuck, allowing you to use 1/4″ hex-shank bits (also known as insert bits) in drills and powered screwdrivers (see pages 2808-2815). Max. torque is 100 in.-lbs.; max. rpm is 400. Made of steel.

5803A91 $31.51

Screw Feeders

Pour screws into the machine's hopper and they automatically line up on the included rail to be picked up with a magnetic-tipped screwdriver. To pick up different sized screws, replace the rail. Pick-up rate is two screws per second. Max. screw length is 11/16″. Operates on 120 volts AC, 60 Hz.

Also Available: Additional rails to accommodate different screw sizes. Please ask for 5931A21 and specify screw size from the table below.

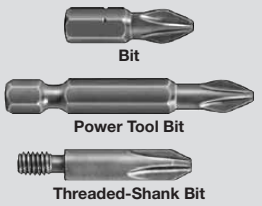
Screwdriver Bits

About Screwdriver Bits



Screwdriver bits are the tips of a screwdriver blade that can be interchanged.

Bits (also known as insert bits) are compact bits that are used in hand drivers (see page 2818) or with a bit adapter (see page 2816) in power tools.

Power tool bits have a groove in the shank and fit directly into power tools without an adapter. They offer more reach for recessed holes and less wobble compared to a bit used with an adapter.

Threaded-shank bits thread directly into your driving tool.

High-Torque Phillips Bits

Made to absorb shock and twisting force, these bits are less likely to crack or shatter under high torque compared to regular bits. They have a 1/4" hex shank, unless noted.

High-torque bits are uncoated.

Extended-life high-torque bits have a diamond coating that provides longer life than uncoated bits.

Extra-high-torque bits for impact drivers are durable and diamond coated to provide a long service life.

▲5/16" hex shank.

6-Piece Extended-Life High-Torque Bit Set—Includes four No. 2 bits for screw sizes 5-10; one No. 1 bit for screw sizes 2-4; and one No. 3 bit for screw sizes 12 and 1/4". Bits are titanium-nitride coated, and are 1" long with a 1/4" hex shank. Packed in a plastic case.

36835A48 ..... $17.90

For information about screwdriver bits, see page 2808.

Slip-Resistant Phillips Bits

Ribs forged into the wings of these bits grip the screw recess to reduce stripping. They're also known as ACR® bits.

7396A81 ..... $31.19

High-Torque Torx Bits

Made to absorb shock and twisting forces, these bits are less likely to crack or shatter under high torque compared to regular bits. Also known as insert bits, these compact bits are used in hand drivers or with a bit adapter in power tools. They are diamond coated and have a 1/4" shank.

Security Bit Assortments

29 Piece—Includes an 8 3/4″ long bit screwdriver; 2 1/8″ long power tool bit adapter; ¼″ male square drive × ¼″ hex shank adapter; and the following ¼″ hex shank × 1″ Lg. bits, all packed in a plastic case:

Tamper-Resistant Torx: T9, T10, T15, T20, T25, T27, T30, and T40.

Tamper-Resistant Hex: 3/32″, 7/64″, 1/8″, 9/64″, 5/32″, 3/16″, 7/32″, and ¼″

Spanner: No. 6, 8, and 10
Torq-Set®: No. 5 and 8
Tri-Wing®: No. 4 and 5
Square: No. 1 and 2
Pozidriv®: No. 2

5996A3 ..... $67.54

39 Piece—Includes a 4 5/16″ long cushion-grip handle; 2 1/4″ long power tool bit adapter; ¼″ female square drive × female hex adapter; and the following ¼″ hex shank × 1″ Lg. bits:

Tamper-Resistant Torx: T8, T10, T15, T20, T25, T27, T30, and T40.

Tamper-Resistant Hex: 5/64″, 3/32″, 7/64″, 1/8″, 9/64″, and 5/32″

Spanner: No. 4, 6, 8, and 10

5/16″	3/16″	2 7/8″	5977A43	5.73

Bit Adapters for Power Tools

Adapters have a groove in the shank to fit in a power-tool chuck, allowing you to use hex-shank bits (also known as insert bits) in drills and powered screwdrivers. Bodies are stainless steel, unless noted.

(B) Twist Lock—Tighten the knurled end to secure the bit.

(C) Wobble Reducing—These adapters are machined from a single piece of metal to provide added stability.

(D) Quick-Change Secure-Hold—The chuck holds bits securely—pull back the collar to insert or remove.

(E) Bit Adapters for Powered Impact Drivers—These adapters are designed to withstand the high torque of impact drivers.

(F) Screw Guiding—Keep your bit from slipping. Place a screw on the end of your bit and slide the sleeve of the adapter over the screw. The sleeve retracts as the screw is driven. Sleeve is aluminum.

(G) Transparent Screw Guiding—The clear sleeve on these adapters slides over the screw and lets you see that the bit is making contact. The sleeve retracts as the screw is driven. Sleeve is plastic.

Screw-Holding Bit Adapters for Power Tools

A magnetic ring at the end of the adapter holds flat-head screws in place to ensure good contact between the bit and screw. This adapter fits in a power-tool chuck, allowing you to use hex-shank bits in drills and powered screwdrivers. It has a 1/4" hex shank, a 1/4" hex opening, and is 2 3/4" long. Made of stainless steel.

6005A1 ..... $20.40

Flexible Bit Adapters for Power Tools

Access tight spots—these adapters flex up to 90°. They fit in a power-tool chuck, allowing you to use hex-shank bits (also known as insert bits) in drills and powered screwdrivers. They have a 1/4" hex male end and a 1/4" hex female end. Made of steel.

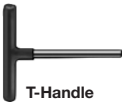
Nonmagnetic Bit Screwdrivers

Screwdriver Handle



T-Handle

Insert bits are held in place with a retaining ring rather than a magnet, so the tool won't attract loose metal parts and shavings. Bits are not included.

Screwdriver Handle—Shaft is steel; handle is plastic. Bits store in the handle.

T-Handle—The cushioned T-handle provides comfort and increased torque. Shaft is steel with a zinc-plated finish; handle is plastic.

Style	Hex Opening	O'all Lg.		
Screwdriver Handle	1/4"	8"	56055A34	$8.00
T-Handle	1/4"	6"	83385A31	17.09
T-Handle	1/4"	12"	83385A35	19.11
T-Handle	1/4"	18"	83385A38	24.14

Secure-Hold Bit Screwdrivers

Pull back on the chuck to insert a bit; push it forward to lock bit firmly in place. Includes 3/16", 7/32", and 1/4" slotted bit sizes and No. 1, No. 2, and No. 3 Phillips bit sizes. Bits are steel and store in the handle.

Overall length is 9 1/8". Shaft is chrome-plated steel with a 1/4" hex opening; handle is plastic.

8343A43 ..... $29.73

T-Handle Ratcheting Bit Screwdrivers

The T-handle provides increased torque. Shaft is stainless steel; handle is plastic. A magnet holds the bits in the shaft. Bits are steel.

Hex Opening	O'all Lg.	Phillips Bit Size		
1/4"	3 7/8"	No. 2	6541A11	$27.22

1/4"	9 13/16"	No. 2	6541A13	30.97

Tight-Clearance Bit Screwdrivers

The head is angled 105° to drive fasteners in tight spaces. It can also be removed and used with power drills that accept a 1/4" hex shank and run at a maximum of 600 rpm with 100 in.-lbs. torque. Includes 3/16" and 1/4" slotted and No. 1 and No. 2 Phillips bit sizes. Bits store in the handle. A magnet holds the bits in place. Shaft is chrome-plated steel; handle is plastic. Overall length is 8 3/8".

5332A81 ..... $30.03

Reversible-Bit Screwdriver/Nutdrivers

Bits have a different tip at each end and snap into the shaft, which is also a nutdriver. Bits are steel and store in the shaft. They have a ball detent holding mechanism. Shaft is chrome-plated steel; handle is plastic.

▲Also has No. 1 and No. 2 square bits.

Electrical-Insulating Bit Screwdrivers

These screwdrivers have an insulated handle and shaft to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet EN 60900 and IEC 60900. Shaft is plastic-coated steel. A magnet holds the bits in place. Bits are steel and store in the handle. Drivers include 7/32" and 1/4" slotted bits and No. 0, No. 1, No. 2, and No. 3 Phillips bits. Overall length is 9".

7315A71 ..... $20.25

Ratcheting Bit Screwdrivers

Standard

Fast Driving

Multiposition Grip

A magnet holds the bits in place. Hex opening is 1/4". Handle is plastic; bits store in the handle.

Standard—Have a chrome-plated steel shaft.

Fast Driving—Grip the speed housing to drive screws four times faster; release to ratchet with more torque and power. Shaft is chrome-plated steel.

Multiposition Grip—Have a handle that folds into a pistol grip for access to tight spaces. Shaft is steel.

★Also has T10, T15 Torx; No. 1, No. 2 Square; No. 1, No. 2 Pozidriv® bits.

■Also has No. 1 and No. 2 Pozidriv® bits.

Flexible-Shaft Bit Screwdrivers

Maneuver around corners and in other hard-to-reach spots that regular and offset screwdrivers can't access. Screwdrivers have a rubber-coated steel shaft and plastic handle. They accept 1/4" hex shank bits (bits not included) and have a quick-change chuck. Overall length is 10 7/8".

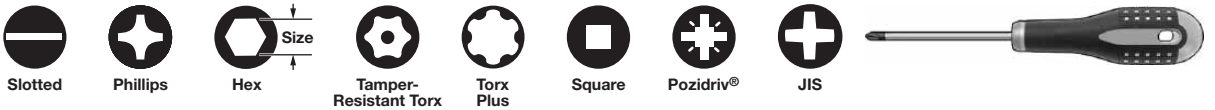
5705A3 ..... $25.91

Lighted Bit Screwdrivers

A light illuminates fasteners and a shaft holds 4 mm hex bits in place. Bits store in the handle. Screwdriver has a plastic shaft and handle, and is 5 3/4" long. Includes 5/64" and 1/8" slotted bit sizes, No. 000 and No. 0 Phillips bit sizes, and T5, T6, T8, and T10 Torx bit sizes. Includes three LR41 batteries.

5509A45 ..... $13.60

Ultra-Grip Screwdrivers



The soft, contoured handle on these premium screwdrivers provides comfort and the best possible grip for achieving maximum torque. All have a steel shaft and plastic handle.

Tamper-resistant Torx are also known as pin-in-Torx.

Torx Plus are not compatible with standard Torx screws.

Square are also known as Robertson screwdrivers.

JIS (Japanese Industrial Standard) are designed for the fasteners used in electronics assembly. The tips have slightly sharper corners than Phillips tips.

Screwdrivers

Screwdrivers with a square shaft or hex shaft can be gripped with a wrench for additional torque.

Tamper-resistant hex are also known as pin-in-hex.

One-way tools are for removal only (one-way screws can be installed with a slotted screwdriver). Screws that are corroded or were installed with power tools must be drilled out.

Drilled spanner are for use with screws that have two drilled holes.

9-piece slotted/Phillips and **9-piece hex sets** include a 3 1/8" long secondary handle that slips over the attached handle for greater torque and a more comfortable grip.

Slotted, Phillips, Hex, Tamper-Resistant Hex, Torx, and Pozidriv® Screwdrivers

Screwdriver Sets

5-Piece Slotted Set—Includes the following sizes: 1/8"×4 3/4", 3/16"×9 3/4", 1/4"×3 1/2", 1/4"×8 1/4", and 5/16"×10 3/4".

8551A51 ..... $22.69

7-Piece Slotted Set—Includes the following sizes: 1/8"×6 3/4", 3/16"×3 1/2", 3/16"×6 3/4", 1/4"×3 1/2", 1/4"×8 1/4", 5/16"×10 3/4", and 3/8"×13 1/4".

8551A52 ..... $39.42

6-Piece Slotted/Phillips Set—Includes the following sizes:
Slotted: 3/16"×6 3/4", 3/16"×9 3/4", 1/4"×8 1/4", 5/16"×10 3/4"
Phillips: No. 1×6 3/4", No. 2×8 1/4"

8551A26 ..... $29.10

9-Piece Slotted/Phillips Set—Packed in a plastic case. Includes the following sizes plus a secondary screwdriver handle:
Slotted: 3/32"×3 1/2", 1/8"×3 1/2", 5/32"×3 1/2", 3/16"×3 1/2", 1/4"×3 1/2"
Phillips: No. 0×3 1/2", No. 1×3 1/2", No. 2×3 1/2"

7032A11 ..... $35.55

10-Piece Slotted/Phillips Set—Includes the following sizes:
Slotted: 1/8"×4 3/4", 3/16"×9 3/4", 1/4"×3 1/2", 1/4"×8 3/4", 5/16"×10 3/4", 3/8"×13 1/4"
Phillips: No. 1×6 3/4", No. 2×3 1/2", No. 2×8 1/4", No. 3×10 3/4"

8551A83 ..... $56.72

5-Piece Phillips Set—Includes sizes No. 0×6 3/4", No. 1×6 3/4", No. 2×3 1/2", No. 2×8 1/4", and No. 3×10 3/4".

8551A48 ..... $24.92

8-Piece Hex Set—Includes sizes 1.3 mm×6 5/8", 1.5 mm×6 5/8", 2 mm×6 5/8", 2.5 mm×7 1/8", 3 mm×7 1/8", 4 mm×7 1/8", 5 mm×7 1/8", and 6 mm×7 1/8". Packed in a canvas roll-up pouch.

57585A61 ..... $64.18

9-Piece Hex Set—Includes sizes 0.028"×3 1/2", 0.035"×3 1/2", 0.050"×3 1/2", 1/16"×3 1/2", 5/64"×3 1/2", 3/32"×3 1/2", 7/64"×3 1/2", and 1/8"×3 1/2", plus a secondary screwdriver handle. Packed in a plastic case.

5759A12 ..... $32.17

9-Piece Hex Set—Includes sizes 0.9 mm×3 1/2", 1.3 mm×3 1/2", 1.5 mm×3 1/2", 2 mm×3 1/2", 2.5 mm×3 1/2", 3 mm×3 1/2", 4 mm×3 1/2", and 5 mm×3 1/2", plus a secondary screwdriver handle. Packed in plastic case.

5759A13 ..... $36.39

Screwdriver Sets (Cont.)

11-Piece Hex Set—Includes sizes 0.050″×6⁵⁄₈″, 1⁄16″×6⁵⁄₈″, 5⁄64″×6⁵⁄₈″, 3⁄32″×7⅛″, 7⁄64″×7⅛″, ⅛″×7⅛″, 9⁄64″×7⅛″, 5⁄32″×7⅛″, 3⁄16″×7⅛″, 7⁄32″×7⅛″, and ¼″×8⅛″. Packed in a canvas roll-up pouch.

7400A33 ..... $68.11

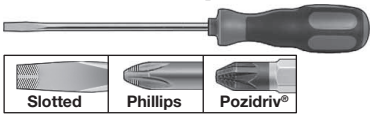
6-Piece Torx Set—Includes sizes T6×6″, T7×6″, T8×6″, T9×6″, T10×6″, and T15×6¾″. Packed in a vinyl pouch.

5756A92 ..... $32.21

6-Piece Torx Set—Includes sizes T10×6″, T15×6¾″, T20×6¾″, T25×7¾″, T27×8″, and T30×8¼″. Packed in a vinyl pouch.

5756A45 ..... $33.62

Screwdrivers with Slip-Resistant Tip



Reduce slipping and stripping the screw recess. The tip has ribbed grooves that grip the surface of the recess, minimizing the pressure required to achieve maximum torque. Shaft is chrome-plated steel; handle is plastic.

Ball-End Screwdrivers

You don't need exact alignment between the fastener and the tool—the ball end allows up to 20° angled entry to tighten and remove screws in hard-to-reach areas. Shaft is steel with a black finish; handle is plastic.

Square are also known as Robertson screwdrivers.

Static Control Screwdrivers

Also known as ESD-safe screwdrivers, the handle drains static away from your application, preventing buildup from electrostatic discharge (ESD) that can damage sensitive equipment. Shaft is chrome-plated steel. Drivers have a surface resistivity of 10^6-10^9 ohms. Meets EN 61340 specifications.

Warning: Because the handle conducts electricity, screwdrivers must not come in contact with sources of electrical power.

Electrical-Insulating Screwdrivers

These screwdrivers have an insulated handle and shaft to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts and meet VDE standards.

Slotted and **Phillips** meet EN 60900. 3/16" size slotted also meets ASTM F1505-01 and IEC 60900.

Torx meet ASTM F1505-01, EN 60900, and IEC 60900.

Terminal screw are for the combination drive screws in electrical equipment. Meet IEC 60900.

Square are also known as Robertson screwdrivers. Meet EN 60900.

Precise-Control Metal-Handle Screwdrivers

Also known as jewelers' screwdrivers, these tools have a rotating end cap on the handle that lets you apply constant pressure to small fasteners while turning the body of the screwdriver with your fingertips. Overall length is 4"; shaft length is 1 1/4". Screwdrivers are steel; shaft has a black-oxide finish.

JIS (Japanese Industrial Standard) are designed for the fasteners used in electronics assembly. The tips have slightly sharper corners than Phillips tips.

Ball-End Precise-Control Hex Screwdrivers

The ball end allows up to 20° angled entry to tighten and remove screws in hard-to-reach areas. Press the rotating end cap on the handle with your palm or index finger to apply constant pressure to small fasteners while turning the body of the screwdriver with your fingertips. They're also known as precision and miniature screwdrivers. Shaft is chrome-plated steel; handle is plastic.

Screwdriver Sets

A magnetized tip holds the screw in place. Packed in a vinyl pouch.

7-Piece Slotted Set—Includes a handle and six interchangeable shafts in sizes 0.025″, 0.040″, 0.055″, 0.070″, 0.080, and 0.100″.

8550A62 ..... $19.40

6-Piece Slotted/Phillips Set—Includes a handle and five interchangeable shafts in sizes 0.055″, 0.070″, and 0.100″ and Phillips No. 0 and No. 1.

8550A54 ..... $20.41

5-Piece Phillips Set—Includes a handle and four interchangeable shafts in sizes No. 000, No. 00, No. 0, and No. 1.

8550A63 ..... $23.61

Convertible-Handle Electrical-Insulating Screwdriver Sets

These screwdrivers have an insulated handle and shaft to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet IEC 900 and VDE standards. Push a button to swap a regular screwdriver handle for a precise-control style, which allows you to apply constant pressure while turning the body of the screwdriver with your fingertips. Overall length ranges from 7¼″ to 8¼″.

Set includes a screwdriver handle, rotating cap, and 12 interchangeable blades in the following sizes: 0.094″, 0.125″, 0.141″, 0.157″, 0.219″, and 0.250″ slotted; No.1 and No. 2 Phillips; T10, T15, and T20 Torx; and No. 2 Pozidriv®.

6095A11 ..... $64.81

Nonmarring Precise-Control Screwdrivers

The ceramic tip on these nonconductive and nonmagnetic screwdrivers won't scratch your workpiece. Press the rotating end cap on the handle with your palm or index finger to apply constant pressure to small fasteners while turning the body of the screwdriver with your fingertips. They're also known as precision and miniature screwdrivers. They have a ceramic shaft and a plastic handle.

Size	Shaft Lg.	O'all Lg.

0.102″	5/8″	4¼″	5879A24	11.92

3-Piece Slotted/Phillips Set—Includes screwdriver handle and two reversible shafts in 0.035″ and 0.071″ slotted sizes and 1.7 mm and No. 0 Phillips sizes.

5879A45 ..... $40.76

Reversible-Shaft Precise-Control Screwdriver Sets

Sets include one static-control (ESD-safe) handle and an assortment of shafts with a different tip at each end. The handle drains static away from your application, preventing buildup from electrostatic discharge that can damage sensitive equipment. Press the rotating end cap on the handle with your palm or index finger to apply constant pressure while turning the body of the screwdriver with your fingertips. They're also known as precision and miniature screwdrivers. Drivers have a surface resistivity of 10^6-10^9 ohms. Shafts are chrome-plated steel; handle is plastic.

Warning: Because the handle conducts electricity, screwdrivers must not come in contact with sources of electrical power.

Screwdriver Sets

6-Piece Slotted/Phillips Set—Includes five reversible shafts and screwdriver handle. Includes slotted sizes 0.059″, 0.079″, 0.099″, 0.118″, 0.138″, and 0.158″ and Phillips sizes No. 000, No. 00, No. 0, and No. 1.

Canvas Pouch	7271A37	$46.18
Metal Case	7271A43	57.80

9-Piece Slotted/Phillips/Torx Set—Includes a screwdriver handle and eight reversible shafts in slotted sizes 0.059″, 0.079″, 0.099″, 0.118″, 0.138″, 0.158″; Phillips sizes No. 000, No. 00, No. 0, No.1; and Torx sizes T6, T7, T8, T9, T10, and T15.

7271A46 ..... $65.11

5-Piece Torx Set—Includes a screwdriver handle and four reversible shafts in T6, T7, T8, T9, T10, T15 (two), and T20 sizes. Packed in a metal case.

7271A45 ..... $33.05

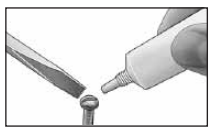
Antislip Fluid

A single drop of this nonstaining, noncorrosive fluid increases the grip between fastener and tool by as much as 700%. Use with screwdrivers, wrenches, pliers, and anywhere else tools are slipping.



53795A21 ..... $5.67

Nonmagnetic Precision Metal-Handle Screwdriver and Tool Sets

25-Piece Screwdriver and Tool Set

Use for assembling and repairing small parts. Screwdriver handles are knurled and made of steel. Include a partitioned vinyl case.

25-Piece Set—Includes 16 handles and shafts, eight individual hex keys, and a tweezer: *Slotted Screwdrivers:* 0.055″, 0.080″, 0.100″, 0.125″; *Phillips Screwdrivers:* #00, #0, #1; *Nutdrivers:* 5/64″, 3/32″, 7/64″, 1/8″, 5/32″; *Hex-Key Drivers:* 0.050″, 1/16″, 5/64″; *Short-Arm Hex Keys:* 1/16″, 5/64″, 3/32″, 1/8″, 5/32″, 3/16″, 7/32″, 1/4″; *Awl:* 5/64″ dia.; *Stainless Steel Tweezer:* 3 9/16″ long with smooth tips.

5821A46 ..... $85.45

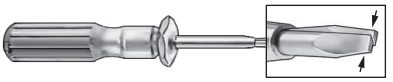
28-Piece Set—Includes 27 handles and shafts and an extension: *Slotted Screwdrivers:* 0.025″, 0.040″, 0.055″, 0.070″, 0.080″, 0.100″; *Phillips Screwdrivers:* #0, #1; *Nutdrivers:* 5/64″, 3/32″, 7/64″, 1/8″, 5/32″; *Hex-Key Drivers:* 0.028″, 0.035″, 0.050″, 1/16″, 5/64″, 3/32″; *Open-End Wrenches:* 5/64″, 3/32″, 7/64″, 1/8″, 5/32″, 3/16″, 1/4″, 5/16″; *Extension:* 3″ long.

5468A31 ..... $107.55

31-Piece Set—Includes three handles (one is smooth plastic and ESD static-dissipative), 27 shafts, and an extension: *Slotted Screwdrivers:* 0.055″, 0.070″, 0.080″, 0.100; *Phillips Screwdrivers:* #00, #0, #1; *Hex-Key Drivers:* 0.028″, 0.035″, 0.050″, 1/16″, 5/64″, 3/32″; *Star Drivers (fit Torx fasteners):* T5, T6, T7, T9, TPT8, TPT10 (TPT = tamper resistant); *Nutdrivers:* 7/64″, 1/8″, 5/32″; *Open-End Wrenches:* 7/64″, 1/8″, 5/32″, 3/16″ *Awl:* 5/64″ dia.; *Extension:* 3″ long.

5821A48 ..... $83.67

Screw Starters



Push the sleeve on the handle forward and insert the tips into screw slot. Release the sleeve and the tips split to hold the screw firmly. These starters are not intended for final tightening or removal. Shafts are steel; handles are plastic. For slotted screws only.

For #6 to #12 Screws: 3/16″×4″, 3/16″×6″, 3/16″×8″
For #8 to #12 Screws: 1/4″×6″

5690A61 ..... $56.71

Nut Starters

Use these starters for holding and initial turning of hex nuts. Insert closed jaws into nut, then pull the sleeve back to open jaws and grip it. Starter releases from nut as the threads are engaged. They're not intended for final tightening or removal. Handle is aluminum. Fits 4-40 thread; overall length is 5 1/8″.

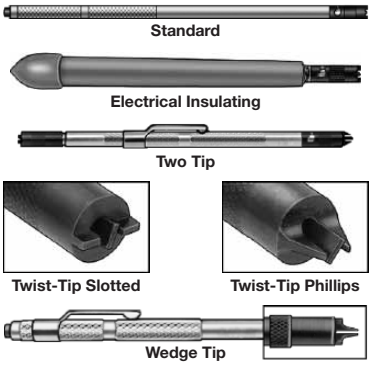
5738A62 ..... $7.61

Screw Hole Starters

Tapered screw point accurately marks, starts, and threads holes in wood and other nonmetal materials. Starter has a steel blade and plastic handle. Shank is 3/16″ Dia.×3″ Lg. Overall length is 6 11/16″. The threaded tapered point is 9/16″ long.

5352A11 ..... $4.25

Tight-Clearance Screw Starters



The slim body reaches into tight spots and a magnet at the end of the handle can retrieve dropped fasteners (except two-tip starters, which do not have a magnet). These starters are not intended for final tightening or removal. Tips are steel.

Twist Tip—Starters secure in the screw head with just a push and a turn. As the fastener is tightened, the starter tip releases. *Two-tip* starters have a slotted tip on one end and a Phillips tip on the other. *Electrical-insulating* tools have an insulated handle and body to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet IEC 900.

Wedge Tip—Starters fit a variety of drive styles. Push the sleeve on the handle forward and insert the tips into screw head. Pull the sleeve back and the tips split to hold the screw firmly. Once threads are started, the tool releases the screw.

For use with Phillips sizes No. 1, No. 2, and No. 3; hex sizes 3/32″-1/4″; Torx sizes T10-T30; and square sizes No. 1 and No. 2.

74265A88 ..... $7.51

Screw Starter Set

4-Piece Slotted and Phillips Set with Aluminum Body—Includes:
Slotted: 9/32″×5 5/8″, 9/32″×9 5/8″
Phillips: #2×5 3/4″, #2×9 3/4″

5806A22 ..... $28.88

Screwdriver and Solid-Shaft Nutdriver Sets

We've grouped 13 of the most common screwdriver and nutdriver sizes in these sets.

Standard Set—Blades are steel and 3⅝" to 4" long. Furnished with a 4" long plastic drive handle. Includes #1 and #2 Phillips screwdriver blades; 3/16" and 1/4" slotted screwdriver blades; and 3/16", 7/32", 1/4", 9/32", 5/16", 11/32", 3/8", 7/16", and 1/2" nutdriver sockets. Packed in a canvas roll-up pouch.

5404A1 ..... Per Set $93.15

ESD Static-Dissipative Set—Use on static-sensitive electronics and in areas where electrostatic discharge is a concern. Blades are hardened tool steel and 5²⁹⁄₃₂" long. Includes a 5⁹⁄₃₂" long plastic drive handle; #0, #1, and #2 Phillips screwdriver blades; 3 mm, 4 mm, and 6 mm slotted screwdriver blades; and 3/16", 1/4", 5/16", 11/32", 3/8", 7/16", and 1/2" nutdriver sockets. Packed in a canvas roll-up pouch. Warning: The handles are conductive, so tools must not come in contact with sources of electrical power.

5587A16 ..... Per Set $83.40

Threaded Stud and Rod Drivers

Hold and tighten right-hand threaded studs and rods. The 1/2" hex end on the handle lets you grip the driver with a wrench for extra torque. Shafts and handles are stainless steel.

Fold-Up Screwdriver and Key Sets

Keys are steel with a black finish. They have a maximum fold-out angle of 180°, unless stated.

(A) Standard Sets—Handle is steel.

(B) Ultra-Grip Sets—The textured grip provides comfort and slip resistance. Handle is plastic.

(C) Z-Style Sets—Select any key without unfolding the others in the set. Keys have a maximum fold-out angle of 270°. Handle is plastic.

(D) High-Visibility Sets—A brightly colored steel handle makes these sets easy to identify. Inch sets have a fluorescent orange handle; metric sets have a blue handle.

(E) Sets with Lanyard Ring—Secure your key set by attaching a lanyard to the 0.55" ID ring on the handle. Handle is steel.

Torx Plus

Four-Flute Spline

Six-Flute Spline

A variety of sets allows you to choose the L-key sizes you need in the container you prefer. Keys are steel with a black finish, unless otherwise noted.

Corrosion-resistant sets resist salt-spray exposure. Keys are ultra-coated steel with a silver finish.

High-visibility blue sets have a blue coating to make the L-keys easy to identify.

Torx Plus are not compatible with standard Torx screws.

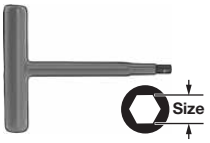
7-Piece Metric Bit Sets— Includes one each of sizes 2, 2.5, 3, 4, 5, 6, and 8 mm, plus 0.050" and 1/16" hex L-keys to loosen the set screw. Packed in a metal stand.

7" Overall Length ..... 7167A69 ..... $135.91
13" Overall Length ..... 7167A71 ..... 146.92

Electrical-Insulating T-Handle Hex Keys



These keys have an insulated plastic handle and a plastic-coated steel shaft to protect against accidental contact with live electrical circuits. They are tested to 1,000 volts to meet ASTM F1505-01 and IEC 60900.

Deep-Reach Ball-End T-Handle Hex Keys with Replaceable Tips

A set screw secures the ball-end tip. To change tips, use a hex L-key (not included) to loosen the set screw. You don't need exact alignment between the socket fastener and the tool—the ball end allows entry at angles up to 20° to tighten and remove screws in hard-to-reach places. Keys are steel with a zinc-plated finish. Handles are plastic.

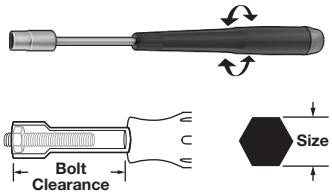
Precise-Control Hex Nutdrivers



Press the rotating end cap on the handle with your palm or index finger to apply constant pressure while turning the body of the nutdriver with your fingertips. Shaft is steel; handle is plastic.

Static-control nutdrivers are also known as ESD-safe nutdrivers. The handle drains static away from your application, preventing buildup from electrostatic discharge (ESD) that can damage sensitive equipment.

Warning: Because the handle conducts electricity, tools must not come in contact with sources of electrical power.

Adjustable-Length Changeable-Shaft Nutdriver Sets

Press down on the handle's collar to adjust shaft length or change shaft size. Set includes a nutdriver handle and seven interchangeable shafts in sizes 3/16", 1/4", 5/16", 11/32", 3/8", 7/16", and 1/2". Packed in a canvas pouch.

1398N1 ..... $60.46

Six-Flute Spline Bits and Ratcheting Screwdrivers

Also known as Bristol bits. The hex shank has a knurled end for finger tightening. Made of steel with a six-flute design. Bits must be used with the tight-clearance ratcheting bit screwdriver (sold separately). Wrench is not compatible with standard 1/4" hex-shank bits.

Six-Flute Spline Bits—To Order Please specify diameter: 0.060", 0.072", 0.096", 0.111", or 0.145".

5697A888 ..... $2.69

Tight-Clearance Ratcheting Bit Screwdriver—Made of stainless steel. Overall length is 3 3/4".

5697A12 ..... $7.44

6-Piece Spline Bit Set—Includes one 3 3/4" long tight-clearance ratcheting bit screwdriver and five spline bits in the sizes listed above. Packed in a plastic pouch.

5697A28 ..... $20.02

Tri-Groove Sockets and Drivers

Sockets are steel. Drivers have steel blades and plastic handles. Sockets and handles sold separately.

10-Piece Set—Includes extractors in sizes No. 12 to 3/4". Packed in a plastic case.

57195A31 ..... $29.86

25-Piece Set—Includes one each of the extractors listed. Packed in a plastic case.

57195A32 ..... $70.43

Extra-Grip Extractors

Deep flutes provide a strong grip and reduced expansion of the part you need to extract. Drill a hole in the broken part, insert the extractor, and turn. The part will back out without damaging the threads around it. Use on right-hand threads. Made of steel.

Also Available: Extractors for left-hand threads. Please ask for 2566A51 and specify trade number.

Straight-Flute Extractors

Pipe Extractor

Screw Extractor

These extractors provide the tightest fit and the most contact with the part to be removed but also cause the most expansion. Insert directly into pipe or drill a hole in a fitting. Tap the extractor in with a hammer and turn. The part will back out without damaging the threads around it. Use on right-hand and left-hand threads. Made of steel.

5-Piece Screw Extractor Set—Includes extractors for screw diameters 1/4", 5/16", 3/8", 7/16", 9/16", and 1/2".

2564A22 ..... $36.94

Sets with Drill Bits and Bearings

20-Piece Screw Extractor Set—Includes five extractors for screw diameters 1/4", 5/16", 3/8", 7/16", and 1/2" to 9/16"; five corresponding high-speed steel drills; and 10 drill bushings. Packed in a plastic case.

2565A2 ..... $102.58

63-Piece Pipe- and Screw Extractor Set—Includes six pipe extractors in pipe sizes 1/8 to 1, eight screw extractors in sizes 1/4" to 1", nine drills in sizes 1/8" to 5/8", and 40 drill bushings. Packed in a plastic case.

2565A1 ..... $523.85

Extractors for Soft Materials and Thin-Walled Parts

The tapered wedge shape of these extractors won't expand the broken part, making it easier to remove. After drilling, tap in with a hammer and turn. The part will back out without damaging the threads around it. Use on right-hand and left-hand threads. Made of steel.

4-Piece Set—Includes four extractors (not listed) for removing screw/bolt sizes No. 4 to 3/8". Shank diameters are 0.248" and 0.342".

5997A6 ..... $40.43

7-Piece Set—Includes one each of the extractors listed.

53405A39 ..... $93.31

Knurled-Grip Extractors

Use a 1/2" square-drive wrench to tighten the knurled wheel, which grips and extracts threaded studs and rods as you turn. The part will back out without damaging the threads around it. Removes 1/4" to 3/4" size studs. Use on right-hand and left-hand threads. Made of steel.

2537A11 ..... $41.34

Miniature Screw Extractors

Remove small stripped and damaged screws such as those used in eyeglasses and electronics. Place the extractor in the stripped recess and twist out the fastener without damaging the threads around it. Extractors have reversible tips. Use on right-hand and left-hand threads. Made of steel; handle is aluminum.

For Screw Recess Width	O'all Lg.

About Nonsparking Metal Tools

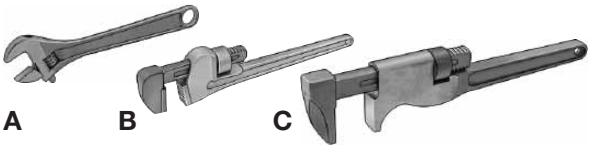
Made from aluminum-bronze, beryllium copper, and other copper-based alloys (such as bronze and nickel copper) that are Factory Mutual approved, these nonmagnetic, corrosion-resistant tools inhibit sparking. They satisfy OSHA requirements that specify nonsparking tools for locations where flammable vapors and combustible residues are present. Iron or steel tools could produce sparks and be an ignition source. Nonsparking tools are not, however, classified as antistatic because they do conduct electricity.

Note: Do not use these tools in direct contact with acetylene.

Aluminum-Bronze—Has high strength for impact and torque applications. Most tools are beryllium free.

Beryllium Copper—With maximum strength for impact and torque applications, it's the most desirable material for tools with cutting edges or gripping teeth. This alloy contains approximately 2% beryllium.

Adjustable and Pipe Wrenches



Style A are made of aluminum-bronze.
Style B have a beryllium copper jaw insert and aluminum-bronze hook.
Style C are made of aluminum-bronze. Also known as railroad wrenches, these tools have smooth jaws.

Tool Sets

16-Piece Set

Screwdrivers are made of beryllium copper; the other tools are made of aluminum bronze, unless noted.

6-Piece Set— Includes a slotted screwdriver (9/32″ × 3″ blade), Phillips screwdriver (#2 × 4″ blade), 6 1/2″ combination pliers, 10″ tongue-and-groove pliers, 8″ adjustable wrench, and a 9″ hammer/claw crate opener. Comes in a roll-up nylon pouch.

6533A7 ..... $326.86

16-Piece Set— Includes a slotted screwdriver (5/16″ × 6″ blade); Phillips screwdriver (#2 × 4″ blade); 6 1/2″ and 8″ combination pliers; 10″ tongue-and-groove pliers; 10″ adjustable wrench; 14″ pipe wrench; 12-point box wrenches in sizes 5/16″ × 3/8″, 7/16″ × 1/2″, 9/16″ × 5/8″, and 3/4″ × 7/8″; 1 1/4″ putty knife; paring knife (3 1/8″ wide blade); 14″ long, 1-lb. claw hammer; 10″ shoe handle brush; and 12″ long deck scraper. Brush is made of phosphorus bronze, and knives are made of nickel copper. Packed in a heavy duty plastic box.

6534A2 ..... $893.91

About Dead Blow Hammers and Sledges

You don't need a big swing to produce a powerful striking force—dead blow hammers and sledges have heads loaded with metal shot to add weight for controlled impact with minimal rebound. The shot also ensures that the striking force is transmitted solidly, reducing worker fatigue and injuries. Dead blow hammers and sledges (except for ball peen) are nonmarring.

Dead Blow Hammers and Sledges

Standard

Slimline

Faces are soft to absorb impact, reduce noise, and prevent marring of the work surface. Head is loaded with steel shot. Handle has a textured grip and is nonreplaceable. ***High-visibility polyurethane*** hammers and sledges are bright safety orange, so they're easy to spot. All have a steel-reinforced handle and are fully encased in polyurethane. ***Black PVC*** hammers have a steel-reinforced handle and are fully encased in PVC.

Hard Nylon Dead Blow Hammers

Made of nylon, the head is encapsulated in PVC for durability; it will not chip or "mushroom" when striking. The PVC casing also minimizes bounce. Head is loaded with steel shot. Faces are hard. The handle is made of fiberglass to withstand impact. It has a safety grip (unless noted) and is nonreplaceable.

★ Smooth grip. ■ One face is steel. ▲ One face is brass.

High-Visibility Polyurethane Dead Blow Ball Peen Hammers

You won't overlook these ball peen hammers—they have a bright orange polyurethane body. The peen end and striking face are alloy steel. Head is loaded with steel shot. The ball peen design handles any job from light duty tapping to heavy duty forming. Use for striking chisels and punches, as well as for setting rivets. The peen end is especially good for forming unhardened metal. The striking face is slightly rounded with beveled edges. Handle is made of steel-reinforced polyurethane; it has a textured grip and is nonreplaceable.

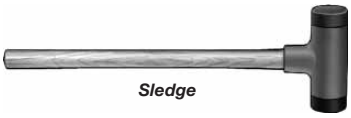
Urethane Replaceable-Face Dead Blow Hammers and Sledges

Hammer



Sledge

Screw-on urethane faces absorb impact without marring or deforming your work surface. Faces resist cracking and are impervious to oils and solvents. Head is loaded with iron shot. Complete hammers and sledges include a lightweight aluminum or iron head, a replaceable hickory handle (see pg. 2856 for replacement handles), and two replaceable faces: medium (green) on one end; extra-hard (black) on the other.

To Order: For replacement faces, please specify soft (burnt orange), medium (green), hard (red), or extra hard (black). *Note:* For information about face hardness, see page 2848.

High-Visibility Polyurethane Replaceable-Face Dead Blow Hammers

Head and handle are one-piece molded polyurethane with a bright orange color for high visibility. Head is loaded with steel shot. Faces screw on to the head and are made of polyurethane to absorb impact, resist oils and solvents, and protect your work surface from marring. Complete hammers include a medium hard (red) face on one end, an extra hard (black) face on the other end, and a steel-reinforced polyurethane handle. Handle has a textured grip and is nonreplaceable.

To Order: For replacement faces, please specify extra soft (clear), soft (blue), medium (green), medium hard (red), hard (amber), or extra hard (black). *Note:* For information about face hardness, see page 2848.

Hard UHMW Polyethylene Replaceable-Face Dead Blow Hammers

Faces screw on to the hammer head and are made of ultra-high molecular weight (UHMW) polyethylene, which resists abrasion, cracking, and chipping. Handle and head are one-piece aluminum alloy to provide high strength, durability, and perfect balance. Head is loaded with steel shot. Handle has a ribbed grip and is nonreplaceable.

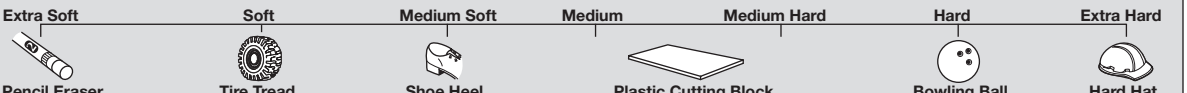
Replaceable-Face Nonmarring Hammers

About Replaceable Plastic Hammer Faces

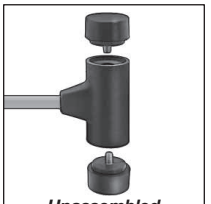
Replaceable plastic faces range in hardness from extra soft to extra hard. Use the diagram below to determine which hardness is best for your application. *Note:* The color indicating a plastic's grade is not standardized and may vary among manufacturers.



Create-Your-Own Replaceable-Face Hammers, Sledges, and Dead Blows

Hammer with Textured Handle Grip (Shown with Faces, Sold Separately)

Hammer with Safety Handle Grip (Shown with Faces, Sold Separately)



Unassembled (Faces Sold Separately)

Design the perfect striking tool. The bodies and faces are sold separately, so you can customize a hammer, sledge, or dead blow to fit your needs.

Hammer and Sledge Bodies (Without Faces)— Consist of a hammer head and a nonreplaceable solid fiberglass handle for optimal strength. Head is glass-filled nylon to eliminate metal contamination as well as scratching and marring caused by metal-to-metal contact. *Safety handle grip* is ribbed to prevent your hand from slipping.

Dead Blow Hammer and Dead Blow Sledge Bodies (Without Faces)— Consist of a hammer head loaded with steel shot and a nonreplaceable reinforced-fiberglass handle. *PVC head* eliminates metal contamination as well as scratching and marring caused by metal-to-metal contact.

Faces— Screw on to the head. *Plastic* faces are tough, nonmarring PVC. *Brass* faces are medium hard and nonsparking. *Steel* faces are hardened for extra durability.

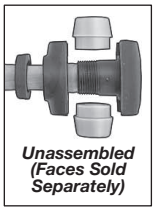
Create-Your-Own Replaceable-Face Split-Head Hammers

Hammer Body (Shown with Faces, Sold Separately)



Unassembled (Faces Sold Separately)

It's faster and easier to change the faces on these split-head hammers than on press-fit style hammers. Just loosen the nut under the head, remove the face, insert the new face, and tighten the nut. The hammer bodies and faces are sold separately, so you can create a custom hammer for your application.

Bodies consist of a two-piece malleable iron hammer head, a nut to secure the assembly, and a replaceable hickory handle. ***Faces*** are available in your choice of materials. *Lead* consists of 94% lead and 6% antimony. *Rawhide* provides soft blows—great for assembly work. *Copper* allows high-impact blows but is soft enough not to damage precision parts. *Hard nitrile rubber* is green and is similar in hardness to a bowling ball. *Hard plastic* is made of yellow ultra-high molecular weight (UHMW) polyethylene and is similar in hardness to a hard hat.

Also Available: Replacement handles. Please ask for 5911A61 and specify the McMaster-Carr body part number.

Air-Powered Replaceable-Face Hammers

Palm-sized tools fit into tight spaces where swinging a hammer is not possible. They can deliver a single blow or up to 1,000 blows per minute. Both have a 1/4" NPT female air inlet and require compressed air at 60-125 psi, depending on force of impact required. Faces are 1 1/2" dia. and are replaceable. Hammers are 3 1/2" high and weigh 2 lbs.

Leather tool cover provides a comfortable grip and muffles sound. ***Maintenance/repair kit*** has six O-rings and a 0.05-oz. tube of lubricant.

Hard Nylon Replaceable-Face Hammers

Made of nylon, the faces on these hammers resist chemicals and abrasion and won't mark your work. Faces screw on to the head. They're off-white and are similar in hardness to a bowling ball. Complete hammers include a chrome-plated zinc alloy head, two screw-on nylon faces, and a replaceable ash handle (unless noted).

For replacement handles, see page 2856.

★ Replaceable hickory handle. ▲ Head is black-painted malleable iron.

Hard/Soft Plastic Replaceable-Face Hammers

Ideal for assembly applications where the components vary in hardness, hammers have a press-fit hard plastic face on one end and a press-fit soft plastic face on the other.

Hard face is yellow Surlyn, which is similar to the hardness of a bowling ball. Soft face is red Kraton, which is similar to the hardness of a shoe heel. Hammers have a forged steel head and a replaceable hickory handle. For replacement handles, see pg. 2856. **To Order:** For replacement faces, please specify hard or soft.

O'all Wt., lbs.	Face Dia.	O'all Lg.	Complete Hammers	Each	Repl. Faces	Each

Hard/Soft Rubber Replaceable-Face Hammer

You have two hardness options with this hammer. The white rubber face won't mark your work; it's medium hard and is similar in hardness to a plastic cutting block. The black rubber face is for general use; it's medium soft and similar in hardness to a shoe heel. Faces are replaceable and press-fit onto the head. Complete hammer has a forged steel head for extra driving power and a replaceable hickory handle. For replacement handles, see page 2856.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each

Black Replacement Face (Medium Soft)			5939A12	2.98
White Replacement Face (Medium Hard)			5939A13	2.98

Rawhide Replaceable-Face Hammers

Rawhide faces provide nonmarring blows on steel, brass, aluminum, and other soft metals. Faces press-fit onto the head. Worn faces can be removed by drilling out the center of the face. Complete hammers have a cast steel head, two press-fit rawhide faces, and a replaceable hickory handle (unless noted). **Also Available:** Replacement hickory handles. Please ask for 5907A25 and specify face diameter.

● Has a malleable iron head and replaceable ash handle.

Copper Replaceable-Face Hammers

Copper faces allow high-impact blows, yet are soft enough to reduce the possibility of damage to precision parts. Use on bronze, brass, aluminum, and ferrous alloys. Faces press-fit onto the head. Worn faces can be removed by drilling out the center of the face. Complete hammers come with a malleable iron head, two press-fit copper faces, and a replaceable hickory handle (unless noted). For replacement handles, see page 2856.

■ Replaceable ash handle.

Extra-Hard UHMW Polyethylene Replaceable-Face Hammers

Made of ultra-high molecular weight (UHMW) polyethylene, the faces on these hammers screw on to the head and shrug off abrasion, impact, and corrosion. They're unaffected by water and coolants. Faces are yellow and similar in hardness to a hard hat. Complete hammers include a steel head, two screw-on UHMW polyethylene faces, and a nonreplaceable hickory handle (unless noted).

♠ Has an acetal handle with a cushion grip.

Acetal/Brass Replaceable-Face Hammer

Lightweight and versatile, this hammer has a screw-on acetal face on one side and a screw-on brass face on the other. Acetal is similar in hardness to a hard hat. Complete hammer includes an aluminum head, two screw-on faces (one acetal, one brass), a nonreplaceable maple handle, and a spanner wrench to remove and replace the faces. ***Replacement face set*** includes one acetal face, one brass face, and a spanner wrench.

Rubber Hammers

White Rubber with Hardwood Handle

Black Rubber with Fiberglass Handle and Cushion Grip

Also known as rubber mallets, these hammers deliver a heavy blow, yet they have soft faces that won't damage your work. Made of a blend of natural and synthetic rubber, the head is molded and cured for strength. Handle is nonreplaceable, unless noted.

Rubber hammers are offered with either a hardwood handle or a fiberglass handle. 5917A7 and *A8* include a cushion grip. *White* hammers are nonmarking. ***No-bounce rubber*** hammers have fibrous layers in the head to greatly reduce bounce and rebound.

★ Handle is replaceable. For replacement handles, see page 2856.

Soft Alloy Replaceable-Head Hammers

An excellent alternative to lead hammers. The head is cast of a heavy zinc-aluminum material that's soft and ductile like lead, but more wear-resistant and longer lasting. To replace the head, simply remove the socket cap screw. Handle is steel and has a textured nonslip rubber grip that resists water, oil, and chemicals.

Also Available Replacement steel handles. Please ask for 6042A61 and specify face diameter.

Rawhide and Weighted Rawhide Hammers

Rawhide hammers cause minimal surface distortion. Also known as rawhide mallets, they're great for bending and fabricating sheet materials such as brass, copper, and steel. Handle is hickory and is replaceable. For replacement handles, see page 2856. ***Rawhide*** hammers have large-diameter faces that are great for use on broad surfaces. ***Weighted rawhide*** hammers are filled with lead to give a heavier, balanced blow.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each

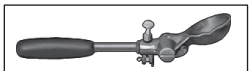
Lead Hammers and Hammer Molds

Complete Hammer with Steel Handle

Complete Hammer with Hickory Handle



Clamping Mold and Handle

Hammer heads are made of 95% lead and 5% antimony, giving them a longer life than heads made of 100% lead. Although lead is the softest metal offered within nonmarring hammers, it produces a heavy blow with minimal rebound and no surface blemishes. Use on plastics and soft, nonferrous metals such as copper and aluminum.

Hammers with Steel Handle—*Complete hammers* have a steel handle with a comfortable rubber grip. You can also make your own steel-handle hammers using molds, handles, and lead hammer metal, all sold separately. *Molds* have a built-in ladle that holds the exact amount of molten lead needed to form the hammer head. A C-clamp and thumb screw hold the mold together until the metal has set. *Handles* are reusable and made of solid steel with a rubber grip. *Lead hammer metal* is 94.25% lead and 5.75% antimony and comes in a 5-lb. bar. Pouring temp. range is 650° to 700° F. Melting point is slightly lower. ***Hammers with Hickory Handle—***Have a nonreplaceable hickory handle.

Brass Hammers and Sledges

A medium-hard material, brass can be used to strike steel, iron, stone, and other hard surfaces. Also used to bend and form sheet metal.

Styles D&H— Have a replaceable hickory handle with a textured, nonslip coating. **Also Available:** Replacement handles. Please ask for 5978A5 and specify overall weight.

Styles E&J— Have a nonreplaceable tubular steel handle with a textured, nonslip coating.

Style F— Have a nonreplaceable aluminum handle with a textured grip, except for ¼- and ⅝-lb. hammers, which have a smooth grip.

Style G— Have a replaceable fiberglass handle with safety grip to prevent your hand from slipping. A handle guard prevents breakage if you miss your mark. For replacement handles, see pg. 2856.

Bronze Hammers and Sledges

Bronze is the hardest nonmarring material. It's ideal for striking tool steel and other hard metals.

Style K— Hammers have two square faces and a replaceable hickory handle. The handle is grooved to prevent your hand from slipping.

Style L— Have two square faces and a fiberglass handle. The handle is encapsulated in urethane and has a textured grip. Handle is nonreplaceable.

Style M— Hammers have one round face and one extended tapered nose for access to hard-to-reach areas. Handle is made of hickory and is replaceable. The handle is grooved to prevent your hand from slipping.

Style N— Slimline design has a round face on one end and a needle nose on the other for reaching into tight spaces. Handle is made of hickory and is replaceable.

Style P— These sledges have two square faces and a replaceable hickory handle.

Also Available: Replacement hickory handles. Please ask for 5893A35 and specify overall weight.

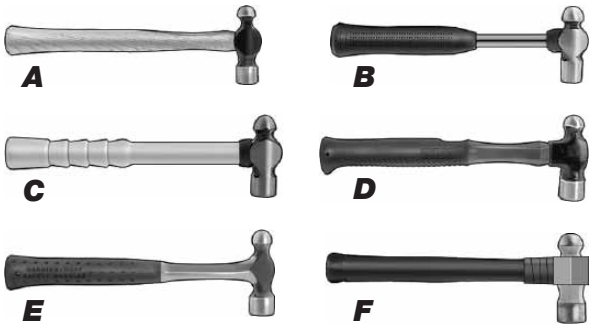
Ball Peen Hammers



A slightly rounded striking face with a beveled edge gives these hammers the ability to handle any job from light duty tapping to heavy duty forming. Use them for striking chisels and punches, as well as for setting rivets. The peen end is especially good for forming unhardened metal.

Style A—These classic style hammers have a steel head and a replaceable hickory handle. For replacement handles, see page 2856.

Styles B&C—Have a steel head with a solid fiberglass handle. All have a handle guard to prevent breakage if you miss your mark. For replacement handles, see page 2856. *Style B* has a smooth grip. *Style C* has a safety grip that's ribbed to prevent your hand from slipping.

Style D—Has a steel head and a sturdy graphite handle that's encased in molded PVC to prevent breakage if you miss your mark. The handle has a textured grip and is nonreplaceable.

Style E—Made from one piece of solid steel, these hammers have a cushion grip. The handle is nonreplaceable.

Style F—Head is steel. Handle is made of heat-treated steel rods that are surrounded by abrasion-resistant rubber. The rubber absorbs shock and reduces fatigue. Handle is unbreakable and nonreplaceable.

Extra-Hard UHMW Polyethylene Replaceable-Face Tapping Hammers

Here's a hammer without a handle that's great for tapping work into position. These nonmarring hammers have a hex-shaped steel body that won't roll when you set it down. Hammers include two screw-on faces that are made of ultra-high molecular weight (UHMW) polyethylene to resist abrasion, impact, and corrosion. Faces are yellow and similar in hardness to a hard hat.

O'all Wt., lbs.	Face Dia.	Thread Size	O'all Lg.	***Complete Hammers***	Each	***Replacement Faces***	Each

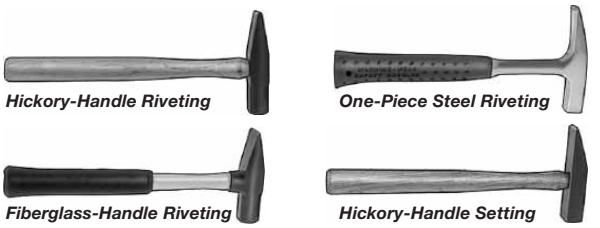
1 1/4	1″	7/16″-14	6 3/4″	**5951A4**	22.52	**5951A8**	3.72

Riveting and Setting Hammers



Riveting Hammers—Also known as tinners' hammers, these are great for driving and spreading rivets in sheet metal.

Setting Hammer—Also known as paneing or seaming hammers. Use to form sheet metal corners, close seams, and insert glazing points.

Hickory-handle models have a forged steel head and replaceable handle. For replacement handles, see page 2856. ***One-piece steel*** models are forged from a single piece of steel and have a nylon vinyl hand grip to reduce shock. Handle is nonreplaceable. ***Fiberglass-handle*** model has a forged steel head, slip-resistant PVC hand grip, and nonreplaceable handle.

Bricklayers', Masons', and Tilesetters' Hammers

Hammers have a carbon steel head with a square flat face on one end and a curved chisel on the other for trimming, shaping, and cutting bricks, concrete blocks, and masonry tiles. They're also good for chipping mortar off bricks. The handles can be replaced on the steel-head hammers (see page 2856 for replacement handles); the handles are not replaceable on the one-piece hammers.

Head Wt., oz.	Face Size	O'all Lg.		Each

One-Piece Steel Pick Hammers

Also known as geologists' picks, these hammers have a pointed tip on one end for prying and removing rock; the other face is square and flat with beveled edges. Hammers are forged from a single piece of carbon steel. Handles are nonreplaceable and have a shock-reducing cushion grip (unless noted).

Head Wt., oz.	Face Size	O'all Lg.		Each

■ Has a double-lacquered leather grip.

Heavyweight Hammers

Strike a powerful blow, even when swing area is limited. Hammers have a shorter handle than sledges for use in confined work areas. All heads have a polished striking face with beveled edges.

One-Piece Steel Hammers—Head and handle are forged from a single piece of steel, unless noted. Head is made of painted carbon steel. Handle is nonreplaceable; a cushion grip reduces shock.

Hickory Handle Hammers—Head is made of carbon steel with a lacquered finish. Hammers have a hickory handle that is replaceable. For replacement handles, see page 2856.

Fiberglass Handle Hammers—Head is made of painted carbon steel. Handle is fiberglass and encapsulated in polypropylene, which prevents handle from breaking if you miss your mark. Handles are replaceable. For replacement handles, see page 2856.

A *One-Piece Steel*

A *w/Hickory Handle*

B *One-Piece Steel*

C *w/Fiberglass Handle*

Style A

This is the most popular style within the heavyweight hammer family. Also called engineers' hammers, they're for forming metal and for driving punches, cold chisels, and rock drills.

