Steel Key Assortments—Come in a plastic box

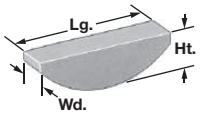
97 Keys in 35 Sizes—Includes the following key numbers: 1 each of 1, 2, 4, 5, 16, 19, 12, 14, 17, 20, 21, 22, 24, D, 23, E, 26, 27, 28, 29; 3 each of 10, 13, 15, B, 152; 4 each of 3, 7, 6, 8, 91; 5 each of 18, G; 10 each of 11, A; and 12 each of 9.

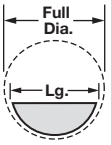
98584A170 ..... $65.64

225 Keys in 18 Sizes—Includes the following key numbers: 15 each of 211, 212, 213, 1, 2, 3, 5, 7, 6, 61, 9, 91; 10 each of 11, 13, A; and 5 each of 15, 18, E.

98540A120 ..... $113.78

Metric Woodruff Keys





Side View

All are round bottom, made of steel, and meet DIN 6888. Not rated for hardness. Width tolerance is –0.025 mm for 1.5 mm to 3 mm keys; –0.030 mm for 4 mm to 6 mm keys; and –0.036 mm for 8 mm to 10 mm keys. Full diameter tolerance is –0.1 mm for 7 mm to 22 mm keys and –0.2 mm for 25 mm and larger keys.

About Key Stock Materials and Tolerances

Type 316 Stainless Steel—Our most corrosion resistant stainless steel. Withstands chemicals and solvents and may be mildly magnetic. Not rated for hardness.

18-8 Stainless Steel—Has excellent corrosion resistance and may be mildly magnetic. Not rated for hardness.

Type 416 Stainless Steel—Can be heat treated for greater strength, but is less corrosion resistant than Type 316 and 18-8 stainless steel. Not rated for hardness.

Zinc-Plated Steel—Provides rust resistance. Not rated for hardness.

Steel—Economical choice. Not rated for hardness.

Spring Steel—Made from 1090-1095 steel. It is annealed for easy machining and can be heat treated for strength. Minimum Rockwell hardness is B91.

Alloy Steel—Made of wear-resistant Alloy 8630 steel and is easy to weld. Not rated for hardness.

Aluminum—Offers good resistance to weather-related corrosion and is one-third the weight of steel. Not rated for hardness.

Brass—Made from Alloy 360 brass, which contains lead for good machinability. Has very good corrosion resistance and is nonmagnetic. Minimum Rockwell hardness is B35.

About Spring Plungers

A spring inside the plunger body pushes the nose to apply accurate, consistent pressure to workpieces. Use spring plungers for positioning, locking, indexing, and ejecting. They can also function as a detent catch.

Ball Nose

Long Nose

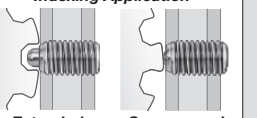
Ball-nose spring plungers roll to minimize wear on materials. They are compact for strength.

Long-nose spring plungers have an extended nose with a larger bearing surface for smooth operation.

Nose Force—*Extended nose force* is the force required to begin to depress the nose. *Compressed nose force* is the force required to depress the nose flush with the body. When using a plunger as a detent catch, lighter nose forces and shallower holes release more easily, while heavier nose forces and deeper holes hold more securely.

Thread-Locking Element—Most of our threaded spring plungers are available with a locking element that resists vibration and reduces the need for thumb nuts and thread-locking adhesives. Note: Not recommended for use on aluminum or other soft materials.

Indexing Application

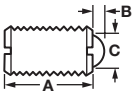


Extended Compressed

Ball-Nose Spring Plungers

With Thread-Locking Element

Without Thread-Locking Element



To Order: For steel, stainless steel, and brass body plungers, please specify **with or without a thread-locking element.** When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

The ball nose in these spring plungers rolls to minimize wear on the workpiece. They are compact for high strength. Install with a screwdriver or plunger wrench (sold separately on page 3413).

Type 316 stainless steel plungers are the most corrosion resistant.

18-8 stainless steel plungers are corrosion resistant and suitable for use in harder materials than brass plungers.

Brass plungers are nonmagnetic, corrosion resistant, and have a decorative finish. They are for use in softer materials than 18-8 stainless steel plungers.

Plastic plungers are lightweight yet durable and are good electrical insulators. Best suited for use with plastic components.

Stainless steel balls are 440C, except Type 316 stainless steel plungers have Type 316 stainless steel balls. *Plastic balls* resist moisture and solvents, and are electrical insulators.

Maximum temperature is 250° F for steel and 18-8 stainless steel plungers with a stainless steel ball and 170° F for all others.

Press-Fit Ball-Nose Spring Plungers

No special tools are needed to install these plungers. A tapered end and smooth body make them easy to press into unthreaded holes. Use in wood, soft plastic, and aluminum. Maximum temperature is 250° F for plungers with a stainless steel ball and 180° F for plungers with a plastic ball.

Stainless steel plungers are made of corrosion-resistant 18-8 stainless steel.

Stainless steel balls are 400 series. Plastic balls resist moisture and solvents, and are good electrical insulators.

Flush-Mount Ball-Nose Spring Plungers

The flangeless design on these spring plungers allows them to mount flush with a surface. Press the plunger into an unthreaded hole for permanent installation. Maximum temperature is 250° F.

Inch plungers have knurled bodies and Type 440C stainless steel balls. The stainless steel plungers are 18-8 stainless steel.

Metric plungers have 18-8 stainless steel bodies with Type 420 stainless steel balls.

Press-Fit Ball-Nose Spring Plungers

An O-ring in the flange creates a tight seal. To install, press-fit into an unthreaded hole. Made of 18-8 stainless steel. Maximum temperature is 176° F.

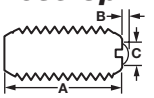
High-Torque Ball-Nose Spring Plungers

With Thread-Locking Element



Without Thread-Locking Element

To Order: Please specify **with or without a thread-locking element**. When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

The hex drive on these plungers allows you to apply more torque during installation (hex key not included). Maximum temperature is 250° F. Balls are Type 440C stainless steel.

Steel plungers have a black-oxide finish.

Stainless steel plungers are made of corrosion-resistant 18-8 stainless steel.

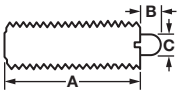
Long-Nose Spring Plungers

Standard Body Length with Thread-Locking Element

Short Body Length without Thread-Locking Element



To Order: Please specify **with or without a thread-locking element**, except where noted. When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

The nose on these plungers is longer than a ball nose, creating a larger bearing surface for smooth operation. Use to position fixtures, eject parts from a punch press, or as an indexing stop. Install with a plunger wrench (sold separately on page 3413). Short body length plungers can also be installed with a screwdriver.

Also known as stubby, **short body length** plungers combine the compact body of a ball-nose spring plunger with a long nose. This combination delivers ample plunger projection and high nose forces in thin materials and tight spaces.

Steel plungers with a *standard body length* have a black-oxide finish, unless noted. Plungers with a *short body length* are zinc plated, unless noted.

Stainless steel plungers are made of corrosion-resistant 18-8 stainless steel.

Plastic noses won't mar softer materials such as aluminum and brass.

Maximum temperature is 250° F for steel and stainless steel nose plungers, and 180° F for plastic nose plungers, unless noted.

Press-Fit Extra-Long-Nose Spring Plungers

Noses are up to four times longer than those of press-fit long-nose spring plungers with a similar body diameter. Bodies are knurled aluminum for a secure press fit, and the flangeless design allows for a flush mount. Noses are made of steel. 6423A23 and 6423A18 have a tapered nose for easy locating.

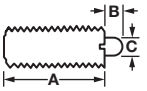
Corrosion-Resistant Long-Nose Spring Plungers

Standard Body Length with Thread-Locking Element



To Order: Please specify **with or without a thread-locking element.** When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

Choose from Type 316 **stainless steel** plungers, which are the most corrosion resistant and **brass** plungers, which are nonmagnetic and have a decorative finish.

Install with a plunger wrench (sold separately on page 3413). Maximum temperature is 180° F.

Short body length plungers are compact with a long nose.

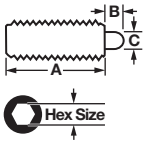
High-Torque Long-Nose Spring Plungers

With Thread-Locking Element



To Order: Please specify **with or without a thread-locking element.** When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

Unlike other plungers, these are machined from a single piece of steel and a hex drive that allows you to apply more torque during installation (hex key not included).

Steel plungers have a black-oxide finish. **Stainless steel** plungers are corrosion-resistant 18-8 stainless steel.

Plastic noses prevent marring on soft materials.

Maximum temperature is 250° F for steel and stainless steel nose plungers and 185° F for plastic nose plungers.

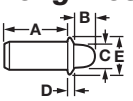
Press-Fit Long-Nose Spring Plungers



A tapered end and smooth body make these plungers easy to push into unthreaded holes.

Steel plungers have a black-oxide finish. **Stainless steel** plungers are corrosion-resistant 18-8 stainless steel.

Plastic noses won't mar soft materials.

Maximum temperature is 250° F for steel nose plungers, 190° F for plastic nose plungers, and 500° F for stainless steel nose plungers.

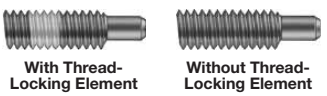
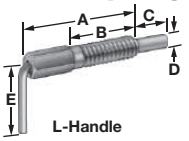
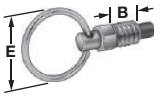
Corrosion-Resistant Retractable Spring Plungers



To Order: Please specify **with or without a thread-locking element**. When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

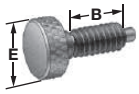


L-Handle



Short Body Pull Ring

Standard Body Pull Ring



Knurled Knob

Pull the handle, ring, or knob to retract the plunger nose. Choose from Type 316 **stainless steel** plungers, which are the most corrosion resistant, and **brass** plungers, which are nonmagnetic and corrosion resistant. Maximum temperature is 180° F.

Plungers with Locking Nose—Lock the nose into the retracted position by pulling the handle, ring, or knob and rotating it 90°.

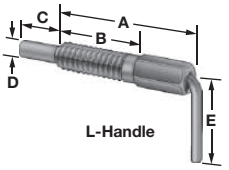
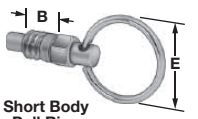
Retractable Spring Plungers

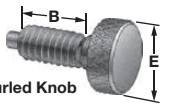


L-Handle



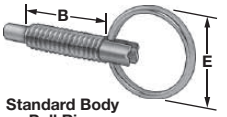
Short Body Pull Ring

Short Body Pull Ring with 12″ Lanyard

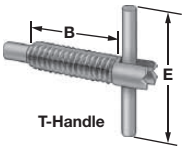


Knurled Knob

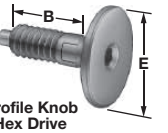
Plastic Knob



Standard Body Pull Ring



T-Handle



Low-Profile Knob with Hex Drive

Retract the nose by pulling the handle, ring, or knob. Use for fastening, positioning, latching, and quick-disconnect applications. Maximum temperature is 250° F, except stainless steel L-handle plungers, plungers with a plastic knob or nose, and steel plungers with a hex drive have a maximum temperature of 180° F.

Steel plungers are zinc-plated, except those with a *plastic knob* have a black-oxide finish and *low-profile knob with hex drive* have a gold finish.
Stainless steel plungers are corrosion-resistant 18-8 stainless steel.
Plungers with Locking Nose—Lock the nose into the retracted position by pulling the handle, ring, or knob and rotating it 90°.

With Thread-Locking Element

Without Thread-Locking Element

To Order: Please specify **with or without a thread-locking element**. When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

Retractable Captive Panel Spring Plungers

Spring-loaded pins retract to release sliding parts. Just pull the knob to withdraw the pin from inner panel. For use as a locator or hinge pin on removable doors. Pins *with hold-open* keep the plunger in the retracted position when you pull and rotate it 90°. To determine pin projection into your inner panel, subtract your outer panel thickness from dimension (B) shown in table. For the thread-in panel pin, you'll need to add 0.030″ to your outer panel thickness to allow for the threaded sleeve.

Press-In Style—Use an arbor press to insert into a panel. Knob is nickel-plated steel; stud is zinc-plated C1006 steel.

Thread-In Style—Manually insert pin into panel; thread on sleeve nut and tighten using installation wrench (sold separately). Knob is 6262-T9 aluminum; pin is zinc-plated 12L14 steel.

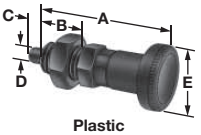
Retractable Spring Plungers for Thin Material



Plastic Knob

Threaded Spindle

When holes aren't deep enough to fit the entire plunger body, use a hand-retractable plunger with locknut to adjust the plunger depth. The locknut prevents loosening and increases holding power, especially in thin materials. Body is steel with a black-oxide finish; plunger nose is steel. Maximum temperature is 230°F.

Without Locking Nose—Choose plungers with a plastic knob or a threaded spindle. *Plungers with threaded spindle* can be threaded onto machinery or topped with the knob or handle of your choice. See pages 2239-2258 for knobs and handles.

With Locking Nose—Lock nose into the retracted position by pulling the knob and rotating it 90°.

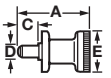
Plate-Mount Retractable Spring Plungers



Two countersunk holes in the plate make these plungers easy to mount to a flat surface. All have a zinc-plated mounting plate and a black plastic knob. To lock plungers with locking nose, pull knob to retract, then rotate 90°. Maximum temperature is 230°F. Fasteners are not included.

Stainless steel plungers are 18-8 stainless steel.

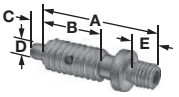
Add-a-Knob Retractable Spring Plungers



With Thread-Locking Element

Without Thread-Locking Element

To Order: Please specify **with or without a thread-locking element.** When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

Attach a knob or handle of your choice to the threaded spindle. Maximum temperature is 250°F. All plungers come with a locking nose—pull the handle back and turn it 90° to lock the nose in the retracted position. See pages 2239-2258 for knobs and handles.

Stainless steel plungers are corrosion-resistant 18-8 stainless steel.

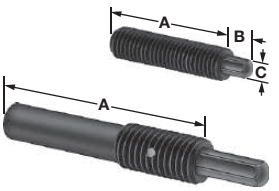
Hex-Nose Spring Plungers



Standard without Thread-Locking Element

Long Nose with Thread-Locking Element

The hex-shaped nose makes these plungers easy to install and adjust with a wrench. The body and nose are steel, unless noted. The body has a black-oxide finish. Maximum temperature is 250°F.

Standard—Use as parts ejectors, positioners, locks, and supports for die fixtures. **To Order:** Please specify **with or without a thread-locking element.** When threading into aluminum and other soft materials, select a plunger without the thread-locking element.

Long Nose—Come with a nylon thread-locking element. Not recommended for use in aluminum or other soft materials.

Spring Locating Pins

Also known as spring-loaded side thrust pins, these pins have a head that moves from side to side. They are often used to hold, clamp, and position components for machining operations and assembly. Their compact design makes them especially useful when clamping small parts and for use in tight spaces. To install, press the knurled body into a drilled hole. Head is made of zinc-plated steel; body is aluminum.

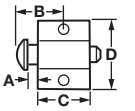
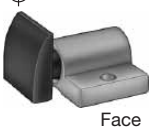
Spring Stops





Mount on flat surfaces to hold workpieces. The face is steel (unless noted) and the body is aluminum. Fasteners are not included.

Square face stops have a large contact surface.

Square face with tang stops prevent thin stock from sliding under the stop. Set the tang in a hole or slot below the work surface.

Square face with chamfered bottom stops provide extra corner clearance for metal workpieces that have a weld bead or imperfection.

Round face stops locate parts in jigs and fixtures and are good for curved or contoured surfaces.

Plastic round face stops are nonmarring.

♣ Mounting base is triangular (versus rectangular as illustrated).

Catches for Ball-Nose Spring Plungers

A countersunk indentation acts as a detent or stop for a ball-nose plunger. These catches, also known as ball buttons, withstand side loads to prevent fixture damage. The tapered end press-fits into a hole. Made of 440C stainless steel. Outside diameter tolerance is –0.0000″ to +0.0002″.

Mounting Bases for Ball-Nose and Long-Nose Spring Plungers

Also known as tooling flanges, these bases let you mount spring plungers to fixture surfaces. Insert the plunger into the threaded hole. Good for horizontal applications. Fasteners are not included.

Stainless steel bases are made of corrosion-resistant 18-8 stainless steel.

Wrenches for Ball-Nose and Long-Nose Spring Plungers

Use to install and remove spring plungers. They work better than screwdrivers because their center hole lets the plunger nose pass through to avoid damaging or overloading the spring.

Hog Rings and Pliers

Squeeze hog rings closed with the pliers for sack closure, tagging, and repairing fences. All are 3/32″ dia. wire. **Copper-coated steel** hog rings offer some corrosion resistance. 92258A668 are not copper plated. **18-8 stainless steel** hog rings have excellent corrosion resistance.

About How to Choose Staples

Find your stapler brand name and model number here to see which staple group it uses. Then find that staple group letter in the table presented on the next page. For box staples, see page 1608. For office staples, see page 2016.

For additional stapler brands and model numbers, go to mcmaster.com and search for **staples for staplers**.

Electric Staplers

Stapler operates on 0.7 amps at 120 volts AC to quickly and continuously drive staples. It has a nylon housing and includes an 8-ft. power cord with two-prong plug. Does not clinch the staple. UL and C-UL listed.

For Staple			Staple		
Wd.	Leg Lg.	Group	Cap.		
3/8"	1/4"-1/2"	J	80	**96132A300**	$52.38

Cordless Staplers

All the benefits of an electric stapler without the constraints of a cord. It includes two 18-volt lithium-ion batteries, a 30-minute charger, and a canvas bag. Housing is plastic; magazine is aluminum. Does not clinch the staple. UL listed.

(3&4) Clinching Staplers—These bend the legs of the staple for a more secure hold than staplers that do not clinch the staple. Made of steel with a chrome finish. *Style 3 heavy duty inward-clinch with spear point* stapler pierces the edges of corrugated containers to clinch the staple from the inside.

(5&6) Standard Staplers—Made of steel. They do not clinch the staple. *Style 5* has a chrome finish. *Style 6* has a knob to select the best drive depth for your application. Has a polished-nickel finish.

(7) Wire and Cable Staplers—A grooved staple guide keeps staples from penetrating the wire or cable jacket. Made of steel with a chrome finish. They do not clinch the staple. *Stapler for 1/4" round wire and cable* uses curved staples. *Stapler for 5/16" round wire and cable* uses standard staples. *Stapler for 1/2" flat wire and cable* uses insulated staples.

(8&9) Stapler/Brad Nailers—Drive staples or brad nails. Made of steel with a rubber grip. They do not clinch the staple. *Style 9 forward-action* stapler/nailer has the handle in the opposite direction for leverage and minimal kickback.

Standard Stapler Kit—Contains a Style 5 stapler, 1,250 staples, a staple lifter, and nose attachments for stapling screens and wires. Comes in a plastic case.

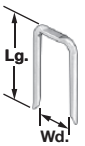
Hammer-In Staples



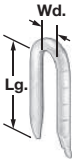
Rectangular

Insulated

Curved

Square

Saddle



Arched

Use these staples to attach wire and cable to wood.

Rectangular staples are for electrical wire.

Insulated staples are for electrical wire and have a paper insulator, except steel staples which have a plastic insulator. Those for low-voltage wire can be used for bell, thermostat, and phone wire.

Curved and **square** staples are for cable and phone wire. They have a black body with a galvanized steel nail. They can also be used in plaster, stucco, and masonry.

Saddle staples are for romex cable and have a white body with two zinc-plated steel nails.

Arched staples can also be used for installing suspended ceilings, securing insulation, and repairing fences.

Nails

Commonly used for framing.

Type 316 stainless steel nails are the most corrosion resistant and may be mildly magnetic.

18-8 stainless steel nails have excellent corrosion resistance and may be mildly magnetic.

Aluminum nails offer good resistance to weather-related corrosion.

Copper nails are decorative and corrosion resistant.

Also Available: Steel nails in 5-lb. packages. Please ask for 97801A200 and specify size.

Decorative Finishing Nails

Also known as escutcheon pins, these have a domed head for a smooth, finished appearance.

18-8 stainless steel nails have excellent corrosion resistance and may be mildly magnetic. **Brass** nails are decorative and corrosion resistant.

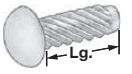
Screw Nails for Metal, Plastic, and Plywood



Also known as round-head Type U drive screws. Drive these into drilled or punched holes and get the hold of a screw when fastening sheet metal, plastic, and plywood. Hole size should be slightly smaller than the shank dia. **18-8 stainless steel** nails have excellent corrosion resistance and may be mildly magnetic.

(1-4) Air Powered— Nailers have a 1/4″ NPT female connection, except 96384A440 has a 1/4″ NPT male connection. All have a metal housing.

Style 1 have an angled magazine for maneuvering in tight spaces. Operating pressure for 96384A440 is 70-120 psi; 5906A46 is 80-120 psi.

Style 2 is coil-fed for less frequent reloading and increased productivity. Operating pressure is 70-100 psi.

Style 3 fits in the palm of your hand and can be used in any position. Operating pressure is 60-100 psi.

Style 4 operating pressure is 70-120 psi. Comes in a plastic case.

(5) Electric— Has a plastic housing. Includes an 8-ft. long cord with two-prong plug and operates on 120 volts AC. Comes in a plastic case. Note: Use only with 12-ga. extension cord with a three-prong plug.

(6) Cordless— Powered by a disposable fuel cell and a rechargeable battery. One fuel cell sets about 1,200 nails. Both nailers include a 7.4-volt lithium-ion battery that sets about 6,000 nails when fully charged. They also come with a battery charger, safety glasses, and a plastic case. Housing is plastic. Not for sale in California or Oregon.

About How to Choose Nails for Nailers

Find your nailer brand name and model number here to see which nail group it uses. Go to that nail group letter in the first column of the tables presented on the next page.

For additional nailer brands and model numbers, go to mcmaster.com and search for **nails for nailers**.

For information about how to choose nails for nailers, see page 3420.

Nails for Air-Powered, Electric, and Cordless Nailers

Framing nails with a ring shank have increased hold.
Finishing and **brad** nails have small, easy-to-conceal heads. Finishing nails have a thicker shank than brad nails.
Galvanized steel nails provide rust resistance.
Type 316 stainless steel nails are the most corrosion resistant and may be mildly magnetic.
18-8 stainless steel nails have excellent corrosion resistance and may be mildly magnetic.

Straight Strip

MIG Welding Wire

Wire with **solid** core or **metal** core requires a shielding gas. Wire with **flux** core is self-shielding and does not require a shielding gas, except vertical/overhead for steel (E71T-1), for 309 stainless steel (E309L-T1), and for 316 stainless steel (E316L-T1) do require a shielding gas.

1- and **2-lb.** spools have a 4″ dia. wheel with a 0.63″ arbor.
3-, 5-, 10-, and **11-lb.** spools have an 8″ dia. wheel with a 2″ arbor.
33-lb. spools have a 12″ dia. wheel with a 2″ arbor.

MIG Guns

Plug Styles for Standard Guns

A B C

Plug Styles for Heavy Duty Guns

A B C

Guns plug into your MIG welder and include a contact tip and nozzle. Cord is 15 ft. long.

Standard—Are 220 amps and rated 4 minutes on and 6 minutes off. Use with CO_2 gas and 0.030″ to 0.035″ dia. wire.

Heavy Duty—Let you weld with more power for longer periods of time. They are 250 amps and rated 8 minutes on and 2 minutes off. Use with Argon/CO_2 gas and 0.035″ to 0.045″ dia. wire.

Plug style A fits Thermal Arc Fabricator 140, 180, 190, and 210.

Plug style B fits Hobart Handler 210; Hobart Trek 180; and Millermatic 135, 140, 175, 180, 200, 210, 211, and 212.

Plug style C fits Lincoln Easy-Core, Easy-MIG, PowerMIG, Pro-Core, Pro-MIG, and Weld-Pak.

Plug Style	Standard		Heavy Duty	
A	77365A41	$137.05	77365A15	$383.93
B	77365A35	137.05	77365A22	383.93
C	77365A31	137.05	77365A28	383.93

MIG Welders

Welder uses 0.025″ to 0.035″ dia. wire and welds metal 1/64″ to 11/64″ thick. A shielding gas is required for welding solid wire. Welder is single phase and operates on 120 volts AC. It is rated for 2 minutes on and 8 minutes off. Power cord is 6 ft. long with a three-prong plug. Overall size is 14″ Ht. × 10″ Wd. × 18″ Dp. Weight is 50 lbs.

Welder includes welding gun contact tips, a 1/2-lb. spool of 0.025″ copper-coated steel solid wire, a 1/2-lb. spool of 0.035″ steel flux-core wire, a 10-ft. ground cable with ground clamp, welding hose, an argon-mixed gas regulator, a gas nozzle for welding solid-core wire, and a gasless nozzle for welding flux-core wire.

Optional utility cart allows you to easily transport your welder, gas tank, and tools from place to place. **Optional aluminum welding kit** includes a gun with spool mount, a 1-lb. spool of 0.035″ 4043 aluminum solid wire, welding gun contact tips, an electric harness with toggle switch, and a carrying case.

Lincoln Model No.	Output Current		
Easy-MIG 140	90A @ 19.5V AC	7264A12	$683.92
Optional Utility Cart		7264A113	99.97
Optional Aluminum Welding Kit		7264A15	286.49

Dissolvable Shims

Use these paper shims to create a gap while welding, then spray them with water and they instantly melt away. They leave no harmful residue.

Thickness	Wd.	Lg.		Pkg. of 25
1/32″	3/8″	4″	7135A11	$15.38
1/16″	3/8″	4″	7135A13	15.69
3/32″	3/8″	4″	7135A15	15.76
1/8″	3/8″	4″	7135A17	16.18

MIG Welding Wire Spool Keepers

Ensure high-quality welds by protecting your welding wire from humidity and corrosion. Spool keeper is made of plastic and holds up to five 4″ dia. spools.

7684A11 ..... $14.18

MIG Welding Pliers

Remove weld spatter, install/remove contact tips and nozzles, cut/draw out wire, and tighten/loosen fittings, nuts, and bolts all with one tool. Pliers are spring assisted and 8″ long.

79405A65 ..... $14.12

MIG Torch Lights

Attach this light to the neck of your welding torch to illuminate the weld area. It fits torch necks 1/2″ to 3/4″ dia. Torch operates on one AAA battery (included).

7741A77 ..... $29.82

MIG Wire Cleaning and Lubricating Pads

Cleaning pads work with all types of wire to reduce weld spatter. **Lubricating pads** keep rusty wire and wire with a poor surface finish feeding smoothly. Do not use on aluminum wire.

		Pkg. of 6
Cleaning Pads	1664K1	$10.47
Lubricating Pads	1664K2	11.66

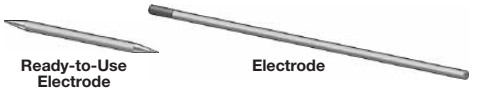
Tungsten Electrodes & TIG Torch Components

Tungsten Electrodes



Electrodes have a ground finish to ensure a close fit in your TIG torch. They conform to AWS (American Welding Society) standards, except ready-to-use general purpose (rare earth mix) do not. *General purpose*, *long life*, and *easy start* weld nickel alloys, steel, stainless steel, and titanium.

Ready-to-Use Electrodes—Come with a 20° angle on both ends.

Electrodes—Grind to your exact specifications.

General purpose electrodes are a mix of rare earth metals, which offers stability and consistency in general purpose applications.

Long-life electrodes contain 1.5% lanthanated tungsten, so they are long-lasting under heavy and pulsing amperage loads.

Easy-start electrodes are used for low-amp welding. They contain 2% ceriated tungsten for ease of starting and providing good arc stability at low currents.

Sharpeners and Grinders for Tungsten Electrodes

Keep your electrode tips sharp to ensure high-quality welds.
Chemical Sharpener—Heat your electrode and dip it into the jar to create a point.
Electric Grinder—The diamond grinding wheel creates a 20° angle on your electrode tip. The grinder operates on 120 volts AC. Includes collets for 1/16″, 3/32″, and 1/8″ dia. electrodes, a hex key, and a plastic case.

Chemical Sharpener

Repl. Diamond Wheel	7652A64	37.50

TIG Torches

Torches consist of a torch body, a cable and hose assembly, and a torch handle. Use with TIG welders, including Hobart, Lincoln, and Miller.
Torch Series No. 9 and **20—**Include a medium back cap.
Torch Series No. 17, 18, and **26—**Include a long back cap.

Water-Cooled Torch

Accessory Kits

Torch Series 9—Includes a long back cap; 0.040″ and 1/16″ collets and collet bodies; sizes 4, 5, and 6 ceramic nozzles; and two 7″ long 2% ceriated tungsten electrodes (0.040″ and 1/16″ dia.).
7740A23 ..... $35.13

Torch Series 17—Includes a short back cap; 0.040″, 1/16″, and 3/32″ collets and collet bodies; sizes 4, 5, and 6 ceramic nozzles; and three 7″ long 2% ceriated tungsten electrodes (0.040″, 1/16″, and 3/32″ dia.).
7740A24 ..... $40.95

Torch Series 18 and **26—**Includes a short back cap; 1/16″, 3/32″, and 1/8″ collets and collet bodies; sizes 5, 6, and 8 ceramic nozzles; and three 7″ long 2% ceriated tungsten electrodes (1/16″, 3/32″, and 1/8″ dia.).
7740A25 ..... $46.18

Torch Series 20—Includes a long back cap; 1/16″, 3/32″, and 1/8″ collets and collet bodies; sizes 5, 6, and 7 ceramic nozzles; and three 7″ long 2% ceriated tungsten electrodes (1/16″, 3/32″, and 1/8″ dia.).
7740A26 ..... $44.20

TIG Welders

Weld metal at least 1/64″ thick. Rated for 1 minute on and 9 minutes off. It operates on 208/230 volts AC, 60 Hz, single phase. A shielding gas is required for use. A built-in polarity switch lets you select AC or DC amperage.
Welder includes a TIG torch, a 12-ft. welding cable, a 10-ft. ground cable with ground clamp, a gas regulator, a welding hose, a foot-pedal control, and a 9-ft. power cord with three-prong plug. Size is 21″ Ht. × 15″ Wd. × 26″ Dp. Weight is 212 lbs.

Shown with Optional Cart

Torch kit includes a long back cap; 0.040″, 1/16″, and 3/32″ collets and collet bodies; 1/4″, 5/16″, and 3/8″ alumina nozzles; and three 7″ long tungsten electrodes (0.040″, 1/16″, and 3/32″ dia.).
Optional cart allows you to easily transport your welder and gas tank up to 9″ Dia. × 51″ Ht. from place to place. A bracket and chain secures the tank. Size is 42″ Lg. × 21″ Wd.

Lincoln Model No.	Output Current

Stick Welders

Use with stick electrodes for general fabrication and repairs on 1/16″ and thicker metals. Welders are rated for 2 minutes on and 8 minutes off and operate on 230 volts AC, 60 Hz, single phase. UL listed.
Welders include a 12-ft. welding cable, an electrode holder, a 10-ft. ground cable with ground clamp, and a 6-ft. power cord with NEMA 6-50 plug. Size is 24″ Ht. × 17″ Wd. × 12″ Dp.
K-1170 weighs 109 lbs.
K-1297 has a built-in polarity switch to select AC, DC positive, or DC negative welding. Weight is 124 lbs.

Shown with Optional Wheel Assembly

Optional Wheel Assembly			7967A65	17.82

Stick Electrode Holders

Electrode holder bodies are fully insulated.
Standard holders have copper jaws.
Big grip holders offer more hand clearance. Jaws are copper.
Stub grip holders grasp the electrode close to the end for less waste. One jaw is bronze, the other is steel.

Carbon-Gouging Electrode Holders

Speed up weld removal, edge preparation, gouging, and repairs when you use a holder with your carbon-gouging electrodes. Holders have brass jaws, a bolt-down lug with a 3/8″ dia. hole for connection to a power source, and 3/8 NPT female threads for connection to an air compressor. The cable swivels 360°.

Stick & Spot Welding Electrodes

Stick Electrodes

The flux coating on these electrodes produces good stability, speed, and welding performance. They are 12″ to 14″ long.

For Steel

Inspection quality (E7018) and *(E7018AC)* are low hydrogen for X-ray quality welds.

Fast deposit (E7014) are fast-melting for quicker welding.

Increased-penetration fast-deposit (E7024) penetrate deeper into the base material for higher-quality welds.

For Stainless Steel

Type 309 (E309L) can also be used for other stainless steel where pre- and post-heat treatments aren't possible, as well as for joining dissimilar metals.

Type 316 (E316L) are often used on food-processing equipment and for welds on molybdenum-bearing steels.

Other Electrodes

Nickel (ENi-CI [Ni99]) are 85% pure nickel for machinable welds joining cast iron to itself, and to mild steel and stainless steel.

Cast iron (ESt [Castarc]) are nickel-free and make nonmachinable welds on cast iron.

For cast iron (ENiFe-CI[Ni55]) join gray iron, ductile iron, malleable iron, and alloy cast iron to themselves, to each other, and to mild steel.

For copper (ECuSnC/Phosphorus Bronze C) are commonly used for metallic carbon arc welding of brass, bronze, and copper to themselves, and to mild steel, stainless steel, and cast iron.

For aluminum (E4043) are for welding aluminum 3003, 3004, 5052, 6061, and 6063.

Wear resistant are for welding steel and stainless steel. They increase the wear resistance of the base metal or restore worn-down surfaces. Rockwell hardness is C55.

For cutting and chamfering are for cutting steel and cast iron.

Carbon-Gouging Electrodes

These electrodes cut as well as gouge steel, stainless steel, copper, and aluminum. Electrodes are 12″ long and for use with DCEP power supplies.

Copper-coated electrodes offer better conductivity and stay cooler than plain electrodes.

Spot Welding Electrodes

Cap Style with Pointed Tip | Cap Style with Flat Tip | Standard Style with Pointed Tip | Standard Style with Flat Tip

Use these 182 copper electrodes with electric resistance spot welders in production operations. The shanks are tapered for easy press-fit installation. Electrodes meet RWMA (Resistance Welding Manufacturing Alliance) standards.

Pointed tips are best for tight areas or for a small weld.

Flat tips create a larger weld and can be used when appearance is less important.

Spot Welding Electrode Cleaners

Use this ratchet-style tool to clean, dress, and shape electrodes without disassembly. It works with RWMA (Resistance Welding Manufacturing Alliance) shank taper No. 4 and No. 5 electrodes as well as dome-nose electrodes. The head is 1 1/4″ wide.

Cleaner (8″ Lg. x 3/4″ Wd.)	7821A11	$92.33
Replacement Cutter	7821A12	56.25

Spot Welders

Use these welders on mild and galvanized steel as well as stainless steel. Welders are 12″ Ht.×6¾″ Wd.×16″ Dp., except the 110 volt welder is 13″ deep. They have 6″ tongs with pointed welding tips that hold and weld the metal pieces together (tongs in other lengths are sold below). Throat height is 3½″ for all tongs when closed. Welders are air cooled and rated for 5 seconds on and 5 seconds off. They operate on 50/60 Hz, single phase and have a 10-ft. power cord with three-prong plug. Do not use on aluminum, copper, or copper alloys.

Maximum material thickness is based on the total thickness of multiple sheets of uncoated mild steel when using 6″ tongs. Capacities are slightly reduced when welding galvanized steel and stainless steel and when using 12″ or 18″ tongs.

Input Volts	For Max. Material Thick.	Output, kVA	Wt., lbs.		
110V AC	1/8″	1.5	22	7870A32	$854.07

Stud Welding Systems

Join threaded studs and pins to steel and stainless steel with resistance welding that won't damage the opposite side of the material.

Welder

Includes a control unit with 6-ft. power cord and three-prong plug; a welding gun with 21-ft. cable; four stop pins to set threaded studs and pins correctly in the collet (required collets are sold separately below); and a 15-ft. ground cable with two grounding clamps. Operates on 115 volts AC, 60 Hz, 10 amps. Output is 120 volts DC. Size is 12″ Wd.×13″ Ht.×9″ Dp.

7845A38 ..... $4,139.73

Collets

Collets must be the same size as the stud or pin you are welding and are not interchangeable with studs from other systems.

Choose a Size		
4-40, 6-32, 8-32, 10-24, 1/4″-20, No. 12	7845A35	$39.00

Threaded Studs

Use for thin-gauge base materials.

18-8 stainless steel studs are more corrosion resistant than copper-coated steel studs.

Welding Cable

The cable resists abrasion and oil. Rated 600 volts AC/DC, except black and red standard cable is rated 600 volts AC.

Standard—Outer insulation is EPDM rubber with Class K 30 AWG copper wire. Temp. range is -55° to 220° F.

Flame Resistant—A more durable version of standard welding cable, this cable meets Mine Safety and Health Administration (MSHA) standards for flame resistance. Outer insulation is solvent-resistant polyethylene with Class M 34 AWG copper wire. Temp. range is -55° to 190° F. UL listed and CSA certified.

Flexible—Thinner strands give this cable more flexibility than other types of welding cable. Outer insulation is EPDM rubber. Temp. range is -55° to 220° F. *Wire gauges 2* and *1* have Class M 36 AWG copper wire; *wire gauges 1/0* and *2/0* have Class M 34 AWG copper wire.

Quick-Action Cable Connectors

Give your welding set-up greater versatility with connectors that allow for quick changes. Male connectors lock into the female connectors. All have an oil- and temperature-resistant thermoplastic cover.

Male and Female Connectors

Female

Male

Tighten the screws with a 1/4″ hex key wrench to attach the cable. Internal components are brass.

For Wire Gauge	Max. Cable Dia.	O'all Dia.	Max. Amps	Male		Female		One Male and One Female	Pair
4-1/0	0.500″	1 1/4″	250	7841A14	$8.95	7841A15	$8.95	7841A11	$16.89
1/0-2/0	0.563″	1 7/16″	350	7841A16	11.10	7841A21	11.10	7841A12	20.94
3/0-4/0	0.625″	1 7/16″	500	7841A22	13.98	7841A23	13.98	7841A13	26.38

Lug-Style Female Connectors

Attach one end to a cable with male connector (sold separately) and the other to the stud on your welding power source. Stud hole is 17/32″ dia. Internal components are bronze.

For Wire Gauge	Straight		45° Angle	
4-1/0	7854A1	$16.12	7854A2	$16.12
1/0-4/0	7854A3	17.25	7854A4	17.25

Cable Lugs

Hammer Tight

Slide lug onto cable and strike it with your hammer for a durable connection. Lugs are made of copper alloy and are not rated for temperature or voltage.

For Wire Gauge	Cable Socket ID	Hole Size		
2-1	0.406″	33/64″	69575K2	$13.06
1/0-2/0	0.516″	17/32″	69575K3	15.97
3/0-4/0	0.625″	21/32″	69575K4	18.89

Crimp/Solder

Lugs can be used with a crimping block and punch (sold separately) and hit with a hammer for a solid connection, or they can be soldered into place. They are made from copper tubing.

For Wire Gauge	Cable Socket ID	Hole Size		
6-2	0.461″	17/32″	7913A1	$2.19
1-2/0	0.559″	17/32″	7913A2	3.32
3/0-4/0	0.660″	17/32″	7913A3	5.43
4/0	0.776″	21/32″	7913A4	9.73
Lug Crimping Block and Punch			7913A76	67.02

Screw Locking

Use a 1/4″ hex key wrench to tighten the screw connection. Lugs are heavy duty cast-copper alloy with a nylon cover.

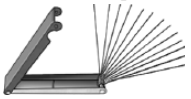
For Wire Gauge	Cable Socket ID	Hole Size	Straight		45° Angle	
6-1/0	0.500″	17/32″	7866A12	$14.22	7866A11	$14.22
2/0-4/0	0.641″	17/32″	7866A14	15.53	7866A13	15.53

Cable Lug Covers

Protect against accidental contact with other welding connections. Cover is made of vinyl and fits straight and angled lugs.

For Wire Gauge		
6-4/0	7828A11	$10.88

Torch Tip Cleaners



Keep torch tips clear for a pinpoint flame. Cleaners are stainless steel. Drill bit sizes are stamped on the back of the aluminum case.

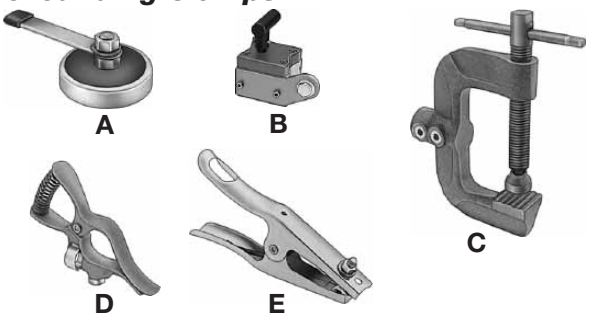
No. Per Set	Cleaner Dia. (Drill Bit Size)	Lg.		
12	0.021″-0.073″ (75-49)	2 1/4″	7946A1	$4.17
13	0.02″-0.073″ (76-49)	4 1/4″	7946A2	5.47
22	0.02″-0.129″ (76-30)	2 1/4″	7946A3	8.47

Torch Cutting Guides

Insert a plasma or oxyacetylene torch in the guide for balance and stability when cutting straight, circular, and irregular shapes. The guide pivots on the centering pin and has a universal bushing that accepts all cutting torches. It cuts circles up to 39″ in diameter.

8001A11 ..... $90.23

Grounding Clamps



(A) Magnetic Clamps— Clamps have a 3 1/2″ dia. steel housing, a 5 1/8″ long handle, and a bolt-and-nut cable connection with a 2″ stud. The stud is brass on *250-amp* clamp and copper on *800-amp* clamp.

(B) Magnetic Clamps with On/Off Switch— Flip the switch to turn the magnet on or off. Clamps are made of steel and have a bolt-and-nut cable connection with a 1 1/4″ stud. The *300-amp* clamp is 2 3/4″ Ht. × 1 15/16″ Wd. The *800-amp* clamp is 4 5/8″ Ht. × 3″ Wd.

(C) C-Clamps— Clamp is bronze; screw and T-handle are copper-plated steel. The *300-amp* clamp includes a detachable male and female cam-action cable connector. The *600-amp* clamp has a screw cable connection.

(D) Spring Clamps— Jaws are copper alloy with a copper hinge pin, so both jaws carry current. An extended jaw lip eases clamping and a support ring prevents cable strand breakage. They have a screw cable connection.

(E) Light Duty Spring Clamps— Made from steel, these have a bolt-and-nut cable connection and a cable support. The *300-amp* clamp has a 5/16″ stud bolt. The *500-amp* clamp has a 1/2″ stud bolt and a braided copper shunt.

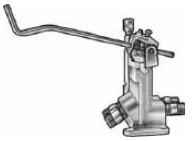
Gas-Saver Torch Holders



Hang your torch on these holders to turn off the gas flow and extinguish the flame during shutdown and between use. Start the gas flow by lifting the torch off the support lever and pass the tip over the pilot light to ignite.

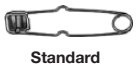
For Gas	Torch Holders		Repl. Pilot Light Assemblies	
Acetylene and Oxygen	7948A11	$187.48	7948A21	$25.59
Propane or Natural Gas and Oxygen (4 psi min.)	7948A13	184.33	7948A22	19.51
Propylene and Oxygen	7948A14	200.94	7948A23	61.96

Gas-Torch Lighters

Standard and **pistol grip** lighters include one flint.

Triple flint lighters have three flints in the flint holder. When one flint wears out, rotate the holder to get a fresh one.

Multispark lighter never needs flints, batteries, or charging.



Standard

Triple Flint

Pistol Grip

Victor Oxyacetylene Welding and Cutting Kits

Weld and cut with one system. Kits include single-stage regulators, a torch with check valves to prevent the reverse flow of gas, a torch handle, a cutting attachment, a welding nozzle, a cutting tip, a torch lighter, glasses, and hose. They meet CGA (Compressed Gas Association) standards.

400 series kits include regulators for oxygen (CGA540) and acetylene (CGA510). They can be also be used with a heating nozzle (sold separately on page 3429).

Professional series kits include regulators for oxygen (CGA540) and acetylene (CGA510), two flashback arresters, and a heating nozzle. *Journeyman* model includes two additional welding nozzles.

TurboTorch with portable tote includes regulators for oxygen (CGA540) and acetylene (CGA200), two flashback arresters, two additional welding nozzles, and a plastic carrying tote. This kit can also be used with a heating nozzle (sold separately on page 3429).

Flashback arresters extinguish flames and have a check valve to stop reverse gas flow.

MIG and TIG Welding Cable Covers

Protect the cables on your MIG guns and TIG torches from weld spatter. The fabric resists tears and abrasion and has a zipper closure. Maximum temperature is 160° F.

MIG covers have an ID of 1 1/8″ and can also be used with plasma cutters. **TIG covers** have an ID of 1″.

MIG Covers				TIG Covers

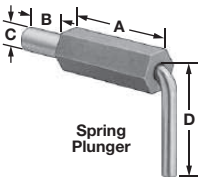
Weld-In Retractable Spring Plungers



Weld the body in place and the spring and plunger stay in place for fastening, positioning, latching, and quick-disconnect applications. Pull the L-handle to retract the plunger nose. Maximum temperature is 400° F.

Steel plungers are magnetic. The spring is 18-8 stainless steel.

18-8 stainless steel plungers are nonmagnetic and corrosion resistant.

Optional mounting bases let you mount the spring plungers to fixture surfaces.

Precision Oxyacetylene Welding Kits

With a needle-point flame, these kits are well-suited for use on electronics, plumbing, and small parts. The flame reaches up to 6000° F using oxygen and acetylene and can weld steel up to 1/8″ thick. They can also be used with hydrogen and propane, unless otherwise specified.

Torch Kits

Kits include a torch, five welding tips in sizes 0.011″ to 0.047″, and two 8-ft. hoses with 9/16″-18 (B size) female fittings.

The **kit with tanks** also includes an unfilled R (20 cu. ft.) oxygen tank, an unfilled MC (10 cu. ft.) acetylene tank, a single-stage oxygen regulator (CGA540), a single-stage acetylene regulator (CGA200), and a plastic carrying case.

Kit without Tanks

Without Tanks	7932A12	$182.29
With Tanks	7932A11	690.83
Optional Magnetic Torch Holder	7932A13	34.94

Welding Tips

Pointed welding tips are for pinpoint heat. 7932A22 cannot be used with propane.

Double-pointed welding tips heat both sides of a material.

Air/Acetylene Torch Kits

Use these torches for HVAC work and general purpose brazing and soldering. No oxygen tank required. Tanks are not included.

MC Tank Style Kit—Includes a torch handle with 3/8″-24 female hose fitting, a single-stage acetylene regulator (CGA 200), and a 12-ft., 3/16″ ID hose with 3/8″-24 (Size A) female fittings. Includes 1/4″ dia. quick-disconnect tip.

B Tank Style Kits—Include a torch handle with 3/8″-24 male hose fitting, a single-stage acetylene regulator (CGA 520), and a 12-ft., 3/16″ ID hose with 3/8″-24 (Size A) female fittings. *Torch kit* includes 3/16″ dia. and 7/16″ dia. quick-disconnect tips. *Torch kit with portable tote* comes with 3/16″ dia. and 5/16″ dia. quick-disconnect tips. It also includes a plastic tote with wheels.

Replacement torch handle has a quick-disconnect connection for easy tip change.

Welding Gas Hose

Hose is abrasion, weather, and ozone resistant. It meets ARPM (Association of Rubber Products Manufacturers) and CGA (Compressed Gas Association) requirements. Maximum pressure rating is 200 psi @ 72° F. Green hose is for oxygen. Red hose is for acetylene.

Grade T hose is oil and flame resistant and can also be used with hydrogen, MAPP gas, natural gas, propane, and propylene.

Hose with Fittings on Both Ends—Has 9/16″-18 female fittings with right-hand threads for oxygen and left-hand threads for acetylene.

Reels with Welding Hose

Reels come with two abrasion-, weather-, and ozone-resistant hoses. Both lines lock in place when pulled out of the reel; they retract with a quick tug. Reels include a 1/4″ ID×9/16″ OD twin-line hose (one green for oxygen and one red for acetylene) with 9/16″-18 female connections. *Green* hose has right-hand threads on the fittings; *red* hose has left-hand threads on the fittings. Reels have a 4″×5″ mounting base with four 1/2″ dia. mounting holes (fasteners not included). Hose meets ARPM (Association of Rubber Products Manufacturers) and CGA (Compressed Gas Association) requirements. Maximum pressure rating is 200 psi @ 72° F.

Grade T hose is oil and flame resistant and can also be used with hydrogen, natural gas, MAPP gas, propane, and propylene.

Welding Hose Fitting Kits

Kits contain brass fittings. Note: RH = right hand; LH = left hand.

3/16″ and 1/4″ ID Hose Kit—Includes four each of 3/8″-24 female RH and LH nuts; eight each of the 9/16″-18 female RH and LH nuts; fourteen 3/16″ hose ID nipples; ten 1/4″ hose ID nipples; two 3/16″ ID hose splicers; four 1/4″ ID hose splicers; one each 3/8″-24 male RH and LH hose couplers; one each 9/16″-18 male RH and LH hose couplers; twelve each 0.45″ and 0.593″ ID ferrules; ten 0.562″ ID ferrules; and a crimping tool.

7869A23 ..... $80.36

5/16″ and 3/8″ ID Hose Kit—Includes eight each 9/16″-18 female RH and LH nuts; eight each 5/16″ and 3/8″ hose ID nipples; two each 5/16″ ID and 3/8″ ID hose splicers; two each 9/16″-18 male RH and LH hose couplers; eight each 0.625″ ID, 0.656″ ID, and 0.718″ ID ferrules; six 0.687″ ID ferrules; and a crimping tool.

7869A24 ..... $116.68

Quick-Disconnect Coupling Sets with Threaded Ends for Welding Hose

Hose-to-Hose Set

Use these coupling sets to quickly link and unlink welding hoses, torches, and regulators. To connect, push the plug into the socket. Couplings have a spring-loaded lock for gas-tight connections and a built-in reverse gas-flow check valve. Each set has one right-hand connection for oxygen and one left-hand connection for fuel gas. Connections are 9/16″-18. Torch and regulator connections are female; hose connections are male.

Hose-to-Hose Set	7934A5	$76.56
Hose-to-Torch Set	7934A4	72.96
Regulator-to-Hose Set	7934A6	76.56

Welding Gas Check Valves

For Torches

For Regulators

Stop the reverse flow of gas in your torch or regulator. Check valves do not stop flashbacks. Made of brass.

Maximum pressure is 125 psi for oxygen; 50 psi for fuel gas. Connections for oxygen have right-hand threads; connections for fuel gas have left-hand threads.

Connections		Oxygen		Fuel Gas	
For Torches					
3/8″-24 Female	3/8″-24 Male	7957A7	$18.08	7957A8	$18.08
9/16″-18 Female	9/16″-18 Male	7957A1	8.16	7957A2	8.16
For Regulators					
1/4 NPT Male	9/16″-18 Male	7957A3	11.45	7957A4	11.45

Welding Gas Flashback Arresters

For Torches

For Regulators

Flashback arresters extinguish flames and have a check valve to stop reverse gas flow. They are reusable; resetting is not required after flashback. Meet ISO 5175, Class 1, and European Safety Specification EN730.

Maximum pressure is 143 psi for oxygen; 15 psi for acetylene; and 50 psi for hydrogen and propane. Connections for oxygen have right-hand threads; connections for fuel gas have left-hand threads.

For Torches—Attach directly to torches that cut steel up to 8″ thick.

For Regulators—Attach to the outlet connection of a regulator on a torch that cuts steel up to 11″ thick.

	Connections		Oxygen Each		Fuel Gas Each		One Oxygen and One Fuel Gas Pair

About Tank-Mount Pressure-Regulating Valves

Tank-mount pressure-regulating valves automatically reduce a high inlet pressure from compressed gas tanks to a lower, stable outlet pressure. Consider the following in your selection:

Compressed Gas Association (CGA) Numbers:
The Compressed Gas Association (CGA) provides a standardized system for secure connections to compressed gas tanks. Choose a valve with the same CGA number as your tank and other system components.

Outlet Pressure:
Choose a valve with a maximum outlet pressure that's approximately twice your application's normal operating pressure. Your operating pressure should never exceed 75% of the valve's maximum outlet pressure.

Tank-Mount Pressure-Regulating Valves

These valves automatically reduce a high inlet pressure from compressed gas tanks to a lower, stable outlet pressure. They have a gauge to monitor outlet pressure and a gauge to monitor inlet pressure from the tank, unless noted.

Brass valves have a longer service life than brass/steel valves. **Valves with a stainless steel diaphragm** can withstand harsh environments.

Two-stage valves progressively reduce pressure over two steps for more consistent outlet pressure at all times. They're often used in applications that require a constant outlet pressure regardless of the tank level.

★ Valve does not include a gauge to monitor inlet pressure.

Tank-Mount Pressure-Regulating Valves with Flowmeter for Inert Gas

Commonly used in TIG welding where gas flow/coverage is a concern, these valves measure the gas flow rate in addition to regulating pressure. Valves have a gauge to monitor the outlet flow rate and a second gauge to monitor inlet pressure from the tank. All are single stage. Body is brass.

Kits include a pressure-regulating valve and a 10-ft. long, 3/16" dia. hose with 5/8"-18 male fittings on both ends.

With Male Inlet

Inlet					Valves		Kits

320	Female	3,000	0-100	5/8"-18 RH Female	7997A51	173.50		

Tank-Mount Pressure-Regulating Valves

For information about tank-mount pressure-regulating valves, see page 3433.

Tank-Mount High-Pressure-Regulating Valves for Air and Inert Gas

With Male Inlet

Often used for pressure-vessel testing and other high-pressure applications, these valves can handle at least seven times the outlet pressure of standard tank-mount pressure-regulating valves. Valves have a gauge to monitor outlet pressure and a gauge to monitor inlet pressure from the tank. All are single stage. Body is brass. 6677A12 has a relief valve.

Inlet		Max. Inlet Pressure,	Outlet Pressure,

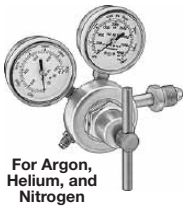
Tank-Mount Pressure-Regulating Valves for Moisture Removal



For Argon, Helium, and Nitrogen

For Nitrogen

Use these valves for nitrogen gas purging in air conditioning, refrigeration, and plumbing systems. All are single stage. Body is brass.

Valves for argon, helium, and nitrogen have a gauge to monitor outlet pressure and a gauge to monitor inlet pressure from the tank.

Valves for nitrogen have a knob to select the set pressure for testing, purging, or brazing. They come with a gauge to monitor inlet pressure from the tank.

Inlet		Max. Inlet Pressure,	Outlet Pressure,	Outlet Pressure/Flow

Pressure-Regulating Valves for Fuel Gases

For Acetylene

For Hydrogen and Propane

Install these valves directly in gas distribution pipelines for acetylene, hydrogen, or propane. They have two outlets to fit various pipe configurations. All come with a threaded brass plug to close the unused outlet and a gauge to monitor outlet pressure. Valves are single stage. Body is brass.

Note: Do not mount valves directly to gas tanks.

Inlet/Outlet Connections	Max. Inlet Pressure, psi	Outlet Pressure, psi

Easy-Read Tank-Mount Pressure-Regulating Valves with Flowmeter for Inert Gas

With One Flowmeter

With Two Flowmeters

Flowmeters let you see the gas flow rate from a distance. Valves have a gauge for monitoring inlet pressure from the tank. All are single stage. Body is brass.

Valves with one flowmeter are for one piece of equipment on a tank. The flowmeter has a single scale. Use the *optional adapter* to change the outlet fitting from a 5/8"-18 to 9/16"-18 male connection.

Valve with two flowmeters lets you simultaneously run two pieces of equipment from one tank. Both flowmeters have a dual scale.

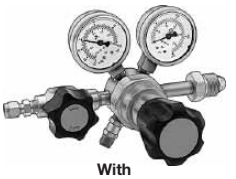
For information about tank-mount pressure-regulating valves, see page 3433.

High-Purity Tank-Mount Pressure-Regulating Valves

Reduce contaminants in research sample systems, emission monitoring systems, chromatography, and other high-purity applications. Valves have a gauge to monitor outlet pressure and a gauge to monitor inlet pressure from the tank. Body is brass and stainless steel. Outlet connection is 1/4" Swagelok® female.

Two-stage valves progressively reduce pressure over two steps for more consistent outlet pressure at all times. They're often used in applications that require a constant outlet pressure regardless of the tank level.



With Male Inlet

Inlet			Max. Inlet Pressure,	Outlet Pressure,	Outlet		
CGA No.	Gender	Stage	psi	psi	Gauge		
For Hydrogen and Methane							
350	Female	Single	3,000	0-15	30" Hg to 30 psi	7951A17	$423.00

Empty Gas Tanks

Tanks are steel and come unfilled. They meet D.O.T. requirements.

For High-Pressure Inert Gas—For argon, argon/carbon dioxide blends, helium, and nitrogen. Maximum pressure is 2,015 psi.

For High-Pressure Oxygen—Maximum pressure is 2,015 psi.

For Acetylene—Maximum pressure is 250 psi.

Tank Style	Outlet CGA No.	Outlet Gender	Cap., cu. ft.	Tank Size Dia.	Tank Size Ht.	Wt., lbs.		
For High-Pressure Inert Gas

Gas Tank Safety Caps and Collars

Protect the valve of gas tanks. The cap fits tanks with and without a regulator. Cap and collar are steel and meet D.O.T., OSHA, and MSHA requirements.

Cap is for high-pressure gas tanks.

Collar is for acetylene tanks only.

Cap

Collar

	Thread Size	For Tank Style		
Cap	3 1/8"-11	K, T	7784A32	$64.92
Collar	3 1/2"-11	5	7784A33	38.58

Welders' Antispatter

Antispatter resists heat and keeps weld spatter from sticking to contact tips, nozzles, and welding accessories.

Long-Lasting Spray On—Lasts up to eight hours so you're not stopping to reapply.

Dip In—To apply dunk your MIG gun nozzle into the container. It is also known as tip dip.

Brush On—This thick liquid handles high-heat applications.

Dip In

	Size		
Spray On	11-oz. Aerosol Can	7881A61	$8.03
Dip In	16-oz. Plastic Jar	77435A28	6.34
Dip In	16-oz. Metal Can	77435A25	7.06
Long-Lasting Spray On	9.5-oz. Aerosol Can	7881A62	32.88
Brush On	1-gal. Plastic Can	7881A71	48.80

Welding Inspection Gauges

Corner Weld

Multicheck Weld

Weld Alignment

Take accurate pre- and post-weld measurements. Gauges are made of stainless steel, except corner weld is steel.

Corner-weld gauge, also known as a fillet gauge, measures concave and convex corner weld dimensions from 1/8″ to 1″ in both inches and millimeters. Includes a vinyl carrying case.

Multicheck-weld gauge measures 0° to 60° bevel angles, excess weld metal (capping size), length of a corner-weld leg and throat to 3/4″, and depth of undercut to 3/16″. Scales are graduated in inches (to 16ths) and millimeters. Includes a vinyl carrying case.

Weld-alignment gauge measures internal misalignment of pipe ID, pipe wall thickness after tack welding, and go/no-go fit-up gap between 1/16″ and 3/32″.

Corner Weld	7928A11	$26.10
Multicheck Weld	7871A11	66.58
Weld Alignment	8970A11	138.74

Welding Plates

Create a dam or mold with these graphite plates to control metal flow while welding. They can be cut with a saw or cutting tool.

Thickness	12″×6″		12″×12″	
1/4″	7971A11	$20.41	7971A12	$38.10
1/2″	7971A15	32.61	7971A16	62.24
5/8″	7971A17	38.10	7971A18	69.70
1″	7971A22	55.44	7971A23	96.31

Stick Electrode Carriers

Leather

Plastic

Protect your stick electrodes during transport. Carriers hold electrodes up to 14″ long and include a belt clip.

Plastic carrier is air and water tight.

Wall bracket lets you hang three plastic carriers. Capacity is 30 lbs. Size is 5 1/2″ Ht.× 12″ Wd.×4 1/2″ Dp.

Tan Leather Carrier	7998A11	$10.66
Red Plastic Carrier	80005A11	12.76
Wall Bracket for Plastic Carrier	80005A12	17.76

Welding Tank Wrenches

3/8″ Socket—For Airco, Burdette, Liquid Air, and NCG welding tanks with 3/8″ 4-point valve stems. Wrench is steel and 5″ long.
7930A11 ..... $4.08

9/32″ Socket—For Linde, POL, and Pyrofax welding tanks with 9/32″ 4-point valve stems. Wrench is steel and 6″ long.
7930A12 ..... $4.33

Box—For 3/16″ 4-point valve stems on B and MC tank styles. Wrench is steel and 3 1/8″ long.
7848A11 ..... $1.87

10 Way—This wrench has 10 openings from 1/16″ to 1 1/8″, including a boxed opening for B and MC tank styles and a socket opening for 1/2″ 4-point valve stems. It is steel and 9″ long.
7935A14 ..... $8.93

Hex Open End and Spanner—Loosens 3 3/4″ tank caps and 1 1/8″ valve stems and regulator inlet nuts. Wrench is aluminum and 13 1/2″ long.
7935A6 ..... $28.13

Welding Water Coolers

Three Gallon

Four Gallon

Cool welding guns and torches with these recirculating coolers. The outlet connects to a hose running to your welder or torch, and the inlet connects to a hose running back from your welder or torch. Coolers can also be used with MIG, TIG, resistance, and plasma welders. Inlet and outlet hose connections are left hand 5/8″-18 female. Coolers operate on 115 volts AC, 50/60 Hz, single phase, 5.9/4.7 amps. CE certified.

3-gal. Cooler—For guns and torches up to 500 amps. Maximum flow is 1.05 gpm.

4-gal. Cooler—For guns and torches up to 600 amps. Maximum flow is 1.47 gpm.

Replacement pump also works on Bernard, Dynaflux, Lincoln, and Miller water coolers.

Coolant can be used in place of water to prevent mineral deposit buildup and frozen lines. It is nonconductive.

Coolers and Replacement Pump

Cap., gal.	BTU/hr.	Lg.	Wd.	Ht.	Wt., lbs.

Welding Positioners

With 5″ Dia. Turntable

With 6″ Three-Jaw Chuck

For rotary workholding and positioning, these units tilt 0° to 90° in 15° increments. They have a forward and reverse switch, speed control, and a grounding stud. Note: Do not exceed the maximum load capacities listed (load capacity is reduced as the turntable or chuck is tilted).

Positioner with 5″ dia. turntable has three 1″ Lg.×1/4″ Wd. positioning slots. It includes a foot switch with on/off control and a 8-ft. power cord with three-prong plug. It operates on 115 volts AC, 50/60 Hz.

Positioner with 12″ dia. turntable and **positioner with 6″ three-jaw chuck** have a 1 1/2″ center hole for pass-through parts, a variable-speed foot switch, a remote control box, and a 6-ft. power cord with three-prong plug. They operate on 115 volts AC, 60 Hz.

12″ dia. turntable has eight 1/2″-13 threaded holes and concentric circles every 2″ for quick positioning of parts.

6″ three-jaw chuck clamps on the inside of pipe and on the outside of round items.

	Max. Horizontal Load Cap., lbs.	rpm	Max. Arc Ground Cap., Amps	Lg.	Wd.	Ht.	Wt., lbs.

Plastic Welding Kits

Use hot compressed air to weld plastics. Kits include a welding torch, a combination tip for tack and continuous welds, a 12-ft. air hose with a 1/4 NPT male fitting, an air regulator, a pressure gauge, a 2-ft. cord with three-prong plug, and a carrying case. They operate on 120 volts AC. Use with the plastic welding rods sold on this page.

Standard—Includes a 450-watt heating element. It can also be used with nitrogen gas when welding polyethylene or polypropylene to prevent possible oxidation (air bubbles). Air compressor not included.

Variable Output—Include 450-watt, 550-watt, and 650-watt heating elements, plus an additional tip for continuous welds and an additional tip for tack welds. It can also be used with nitrogen gas when welding polyethylene or polypropylene to prevent possible oxidation (air bubbles). Air compressor not included.

Variable-Output with Built-In Compressor

Variable Output with Built-in Compressor—Air compressor produces 2½ cfm @ 3 psi. Includes 450-watt and 550-watt heating elements.

Optional high-speed tips heat the welding rod and the materials being welded at the same time to make fast, uniform welds.

	Temperature Range @ 3 psi		
Kits			
Standard	700° F	7890A3	$378.23

Optional High-Speed Tip for 3/16" Dia. Rod		7890A34	107.33

Hot-Air Gun Plastic Welding Kits

No compressor needed—a hot-air gun welds your plastics. Temperature adjusts in 10° increments and airflow adjusts from 4 to 16 cfm. Gun is 1,300 watts, operates on 120 volts AC, and has a 6-ft. cord with three-prong plug. Kit includes a high-speed tip for rods up to 1/4" dia., a tip for tack welds, a 3/8" reducer for attaching tips, a 5/8" reducer for concentrated airflow, a 1 1/4" shrink attachment for tubing and pipe, six pieces each of 1/8" Dia. x 9" Lg. ABS, HDPE, LDPE, polypropylene, and PVC welding rods, and a plastic carrying case. UL and C-UL listed.

Temperature Range @ 3 psi			
130° to 1,000° F		7890A13	$353.44

Portable Welding Tables

Speed production with this versatile, mobile welding surface.

Welding table adjusts from horizontal to 30° tilt, plus it folds for transport and storage. Height is adjustable from 26" to 32". The 30"x20" tabletop is made of steel and has three 1 1/8" wide slots for clamping, and rails on two sides that can be used as guides, stops, and clamping edges. Load capacity is 350 lbs. Weight is 44 lbs.

Optional connector plate joins two welding tables together for a larger work surface. It has three 1 1/8" wide slots for clamping and has through holes on each side for mounting options. Size is 30"x20". Weight is 16 lbs.

Welding Table	7891A1	$171.00
Optional Connector Plate	7891A2	61.04

Stick Electrode Ovens

Store electrodes at the optimum temperature to keep them dry and in prime condition. Ovens hold electrodes up to 18" long. They are made of steel and have an 8-ft. cord with three-prong plug. A light indicates the oven is on. CSA certified.

Portable oven is for transferring electrodes from a holding oven to the job site. It requires power during transit in order to maintain temperature.

Bench top ovens have an adjustable knob that controls the temperature.

Plastic Repair Kits & Torches

Plastic Welding Repair Kits

Weld stainless steel staple-like stakes into the surface of plastics to repair cracks.

Kit includes a resistance welder, 100 M-shaped stakes for tabs and narrow sections, 100 S-shaped stakes for flat surfaces, 100 V-shaped stakes for inside corners, and 100 W-shaped stakes for outside corners. Welder operates on 120 volts AC, 120 mW, and has a 4-ft. cord with plug. Temperature range is 575° to 875°F.

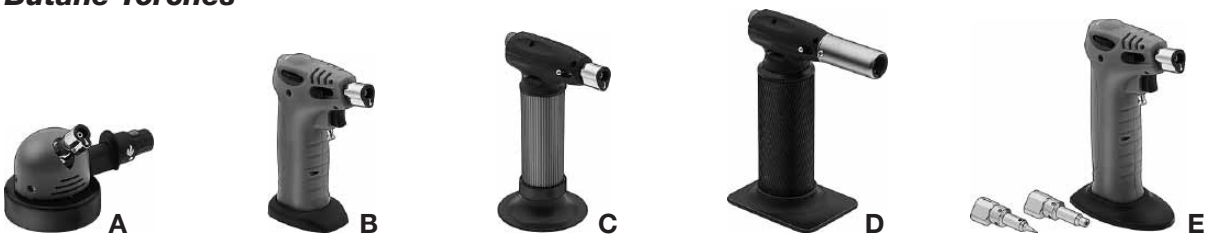
Butane Torches



Solder, desolder, and handle light brazing with these self-ignite torches. Flame reaches temperatures up to 2500°F. Torches have a continuous-use lock. They have a refillable plastic fuel tank, except Styles A and D have a metal fuel tank. Butane is sold separately.

(A) The low profile of this torch saves bench space and the wide, heavy base adds stability. A knob allows for flame adjustment.

(E) Torch includes a solder tip (maximum temperature is 750°F) and a heat tip (maximum temperature is 930°F) for applications that require heat without an exposed flame.

Style E kit includes a Style E torch, a solder tip, a heat tip, a hot-knife tip, a heat-shrink attachment, a foam cutter, a 5″ wire cutter, 5″ needle-nose pliers, 60/40 tin/lead solder, and a sponge. Kit comes in a plastic case.

	Run Time, min.	Overall Size Ht.	Wd.	Dp.

Butane Gas (5.1 oz.)					7694A5	5.24

Propane Torches and Heat Guns

Torches have 1″-20 female threads for connection to fuel cylinders (please see page 3439).

Torches—Require a gas-torch lighter to ignite (please see page 3429).

Self-Ignite Torches—Have an on/off button to ignite.

Self-Ignite Heat Gun—Has an on/off button to ignite. Heats wide and thick surfaces. Can only be used for heat shrinking applications.

Styles A, C & D torches have approximately half the Btu output of standard propane torches for use in light duty applications. Style A has a pencil-point flame tip that concentrates the flame for detail work.

Style B torch has two burners with a short, wide flame that concentrates heat over a large area. The tip rotates 360° to put the heat exactly where you need it. Used for applications requiring high heat, this torch produces higher Btus per hour than standard propane torches.

Style E torches handle brazing and soldering, as well as heating jobs. A swirl-flame tip creates a small, tight flame for heat concentration and efficient gas usage.

Style F torch rotates 360° to put the heat exactly where you need it.

Style G torch heats wide and thick surfaces. Used for applications requiring high heat, it also produces higher Btus per hour than standard propane torches.

Ultra-High-Output Propane Torches

Tackle roofing and other heavy duty heating applications. A gas-torch lighter is required for ignition. Hose connection is a 9/16″-18 left-hand male fitting. Torch includes a 4″ angled extension; tips are sold separately. Use only with propane. To connect torch to a propane tank, use 7976A adapters and hose sold on this page.

Torch

78505A22	$87.50

Propane Torches with Extended Handle

A 28″ long handle lets you heat, thaw, and sterilize in areas other torches can't reach. Torch is steel and includes a flame-adjusting valve, a torch lighter, a 10-ft. hose with 1/4 NPT female fitting, and a POL (CGA 510) 7/8″-14 male fitting to connect to a propane tank. Use only with propane.

Btu/hr.	Flame Temp., °F	Max. Flame Lg.	Max. Flame Dia.	O'all Lg.		
500,000	2000°	24″	12″	33″	78265A41	$92.31

Economy Propane Torches with Cylinder and Hose

Get into hard-to-reach areas. These adjustable-flame torches include a 4-ft. hose, a pressure regulator, a filled 14.1-oz. propane cylinder, and a belt clip. Use only with propane.

Torch requires a gas-torch lighter to ignite (please see page 3429).

Self-ignite torch has push-button ignition.

Btu/hr.	Flame Temp., °F	For Soft Soldering Copper Tube Dia.

Self-Ignite Torch				
3,900	3600°	2″	78225A31	79.19

Quick-Connect Propane Torch Kits

Save time by quickly connecting and disconnecting your propane torch tips to get the right output for your job. Kit can also be used with Apachi, HPG, and propylene. Note: Specifications shown in the tables are for use with propane.

Kit includes a handle, 1/2″ and 1″ dia. tips, a 12-ft. hose with 9/16″-18 left-hand female fitting, and a torch lighter. It also has a pressure regulator with POL (CGA 510) for connecting to a propane tank and a 9/16″-18 left-hand male outlet that connects to the hose.

Torch Kit

Flame Temp., °F		
3000°	78365A11	$328.13

1″	45,300	4″	2″	78365A15	137.67

Oxygen/Propylene Torches

Get flame temperatures from these torches that are capable of cutting, welding, and brazing steel up to 3/16″ thick. Torch has adjustable oxygen flow and includes a 4 1/2-ft. hose, a filled 1.4-oz. oxygen cylinder, a filled 14.1-oz. propylene cylinder, five brazing rods, a torch lighter, and a cylinder stand.

Flame Temp., °F		
5000°	78645A11	$107.48

Filled Fuel Cylinders

Cylinders have a 1″-20 male fuel outlet valve. They are not refillable. Size is 3″ Dia. x 10 5/8″ Ht., except the propane 16-oz. cylinder is 3 7/8″ Dia. x 7 3/4″ Ht. All meet D.O.T. 39.

Oxygen—Use with propylene to increase flame temperature.

For Gas	Cap., oz.	Flame Temp., °F Without Oxygen	With Oxygen		1-11	12-Up
Propane	14.1	3600°	4600°	8003A14	$7.97	$7.18

Empty Propane Tanks

Tanks are manufactured in accordance with D.O.T. regulations. All are steel with a rust-resistant painted finish.

Tanks **with gas capacity up to 40 lbs.** have a Type 1 valve with an overfill prevention device. They have an internal female POL (CGA 510) connection as well as external 1 5/16″ Acme threads for Type 1 connections. Meet NFPA 58 requirements.

Tank **with gas capacity of 100 lbs.** has a female POL (CGA 510) valve.

Gas Capacity lbs.	gal.	Dia.	Ht.	Empty Tank Wt., lbs.		
4.25	1.0	9″	12″	11	79955A32	$77.79

100	23.6	15″	49″	68	79955A42	176.07

Torch-to-Propane Tank Adapters and Hose

Tank-to-Hose Adapter

Torch-to-Hose Adapter

Adapters and hose (each sold separately) let you convert a propane torch (which normally connects to a fuel cylinder) for use with a propane tank. Commonly used for extended-use applications or when a propane tank cannot be moved.

Tank-to-hose adapter has a male POL (CGA 510) fitting that connects to a propane tank and a 9/16″-18 left-hand male fitting that connects to the hose.

Torch-to-hose adapter has a 1″-20 male fitting that connects to a propane torch and a 9/16″-18 left-hand male fitting that connects to the hose.

Hose has a 9/16″-18 left-hand female nut on both ends.

Hose with adapters includes a 12-ft. hose with a permanently attached tank-to-hose and a torch-to-hose adapter.

Adapters		
Tank-to-Hose	7976A21	$10.95
Torch-to-Hose	7976A22	16.51
Hose		
12 ft.	7976A34	41.46
24 ft.	7976A35	77.92
Hose with Adapters	7976A24	63.30

Propane Tank Refill Indicator Gauges

Know at a glance if your propane gas supply is running low. Gauge has a 1 5/16″ female Type 1 Acme inlet connection and a female POL (CGA 510) outlet connection as well as external 1 5/16″ Acme threads. Gauge works with tanks manufactured after 1995.

76775A2	$26.65

Propane Tanks & Brazing Alloys

Valves for Propane Tanks

Valves work with standard propane tanks. Do not use them with lift-truck propane tanks. Meet NFPA 58 requirements.

Valves **for 10- to 40-lb. tank capacity** are Type 1 and have an overflow protection device. Inlet is 3/4 NPT male. Outlet has both an external 1 5/16" Acme Type 1 connection and an internal female POL (CGA 510) connection.

Valve **for 100-lb. tank capacity** has a 3/4 NPT male inlet and a female POL (CGA 510) outlet connection.

Empty Propane Tanks for Lift Trucks

Tanks come unfilled and meet D.O.T. regulations. They include an on/off valve that has a coupler for the fuel line, a pressure relief valve, an overflow protection device, and a fuel-level gauge.

Steel tanks meet D.O.T. 4BA240. **Aluminum** tanks meet D.O.T. 4E240.

Valves and Connectors for Lift-Truck Propane Tanks

Valve

Valve Connector

Hose Connector

A complete connection from a propane tank to your lift-truck fuel hose requires a valve, a valve connector, and a hose connector (each sold separately). Valve and connectors are made of brass.

Valve—Permits withdrawal of liquid or vapor. It has a 3/4 NPT male inlet for the propane tank and a 3/8 NPT male outlet for the valve connector.

Valve Connector—One end attaches to the valve and the other end to the hose connector.

Hose Connector—Creates a quick disconnect. One end attaches to the valve connector and the other to the lift-truck fuel hose.

		Each
Valve and Connectors		
Valve	77445A81	$29.27
Valve Connector	77445A82	22.74
Hose Connector	77445A83	25.53
Replacement Parts		Pkg. of 10
Washers for Valve Connector	77445A91	$4.55
O-Rings for Valve Connector	77445A92	3.10

Brazing Alloys

Make stronger bonds than solder without melting the base material. These brazing alloys join most metals and alloys.

Coils and **rods** meet Fed. Spec. QQB-654A and AWS standards, unless noted. **Rings** meet AWS standards.

Alloys without cadmium are ROHS compliant.

Composition: Ag = Silver, Cu = Copper, Zn = Zinc, Cd = Cadmium, Sn = Tin, and Ni = Nickel.

★Does not meet Fed. Spec. ■ Does not meet Fed. Spec or AWS.

Brazing Alloy Assortments

Everything you need to start brazing. Assortment includes a 1.1-oz. coil of 1/16" Dia. × 5-ft. Lg. 45/30/25 silver/copper/zinc alloy without cadmium for joining dissimilar metals (melting temperature is 1225° to 1370°F); 0.16-oz. rod (three 10" Lg. × 1/8" Wd. × 0.05" Thick.) of 15/80/5 silver/copper/phosphorous alloy without cadmium for copper, brass, and bronze (melting temperature is 1190° to 1475°F); and a 4-oz. jar of flux. Brazing alloys and flux are ROHS compliant.

7666A1 ..... $89.10

Brazing Alloys and Flux for Aluminum

Join aluminum to aluminum alloys. Includes a 0.4-oz. coil of 1/16" Dia. × 8-ft. Lg. 88.5/11.5 aluminum/silicon brazing alloy without cadmium (melting temperature is 1070°F) and a 0.5-oz. tube of liquid flux. Both are ROHS compliant.

7797A11 ..... $10.40

Brazing Stop-Off

Prevent the flow of flux and metal to unwanted areas during brazing. Color is green.

0.3-oz. Pen ..... **1015N1** $24.25

Brazing Alloys for Carbide Tool Inserts

Also known as trimetal brazing strips, these 1" Wd. × 0.015" Thick. strips have silver with nickel alloy sides and a copper core. Use for brazing carbide tool inserts as well as steel, copper, brass, and bronze.

Alloys **without cadmium** are ROHS compliant.

	Melting Temp., °F	1.1-oz. (13" Lg.)		5.5-oz. (68" Lg.)	
With Cadmium	1170° to 1270°	**7759A11**	$56.10	**7759A14**	$238.55
Without Cadmium	1220° to 1305°	**7759A12**	56.10	**7759A68**	238.31

Brazing Flux

Use this flux with silver brazing alloys to clean and prepare surfaces. Residue washes off with hot water. Do not use it with titanium. Flux is ROHS compliant.

White flux is for use with steel, stainless steel, copper, brass, and bronze brazing alloys. It meets Fed. Spec. O-F-499, Type B; AWS A5.31-92, Type FB3A; and AMS3410.

Black flux is boron modified and is for use with nickel and carbide brazing alloys. It meets Fed. Spec. O-F-499, Type B; AWS A5.31-91, Type FB3C; and AMS3411.

	Max. Temp., °F	½-lb. Jars		1-lb. Jars	
White	1600°	**7693A1**	$8.86	**7693A2**	$13.03
Black	1700°	**7645A41**	12.77	**7645A51**	17.80

Solder without Flux

Without a flux core, this solder allows you to choose the flux that works best for your application. Meets ASTM specifications. For flux, please see page 3443.

Bar solder is commonly used in solder melting pots.

Composition: Sn = Tin, Pb = Lead, and Ag = Silver.

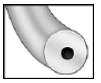
Solder with Flux Core



Single Flux Core

Five Flux Cores

No need to add flux—it's in the core of this solder. Solder **with five flux cores** allows fast soldering that uses less solder and transmits less heat to the joint.

Acid flux has strong cleaning action, but leaves corrosive residue that washes away with water.

Rosin flux is quick acting with strong cleaning action, but leaves residue that requires flux remover.

Easy-clean flux residue washes away with water.

No-clean flux leaves minimal residue so there's no cleanup.

High-melting-point with rosin flux meets J-STD-004 and J-STD-006.

Composition: Sn = Tin, Pb = Lead, and Ag = Silver.

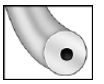
Solder Spool Holders

Keep your solder spools organized. Holder is low-static plastic and has an adhesive base. It holds up to 1 lb. of solder.

7706A67 ..... $40.43

Lead-Free Solder



With Flux Core

All solder is ROHS compliant.

Coil solder without flux core allows you to choose the flux that works best for your application (please see page 3443).

Coil solder *for drinking water* meets NSF/ANSI Standard 61.

Coil solder with flux core does not need additional flux.

Acid flux has strong cleaning action, but leaves corrosive residue that washes away with water.

Rosin flux is quick acting with strong cleaning action, but leaves residue that requires flux remover.

No-clean flux leaves minimal residue so there's no cleanup.

Easy-clean flux residue washes away with water.

Bar solder without flux core is triangular (approximately ½″ Ht. sides×1″ Wd. at base, except solder *for electronics and electrical applications* is rectangular and ½″ Ht.×1″ Wd.×14″ Lg.). *For food service equipment* is 11½″ Lg. and *for high-temperature applications* is 12″ Lg.

Composition: Sn = Tin, Ag = Silver, Sb = Antimony, and Cu = Copper.

Solder for Aluminum

Solder aluminum to itself and to its alloys. 7664A31, 7664A21, and 7664A11 require flux (please see 7696A on this page). Solder is ROHS compliant.

Composition: Sn = Tin, Zn = Zinc, and Al = Aluminum.