★Head and handle are two-piece welded construction.

Sledges

Also known as blacksmith-style sledges, these tools provide maximum striking power for all of your extra-tough jobs. All sledges have crowned and beveled striking faces. Use them for striking stone, concrete, and hardened nails, unless noted.

Hickory Handle

Heads are made of clear lacquer-coated carbon steel and have polished faces. Handles are hickory and can be replaced. For replacement handles, see page 2856.

Head Wt., lbs.	Face Dia.	O'all Lg.		Each
6	2 13/64"	35"	5884A14	$24.33

Replacement Hickory Handle			5988A29	Each $29.24

Driving Maul

A maul is similar to a sledge hammer, but has a longer, slimmer head. It's often used to drive and punch out pins when aligning structural steel components or maintaining machines. Also known as a spike maul, this tool is great for driving railroad spikes. Head is made of carbon steel with a painted finish. Handle is hickory and can be replaced; for a replacement handle, see page 2856.

Head Wt., lbs.	Face Dia.	O'all Lg.		Each
10	1¼", 1 5/8"	36"	5932A8	$104.76

Sledge and Ax Handle Protectors

Add a durable rubber collar to your tool's handle to protect it from cracking and the wear that can occur if you miss your mark.

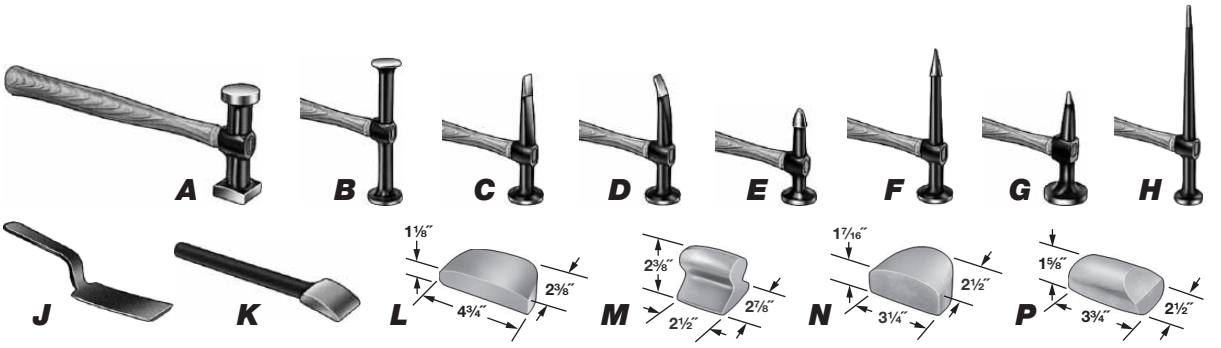
Sheet Metal Forming Tools



Also known as body and fender tools, these tools are excellent for forming and repairing dents in sheet metal components. All are made of forged steel.

(A-H) Hammers— All measure approximately 12″ long and have a smooth face (except where noted).

(J) Dinging Spoon— To protect the finish of your workpiece, place this tool against the workpiece you're forming or repairing and strike with a hammer. It's often used to smooth ridges.

(K) Dolly Block with Handle— A long handle allows this tool to get into hard-to-reach spots.

(L-P) Dolly Blocks— Place blocks on the back side of your workpiece to act as a support when you strike the workpiece.

Replacement Handles

Designed for use with hammers A-H. All are approximately 12″ long.

Welders' Chipping and Scaling Hammers

Chip away unwanted weld spatter and slag as well as rust and paint from metals. All hammers have a steel head and shank (unless stated otherwise). Handles are replaceable, except for the handle on Style R hammers. ***Styles T*** and ***U*** have a wire coil handle that provides a flexible grip and dissipates heat. ***Style U*** also has a replaceable wire brush and is made entirely of steel.

Magnetic Tack Hammers

Also known as upholstery hammers, these hammers have a tapered head for driving tacks in confined areas. For added convenience, one end of the hammer head is permanently magnetized to hold tacks. The head is forged steel with a polished finish; handle is hickory and nonreplaceable.

Head Wt., lbs.	Head Lg.	O'all Lg.		Each
¼	3½″	11″	5861A2	$36.21
5⁄16	4⅛″	11″	5861A6	39.80
½	4⅜″	10½″	5861A7	41.02

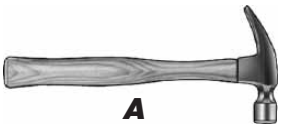
Magnetic Brad Driver

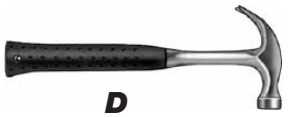
The magnetic point holds the brad; push the handle to easily drive and countersink 16-ga. brads up to 1½″ long. Shaft is carbon steel; handle is hardwood. Overall length is 6″.

5702A11 ..... Each $6.84

For replacement handles, see page 2856.

Nail Hammers





Hit the nail on the head with any one of these hammers. All have a polished head. Choose hammers with a ***straight claw*** for ripping and prying; hammers with a ***curved claw*** are for removing nails. Hammers with a ***milled (serrated) face*** prevent the head from slipping when striking.

Style A have a hickory handle that's replaceable.

Style B have a fiberglass handle that resists breakage if you miss your mark. Handles are nonreplaceable. *Straight claw* hammers have a hollow core that reduces vibration and a smooth cushion grip that reduces fatigue. *Curved claw* hammers have a solid core that reduces impact and wear. A cushioned safety grip prevents your hand from slipping.

Style C have a graphite handle with a graphite core and a molded polycarbonate casing that reduces shock and prevents breakage if you miss your mark. Hammers also have a ribbed cushion grip for added shock reduction. Handles are nonreplaceable.

Style D have a cushion grip that reduces shock. The handles are nonreplaceable.

One-Piece Steel Carpenters' Hatchets

One side of the head has a hammer face for driving unhardened nails and wood or plastic stakes; the other side has a hatchet for cutting, splitting, and trimming. Tools are one-piece forged steel with a fully polished head and a cushion grip to reduce shock. 5966A3 has a milled (serrated) hammer face to prevent the head from slipping when striking.

Head Wt., lbs.	Hammer Face Style	Cutting Edge Lg.	O'all Lg.		Each
1 3/16	Smooth	3 5/8″	13″	5966A2	$41.40
1 3/8	Milled (Serrated)	3½″	16¾″	5966A3	44.34

Axes

Axes have a forged steel head with a sharpened cutting edge. Handle is hickory and can be replaced.

Utility Ax— With its short handle, this ax is great for confined spaces. It has a painted red enamel finish with a clear lacquer-coated cutting edge to resist rust and scratches.

Lumberjack Ax— With its longer handle and larger cutting edge, this ax is the choice for big cutting jobs. It has a painted red enamel finish with a clear lacquer-coated cutting edge to resist rust and scratches.

Firefighters' Axes— Axes have the traditional bright red head for easy visibility. One end has a cutting edge for chopping; the other end has a pick end for ripping.

Firefighters' Ax	6	5″	36″	6084A12	75.40

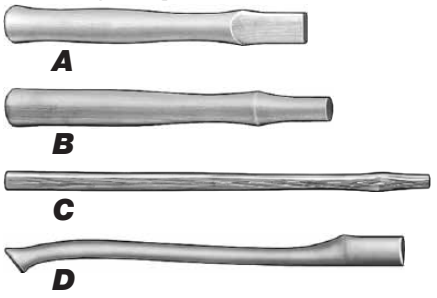
Slide-Bar Hammers

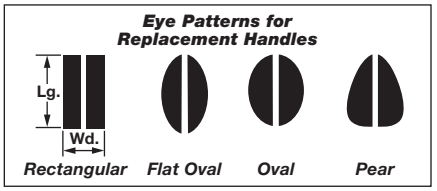
Shown with Optional 7/8″ Dia. Face

No need for a separate hammer and chisel. These hammers have a slide bar that acts as a sledge, eliminating the danger of swinging a traditional sledge hammer. To use, extend the slide bar's handle and forcefully push it into the hammer's steel chamber. The bar strikes against the removable driver face, delivering accurate driving power. Perfect for one-person jobs on heavy equipment and for limited-space areas where it would be difficult to swing a regular sledge. A slide lock keeps the bar in place when not in use. Hammers are made of steel. Furnished with a 2″ dia. steel face. ***Optional 7/8″ dia. face*** fits both hammers below.

O'all Wt., lbs.	Face Dia.	O'all Lg.		Each
14	2″	30″	6861A34	$627.31
21	2″	46″	6861A37	691.19
Optional 7/8″ Dia. Face (11½″ Lg.)			6861A41	99.51

Hickory Replacement Handles





Handles are slotted and made of quality hickory. Styles A-C come with one steel and one wood wedge (unless noted) to use together for a secure fit. Style D handles come with one wood wedge (unless noted).

***All-White Grade AA*—**The highest grade available. This straight-grain, smooth and dense hickory is free from defects. Handles have a wax finish that provides a longer service life than Grade A hickory. 5976A18 and 5976A33 are red and white.

***Flame-Tempered Grade A*—**Fire-finished hickory is coated with a clear lacquer to resist aging, dirt, moisture, and weathering.

Fiberglass Replacement Handles

With Smooth Grip

With Safety Grip

Ax Handle with Smooth Grip

Solid fiberglass handles are durable and impact resistant. They won't split like wood handles.

***Wedge-Style Handles*—**Furnished with two synthetic wedges for quick and easy assembly (does not require epoxy). The wedges are ribbed to ensure a tight fit. Choose handles with a smooth cushion grip or a ribbed safety grip that prevents your hand from slipping. 36155A22 and *A24* are encapsulated in polypropylene to prevent breakage if you miss your mark.

***Epoxy-Style Handles*—**Furnished with epoxy bonding compound, mixing stick, and tape seal. Just pour mixed epoxy into the tool head, place the handle in the tool head, and let the epoxy cure. Epoxy fills in around the handle, compensating for different eye patterns and ensuring a secure fit. Choose handles with a smooth cushion grip (except for ax-handle style, which is not cushioned) or a ribbed safety grip that prevents your hand from slipping.

Also includes 72 steel rivets (3/16″ Dia. x 1 5/8″ Lg.). Wedges are smooth. Comes in a plastic box.

6676A9 ..... **Each** $49.94

Standard 0.401″ Shank Air-Powered Hammers

Also known as zip guns, these air-powered hammers easily handle metal cutting, chipping, scraping, and staking applications. They have a metering trigger that controls the number of blows per minute. Their piston stroke determines the hammering power; the longer the piston stroke, the greater the power. For example, a light duty hammer has a short piston stroke for fast-hitting, but has less power than a slower-hitting heavy duty hammer, which has a longer piston stroke. All hammers use standard 0.401″ shank chisels (sold separately, see 7117A on this page) and have a maximum operating pressure of 90 psi.

A-C** Nonriveting Hammers*—Have an aluminum housing, alloy steel barrel, and mechanical aid spring retainer (for replacement see 59005A24 on this page). Not suitable for driving rivets. ***Hammer sets include the hammer and one each of the following: 3/4″ Wd. x 7 3/4″ Lg. edging tool, 3/4″ Wd. x 7 3/4″ Lg. muffler/tail pipe cutter, 3/4″ Wd. x 7 3/4″ Lg. flat chisel, 3/4″ Wd. x 7 3/4″ Lg. cutting chisel, and 15/32″ Dia. x 7 3/4″ Lg. tapered punch. Connections: NPT female.

D** Medium Duty Riveting Hammer*—Can accept up to 3/16″ size soft iron and aluminum rivets. It has an aluminum housing, heat-treated steel barrel, and beehive spring retainer (for replacement see 59005A23 on this page). ***Hammer set includes the hammer; air regulator; and one each of the following: 1/8″, 5/32″, and 3/16″ dia. round rivet setters. Furnished in a plastic box. Connections: NPT female.

E&F** Heavy Duty Riveting Hammers*—Can accept up to 3/8″ size soft iron and aluminum rivets. They have an aluminum housing, heat-treated steel barrel, and beehive spring retainer (for replacement see 59005A23 on this page). ***Hammer sets include the hammer and one each of the following: 3/16″ and 1/4″ dia. round rivet setters. Connections: NPT female.

Quick-Change Retainer

Beehive Spring Retainer

Mechanical Aid Spring Retainer

Quick-Change Air-Powered Hammers

Straight Handle

Pistol Handle

A good choice for applications that require fast hitting and light tapping. Hammers have a compact design and work well for scaling, trimming, cutting, chipping, piercing, and peening. Not suitable for driving rivets. A quick-change retainer lets you easily change chisels and lock them in place, even at various angles. The chuck is not removable. Hammers have an aluminum handle and a heat-treated steel barrel. The longer the piston stroke, the greater the force the hammer delivers. A metering trigger controls the blows per minute. Operating pressure is 90 psi. Connections: NPT female.

Note: The 0-13,000 bpm hammers only accept the 6027A octagon shank chisels and tools sold separately below; the 0-9,000 bpm hammers only accept the 6027A hex shank chisels and tools sold separately below.

D Handle

For a listing of repair parts for these hammers, go to mcmaster.com and search for **5957AAC** for gooseneck handle or **57225AAC** for D handle.

Put these hammers to work on heavy construction jobs as well as in foundry and fabrication shops. The longer the piston stroke, the greater the force the hammer delivers. All of these chipping hammers use United States Navy (U.S.N.) style shank oval-collar flat chisels or oval-collar moil points (7083A sold separately on this page). Maximum operating pressure is 90 psi. Connections: NPT female.

The retainer on these hammers has a black-oxide coating. ***Gooseneck-handle*** hammers allow a firm grip and a quick release. They have a carbon steel handle with a hardened steel barrel and a plated piston for reduced wear. The ***D-handle*** hammers offer a firm grip with added safety. They have a forged steel handle with a heat-treated steel barrel and a plain piston. ***Swivel hose connectors*** eliminate cracked hoses due to kinking and broken inlet bushings. The connectors screw into the air inlet and allow hose to swivel with the hammer. ***Mufflers*** cover the tool's exhaust ports to reduce sound.

Electric Demolition Hammers

DeWalt

Milwaukee

Easily break through concrete walls and floors with these demolition hammers. The side handle rotates 360° for maximum control. Operate on 120 VAC, 50/60 Hz. Hammers use 3/4″ hex shank chisels that are for electric demolition hammers; see 59305A sold separately on this page. Meet OSHA requirements.

DeWalt— Soft rubber-coated grips and an anti-vibration system provide fast cutting with less fatigue. Hammer has locking on/off switch. You can rotate the chisel to one of 12 positions to align the bit according to your needs. Hammer body is made of magnesium and aluminum, and the dust seals are spring loaded for longer life. Operates on 15 amps. Comes with a 13-ft. cord with a three-prong plug, and a nylon case. UL listed and CSA certified.

Milwaukee— Hammer has ball and roller bearing construction, a two-finger trigger switch, and a speed lock-on button. The body is made of aluminum; handles are glass-reinforced nylon with a cushion grip. The back handle has vibration isolation for less fatigue and a soft grip for extra comfort. Hammer operates on 14 amps. It comes with a 10-ft. cord with a two-prong, double-insulated plug and a steel carrying case. UL listed and C-UL listed.

Bosch Brute Electric Pavement-Breaker Hammer

This heavy duty hammer delivers a powerful blast for heavy pavement-breaking and asphalt-cutting jobs. It's double insulated, has ball bearing construction, and has a brush system that turns off the hammer when brushes are worn. Hammer is made of cast aluminum. Handles absorb shock to reduce fatigue. Operates on 120 VAC/DC, 60 Hz, 15 amps, or a 2,500-watt portable generator. Comes with an 8-ft. cord with two-prong plug. Meets OSHA requirements and is CSA certified.

Hammer uses 1 1/8″ hex shank chisels that are for electric pavement-breaker hammers; see 3615A, 3613A, 3617A, and 3616A sold separately on this page.

Bosch Model No.	Blows per Minute	Piston Stroke	O'all Lg.	Wt., lbs.		Each

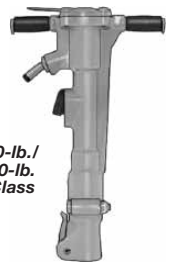
Air-Powered Pavement-Breaker Hammers



60-lb./ 90-lb. Class

One-piece housing eliminates side rods and springs, which reduces your cost for parts. These hammers have a built-in lubricator and a safety throttle that shuts off instantly when released. Cylinder is made of ductile iron. The latch-type front head is foot-operated for rapid tool changes. Max. operating pressure is 90 psi with a 3/4″ min. hose ID. Air inlet is 3/4″. Connections: NPT male.

The ***60-*** and ***90-lb. class models*** also have an exhaust deflector, a piston cycle that transfers blow energy to the tool, a four-bolt back-head plate for easy maintenance, and a special spring-loaded anvil bushing that can be serviced without a hydraulic press.

Use hex shank chisels that are for air-powered pavement-breaker hammers; see 3615A, 3613A, 3617A, and 3616A sold separately on this page.

Combination Air-Powered Chipper/Scraper

Remove weld flux, spatter after welding, and perform a wide variety of light chipping applications with one tool. This combination chipper/scraper has an alloy steel body and a straight steel handle. It is equipped with a curved flat chisel that has a 1″ Wd. × 6 3/32″ Lg. blade. Maximum operating pressure is 85 psi.

Connections: NPT female.

Blows per Minute	Piston Stroke	cfm @ 85 psi	Air Inlet	Min. Hose ID	O'all Lg.	Wt., lbs.		Each

Air-Powered Demolition Hammer

Demolish bricks and concrete walls and foundations. Barrel is hardened steel with a durable, forged-steel handle that has a leakproof throttle valve for positive shutoff. Piston and barrel design provides an air cushion between piston and accessory for maximum accessory life. A lock assembly keeps accessories firmly attached. Max. operating pressure is 90 psi with a ½″ min. hose ID. Use with 0.890″ demolition hammer chisels; see 36205A on this page. Weight is 24¾ lbs. Connections: NPT female.

Air-Powered Needle Scalers

Mini needles tap surfaces to gently remove unwanted rust, scale, paint, and weld spatter. They generate very little dust and are excellent for use on irregular-shaped and hard-to-reach areas. Piston stroke determines the force of a scaler; the longer the piston stroke, the greater the force. Scalers are lever operated, except for Style C, which is button-operated. All come with flat blunt-tip needles. Connections: NPT female.

A Economy Needle Scaler—Scaler is made of steel. Needle housing holds and is furnished with 12 (3 mm×7″) steel needles. Operating pressure is 80 to 100 psi. ***Scaler set*** includes scaler, three sets of 12 (3 mm×7″) steel needles, two 7″ Lg.×¾″ Wd. narrow chisels, a 7″ Lg.×1⅜″ Wd. wide chisel, a 7″ Lg.×1⅜″ Wd. angle chisel, a return spring, and a chisel adapter. Comes in a metal carrying case.

B&C Adjustable-Blow Needle Scalers—Change the number of blows per minute by adjusting the amount of pressure you place on the button. Scalers are steel with an aluminum handle and include two sets of nine (⅛″×5″) steel needles. Needle housing holds one set of needles. Operating pressure is 90 psi. ***Scaler sets*** include a scaler, two sets of nine (⅛″×5″) steel needles, and one each of: 7″ long gouge chisel, 4″ Lg.×9⁄16″ Wd. flat chisel, 7″ long grooving chisel, 3½″ long peening chisel, and a chisel adapter. Comes in a plastic case.

D Spring-Less Needle Scaler—Scaler has no internal springs to break, ensuring consistent performance. Made of aluminum. Comes with 28 (3 mm×7″) steel needles, a set of 14 (4 mm×7″) steel needles, a 4 mm needle holder, an installation tool for needle holders, and a ⅜″ hose nipple. Max. operating pressure is 85 psi.

E&F Low Vibration Needle Scalers—Scalers produce 80-90% less vibration than conventional tools. All are made of steel. Maximum operating pressure is 90 psi. *Style E* includes two sets of 18 (⅛″×7″) steel needles. Needle housing holds one set of needles. *Style F* holds and is furnished with 19 (⅛″×7″) steel needles.

G Combination Needle Scalers/Scaling Hammers—Tools are made of steel. They hold and are furnished with 19 (⅛″×5″) steel needles. Scalers have a built-in chisel retainer. Use scaling hammer chisels to convert tools into scaling hammers. For scaling hammer chisels, see 6097A sold separately on this page. Meet Mil. Spec. MIL-S-23492A. Maximum operating pressure is 90 psi. ***Scaler sets*** include a needle scaler, two sets of 19 (⅛″×5″) steel needles, one set of 19 (⅛″×7″) steel needles, and one each of the following: 6⅛″ Lg.×1⅜″ Wd. angle chisel, 6⅛″ Lg.×1⅜″ Wd. straight chisel, and 7″ Lg.×¾″ Wd. narrow chisel. Come in a vinyl carrying case.

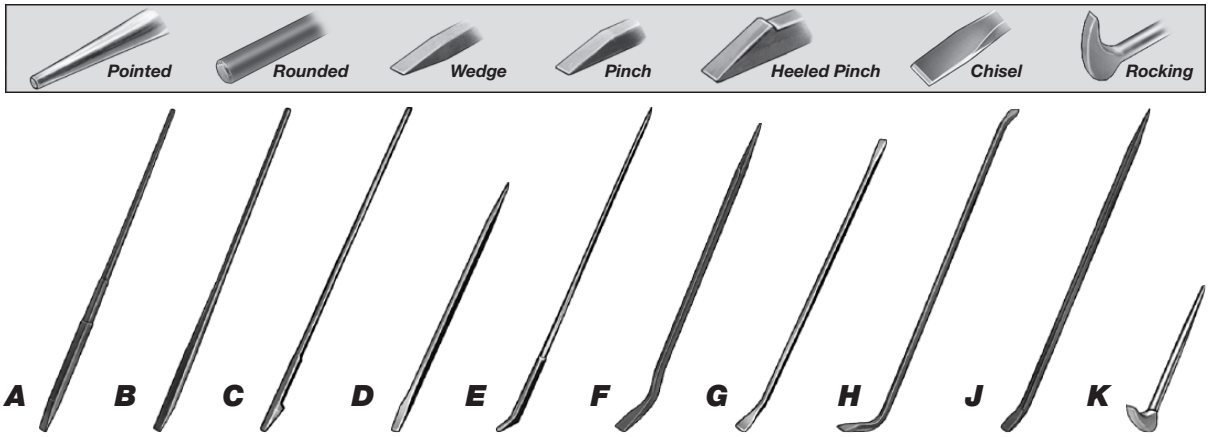
Wrecking and Pry Bars



Some of these bars have pointed ends, which work well for aligning bolt holes in steel construction. *End width* is measured at the wedge, pinch, chisel, or rocking end of the bar. ***Offset (bent-tip) bars*** have at least one bent end to provide better leverage for lifting and moving.

Straight Bars

***A* Wedge- and Rounded-End Bars—** Ideal for prying and moving heavy objects with wedge leverage. Forged from high-carbon steel square bar with a painted finish.

***B* Pinch- and Rounded-End Bars—** Tools have a single taper that forms the pinch tip—they're great for getting into small crevices. Forged from high-carbon steel square bar with a painted finish.

	Lg.	Wt., lbs.	Bar Size	End Wd.		Each

Offset (Bent-Tip) Bars

***E* Offset-Wedge and Pointed-End Bars—** Also known as warehouse/loading bars, these tools have a rounded handle that's tapered for prodding. Forged from high-carbon steel square bar with a painted finish.

***F* Gooseneck-Chisel and Pointed-End Bars—** The gooseneck end provides extra leverage. Made of forged alloy steel hex bar.

***G* Double-Chisel-End Wrecking Bars—** Have an offset chisel on one end and a straight chisel on the other. Forged from high-carbon steel hex bar with a painted finish.

	Lg.	Wt., lbs.	Bar Size	End Wd.		Each

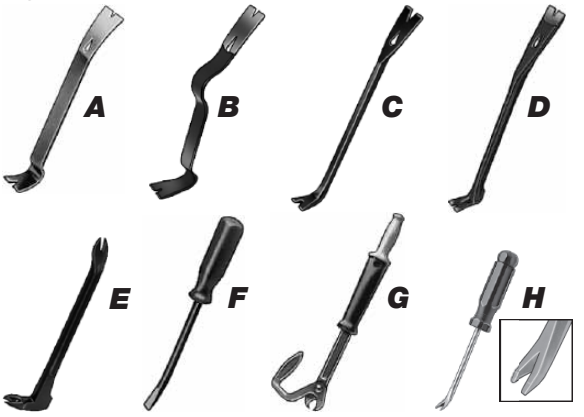
Pry Bars and Nail Pullers



A&B ***Gooseneck-Claw and Offset-Claw Bars—*** Sharp, tapered thin blades handle prying, scraping, and nail pulling. Both ends have claws. Bars have three nail slots. Forged from high-carbon steel.

Style A has a gooseneck rocking head for extra leverage.

Style B has an arch for more swing during pulling and prying without the need for a block for leverage.

	Lg.	Wt., lbs.	Bar Size	Claw Wd.	Finish		Each
A	5 1/4"	1/16	1/2"	1/2", 1/2"	Plain	6000A3	$3.80
A	7 1/4"	5/16	1"	1", 1"	Plain	6000A2	4.25
A	15"	1 1/2	1 3/8"	1 3/4", 1 7/8"	Painted	6000A1	10.24
A	21"	2	1 3/8"	1 3/4", 1 7/8"	Painted	6000A4	12.71
B	15 1/2"	1 3/4	1 3/8"	1 3/4", 1 3/4"	Painted	6769A12	12.13

C-E ***Double-Offset Claw Bars—*** Both ends have claws. Forged from high-carbon steel with a painted finish.

Style C bar is hex shaped and has three nail slots.

Style D has an I-beam design to give you extra strength without adding weight to the tool. The rocking head provides maximum leverage. Bar has three nail slots.

Style E is also known as a bear claw. Flat claw is for easy wedging with minimal wood damage; extra-heavy rocking head provides maximum leverage.

	Lg.	Wt., lbs.	Bar Size	Claw Wd.		Each

E	14 1/4"	1 5/8	5/8"	1", 1"	37205A74	19.82

★ I-beam thickness.

F ***Screwdriver Pry Bars—*** The curved screwdriver blade gives you the extra leverage you need to handle tough prying jobs. Bars are made of hardened and tempered alloy steel. Bars 31" and shorter have a hard plastic handle. Bars 36" and longer have a cushion-grip handle for a comfortable and secure grip; they also have a capped end that allows you to strike the pry bar without damaging the handle.

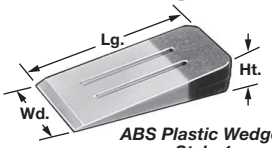
Plastic Wedges



ABS Plastic Wedge, Style 1

ABS Plastic Wedge, Style 2

Three-Piece Set

Wedges are made of plastic, so they won't damage material.

ABS Plastic Wedges— Lightweight, yet strong. *Style 1* wedges are for separating and holding material. They won't chip or shatter, even in subzero temperatures. For use with wood and other soft materials. *Style 2* wedge is for leveling, aligning, and prying apart materials. It's ideal for use in larger, heavier jobs such as framework and doors.

	Blade				
Lg.	Wd.	Ht.	Wt.		Each
Style 1					
5 1/2″	2 1/2″	1″	5 oz.	5868A91	$6.90

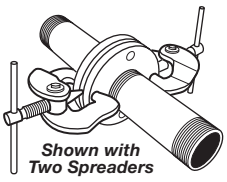
Dent Puller

An economical way to make minor repairs, this tool pulls dents out of sheet metal panels from the front side. It has a 1/2″-20 threaded shaft and comes with nosepiece, "L" puller with two screws, and a door edge tool with two nuts.

6873A11 ..... $42.98

T-Handle Pipe Flange Spreaders



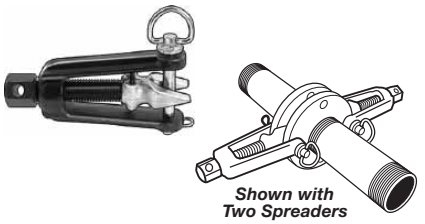
Shown with Two Spreaders

Make gasket replacement fast and easy, even in hard-to-reach locations. Spreaders are made of steel with a black-oxide finish. They exert extreme pressure smoothly and evenly with minimal operator effort. To use, place hooks in flange bolt holes and turn the T-handle. Units allow you to part flanges quickly and hold them in perfect alignment without damaging flange faces. *Note:* Use in pairs for even distribution of pressure. Capacities are for standard raised-face flanges.

PIPE SIZE RANGE					
Cast-Iron Flange		Steel Flange			
125-lb.	250-lb.	150-lb.	300-lb.		Per Pair
2″ to 20″	1″ to 12″	2″ to 20″	3/4″ to 12″	59125A1	$292.69
16″ to 48″	12″ to 30″	18″ to 24″	12″ to 24″	59125A2	588.05

Flange Spreaders & Alignment Pins

Wrench-Driven Flange Spreaders

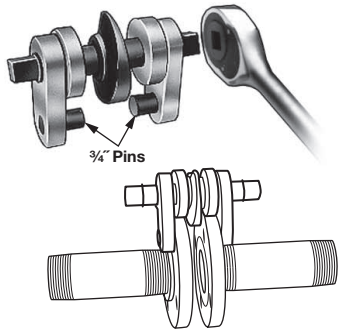


High-quality, alloy-steel spreaders are heat-treated to handle tough jobs without distortion or breakage. Compact in size, units are perfect for use on standard pipe and ring-type joint flanges. They're easy to use—remove bolt from flange to insert support rod, and turn the hex bolt to drive the spreader.

Note: A spreader is required on each side of the flange for even distribution of pressure.

Pipe Size Range		Hex	Spreaders		Replacement Spreaders	
150-lb. Flange	300-lb. Flange	Screw Size	Pkg. Qty.	Pkg.		Each
2″ to 6″	¾″ to 2½″	1½″	2	59135A32 $472.15	59135A22	$248.50
5″ to 16″	2½″ to 6″	1½″	2	59135A34 488.49	59135A24	257.10
14″ to 42″	10″ to 22″	1⅝″	2	59135A36 618.70	59135A26	325.63
22″ to 42″	16″ to 36″	1⅝″	2	59135A38 820.55	59135A28	431.87

Ratchet-Action Pipe Flange Spreaders



Slip these lightweight, easy-to-use spreaders over pipe flanges to separate stubborn connections. They're safe to use—no more hammer blows, chisels, or flying wedges. All are made of steel.

Spreaders have two ¾″ pins that fit into the bolt holes on your flanges. Applying pressure to the ratchet handle forces a circular cam wedge between flanges to separate them. Use spreaders on standard raised-face flanges. Multi-range spreader is also suitable for large-diameter flanges with up to 750° F steam. All come with a female square-drive reversible ratchet. Furnished with a metal carrying case for the spreader; case for standard range spreader also holds the ratchet.

Standard Range— For 150-lb. flanges up to 20″ pipe size; 300-lb. flanges up to 6″ pipe size.

Multi-Range—*For standard raised-face flanges:* 150-lb. flanges 12″ to 24″ pipe size; 300-lb. flanges up to 24″ pipe size. *For large-diameter flanges with up to 750° F steam:* 150-lb. flanges 26″ to 72″ pipe size; 300-lb. flanges 26″ to 42″ pipe size.

Deluxe Range— For 400-lb. flanges up to 24″ pipe size; 600-lb. flanges up to 20″ pipe size; 900-lb. flanges up to 16″ pipe size; 1500-lb. flanges up to 8″ pipe size; 2500-lb. flanges up to 5″ pipe size.

	Ratchet Size		Each
Standard Range	¾″	59115A1	$918.75
Multi-Range	1″	59115A2	1,130.00
Deluxe Range	1″	59115A3	1,142.50

Tapered Alignment Pins

Use alignment pins to align structural components such as I-beams and angle irons for bolting, riveting, and welding. Pins are made of carbon steel, unless noted.

Styles A-E— To align bolt holes, simply drive pins into the drilled holes of two structural components. When ordering, select a pin with a diameter that is 1/16″ larger than the diameter of the bolt or rivet being used. Diameter is measured at the widest part of the pin, unless noted.

Style F— To align bolt holes, fit the tapered end of the pin into the bolt holes and use a wrench on the hex head to rotate and align the holes. If your bolt hole is in between the sizes listed, choose the smaller size pin.

(A) Single-End Alignment Pins

(E) Broad-Head Alignment Pins

Often called bull pins, these pins are designed to resist mushrooming caused by repeated pounding. The large striking surface allows you to drive the pins quickly and efficiently. Flat surfaces are forged below the head for use as a wrenching surface.

Dia. ♦	O'all Lg.	Taper Lg.	Point Size		Each
1 1/16″	10″	5 1/2″	1/4″	6057A11	$27.52
1 1/4″	13″	6″	5/16″	6057A12	38.36

♦ Diameter at the top of the pin, below the pin head.

(F) No Strike Hex-Head Alignment Pins

A specially designed shaft eliminates the need for hammering and prying when aligning bolt holes. Unlike most other pins, these are reusable—use them for your next aligning job. Pins are heat-treated alloy steel with cadmium plating for corrosion resistance. Great for use on flanges and steel framing.

For Bolt Hole Size	O'all Lg.	Taper Lg.	Point Size		Each

Transparent Shatter-Preventing Film

Keep windows from producing dangerous flying glass if they break. This scratch-resistant transparent polyester film bonds to the inside of glass windows to hold them together if broken.

Thick., mils	Wd.	10-ft. Roll		25-ft. Roll	
2	60″	**2293A76**	$77.85	**2293A16**	$170.30

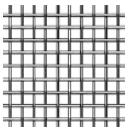
Insect Screening



All screening resists corrosion.

Aluminum is the most popular insect screening.

Fiberglass won't crease or dent.

Type 316 stainless steel and **bronze** have superior corrosion resistance.

Mini Blinds

Adjustable slats offer light control and privacy. Slats are 1″ wide. Blinds include universal hardware for inside, outside, and ceiling mounting. Inside mounting requires a mounting surface of at least 1½″ for vinyl blinds and ⅝″ for aluminum blinds.

Aluminum blinds are more durable than vinyl.

Vinyl—Color is white

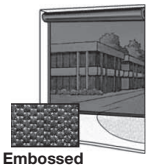
Light-Reducing Shades

Dim incoming light without blocking the view. Made of see-through metalized polyester, shades block up to 99% of UV rays. Shades include universal hardware for inside, outside, and ceiling mounting. Inside mounting requires a mounting surface of at least 3″.

Embossed shades have a raised pattern for scratch resistance.



Embossed

Mounting Wd.	Lg., ft.	Light Blocked	Gray Smooth		Gray Embossed

Privacy Film and Sprays

Apply to windows to prevent outsiders from seeing in.

Film

Nonreusable polyester film is for indoor use on single- and dual-pane windows. It blocks up to 98% of UV rays. Apply to window with a soap and water solution.

Reusable vinyl film is for indoor use on single-pane windows. Apply to window with water. Film is not recommended for use on dual-pane, wire, or tinted windows because heat buildup could crack the glass.

Application kit includes spray bottle of solution, blade, and squeegee.

Spray

Create a translucent frosted effect on windows. Spray covers 20 sq. ft.

12-oz. Spray Can ..... 1008A12 ..... $7.29

Light- and Glare-Reducing Film

Cut down on glare and filter sunlight with this reusable vinyl film. Use as directed or heat buildup could crack the glass

Wet-mount film is for use on the inside of single-pane windows. It is not for use on dual-pane, wire, or tinted windows. *Application kit* includes spray bottle of solution, blade, and squeegee.

Static-cling mount film is for use on the inside or outside of single-pane windows and the outside of dual-pane windows. It is not for inside use on dual-pane windows.

Light-Reducing Insulating Film

Reduce heat transfer through your windows and maintain privacy. In the summer, film reflects the sun's heat; in the winter, it minimizes heat loss. Film is metalized polyester that adheres to glass to dim incoming light and to block up to 99% of UV rays.

For indoor use on single- and dual-pane windows with ⅛″-¼″ thick glass. Apply with a solution of soap and water.

Application kit includes spray bottle of solution, blade, and squeegee.

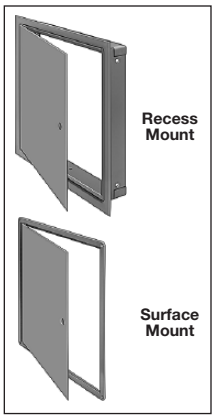
Access Doors



Standard Shown

Gain access to pipes, pumps, wiring, and controls behind walls and ceilings. The door opening is up to 5/8" smaller than the cutout. Mounting fasteners are not included. *Steel* doors have a white primer finish.

Standard doors have screwdriver-operated cam latches. Panel and frame are 14-16 ga.

Standard key-locking doors are keyed alike and include two keys. *Steel* panel and frame are 16 ga. *Type 304 stainless steel* panel is 16 ga; frame is 18 ga.

Tight-seal doors have a 1/16" thick neoprene gasket to keep out dust and moisture. They have screwdriver-operated cam latches. Panel and frame are 16 ga.

Fire-rated doors contain 2" of fire-rated insulation and are UL rated for 1 1/2 hours in fire-rated walls. They have a latch that is operated by the included turn ring or key. Panel is 20 ga.; frame is 16 ga. Doors that are *fire rated for walls and ceilings* are also Warnock-Hersey listed for 1-hour combustible and 3-hour noncombustible ceilings.

Doors **with drywall flange** have a perforated flange that can be covered with joint compound. They have screwdriver-operated cam latches. Panel is 14 ga.; frame is 16 ga.

Insulated doors have polystyrene or fiberglass insulation to prevent heat from passing through them. *Aluminum* doors have screwdriver-operated cam latches. Panel and frame are 16 ga. *Aluminum/galvanized steel* doors have handles. They do not have mounting holes; drill your own as needed. Panel is 24-ga. galvanized steel; frame is 15-ga. aluminum.

Adjustable Access Doors

Slide the frame apart using its notched tabs to adjust its length and width in 3/8" increments. Recess mount in walls or ceilings that are at least 3/8" thick. The door opening is 1 1/4" smaller than the cutout. Panel is 20-ga. steel with a white finish and attaches to the frame magnetically. Frame is 24-ga. galvanized steel and plastic.

Tight-Seal Access Doors

Rectangular Recess Mount

Round Recess Mount

Round Surface Mount

Create a weathertight point of access to concealed objects. The door opening is up to 1 1/4" smaller than the cutout.

Rectangular recess-mount doors have a neoprene/EPDM gasket and mount into floors. They have a slam latch that can be pulled open. Doors can support 180 lbs.

Round recess-mount doors are flexible and resist heat and chemicals. The panel fits snugly into the frame for a watertight seal; pull on the panel's tab to open it. They are often used to inspect insulated pipes for corrosion. Frame has locking ridges to secure it in insulation that is at least 3/4" thick; no mounting screws or caulk needed.

Round surface-mount doors have an EPDM gasket and mount to floors. They have a T-handle latch. *Aluminum* doors can support 300 lbs.

Weld-On Access Doors

Rectangular

Round

Often used for inspecting conveyors, hoppers, and tanks, these doors have gaskets to shut out dust and moisture. They have padlock hasps that accept up to a 5/16" dia. shackle. The door opening is the same size as the cutout.

Rectangular doors have a polyethylene gasket and a handle latch. Panel is 13 ga.; frame is 10 ga.

Round doors have a Buna-N gasket and a flip latch. Panel and frame are 10 ga.

Light Duty Access Doors

Rectangular

Round

An economical option, doors have an 1/8" thick white plastic panel and frame. They surface mount to walls or ceilings and have a door opening that is up to 3/8" smaller than the cutout.

Rectangular doors have a snap catch that can be opened with a screwdriver. They can be mounted with adhesive or by drilling mounting holes.

Round door has a slide bolt latch. It requires No. 6 screws for mounting.

Load-Rated Access Doors

Designed for installation in new floors and sidewalks, these doors can support 300 lbs./sq. ft. They mount in wet concrete using the included 3/4" anchor flange. Door is self-locking. Unlock from above using the included key; unlock from below using the turn handle. The door opening is the same size as the cutout. Panel is 1/4" thick diamond-tread aluminum; frame is 1/4" thick aluminum with a 1 1/2 NPT female coupling for drainage.

Roof Access Doors

Access your roof from inside your building. The lid has spring-assist supports, a hold-open arm, and a gray primer finish. Doors have a handle latch inside, a push-button release outside, a foam rubber gasket, and padlock hasps on the inside and outside. Padlock hasps accept up to a 1/2" dia. shackle. Sides have 1" of insulation. Surface mount to your roof; mounting flange is 4" wide and has 7/16" dia. mounting holes (fasteners not included).

Galvanized steel doors have a 14-ga. lid with a 22-ga. liner.

Aluminum doors have an 8-ga. lid with a 13-ga. liner.

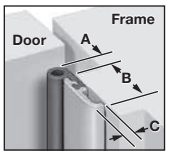
Frame-Mount Weatherstripping



Shown Installed

Compressible Bulb

Noise Damping

Adjustable Projection

Flexible Brush

Flat

Magnetic Contact

Mount to the sides and top of your door frame to seal gaps. Weatherstripping has a metal flange with mounting holes and includes mounting screws. Meets UL 10B and 10C for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours, except noise-damping stripping does not meet UL 10C. *Silicone* resists UV and heat; *neoprene* resists abrasion; *polyurethane* resists UV, oil, tears, and abrasion.

Compressible Bulb

No need to drill mounting holes—apply this weatherstripping to the frame to close gaps in doors and windows.

Fire Rated—Meets UL 10B and UL 10C for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours, except metal weatherstripping does not meet UL 10C.

Fire and Smoke Rated—Meets UL 10B and 10C for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours, as well as UL 1784 for use as a smoke and draft control gasket.

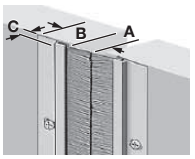
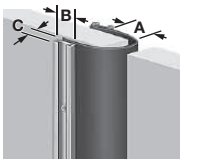
Double-Door Weatherstripping



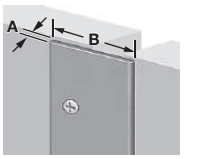
Flexible Brush

Flat

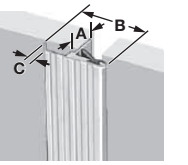
Adjustable Projection



Wrap Around



Plate



T-Shape

Seal the space between your double doors. Weatherstripping has a metal flange with mounting holes and comes with screws. Meets UL 10B for use with wood fire doors rated for 1½ hours and metal doors rated for 3 hours, except T-shape weatherstripping is not rated.

Flexible brush, **flat**, and **adjustable projection** weatherstripping come in a set of two. *Adjustable projection* seals adjust with a screwdriver up to 1/4".

Wrap-around weatherstripping fits doors up to 1¾" thick.

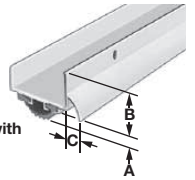
Wrap Around



Wrap Around with Drip Guard

Cover the gap below your door. Weatherstripping has a metal flange with mounting holes to attach to the door's face with the included screws. Meets UL 10B for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Flexible-brush and wrap-around weatherstripping also meet UL 10C. *Vinyl* is an economical option; *neoprene* and *SBR* resist abrasion; *nylon* resists tears.

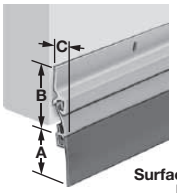
Automatic Bottom-Mount Weatherstripping



Surface Mount Flat

Surface Mount Compressible

Surface and Half-Mortise Mount

Avoid scuffing your floor and reduce wear on your seals—automatic weatherstripping has a plunger that lowers the seal as the door is closed and raises it as the door is opened. It has a metal flange with mounting holes and comes with screws. Meets UL 10B and UL 10C for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. *Vinyl* is an economical option; *neoprene* resists abrasion; *santoprene* resists chemicals.

Surface Mount—Mount to the door's face. Weatherstripping can be cut down with a saw (up to 12" can be removed from *flat*; up to 4" can be removed from *compressible*).

Surface and Half-Mortise Mount—Mount to the door's face or in a cutout. Weatherstripping can be cut down with a saw (up to 2" can be removed from weatherstripping *with santoprene seal;* up to 4" can be removed from weatherstripping *with neoprene seal*).

Frame-Mount Overhead-Door Weatherstripping

Shown Installed

Vinyl Seal

Nylon Brush

Eliminate gaps between your overhead door and frame. Mounting screws are included.

Vinyl seal with aluminum flange is an economical option. Meets UL 10B for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours.

Nylon brush with aluminum flange have flexible nylon bristles that conform to fill gaps. The included weatherstripping covers both sides and the top of your door frame. Meet UL 10B and UL 10C for use with wood fire doors rated for 1 hour and metal fire doors rated for 3 hours.

Floor Thresholds

1

2

3

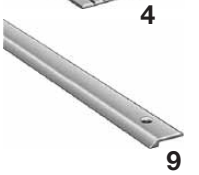
4

5

6

7

8



9

10

Make a smooth transition between flooring surfaces. Thresholds have mounting holes and come with screws, except Style 6 requires you to drill your own holes and Styles 7 and 10 install with contact adhesive (see page 3458). Styles 1-6 meet UL 10B for use with wood fire doors rated for 1½ hours and metal fire doors rated for 3 hours. Styles 2, 3, 5, and 6 also meet UL 10C.

Standard thresholds are often used in doorways to reduce the gap between a door and the floor. *Style 3* have a nonskid coating. *Style 6* comes in three pieces; the middle piece can be installed with the smooth or ribbed side up.

Single-edge thresholds protect the edges of flooring materials.

★ Does not come with screws.

Above-the-Door Drip Guards

Shelter your door opening from rain, snow, and dust. Guards are 1/16″ thick aluminum and come with mounting screws.

Lg.	Flange Ht. (A)	O'all Ht. (B)	Proj. (C)		
3′4″	9/16″	1 1/2″	2 1/2″	8112A11	$12.02
4′4″	9/16″	1 1/2″	2 1/2″	8112A12	15.83
6′4″	9/16″	1 1/2″	2 1/2″	8112A13	23.13

Dock Door Seals

Keep heated and cooled air in and dust out when loading and unloading trailers. Seals consist of two 1-ft. Wd. × 8-ft. Ht. side pads and one 10-ft. Wd. × 1-ft. Ht. top pad that close gaps between a trailer and dock. Pads are foam covered with black nylon-reinforced vinyl and have a wood backing.

Mount seals to your dock wall using the included brackets and screws. Choose a seal that projects a maximum of 5″ beyond your dock bumper. If your dock has an edge-of-dock leveler, order the seal with a 20″ projection.

Projection	Fits Door Ht.	Fits Door Wd.		
10″	8 ft.	8 ft.	21735T11	$728.67
20″	8 ft.	8 ft.	21735T53	982.40

Dock Door Shelters

Protect your loading dock from the elements. Shelters are black vinyl and consist of two 21″ Wd. × 10 1/2-ft. Ht. side flaps and one 11-ft. Wd. × 3-ft. Ht. top flap. They can also be used to create a seal between oversized door openings and trailers. To mount in block or brick, 3/8″ or 1/2″ Dia. × 4″ Lg. anchors are required.

Rigid—Side covering is translucent white vinyl with aluminum and wood trim. Shelter includes two steel protectors to prevent damage from trailers.

Shock Absorbing—Shelter is spring loaded, allowing it to retract with trailers and eliminating the need for steel protectors. Side covering is white vinyl with steel trim.

Rigid

	Projection	Fits Door Ht.	Fits Door Wd.		
Rigid	24″	8-10 ft.	8-10 ft.	87645T75	$1,659.64
Shock Absorbing	24″	8-10 ft.	8-10 ft.	87645T76	1,792.88

Mail Slots

Pass mail through your door to keep it safe and dry. Slots have a spring-loaded front cover and come with mounting screws.

Optional sleeve covers the magazine-size cutout's rough edges and prevents mail from falling into hollow doors. It is for 1 3/4″ thick doors. Sleeve is stainless steel and comes with mounting screws.

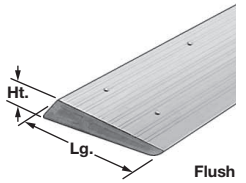
Floor Ramps



Flush

Overlapping

Create a gradual incline between uneven floor surfaces. Ramps are 0.11″ thick aluminum with a ribbed surface and come with mounting screws. Load capacity is 1,000 lbs. They are UL listed for use with fire-rated doors.

Overlapping ramps have a 3″ lip that fits over your threshold or raised entry.

For Door Wd.	Flush Lg.	Flush Ht.			Overlapping Lg.	Overlapping Ht.

Door Windows and Frames

See outside your door without opening it. Windows and frames are for use in 1 3/4″ thick doors. They are UL listed for use in fire-rated doors.

Windows

Window frame is steel with a gray primer finish and comes with mounting screws.

Impact-resistant glass provides a clear, unobstructed view. It is 3/16″ thick and is also known as pyran.

Wired glass contains wire mesh that holds the glass together if broken. Glass is 1/4″ thick.

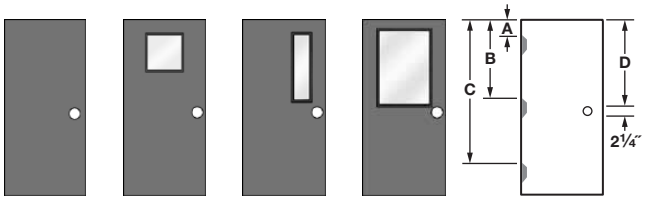
Fire-Rated Doors & Frames

Fire-Rated Steel Doors



No Window | Square Window | Rectangular Window | Half-Door Window

These 18-ga. steel doors are UL fire-rated to help prevent the spread of fire. Doors are reversible for left- or right-hand installations and are 1¾″ thick with a solid polystyrene core and gray primer finish. Frames are sold separately below.

Doors are prepared for three 0.134″ or 0.18″ thick, 4½″×4½″ hinges (unless noted) and a lockset with a 2¾″ backset (the distance from the edge of the door to the center of the lockset's mounting hole). For hinges and locksets, see page 2875; for door closers, see pages 2898-2900.

Windows contain wired glass. Viewing size is 10″×10″ for **square windows**; 4″×25″ for **rectangular windows**; and approximately 20″×30″ for **half-door windows** (except for 48″ Wd. doors it's approximately 34″×30″ and for 96″ Ht. doors it's approximately 20″×44″).

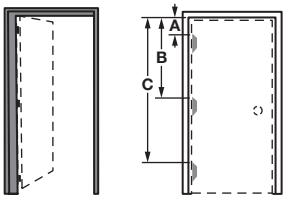
★ Match doors to fire-rated frames with the same door/frame style. ■ Prepared for four hinges; 81 3/8″ to fourth cutout.

Fire-Rated Steel Door Frames



Left-Hand Door Frame

Made of 16-ga. steel, frames are sized to fit the Fire-Rated Steel Doors above that have the same door/frame style. Frames are UL fire-rated to help prevent the spread of fire. They accept three 0.134″ or 0.18″ thick, 4½″×4½″ hinges (unless noted) and a 4 7/8″ strike. All have a 2″ face and are reinforced to support a door closer (see pages 2898-2900). Frames are shipped unassembled.

To determine if you need a left-hand or right-hand frame, stand on the side of the door where it swings away from you. If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door.

Flush frames are for use in brick or block walls. They have a 5¾″ overall depth to fit a maximum 4 7/8″ thick wall. Frames include anchors.

Wrap-around frames are for use in drywall. They have a 5 7/8″ overall depth to fit a maximum 4 7/8″ thick wall.

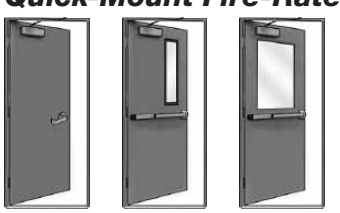
★ Match frames to fire-rated doors with the same door/frame style. ■ Prepared for four hinges; 81½″ to fourth cutout.

Quick-Mount Fire-Rated Steel Doors



No Window Left-Hand | Rectangular Window Left-Hand | Half-Door Window Left-Hand

Doors come hung in a sub-frame that mounts into your existing door frame. These 18-ga. galvanized steel doors have a gray primer finish, are 1¾″ thick, and have 4½″×4½″ stainless steel hinges with a removable pin. They are UL fire-rated if installed into a fire-rated frame. All include a door closer, weatherstripping, a threshold, and mounting hardware.

To determine if you need a left-hand or right-hand door, stand on the side of the door where it swings away from you. If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door.

Doors with **no window** have a mortise lever lockset. Locks are keyed differently and come with two keys.

Doors with **rectangular window** and **half-door window** have a touch-bar exit device on one side and a lever and cylinder lock on the other side. Locks are keyed differently and come with two keys. Windows contain clear ceramic glass. Viewing size is 4″×25″ for *rectangular windows* and approximately 22″×30″ for *half-door windows*.

Door Size/ Approx. Cutout Size, Wd.×Ht.	No Window (1½-hr. Rating): Left Hand	Right Hand		Rectangular Window (1½-hr. Rating): Left Hand	Right Hand		Half-Door Window (¾-hr. Rating): Left Hand	Right Hand

Stainless Steel Doors with Frames

Able to withstand harsh environments, these 24-ga. stainless steel doors come hung in a 16-ga. stainless steel frame. Doors are 1¾″ thick and come with 0.094″ thick, 4″×4″ stainless steel hinges; an adjustable strike; a threshold; and weatherstripping. They are prepared to accept a lockset (see pages 2890-2892) with a 2¾″ backset (the distance from the edge of the door to the center of the lockset's mounting hole). Doors are not fire rated. Frames are 3½″ deep.

To determine if you need a left-hand or right-hand door, stand on the side of the door where it swings away from you. If it opens to the left, it's a left-hand door; if it opens to the right, it's a right-hand door.

Type 316 stainless steel is more corrosion resistant than Type 304 stainless steel.

Fire-Rated Steel Double Doors and Frames

Sized for wide openings, these double doors and frames are UL fire-rated to help prevent the spread of fire.

Doors are 18-ga. steel with a solid polystyrene core and gray primer finish. They are reversible; install so they open in or open out. Doors are prepared for three 0.134″ or 0.18″ thick, 4½″×4½″ hinges and a lockset with a 2¾″ backset (the distance from the edge of the door to the center of the lockset's mounting hole). Doors are 1¾″ thick and include weatherstripping. Locksets, strikes, and hinges are sold separately on this page.

Flush frames are for use in brick or block walls. They are 16-ga. and have a 5¾″ overall depth to fit a maximum 4⅞″ thick wall. Frames include anchors.

Wrap-around frames are for use in drywall. They are 16-ga. and have a 5⅞″ overall depth to fit a maximum 4⅞″ thick wall.

Lockset, Strike, and Hinge Sets

Outfit your doors and double doors with hardware to complete their installation. Sets include a Schlage lockset, a 4⅞″ high strike, and 0.134″ thick, 4½″×4½″ mortise hinges with screws. All are reversible for left- and right-hand doors. Locksets have a backset of 2¾″ (the distance from the edge of the door to the center of the lockset's mounting hole).

Locking locksets have a Schlage C keyway on the outside and a turn button on the inside. Sets are keyed differently and come with two keys.

See pages 2890-2892 for additional locksets; see page 2895 for additional strikes; see pages 2966-2968 for additional hinges.

Roll-Up Overhead Doors

Secure dock doorways and other large openings. Doors are 26-ga. galvanized steel with a white finish. They roll up and down in 16-ga. steel tracks that can be cut to size. Mount doors on the inside wall to wood, steel, brick, and block frames. Controls can be mounted on the left or right side. Doors include weatherstripping to seal the gap between the door and the ground, mounting hardware, and a slide bolt for security.

Automatic Door Opener Adapter Kit—Add an adapter kit to use your roll-up overhead door with an automatic overhead door opener (jackshaft). Kit includes a #41 chain sprocket gear. For automatic overhead door openers, see page 2897.

1200A91 $75.00

Folding Gates

Standard Biparting Gate

Portable Gate

Secure an area without sacrificing visibility and air circulation. Built to withstand outdoor use, gates are heavy-gauge galvanized steel. They have a padlock hasp that accepts up to a 5/8″ dia. shackle.

Standard—The top of the gate mounts to the inside or outside of the frame; the bottom mounts into the floor. When folded, gates can swing out of the opening.

Single gates mount on one side of the doorway and lock on the other. Mount with 5/16″ dia. screws (not included). When folded, gate is 11″-15″ wide.

Biparting gates mount on each side of the doorway and lock together in the center. Mount with 1/4″ dia. screws (not included). When folded, each section is 11″-15″ wide. Add optional extra-clearance brackets to mount biparting gates adjacent to overhead door rails or other obstacles. Brackets project 9″ and provide 7 1/4″ of clearance between the wall and gate.

For Windows—Reversible for left- or right-hand installation, gates mount to the inside or outside of the frame with 5/16″ dia. screws (not included). When folded, the gate is 7″ wide.

Portable—Gate has six 3″ dia. rubber casters with side wheel brakes. When folded, gate is 27″ wide. Gate includes hardware for temporary wall mounting. *Add-on gate* bolts to end of the gate to add 6 feet of width. It includes two casters and mounting hardware. Multiple add-on gates can be combined.