Composition % Sn	Zn	Al	Melting Temp., °F	Dia.	Lg.	No. of Pcs.	Wt., oz.		
—	98	2	760°	0.125″	18″	37	32	7664A4	$35.60
60	40	—	635°	0.125″	26ft.	1	16	7664A31	33.53
60	40	—	635°	0.281″	13½″	1	3.4	7664A21	9.44
60	40	—	635°	0.562″	13½″	1	13.6	7664A11	39.28

Paste Solder

Use this paste in hard-to-reach areas—apply a thin coat of paste to the surfaces you want joined, apply heat, and wipe with a damp cloth. Paste is made of finely powdered solder combined with a flux paste.

Composition: Sn = Tin, Pb = Lead, and Sb = Antimony.

Composition % Sn	Pb	Sb	Melting Temp., °F	Wt., lb.		
ROHS Compliant for Steel, Cast Iron, Nickel Alloys, Copper, Brass, Bronze, and Zinc						
95	—	5	500°	1	7774A15	$65.86
For Steel, Copper, Brass, Bronze, and Zinc						
50	50	—	420°	1	7683A3	77.58

Soldering Flux for Electronics

Clean and prepare electrical assemblies and printed circuit boards for soldering. Flux meets IPC J-STD-004 and is ROHS compliant.

Rosin—The more activated the flux, the stronger the cleaning action. The stronger the cleaning action, the more residue left over. The residue requires flux remover.

Easy Clean—Residue washes away with water.

No Clean—Leaves minimal residue so there's no cleanup.

Needle-Point Pen

Soldering Coppers

Chisel Head

Pointed Head with Wood Handle

Traditionally used for sheet metal work, heat the heads of these coppers with an external flame source and they store enough heat to complete long joints. Add a head to a handle (each sold separately) to create your soldering copper.

Note: Coppers are often used in pairs; the weight stamped on each copper is the weight per pair, not the weight per tool as shown in table.

Wt., lbs.	Tip Wd.	Chisel Heads		Pointed Heads		Wood Handles

Soldering Flux for Metals

Use this water-soluble flux to clean and prepare most metals for soldering. Do not use it on magnesium or electronics.

Rubyfluid—Causes solder to flow in a thin film to create strong joints with minimal solder use. Product cannot be sold in California, Louisiana, or Vermont.

For Plumbing—Flux cleans while soldering. *Liquid* can be used for non-potable (nondrinking) water applications. *Paste* meets MIL-F-4995, Type II and NSF/ANSI Standard 61 for drinking water.

Fast-Flushing—Provides the fastest removal of flux from pipe lines. It meets NSF/ANSI Standard 61 for drinking water and ASTM B813.

Nokorode—Protects the solder joint from corrosion. It meets NSF/ANSI Standard 61 for drinking water, A-A-51145, and MIL-FS-6872A.

For Aluminum—Meets DOD 1866 and is ROHS compliant.

For Stainless Steel—Meets A-A-51145C Type IIB. ROHS compliant. Do not use with stainless steel tubing.

Cordless Soldering Irons

Economy

Quick Charge and Standard

Extended Charge

Economy iron runs on the four included AA batteries. It is for intermittent use and includes a 1/32″ wide conical tip, lead-free solder, a tip wrench, and a safety cap.

Quick-charge, standard, and **extended-charge** irons are powered by the included rechargeable NiCad battery. They include a charger that runs on 120 volts AC and has a 4-ft. cord with plug. These products cannot be sold in California or Oregon.

Quick-charge iron includes a 1/16″ wide pointed tip and a 5/32″ wide chisel tip. UL listed.

Standard iron includes a 1/16″ wide pointed tip and a 3/16″ wide conical tip. UL listed.

Extended-charge iron solders nearly three times as many joints per charge. It includes a 1/32″ wide conical tip, a 1/16″ wide pointed tip, a 1/8″ wide chisel tip, a 4-gram coil of 60/40 tin/lead flux-core solder, a tip cover, a cleaning sponge, and a screwdriver.

Butane Soldering Irons

Economy

Standard

Butane power means no restrictive cords. Irons are self-igniting, heat-up in approximately 40 seconds, and include a protective cap. Butane is sold separately.

Economy iron includes a 3/32″ wide double-flat tip (tip temp. is 850° F). Run time is 60 minutes.

Iron kit includes an iron and 3/32″ wide double-flat tip, a 5/32″ wide knife tip, and a 5/32″ hot-air cylinder tip (all with 850° F tip temp.). Kit also includes a 7/32″ hot-air cylinder tip (tip temp. is 2370° F), a 51/64″ wide hot-air deflector tip (not rated for temp.), a sponge, a stand, and a plastic case.

Standard iron includes a 3/32″ wide chisel tip (tip temp. is 840° F) and a 3/16″ hot-air cylinder tip (tip temp. is 1200° F). Run time is 75 minutes.

Adjustable-temperature iron includes a 5/64″ wide chisel tip (tip temp. adjusts from 480° to 930° F) and a 1/8″ hot-air cylinder tip (tip temp. is 1200° F). Run time is 2 hours. UL listed.

Iron kit includes an iron, a 1/8″ wide chisel tip (tip temp. adjusts from 480° to 930° F), a 3/16″ hot-air cylinder tip (tip temp. is 1200° F), a 1/2″ dia. heat-shrink attachment, a wrench, an ejector, a sponge, and a metal case.

Instant-Heat Soldering Guns

Economy

Standard

Pull the trigger for instant heat; release it and the gun quickly cools. Guns come with one tip; additional tips are sold separately. All guns operate on 120 volts AC and include a light to illuminate your work. UL listed.

Economy

Guns have two temperature settings and a 6-ft. cord with plug.

Kits include gun, soldering tip, smoothing tip, plastic-cutting tip, rosin-core solder, hex wrench, and plastic case.

Watts, Low/High	Tip Temp., °F	Guns		Kits

Soldering Irons

Use these irons for your high-volume jobs. They include a plug-style tip and have a 5-ft. cord with plug. Irons operate on 120 volts AC.

Standard irons have a fiberglass grip.

Comfort-grip irons provide an extra layer of cork insulation between your hand and the iron.

Heavy duty irons have a large tip for excellent heat transfer, making them ideal for running seams in sheet metal. They have a wood handle and include a stand.

Economy Soldering Irons

From electronics to metal sealing, these irons handle most light duty soldering jobs. They have a light to indicate the unit is on and include a stand. Irons operate on 120 volts AC and have a 5-ft. cord with plug. UL listed.

25-watt iron includes a screw-in conical tip with 10-24 male threads; **40-** and **80-watt** irons include a plug-style chisel tip.

Adjustable-Temperature Soldering Stations with Fixed-Temperature Tip

These stations are ESD (electrostatic discharge) safe to protect sensitive components. The included tip maintains a fixed temperature of 700° F. To solder at a different fixed temperature, choose another tip from the *additional plug-style tips.*

Stations include a 42-watt iron, a plug-style 1/16" wide screwdriver tip, a stand, a tip storage area, a sponge, and a 5-ft. cord with plug. UL listed.

Stations and Replacement Parts

Adjustable-Temperature Soldering Stations

A

B

Adjust the temperature at the station for more precise and consistent control. Stations include a soldering iron, a stand, and a sponge. They operate on 120 volts AC.

Style A soldering irons have a 1/16″ wide plug-style screwdriver tip and a 5-ft. cord with plug. Stations are UL listed.

Style B soldering iron has a 3/32″ wide plug-style chisel tip and a 6-ft. cord with plug.

Analog has a dial marked in 10° increments. **Digital** have a three-digit display and adjust in 1° increments.

	Watts	Temp. Range, °F		
A Analog	50	350° to 850°	7734A18	$141.18

Resistance-Soldering Stations

A plier-style handpiece confines heat to only where it touches when you're treating, brazing, and silver soldering small parts.

The handpiece is 7¼" long with a ⅜" maximum opening. It has carbon electrodes and a 4-ft., two-wire cord that connects directly to the power unit with screw terminal connections for 200- and 75-watt output. Power unit operates on 115 volts AC and has a 4-ft. cord with plug.

Soldering Station	7713A2	$385.33
Replacement Handpiece	7713A1	151.24
Replacement Carbon Electrodes (Pair)	7713A3	13.34

Soldering Iron Stands

Stand holds irons up to 700 watts. Size is 1½" Dia.×5½" Lg.

Stand with sponge tray holds 15- to 60-watt irons with ½" max. barrel diameter. It is ¾" ID×7¼" Lg. with a 5" long protective coil. Tray includes a 4½" Lg.×3½" Wd. sponge with a hole.

Sponge tray includes one 4½" Lg.×3½" Wd. sponge with a hole.

Stand	7764A21	$13.37
Stand with Sponge Tray	7764A11	102.91
Sponge Tray	7750A11	13.63
Repl. Sponges (Pkg. of 10)	7002A37	23.72

Soldering Iron Tip Cleaners

Brass-wool cleaner is a dry brass-wool ball that removes oxidation from soldering tips. It includes a static-dissipative holder.

Tinner cleaner removes excess oxide and replenishes the tip's original coating. It's made of lead-free alloys and special fluxing agents.

Bar cleaner removes heavy oxidation from soldering tips and coppers. It is made of ammonium chloride (also known as sal ammoniac).

Heat Barriers

Stop heat from traveling to adjoining surfaces during soldering, welding, and brazing.

Putty can be formed around pipes and tubing or spread onto a flat surface. It's reusable and for use on most metals. Maximum temperature is 2000°F.

Spray gel protects components and surrounding surfaces from heat damage and discoloration. It's clear, nonstaining, and won't leave residue.

Putty	16-oz. Jar	76685A65	$13.22
Spray Gel	32-oz. Bottle	7654A2	22.82

Heat-Transfer Paste

Apply this silicone-free paste under power transistors and other devices to transfer heat (but not electricity) to a metal frame for dissipation. Temperature range is -40° to 392°F. Meets MIL-C-47113.

4-oz. Tube	76645A12	$32.67
1-lb Jar	76645A14	81.68

Heat-Sink Clips

Dissipate heat on circuit board components. Clips have chrome-plated copper jaws. Tip width is ⅛".

Electric Desoldering Guns

The fast-heating tip liquefies the solder and a built-in vacuum pump draws it into a disposable filter. Temperature adjusts from 660° to 930°F. Tool operates on 120 volts AC and has a 6-ft. cord with three-prong plug. It includes a 0.040" tip, two aluminum filters, two ceramic paper filters, and a plastic carrying case.

Desoldering Gun	7511A31	$318.86
Optional 0.051" Tip	7511A33	30.36
Optional 0.063" Tip	7511A34	30.36
Repl. 0.040" Tip	7511A32	30.36
Repl. Ceramic Paper Filters (Pkg. of 10)	7511A26	17.80
Repl. Aluminum Filters (Pkg. of 5)	7511A35	11.00

About Adhesives and Sealants

Adhesives form strong, generally permanent, bonds between two or more close-fitting surfaces. **Sealants** provide a protective coating between two or more surfaces. **Repair adhesives** fill in worn spots or tears on a single surface.

Adhesives

	**High Strength:** Epoxies, acrylics, and urethanes form very strong, impact-resistant bonds and are alternatives to mechanical fasteners and welding in structural applications.	Pages 3449-3454
	**Instant Bonding:** Also known as super glues and cyanoacrylates, these quickly form strong bonds, but aren't as impact resistant as high-strength adhesives.	Pages 3455-3458
	**Contact:** Applied on two surfaces, air dried, and then brought together to form strong instant bonds. They are often used for laminating or bonding large areas.	Pages 3458-3459
	**Aerosol:** Similar to contact adhesives but easier to apply, yet not as strong. Often used for package sealing.	Page 3459
	**Hot Melt:** When heated, these melt and begin to harden quickly to form low- to medium-strength bonds.	Pages 3460-3461

	**Glue:** Form low- to medium-strength bonds.	Pages 3461-3463
	**For Electronics:** Use for applications such as encapsulating (potting) and attaching components to printed circuit boards.	Pages 3464-3466
	**For Pipe:** Also known as pipe cements, these create strong, leakproof joints between pipes and fittings. Use on plastic (including PVC and CPVC) and copper pipes.	Page 3466
	**Threadlockers:** Keep threaded metal fasteners from loosening due to vibration and shock. They also provide an excellent seal against solvents and moisture.	Pages 3467-3468
	**Retaining Compounds:** Bond unthreaded cylindrical metal parts such as shafts, hubs, bearings, bushings, splines, pulleys, and press-fit assemblies.	Pages 3468-3469

Adhesives Bonding Guide

	Suggested Adhesive						
						● Excellent	◓ Good
Material to Bond	High Strength	High-Strength for Slippery Plastics	Instant Bonding	Contact	Aerosol	Hot Melt	Glue
Metal	●		●	●	◓	◓	◓
Plastic	●		●	●	◓	◓	◓
Hard-to-Bond Plastic (Polyethylene, Polypropylene, and PTFE)		●					
Rubber	◓		●	◓	◓		◓
Fiberglass	●		●				
Ceramic and Glass	●					◓	
Brick, Concrete, and Stone	●						
Wood	◓		◓	●	◓	◓	◓
Fabric and Paper			◓	●	●	●	●

Sealants

	**Pipe Thread and Joint:** Form water- and gas-tight seals on threaded and unthreaded metal pipe joints.	Pages 3469-3470
	**Gasketing:** Replace traditional gaskets by forming either rigid or flexible seals.	Pages 3470-3472
	**Multipurpose:** Seal and fill large gaps. Sealants are flexible and maintain the seal even when compressed or stretched. Also known as caulk.	Pages 3472-3476

Repair Adhesives

	Fill worn spots and cracks on a single surface, such as metal or fiberglass components.	Pages 3476-3479

3M Adhesive Cartridges

Bond most metals and plastics with these two-part adhesives. Use a dispensing gun with a mixer nozzle (each sold separately) to simultaneously mix and dispense. Cartridges work only with the 3M manual and air-powered dispensing guns and mixer nozzles listed below.

Epoxies are the strongest and the most weather and chemical resistant.

DP100 and *DP100 Plus* meet UL 94HB.

DP100FR meets UL 94V0.

DP190 also bonds masonry.

DP420, DP420NS, DP460, and *DP460NS* also bond phenolic laminates (Garolite).

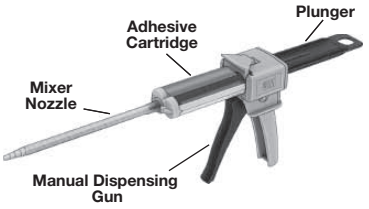
Acrylics resist impact, peeling, and weather and require the least amount of surface preparation. They also bond fiberglass, rubber, and wood.

DP810 also bonds oily surfaces.

DP8005, DP8010, and *DP8010NS* also bond polyethylene, polypropylene, and PTFE.

Urethanes are thicker than epoxies and acrylics and remain the most flexible when bonding dissimilar materials. Metal must be primed before bonding. They also bond ceramic, fiberglass, and wood.

DP640 also bonds concrete.



Adhesive Cartridges

3M No.	Type	Size, oz.	Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Temperature Range, °F		
Epoxies

Dispensing Guns, Mixer Nozzles, and Plungers

Dispensing guns include 1:1 and 2:1 mix ratio plungers, unless noted. **Air-powered dispensing gun** has a ¼ NPT male air inlet and a maximum pressure of 50 psi.

Small Manual Dispensing Gun for 1.25-, 1.52-, 1.59-, and 1.69-oz. Cartridges	7467A41▲	Each	$85.76
Large Manual Dispensing Gun for 6.76-oz. Cartridges	7467A91	Each	566.07
Air-Powered Dispensing Gun for 1.25-, 1.59-, and 1.69-oz. Cartridges	7467A15	Each	621.15
Mixer Nozzles for 1.25-, 1.59-, and 1.69-oz. Cartridges	7467A12	Each	2.93
Mixer Nozzles for 1.52-oz. Cartridges	7467A13	Each	1.33
Mixer Nozzles for 6.76-oz. Cartridges	7467A93	Each	3.90
Replacement 1:1 Plunger for Small Manual Dispensing Gun	7467A46	Each	10.50
Replacement 2:1 Plunger for Small Manual Dispensing Gun	7467A48	Each	10.50
Replacement 10:1 Plunger for Small Manual Dispensing Gun	7467A79	Each	10.67
Replacement 1:1/2:1 Plunger for Large Manual Dispensing Gun	7467A92	Each	80.75

▲Also includes a 10:1 mix ratio plunger.

Epoxy Removers

Remove most unhardened or fully hardened epoxies. Do not use on PVC, rubber, or urethane.

1-gal. Bottle	7532A15	$74.45

Instant-Bonding Adhesive Removers

Apply remover to debond and clean parts. Do not use on acrylic.

0.17-oz. Bottle	7503A21	$3.08

Adhesive Primers for Plastic and Rubber

Use with epoxies, acrylics, and urethanes to promote bonding to EPDM rubber, polyolefins, and thermoplastic elastomers. This product cannot be sold in the Los Angeles area.

8-oz. Can	66595A4	$36.31

Spacing Beads

Add these tiny glass beads to epoxies, acrylics, urethanes, and instant-bonding adhesives for uniform dispersion that keeps adhesive from squeezing out during clamping. Bead diameter is 9.8 mil. A Luer Lock dispensing tip is included.

1-oz. Bottle	6640A11	$11.11

Loctite® Adhesive Cartridges

Use these two-part adhesives to bond most metals and plastics. The dispensing gun and mixer nozzle (each sold separately) let you simultaneously mix and dispense.

Epoxies are the strongest and the most weather and chemical resistant.

Acrylics resist impact, peeling, and weather and require the least amount of surface preparation. *H8000™, H8100™,* and *H8700™* also bond magnets.

Urethanes remain the most flexible when bonding dissimilar materials. They also bond glass and wood.

Lord Adhesive Cartridges

Make strong bonds on most metals and plastics as well as fiberglass with these two-part adhesives. Use the dispensing gun (sold separately) with the mixer nozzle (included with adhesive) to simultaneously mix and dispense.

Epoxies are the strongest and the most weather and chemical resistant. They also bond glass and wood. *305-½* also bonds ceramic, phenolic laminates (Garolite), and rubber.

Acrylics resist impact, peeling, and weather and require the least amount of surface preparation. *506/19* also bonds phenolic laminates (Garolite).

Urethanes remain the most flexible when bonding dissimilar materials. They also bond glass, painted surfaces, and wood. *7150A/B* also bonds foam and rubber. *7542A/B* also bonds rubber. *7550A/C* also bonds primed metal.

■Comes in two 7.5-oz. bottles; cannot be used with dispensing gun. ★Requires 10:1 plunger 74695A45 (sold separately).

Dispensing Gun, Mixer Nozzle, and Plunger

Dispensing Gun (Includes 1:1 and 2:1 mix ratio plungers)	74695A71	$23.06
Mixer Nozzle	74695A12	1.26
10:1 Plunger (Required for 66215A73)	74695A45	3.62

Adhesives in Caulk Gun Cartridges

All you need is a standard caulk gun to dispense this two-part weather- and chemical-resistant epoxy. It bonds most metals and plastics as well as ceramic and fiberglass. Cartridge includes two mixer nozzles that simultaneously mix and dispense. Please see page 3484 for caulk guns.

Size, oz.	Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Temperature Range, °F		
8.5	Light Amber	3 min.	24 hrs.	1:1	–40° to 200°	7646A12	$48.89

3M Adhesives

These two-part adhesives securely bond most metals and plastics as well as composites, glass, rubber, and wood. Size listed is the combined total of the two parts.

Epoxies are the strongest and the most weather and chemical resistant.
1838 meets MIL-A-52194A.
1838L also bonds masonry.
2158 also bonds concrete.
2216 also bonds fiberglass and masonry. Gray version meets DOD-A-82720.
3501 also bonds masonry.
Urethanes remain flexible when bonding dissimilar materials. They can also be used on fiberglass and painted surfaces.

Loctite® Adhesives

Impact, peel, and weather resistant, these two-step acrylic adhesives bond most metals and plastics as well as glass. A primer or activator (sold separately) is required to create adhesion.

324™ also bonds magnets. Requires activator 7075™.
325™ also bonds ceramic and magnets. Requires activator 7075™.
326™ also bonds Kevlar. Requires primer 7649™.
330™ also bonds ceramic and wood. Requires activator 7387™.
331™ and **392™** also bond magnets. Require activator 7387™.

Adhesives in One-Time-Use Packets

Also known as double-bubbles, these convenient packets easily handle small jobs on most metals. Ten mixing sticks are included. Size listed is the combined total of the two parts.

Epoxies are the strongest and most weather and chemical resistant.

General purpose and *fast hardening* also bond ceramic, concrete, and rubber.

Fast hardening for vertical surfaces also bonds stone and wood.

Easy flowing also bonds phenolic laminates (Garolite).

Machinable also bonds fiberglass and phenolic laminates (Garolite).

Transparent also bonds glass.

Vibration resistant also bonds rubber.

Underwater also bonds concrete and fiberglass.

Urethanes remain the most flexible when bonding dissimilar materials. They also bond glass, phenolic laminates (Garolite), rubber, and stone.

Flexible also bonds fiberglass.

Semi-rigid also bonds sheet moulding compound (SMC) and thermoplastic elastomers.

Type	Size, oz.	Color	Begins to Harden	Reaches Full Strength	Temperature Range, °F		Pkg. of 10

8-Piece Epoxy Assortment— Includes 1 packet of each epoxy listed above. 7538A16 Each $18.16

Adhesives in Syringes

Suited for small jobs on most metals and plastics, these two-part adhesives come in a syringe for easy dispensing.

Epoxies are the strongest and most weather and chemical resistant.

Loctite® 1324007™ also bonds concrete, glass, and wood.

Gorilla also bonds ceramic, glass, and wood.

General purpose also bond wood. 7541A76 also bonds brick and painted metal; 7541A84 also bonds rubber.

High strength also bonds brick, concrete, and wood.

Water resistant also bonds fiberglass, glass, and wood.

Underwater also bonds concrete, fiberglass, glass, and wood.

Acrylic is impact, peel, and weather resistant and requires the least amount of surface preparation. It also bonds ceramic and fiberglass.

Urethanes remain the most flexible when bonding dissimilar materials that expand and contract differently.

Adhesives in Tubes

Two-part epoxies in easy-to-use tubes for bonding most metals and plastics. Size listed is the combined total of the two parts.

Loctite® 1C™ general purpose also bonds wood.

Loctite® 0151™ for fiber optics also bonds glass.

Loctite® 9340™ chemical resistant also bonds ceramic.

General purpose also bond rubber.

Electrical insulating also bonds ceramic.

Fast setting also bonds fiberglass.

Adhesives in Bottles

Plastic squeeze bottles mean easy dispensing of these two-part epoxies that bond concrete, glass, and most metals. Size listed is the combined total of the two parts.

General purpose also bonds polystyrene, PVC, rubber, and stone.

Fast hardening also bonds most plastics.

Vibration resistant also bonds rubber.

Type	Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Temperature Range, °F	8 oz.		32 oz.

Loctite® High-Purity Adhesives

Use to bond glass, metal, and plastic. To simultaneously mix and dispense these two-part adhesive cartridges, use the dispensing gun and a mixer nozzle (each sold separately).

Epoxies are the strongest and most weather and chemical resistant.

Urethane remains the most flexible when bonding materials that expand and contract differently. Also bonds wood.

Adhesives for Food-Processing Applications

Bond most metals and plastics as well as ceramic, fiberglass, and glass in food-processing and packaging equipment. Epoxies are two-part and are FDA compliant. Size listed is the combined total of the two parts.

Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Temperature Range, °F	1.4-oz. Dual-Packets		16-oz. Cans	
Amber	2 hrs.	18 hrs.	2:1	–94° to 290°	66525A21	$29.30	66525A22	$89.18

Adhesives for Slippery Plastics

Difficult-to-bond plastics such as HDPE, nylon, PEEK, PET, and polyethylene become easy to bond with these two-part epoxies. They also bond glass and metal.

1.7-oz. cartridges use the dispensing gun and mixer nozzle (each sold separately) to simultaneously mix and dispense. Size listed for *bottles* is the combined total of the two parts.

Flexible also bonds fiberglass, polyimide, PVDF, rubber, and UHMW polyethylene.

Easy flowing can also be used as a protective coating or for potting applications. It also bonds fiberglass, polyimide, PVDF, rubber, and UHMW polyethylene.

Type	Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Temperature Range, °F	1.7-oz. Cartridges		48-oz. Bottles

Mixer Nozzle								74695A12	1.26

Adhesives for PTFE

Make secure bonds on PTFE and fluoropolymers with these two-part epoxies that also bond ceramic, glass, most metals, and wood.

Adhesives

Epoxy requires the dispensing gun and a mixer nozzle (each sold separately) to simultaneously mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers. Temperature range is –85° to 275°F. Size listed is the combined total of the two parts.

Type	Size, oz.	Color	Begins to Harden	Reaches Full Strength	Mix Ratio	Epoxies		Dispensing Gun		Mixer Nozzle	
Super Flexible	1.7	Amber	90 min.	3 days	1:1	7513A6	$78.18	74695A71	$23.06	74695A12	$1.26

Adhesive Kits

Deluxe Kit

Kits include one cartridge of epoxy, etching solution, 1:1 and 2:1 mix ratio plungers, and a mixer nozzle. Color is amber. Begins to harden in 30 min.; reaches full strength in 24 hours. Mix ratio is 2:1. Temperature range is –50° to 350°F. Use with the dispensing gun (sold separately) to simultaneously mix and dispense. Gun includes 1:1 and 2:1 mix ratio plungers.

Deluxe kit also includes two brushes, two mixing trays, and a mixing stick.

Type	Size	Kits		Dispensing Gun		Repl. Mixer Nozzle	
Standard	1.7-oz. of Epoxy 2-oz. of Etching Solution	7607A15	$154.00	74695A71	$23.06	74695A12	$1.26

High-Temperature Adhesives

Ready-to-Use—No mixing required.
General purpose, easy flowing, and *for vertical surfaces* bond ceramic and metals.
Extreme temperature bonds brick and ceramic.
For porous insulation bonds calcium silicate insulation.

Two-Part—Size listed is the combined total of the two parts.
General purpose bonds aluminum, brass, and copper.
Fast hardening bond ceramic and glass.
Electrical insulating bond ceramic, glass, and steel.

Loctite® Instant-Bonding Adhesives

Also known as super glue, these adhesives provide quick bonds on metals, phenolic laminates (Garolite), most plastics, and rubber.

General Purpose—*404*™, *414*™, *415*™, *416*™, *420*™, *422*™, *430*™, *493*™, and *496*™ meet Commercial Standard A-A-3097. *409*™ also bonds ceramic.

Impact Resistant—*480*™ meets NSF/ANSI standards for use with drinking water systems.

High Temperature—*495*™ meets Commercial Standard A-A-3097.

High Temperature for Dirty or Porous Surfaces—Also bond foam, leather, paper, and wood.

Flexible—Also bond fabric, leather, and paper.

Instant-Bonding Adhesives

For information about adhesives and sealants, see page 3448.

Loctite® Gap-Filling Instant-Bonding Adhesives

Large gaps are no problem for this fast-bonding, two-part adhesive. It bonds most metals, plastics, rubber, and wood. Includes three mixer nozzles for simultaneous mixing and dispensing.

Loctite No.	Fills Gaps Up To	Size, oz.	Begins to Harden	Reaches Full Strength	Thick-ness	Temperature Range, °F	Color		
3092	0.2″	0.3	15 sec.	24 hrs.	Gel	0° to 175°	Clear	7530A12	$27.56

3M Instant-Bonding Adhesives

Get quick, strong bonds on most plastics and rubber. Also known as super glue. Adhesives meet Commercial Standard A-A-3097 (unless noted).

General Purpose—Also bond most metals.

CA4, CA5, and *CA50* also bond phenolic laminates (Garolite). *CA40* and *CA40H* also bond EPDM and phenolic laminates (Garolite).

Impact Resistant—Also bond fiberglass and phenolic laminates (Garolite).

For Dirty Surfaces—Also bond cardboard, leather, and wood.

Primer/accelerator ensures strong bonds and shortens the time it takes for adhesives to reach full strength.

Permabond Instant-Bonding Adhesives

Bond most metals and plastics, phenolic laminates (Garolite), and rubber with these adhesives that are also known as super glue.

General Purpose—*268* also bonds ceramic.

High Temperature—To achieve resistance to the maximum temperature, adhesives (except 820) must be clamped at room temperature for 4 hours and then heated to 305°F for 2 hours.

Accelerator shortens the time it takes for adhesives to reach full strength.

High-Purity Instant-Bonding Adhesives

Comparable to Loctite® high-purity instant-bonding adhesives. Also known as super glue, they bond most metals and plastics as well as fiberglass, phenolic laminates (Garolite), rubber, and wood.

Fills Gaps Up To	Size	Begins to Harden	Reaches Full Strength	Thick-ness	Temperature Range, °F	Color

Loctite® Primers, Accelerators, and Cleaners

Prepare your surfaces for bonding with these primers, accelerators, and cleaners.

Primers ensure strong bonds, especially when applying adhesives in low temperatures, or to large gaps or deep threads. Recommended for aluminum, galvanized steel, magnesium, stainless steel, steel, and titanium as well as plated parts and black-oxide coatings.

770™ and *7701*™ are for hard-to-bond slippery plastics. These products cannot be sold in the Los Angeles area.

7090™ cannot be sold in the Los Angeles area.

7471™ meets MIL-S-22473E.

7649™ meets NSF/ANSI 61 Standard for use with drinking water and meets MIL-S-22473E.

Accelerators shorten the time it takes for adhesives to reach full strength. Use on most metals and plastics.

712™ is for wires and coils on circuit boards.

713™ meets ISO 10993 though it is not for use in medical applications. Meets MIL-A-46050C.

7113™ creates smooth bond lines. This product cannot be sold in the Los Angeles area.

7452™ is for electronic components.

Cleaners remove dirt and degrease surfaces. They contain no ODCs (ozone-depleting chemicals).

Loctite® Light-Activated Adhesives

When exposed to ultraviolet (UV) light, these adhesives reach full strength in seconds. All bond most metals. *Syringes* require a dispensing gun (sold separately).

349™ also bonds glass.

352™ resists vibration and also bonds glass and most plastics including polycarbonate.

363™ also bonds glass and most plastics.

366™ also bonds glass.

3103™ also bonds glass.

3104™, 3105™, and **3106™** also bond glass and plastics including polycarbonate and PVC.

3211™ also bonds glass and polycarbonate.

3311™ also bonds glass.

3321™ also bonds glass and most plastics.

3494™ withstands humidity and immersion in water. Also bonds glass.

3525™ also bonds glass and most plastics.

3751™ and **3761™** also bond most plastics and can be used for potting and encapsulating electronics.

3922™ also bonds glass and most plastics.

Weldwood Contact Adhesives

Often used to bond laminates for countertops and cabinets, these adhesives provide adhesion with no need for clamps or temporary fasteners. They also bond wood.

General purpose also bonds most plastics. 7488A65 meets MMM-A-130B.

Nonflammable is rubber based and low odor. Also bonds porous surfaces.

Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color

Pliobond Contact Adhesives

Make flexible, waterproof, and chemical-resistant bonds that strengthen with age.

General Purpose—Bond ceramic, metal, plastic, and rubber. The 32-oz. and 1-gal. cans cannot be sold in California.

20 also bonds glass.

High Temperature—Bonds ceramic and metals. Heat to 300°F to reach full strength. Cannot be sold in the Los Angeles area, Connecticut, the D.C. area, Delaware, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, Utah, and Northern Virginia.

For Porous Surfaces—Also bonds cork and fabric.

3M Contact Adhesives for Plastics

Make secure bonds on most plastics. 826, 4475, and 4693 cannot be sold in the Los Angeles area, Connecticut, the D.C. area, Delaware, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, Utah, or Northern Virginia.

1099—Also bonds fabric, foam, and vinyl extrusions and sheeting. Meets MIL-A-13883B, Type I and MMM-A-189C, Class 2.

2262—Also bonds most metals and vinyl extrusions.

4475—Also bonds ceramic, fabric, glass, leather, and vinyl.

4693—Also bonds polyethylene and polypropylene.

3M No.	Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color

Contact Adhesives for Vinyl Fabrics

Strong yet flexible, these adhesives bond vinyl-coated fabrics and stand up to weather, oil, fuel, grease, and chemicals. They also bond leather, metal, hard plastic, urethane, vinyl foam, and wood.

The *32-oz.* and *1-gal.* cans cannot be sold in the Los Angeles area.

Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
4-oz. Brush-Top Can	2 min.	24 hrs.	–30° to 180°	Clear	7507A1	$7.24

1-gal. Can	2 min.	24 hrs.	–30° to 180°	Clear	7507A5	46.67

3M Aerosol Adhesives

Spray a thin, uniform coating without a mess. Adhesives can be applied to one or both surfaces (unless noted).

27 and **77—**Bond cloth, most metals and plastics, and wood.

72—Can be repositioned hours after spraying. Bonds carpet backing, foam padding, fiberglass, hardwood, particleboard, plastic, polyethylene, and steel.

75—Forms a strong temporary bond, but will not harden completely. Use in applications where parts are temporarily held in place.

76—Bonds cardboard, cork, and foil.

90—Bonds metal, particleboard, polyethylene, polypropylene, SBR rubber, and wood.

Shipping-Mate Case Sealing—Seals flaps on corrugated containers.

Shipping-Mate Palletizing—Holds paper and plastic bags as well as corrugated containers securely in place during storage and shipment. It has a clean release when bags and containers are unstacked.

Glue Guns

Mini

Cordless

Cordless Butane

Standard and Low Temperature

Heavy Duty

High Output

Adjustable Temperature High Output

To choose the right gun, keep in mind that the higher the watts, the faster the glue melts and can be dispensed. Guns operate on 120 volts AC, except cordless butane gun.
Mini—Gets into tight spaces. Has a 5-ft. cord with two-prong plug. UL listed.
Cordless—After warm up, gun runs 3 minutes per charge. Includes a charging base that has a 6-ft. cord with two-prong plug. UL listed.
Cordless Butane—Runs up to 140 minutes on butane gas (sold separately). Four 6″ long glue sticks are included.
Standard—Use for small jobs and light assembly work. Has a 5-ft. cord with two-prong plug.
Low Temperature—Use in heat-sensitive applications. Has a 5-ft. cord with two-prong plug. CSA-US certified.
Heavy Duty—Has a 10-ft. cord with three-prong plug. UL listed.
High Output—Has a 7-ft. cord with three-prong plug.
Adjustable Temperature High Output—Offers five temperature settings and the highest output. Has a 7-ft. cord with three-prong plug. Includes a plastic case. CSA-US certified.

High-Strength Hot-Melt Adhesive Kits

The polyurethane-based adhesives in this kit offer higher strength bonds than other hot-melt adhesives. Kit includes general purpose adhesive, adhesive for wood, fast-hardening adhesive for wood, and a cordless gun with charging base.
Adhesives come in a 1.76-oz. cartridge and have a melting point of 250° F. Color is opaque white. All reach full strength in 48 hours.
General purpose bonds brick, ceramic, fiberglass, metal, and plastic. It begins to harden in 75 seconds. *Adhesive for wood* begins to harden in 60 seconds. *Fast-hardening adhesive for wood* begins to harden in 30 seconds.
Gun operates at 200 watts, warms up in 13 minutes, and runs for 20 minutes per charge. Base has a 6-ft. cord with two-prong plug. UL listed.

Kit	7354A11	$127.27
Replacement General Purpose Adhesive Cartridge (MP75)	7354A23	11.41
Replacement Adhesive for Wood Cartridge (WW60)	7354A22	11.41
Replacement Fast-Hardening Adhesive for Wood Cartridge (WW30)	7354A21	11.41

For information about adhesives and sealants, see page 3448.

3M Scotch-Weld Hot-Melt Adhesives

Glue Sticks

These glue sticks work only with the 3M glue guns below.

3738—Bonds chipboard, corrugated cardboard, and wood. UL listed.

3747—Bonds plastics, metals, and fabric.

3750 and **3750LM**—Use for wood assembly.

3762 and **3762LM**—Bond cardboard and carton-sealing paper. *3762* is UL listed. *3762LM* also bonds plastics.

3764 and **3789**—UL listed.

3792 and **3792LM**—Bond fabric and wood. *3792* is UL listed. *3792LM* also bonds plastics.

★ Requires converter (sold separately below) for use with LT or TC gun.

Glue Guns

To choose the right gun, keep in mind that the higher the watts, the faster the glue melts and can be dispensed. Guns operate on 120 volts AC and have an 8-ft. cord with three-prong plug. All include a 3/32″ dia. tip (additional tips are sold separately below). Use only with the 3M glue sticks above.

LT—Use with 3762LM and 3792LM glue sticks only.

EC—Offers five temperature settings and includes a stroke adjuster for repeatable output quantities.

II—Has a fast-loading cartridge system. It requires 50-80 psi of air and has a 1/8 NPT male air inlet. An 8-ft. long air hose and a wire bench stand are included.

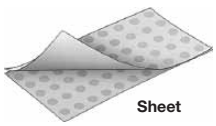
Glue Discs

Small discs of pressure-sensitive glue offer quick and convenient bonding on ceramic, fabric, paper, and wood. Color is clear. Temperature range is 20° to 140° F.

General purpose discs can be removed from some surfaces.



Sheet

Type	Thick.	Approx. Dia.	Sheet of 80		Roll of 1,000

Glue Strips

No-mess, easy-to-apply strips of semi-clear rubber glue come on peel-away liners. Strips hold up to 2 lbs. and can be cut to the size you need (holding capacity decreases when strips are cut).

They bond ceramic, glass, metal, and wood. Temperature range is 0° to 180° F.

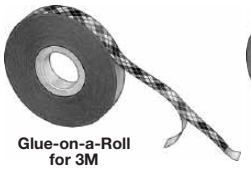
Glue

For information about adhesives and sealants, see page 3448.

Glue-on-a-Roll



Glue-on-a-Roll for 3M Dispensing Guns

Hand-Dispensed Glue-on-a-Roll

Also known as adhesive transfer tape, these rolls have a thin film of pressure-sensitive glue on a peel-away liner that is a good alternative to liquid adhesives, hot melts, and staples. It is also thinner and more conformable than tape with adhesive on both sides. Glue is acrylic, except high temperature for slippery plastics is silicone.

3M Repositionable has permanent glue on one side; removable on the other. It bonds foam.

3M VHB (very high bond) can replace rivets, spot welds, and other permanent fasteners. It bonds ceramic, glass, metal, and phenolic laminates (Garolite).

3M for slippery plastics and **high temperature for slippery plastics** are for hard-to-bond plastics such as polyethylene and polypropylene.

High-Temperature Glue

Make high-strength bonds that withstand high temperatures. Formerly known as LePage's Original Glue, it can be used on cloth, glass, leather, metal, paper, and wood. Temperature range is –30° to 500° F. Color is tan.

Size	Begins to Harden	Reaches Full Strength		
32-oz. Bottle	2 hrs.	12 hrs.	7466A7	$19.20
1-gal. Can	2 hrs.	12 hrs.	7466A8	45.30

Elmer's Glue

Tackle a variety of repairs and projects with this general purpose white glue that dries clear. It bonds paper, wood, and other porous materials.

Size	Begins to Harden	Reaches Full Strength		
8-oz. Bottle	10 sec.	24 hrs.	7516A1	$3.12
16-oz. Bottle	10 sec.	24 hrs.	7516A6	5.30
1-gal. Jug	10 sec.	24 hrs.	7516A4	17.86

Glue Sticks

Easy to apply for bonding cardboard, fabric, paper, and photos. Glue is white and dries clear.

Size, oz.	Dia.	Begins to Harden	Reaches Full Strength		1-5	6-Up
0.21	3/4″	10 sec.	12 hrs.	66285A73	$1.16	$0.93
0.77	1″	10 sec.	12 hrs.	66285A74	2.29	1.87

Rubber Cement

Cement bonds paper and allows repositioning until fully dried. Color is clear.

Size		
8-oz. Brush-Top Bottle	74725A12	$4.83
32-oz. Bottle	74725A14	13.80
1-gal. Can	74725A15	43.61

Gorilla Glue

Stronger than other glue when bonding ceramic, glass, metal, plastic, stone, and wood. Glue is waterproof, paintable, stainable, and sandable at full strength. Color is tan.

Size, oz.	Begins to Harden	Reaches Full Strength		
2	10 min.	24 hrs.	7454A21	$5.57
4	10 min.	24 hrs.	7454A22	8.28

18	10 min.	24 hrs.	7454A24	21.37
36	10 min.	24 hrs.	7454A25	33.09

For information about adhesives and sealants, see page 3448.

Reusable Adhesive Putties

Pull off a small piece of putty and stick lightweight objects to concrete, glass, metal, tile, and wood. Putty won't dry out, so you can use it again and again; and it removes without leaving stains or residue on most surfaces. Color is blue. Temperature range is 70° to 100° F.

1 oz.	7576A2	$3.43

High-Strength Glue for Wood

Mix this powdered glue with water and form bonds that are stronger than wood itself. It is often used for applying veneers and edge banding. Glue comes in a can.

Size, lbs.	Begins to Harden	Reaches Full Strength	Mix Ratio	Color	Temperature Range, °F		
1	2 hrs.	72 hrs.	2.5:1	Amber	35° to 150°	7469A1	$9.76
4.5	2 hrs.	72 hrs.	2.5:1	Amber	35° to 150°	7469A2	35.16

Carpenter's Glue for Wood

Bond soft and hard woods. Glue can be sanded and painted after reaching full strength. *Standard 32-oz. glue* also bonds fabric and leather.

Water Resistant—For limited exposure to water.

Waterproof—FDA compliant for indirect food contact.

Liquid Nails Adhesives

Get a quick initial bond and long-term adhesion. *Cartridges* fit a standard caulk gun (please see pg. 3484).

Multipurpose—Resists water and can be used outdoors. Bonds concrete, drywall, foam, and plastic.

Interior—Bonds finished concrete, drywall, plywood, and wood. It has a latex base and is water resistant. Cleans up with water until reaching full strength.

Deck and Subfloor—Is waterproof and bonds lumber, plywood, and other building materials. Can be used outdoors. Meets American Plywood Association AFG-01, ASTM D3498, and ASTM C557.

Vertical Hold—Often used to hold mirrors on plywood and stone. It is weatherproof and can be used outdoors.

Heavy Duty—Resists water and weather and offers higher strength bonds on drywall, particleboard, and plywood than other adhesives. Can be used outdoors.

Adhesives for Wall Base

Use indoors to bond rubber and vinyl wall base to concrete, drywall, painted surfaces, and wood. *Cartridges* fit a standard caulk gun (please see page 3484).

Size	Begins to Harden	Reaches Full Strength	Color	Temp. Range, °F		
10.3-oz. Cartridge	20 min.	48 hrs.	Gray	0° to 120°	7539A21	$4.70
30-oz. Cartridge	20 min.	72 hrs.	Cream	55° to 100°	7539A19	6.80
1-gal. Pail	20 min.	72 hrs.	Cream	55° to 100°	7539A14	30.47

Adhesives for Flooring

Bond carpeting, vinyl tile, and other floor coverings to subfloors. Adhesive is water resistant and for indoor use only. It comes in a can.

Size	Begins to Harden	Reaches Full Strength	Color	Temperature Range, °F		
32 oz.	15 min.	48 hrs.	Beige	40° to 120°	66515A12	$7.09
1 gal.	15 min.	48 hrs.	Beige	40° to 120°	66515A13	17.82

Adhesives for Stair Treads and Nosing

Stair Tread

Two-Part Nosing

Install rubber and vinyl treads and nosings on indoor concrete stairs.

Stair-tread adhesive is strong, water-resistant latex. It can also be used on wooden stairs.

Nosing adhesive is a two-part epoxy that prevents cracks by filling in gaps between the nose and front edge of the stair. Size listed is the combined total of the two parts.

Size	Begins to Harden	Reaches Full Strength	Color	Temperature Range, °F		
Stair Tread						
1-gal. Pail	15 min.	24 hrs.	White	55° to 85°	62695T82	$47.80
Nosing						
32-oz. Can	45 min.	24 hrs.	Tan	70° to 80°	62695T86	41.75

Adhesives for Electronics

For information about adhesives and sealants, see page 3448.

Loctite® Adhesive Cartridges for Electronics

Two-part epoxies and urethanes commonly used for encasing (potting), creating small castings, and bonding heat sinks. Use the dispensing gun (sold separately) and mixer nozzle (included with cartridge, unless noted) to simultaneously mix and dispense.

ES1004™ meets ASTM D635 and UL 94V0.

ES2500™ meets UL 94HB.

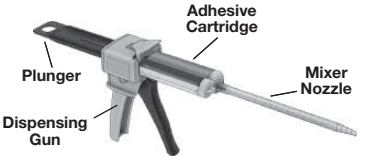
■Requires mixer nozzle 74695A12 (sold separately). ▲Reaches full strength with heat: 2 hours at 175° F plus 2 hours at 300° F.
♦Requires 4:1 plunger 74695A44 (sold separately).

Dispensing Gun, Mixer Nozzle, and Plunger

Dispensing Gun (Includes 1:1 and 2:1 mix ratio plungers)	74695A71	$23.06
Mixer Nozzle (Required for 6430A27)	74695A12	1.26
4:1 Plunger for Dispensing Gun (Required for 7369A13, 7369A32, 7369A35)	74695A44	3.62

3M Adhesive Cartridges for Electronics



Handle encasing (potting) and bonding of electrical components with these two-part epoxies. To simultaneously mix and dispense, use the dispensing gun with a mixer nozzle (each sold separately).

General Purpose—Also bonds plastics. Meets UL 94HB.

High Strength—Can also be used for assembling hard drives and spindle motors. They also bond magnets.

High-Temperature Adhesives for Electronics

Not only does this two-part epoxy withstand high temperatures in your electronic encasing (potting) applications, it remains flexible and impact resistant. It can also be used to bond ceramic, glass, and most metals and plastics. Size listed is the combined total of the two parts.

Begins to Harden	Reaches Full Strength	Dielectric Strength, volts/mil	Thermal Conductivity, W/mK	Mix Ratio	Color	Temperature Range, °F	10 oz.		24 oz.

Loctite® Adhesives for Electronics

Secure and insulate hardware on printed circuit boards. These two-step, instant-bonding adhesives require an accelerator. **382™** handles temperature fluctuations. **444™** can also be used for encasing (potting). Meets Commercial Standard A-A-3097.

Loctite No.	Size	Begins to Harden	Reaches Full Strength	Dielectric Strength, volts/mil	Thermal Conductivity, W/mK	Color	Temperature Range, °F		
Adhesives

Loctite 444 Kit (0.7-oz. Bottle of Adhesive and 1.75-oz. Bottle of Accelerator)	7586A31	25.24

For information about adhesives and sealants, see page 3448.

Heat-Transfer Adhesives for Electronics

Draw heat away from parts during encasing (potting) and in small electronic casting applications. Epoxy is two-part and won't crack during thermal expansion. It resists weather, water, petroleum lubricants, and mild acids and alkalies. Use the dispensing gun with a mixer nozzle (each sold separately) to simultaneously mix and dispense.

Size, oz.	Begins to Harden	Reaches Full Strength	Dielectric Strength, volts/mil	Thermal Conductivity, W/mK	Mix Ratio	Color	Temperature Range, °F		
1.7	15 min.	8 hrs.	520	1.01 to 1.15	2:1	Black	–40° to 210°	7548A11	$39.20
Dispensing Gun (Includes 1:1 and 2:1 mix ratio plungers)								74695A71	23.06
Mixer Nozzle								74695A12	1.26

Silicone Sealants for Electronics

Sealants form a tough, rubbery solid for encasing (potting).

Ready-to-Use—No mixing required. *Cartridges* fit a standard caulk gun (please see page 3484).

748 is FDA compliant for indirect food contact and meets UL 94HB. **3165** meets UL 94V0. **5145™** meets MIL-A-46146B. **162** meets MIL-A-46146B. Components are UL recognized. Product cannot be sold in California.

Two Part—Size listed is the combined total of the two parts.

Standard requires a dispensing gun (sold separately). Includes a mixer nozzle. **182** meets UL 94V1. **5620™** requires a dispensing gun (sold separately). Includes two mixer nozzles. **11** meets GSA A-A-56023A.

Adhesives for Electronics in Easy-Mix Packs

Conveniently packaged for easy use, this two-part epoxy is for encapsulating (potting) and attaching transistors, diodes, resistors, and other heat-sensitive components to printed circuit boards. It resists salt solutions and mild acids and alkalies and also bonds ceramic, glass, and metal.

Size, oz.	Begins to Harden	Reaches Full Strength	Dielectric Strength, volts/mil	Thermal Conductivity, W/mK	Mix Ratio	Color	Temperature Range, °F		
1.4	90 min.	24 hrs.	410	0.95	20:1	Blue	–90° to 230°	66395A11	$23.43

3M Scotch-Weld Hot-Melt Adhesives for Electronics

A hot-melt alternative for encasing (potting) and attaching electronic components. Glue sticks work only with the 3M glue guns sold separately below.

3748—Noncorrosive to copper and also bonds polyolefin. It is FDA compliant for indirect food contact. UL listed.

3779—Has high temperature resistance.

3M No.	Type	Use with 3M Gun	Dia.	Lg.	Melting Point, °F	Color	Begins to Harden	Reaches Full Strength	Approx. Sticks/lb.		1 lb.	11 lbs.
3748	Adds Rigidity	TC	5/8"	2"	290°	Off-White	45 sec.	24 hrs.	55	7333A16	$39.66	$344.85
3748	Adds Rigidity	EC, TC★	5/8"	8"	290°	Off-White	45 sec.	24 hrs.	15	7333A17	37.94	329.89

TC Gun (Adhesive output is 3.5 lbs./hr.)	7333A11	173.25
Converter for TC Gun (For use with 8" long glue sticks)	7333A12	32.68

Protective Coatings for Circuit Boards

Also known as conformal coatings. They come in an aerosol can. **Fast-hardening** coating is acrylic and resists moisture. **Chemical-resistant** coating is silicone. Use in harsh environments.

	Size, oz.	Begins to Harden	Reaches Full Strength	Dielectric Strength, volts/mil	Color	Temperature Range, °F		
Fast Hardening	12	3 min.	24 hrs.	1,000	Clear	–85° to 255°	6801A39	$33.00
Chemical Resistant	12	60 min.	72 hrs.	1,100	Clear	–85° to 390°	6801A37	37.58

Silver-Filled Conductive Adhesives

Use for bonding electronic components, interference shielding, and electrical circuit repairs. Epoxies are two-part and bond aluminum, brass, copper, stainless steel, and steel. Color is silver. The size listed is the combined total of the two parts.

Semiflexible can be used on vertical surfaces.

Flexible bends without coming off the surface or losing conductivity. It also bonds dissimilar materials, such as alumina to aluminum and silicon to copper.

	Begins to Harden	Reaches Full Strength	Thermal Conductivity, W/mK	Electrical Resistivity, ohms-cm	Mix Ratio	Temperature Range, °F	0.5 oz.		1 oz.

Silver-Filled Conductive Adhesives in Easy-Mix Packs

Contained in a convenient dual packet, these epoxies make electrically and thermally conductive bonds on metal, electronic components, printed circuits, flat cable, and shields. They can also be used in place of soldering to bond heat-sensitive materials. Color is silver. Size listed is the combined total of the two parts.

Loctite® 3888™ also bonds polycarbonate. **Rigid** and **flexible** also bond ceramic and glass.

Plastic Pipe Cement

Recommended application temperature is 40° to 110° F. Depending on the pipe size and temperature, the time it takes for cement to begin to harden and reach full strength will vary. Cans have a brush top.

For PVC—Use on drinking water, drain, waste, and vent pipes and fittings. Meet ASTM D2564.

For CPVC—For hot- and cold-water plumbing and industrial piping. Meet ASTM F493.

For ABS—Use for drain, waste, and vent pipes and fittings. Meet ASTM D2235.

All Purpose—Bonds PVC, CPVC, and ABS. Use for solvent welding most plastic pipe, conduit, water lines, and drain, waste, and vent systems.

Cleaner removes dirt, grease, and moisture from PVC, CPVC, and ABS. **Primer** prepares PVC and CPVC for adhesive. Meets ASTM F656.

For information about adhesives and sealants, see page 3448.

Loctite® Threadlockers

Prevent threaded fasteners from loosening due to shock and vibration, plus protect them from oil, most solvents, and harsh environments. Threadlockers are for metal fasteners, except 425™ is for plastic fasteners. All reach full strength in 24 hours. *Primer* is recommended when working with aluminum, black-oxide finishes, cadmium, stainless steel, titanium, and zinc.

Regular Strength—Require a hand tool for fastener removal.

243™ 8.45-oz. bottle meets NSF/ANSI Standard 61 for use with drinking water systems.

078™ meets MIL-S-22473E, Grade H and ASTM D5363.

085™ meets MIL-S-22473E, Grade B and ASTM D5363.

220™ meets MIL-S-46163A.

222MS™ meets MIL-S-46163A and meets NSF/ANSI Standard P1 for food-processing areas.

242™ and *290*™ meet MIL-S-46163A. The 8.45-oz. bottles meet NSF/ANSI Standard 61 for use with drinking water systems.

High Strength—Require heat and a hand tool for fastener removal.

263™ 8.45-oz. bottle meets NSF/ANSI Standard 61 for use with drinking water systems.

087™ meets MIL-S-22473E, Grade AV and ASTM D5363.

262™ meets MIL-S-46163A and meets NSF/ANSI Standard P1 for food-processing areas.

271™ meets MIL-S-46163A and is UL classified MH8007.

277™ meets MIL-S-46163A.

Loctite® Threadlocker Sticks and Tape

All the benefits of liquid threadlocker, but in a no-drip form. Use on threaded metal fasteners. All reach full strength in 24 hours. Temperature range is –65° to 300°F.

Sticks—*248*™ requires a hand tool for fastener removal. *268*™ is high strength and requires heat and a hand tool for fastener removal.

Tape—Is 1/2" Wd. x 1/32" Thick. It can be applied up to 30 days before use. A hand tool is required for fastener removal.

Vibra-Tite Reusable Threadlockers

Lock and seal any size threaded nylon, metal, or wood fasteners, yet still be able to adjust, remove, or even reuse them. You can also coat your fasteners ahead of time and store them indefinitely. Begins to harden in 10 seconds; reaches full strength in 30 minutes. Temperature range is –65° to 165°F.

Size	Color		
0.17-oz. Tube	Red	75145A68	$3.68
1-oz. Brush-Top Bottle	Red	75145A69	21.70

3M Scotch-Weld Threadlockers

Use on threaded metal fasteners to prevent loosening due to shock and vibration. Threadlockers begin to harden in 20 minutes; reach full strength in 24 hours. Temperature range is –65° to 300°F. All come in a bottle.

TL22 is for fine threads. A hand tool is required for fastener removal. **TL42** is for machine tool bolts and studs and countersunk screws. A hand tool is required for fastener removal. **TL62** creates strong bonds even on oily parts. Heat and a hand tool are required for fastener removal. **TL71** makes permanent bonds on bolts and studs, plus seals against leakage and corrosion.

Permatex Threadlockers

Twist the stick to dispense these no-drip gels right where you want them on your threaded metal fasteners. They begin to harden in 15 minutes; reach full strength in 24 hours. Temperature range is –65° to 300°F.

24010 requires a hand tool for fastener removal.

27010 is high strength and requires heat and a hand tool for fastener removal.

27010	3/8" to 1"	Red	7445A13	12.98

Loctite® Threadlockers for Food Processing Applications

A two-part, FDA-compliant threadlocker lets you secure threaded metal fasteners in food and beverage applications. Begins to harden in 90 minutes; reaches full strength in 24 hours. Temperature range is –65° to 400°F. Comes in a syringe and includes three mixer nozzles for simultaneous mixing and dispensing.

Loctite No.	For Fastener Dia.	Size, oz.	Color		
2046	Up to 2″	0.4	Blue	91458A136	$59.93

Aerosol Threadlockers

A spray-on option to dampen vibration and prevent loosening of threaded metal, plastic, and wood fasteners. Also prevents fluid leaks. Begins to harden in 10 seconds; reaches full strength in 5 minutes. Temperature range is –55° to 170°F. Comes in an aerosol can.

Size, oz.	Color		
4.5	Red	5650A11	$48.89

High-Temperature Threadlockers

Capable of handling temperatures from –300° to 2100°F, these no-drip threadlockers bond metal and ceramic threads. They also resist oil, fuel, acids, and alkalies. Begin to harden in 24 hours; reach full strength in 3 days. Threadlockers come in a bottle.

Type	Size, oz.	Color		
General Purpose	4	Blue	7604A55	$45.08
For Fine Threads	4	Green	7604A54	45.08
For Coarse Threads	4	Red	7604A56	45.08

Threadlocking Washers

Let these 1/32″ thick washers also be your threadlocker. When a metal fastener is tightened onto the washer, the epoxy activates and bonds the underside of the fastener head to the surface to prevent loosening, and fills gaps and spaces that other washers fail to seal. Temperature range is –65° to 300°F.

3/8″	3/8″	13/16″	Blue	92937A370	18.88

Mil. Spec. Threadlockers

Meet your Mil. Spec. needs for metal fasteners. Threadlockers also meet ASTM D5363 and have a maximum temperature of 300°F. Begin to harden immediately; reach full strength in 24 hours. *Primer* cleans the surface and decreases the time to reach full strength. It can be used with MIL-S-22473 and MIL-S-46163 threadlockers. Meets MIL-S-22473.

Regular-strength threadlockers require a hand tool for fastener removal.

High-strength threadlockers require heat and a hand tool for fastener removal.

Loctite® Retaining Compounds

Secure unthreaded metal cylindrical parts such as shafts, hubs, bearings, bushings, splines, pulleys, and press-fit assemblies. Retaining compounds prevent corrosion and fluid leaks and resist most chemicals. All reach full strength in 24 hours. *Primer* is recommended when working with aluminum, black-oxide finishes, cadmium, stainless steel, titanium, and zinc.

609™ and **635™** meet MIL-R-46082B.

680™ 8.45-oz. bottle meets NSF/ANSI Standard 61 for use with drinking water systems.

High-Temperature Pipe Thread Sealants

Use in high-temperature and high-pressure applications on steel and stainless steel pipe up to 2″ diameter. Maximum air pressure is 2,300 psi. Do not use in oxygen systems. Comes in a tube.

Size, oz.	Max. Temperature, °F	Color		
4.4	1175°	Black	1965K1	$64.44

Pipe Thread Sealant Tape

Form and maintain seals on threaded metal pipe with this PTFE tape. The thicker and denser the tape, the better the seal. Temperature range is –450° to 550° F. All tape is UL listed. White tape is FDA compliant for food processing applications.

Commercial Grade—Also known as dope tape.

Military Grade—All meet MIL-T-27730A. *Premium* will seal coarse threads. It also meets MIL-A-A-58092.

Premium color lets you color-code hot water, gas, and chemical connections. It also meets MIL-A-A-58092.

Tape *for stainless steel* is for coarse threads. It also meets MIL-A-A-58092.

Pipe Thread Sealants for Oxygen Systems

Make tight seals between pipe threads and joints in oxygen systems. Sealants are made of PTFE.

Dry Environment—Use on any pipe for diesel fuel, liquid propane gas, oxygen, and hydraulic systems. Temperature range is –400° to 500° F (–40° to 300° F for natural gas; up to 140° F for oxygen). Maximum pressure is 3,500 psi (300 psi for natural gas). Maximum pipe size for natural gas is 3/4 NPT. USDA compliant for food-processing areas.

Wet Environment—Use on steel, stainless steel, brass, and bronze pipe for gas, liquid, and low-vacuum service, as well as for oxygen and liquid-oxygen systems. Do not use with aluminum-to-aluminum surfaces or in alkali, fluorine, or hydrofluoric environments. Sealant withstands temperatures up to 450° F (140° F for oxygen). Maximum pressure is 10,000 psi.

	Size	Color		
Dry Environment	3.5-oz. Tube	White	4538K1	$32.45
Wet Environment	3.5-oz. Jar	Green	4538K6	119.34

Joint Sealants

Use to seal threaded and flanged joints.

X-Pando—Expands as it hardens. Use on most pipe. Compatible with liquid oxygen. FDA and USDA compliant. Meets NSF/ANSI Standard 61 for use with drinking water systems.

X-Pando Special—Use on cement-lined pipe joints prior to welding. The heat from the welding torch helps the sealant begin to harden. USDA compliant.

Key-Tite—Waterproof and nonhardening for air, gas, water, and steam joints. Do not use with gasoline.

Key Graphite—Nonhardening and for use with petroleum products, acids, and high-pressure steam joints. Do not use for water service.

For Plastics—Meets NSF/ANSI Standard 61 for use with drinking water systems. Do not use with compressed air or gas.

Mil. Spec. Joint Sealants

Seal threaded and flanged joints in temperatures up to 1500° F. Sealant withstands vibration and resists steam, ammonia, hydrocarbons, refrigerants, hydraulic fluids, propane, brine, acids, and mild alkalies. Use on metal, ceramic, rubber, and most plastics. Can be used on steam joints up to 2,000 psi; flanges without gaskets up to 6,500 psi; and threaded joints up to 10,000 psi.

Above 300° F, the sealant begins to harden in 15 minutes and reaches full strength in 4 hours with heat. Below 300° F, it begins to harden in 4 hours and will take up to 1 year to reach full strength if not heated. Meets MIL-S-15204D. Comes in a can.

Size, oz.	Temperature Range, °F	Color		
32	–315° to 1500°	Black	1959A31	$198.33

Loctite® Gasket Sealants

Seal existing gaskets on metal parts. Sealants reach full strength in 24 hours.

1™ forms rigid seals on duct and plumbing connections. It fills gaps up to 0.01″. **2™** creates flexible seals that never fully harden. It fills gaps up to 0.01″. **MR 5923™** provides flexible seals for marine engines.

Permatex Gasket Makers

Replace cork, paper, rubber, and other traditional gaskets. Apply gasket makers to glass, metal, plastic, rubber, and wood for a form-in-place seal. *Cartridges* fit a standard caulk gun (please see page 3484).

Ultra-blue RTV for oily surfaces cannot be sold in California.

Crack- and shrink-resistant high-temperature RTV meets MIL-A-46106B.

Loctite® Gasket Makers

Create tough, resilient seals that replace traditional gaskets. Commonly used on metal water pumps, thermostats, split crankcases, gear boxes, transmission housings, and axle covers. Cartridges fit a standard caulk gun (please see page 3484).

587™ is UL listed and NSF registered P1 for nonfood contact. **515™** is UL listed. **518™** meets NSF/ANSI Standard 61 for use with drinking water systems. *Kit* also includes a 0.88-oz. aerosol can of primer.

High-Temperature Gasket Makers

Use these gasket makers to form a tight seal on furnace doors, exhaust systems, stoves, and other high-temperature applications. They are fire resistant and resist most acids, solvents, and corrosives. Use on ceramic and metals. Cartridges fit a standard caulk gun (please see page 3484).

Gasketing Adhesives & Multipurpose Sealants

For information about adhesives and sealants, see page 3448.

Gasketing Adhesives

Hold gaskets in place during assembly.

Loctite®—*534*™ is for use on cork and metal. *30537*™ is for use on rubber. *30540*™ is for use on fabric and vinyl.

3M—Use on metal. 1300, 1300L, and 4799 cannot be sold in Connecticut, DC, Delaware, the Los Angeles area, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, Utah, or Northern Virginia. *1300* and *1300L* meet MMM-A-121.

Mfr. No.	Type	Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color

High-Temperature Gasketing Adhesives

Adhesives have a maximum temperature of 2000°F and are often used on stoves and ovens. To reach full strength, they require 1 hour at room temperature and 2 hours at 500°F. *Cartridges* fit a standard caulk gun (please see page 3484).

Thin adhesive is easy flowing for bonding fiberglass gaskets to cast iron and steel.

Thick adhesive seals fiberglass gaskets into stove doors as well as seals cracks in metal. It can also be used on masonry.

Type	Begins to Harden	Reaches Full Strength	Color	2.3-oz. Tubes		10.3-oz. Cartridges	
Thin	60 min.	3 hrs.	Black	7573A29	$6.98	7573A31	$7.87
Thick	60 min.	3 hrs.	Black	7573A63	7.13	7573A65	7.87

Loctite® Quick-Service Kits

Everything you need for routine maintenance work or quick repairs.

Kit comes in a case and includes: 0.1-oz. tube of 454™ instant-bonding adhesive, 0.33-oz. bottle of 243™ regular-strength threadlocker, 0.33-oz. bottle of 263™ high-strength threadlocker, 7-yd. roll of 249™ threadlocker tape, 0.2-oz. tube of 660™ retaining compound, 2.4-oz. tube of 587™ blue silicone gasketing adhesive, 1.69-oz. tube of 565™ thread sealant, 1.69-oz. tube of 518™ gasket maker, and 0.24-oz. stick of 7088™ primer.

Loctite No. 00101 — 7458A65 — $107.81

Dow Corning Silicone Sealants

Form a tough, rubbery solid for sealing and bonding. All sealants can be used on metal. *Cartridges* fit a standard caulk gun (please see page 3484).

700—Can also be used on glass and plastics. It is FDA compliant and meets NSF/ANSI Standard 51 for direct food contact. UL recognized.

732—Also for use on glass. Meets MIL-A-46106B and NSF/ANSI Standards 51 and 61 for use with food equipment and drinking water systems. FDA compliant and UL listed.

734—Can also be used on glass, plastics, and rubber.

736—Meets MIL-A-46106B and NSF/ANSI Standard 51 for direct food contact. FDA compliant and UL listed.

737—Also for use on glass, plastics, and rubber. This product cannot be sold in California.

786—Can also be used on ceramic.

790—Use for sealing expansion and control joints.

795—Meets ASTM C920 Type S, Grade NS, Class 50.

832—Meets UL 94HB.

9-1363—Meets UL 94HB.

995—Can also be used on concrete with the P5200 primer (sold separately).

P5200 Primer—Cleans surfaces and improves adhesion.

Loctite® Silicone Sealants

Seal and bond with these RTV (room temperature vulcanizing) sealants that form a tough, rubbery, temperature-resistant solid. All can be used on metal. Do not use on parts that come in contact with gasoline. *Cans* provide a uniform bead when you press the nozzle. *Cartridges* fit a standard caulk gun (please see page 3484).

General Purpose RTV—*59530*™ and *59575*™ meet NSF/ANSI Standard 51 for use with food equipment.
Oil- and Fluid-Resistant Blue RTV—Withstands temperatures up to 500°F during intermittent use.
High-Temperature Red RTV—Withstands temperatures up to 600°F during intermittent use.

Momentive/GE Silicone Sealants

These RTV (room temperature vulcanizing) sealants form a tough, rubbery, temperature-resistant solid for sealing and bonding. All can be used on metal. Do not use in underwater, concrete, or mortar applications. *Cartridges* fit a standard caulk gun (please see page 3484).

General Purpose—Can also be used on plastic, rubber, and wood. Meet MIL-A-46106B, Group I, Type I and NSF/ANSI Standard 51 for use with food equipment. FDA and USDA compliant. UL recognized.

High Strength—Can also be used on glass and plastic. These products cannot be sold in California.

Easy Flowing—Fill cracks and crevices. Can also be used on ceramic, glass, and plastic.

RTV116 meets MIL-A-46106B, Group III, Type II and NSF/ANSI Standard 51 for use with food equipment. It is FDA compliant and UL recognized.

RTV118 is USDA compliant and UL recognized.

For Vertical Surfaces—Can also be used on glass. Meets MIL-A-46106B, Group III, Type I and NSF/ANSI Standard 51 for use with food equipment. It is also FDA and USDA compliant and UL recognized.

Low Odor—Can also be used on glass and plastic. UL recognized.

Sealant Removers

Apply remover to debond as well as to clean your work area and tools. Removers come in a bottle.

Size, oz.		
4	6743T1	$19.52
12	6743T2	30.16

Multipurpose Sealants

For information about adhesives and sealants, see page 3448.

Silicone Sealants

Seal and bond with these temperature-resistant sealants. All can be used on metal. *Cans* provide a uniform bead when you press the nozzle. *Cartridges* fit a standard caulk gun (please see page 3484).

General purpose sealants also seal glass. They are FDA compliant, except the bronze color is not.

Paintable sealant is low odor and also seals fiberglass, masonry, and plastic.

Sealant **for high-moisture areas** is for wet indoor and outdoor environments.

Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Choose a Color

Sika Flexible Sealants

More flexible than silicone sealants, these are designed to expand and contract when sealing dissimilar materials as well as keep out moisture and dirt. All can be painted after reaching full strength. They come in a cartridge that fits a standard caulk gun (please see page 3484). **201, 221, 227,** and **291** cannot be sold in California.

201—Use on metal and wood.

221—Use on ceramic, metal, and plastics. Black and white meet NSF/ANSI Standard 61 for drinking water systems.

227—It is odorless and for use on metal, plastics, and painted surfaces.

252—Sandable and impact resistant as well as vibration and sound damping. It can also be used on fiberglass, metal, and wood.

291—Use on metal. Meets NSF/ANSI Standard 61 for drinking water systems. USDA compliant.

295—Use on most plastics. White color can also be used on metal.

Sika No.	Type	Size, oz.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Choose a Color		
201	General Purpose	10.1	180 min.	72 hrs.	–40° to 190°	Aluminum, White	6937T1	$7.72
221	General Purpose	10.1	60 min.	72 hrs.	–40° to 190°	Aluminum, Black, White	6937T2	7.72
227	Fast Hardening	10.1	40 min.	72 hrs.	–40° to 190°	Aluminum, Black, White	6937T5	7.72

291	Salt Water Resistant	10.1	60 min.	72 hrs.	–40° to 190°	Black, White	6937T7	8.50
292i	High Strength Water Resistant	10.1	40 min.	72 hrs.	–40° to 195°	White	6937T9	16.96
295	UV Resistant	10.1	60 min.	72 hrs.	–40° to 190°	Black, White	6937T8	18.72

Flexible Sealants

Seal dissimilar materials that have different expansion/contraction rates. Sealants come in a cartridge that fits a standard caulk gun (please see page 3484). Meet Fed. Spec. TT-S-00230C, Type II, Class A.

General purpose is for concrete, glass, metal, and plywood.

Fast hardening is for metal and plastic.

For plastics works on fiberglass, most plastics, and polyurethane.

Super flexible is the most elastic and works on concrete, metal, plastic, and wood.

See through leaves a clear bead on metal and wood.

Type	Size, oz.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Choose a Color		
General Purpose	10.3	30 min.	24 hrs.	–20° to 180°	Black, Gray, Limestone, White	7606A39	$9.78
Fast Hardening	10.1	5 min.	72 hrs.	–40° to 190°	Black, Gray, Limestone, Tan, White	7606A59	6.04
For Plastics	10.1	20 min.	24 hrs.	–75° to 250°	Clear	7322A31	11.93
Super Flexible	10.1	60 min.	72 hrs.	–40° to 200°	Black, Gray, Limestone, Tan, White	7606A49	6.20
See Through	10.1	10 min.	72 hrs.	–40° to 190°	Clear	7606A61	8.54

Sealants

Also known as caulk, these sealants fill cracks and voids. They can be painted after reaching full strength. All can be used on metal. *Cartridges* fit a standard caulk gun (please see page 3484).

High Strength and **High Strength for Vertical Surfaces**—Resist oil and can also be used on PVC, rubber, and wood. These products cannot be sold in California.

High Temperature—For indoor use only on stoves, chimneys, and flues. Can also be used on brick.

For Vertical Surfaces—9130T91 is USDA compliant.

Low Odor for Vertical Surfaces—Can also be used on ceramic.

Odorless and Mildew Resistant—Use on tubs, tile, and sinks.

Mildew Resistant—Can also be used on ceramic.

Flexible—For materials with dissimilar expansion/contraction rates. Can also be used on fiberglass and plastic.

Removable Weatherstripping—Makes a temporary waterproof seal that peels off when no longer needed.

All Weather—Stays flexible despite changing weather conditions. Can also be used on concrete and fiberglass.

3M Marine Sealants

Form a seal that stands up to salt water. Sealants are nonshrinking and retain their strength in and out of water. All can be used on fiberglass, metal, and wood. *Cartridges* fit a standard caulk gun (please see page 3484).

3M No.	Type	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color	3-oz. Tubes		10-oz. Cartridges	
4000	UV Resistant	22 min.	24 hrs.	–40° to 190°	White	67015A63	$14.05	67015A65	$21.36
5200	High Strength	48 hrs.	7 days	–40° to 190°	White	67015A21	15.03	67015A31	24.80
5200	High Strength	48 hrs.	7 days	–40° to 190°	Black	67015A41	15.03	67015A51	24.80
5200	Fast Hardening High Strength	60 min.	24 hrs.	–40° to 190°	White	67015A42	17.31	67015A44	28.56

Underwater Sealants

In or out of the water these sealants create waterproof seals and maintain strength. *Cartridges* fit a standard caulk gun (please see page 3484).

General purpose sealant also resists tears and abrasion. Use on fiberglass, metal, plastic, and wood.

High-strength sealant resists saltwater spray, most chemicals, and yellowing from sunlight. Use on ceramic, glass, and plastic. This product cannot be sold in California.

High-temperature sealant is for glass, metal, and rubber. It will not harm fish.

Type	Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Choose a Color		
General Purpose	10.1-oz. Cartridge	70 min.	72 hrs.	45° to 180°	Black, White	75005A11	$14.96
General Purpose	10.1-oz. Cartridge	70 min.	6 days	45° to 180°	White	75005A122	12.69
High Strength	3.7-oz. Tube	4 min.	72 hrs.	–40° to 150°	Clear	7475A67	9.87
High Strength	10.2-oz. Cartridge	4 min.	72 hrs.	–40° to 150°	Clear	7475A68	11.89
High Temperature	2.8-oz. Tube	5 min.	48 hrs.	–40° to 400°	Clear	7327A21	5.90

Sealants for Wet and Oily Surfaces

Instantly seal leaks despite oil, moisture, and water. Sealant is for use on aluminum, ceramic, concrete, galvanized metal, and wood. It's UV resistant, paintable, and stays flexible. Sealant comes in a cartridge that fits a standard caulk gun (please see page 3484). 74565A8 cannot be sold in California.

Size, oz.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
10.6	On Contact	5 days	–40° to 180°	Clear	74565A7	$19.29
10.6	On Contact	5 days	–40° to 180°	White	74565A8	19.29

Chemical-Resistant Sealants

Form strong seals even in the presence of chemicals and vapors. All sealants can be used on concrete and metal. *Cartridges* fit a standard caulk gun (please see page 3484). **Fast-hardening** sealant includes a bottle of accelerator. Cannot be sold in Connecticut, the D.C. area, Delaware, the Los Angeles area, Maine, Maryland, New Jersey, New York, Pennsylvania, Rhode Island, Utah, or Northern Virginia.

Type	Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
General Purpose	2.5-oz. Cartridge	5 min.	72 hrs.	–40° to 400°	Black	77495A15	$33.33
General Purpose	11-oz. Cartridge	5 min.	72 hrs.	–40° to 400°	Black	77495A16	119.05
Fast Hardening	32-oz. Can	2 min.	24 hrs.	–20° to 450°	Black	7716A12	105.77
For Vertical Surfaces	2.5-oz. Cartridge	5 min.	72 hrs.	–40° to 400°	Black	77495A31	38.00
For Vertical Surfaces	11-oz. Cartridge	5 min.	72 hrs.	–40° to 400°	Black	77495A32	132.00

Sealants for Metal Duct

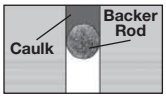
Seal low-, medium-, and high-pressure metal duct systems. Sealants can be used outdoors. *Cartridges* fit a standard caulk gun (please see page 3484).

Standard sealant meets SMACNA (Sheet Metal and Air Conditioning National Association) leakage requirements and UL 723, Class 1.

High-temperature sealant meets Fed. Spec. TT-S-00230C Class A and TT-S-001543A Class A.

Type	Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
Standard	10.5-oz. Cartridge	60 min.	48 hrs.	–25° to 200°	Gray	73335A65	$5.12
Standard	1-gal. Pail	60 min.	48 hrs.	–25° to 200°	Gray	73335A66	35.89
High Temperature	9.4-oz. Cartridge	20 min.	24 hrs.	–60° to 500°	Gray	73335A42	5.68

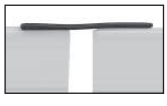
Backer Rod



Reduce stress on caulk—insert backer rod into wide gaps and fill in with sealant to form a seal. Backer rod is made of gray foam with a non-absorbing skin that conforms to irregular widths. It's chemically inert and resists moisture. Temperature range is –45° to 160° F.

Dia.	For Approx. Gap Wd.	Short Lengths: Lg., yds.			Long Lengths: Lg., yds.		
3/8"	1/4"	33	77605T422	$7.76	600	77605T423	$75.96
5/8"	1/2"	33	77605T442	12.04	515	77605T443	99.14
7/8"	1 1/16"	33	77605T462	26.43	280	77605T463	96.79

Sealing Strips for Large Gaps



Cover large gaps that other sealants can't. Add a bead of silicone sealant to the ribbed edges of these extruded silicone strips to create durable seals that allow for expansion and contraction. Strips can be used on glass and metal. They are often used on skylights and as HVAC seals. Temperature range is –60° to 300° F.

Wd.	Thick.	Choose a Color	Lengths, ft.		Per Ft.
1"	0.08"	Black, Gray	1, 5, 10, 25, 100	7159A1	$1.33

Multipurpose Sealants & Repair Adhesives

For information about adhesives and sealants, see page 3448.

Sealing Cord and Tape

No caulk gun needed for these easy-to-apply sealants. All can be used on glass, metal, plastic, and wood.

Cord—Press this permanently pliable cord into place to keep out moisture and drafts. It can also be used on masonry and outdoors. It does not harden. Each roll has 8 cords.

Tape—For indoor use only, this mildew-resistant tape seals and fills cracks around tubs and sinks. It has an adhesive back with a peel-off liner. Can also be used on fiberglass. Reaches full strength in 12 hours.

Type	Dia.	Wd.	Lg., ft.	Temperature Range, °F	Color		
Cord	3/16"	—	45	–30° to 150°	Gray	9408T17	$3.09
Cord	3/16"	—	90	–30° to 150°	Gray	9408T14	4.82
Tape	—	7/8"	11	50° to 110°	White	7582T25	5.70

Fire-Rated Glazing Tape

Seal glass windows into metal frames in fire-rated hollow metal and wood doors. Tape has an adhesive back with a peel-off liner. UL 10C listed.

Fire Rated Up to	Lg., ft.	Wd.	Thick.	Max. Temp., °F	Color		
45 min.	8	7/16"	3/64"	1800°	White	7147A35	$17.21
45 min.	14	7/16"	3/64"	1800°	White	7147A32	29.06
90 min.	16	7/16"	5/64"	1800°	White	14435A991	52.65

Stay-Soft Glazing Rope

Easy to apply, this butyl rope with peel-off liner stays soft and pliable for years. It holds glass in window frames as well as seals leaks in eaves and gutters.

Dia.	Lg., ft.	Temperature Range, °F	Color		
1/4"	20	–70° to 220°	Gray	1049A31	$7.99

3M Scotch-Seal for Metal

Seal metal to glass in windows and doors. Sealant resists water, oil, and fuel. Meets AAMA (Architectural Aluminum Manufacturer's Association) Specification 801.1. Comes in a tube.

3M No.	Size, oz.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
2084	5	5 min.	24 hrs.	–30° to 250°	Aluminum	7432A21	$17.88

Glazing Compounds

Install glass in metal and wood sashes. Compounds form a tough protective coating yet allow expansion and contraction with changing temperatures. They are oil based (except compound in 10.1-oz. cartridge is acrylic based) and can be painted. *Cartridge* fits a standard caulk gun (please see page 3484).

Size	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
10.1-oz. Cartridge	6 hrs.	72 hrs.	0° to 180°	White	1029A22	$3.90

5-gal. Bucket	48 hrs.	—	–10° to 120°	White	1029A28	115.84

Loctite® Repair Adhesives

Repair leaks and cracks as well as rebuild rough spots with these epoxies. At full strength, they can be machined and tapped, except for 98742™. Liquid and paste adhesives are two part; the size listed is the combined total of the two parts.

For Aluminum—Form a nonrusting finish.

For Stainless Steel—Also bonds bronze, cast iron, concrete, copper, and steel.

For Steel—Also bond bronze, cast iron, concrete, copper, and stainless steel.

97483™ and *97484*™ are pourable for making castings and filling voids.

98853™ hardens on wet and underwater surfaces. Meets NSF/ANSI Standard 61 for use in drinking water systems.

99913™ and *99914*™ have extremely strong adhesion.

Wear Resistant for Metals—Resists corrosion. *97473*™ is also chemical resistant. *98742*™ can also be used on ceramic.

One-Time Use for Metals and Ceramic—Job-size quantity. Can also be used on concrete, glass, plastics, and wood.

Devcon Repair Adhesives

These chemical-resistant epoxies handle cracks and leaks as well as rebuild rough spots. They are also corrosion resistant (except adhesive for rubber). Adhesives are two part and withstand machining and tapping at full strength (unless otherwise stated). The size listed is the combined total of the two parts.

General Purpose—Also known as plastic steel, these repair areas where brazing and welding is impractical. They bond aluminum, brass, cast iron, copper, and stainless steel.

Fast Hardening—Alumina filled for use on ferrous and nonferrous metal pipes, chutes, tanks, and bearing housings.

Wear Resistant for Metals—Provides a protective barrier against erosion and corrosion.

For Dirty Surfaces—Adhesive is one part and cannot be machined or tapped. It seals and fills worn, rusted, and corroded metal. Can also be used on ceramic and glass.

For Harsh Environments—Titanium filled to resist chemicals and most acids and solvents.

For Aluminum—Form a nonrusting finish. Can also be used on ceramic, concrete, fiberglass, stainless steel, steel, and wood.

For Rubber—Cannot be machined or tapped.

For Stainless Steel—Meets NSF/ANSI Standard 61 for use on drinking water systems.

Repair Adhesive Sticks

Easy-to-use two-part epoxies in sticks that you cut to the desired amount, knead to a uniform color, and apply. Both parts are contained in one stick, except 7531A11 which contains each part in a separate stick. The size listed is the combined total of the two parts.