Other Sizes—Please specify single or biparting door, width (4′-10′ for single doors; 8′-20′ for biparting doors), height (2′1″-8′1″), and color (white, dark brown, or tan). Price is based on door width.

8449A13 ..... Per Ft. $72.03

Dock Door Screens

Let light and fresh air in; keep debris and insects out. Doors have a blue vinyl-coated polyester screen that resists mildew, stains, and UV light. Doors mount to the inside of the door frame, which must be at least 8″ deep. Mounting brackets, aluminum track, and weatherstripping are included.

Manual doors are spring-loaded to assist in raising and lowering the screen.

Motorized doors operate on 120 volts AC and have an 8-ft. power cord with three-prong plug and a wall switch.

Impact-Absorbing Door Bumpers

Prevent vehicles, carts, and other objects from damaging your door. Bumpers are made of black polyethylene and surface mount to doors (mounting hardware is included).

Two-Way Swinging Doors

Gravity hinges allow these doors to swing closed after being pushed open from either direction. They are reversible for left- and right-hand installations and come with mounting hardware.

Lightweight aluminum doors are 0.063″ thick and have an anodized finish. Each door has a 9″×14″ acrylic window. The top of the door mounts to the inside of the frame; the bottom mounts to the floor.

Impact-resistant polyethylene doors are built to withstand forklift traffic, refrigeration, and washdowns. Doors are 1⅞″ thick and each has a 20½″×22½″ polycarbonate window, except 5-ft. wide doors have a 14½″×22½″ window. Doors mount to the inside of the frame. They are gray and have bumpers on both sides.

Flexible Two-Way Swinging Doors

See-Through Double Door

Heavy Traffic Double Door

Similar to strip doors, these doors open only as much as needed. A gravity hinge allows the door to be pushed open from either direction before swinging back to the closed position. The hinge attaches at the top of the frame. Doors are reversible for left- and right-hand installation.

See-through doors are ⅛″ thick clear PVC. They meet NSF/ANSI standards and have a stainless steel hinge (unless noted). Mounting screws are included. Temperature range is 20° to 125° F.

Heavy traffic doors are ¼″ thick gray PVC for greater durability than see-through doors. Each door has a 15″×18″ clear PVC window. Hinge is galvanized steel and has ⅜″ dia. mounting holes (fasteners not included). Temperature range is –10° to 150° F.

★ Door does not meet NSF/ANSI standards. Has an aluminum hinge.

Air Curtains

Produce a stream of air down a doorway or other opening to keep out dust, dirt, insects, and fumes while allowing personnel to pass through.

Single Phase

Air curtains mount to exterior or interior walls. Mounting hardware is not included. ETL listed for indoor and outdoor use. Temp. range is 0° to 120° F. For information about sound levels (dB), see pg. 673.

Low-profile curtains are often used in coolers, offices, and other locations with limited clearance above doorways. Housing is black powder-coated steel. Curtains have a variable-speed switch, ⅜″ dia. mounting holes, and an 8-ft. power cord with three-prong plug.

Standard curtains are commonly used in receiving areas and cold-storage rooms. Housing is steel. Curtains have 7⁄16″ dia. mounting holes and wire leads for hardwiring.

High-output curtains produce a strong stream of air to cover large doorways in receiving areas and hospitals. Housing is steel. Curtains have 7⁄16″ dia. mounting holes and wire leads for hardwiring. *Corrosion-resistant* curtains have a Type 304 stainless steel housing that can withstand corrosive and high-moisture environments. Motor can withstand washdowns.

Optional door switches turn air curtains on when the door is opened and off when it is closed.

Three Phase

Curtains produce approximately twice as much airflow as single-phase high-output curtains and cost approximately twice as much. They require a control panel.

Air Curtains—Please specify door opening width (6, 7, 8, 10, or 12 ft.), door opening height (12 or 16 ft.), and voltage (230 or 460V AC). 1077A1

Control Panels—Please specify door opening width (6, 7, 8, 10, or 12 ft.), door opening height (12 or 16 ft.), and voltage (230 or 460V AC). 1077A3

Optional Door Switch 1077A2 $90.00

Heated

Maintain inside temperature when doors are open by setting the curtain's thermostat between 34° and 90° F. Max. door opening height is 8 ft. They cost approximately twice as much as standard curtains.

Single Phase—Please specify door opening width (3 or 4 ft.) and voltage (208 or 240V AC). 1059A1

Three Phase—Please specify door opening width (3, 4, 5, or 6 ft.) and voltage (208, 240, or 480V AC). 1059A2

Optional Door Switch 1059A21 $38.93

Vinyl Strip Doors

Allow personnel and vehicles to move freely through doorways while keeping heated or cooled air in and dirt, dust, and debris out. Strips overlap each other to prevent gaps and come in a variety of widths—narrow strips are easier to pass through while wider strips create a better seal. Strip doors consist of an aluminum mounting plate and vinyl strips with holes punched on 2″ centers. Fasteners for mounting to your wall or door frame are not included. Mounting holes for mounting plate with bolts are ½″ dia.; for mounting plate with press-on pegs they are ⅜″ dia. For replacement strips, see page 2880.

Mounting Plate with Bolts—Place strips on the threaded studs and use included nuts to hold securely in place.

Mounting Plate with Press-On Pegs—Press strips onto pegs for quick installation.

Standard doors are for indoor and outdoor use. Temperature range is 0° to 150° F. Doors include two orange strips to mark the wall location on each side. *Ribbed strips* hide scratches and wear.

Low-temperature doors are often hung in freezers and can be used in food service environments. They are for indoor use. Temperature range is –30° to 150° F. Strips are reinforced with nylon, except 16″ wide strips.

Static-resistant doors are commonly used in data centers and other areas where static build-up could be harmful. They are for indoor use. Temperature range is 0° to 150° F. Surface resistivity is 10^6 ohms.

Short Vinyl Strip Doors

Sized to fit short openings, these strip doors are often used with conveyors to prevent the loss of heated or cooled air through unprotected openings. Doors consist of an aluminum mounting plate with bolts and vinyl strips with holes punched on 3″ centers. Place strips on the threaded studs and use the included nuts to hold them securely in place. Fasteners for mounting to your wall or door frame are not included. Plates have ⅜″ dia. mounting holes. For indoor and outdoor use. Temperature range is –10° to 150° F.

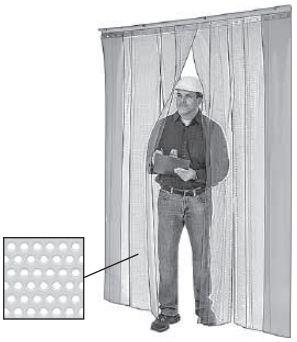
Ventilated Vinyl Strip Doors



Strips are perforated with 3/16″ dia. ventilation holes that allow air to circulate between spaces while preventing debris, insects, and birds from entering. For indoor and outdoor use. Temperature range is –10° to 150°F.

Clear strips cover doorways without obstructing the view.

Amber strips partially block light.

Strip Doors

Doors consist of an aluminum mounting plate with press-on pegs and perforated vinyl strips with holes punched on 2″ centers. Press strips onto pegs for quick installation. Fasteners for mounting to your wall or door frame are not included. Plates have 3/8″ dia. mounting holes.

Food-Grade Vinyl Strip Doors

Suitable for food service and washdown environments, doors meet NSF/ANSI standards and can be used in USDA-inspected facilities. Doors are often used in freezers and consist of a polypropylene mounting plate with press-on pegs and vinyl strips. Press strips onto pegs for quick installation. A shield on the mounting plate covers strips and pegs so that dust won't collect. Fasteners for mounting to your wall or door frame are included. Strips are clear with holes punched on 2″ centers. For indoor and outdoor use. Temperature range is –20° to 140°F.

Light-Blocking Vinyl Strip Doors

Seal out light, as well as dust, dirt, and debris. Doors consist of an aluminum mounting plate with bolts and vinyl strips with holes punched on 2″ centers. Place strips on threaded studs and use the included nuts to hold them securely in place. Fasteners for mounting to your wall or door frame are not included. Plates have 1/2″ dia. mounting holes. For indoor and outdoor use. Temperature range is 0° to 150°F. For replacement strips, see page 2880.

Opaque black strips completely block light to maintain darkness and privacy.

Dark amber strips partially block light and are often used as welding curtains.

Strip Door Mounting Plates

Create a customized strip door by combining a mounting plate and strips (not included, see page 2880). Use with strips that have 3/8″ dia. holes on 2″ centers. Fasteners for attaching the mounting plate to your wall or door frame are not included. Plates have 1/2″ dia. mounting holes, except plates with press-on pegs have 3/8″ dia. holes.

With Bolts—Place strips onto threaded studs and use the included nuts to hold them securely in place.

Heavy Traffic with Bolts—Plates have a hinge that swings when personnel or vehicles pass through, minimizing strain on the strips. Place strips onto threaded studs and use the included nuts to hold them securely in place.

With Press-On Pegs—Press strips onto pegs for quick installation.

Vinyl and Fiberglass Strips and Rolls

Ready-to-Hang Strips

Ready-to-Hang Strips on a Roll

Rolls

Hole-Making Template Kit

Replace worn strips, combine with a mounting plate (see page 2879) to create a customized strip door, or use for applications such as surface protection. Strips and rolls are vinyl, except high-temperature strips are silicone-coated fiberglass.

Ready-to-Hang Strips—Holes are already punched in these individual strips for convenient installation. Holes are 3/8″ dia. on 2″ centers.

Ready-to-Hang Strips on a Roll—Rolls have perforations at specified strip lengths and are punched with 3/8″ dia. holes on 2″ centers.

Rolls—Cut to the length you need with shears or a utility knife and punch holes for hanging. *Optional hole-making template kit* helps to create ready-to-hang strips from rolls. Kit includes a stainless steel template for marking strips with 3/8″ dia. holes on 2″ centers and a drill bit for making the holes in strip material.

Standard strips and rolls are for indoor and outdoor use. Temperature range is 0° to 150° F. *Ribbed* strips hide scratches and wear. *Opaque black* strips completely block light. *Dark amber* strips partially block light. *Orange* strips can be used to mark the wall location on each side of a strip door.

Low-temperature strips and rolls are often hung in freezers and can be used in food service environments. They are for indoor use. Temperature range is –30° to 150° F, except rolls have a range of –20° to 140° F. *Reinforced* rolls are reinforced with nylon for added strength.

High-temperature strips have a temperature range of –65° to 500° F. They resist water, oil, and chemicals and are for indoor and outdoor use.

Static-resistant strips and rolls are commonly used in data centers and other areas where static build-up could be harmful. They are for indoor use. Temperature range is 0° to 150° F. Surface resistivity is 10^6 ohms.

Optional Hole-Making Template Kit 1139A11 $69.63

Replacement Track Rollers

Use rollers as replacements on an existing door hanger or as the starting point for a customized hanger. They have a hole so you can add a bolt or a mounting plate (not included) to attach doors. Made of zinc-plated steel.

For Inside Track Wd.	Capacity, lbs. per Pair	Roller Wd.	Roller Dia.	Bolt Hole Size		Each
1 3/4″	400	1 5/8″	2 3/16″	1/2″ Dia.	10075A42	$14.79

Replacement Overhead Door Rollers

Keep garage doors and other overhead doors rolling smoothly by replacing bent and broken rollers. These fit standard 2″ wide track and have a 7/16″ dia. steel stem. Roller has steel ball bearings.

Wheel Material	Wheel Dia.	Stem Length		1-9	10-Up
Nylon	1 7/8″	4 1/4″	1903A29	$4.47	$3.58
Steel	1 13/16″	3 11/16″	1903A31	2.75	2.20

Cabinet Drawer and Door Rollers

No need for drawer slides or roller track—add rollers to wood cabinet drawers and doors for smooth operation. To mount, create a cutout for the top of the roller in the underside of your drawer or door and secure with screws (not included). Roller housing is steel.

Roller Material	Roller Dia.	(A)	(B)	Screw Size		
Nylon	9/16"	17/8"	7/16"	No. 3	1714A5	$1.19

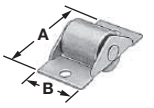
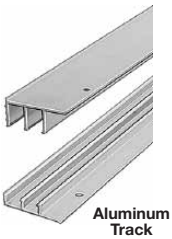
Steel	3/4"	2"	1"	No. 6	1714A3	1.69



Track Sets for Bypassing Cabinet Doors

Plastic Track



Aluminum Track

Steel Roller Track

Sets include an upper and lower track for hanging cabinet doors that slide past each other.

Plastic track sets have polystyrene track that works well with lightweight glass panels and lightweight wood cabinet doors. Upper track is 9/16" Ht. x 7/8" Wd. Bottom track is 5/16" Ht. x 7/8" Wd. Color is tan. To mount track, use glue or tape with adhesive on both sides.

Aluminum track sets are for use with lightweight wood cabinet doors. Upper track is 1/2" Ht. x 1 1/4" Wd. Bottom track is 1/4" Ht. x 1 1/4" Wd. Both tracks have a dull finish and 1/8" dia. mounting holes (fasteners not included).

Steel roller track sets are for use with lightweight glass panels. Sets include a 5/8" Ht. x 15/16" Wd. upper track and a 1" Ht. x 1" Wd. bottom track with two ball-bearing carriers that roll along the track. Track and carriers are zinc-plated steel. To mount, glue track in place. Height of cabinet door should not exceed twice its width.

Track Lg.	For Door Thick.	Plastic Track Sets		Aluminum Track Sets		Steel Roller Track Sets	
3 ft.	1/4"					1718A5	$48.22

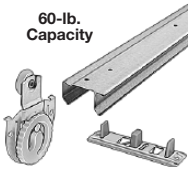
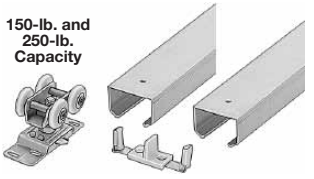
Roller Track Sets for Bypassing Doors



60-lb. Capacity



150-lb. and 250-lb. Capacity

Hang two doors that slide past each other. Sets include track, four hangers (two per door), adjustable door guides, and mounting hardware. Track can be cut to length with a saw. Capacity is per pair of hangers.

60-lb. capacity sets include one piece of steel track. Hangers have a plastic roller, mount to the side of the door, and adjust vertically allowing 1 1/4"-1 9/16" distance between the ceiling and the top of the door.

150-lb. and **250-lb. capacity sets** include two pieces of aluminum track. Hangers have four plastic rollers, mount to the top of the door, and adjust vertically allowing 1 3/4"-2 3/8" distance between the ceiling and the top of the door.

I-Beam Roller Track Sets for Doors

Use to hang doors and panels that are at least 1" thick. Capacity is per pair of hangers.

Sets include an aluminum I-beam track, two steel hangers with nylon wheels, a door guide, and mounting hardware. Track is 1 5/16" Ht. x 1 7/8" Wd. Hangers adjust vertically allowing 3"-3 1/2" distance between the ceiling and the top of the door.

Additional hangers and **track** let you create a longer run.

Corrosion-Resistant I-Beam Roller Track for Doors and Curtains

Built to withstand harsh environments, track is marine-grade, black anodized aluminum and hangers are black chrome-plated Type 316 stainless steel. Combine track, hangers, track bolts, and pin stops to create a system.

Track mounts using track bolts (sold separately). For extra stability, an additional track can be mounted to the floor as a guide.

550-lb. capacity hangers have three clevis pins to hold doors and curtains up to 1/2" thick.

1,400-lb. capacity hangers have a loop with a 1/4" dia. opening which you can use to attach doors and curtains with carabiners, S-hooks, and shackles.

Track bolts are used to mount track. Nine bolts are required for every 3 ft. of track. Made of 300 series stainless steel.

Track pin stops are used at track ends to prevent hangers from sliding off. Made of 300 series stainless steel.

Track Mounting Brackets

Mounting fasteners are not included. *Powder-coated steel* brackets are tan.

Wall Mount—Can be mounted above doorways.

Ceiling Mount—Bolt to joists or hang from threaded rod.

Double-Track Wall Mount—Support two parallel tracks for bypassing doors.

Suspended Ceiling Mount—Provide clearance between your track and ceiling.

Supports are required every 2 ft. of track.

Joints hold adjoining sections of track together and act as supports.

Ends cap track ends to contain the hangers.

Super Corrosion-Resistant Roller Track for Doors

Track and brackets are Type 316 stainless steel for excellent corrosion resistance. They cost approximately twice as much as the Type 304 stainless steel track and brackets in Roller Track for Doors. Hangers are Type 304 stainless steel. Combine components with the same capacity to create a complete system.

For pricing and the same specifications shown in Roller Track for Doors, go to mcmaster.com and search for a part number below.

	300-lb. Capacity	600-lb. Capacity

10 ft.	7/16"	2¼"	38⅞"	12635A63	98.80

Hanger with Mounting Plate—150-lb. capacity per pair

Use to hang framed and solid metal and wood doors. Hanger has two 2⅛" dia. nylon rollers, a steel mounting plate, and includes fasteners. Use two hangers per door.

For Door Thick.	O'all Ht.	Mounting Plate Ht.		Each
Up to 1¾"	5½"	3"	12635A65	$19.10

Dust-Resistant Roller Track for Doors

Round track eliminates edges where dust and debris can accumulate. Combine track, hangers, and accessories to create a complete system.

Track with Mounting Brackets—600-lb. capacity

Track is galvanized steel with wall-mount brackets attached on 2-ft. centers. Brackets have 5/16" dia. mounting holes (fasteners not included).

Track Lg.	ID		
8 ft.	2¼"	1054A31	$28.96
10 ft.	2¼"	1054A33	36.20

Hangers with Bolt—600-lb. capacity per pair

Use to hang framed metal and wood doors. Hangers bolt through top of door; adjust doors vertically within the bolt's thread length. Hangers have two 2" dia. plastic rollers with ball bearings.

O'all Ht.	Bolt: Size	Bolt: Thread Lg.		Pair
9½"	½"-13	5"	1054A37	$34.36
12½"	½"-13	8"	1054A39	34.36

Hanger with Mounting Plate—600-lb. capacity per pair

Use to hang framed and solid metal and wood doors. Hanger adjusts vertically allowing 1¾"-3¼" distance between the bottom of the track and the top of the door. Hanger has two 2" dia. plastic rollers with ball bearings and includes mounting fasteners.

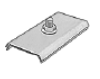
For Door Thick.	O'all Ht.	Mounting Plate Ht.		Pair
1½"-2⅜"	10"	4 7/16"	1054A35	$35.26

Accessories

End stop prevents hangers from rolling off the track.

Joint collar holds together adjoining sections of track.

End Stop



Joint Collar

End Stop	1054A23	$0.78
Joint Collar	1054A21	2.88

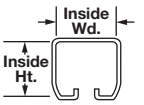
Curved Roller Track for Curtains, Strip Doors, and Doors

Curved track pieces allow you to create a wide variety of layouts for curtains, strip doors, and doors. Combine track, mounting brackets, and hangers that fit the same inside track width to create a system. Some components that fit together are rated for different capacities; the capacity of your system is determined by the component with the lowest capacity.

Track

Straight Track

90° Curved Track



End Stop

100-lb. capacity track is galvanized steel. Add an **optional end stop** to prevent hangers from rolling off the track.

600-lb. capacity track is tan powder-coated steel.

Hook-to-Catch Door Holders

Latch your door to the wall or floor for a secure hold. Mounting screws are included, except 12975A35 requires No. 7 screws, 12975A36 requires No. 6 screws, and Style 11 require No. 10 screws.

Style 11 are often used on trailer doors.

Floor-mount holders require 1½″ or less clearance between the floor and bottom edge of the door.

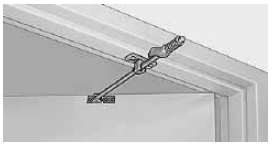
Frame-Mount Door Holders



Standard

Heavy Duty

Hold doors open without adding clutter to your floor or walls. Holders are adjustable—open to any position within the 85° to 110° adjustment range. They can also be used to prevent doors from opening too far. Holders are reversible for right- and left-hand doors, mount on the top of the door frame, and include mounting screws. They are made of brass, steel, and stainless steel.

Standard holders have a 1/2″ dia. rod. Minimum required clearance at top of door is 7/8″.

Heavy duty holders have a broader mounting footprint than standard holders for increased stability. Minimum required clearance at top of door is 1 7/8″.

Standard

Chain and Spring Door Stops

Standard Duty

Heavy Duty

Prevent doors from opening too far. One end mounts to your frame and the other to your door. Mounting screws are included.

Standard duty stop is zinc-plated steel. A spring on one end absorbs shock.

Heavy duty stops are chrome-plated steel and include a gray vinyl cover. Each end has a spring for greater shock absorption than standard duty stops.

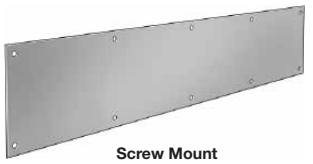
Door Plates & Lockset Accessories

Kick Plates



Screw Mount

Also known as door plates, armor plates, and mop plates, kick plates protect door bottoms from damage caused by foot traffic and equipment. Choose a kick plate with a width that is 2″ narrower than the overall width of your door to prevent interference with the door's opening and closing. Plates are 0.05″ thick.

Screw-mount kick plates include mounting screws. *Type 316 stainless steel* has greater corrosion resistance than Type 304 stainless steel.

Padlockable Door Lock Plates

Temporarily secure doors while repairing or replacing a handle. Fasten this reusable steel plate to a metal door frame (min. 2″ depth) using the screw holes from your existing strike plate. Secure with a padlock (not included, 5/16″ max. shackle dia.). Plate is for right- and left-swinging doors that have a thickness of 1¾″. Mounting hardware is included.

Lock Plate	1944A11	$64.06
Optional Steel Padlock with Two Keys	1189A31	3.29

Door Knob-to-Handle Converters

Restyle door knobs as easy-open handles without replacing the knobs. Converter fits 2⅛″-2⅜″ dia. knobs and is for right- and left-swinging doors. Made of tan plastic.

Handle Lg.	Depth		
5″	1¼″	12015A15	$11.17

Lock Rekeying Pin Kits

Change your lock's pins so you can open it with a different key. Kits include pin charts, upper and lower pins, springs, and a case. Pins are 0.115″ dia., except Arrow and Falcon pins are 0.108″ dia. and Yale pins are 0.095″ dia.

Tool set includes followers to hold the upper pins and springs in place while pinning, a pin length gauge, and tweezers.

Locking Door Handle and Knob Guards

Block access to door knobs and handles. Guards are gray-painted aluminum and include two keys. Inside depth is 1 7/8″.

Knob—For 1 1/2″-2 5/16″ dia. knobs.

Lever—For use on right- and left-hand levers.

Keyed differently guards open with different keys. **Keyed alike** guards open with the same key.

Knob

Lever

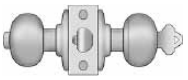
About Door Handles and Knobs

Door Handle and Knob Types

Nonlocking—Also known as passage handles, these do not lock.

Button Locking—Lock the outside handle with the button on the inside handle. Turn the inside handle to release the lock or release it from the outside with a slotted screwdriver. Also known as privacy handles.



Key and Button Locking—Once the outside handle is locked with the button on the inside handle, turn the inside handle to release the lock or unlock it with a key from the outside. Also known as entrance handles.

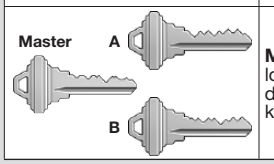
Key Locking—The outside handle locks and unlocks with a key while the inside handle can always open the door. Also known as classroom handles.

Self Locking with Key—The outside handle is always locked and has to be unlocked with a key while the inside handle can always open the door. Also known as storeroom handles.

Keying Types

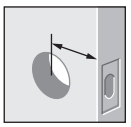
Keyed Differently—Each lock opens with a different key. Locks have random key numbers.

Keyed Alike—Locks with the same part number open with the same key.



Master Keyed—Each lock opens with a different key; a master key opens all locks.

Door Handles



Backset Distance

These Schlage door handles are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions. They are UL listed for three-hour fire doors and have a 3 7/16″ dia. faceplate. Select a handle with the correct backset distance (the distance from the door's edge to the center of the handle's mounting hole) for your door.

Standard—These AL series handles have a 4 1/4″ long handle that projects 2 1/2″ from the door's face. Latch bolt extends 1/2″ from the door's edge. Meet ANSI A156.2 Grade 2 for 400,000 cycles.

High Traffic—For frequently used doors, these ND series handles last twice as long as standard door handles. Handle is 4 9/16″ long and projects 2 15/16″ from the door's face. Latch bolt extends 1/2″ from the door's edge. Meet ANSI A156.2 Grade 1 standards for 800,000 cycles.

Keyed handles include two Schlage C style keys. Choose handles *without lock cylinders* if you want to use your own compatible lock cylinder. Master keys for master-keyed handles are sold separately. To Order: For master keys, please specify the handle's backset (2 3/8″ or 2 3/4″) where applicable and the handle's finish (dull chrome or dark bronze).

ⓘ For other door handle brands, go to mcmaster.com and search for Yale, Sargent, or Corbin Russwin door handles.

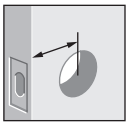
Door Knobs



Backset Distance

These Schlage door knobs are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions. They are UL listed for three-hour fire doors. Select a knob with the correct backset distance (the distance from the door's edge to the center of the knob's mounting hole) for your door.

Standard—These A series knobs have a 2 1/8" dia. knob that projects 2 3/8" from the door's face. Faceplate is 2 5/8" dia. Latch bolt extends 1/2" from the door's edge. Meet ANSI A156.2 Grade 2 standards for 400,000 cycles.

High Traffic—For frequently used doors, these D series knobs last twice as long as standard door knobs. Knob is 2 1/4" dia. and projects 2 5/8" from the door's face. Faceplate is 2 5/8" dia. Latch bolt extends 1/2" from the door's edge. Meet ANSI A156.2 Grade 1 standards for 800,000 cycles.

Keyed knobs include two Schlage C style keys. Choose knobs *without lock cylinders* if you want to use your own compatible lock cylinder. Master keys for master-keyed knobs are sold separately. **To Order:** For master keys, please specify the knob's backset (2 3/8" or 2 3/4") where applicable and the knob's finish (dull chrome, dark bronze, or dull stainless steel).

ⓘ For other door knob brands, go to mcmaster.com and search for Yale or Sargent door knobs.

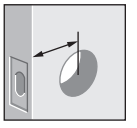
Washdown High-Traffic Door Knobs



Backset Distance

In addition to lasting twice as long as standard door knobs, these Falcon X series knobs are made of dull stainless steel and other corrosion-resistant materials to stand up to washdown and marine environments. They are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions. Knob is 2 1/8" dia. and projects 2 3/4" from the door's face. Faceplate is 2 5/8" dia. Latch bolt extends 9/16" from the door's edge. Knobs are UL listed for three-hour fire doors and meet ANSI A156.2 Grade 1 standards for 800,000 cycles. Select a knob with the correct backset distance (the distance from the door's edge to the center of the knob's mounting hole) for your door.

	For Door Thick.	2 3/8" Backset Distance		2 3/4" Backset Distance	
Nonlocking	1 3/8"-1 7/8"	2146A18	$311.76	2146A14	$311.76

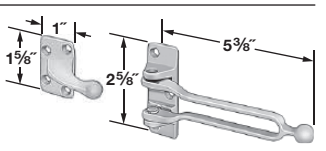
Self Locking with Key (Keyed Differently)	1 3/8"-1 7/8"	2146A16	387.36	2146A12	387.36

Swing-Bar Door Latches

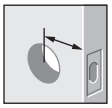


Maintain security by keeping your door latched as you open it up to 3". Latches are brass and include mounting hardware.

Finish	Projection		
Dull Chrome	1"	7036A2	$20.96
Polished Brass	1"	7036A1	20.96

High-Traffic Door Handles for Easy-Change Lock Cylinders

Key and replace lock cores without dismantling the entire door handle. Also known as interchangeable-core door handles, choose these Falcon T series handles if you want to use your own compatible easy-change lock cylinders. Handles are compatible with Arrow, Best, Falcon, and Simplex lock cylinders (not included, see Easy-Change Lock Cylinders below). They are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions. Handle is 5½" long and projects 3¼" from the door's face. Faceplate is 3½" dia. Latch bolt extends 9/16" from the door's edge. Door handles have a dull chrome finish. They are UL listed for three-hour fire doors and meet ANSI A156.2 Grade 1 standards for 800,000 cycles.



Backset Distance

For Door Thick.	Backset Distance	Key and Button Locking		Key Locking		Self Locking with Key	
1¾"-2⅛"	2¾"	2185A11	$223.75	2185A21	$223.75	2185A31	$223.75

Easy-Change Lock Cylinders

These lock cylinders are for use in the High-Traffic Door Handles above, as well as Alarm Lock, Arrow, Best, Falcon, and Simplex interchangeable-core handles. Lock cylinders have a six-pin tumbler locking mechanism and include two keys. If you are unsure of which keyway style to choose, Best E keyways are more prevalent in the industry.

A **control key** (sold separately) is required to install and remove the cylinders.

A **master key** (sold separately) is required for a master-keyed cylinder.

Pry-Resistant High-Traffic Door Handles

Key and Button Locking

In addition to lasting twice as long as standard door handles, these Schlage L9000 handles mortise mount into a 6⅛" Ht.×1 1/16" Wd.×4½" Dp. cutout in the door to withstand vandalism. They are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions. Handles are 4⅝" long and project 2¾" from the door's face. Faceplate is 2⅛" dia. Latch bolt extends ¾" from the door's edge. Handles are UL listed for three-hour fire doors and meet ANSI A156.13 Grade 1 standards for 1,000,000 cycles.

Keyed handles are keyed differently and include two Schlage C style keys.

Door Handle Type	For Door Thick.	Backset Distance	Dull Chrome		Dark Bronze		Dull Stainless Steel	
Nonlocking	1¾"	2¾"	12195A52	$415.77	12195A53	$436.66	12195A54	$436.66

Self Locking with Key	1¾"	2¾"	12195A58	533.46	12195A59	554.36	12195A61	554.36

Push/Pull Door Levers

A slight push or pull on the lever opens your door. These nonlocking Glynn-Johnson HL6 series levers are for right- and left-swinging doors and include a strike plate and mounting screws. Latch bolt extends ⅝" from the door's edge. Faceplates are 5½" Ht.×2 9/16" Wd. Handles are 4½" Lg.×1½" Wd. and project 2⅝" from the door's face. Levers have a dull finish and are UL listed for three-hour fire doors. Select a lever with the correct backset distance (the distance from the door's edge to the center of the lever's mounting hole) for your door.

Knob	¾"-1⅛"	Silver	8765T122	9.60

Push-Button Combination Deadbolt Door Locks

Outside View

Manual Slide Bolt (Inside View)

Self Locking (Inside View)

Enter a 5-number combination and turn the turnpiece to unlock these locks from the outside. These Kaba Simplex 900 series locks are for right- and left-swinging doors and include a strike plate, mounting hardware, and installation instructions.

Locks are for wood doors and frames (for metal door installations, use adapter kit, sold separately). Outside faceplate is 3¾" Ht.×2 9/16" Wd. and projects 15/16"; inside faceplate is 5" Ht.×3 1/16" Wd. and projects 1 9/16". Backset distance is 2½".

Manual Slide Bolt—To lock, turn the inside or outside turnpiece. Latch bolt extends 1" from the door's edge.

Self Locking—Automatically lock when you close the door. Locks have a latch bolt that extends ⅝" from the door's edge and a deadlocking latch. The latch can be held in the retracted position to allow unrestricted entry.

Self Locking with Key—Gain access from the outside with a combination or a key. Locks include one key and are keyed differently (each lock opens with a different key).

Metal door adapter kits include a surface-mounted strike plate, a riser plate, and shims for metal door installations.

For information about door handles and knobs, see page 2890.

Deadbolt Door Locks

Secure your door by supplementing your existing door handle or knob with a deadbolt lock. All unlock with a key on the outside. They are for right- and left-swinging doors and include a strike plate, two keys, mounting hardware, and installation instructions.

Style 1 has a latch bolt that extends 1″ from the door's edge. Locks are brass with a 2½″ dia. inside faceplate.

Style 2 has a latch bolt that extends 1⅛″ from the door's edge. Locks are zinc with a 3⅜″ Ht. × 3½″ Wd. inside faceplate.

Style 3 has a guard over the latch to prevent tampering. Locks are bronze with a 2 15/16″ Ht. × 3⅝″ Wd. inside faceplate.

Deadbolt Locks for Double Doors

These locks have a latch bolt to secure doors in the closed position.

Manual—*Surface-mount* locks are steel with a chrome finish; *mortise-mount* locks are brass with a chrome finish.

Automatic—Locks retract when one double door is opened to allow the other door to open. Made of stainless steel.

Automatic and Manual—Locks include an automatic bolt lock for the bottom of a door and a manual bolt lock for the top. Made of stainless steel.

Occupied/Vacant Deadbolt Door Locks

Often used on restroom doors, a message on the outside of the door changes when the lock is engaged or disengaged. Locks open with a turnpiece inside and an emergency access tool outside. They can be installed in doors with a 2⅜″ or 2¾″ backset and are for right- and left-swinging doors. Latch bolt extends 1″ from the door's edge. Locks are zinc and include a drill template, mounting hardware, and an emergency access tool.

For Door Thick.	Ht.	Wd.	Brass Finish		Chrome Finish	
1⅜″-2″	2 1/16″	3½″	14055A39	$94.83	14055A32	$94.83

Deadbolt Locks for Wire Partition Doors

Secure doors in wire and chain link partitions. Locks open with a turnpiece on one side and have an opening for a pry-resistant lock cylinder for mortise-mount locks (sold separately) on the other. Locks are aluminum and have a ½″ Wd. × 3/16″ Dp. groove around its body for mounting.

Swinging-Door Lock—Requires a 1″ Ht. × ½″ Wd. cutout. Latch bolt extends 1⅛″ from the door's edge.

Sliding-Door Lock—Requires a 4″ Ht. × 2⅛″ Wd. cutout. Latch bolt extends 1½″ from the door's edge. A **strike plate** (sold separately) is required.

Lock Cylinders

For Surface-Mount Locks | For Mortise-Mount Locks | Cylinder Lg.

Standard Cam | Adams-Rite Cam

Commonly used in deadbolt door locks and touch bars with alarms, lock cylinders are brass and have a five-pin tumbler locking mechanism. They include two keys. Lock cylinders that are *keyed differently* each open with a different key. Lock cylinders that are *keyed alike* open with the same key.

Cylinders **for surface-mount locks** are also known as rim lock cylinders.

Cylinders **for mortise-mount locks** are for use in locks that are mounted into a cutout in the door. Cylinders have either a standard cam or a cam specifically for Adams-Rite locks.

To Order: Please specify finish: dull chrome or polished brass.

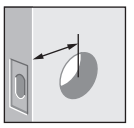
Combination Door Handles & Knobs

For information about door handles and knobs, see page 2890.

Push-Button Combination Door Handles and Knobs

Knob



Backset Distance

Gain access from the outside with a resettable 5-number combination; the inside handle is always unlocked. These Kaba Simplex 1000 handles are mechanical and do not require electrical wiring or batteries.

Door handles and knobs are for indoor and outdoor use and include a strike plate, mounting hardware, and installation instructions. Latch bolt extends 1/2" from the door's edge. Faceplate is 7 3/8" Ht. x 3 1/8" Wd and projects 3 13/16". UL listed for three-hour fire doors.

Knob—For right- and left-swinging doors.

Lever—To determine if you need a right- or left-swinging door handle, stand on the side of the door where it swings away from you. If it opens to the right, select a right handle; if it opens to the left, select a left handle.

Handles and knobs **with nonlocking turnpiece** are for doors that need to be unlocked for long periods of time. The turnpiece is on the inside and overrides the combination so the door can be opened freely from the outside.

Handles **with key option** accept an easy-change lock cylinder (see page 2892) so you can open the lock with either the combination or a key.

	For Door Thick.	Backset Distance	Choose a Finish	Knob: For Right- and Left-Swinging Doors		Lever: For Right-Swinging Doors		Lever: For Left-Swinging Doors

Keypad Combination Door Handles

Battery Powered with Key Option

These handles are programmable so you can assign different combinations to different people and restrict access when necessary. Open the outside handle with a combination or the included key; the inside handle is always unlocked.

Door handles are for right- and left-swinging doors and have a dull chrome finish. Latch bolt extends 1/2" from the door's edge. Handles include a strike plate, mounting hardware, and installation instructions. Meet ANSI A156.2 Grade 1 standards for 800,000 cycles and are UL listed for three-hour fire doors.

Battery Powered—Can be programmed for up to 100 unique 5-number combinations. These Alarm Lock DL2700 units operate on five AA batteries (included) and have a low-battery indicator. Faceplate is 8" Ht. x 3 1/4" Wd. and projects 3 3/8". Handle *for use outdoors* has a double-sealed keypad.

Self Powered—The movement of the lever from opening and closing the door generates the power this handle needs. This Kaba PowerPlex 2000 handle supports up to 100 unique 8-number combinations. Faceplate is 8 15/16" Ht. x 3 5/16" Wd. and projects 3 3/16". For outdoor use, add the *optional weather shield*.

Keyed-differently handles come with two Schlage C style keys.

Handles **with key option** accept an easy-change lock cylinder (see page 2892) so you can open the lock with either the combination or a key.

Keying	For Door Thick.	Backset Distance	For Use Indoors		For Use Outdoors

Optional Weather Shield for Self-Powered Door Handle					1577A33	54.55

Battery-Powered Touch-Screen Combination Door Handles

The easy-to-read backlit screen turns on when touched and enters sleep mode when inactive to conserve battery life. Open this Yale inTouch door handle from the outside with a combination or the included keys; the inside handle is always unlocked. This door handle is programmable so you can assign different combinations to different people and restrict access when necessary. It accepts up to 500 unique 12-number combinations. Door handle is for right- and left-swinging doors and is for indoor and outdoor use. It includes two keys.

Latch bolt extends 1/2" from the door's edge. Door handle has a dull chrome finish. Faceplate is 8 1/8" Ht. x 3 3/4" Wd. Handle projects 3 5/16". It operates on four AA batteries (included) and has a low battery indicator. Door handle comes with a strike plate, mounting hardware, and installation instructions. Meets ANSI A156.2 Grade 1 standards for 800,000 cycles and is UL listed for three-hour fire doors.

For Door Thick.	Backset Distance		
1 3/4"	2 3/4"	9632T3	$403.20

Battery-Powered Keypad Combination Door Handles with Proximity Reader

This Sargent Profile Series v.G1.5 handle accepts optional HID-compatible proximity cards or key fobs to regulate access for up to 2,000 employees. They are programmable so you can assign different combinations to different people and restrict access when necessary. Unlock the outside handle with a combination or the included key as well as with the optional proximity card or key fob. The inside handle is always unlocked. Door handle accepts 6-number combinations and includes two keys. It is for right- and left-swinging doors and for indoor and outdoor use. UL listed.

Latch bolt extends 1/2" from the door's edge. Door handle has a polished chrome finish. Faceplate is 14 1/4" Ht. x 3 3/4" Wd. Handle projects 2 1/2". It operates on six AA batteries (included), has a low battery indicator, and includes a strike plate and mounting hardware.

Optional transfer device with tracking software lets you program the time of day the combinations and proximity cards are in effect and tracks employee traffic. It operates on Windows XP or later.

For Door Thick.	Backset Distance		
1 3/4"	2 3/4"	1625A1	$976.83
HID Proximity Card		1625A3	5.43
HID Proximity Key Fob		1625A4	8.60
Optional Transfer Device with Tracking Software		1625A9	504.00

Keypad Door Controls

Enter a combination to operate electromagnetic locks, electric door strikes, and other access control devices.

Standard control accepts a 4-number combination and is often used with alarm systems and motion detectors. It surface mounts, operates on 6 or 12 volts DC, and is made of white plastic.

Weather-resistant control accepts 3-8 number combinations. Built to mount outdoors, the keypad is made of stainless steel. It includes a control box that you mount indoors, a 15-ft. cable to connect the keypad to the control box, and mounting hardware. Operates on 12 or 24 volts AC. Hardwire the control to an existing power source or use a *transformer* (sold separately) to convert 120 volts AC. Connect an *additional keypad* with an *additional cable* (each sold separately) to the control box to regulate access to a second doorway.

Control **with built-in proximity reader** accepts 6-number combinations as well as optional HID-compatible proximity cards or key fobs (sold separately) to regulate access for up to 2,000 employees. Control is black plastic. Hardwire the control to an existing power source or use a *transformer* (sold separately) to convert 100-240 volts AC. *Optional transfer device with tracking software* lets you program the time of day the combinations and proximity cards are in effect and tracks employee traffic. It operates on Windows XP or later.

Electric Door Strike Plates

Regulate access to doors by holding or releasing a lock's latch with a signal from a push-button switch, keypad control, or card reader.

When replacing an electric strike plate, first select one that will work with your lock type so that the latch will align properly with the plate. Next, choose a strike plate that can accommodate your latch bolt projection (how far the latch bolt extends from the door's edge). Then, match the size of the strike plate to your door frame cutout. If you don't find an exact match, choose a strike plate with a smaller size than your cutout.

Strike plates must be hardwired and are for right- and left-swinging doors. All have a holding force of at least 1,000 lbs. They are for metal and wood door frames, except ROFU 1505 strike plates are for wood frames only. Mounting hardware is included. Rutherford and Von Duprin strike plates meet UL 1034 for burglary resistance.

Universal Electric Strike Plate—Adjusts to fit a range of lock types.

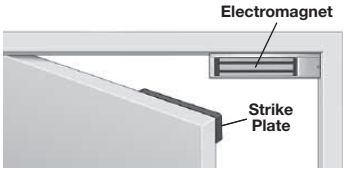
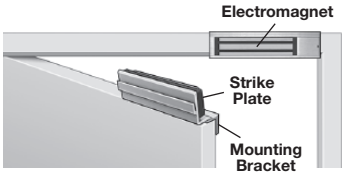
Electromagnetic Door and Gate Locks



Flush Mount



Offset Mount

For use alone or as part of an access-control system, these locks use electromagnetic force to hold doors closed. Control the locks with a push-button switch or keypad door control (sold separately on page 2895). Locks operate on 12-24 volts DC and must be hardwired. When power is interrupted, they instantly release. Mounting hardware is included.

With Delayed Locking Action—Delay locking by 0.5 to 30 seconds.

Flush-mount locks mount under the door frame header. For locks with 500 lbs. and 1,500 lbs. of holding strength, a 5/8″ thick filler plate (sold separately) is required if the mounting surface on the frame is less than 2″ wide. Lock *for double doors* includes two strike plates and controls two doors at once.

Offset-mount locks mount on the door frame header and include a mounting bracket that extends the strike plate above the door. Lock *for gates* mounts vertically on the gate's side.

Transformer accepts 120-240 volts AC and produces 12 or 24 volts DC output. It has overload protection and screw terminal connections. Housing is a NEMA 1 key-locking enclosure for indoor use. UL listed. *Battery backup pack* supplies power during power interruptions.

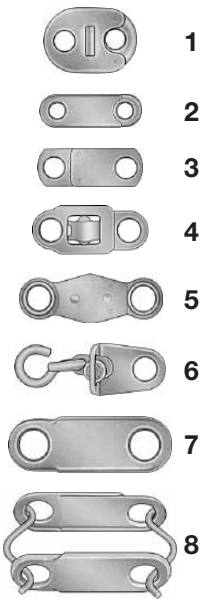
Fusible Links



Automatically close fire doors, windows, and lids in the event of a fire. High temperatures melt the solder bond between links, causing them to separate and release their load. Install with S-hooks or chain (not included). UL listed. Styles 4 and 5 are FM approved.

To ensure safety, replace links annually and do not paint or coat them. Use links in straight-pull applications only.

Chain-Reel Overhead Door Openers

Openers have a solid hub that you can bore to the size you need. Housing is solid, except opener with 8″ dia. hub has a spoked housing. Chain (sold separately) is zinc-plated low carbon steel.

All openers are designed for use only with the chain listed—do not substitute other chain.

Automatic Overhead Door Openers

Also known as jackshafts, these openers operate 18-ga. or thinner overhead doors that are a maximum 14 ft. Ht. × 14 ft. Wd. The opener will stop and reverse the door's downward motion if it encounters an obstruction when closing or the beam between the opener's two safety photo eyes is interrupted. Photo eyes have a water-tight housing with metal mounting brackets.

Openers have a heavy duty ½-hp motor that runs on 120 volts AC. Motor is capable of 12 cycles per hour, up to 50 cycles per day. Openers have a black powder-coated steel frame. They are 18⅞″ Ht. × 15¾″ Wd. × 9¼″ Dp. and have a ¼″ keyway, 1″ drive shaft, and #41 chain. Meet UL 325.

Controllers mount to a wall and have open, close, and stop buttons. They are wired to the opener and run on 24 volts AC. *Optional remote control transmitter* has three buttons (open, close, and stop) and is powered by a 12-volt battery (included). During a power failure, use the manual chain hoist to move the door.

When facing the side of the door with the opener, a **right-side mount** opener is located on the right side of the door, **left-side mount** is on the left.

Remote Control Transmitters and Receivers

Keypad

Three-Button Keychain

One Button

Three Button

Universal Receiver

Replace your existing transmitter or team a transmitter and receiver to remotely operate your overhead door opener. All are made by Liftmaster and include batteries.

Universal Transmitters—Compatible with rolling code, DIP switch, billion code, and security +2.0 door opener technologies to operate openers from Liftmaster, Genie, Stanley, Multicode, Chamberlain, and Craftsman. *Two-button* transmitter can operate two devices and includes a visor clip. *Keypad* transmitter operates one device and accepts a 4-digit PIN. The keypad is backlit and mounts to a wall (mounting screws included).

Rolling-Code Transmitter—For Liftmaster openers with a rolling-code receiver, transmitter sends a different code every time the door is opened or closed. Transmitter has three buttons to operate up to three devices.

DIP-Switch Transmitters—For Liftmaster openers with a DIP-switch receiver, transmitter has a series of DIP (dual in-line package) switches to match the code on your opener or receiver. Transmitters have one set of 12 DIP switches and include a visor clip. *One-button* transmitter operates one opener. *Three-button* transmitter operates one opener and has open, close, and stop functions.

Universal receiver must be wired directly to the opener for its power supply. It can control up to three door openers and support up to 90 remote controls. Receiver is for indoor use.

Push-Button and Key-Activated Door Switches

1

2

3

4

Lock Not Included

5

Open electromagnetic locks, electric strikes, and automatic door openers. Switches contain UL listed contact blocks and must be hard-wired. All include an installation tool and mounting screws; Style 2 includes tamper-resistant spanner head screws.

Instant open switches provide immediate access.

Time delay switches allow time to reach the door before it opens.

Turn-to-open/turn-to-close switch operates by holding the key in the turned position to open and close the door.

Push Button—All are CSA certified. *Styles 1* and *2* have a red plastic button and screw terminal connections. Style 1 has a stainless steel plate; Style 2 has an aluminum plate. *Styles 3* and *4* are stainless steel with spade terminal connections.

Key Activated—Often used to reset fire panels, switches have an aluminum plate with wire leads. Lock not included; use a 1¼″ long mortise lock with standard cam (see page 2893).

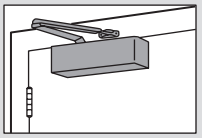
About Door Closers

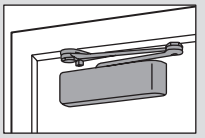
When replacing an existing closer, remove the cover and match the model number and/or mounting hole pattern to a closer in our offering. Or, use one of our closers and a universal mounting plate (see page 2899) which matches most hole patterns.

If you are installing a new closer, choose one that works for your door width. Due to added resistance from wind, closers typically accommodate smaller exterior doors than interior doors.

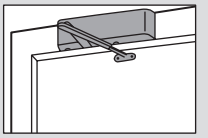
Mounting Positions



Door Mount, Opens In



Door Mount, Opens Out



Frame Mount, Opens Out

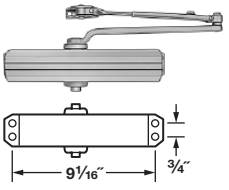
There are three typical mounting positions for door closers; many of our closers are versatile and can be mounted in any of these positions.

Door Mount, Opens In—Also known as regular arm mount, this position allows the door to open in toward the closer.

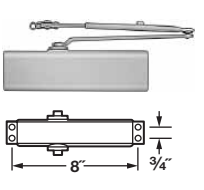
Door Mount, Opens Out—Also known as parallel arm mount, this installation folds the arm in.

Frame Mount, Opens Out—Also known as top frame mount, this position is often used for exterior doors.

Door Closers



Norton 1601/9300



Norton 1700

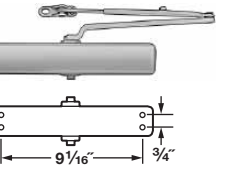
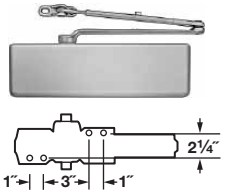
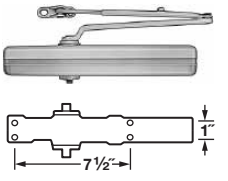
Norton 8301



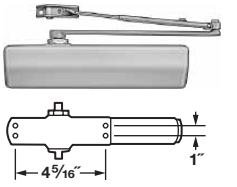
LCN 1261



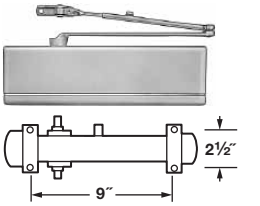
LCN 4040XP/4041



LCN 1460/1461



Corbin Russwin DC3000



Sargent 351

All closers are reversible for right- and left-hand doors and have adjustable opening/closing speed. As listed, some of the closers also have adjustable tension to handle a large range of door sizes. They can replace Yale, Dorma, Falcon, Stanley, Parker, and Cal Royal models with the same mounting hole pattern. Norton and Sargent door closers have an aluminum body; LCN and Corbin Russwin closers are iron. Mounting hardware and installation instructions are included.

Standard closers are UL listed and comply with UL 10C positive pressure fire test. **Hold-open** closers hold the door open until it is released by a slight push or pull on the door.

Heavy Traffic—Use on doors that are frequently opened and closed, such as entrance doors. Closers meet ANSI A156.4 Grade 1 standards for 2,000,000 cycles. Closers *with built-in door stop* prevent doors from opening too far. Closers *with delayed closing* hold doors open for up to 60 seconds before closing. *Norton 1601 BF* closers allow for a lower tension for interior doors.

Moderate Traffic—Often used on office doors, closers meet ANSI A156.4 Grade 2 standards for 1,000,000 cycles.

Light Traffic—Commonly used on storage room doors, closers meet ANSI A156.4 Grade 3 standards.

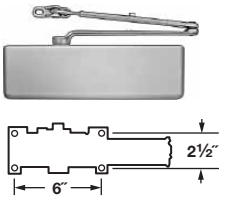
Nonreversible Door Closers



Use on doors that are frequently opened and closed, such as entrance doors. Closers meet ANSI A156.4 Grade 1 standards for 2,000,000 cycles. To determine if you need right or left hand, stand on the side of the door where it swings away from you. If it opens to the right, it's a right-hand door; if it opens to the left, it's a left-hand door. Closers have a cast iron body. They have adjustable opening/closing speed and adjustable tension to handle a range of door sizes. Mounting hardware and installation instructions are included.

Standard closers are UL listed and comply with UL 10C positive pressure fire test. **Hold-open** closers hold the door open until it is released by a slight push or pull on the door.

Closers *with delayed closing* hold doors open for up to 60 seconds before closing.

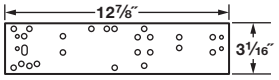
Universal Door Closers and Plates



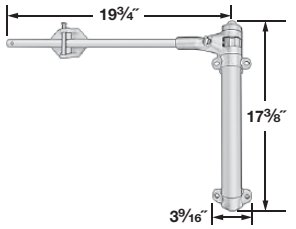
No need to drill new holes—this closer's mounting plate fits the hole patterns of most closers from Norton, LCN, Corbin Russwin, Dorma, and Yale.

Closer with mounting plate is for frequently used interior and exterior doors and is reversible for right- and left-hand doors. It can mount to the door and open in or out, or to the frame and open out. Tension is adjustable. Body is aluminum. Mounting screws are included. Closer meets ANSI A156.4 Grade 1 standards for 2,000,000 cycles. UL listed and complies with UL 10C positive pressure fire test.

Mounting plate lets you match any closer to your existing hole pattern.

	For Door Width	Max. Open Angle	Color		
Closer with Mounting Plate	24″-48″	180°	Silver	2008A11	$137.25
Mounting Plate				2008A12	60.00

High-Capacity Door Closers



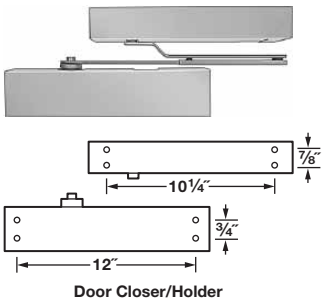
Close heavy doors weighing 200 lbs. or more, such as large freezer doors. Closer is reversible for right- and left-hand doors and mounts above the door's lowest hinge. The door's face cannot project more than ⅞″ from the frame. Opening/closing speed is adjustable. Closer is iron with a steel rod and a zinc-plated finish. Mounting hardware is included.

Max. Open Angle		
175°	1261A22	$504.87

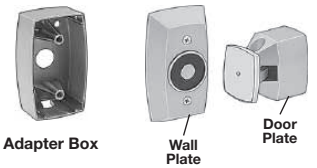
Door Closers, Holders & Openers

For information about door closers, see page 2898.

Fire Alarm-Activated Door Closers and Holders



Door Closer/Holder



Door Holder

Wired directly into your fire alarm system, holders release doors when the alarm goes off. They have an aluminum finish and are UL listed. Mounting hardware and installation instructions are included.

Door closers/holders contain an electromagnet that holds the door open; when activated by a fire alarm, the magnet shuts off and releases the door. They are reversible for right- and left-hand doors and are made of steel and aluminum. Meet ANSI 156.15 Grade 1 standards. For *door mount, opens in* closers/holders, the frame cannot project more than 1/8″ from the door's face. For *door mount, opens out* closers/holders, the frame cannot project more than 3 1/2″ from the door's face.

Door holder is often used with doors that already have a closer. Holder keeps doors open with an electromagnet. When activated by a fire alarm, the magnet shuts off and releases the door. Holder comes with a plastic wall plate with metal bracket and a plastic door plate with metal bracket. Mount the electromagnet in an electrical outlet box or use the *wall-mount adapter box* (sold separately). Adapter box mounts directly to the wall with the included fasteners.

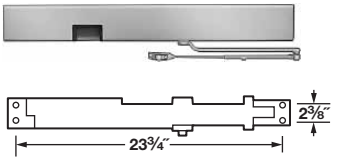
Motion-Sensing Door Closers/Holders



Equipped with a motion sensor to automatically close doors after people have safely passed through the doorway. Doors must be opened manually; door closing can be delayed for up to 20 seconds after the doorway is clear of traffic. Closers have adjustable tension to handle a large range of door sizes. They are for interior installations. To determine if you need a right- or left-hand closer, stand on the side of the door where it swings away from you. If it opens to the right, it's a right-hand door; if it opens to the left, it's a left-hand door. Closers must be hardwired. They have an aluminum body, include mounting hardware, and comply with UL 10C positive pressure fire test.

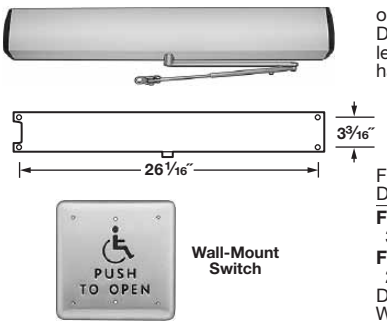
Automatic Door Openers/Closers



Wall-Mount Switch

Automatic operation provides hands-free passage through doorways. Nudge your door and the opener will open it the rest of the way, or wire the opener to a push-button switch (sold separately). Door closing can be delayed by up to 30 seconds. These openers/closers are reversible for right- and left-hand doors that weigh up to 200 lbs. They are cast iron with an aluminum finish and must be hardwired to a 120 volt AC line. Mounting hardware is included. UL listed for fire-rated applications.

Switches can be wired directly to these openers. Mounting screws are included.

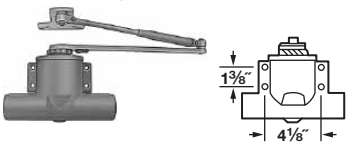
Pot-Belly Door Closers



A traditional design that is often found in older installations, these pot-belly closers are reversible for right- and left-hand doors. Opening/closing speed is adjustable. Closers also have adjustable tension to handle a large range of door sizes. Housing is aluminum with a dull bronze finish. Closers meet ANSI A156.4 Grade 3 standards and include mounting hardware.

Standard closers are UL listed and comply with UL 10C positive pressure fire test.

Hold-open closers hold the door open until it is released by a slight push or pull on the door.

Top frame mounting bracket allows closers that open in to mount to the underside of the top door frame when space is limited.

Door and Gate Spring Closers

1 2  3  4  5 

An economical option for screen doors, storm doors, and gates, one end of the spring attaches to your door or gate and the other end attaches to the frame. Springs are steel wire.

Extension Springs

Springs retract to pull the door or gate closed. Springs with a large OD have more force than those with a small OD. Mounting hardware is not included. *Style 2* consists of two interconnected springs that can be twisted to adjust force.

	Spring OD	Overall Lg.	Black		Zinc-Plated	
1	5/16"	16 3/8"	9629K3	$2.12	9629K23	$2.12

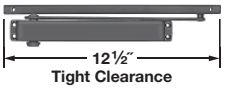
Lightweight Door Closers

Standard



Tight Clearance

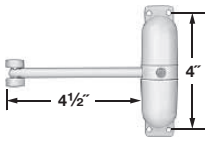
The most common closers for screen and storm doors, these are reversible for right- and left-hand doors and have adjustable opening/closing speed. Cylinders are aluminum. Mounting hardware is included. Door-to-door clearance is the space required between two doors.

Standard closers can also hold doors open. Cylinder is 1 1/2" dia. **Tight-clearance** closers have a 1 1/4" Ht. × 2 1/4" Dp. housing.

	Max. Open Angle	Door-to-Door Clearance	Finish		
Standard	90°	3"	Aluminum	1448A11	$9.96
Standard	90°	3"	Black	1448A12	9.96
Tight Clearance	110°	2"	Dull Brass	10205A85	35.60
Tight Clearance	110°	2"	Dark Brown	10205A86	35.60

Roller-Arm Door and Gate Closers

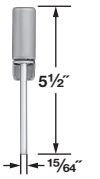
Simple and compact, closers have an arm that rolls along lightweight doors and gates to push them closed. Closers mount to the door frame and open in. They are reversible for right- and left-hand doors. Opening/closing speed is adjustable. Closers are 4 1/2" Ht. × 15/16" Wd. with a 1 1/4" projection and have a die cast zinc housing with a powder-coated finish. Mounting hardware is included.



Max. Door Weight	Max. Open Angle	Brown		White	
150 lbs.	120°	1234A82	$14.85	1234A83	$14.85

Hinge-Pin Door Closers

There's no need to mount a closer to your door or frame—this closer takes the place of an existing hinge pin. Closer fits 3 1/2" × 3 1/2" and 4" × 4" hinges. Opening/closing speed is adjustable. The closer projects 2 5/16" from the top of the hinge. Made of steel with a brass finish.



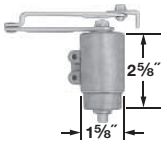
Max. Door Weight		
30 lbs.	1490A11	$8.54

Hydraulic Door Closers

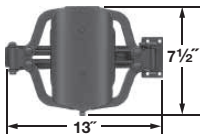
Shut doors smoothly and quietly. Hydraulic closers are reversible for right- and left-hand doors and include mounting hardware.

Closer **for screen and storm doors** mounts to the door and opens in or out. Opening/closing speed is adjustable.

Closer **for exterior doors** is weather-resistant. It mounts to the door and opens in. Opening/closing speed is adjustable.



For Screen and Storm Doors



For Exterior Doors

	Max. Door Weight	Max. Open Angle	Material		
For Screen and Storm Doors	35 lbs.	180°	Aluminum	1255A14	$45.91
For Exterior Doors	150 lbs.	90°	Steel	1469A31	77.13

Roller-Ball Door Latches

Often used on walk-in freezer doors, latches have a holder arm that rolls into the catch as the door closes for a secure hold. A firm tug releases the roller and opens the door. Mounting hardware is included.

Flush—Use when your closed door is even with its frame.

Offset—For doors that have 7/8"-1 5/8" between the frame and the door face when closed.

Hydraulic latches prevent doors from slamming. Latch with a *steel* housing has a polished chrome finish and an enclosed gas-filled cylinder. Latch with a *stainless steel* housing has a polished finish and an exposed fluid-filled cylinder.

Spring-loaded latches overcome resistance caused by gaskets and air pressure to close doors tightly.

Hydraulic Flush

Spring Loaded Offset

	Housing Material	*Overall* Lg.	*Overall* Wd.	Flush Proj.			Offset Proj.

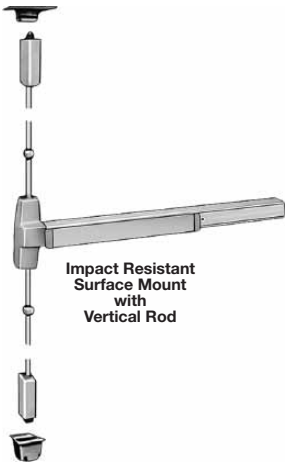
Touch Bars

Often used on emergency exits, touch bars open doors with a push. You can use them alone or mount an optional handle on the outside of the door. All touch bars and handles are for right- and left-swinging doors.

Touch Bars

Standard Surface Mount



Impact Resistant Surface Mount with Vertical Rod

Touch bars are for 1¾″-2¼″ thick doors and can be cut to fit a range of door widths. They project 3⅞″ from the door's face. Use the built-in retainer to hold touch bars in the unlatched position to allow traffic to pass freely through doorways; fire-rated touch bars do not have a built-in retainer. Mounting hardware, strike plate, and installation instructions are included. UL listed and meet ANSI A156.3 Grade 1 standards for 500,000 cycles.

Standard—Housing and bar are steel.

Impact Resistant—Rugged construction withstands impact from carts, dollies, and other equipment. Housing is steel and bar is aluminum with a hydraulic damper for quiet operation. *Fire-rated* touch bar is UL listed for three-hour fire doors.

Surface mount touch bars require a center support (sold separately) when used on double doors.

Surface mount with vertical rod touch bars latch into strike plates mounted on the floor and ceiling. Often used on double doors, touch bars fit doors up to 7 ft. high.

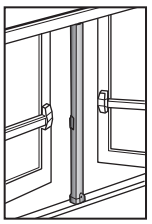
Removable Center Supports



Also known as mullions, these 7′2″ steel posts allow surface-mount exit devices to be used on double doors. They accept the strike plates included with standard and impact-resistant devices. Supports are removable to allow large equipment through. Mounting hardware is included.

Finish		
Aluminum	8080A81	$348.49
Dark Brown	8080A82	348.49

Corrosion-Resistant Touch Bars

Made of 304 stainless steel, these touch bars stand up to corrosive environments. Often used on emergency exits, they open doors with a push. You can use them alone or mount an optional handle on the outside of the door. All devices and handles have a dull finish and are for right- and left-swinging doors.

Touch Bars—Trans Atlantic ED-S551 Series

Touch bars are for 1¾″ thick doors and can be cut to fit a range of door widths. They project 2½″ from the door's face. Use the built-in retainer to hold touch bars in the unlatched position to allow traffic to pass freely through doorways. Mounting hardware, strike plate, and installation instructions are included. UL listed and meet ANSI A156.3 Grade 1 standards for 500,000 cycles.

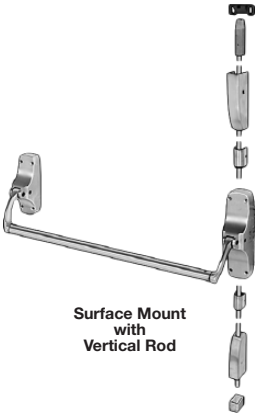
Crossbars

This traditional design is common in older installations. Crossbars open doors with a push and are often used on emergency exits. You can use them alone or mount an optional handle on the outside of the door.

Crossbars—Von Duprin 88 Series

Surface Mount

Pry Resistant for Left-Swinging Door



Surface Mount with Vertical Rod

Crossbars are for 1¾″ thick doors and can be cut to fit a range of door widths. Bars are made of 1″ dia. tubing and project 4⅞″ from the door's face. Mounting hardware, strike plate, and installation instructions are included. UL listed and meet ANSI A156.3 Grade 1 standards for 500,000 cycles.

Housing is brass. Bars with *dark bronze finish* are brass; bars with *dull chrome finish* are stainless steel.

Surface mount crossbars are for right- and left-swinging doors. When used on double doors, a center support is required (see page 2902).

Surface mount with vertical rod crossbars latch into strike plates mounted on the floor and ceiling. Often used on double doors, crossbars fit doors up to 10 ft. high and are for right- and left-swinging doors.

Pry-resistant crossbars mortise mount into a 4½″ deep cutout in the door to withstand vandalism better than other crossbars. To determine door swing direction, stand on the side of the door where it swings away from you. If it opens to the right, select a crossbar for a right-swinging door; if it opens to the left, select one for a left-swinging door.

Crossbar Retainers

Hold crossbars in the open position so traffic can pass freely through doorways. Push the release button to return to the latched position. Retainers are aluminum and include mounting hardware for wood and metal doors. Not for use on fire-rated doors.

Add an *optional extension shim* if your crossbar projects more than the maximum reach.

Alarmed Push Levers and Touch Bars for Emergency Exits

Standard Push Lever

Self Locking Push Lever

Self Locking Touch Bar

A 95 dB alarm sounds when these push levers and touch bars are pushed to open doors. A lock cylinder (sold separately) is required to arm and disarm the alarm. You can mount an additional lock cylinder on the exterior of the door to use as a door lock. All are for right- and left-swinging doors and operate on a 9-volt battery (included). Mounting hardware and installation instructions are included. UL listed.

Standard—Has a bolt that locks your door when the alarm is armed. Housing is zinc.

Self Locking—In addition to a bolt that locks your door when the alarm is armed, these have a latch that automatically locks the door when it's closed. Housing is aluminum. Touch bar **for outdoor use** is waterproof and can be used in washdown areas.

Lock cylinder has a Schlage C style keyway. It is keyed differently, includes two keys, and has a dull chrome finish. One cylinder is required to arm and disarm the alarm; you can mount an additional lock cylinder on the exterior of the door to use as a door lock.

Magnetic-Contact Chimes

Receive an audible signal when your door is opened. No electricity or batteries are needed—as the door opens, the magnet and contact disc are separated, sounding the mechanical chime. Chime can be deactivated. It has a brown plastic cover and includes mounting hardware and installation instructions. For indoor use only.

Ht.	Wd.	Dp.	Volume, dB		
2"	5 3/4"	2 3/4"	75	8096A61	$39.28

Checkpoint Recorders

Touch a hand-held electronic recorder to buttons installed at checkpoints to record the location, date, and time. Also known as watchmen's clocks, recorders are often used to ensure that security guards make their scheduled rounds. Recorder stores up to 5,400 reads and operates on a 3-volt battery (included). After collecting data, return the recorder to the base station and use the included software to transfer data to your Windows-based PC.

Recorder is 1" Dia. × 5 1/4" Lg. Mounting brackets for buttons are 2" Lg. × 1 1/4" Wd. Kit includes an electronic recorder, leather holster, 11 buttons with mounting brackets, a base station for two recorders, a 9-pin cable to connect to a PC, and software. Mounting brackets for buttons require two No. 10 screws (not included).

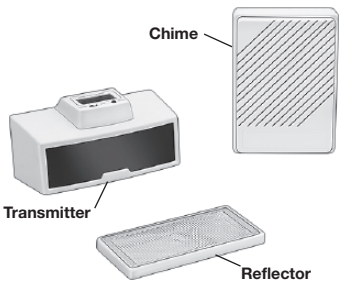
Recorder System	1708T1	$850.93
Additional Recorder	1708T5	373.10
Additional Button with Mounting Bracket	1708T6	5.00

Hand-Held Metal Detectors

Maintain security by detecting concealed objects. Detector beeps when it senses metal up to 12" away, depending on the alloy, object size, and search speed. It runs on a 9-volt battery (sold separately) and has a low-battery warning. Case is high-impact black plastic. The metal detecting face is 8" long; overall length is 16".

Metal Detector	6606T64	$142.86
9-Volt Battery	71455K56	3.95

Motion-Sensing Chimes



A chime announces when someone passes through the infrared light beam and a counter keeps track of each entrance and exit. Mount the infrared transmitter and reflector between 2 and 20 feet apart. The chime's volume is adjustable up to 85 dB. Housing is plastic. System includes 26 ft. of 24-ga. wire, a plug-in transformer to supply 12 volts AC, mounting hardware, and installation instructions.

Transmitter is 2 3/4" Ht. × 5" Wd. × 2 1/2" Dp. Chime is 5" Ht. × 3 3/4" Wd. × 1 1/2" Dp. Beam reflector is 2" Ht. × 4" Wd.

Chime system cannot be sold in California.

Chime System	80405A18	$155.88
Additional Chime	80405A23	63.70

Motion Sensors

Alarm Activating

Verbal Alert

Detect movement in restricted areas. For indoor use only.

Alarm-activating sensor wires to your existing alarm system and sends a signal when it detects motion. It covers a 90° area that's 40 feet high and 40 feet wide and can be set to ignore objects that weigh less than 40 or 80 lbs. It detects motion using an infrared sensor. Mount from 4-7 1/2 feet high. Sensor operates on 9-15 volts DC. Housing is white plastic and includes mounting hardware. UL listed.

Verbal-alert sensor plays a recorded message up to 6 seconds in length when someone passes within 6 1/2 feet. It detects motion using a light sensor. Unit has an on/off switch and operates on three AA batteries (included). Housing is black plastic.

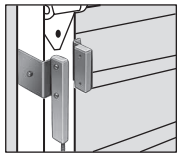
Magnetic Contacts

Surface Mount
Plastic with Screw Connections

Surface Mount
Aluminum

Floor Mount

Mortise Mount



Track Mount

Wire contacts to your alarm system to alert when doors or windows are opened. Contacts consist of a magnet that mounts to your door or window and a switch that mounts to the frame; your alarm will be activated when the magnet is moved away from the switch. Switches are sealed for corrosion resistance and are UL listed.

Single Circuit—Connect to an alarm system. Switch is single pole single throw, normally open (SPST-NO).

Double Circuit—Connect to an alarm system and another item such as a motion detector. Switch is single pole double throw (SPDT).

Surface-mount plastic contacts come with mounting screws, except 8039A21 has an adhesive back. For indoor use.

Surface-mount aluminum and **floor-mount** contacts have flexible stainless steel conduit permanently attached to the switch housing and include mounting screws. Can be used outdoors.

Mortise-mount contacts mount in 3⁄8" dia. drilled holes on the door frame and door to sit flush with the surface. Can be used outdoors.

Track-mount contacts mount directly to a track or channel and an overhead door. They come with mounting hardware and stainless steel armored cable. 80425A31 is for indoor use; 80535A42 can be used outdoors.

Alarmed Magnetic Contacts

Standard with Strobe

Low Profile Key Controlled

Low Profile Keypad Controlled

Optional Exterior Keypad

Sound an alarm when a door is opened without authorization. Alarms surface mount on a door and a magnet mounts on the door frame; the alarm sounds when they are separated. Housing is aluminum. Alarmed magnetic contacts are for indoor use and include mounting hardware, batteries, and installation instructions. Mount an optional rim lock cylinder (see 1385A on page 2893) on the opposite side of the door to arm and disarm the lock from the outside. *Key-controlled* alarms require a mortise lock cylinder (sold separately and includes two keys).

For information about sound levels, see page 673.

Low profile alarms take up less space than standard alarms. They can be set to sound continuously or announce openings with a two-second tone. An LED flashes when the alarm sounds. *Keypad-controlled* alarms accept one 3-5 digit code to arm and disarm the alarm. *Optional exterior keypad* allows the alarm to be armed and disarmed from the outside. It is aluminum with a dull finish.

Surveillance Systems

Camera

Smart Camera

Network Video Recorder

Create a network of surveillance cameras and view live or recorded footage remotely on any computer or mobile device. Cameras record in color and automatically adjust to maintain sharp focus in bright or low-lit areas. They are standalone IP cameras, so you can stream audio and video through a web browser or the included software. Use the network video recorder (sold separately) to record and replay past footage. For networking equipment, see Ethernet cords and switches.

Camera has a dome cover that makes it more inconspicuous than the smart camera. Remove the dome to manually pan 350°, tilt 130°, and rotate 330°. Camera operates on 120 volts AC and has a cord with a two-prong plug. It's also Power over Ethernet (PoE) enabled, which means you can use one cable to power and access the camera in facilities with a PoE setup. PoE power input is 48 volts DC. Housing is plastic; meets NEMA 4X and IP66 for protection against dust, rain, splashing, and power jets of water. Mounting fasteners are included.

Smart camera automatically detects motion within user designated zones, highlighting objects in view that enter restricted areas or cross a threshold such as a fence. It also focuses on and provides high-quality images of important details such as faces and license plates. The included mounting bracket allows you to manually pan 360° and tilt 180°. Camera operates on 120 volts AC and has a cord with a two-prong plug. Housing is aluminum; meets NEMA 4X and IP66 for protection against dust, rain, splashing, and power jets of water. Mounting fasteners are not included.

Network video recorder has built-in search functions that allow you to quickly find footage from specific dates and times. It has 4 TB of storage and records video and audio from up to 32 cameras at a time. Housing is plastic. Recorder operates on 100/240 volts AC and has a cord with a three-prong plug.

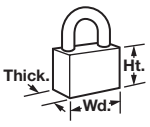
Bluetooth Padlocks



For Indoor Use

For Outdoor Use

No more lost keys or forgotten combinations—these padlocks open with your Bluetooth-enabled smartphone. Each padlock has a code for registering the lock with a free app to control it via Bluetooth. In addition to locking and unlocking the padlock, you can permanently or temporarily share access to the padlock with others, monitor when and who had access to the padlock, and receive tamper alerts.

Padlocks operate on one battery (included) and provide a low-battery warning. If your phone is not available, you can also open the padlock using a seven-button combination on the padlock keypad. The body is zinc. The shackle is hardened boron alloy for superior cut resistance. Color is silver and black.

Padlock for outdoor use has a black rubber cover.

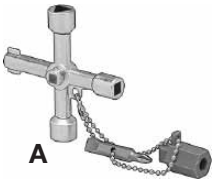
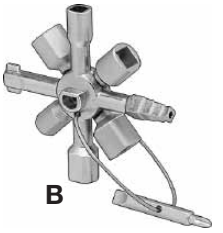
Control Cabinet Keys



A



B

Square Key

Triangle Key

Two-Way Key

Half-Moon Key

Stepped Square Key

With a number of different key profiles, these keys are for use on a wide range of facility locking and shut-off systems. All keys include a No. 2 Phillips × 9/32" slotted reversible bit. Keys are zinc.

Style A has a 5, 6, and 8 mm square key; 9 mm triangle key; 3-5 mm two-way key; and 6-point/hex adapter for 1/4" (6.35 mm) bits.

Style B includes two four-arm keys held together with a magnet. It has a 5-11 mm square key, 7-12 mm triangle key, 3-5 mm two-way key, 6 mm half-moon key, and 6-9 mm stepped square key.

Style A	1330N1	$38.17
Style B	1330N2	50.63

Key Blanks

Find the key blanks you need to cut keys for padlocks, cabinet doors, and locksets. Match the equivalent key number on the key blank to the number printed on your key. Blanks are nickel-plated brass, except Sargent key blanks are nickel-silver.
Additional Key Numbers: Please ask for 10655A271 and specify key number.

ⓘ Not sure which key number you have? For actual-size drawings for all the key blanks we offer, go to mcmaster.com and search for 10655AAC.

Extend and Retract Key Holders

A Belt-Clip Holder **B** Belt-Loop Holder **C** **D** with Split Ring

A cable or chain extends for reach and then retracts automatically. No need to detach keys for use. Key end swivels 360°. Cable and chain are stainless steel, unless noted. *Steel holders* are chrome plated. *Plastic holders* are black.

Ball-socket style holders have a slit that allows cable to be pulled out on the side or directly up, relieving stress on the cable. When the cable is fully retracted, the ball locks in place to prevent extension.

Belt-Clip Holders—Hook onto your belt.

360° Belt-Clip Holders—The belt clip hooks onto your belt and rotates 360°. On *steel holders* the belt clip is detachable. *Plastic holder* has a detachable split ring and a locking latch to keep cable extended.

Belt-Loop Holders—Slide onto your belt. *Standard style* fits belts up to 1¾″ wide. *Ball-socket style* fits belts up to 2¼″ wide.

Bolt-Down Holders—Keep important keys and tools from leaving the area. Holders have two mounting tabs with 3/16″ dia. holes; two #8 screws are required (not included). Bracket has 3/16″ dia. holes.

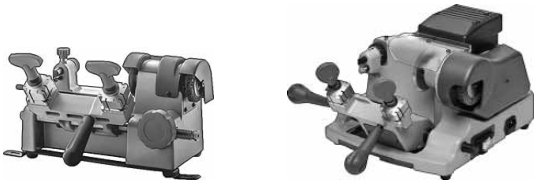
Key Duplicating Machines



Manual-Guide Intermittent Duty **Manual-Guide Continuous Duty**

Machines accept large-head keys up to 3½″ wide. They operate on 120 volts AC and have an 8-ft. cord with three-prong plug. Housing is metal. Machines come with instructions.

Manual-Guide Machines—Maneuver the machine cutters by hand to duplicate keys. *Intermittent-duty* machine is 1/3 hp with 2,900 rpm. Includes a deburring tool. *Continuous-duty* machine is 1/3 hp with 1,350 rpm. Includes a deburring brush.

Automatic Machine—To duplicate keys, press the cycle start switch to begin the cutting operation and this machine will do the rest. Machine is 1/3 hp with 1,350 rpm. Includes a deburring brush.

Also Available: Replacement parts. Please order 1334A5 and specify machine style and part needed: cutting wheel, drive belt, or nylon brush. Note: Nylon brush is not available for the manual-guide intermittent-duty machine.

Keyhead Covers

These assortments of high-visibility covers fit most standard-size keys to make them easy to identify. They will not fit large-head automotive or hotel keys. Each assortment contains 200 pieces. There are 25 each of the following colors: black, dark blue, light blue, green, pink, purple, red, and yellow.

Half Round **Round**

Half Round	10755A78	$21.11
Round	10755A76	21.11

Key Holders & Key Boxes

Locking Key Holders

A lock protects your keys from being removed and duplicated. The lock is aluminum. Holders include two keys.

Flexible—These holders have a flexible key cable that can also be used to secure small tools to workbenches. They have a 1″ Dia.×2 1/8″ Lg. black body. Key cable is nylon-coated stainless steel.

Rigid Choose-a-Color—These holders come in a variety of colors for easy key identification. Choose them if you need several holders that open with the same key. They have a rigid 304 stainless steel key ring that separates from the body and is interchangeable, so you can quickly transfer a set of keys from one lock to another. **To Order:** Please specify color: black, blue, green, orange, red, or yellow.

Locking Key-Access Boxes

Store and secure keys and other small objects in these resettable combination lock boxes. *Styles B-G* can be used outdoors.

(A) Wall-Mount Emergency Key Boxes—For emergency access to stored keys, break the glass with the attached tool. Choose keyed differently boxes if you need boxes that each open with a different key. Choose keyed alike boxes if you need several boxes that open with the same key. Both come with mounting screws and two keys.

(B) Wall-Mount Key Boxes with Push-Button Combination—The two-key capacity box includes mounting screws; the seven-key capacity box requires four 1/4″ mounting screws.

(C) Wall-Mount Key Boxes with Dial Combination—Includes mounting screws.

(D) Wall-Mount Key Boxes with Rolling-Digit Combination—Has a magnet for mounting.

(E & F) Door-Mount Key Boxes with Combination—Attach like a padlock onto doorknobs. The box and steel shackle have a rubber protector to prevent marring. Overall height is 5 3/4″. Vertical shackle clearance is 1 3/4″; horizontal shackle clearance is 1 1/2″.

(G) Door-Mount Key Boxes with Dial Combination—Mounts over the top edge of doors up to 1 7/8″ thick and secures with the included screws. The box has plastic on the back to protect your door's surface.

Single-Use Key-Access Boxes

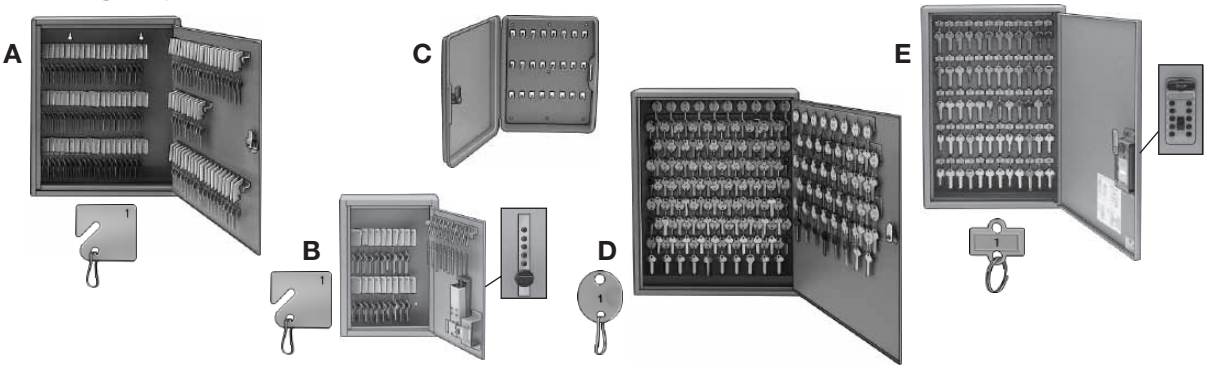
Once you snap these boxes closed to secure keys, access control cards, passwords, or codes, you have to break them open to access the contents. These boxes are not reusable.

Write your name or a message in the space provided to ensure the contents will not be used and replaced in another box without your knowledge. All are plastic. Size is 4 3/4″ Ht.×3″ Wd.×3/4″ Dp.

To Order: Please specify color: blue, clear, red, or yellow.

12665A5 ..... $9.17

Locking Key-Control Cabinets



Lock and keep track of keys in these wall-mount cabinets. Mounting screws are included.

Style A—Includes consecutively numbered, reusable key tags and "out key" tags (one for every 10 key positions) to hang in place of a loaned key. For keys up to 3¼" long. Locks come with two keys. Cabinet is steel. **To Order:** Please specify color: beige or white, unless noted.

Style B—Includes consecutively numbered, reusable key tags and "out key" tags (one for every 10 key positions) to hang in place of a loaned key. It has a resettable push-button combination with 1,000 possible combinations. For keys up to 3" long. Cabinet is steel with a beige powder-coated finish.

Style C—Has consecutively numbered hooks and does not include key tags. Each hook holds one key and accommodates keys up to 2½" long. Lock comes with two keys; key tags sold separately below. Cabinet is beige plastic.

Style D—Includes consecutively numbered, reusable key tags. Each hook holds up to five keys and accommodates keys up to 3" long. Locks come with two keys. Cabinet is steel with a gray powder-coated finish.

Style E—Includes consecutively numbered, reusable key tags. It has a resettable push-button combination with 1,000 possible combinations. Each hook holds one key and accommodates keys up to 2⅜" long. Cabinet is steel with a beige powder-coated finish.

Blank Key Tags for Style C Cabinet (Pkg. of 20) 1333A21 5.23

Loan-One and Keep-One Locking Key-Control Cabinets

For a higher level of key control than other wall-mountable cabinets, these have hooks that each hold two keys—a control key and a duplicate loaner key. The control key remains in the cabinet when its loaner key is removed. All cabinets include consecutively numbered key tags and 250 "out key" tags to hang in place of a loaned key. Once the control key is attached to the tag, you may only remove it by destroying the tag. The loaner key tag is reusable. Cabinets are steel with a gray powder-coated finish. Requires four ¼" mounting screws.

Cabinets with key lock include two keys.

Cabinets with push-button combination lock have a resettable combination with 2,200 possible combinations.

Lockout Devices

For choose-a-color lockout padlocks, see page 2915. For lockout/tagout danger tags, see pages 1915-1916.

Lockout Hasps

Lock out a single energy control on machinery and electrical equipment so it can't be used. *Vinyl-coated* hasps won't mar surfaces.
Hasps **with chain** attach to equipment so they won't get lost.
Hasps **with label** have an attached label to record employee name and department.

Lockout Cables

These flexible cables wrap around and through panel boxes, freestanding equipment, and multiple gate valves to keep them inoperable. Body is plastic.

Pinch Point—Thread the free end of the cable through the looped end and into the lockout clamping hole; pull tight and close handle to pinch the cable for a secure fit. Cable is nylon-coated steel so it won't mar surfaces.

Pull Tight—After locking, pull the cable tight for a secure fit. Cable is plastic-coated steel so it won't mar surfaces. It includes write-on labels in English, French, and Spanish.

Self Retracting—Extend the cable and place its loop in the body opening. Rotate the body to lock the cable for a secure fit. When unlocked, the cable retracts into the body with the push of a button. Cable is red nylon.

Wall Switch Lockouts

Mount this lockout over toggle- and rocker-style wall switches to make the switch inaccessible. Switches can be locked out in either the on or off position. When not in use, the cover flips up to allow normal switch operation. Lockout mounts using the screws from your switch cover plate. It requires one padlock (not included) with a 9/32″ maximum shackle diameter. Lockout is plastic. Overall size is 4 3/4″ Lg. x 1 3/4″ Wd. x 1″ Dp. Color is red. It includes English/Spanish and English/French labels.

12135A72 ... $8.21

For choose-a-color lockout padlocks, see page 2915. For lockout/tagout danger tags, see pages 1915-1916.

Group Lockout Boxes

Lock out a machine with fewer padlocks when a team is working. After locking one padlock to each electrical control and placing the keys in the box, workers lock their own padlocks to the box. The keys are only accessible when all the workers remove their padlocks for group safety.

Portable—Minimum padlock shackle vertical clearance is 5⁄8″.

Wall Mount—This box has six key hooks inside and a plastic window for viewing contents. Requires three #4 mounting screws (not included).

Portable/Wall Mount—These boxes have 12 key hooks inside. Require four #8 screws (not included) for wall mounting.

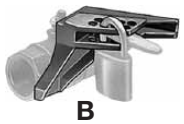
Valve Handle Lockouts

A



B

C

(Padlocks Not Included)

Prevent valve handles from turning. Color is red.

(A) Slide the lockout onto the valve handle; the valve body prevents the handle from turning. Made of plastic. Temperature range is -50° to 360°F.

(B) Slide the lockout onto the valve handle; the valve body prevents the handle from turning. Minimum padlock shackle vertical clearance is 1″. Made of steel, except 48635K81 is plastic (temperature range is -40° to 248°F).

(C) Close your valve, remove the handle, and store the handle in the lockout's zippered pouch. The lockout fits around the pipe, covers the valve stem, and secures the pouch's zipper to prevent valve operation. Minimum padlock vertical shackle clearance is 3⁄4″. Lockout is plastic. Write-on labels in English, French, and Spanish are included. Temperature range is -40° to 250°F.

Lockouts for Valve Hand Wheels

Two Piece

Hinged

Nestable

Cover your valve's hand wheel and secure with a padlock (not included) to prevent the wheel from turning. Made of plastic. Temperature range is -50° to 350°F.

Two Piece—Fits a wide range of sizes. To Order: Please specify color: red or yellow.

Hinged—A hinged design makes mounting these lockouts easy. To Order: Please specify color: blue, green, red, or yellow.

Nestable—Each lockout rotates into itself, making installation in tight spaces easier than other lockouts. Lockouts are red and include write-on labels in English, French, and Spanish.

Air Hose Lockouts

(Padlock Not Included)

Isolate air-powered equipment from a compressed air source. This lockout fits most 1⁄4, 3⁄8, and 1⁄2 quick-disconnect hose couplings—each arm of the lockout accepts a different size. Use with one padlock that has a maximum shackle diameter of 9⁄32″. Lockout is 3″ wide. Made of red plastic. Maximum temperature is 482°F.

3423A11 ..... $23.05

Electrical Plug Lockouts

Lock out an electrical plug so it can't be used.

(A) Put the plug into the cylinder and lock the cover with a single padlock (not included; 5⁄16″ maximum shackle dia.). Lockout fits cords up to 1 1⁄4″ dia. and plugs up to 5 1⁄2″ Lg.×3″ Wd. It is 6 1⁄4″ Lg.×3 1⁄2″ Dia. Made of plastic. Color is yellow. Temperature range is 32° to 275°F.

10645A65 ..... $16.18

A

(Padlock Not Included)

(B) Secure a wide range of electrical plugs. Lockout fits a maximum plug size of 4 3⁄4″ Lg.×2 3⁄4″ Wd., minimum plug width of 1 1⁄2″, and maximum cord diameter of 1 1⁄8″. Accepts up to four padlocks (not included; 3⁄8″ maximum shackle diameter). Lockout is 7 1⁄4″ Lg.×4 1⁄4″ Dia. Color is yellow. Temperature range is -20° to 140°F.

15515A41 ..... $23.92

B

(Padlock Not Included)

(C) These lockouts plug into standard two- and three-prong plugs and lock with keys so the plug can't be used. Lockouts are 1 3⁄4″ Lg.× 1 1⁄4″ Wd.×3⁄4″ Dp. Made of steel with a red plastic coating. Temperature range is -40° to 194°F. Two keys are included.

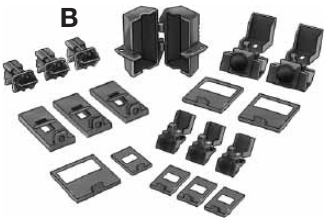
Lockout Sets

A

B



C

D

Sets include a variety of lockouts to help keep machines and electrical equipment inoperable when repairs are being made. Padlocks, hasps, and lockouts are red.

(A) Lockout Set with Keyed Alike Padlocks—Includes three padlocks (open with the same key, have a 1/4″ dia. shackle, and include labels), a hasp, 12 tags, and a waist pouch.

4974A11 ..... $90.94

(B) Electrical Lockout Set without Padlocks—Includes three wall-switch lockouts, an electrical plug lockout, three multipole circuit-breaker lockouts, three 277V AC no-hole circuit-breaker lockouts, two 480/600V AC no-hole circuit-breaker lockouts, a 277V AC cleat, a 480/600V AC cleat, and a zippered bag.

12865A32 ..... $122.62

(C) Electrical and Valve Lockout Set with Keyed Alike Padlocks—Includes three padlocks (open with the same key, have a 1/4″ dia. shackle, and include labels), a circuit breaker padlock, five circuit-breaker lockouts, a wall-switch lockout, a cable lockout, three valve-wheel lockouts (for wheel diameters 1″-3″, 2″-5″, and 4″-6 1/2″), two valve-handle lockouts (fit pipe sizes 3/8-4; max. 11″ long valve handle), a hasp, a snap-on hasp, 12 tags, and a plastic box.

4974A13 ..... $314.12

(D) Electrical and Valve Lockout Set with Keyed Differently Padlocks—Includes six padlocks (each opens with a different key, has a 1/4″ dia. shackle, and includes labels), two circuit-breaker padlocks, nine circuit-breaker lockouts, two wall-switch lockouts, a cable lockout, three valve-wheel lockouts (for wheel diameters 1″-3″, 2″-5″, and 4″-6 1/2″), two valve-handle lockouts (fit pipe sizes 3/8-4; max. 11″ long valve handle), two plug covers (one for 120/220V AC plugs and one for 220/550V AC plugs), a hasp, a snap-on hasp, 24 tags, and a plastic bag.

4974A15 ..... $456.06

Wall-Mount Lockout Sets

A&B

C

Sets contain items for group lockouts and are furnished in a yellow plastic case that mounts to the wall to keep the items organized in a central location. Each padlock in these sets opens with a different key. Padlocks have a 1/4″ dia. shackle and include labels. Padlocks, hasps, and lockouts are red.

(A&B) Lockout Sets with Padlocks—Sets require four #6 mounting screws (not included).

(C) Electrical and Valve Lockout Set—Set requires eight #10 mounting screws (not included). In addition to the items listed, this set comes with two plug lockouts. Valve wheel lockouts fit wheel diameters 1″-3″, 2″-5″, 4″-6 1/2″, and 6″-10″. Valve handle lockouts fit pipe sizes 3/8-4.

Circuit Breaker Lockouts

Single Pole

Tie-Bar Multipole

No Hole

Prevent electrical circuits from being energized. Lockouts accept a single padlock with a maximum shackle diameter of 9/32″ (padlock not included). All are compatible with Square D circuit breakers. Made of red plastic. Temperature range is 0° to 175° F.

Single-pole lockout works with most 120V AC circuit breakers that have a hole through the breaker lever.

Tie-bar multipole lockout is suitable for most multipole breakers that have a tie bar, including Bryant, Challenger, GE, General Switch, ITE, Sylvania, and Westinghouse.

No-hole lockouts work on most single-pole circuit breakers that don't have a hole through the breaker lever.

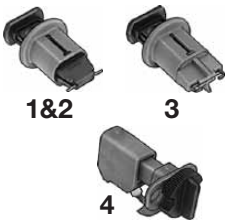
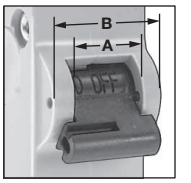
DIN-Rail Circuit Breaker Lockouts



Style 1 Shown Mounted



Lock out circuit breakers that are designed to mount on DIN rails. All of these lockouts accept one padlock with a 9/32″ maximum shackle diameter (padlock not included). Made of red plastic. Not rated for temperature.

Styles 1-3 work with single and multipole breakers. **Style 4** works with multipole breakers that have a tie bar. A thumb wheel simplifies use.

Lockout Labels and Sleeves for Padlocks

Comply with lockout/tagout procedures. All labels and sleeves have space for employee's name and department.

(A) Adhesive-Back Labels—Apply directly to locks. Supplied with a clear plastic strip to cover and protect the label. Color is red.

(B) Labels with Heat-Shrink Sleeve—Use a heat gun to apply the clear, shrink-to-fit sleeve over the label for protection from dirt and moisture. Color is blue. 5028T52 allows you to add the employee's picture for identification.

(C) Heat-Shrink Sleeves—Use a heat gun to apply these solid-colored sleeves to locks. **To Order:** Please specify color: blue, green, red, or yellow.

Padlockable Bars for Drawer Cabinets

Bars have a spring hinge and fold over the edge of your cabinet drawers to keep contents secure. Lock the drawers closed with a padlock (not included).

Bars are made of gray-painted steel and are 1½″ wide. They mount to the surface of your cabinet with the included hardware. Bars require a minimum mounting width of ¼″ for installation. When mounting the bar next to a drawer pull, you'll need a minimum of ½″ clearance from the drawer pull as well as ½″ of mounting width on the cabinet edge.

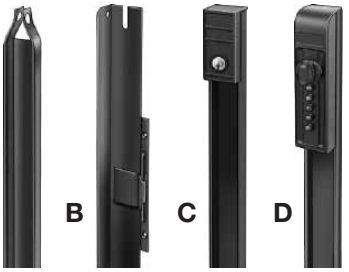
34½″	5/16″	12485A83	46.09

(Padlock Not Included)

Padlockable and Locking Bars for File Cabinets

Style A

(Padlock Not Included)



Surface mount these bars on nonlocking cabinets to secure the contents. The bar slides over a notched pin at the bottom, fits into a notched or clevis pin at the top, and locks at the top. All bars are 1½″ Wd. x 1/8″ Thick. black-painted steel and can be cut to the length you need. They come with ⅜″ clevis pins, washers, notch pins, and nuts for mounting. Instructions are included.

Padlockable Bars

Padlocks are not included.

(A) Standard—Mount on the front of the cabinet. For access to cabinet drawers, remove the bar.

(B) Easy Access—Bars have hinges and swing out of the way for easy access to cabinet drawers. Mount them to either corner to secure the contents. Bars require a minimum mounting width of ½″ for installation. Hinges are 8″ Lg. x ½″ Wd.

About Padlocks

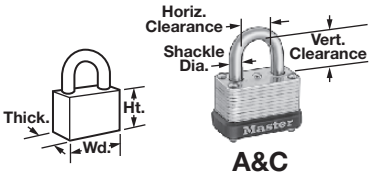
You'll find our basic padlocks on pages 2914-2915. They have random key numbers. If you want to add padlocks or keys to an existing system, purchase a padlock with more than two keys, or create systems of locks (keyed alike or master keyed), see pages 2916-2924. For combination padlocks, see page 2925.

Most padlocks have a locking mechanism with multiple pins or discs. When choosing between padlocks with different numbers of pins or discs, the lock with more pins or discs will be harder to pick.

Strength and corrosion resistance are important factors to consider in selecting a padlock. See the chart at right for the relative strength and corrosion resistance of padlock materials.

Strength		Corrosion Resistance
Solid Steel	Greatest ↑	Brass
Laminated Steel, Plastic-Covered Laminated Steel		Stainless Steel
		Plastic-Covered Laminated Steel
		Plastic
Stainless Steel		Aluminum
Aluminum		Zinc
Brass, Zinc		Solid Steel
Plastic		Laminated Steel

Padlocks



A&C

B

D&E

F

G

H

J

K

• Include two keys.

A steel body and shackle give Styles A-J strength. Style K has a zinc body which is not as strong, but has better corrosion resistance. Choose these locks if you need locks that each open with a different key. All locks have random key numbers.

(A&B) Master Lock Warded Laminated Steel—Have a basic warded locking mechanism and a gray bumper. Shackle is steel. *Style B* have an adjustable vertical shackle clearance.

(C-F) Master Lock Laminated Steel—*Style C* have a blue bumper, a steel shackle, and a four-pin tumbler. *Style D* have gray bumpers, a hardened steel shackle, and a four-pin tumbler. *Style E* have gray bumpers, a hardened steel shackle, and a five-pin tumbler. *Style F* has a hardened steel shackle and a five-pin tumbler.

(G&H) Master Lock Solid Steel—Have a hardened steel shackle and a five-pin tumbler. *Style H* has a protected shackle.

(J) American Lock Solid Steel—Have a hardened steel shackle and a five-pin tumbler.

(K) Zinc—Have a hardened steel shackle and a six-disc tumbler. Body is tan.

Weather-Resistant Padlocks

A&B

C

D

• Include two keys.

Choose these strong and corrosion-resistant locks if you need locks that each open with a different key. All locks have random key numbers and pins in the tumbler.

(A&B) Abus Lock—Have a stainless steel body. 1831A31 and 1831A11 have a stainless steel shackle. 1831A24 has a hardened steel shackle.

(C&D) Master Lock Pro Series—Have a laminated-steel body with black plastic cover. Shackle is hardened steel. *Style D* have a protected shackle.

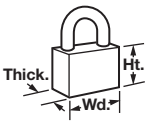
Weather-Resistant Brass-Body Padlocks



• Include two keys.

Tough enough to stand up to corrosion, high humidity, and atmospheric pollution, these padlocks are well-suited for refineries and marine applications. Choose these locks if you need locks that each open with a different key. All locks have random key numbers and pins in the tumbler.

(A) Master Lock Laminated Brass—Have a blue bumper. Model 8 locks have a steel shackle. Model 2, 4, and 6 locks have a hardened steel shackle.

(B-D) Solid Brass—*Style B* have a brass shackle. *Styles C* and *D* have a hardened steel shackle.

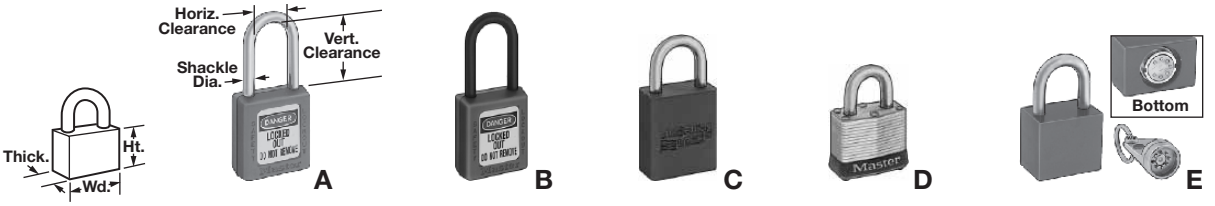
Choose-a-Color Lockout Padlocks



• Include two keys, unless noted.

Lockout padlocks come in a variety of colors for lockout identification compliance. Choose these locks if you need locks that each open with a different key. All locks have random key numbers and pins in the tumbler.

(A) Master Lock Plastic Body—Entire body is colored. Shackle is hardened steel. Locks include a Danger label as well as a write-on label marked Property of. **To Order:** Please specify body color: black, blue, green, orange, purple, red, teal, or yellow.

(B) Master Lock Plastic Body with Plastic Shackle—All external parts are plastic, making this lock nonconductive, nonsparking, and nonmagnetic. Entire body is colored. Shackle is plastic. Lock includes a Danger label as well as a write-on label marked Property of. **To Order:** Please specify body color: black, blue, green, orange, purple, red, teal, or yellow.

(C) American Lock Aluminum Body—Entire body is colored. Shackle is hardened steel. **To Order:** Please specify body color: black, blue, brown, gold, green, orange, purple, or red.

(D) Master Lock Laminated-Steel Body—Locks have a colored bumper. Shackle is hardened steel. **To Order:** Please specify bumper color: black, blue, green, red, white, or yellow.

(E) Aluminum Body with No-Copy Key—Locks have specially designed keys that cannot be duplicated and cannot be removed when the lock is open. Entire body is colored. Shackle is stainless steel. **To Order:** Please specify body color: black, blue, bronze, gold, red, or tan.

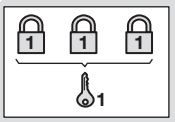
■ Includes one key.

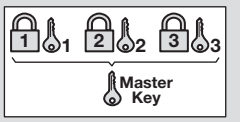
Padlocks & Additional Keys

For information about padlocks, see page 2914. For padlocks with random key numbers, see pages 2914-2915.

About Padlock Keying Options

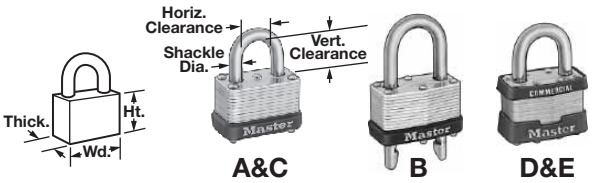


Keyed Alike Padlocks (pages 2916-2920)—Choose these locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number.



Master Keyed Padlocks and Sets (pages 2922-2924)—Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key.

Keyed Alike Padlocks



• Include two keys.

Choose these locks if you need several locks that open with the same key. A steel body and shackle give Styles A-J strength. Style K has a zinc body which is not as strong, but has better corrosion resistance. If the lock or key with the key number you want isn't listed, order the "Other Key Nos." and specify your desired key number.

(A&B) Master Lock Warded Laminated Steel—Have a basic warded locking mechanism and a gray bumper. Shackle is steel. *Style B* have an adjustable vertical shackle clearance.

(C-F) Master Lock Laminated Steel—*Style C* have a blue bumper, steel shackle, and four-pin tumbler. *Style D* have gray bumpers, a hardened steel shackle, and a four-pin tumbler. *Styles E* and *F* have gray bumpers, a hardened steel shackle, and a five-pin tumbler.

(G&H) Master Lock Solid Steel—Have a hardened steel shackle and a five-pin tumbler. *Style H* has a protected shackle.

(J) American Lock Solid Steel—Have a hardened steel shackle and a five-pin tumbler.

(K) Zinc—Have a hardened steel shackle and a six-disc tumbler. Body is tan.

Match-Your-Key Padlocks

Insert your key into the keying tool (sold separately) and place the key in the padlock. Then, strike the tool with a hammer to set the padlock's key pattern. Padlocks can be matched to your key from Master Lock padlock Model Nos. 1, 3, or 5. Locks have a laminated-steel body, a hardened steel shackle, and a four-pin tumbler.

Note: Locks cannot be master keyed.

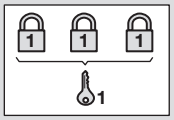
Padlocks & Additional Keys

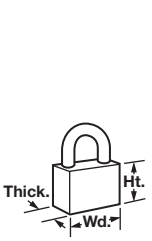
For information about padlocks, see page 2914. For information about keying options, see page 2916.

About Keyed Alike Padlocks



Choose these locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number. For example, use keyed alike locks if you have multiple tool boxes and want them to open with the same key.

Weather-Resistant Keyed Alike Padlocks



A

B&C

D

E

F

- Include two keys.

A step above ordinary padlocks, these are made for strength and corrosion resistance. Choose these locks if you need several locks that open with the same key. If the lock or key with the key number you want isn't listed, order the "Other Key Nos." and specify your desired key number.

(A) Master Lock Titanium Series—Has a stainless steel body, a hardened steel shackle, a black bumper, and a four-pin tumbler.

(B&C) Abus Lock—Have a stainless steel body. *Style B* have a stainless steel shackle and a four-pin tumbler. *Style C* has a hardened steel shackle and a five-pin tumbler.

(D&E) Master Lock Pro Series—Have a laminated-steel body with black plastic cover, a hardened steel shackle, and a five-pin tumbler.

(F) Stainless Steel with No-Copy Key—Has specially designed keys that cannot be duplicated and cannot be removed when the lock is open. Lock has a stainless steel body and shackle and a seven-disc tumbler.

Breakable-Shackle Padlocks

A

B

- Include two keys.

In an emergency, use a hammer to quickly break the shackle on these keyed alike locks. They are often used for sprinkler shutoff valves and fire hose housings. Locks have a specific key number, a zinc shackle, and a basic warded locking mechanism.

Style A are Master Lock laminated-steel body padlocks with a gray bumper. **Style B** has a steel body.

For information about padlocks, see page 2914. For information about keying options, see page 2916.

Weather-Resistant Keyed Alike Brass-Body Padlocks

• Include two keys.

A brass body gives these padlocks the ability to withstand corrosion. Choose these locks if you need several locks that open with the same key. If the lock or key with the key number you want isn't listed, order the "Other Key Nos." and specify your desired key number.

(A) Master Lock Laminated Brass—Have a blue bumper and a four-pin tumbler. Model 8 have a steel shackle. Model 2, 4, and 6 have a hardened steel shackle.

(B-D) Solid Brass—Have a five-pin tumbler, unless noted. *Style B* have a brass shackle. *Style C* have a stainless steel shackle. *Style D* have a hardened steel shackle.

(E&F) Solid Brass with No-Copy Key—Locks have specially designed keys that cannot be duplicated and cannot be removed when the lock is open. Locks have an 11-disc tumbler. *Style E* has a stainless steel shackle. *Style F* has a hardened steel shackle.

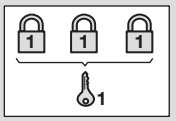
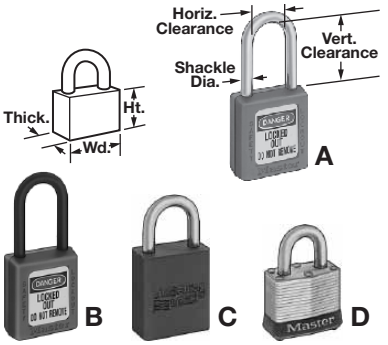
About Keyed Alike Padlocks



Choose these locks if you need several locks that open with the same key. You can also find locks and keys to match a specific key number. For example, use keyed alike locks if you have multiple tool boxes and want them to open with the same key.

Choose-a-Color Keyed Alike Lockout Padlocks



• Include two keys, unless noted.

Lockout padlocks come in a variety of colors for lockout identification compliance. Choose these locks if you need several locks that open with the same key. If the lock or key with the key number you want isn't listed, order the "Other Key Nos." and specify your desired key number and lock color.

(A) Master Lock Plastic Body—Entire body is colored. Locks have a hardened steel shackle and a six-pin tumbler. They include a Danger label as well as a write-on label marked Property of.

(B) Master Lock Plastic Body with Plastic Shackle—All external parts are plastic, making these locks nonconductive, nonsparking, and nonmagnetic. Entire body is colored. Locks have a six-pin tumbler and include a Danger label as well as a write-on label marked Property of.

(C) American Lock Aluminum Body—Entire body is colored. Locks have a hardened steel shackle and a five-pin tumbler. **Additional Keys:** Please ask for 12095A1 and specify key number.

(D) Master Lock Laminated-Steel Body—Have a colored bumper, a hardened steel shackle, and a four-pin tumbler. **Additional Keys:** Please ask for 11775A2 and specify key number.

■ Includes one key.

For information about padlocks, see page 2914.

Cable Locks

• Include two keys.

Secure tools and equipment with these flexible Master Lock cable locks that wrap around and through objects. Choose these locks if you need locks that each open with a different key. They have a four-wafer cylinder. The body is weather-resistant aluminum. The cable is steel and has a black vinyl coating to prevent scratches and add weather resistance.

Cable				
Lg.	Dia.			
6 ft.	3/8"	8030A16	$13.15
6 ft.	5/8"	8030A18	34.83

Adjustable-Length Cable Locks

• Include two keys.

These Master Lock cable locks have a cinching collar that allows you to tighten and loosen the cable around equipment.

Locks are made of weather-resistant aluminum with a black bumper. They have a four-wafer cylinder. Size is 2 3/4" Ht. × 4" Wd. × 1 7/16" Thick. Cables are 6-ft. long and are made of 3/8" dia. black vinyl-coated steel to prevent scratches and add weather resistance.

Each Lock Opens with a Different Key	1033A31	$24.35
Each Lock Opens with Key No. 3221	1033A32	24.35

Anchored Cable Locks

• Include two keys.

Often used to secure computer equipment, this cable lock has a lock at both ends to secure two pieces of equipment. Each lock fits into the standard built-in female security slot in PCs, laptops, and notebooks. The body is corrosion-resistant stainless steel. The cable is steel and has a clear nylon coating to prevent scratches and add weather resistance. Choose these locks if you need locks that each open with a different key. The included keys are designed to be difficult to duplicate.

To attach this lock to equipment without a built-in security slot, use an optional adapter kit (sold separately). Optional adapter kit adds a security slot. Includes preparation pad and adhesive.

Cable			
Lg.	Dia.		
7 ft.	3/16"	1349A15	$70.00
Optional Adapter Kit		1349A7	8.33

Removable-Shackle Padlocks

• Include two keys.

The entire shackle separates from the body, making it easy to secure and remove these Master Lock seven-pin locks. Locks have a vinyl cover, a steel body, and a hardened steel shackle. Lock with 11" vertical shackle clearance is useful for securing bulky items.

Clearance		Body			
Dia.	Vert.	Horiz.	Dia.	Wd.		
1/2"	2"	1 5/8"	1"	3 15/16"	1026A11	$22.65
1/2"	11"	5 1/8"	1 1/8"	8 1/4"	1026A13	32.51

Cut-Resistant Chain with Cover—Not for Lifting

Not only is this chain made of hardened zinc-plated steel for cut resistance, it has a black nylon sleeve to protect against abrasion. Not rated for capacity.

Inside Wd.	Thick.	2-ft. Length		10-ft. Length	
0.38"	0.24"	1585A73	$13.84	1585A81	$68.51

Padlock Chains, Collars, and Tags

Use these chains, collars, and tags to anchor padlocks to your equipment.

Chains

Chains are made of zinc-plated steel and fit the collars sold separately below. They have a 1 9/16" Lg. × 3/4" Wd. mounting tab with two 3/16" dia. holes (screws not included).

Sash chain has flat links that have been stamped into shape; **machine** chain is made of welded links, which are stronger.

Sash Chain

Chain			Pkg.	
	Thick.	Lg.	Qty.	Pkg.
Sash	0.032"	9"	6	13205A11	$10.25
Machine	1/8"	9"	3	13205A12	7.98

Collars

Collars allow you to attach a padlock to the 13205A series chain sold separately above. Made of zinc-plated steel. Include hardware for attaching collar to shackle.

For Max. Shackle Dia.	Pkg. of 12	
1/4"	13205A14	$11.21

5/16"	3/16"	8"	1084A57	8.56

Tags

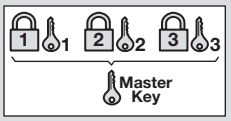
Tags are brass and have an overlapping ring. They are 1 3/4" Lg. × 1/2" Wd.

11695A44	Pkg. of 12	$16.88

Master Keyed Padlocks

For information about padlocks, see page 2914. For information about keying options, see page 2916.

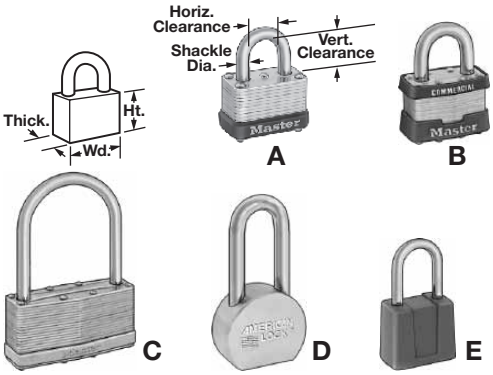
About Master Keyed Padlocks



Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. An example is locker assignments. Each person uses a padlock that has a random key number—each person can open only their own locker. In a master keyed system, one person has a master key that opens all of the lockers.