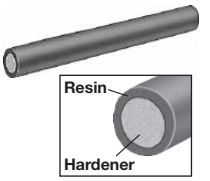
General purpose bond metal. 6615A11 meets NSF/ANSI Standard 61 for use in drinking water systems.

High temperature bonds ceramic, metal, and stone.

For underwater use is also known as Loctite® 82093™. It bonds concrete, fiberglass, metal, plastic, and wood.

For copper can also be used on brass, bronze, and other nonferrous metals. Meets NSF/ANSI Standard 61 for use in drinking water systems.

For plastic bonds most rigid and semiflexible plastics. Do not use on polyethylene and polypropylene. Meets NSF/ANSI Standard 61 for use in drinking water systems.



Type	Size, oz.	Approx. Coverage @ 1/4" Thick, sq. in.	Begins to Harden	Reaches Full Strength	Max. Temp., °F	Mix Ratio	Color

Devcon Zip Repair Patches

Make repairs to pipes, tanks, drums, and containers in the field. Patch is 4"×9" and includes activator spray and gloves. It bonds ceramic, fiberglass, metal, plastic, and wood and can be sanded, painted, machined, tapped, and drilled at full strength.

Devcon No.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Color		
11500	5 min.	4 hrs.	–40° to 200°	Brown	7790A21	$58.26

Underwater Repair Adhesives

Even under water this two-part epoxy paste will bond fiberglass, most metals, plastics, and wood. It resists alkalies, solvents, gasoline, and oil. It also works on dry or moist surfaces. At full strength it can be machined, sanded, drilled, tapped, and painted. Size listed is the combined total of the two parts. Adhesives come in a jar.

Size, oz.	Approx. Coverage @ 1/8" Thick, sq. in.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Mix Ratio	Color		
12	170	30 min.	24 hrs.	50° to 210°	1:1	White	7521A14	$17.92

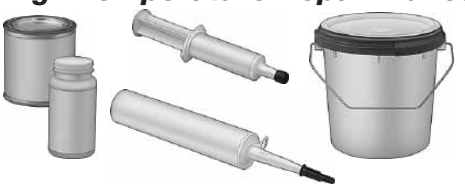
48	680	30 min.	24 hrs.	50° to 210°	1:1	White	7521A13	44.80

Repair Adhesives

For information about adhesives and sealants, see page 3448.

High-Temperature Repair Adhesives



Make repairs to valves, fittings, and shafts in high-temperature applications.

For Cast Aluminum—Also known as pyro-putty, this two-part adhesive is machinable at full strength. Size listed is the combined total of the two parts.

For Cast Iron, Stainless Steel, and Steel—This one-part adhesive is also known as pyro-putty. It is machinable at full strength. *8-oz.* size includes 4 oz. of thinner.

For Metal and Fiberglass—Two-part epoxy that resists corrosion and can be machined, tapped, and drilled at full strength. Size listed is the combined total of the two parts. *Kit* includes 1.5 oz. of epoxy, sandpaper, reinforcement screen, and mixing sticks.

For Porous Materials—Use this one-part adhesive putty as thermal insulation on brick, mortar, burner blocks, furnace holders, and thermocouples.

Repair Adhesives for Metal

Resistant to corrosion and most chemicals, these two-part, metal-filled epoxies repair cracks and leaks as well as rebuild rough spots. They can be machined and tapped at full strength. The size listed is the combined total of the two parts. Adhesives come in a tube. 7500A11 cannot be used on copper or stainless steel.

Size, oz.	Approx. Coverage @ 1/4″ Thick, sq. in.	Begins to Harden	Reaches Full Strength	Temperature Range, °F	Mix Ratio	Color		
6.5	25	3 min.	5 hrs.	–40° to 200°	1:1	Gray	7500A4	$20.00
11	50	22 min.	7 days	–55° to 180°	1:1	Silver	7500A11	13.74
11	60	22 min.	7 days	–75° to 170°	1:1	Gray	74575A95	24.24

Leak Repair Patches for Metal

Seal leaks on metal surfaces and around rivet holes and fasteners. Apply adhesive (sold separately below) to the center of the patch and position it on the surface. To activate the adhesive, press the center of the patch until it clicks.

Domed patch is for fasteners with a protruding head size up to 7/16″ ID×3/8″ Ht.

Leak Repair Sticks

Heat Activated and Rub On

Two Step

Stop leaks in metal tanks and equipment without draining the contents.

Heat Activated—Heat the area to be repaired with a heat gun or torch at 250° F to melt the stick and form a seal that withstands up to 600 psi. Color is green. Meets NSF/ANSI Standard 61 for drinking water systems.

Two Step—Rub the stick into the leak until it stops. Then use the two-part epoxy to form a seal that withstands up to 15 psi. Color is black.

Rub On—Until a permanent repair can be made, rub this stick into the leak. Seal withstands up to 15 psi. Color is gray.

Size	Begins to Harden	Reaches Full Strength	Temp. Range, °F		
Heat Activated—Permanent					
0.375-oz. Stick	60 sec.	90 sec.	Up to 350°	7703A1	$21.24

Rub On—Temporary					
1.25-oz. Stick	12 hrs.	24 hrs.	–50° to 220°	7703A2	15.75

West System Repair Adhesives for Fiberglass

Make repairs to fiberglass in marine environments. Epoxy also bonds ABS, aluminum, lead, PVC, stainless steel, steel, and wood.

Kit contains eight 0.68-oz. packets of 101-TS two-part epoxy (size listed is the combined total of the two parts), one 0.14-oz. cup of 406 colloidal silica filler, one 0.11-oz. cup of low-density filler, two brushes, a reusable mixing stick, three mixing cups, a 15″x15″ fiberglass cloth, a syringe dispenser, and three pairs of disposable gloves.

West System No.	Begins to Harden	Reaches Full Strength	Temp. Range, °F	Mix Ratio	Color

Repair Kits for Fiberglass

Everything you need to make repairs to fiberglass in the field. Kit includes polyester resin, 18″×24″ woven fiberglass cloth, a mixing stick, a mixing tray, and a spreader. Color ranges from yellow to green-blue.

Size, oz.	Begins to Harden	Reaches Full Strength	Temp. Range, °F	Mix Ratio		
8	15 min.	3 hrs.	–40° to 180°	50:1	7597A35	$17.36

Light-Activated Repair Adhesives for Fiberglass

Apply adhesives to fiberglass, expose to sunlight or a UV lamp, and they begin to harden immediately. At full strength, they can be drilled, sanded, and painted.

General Purpose Putty and **High-Strength Putty**—Can also be used on metal, wood, and plastics, except polystyrene. They fill gaps up to 1″ and can be also be tapped at full strength. *High strength* has better adhesion and more corrosion resistance than general purpose.

Patch—Cut to desired size, peel off backing, and press into place. Patch is waterproof and can also be used on concrete and rubber.

Patch

Type	Size	Approx. Coverage @ 1/4″ Thick, sq. in.	Reaches Full Strength	Temperature Range, °F	Color		
General Purpose Putty	3.5-oz. Tube	24	3 min.	–40° to 225°	Semi-Clear	73475A12	$14.31

Patch	6″ Lg.×3″ Wd.	—	50 min.	–40° to 350°	Yellow	7737A21	9.78

Repair Patches for Fiberglass

A dual-pouch packet contains an epoxy-coated patch and resin—knead the two together right in the packet for a convenient way to repair fiberglass pipes, hose, conduit, tanks, and containers. At full strength, patches can be sanded and painted. Begins to harden in 1 minute; reaches full strength in 24 hours. They also bond metals, plastics, rubber, and wood. Temperature range is –85° to 220° F.

Lg.	Wd.	Color			Lg.	Wd.	Color		
2″	12″	Red	74645A75	$10.03	4″	6″	Blue	74645A77	$10.03

Single-Component Dispensing Guns

Dispense one-part adhesives, sealants, and fluids. The gun includes a ratchet-action plunger and uses the syringes sold separately.

Luer lock tip syringes require a needle with a luer lock hub (please see pages 3481-3482).

Dispensing Gun	7422A41	Each	$26.10
Taper-Tip Syringes (1.01 oz./30 cc)	66305A56	Each	$2.36
Luer Lock Tip Syringes (1.01 oz./30 cc)	66305A54	Pkg. of 5	$12.38

Trigger-Action Dispensing Guns

With its heavy duty spring-action trigger, this gun easily applies thick adhesives. Tip diameter is 0.055″. Capacity is 16 oz.

Optional nylon brush tip lets you spread the adhesive after it is applied.

Dispensing Gun	66245A31	$23.44
Optional Nylon Brush Tip	66245A32	4.78

Micro-Dispensing Dual Cartridges

Add your two-part adhesive to the cartridge to dispense small amounts. A *mixer nozzle* (sold separately) is required and lets you simultaneously mix and dispense. Cartridge includes a plunger and two pistons. Mix ratio is 1:1. Size listed for the cartridge is the combined total of the two parts. For larger cartridges, see page 3480.

0.34-oz. Cartridge	7816A61	$2.29
Mixer Nozzle (0.126″ ID×2.9″ Lg.)	7816A32	1.88

Dual-Cartridge Dispensing Guns

Standard Gun for 1.69-oz. Cartridges

Standard Gun for 6.76- and 13.5-oz. Cartridges

3M Gun for 1.18-, 1.25-, 1.52-, 1.59-, and 1.69-oz. Cartridges

3M Gun for 6.76-oz. Cartridges

Guns provide convenient dispensing of two-part adhesives in dual cartridges.

Standard Guns—Do not use with 3M adhesives. Gun *for 1.69-oz. cartridge* includes 1:1 and 2:1 mix ratio plungers. Guns *for 6.76- and 13.5-oz. cartridges* have a built-in plunger that works for 1:1 and 2:1 mix ratios.

3M Guns—Use with 3M two-part adhesive cartridges only. Guns include 1:1 and 2:1 mix ratio plungers. Gun *for 1.18-, 1.25-, 1.52-, 1.59-, and 1.69-oz. cartridges* also includes 10:1 mix ratio plunger.

Dual-Cartridge Plungers

Hand Dispensing

Dispense contents from dual cartridges up to 1.69 oz.

	Choose a Mix Ratio		
For Hand Dispensing	1:1	74695A27	$1.41
For Standard Guns	1:1, 2:1, 4:1, 10:1	74695A41	3.62
For 3M Guns	1:1, 2:1, 10:1	7467A52	10.50

Caulk Gun Conversion Kits for Dual Cartridges

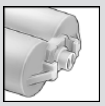
Adapt a standard caulk gun to dispense two-part adhesives from 1.69-oz. cartridges. Kit contains a polypropylene sleeve to hold the cartridge and a plunger to dispense the contents.

Mix Ratio		1-9	10-Up
1:1	74695A68	$3.49	$2.79
2:1	74695A74	3.49	2.79

Dual-Cartridge Mixer Nozzles

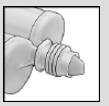
Simultaneously mix and dispense two-part adhesives. All nozzles are made of polypropylene.

Taper tips are for precise dispensing. **Blunt** tips dispense more adhesive at a time. **Luer lock hub** tips offer the most precise dispensing. They require a needle with a luer lock hub (please see pages 3481-3482). **3-step, 4-step,** and **5-step** tips let you trim the opening size to the diameter you need.



Bayonet Connection

Twist-Lock Connection



Bell-Mount Connection

To find a nozzle that will connect to your filled or empty two-part adhesive cartridge, match the connection style of your cartridge from those shown at left and then locate the nozzles with that connection style in the table.

Bayonet connection is the most common. Most of the filled cartridges we carry have a bayonet connection.

3M nozzles are for 3M cartridges only.

Plastic Syringes

A convenient option for dispensing small amounts of adhesives and sealants. All are made of polypropylene.

Manual Syringes—Include a barrel, piston, and plunger.

Air-Powered Syringes—Are for the repetitive dispensing operations of air-powered dispensers (see page 3482). Syringes include a barrel and a piston.

Syringes **with taper tip** let you trim the opening size to the diameter you need.

Syringes **with luer lock tip** require a needle with a luer lock hub (please see pages 3481-3482).

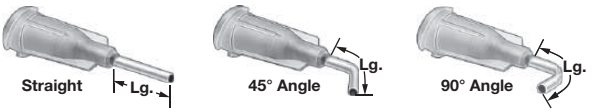
Stainless Steel and PTFE Dispensing Needles



Use for precision dispensing of adhesives, fluids, solvents, fluxes, oils, and pastes. Needles have a blunt tip and a polypropylene luer lock hub.

Stainless Steel Needles—*12-piece straight needle assortment* contains one of each gauge of the 1″ long needles. Assortment comes in a plastic bag.

Straight PTFE-lined needles work well with instant-bonding adhesives. *45° and 90° angle* needles get into hard-to-reach areas.

PTFE Needles—Flexible and can be cut to length for easier positioning. Their nonstick surface works better with instant-bonding adhesives than stainless steel needles.

Stainless Steel Needles

Build-Your-Own Air-Powered Dispensers

Use these components to create a dispensing system that delivers consistency in repetitive bonding processes.

Foot-Pedal Controls

A knob adjusts the air pressure to control the amount of adhesive released when you push the pedal. Controls operate at 0-100 psi and have a ¼″ male quick-disconnect air inlet.

Standard is 3¾″ Ht.×3¾″ Wd.×7¼″ Dp.

Drip free stops any drips after foot pedal is released. It is 3¾″ Ht.×3¾″ Wd.×8½″ Dp.

Standard	66505A11	$292.85
Drip Free	66505A33	398.21

Syringe Adapters and Adapter Kit

Adapters convert taper-tip and luer lock tip plastic syringes (please see page 3481) into air-powered dispensing syringes. They have a gasket seal and a 360° swivel for easy operation. The included 6 ft. hose has a male fitting for connecting to a foot-pedal control.

Adapter kit includes 0.1-oz. (3 cc), 0.17-oz. (5 cc), 0.34-oz. (10 cc), and 1.01-oz. (30 cc) syringe adapters, a needle and syringe assortment, a syringe holder stand, a filter, a 2-oz. squeeze bottle, and disposable gloves.

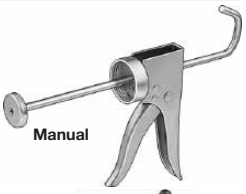
Single-Component Dispensing Guns, Cartridges, and Nozzles

Choose a gun and add a cartridge, cartridge holder, and nozzle (all sold separately) to make dispensing one-part adhesives, sealants, and fluids easy. Not for use with two-part adhesives.

Dispensing Guns

Manual guns are for small dispensing jobs. They are similar to a caulk gun.

Air-powered gun provides controlled dispensing for small or large jobs. Gun requires *air hose* (sold separately). Hose has a 1/4"-28 female fitting on one end that connects directly to the gun while the other end has a 1/4" male quick-disconnect for the air supply. Operating range is 0-100 psi.



Manual

Air Powered

Fits Cartridge Size, oz.		
Manual		
2.5 and 6	7579A61	$142.73

Laminating Rollers

Smooth

Grooved

Smooth rollers, also known as brayers, press down on surfaces to be laminated or bonded. They won't accumulate rubber cement, wax, or clay during use. Roller is acrylic; handle is steel.

Grooved rollers have thin ridges that allow air to escape. Roller is aluminum. Handle is wood with a threaded hole for a handle extension.

Flexible Tube Dispensers

Extract all the contents from plastic and metal tubes up to 3" wide. Dispenser is plastic and the handle stores tube caps and nozzles.

73345A26 ..... $5.20

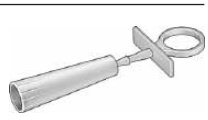
Caps for Cartridges and Bottles

Unroll these caps onto the tip for an airtight seal. Caps stretch to fit most sizes.

7526A11 ..... Pkg. of 35 $6.68

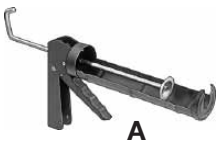
Cartridge Sealers

Slip the cone over the tip of a 10- to 32-oz. cartridge, then insert the barbed T-handle pin into the cone to complete the seal.



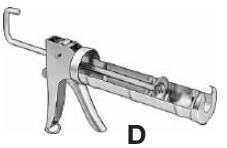
7554A14 ..... $1.43

Caulk Guns



A

B&C



D

E

Dispense cartridges with ease and control. The higher the thrust ratio the easier it is to dispense thick adhesives and sealants.

Style A are metal. 7622T23 has a rubber handle and trigger.

Style C are metal and offer drip-free dispensing. Both 9263T12 and 9263T13 have a rubber handle and trigger. 9263T12 also has a dual stroke for fast applications.

Style E are metal and have a rotating frame that pivots around the rod for easy bead applications.

Bulk-Load Caulk Guns

Immerse into a pail of caulk, pull back the pressure rod, and suction draws the sealant up into the barrel.

Guns

Guns are metal and have a smooth pressure rod and round nozzle. *16-oz. capacity* gun can also be used with 10- to 13-oz. cartridges.

Sausage-style pack conversion kit allows 16-oz. and 30-oz. capacity guns to accept 10-oz. and 20-oz. sausage-style packs of sealant.

Extensions for Caulk Cartridges and Bulk-Load Caulk Guns

Cartridge Extension

Extension Kit

Put a bead of sealant anywhere—even hard-to-reach areas.

Cartridge Extension—Adjusts from 7" to 12½" long and bends up to 180°.

Extension Kit for Bulk-Load Guns and Threaded Cartridges—Includes an adapter, two angle joints, and four nozzles. Fits Albion, Cox, and Newborn barrel-style bulk-load guns.

Cartridge Extension	**7809A11**	$3.00
Extension Kit	**7809A17**	8.38

Bead-Smoothing Sprays and Tools

Achieve the perfect bead every time.

Smoothing Spray—Creates a slippery surface that keeps sealant from smearing or widening when smoothed. Works with all sealants on any nonporous surface. Covers approximately eight 10-oz. cartridges of caulk.

Smoothing Tool—Made of plastic with a flexible rubber tip.

Smoothing Spray	**7326A14**	$8.63
Smoothing Tool	**7146A23**	2.40

Hand-Held Dispensers for Packaging Tape

Economy and Standard

Curved Grip

Heavy Duty

Wide

Hold-a-Roll

Use with packaging tape on pages 3487-3488. All dispensers have a metal blade, a plastic handle, and a wipe-down flap to smooth tape to your surface. **Dispensers with tape** include one roll of packaging tape, except 3M hold-a-roll comes with two rolls.

Economy—Frame is metal and plastic. An adjustable brake controls tension for tighter box closure.

Cushion grip has a foam-covered handle.

Retractable blade prevents accidental cuts as the blade stays retracted until pressure is applied to the wipe-down flap.

Standard—Have a steel frame and a nonslip handle. An adjustable brake controls tension for tighter box closure.

Curved Grip—Handle shape is designed for comfort. Frame is plastic.

Heavy Duty—The steel frame is beefier than the standard dispenser to withstand heavy use. A rubber roller keeps tape in ready position, and an adjustable brake controls tension for a tighter box closure.

Wide—Hold 3″ and 4″ wide tape rolls. Frame is steel and plastic. 75835A51 and 75835A82 have an adjustable brake to control tension for tighter box closure.

Hold-a-Roll—Economy version of 3M hold-a-roll. Frame is plastic.

3M Hold-a-Roll—Fit in your hand for greater control and precision. Frame is plastic. Includes two rolls of 3M Scotch #375 tape.

Tabletop Tape Dispensers

Single-Roll Economy

Single-Roll for 1″ and 3″ Cores

Single-Roll Heavy Duty

Multi-Roll Economy

Multi-Roll Standard (75725A74)

Multi-Roll Heavy Duty

Multi-Roll Extra Wide

For use with masking, paper, Scotch, and filament-reinforced tape, unless otherwise stated. Tape is not included.

Single Roll—Have a plastic housing with a nonskid base.

Economy is for use with Scotch tape only.

For 1″ and 3″ cores includes two spools so you can use 1″ or 3″ ID tape. Use with Scotch tape only.

Heavy duty is larger and heavier than other single roll dispensers.

Multi Roll—Keep all of your tape in one dispenser.

Economy holds three 1″ wide tape rolls or any combination up to 3″ wide. Housing is metal with a weighted base.

Standard have a plastic housing with a weighted base. 75725A72 holds two 1″ wide tape rolls or one 2″ wide roll. 75725A74 holds six 1″ wide tape rolls or any combination up to 6″ wide.

Heavy duty accommodates one 2″ wide tape roll or two 1″ wide rolls. Housing is plastic with a nonskid base.

Extra wide have a metal housing with suction cups on the base. 76765A1 tape holder adjusts from 1″ to 10″ wide; it holds up to three tape rolls. 76765A2 tape holder adjusts from 1″ to 18″ wide; it holds up to six tape rolls.

Select-a-Length Tape Dispensers

Economy Lever

Standard Lever

Electric/Battery Operated Auto-Repeat

Auto-Cut and Repeat

Dispense the exact length you need, saving tape and time. For filament-reinforced tape, use Auto-Cut and Repeat Dispensers. Tape is not included.

Economy Lever—Adjust the lever to set tape length, pull to dispense, and tear manually. Housing is plastic.

Standard Lever—Set the sliding gauge to desired length, pull the lever to dispense, and tear manually. Housing is steel and plastic.

Electric/Battery Operated Auto-Repeat—Dispenses tape continuously to one of three selectable lengths and tear manually. Plug the included 6-ft. cord with two-prong plug into an outlet or use with three D batteries (sold separately). Housing is plastic.

Auto-Cut and Repeat—Dispenses and cuts tape continuously to a set length. It also has a three-digit LED display and a touch pad. Includes a 5-ft. cord with three-prong plug. Housing is steel and plastic.

Dispensers for Water-Activated Packaging Tape

As tape passes through the dispensers a brush wets the adhesive. Tape is not included.

Pull-and-Tear

Pull the tape to desired length and tear off. Use with general purpose water-activated packaging tape 7624A4, 7624A5, and 7624A7 on page 3488. Tank holds 4 oz. of water. Housing is steel with nonskid rubber feet.

Accepts Tape Width	Max. Tape Roll Dia.	Dispensers		Repl. Brushes		Repl. Blades	
1″ to 3″	7″	76215A15	$107.71	76215A16	$32.07	76215A17	$32.07

Select-a-Length

Large Tank

Extra Large Tank

Set to dispense the desired length and pull the lever. Fewer moving parts and an enclosed housing minimize maintenance.

Large Tanks—Length dispensed adjusts in 2″ increments (10″, 12,″ 14″, etc. up to 30″). Dispensers have a handle on the left side and a 44-oz. capacity water tank. Housing is steel and plastic with nonskid rubber feet.

Standard can be used with the following water-activated tape on page 3488: general purpose 7624A4, 7624A5, and 7624A7; heavy duty reinforced; and warning message. Optional heater for standard dispenser (sold separately) quickly activates glue to ensure good adhesion. It has a 6-ft. cord with three-prong plug.

For pull tab is for use with pull-tab water-activated tape 6161A33 on page 3488.

Extra Large Tanks—Set to dispense any length between 5″ and 36″. Dispensers have a handle on the right side and a 70-oz. capacity water tank. Housing is plastic. Can be used with all water-activated tape on page 3488.

Heated dispenser quickly activates glue to ensure good adhesion. It has a 6-ft. cord with three-prong plug.

2″	11″	76435A76	81.06	76435A86	14.48

Packaging Tape

Securely seal packages and bundle loads. Tape is made of polypropylene unless otherwise stated. Spool ID is 3″. For dispensers, see page 3485.

General Purpose—Has synthetic rubber adhesive that stretches for use on overstuffed cartons.

Extreme Conditions—Has acrylic adhesive that lasts longer than rubber adhesive and won't yellow from exposure to sunlight. Temperature range is –10° to 200° F.

Moisture Resistant—Rubber adhesive locks out moisture, and sticks well on rough and corrugated paper, printed cartons, and shrink wrap.

High-Strength Conformable—Made of PVC for more strength and stretchability than polypropylene tape. It is abrasion and puncture resistant and has rubber adhesive that works well on rough and corrugated paper as well as on printed cartons.

Quiet-Unwind—Tape unwinds without making a loud ripping noise.

Easy-to-Tear Paper Packaging Tape

The strong backing on this kraft paper tape resists moisture and weathering; yet it can still be torn by hand. Rubber adhesive provides a secure seal. Tape is 0.007″ thick and color is tan. Temperature range is 32° to 180° F.

Wd.	Lg., yds.		Each	Pkg. Qty.

Packaging Tape

Water-Activated Packaging Tape

Pull Tab

Warning Message

Tamper Evident

Water-activated adhesive makes this kraft paper tape the most effective choice for sealing corrugated, printed, and overstuffed cartons. For dispensers, see page 3486.

Heavy duty reinforced has tri-directional fiberglass strands that provide extra strength. **Pull tab** has no need for box cutters or knives, just pull the center strip to open the seal. **Warning message** has red lettering. **Tamper evident** leaves a red layer when tape is removed.

Tamper-Evident Packaging Tape

Peel Back

Know if high-value and confidential items have been tampered with. For dispensers, see page 3485.

Diagonal Stripe—Diagonal stripes printed on the tape cannot be realigned if the tape has been cut, revealing package has been tampered with. Tape is white polypropylene with synthetic rubber adhesive. Stripes and lettering are blue.

Peel Back—When tape is peeled back, an "OPENED" message is revealed. The tape cannot be resealed without evidence of tampering. Tape is red polypropylene with acrylic adhesive. Lettering is black.

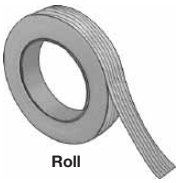
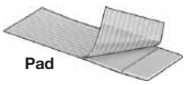
Filament-Reinforced Tape



Roll



Pad

Embedded filaments give this polypropylene tape the strength for packaging, bundling, and strapping. Tape also has excellent abrasion and moisture resistance. Adhesive is synthetic rubber. Temperature range is up to 120°F, except double-reinforced pad is 0° to 160°F.

For dispensers, see pages 3485-3487.

Economy—Semi-Clear

Filaments run along the length.
Light Duty—Has fiberglass filaments and is 0.004″ thick.
Heavy Duty—Has polypropylene filaments and is 0.006″ thick.

3M Scotch Tape

A traditional choice for mending, holding, and splicing. Tape is clear and 0.002″ thick. For dispensers, see pages 3485-3487.

#600—Has acrylic adhesive for sealing as well as light duty packaging applications. It is treated for easy release and is moisture resistant.

#610 Cellophane—Has rubber adhesive for better holding properties than #600.

#810 Magic—Has acrylic adhesive that becomes as clear as glass upon application. The ink-receptive surface allows you to write on it.

Super-Thin Electrical Tape

Shield and insulate electrical connections with tape that's only 0.0025″ thick, yet durable, conformable, and abrasion resistant. Tape consists of 0.001″ thick electrical-grade polyester film with 0.0015″ thick adhesive. UL listed.

General Purpose—Noncorrosive with better adhesion than solvent-resistant tape. Adhesive is rubber. Color is yellow and temperature range is 0° to 325° F.

Solvent Resistant—Also resists oil. Adhesive is acrylic. Color is white and temperature range is –20° to 325° F.

Liquid Electrical Tape

Apply this liquid for a skin-tight protective coating that insulates and resists moisture, acids, and corrosion. Adheres to metal, plastic, vinyl, rubber, and composite surfaces.

Moisture and Crack Resistant—Use as a seal on plastic tape. Liquid is made of synthetic rubber. Allow 20 minutes between coats. Reaches full strength in 24 hours. Temperature range is –30° to 200°F. Top has an applicator brush.

High Temperature—Use this vinyl liquid on electrical connections and terminals. It dries to the touch in approximately 10 minutes and reaches full strength in 24 hours. Temperature range is –50° to 250°F. Top has an applicator brush.

Spray On—Use this rubber-based liquid on electrical connections and terminals. Allow 20 minutes between coats. Reaches full strength in 24 hours. Temperature range is –30° to 200°F.

3M Scotch Brand Electrical Tape

Rolls

Hold and insulate wire and cable splices. Tape is rated for up to 600 volts, unless noted.

Super #33+ General Duty—A super-stretchy tape that easily conforms to irregular surfaces and provides corrosion protection and flame retardance, plus resists abrasion, chemicals, and UV rays. Tape is 0.007″ thick vinyl. Maximum temperature is 220°F. UL listed and CSA certified.

#35 Choose-a-Color General Duty—Use for identification to keep track of circuits, piping systems, motor leads, and splices. Tape is 0.007″ thick vinyl. Maximum temperature is 220°F. UL listed and CSA certified.

Super #88 Heavy Duty—Tape is 0.0085″ thick vinyl, making it tougher than general duty tape for corrosion protection and flame retardance, plus resistance to abrasion, chemicals, and UV rays. It also remains conformable down to 0°F. Maximum temperature is 220°F. UL listed, CSA certified, and meets MIL-I-24391C.

#22 Ultra Heavy Duty—Extra thickness provides good electrical insulation and mechanical strength. Tape is 0.01″ thick vinyl. Maximum temperature is 175°F. UL listed and CSA certified.

#23 and **#130C Self-Fusing Splicing—**Highly conformable, EPR-based (ethylene propylene rubber) tape can be used for splices up to 69,000 volts. Tape is 0.03″ thick and temperature range is 0° to 190°F. #23 has a peel-off liner.

#27 and **#69 High-Temperature Corrosion Resistant—**Corrosion and puncture resistant glass-cloth tape that won't shrink, rot, or burn. The adhesive becomes stronger at high temperatures. Use indoors only. Tape is 0.007″ thick and not rated for voltage.

#27 provides heat-stable insulation for "hot spot" applications such as furnace and oven controls, and motor leads. Temperature range is –40° to 265°F.

#69 reinforces insulation in heavy-load and high-heat applications. Temperature range is –40° to 390°F. Meets MIL-I-19166C requirements.

#70 High-Temperature Self Fusing—This arc-resistant tape has no adhesive; it fuses instantly to itself to protect cables. Made of 0.012″ thick silicone rubber with a peel-off liner. Not rated for voltage. Temperature range is 35° to 355°F.

#77 Fire Retardant Wrap—Also known as electric-arc proofing wrap, it expands in a fire to protect cables from flames and heat. It doesn't have an adhesive—use as cable wrap with #69 glass-cloth electrical tape (sold separately). Tape is 0.03″ thick and not rated for voltage. Temperature range is –40° to 220°F.

#2210, #2228, and **#2229 Insulating—**Also known as mastic tape. It is thicker than other tape for cushioning, insulating, and sealing out moisture and environmental contaminants in electrical connections. All have rubber-based adhesive and a peel-off liner.

#2210 is 0.09″ thick vinyl tape with excellent resistance to abrasion, chemicals, corrosion, and UV rays. Maximum temperature is 175°F.

#2228 is 0.065″ thick rubber tape suitable for use with cable, wire, and motor lead connections up to 1,000 volts and with bus bar connections up to 35,000 volts. Maximum temperature is 190°F.

#2229 sealing tape is 0.125″ thick and conformable to mold around irregular shapes. Maximum temperature is 190°F.

#2200 and **#2229 Insulating Pads—**Use to cover a large area. Pads are 0.125″ thick to cushion, insulate, and seal out moisture and environmental contaminants in electrical connections. All have a peel-off liner.

#2200 pads have excellent resistance to abrasion, chemicals, corrosion, and UV rays. Made of an all-weather grade PVC film with a rubber-based adhesive. Maximum temperature is 175°F.

#2229 pads are conformable to mold around irregular shapes and have a rubber-based adhesive. Maximum temperature is 190°F.

#2520 Puncture Resistant—This puncture- and cut-resistant cotton tape is coated with a high-grade electrical insulating varnish and can be used as insulation for bus bars, service drop connectors, and temporary splices. Tape is 0.008″ thick. Temperature range is 35° to 220°F.

Scotchfil Insulating Putty—Noncorrosive, electrical-grade putty in tape form that wraps, stretches, and molds around irregular shapes for insulation build-up. Putty is 0.125″ thick and has a peel-off liner. Temperature range is –40° to 175°F.

Electrical Tape

Insulate wire and cable splices up to 600 volts. Tape is also great for harnessing wire and cable and as jacketing for cable splices and repairs. It is resistant to moisture, weather, abrasion, chemicals, and copper corrosion. Made of 0.007″ thick PVC with rubber adhesive. Temperature range is 35° to 175°F. UL listed.

Wd.	Lg., yds.	Available Colors		Roll 1-9	Roll 10-Up

Self-Fusing Tape

No need for adhesive, this tape fuses to itself for a permanent seal and stretches to fit virtually any form.

All Weather—Insulates and seals above and below ground, in hot and cold weather, and in wet and dry environments. Made of EPR (ethylene proplyene rubber), this tape fuses to itself within minutes and can't be unwrapped. Great for sealing wires, joints, pipes, and hose as well as for insulating battery terminals. It has a peel-off liner. Temperature range is –40° to 190° F.

High Temperature—Temperature range is –65° to 390° F for applications such as electrical coil insulation, splices, cable harnesses, masking applications, and bus bar insulation. It has a peel-off liner.

Standard tape meets MIL-A-A-59163 Type I requirements, except 1/4″ wide.

Easy-Wrap tape is thicker in the middle and tapers at the edges like a triangle, allowing each edge to overlap evenly for uniform application. Middle also has a ridge with a thin colored line that acts as a guide. Meets MIL-A-A-59163 Type II requirements.

Antistatic Wire and Cable Protection Tape

For high-temperature wrapping applications where static can be a problem, use this tape. It is flexible as well as chemical and UV resistant so it withstands harsh environments that normally wear out standard fiberglass cloth tape. Made of extra-strength aramid (comparable to Kevlar) cloth fused with antistatic PTFE. Tape consists of a 0.005″ thick backing with 0.002″ of silicone adhesive. Temperature range is –100° to 500° F. Color is black.

High-Friction Black Cloth Tape

Also known as friction tape, this traditional black cotton electrician's tape provides an abrasion-resistant shield for wrapping low-voltage splices. The rubber adhesive applied to both sides works as a nonslip surface when used on tool handles. Tape is 0.015″ thick. Temperature range is 35° to 175° F.

Wd.		20-yd. Rolls 1-19	20-Up
3/4″	76465A1	$3.27	$2.94
1 1/2″	76465A5	6.42	5.68

High-Strength Fiberglass Cloth Tape

With good temperature and abrasion resistance, this conformable and flexible fiberglass tape is great for electrical insulating. Use as a protective wrap for wire and cables. Tape is 0.007″ thick and consists of 0.0045″ fiberglass cloth with 0.0025″ of adhesive. Color is white.

Solvent Resistant—Resists solvents and oils. Has an acrylic adhesive. Temperature range is –20° to 350° F.

Extreme Temperature—Withstands temperatures from –100° to 500° F. Has a silicone adhesive.

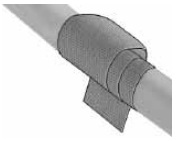
EMI-Shielding Tape



With high conformability, this tape is used for EMI (electromagnetic interference) shielding of cables and other electronic components.

Mesh with Conductive Adhesive

This tape is highly conductive throughout, including the acrylic adhesive. Made of a puncture-resistant polyester fabric woven with copper and nickel. It has a peel-off liner. Tape is 0.004″ thick and consists of a 0.003″ thick backing with 0.001″ adhesive. Temperature range is –5° to 250° F. Color is silver.

High-Temperature Mesh

Made of a strip of metalized polyester, this tape is edged by a two-ply woven tinned copper mesh for strength and flexibility and has a temperature range of –40° to 345° F. Choose tape with a center strip made of either copper or aluminum metalized polyester. Tape has an acrylic adhesive and a paper release liner. When wrapping objects, tape should overlap half of its width to achieve a highly effective 4-ply shielding. Tape is 0.0250″ thick. Supplied on a plastic spool.

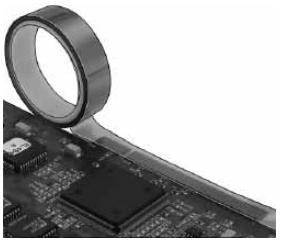
Tape Made with Kapton® Polyimide for Soldering and Splicing



The Kapton® polyimide in this tape has high heat resistance, making the tape suitable for masking electrical components as well as wrapping and splicing wire and cable. Color is amber.

High Temperature—The 0.0015″ thick silicone adhesive on this tape performs in temperatures of –100° to 500° F. Complies with UL 510. Use for masking gold parts when wave soldering printed circuit boards.

0.0025″ thick tape has a 0.001″ thick film.

0.0035″ thick tape has a 0.002″ thick film.

General Purpose—Consists of 0.001″ thick film with 0.0015″ of acrylic adhesive. Temperature range is –20° to 350° F.

Discs, Rings, and **Squares—**Mask small areas and cover openings. Tape consists of 0.001″ thick film with 0.0015″ of silicone adhesive. Temperature range is –100° to 500° F.

Tape

All are supplied on a plastic spool.

Low-Static Polyimide Tape

Minimize electrostatic discharge (ESD) that can degrade circuit boards. A unique coating on this film limits ESD when film is unwound from the roll and when it is removed from printed circuit boards. Use as a masking tape in clean rooms where high ESD is a concern.

Tape is 0.0026″ thick and consists of 0.001″ thick film with 0.0016″ of silicone adhesive. Temperature range is –40° to 355° F. Supplied on a plastic spool. Color is amber.

Heat-Transfer Insulating Tape Made with Kapton® Polyimide

Kapton® polyimide gives this tape excellent electrical isolation. One side of the film has thermally conductive acrylic adhesive. The other side has a silicone rubber coating over the Kapton® polyimide. Silicone provides a slick surface so assembly components won't stick to it. Use tape as a gap filler between components.

Tape is 0.0045″ thick and consists of 0.001″ of Kapton® polyimide film, 0.002″ of silicone rubber, and 0.0015″ of acrylic adhesive. Temperature range is –20° to 300° F. Color is pale green.

1-yd. rolls are wound without a spool, except 7171A21 has a cardboard spool. **18-yd. rolls** have a cardboard spool.

2″	7171A23	26.36	7171A13	202.78

Heat-Transfer Tape—

Adhesive on Both Sides

Create an effective thermal interface between electronic components—both sides of this aluminum film have a thermally conductive acrylic adhesive. Use to attach components to heat sinks and to metal chassis walls in place of screws and other mechanical fasteners; you won't need thermal grease or additional thermal compounds.

Tape is 0.009″ thick. Temperature range is –20° to 255° F. Supplied on a cardboard spool. Color is gray.

Conductive Copper Tape

Shield integrated circuit chips, cables, and motors with electrically conductive copper foil tape. It can be soldered and is suitable for EMI/RFI (electromagnetic interference/radio-frequency interference) shielding. Tape has a peel-off liner.

Temperature range is –40° to 325° F. Supplied on a cardboard spool. Meets UL 510.

With Conductive Adhesive—Use to modify printed circuit boards, repair security-alarm circuits, and prototype wiring-board layout and design. Tape consists of a 0.0014″ thick foil with 0.0021″ of acrylic adhesive.

With Nonconductive Adhesive—Protects electronic components from electrostatic discharge. Great for holding pieces during soldering because solder flows freely across the tape surface. Tape consists of a 0.0014″ thick foil with 0.0015″ of acrylic adhesive.

Masking Tape

Tape is made of crepe paper.

General Purpose—Also use for bundling. All have rubber adhesive.

3M #234 Scotch—Slightly thicker than standard masking tape.

3M #232 Scotch Clean Release—Leaves less adhesive residue behind than Scotch #234.

3M #401+ Scotch for Curved Surfaces—Adheres well to contours.

High Temperature—Withstands heat up to 325°F.

For Long-Term Paint Jobs—Removes cleanly with no adhesive residue, even after exposure to direct sunlight for several days. All have acrylic adhesive.

Long-Life for Delicate Surfaces—Adheres to drywall and painted surfaces but won't damage surfaces when removed.

For Fine-Line Paint Jobs—Creates sharper paint lines than general purpose masking tape.

Standard tape is also known as frog tape. It works for 7 days outside and 21 days inside. Adhesive is rubber.

Smooth Backed—Has a smooth surface for even painting and a super-strong adhesive for better holding than other masking tape. Adhesive is acrylic, except 3M #250 Scotch smooth backed has rubber adhesive.

For Delicate Surfaces—Have a gentle acrylic adhesive that won't damage painted and finished surfaces.

For Trim—Made of paper with a 3/4" wide strip of acrylic adhesive along one edge. The other side has no adhesive so it won't stick to your drop cloth or other items.

Stretch Plastic—Stretches to form smooth curves for painting precise lines. It resists solvents and moisture. Adhesive is rubber.

Masking Tape Applicators

Applicator works with all standard masking tape up to 2″ wide and can be used on trim, painted walls, woodwork, and glass. Use with tape that has a 3″ spool ID. Tape not included.

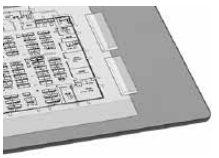
2470A32 ..... $15.91

Masking Tape for Gaps

Protect against drips and paint overspray—this thick foam tape fills gaps in door jambs and openings that flat masking tape can't. It also seals out dust and other contaminants. Tape has a rubber adhesive and is ¼″ thick. The width is perforated every ¾″. Color is blue.

Wd.	Lg., yds.		
5¼″	7	7647A1	$70.53

Clean-Release Masking Tape



Also known as drafting tape, this tape temporarily holds materials without damaging them. Use to mount drawings, tracings, and blueprints. Made of off-white crepe paper with a rubber adhesive.

Wd.	Lg., yds.

All-in-One Paint Masking Systems

Often used for masking vehicles, this system consists of a clear polyethylene film with an acrylic adhesive and a dispenser with cutting blade. The film acts like a plastic drop cloth, clinging to the surface to seal off the covered area. It's antistatic and lint-free. Film is 0.001″ thick.

Light-Blocking Tape

Black Tape

Black Tape—Made of pinhole-free crepe paper to seal out light. Often used in photoprocessing labs. Tape is 0.006″ thick with a rubber adhesive. Temperature range is 45° to 100°F.

3M #616 Lithographer's Tape—Also known as Ruby Red lithographer's tape. It blocks out light that can affect photo-sensitive film and plates, yet it's translucent so work underneath is visible. Tape is 0.0024″ thick and has a rubber adhesive.

Wd.	Lg., yds.

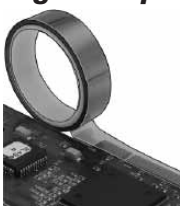
Plastic Masking Tape for High Temperatures



Use for high-temperature masking jobs such as powder-coating and masking circuit boards. Adhesive is silicone. Tape and discs resist corrosive chemicals and remove without leaving residue. They also resist tearing and breaking. All are 0.003″ thick. Temperature range is –40° to 265°F; can withstand temperatures up to 400°F for 20 minutes. Color is green.

Plastic Masking Tape for Plating

Made of vinyl to resist chemicals, this tape won't contaminate plating baths. Color is yellow.

Nonadhesive adheres to itself for a leakproof bond. Temperature range is 15° to 150°F. Tape is 0.004″ thick.

Rubber adhesive works well as a straight-edge mask for anodizing and plating. Temp. range is 15° to 175°F. Tape is 0.007″ thick.

Liquid Masking Tape

Brush on this liquid to cover areas that you don't want painted—it's especially useful for small surfaces and irregular shapes. To remove, wash or peel off. Not for use with water-based paints. Comes in a 1-oz. bottle. Color is blue.

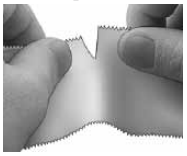
7216A1 ..... $4.95

Chemical-Resistant Surface-Protection Tape

Made of Surlyn film, this tape resists breaking down even in the harshest chemical environments. It is conformable, abrasion resistant, and heat sealable for use as an invisible protective barrier. Tape is 0.012″ thick. It has acrylic adhesive and a liner. Temperature range is –40° to 180° F. Color is clear.

Wd.	Lg., yds.		
1″	36	7622A41	$27.71
3″	36	7622A42	80.06

Easy-Tear Surface-Protection Tape



A serrated edge makes this tape easy to tear, even when wearing gloves. Made of polyethylene with a rubber adhesive. Tape is waterproof, conformable, and 0.0075″ thick. Temperature range is 35° to 160° F.

Wd.	Lg., yds.	Color

2″	60	White	7566A32	9.53

Clean-Release Surface-Protection Tape

Tape removes cleanly and leaves no residue. Color is clear.

General Purpose—This polyethylene tape temporarily protects highly polished surfaces from scratching and marring. Use on metals, plastics, and glass. Tape is 0.003″ thick and has an acrylic adhesive. Temperature range is 40° to 90° F.

Heat Resistant—Made of embossed polypropylene and often used to protect screen-printed graphics during high-temperature manufacturing processes. Effective at temperatures from –40° to 300° F, it's 0.004″ thick and has a silicone adhesive.

3M Scotchrap #51 Corrosion-Protection Tape

Providing all-weather corrosion protection, this tape is resistant to salt water, acids, alkalies, and UV rays. It is also impact and abrasion resistant. The high-tack rubber adhesive adheres to piping and electrical conduit above and below ground.

Made of 0.020″ thick black vinyl. Temperature range is –55° to 175° F. Meets Fed. Spec. L-T-1512A, Type 2 for corrosion protection.

Wd.	Lg., yds.		
1″	33	7621A13	$14.97

Abrasion-Resistant Surface-Protection Tape

Protect surfaces from chipping, scratching, and abrasion with this strong, conformable tape. Designed primarily for indoor use, it will adhere to most metal and plastic surfaces. Made of polyurethane with an acrylic adhesive and a liner. Tape is 0.009″ thick. Temperature range is –40° to 250° F. Color is black.

Wd.	Lg., yds.		
1″	18	7571A1	$27.71
3″	18	7571A2	83.22

Moisture-Resistant Surface-Protection Tape

Designed as a moisture seal for floor joints in wet areas such as galleys or lavatories, this tape works well in harsh, wet environments. A tough polyurethane backing with a urethane adhesive makes it moisture and leak resistant as well as flame retardant. Tape is 0.009″ thick. Temperature range is –65° to 300° F. Color is clear.

Wd.	Lg., yds.

Super-Slippery Tape Made with Teflon® PTFE

Tougher and more conformable than tape made with Kapton® polyimide, this tape provides a super-slick surface along with excellent resistance to electrical current. It works well as high-performance electrical and insulation tape and can also be used for masking and wrapping laminating rollers to prevent buildup. Color is gray.

Note: This is not pipe thread tape. For PTFE pipe thread tape, see page 3470.

High Temperature— Made with a silicone adhesive. *0.0035″ thick* tape has 0.002″ thick film. *0.0045″ thick* tape has 0.003″ thick film. *0.0115″ thick* tape has 0.01″ thick film. Temperature range is –100° to 500° F.

Extra Tough— Consists of a strong, thick layer of Teflon® PTFE backed with acrylic adhesive. *0.022″ thick* tape has 0.02″ thick film. *0.032″ thick* tape has 0.03″ thick film. *0.062″ thick* tape has 0.06″ thick film. Temperature range is 0° to 250° F.

High Bond— Slick Teflon® PTFE is backed with 3M #4941 VHB (very high bond) foam adhesive for strength, padding, and vibration resistance. Tape is 0.065″ thick and consists of 0.02″ film with 0.045″ acrylic adhesive. Temperature range is 0° to 200° F.

Discs, Rings, and **Squares—** All are 0.0035″ thick and consist of 0.002″ thick film with 0.0015″ silicone adhesive. Temperature range is –100° to 500° F.

Ultra-Slippery Tape Made with Teflon® PTFE

Our most slippery tape, the slick surface allows items to glide smoothly over it. Often used for packaging and heat-sealing applications. Tape is 0.005″ thick and consists of 0.003″ film with 0.002″ adhesive. Color is gray.

General Purpose— Has an acrylic adhesive and temperature range of –40° to 350° F.

High Temperature— Has a silicone adhesive that withstands temperatures of –40° to 500° F.

Conformable Slippery Tape Made with Teflon® PTFE

Use as a nonstick surface on packaging equipment and heat sealing machines, and as a lining on molds, guide rails, and chutes. It has more stretch and conforms better to uneven surfaces than standard PTFE tape. Also known as skived tape, it has a low-friction surface and high chemical resistance. Tape has a silicone adhesive and a temperature range of –40° to 500°F.

Note: This is not pipe thread tape. For PTFE pipe thread tape, see page 3470.

Standard—Tape includes a liner. *0.0045″ thick* tape has 0.003″ film and 0.0015″ adhesive. *0.0065″ thick* tape has 0.005″ film and 0.0015″ adhesive. *0.0115″ thick* tape has 0.01″ film and 0.0015″ adhesive. *1-yard rolls* are gray. *5-yard* and *18-yard rolls* are tan.

Weather Resistant—Tape is UV resistant. *0.006″ thick* tape has 0.003″ film and 0.003″ adhesive. *0.0065″ thick* tape has 0.005″ film and 0.0015″ adhesive. *0.0125″ thick* tape has 0.01″ film and 0.0025″ adhesive. Color is white. *5-yard rolls* include a liner.

Wear-Resistant Slippery UHMW Tape

Provides a nonstick, low-friction surface similar to PTFE tape but with higher abrasion and impact resistance. Ideal for chutes, packaging lines, slides, and anywhere high-pressure sliding contact occurs. You can also use it between touching parts to eliminate squeaks and rattles. Tape consists of UHMW polyethylene film with acrylic adhesive. Color is translucent. Tape up to 0.012″ thick has a temperature range of 0° to 200°F and includes a liner. 0.022″ thick tape and thicker has a temperature range of 0° to 120°F.

Tape—Tape up to 0.022″ thick has 0.002″ adhesive. Tape 0.036″ and thicker has 0.005″ adhesive.

Discs, Rings, and **Squares—**Shapes are 0.012″ thick with 0.002″ acrylic adhesive and a liner.

High-Bond, Wear-Resistant Slippery UHMW Tape

All the benefits of UHMW polyethylene tape, plus a high bond adhesive make this tape perfect for difficult-to-bond surfaces such as plastic, foam, metal, and powder-coated surfaces.

With High-Bond Adhesive—Adhesive is chemical-resistant acrylic. *0.012″ thick* tape has 0.01″ film and 0.002″ adhesive. *0.022″ thick* tape has 0.02″ film and 0.002″ adhesive. Temperature range is 0° to 180°F. Color is translucent.

With 3M #4941 VHB (Very High Bond) Foam Adhesive—Provides a super-strong bond along with the shock absorbance of foam. Tape is 0.07″ thick (0.02″ film and 0.05″ adhesive). Temperature range is –40° to 180°F. Color is gray.

Antistatic Slippery UHMW Tape

Use to create a slick, static-free surface for working on small items, as a wear-resistant covering for parts that require abrasion resistance, and to eliminate squeaks and rattles on machinery. Tape has 0.005″ thick rubber adhesive and a temperature range of 0° to 175° F. Color is black.

Thick.	Wd.	Lg., yds.		
0.010″	1″	5	7746A31	$14.07

Shock-Absorbing Slippery UHMW Tape

Cushion surfaces with this tough, wear-resistant foam-backed tape. It dampens noise and vibration in chutes, bins, and similar delivery systems. It also reduces friction in low-speed conveyors. The surface is easy to clean and resistant to tearing, gouging, and most chemicals.

Tape is 0.067″ thick (0.005″ UHMW polyethylene film laminated to 0.0605″ polyurethane foam and coated with 0.0015″ of acrylic adhesive). It comes with a liner and has a temperature range up to 200° F. Color is off-white.

Wd.	10-ft. Rolls		100-ft. Rolls	
1″	76635A8	$29.77	76635A651	$166.34

Super Wear-Resistant Slippery Tape

Often referred to as Rulon or bearing tape, this self-lubricating PTFE tape brings you more abrasion and wear resistance than regular PTFE tape. Use on bearing liners, chutes, and guide rails, and for applications requiring high temperatures and chemical resistance.

Tape is 0.010″ thick (0.008″ film with 0.002″ silicone adhesive). Temperature range is –100° to 500° F. Color is red.

Wd.	5-yd. Rolls		18-yd. Rolls

2″	7800A14	98.06	7800A24	258.05

Ultra Wear-Resistant Slippery Tape

When you need excellent wear and friction properties, plus insulation and good chemical resistance, this PEEK-backed tape does the job. Use it for sliding bearing surfaces, abrasion-resistant wire wraps, and high-heat applications, as well as on hard surfaces such as steel, ceramic, and glass. Comes with a liner. Color is tan.

General purpose tape resists high humidity and chemicals. It has 0.002″ thick acrylic adhesive and a temperature range of –40° to 300° F.

Clean release tape leaves behind less adhesive residue than General-Purpose tape. It has 0.002″ thick silicone adhesive and a temperature range of –40° to 400° F.

Wear-Resistant Fiberglass Tape Coated with Teflon® PTFE

Super-slick PTFE is reinforced with fiberglass for strength, durability, and resistance to tears, punctures, and abrasion. Tape withstands high temperatures and exposure to chemicals. Use as a release surface on heat sealers and blister forming equipment, as a slick lining on chutes and rails, and for mold protection.

For adhesive-backed PTFE-coated fiberglass sheets, see 5739T on page 3571.

Nonconductive—Does not conduct electrical current. It has 0.002″ thick silicone adhesive and a temperature range of –100° to 500° F. Color is tan.

Semiconductive—Resists static buildup and discharges minor amounts of surface static electricity. Comes with a liner. It has 0.002″ thick silicone adhesive and a temperature range of –100° to 500° F. Color is black.

Long Life—Fiberglass is laminated with PTFE for longer life and better conformability than Nonconductive and Semiconductive tapes. It has 0.002″ thick silicone adhesive and a temperature range of –100° to 550° F. Color is brown.

Slippery Nonadhesive Tape Made with Teflon® PTFE

Fiberglass is coated with slippery PTFE on one side and silicone that grips horizontal surfaces on the other. Use as a moveable work surface, release sheet, gasket, and diaphragm. Tape is 0.009″ thick. Temperature range is –100° to 500° F. Color is copper.

Surface-Gripping Tape

Easy Release

Tape is coated with silicone to grip smooth surfaces and resist sticky substances such as ink. Also known as roller wrap, it's often used on rollers such as those found in the printing and textile industries. Adhesive is 0.003″ thick rubber.

High Grip—Has a smooth surface for maximum grip. Tape is 0.013″ thick.

Easy Release—Has a pebbled surface for moderate grip. Tape is 0.024″ thick.

High-Temperature Conformable—Withstands temperatures up to 265° F. Smooth and thinner than the other tapes, it conforms to surfaces better and adds less bulk. Tape is 0.008″ thick.

Heat-Shrink Tape

Wrap this tough, flexible tape around an object and heat. Tape will shrink and apply pressure to the object. When wrapping objects, tape should overlap half of its width. It starts to shrink at 150° F and shrinks lengthwise only. Tape is 0.002″ thick. Temperature range is 175° to 350° F. Color is clear.

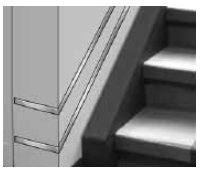
Reflective Tape



Mark aisles and stairs with a high-contrast reflective stripe. Tape also works with hand-held tachometers, and other applications that need a reflective surface.

Tape is 0.004″ thick and consists of a vinyl backing with acrylic adhesive and a liner. Maximum temperature 175° F. Color is silver.

Clean Room Tape

Easy Remove

Wear Resistant

Tape releases minimal gaseous contaminants and leaves no adhesive residue so it's safe for sealing, masking, and hanging plastic sheeting in clean rooms. Spool is plastic. Temperature range is –10° to 175° F. Rolls come sealed in a plastic bag and are certified for clean rooms Class 10 and up.

Easy Remove—Tape has a rubber adhesive, so it's easy to remove and unaffected by moisture. Made of vinyl with adhesive, total tape thickness is 0.006″.

High Bond—Adheres better than Easy Remove tape. Made of polyethylene with synthetic rubber adhesive. Total tape thickness is 0.007″.

Conformable—Designed to mold around box corners. Made of polyethylene with acrylic adhesive, total tape thickness is 0.007″.

Wear Resistant—Striped with warning colors that won't fade, this abrasion- and chemical-resistant tape withstands high traffic and frequent cleaning. Made of vinyl with rubber adhesive. Total tape thickness is 0.01″.

Super-Soft Rattle-Reduction Tape

Also known as flocking tape, use this 0.029″ thick polyester and cotton tape to reduce squeaks and rattles between parts. Designed for the automobile industry, it's backed with 0.005″ thick acrylic adhesive that sticks well to slick plastic surfaces, foam, and fabric. Tape withstands temperatures up to 200° F. Color is black.

Wd.	Lg., yds.

Duct Tape

You'll get water resistance with excellent adhesion from this flexible, multipurpose tape. It has a shiny polyethylene coating and rubber adhesive, except for *conformable* and *easy-tear vinyl* tape, which have a matte vinyl coating, and *transparent* tape, which has an acrylic adhesive.

General Purpose—Use to secure fiberglass insulation, as a condensation barrier in refrigeration assemblies, and in short-term ductwork sealing. Tape is 0.01″ thick. Temperature range is 40° to 160° F.

Duct and Insulation Sealing—Thicker than our General Purpose tape; use for demanding HVAC applications. Tape is 0.012″ thick. Temperature range is 50° to 200° F.

Super Bond—Our thickest, strongest, stickiest duct tape. Bond to rough surfaces such as wood, plaster, stucco, brick, metal, and cement. Tape is 0.017″ thick and withstands temperatures up to 200° F.

Flame Retardant—Has flame-retardant adhesive and is 0.012″ thick with a temperature range of 40° to 200° F. Meets FAR (Federal Aviation Regulation) 25.853(a), though it is not intended for use in aircraft.

Nuclear Grade—Use in nuclear power plants to seal end caps on stainless steel pipes, hold labels and signs, and seal ductwork. Tape is 0.012″ thick. Temperature range is 50° to 200° F. Meets ANSI No. 45.2.2, ASME NQA-1, NRC (Nuclear Regulatory Commission) Guide 1.38.

Conformable (Gaffer's)—Tape is flexible, tough, and releases cleanly from surfaces. It's 0.012″ thick and has a temperature range of 40° to 200° F.

Easy-Tear Vinyl—Our thinnest duct tape; the embossed vinyl backing makes it easier to unwind and tear by hand. It leaves little residue behind, won't stick to itself during application. Tape is 0.007″ thick and withstands temperatures up to 200° F.

Long Life—Lasts up to a year without deterioration and removes cleanly—even after six months. Tape is 0.012″ thick and withstands temperatures up to 200° F.

Transparent—Makes repairs less obvious. Tape is UV resistant and easy to tear. Use it indoors and out to secure lightweight loads and for reinforcing, patching, splicing, and sealing. It's 0.009″ thick and withstands temperatures up to 170° F.

Economy Grade—Temperature range is 40° to 200° F. Tape is 0.008″ thick.

Handy Roll—Without a spool, rolls fit in your pocket so you can have tape on hand when you need it. Tape is 0.01″ thick and not rated for temperature.

Tape Pads—Make quick repairs with short strips of tape—no unwinding or tearing required. Each pad contains 20 strips of 0.009″ thick tape. Color is silver. Temperature range is 35° to 200° F.

Conformable Metalized Duct Tape

Looks like foil tape, but is more conformable and won't twist or curl. Use on flexible ducts and insulation. Tape consists of shiny polyethylene-coated cloth with rubber adhesive. It's 0.011″ thick, 2″ wide, and 60 yards long. Temperature range is 40° to 200° F. Color is silver.

7709A21 ..... $15.60

Metalized Plastic Insulation Tape

Join and seal seams on building insulation. Reinforced for extra strength, this metalized polypropylene/scrim (fiber)/kraft-laminated (FSK) tape sticks quickly at room temperature and also performs well at low temperatures. Tape is 3″ wide, 50 yards long, 0.0107″ thick, and has 0.0017″ acrylic adhesive. Temperature range is –40° to 175° F. Color is white.

7620A11 ..... $29.78

UL Printed Duct Tape

Tape is printed with UL 181B-FX for easy identification. Use it to seal flexible air ducts and connectors. Tape consists of 0.0015″ thick polypropylene with 0.0015″ acrylic adhesive. Temperature range is –35° to 260° F.

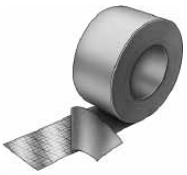
Insulation Duct Tape



Also known as ASJ (all-service jacket) tape because it conforms to ASJ-faced fiberglass duct and pipe insulation. It also can be used as a vapor seal.

Tape has a fiber-reinforced foil/scrim (fiber)/kraft (FSK) backing and liner. Temperature range is 30° to 175° F. Color is white. 76755A67 has a synthetic rubber adhesive. 76755A65 and 76755A66 have an acrylic adhesive and are UL listed.

Pipe Repair Tape

Repair broken and leaking pipes in minutes. When exposed to air, this resin-coated fiberglass tape becomes rock hard in about 30 minutes. To speed hardening, cover with water. Tape can be sanded and painted when dry.

Use on metal, PVC, rubber, fiberglass, copper, and plastic pipes. Tape retains fluid pressure on supply lines up to 150 psi. Maximum temperature is 600° F. Color is off-white.

Solvent-Resistant Cloth Tape

Provides excellent resistance to solvents, unwinds smoothly, and tears straight. Often used as blocking tape on silk screen frames, it's 0.012″ thick and consists of polyethylene-coated cloth with a rubber adhesive. Temperature range is 40° to 200° F. Color is white.

Wd.	Lg., yds.		
2″	60	76985A1	$19.24
3″	60	76985A2	28.77

Water-Resistant Cloth Tape

Flexible yet nonelastic, this long-lasting, conformable tape stays in place—even in damp conditions. Use for reinforcing and bundling. Tape is 15 yards long, 1 1/2″ wide, and 0.01″ thick. It consists of rayon fabric backed with zinc-oxide adhesive. Not rated for temperature. Color is tan.

7618A1	$18.25	

Foil Tape

Aluminum Foil Tape

Printed UL

Reinforced (FSK)

This flexible aluminum foil tape conforms to irregular and curved surfaces. Color is shiny silver.

General Purpose—Use for sealing air conditioning and refrigeration systems and for taping joints and seams on foil-jacketed insulation. Temperature range is 40° to 180° F. Tape has 0.002″ thick rubber adhesive. 2″-3″ wide tape meets UL 723. 4″ wide tape meets UL 25/50.

Economy—Able to withstand temperatures of –40° to 250° F; apply at –10° F to room temperature. Tape has 0.0015″ thick acrylic adhesive.

High Temperature—Withstands temperatures of –30° to 325° F; apply at –20° to 250° F. Use indoors and outdoors for masking, general sealing, metal patching, and creating moisture and dust barriers. Adhesive is acrylic. *0.003″ thick* tape and *0.006″ thick* tape have 0.001″ adhesive. *0.005″ thick* tape has 0.002″ adhesive and meets Fed. Spec. L-T-80B and SAE-AMS-T-23397.

Extreme Temperature—This tape functions in temperatures from –65° to 600° F; apply at 0° to 200° F. It also resists moisture and dust. Tape has 0.002″ thick silicone adhesive. Meets FAR (Federal Aviation Regulation) 25.853(a).

Printed UL—UL 181A-P and UL 181B-FX flexible duct standards are printed on this tape for easy identification. Tape has 0.002″ thick acrylic adhesive. Temperature range is –30° to 300° F.

Outdoor—Tape has butyl rubber adhesive to create a permanent seal against water and humidity. It can endure long-term UV exposure and resists flame spread and smoke. Use for repairing holes and leaks on gutters, downspouts, and roofing membranes. Adhesive is 0.009″ thick. Temperature range is 40° to 200° F. Meets UL 723.

Reinforced (FSK)—Also known as foil/scrim/kraft tape. Tape has a diamond-patterned aluminum foil/fiberglass scrim backing that resists tearing. It's well-suited for sealing, patching, and matching FSK duct. *0.006″ thick* tape has acrylic adhesive and a temperature range of –25° to 175° F. *0.007″ thick* tape has rubber adhesive and a temperature range of 32° to 175° F.

Fiberglass-Reinforced Foil Tape

Aluminum foil is laminated to a tough fiberglass fabric to form a high-strength, reflective tape that can wrap around complex shapes. Use for flame-spray masking and wire harness heat shielding. Tape has silicone adhesive. Color is shiny silver.

General Purpose—Temperature range is –100° to 500° F. *0.007″ thick* tape has a 0.0025″ thick backing with 0.0045″ adhesive. *0.011″ thick* tape has a 0.0075″ thick backing with 0.0035″ of adhesive.

High Temperature—Temperature range is –30° to 600° F; apply at 40° F and above. Tape has a 0.004″ thick backing with 0.003″ adhesive.

Weatherproof Aluminum Foil Tape

Forms a watertight bond with almost any building material including metal, wood, plastic, concrete, brick, asphalt, and glass—indoors and out. Also known as aluminum flashing tape, use it for sealing and repair jobs such as patching gutter joints. It has an asphalt-based adhesive that conforms to contours and sticks firmly on contact.

Tape can be painted and has a liner. It consists of 0.002″ thick aluminum foil with 0.048″ of adhesive. Temperature range is –40° to 200°F. Choose from shiny silver and nonreflective gray.

Weatherproof Rubber Tape

Create patches and seals that can withstand the elements. Color is black.

General purpose tape won't crack, sag, or harden under severe weather conditions. It is 0.125″ thick, odorless, nonstaining, and paintable. Temperature range is –20° to 180°F.

Super tough tape withstands higher temperatures than general purpose tape and is more durable and UV resistant. Also known as window shim tape. Tape is 0.125″ thick. Temperature range is –45° to 200°F.

Vibration-resistant sealing tape remains flexible after prolonged exposure to high temperatures and UV light. Also known as glazing tape. Tape is 0.125″ thick. Temperature range is –45° to 200°F.

Sealing tape is thin to seal seams and cracks. Tape is 0.03″ thick. Temperature range is –40° to 180°F.

Conformable tape stretches to mold to irregular shapes. Use it to repair and seal seams on rubber, metal, and asphalt roofs, as well as gutters. Tape is 0.08″ thick. Temperature range is –40° to 180°F.

Gap-Filling Expandable Foam Sealing Tape

Tape comes compressed and gradually expands to follow contours and fill voids. Use for joints in metal buildings and roofs as well as for expansion/compression joints affected by movement due to thermal expansion and contraction. It also works as a gasket in nonmoving applications and as an alternative to caulk and rubber sealants.

It is UV and mildew resistant, and will not dry out and become hard or brittle. Made of polyurethane foam with an acrylic adhesive on one side. Temperature range is –40° to 185°F. Color is black.

Foam Tape with Adhesive on Both Sides

Multipurpose Foam Tape—

Adhesive on Both Sides

Consisting of polyurethane foam coated with acrylic adhesive on both sides, this tape absorbs shock and attaches well to rigid surfaces. It also offers excellent temperature resistance plus high strength and holding power. Use in mounting and holding applications. For polyurethane foam tape with adhesive on one side, see pages 3622-3623.

Standard—Has a paper liner. Temperature range is –20° to 220°F.

Weather Resistant—Has a polyethylene liner, except discs have a paper liner. Temperature range is –40° to 200°F.

Fire-Retardant Foam Tape—

Adhesive on Both Sides

Prevent the spread of fire while sealing, cushioning, and damping vibration indoors and outdoors. Tape is also resistant to UV light and ozone. It is made of silicone foam coated with acrylic adhesive on both sides. Foam, but not adhesive, meets UL94. Color is black. Has a paper liner. Temperature range is -35° to 250°F.

Conformable Foam Tape—

Adhesive on Both Sides

Get more conformability than with other foam tapes for use in gasketing, mounting, and damping sound/vibration. Tape can be used indoors and outdoors. It consists of neoprene/EPDM/SBR foam coated with acrylic adhesive on both sides. Color is black. Has a paper liner. Temperature range is 0° to 155°F. For neoprene foam tape with adhesive on one side, see page 3614.

Weather-Resistant Foam Tape—

Adhesive on Both Sides

This tape combines weather resistance and strength for outdoor use. It is also UV and solvent resistant. Tape consists of PVC foam coated with acrylic adhesive on both sides. Has a paper liner. Maximum temperature is 150°F. For vinyl foam tape with adhesive on one side, see page 3615.

3M VHB (Very High Bond) Foam Tape—Adhesive on Both Sides

Use this tape in place of some rivets and spot welds, liquid adhesives, and other permanent fasteners. Tape is foam with acrylic adhesive blended into the surface on both sides for significantly better holding power than other tapes. Tape has a paper or plastic liner. Apply at room temperature, unless otherwise stated.

Standard—Use with stainless steel, aluminum, glass, and sealed wood. Temperature range is –40° to 200° F.

Multipurpose—Tape is highly conformable and bonds to most plastics including rigid vinyl, ABS, and nylon. It also bonds to steel, aluminum, glass, and enamel and epoxy paint surfaces. Temperature range is –30° to 200° F. UL 746C listed.

Low Application Temperature—Can be applied in temperatures as low as 35° F and is conformable.

High Temperature—Maximum temperature is 230° F. UL 746C listed.

High-Temperature Conformable—For powder-coated and plastic surfaces. Temperature range is –30° to 250° F.

For Hard-to-Bond Surfaces—Bond powder-coated surfaces, polypropylene, and polystyrene. Also bonds with ABS, rigid vinyl, nylon, and enamel and epoxy paint surfaces. Temperature range is –40° to 160° F.

Tape with Adhesive on Both Sides

Light Duty Foam Tape—

Adhesive on Both Sides

Bond, seal, and absorb sound and vibration with an economical tape that stretches and conforms to irregular surfaces. Has a paper liner. For polyethylene foam tape with adhesive on one side, see page 3624.

Standard—Has a high tack and adheres to a wide variety of surfaces. Tape consists of polyethylene foam coated with rubber adhesive. *Rolls* temperature range is 0° to 150°F. *Shapes* temperature range is 0° to 140°F.

Weather Resistant—UV-resistant with good adhesion to plastics, wood, and metals. The adhesive bond increases over time. Tape consists of polyethylene foam coated with acrylic adhesive. Temperature range is –20° to 200°F.

Removable Foam Tape—

Adhesive on Both Sides

Thicker and more conformable than other removable tape, use this on irregular surfaces, trim, and signage.

Removable on Both Sides—Clear acrylic foam has acrylic adhesive blended into it on both sides so tape won't separate when removed from a surface. Tape has excellent resistance to sunlight. Has a plastic liner. Maximum temperature is 175°F.

Removable on One Side—One side has a tacky adhesive for temporary holding; the other side has permanent adhesive. Tape is white polyethylene foam coated with synthetic rubber adhesive on both sides. Has a paper liner. Temperature range is 0° to 150°F.

Foam Sealing Tape—

Adhesive on Both Sides

Prevent water penetration with this sticky, flexible tape. It conforms to irregular shapes and expands to fill gaps. Use to seal metal to metal, fill gaps on freezers and windows, and for marine applications. Tape consists of soft, PVC foam that's coated on all sides with butyl rubber adhesive. Temperature range is –15° to 160°F. Color is black.

Masking Tape—Adhesive on Both Sides

The choice for light duty bonding and splicing, tape is smooth paper coated with rubber adhesive on both sides. Has a paper liner.

General Purpose—Tape is white and 0.007″ thick. Temperature range is 30° to 200°F. Meets Fed. Spec. CID A-A-180C, Type II.

For Smooth Surfaces—Sticks better than general purpose tape when splicing and bonding paper, foil, and fabric. Tape is off-white and 0.006″ thick. Maximum temperature is 150°F.

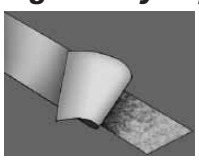
Light Duty Tape—Adhesive on Both Sides



Seal envelopes and hang posters with this tissue-like transparent tape. It is 0.003″ thick, has an oversized liner that's easy to lift away, and can be torn by hand.

Standard—Has a rubber adhesive.

High Bond—Has a rubber adhesive that sticks to glossy surfaces and UV coatings.

UV Resistant—Stands up to UV light exposure better than standard and high-bond tape. Adhesive is acrylic.

Fiberglass-Reinforced Cloth Tape—
Adhesive on Both Sides

With its excellent heat and abrasion resistance, this tape withstands plasma spraying and grit blasting. It can also be used as an underwrap for Masking Tape for Blasting and Plasma Flame Spraying (page 3494) and Fiberglass-Reinforced Foil Tape (page 3502). Tape is 0.007″ thick and consists of off-white fiberglass-reinforced cloth coated with silicone adhesive on both sides. Has a paper liner. Temperature range is –100° to 500°F.

About Hook and Loop

Just like burrs grab onto your clothing, the hook aggressively grabs the loop for a sturdy and reliable fastener. The hook also grabs onto other fabric, such as carpet and upholstery. Use for bundling cable, holding matting in place, putting up signs, holding down tarps, creating display boards, and holding tools.

Open/Close Cycles—Number of times hook and loop can be pressed together and pulled apart until performance reaches 50%.

Hook & Loop

For information about hook and loop, see page 3508.

One-Piece Hook and Loop

Hook on one side and loop on the other allow each strap to fasten to itself. Secure bundles by wrapping strap around and overlapping the ends. Loop is nylon. Temperature range is 0° to 220° F.
Straps have polypropylene hook. **Black perforated rolls** have polyethylene hook.

Flame-Resistant Hook and Loop

With a maximum temperature of 370° F, hook and loop meets Federal Motor Vehicle Safety Standard 302 and FAR (Federal Aviation Regulation) 25.853(12) and (60), though it is not intended for use in aircraft. Made of off-white polyphenylene with a plain back that can be sewn, stapled, or screwed to your surface. Maximum continuous length is 150 feet.

Wd.	Hook	Per Ft.	Loop	Per Ft.
1"	96125K41	$2.67	96125K42	$2.67
2"	96125K61	5.26	96125K63	4.92

Heat-Resistant Stainless Steel Hook and Loop

Get the flexibility of hook and loop combined with the corrosion and heat resistance of stainless steel. Strength will diminish with repeated use. Has a plain back that can be sewn, stapled, or screwed to your surface. Color is brown and temperature range is –40° to 800° F. Maximum continuous length is 75 feet.

Wd.	Hook	Per Ft.	Loop	Per Ft.
1"	96225K41	$37.00	96225K61	$33.62

Mil. Spec. Hook and Loop

Hook meets MIL-A-A-55126B, Type 2, Class 1; and loop meets MIL-A-A-55126B, Class 1. Both are nylon and have a plain back that can be sewn, stapled, or screwed to your surface. Maximum temperature is 200° F.

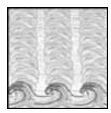
Self-Lock Hook-Head Fasteners

When parallel strips are pressed together, this low-profile hook material fastens to itself for a zipper-like closure. No loop needed. An audible click signals a secure hold. Material will not engage if it is not parallel. Made of clear polypropylene with rubber adhesive on the back. Temp. range is –40° to 120° F.



Wd.	15-ft. Lengths		45-ft. Lengths	
3/8"	7141A2	$9.29	7141A4	$25.36

Self-Lock Mushroom-Head Fasteners

Mushroom-shaped heads allow this material to attach to itself for a secure hold, eliminating the need for separate hook and loop. Made of polyolefin.

Adhesive Back—Have rubber adhesive. Maximum temperature is 120° F.

Super-Adhesive Back—A high-performance acrylic adhesive withstands moisture and high temperatures. Will bond to vinyl. Maximum temperature is 200° F.

Plain Back—Can be sewn, stapled, or screwed to your surface. Maximum temperature is 200° F.

Strips

Have 250 heads per square inch. Maximum continuous length is 150 feet.

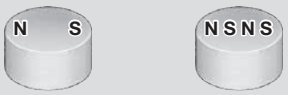
About Magnetic Poles

Magnets' holding power is concentrated in areas called poles. Similar poles repel each other, and opposite poles attract.

Holding Power on One Face



Two Poles — Four Poles

This orientation concentrates holding power on one face. Magnets with multiple north (N) and south (S) poles have greater holding power on thin material.

Holding Power on Both Faces

Two Poles — Eight Poles

This is the most common pole orientation. Magnets have good pull on both faces.

Flexible Magnets

Use scissors to cut magnets into custom shapes for use as latches, tool holders, display materials, and shelf labels. Magnets are ferrite bonded with synthetic rubber and resist corrosion and demagnetization. Temperature range is 0° to 150° F, except 3M VHB (very high bond) magnets have a temperature range of 0° to 140° F. Color is dark brown to black.

Strips

Holding Power on One Face

Holding Power on Both Faces

Thickness tolerance is ±0.005". Width tolerance is –4% to +8%.
Increased-pull magnets have at least 20% more pull than standard-pull magnets.

Flexible Magnets with Vinyl Face

Handwrite or use a silk screen printer to create messages and designs on the vinyl face. Magnets are ferrite bonded with synthetic rubber and resist corrosion and demagnetization. They can be cut with scissors. Temperature range is –15° to 160° F.

Sheets

Thickness tolerance is ±0.0035″. Width tolerance is ±0.03″. Length tolerance is ±1%.

High-Temperature Flexible Magnets

With a temperature range of –40° to 250° F, these magnets withstand higher temperatures than our other flexible magnets. They are ferrite bonded with synthetic rubber and resist corrosion and demagnetization. They can be cut with scissors. Color is brown. Thickness tolerance is ±0.007″. Width and length tolerances are ±1%.

Holding Power on Both Faces

Magnetic-Receptive Flexible Sheets

Vinyl Face with Plain Back

Create a nonmetallic, nonmagnetic surface that magnets will stick to. Sheets are made of rubber and iron oxide and can be cut with scissors. Thickness tolerance is ±0.002″. Width tolerance is ±0.03″. Temperature range is 0° to 160°F.

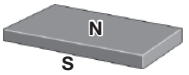
Vinyl Face with Plain Back—You can handwrite on the face.

	Thick.	Wd.	Color	Max. Continuous Length, ft.		Per Ft.
Plain Back	0.025″	24 3/8″	Black	50	1086N11	$5.38
Adhesive Back	0.029″	24 3/8″	Black	50	1086N12	6.25
Vinyl Face with Plain Back	0.03″	24 3/8″	White	50	1086N13	6.03

Machinable High-Pull Neodymium Magnets

Neodymium-iron-boron bonded with epoxy resin makes these magnets machinable with carbide tooling. Magnets resist demagnetization. Temperature range is –20° to 300°F (unless noted). Color is gray.

Rectangular Bars



Length and width tolerances are ±2.5%. Thickness tolerance is ±0.005″.

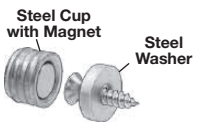
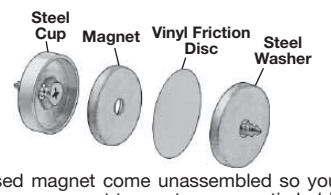
Build-Your-Own Neodymium Encased Magnets





All the pieces of an encased magnet come unassembled so you can mount the washer wherever you want to create a magnetic hold. Maximum temperature is 175°F. Color is gray. **Press-fit** magnets flush mount into a hole. **Screw-in** magnets screw into a surface.

Ultra-High-Pull Neodymium Magnets

These are the strongest magnets we offer. All are neodymium-iron-boron and resist demagnetization. They cannot be machined. **Plain** magnets are gray. **Nickel-plated** magnets are more corrosion resistant than plain magnets. Color is silver.

Discs

Diameter and thickness tolerances are ±0.005″.

Standard-pull magnets have a maximum temperature of 300° F (unless noted).

Increased-pull magnets have at least 20% more pull than standard-pull magnets. Temperature range is –40° to 245° F.

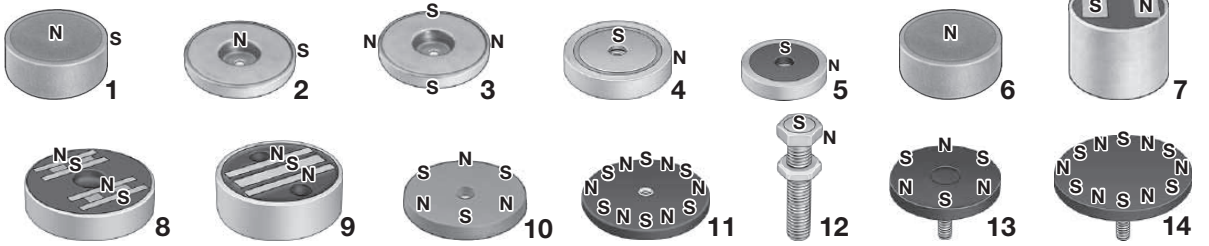
Ultra-High-Pull Encased Neodymium Magnets



A casing protects the neodymium-iron-boron magnet material. Magnets cannot be machined. *Steel casings* also concentrate the magnetic field. *Casings with a cover* protect the exposed magnet face from corrosion. Maximum temperature is 175° F. Color is black to silver (unless noted).

With Mounting Hole—Diameter and thickness tolerances are ±0.025″, except magnets with a metric zinc-plated steel casing have a diameter tolerance of ±0.1 mm and a thickness tolerance of ±0.2 mm. Fasteners are not included.

With Threaded Stud—Magnets with a *metric zinc-plated steel casing* include a locknut. Diameter tolerance is –0.33 mm. Thickness tolerance is –1 mm. Magnets with a *rubber casing* have diameter and thickness tolerances of ±0.025″.

Warning! ***Max. pull ratings are based on direct contact with rust-free and unpainted iron plate. Variations in material condition will significantly reduce these ratings. Do not use magnets for lifting over people.***

For information about magnetic poles, see page 3512.

Ultra-High-Temperature Alnico Magnets

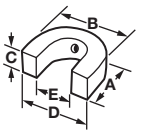
Made of corrosion-resistant aluminum-nickel-cobalt, these magnets have a maximum temperature of 975° F, except the encased magnets have a maximum temperature of 425° F. Grade 8 magnets resist demagnetization better than Grade 5. Machining is not recommended.

Horseshoes, U-Shapes, and Bridges—Grade 5

Horseshoe

U-Shape

Bridge



Length, width, and thickness tolerances are ±0.045″. Color is red (unless noted). Magnets with a mounting hole do not include fasteners.