We also offer master keyed padlock sets. Master keyed sets have padlocks (or groups of padlocks) with different key numbers. Each person can open their own lock (or the locks in their group). One person has a master key that opens every lock in the set. For master keyed padlock sets, see pages 2922 and 2923.

Master Keyed Padlocks



• Include two keys.

Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. A steel body and shackle give Styles A-D strength. Style E has a zinc body which is not as strong, but has better corrosion resistance. The included keys have random key numbers; master keys are sold separately.

(A-C) Master Lock Laminated Steel—*Style A* have a blue bumper, a steel shackle, and a four-pin tumbler. *Style B* have gray bumpers, a hardened steel shackle, and a four-pin tumbler. *Style C* has a hardened steel shackle and a five-pin tumbler.

(D) American Lock Solid Steel—Has a hardened steel shackle and a five-pin tumbler.

(E) Zinc—Have a hardened steel shackle and a six-disc tumbler. Body is tan.

Individual Padlocks—Locks have random key numbers and also open with a master key (sold separately).

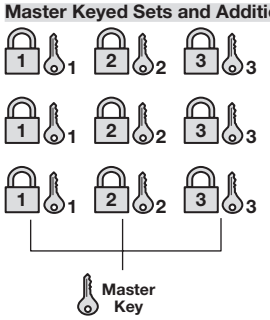
Master Keyed Sets and Additional Padlocks, Keys, and Master Keys



Master keyed sets come with nine padlocks that are divided into three groups of three. Each group of padlocks opens with a specific key number and includes a master key that opens all of the padlocks. If you want to expand your set, order additional padlocks, keys, and master keys (sold separately).

Weather-Resistant Master Keyed Brass-Body Padlocks

• Include two keys. Master keys sold separately.

Tough enough to stand up to corrosion, high humidity, and atmospheric pollution, these padlocks are well-suited for refineries and marine applications. Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. The included keys have random key numbers; master keys are sold separately. Locks have a tumbler with pins.

(A) Master Lock Laminated Brass—Have a blue bumper and a hardened steel shackle.

(B&C) Solid Brass—*Style B* have a brass shackle. *Style C* have a hardened steel shackle.

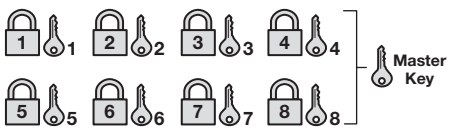
Master Keyed Lockout Padlock Sets

• Each padlock includes two keys. Master key included in set.

The body of each padlock in this set is a different color for lockout identification compliance. Padlocks are American Lock model 1105 with an aluminum body and hardened steel shackle. They have a five-pin tumbler. Shackle diameter is 1/4″. Vertical shackle clearance is 1″. Horizontal shackle clearance is 3/4″. Body is 1 13/16″ Ht. × 1 1/2″ Wd. × 3/4″ Thick. Padlocks open with a specific key number and a master key that opens all of the padlocks.



Master Keyed Padlock Set

This master keyed set includes eight padlocks in different colors (and key numbers): one each in black (0030), blue (0020), brown (0040), green (0015), orange (0025), purple (0045), red (0005), and yellow (0010). The included master key opens all the locks.

1455A21 ..... $131.71

Additional Master Key—Master key number is M58501.

The master key opens all the padlocks in the set.

1455A9 ..... $2.27

Additional Padlocks and Keys

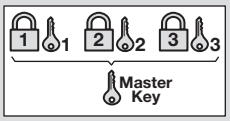
Master Keyed Padlocks

For information about padlocks, see page 2914. For information about keying options, see page 2916.

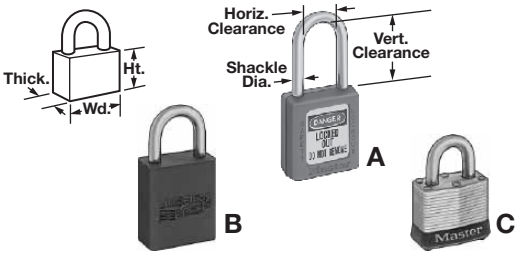
About Master Keyed Padlocks



Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. An example is locker assignments. Each person uses a padlock that has a random key number—each person can open only their own locker. In a master keyed system, one person has a master key that opens all of the lockers.

We also offer master keyed padlock sets. Master keyed sets have padlocks (or groups of padlocks) with different key numbers. Each person can open their own lock (or the locks in their group). One person has a master key that opens every lock in the set. For master keyed padlock sets, see pages 2922 and 2923.

Choose-a-Color Master Keyed Lockout Padlocks



• Include two keys, unless noted. Master keys sold separately.

Padlocks come in a variety of colors for lockout identification compliance. Choose these locks if you want individual locks or groups of locks that open with their own key, but also open with a master key. The included keys have random key numbers; master keys are sold separately. If the lock keyed to the master key number you want isn't listed, order "Other Padlocks" and specify your desired master key number and lock color.

(A) Master Lock Plastic Body—Entire body is colored. Locks include a Danger label as well as a write-on label marked Property of.

(B) American Lock Aluminum Body—Entire body is colored. Locks have a five-pin tumbler.

(C) Master Lock Laminated-Steel Body—Have a colored bumper and a four-pin tumbler.

■ Includes one key.

Combination Padlocks

These Master Lock padlocks have a three-digit combination and a stainless steel body. Shackle is hardened steel. Dial is black with white numbers.

Standard—Body is 1⅞" Dia. × 1" Thick.

High Security—Dial rim is recessed and reinforced to prevent tampering. Body is 2³⁄₁₆" Dia. × 1½" Thick.

Key-controlled locks let you open the shackle with a control key (sold separately) instead of the combination. All have a four-pin tumbler. *Factory-registered* locks give you an exclusive keying system that is unique to your locks. **To Order:** If matching factory-registered locks to an existing group, please specify key number.

TSA Accessible

Set your own combination and change it at any time. Three-digit locks have 1,000 possible combinations; four-digit locks have 10,000 possible combinations; and five-letter lock has 50,000 possible combinations. **Bottom-digit** and **front-digit** locks have a hardened steel shackle, except 1836A23 has a boron-carbide shackle. **Side-digit** locks have a steel shackle.

Super Sesamee—Locks have a hardened-steel body for extra toughness.

Laminated—Locks have a black bumper.

Plastic-Covered Zinc—Locks have a black bumper.

Key Controlled—Locks can open with a control key (sold separately).

Letter Combination—Use letters instead of numbers to unlock the shackle. Dials are plastic.

TSA Accessible—Lock secures your equipment cases during travel, but allows Transportation Security Administration personnel to open your luggage. An opened indicator changes from green to red to alert you if the lock was opened.

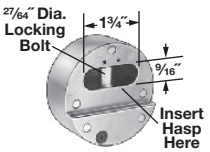
Enclosed-Shackle Padlocks and Hasp

Padlock with Optional Hasp



Back View of Lock

- Include two keys. Master keys sold separately for 1749A13.

Also called hockey puck locks, these eliminate the most vulnerable part of any padlock—the shackle. Use with optional hasp (sold separately) or any hasp with a minimum 7/16″ dia. hole. The locking bolt passes through the hasp eye to protect against bolt cutters, hacksaws, and pry bars. Padlocks are chrome-plated steel with a six-pin tumbler.

Optional hasp is 1/4″ thick steel and requires six 3/8″ dia. carriage bolts.

Extra-Reach Padlockable Corner Hasps

Hinged leaves allow you to mount these hasps around complex curves, angles, and corners that other corner hasps can't reach. All have a fixed padlock eye that cannot be adjusted after installation. Mounting screws are included.

Pry-resistant hasps include a padlock shackle protector to prevent the shackle from being cut or pried open. They are designed for use with concealed-shackle padlocks.

★For maximum padlock shackle diameter.

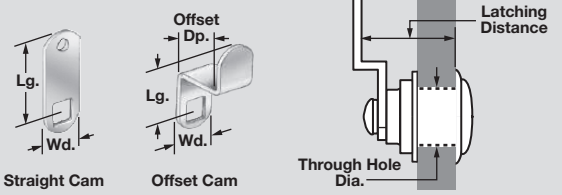
About Cam Latches and Locks



Cam latches and locks have an attached metal arm that rotates to lock cabinet doors and file drawers. The cam mechanism is either straight or offset. Offset cams are often reversible, which means they can be mounted to reach two different latching distances.

Latching distance is the distance between the outside mounting surface and the inside face of the cam. We provide the maximum latching distance possible after installation of the latch or lock. Some latches and locks have a latching distance range because their cams are adjustable. Latches and locks with fixed values for latching distance have cams that are not adjustable.

Keyed Cam Locks CAD

Locks are zinc and come with a straight cam and a reversible offset cam to accommodate different latching distances. They come with two keys. Note: Master keys for master-keyed locks are sold separately.

Locks **for 1/2″ dia. through hole** are for mounting in metal and plastic. Head is 5/8″ dia. Locks come with a 1 1/8″ Lg. × 3/8″ Wd. straight cam, a 1 1/8″ Lg. × 3/8″ Wd. reversible offset cam (3/8″ offset), and mounting hardware.

Locks **for 3/4″ dia. through hole** are for mounting in metal and wood. Head is 7/8″ dia. Locks come with a 1 1/2″ Lg. × 5/8″ Wd. straight cam, a 1 1/8″ Lg. × 5/8″ Wd. reversible offset cam (3/8″ offset), and mounting hardware. Replacement washers for mounting in metal and wood are sold separately.

Each Lock Opens with a Random Key

Circular-Keyway Cam Locks

Offering more security than standard keyed cam locks, these have circular keys that are difficult to duplicate and a tubular pin tumbler that is difficult to pick. Turn key 90° or 180° to the right or left to unlock. Locks are polished nickel-plated zinc. Head dia. is 7/8".

Locks come with two keys, a 1 9/16" Lg. × 5/8" Wd. straight cam, a 1 7/16" Lg. × 5/8" Wd. reversible offset cam (1/4" offset), and mounting hardware. Mount in metal, plastic, or wood. Note: Master key for master-keyed locks is sold separately.

Also Available: Replacement keys for locks that open with the same key. Please ask for 1682A41 and specify key number.

Miniature Circular-Keyway Cam Locks

With a head diameter of 5/8", these locks are well-suited for tight spaces. They have circular keys that are difficult to duplicate. Turn key 90° to unlock. You select the turn direction when you mount the cam. Keys can only be removed in the locked position. Locks are polished chrome-plated brass.

Locks come with two keys, a 1 1/8" Lg. × 7/16" Wd. straight cam, a 1 1/8" Lg. × 7/16" Wd. reversible offset cam (1/8" offset), and mounting hardware. Mount in metal or plastic.

Slotted Cam Latches

These latches require a slotted screwdriver to open, making them more secure than handle and knob cam latches. You select both the amount (90° or 180°) and direction of turn for the latch when you mount the cam. Latches are nickel-plated zinc.

Latches come with a 1½″ Lg.×⅝″ Wd. straight cam, a 1½″ Lg.×⅝″ Wd. reversible offset cam (3⁄16″ offset), and mounting hardware. Mount in metal or wood.

For Max. Thick.	Max. Latching Distance	For Through Hole Dia.	Head Dia.		
¼″	13⁄16″	¾″	⅞″	10335A75	$5.87

Knob Cam Latches

Turn the collar under the knob to set your latching distance exactly where you need it. To unlock, turn the knob 90° to the right or left. Knob is plastic; latch is zinc-plated steel.

Latches come with a reversible offset cam and mounting hardware. Mount in metal, plastic, or wood.

Miniature Slotted Cam Latches

Latch has a small head that is good for limited-space areas. It requires a slotted screwdriver to open, making it more secure than handle and knob cam latches. To unlatch, turn the head 90° right or left. This latch doesn't require any tools for installation—insert the shaft through a drilled hole and use the push-on retainer to tension-mount the latch against the inside surface. Latch is polished nickel-plated steel.

Latches come with a 15⁄16″ Lg.×½″ Wd. straight cam and mounting hardware. Mount in metal, plastic, or wood.

For Max. Thick.	Latching Distance	For Through Hole Dia.	Head Dia.		
¾″	¼″-1″	¼″	9⁄16″	1340A31	$5.62

L- and T-Handle Cam Latches and Locks

Standard Nonlocking L-Handle Latch

Tamper-Resistant Keyed T-Handle Lock

Use alone or with a three-point locking system commonly seen on filing cabinet doors. Mount the cam to latch at a single point; for additional strength, position it to drive a bar or rod into as many as two additional latch points. Latches and locks are chrome-plated zinc. They have a 2 5⁄16″ Lg.× 1 3⁄16″ Wd. mounting plate and fit into a ⅞″ dia. through hole.

Latches and locks come with a 1¾″ Lg.×⅝″ Wd. straight cam. Mount in metal, plastic, or wood.

L-Handle—All are 3 5⁄16″ long and have a 1 11⁄16″ projection.

T-Handle—All are 3 3⁄16″ long and have a 1 13⁄16″ projection.

Standard latches and **locks** require two M4 screws. They have a 5⁄16″ Sq.×3 3⁄16″ Lg. spindle.

Tamper-resistant latches and **locks** include mounting screws. When installed, the screws are concealed to prevent tampering. Latches and locks have a 5⁄16″ Sq.×9⁄16″ Lg. spindle.

Locks come with two keys. Note: Master key for master-keyed locks is sold separately.

Also Available: Replacement keys for keyed locks. Please ask for 1210A77 and specify key number.

For information about cam latches and locks, see page 2928.

L-Handle Padlockable Cam Latches

These padlockable latches are commonly used on heavy doors, such as those found on trucks and large cabinets. The handle and latch are each sold separately. Turn the handle 90° to unlatch; you select the turn direction when you mount the cam. Mount in metal, plastic, or wood. All have a dull finish.

Handles—Require No. 10 mounting screws.

Latch—Comes with a 5/8" Lg. x 11/16" Wd. straight cam. Latch projects 11/32" and requires No. 14 mounting screws.

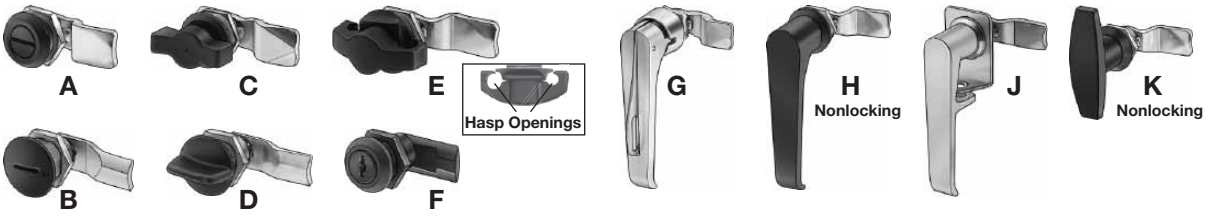
Washdown Cam Latches and Locks



These latches and locks are IP65 and NEMA 4 rated for protection against dust, dirt, and washdowns. Unlatch with a 90° turn to the right or left. Mount into a 7/8" dia. through hole.

All come with three nonreversible cams with a variety of offsets, except Styles B and D come with one nonreversible cam (5/16" offset). Cams are 1 3/4" Lg. x 3/4" Wd., except cam for Style F is 1 3/8" Lg. x 3/4" Wd.

Keyed locks include 2 keys.

Style E has two hasp openings that accommodate padlocks with a 3/16" and 3/8" maximum diameter shackle.

Style F has a temperature range of 0° to 190° F.

Styles G and **J** have a hasp that accommodates a padlock with a maximum shackle diameter of 5/16".

Two-Handle Padlockable Bolt Latches

Operate these latches from either side of your door—there is a handle on both sides. Latches are reversible for right- and left-hand mounting. They require a 3/4" dia. through hole in your door for installation. Latches are zinc-plated steel and accept a padlock with a max. shackle diameter of 3/8". Mounting screws are included.

Deadbolt Drawer Locks and Cam Locks without Lock Cylinders

Choose these locks if you want to use your own compatible lock cylinder to match the keying of an existing system. They also give you the option of changing the cylinder without replacing the entire lock.

Locks

Deadbolt Drawer

Cam

Locks accept a 5⁄8″ dia. cylinder. Mount in wood.

Deadbolt drawer lock has a 1 1⁄4″ Ht. × 1 3⁄4″ Wd. × 1⁄2″ Dp. case. It is zinc and has a latch bolt projection of 3⁄8″.

Cam lock has a 5⁄8″ Ht. × 1 11⁄16″ Wd. × 1⁄8″ Thick. mounting plate and comes with a 1 1⁄4″ Lg. × 5⁄8″ Wd. straight cam and a 13⁄16″ Lg. × 5⁄8″ Wd. offset cam. Lock is zinc-plated steel.

	For Max. Thick.		
Deadbolt Drawer	3⁄4″	17825A21	$2.86
Cam	3⁄4″	17825A22	4.55

Lock Cylinders

Lock cylinders snap into compatible cam and deadbolt lock bodies. Removal requires the lock cylinder removal tool (sold separately).

Cylinders come with two keys and a trim ring adapter that adapts the cylinder for use in 3⁄4″ diameter holes. Note: Master key for master-keyed lock is sold separately.

To Order: Please specify black, brass, or nickel finish.

Spring-Cam Latches

Knob

Slotted

T-Handle

These latches have a spring-wire cam that slips under a receiving catch to create tension and hold doors and drawers closed. Turn the head 90° to the left to release the tension and unlatch. They can be screwed, riveted, or welded to your mounting surface.

All have a dull finish. Mount in metal, plastic, or wood. Mounting screws are not included.

Lift-and-Turn Tight-Hold Cam Latches and Locks

L-Handle Latch

Keyed Paddle-Handle Lock

Also known as compression cam latches and locks, these reach full compression when you lift the handle, turn it a quarter-turn, and then push it down for a secure hold. You select the turn direction when you mount the cam.

Latches and locks are zinc. They come with a reversible offset cam (unless noted) and mounting hardware. The offset cam provides variable latching-distance ranges depending on the cam position. Mount in metal, plastic, or wood.

Keyed paddle-handle locks include two keys. They open with key number CH751.

★Cam is not reversible.

For information about cam latches and locks, see page 2928.

Tight-Hold Cam Latches and Locks

Also known as compression cam latches and locks, turn the handle a quarter-turn to latch, then another quarter-turn to draw the cam firmly against the door or drawer surface for a secure hold. Turn the handle a continuous half-turn to unlatch.

Styles A-B and **D-F** have a maximum clamping force of 100 lbs. They are zinc with a black-painted finish and come with a reversible offset cam to provide variable latching-distance ranges depending on the cam position. Mount in metal, plastic, or wood with the included hardware.

Style C is not rated for maximum clamping force. It is dull aluminum and comes with a straight cam. Mount in metal.

(A) Hex Socket Latch—Cam offset is 1/2″. To unlatch, use a 5/16″ hex key (not included).

(B) Slotted Latch—Cam offset is 1 1/16″. To unlatch, use a slotted screwdriver.

(C) L-Handle Latch—Cam is straight. Latch has a 3″ Lg. × 1 1/4″ Wd. mounting plate and requires four No. 10 mounting screws.

(D) T-Handle Latch—Cam offset is 1/2″.

(E) Circular-Keyway Lock—Cam offset is 1 1/16″. Lock comes with one key.

(F) T-Handle Lock—Cam offset is 1/2″. Lock comes with two keys.

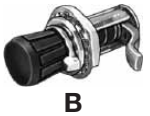
Adjustable-Tension Tight-Hold Cam Latches

A



B

C

D

E

F

Latch Cover for Styles C and F

Also known as adjustable compression cam latches, these adjust to compensate for door or drawer misalignment. To latch, turn the knob a quarter-turn and then continue turning it as much as you need to draw the cam firmly against the door or drawer surface for a secure hold.

Latches come with a nonreversible offset cam, unless noted. Mount in metal, plastic, or wood. All have a dull finish.

Styles A, B, D, and **E** include mounting hardware.

Styles C and **F** require two No. 10 screws (screw holes are 1 1/4″ center-to-center).

Slotted—Use a screwdriver to latch and unlatch.

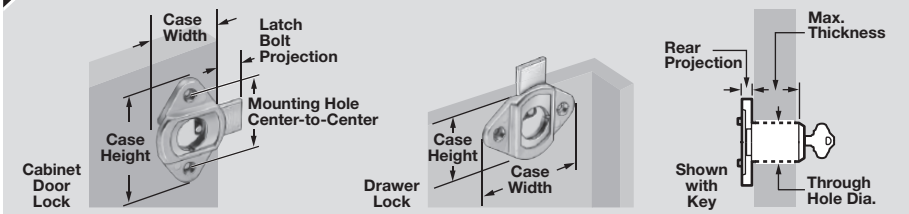
Keyed Lock

Cabinet Door & Drawer Locks

About Cabinet Door and Drawer Locks



Cabinet door and drawer locks are usually used in wood doors and come with wood screws. Keys can be removed in both the locked and unlocked positions.

Deadbolt Cabinet Door and Drawer Locks

Diamond Case for Cabinet Door

Diamond Case for Drawer

Rectangular Case for Cabinet Door

Rectangular Case for Drawer

Locks come with two keys and mounting hardware. Note: Master keys for master-keyed locks are sold separately.

Locks with Diamond Case—Case and cylinder are zinc. Latch bolt projection is 3/8″. Screw holes are 17/16″ center-to-center. Case is 2″ Ht. × 1 3/8″ Wd. for door; 1 3/8″ Ht. × 2″ Wd. for drawer.

Pry-Resistant Locks with Rectangular Case—Thicker bodies and longer bolts resist prying to provide more security than other deadbolt cabinet door and drawer locks. Case is zinc; cylinder is brass. Latch bolt projection is 3/4″. Screw holes are 1 5/16″ center-to-center. Case is 1 5/8″ Ht. × 1 1/4″ Wd. for door; 1 1/4″ Ht. × 1 5/8″ Wd. for drawer.

Strikes for Deadbolt Cabinet and Drawer Locks

This strike has a 3 3/8″ Lg. × 1/4″ Wd. slot that works with most deadbolt cabinet and drawer locks. Mount it on the right or left side of a wood cabinet door or drawer. Strike is dull steel.

Overall size is 4″ Lg. × 2 13/16″ Wd. × 1/16″ Thick. It has a 3/16″ dia. mounting hole (screws not included).

8051A11 ..... $3.73

For information about cabinet door and drawer locks, see page 2934.

Keyed File Cabinet Locks

Replace locks in file cabinets that have existing mounting brackets. Locks are 13/16″ Ht. × 9/16″ Wd. They include two keys and a mounting screw, unless noted.

All locks are zinc. Locks *with round bolt* have a dull nickel finish. Locks *with rectangular bolt* have a dull chrome finish.

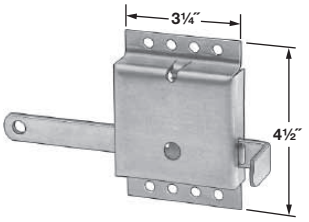
■ Has a 0.095″ spring pin (also called a roll pin or tension pin) for mounting.

Spring-Loaded Padlockable Slide-Bolt Latches

With its spring-loaded bolt, this latch is often used on 2″ and 3″ track to keep sectional overhead doors closed. It is galvanized steel. Maximum padlock shackle diameter is 5/16″.

Latch is reversible for right- and left-hand mounting and requires 1/4″ dia. mounting screws.



Proj.		
7/8″	15585A51	$7.03

Adjustable-Bolt Sliding Window Locks

Secure overlapping sliding glass windows like those in bookcases and display cases. Locks are 4 5/8″ Lg. × 5/8″ Wd.

The lock has a ratchet bar with thumbscrew adjustment. To lock, slide the ratchet bar through the lock cylinder; to unlock, turn the key 90° to the right and remove the ratchet bar from the lock cylinder. Locks are zinc with a dull nickel finish. They include two keys and mounting hardware.

Push-Bolt Sliding Window Locks

Lock sliding windows in a closed position, or slightly open for ventilation. To lock, push in the cylinder; to unlock, turn the key 45° to the right or left. Lock is zinc with a dull aluminum finish.

Lock is 1 3/8″ Lg. × 1 3/4″ Wd. with a 1″ projection. The latch bolt extends 1/2″ from the window's edge. The strike plate has a 3/8″ inside dia. and requires a 1/2″ dia. mounting hole. Lock includes two number 801 keys and mounting hardware.

1048A14 ..... $12.36

Keyed Locker Locks

Surface mount these locks to the back of a locker door. They are for right- and left-swinging doors. The latch bolt moves horizontally and projects 5/16″ from the door's edge. The key is removable only in the locked position. Locks are cadmium-plated steel.

Case is 2 11/16″ Ht. × 2″ Wd. Rear projection is 15/16″. Mounting holes are 2 3/16″ center-to-center. Locks include two keys and mounting hardware. Note: Master key for master-keyed lock is sold separately.

Resettable-Combination Locker Locks

For Right-Swinging Doors

For security, you can change the combination of these Master Lock locks in seconds. The back of each lock has a push-button combination changer that allows you to switch between five three-number combinations. A control key overrides the combination (sold separately).

Locks are steel with a black plastic dial. They mount in an 1 1/16″ dia. through hole in doors up to 1/8″ thick. Case is 2 7/8″ Ht. × 1 7/8″ Wd. All locks have concealed mounting bolts to prevent tampering. Mounting holes are 2 3/16″ center-to-center. Mounting hardware is included.

Self Locking with Vertical Latch—For lockers with pull-up handles and automatic bar-and-rod releases. Latch bolt projects 5/16″ from the door's edge.

Self Locking with Horizontal Latch—For lockers without handles. Latch bolt projects 1/4″ from the door's edge.

Manual Locking—For metal mesh lockers and lockers with automatic bar-and-rod releases. Latch bolt projects 5/16″ from the door's edge.

Control key overrides the combination.

To Order: For locks, please specify if order is for a new system or an existing system. If you are ordering for a new system, you must order a control key (sold separately). If you are matching an existing group of locks, please specify key number.

	Latching Direction	For Right-Swinging Doors♦		For Left-Swinging Doors♦	
Self Locking	Vertical	1504A11	$16.02	1504A12	$16.02
Self Locking	Horizontal	1504A21	17.84	1504A22	17.84
Manual Locking	Horizontal	1504A33	18.53	1504A35	18.53
Control Key				1504A31	3.76

♦To determine door swing direction, stand facing your locker. If the hinges are on your right, you need a right lock; if they're on the left, you need a left lock.

Deadbolt Locks for Sliding Cabinet Doors

Also known as push-bolt locks, these locks secure sliding doors, such as those found on display cases. To lock, push in the cylinder. To unlock, use the key. Locks are brass with a dull finish.

Rear projection is 7/16″. Strike is 7/16″ Dia. × 3/8″ Lg. and has a 5/8″ collar, unless noted. Mounting holes are 1 3/8″ center-to-center (screws not included). All come with two keys.

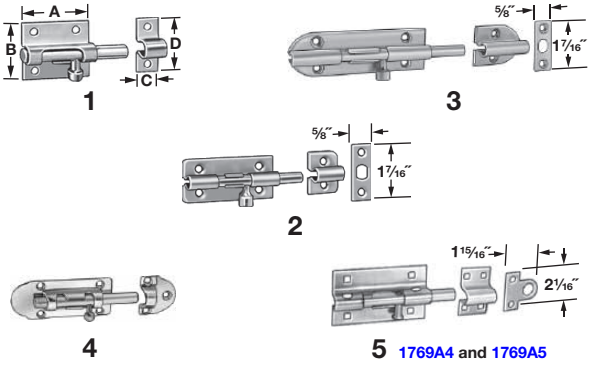
Lift-and-Drop Barrel Slide-Bolt Latches



Slide the bolt and drop the knob into the notch to secure your door. The knob stays out of the way when not in use. All latches are reversible for right- and left-hand mounting. They include mounting screws, except Style 4.

Style 4—Latches require No. 6 screws.

Style 5—1441A21 and 1441A42 have a 1/4″ maximum padlock shackle diameter; they do not have a second strike plate. 1769A4 and 1769A5 have a 3/8″ maximum padlock shackle diameter.

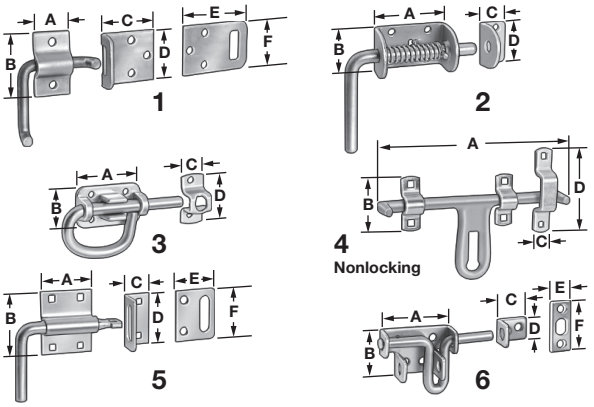
Easy-Grip Lift-and-Drop Barrel Slide-Bolt Latches



Large handles make gripping these latches easier than other lift-and-drop barrel slide-bolt latches. Slide the bolt and drop the handle to secure your door. The handle stays out of the way when not in use. All latches are reversible for right- and left-hand mounting. They include mounting screws, except Styles 1, 2, and padlockable Style 4.

Style 1—(E) is 3 7/8″ and (F) is 2 1/2″. Requires 3/8″ dia. screws.

Style 2—Requires 1/4″ dia. screws.

Style 3—1754A24 has an additional strike plate; (E) is 1″ and (F) is 2 3/16″.

Style 4—Requires No. 10 screws. 1241A3 and 1241A4 have a maximum padlock shackle diameter of 5/8″.

Style 5—Maximum padlock shackle diameter is 3/8″, (E) is 2″, and (F) is 2 1/4″.

Style 6—For 10635A45 the maximum padlock shackle diameter is 1/4″, (E) is 5/8″, and (F) is 1 1/4″. 10635A65 and 10635A85 have a maximum padlock shackle diameter of 3/8″. For 10635A65 (E) is 3/4″; (F) is 1 5/8″. For 10635A85 (E) is 7/8″; (F) is 1 7/8″.

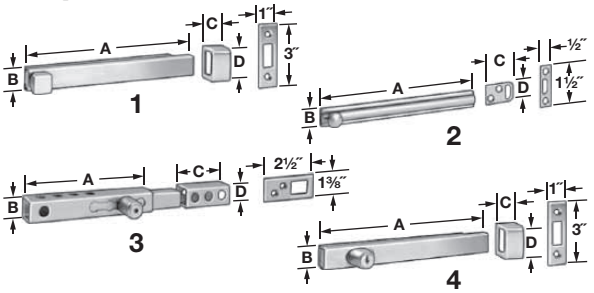
Tamper-Resistant Slide-Bolt Latches and Locks



The mounting screws on these latches and locks are concealed to prevent tampering. All are reversible for right- and left-hand mounting. Mount vertically or horizontally with the included hardware.

Padlockable Latch—You can lock the slide bolt in any of four locking positions. Padlock must have a vertical shackle clearance that exceeds 1″. Maximum padlock shackle diameter is 7/16″.

Locks—Slide bolts can be locked in the open or closed position. Locks come with two keys.

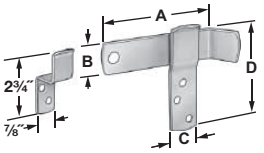
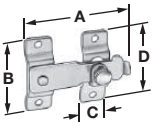
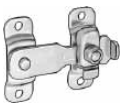
Swinging Bar Latches



Standard



Screw Tight



Push Button

These latches are reversible for right- and left-hand mounting. Mounting hardware is included.

Standard—The strike creates a sleeve to hold the bar. A back catch holds the bar when it's not latched.

Screw Tight—Tighten the screw to secure the bar and prevent accidental unlatching.

Push Button—Latches snap shut when the bar is placed in the strike to prevent accidental unlatching. Push the button on the bottom of the strike to release the bar.

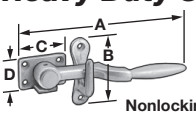
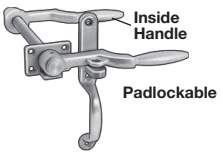
Heavy Duty Swinging Bar Latches



Nonlocking



You'll often see these latches on refrigerators and truck doors because they stand up to heavy use. Latches are reversible for right- and left-hand mounting. Mounting screws are not included.

Nonlocking—Latch is zinc-plated steel.

Padlockable—Latch comes with two handles for access from the inside as well as the outside. Latch is zinc-plated iron with a zinc handle. Minimum door thickness is 2″. Maximum padlock shackle diameter is ⅜″. Latch has a through-door rod that is 9⁄16″ Dia. × 8¾″ Lg.; thread length is 7″.

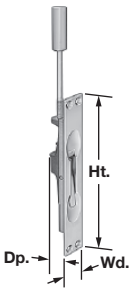
Pry-Resistant Deadbolt Locks for Double Doors



Designed to withstand vandalism better than other deadbolt locks for double doors, these mortise mount into a cutout in the doors. They have a latch bolt to secure doors in the closed position. Locks are brass and include two strike plates. They are for metal doors.

Cam Latches and Latch Kits

Latches arrive ready for single-point latching. For more holding power, add a latch kit (sold separately) for two-point latching, or add two latch kits for three-point latching (except 11595A41 is for single-point latching only). For multiple-point latching, use Style A on 7″-68″ high doors and Styles B-E on 20″-118″ high doors.

(A) Nonlocking with Ring Handle—The ring handle is recessed to stay out of the way when not in use. Lift and turn the handle 90° to unlatch; you select the turn direction when you mount the cam. Latch is chrome-plated steel and comes with a reversible offset cam and mounting hardware. **Latch kit** has a rod and a rod guide. Guide requires #10 mounting screws.

(B&C) Nonlocking with T-Handle—Turn the handle 90° to unlatch; you select the turn direction when you mount the cam. Latches are zinc-plated steel and zinc and come with a cam and mounting hardware. 11595A41 has two handles (one inside and one outside). **Latch kits** have a rod and a rod guide. Guide requires M6 mounting screws.

(D&E) With Folding T-Handle—Turn the handle 90° to unlatch. Latches are dull 300 series stainless steel with a chrome-plated zinc handle. They come with a straight cam and mounting hardware. **Latch kits** have a rod and a rod guide. Guide requires M6 mounting screws.

To Order: For Styles D and E, please specify unlatching direction: counterclockwise to unlatch or clockwise to unlatch.

Two-Point Push-to-Close Latches and Locks with Paddle Handle

A paddle handle activates the top and bottom spring-loaded latching points to secure large doors. The handle does not latch. Mount vertically or horizontally. Latch and lock are zinc-plated steel with a black-painted zinc handle and a plastic latch bolt that extends 5/8″ from the door's edge. Handle fits in a 4″ Ht. × 1 11/16″ Wd. cutout. Projection is 1 3/16″; rear projection is 1 13/16″.

Latch and lock come with a mounting bracket and two 1/4″ Dia. × 48″ Lg. connecting rods that can be cut to size. Mounting holes are 1 3/4″ and 1 1/4″ center-to-center. Require 10-24 mounting screws.

Keyed lock has a random key number. It comes with two keys.

L-Handle Three-Point Cam Latches and Locks

Side, top, and bottom latching points secure large, heavy doors that are subject to strenuous use, such as those found on trucks and large access doors. They are zinc-plated steel and have two handles: a 7 1/2″ long outside handle with a 5/8″ Sq. × 6″ long spindle that mounts through the door and a 9 1/4″ long inside safety-release handle that opens the latch even if the outside handle is locked.

They have a 3 1/16″ long straight cam for side latching. For top and bottom latching, rods connect the top and bottom slide bolts, which have a 1 1/2″ latching distance. Use a hacksaw to cut rods and spindle to size. Require 1/4″ mounting screws. Screw holes on handle plate are 7 3/8″ and 1 1/4″ center-to-center; on latch plates they are 3 1/8″ and 2 3/4″ center-to-center.

Push-to-Close Latches with Remote Push-Button Release

Operate latches around corners and other obstructions—a flexible cable connects the latch and the T-handle. Pull on the handle to retract the spring-loaded latch bolt. Bend radius of the cable is 1 1/2″. The maximum cumulative bend is 720°. Through-hole mount the handle and bolt housing or surface mount them using the included mounting plates. The through-hole mounting size is 1/2″ for the handle and 9/16″ for the bolt housing.

Latches are zinc-plated steel with a plastic handle and stainless steel strike plates. Mounting requires 1/4″ dia. and No. 10 screws.

With Two Latch Points

To Order: Please specify cable length from those listed. Note: For latches with two latch points, cable length is for each length of cable.

No. of Latch Points	Cable Dia.	Bolt Dia.	Latch Bolt Proj.	Handle Wd.	Handle Proj.	Strike Plate Lg.	Strike Plate Ht.	Strike Plate Proj.	Mounting Plate Lg.	Mounting Plate Wd.	Mounting Plate Proj.	Choose a Cable Length, ft.

About Draw Latches

Draw latches operate by pulling surfaces together and holding them closed. They are also known as tension latches.

Latching distance is how far apart a mounted latch can be from the surface it's drawing to itself. Specifically, it's the distance between the center of the mounting hole closest to the latch arm and the farthest inside surface of the latching arm when the latch is closed.

The **overall length** listed includes the strike plate.

Draw Latches and Locks

A 
B  Nonlocking Latch

C 

D 

E 

F 

G  Nonlocking Latch

H 

J 

K 

L 

Latch and pull the handle down to close these latches, which are also known as tension latches. Latches have a fixed latching distance. Mounting screws are not included.

Styles C and **G** are strikeless; they hook into a lip or notch in the item being latched.

Style C has a vinyl-coated arm so it won't scratch surfaces.

Style F has a safety catch to prevent accidental opening.

Style L opens with key number 931A and comes with one key.

Plastic and Rubber Draw Latches

A 

B 

C 

Nonmetal bodies make these latches corrosion resistant. Latching distance is fixed. Mounting screws are not included.

Plastic latches have a temperature range of 32° to 150° F.

Rubber latches absorb vibration and stretch to compensate for slight misalignment. They have 300 series stainless steel strike plates. Temperature range is -20° to 120° F.

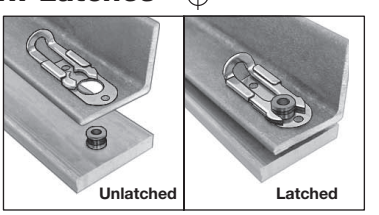
Slide-Snap Draw Latches



To secure overlapping components, pull the slide over the stud until they snap together. These latches resist shock and vibration. They are dull 304 stainless steel. Latches are 1 3/4" Lg. × 1 11/16" Wd. and project 1/2". Stud has a 3/8" dia. head. Latching distance is fixed. Latches require M3 mounting screws.

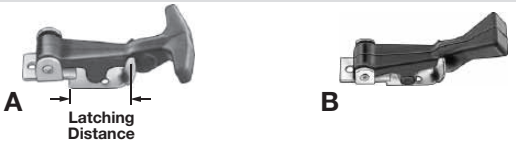
1872A72 includes a steel spacer for installation.

For Mounting Surface Thickness	Latching Distance		
0.046"-0.080"	5/8"	1872A71	$6.12
0.081"-0.128"	5/8"	1872A72	6.51

Weather-Resistant Draw Latches

Rubber bodies make these latches corrosion resistant. They also absorb vibration and stretch to compensate for slight misalignment. Color is black. Mounting screws are not included.

With Metal Strike Plate



Temperature range is 0° to 200°F, except those with a 15/16" latching distance are not rated for temperature.

T-Handle Tight-Hold Draw Latches

These latches are typically used to secure hoods and covers. Designed with a spring loaded handle, they withstand vibration better than other draw latches for a more secure hold. Mounting screws are not included.

	Latching Distance	Overall Lg.	Overall Wd.	Proj.	Screw Size

Adjustable-Grip Draw Latches

A threaded rod lets you adjust the latching distance to compensate for gasketing and misalignment. The overall length listed includes the strike plate; it is measured with the rod extended to maximum latching distance. Mounting screws are not included.

Nonlocking Latches—*Black plastic* has a temperature range of -20° to 175°F.

Nonlocking Latches with Safety Catch—Have a safety catch to prevent accidental opening.

♣ Strike plate is plastic.

Gasket-Sealing Draw Latches with Safety Catch

Nonlocking

Padlockable

In addition to a safety catch to prevent accidental opening, these latches use downward compression to pull surfaces together for sealing gasketed doors. Mounting screws are not included.

Padlockable latches have a maximum padlock shackle diameter of 1/4".

Note: Capacity is the maximum amount of force the latch can withstand.

Multiple-Strike Draw Latches

Each latch comes with a variety of strike plates, so you can choose the best mounting direction for your application. Mounting screws are not included.

Nonlocking with Safety Catch—Latches have a safety catch to prevent accidental opening.

Note: Capacity is the maximum amount of force the latch can withstand.

■ Overall length includes the strike plate; it is measured with the rod extended to maximum latching distance.

▲Latch is strikeless; it hooks into a lip or notch in the item being latched.

High-Capacity-Rated Adjustable-Grip Draw Latches

Demanding applications require latches with the highest capacity ratings we offer. A threaded rod lets you adjust the latching distance to compensate for gasketing and misalignment. Mounting screws are not included.

Nonlocking with Safety Catch—Latches have a safety catch to prevent accidental opening.

Note: Capacity is the maximum amount of force the latch can withstand.

▲ No mounting holes; designed for welding. ■ Made of plain steel.

Corner-Mount Tight-Hold Draw Latches

Nonlocking with 90° Angle Strike Plate

Padlockable with Safety Catch and Straight Strike Plate

Mount these latches on a corner to draw perpendicular surfaces together. Designed with compression springs to withstand vibration better than other draw latches, they offer a more secure hold. Latches are polished 304 stainless steel. Mounting screws are not included.

Padlockable with Safety Catch—Latch has a safety catch to prevent accidental opening. It accepts a padlock with a 3/16″ max. shackle diameter.

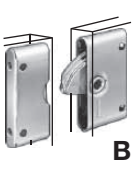
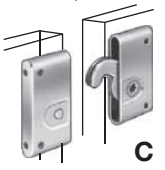
Hex-Socket Draw Latches

A



B



C

Use a 5/16″ hex key to open and close these latches. A hole must be drilled in your panel for hex key access. Latches are zinc-plated steel. Mounting screws are not included.

Style A has front tab mounting holes for mortise mounting.

Styles B and **C** have both side and back mounting holes, so they attach to the side of the panel or mortise into the panel.

Note: Capacity is the maximum amount of force the latch can withstand.

Snap-Down Draw Latches

These latches snap in place to eliminate rattling and hold access doors, screens, windows, and panels together. Arm width is 7/16". Latches require No. 10 mounting screws.

Zinc-plated steel latches have one mounting hole. **Polished 304 stainless steel** latches have two mounting holes (9/16" center-to-center).

Turn-to-Open Draw Latches and Locks

Nonlocking | Padlockable | Keyed

Lift and turn the handle 180° to open and close these latches and locks. Mounting screws are not included.

Tight Hold—A spring-loaded handle provides a tight hold and compensates for misalignment.

Padlockable latches accept padlocks with a 3/8" max. shackle diameter.

Keyed lock comes with two keys and opens with key number 801.

Note: Capacity is the maximum amount of force the latch can withstand.

Mortise-Mount Tight-Hold Turn-to-Open Draw Latches

After it's mounted, the latch creates a nearly flat surface that protects it from damage. With a spring-loaded handle, these hold tighter than other turn-to-open draw latches and compensate for misalignment. Lift and turn the handle 180° to open and close these latches. Made of zinc-plated steel. Mounting screws are not included.

Gate Latches and Locks

All surface mount and are for right- and left-swinging gates. Latches and locks *with straight bolt* are for gates that close flush with the post. Latches *with 90° bolt* are for gates that overlap the post when closed.

Nonlocking Latches—A hidden push-button release on the bottom of these latches retracts the latch bolt; this discourages unwanted entries, but allows access to those who know it's there. Latch bolt extends 7/16" from the door's edge.

Padlockable Latches—Push to close and pull up on the latch arm to open these latches. They have a 3/16" dia. hole for a pull cord or chain, except zinc-plated steel Style 2 has a 1/8" dia. hole.

Keyed Lock—With a key-locking mechanism, this lock provides more security than gate latches.

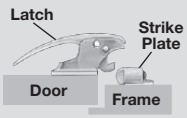
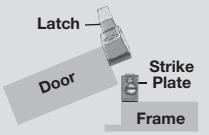
Push-to-Close Latches

About Push-to-Close Latches

When choosing between a face-mount latch and an edge-mount latch, consider the offset of your door. **Offset** is the space between the front of the door and the frame.

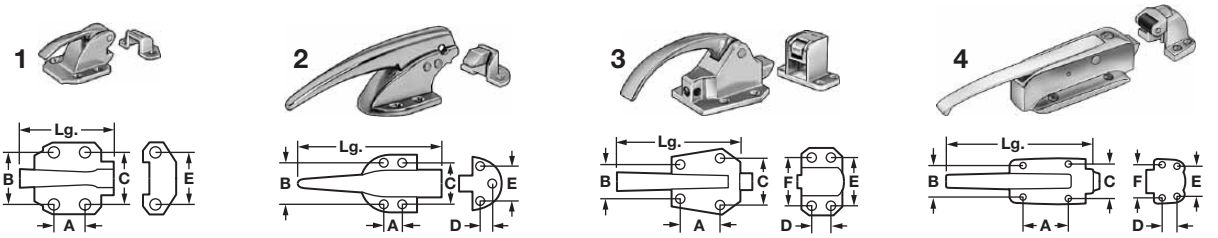


Face-Mount Latches—Mount horizontally to the front of the door with the strike plate mounted on the frame. Strike plate accommodates flush or offset doors.



Edge-Mount Latches—Mount vertically to the side edge of the door with the strike plate mounted behind it on the face of the frame. Latches need a minimum 3/4" offset.

Face-Mount Push-to-Close Latches and Locks with Handle



Keep doors on refrigerators and industrial enclosures closed. Mount these latches and locks horizontally to the face of your door with the strike plate mounted on the frame. Styles 2-4 can mount to oven doors. Mount on the right or left side of the door. Mounting screws are not included.

Nonlocking Latches—Come with three fixed strike plates to accommodate different door offsets. They are not recommended for use on oven doors.

Padlockable Latches—Have an adjustable strike plate to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. Maximum padlock shackle diameter is 1/4".

Keyed Locks—Have an adjustable strike plate to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. Locks come with two keys and open with key number 105. Meet NSF/ANSI standards.

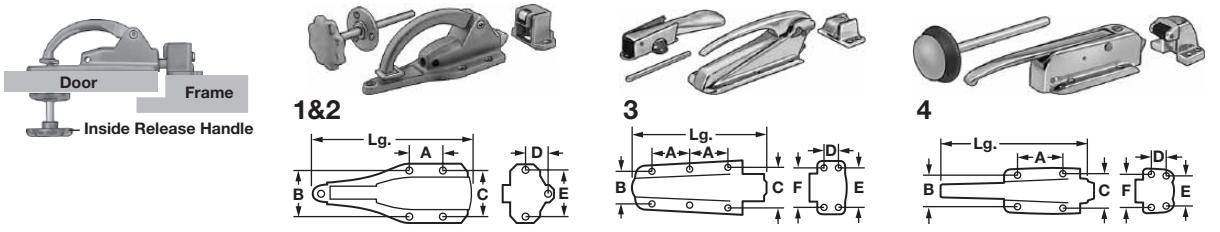
Face-Mount Push-to-Close Latches and Locks with Emergency Release Handle



An emergency release handle offers a means of escape if the door closes with someone inside your enclosure. Mount these latches and locks horizontally to the face of doors on refrigerators, ovens, and industrial enclosures with the strike plate mounted on the frame. They have an adjustable strike plate to compensate for changes in offset caused by sagging doors and worn or flattened gaskets.

Mount on the right or left side of the door. Mounting screws are not included. Latches and locks require 1/4" mounting screws, except Style 1 latches with 4 1/8" projection require No. 10 screws. *Style 4* locks also require No. 10 screws.

Style 1 is silver-painted iron. **Style 2** is polished 304 stainless steel. **Styles 3&4** are chrome-plated zinc.

Keyed Locks—Come with two keys and open with key number 105. They also accept a padlock. Locks *with fiberglass rod* work in temperatures down to -40° F.

For information about push-to-close latches, see page 2946.

Pressure-Venting Face-Mount Push-to-Close Latches with Handle

Internal pressure in equipment such as spray booths and drying ovens automatically opens these latches. Manually open them by pulling on the handle. Mounting screws not included. FM approved.

Release force is the amount of pressure an enclosed area can sustain before the latch opens. Adjust the catch to make the latch more or less sensitive to pressure. Styles 1 and 2 adjust with a slotted screwdriver. Style 3 adjusts with a 3/16" hex key.

Styles 1&2 are reversible for right- and left-side door mounting.

Style 3 is not reversible. **To Order:** For Style 3, please specify right or left door mounting location. To determine door mounting location, look at the outside face of your door: if the hinges are on the right, order a right-side latch; if the hinges are on the left, order a left-side latch.

Edge-Mount Push-to-Close Latches and Locks

Mount these latches and locks vertically to the side edge of doors on refrigerators, ovens, and industrial enclosures. They require a 3/4" offset between the door face and the frame when the door is closed and have an adjustable strike plate to compensate for changes in offset caused by sagging doors and worn or flattened gaskets. They are chrome-plated zinc, except Style 3 has a black plastic handle. Mount on the right or left side of the door. Mounting screws are not included.

Padlockable Latch—Maximum padlock shackle diameter is 5/16".

Keyed Locks—Come with two keys. *Style 2* opens with key number 01. *Style 3* opens with key number 1313 and has a magnetic strike plate for airtight closure.

Push-to-Close Latches and Locks with Push-Button Release

To open, push in the knob and pull the tab. Latch and lock are black plastic. They require No. 6 mounting screws. Latch bolt projects 5/16". Temperature range is 0° to 150° F.

Note: Maximum latching distance is the maximum possible space between the bolt and the front surface of the door.

Keyed Lock—Comes with two keys.

Push-to-Close Latches and Locks with Paddle Handle

Also known as paddle latches and locks, these are often seen on electrical panels, cabinets, and lockers. They are zinc-plated steel.

Style 1—Mount on the right or left side of the door. They include mounting hardware.

Style 2—To determine door mounting location, look at the outside face of your door: if the hinges are on the right, order a right-side latch; if the hinges are on the left, order a left-side latch. Require No. 8 screws.

Ring-Handle Push-to-Close Latches

Plastic

When you release the spring-loaded ring it returns to its recessed position to stay out of your way. These latches open from the inside as well as the outside. From the outside, pull the recessed ring to unlatch. From the inside, slide the release tab on the back of the latch to unlatch. Latches are nonlocking. They have a stainless steel strike plate and require No. 10 screws. Maximum latching distance is the maximum possible space between the bolt and the front surface of the door.

Plastic latches have a temperature range of 0° to 140° F.

Optional Sealed Cover for Style 3

Latches and locks open with a turn of the knob or key. All are for through-hole mounting. Latch bolt projects 5/16". Maximum latching distance is the maximum possible space between the bolt and the front surface of the door.

Style 1—All are chrome-plated zinc. They require No. 6 mounting screws. Temperature range is 0° to 150° F. *Keyed locks* come with two keys.

Style 2—When not in use, you can push the knob in so it's flush and out of the way; it pops out with a touch. Latches can be secured with the knob in or out. They are plastic with a stainless steel strike plate and require No. 10 mounting screws. Temperature range is -20° to 140° F. 1248A11 is dull black; 1248A12 is polished silver.

Style 3—The low-profile design means less of the lock is exposed, reducing the potential for damage. Locks are chrome-plated zinc and require No. 6 mounting screws. They come with two keys. *Optional sealed covers* protect these latches from dirt and debris. They are black plastic. Temperature range is -40° to 175° F.

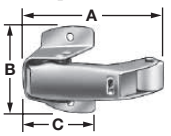
Snap-Arm Roller Latches



You don't need a mating strike plate for this latch—its spring-loaded arm snaps to engage when you close the door. Open the door to release the latch. Latch is zinc-plated steel with a rubber roller. Surface mount with the included screws.

(A)	(B)	(C)	Proj.	Mounting Hole Ctr.-to-Ctr.		
2 3/4"	2 1/2"	1 3/16"	1 3/4"	2 1/8"	**1302A11**	$6.16

Roller Latches

Doors stay closed with the pressure of plastic rollers against the strike plate. Latches include mounting screws, except Style 1.

Style 1 has elongated mounting holes that allow for adjustment. Max. temp. is 150° F.

Style 2 has elongated mounting holes that allow for adjustment. Not rated for temperature.

Styles 3-5 have a projection adjustment screw that allows you to adjust the roller projection from 0″ to 3⁄8″ to compensate for misalignment. Temp. range is -100° to 300° F.

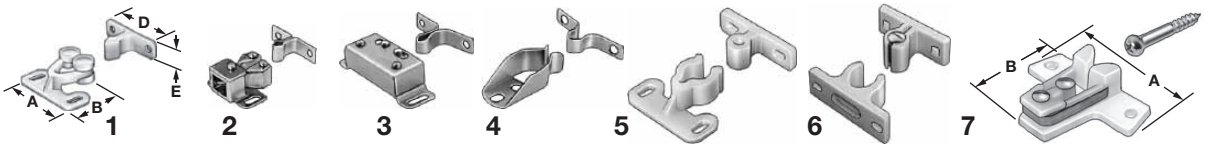
Grab Latches



A catch grabs and holds the strike plate to keep doors shut. Mounting screws are not included, except Styles 2, 4, and 7 come with screws.

Plastic latches have a temperature range of -20° to 150° F.

Style 6 has a screw for adjusting the gripping force on the strike plate.

Multidirectional Ball-Style Grab Latches

Each latch has top and bottom spring-loaded balls that can grab the strike plate from the direction that's best for your application: left, right, front, and/or back. Mounting screws are included. *Brass* latches have a force adjustment screw that allows you to adjust the force needed to open and close the latches.

Two Way—Grab the strike plate from the left or right. Surface mount. Balls are 304 stainless steel. Meet ANSI 156.9.

Three Way—Grab the strike plate from the left, right, or front. Surface mount. *Brass* latches have steel balls. *316 stainless steel* latches have 316 stainless steel balls.

Four Way—Grab the strike plate from the left, right, front, or back. Surface or mortise mount. Balls are 304 stainless steel. Meet ANSI 156.9.

Vibration-Resistant Grab Latches

Their spring-loaded design withstands vibration, rattling, and shaking better than other push-to-close grab latches for a more secure hold. Latches are black plastic and are for surface mounting. Mounting screws are not included.

Latches—Temperature range is -20° to 140° F. Meet UL 94HB for flammability.

Latches with Electrical Switch—An electrical switch allows these latches to power a light or other signal to indicate whether your door is open or closed. They are not for use as access safety switches. Temperature range is -40° to 140° F. Meet UL 94V0 for flammability.

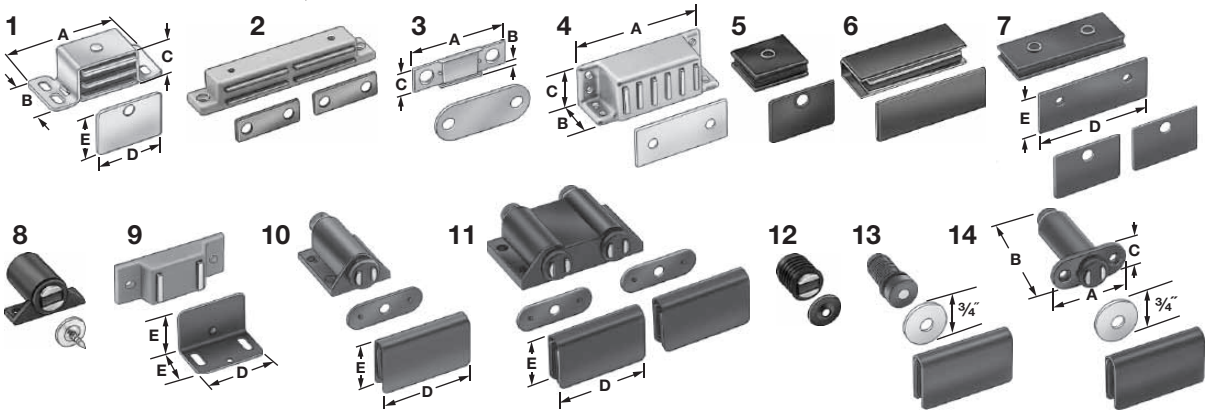
Magnetic Latches



Magnets on the latch and strike plate meet to hold doors shut. These latches can often be found on audio/visual cabinets. Strike plates are steel or stainless steel. Not rated for temperature.

Note: Maximum pull-strength rating given is based on installation with the furnished strike plate; pull strength may be different based on your application.

Style 6 has adhesive on the back for installation.

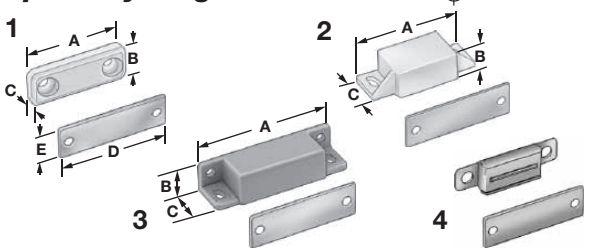
Specialty Magnetic Latches



Keep doors shut in clean room, food service, and high-temperature environments. Mounting screws are not included.

(1&2) Clean Room—For use in sanitary environments, the magnet is encapsulated in white plastic so it won't release particles when it meets the stainless steel strike plate. Temperature range is 15° to 175° F.

(3) Food Safe—Designed to meet NSF/ANSI standards, this latch has a magnet completely sealed in gray plastic to eliminate crevices that can trap food particles. Strike plate is stainless steel. Temperature range is 15° to 175° F.

(4) High Temperature—This dull 304 stainless steel latch can withstand temperatures up to 480° F. Minimum temperature is 15° F.

Ball-Style Grab Latches

Also known as bullet catches, these latches have a spring-loaded ball that grabs and holds the strike plate to keep doors shut.

Style 1—Latch is nickel-plated steel and requires No. 4 mounting screws.

Style 2—Latches are dull brass with a steel ball and strike plate. Mounting hardware is included.

Style 3—These latches are adjustable; push the ball in and rotate it to adjust force as well as compensate for misalignment. Latches are dull brass. Mounting hardware is included.

About Pull Handles

Round Grip—A circular gripping surface allows your hand to pivot in any direction.

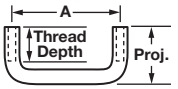
Oval Grip—A rounded edge on the gripping surface conforms to your hand and offers more control than round grip.

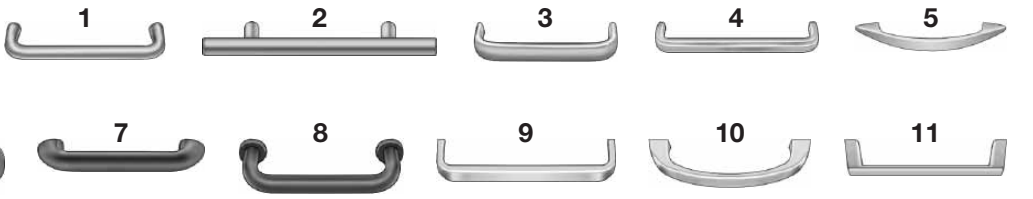
Rectangular Grip—The flat gripping surface prevents your hand from slipping or repositioning, but may be less comfortable than round and oval.

Handle strength varies by fabrication process and material.

Fabrication Process		Material
Forged	**Strongest** ↑	Titanium, Stainless Steel
Cast		Steel
Extruded		Zinc
Formed		Aluminum, Brass
Stamped		Plastic, Rubber

Pull Handles with Threaded Holes





Mounting screws are completely hidden because these handles mount from behind your material. Furnished with mounting screws, unless noted. **Style 1**—*ABS plastic handles* are not rated for temperature. Mounting holes are not threaded, but accommodate #8×1⅛″ self-tapping screws (included). **Style 7**—Minimum temperature is not rated. Maximum temperature is 215°F. **Style 8**—Temperature range is –40° to 320°F.

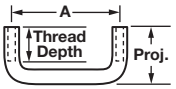
Load-Rated Pull Handles



Force Pulling Straight Out from the Handle

Meet the demands of your heavy duty applications. Note: Load cap. stated is for force pulling straight out from the handle.
Round Grip— Mounting screws not included.
Oval Grip— Mounting screws not included. *Nylon* and *plastic handles* have a temperature range of –20° to 230° F.
Rectangular Grip— Temperature range is –40° to 140° F. Styles 6 and 7 come with mounting screws. Styles 8-10 do not include mounting screws. Styles 9 and 10 have a snap-on cover to conceal screws.

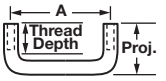
Coated Pull Handles



A step above ordinary, these handles have a coating which inhibits the growth of microbes and protects the handle from degradation. Handles have a round grip with threaded holes. For indoor use.
Cast aluminum handles do not include mounting screws.
Formed Type 303 stainless steel handles come with mounting screws.

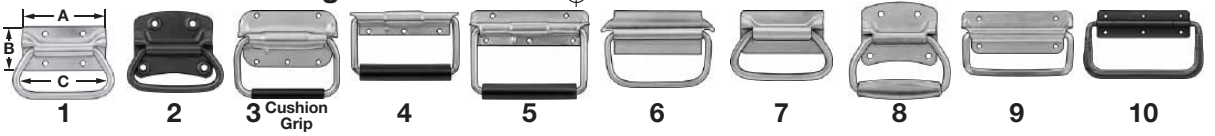
Surface-Mount Folding Pull Handles



Also known as case handles, these pull handles fold to stay out of your way when not in use. Great for use on trash cans, chests, boxes, and cabinets. Mounting plates have unthreaded through holes (except mounting plates on weld-on handles). Plates are 1/16" thick. Mounting screws not included.

Handles have a 90° stop, except Styles 6 and 10. Style 6 has a 120° stop. Style 10 does not have a stop; the handle automatically drops when you release it.

Spring-loaded handles snap flat to stay out of the way when not in use. **Cushion-grip handles** have a rubber grip (except Style 10 has a vinyl grip) for comfort. Temperature range is –40° to 150° F for rubber; vinyl grip is not rated.

Recessed Folding Pull Handles

Fold handles into the mounting plate—they're recessed to stay flush with the mounting surface. Handles have a 90° stop, except Styles 11 and 12 have a 110° stop. All require a cutout in your mounting surface.

Styles 11-16—Mounting plates have unthreaded through holes. *Style 11* comes with screws. *Styles 12-16* do not include screws.

Style 17—Mounting plate has 3/8" deep threaded holes. Mounting screws are included.

Spring-loaded handles snap flat to stay out of the way when not in use. **Cushion-grip handles** have a rubber grip for comfort. *Style 15* handles have a temperature range of –40° to 240° F. *Style 17* handle has a temperature range of –10° to 200° F.

Load-Rated Folding Pull Handles

A load rating lets you know the capability of these handles. Fold them out of the way when not in use. Handles have a 90° stop and a round grip. Mounting plates are 1/16" thick and have unthreaded through holes. Note: Load capacity is based on the use of one handle.

Style 18—Surface mount with the included mounting screws.

Styles 19&20—Handles are spring loaded, so they snap flat when not in use. All have a glass-filled nylon grip; temp. range is 14° to 212° F. Mounting screws not included. *Style 19* handles surface mount. *Style 20* handles are recessed into the mounting plate.

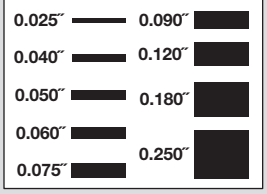
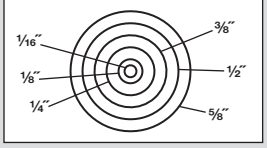
About Hinges

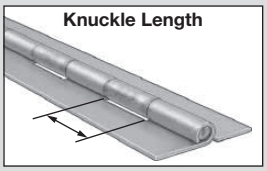
Leaf Thickness



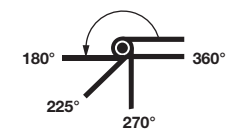
Pin Diameter



Knuckle Length



Range of Motion



Hinge Styles	Door Closed	Door Open	Pages
Surface Mount—The most common type of hinge.			2958-2967; 2969
Extra Clearance—Hinge leaves are offset to accommodate a gasket or trim between the door and frame.			2963
Tight Clearance—Hinge leaves fold closely together to minimize the gap between the door and the frame. Also known as swaged, they're often used on electrical enclosures.			2963
Mortise Mount—Hinge leaves fit into cutouts (mortises) to mount flush with the door and frame edges. They require minimal space between the door and frame.			2967-2968
Half Surface/Half Mortise Mount—Surface mount one leaf and mortise mount the other. They are often used to hang a hollow door on a solid frame.			2968

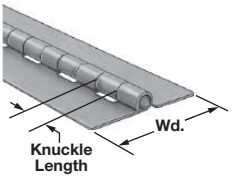
Cutting and Installing Piano Hinges—Most metal piano hinges can be cut between the knuckles with a hacksaw; hinges with a leaf thickness of 0.180″ and thicker may require a band saw. Install *hinges without holes* by spot welding or drilling holes for rivets or screws.

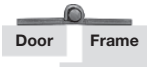
Piano Hinges

For technical drawings and 3-D models, go to mcmaster.com.

Don't see the piano hinge you need? Just tell us what you're looking for and we'll get it for you.

Unfinished Steel Piano Hinges without Holes





Door Closed

Door Open

Hinges have a full range of motion of 270°. All are surface mount. Note: Prices are 15% to 20% lower when you buy 10 or more hinges of the same size.

Zinc-Plated Steel Piano Hinges without Holes

Often used in heating, ventilating, and air conditioning applications, zinc plating provides good corrosion resistance. Hinges have a full range of motion of 270°. All are surface mount.

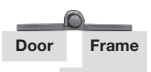
Bright-Finish Type 304 Stainless Steel Piano Hinges without Holes



Door Closed

Door Open

Good for use in marine environments, these hinges have a bright-annealed finish for greater corrosion resistance than plain Type 304 stainless steel. The full range of motion is 270°. All are surface mount.

Aluminum Piano Hinges without Holes

Get good corrosion resistance at a lighter weight than steel or brass hinges. The full range of motion is 270°. All are surface mount. Hinges with a 0.032″ thick leaf and thinner are Alloy 3004; all others are Alloy 5052. Note: Prices are 15% to 20% lower when you buy 10 or more hinges of the same size.

Titanium Piano Hinges without Holes

Titanium provides the corrosion resistance of stainless steel and the strength of steel at a much lighter weight. Hinges have a full range of motion of 270°. All are surface mount.

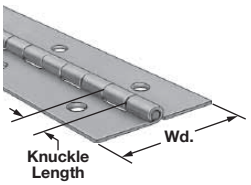
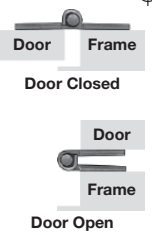
Piano Hinges with Holes





Spend less time on preparation—these hinges have holes so they're ready to install. The full range of motion is 270°. All are surface mount. Holes are countersunk; mounting screws are not included.

Zinc-plated steel and primed steel provide better corrosion resistance than plain steel. *Zinc-plated steel* is often used with sheet metal in heating, ventilating, and air conditioning applications. *Primed steel* has a black electrocoated finish that can be painted.

Type 304 stainless steel has greater corrosion resistance than steel.

Type 316 stainless steel provides greater corrosion resistance than Type 304 stainless steel.

Aluminum has good corrosion resistance and is lighter in weight than steel or brass. *Aluminum with a clear anodized finish* provides greater corrosion resistance than unfinished aluminum.

Polished brass has an attractive finish and provides good corrosion resistance.

Extra-Clearance Offset Piano Hinges without Holes

When the door is closed, the distance between the leaves is larger than the pin diameter, creating an offset to accommodate a gasket or trim. The full range of motion is at least 225°. All are surface mount.

Type 304 stainless steel hinges are more corrosion resistant than unfinished steel.

Tight-Clearance Piano Hinges without Holes

The leaves of these hinges almost touch when the door is closed. Often used in electrical enclosures. The full range of motion is 270°. All are surface mount.

Type 304 stainless steel hinges are more corrosion resistant than unfinished steel.

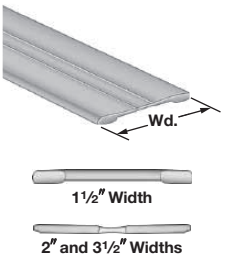
Plastic Piano Hinges without Holes



A lightweight and corrosion-resistant alternative to metal hinges, these plastic hinges provide smooth, silent operation. Mount on the surface of doors and frames with adhesive or fasteners. All are for indoor use. Temperature range is 45° to 150°F, except 11195A11 has a temperature range of 45° to 100°F. Center is white, except 11195A11 is clear.

Acrylic leaves have greater clarity than PVC.

PETG leaves have greater clarity and durability than acrylic.

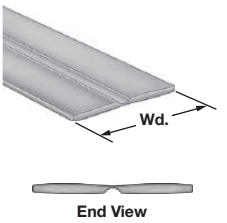
Harsh Environment Plastic Piano Hinges without Holes



Made of polyolefin plastic to resist salt water, oil, solvents, extreme temperatures, and UV rays. Hinges have rigid leaves and a flexible center for smooth, silent operation. Mount on the surface of doors and frames with adhesive or fasteners. Hinges can be cut with a box cutter or razor. All are for indoor and outdoor use. The full range of motion is 280°. Temperature range is –40° to 180°F.

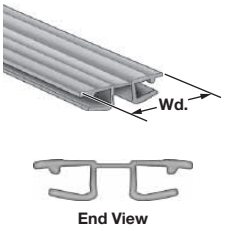
Slip-On Plastic Piano Hinges without Holes



Hang panels without drilling holes or welding—channels grip panel edges for a secure fit. Hinges have rigid leaves and a flexible center. All are for indoor use.

Polypropylene leaves have greater durability than PVC or acrylic. The leaves and center are the same color. Not rated for temperature.

PVC leaves resist chemicals better than the other plastics. They have a white center. Temperature range is 30° to 150°F.

Acrylic leaves have good clarity. Center is white. Temperature range is –40° to 150°F.

PETG leaves have greater clarity and durability than the other plastics. Center is clear. Temperature range is 45° to 100°F.

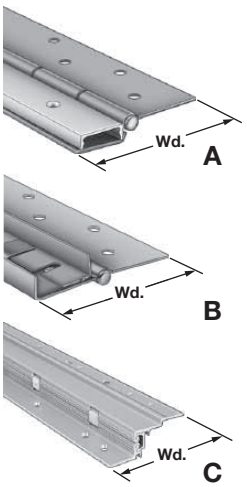
Load-Rated Piano Hinges with Holes



Ensure smooth operation of heavy doors. Hinges have nylon bearings spaced evenly along the length to distribute door weight. The full range of motion is 180°. Fasteners included.

Styles A and B are UL fire-rated for 90 minutes on hollow metal and composite core wood doors. Maximum door thickness is 1¾". *Style A* have one leaf that mounts to the surface of the door, while the other mounts to the frame. *Style B* has one leaf that mounts around the edge of the door, while the other mounts to the frame.

Style C come with a snap-on cover that protects hinge from tampering and creates a finished appearance. Both leaves are surface mount.

Note: Load capacity is based on a maximum door size of 4′ Wd. ×7′ Ht.

Mil. Spec. Piano Hinges without Holes

Hinges conform to military specifications for material, design, and construction. All provide good corrosion resistance. The full range of motion is at least 270°. All are surface mount.

Type 302 stainless steel has better corrosion resistance than aluminum.

Aluminum is lighter in weight than Type 302 stainless steel. Leaves are Alloy 2024-T3511 and pins are cadmium-plated Type 302 stainless steel.

Self-Closing Steel Hinges for Swinging Doors

Open your door or gate in either direction and these hinges will return it to the closed position. The full range of motion is 180°. Hinges are nontemplate—the mounting hole pattern does not meet an industry standard. All come with mounting screws and a tool to adjust the spring tension. Note: Load capacity is based on two hinges per door with the maximum door size listed in the table.

Mortise-mount door hinges have leaves that fit in cutouts (mortises) in your door's edge. They mount to the surface of the frame.

Surface-mount door hinges have leaves that fit around your door's edge. They mount to the surface of the frame.

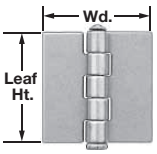
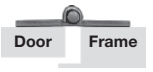
Surface-Mount Hinges without Holes





Door Closed

Door Open

Don't worry about matching a mounting hole pattern—you'll have options when installing these hinges since they don't have holes. *Steel, stainless steel, aluminum, HDPE, and PVDF* hinges mount by welding in place or drilling holes. *Acrylic and polycarbonate* hinges mount with solvent-based adhesive. Full range of motion is at least 265°, except polycarbonate, HDPE, and PVDF hinges have a 180° range of motion. Choose hinges with a nonremovable pin to deter tampering.

Galvanized and zinc-plated steel provide better corrosion resistance than unfinished steel.
Type 304 stainless steel has greater corrosion resistance than steel.
Type 316 stainless steel provides greater corrosion resistance than Type 304 stainless steel.
Aluminum is Alloy 5052. It has good corrosion resistance and is lighter in weight than steel.
Acrylic, polycarbonate, HDPE, and PVDF hinges are lighter in weight and more corrosion resistant than metal hinges.

Note: Prices are 15% to 25% lower when you buy 10 or more hinges of the same size.

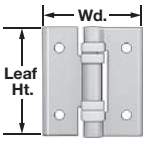
Miniature Surface-Mount Hinges without Holes

Tiny and lightweight, these are our smallest hinges. Mount with solder or adhesive. They have unfinished brass leaves with a riveted middle instead of a pin. The full range of motion is 180°.

Leaf Ht.	Wd.	Leaf Thick.		1-9	10-Up
1/8"	7/16"	0.036"	1600A11	$7.39	$6.52
3/16"	9/16"	0.036"	1600A12	7.45	6.57

Clean Room Surface-Mount Hinges

Keep your environment free of contaminants—polyacetal bushings prevent metal-to-metal contact that can release particles as hinges open and close. Hinges have aluminum leaves and a Type 304 stainless steel pin. The full range of motion is 270°. Mounting screws are not included.



Leaf Ht.	Wd.	Leaf Thick.	Pin Dia.	Screw Size	No. of Holes		
2 9/16"	2 3/8"	0.137"	13/64"	No. 12	4	1795A1	$23.23
3 15/16"	2 3/8"	0.137"	13/64"	No. 12	6	1795A2	27.87

Mortise-Mount Template Hinges

Hinge leaves fit into cutouts (mortises) to mount flush with door and frame edges. The mounting holes form an industry-standard half-moon shape. The leaves fold closely together to fit into tight spaces. For use on wood and hollow metal doors. The full range of motion is at least 180°. Hinges have eight holes for No. 12 screws, except hinges with 3" and 3 1/2" leaf heights have six holes for No. 9 screws. All include mounting screws. Holes are countersunk. Load capacity is based on three hinges per door with a maximum door size of 7 ft. Ht. × 3 ft. Wd. × 1 3/4" Thick. Choose hinges with a nonremovable pin to deter tampering. *Type 304 stainless steel* hinges are more corrosion resistant than steel.

Hinges without bearings are for use on doors without a door closer.

Hinges with bearings are for use on doors with or without a door closer.

Security hinge has concealed bearings. A stud projects from the back of each leaf to prevent the door from being forced open. Includes tamper-resistant screws.

Also Available: Mortise-mount hinges with concealed bearings. Please ask for 16745A55 and specify finish, leaf height, and width.

Mortise Cutters

Create precise outlines for your hinge mortises (cutouts). Position the cutter on your wood door or frame and hit it with a hammer to cut the outline. Use a chisel to remove the wood and make the mortise. Cutters have a scriber for marking the correct depth. Made of heat-treated alloy steel with a black finish.

Leaf Ht.	(A)

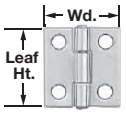
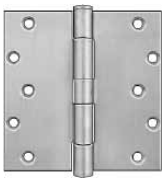
Mortise-Mount Hinges with Nonstandard Mounting Hole Pattern



Square Corners with 4 Holes

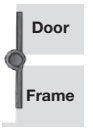
Round Corners with 6 Holes

Round Corners with 8 Holes



Square Corners with 10 Holes

Door Closed



Door Open

The mounting hole pattern on these hinges does not follow an industry standard, which means you can work around worn mounting holes when replacing template hinges. Also known as nontemplate hinges, they are for use on solid and hollow-core wood doors. Holes are countersunk. The full range of motion is at least 270°. Hinges are not for use on doors with a door closer. Mounting screws are not included, unless noted. Hinges with a leaf height of 1″ to 1½″ have three knuckles; all others have five knuckles. Choose hinges with a nonremovable pin to deter tampering.

Zinc-plated steel and Type 304 stainless steel are more corrosion resistant than unfinished steel.

■ Mounting screws are included. ★ Hinges are primed steel.

Half-Mortise/Half-Surface Mount Template Hinges

You only need one cutout (mortise) for these hinges—the offset design allows you to mortise mount one leaf and surface mount the other. Often used when it is difficult to mortise the door or frame, such as when hanging a hollow door on a solid frame. The mounting holes form an industry-standard half-moon shape. Pins are removable. Holes are countersunk. The full range of motion is at least 180°. Mounting screws included.

Hinges without bearings are for doors without a door closer.

Hinges with bearings provide smooth operation on doors with or without a door closer.

Load-Rated Heavy Duty Surface-Mount Hinges

Thick leaves and a large diameter pin make these hinges strong enough for use with heavy doors, such as those on vaults. All have a nonremovable steel pin, which deters tampering. The full range of motion is at least 180°. Hinges with a 5″ leaf height have bearings; those with a 3″ leaf height do not. *Hinges without holes* install by spot welding or drilling holes for rivets or screws. *Hinges with holes* have countersunk holes and include screws, unless noted.

Adjustable hinges have a set screw you can turn to move the door 1/8″ up or down after it's hung. **To Order:** Please specify right-hand or left-hand mount. Use a right-hand hinge if, from the push side of the door, the hinge is on the right; use a left-hand hinge if it is on the left.

Note: Load capacity is based on two hinges per door.

■ Holes are not countersunk. ▲ Holes are not countersunk; mounting screws are not included.

Plastic Surface-Mount Hinges

These one-piece polyolefin hinges resist corrosion and harsh weather. The pinless design provides smooth, silent operation. Temperature range is –40° to 180°F. Holes are countersunk, except hinges with a 1″ high leaf. Mounting screws are not included. The full range of motion is 270°.

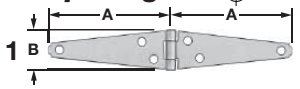
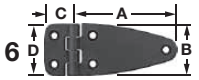
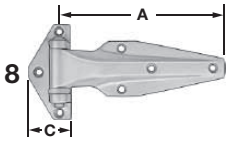
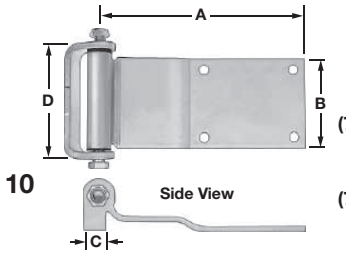
♣ Sold per pair. Mounting screws are included. ■ Holes are not countersunk.

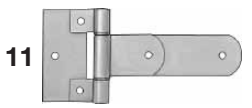
Strap Hinges











Surface mount these hinges on flush-mounted gates and doors. Pins are nonremovable, except Styles 8 and 10. Mounting screws are not included.

Styles 8 and 9 are for service doors, refrigerators, freezers, and industrial enclosures. *Style 8* have nylon bearings for smooth operation. *Style 9* has a nylon bushing for smooth operation.

Style 10 has a 1 3/8" offset to accommodate a door seal.

Styles 11 and 12 have door leaves constructed from multiple layers of metal for extra strength.

Style 13 is often used on self-closing gates. It is spring-loaded and the tension is adjustable.

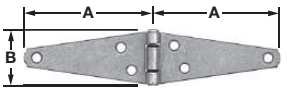
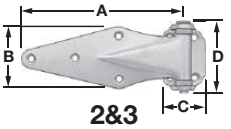
Load-Rated Strap Hinges

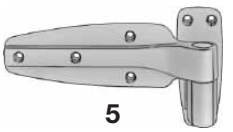


1



2&3

4



5

All are surface mount with countersunk holes. Screws not included.

Style 1—For use on flush-mounted gates and doors. Hinges have a nonremovable steel pin. The full range of motion is 180°. Load capacity is based on one hinge per door.

Styles 2-5—Often used on service doors, refrigerators, freezers, and industrial enclosures. The full range of motion is 180°. Load capacity is based on two hinges per door. Hinges have a removable stainless steel pin, except Styles 2 and 5 have a steel pin. *Style 2* also has nylon washers for smooth operation. *Style 5* has a lift-off design that allows quick removal of the door from the frame. Hinge is reversible and self-lubricating for smooth operation.

Load-Rated Heavy Duty Strap Hinges

Thick leaves, large diameter pins, and a ball-bearing design make these hinges strong enough for heavy duty applications. All hinges are for surface mounting on flush-mounted doors. Hinges are steel with a tan powder-coated finish. The pin is removable and the full range of motion is 180°. Holes are punched and mounting screws are not included. *Style 6* is for manual doors. *Style 7* works with manual and power-operated doors.

Note: Load capacity is based on the number of hinges listed per door with the maximum door size listed.

Self-Closing Gravity Hinges for Partitions

The weight of your door returns these hinges to a closed position without the help of springs. They are often used on restroom doors. A pair includes one hinge for the top of the door and one for the bottom of the door.

Surface-Mount Hinges

Hinges mount to the surface of flush-mounted doors. Pins are removable. The full range of motion is 180°. Hinges come with one-way, tamper-resistant, No. 10 shoulder screws with barrel nuts.

Choose a right-hand or a left-hand hinge. Use a right-hand hinge if, from the push side of the door, the hinge is on the right; use a left-hand hinge if it is on the left.

Mortise-Mount Hinges

The pins on these hinges fit into cutouts (mortises) in doors. Hinges are chrome-plated zinc with a removable steel pin. All are reversible for right-hand and left-hand doors. The full range of motion is 110°. Mounting fasteners are included.

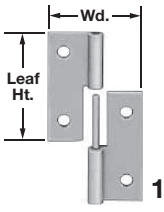
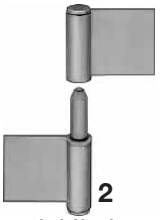
Surface-Mount Lift-Off Hinges



Right Hand with Holes

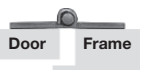


Left Hand

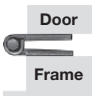
Right Hand

Right Hand

Reversible without Holes



Door Closed



Door Open

The pin in these hinges is permanently attached to the frame leaf so you can quickly lift the door off the hinge without removing the pin. Note: Load capacity is based on two hinges per door.

Hinges *without holes* install by welding or drilling holes for rivets or screws. Hinges *with holes* have four holes. *Styles 4* and *5* are punched prior to plating for better corrosion resistance. Mounting screws are not included. Choose a right-hand hinge if, from the pull side of the door, the hinge is on the right; use a left-hand hinge if it's on the left.

Stainless steel is more corrosion resistant than steel. *Type 316 stainless steel* is more corrosion resistant than Type 304 stainless steel. *Polished Type 304 stainless steel hinge with plastic gasket* keeps the hinge and mounting surface from touching, which prevents corrosion.

Aluminum has good corrosion resistance and is lighter in weight than steel or brass. *Clear anodized aluminum* hinges have plastic bushings to prevent metal-to-metal contact that can release particles as hinges open and close. Often used in clean rooms.

Nylon is lighter in weight and more corrosion resistant than metal.

Chrome-plated brass has a polished finish and provides good corrosion resistance.

Zinc-plated steel is more corrosion resistant than steel, and is often used with sheet metal in heating, ventilating, and air conditioning applications.

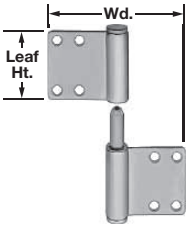
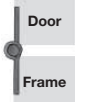
Mortise-Mount Lift-Off Hinges

Template Right Hand



Hinge with Nonstandard Mounting Hole Pattern

Door Closed



Door Open

Mount these hinges into recessed cutouts (mortises) in your door's edge and frame for a neat, flush mount that requires minimal clearance between the door and the frame. The pin is attached to the frame leaf, allowing you to quickly lift the door off the hinge without removing the pin. Mounting screws included. *Primed steel* is corrosion resistant and can be painted. *Type 304 stainless steel* is more corrosion resistant than steel.

Template hinges have screw holes placed in the industry-standard half-moon pattern. The full range of motion is at least 180°. Choose a right-hand hinge if, from the push side of the door, the hinge is on the right; use a left-hand hinge if it is on the left. Screw holes are countersunk. Note: Load capacity is based on three hinges per door, 50-100 daily openings, with a maximum door size of 7′ Ht.×3′ Wd.×1 3/4″ Thick.

Hinges with nonstandard mounting hole pattern do not follow the industry standard, so you can work around worn mounting holes when replacing template hinges. The full range of motion is 270°. Hinges are reversible for right- and left-hand doors. Note: Load capacity is based on two hinges per door.

Narrow-Profile Weld-On Lift-Off Hinges

Weld these narrow hinges in place horizontally or vertically—they can mount flush to the door or offset. They're the right size for tight spaces, narrow frames, and areas close to corners. The pin is permanently attached to the frame leaf so you can quickly lift the door off the hinge without removing the pin. Hinges have a small triangular surface to weld to your door frame, unless noted.

Hinges are reversible for right- and left-hand doors. The full range of motion is 360°, except 13615A54, 13615A55, 13615A56, and 13615A57 have a 270° range of motion.

Steel with grease fitting hinges are easy to lubricate.

Type 316 stainless steel hinges are corrosion resistant.

★Weld the round body directly to your door frame.

Narrow-Profile Screw-Mount Lift-Off Hinges

When space is limited, these narrow, block-style hinges are a good choice. The pin is permanently attached to the frame leaf, allowing you to quickly lift your door off the hinge without removing the pin. Hinges have four mounting holes; mounting screws not included. Screws are concealed when the hinge is closed. The full range of motion is 180°. Note: Load capacities are listed per hinge, except Style 1 hinge capacities are based on two hinges per door.

Overlay—Hinges are reversible to work with both right- and left-hand doors that overlay their frames.

Flush—Hinges are for use on flush-mounted doors. Choose a right-hand hinge if, from the pull side of the door, the hinge is on the right; use a left-hand hinge if it's on the left.

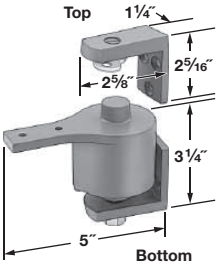
Two-Way-Swinging Self-Closing Pivot Hinges

For smooth swinging in two directions, surface mount these steel hinges to a door or gate frame. Hinges are spring loaded, so they return to the closed position on their own. Adjust the spring tension with the included tool.

The full range of motion is 270°. Hinges are reversible for right- and left-hand doors. Screw holes are countersunk; mounting screws included. Note: Load capacity is based on one hinge per door, with a max. door size of 36" Wd. × 2 1/2" Thick.

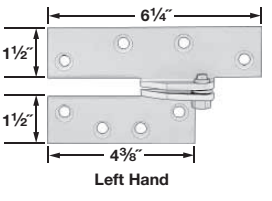


Finish	Screw Size	No. of Holes	Load Cap., lbs.		
Primed	No. 10, No. 12	6	75	1482A13	$110.90
Painted Black	No. 10, No. 12	6	75	1482A11	110.90
Dull Zinc	No. 10, No. 12	6	75	1482A15	149.40

Reinforcing Pivot Hinges

Surface mount these hinges to the top edge of a door to reinforce loose or damaged hinges. Use on doors that swing in one direction and are flush with the frame or have up to a 1/8" offset.

The full range of motion is 270°. Made of zinc-plated steel with bronze bushings. Choose a right-hand hinge if, from the push side of the door, the hinge is on the right; use a left-hand hinge if it's on the left. Hinge width is for the existing door hinge. Screw holes are countersunk. Furnished with 1/4" and No. 14 screws. Meet ANSI 156.1/156.7.



For Hinge Wd.	Max. Door Thick.	Leaf Thick.	Right Hand	Left Hand	
3 1/2"	1 3/8"	0.187"	1725A11	1725A15	$83.31

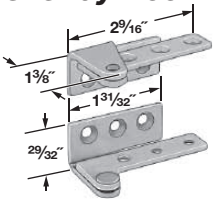
5"	1 3/4"	0.187"	1725A14	1725A18	83.31

Overlay Door Pivot Hinges



Use this hinge on doors up to 13/16" thick that overlay their frames. It surface mounts at the top and bottom of the door and the frame. Made of dull Type 430 stainless steel and reversible for right- and left-hand doors. The full range of motion is 270°. The screw holes are countersunk; mounting screws not included. A pair is for one door and includes one top and one bottom hinge.

Note: Load capacity is based one pair of hinges per door.

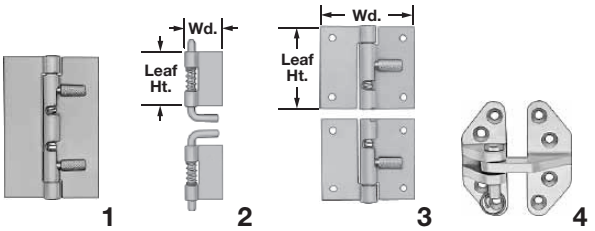
0.118"	No. 6	12	5	12255A64	$22.62

Quick-Disconnect Latch Hinges



1 Without Holes 2 Without Holes 3 With Holes 4

Retract the pins in these hinges to disconnect your door without having to lift it. You can also use them as a latch on cabinet lids, electrical enclosure doors, and computer equipment housings. All surface mount. Bolt extension is the distance the pin must be moved to disconnect the hinge.

Style 1—Squeeze the handles together to retract the pin; release the handles and the pin snaps back. Reversible for right- and left-hand mounting. The full range of motion is 270°.

Styles 2 and 3—Hinges are spring loaded; pull the handle back to retract the pin; release the handle and the pin snaps back. Springs are stainless steel. A set includes one left-hand and one right-hand hinge. *Style 3* hinges have a groove to hold the handle in the retracted position for easy door removal and replacement. The full range of motion is 270°.

Style 4—Remove the ring to pull out the pin. Pins are Type 304 stainless steel. Reversible for right- and left-hand mounting. The full range of motion is 180°.

Without Holes—Weld in place or drill screw holes

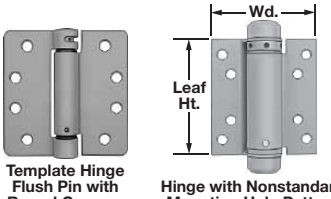
Mortise-Mount Self-Closing Spring Hinges



Template Hinge Flush Pin with Round Corners

Hinge with Nonstandard Mounting Hole Pattern

Spring-loaded so doors automatically swing closed. To adjust the spring tension, use the included tool. Hinges mount into recessed cutouts (mortises) in your door's edge and frame so they have a neat, flush appearance that requires minimal clearance between the door and frame.

Reversible for right- and left-hand doors. The full range of motion is 180°. Screw holes are countersunk and mounting screws are included. UL listed for labeled fire doors, unless noted. Note: Load capacity is based on three hinges per door with a maximum door size of 7' Ht. x 3' Wd., unless noted.

Template hinges have screw holes placed in the industry-standard half-moon pattern. *Type 304 stainless steel* hinges have steel springs with a corrosion-resistant coating.

Hinges with nonstandard mounting hole pattern do not follow the industry standard, which means you can work around worn mounting holes when replacing template hinges.

Glass Door Pivot Hinges

Support, hold, and pivot glass doors with these hinges. They mount to the top and bottom of 3/16" to 1/4" thick flush glass doors. Hinges are made of steel and are reversible for right- and left-hand doors. The full range of motion is at least 110°. A pair is for one door and includes one top hinge and one bottom hinge.

Top/Bottom Mount—Require a 11/32" Dia. x 5/16" Dp. hole in case or frame to accommodate the pin and included bushing. Set screws are included.

Side Mount—Surface mount the pivot arm to the case or frame. Hinges require four No. 4 screws for mounting (not included). The screw holes are punched prior to plating for better corrosion resistance.

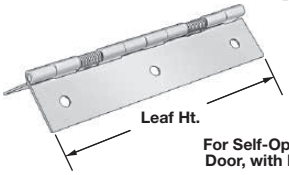
Lightweight Surface-Mount Spring Hinges



For Self-Opening Door, with Holes

Spring Direction for Self-Closing Door

Spring Direction for Self-Opening Door

Springs return lightweight doors to the open or closed position, depending on the style of hinge you choose. All surface mount, have fixed spring tension, and are reversible for right- and left-hand doors. Hinges are unfinished, unless noted. The full range of motion is 270°. Mounting screws not included.

For Self-Closing Door—Hinges automatically return the door to a closed position.

For Self-Opening Door—A light push on a closed door causes it to swing fully open.

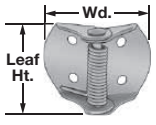
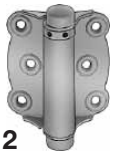
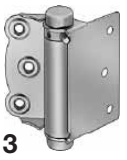
Lightweight Self-Closing Spring Hinges



1



2



3

4

5

Springs automatically swing doors and gates closed behind you. Reversible for right- and left-hand use. The full range of motion is at least 170°. Hinges surface mount, except Style 3 surface mounts on the door leaf and mortise mounts on the frame leaf. Mounting screws included, except for Style 4.

Style 1—Spring tension is fixed.

Styles 2 and 3—To adjust spring tension, use the included tool. Screw holes are countersunk.

Styles 4 and 5—Made of black glass-filled nylon with stainless steel springs for corrosion resistance. Adjust spring tension with a screwdriver (not included). Temperature range is –40° to 140°F. *Style 4* includes a snap-on cover.

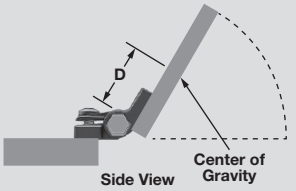
About Position, Lever-Lock, and Friction Hinges

Position, lever-lock, and friction hinges hold small doors, lids, and hatches in position, eliminating the need for latches, door holders, and other secondary support mechanisms. For example, position hinges are often found on lids and machine covers, and friction hinges are used on laptop computers.

Selecting a Hinge for a Horizontally Mounted Door

Hinges on horizontally mounted doors (hatches or lids) must resist the downward pull of gravity; the operation of hinges on vertically mounted doors is not effected. To select the correct hinge(s) for your horizontally mounted door, find the approximate force needed to move the door (torque force). Then, calculate the torque rating your hinge should have.



1. To find torque force, multiply the weight of your door (in pounds) by the distance (D) between the hinges and the door's center of gravity (in inches).
2. Divide the torque force of your door by the number of hinges you wish to use. The result is the torque rating you should exceed per hinge.

Example: Suppose your door weighs 3 lbs., D = 12″, and you wish to use two hinges.
1. Multiply: 3 × 12 = 36. The door's torque force is approximately 36 in.-lbs.
2. Divide: 36 ÷ 2 = 18. The torque rating for each hinge should be greater than 18 in.-lbs.

Incremental-Angle Position Hinges

Push the plastic button to adjust the hinge angle and release it to lock the position. They are strong enough for use on machine guards and racks. Reversible for right- and left-hand doors. The full range of motion is 220°. Mounting screws are not included.

Square arm hinge has a hollow tube so it fits over a 3/4″ wide or into a 1 1/2″ wide square tube. Made of black plastic without screw holes. It is not temperature rated.

Round arm hinge is steel with a black PTFE coating. Each arm has two 1/4″-20 mounting holes. Holes are tapped prior to coating for better corrosion resistance.

	O'all Ht.	Adjustable Increments	Torque, in.-lbs.		
1 1/4″ Square Arm	6 1/8″	10°	450	1258A1	$31.80
3/4″ Round Arm	5 1/4″	10°	1,200	1258A12	123.70

Set-Angle Position Hinges

A detent on these hinges holds doors open at a set angle, but they can be further opened to 180°. Surface mount them on flush-mounted doors such as access doors, machine covers, panels, and lids. Reversible for right- and left-hand doors. Note: Load capacity is based on one hinge per door.

Made of plastic with a nonremovable pin. Temperature range is 32° to 180° F. Hinges require four No. 10 screws (not included), except hinges with a 90° set angle require four No. 8 screws. Furnished with snap-on, plastic covers to conceal the mounting screws.

Set Angle	Leaf Ht.	Wd.	Leaf Thick.	Pin Dia.	Load Cap., lbs.	Torque, in.-lbs.

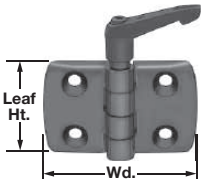
Lever-Lock Hinges

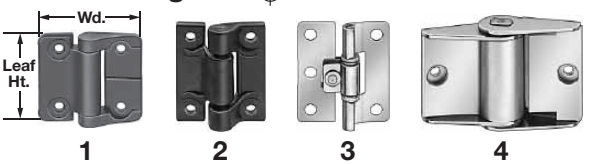


Tighten the lever to lock these hinges in any position from 0° to 180°. Mount on lids, panels, and doors.

Hinges are made of black nickel-plated aluminum with a black nylon handle and a nonremovable Type 304 stainless steel pin. All have four mounting holes; screws not included.

Leaf Ht.	Wd.	Leaf Thick.	Pin Dia.	Screw Size		
1 7/8″	2 3/8″	0.315″	1/4″	M6	1604A43	$16.56
1 7/8″	3″	0.315″	1/4″	M6	1604A41	16.96
1 7/8″	3 13/16″	0.315″	1/4″	M6	1604A44	18.07
1 7/8″	4 9/16″	0.315″	1/4″	M6	1604A45	19.27

Friction Hinges



Constant resistance through the full range of motion holds lids, panels, and doors at any angle. Apply force to change the hinge position. The full range of motion is 180°, except Style 2 have a 270° range of motion. All are surface mount, reversible for right- and left-hand doors, and have a nonremovable pin. *Styles 1* and *2* have four mounting holes, *Style 3* have five holes, and *Style 4* have six holes; screws not included.

Black nylon hinges have a temperature range of 32° to 140° F.

Polished Type 304 stainless steel hinges include a matching plastic cover to conceal mounting screws.

Adjustable-Friction Hinges

Hold your doors closed or open at any angle up to 180° by tightening or loosening the adjustment screw to change the hinge resistance. Hinges move easily when you apply force and are load rated to handle heavy doors. Surface mount hinges on flush-mounted doors. Reversible for right- and left-hand doors. Note: Load capacity is based on one hinge per door.

Made of plastic with a nonremovable pin and stainless steel adjustment screw and nut. Temperature range is 20° to 150° F. All have four mounting holes; screws not included.

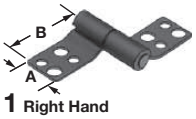
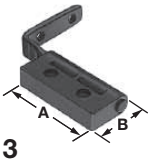
360° Friction Hinges

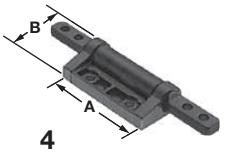


1 Right Hand

2 Right Hand



3



4

5 Left Hand

Designed to allow unlimited 360° motion while providing constant resistance, these hinges hold lids, panels, and doors at any angle and move when you apply force. All are surface mount. Made of zinc and steel (unless noted) with a black epoxy finish. Pin is steel and nonremovable. Mounting screws not included.

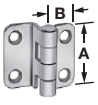
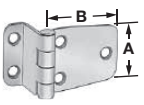
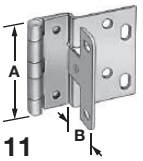
Surface-Mount Cabinet Hinges



9

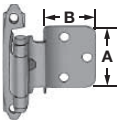


10

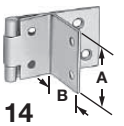


11

12



13



14

Surface mount these hinges to your cabinet's door and frame. Hinges are reversible for right- and left-hand doors. The full range of motion is 180°, except for Styles 11 and 14, which have a 270° range of motion. Pins are nonremovable. *Styles 13* and *14* come with mounting screws.

Overlay Style—For use on doors that overlay their frames. Leaf thickness for *styles 9* and *10* is 0.063". *Style 11* has a tapered pin for tamper resistance; it's for use on large doors. Leaf thickness is 0.095". *Style 13* have a spring that pulls the door closed when it's open less than 35° and keeps it closed without a catch or latch. Leaf thickness is 0.063".

Inset Style—For use on inset doors. *Style 12* has a pin adjustment screw that allows a 1/16" vertical adjustment and screw holes that allow 1/32" horizontal adjustment. Leaf thickness is 0.250". Screw holes are countersunk. Pin is nickel-plated brass. *Style 13* have a built-in spring that pulls the door closed when it's open less than 35° and keeps it closed without the need for a catch or latch. Leaf thickness is 0.063".

Flush Style—For flush-mounted doors that are at least 3/4" thick. Leaf thickness is 0.080".

Concealed Surface-Mount Cabinet Hinges

When external appearance is important, surface mount these hinges to the inside of cabinets with flush-mounted doors. When the door is closed, you can't see the hinges from the outside. Reversible for right- and left-hand doors. The full range of motion is 180°. Mounting screws not included.

Material	For Door Thick.	*Door Leaf* (A)	(B)	*Frame Leaf* (C)	(D)	Leaf Thick.	Screw Size	No. of Holes

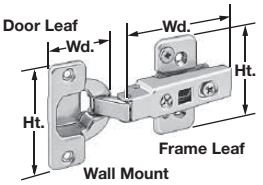
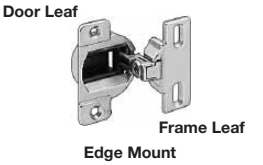
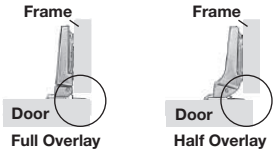
Concealed Half-Mortise/Half-Surface Mount Cabinet Hinges







Completely hidden from the outside when the door is closed, these hinges (also known as European hinges) have a door leaf that mounts into a recessed cutout (mortise) on the inside of your cabinet door. The door leaf requires a 1 3/8" (35 mm) dia. mortise—we recommend you use a wood boring bit (see 3216A29 on page 2479).

Reversible for right- and left-hand doors. The pin is nonremovable. Steel and zinc hinges have screw holes that are countersunk. All are furnished with mounting screws.

Wall Mount—Attach the frame leaf to the interior cabinet wall. *Steel* hinges have a quick-release clip for easy door removal. *Type 304 stainless steel* hinges screw into a Type 304 stainless steel mounting plate.

Edge Mount—Attach the frame leaf to the inside edge of the cabinet frame. Hinges have a steel pin and spring.

Hold-closed models have a built-in spring that pulls the door closed when it's open less than 10° and keeps it closed without a catch or latch.

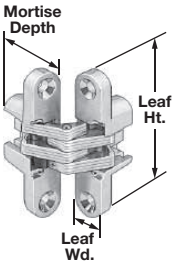
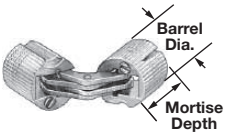
Concealed Mortise-Mount Cabinet Hinges





When your door is closed, these hinges are completely hidden from both sides to prevent tampering and to provide a neat appearance. Both leaves mount into recessed cutouts (mortises) on your door's edge and frame, so they don't take up space in the cabinet itself. All hinges are reversible for right- and left-hand doors. The full range of motion is 180°.

Zinc Hinges with Steel Leaves—Have nonremovable steel pins. Furnished with mounting screws. The *Router Guide* is a wood template that makes it easy to install the hinges.

Brass Hinges—Require two wood screws (not included) for mounting and adjusting tension.

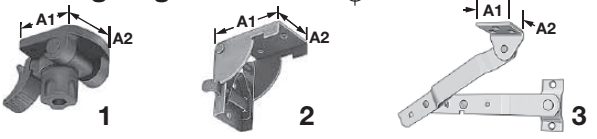
Folding Leg Brackets



Make your own folding table—use these brackets to mount table legs to a table top. Brackets do not include mounting screws, except Style 3.

Style 1 press-fits into 0.78" ID legs. Made of plastic.

Styles 2 and **3** have mounting holes to connect legs. *Style 2* is for 1 1/2" square legs. Made of bronze-plated steel. *Style 3* includes one right-hand and one left-hand bracket made of zinc-plated steel.

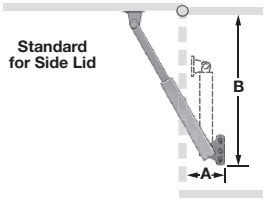
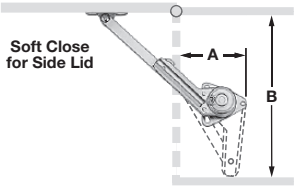
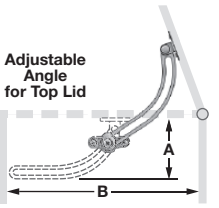
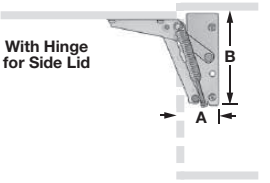
Open-Up Lid Supports









Hold lids and doors open at the angle listed for access to cabinets and chests. Lid supports can be used individually or in pairs for added strength and stability. Many supports are reversible; if you choose a handed support, mounting position is determined as you look into your cabinet or chest. Standard lid supports and lid supports with hinge do not include mounting screws; soft close and adjustable angle lid supports include mounting screws.

Lid Supports without Spring Assist—To open lids, raise them until the hold-open mechanism is engaged.

Standard lid supports open and close at the speed you move them. Supports are Type 304 stainless steel.

Soft-close lid supports have dampers that prevent the lid from slamming closed and an adjustment screw to control the opening/closing speed, except 1227A73 does not have an adjustment screw. Calculate your lid's torque and make sure it falls within the range listed—too much torque will cause your lid to slam; too little will prevent it from closing. Supports are nickel-plated steel and nickel-plated zinc alloy.

Adjustable-angle lid supports hold lids open in any position up to 70°. Open your lid and tighten the adjustment screw to set the angle. Supports are brass-plated steel.

Lid Supports with Spring Assist—To open lids, raise them partially and a spring will help lift them the rest of the way. When the lids are closed, the spring keeps them in position.

Standard lid supports are Type 304 stainless steel.

Lid supports *with hinge* are a hinge and lid support in one. Supports are white epoxy-coated steel. The spring is nickel-plated steel.

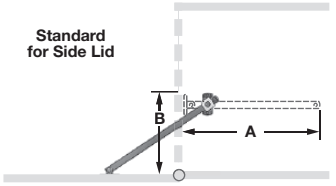
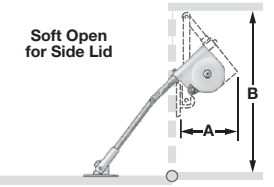
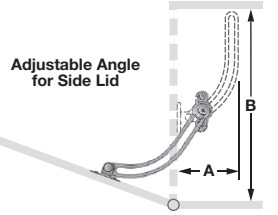
★ Torque = Lid Height (inches) × 0.5 × Lid Weight (lbs.)

Open-Down Lid Supports







Designed for downward-opening cabinets and chests, these supports hold lids open so you don't have to. Lid supports can be used individually or in pairs for added strength and stability. If you choose a handed support, mounting position is determined as you look into your cabinet or chest. For supports that do not hold lids closed, add a latch (not included) to secure them in the closed position. Mounting screws are included, except standard lid supports.

Standard lid supports open and close at the speed you move them. Supports are Type 304 stainless steel.

Soft-open lid supports have dampers that prevent the lid from slamming open and an adjustment screw to control the opening/closing speed. Calculate your lid's torque and make sure it falls within the range listed—too much torque will cause your lid to slam; too little will prevent it from closing. Supports are nickel-plated steel and nickel-plated zinc alloy.

Adjustable-angle lid supports hold lids open in any position up to 70°. Open your lid and tighten the adjustment screw to set the angle. Supports are brass-plated steel.

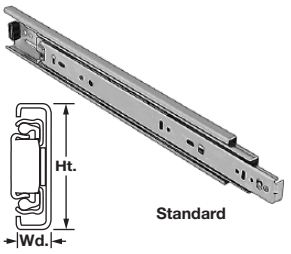
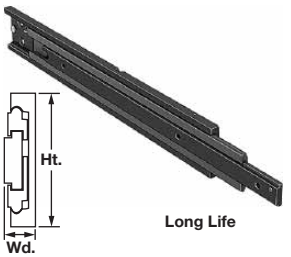
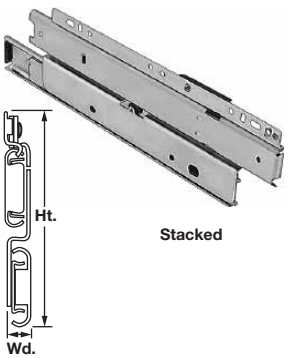
Side-Mount Drawer Slides



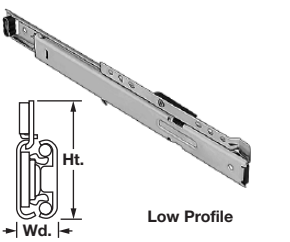
Standard



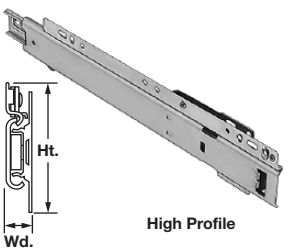
Long Life



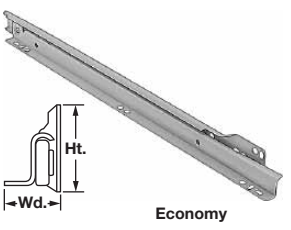
Stacked



Low Profile



High Profile



Economy

The most commonly used slides, these are sized to fit most drawer openings in desks and cabinets. Standard, stacked, low profile, and high profile slides have ball bearings for smooth, quiet operation. Long-life slides have tight fitting components that are coated with a dry film lubricant. Economy slides have a plastic wheel. Steel slides include mounting screws. Stainless steel and aluminum slides require No. 8 mounting screws.

Full Extension—Allow access to items in the back of drawers.

Partial Extension—Slides extend approximately ¾ of the closed length to reduce the chance that a heavy load will cause your cabinet to tip.

Long-life slides have fewer moving parts and collect less debris than other slides for a longer service life. They are black anodized aluminum.

Stacked slides have higher capacities than standard slides.

Low-profile slides require less vertical clearance than standard slides for use on short drawers.

High-profile slides have an older design that can still be found on many drawers.

Economy slides are often used in light duty applications.

Self-closing slides automatically pull the drawer closed when it approaches the closed position. *Push-to-open* slides propel drawer open when you push on the drawer. *Hold-open* slides have a detent to hold the drawer open; push firmly on the drawer to close. *Lock-open* slides have a lever to lock the drawer in the open position. To close it, push the levers on both slides.

Add optional *brackets* to standard lock-open slides to mount them on vertical rails, such as those on electronic equipment. Add optional *brackets* to economy slides to mount them to the rear wall of a cabinet.

Under-Mount Drawer Slides

Mount slides to the underside of countertops, desktops, shelves, and tables. Often used to hold keyboard trays, these are also known as under-the-counter drawer slides. Slides are partial extension; they extend approximately 3/4 of the closed length to reduce the chance that a heavy load will cause your cabinet to tip. They are made of steel and have ball bearings for smooth, quiet operation. A detent holds the drawer in place when opened; push firmly on the drawer to close. Slides include mounting screws and adjustable-height mounting brackets that are reversible for inward and outward mounting.

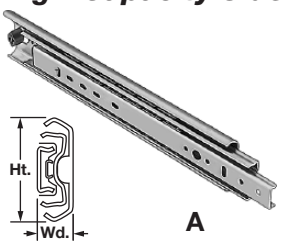
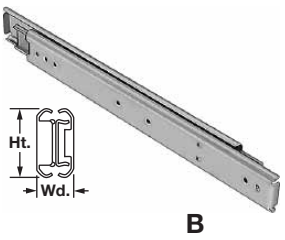
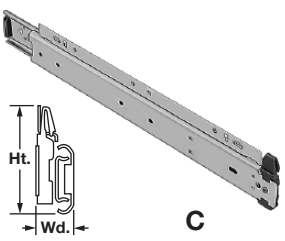
High-Capacity Side-Mount Drawer Slides



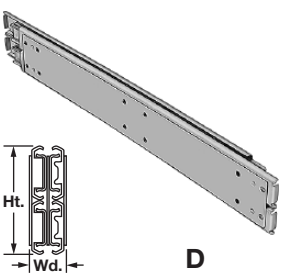
A



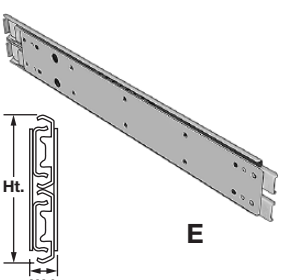
B



C



D



E

Built wide and tall to handle heavy loads, these slides are often used in tool cabinets, shelving units, and vehicles. Slides have ball bearings for smooth, quiet operation. *Style A* slides include mounting screws, except *lock open/closed* slides require 1/4″ screws. *Styles B-E* require No. 8 screws.

Full Extension—Allow access to items in the back of drawers.

Partial Extension—Slides extend approximately 3/4 of the closed length to reduce the chance that a heavy load will cause your cabinet to tip.

Lock-open/closed slides have a lever that locks the drawer in place when fully opened or closed. Push the lever on the right-hand slide to release the lock.

Revolving Tool Holders

Bench Top

Clamp Mount

Your frequently used tools are only a spin away. Holders are steel and have twelve 1″ dia. openings, six 1 1/2″ dia. openings, and twelve S-hooks to hang tools.