(Continued on following page)

Warning! ***Max. pull ratings are based on direct contact with rust-free and unpainted iron plate. Variations in material condition will significantly reduce these ratings. Do not use magnets for lifting over people.***

Ultra-High-Temperature Alnico Magnets *(Continued from previous page)*

Made of corrosion-resistant aluminum-nickel-cobalt, these magnets have a maximum temperature of 1020° F. Grade 8 magnets resist demagnetization better than Grade 5. Machining is not recommended.

Channel Bars—Grade 5

Length tolerance is ±0.045″. Width and channel width tolerances are ±0.016″. Thickness tolerance is ±0.005″.

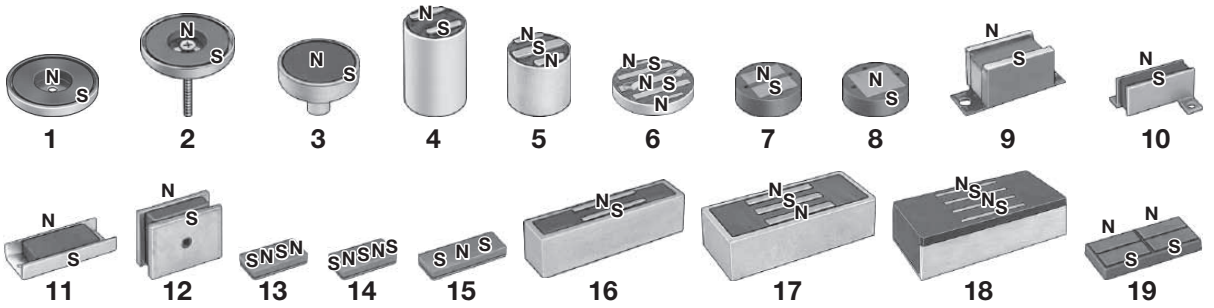
Encased Ceramic Magnets



A casing protects the magnet material. Magnets are ferrite (unless noted). Color is gray to black (unless noted). They cannot be machined. *Steel casings* also concentrate the magnetic field.

Magnets with mounting holes do not include fasteners, except Style 2 includes a screw and two nuts.

Diameter, length, width, and thickness tolerances are ±0.063″, except round metric magnets have diameter and thickness tolerances of ±0.5 mm.

Magnets with a **steel, zinc-plated steel,** or **aluminum casing** have a maximum temperature of 180° F (unless noted). Magnets with a **stainless steel casing** have a maximum temperature of 390° F. Magnets with a **plastic casing** have a maximum temperature of 140° F.

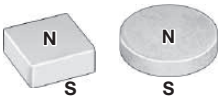
★ Ferrite bonded with synthetic rubber. Color is brown. Maximum temperature is 140° F. ■ Color is red. ▲ Maximum temperature is 140° F.

Warning! ***Max. pull ratings are based on direct contact with rust-free and unpainted iron plate. Variations in material condition will significantly reduce these ratings. Do not use magnets for lifting over people.***

High-Temperature High-Pull Samarium-Cobalt Magnets



The original rare earth magnet, these are made of samarium-cobalt Grades 1:5 and 2:17. Length, width, diameter, and thickness tolerances are ±0.005″. Color is gray. They cannot be machined. **Grade 1:5** temperature range is –40° to 480°F. **Grade 2:17** temperature range is –40° to 570°F.

Easy On/Off Encased Magnets

Turn the knob to switch magnets on and off. Magnets are corrosion-resistant nickel-plated neodymium-iron-boron. Max. temp. is 180°F.

Standard magnets have a nickel-plated steel casing. Magnets **with mounting flange** have an aluminum and zinc-plated steel casing and two 0.17″ dia. mounting holes (fasteners not included).

Ferrite Cores

Often used as inductors and transformers in electrical circuits, cores generate a magnetic hold when magnet wire is wrapped over them and energized. Remove the electric current and they lose their magnetism. Please see page 839 for magnet wire.

High-Pull Encased Samarium-Cobalt Magnets

A nickel casing protects the samarium-cobalt Grade 2:17 magnet material and concentrates the magnetic field. Diameter and thickness tolerances are ±0.008″. Temperature range is 15° to 300°F. Color is silver. They cannot be machined.

Knurled magnets are easier to grip.

Warning! ***Max. pull ratings are based on direct contact with rust-free and unpainted iron plate. Variations in material condition will significantly reduce these ratings. Do not use magnets for lifting over people.***

Surface-Contact DC-Powered Electromagnets

Position the face of these magnets in direct contact with a flat metal surface and turn on the power to create a magnetic hold. Magnets have 8″ long wire leads that connect to a required DC electromagnet power supply (sold separately on this page). Magnets have one or two threaded mounting holes (fasteners not included). Maximum temperature is 100° F.

Note: Holding power is not adjustable and when turned off, magnets still have some residual magnetism.

Round magnets **with spring-loaded release** have a pin that pops up to separate the object and magnet when the power is turned off.

DC-Powered Electromagnets with Parallel Poles

Parallel poles create a better magnetic hold on thinly painted, plated, or coated flat metal surfaces than other magnets. A terminal block (leads not included) on the magnets connect to a required DC electromagnet power supply (sold separately on this page). Magnets have two threaded mounting holes (fasteners not included). Maximum temperature is 105° F.

Note: Holding power is not adjustable and when turned off, magnets still have some residual magnetism.

DC Electromagnet Power Supplies

Automatic

Manual

Also known as rectifiers, these power supplies convert AC power to DC. Choose a power supply with watts equal to or greater than the watts of your magnet. Power supplies have a NEMA 12 steel enclosure for protection from oil/coolant dripping and four 9⁄32″ mounting holes (fasteners not included). Maximum temperature is 140° F.

Automatic—Turn it off and the magnetic current reverses automatically for release. Use for high-speed automated magnetic equipment. The enclosure has a terminal strip with input and output connections. An SPST switch, limit switch, or 120 volt AC PLC output is required.

Manual—Flip the switch to reverse the magnetic current for release. *48-watt* power supplies have 5-ft. input and output cords with plugs. *800-watt* power supply has 5-ft. wire leads and a 5-ft. cord with plug.

Plug-In Surface-Contact Electromagnets

The plug contains a power supply that converts power from AC to DC so no additional wiring or power source is needed. Position the face of these magnets in direct contact with a flat metal surface and plug in to create a magnetic hold. Cord is 3-ft. long. Maximum temperature is 100° F.

Note: Holding power is not adjustable and when turned off, magnets still have some residual magnetism.

Rectangular magnets have two threaded mounting holes; **round** have one (fasteners not included).

25	—	3″	3″	370	5⁄16″-18	—	5692K38	216.53

Warning! ***Max. pull ratings are based on direct contact with rust-free and unpainted iron plate. Variations in material condition will significantly reduce these ratings. Do not use magnets for lifting over people.***

Rubber Edge Seals

These firm rubber seals stop dust, noise, and vibration. They're firmer and more durable than foam rubber seals.

Water- and weather-resistant EPDM seals stand up to water, sunlight, ozone, and salts. Durometer is 65A (hard).

Water-resistant vinyl seals resist salts and detergents. They meet UL 94HB for flammability. Durometer is 70A (hard).

High-temperature silicone seals maintain their shape in hot environments. They resist water and salts. Durometer is 55A (medium).

Chemical-resistant Viton® fluoroelastomer seals resist fuels and aggressive chemicals, such as petroleum oil, hydrofluoric acid, and propyl alcohol. They meet MIL-R-83248. Durometer is 75A (hard).

Soft Foam Rubber Edge Seals

Softer and more flexible than rubber seals, these seals will effortlessly conform to uneven surfaces to shield against dust, noise, and vibration. The foam has closed-cell construction, which resists absorption.

Water- and weather-resistant EPDM foam seals resist water, sunlight, and ozone.

High-temperature silicone foam seals will stand up to hot environments, plus they resist water and salts.

Water-Resistant Rubber Flange-Mount Seals

The foam core makes these vinyl rubber seals firmer and more durable than hollow seals. They have a flange that can be positioned along a door's edge to cover gaps and block dust, noise, and vibration. In addition to water, these seals resist salts and detergents. Seals with a polyurethane foam core also resist refrigerants. Durometer is 70A (hard). Temperature range is 0° to 150° F.

	Wd. (A)	Overall Wd. (B)	Flange Thick.	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up
Vinyl with EPDM Foam Core—Gray

Push-On Seals

Stop wind, dust, and water from entering doors. These seals push onto a door's edge, except Style 30 pushes into the gap on a metal track. Seals are made from closed-cell foam, which resists absorption, except Style 19 is all rubber. Bulbs are hollow for compressibility, except Styles 16 and 17 are solid. The gripping edges have fingers to provide a strong hold, except Style 19 has smooth gripping edges so they lay flat against the surface. All have a metal core, except Style 19 is all rubber.

Water- and Weather-Resistant Seals with EPDM Foam Bulb on Side

The EPDM foam rubber bulb on these seals resists water, sunlight, and ozone. Color is black. Temperature range is -20° to 150°F.

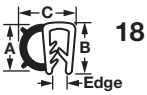
For information about rubber and durometer hardness, see page 3588.

Push-On Seals *(Continued from previous page)*

Oil-Resistant Seals with Buna-N Foam Bulb on Side

In addition to oil, these seals resist grease, salts, water, steam, and most detergents. Color is black. Temperature range is -40° to 212° F.

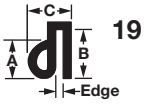


18

Fits Edge Thick.	(A)	(B)	(C)		Per Ft. 1-99	Per Ft. 100-Up
Style 18 with Buna-N Grip—Choose a Length: 10, 25, 50, 100 ft.						
3/64" - 9/64"	7/16"	33/64"	39/64"	12335A55	$5.71	$4.26

High-Temperature Seals with Silicone Rubber Bulb on Side

These all-rubber silicone seals can withstand temperatures up to 500° F, plus they resist water and salts. Color is red. Temperature range is -100° to 500° F.



19

Fits Edge Thick.	(A)	(B)	(C)		Per Ft. 1-99	Per Ft. 100-Up

Oil-Resistant Rubber Seals with Buna-N Foam Bulb on Top

The Buna-N foam rubber bulb on these seals resists oil, grease, salts, water, steam, and most detergents. Color is black. Temperature range is -40° to 212° F.

High-Temperature Fire-Rated Hollow Rubber Surface-Mount Seals

Tested in accordance with NFPA standards 80, 105, and 252, these silicone rubber seals are for use on fire-rated doors. They meet UL 10B, UL 10C, and UL 1784, as well as ASTM E1408, ASTM E283, and ASTM E90. Hollow construction provides compressibility. Attach these seals directly to a door's surface to shield against dust, noise, and vibration. Durometer is 75A (hard). Temperature range is -100° to 500° F; the adhesive has a temperature range of 0° to 190° F.

1/2"	1/4"	Brown, Gray, White	10, 25, 100, 300	1067A3	$1.38	$1.03

Push-On Seals with Wiper & Slotted-Edge Seals

For information about rubber and durometer hardness, see page 3588.

Push-On Seals with Wiper

Push these seals onto a door's edge to deflect wind, dust, and water. The gripping edges have fingers to provide a strong hold, except Styles 1 and 2 have smooth gripping edges so they lay flat against the surface.

High-Temperature Seals with Silicone Wiper

Made of silicone rubber, these seals can handle temperatures up to 500°F, plus they resist water and salts. Durometer is 60A (medium hard). Temperature range is -100° to 500°F.

Style 1 seals are gray. **Style 2** seals are orange.

1/16"	1/2"	1/2"	43/64"	12335A63	2.87	2.14

Water- and Weather-Resistant Seals with EPDM Wiper

In addition to water, seals resist sunlight and ozone. All have a metal core. Temperature range is -20° to 150°F. Color is black. **Styles 3-5** have an EPDM foam wiper with closed-cell construction, which restricts absorption. **Styles 6-9** have an EPDM rubber wiper, which is firmer and more durable than the EPDM foam rubber wipers.

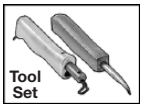
Push-On Seals with Glass Locking Slot



Seal stationary windows into place with these EPDM seals. To install, lubricate the seal with soap and water, then push the bottom of the seal around the edge of the window opening. Insert glass into the top opening of the seal. EPDM resists water, sunlight, and ozone. Durometer is 70A (hard). Temperature range is -30° to 155°F.

Optional Two-Piece Locking Gasket Tool Set— Use these tools to work the window into place when installing seal.

High-Temperature Slotted Rope Edge Seals

Standard

Ultra Conformable

Also known as drop-warp and bolt-hole tape, these seals have openings along the center to accommodate bolts and rivets. Use them on metal flanges, as well as on oven, furnace, and boiler doors. They resist grease, oil, hydraulic fluid, and solvents. Color is white.

Standard—Made of fiberglass that is woven tighter than ultra-conformable seals for increased durability.

Ultra Conformable—Made with loosely knitted fiberglass to be more flexible and conformable than standard seals.

Plain-back seals have a maximum temperature of 1000°F. **Adhesive-back** seals will stay in place until you permanently secure them, making them the best choice when installing in confined spaces. Maximum temperature for the fiberglass is 1000°F; for the adhesive it is 150°F.

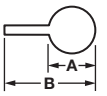
For information about rubber and durometer hardness, see page 3588.

High-Temperature Flange-Mount Rope Edge Seals

The flange on these seals slides into a slot that is commonly found on oven, furnace, and boiler doors; it can be positioned to cover large gaps.



High-Temperature Fiberglass Seals with Fiberglass Core

In addition to high temperatures, these seals have a fiberglass cover and core that resists most refrigerants, salts, and grease. They're flexible and compressible, and are often used as caulking and for filling expansion joints. Flange thickness is 1/8". Color is white. Temperature range is -20° to 1000° F.

Molten Metal Splash-Resistant Fiberglass Seals with Stainless Steel Core

A silicone-coated fiberglass cover sheds sparks and molten metal splash while a stainless steel spring core bounces back when pressure is relieved. These seals resist steam, most refrigerants, salts, and grease. Flange thickness is 1/16". Color is red. Temperature range is -80° to 450° F.

Wd. (A)	Overall Wd. (B)	Lengths, ft.		Per Ft. 1-99	Per Ft. 100-Up
3/8"	7/8"	1, 5, 10, 25, 50	8858K11	$3.90	$3.12

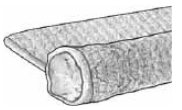
3/4"	2 1/4"	1, 5, 10, 25, 50	8858K22	5.06	4.02
1"	2 1/2"	1, 5, 10, 25, 50	8858K26	5.57	4.43
1"	3"	1, 5, 10, 25, 50	8858K27	5.77	4.59

High-Temperature Chemical-Resistant Fiberglass Seals with Fiberglass Core

The PTFE coating on these fiberglass seals is slippery, so they are easier than the other seals to press-fit into oven, furnace, and boiler doors. The PTFE resists most acids, alkalies, refrigerants, salts, and grease. Flange thickness is 1/8". Color is white. Temperature range is -40° to 500° F.



Wd. (A)	Overall Wd. (B)	Lengths, ft.		Per Ft. 1-24	Per Ft. 25-Up
3/8"	1"	1, 5, 10, 25	88255K11	$2.96	$2.36
1/2"	1"	1, 5, 10, 25	88255K16	3.20	2.56
3/4"	1"	1, 5, 10, 25	88255K22	$3.84	$3.07
3/4"	1 1/2"	1, 5, 10, 25	88255K24	4.09	3.27

Ultra High-Temperature Chemical-Resistant Ceramic Seals with Inconel 625 Nickel Core

A ceramic cover makes these seals more chemical resistant than the seals with a silica cover. Seals resist acids (except hydrofluoric and phosphoric), diluted alkalies, most refrigerants, salts, and grease. Flange thickness is 3/8". Color is white. Maximum temperature is 1700° F.

Wd. (A)	Overall Wd. (B)		1 ft.	10 ft.	25 ft.

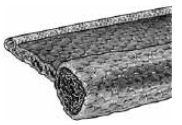
1"	3"	8833K62	41.05	433.15	992.52

Ultra High-Temperature Silica Seals with Inconel 625 Nickel Core

These seals have a strong Inconel core covered with woven silica yarn that's been treated to withstand extremely high heat. They resist most refrigerants, salts, and grease. Flange thickness is 3/32". Color is tan. Temperature range is -40° to 2300° F.



Wd. (A)	Overall Wd. (B)	Lengths, ft.		Per Ft. 1-24	Per Ft. 25-Up

Rope Seals & Silicone Gasket Material

For information about rubber and durometer hardness, see page 3588.

High-Temperature Rope Edge Seals

Seals are flexible and will conform to uneven surfaces. Push them into the groove that's commonly built into oven doors, furnaces, and tanks.

High-Temperature Fiberglass Seals

Standard

Ultra Conformable

These seals resist bleach, solvents, and most acids (do not use with hydrofluoric acid, hot phosphoric acid, and wet hydrogen chloride). Color is white. Maximum temperature is 1000° F.

Standard—A tighter braid makes these fiberglass seals more durable than the ultra-conformable seals.

Ultra Conformable—These loosely knitted seals are more flexible, compressible, and conformable than standard seals. The looser construction also makes them more likely to absorb liquids.

Ultra High-Temperature Silica Fiber Seals

Round Profile

Square Profile

Seals resist water, salts, and diluted acids. Color is white.

Round Profile—Made of 96% silica for excellent temperature resistance. Temperature range is -100° to 1800° F.

Square Profile—Seals have flat edges that provide more sealing surface than round-profile seals. They're made of 98% silica for excellent temperature resistance. Temperature range is -40° to 2300° F.

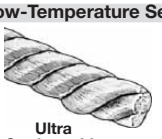
Ultra High- and Low-Temperature Seals

Standard



Ultra Conformable

A wide temperature range makes these ceramic seals equally suitable for use in cryogenic applications as they are for extreme-heat applications. They won't burn and they resist molten metal splash. They also resist steam, salts, grease, detergents, bleach, and hydraulic fluid; however, they will absorb these substances. Seals meet MIL-I-24244B. Color is white.

Standard—Made from tightly woven calcium alumina silicate. Temperature range is -300° to 1100° F.

Ultra Conformable—Made from alumina silicate that is loosely woven to make these seals stronger, more flexible, and able to resist higher temperatures than standard seals. Temperature range is -300° to 2300° F.

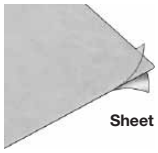
Water- and Steam-Resistant Sticky Silicone Gel Gasket Material



Sheet

Strip

Inherently sticky, these silicone gel sheets and strips conform to irregular surfaces and stay in place for an effective moisture barrier. They resist water, steam, salts, grease, oil, and detergents in low-pressure applications. Cut with scissors or a utility knife. Temperature range is -40° to 255° F. Not rated for pressure. Color is blue.

Gel—Sheets and strips are sticky on both sides.

Gel with Foam Facing—Sheets and strips are sticky on one side; the other side has a polyurethane foam facing with open-cell construction, which allows water, air, and gases to be absorbed.

Aramid Pipe Gaskets with Bolt Holes

The best choice for all-around use. Commonly called full-face gaskets, these cover the entire face of flat-surface pipe flanges and align with the bolt holes. All gasket specifications are sized to meet ANSI standards. Temperature range is -100° to 400° F.

Oil-resistant aramid/Buna-N gaskets also resist water and aliphatic hydrocarbons such as ethylene. Maximum pressure is 1,000 psi. Color is blue. *Adhesive-back* gaskets stay in place to make installation easier; the adhesive has a maximum temperature of 125° F.

Water-resistant aramid/SBR gaskets also resist inert gases and abrasion. Maximum pressure is 1,200 psi. Color is white.

Rubber Pipe Gaskets with Bolt Holes

Damp vibration in your pipe line with these rubber gaskets. They bounce back after compressing and compensate for misaligned flanges. Commonly called full-face gaskets, they cover the entire face of flat-surface pipe flanges and align with the bolt holes. All gasket specifications are sized to meet ANSI standards. Gaskets meet ASTM D2000.

Oil-resistant compressible Buna-N gaskets also resist water and salts. They compress to ensure a tight seal. Temperature range is -20° to 170° F. Maximum pressure is 800 psi. Durometer is 60A (medium hard). Color is black.

High-temperature silicone gaskets resist water and salts. Temperature range is -80° to 450° F. Maximum pressure is 600 psi. Durometer is 60A (medium hard). Color is red.

Chemical-resistant Viton® fluoroelastomer gaskets resist boric acid, citric acid, isopropyl alcohol, fuel, oil, and transmission fluid. Temperature range is -20° to 450° F. Not rated for pressure. Durometer is 75A (hard). Color is black.

Water- and steam-resistant EPDM gaskets also resist salt water. Temperature range is -20° to 220° F. Maximum pressure is 800 psi. Durometer is 60A (medium hard). Color is black.

Pipe Gaskets with Bolt Holes

Ultra-Chemical-Resistant PTFE Pipe Gaskets with Bolt Holes

Here are the most chemical resistant pipe gaskets with bolt holes we offer. They are chemically inert (except to molten alkali metal and fluorine compounds), unless otherwise stated. Commonly called full-face gaskets, they cover the entire face of flat-surface pipe flanges and align with the bolt holes. All gasket specifications are sized to meet ANSI standards.

Compressible PTFE (Gore GR), Food-Grade Compressible PTFE, and **Compressible PTFE (Gore UPG)**—These soft expanded PTFE gaskets compress to ensure a tight seal. Temperature range is -450° to 600°F. Maximum pressure is 3,000 psi. Color is white. *Food-grade compressible PTFE* gaskets are made of FDA-listed material for use with food and beverage. *Compressible PTFE (Gore UPG)* gaskets are for use with cast iron pipe flanges.

Compressible Reinforced PTFE—Reinforced with a stainless steel insert, these soft expanded PTFE gaskets are stronger and can hold their shape better than gaskets without an insert. Temperature range is -150° to 500°F. Maximum pressure is 1,000 psi. Color is white.

PTFE—Made of pure PTFE, these gaskets have a slippery surface that prevents sticking. Temperature range is -450° to 500°F. Gaskets are not rated for pressure. They meet ASTM D3308 and MIL-P-22241. Color is white.

High-Strength PTFE—Resistant to hydrocarbons, solvents, refrigerants, and moderate concentrations of acids, these gaskets have a fiberglass filler to prevent them from thinning out when compressed. Temperature range is -450° to 500°F. Maximum pressure is 800 psi. Color is blue.

High-Temperature Pipe Gaskets with Bolt Holes

Even when temperatures rise, these gaskets maintain a strong seal. Commonly called full-face gaskets, they cover the entire face of flat-surface pipe flanges and align with the bolt holes. All gasket specifications are sized to meet ANSI standards.

Extreme-pressure graphite gaskets have a stainless steel insert for strength to handle pressure up to 5,000 psi. Temperature range is -325° to 850°F. Color is gray.

Oil-resistant carbon/Buna-N gaskets have a temperature range of -100° to 650°F. Maximum pressure is 2,000 psi. Color is black.

Graphite/Buna-N gaskets have a temperature range of -100° to 650°F. Maximum pressure is 2,000 psi. Color is brown.

Ultra-high-temperature vermiculite gaskets withstand temperatures from -235° to 1800°F. They are reinforced with a stainless steel insert for added strength under pressures up to 2,900 psi. Color is gold.

Aramid Pipe Gaskets

Use these general purpose gaskets on raised-surface pipe flanges. Also known as ring gaskets, they fit the surface inside the bolt holes. All gasket specifications are sized to meet ANSI standards. Temperature range is -100° to 400° F.

Oil-resistant aramid/Buna-N gaskets also resist water and aliphatic hydrocarbons such as ethylene. Maximum pressure is 1,000 psi. Color is blue. *Adhesive-back* gaskets stay in place to make installation easier; the adhesive has a maximum temperature of 125° F.

Water-resistant aramid/SBR gaskets also resist abrasion and inert gases. Maximum pressure is 1,200 psi. Color is white.

Rubber Pipe Gaskets

Made of rubber, these gaskets compress to damp vibration. Also known as ring gaskets, use them with raised-surface pipe flanges; they fit the surface inside the bolt holes. All gasket specifications are sized to meet ANSI standards. Meet ASTM D2000.

Oil-resistant compressible Buna-N gaskets also resist water and salts. Temperature range is -20° to 170° F. Maximum pressure is 1,000 psi for ANSI Class 150 gaskets, 800 psi for ANSI Class 300. Durometer is 60A (medium hard). Color is black.

High-temperature silicone gaskets withstand temperatures from -80° to 450° F. They resist water and salts. Maximum pressure is 600 psi. Durometer is 60A (medium hard). Color is red.

Chemical-resistant Viton® fluoroelastomer gaskets resist boric acid, citric acid, isopropyl alcohol, fuel, oil, and transmission fluid. Temperature range is -20° to 450° F. Durometer is 75A (hard). Color is black.

Water- and abrasion-resistant SBR gaskets have a temperature range of -20° to 170° F. Maximum pressure is 800 psi. Durometer is 75A (hard). Color is red.

Water- and refrigerant-resistant neoprene gaskets have a temperature range of -20° to 170° F. Maximum pressure is 1,000 psi. Durometer is 60A (medium hard). Color is black.

Water- and steam-resistant EPDM gaskets also resist salt water. Temperature range is -20° to 220° F. Maximum pressure is 800 psi. Durometer is 60A (medium hard). Color is black.

Ultra-Chemical-Resistant PTFE Pipe Gaskets

These are the most chemical resistant pipe gaskets we offer. They are chemically inert (except to molten alkali metal and fluorine compounds), unless otherwise stated. Also known as ring gaskets, use them with raised-surface pipe flanges; they fit the surface inside the bolt holes. All gasket specifications are sized to meet ANSI standards.

Compressible PTFE (Gore GR), Food-Grade Compressible PTFE, and **Compressible PTFE (Gore UPG)—**These soft expanded PTFE gaskets compress to ensure a tight seal. Temperature range is -450° to 600°F. Maximum pressure is 3,000 psi. Color is white. *Food-grade compressible PTFE* gaskets are made of FDA-listed material for use with food and beverage. *Compressible PTFE (Gore UPG)* gaskets are for use with cast iron pipe flanges.

PTFE—Made of pure PTFE, these gaskets have a slippery surface that prevents sticking. Temperature range is -450° to 500°F. Gaskets are not rated for pressure. They meet ASTM D3308 and MIL-P-22241. Color is white.

High-Strength PTFE—Resistant to hydrocarbons, solvents, refrigerants, and moderate concentrations of acids, these gaskets have a fiberglass filler to prevent them from thinning out when compressed. Temperature range is -450° to 500°F. Maximum pressure is 800 psi. Color is blue.

Reinforced PTFE and **Compressible Reinforced PTFE—**A stainless steel insert in these PTFE gaskets adds strength. Color is white. *Reinforced PTFE* gaskets have a temperature range of -300° to 400°F. Maximum pressure is 500 psi. *Compressible reinforced PTFE* gaskets have a temperature range of -150° to 500°F. Maximum pressure is 1,000 psi.

High-Temperature Pipe Gaskets

Maintain a strong seal in high temperatures with these gaskets. Also known as ring gaskets, use them with raised-surface pipe flanges; they fit the surface inside the bolt holes. All gasket specifications are sized to meet ANSI standards.

Extreme-pressure graphite gaskets have a stainless steel insert for strength to handle pressure up to 5,000 psi. Temperature range is -325° to 850°F. Color is gray.

Oil-resistant carbon/Buna-N gaskets have a temperature range of -100° to 650°F. Maximum pressure is 2,000 psi. Color is black.

Graphite/Buna-N gaskets have a temperature range of -100° to 650°F. Maximum pressure is 2,000 psi. Color is brown.

Ultra-high-temperature vermiculite gaskets withstand temperatures from -235° to 1800°F. They are reinforced with a stainless steel insert for added strength under pressures up to 2,900 psi. Color is brown.

High-Temperature Metallic Pipe Gaskets

The metal construction of these gaskets provides structural strength. They compensate for flange movement caused by vibration and pressure. Use them with both flat-surface and raised-surface pipe flanges; they fit the surface inside the bolt holes. All specifications are sized to meet ANSI standards.

Maximum pressure is 150 psi (unless otherwise indicated) for ANSI Class 150 flanges; 300 psi for ANSI Class 300 flanges; 600 psi for ANSI Class 600 flanges; and 1,500 psi for ANSI Class 1500 flanges.

Standard

Also known as spiral-wound gaskets, these have a 1/8" thick carbon steel outer ring and a 0.175" wide 304 stainless steel sealing element with a filler. Gaskets with an **inner ring** prevent flange erosion. Inner ring is 304 stainless steel. Gaskets meet ASME B16.20.

Mica/Graphite Filler—Temperature range is -50° to 480° F.

Chemical-Resistant PTFE Filler—The PTFE is chemically inert (except to molten alkali metal and fluorine). Temperature range is -50° to 500° F.

Graphite Filler—Temperature range is -50° to 840° F.

Long Life

A space between the outer ring and the sealing element prevents the element from being squeezed inward and contaminating the process line. Also known as spiral-wound gaskets, these have a 1/8" thick carbon steel outer ring and a 0.175" wide 304 stainless steel sealing element with a graphite-based filler. Temperature range is -40° to 850° F.

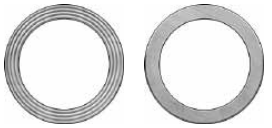
(Continued on following page)

High-Temperature Metallic Pipe Gaskets *(Continued from previous page)*

The metal construction of these gaskets provides structural strength. They compensate for flange movement caused by vibration and pressure. Use them with both flat-surface and raised-surface pipe flanges; they fit the surface inside the bolt holes. All specifications are sized to meet ANSI standards.

Steam Resistant



Corrugated Smooth

Made of 110 copper, these gaskets handle steam applications up to 600°F. They are electrically conductive and resist water, Freon, and fuel oil.

Corrugated gaskets conform to rough and uneven surfaces when put under low pressure for a tight seal. Maximum pressure is 500 psi.

Smooth gaskets have a maximum pressure of 1,500 psi.

Oil-Resistant Aramid/Buna-N Pipe Gaskets with Fasteners

Pipe Gasket with Bolt Holes

Pipe Gasket

Each gasket comes with enough Grade 2 steel bolts and nuts to create a connection between two steel pipe flanges. Gaskets resist oil, water, and aliphatic hydrocarbons such as ethylene. All gasket specifications are sized to meet ANSI standards. Temperature range is -40° to 450°F. Maximum pressure is 725 psi. Color is green.

Pipe gaskets with bolt holes cover the entire face of flat-surface pipe flanges and align with the bolt holes.

Pipe gaskets are for use on raised-surface pipe flanges; they fit the surface inside the bolt holes.

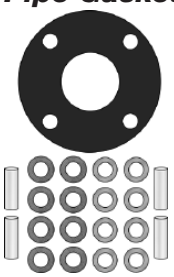
Pipe Gaskets with Bolt Holes for Dissimilar Metals



The included plastic sleeves and washers provide a layer of protection against dielectric corrosion, which occurs when different metals are joined. Commonly called full-face gaskets, these cover the entire face of flat-surface pipe flanges and align with the bolt holes. Each gasket comes with one full-length sleeve for each bolt hole, plus two phenolic and two zinc-plated metal washers for each bolt hole. Bolts are not included. Maximum temperature is 105°F. Color is black.

Oil-Resistant Compressible Buna-N—Maximum pressure is 455 psi. The included sleeves are PET.

Water- and Steam-Resistant EPDM—Maximum pressure is 285 psi. The included sleeves are phenolic.

Metric Pipe Gaskets for DIN Flanges

Pipe Gasket with Bolt Holes

Pipe Gasket

Sized to fit DIN flanges with a pressure class PN16, these gaskets are 1/8″ thick.

Oil-resistant aramid/Buna-N gaskets have a temperature range of -100° to 400°F. Maximum pressure is 1,000 psi. Color is blue.

Chemical-resistant Viton® fluoroelastomer gaskets resist boric acid, citric acid, isopropyl alcohol, fuel, oil, and transmission fluid. Durometer is 75A (hard). Temperature range is -20° to 450°F. Maximum pressure is 1,000 psi. Color is black.

Pipe Gaskets with Bolt Holes—Cover the entire face of flat-surface pipe flanges and align with the bolt holes.

Pipe Gaskets—For use on raised-surface pipe flanges; they fit the surface inside the bolt holes.

High-Temperature Metallic Pipe Gaskets—Also known as spiral-wound gaskets, these have a carbon steel outer ring, a 304 stainless steel sealing element with a graphite-based filler, and a 304 stainless steel inner ring that prevents flange erosion. They can be used with both flat-surface and raised-surface pipe flanges; they fit inside the bolt holes. Maximum temperature is 975°F. Not rated for pressure.

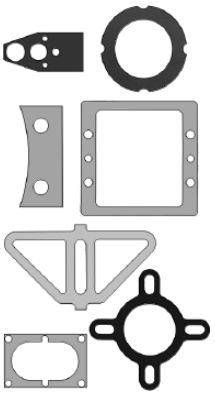
Made-to-Order Gaskets



If you need a unique gasket shape or size, send us your DXF file and we'll precision cut it for you.

First select a material and thickness, then select a sheet size that's large enough to accommodate your gasket. Finally, send us your DXF file. Depending on the size of your gasket, we'll send you as many same-design gaskets as a sheet will yield, up to 20 gaskets for 12″×12″ sheets, and up to 40 gaskets for 24″×24″ sheets.

Oil-Resistant Aramid/Buna-N—Also resists aliphatic hydrocarbons, such as ethylene. Temperature range is -100° to 400° F. Maximum pressure is 1,000 psi. Color is blue.

Chemical-Resistant Viton® Fluoroelastomer—Resists boric acid, citric acid, isopropyl alcohol, fuel, oil, and transmission fluid. Temperature range is 0° to 399° F. Maximum pressure is 100 psi. Color is black.

Ultra-Chemical-Resistant PTFE—Made of soft expanded PTFE, which is chemically inert (except to molten alkali metal and elemental fluorine). Temperature range is -450° to 600° F. Maximum pressure is 3,000 psi. Color is white.

High-Temperature Graphite—Also known as Hochdruck, this material is graphite with stainless steel layers for added strength in hot environments. Temperature range is -400° to 850° F. Maximum pressure is 2,000 psi. Color is black.

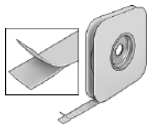
Gasket Tape



Very soft and conformable, this adhesive-back expanded PTFE gasket tape compresses into an extremely thin profile. Use it to create a leak-resistant seal in tight-tolerance applications, such as on precision machinery. This tape is chemically inert, except to molten alkali metal and elemental fluorine. Color is white.

Gore—Temperature range for the gasket tape is -450° to 600° F; temperature is not rated for the adhesive. Maximum pressure is 3,000 psi, except 0.250″ thick gasket tape is 580 psi.

Food Grade—Made of FDA-listed material for use with food and beverage. Temperature range for the gasket tape is -450° to 500° F; temperature is not rated for the adhesive. Maximum pressure is 2,900 psi.

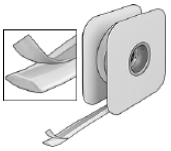
Gasket Tape for Pipe Flanges



Because this adhesive-back expanded PTFE tape is thicker than other gasket tape, it fills the irregularities on rough-surfaced flanges when compressed for a tight seal. This gasket tape is chemically inert, except to molten alkali metal and elemental fluorine. Color is white.

Gore—Temperature range for the gasket tape is -450° to 600° F; temperature is not rated for the adhesive. Maximum pressure is 3,000 psi.

Food Grade—Made of FDA-listed material for use with food and beverage. Temperature range for the gasket tape is -450° to 500° F; temperature is not rated for the adhesive. Maximum pressure is 2,900 psi.

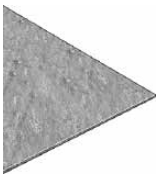
Sheets of Gasket Material

Sheets of Aramid Gasket Material



Make your own gaskets for a wide range of applications. Cut with a gasket cutter.

Oil-Resistant Aramid/Buna-N—Also resistant to water and aliphatic hydrocarbons such as ethylene. Temperature range is -100° to 400°F. Maximum pressure is 1,000 psi. Color is blue.

Oil-Resistant High-Strength Aramid/Buna-N—Stronger and able to withstand higher pressures than other types of aramid/Buna-N, these sheets also resist water, steam, and solvents. Temperature range is -40° to 750°F. Maximum pressure is 1,400 psi. Color is green.

Water-Resistant Aramid/SBR—These sheets also resist inert gases and abrasion. Temperature range is -100° to 400°F. Maximum pressure is 1,200 psi. Color is white.

Sheets of Rubber Gasket Material

Rubber is vibration damping and bounces back after compression. Cut these sheets with scissors or a utility knife. They meet ASTM D2000.

Water- and Abrasion-Resistant SBR—Temperature range is -20° to 170°F. Maximum pressure is 800 psi. Durometer is 75A (hard). Color is red.

Water- and Refrigerant-Resistant Neoprene—Temperature range is -20° to 170°F. Maximum pressure is 1,000 psi. Durometer is 70A (hard). Color is black.

Water- and Refrigerant-Resistant Reinforced Neoprene—Sheets are reinforced with a nylon insert to prevent them from losing shape. Temperature range is -20° to 170°F. Maximum pressure is 1,000 psi. Durometer is 70A (hard). Color is black.

Oil-Resistant Compressible Buna-N—Temperature range is -20° to 170°F. Maximum pressure is 1,000 psi. Durometer is 60A (medium hard). Color is black.

Oil-Resistant Food-Grade Compressible Buna-N—Made of FDA-listed material for use with food and beverage. Temperature range is -20° to 170°F. Maximum pressure is 1,000 psi. Durometer is 60A (medium hard). Color is white.

Water- and Steam-Resistant EPDM—Temperature range is -20° to 220°F. Maximum pressure is 800 psi. Durometer is 60A (medium hard). Color is black.

Water-Resistant High-Pressure Natural Rubber—Temperature range is -20° to 170°F. Maximum pressure is 3,000 psi. Durometer is 40A (medium soft). Color is tan.

High-Temperature Silicone—In addition to withstanding temperatures from -80° to 450°F, these sheets resist water and salts. Maximum pressure is 1,000 psi. Durometer is 60A (medium hard). Color is red.

Chemical-Resistant Viton® Fluoroelastomer—Sheets resist boric acid, citric acid, isopropyl alcohol, fuel, and oil. Temperature range is -20° to 450°F. Not rated for pressure. Durometer is 75A (hard). Color is black.

Chemical-Resistant Food-Grade Viton® Fluoroelastomer—Made of FDA-listed material for use with food and beverage. Temperature range is 5° to 400°F. Not rated for pressure. Durometer is 75A (hard). Color is white.

Sheets of Water-Resistant Lightweight Fiber Gasket Material

These paper-thin sheets are commonly used for light-duty gasketing. Cut with scissors or a utility knife.

Paper fiber/Buna-N sheets resist water and some types of oil. Maximum temperature is 450°F. Maximum pressure is 1,000 psi. Color is gray.

Paper fiber/SBR sheets resist water and abrasion. Maximum temperature is 350°F. Maximum pressure is 1,000 psi. Color is gray.

Vegetable fiber sheets are impregnated with a compound that seals against fluid. They resist water, oil, and inert gases and meet MIL-G-12803. Temperature range is -20° to 250°F. Maximum pressure is 250 psi. Color is brown.

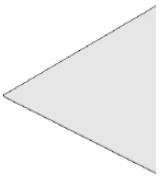
Sheets of Ultra-Chemical-Resistant PTFE Gasket Material



This is the most chemical-resistant gasket material we offer. Sheets are chemically inert (except to molten alkali metal and elemental fluorine), unless otherwise stated. Cut with a utility knife or gasket cutter.

Compressible PTFE (Gore GR)—These expanded PTFE sheets are compressible to ensure a tight seal. Temperature range is -450° to 600°F. Maximum pressure is 3,000 psi. Color is white.

Food-Grade Compressible PTFE—Made of FDA-listed material for use with food and beverage, these expanded PTFE sheets are compressible to ensure a tight seal. Temperature range is -450° to 600°F. Maximum pressure is 3,000 psi. Color is white.

PTFE—Sheets have a slippery surface that prevents sticking. They meet MIL-P-22241. Temperature range is -450° to 500°F. Not rated for pressure. Color is white.

High-Strength PTFE—Made of PTFE with a fiberglass filler to provide strength and prevent these sheets from thinning out when compressed. They resist hydrocarbons, solvents, refrigerants, and moderate concentrations of acids. Temperature range is -450° to 500°F. Maximum pressure is 800 psi. Color is blue.

Sheets of High-Temperature Gasket Material

Use these sheets when a strong seal is required in boilers and furnaces. Cut with a utility knife, except the metal-faced vermiculite can be die-cut.

Oil-Resistant Carbon/Buna-N—Temperature range is -100° to 650°F. Maximum pressure is 2,000 psi. Color is black.

High-Pressure Graphite—Offers excellent compression under moderate loads. Temperature range is -400° to 850°F. Maximum pressure is 2,000 psi. Color is gray.

Extreme-Pressure Graphite—A stainless steel insert adds strength to withstand pressure up to 10,000 psi. Temperature range is -400° to 850°F. Color is gray.

High-Pressure Fire-Rated Graphite—Made of American Bureau of Shipping Fire Safe approved graphite/Buna-N. Temperature range is -100° to 650°F. Maximum pressure is 2,000 psi. Color is brown.