Clamp-mount tool holder mounts to tubes and pipes up to 2 3/8″ dia.

	For Tool Dia.	Ht.	Overall Dia.		
Bench Top	1″-1 1/2″	9 1/2″	9 1/4″	**1921A27**	$89.23
Clamp Mount	1″-1 1/2″	9 1/2″	7 3/4″	**1921A25**	89.23

Base-Mount Drawer Slides

When you don't have enough clearance for side-mount slides, mount these slides to the base of your drawer or shelf. Slides have ball bearings for smooth, quiet operation. Style A slides require 1/4" screws. Style B slides include mounting screws. Styles C and D slides require No. 8 screws.

Full Extension—Allow access to items in the back of drawers.

Partial Extension—Slides extend approximately 3/4 of the closed length to reduce the chance that a heavy load will cause your cabinet to tip.

Hold-closed slides have a detent to hold the drawer in place when closed. Pull firmly on the drawer to open. **Soft-open** slides gradually slow the drawer's motion to prevent it from slamming open.

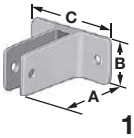
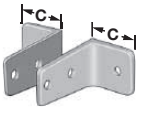
Panel Hanging Brackets



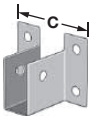
1

2

3



4



5

Often found in washrooms, these brackets are used to mount panels and partitions.

Stainless steel brackets have a dull finish. **Aluminum** brackets have a white powder-coated finish.

Styles 1-4—Include mounting screws and one-way security screws. *Style 4* brackets consist of two pieces.

Style 5—Do not include mounting screws. *Aluminum* brackets require 5/16" dia. screws; *stainless steel* brackets require 1/4" dia. screws.

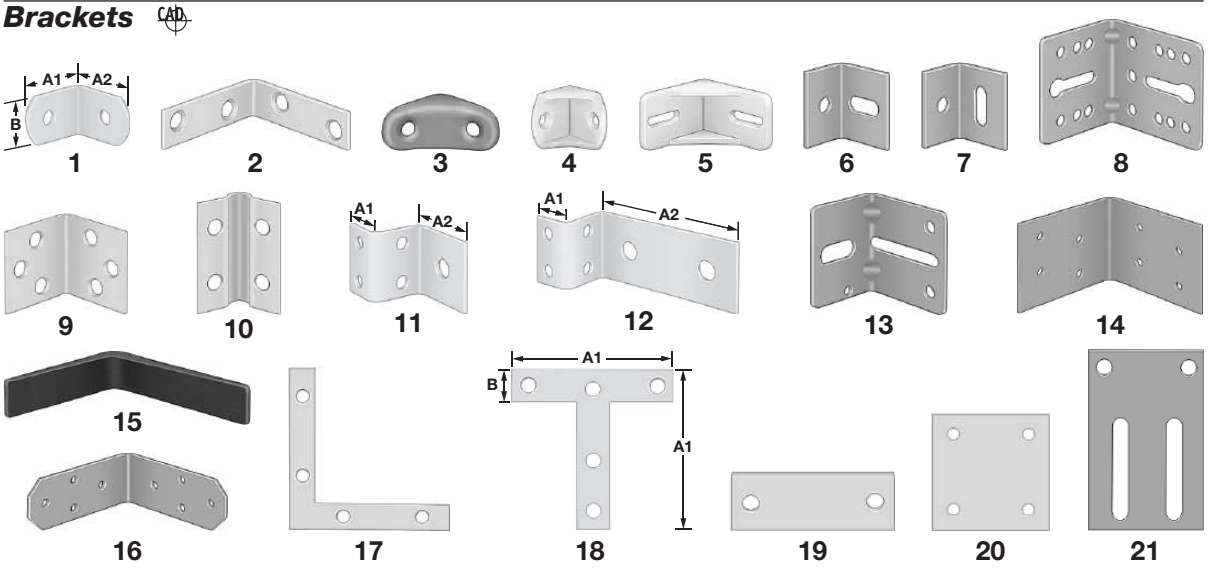
Brackets



Also known as angle brackets, corner brackets, and mending plates, these brackets support corners and joints. They do not include mounting fasteners, except Style 2 stainless steel brackets. **Styles 11** and **12** have an offset (7/8" for 1030A11; 1 1/8" for 1030A12 and 1030A13).

Note: Prices are approximately 25% lower when you buy 50 or more of the same bracket.

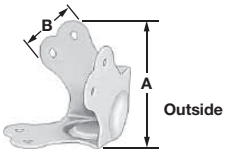
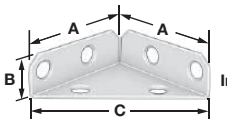
★ Prices are approximately 25% lower when you buy in quantities of 50 or more.

Corner-Reinforcing Brackets





Fortify the corners of cases and crates. Brackets are zinc-plated steel. Mounting screws are not included.

Outside brackets mount to outside corners. Brackets have dimples that fit together so crates can be stacked.

Inside brackets mount to inside corners to strengthen joints.

(A)	(B)	(C)	Thick.	Screw Size	No. of Holes		
Outside

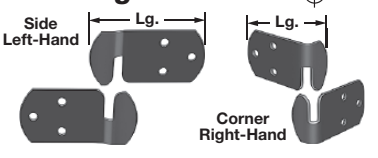
4″	⅞″	5⅝″	0.1″	No. 8	6	1088A33	3.80

Interlocking Connecting Brackets

Fit brackets together to assemble truck racks, gates, crates, and fences. Each set has a top and bottom piece. All are steel with a black zinc finish. Mount with 5/16″ dia. screws (not included).



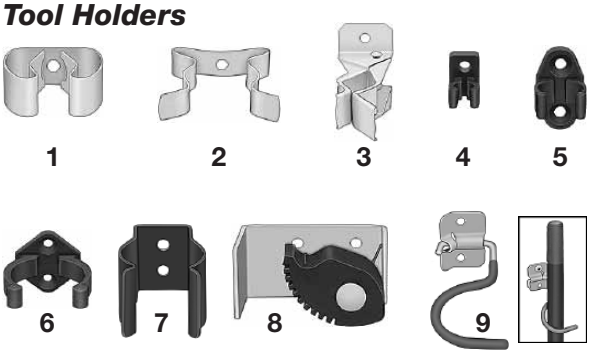
Bracket Position	Lg.	Ht.	Thick.	Left Hand	Set	Right Hand	Set
Side	5⅛″	2½″	0.16″	18445A42	$7.79	18445A41	$7.79
Corner	4″	2½″	0.17″	18445A52	7.79	18445A51	7.79

Wristband Magnetic Holders

Keep nails, nuts, screws, and other easily lost magnetic items on hand. Wristband has a hook and loop closure and fits up to a 10″ circumference. Magnet is 2⅛″ Dia.×⅜″ Proj.

1846A21 ..... $17.85

Tool Holders



Store tools such as brooms, screwdrivers, and flashlights for convenient access. Mounting screws are included, unless noted.

Styles 1-7 are spring-action clips that securely hold tools. *Style 3* is measured in the closed position. *Styles 4-6* are nonconductive, nonmagnetic, and noncorrosive.

Styles 8 and **9** use the tension created by your tool's weight to secure the tool.

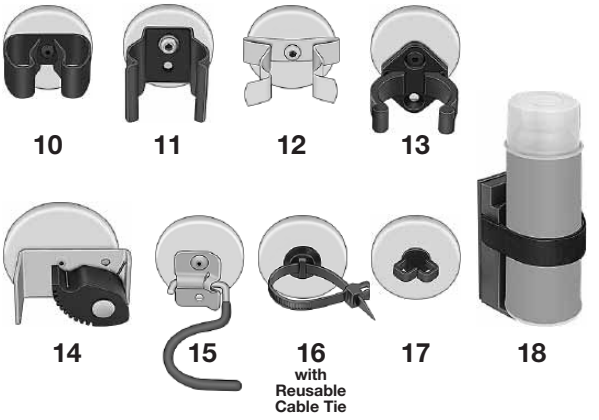
★ Mounting screws not included.

Mountable Magnetic Discs

Add a magnetic surface to tool holders, doors, and other objects. The magnet attaches to the included studded mounting plate. To install, mount the plate to your object and then screw the magnet onto the plate. The plate is 1/8" thick and has four 0.1" dia. mounting holes.

Dia.	Proj.		
2 1/4"	5/8"	**1046A5**	$8.63

Magnet-Mount Tool Holders



Mount and reposition tools on magnetic walls, cabinets, and desks.

Styles 10-13 have a spring-action clip mounted to a corrosion-resistant steel base.

Styles 14 and **15** use the tension created by your tool's weight to secure the tool.

Style 16 has a slot for a cable tie.

Style 17 has two prongs for holding tools with lanyards and cords.

Style 18 has an adjustable hook and loop strap. Base is red polypropylene.

No need for clips or hooks—these racks hold steel tools in place magnetically. *Styles 9, 10,* and *11* are screw-mount; *Styles 9* and *10* include mounting screws and *Style 11* requires 10-24 screws. *Style 12* is magnet-mount; attach it to steel walls and other magnetic surfaces.

Slatwall

Slide slatwall hooks and pegboard hooks anywhere along the built-in channels. Slatwall hooks and pegboard hooks are sold separately (see pages 2988-2989). To install slatwall, drill mounting holes and fasten with screws. Channels are 3″ apart.

Black composite board is an economical option.

Metal-covered composite board resists wear better than black composite board. It is covered with alternating strips of diamond-tread aluminum and brushed stainless steel.

Aluminum has all-metal construction for greater strength and durability than metal-covered composite board. It comes in eight interconnecting strips. *Clear-anodized aluminum* is more durable than unfinished aluminum.

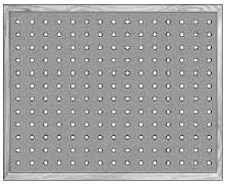
Pegboards



Framed Hardboard

Holes are on 1″ centers. Pegboards with *3/16″ dia. holes* are 1/8″ thick; those with *9/32″ dia. holes* are 1/4″ thick.

Unframed pegboards are an economical option. Mounting hardware is sold separately. *Polypropylene* resists abrasion and chemicals better than hardboard.

Framed pegboards resist warping and have built-in hangers. Mounting screws are not included. Oak frames are lacquered; aluminum frames are unfinished. *Combination dry-erase/hardboard* pegboards have a 10 1/2″ wide section of dry-erase board with a marker tray.

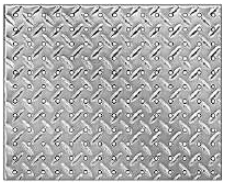
Heavy Duty Metal Pegboards and Pegboard Strips



Diamond-Tread Aluminum

All-metal construction provides greater strength and durability than wood or plastic pegboards. Holes are on 1″ centers. Boards and strips project 3/4″ from the wall, except aluminum strips project 1/2″. All require 1/4″ mounting screws.

Stainless steel resists corrosion.

Aluminum is lighter than steel and stainless steel.

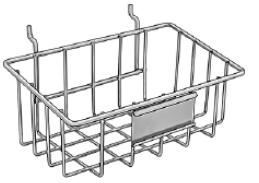
Pegboard Containers

Bin



Basket with Slotted Card Holder

Jar

Containers fit 3/16″ and 9/32″ dia. pegboard holes on 1″ centers.

Bins have a zinc-plated steel clip that screws into the pegboard. Mounting screws are included.

Baskets that are 8 3/8″ wide have a slotted card holder.

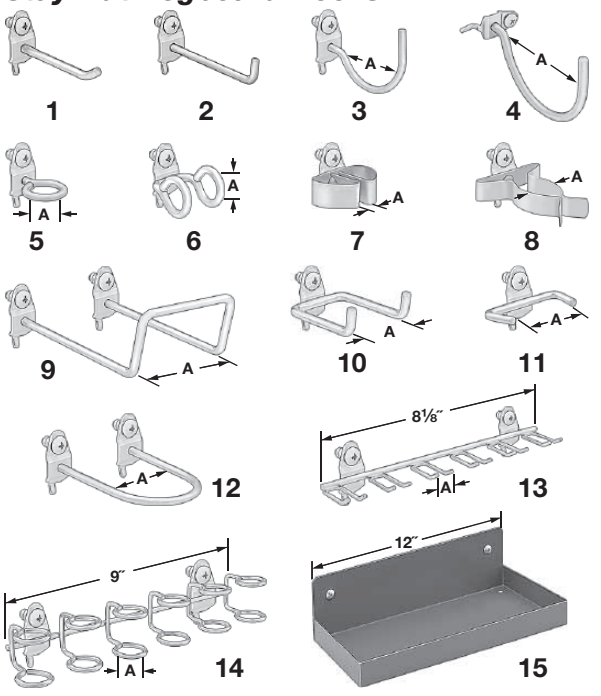
End Caps for 9/32″ dia. (Heavy Wire) Hooks	100	18535A86	9.04

Wall-Mount Strap Hooks

Hang large and awkward items, such as coils of rope. Wrap the strap around your item and then hook the buckle onto the mounting plate for a secure hold. The strap is black nylon and the buckle and mounting plate are steel. Mounting plate is 3 3/16″ Ht. × 1 1/2″ Wd. and includes mounting screws.

Strap Lg.	Load Cap., lbs.		
32″	50	1802A11	$6.80
48″	50	1802A12	7.40

Stay-Put Pegboard Hooks



A locking tab and mounting screw secure these hooks firmly in place on hardboard pegboards. Hooks install from the front, so there's no need to remove the board to install or rearrange them. Secure in 3/16″ or 9/32″ dia. holes on 1″ centers with the included screws. You can insert and remove the screws without damaging the pegboard. Hooks are zinc-plated steel, except Styles 7 and 8 are chrome-plated steel and Style 15 is blue-painted steel.

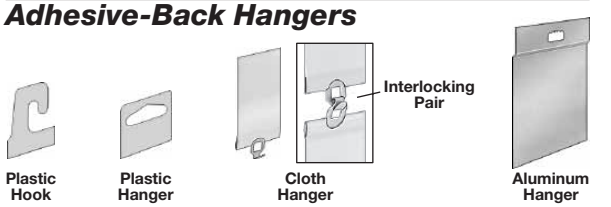
Adhesive-Back Hangers



Attach a hanger to your item to hang it on a hook.

Clear plastic hook, clear plastic hanger, and **aluminum hanger** have a peel-off backing.

White cloth hanger with zinc-plated steel hook has a water-activated adhesive. Two hangers can be used as an interlocking pair: one mounts to the wall and the other to the item you're hanging.

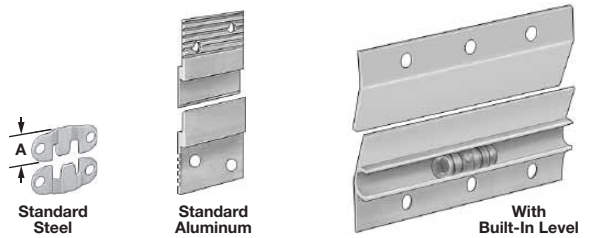
Interlocking Bracket Hangers



Hang mirrors, cabinets, and panels with interlocking brackets that slide together for a secure hold. Mount one hanger to the wall and another to your item. Hangers require No. 8 screws, except standard steel hanger requires No. 6 screws.

Cut-to-size hangers can be cut with a hacksaw.

Hangers with **built-in level** make it easy to mount objects straight.

About Tapping Screws

While other screws and bolts require holes with threads, tapping screws create their own threads.

Pointed screws are the most common tapping screw. They have a pointed end to penetrate thin materials such as sheet metal, and soft materials such as wood and drywall. In thicker materials, they generally need a starter hole.

Thread-forming and **thread-cutting screws** create reusable threads in metals and plastics. They require a drilled or punched hole to install. Thread-forming screws press threads into material without leaving debris, while thread-cutting screws eject material as they're turned.

Drilling screws save you time and effort by drilling their own holes, creating reusable threads, and fastening materials in a single operation. Use them to fasten metal.

Materials

Type 316 Stainless Steel—Our most corrosion resistant stainless steel. Withstands pitting caused by chloride and sulfur. May be mildly magnetic.

18-8 Stainless Steel—Has excellent corrosion resistance. May be mildly magnetic.

Type 410 Stainless Steel—Stronger than Type 316 and 18-8 stainless steel but less corrosion resistant. Not for use with aluminum. Magnetic.

Brass—Nonmagnetic with very good corrosion resistance. An excellent conductor of electricity, it's usually softer than steel and stainless steel.

Aluminum—It's nonmagnetic and one-third the weight of steel. Offers mild resistance to corrosion.

Steel—This low-strength general purpose metal is often plated with zinc for rust resistance.

Finishes

Zinc Plated and **Black Zinc-Plated—**Enhances rust resistance. Black adds a decorative finish.

Black Oxide and **Black Phosphate—**Provides a dark look, adds mild rust resistance, and makes screws easier to thread.

Black Coated—Delivers corrosion resistance and deep, consistent color that won't rub off with repeated use.

Chrome Plated—Bright and attractive. Offers good rust resistance.

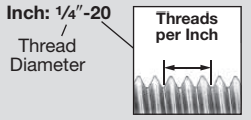
Nickel Plated—A decorative finish that's more rust resistant than zinc plating and less expensive than chrome plating.

PTFE Coated—This slick coating prevents fasteners from sticking and binding.

Weather-Resistant Coated—Resists corrosion better than zinc plating and minimizes reactions between dissimilar metals.

How to Read a Screw Size

The screw size listed for thread-forming, thread-cutting, and drilling screws is the size of the threads they create.



Decimal Equivalents for Inch Screw Sizes

Inch Screw Size	Screw No. 0	1	2	3	4	5	6	7	8	9	10

About Installing Screws for Sheet Metal

Screws penetrate 0.025″ and thinner sheet metal. In 0.026″ and thicker metals, they generally need a starter hole. The actual hole size varies according to the material and thickness you're fastening. Our reference drill sizes typically allow adequate thread engagement. We suggest, however, that you test to determine the ideal hole size for your application.

Square Drive Screws for Sheet Metal

The square drive reduces driver slippage and allows for more driving power than a Phillips drive can take. Screw length is measured from under the head.

Pan head screws have a flat bearing surface. **Pan washer head** screws have a wide, one-piece head that reduces the likelihood of crushing thin materials.

For drivers, see 5830A on page 2819; for bits, see 7185A on page 2814.

Pointed Tapping Screws for Sheet Metal

For technical drawings and 3-D models, go to mcmaster.com.

For information about tapping screws, see page 2996. For information about installation, see page 2997.

Torx Drive Screws for Sheet Metal

The torx drive makes more contact with your screwdriver than Phillips, square, and slotted styles, which reduces slipping and increases the amount of force you can apply. Screws have a pan head, flat bearing surface, and are made from zinc-plated steel. Length is measured from under the head.

For drivers see page 2820; for bits see pages 2813-2814.

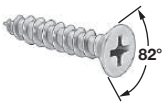
Flat Head Phillips Screws for Sheet Metal



Screws are beveled under the head for use in countersunk holes. Length is measured from the top of the head. Sizes marked with a ★ have an undercut head that allows more threading. Metric screws have an 80° head.

★ Has an undercut head.

Flat Head Square Drive Screws for Sheet Metal

The square drive is designed to prevent slipping. Screws are beveled under the head for use in countersunk holes. Made from 18-8 stainless steel. Length is measured from the top of the head.

For drivers, see 5830A on page 2819; for bits, see 7185A on page 2814.

Oval Head Screws with Washer for Sheet Metal

A permanently attached, freely rotating washer distributes holding force, which prevents the screw from crushing thin materials. Washer OD is 1/2". Together, the head and washer are 0.102" to 0.123" thick. Screws have a Phillips drive. Length is measured from the edge of the head.

Large Diameter (Truss) Head Screws for Sheet Metal

With a wider head than both pan and round head screws, these screws reduce the risk of crushing thin metal. They have a Phillips drive. Length is measured from under the head.

Extra-Large Diameter Head Screws for Sheet Metal

Wider than a truss head, the washer head is less likely to crush thin metal. Screws have a Phillips drive. Length is measured from under the washer.

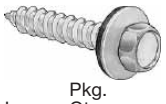
Vibration-Damping Screws for Sheet Metal



A rubber washer cushions the screw to reduce loosening from vibration. Screw length is measured from under the hex head and does not include the thickness of the washer.

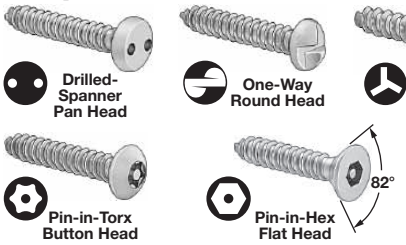
Tamper-Resistant Screws for Sheet Metal



Unique drivers are required for installation and removal. All screws are 18-8 stainless steel. Length is measured from under the head for all but flat head screws, which are measured from the top of the head.

Drilled Spanner—For drivers, see 94062A on page 2820; for bits, see 52775A on page 2815.

One Way—Screws install with a standard slotted screwdriver, but require a special removal tool (see 7392A on page 2820).

Tri-Wing®—For bits, see 7175A on page 2815.

Pin-in-Torx—For drivers, see page 2819; for bits, see pages 2814-2815.

Pin-in-Hex—For drivers, see 7253A on page 2820; for bits, see 7257A on page 2811.

Screws for Joining Metal to Wood

Fasten thin metal to wood framing. Screws have a needle point that easily penetrates overlapping panels. A rubber washer bonded to the hex washer head provides a watertight seal. Made from weather-resistant coated steel. The coating provides 1,000 hours of salt spray resistance. Length is measured from under the washer.

Screws for Thick Sheet Metal

Hex

Slotted Hex

Vibration Resistant

Screws have a needle point to penetrate sheet metal up to 0.050" thick. The hex washer head provides a large bearing surface that reduces the possibility of crushing surfaces. Length is measured from under the washer.

Vibration-resistant zinc-plated steel have serrations that slow the screw when they touch the surface to minimize stripping and resist loosening.

Thread-Forming Screws for Sheet Metal

Also known as Fastite fasteners, these screws have an undercut head that pulls in material to ensure secure, tight assemblies. Made from zinc-plated steel, they have a pan head and a Torx drive. Length is measured from under the head.

About Installing Thread-Forming and Thread-Cutting Screws for Metal

Thread-forming screws press threads into material without leaving debris, while thread-cutting screws eject material as they're turned.

Determining Drill Size

The hole size required to install these screws varies according to the material and thickness you're fastening. Our drill sizes are based on industry data and typically allow adequate thread engagement. We suggest, however, that you test to determine the drill size for your application.

Countersinking

To install, create a hole with a countersink that matches the head angle of your screw. Use a countersink (see pg. 2484) to create a recess for flat and oval head screws.

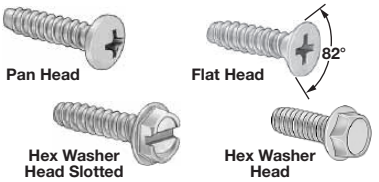
Thread-Forming Screws for Sheet Metal and Iron CAD



These Type B thread-forming screws form widely spaced threads in sheet metal and soft metal such as cast iron. They have a blunt tip with an incomplete thread near the end for easy entry. Screws indicated with a ★ have an undercut head to allow more threading.

Pan head screws have a flat bearing surface. Length is measured from under the head.

Flat head screws are beveled under the head for use in countersunk holes. Length is measured from the top of the head.

Hex washer head screws have a wide, one-piece head that reduces the possibility of crushing thin material. Length is measured from under the washer.

Quick-Install Thread-Forming Screws for Sheet Metal and Iron

Pan Head

Hex Washer Head Slotted

Hex Washer Head

The leading threads grab material to reduce the initial torque necessary to drive these screws. Also called Swageform screws, they have a blunt tip. Use them in sheet and cast metal. All are made from zinc-plated steel.

Pan head screws have a flat bearing surface. Length is measured from under the head.

Hex washer head screws have a wide, one-piece head that reduces the possibility of crushing thin materials. Length is measured from under the washer.

Thread-Forming Screws for Steel

Made from hardened steel to penetrate hard metals, these are our strongest thread-forming screws. Also known as Tap-Flex screws, they have a one-piece hex washer head that reduces the possibility of crushing thin materials, a five-lobed shank with a blunt tip, and a weather-resistant coating. Length is measured from under the washer.

Sealing Thread-Forming Screws for Sheet Metal and Iron

A rubber O-ring under the head creates a seal that withstands liquid and gas pressure. Also known as Type B thread-forming screws, they form threads in thin and soft metals such as cast iron. Each has a Phillips drive, a pan head with a flat bearing surface, and a blunt tip. Made from 18-8 stainless steel. Length is measured from under the head. O-ring temperature range is –40° to 225° F.

Thread-Cutting Screws for Soft Metals

These Type 23 screws cut threads into soft metals such as cast iron. A wide cutting slot at the end of the shank clears chips. All have a Phillips drive and a pan head with a flat bearing surface. Made from Type 410 stainless steel. Length is measured from under the head.

Thread-Forming Screws for Soft Metals

The triangular shank presses tightly as it forms threads, so screws resist loosening in soft metals such as brass, aluminum, and copper. Also known as Taptite® screws, they have a pan head with a flat bearing surface, a Torx drive, and a blunt tip. Length is measured from under the head.

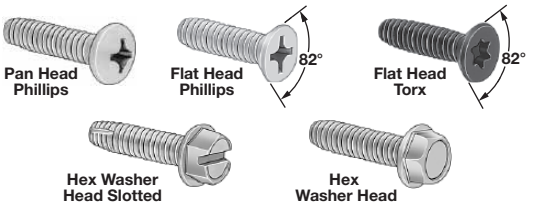
Thread-Cutting Screws



Cut threads in a variety of materials including heavy gauge sheet metal, cast iron, aluminum, brass, and plastic with these Type F screws.

Pan head screws rest above the material surface when installed. The head has a low profile and a flat bearing surface. Length is measured from under the head.

Flat head screws sit flush within countersunk holes. Screws indicated with a ★ have an undercut head to allow more threading. Length is measured from the top of the head.

Hex washer head screws have a wide, one-piece head that reduces the possibility of crushing thin material. Length is measured from under the washer.

Pan Head Phillips—Type 410 Stainless Steel

★ Has an undercut head.

Hinge Screws

Commonly used with door hinge hardware, these Type F steel screws cut threads in materials such as aluminum, brass, and plastic. All have a Phillips drive and a flat head that's beveled underneath for use in countersunk holes. Screws are undercut to allow more threading. Length is measured from the top of the head.

Electrical Grounding Screws

The green color identifies these as grounding screws. They have Type F threads that cut threads in metal. The slotted, one-piece hex washer head provides a large flat bearing surface for making solid electrical connections. Made from zinc-plated steel. Length is measured from under the washer.

Drilling Screws for Joining Insulation to Metal

Steel Washer

Plastic Washer

Use these long, hardened steel roofing screws to fasten rigid insulation board to steel decking. All have a weather-resistant coating. Maximum recommended steel thickness is 0.047". Screws have a pan head with a flat bearing surface and a Phillips drive. They're partially threaded (unless noted). Length is measured from under the head. Screws are FM approved.

Screw washers (sold separately) provide a 3" bearing surface that reduces the possibility of crushing material. The plastic screw washer is FM approved.

About Installing Drilling Screws

Drilling screws save you time and effort by drilling their own hole, tapping a reusable thread, and fastening material in a single operation. Install them with a power driver. The screw's drill point must penetrate the total material thickness before the first thread engages.

Drilling Screws for Metals

Hex Head

Slotted Hex Head

Screws have a one-piece hex washer head with a wide flat bearing surface. Use them in materials such as steel and stainless steel. They're fully threaded (unless noted). Length is measured from under the washer.

High-strength corrosion-resistant stainless steel is a blend of Type 316 and Type 410 stainless steel. **High-strength stainless steel** is Type 410 stainless steel.

For fastening aluminum, see Drilling Screws for Aluminum on page 3011.

Strip-Resistant Drilling Screws for Metals

Serrations under the head act as a brake to stop the screw. The one-piece hex washer head provides a wide flat bearing surface. All screws are fully threaded and made from zinc-plated steel, except wide-head screws are coated steel. Length is measured from under the washer.

Thin head screws leave the most clearance above the head.
Medium head screws give you the choice to install with a wrench or a Torx driver.
High head screws are the easiest to grasp with a socket driver.
Wide head screws have the largest serrated area, so they're the best at resisting vibration.

Corrosion-Resistant Drilling Screws for Metals

Coated to increase corrosion resistance, these 18-8 stainless steel screws have a hardened drill point to penetrate steel. Screws are fully threaded, except 2 13/16″ to 8″ long screws, which are partially threaded.

Hex washer head screws have a wide, one-piece head that reduces the possibility of crushing thin material. Length is measured from under the washer.

Flat head Phillips screws are beveled under the head for use in countersunk holes. Length is measured from the top of the head.

Drilling Screws for Aluminum

Fasten aluminum panels to aluminum framing. Also for fastening aluminum panels to steel framing (unless noted). Screws have a one-piece hex washer head that provides a large flat bearing surface that reduces the possibility of crushing surfaces. All screws are fully threaded. Length is measured from under the washer.

♠ For use in aluminum only.

Drilling Screw Assortments for Metals

Each set of 525 unslotted hex washer head screws includes 150 No. 8 screws in 1/2″, 3/4″, and 1″ lengths, 200 No. 10 screws in 1/2″, 5/8″, 3/4″, and 1″ lengths, 100 No. 12 screws in 3/4″ and 1″ lengths, and 75 1/4″ screws in 3/4″, 1″, and 1 1/2″ lengths.

Type 410 Stainless Steel	**91690A600**	$172.32
Zinc-Plated Steel	**90430A112**	92.42
Weather-Resistant Coated Steel	**90960A412**	109.87

Sealing/Drilling Screws for Metals

Drive the screw to compress the rubber washer and form a tight seal. The rubber washer is bonded to a free-spinning metal washer (unless noted). Screws are fully threaded. Length is measured from under the head.

Steel with corrosion-resistant head screws have an 18-8 stainless steel cap covering their head.

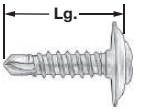
Oval Head Drilling Screws with Washer for Metals



Attach fabrics such as tarps and other nonmetallic materials to metal. The freely rotating washer provides a large bearing surface that won't crush thin material. The head is rounded for a finished appearance. Screws accept a #2 Phillips drive and are fully threaded. Length is measured from the edge of the head.

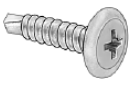
Round Washer Head Drilling Screws for Metals



Also known as metal lath screws, you can use these screws to secure metal wire to steel framing. The one-piece washer and round head provide a large flat bearing surface. Screws accept a #2 Phillips drive and are fully threaded. Made from zinc-plated steel. Length is measured from under the washer head.

Pan Head Drilling Screws for Metals

Screws have a rounded top and a flat bearing surface. Those with a square drive handle more torque with less slipping than those with a Phillips drive. All are fully threaded. Length is measured from under the head.

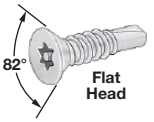
★ Head is undercut to allow more threading.

Tamper-Resistant Drilling Screws for Metals



The pin-in-torx drive makes these screws difficult to remove without the proper tools. All are fully threaded.

Pan head screws have a rounded top and a flat bearing surface. Maximum material thickness is 0.076". Length is measured from under the head.

Flat head screws are beveled under the head for use in countersunk holes. Maximum material thickness is 0.100" for 8-18 screws and 0.175" for 10-16 screws. Length is measured from the top of the head.

Low-Profile Drilling Screws for Metals

Use these thin, wide-head screws to attach framing to metal up to 3/16" thick. Also known as pancake head screws, they have a combination drive that accepts both #2 Phillips and #2 square drivers and are fully threaded. Made from zinc-plated steel. Length is measured from under the head. Head is 7/16" Wd. × 3/32" Thick.

About Installing Screws for Plastics

Determining Drill Size

The hole size required to install these screws varies according to the material and thickness you're fastening. Our drill sizes are based on industry data and typically allow adequate thread engagement. We suggest, however, that you test to determine the drill size for your application.

Countersinking

To install, create a hole with a countersink that matches the head angle of your screw. Use a countersink (see pg. 2484) to create a recess for flat and oval head screws.

Screw Size	No. 000	No. 00	No. 0	No. 1	No. 2	No. 3	No. 4	No. 5	No. 6	No. 8	No. 10	1/4"
Thread Cutting Drill Sizes	—	—	—	—	—	—	#41	—	#31	#26	—	—
Thread Forming Drill Sizes	#69	#60	#56	#53	#48	#46	#44	#36	#32	#29	#21	#4

Pointed Screws for Plastics and Particleboard

A sharp point pierces a hole—reducing the chance you'll crack the material you're fastening. Screws have a Phillips drive, a pan head with a flat bearing surface, and deep, coarse threads. All are Type 410 stainless steel. Length is measured from under the head.

Thread-Cutting Screws for Soft Plastics

These Type 25 screws have a wide cutting slot to clear chips and coarse threads that grip soft plastic. Each has a Phillips drive and a pan head with a flat bearing surface. All are Type 410 stainless steel. Length is measured from under the head.

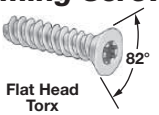
Thread-Forming Screws for Plastics

Pan Head Phillips



Flat Head Torx

Material locks against the triangular (tri-lobular) shank to ensure a vibration-resistant connection. Also known as Plastite screws, they have coarse, sharply angled threads and a blunt tip. They provide maximum holding strength with minimal stress in formable plastics such as polypropylene and polycarbonate. Length is measured from under the head for pan head screws and from the top of the head for flat head screws.

Metric Thread-Forming Screws for Plastics

The triangular (tri-lobular) shank forms a vibration-resistant connection in formable plastics such as polypropylene and polycarbonate. Also known as Plastite screws, each has a Torx drive, a pan head with a flat bearing surface, and a blunt tip. Length is measured from under the head.

Note: The drill sizes listed are recommendations. We suggest you test to determine the drill size for your application.

Screws for Joining Plastics to Wood

Screws allow plastic panels to expand and contract without cracking. A rubber washer seals out contaminants. Length is measured from under the head.

Coated steel screws are corrosion resistant. Those with a low-profile head have a combination drive.

Thread-Forming Screws for Thin Plastics

With a round shank, blunt tip, and deeper, more sharply angled threads than other thread-forming screws, these screws require less driving torque and they won't crack thin plastics. Also known as Delta PT screws, they have a Torx drive and a pan head with a flat bearing surface. Length is measured from under the head.

Note: Although the drill sizes listed typically allow adequate thread engagement, we suggest you test to determine the drill size for your application.

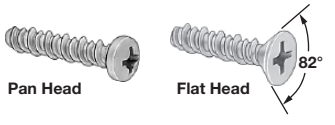
Thread-Forming Screws for Brittle Plastics



Alternating high and low threads minimize cracking and splitting in brittle materials such as phenolic and glass-filled plastics. All screws have a Phillips drive and a blunt tip.

Pan head screws have a higher profile and slightly smaller head diameter than standard pan head screws. The bearing surface is flat. Length is measured from under the head.

Flat head screws are beveled under the head for use in countersunk holes. Length is measured from the top of the head.

About Installing Screws for Drywall, Composite Wood, and Wood

Screws for Drywall

Drywall screws have a sharp, pointed end that can penetrate drywall without the need for a pilot hole. They come with either coarse threads for holding drywall to wood or fine threads for holding drywall to metal.

Screws for Composite Wood

These screws are designed for use in materials made from a mixture of wood fiber and plastic, such as those commonly used for decking. To prevent splitting, drill a pilot hole slightly smaller than the screw you're installing. Screws with an auger point require a pilot hole only when being used near an edge. See page 2462 for drill bits.

Screws for Wood

Screws for wood can be used to fasten hard wood such as walnut and oak and soft wood such as pine and cedar. To prevent splitting, drill a pilot hole slightly smaller than the screw you're installing. Screws with an auger point require a pilot hole only when used near an edge. See page 2462 for drill bits.

Materials

Type 316 Stainless Steel—Our most corrosion resistant stainless steel, it withstands solvents and pitting caused by chloride and sulfur. It's a good choice for ACQ-treated (arsenic-free) lumber and may be mildly magnetic.

18-8 Stainless Steel—Has excellent corrosion resistance and is a good choice for ACQ-treated (arsenic-free) lumber. It may be mildly magnetic.

Brass—Material is nonmagnetic and has very good corrosion resistance.

Finishes

Zinc Plated and **Black Zinc-Plated**—Enhances rust resistance.

Black Oxide and **Black Phosphate**—Adds mild rust resistance.

Weather-Resistant Coated—Resists corrosion better than zinc plating and minimizes reactions between dissimilar metals.

Hot-Dipped Galvanized—This thick plating provides superior rust resistance compared to zinc-plated steel. A good choice for ACQ-treated (arsenic-free) lumber.

For Phillips power bits see pages 2808-2809; for square drive power bits see page 2814; for Torx drive power bits see page 2813.

Screws for Drywall

A curved neck sinks into drywall without tearing its paper surface. All screws have a Phillips drive and are made from steel with a rust-resistant finish. Length is measured from the top of the head.

Drywall to Drywall—Hold sheets of drywall together until glue sets. Also hold drywall to metal studs up to 0.036″ thick. Finish is black phosphate.

Drywall to Wood—Hang drywall to wood framing. Screws have a zinc yellow-chromate plating.

Drywall to Wood (High Hold)—Alternating high and low threads maximize holding power. Use to attach drywall to wood framing and metal studs up to 0.036″ thick. Finish is black phosphate.

Drywall to Metal—Attach drywall to metal studs up to 0.036″ thick. Finish is black phosphate.

Drywall to Metal (Coated)—Screws have a gray coating that provides 500 hours of salt spray resistance. Use them to hold drywall to metal studs up to 0.036″ thick.

Drywall to Metal (Drilling)—Have a #2 drill point that powers through drywall and into metal studs up to 0.105″ thick. Finish is black phosphate.

Small Head Screws for Drywall

Heads are one-third smaller than those of other drywall screws. Made from rust-resistant black-finish steel. Length is measured from the top of the head.

Sharp Point—Fasten drywall to wood or metal trim and framing up to 0.036″ thick.

Drilling—Have a #2 drill point that bores through drywall and into metal studs up to 0.105″ thick.

Strip-Resistant Screws for Drywall

Ribs under the head act as a brake as the curved neck sinks flush into drywall. Use these screws to join cement board and other dense materials to wood and metal studs. All have a Phillips drive. They're made from steel and coated to resist up to 500 hours of salt spray. Length is measured from the top of the head.

Sharp Point—Fasten drywall to wood and metal studs up to 0.036″ thick.

Drilling—Have a drill point that bores through drywall and into metal studs up to 0.105″ thick.

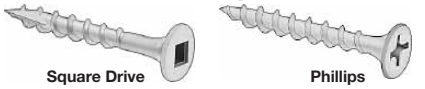
Screws for Composite Wood and Wood



These general purpose flat head screws have a curved neck that sinks into materials so they sit flush with the surface when installed. Also called bugle-head deck screws, they are threaded at least two-thirds of their length.

Square Drive—Have a Type 17 auger point that eases penetration.

Phillips—Made from hardened steel with a coating that resists at least 500 hours of salt spray.

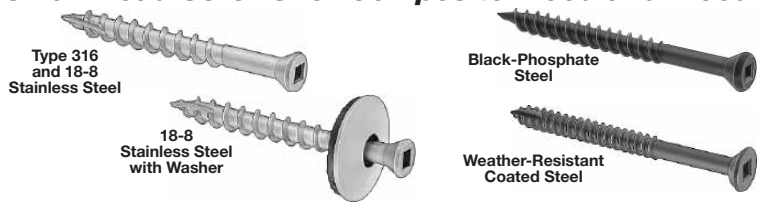
Small Head Screws for Composite Wood and Wood



With a small flat head and slender shank, these general purpose screws are also known as trim head screws. They have a square drive and are threaded at least half their length. Stainless steel and weather-resistant coated steel screws have a Type 17 auger point that eases penetration.

18-8 stainless steel screws with washer have a neoprene-backed sealing washer with a 0.63″ OD. Overall washer height is 0.2″.

Serrated-Thread Screws for Plywood

Serrated threads penetrate dense material and provide extra holding power. Stainless steel screws 1″ long and under are fully threaded; those over 1″ long are threaded at least 3/4″. All zinc-plated steel screws are fully threaded. Phillips/square screws can be used with Phillips and square drivers.

Stainless steel screws are also suitable for use in fiberglass.

Screws for Plywood and Particleboard

Sharp angled threads provide excellent holding power and cut into plywood and particleboard without splitting. Screws have a Phillips drive and are threaded at least two-thirds their length. All are made from hardened steel and have a black-oxide finish.

Drilling Screws for Wood to Metal

Speed installation by drilling and tapping in a single operation. Screw length is measured from the top of the head. Those marked with a ■ have cutting wings that break off when they contact metal, so the screw can tap the remainder of the hole.

Corrosion-resistant coated steel are a good choice for ACQ-treated (arsenic-free) lumber.

Zinc-plated steel screws offer good rust resistance.

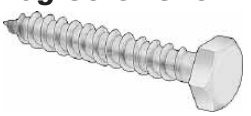
Lag Screws for Wood



Also known as lag bolts, these screws come in longer lengths than traditional wood screws. Screws are threaded at least two-thirds their length (unless noted). Length is measured from under head. Hex size is measured from flat to flat. All screws meet ASME B18.2.1.

Hot-dipped galvanized steel conforms to ASTM A307 or SAE J429; zinc coating conforms to ASTM 153.

Flange Head Lag Screws for Wood

A flange distributes pressure to reduce the risk of crushing material around the hole.

Type 316 stainless steel screws have at least 2 3/8" of thread.

Hot-dipped galvanized steel screws meet ASTM A153 and are threaded at least half their length.

Thread-Forming Screws for Wood to Metal

Also known as Flortorx screws, these screws press threads into material and resist stripping and pullout. They have triangular leading threads, a blunt tip, and a Torx drive that prevents driver slippage. The flat head is beveled underneath, so screws sit flush with the surface when installed. All are made from steel and have a rust-resistant black phosphate finish. Length is measured from the top of the head.

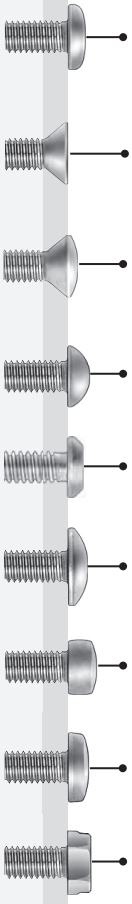
About Machine Screws

Head Styles



Pan head screws (pages 3025-3035) are general purpose screws with moderate head height and head diameter.

Flat head screws (pages 3036-3044) are angled under the head to provide a flush surface when countersunk in a hole. To install, create a hole with a countersink that matches the head angle of your screw.

Oval head screws (pages 3044-3045) are angled under the head so they can be countersunk in a hole. When installed, the rounded top sits above the surface. To install, create a hole with a countersink that matches the head angle of your screw.

Round head screws (pages 3045-3049) have a thick, decorative round head that provides a finished appearance.

Low-profile button head screws (page 3048) are similar to pan heads but with a shallower head.

Large-diameter truss head screws (pages 3049-3050) have a rounded head that's wider than other head styles for a strong hold in thin materials.

High-profile fillister and **high-profile cheese** head screws (pages 3050-3052) maximize driving power by combining the greatest head height with the smallest head diameter you can get in a machine screw.

Binding head screws (pages 3052-3053) are slightly wider than pan head screws and are often used for making electrical connections.

Hex head screws (pages 3053-3054) have flat sides for tightening with a wrench.

Materials

Type 316 Stainless Steel—Our most corrosion resistant stainless steel. Withstands solvents and pitting caused by chloride and sulfur. May be mildly magnetic.

18-8 Stainless Steel—Has excellent corrosion resistance. May be mildly magnetic.

Titanium—Resists corrosion from salt water and stands up to more chemicals than stainless steel. It's strong, yet 40% lighter than steel.

Brass—Nonmagnetic with very good corrosion resistance. An excellent conductor of electricity, it's usually softer than steel and stainless steel.

Aluminum—Offers mild resistance to corrosion. It's nonmagnetic and one-third the weight of steel.

Steel—This low-strength general purpose metal is often plated with zinc for rust resistance.

Plastic—Plastic screws (pages 3055-3057) come in economical *nylon*; impact-resistant *polycarbonate*; nonstick *PTFE*; and high-strength, water- and steam-resistant *PEEK*.

Ceramic—(Page 3055) Won't melt, rust, seize, or become brittle at high temperatures. Highly resistant to corrosive gases. Nonconductive.

Finishes

Black Oxide—Provides a decorative finish, adds mild rust resistance, and makes screws easier to thread.

Zinc Plated—Enhances rust resistance.

Chrome Plated—Bright and attractive. Offers good rust resistance.

Cadmium Plated—Adds superior corrosion protection and makes screws easier to thread.

Black Coated—Delivers corrosion resistance and deep, consistent color that won't rub off with repeated use.

PTFE Coated—This slick coating prevents fasteners from sticking and binding.

Passivated—Protects from oxidation and corrosion.

Drive Styles

Phillips drives are the most common cross-style drive. Use a screwdriver that matches your screw's drive size: #0, #1, #2, #3, or #4.

Slotted drives accept readily available flat-head slotted screwdrivers.

Combination drives accept both slotted and Phillips screwdrivers.

Torx drives make the most contact with your driver, which reduces slippage and improves driving power. They require compatible driving tools in sizes specified by a Torx number such as T10.

Hex drives have flat sides, so they're easy to tighten with a wrench. Hex size is measured from flat to flat.

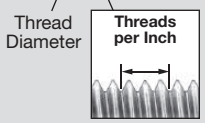
Tamper-resistant drives (pages 3054-3055) add a level of security. They come in a variety of non-standard shapes that are difficult to remove without special tools.

Thread Fit

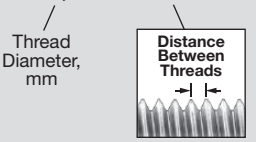
Thread fit is a measure of how tightly threads fit together. Most of our screws have a standard thread fit: inch sizes are Class 2A (unless noted); metric sizes are Class 6g, except zinc plated, which are Class 6h.

How to Read a Screw Size

Inch: ¼″-20



Metric: M2, Pitch: 0.4 mm



Decimal Equivalents for Inch Screw Sizes

Inch Screw Size	000	00	0	No. 1	No. 2	No. 3	No. 4	No. 5	No. 6	No. 8	No. 10	No. 12	¼″	5⁄16″	⅜″	½″
Decimal Size	.034″	.047″	.060″	.073″	.086″	.099″	.112″	.125″	.138″	.164″	.190″	.216″	.250″	.312″	.375″	.500″

Metric Pitch

Metric Screw Size	M1	M1.2	M1.4	M1.6	M2	M2.5	M2.6	M3	M3.5	M4	M5	M6	M8	M10
Standard Pitch, mm	0.25	0.25	0.30	0.35	0.4	0.45	0.45	0.5	0.6	0.7	0.8	1	1.25	1.5

Screw Dimensions

CAD For technical drawings and 3-D models, go to mcmaster.com and search by part number.

Pan Head Phillips

Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under the head.

Pan Head Torx

With more drive surface than Phillips and slotted screws, you can apply extra force without slipping. For drivers, see page 2820; for bits, see pages 2813-2814.

Screws are fully threaded. Length is measured from under the head. **Black-coated steel** screws have a Class 3A thread fit.

Mil. Spec. Pan Head Phillips

Strict military standards ensure performance and reliability. Materials and dimensions meet Fed. Spec. FF-S-92. Screws are fully threaded. Length is measured from under the head.

300 series stainless steel screws are passivated to meet QQ-P-35. **Cadmium-plated steel** screws meet QQ-P-416 and have a Class 3A thread fit.

Mil. Spec. Pan Head Phillips *(Continued from previous page)*

Strict military standards ensure performance and reliability. Materials and dimensions meet Fed. Spec. FF-S-92. Screws are fully threaded. Length is measured from under the head.

Cadmium-plated steel screws meet QQ-P-416 and have a Class 3A thread fit.

Pan Head Phillips with Split Lock Washer

When compressed, the split washer bites into surfaces, holding tension constant and keeping screws tight. Also known as Sems screws, the washer rotates freely, but won't fall off.

Screws are fully threaded. Length is measured from under the head.

Pan Head Phillips with Lock Washer

Sharp teeth dig into surfaces to resist vibration and keep screws tight. Also called Sems screws, each has a washer that rotates freely, but won't fall off. Screws are fully threaded. Length is measured from under the head.

18-8 stainless steel screws have magnetic Type 410 stainless steel washers. **Screws with internal-tooth lock washer** won't snag along the outer edge and have a smoother appearance than screws with external-tooth washers. **Screws with external-tooth lock washer** offer maximum holding power.

Thread-Locking Pan Head Phillips

A nylon anti-vibration patch is bonded to the threads so screws resist loosening. The patch has a temperature range of –70° to 250° F. Screws are made from 18-8 stainless steel and are fully threaded. Length is measured from under the head.

Sealing Pan Head Phillips

Prevent leaks and protect equipment. O-rings stop liquid and gas pressure up to 6,000 psi when used in the hole size range listed. Screws are made from 18-8 stainless steel and are fully threaded. Screw length is measured from under the head.

Buna-N rubber O-rings withstand abrasive environments and exposure to water. Temperature range is –40° to 225°F.

Silicone rubber O-rings are good for the widest range of temperatures: –80° to 400°F.

Fluoroelastomer rubber O-rings are resistant to acids and oils. Temperature range is –20° to 400°F.

Sealing and Thread-Locking Pan Head Phillips

A vibration-resistant patch locks threads in place so screws won't come loose and cause seals to leak. Screws are made from 18-8 stainless steel. They have a silicone O-ring that stops liquid and gas pressure up to 6,000 psi when used in the hole size range listed. They also have a nylon locking patch with a temperature range of –40° to 225° F. Screw length is measured from under the head.

Metric Japanese Industrial Standard Pan Head Phillips

Screws meet JIS B1111 for a smaller head diameter and shorter head height than most other metric pan head screws. They're made from zinc-plated steel and are fully threaded. Length is measured from under the head. For JIS drivers, see 53325A on page 2819. **Also Available:** 18-8 stainless steel screws in sizes marked with a ★. Please ask for 94102A650 and specify thread size and screw length.

Metric Pan Head Phillips with Lock Washer

Sharp teeth dig into surfaces to resist vibration and keep screws tight. Also called Sems screws, each has a washer that rotates freely, but won't fall off. All are 18-8 stainless steel and have magnetic Type 410 stainless steel washers. Screws are fully threaded. Length is measured from under the head.

With Internal-Tooth Lock Washer

With External-Tooth Lock Washer

Screws with internal-tooth lock washer won't snag along the outer edge and have a smoother appearance than screws with external-tooth washers. **Screws with external-tooth lock washer** offer maximum holding power.

■ Washer is 18-8 stainless steel.
▲ Has a #2 drive and washer OD of 6.5 mm.

Metric Thread-Locking Pan Head Phillips

A nylon anti-vibration patch fused to the threads prevents loosening. The patch has a temperature range of –70° to 250°F.

Screws are 18-8 stainless steel and fully threaded. Length is measured from under the head.

Metric Sealing Pan Head Phillips

Seal out contaminants and prevent leaks. Made from 18-8 stainless steel, screws have a silicone rubber O-ring that stops liquid and gas pressure up to 6,000 psi when used in the hole size range listed. Temperature range is –80° to 400°F. Screws are fully threaded. Length is measured from under the head.

Pan Head Phillips Machine Screw Assortments

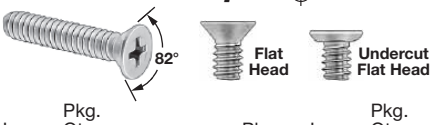
Keep the screws you need convenient and organized. Assortments come in a steel box.

Inch assortment includes 1,200 size 4-40, 6-32, 8-32, and 10-32 18-8 stainless steel screws in lengths from ¼″ to 1″.

Metric assortment includes 1,500 size M3, M4, M5, and M6 zinc-plated steel screws in lengths from 6 to 20 mm.

Inch Assortment	93175A212	$106.10
Metric Assortment	92020A116	99.74

Flat Head Phillips



Screws have a standard 82° bevel under the head. Those marked with a ★ have an undercut head to allow more threading. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from the top of the head.

(Continued on following page)

Flat Head Slotted *(Continued from previous page)*

Each screw has an 82° bevel under the head. Screws marked with a ★ have an undercut head to allow more threading. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from the top of the head.

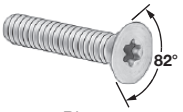
★ Head is undercut to allow more threading.

Flat Head Torx



With more drive contact than Phillips and slotted screws, you can apply extra force without your driver slipping. For drivers, see page 2820; for bits, see pages 2813-2814.

Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from the top of the head.

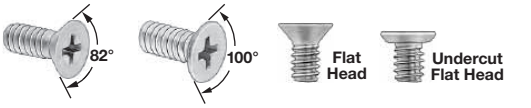
■ Thread fit is Class 3A.

Mil. Spec. Stainless Steel Flat Head Phillips



Meet additional military standards to ensure performance and reliability. Made from 18-8 stainless steel, material and dimensions meet Fed. Spec. FF-S-92. All are passivated to meet QQ-P-35. Length is measured from the top of the head.

82° screws marked with a ★ have an undercut head to allow more threading.

100° screws have a larger bearing surface to distribute holding force, making them a better choice than standard 82° flat head screws for soft materials.

Thread-Locking Flat Head Phillips

A nylon anti-vibration patch is bonded to the threads so screws resist loosening. The patch has a temperature range of –70° to 250° F. Screws are 18-8 stainless steel and fully threaded. Length is measured from the top of the head.

Sealing Flat Head Phillips

Each screw has a silicone rubber O-ring that stops leaks at pressures up to 20,000 psi when used in the hole size listed. O-ring has a temperature range of –150° to 500° F. Screws are 18-8 stainless steel and fully threaded. Screws are beveled 100°, except size 2-56, which are beveled 82°. Screw length is measured from the top of the head.

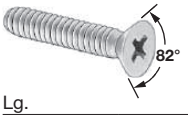
Titanium Flat Head Phillips



Screws are durable, corrosion resistant, about 40% lighter than steel, and have a high strength-to-weight-ratio. Fully threaded. Length is measured from the top of the head.

Metric Japanese Industrial Standard Flat Head Phillips

Screws meet JIS B1111 for a larger head diameter than screws that meet DIN specifications. Head is beveled 90°. Screws are zinc-plated steel and fully threaded. Length is measured from the top of the head. For JIS drivers, see 53325A on page 2819.

Also Available: 18-8 stainless steel screws in sizes marked with a ▲. Please ask for 97613A550 and specify thread size and screw length.

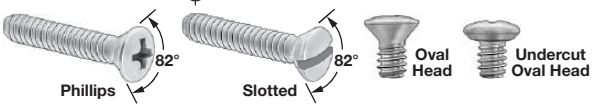
Oval Head



Inch sizes have an 82° beveled head; **metric** sizes have a 90° beveled head.

Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Sizes marked with a ★ have an undercut head to allow more threading. Length is measured from the top of the bevel.

Low-Profile Button Head Torx

Use these shallow-head screws in tight spaces. With more driver contact than Phillips and slotted screws, you can apply extra force without your driver slipping. For drivers, see page 2820; for bits, see pages 2813-2814.

Screws up to 2½″ are fully threaded; those longer than 2½″ have at least 2″ of thread. Length is measured from under the head.

Large-Diameter Truss Head

Truss head screws have a wider head than both round and pan head screws. The large diameter holds thin materials better. Screws up to 2″ or 25 mm long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under the head.

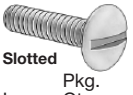
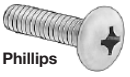
(Continued on following page)

Large-Diameter Truss Head *(Continued from previous page)*



Slotted



Phillips

Truss head screws have a wider head than both round and pan head screws. The large diameter holds thin materials better. Screws up to 2″ or 25 mm long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under the head.

Low-Profile Wide Head Slotted

Sneak these screws into spaces where other wide-head machine screws won't fit. Also known as shutter screws, the head width reduces the likelihood of crushing mating surfaces. Screws are 18-8 stainless steel and fully threaded. Length is measured from under the head.

High-Profile Fillister Head

Phillips

Slotted

Fillister head screws maximize driving power by combining the greatest head height with the smallest head diameter you can get in a machine screw. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1½″ of thread. Length is measured from under the head.

Also Available: Mil. Spec. 35275/35276 stainless steel wire-lockable drilled-fillister-head screws in sizes marked with a ■. Passivated to meet QQ-P-35. Please ask for 90350A100 and specify screw size and length.

Metric High-Profile Cheese Head

Cheese head screws maximize driving power by combining the greatest head height with the smallest head diameter you can get in a metric machine screw. Slotted screws meet DIN 84. Fully threaded. Length is measured from under the head.

Hex Head

Hex drives have flat sides, so they're easy to tighten with a wrench. Screws up to 2" long are fully threaded; those longer than 2" have at least 1 1/2" of thread. Length is measured from under head. For more hex head screws, see pages 3144-3170.

Stainless steel screws have a smooth head.

Zinc-plated steel screws have an indented head.

Zinc-plated steel screws with external-tooth lock washer are also known as Sems screws. They have an indented head and come with a freely rotating but permanently attached washer for extra holding power.

(Continued on following page)

Hex Head *(Continued from previous page)*

Zinc-Plated Steel

Zinc-Plated Steel with External-Tooth Lock Washer

Hex drives have flat sides, so they're easy to tighten with a wrench. Screws are fully threaded. Length is measured from under head. For more hex head screws, see pages 3144-3170.

Zinc-plated steel screws have an indented head.

Zinc-plated steel screws with external-tooth lock washer are also known as Sems screws. They have an indented head and come with a freely rotating but permanently attached washer for extra holding power.

Tamper Resistant

Drilled Spanner Pan Head

Drilled Spanner Flat Head

Drilled Spanner Large Diameter Truss Head

One Way Round Head

Tri-Groove Head

Pin-in-Torx Flat Head

Discourage tampering with screws that require unique drivers. Made from 18-8 stainless steel except tri-groove screws, which are made from zinc-plated steel. Screws up to 2″ long are fully threaded; those longer than 2″ have at least 1 1/2″ of thread.

Drilled Spanner—For drivers, see 94062A on page 2820; for bits, see 52775A on page 2815.

One Way—Install with a slotted screwdriver. For removal tools, see 7392A on page 2820.

Tri-Groove—For sockets and drivers, see 7393A on page 2840.

Pin-in-Torx—For L-keys, see page 2830; for bits, see page 2814.

Also Available One-way screws made from zinc-plated steel. Please ask for 90287A660 and specify thread size and screw length.

★ Head is undercut to allow more threading. ■ Class 3A thread fit.

Ceramic Hex Head

Ceramic won't melt, rust, seize, or become brittle—even at temperatures up to 3000° F. Screws are also highly resistant to corrosive gases and are nonconductive. Fully threaded. Color is off-white.

Length is measured from under the head. For matching ceramic nuts, see page 3209.

PEEK Machine Screws

Reliable in hostile environments, PEEK machine screws withstand water, steam, and temperatures up to 500° F. They're fully threaded and nonconductive. Color is tan.

Pan head screws have a #2 Phillips drive. Length is measured from under the head. **Flat head** screw length is measured from the top of the head.

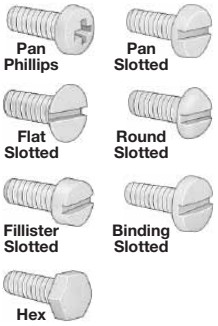
Nylon Machine Screws CAD



Our nylon screws are fully threaded, nonconductive, and resistant to oils, greases, and solvents (except mineral acids). Temperature range is –40° to 185° F. Length is measured from under the head, unless otherwise stated. Note: Nylon absorbs moisture, which can affect dimensions and other properties.

Flat head screw length is measured from the top of the head. Screws with an 82° bevel are considered standard. Those with a 100° bevel distribute holding force over a wider area, so they're better for soft materials.

To Order: Please specify head style: pan Phillips, pan slotted, 82° flat, 100° flat, round, fillister, binding, or hex.

Metric Nylon Machine Screws

Like our inch sized nylon machine screws, our metric versions are fully threaded, nonconductive, and resistant to oils, greases, and solvents (except mineral acids). Length is measured from under the head, unless otherwise stated. Temperature range is –40° to 185° F. Note: Nylon absorbs moisture, which can affect dimensions and properties.

Pan head Phillips M2 size screws have a #0 drive, M3 have a #1 drive, M4 and M5 have a #2 drive, M6 has a #3 drive, and M8 has a #4 drive.

Flat head screw length is measured from the top of the head.

To Order: Please specify pan Phillips, pan slotted, cheese, or flat head style.

Nylon Machine Screw Assortments

Keep this selection of 757 slotted machine screws, set screws, nuts, and washers at the ready. Assortment includes pan, binding, and hex head screws in 4-40, 6-32, 8-32, and 10-32 sizes; and round head, high-profile fillister head, and set screws in 4-40, 6-32, 8-32, 10-32, and 1/4″-20 sizes. Screw lengths range from 1/4″ to 1″. You'll also get 100 hex nuts and 125 flat washers in matching sizes. All come in a plastic box.

90188A415 ..... $71.77

Machine Screw Assortments

Machine Screws

Screws have a pan head with a Phillips drive and come in a steel box.

Inch assortment includes 1,200 size 4-40, 6-32, 8-32, and 10-32 18-8 stainless steel screws in lengths from 1/4″ to 1″.

Metric assortment includes 1,500 size M3, M4, M5, and M6 zinc-plated steel screws in lengths from 6 to 20 mm.

Machine Screws and Nuts

Assortments include 6-32, 8-32, 10-32, and 1/4″-20 size screws, plus matching nuts. Each comes in a plastic box.

300-piece assortments include 240 pan and flat head Phillips screws in lengths from 1/4″ to 1″ and 60 nuts.

1,280-piece assortment includes 880 pan and flat head Phillips screws in lengths from 1/2″ to 2″ and 400 nuts.

1,520-piece assortments include 1,120 round and flat head slotted screws in lengths from 1/2″ to 2″ and 400 nuts.

Machine Screws, Nuts, and Washers

Inch assortment includes 360 size 4-40, 6-32, 8-32, 10-24, 10-32, and 1/4″-20 pan head Phillips, as well as pan, flat, and round head slotted screws in lengths from 1/4″ to 1 1/2″; plus, a matching set of 360 nuts, 360 split-lock washers, and 360 flat washers. All come in an 18 1/2″ Lg. × 15″ Wd. × 6 1/2″ Dp. plastic storage cabinet.

Metric assortment includes 600 M3 and M4 pan and flat head Phillips screws in lengths from 6 to 16 mm, 600 nuts, and 1,000 split-lock and flat washers in sizes M3, M4, M5, M6, M8, and M10. All come in a metal box.

Maintenance Assortments

Machine Screws, Sheet Metal Screws, Nuts, and Washers

Assortments contain flat and pan head Phillips sheet metal and machine screws, plus a variety of nuts and washers. Each includes 600 No. 6, 8, and 10 size sheet metal screws in lengths from 3/8″ to 1 1/2″; 150 size 10-24 and 1/4″-20 machine screws in lengths from 3/4″ to 1″; 250 size 6-32, 8-32, 10-24, 1/4″-20, 5/16″-18, and 3/8″-16 nuts; and 500 No. 6, 8, 10, 1/4″, 5/16″, and 3/8″ size lock washers and flat washers for a total of 1,500 pieces.

18-8 Stainless Steel Assortment

18-8 stainless steel assortment comes with an additional 50 size 10-32 machine screw nuts for a total of 1,550 pieces. Comes in a metal box.

90970A350 ..... $142.60

Zinc-plated steel assortment comes in a plastic box.

90970A670 ..... $112.00

Assorted Screws, Nuts, Washers, and Electrical Terminals

This 3,342-piece assortment includes 480 round head slotted machine screws in sizes 6-32, 8-32, 10-24, and 1/4″-20 in lengths from 1/2″ to 1 1/2″; a matching set of 490 nuts, 490 lock washers, and 490 flat washers; 700 No. 4, 6, 8, 10, and 14 size pan head combination drive tapping screws in lengths from 1/2″ to 1 1/2″; 500 No. 4, 6, and 8 size flat head slotted wood screws in lengths from 1/2″ to 1″; 55 size 6-32, 8-32, 10-24, 10-32, 1/4″-20, 1/4″-28, 5/16″-18, 5/16″-24, 3/8″-16, 1/2″-13, and 5/8″-11 socket head screws in lengths from 1/8″ to 5/8″; 37 size 8-32, 10-24, 10-32, 1/4″-20, 5/16″-18, and 3/8″-16 socket head cap screws in lengths from 1/2″ to 2″; and 100 electrical terminals including ring, spade, and butt connectors.

All are zinc-plated steel except socket screws, which have a black-oxide finish. Come with a plastic 18 1/2″ Lg. × 15″ Wd. × 6 1/2″ Dp. storage cabinet.

92250A680 ..... $223.56

About Set Screws

Unlike screws that hold materials together with threads, set screws exert pressure at the tip to hold objects in place.

Points

Cup (pgs. 3058-3066)—The cup has a thin edge that digs into the contact surface for high holding power.

Knurl-Grip Cup (pgs. 3063-3064)—A variation of the cup point, this style has knurls for a strong grip.

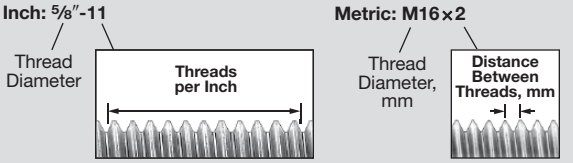
Flat (pgs. 3066-3068)—The blunt tip won't dig into the contact area, which minimizes surface damage.

Oval (pg. 3068)—A small rounded contact surface allows you to make slight adjustments without loosening the screw and also causes minimal surface damage.

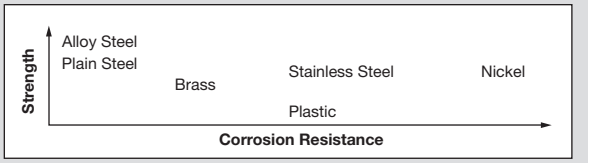
Cone (pg. 3069)—A sharp tip wedges into the contact area for the highest holding power of all set screw styles.

Extended (pgs. 3070-3073)—Also known as dog point, a protruding tip locks within a mating hole or slot in your workpiece. Often used in place of a dowel pin.

How to Read a Screw Size



Materials



Stainless Steel—May be mildly magnetic. Minimum Rockwell hardness is B80 (unless noted). *18-8 stainless steel* is the most common. *Type 316 stainless steel* is more resistant to corrosion, solvents, and pitting caused by chlorides and sulfates than 18-8 stainless steel.

Nickel—Good for marine and chemical-processing environments, material is comparable to Monel. It's strong, heat resistant, and slightly magnetic. Not rated for hardness.

Brass—Nonmagnetic and an excellent conductor of electricity, it has a minimum Rockwell hardness of B55.

Alloy Steel and **Plain Steel**—Both have a minimum Rockwell hardness of C45 (unless noted).

Plastic—Nonconductive and resistant to chemicals and solvents, except mineral acids. Exposure to moisture may cause it to expand.

(Continued on following page)

Cup Point Set Screws *(Continued from previous page)*

Screws have a hex socket and a Class 3A thread fit. All dimensions meet ASME B18.3. Length listed is the overall length.
Alloy steel meets ASTM F912.

Slotted Cup Point Set Screws

Also known as headless set screws and grub screws, these slotted set screws install with a slotted screwdriver. Screws have a Class 2A thread fit. Length listed is the overall length.

Type 316 stainless steel screw dimensions meet ANSI B18.3. **18-8 stainless steel** screw dimensions meet ASME B18.6.2.

Mil. Spec. Cup Point Set Screws

Screws meet stringent military specifications and resist corrosion. They have a hex socket and a Class 3A thread fit. Length listed is the overall length.

18-8 Stainless Steel—Sizes 2-56 to 8-32 meet MS 51021; sizes 10-32 and 1/4"-28 meet MS 51023. All are passivated to meet QQ-P-35. Not rated for hardness.

Cadmium-Plated Alloy Steel—Sizes 2-56 to 8-32 and 1/4"-20 meet MS 51963; sizes 10-32 and 1/4"-28 meet MS 51964.

Vented Cup Point Set Screws

Typically found in vacuum systems, these screws vent fluids and gases while holding parts securely in place. All have a hex socket. They are not rated for hardness. Length listed is the overall length.

Inch sizes have a Class 3A thread fit. **Metric** sizes have a Class 3g thread fit.

Thread-Locking Cup Point Set Screws

A nylon locking element adds holding power so screws resist loosening. The locking element remains effective up to 250° F. Screws have a locking patch, except those marked with a ★ have a solid locking pellet. All screws are reusable. They have a hex socket and a Class 3A thread fit. Dimensions meet ASME B18.3. Length listed is the overall length.

Alloy steel screws meet ASTM F912.

★ Has a locking pellet; minimum Rockwell hardness is C28.

Metric Thread-Locking Cup Point Set Screws

These metric screws have a nylon locking patch that adds holding power. The patch remains effective up to 250° F. Screws are reusable. They have a hex socket and meet DIN 916/ISO 4029. Length listed is the overall length.

18-8 stainless steel screws have a Class 6g thread fit. **Alloy steel** screws have a Class 5g6g thread fit.

Square Head Cup Point Set Screws

Use the prominent square head to turn these screws by hand, or use a wrench when you need more torque. All have a cup point that digs into the contact surface for a strong grip. They're fully threaded and have a Class 2A thread fit. Dimensions meet ASME B18.6.2. Screws have a minimum Rockwell hardness of B80, except 5/8"-11 and 3/4"-10 18-8 stainless steel screws have a minimum Rockwell hardness of B70 and alloy steel screws have a minimum Rockwell hardness of C45. Length is measured from under the head.

Nonmarring Flat Point Set Screws

Make frequent adjustments with minimal surface damage. Screws have a hex socket. Length listed is the overall length. **Inch** sizes have a Class 3A thread fit and dimensions that meet ASME B18.3. *Alloy steel* screws meet ASTM F912. **Metric** sizes meet DIN 913/ISO 4026. *Type 316* and *18-8 stainless steel* screws have a Class 6g thread fit. *Alloy steel* screws have a Class 5g6g thread fit.

Thread-Locking Nonmarring Flat Point Set Screws

A nylon locking patch on the threads ensures a secure grip. The patch remains effective up to 250° F. Screws are reusable and have a blunt tip that minimizes surface damage. They are made from alloy steel, have a hex socket, and a Class 3A thread fit. All meet ASTM F912 and ASME B18.3. Length listed is the overall length.

Plastic Nonmarring Flat Point Set Screws

Made of nylon, these screws offer chemical resistance at an economical price. They also have a flat point that minimizes surface damage. All have a Class 2A thread fit. Temperature range is –40° to 185° F. Color is off-white.

For **hex-socket** screws, length listed is the overall length.

For **slotted** screws, length does not include the drive portion.

Easy-Adjust Oval Point Set Screws

A small rounded contact surface allows you to make slight adjustments without loosening the screw and also causes minimal surface damage. Screws have a hex socket and a Class 3A thread fit. All dimensions meet ASME B18.3. Length listed is the overall length.

Alloy steel screws meet ASTM F912.

High Hold Cone Point Set Screws

The sharp tip wedges into contact surfaces for a superior grip. All screws have a hex socket. Length listed is the overall length.

Inch sizes meet ASME B18.3 and have a Class 3A thread fit. *Alloy steel* screws also meet ASTM F912.

Metric sizes meet DIN 914/ISO 4027. *Metric 18-8 stainless steel* screws have a Class 6g thread fit; *metric alloy steel* screws have a Class 5g6g thread fit.

Fine-Adjustment Set Screws

Set Screws

These screws are finely threaded for precise adjustment. All have a rounded point that minimizes damage to contact surfaces. To install screws in unthreaded holes, use the optional threaded inserts (sold separately). Screws and inserts are not rated for hardness.

Screws have a hex socket and a Class 3A thread fit. They're made of 18-8 stainless steel. Length listed is the overall length.

Optional threaded inserts are made of brass and have a Class 3B thread fit.

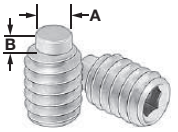
Extended Point Set Screws



Also known as dog point and pilot point set screws, their long tip fits into a mating hole on your workpiece to keep parts aligned. Screws have a hex socket and a Class 3A thread fit. All dimensions meet ASME B18.3. Length listed is the overall length.

Alloy steel screws meet ASTM F912.

Thread-Locking Extended Point Set Screws

A nylon locking patch on the threads provides a secure hold at temperatures up to 250° F. Also known as dog point and pilot point set screws, they have a protruding tip that fits into a mating hole on your workpiece. Each has a hex socket and a Class 3A thread fit. Screws are made of alloy steel and meet ASTM F912. All dimensions meet ASME B18.3. Length listed is the overall length.

Extra-Long Extended Point Set Screws

The tip is twice as long as the tip on other extended point screws for greater engagement in deep mating holes. Also known as dog point and pilot point set screws, they have a hex socket and a Class 3A thread fit. All dimensions meet ASME B18.3. Length listed is the overall length.

Alloy steel screws meet ASTM F912.

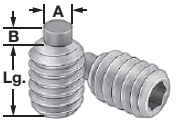
Conformable Soft-Tip Set Screws



Nylon and Brass Tip

Silver Tip

The soft tip grips textured and curved surfaces. Screws have a hex socket and a Class 3A thread fit. All dimensions meet ASME B18.3. Length listed does not include the tip. *Alloy steel* screws have a minimum Rockwell hardness of C28.

Nylon tip is extra soft and nonconductive. Temperature range is –50° to 250° F. Color is green. **Silver tip** is softer than brass. It's conductive and resists mild chemicals, heat, and wear. **Brass tip** is conductive.

Nylon-Tip 18-8 Stainless Steel

Metric Conformable Soft-Tip Set Screws

With their soft tip, these metric screws conform to curved surfaces without marring. All have a hex socket and meet ANSI/ASME B18.3.6M. Length listed does not include the tip. *18-8 stainless steel* screws have a Class 6g thread fit. *Alloy steel* screws have a Class 5g6g thread fit, a minimum Rockwell hardness of C28, and meet ASTM F912.

Nylon tip is softer than brass and nonconductive. Temperature range is –50° to 250° F. Color is green. **Brass tip** is conductive.

Square Head Extended Point Set Screws

A square head allows you to tighten these screws by hand or with a wrench. Also known as dog point and pilot point set screws, their long tip fits into a mating hole in your workpiece. All are made from alloy steel.

Inch sizes have a Class 2A thread fit and meet ASTM F912.

Metric sizes have a Class 6g thread fit and meet DIN 479. Minimum Rockwell hardness is C20 for M6 to M16 screws; C23 for M20 screws.

Swivel Set Screws for Angled Surfaces

Flat Point

Round Point

A ball bearing swivels to align screws with angled and uneven surfaces. They're also known as ball-ended thrust screws. All have a hex socket drive. Length listed is the overall length.

Inch sizes have a Class 2A thread fit. *Metric* sizes have a Class 6g thread fit.

18-8 stainless steel screws have a minimum Rockwell hardness of C54 and a hard, Type 440 stainless steel ball bearing with a minimum Rockwell hardness of C54. *Alloy steel* screws have a minimum Rockwell hardness of C39 and ball bearing with a minimum Rockwell hardness of C54.

Flat-point screws have a flat-faced ball bearing that swivels 9°. **Round-point** screws have a completely round ball bearing that swivels 360°.

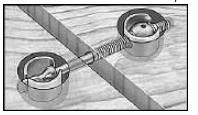
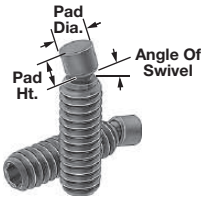
Sure-Joint Fastener Clamps



Create a secure joint between two 3/4" thick boards or countertops. Clamps are zinc-plated steel and adjust from 2" to 3 1/2" center to center on a 4" long draw bolt. They come with a bit for drilling 7/8" Dia. × 5/8" Dp. holes and a tightening tool. Not rated for holding capacity.

Fastener Clamps (Pkg. of 25) **5079A55** $53.65

Swivel Pad Set Screws for Angled Surfaces



For Limited Clearance

For Gripping Strength

As you tighten these screws, a self-aligning pad swivels to make contact against angled and uneven surfaces. All screws have a hex socket and Class 2A thread fit.

Screws for Limited Clearance—Their narrow pad allows you to thread these screws through holes where clearance is limited. Pad is not removable. Pad and screw are alloy steel. The pad has a minimum Rockwell hardness of C30; the screw has a minimum Rockwell hardness of C45.

Screws for Gripping Strength—With a pad that is wider than the screw, you'll get more gripping power. To use, remove the pad, thread the screw through the hole, and attach the pad on the other side. Pad and screw are made from 12L14 steel and are not rated for Rockwell hardness. For replacement pads, see 90165A on page 3080.

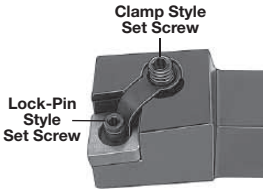
Set Screws for Carbide Insert Holders

Clamp Style

Lock-Pin Style



Screws used in a tool holder

Use these set screws to fasten carbide inserts to tool holders. When it's time to replace the screws, use the reference number typically found on your tool holder to determine the size you need. Set screws have a hex drive in both ends (unless noted) and are made from heat-treated alloy steel. Minimum Rockwell hardness is C42. Length listed is the overall length.

Clamp style screws hold insert-holding clamps at the proper height for tooling. They have right-hand threads on one end, left-hand threads on the other, and a Class 3A thread fit.

Lock-pin style screws hold the insert in place. They have right-hand threads on one end.

About Thumb Screw and Binding Post Materials

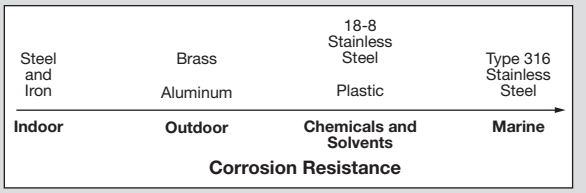
Stainless Steel—May be mildly magnetic.

Steel and **Iron**—These general purpose metals often come with a plating or finish. Zinc plating adds protection in dry, indoor conditions. Black-oxide adds a dark color, but no protection.

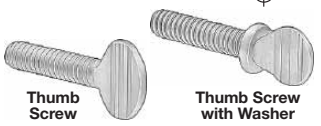
Brass—An excellent conductor of electricity, brass is often selected for its decorative properties. It is nonmagnetic.

Aluminum—At one-third the weight of steel, aluminum is strong and nonmagnetic.

Plastic—It's the ultimate lightweight material and is also nonconductive.



Thumb Screws



These fully threaded screws are also known as spade head screws. Length is measured from under the head. Inch sizes have a Class 2A thread fit. Metric sizes have a Class 8g thread fit.

Screws with washer sit high above the mounting surface so they're easy to grasp.

Also Available: Thumb screws in other materials and styles. Please ask for the part number and specify thread size and length. *Brass thumb screws* (part number 92427A100) are available in sizes marked with a ★. *Zinc-plated steel thumb screws with a nylon tip* (part number 90772A111) are available in sizes marked with a ■. *Zinc-plated steel thumb screws with a washer* (part number 97008A100) are available in sizes marked with a ▲.

Wing Head Thumb Screws

With more gripping surface than spade head screws, you'll get plenty of leverage for turning and tightening. Screws are fully threaded. Length is measured from under the head. Inch sizes have a Class 2A thread fit. Metric sizes have a 6g thread fit.

Metric screws meet DIN 316.

Hex Head Thumb Screws

When your thumb screw needs to be more than finger-tight, these allow you to use a wrench for more torque. They're fully threaded and have a Class 2A thread fit. Length is measured from under the head.

Quick-Latch Thumb Screws

The head fits through a slit in a latch or panel to hold it in place. Also known as quarter-turn thumb screws, they're made from black-oxide steel and have a Class 2A thread fit. Length is measured from under the head.

Fine-Adjustment Thumb Screws

Fine threads give you precise control. Screws have a ball bearing tip that adjusts to angled surfaces. Length is measured from under the head. The head is black plastic and withstands temperatures up to 180° F. The shaft is 18-8 stainless steel. It's fully threaded and has a Class 3A thread fit.

Use brass threaded bushings to install thumb screws in existing holes (see 98625A on page 3070).

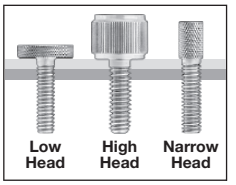
Knurled Head Thumb Screws



Roll the finely knurled, slip-resistant screw head between your fingers for controlled adjustment. Screws are fully threaded (unless noted). Length is measured from under the head. Inch sizes have a Class 2A thread fit. Metric sizes have a Class 6g thread fit.

Also Available: Low-head and narrow-head 18-8 stainless steel screws with a slotted drive in the sizes listed below. Please ask for 91746A155 and specify the corresponding unslotted part number.

Knurled Head Thumb Screws with Shoulder

A shoulder lifts the head up from the work surface and nonslip knurls provide a secure grip. All screws are fully threaded. Length is measured from under the head. **Inch sizes** have a Class 2A thread fit. **Metric sizes** have a Class 6g thread fit.

Also Available: Brass thumb screws. Screws with a straight shoulder come in sizes marked with a ★. Please ask for 98816A100 and specify thread size and length. Screws with a flared shoulder come in sizes marked with a ■. Please ask for 92421A100 and specify thread size and length. Head and shoulder dimensions vary; please see mcmaster.com.

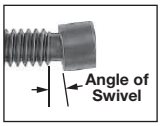
Swivel-Pad Thumb Screws for Angled Surfaces



Pads swivel in all directions for maximum contact with angled surfaces. They stop rotating when they touch the workpiece to reduce marring. Screws are made from steel with a black-oxide finish and are fully threaded. Length is measured from under the head.

Screws with pad for limited clearance have a pad that can pass through tapped holes. They come with your choice of a permanent pad that swivels 7½° or a removable pad that swivels 10°. The removable pad is left-hand threaded, so it won't fall off when you tighten the screw.

Screws with pad for gripping strength provide the most holding power. To use, thread the screw through the hole, then snap the pad on from the other side. A retaining spring holds the pad in place. The pad swivels 10°. *Optional extra-large steel pad* offers more gripping strength. *Optional plastic pad* is soft, nonmarring, and made of acetal.

Also Available: Replacement retaining springs for screws with a large diameter pad. Please ask for 90165A700 and specify thread size.

Screws with Pad for Limited Clearance

To Order: Please specify permanent pad (7½° swivel) or removable pad (10° swivel), except ½″-13 is only available with a permanent pad.

Extended Point Thumb Screws

Also called dog- and pilot-point thumb screws, insert the point into a drilled hole or slot to lock items in place. Length is measured from under the head. **Inch sizes** have a Class 2A thread fit. **Metric sizes** have a Class 6g thread fit.

Fluted head screws are fully threaded.

Plastic Thumb Screws

These lightweight nylon screws do not conduct electricity. They have knurls on the head for a nonslip grip. All are fully threaded, have a Class 2A thread fit, and withstand temperatures from –40° to 185° F. Length is measured from under the head. Exposure to moisture may cause nylon to expand.

Nylon with Slotted Head—Can be turned with a screwdriver if space for fingers is limited.

Nylon and **High-Strength Nylon with Shoulder**—The head is raised above your work surface, so it's easy to grasp. **High-strength nylon** are made from glass-reinforced nylon, so they're extremely strong.

Also Available: Wear-resistant nylatron thumb screws. Color is black. Please ask for 94955A111 and specify thread size: 6-32, 8-32, 10-24, 10-32, 1/4″-20, or 5/16″-18; and length: 3/8″, 1/2″, 3/4″, 1″, or 1 1/4″.

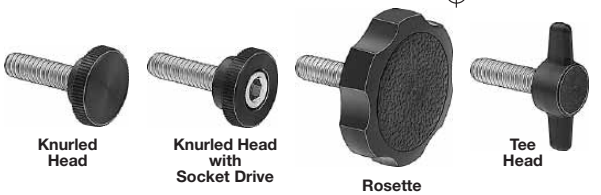
Plastic Head Thumb Screws



Plastic heads withstand temperatures from 32° to 180° F. Screw shafts are 18-8 stainless steel and fully threaded, unless noted. Length is measured from under the head. Inch sizes have a Class 3A thread fit. Metric sizes have a Class 4g6g thread fit.

Knurled head screws roll between your fingers for controlled adjusting.

Knurled head with socket drive can be tightened with a hex key for more torque.

Rosette head screws have a large gripping surface.

Tee head screws have flat surfaces to push against. Head diameter is measured from end to end.

Knurled Head—Available colors: black, red

Plastic Head Thumb Screws with Graduations

Heads are etched in increments of 0.005″ for precision adjustment. Use the included locknut to hold the screw in place. The head and locknut are made from black plastic and have a temperature range of 32° to 180°F. Screws have a fully threaded, 1/4″-20 black alloy steel shaft with a Class 3A thread fit.

Lg.		Each	Lg.		Each

Big-Grip Thumb Screw Heads

Convert cap screws into thumb screws so large you can grip them with heavy work gloves. Head diameter is 2¾″; gripping surface is knurled. Made from aluminum. Screw heads *for hex head cap screws* can also be used with hex nuts.

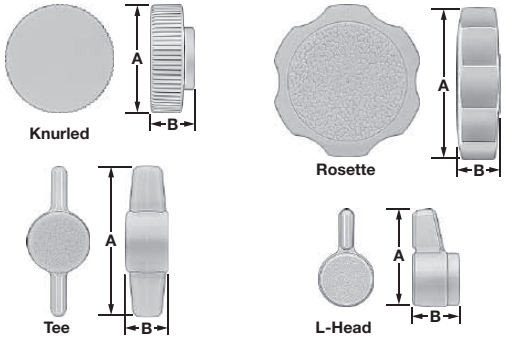
Plastic Thumb Screw Heads

Build your own thumb screw. Choose the head style you prefer and pair it with a socket head cap screw of the same screw size (please see pages 3101-3128 for socket head cap screws). Press the head and screw together using a bench vise or arbor press. All screw heads have a temperature range of 32° to 180°F.

Screw Heads



To Order: Please specify black, gray, red, or yellow.

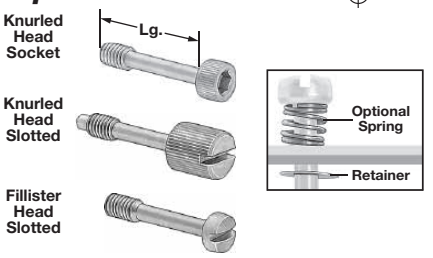
Captive Panel Screws



Use these screws for panel assemblies, cabinets, and enclosures. To hold them captive in a panel, use a retainer (sold separately). Screws, retainers, and springs are 18-8 stainless steel.

Knurled head socket screws have a Class 3A thread fit.

Knurled and **fillister head slotted screws** have a Class 2A thread fit and meet ASTM A581 and A582.

Optional springs (sold separately) provide even compression against panels.

Also Available: Metric slotted screws, retainers, and springs in M3, M3.5, and M4 screw sizes. For screws, please ask for 95536A110 and specify size and length. For retainers, please ask for 91065A800 and specify screw size. For springs, please ask for 94125K472.

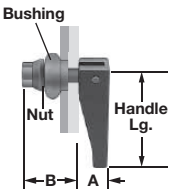
Vibration-Resistant Captive Panel Screws



An expanding rubber bushing damps vibration while holding panels together. To install, push the threaded end through a hole in the outer panel, slide on the bushing, and tighten the nut. Next, insert the assembly through the inner panel hole and flip the handle to fasten. When installed, fasteners become a permanent part of the panel. Total panel thickness is the outer plus the inner panel thickness.

Handle and nut are nylon. Color is black. 90702A810 has a zinc screw. 90702A910 has a brass screw.

Max. Outer Panel Thick.	Max. Install. Thick.	Outer Panel Cutout Ht.	Outer Panel Cutout Wd.	Inner Panel Hole Dia.	Handle Lg.	(A)	(B)

Easy-to-Install Captive Panel Screws

Fasteners snap in without special tools. Each consists of a plunger and a grommet. To install, press the grommet into a hole in the outer panel. To fasten, insert the plunger to expand the grommet behind the inner panel. Pull the plunger to release. When installed, fasteners become a permanent part of the outer panel, so they won't fall out. Total panel thickness is the outer plus the inner panel thickness.

Fasteners meet UL 94V2 for flame retardance. They're made from plastic and have a temperature range of –20° to 185°F. Color is black.

Quarter-Turn Captive Panel Screws with Nut

Lock and release access panels, doors, and covers with a quarter-turn. The screw is held to the outer panel by a retainer. Each screw includes a nut and retainer. Length is measured from under the screw head.

Screws **with clip-on nut** allow you to mount the screws near the edge of thin panels.

Screws **with rivet-mount nut** can be riveted into thin panels for a flush fit. They can be mounted without space between the panels. Rivets are not included.

Screws **with back press-fit nut** press into the back of a panel in applications where both sides are accessible.

Screws **with front press-fit nut** press into a closed-end hole or thick panel in applications where the back of the panel is not accessible.

Zinc-plated steel is corrosion resistant. An installation tool (sold separately) is required. Retainer is 18-8 stainless steel. **Acetal** is chemical resistant and lightweight. Temp. range is –40° to 190°F. Color is black.

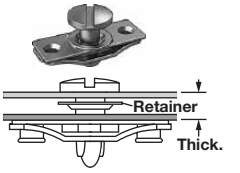
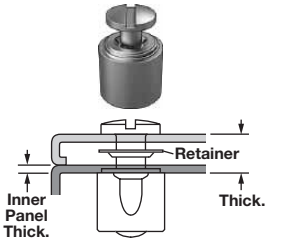
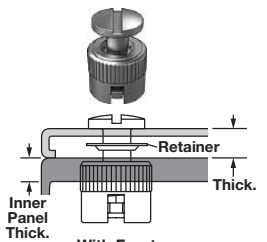
With Clip-On Nut



With Rivet-Mount Nut



With Back Press-Fit Nut



With Front Press-Fit Nut

Low-Profile Captive Panel Screws

When installed, screws become a permanent part of the outer panel. The screw head is protected inside a shell that mounts flush against the outer panel's surface. Install in aluminum and low-carbon steel with a press or punch.

Use with flush-mount press-in nuts (sold separately on page 3238).

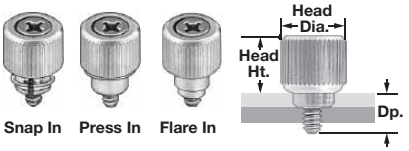
Permanently Attached Captive Panel Screws



Screws become a permanent part of the panel when installed, so they won't fall out and get lost. Made from stainless steel. Use with flush-mount press-in nuts (sold separately on page 3238).

Snap In— Use in material up to 0.125″ thick. They install without tools.

Press In— For sheet metal with a minimum thickness of 0.036″ and a Rockwell hardness of B85 or softer. Use an arbor press or similar tool for installation.

Flare In— For near-edge applications in panels up to 0.312″ thick. Install with a flare-in installation tool (required; sold separately) and an arbor press. Requires a 90° flared hole.

Also Available Flare-in installation tools. Please ask for 92060A888 and specify thread size.

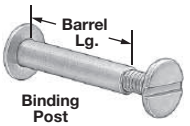
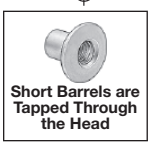
Low-Profile Binding Posts





Also known as Chicago binding posts, these unobtrusive two-part fasteners have a thin, large-diameter (truss) head on each end. The screw head has a slotted drive; the barrel head is smooth, except stainless steel, steel, and brass barrels 1/4″ and shorter, and aluminum barrels 3/8″ and shorter are tapped through the head.

Barrel Extensions— Add length to the binding post barrel. Made from aluminum. Maximum usable thread depth is 3/8″, except 1/4″ long barrels have a usable thread depth of 3/16″.

Binding Posts— Barrel Dia.: 13/64″; Thread Size: 8-32

Binding Posts

Barrels and screws team up to hold items together. Each has a large-diameter (truss) head and a combination drive on both ends that accepts both Phillips and slotted screwdrivers, unless noted.

Also Available: Replacement barrels, replacement machine screws, and 1/4" long shoulder screws. For barrels, please ask for 98002A401 and specify material, barrel diameter, and length. For machine screws, please ask for 98002A501 and specify material and thread size. For shoulder screws, please ask for 98002A601 and specify material and thread size.

♠ Barrel drive is slotted. ■ Barrel length is 1/2". ▲ Barrel length is 3/4".

Socket Drive Binding Posts

A deep socket drive allows you to tighten these fasteners with plenty of torque. All are 18-8 stainless steel.

Button head screws have a smooth dome that sits above the panel surface and provides a finished appearance.

Flat head screws have an 82° bevel under the head. They sit flush in countersunk holes leaving panel surfaces even and snag-free.

Tamper-Resistant Binding Posts

These binding posts have a nonstandard drive that can only be loosened with a matching driver. All are 18-8 stainless steel.

Pin-in-star binding posts are compatible with tamper-resistant Torx drivers and bits.

One-way binding posts are also known as partition bolts. They install with a standard slotted screwdriver, but require a special tool to remove (see 7392A63 on page 2820).

Quick-Install Binding Posts

To install, tap the cap into the barrel with a hammer.

Metal binding posts come complete with a barrel and a cap. Barrels are aluminum and fit a 7/32" hole. Caps are nickel-plated steel and 7/16" dia. Once installed, they cannot be removed.

Plastic binding post barrels and caps are sold separately. Both are black and withstand temperatures from 20° to 120°F. Barrels fit a 1/4" hole. Caps are 7/16" dia. Once installed, **permanent caps** cannot be removed. **Removable caps** have a slotted drive for removal with a screwdriver.

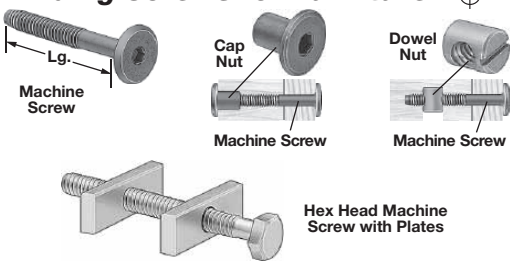
Binding Screws for Furniture



Create strong joints in wood and wood composite furniture.

Machine screws have a low-profile head and require a cap nut or a dowel nut (sold separately). Use a *cap nut* for a finished look on the back of a through hole and a *dowel nut* for an extra strong joint in a blind hole.

Hex head machine screws with plates join mitered corners. They come with one threaded and one unthreaded plate.

Sealing and Thread-Locking Binding Posts

Also called Camtainer fasteners, these binding posts have a PVC seal under the head to keep contaminants out and adhesive on the threads to resist loosening. Temperature range is –40° to 300°F. Made from zinc-plated steel.

Screws have a tamper-resistant, low-profile head with a knurled shoulder that resists rotation. Barrels have a low-profile head with a Torx drive. Barrel diameter is 25/64".

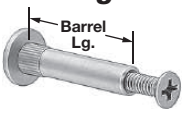
Binding Posts for Door Hardware



Also known as architectural bolts, you can use these fasteners to anchor hardware such as door closers and kick-plates. Screws have a Phillips drive and an 82° flat head that sits flush with the surface for a finished look. They protrude from the barrel to leave room for hardware. Barrels have a smooth, large-diameter (truss) head, so there's no drive to be tampered with on the outside of your door. Install in a hole with a diameter equal to the barrel diameter.

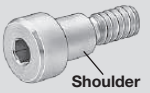
About Shoulder Screws

Also called stripper bolts and shoulder bolts, these screws have a cylindrical shoulder under the head that, like an axle or shaft, allows moving parts to rotate around or slide along its length. They also serve as fulcrums and pivots.
Shims for lengthening or shortening shoulders are available on pages 3286-3287.



Material Properties

Alloy Steel—Screws made from alloy steel are comparable to Grade 8 screws. They have a shear strength of 84,000 psi, except 1¼″ and 1½″ diameter and tight-tolerance shoulder screws are not rated.

Stainless Steel—May be mildly magnetic.

18-8 stainless steel is the most common.

Type 316 stainless steel is more resistant to corrosion, solvents, and pitting caused by chlorides and sulfates than 18-8 stainless steel.

Type 416 stainless steel and *17-4 PH stainless steel* offer the corrosion resistance of 18-8 stainless steel with strength close to that of alloy steel.

Nickel—Good for marine and chemical-processing environments, this material is comparable to Monel. It is heat resistant and slightly magnetic.

Titanium—Strong and lightweight, this material is roughly 40% lighter than steel. It is nonmagnetic.

Brass—It's nonmagnetic and an excellent conductor of electricity.

Aluminum—Lightweight and nonmagnetic, it has mild corrosion resistance.

Plastic—Nonconductive and resistant to chemicals and solvents, except mineral acids. Exposure to moisture may cause it to expand.

Comparing Strength and Corrosion Resistance

	Min. Rockwell Hardness	Min. Tensile Strength, psi

Head Ht., mm	2	3	4	5	6	7	9	11	14	16

■ Head heights for low profile screws are 1/3 to 2/3 shorter than the dimensions listed above. Dimensions do not apply to tight-tolerance or friction-resistant shoulder screws.

Shoulder Screws

Inch Sizes—Screws have a Class 3A thread fit. Shoulder diameter tolerance is –0.004″ to –0.002″. Shoulder length tolerance is ±0.005″. Screws with a 1/4″ and larger shoulder diameter meet ANSI/ASME B18.3, unless noted. *Alloy steel* screws with a 1″ and smaller shoulder diameter meet ASTM A574.

Metric Sizes—Screws have a Class 5g6g thread fit. Dimensions meet ISO 7379 (unless noted). Shoulder diameter tolerance is –0.072 mm to –0.01 mm. Shoulder length tolerance is +0.25 mm.

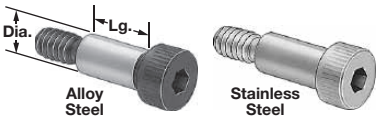
▲ Do not meet ANSI/ASME B18.3.

(Continued on following page)

⋆Prices are 15% lower when you buy in multiples of five.

Shoulder Screws *(Continued from previous page)*



Inch Sizes—Screws have a Class 3A thread fit. Shoulder diameter tolerance is –0.004″ to –0.002″. Shoulder length tolerance is ±0.005″. Screws with a 1/4″ and larger shoulder diameter meet ANSI/ASME B18.3, unless noted. *Alloy steel* screws with a 1″ and smaller shoulder diameter meet ASTM A574.

Metric Sizes—Screws have a Class 5g6g thread fit. Dimensions meet ISO 7379 (unless noted). Shoulder diameter tolerance is –0.072 mm to –0.01 mm. Shoulder length tolerance is +0.25 mm.

Thread-Locking Shoulder Screws

A nylon locking element bonded to the threads helps these screws resist loosening. It withstands temperatures from –50° to 250° F. Screws have a locking patch, except inch sizes in alloy steel have a locking pellet.

Inch Sizes—Screws have a Class 3A thread fit and meet ANSI/ASME B18.3. Shoulder diameter tolerance is –0.004″ to –0.002″. Shoulder length tolerance is ±0.005″. *Alloy steel* screws meet ASTM A574.

Metric Sizes—Screws have a 5g6g thread fit. Dimensions meet ISO 7379 (unless noted). Shoulder diameter tolerance is –0.049 mm to –0.010 mm. Shoulder length tolerance is +0.25 mm.

Shoulder Screw Assortments

Screws have a socket drive.

For assortment contents, please go to mcmaster.com and search by part number.

Material	No. of Screws	Shoulder Dia.	Shoulder Lg.	Thread Sizes		
Alloy Steel	60	¼″ to ½″	½″ to 1″	10-24, ¼″-20, 5⁄16″-18, ⅜″-16	97315A201	$139.98
18-8 Stainless Steel	60	¼″ to ½″	½″ to 1″	10-24, ¼″-20, 5⁄16″-18, ⅜″-16	93305A101	166.67

Tight-Tolerance Shoulder Screws

Shoulder tolerances for these screws are twice as precise as those for our standard shoulder screws. **Inch Sizes—**All screws have a Class 2A thread fit. Shoulder diameter tolerance is –0.001″ to +0″. Shoulder length tolerance is –0″ to +0.002″. **Socket drive** screws marked with a ♠ meet MS 51576. **Slotted drive** screws marked with a ■ meet MS 51575.

Metric Sizes—Screws have a Class 6g thread fit. Shoulder diameter tolerance is –0.025 mm to +0 mm. Shoulder length tolerance is –0 mm to +0.050 mm.

Tight-Tolerance Shoulder Screws *(Continued from previous page)*

Shoulder tolerances for these screws are twice as precise as those for our standard shoulder screws.

Metric Sizes—Screws have a Class 6g thread fit. Shoulder diameter tolerance is –0.025 mm to +0 mm. Shoulder length tolerance is –0 mm to +0.050 mm.

Thread-Locking Tight-Tolerance Shoulder Screws

With a nylon locking patch bonded to the threads, these 18-8 stainless steel screws provide a secure grip in high-vibration applications. Plus, they have shoulder tolerances that are twice as precise as those of our standard shoulder screws. The patch withstands temperatures from –70° to 250°F.

Inch Sizes—Screws have a Class 2A thread fit. Shoulder diameter tolerance is –0.001″ to +0″. Shoulder length tolerance is –0″ to +0.002″.

Metric Sizes—Screws have a 6g thread fit. Shoulder diameter tolerance is –0.025 mm to +0 mm. Shoulder length tolerance is –0 mm to +0.050 mm.

Inch Sizes—Choose a drive: socket or slotted

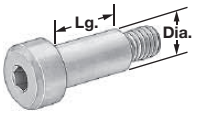
Friction-Resistant Shoulder Screws



With a slippery surface, these screws withstand wear to help rotating or sliding components move smoothly. **TiCN-coated 18-8 stainless steel** screws have a thin layer of titanium carbonitride that makes the head and shoulder slippery. **Brass** screws have a naturally slick surface.

Inch Sizes—All screws have a Class 2A thread fit. Shoulder diameter tolerance is –0.002″ to +0″. Shoulder length tolerance is –0″ to +0.003″.

Metric Sizes—All screws have a Class 6g thread fit. Shoulder diameter tolerance is –0.025 mm to +0 mm. Shoulder length tolerance is –0 mm to +0.050 mm.

Internally Threaded Shoulders

Internal threads allow you to screw these shoulders onto a stud. Use them to create pivots and to join parts when a tapped hole is not available. All sizes are 18-8 stainless steel with a socket drive. They have a Class 2B thread fit. Shoulder diameter tolerance is –0.004″ to –0.002″. Shoulder length tolerance is ±0.005″.

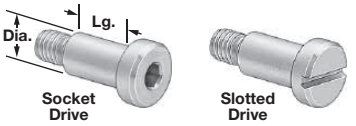
Low-Profile Shoulder Screws



The shallow head make these screws the right size to hold components in tight spaces. **Low-profile** screws are 2/3 the head height of standard shoulder screws. **Ultra-low profile** screws are 1/3 the standard head height.

Inch Sizes—All screws have a Class 2A thread fit. Shoulder diameter tolerance is –0.001″ to +0″. Shoulder length tolerance is –0″ to +0.002″.

Metric Sizes—All screws have a Class 6g thread fit. Shoulder diameter tolerance is –0.025 mm to +0 mm. Shoulder length tolerance is –0 mm to +0.050 mm.

Low Profile 18-8 Stainless Steel—Choose a drive: socket or slotted

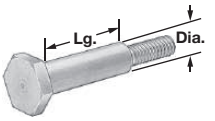
Hex Head Shoulder Screws



Also known as wheel or axle bolts, hex head shoulder screws are often used on vehicle axles. All sizes have a Class 2A thread fit and a minimum tensile strength of 70,000 psi, but are not rated for shear strength. Shoulder diameter tolerance is –0.004″ to +0″. Shoulder length tolerance is ±0.005″.

18-8 stainless steel screws have a minimum Rockwell hardness of B55.

Zinc-plated steel screws have a minimum Rockwell hardness of B80.

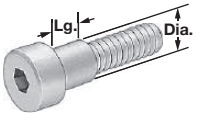
Extended-Thread Shoulder Screws



Screws have extra-long threads for use with nuts and washers or thick materials. All sizes are 18-8 stainless steel and have a Class 2A thread fit. Shoulder diameter tolerance is –0.001″ to +0″. Shoulder length tolerance is –0″ to +0.002″.

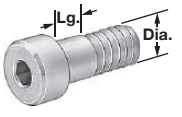
Same-Size Thread Shoulder Screws



With threads the same size as the shoulder, these screws can handle heavier loads than standard shoulder screws. They are 18-8 stainless steel and have a Class 2A thread fit. Shoulder diameter tolerance is –0.004″ to –0.002″. Shoulder length tolerance is ±0.005″.

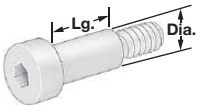
Plastic Shoulder Screws



Our plastic shoulder screws are a lightweight, nonconductive alternative to metal fasteners. All sizes have a Class 2A thread fit.

Nylon Screws—These screws withstand temperatures from –40° to 185° F. Shoulder diameter tolerance is –0.012″ to –0.002″. Shoulder length tolerance is ±0.015″.

Wear-Resistant Nylatron Screws—This material is more wear resistant than nylon. Not rated for temperature. Shoulder diameter and length tolerances are ±0.005″.

Nylon—Choose a color: black, off-white

About Socket Cap Screws

Choosing a Head Style

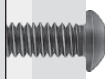
Consider the shape of the hole and the clearance above the surface when selecting a head style.

Socket heads (pages 3101-3128) are the standard for high-strength fastening. They can be installed in a counterbored hole or above the surface.

Flanged socket heads distribute the holding force to relieve stress at the point of contact.

Low socket heads are about half the height of standard socket heads for use in tight spaces.

Flat heads (pages 3128-3135) are angled under the head and provide a flush surface when countersunk. Most are angled 82°, but some have a shallower 100° angle for use in thin materials. They are not recommended for high-strength fastening.



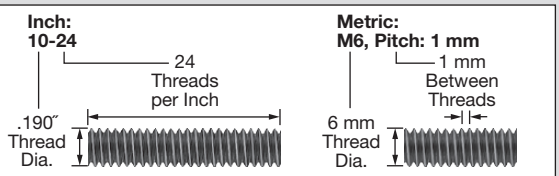
Button heads (pages 3136-3143) have a low head and provide a finished appearance. They are not recommended for high-strength fastening.

Flanged button heads have a built-in washer that keeps the screw head from crushing thin or soft materials.

Understanding Screw Size

Inch screw sizes are specified by diameter and threads per inch. For those with a diameter smaller than ¼″, diameter is indicated by a number (e.g., #1 or No.1).

Metric screw sizes are specified by diameter and pitch.

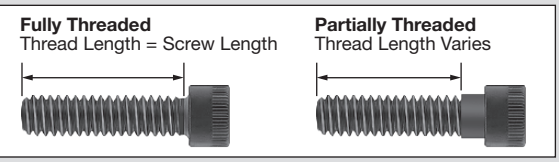


Inch Equivalents for Numbered Screw Sizes

#0	#1	#2	#3	#4	#5	#6	#8	#10	#12
.060″	.073″	.086″	.099″	.112″	.125″	.138″	.164″	.190″	.216″

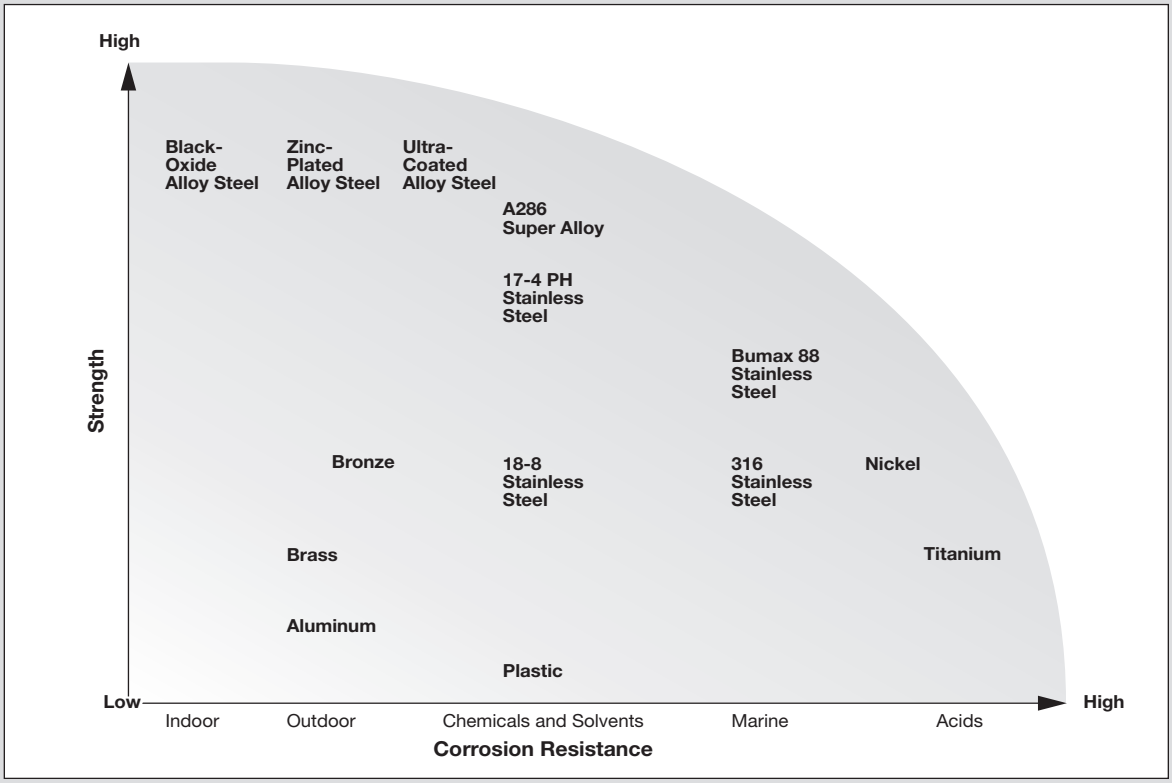
Understanding Thread Length

Fully threaded screws can be screwed all the way into a threaded hole. **Partially threaded** screws have an unthreaded portion under the head for more holding power when force is applied from the side. The unthreaded portion is stronger than the threaded portion of a screw.



Comparing Materials by Strength and Corrosion Resistance

Use this chart to compare the trade-offs between strength and corrosion resistance in different environments.



Other Material Properties to Consider

Alloy Steel is magnetic.
Stainless Steel and **Nickel** may be mildly magnetic.
Brass and **Bronze** are nonmagnetic and conduct electricity.
Aluminum is extremely lightweight—it's 70% lighter than steel.

Titanium is prized for its high strength-to-weight ratio. It's 40% lighter than steel and comparable in strength to Grade 2 steel.
Plastic is nonconductive and resists chemicals and solvents.

Alloy Steel Socket Head Cap Screws

The standard among high-strength fasteners, these screws are stronger than Grade 8 steel screws and have been heat treated for hardness, which results in a dark surface color. They conform to ASTM A574, have a minimum Rockwell hardness of C37, and a minimum tensile strength of 170,000 psi. Screw sizes through 1″ have a Class 3A thread fit; screw sizes larger than 1″ have a Class 2A thread fit. Length is measured from under the head.

Black-Oxide Alloy Steel

(Continued on following page)

Alloy Steel Socket Head Cap Screws *(Continued from previous page)*

The standard among high-strength fasteners, these screws are stronger than Grade 8 steel screws and have been heat treated for hardness, which results in a dark surface color. They conform to ASTM A574, have a minimum Rockwell hardness of C37, and a minimum tensile strength of 170,000 psi. Screw sizes through 1″ have a Class 3A thread fit; screw sizes larger than 1″ have a Class 2A thread fit. Length is measured from under the head.

Black-Oxide Alloy Steel (Cont.)

Alloy Steel Socket Head Cap Screws *(Continued from previous page)*

Full Threads

Partial Threads

The standard among high-strength fasteners, these screws are stronger than Grade 8 steel screws and have been heat treated for hardness, which results in a dark surface color. They conform to ASTM A574, have a minimum Rockwell hardness of C37, and a minimum tensile strength of 170,000 psi. Screw sizes through 1″ have a Class 3A thread fit; screw sizes larger than 1″ have a Class 2A thread fit. Length is measured from under the head.

Black-Oxide Alloy Steel (Cont.)

Alloy Steel Socket Head Cap Screws *(Continued from previous page)*

The standard among high-strength fasteners, these screws are stronger than Grade 8 hex head cap screws and have been heat treated for hardness, which results in a dark surface color. They conform to ASTM A574, have a minimum Rockwell hardness of C37, and minimum tensile strength of 170,000 psi. Screw sizes through 1" have a Class 3A thread fit; screw sizes larger than 1" have a Class 2A thread fit. Length is measured from under the head.

Black-Oxide Alloy Steel Assortments

Metric Alloy Steel Socket Head Cap Screws

Made from a high-strength alloy steel, these are the metric sizes of our popular alloy steel screws. They have a Class 5g6g thread fit, a minimum Rockwell hardness of C38, and minimum tensile strength of 170,000 psi, except the black-oxide Class 8.8 alloy steel assortment. Dimensions meet DIN 912/ISO 4762. Length is measured from under the head.

Black-oxide Class 12.9 alloy steel screws have a dark surface color.

High-visibility blue Class 12.9 alloy steel screws have a distinctive blue color that makes them easy to distinguish from inch screws and are zinc plated for corrosion resistance.