Ultra-High-Temperature Chemical-Resistant Vermiculite—In addition to handling temperatures from -235° to 1800°F, these sheets resist acids (except hydrofluoric), alkalies, and detergents. They have a stainless steel insert that provides strength under pressure. Maximum pressure is 2,900 psi. Color is gold.

Ultra-High-Temperature Metal-Faced Vermiculite—An ETP (electrolytic tin plate) laminate covers the vermiculite core to ensure these gasket sheets maintain their shape as they expand and contract during heating/cooling cycles. These sheets resist vibration. Maximum temperature is 1830°F. Not rated for pressure.

Ultra-High-Temperature Ceramic—Our highest temperature gasket sheets, these are made of high-alumina ceramic and can withstand temperatures up to 2600°F. Not rated for pressure. Meet MIL-I-24244B. Color is white.

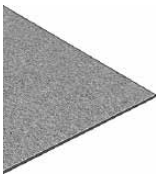
Cork, Gasket Material Assortments & Gaskets for Boilers

Cork Gasket Material



Commonly used in low-pressure applications, these sheets are highly compressible and conform to curved surfaces. This material is also used in bulletin boards. Cut with a utility knife.

Water- and Steam-Resistant Cork—Temperature range is -20° to 180°F. Maximum pressure is 55 psi. Color is tan. *Adhesive back* stays in place to make installation easier.

Oil-Resistant Cork/Buna-N—Temperature range is -20° to 170°F. Not rated for pressure. Meets SAE-AMS-C-6183. Color is brown/black.

Water-Resistant Low-Pressure Rubber/Cork—Not rated for pressure. Color is brown/black. *Plain back* has a temperature range of -20° to 230°F. Meets SAE-AMS-C-6183. *Adhesive back* stays in place to make installation easier. Temperature range is 0° to 200°F.

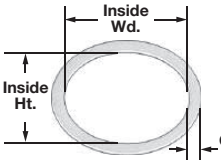
High-Temperature Gaskets for Boiler and Access Covers



Elliptical

Oblong

Built to handle hot environments, these gaskets fit closures on industrial boilers. All are 1/4" thick.

Rubber-Coated Fiberglass—Made of woven fiberglass that is reinforced with brass wire and coated with rubber, these gaskets lay flat and maintain their shape when compressed. Temperature range is -20° to 400°F. Maximum pressure is 180 psi. Color is white.

EPDM—These gaskets stand up to steam. Temperature range is -55° to 380°F. Maximum pressure is 180 psi. Color is black.

Gaskets for Quick-Clamp Tube Fittings

Ensure a tight seal in quick-clamp stainless steel sanitary tube fittings. Gaskets are not rated for pressure.

Standard Gaskets

Gaskets are 3-A certified.
Oil-resistant Buna-N gaskets have a temperature range of -30° to 200° F. Color is black.
Water- and steam-resistant EPDM gaskets have a temperature range of -20° to 300° F. Color is black.
High-temperature silicone gaskets have a temperature range of -40° to 450° F. Color is clear.
Ultra-chemical-resistant PTFE gaskets are chemically inert (except to molten alkali metal and elemental fluorine). They have a temperature range of -100° to 500° F. Color is white.
Chemical-resistant fluoroelastomer gaskets resist fuel, oil, and acid condensates. They have a temperature range of -30° to 400° F. Color is black.

★ OD is 6.67″.

Clean Room Gaskets

Gaskets meet Class 10,000 clean room requirements and are made of FDA-listed material.
Oil-resistant Buna-N gaskets have a temperature range of -20° to 250° F. Color is black.
Water- and steam-resistant EPDM gaskets have a temperature range of -60° to 325° F. Color is black.
High-temperature silicone gaskets have a temperature range of -60° to 400° F. Color is clear. USP VI certified.
Ultra-chemical-resistant Teflon® PTFE gaskets are chemically inert (except to molten alkali metal and elemental fluorine). They have a temperature range of -100° to 500° F. Color is white.
Chemical-resistant Viton® fluoroelastomer gaskets resist fuel, oil, and acid condensates. They have a temperature range of -10° to 400° F. Color is black.

Metal-Detector-Grade Gaskets

If a piece wears off, fragments as small as 1 mm can be picked up by a metal-detection system to prevent contamination of your process line.
Oil-resistant Buna-N gaskets have a temperature range of -30° to 250° F. Color is red.
High-temperature silicone gaskets have a temperature range of -40° to 450° F. Color is red.
Ultra-chemical-resistant PTFE gaskets are made from a blend of PTFE and stainless steel. They are chemically inert (except to molten alkali metal and elemental fluorine). Temperature range is -350° to 550° F. Color is gray.

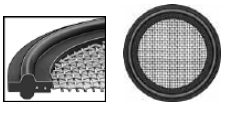
Gaskets with Screen



The built-in screen is made of corrosion-resistant 316 stainless steel and provides inline straining. The mesh size indicates the number of openings on the screen per square inch. Gaskets are 3-A certified.
Water- and steam-resistant EPDM gaskets have a temperature range of -20° to 300° F. Color is black.
High-temperature silicone gaskets have a temperature range of -40° to 450° F. Color is clear.
Ultra-chemical-resistant PTFE gaskets offer excellent resistance to detergents, hydraulic fluid, and salts. They have a temperature range of -100° to 500° F. Color is white.
Chemical-resistant fluoroelastomer gaskets resist fuel, oil, and acid condensates. They have a temperature range of -30° to 400° F. Color is black.

About O-Rings

Inch O-rings are sized to the SAE standard AS568, which is known as a dash number. Metric O-rings are sized to the actual measured inside dia.

Applications Guide

Use the chart below to identify the best material for your application. Blank boxes indicate a poor rating or no rating. Information is intended for comparison only.

O-Ring Size-Identification Tools

Inch Gauge

Deluxe Inch Cone

Use one of these plastic tools to identify your O-ring sizes. Inch tools identify the AS568 dash number. The metric cone identifies the actual O-ring size.

Inch Gauge—This sliding gauge identifies 312 dash numbers with 1/32″ to 13″ IDs in five widths: 0.070″, 0.103″, 0.139″, 0.210″, and 0.275″. It extends to 25″ long.

Standard Inch Cone—Comes as a two-piece measuring system to identify 226 dash numbers in five widths: 0.070″, 0.103″, 0.139″, 0.210″, and 0.275″. The cone identifies 112 dash numbers with 1/4″ to 3″ IDs; an included sizing tape identifies another 114 dash numbers with 3 1/8″ to 8″ IDs.

Deluxe Inch Cone—Identifies 209 dash numbers with 1/4″ to 5 5/8″ IDs in five widths: 0.070″, 0.103″, 0.139″, 0.210″, and 0.275″.

Metric Cone—Identifies 6 to 69 mm IDs in 12 widths: 1, 1.5, 1.6, 1.9, 2, 2.4, 2.5, 3, 3.1, 3.5, 4, and 5 mm.

	Ht.		
Inch Gauge	13 1/2″	9699K51	$22.22
Standard Inch Cone	7 3/4″	9440K41	24.42

	Ht.		
Deluxe Inch Cone	17 5/8″	9440K42	$52.22
Metric Cone	7 7/8″	9440K43	20.69

Multipurpose O-Rings

All O-rings are sized to the SAE standard AS568. They meet ASTM D2000/SAE J200.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N also resists grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400° F. Durometer is A75 (medium). Color is black.

High-Temperature Silicone—O-rings stand up to temperatures from –80° to 450° F. They resist weather, detergents, and salt water. They're made from FDA-listed materials for use with food and beverage. Durometer is A70 (medium). Color is red.

Steam-Resistant EPDM—These O-rings are peroxide cured, so they're more resistant to high temperatures than standard EPDM. They also resist water and brake fluid. Temperature range is –70° to 250° F. Durometer is A70 (medium). Color is black.

(Continued on following page)

Multipurpose O-Rings *(Continued from previous page)*

All O-rings are sized to the SAE standard AS568. They meet ASTM D2000/SAE J200.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N also resists grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400° F. Durometer is A75 (medium). Color is black.

High-Temperature Silicone—O-rings stand up to temperatures from –80° to 450° F. They resist weather, detergents, and salt water. They're made from FDA-listed materials for use with food and beverage. Durometer is A70 (medium). Color is red.

Steam-Resistant EPDM—These O-rings are peroxide cured, so they're more resistant to high temperatures than standard EPDM. They also resist water and brake fluid. Temperature range is –70° to 250° F. Durometer is A70 (medium). Color is black.

(Continued on following page)

Multipurpose O-Rings *(Continued from previous page)*

All O-rings are sized to the SAE standard AS568. They meet ASTM D2000/SAE J200.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N also resists grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400° F. Durometer is A75 (medium). Color is black.

High-Temperature Silicone—O-rings stand up to temperatures from –80° to 450° F. They resist weather, detergents, and salt water. They're made from FDA-listed materials for use with food and beverage. Durometer is A70 (medium). Color is red.

Steam-Resistant EPDM—These O-rings are peroxide cured, so they're more resistant to high temperatures than standard EPDM. They also resist water and brake fluid. Temperature range is –70° to 250° F. Durometer is A70 (medium). Color is black.

Other High-Temperature Silicone Dash Numbers—Choose a Dash Number: 901 to 916, 918, 920, 924, 928, or 932 ... 1283N1

Multipurpose Metric O-Rings

These metric O-rings meet ASTM D2000 and SAE J200.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N O-rings also resist grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400° F. Durometer is A75 (medium). Color is black.

High-Temperature Silicone—Able to withstand temperatures from –60° to 400° F, these O-rings resist weather, detergents, and salt water. Durometer is A70 (medium). Color is red.

Brown Chemical-Resistant Viton® Fluoroelastomer O-Rings

These O-rings are brown for quick material identification and offer excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is –10° to 400° F. Durometer is 75A (hard). All meet ASTM D2000. Inch o-rings are sized to the SAE standard AS568 and meet SAE J200.

Made-to-Order O-Rings

When you need a large O-ring that's not an industry-standard size, we can make one for you. All meet ASTM D2000.

Oil-Resistant Buna-N—Resists oil, grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is 70A (hard). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Offers excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is –15° to 400° F. Durometer is 75A (hard). Color is black.

Steam-Resistant EPDM—In addition to steam, these O-rings also resist water and brake fluid. Temperature range is –65° to 300° F. Durometer is 70A (hard). Color is black.

High-Temperature Silicone—With a temperature range of –80° to 450° F, these O-rings can take the heat. They're suitable for a wide range of static and dynamic sealing applications. Durometer is 70A (hard). Color is red.

Ultra-Compressible O-Rings

Softer than standard O-rings for a better seal in low-pressure applications.

Oil-Resistant Buna-N—The most widely used O-ring material. Temperature range is –30° to 225° F. Durometer is 50A (medium). All meet ASTM D2000. Inch O-rings are sized to the SAE standard AS568 and meet SAE J200. Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Offers excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. They are sized to the SAE standard AS568 and meet ASTM D2000. Temperature range is –15° to 400° F. Durometer is 60A (medium hard). Color is white.

High-Temperature Silicone—Resistant to ozone and salt water, these O-rings stand up to temperatures from –60° to 400° F. They are sized to the SAE standard AS568 and meet ASTM D2000. Color is red.

Metal-Detector-Grade O-Rings

If these O-rings deteriorate they can be picked up by metal detection systems and magnetic separators. All are made of FDA-listed materials and include a material certification with shelf life, cure date, and a traceable lot number. They are sized to SAE standard AS568 and meet ASTM D2000.

Oil-Resistant Buna-N—Resists animal oil, vegetable oil, and water. Temperature range is -40° to 250° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Fluoroelastomer—Resists a wide range of chemicals including citric and nitric acid. Temperature range is -15° to 400° F. Durometer is A75 (medium). Color is blue.

High-Temperature Silicone—In addition to high temperatures, these O-rings resist alcohol and water. Temperature range is -80° to 400° F. Durometer is A70 (medium). Color is red.

Abrasion-Resistant O-Rings

These O-rings stand up to wear caused by moving parts, such as in cylinders. Inch O-rings are sized to the SAE standard AS568.

Oil-Resistant Buna-N—Harder than our multipurpose Buna-N O-rings, these have better wear resistance. In addition to oil, these O-rings also resist grease and hydraulic oils. They meet ASTM D2000; the inch O-rings also meet SAE J200. Temperature range is –20° to 250° F. Durometer is A90 (hard). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Offering the same excellent chemical resistance as multipurpose Viton® fluoroelastomer O-rings, except with a durometer of A90 (hard) for better wear resistance. These resist boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. They meet ASTM D2000/SAE J200. Temp. range is –20° to 400° F. Color is black.

High-Strength Polyurethane—More abrasion resistant than Buna-N and other rubber, polyurethane O-rings offer the best resistance to wear and tearing. They also resist salt water and gasoline. O-rings meet ASTM D2000/SAE J200. Temperature range is –40° to 200° F. Durometer is A70 (medium). Color is black.

Ultra-High-Strength Polyurethane—With a durometer of A90 (hard), these O-rings are harder and are better for high-pressure applications than high-strength polyurethane. They resist tearing. Temperature range is –65° to 275° F. Color is cream.

X-Profile O-Rings

The lobes on these O-rings provide multiple points of contact for a better seal than round-profile O-rings. They also require less compression to make a seal, so they offer a longer service life. All O-rings meet ASTM D2000. Inch O-rings are sized to the SAE standard AS568 and meet SAE J200.

Double-seal O-rings are also known as Quattro Seals and X-rings. They have a cross-shaped profile that provides four points of contact.

Multi-seal O-rings have eight points of contact, as well as eight grooves that will hold lubricants to further reduce friction and wear.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N O-rings also resist hydraulic oils. Temperature range is –30° to 225° F. Durometer is A70 (medium). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—These O-rings offer excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is –15° to 400° F. Durometer is A75 (medium). Color is black.

Square-Profile O-Rings

With flat edges on all four sides, square-profile O-rings cover more surface than round-profile O-rings for a better seal in static applications, such as in hose, pipe, and faucet connections. All O-rings meet ASTM D2000. Inch O-rings are sized to the SAE standard AS568.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N O-rings also resist hydraulic oils. Temperature range is –30° to 212° F. Durometer is A70 (medium). Color is black. Inch sizes meet SAE J200.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is –10° to 400° F. Durometer is A75 (medium). Color is black.

High-Temperature Silicone—These O-rings stand up to temperatures from –40° to 500° F and resist salt water and ozone. Durometer is A70 (medium). Color is red.

Refrigerant-Resistant O-Rings

Made of neoprene, these O-rings resist Freon 12, ethylene glycol, ammonia, and isopropyl alcohol. They are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200. Temperature range is –35° to 250° F. Durometer is A70 (medium). Color is black.

Extreme-Chemical O-Rings

Choose one of these O-rings for applications involving chemicals. O-rings meet ASTM D2000/SAE J200, except Aflas O-rings do not meet SAE J200 and PTFE O-rings do not meet either specification. Inch O-rings are sized to the SAE standard AS568.

PTFE—These PTFE O-rings are chemically inert. Use them with most fluids and gases, including citric acid and acetone. They're made from FDA-listed materials for use with food and beverage. Temperature range is –50° to 500°F. Inch sizes have a durometer of D55 (hard); metric sizes have a durometer of D51 (hard). Color is white.

Aflas—Recommended for use with oils and lubricants, Aflas O-rings also resist steam, heat, and chemicals such as boric and phosphoric acids. Temperature range is 25° to 450°F. Durometer is A80 (hard). Color is black.

FEP with Silicone Core—The FEP shell is chemically resistant like PTFE, but the silicone core makes these O-rings more compressible. Both the FEP and the silicone are made from FDA-listed materials, so if the shell wears away, your food and beverage process is still protected. These O-rings resist ammonia, animal and vegetable oils, and ethanol. Temperature range is –75° to 400°F. The FEP has a durometer of D55 (hard) and is clear; the silicone has a durometer of A70 (medium) and is red-orange.

FEP with Viton® Fluoroelastomer Core—These O-rings also have a chemical-resistant FEP shell with a compressible core; but if the shell wears away, the core will continue to resist chemicals, such as boric acid, citric acid, isopropyl alcohol, and transmission fluid. Temp. range is –15° to 400°F. The FEP is made from FDA-listed materials for use with food and beverage; it meets ASTM D2116, has a durometer of D55 (hard), and is clear. The Viton® fluoroelastomer core has a durometer of A75 (medium) and is black.

Kalrez 4079—Inherently softer and more compressible than PTFE O-rings with comparable chemical resistance, these O-rings are often used in semiconductor environments. They resist boric acid, citric acid, ammonia, gasoline, ketones, grease, and oils. Temperature range is 30° to 600°F. Durometer is A75 (medium). Color is black.

Kalrez 6375—Similar to Kalrez 4079, but this formulation is preferred for chemical-processing environments. These O-rings resist boric acid, citric acid, ammonia, gasoline, ketones, grease, and oils. Temperature range is 30° to 525°F. Durometer is A75 (medium). Color is black.

Kalrez 7075—These O-rings withstand repeated compression better than any other extreme-chemical O-rings we offer, with chemical resistance similar to Kalrez 4079. They also last longer in thermal cycling applications that have large temperature swings. Temperature range is 30° to 620°F. Durometer is A75 (medium). Color is black.

Viton® ETP Fluoroelastomer—Choose Viton® ETP fluoroelastomer when you want an O-ring that's compressible like Kalrez but will stand up to low temperatures. These O-rings resist boric and citric acids, ketones, hydrocarbons, and animal and vegetable oils. Temperature range is –10° to 400°F. Durometer is A75 (medium). Color is black.

Water- and Steam-Resistant High-Temperature EPDM O-Rings

These are the highest temperature EPDM O-rings we offer. In addition to water and steam resistance, they also have broad chemical resistance, including brake fluids and acids. Temperature range is –70° to 300° F. Durometer is A70 (medium). Color is black.

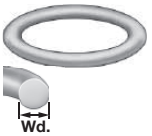
Extreme-Pressure Metal O-Rings



Made from silver-plated 321 stainless steel, these O-rings can withstand pressures up to 5,000 psi. They meet SAE standard AS9373. O-rings resist boric acid, acetone, benzene, isopropyl alcohol, and hydraulic oils. Temperature range is –40° to 800° F. Durometer is C28 (hard). Color is silver.

Chemical-Resistant Super-Resilient Viton® Fluoroelastomer O-Rings

These durable O-rings bounce back to shape after repeated compression better than other Viton® Fluoroelastomer O-rings. They offer excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is –15° to 400° F. Durometer is A75 (medium). Color is black. All are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200, unless noted.

Food-and-Beverage O-Rings

All of these O-rings are made from FDA-listed materials for use with food and beverage. They are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200.

Steam-Resistant EPDM—These EPDM O-rings are peroxide cured, so they're more resistant to high temperatures than standard EPDM. Temperature range is –40° to 250° F. Durometer is A70 (medium). Color is black.

Oil-Resistant Buna-N—These O-rings resist grease, hydraulic oils, and abrasion. Temperature range is –20° to 250° F. Durometer is A70 (medium). Color is black.

Kalrez 6230—These high-purity O-rings are 3-A certified for dairy and meet USP Class VI. They withstand chemicals, acids, and concentrates used in food, beverage, and pharmaceutical applications. Temperature range is 30° to 500° F. Durometer is A75 (medium). Color is black.

Clean Room O-Rings

These O-rings are made in a Class 10,000 clean room. All O-rings are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200.

Oil-Resistant Buna-N—These O-rings are made from FDA-listed materials for use with food and beverage. They resist animal and vegetable oils, grease, and water. Temperature range is –35° to 250° F. Durometer is A70 (medium). Color is white.

Chemical-Resistant Viton® Fluoroelastomer—These O-rings resist citric and phosphoric acid, alcohol, and fuels. Temperature range is –15° to 400° F. Durometer is A75 (medium). Color is black.

High Purity Chemical-Resistant Viton® Fluoroelastomer—These are the highest purity chemical-resistant O-rings we offer. In addition to broad chemical resistance, these O-rings are 3-A certified for dairy and meet USP Class VI. Temperature range is 25° to 450° F. Durometer is A70 (medium). Color is white.

High Purity High-Temperature Silicone—These O-rings stand up to temperatures from –75° to 400° F. They are 3-A certified for dairy and meet USP Class VI. Durometer is A70 (medium). Color is clear.

Mil. Spec. O-Rings

All of these O-rings are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200.

MIL-R-83248C Chemical-Resistant Viton® Fluoroelastomer—These O-rings resist boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400° F. Durometer is A75 (medium). Color is black.

MIL-R-25988 Wide-Temperature Fluorosilicone—With a temperature range of –80° to 400° F, these O-rings stand up to a wide range of temperatures. They resist boric acid, citric acid, and ethanol. Durometer is A70 (medium). Color is blue.

MIL-P-25732 Oil-Resistant Buna-N—Choose these O-rings for their resistance to hydraulic oils, gasoline, and animal and vegetable oils. Temperature range is –65° to 275° F. Durometer is A70 (medium). Color is black.

MIL-P-5315 Oil-Resistant Buna-N—Just as resistant to hydraulic oils, gasoline, and animal and vegetable oils as other Buna-N, but these O-rings do not stand up to high temperatures. Temperature range is –65° to 155° F. Durometer is A65 (medium). Color is black.

MIL-P-83461 Oil-Resistant Buna-N—These O-rings resist hydraulic oils, gasoline, and animal and vegetable oils. Temperature range is –65° to 275° F. Durometer is A70 (medium). Color is black.

MIL-I-45208 Oil-Resistant Buna-N—Also meet SAE standard AS3578. These O-rings resist abrasion and hydraulic oils. Temperature range is –20° to 250° F. Durometer is A65 (medium). Color is black.

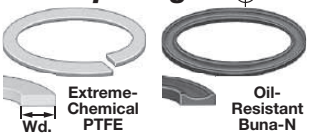
Backup Rings



Extend the life of your O-ring and improve its performance in high-pressure applications with the support of a backup ring. These backup rings fit O-rings that are sized to the SAE standard AS568.

Extreme-Chemical PTFE—These backup rings are virtually unaffected by most chemicals, including citric acid and acetone. They have a rectangular profile and are split, so they install more easily than backup rings that are not split. Durometer is D55 (hard). Temperature range is -300° to 500°F. Color is white.

Oil-Resistant Buna-N—In addition to oil, these backup rings also resist grease and hydraulic oils. Also known as contoured backup rings, one side is concave to provide uniform contact with round-profile O-rings. They are not split. Durometer is A90 (hard). Temperature range is -40° to 250°F. Color is black.

O-Rings for Straight Thread Tube Fittings

Also known as Boss O-rings, all are for use in straight-thread tube fittings. They are sized to the SAE standard AS568 and meet ASTM D2000/SAE J200.

Oil-Resistant Buna-N—The most widely used O-ring material, Buna-N also resists grease, hydraulic oils, and abrasion. Temperature range is -20° to 250°F. Durometer is A90 (hard). Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose these O-rings for their excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400°F. Durometer is A90 (hard). Color is black.

High-Temperature Silicone—O-rings stand up to temperatures from -60° to 400°F. They resist weather, detergents, and salt water. They're made from FDA-listed materials for use with food and beverage. Durometer is A70 (medium). Color is red-orange.

Steam-Resistant EPDM—These O-rings are peroxide cured, so they're more resistant to high temperatures than standard EPDM. They also resist water and detergents. Temperature range is -70° to 250°F. Durometer is A70 (medium). Color is black.

MIL-R-83248C Chemical-Resistant Viton® Fluoroelastomer—These O-rings meet strict military standards. They resist boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 0° to 400°F. Durometer is A75 (medium). Color is black.

Chemical-Resistant Brown Viton® Fluoroelastomer—Because these O-rings are brown, they're easy to identify. They have excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is -10° to 400°F. Durometer is A75 (medium).

Refrigerant-Resistant Neoprene—These O-rings resist Freon 12, ethylene glycol, and ozone. Temperature range is -35° to 250°F. Durometer is A70 (medium). Color is black.

Extreme-Chemical Kalrez 4079—Often used in semiconductor environments, these O-rings resist boric acid, citric acid, ammonia, gasoline, ketones, grease, and oils. Temperature range is 30° to 600°F. Durometer is A75 (medium). Color is black.

High-Strength Polyurethane—These tear-resistant O-rings resist salt water and gasoline. Temperature range is -40° to 200°F. Durometer is A70 (medium). Color is black.

For information about O-rings, see page 3540. For O-ring dimensions, see pages 3540-3545.

O-Ring Assortments

All assortments come in a plastic case. Inch O-rings are sized to the SAE standard AS568. **Round-profile** O-rings are for most sealing applications. **Square-profile** O-rings have flat edges, which cover more surface than round-profile O-rings for a better seal in static applications, such as in faucets. **X-profile** O-rings are double-seal style; they have four points of contact for a better seal than round-profile O-rings.

Oil-Resistant Buna-N—Buna-N is the most widely used O-ring material. O-rings meet ASTM D2000; the 380-piece metric set also meets JIS/JASO. Temperature range is -25° to 250° F.

Chemical-Resistant Viton® Fluoroelastomer—These O-rings have excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. O-rings meet ASTM D2000/SAE J200. Temperature range is –15° to 400° F.

High-Temperature Silicone—These O-rings stand up to temperatures from –65° to 450° F. They resist weather, detergents, and salt water. They're made from FDA-listed materials for use with food and beverage.

Steam-Resistant EPDM—In addition to steam, these O-rings resist water and isopropyl alcohol. They meet ASTM D2000/SAE J200. Temp. range is –60° to 250° F.

Extreme-Chemical PTFE—PTFE is a hard material that is chemically inert to a wide range of chemicals, including citric acid, grease, and acetone. Temperature range is –100° to 500° F.

O-Ring Cord Stock

Round Profile

Square Profile

X Profile

Make your own O-rings from this cord stock. It meets ASTM D2000. **Round-profile** cord stock is for most sealing applications. **Square-profile** cord stock has flat edges on all four sides, which covers more surface than round profile for a better seal in static applications, such as hose, pipe, and faucet connections. **X-profile** cord stock is double-seal style; it has four points of contact for a better seal than round profile.

Oil-Resistant Buna-N—The most widely used material for O-rings. Temperature range is –25° to 212° F. Durometer is A70 (medium), except ultra compressible is A50 (soft) and abrasion resistant is A90 (hard). Color is black, except food and beverage cord stock is white. Food and beverage Buna-N is made from FDA-listed materials.

Chemical-Resistant Viton® Fluoroelastomer—This cord stock offers excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 5° to 395° F. Durometer is A75 (medium), except ultra compressible is A55 (soft) and abrasion resistant is A90 (hard). Color is black, except food and beverage cord stock is white and colored cord stock is brown. Food and beverage Viton® fluoroelastomer is made from FDA-listed materials.

High-Temperature Silicone—Able to handle temperatures from –60° to 400° F, this cord stock resists ozone, isopropyl alcohol, and salt water. Durometer is A70 (medium) and color is red-orange, except ultra compressible is A50 (soft) and color is black.

Steam-Resistant EPDM—In addition to steam, this cord stock also resists water, acetone, ethanol, and ammonia. Temperature range is –40° to 212° F. Durometer is A70 (medium). Color is black.

Refrigerant-Resistant Neoprene—Choose this cord stock for its resistance to Freon 12 and ozone. Temperature range is –30° to 212° F. Durometer is A70 (medium), except ultra compressible is A50 (soft). Color is black.

Extreme-Chemical Viton® ETP Fluoroelastomer—More chemical resistant than standard Viton® fluoroelastomer, this cord stock resists phosphoric acid, nitric acid, and hydrocarbons. Temp. range is 15° to 395° F. Durometer is A75 (medium). Color is black.

O-Ring Cord Joining Kits

Make your own O-rings from Viton® fluoroelastomer and silicone cord stock. Also known as O-ring vulcanizing kits, they use a combination of heat and an adhesive to create a bond that's stronger and has greater elasticity than a bond made with adhesive alone. Kits come with a precision mold, a 120-volt AC heater, a die, a cutting knife, and three sets of a two-part adhesive (mix before use) for bonding Viton® fluoroelastomer cord stock. The adhesive for bonding silicone cord stock is sold separately.

Inch kit is for use with cord stock widths: 0.070″, 0.103″, 0.139″, 0.210″, 0.275″, 0.312″, 0.375″, and 0.500″.

Metric kit is for use with cord stock widths: 1.6, 2.4, 3, 4, and 5.7 mm.

Inch Kit	9450K21	$1,322.44	Repl. Adhesive for Viton® Fluoroelastomer	9450K32	$46.67
Metric Kit	9450K17	1,337.12	4″ × 4″ Solid Silicone Adhesive	9450K34	56.45

O-Ring Cord Splicing Kits

These kits include everything you need to make your own O-rings: cord stock, a splicing jig, adhesive, and a razor blade. Cord lengths are 7 ft. for inch kits and 3 ft. for inch/metric and metric kits.

Oil-Resistant Buna-N—This cord stock also resists grease, hydraulic oils, and abrasion. Durometer hardness is A70 (medium). Temperature range is –40° to 212° F. Color is black.

Chemical-Resistant Viton® Fluoroelastomer—Choose this cord stock for its excellent resistance to boric acid, citric acid, isopropyl alcohol, fuels, and transmission fluid. Temperature range is 5° to 400° F. Durometer is A75 (medium). Color is black.

Steam-Resistant EPDM—In addition to steam, this cord stock also resists water and isopropyl alcohol. Temperature range is –65° to 300° F. Durometer is A70 (medium). Color is black.

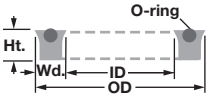
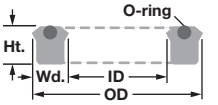
O-Ring Supported U-Cup Seals



Square Profile



Rectangular Profile

Also known as polypacks and loaded-lip seals, an O-ring engages both the inner and outer walls of the U-cup for better sealing performance at lower pressures than unsupported U-cup seals. Use them for sealing rods and pistons. They resist grease, oil, and hydraulic fluids. Maximum pressure is 5,000 psi. Temperature range is –65° to 300° F. The U-cups are urethane and have a durometer of A92 (hard); the O-rings are Buna-N and have a durometer of A70 (medium). Color is black.

Square-profile seals are as wide as they are high to ensure uniform contact.

Rectangular-profile seals, also called Type B seals, have a taller body than square-profile seals for better stability and beveled lips for a tighter seal.

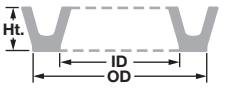
U-Cup Seals



These molded Buna-N U-cup seals provide a uniform seal on rods and pistons in low-pressure air and hydraulic cylinders. Maximum pressure is 120 psi. Temperature range is –20° to 212° F. Durometer is A70 (medium). Meet ASTM D2000 and AN6226. Color is black.

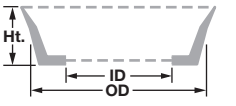
Piston Cup Seals



Seal pistons in hydraulic cylinders and pumps. Molded from cotton-reinforced Buna-N, these seals resist water, salt water, lubricating oils, and hydraulic fluids. Maximum pressure is 1,000 psi. Temperature range is –40° to 250° F. Color is black.

Rod Wipers

As the outer-most seal on a cylinder, these wipers scrape against the rod to prevent dust, dirt, and other contaminants from entering your hydraulic system. Maximum pressure is not rated.

Solid-profile polyurethane wipers are abrasion- and tear-resistant. Also known as U-type wipers, they resist ozone, grease, butyl alcohol, and hydraulic fluids. Temperature range is –65° to 200° F. Durometer is A90 (hard). Color is black.

Double-lip Buna-N wipers have an outer lip that scrapes the shaft and an inner lip that acts as a pressure seal. They're also known as 8600 type wipers and are commonly used with JIC cylinders that have rubber rod seals. Wipers resist water, grease, oil, hydraulic fluids, and detergents, as well as some ammonias, butyl alcohols, and refrigerants. Temperature range is –40° to 250° F. Durometer is A90 (hard). Color is black.

Multipurpose Rod and Shaft Seals

A stainless steel spring reinforcement ensures that these seals stay engaged to prevent leaks at low pressures. Use them for linear- and rotary-motion applications, such as in cylinders and pumps. Maximum pressure is 3,000 psi for linear motion; it is 250 psi for rotary motion. Temperature range is –320° to 450° F.

PTFE seals have a slippery surface that prevents sticking and keeps friction at a minimum. They are virtually chemically inert, except to alkali metals and fluorinated fluid. Color is white.

Graphite-reinforced PTFE seals have excellent wear resistance. They resist steam and most chemicals, except sulfuric, nitric, and hydrofluoric acids. Color is black.

Stackable V-Ring Seals

Stack one or more rings between a male and female adapter—the V shape keeps the rings in position when under pressure. Each ring adds a layer of sealing force; the female adapter also has a sealing edge. Use them for linear- and rotary-motion applications, such as in cylinders, motors, pumps, and valves. Seals are molded from PTFE and are chemically inert, except to molten alkali metals and fluorines. Maximum pressure is 400 psi. Temperature range is –110° to 500° F. Color is white.

For a complete seal, you'll need at least one V-ring and a pack of male/female adapters.

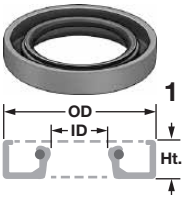
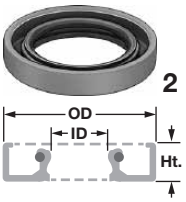
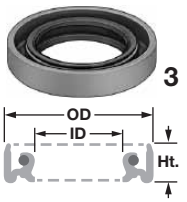
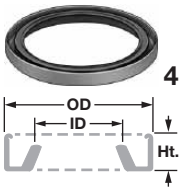
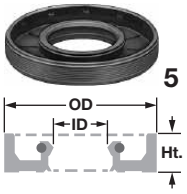
Shaft Seals











Use these seals on rotating shafts in motors, pumps, and gearboxes. They have Buna-N lips that resist grease, animal and vegetable oils, and most mineral oils. The Buna-N has a durometer hardness of A75 (medium). Temperature range is –40° to 210° F. The seals with spring-loaded lips are also called oil seals; the spring keeps the lip engaged at low pressures to prevent leakage.

Steel—Seals have a green coating on the OD (unless noted) that smooths surface imperfections to ensure a tight seal.

Buna-N—Seals have a steel core for strength.

(1) Spring-loaded single lip seals are economical general purpose seals. Maximum pressure is 10 psi at 0-1,000 fpm; 5 psi at 1,001-2,000 fpm; and 0 psi at 2,001-3,600 fpm.

(2) Spring-loaded double lip seals have a second lip that blocks contaminants from the main lip. Maximum pressure is 10 psi at 0-1,000 fpm; 5 psi at 1,001-2,000 fpm; and 0 psi at 2,001-3,600 fpm.

(3) Heavy duty spring-loaded double lip seals are built to handle moderate pressure changes; be sure to secure the seal with a retaining ring to prevent it from pressing out of the housing bore. These seals have a second lip that blocks contaminants from the main lip. Maximum pressure is 90 psi at 0 fpm and 50 psi at 1,000 fpm.

(4) Non-spring-loaded seals are typically used in grease-lubricated applications; because there is no spring, they will not retain oil. Install with the lip facing outward to block contaminants. Maximum pressure is 3 psi at 0-2,000 fpm.

(5) Spring-loaded double lip seals have a second lip that blocks contaminants from the main lip. Maximum pressure is 5 psi up to 3,600 fpm.

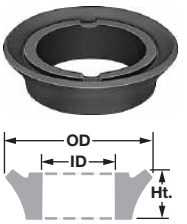
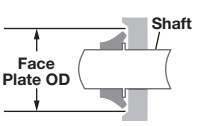
Stretch-Fit Shaft Seals





Stretch these seals over a shaft—they bounce back to shape when pressed firmly onto the face plate. As the shaft rotates, these seals self-adjust to deflect dust, dirt, and water and prevent the loss of lubricants. Use on motors, pumps, and gearboxes. Made of Buna-N, they resist water, grease, oil, detergents, salt water, UV light, hydraulic fluids, alcohol, and some refrigerants. Durometer hardness is A85 (hard). Maximum pressure is 6 psi in the opening direction and 100 psi in the closing direction. Temperature range is –20° to 225° F. Color is black.

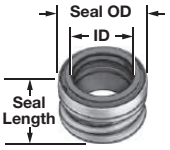
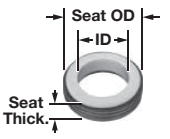
★ Installed.

Pump Shaft Seals

A stainless steel outer shell locks seal components together, which makes them easy to install and eliminates the need for bonding adhesives. These seals are commonly used on circulating and dispensing pumps. They come with a seat, unless noted; the seats have a U-cup that is the same material as the diaphragm. Seals with a Buna-N diaphragm have a temperature range of –40° to 212°F and a durometer of A65 (medium). Seals with a Viton® fluoroelastomer diaphragm have a temperature range of 0° to 400°F and a durometer of A70 (medium).





Style 1

These seals are comparable to Pac-Seal Type 16, John Crane Type 6, and Sealol Type 60L. Maximum pressure is 150 psi. Maximum speed is 5,000 fpm.

♣ Seat mounts on the shaft; there is a seal on the ID instead of the U-cup.

Compression Packing Seals

Cut these seals to size with a knife then pack them into place.

Multipurpose—These seals resist water, salt water, oil, mild acids, and mild alkalies. **Broad-temperature** seals are graphite-impregnated aramid for use in pumps and valves. They require lighter packing pressure than value seal, so they cause less friction for reduced shaft wear. **Value seal** are PTFE-impregnated synthetic fiber for use in pumps. They offer better chemical resistance than broad-temperature seals and are lubricated to prevent overheating.

High Temperature—All are rated for use with steam. **High-pressure** seals are graphite-impregnated graphite for high-performance service in pumps and valves. They resist water, salt water, oil, ammonia, corrosive acids, and mild alkalies. **Flexible** seals are chemically inert expanded graphite yarn. Use in pumps and valves. **Reinforced flexible** seals are expanded graphite yarn like the flexible seals, but they are reinforced with Inconel wire for shape retention. They are for use in valves only and resist water, salt water, oil, ammonia, mild acids, and mild alkalies. **High-speed** seals are expanded graphite with carbon-yarn corners for high-speed pump and valve applications. They are chemically inert. **Ultra-high-speed** seals are graphite-impregnated carbon; they dissipate heat away from the shaft to protect pumps and valves when operating at high speeds. They resist water, salt water, oil, ammonia, corrosive acids, and mild alkalies.

Ultra Compressible—Made from a lubricated, PTFE-impregnated aramid blend, these seals require less pressure than any other to make an effective seal. They are for use in pumps and resist water, salt water, oil, mild acids, and mild alkalies.

Food and Beverage—For use in pumps, these seals are made from FDA-listed materials. They are chemically inert PTFE lubricated with mineral oil.

Abrasion Resistant—For use in pump applications, these seals are abrasion and wear resistant. **Chemical-resistant** seals are a blend of aramid and PTFE. They resist water, salt water, oil, mild acids, and mild alkalies. **Ultra-wear-resistant** seals are aramid impregnated with PTFE and saturated in a lubricant, making them the most wear resistant of our seals. They resist water, salt water, oil, mild acids, and mild alkalies. **Long-life** seals combine a yarn that's comparable in strength to aramid with graphite for a soft seal that dissipates heat away from the shaft to extend the life of pumps. They resist water, salt water, oil, ammonia, mild acids, and mild alkalies.

Extreme Chemical—All are made from chemically inert PTFE. **Ultra-compressible** seals are lubricated for formability and reduced wear on the shaft. They are for use in pumps and valves. **High-pressure** seals are made without a lubricant, so they are harder than the other extreme-chemical seals to handle high-pressure valve applications. **High-speed** seals are also known as 100% GFO expanded PTFE; they contain a graphite powder, which dissipates heat away from the shaft and allows the pump to run cool at high speeds.

Corrosion-Resistant Compressible Packing Seals for Valve Stems

- Temperature Range:
  Gore: –450° to 600°F;
  Value Seal: –450° to 500°F
- Max. Temperature in Steam:
  Gore: 600°F;
  Value Seal: 500°F
- Max. Pressure:
  Gore: 725 psi;
  Value Seal: Not rated
- pH Resistance Range: 0 to 14

These soft PTFE seals conform to fill irregularities caused by wear in valve stems. PTFE is self lubricating. Seals can be cut with a knife. Color is white.

Gore—Resists salt water, detergents, oil, grease, isopropyl alcohol, and hydraulic fluids.

Value Seal—Made with FDA-listed materials for use with food and beverage.

Compression Packing Lubricating Rings

- Temperature Range: –450° to 500°F
- Max. Temperature in Steam: 500°F
- Max. Pressure: 1,000 psi
- pH Resistance Range: 0 to 14

Install lubricating rings between layers of compression packing—the notches increase flexibility for bending around shafts and allow lubricants to distribute evenly. Also known as lantern rings, they're made of PTFE and resist most chemicals including acids, oil, grease, isopropyl alcohol, and hydraulic fluids. Maximum continuous length is 4 feet. They can be cut with a knife. Color is white.

Ultra-Thin Packing Seals

- Max. Temperature: 212°F; low end not rated
- Max. Temperature in Steam: 250°F
- Max. Pressure: 160 psi
- pH Resistance Range: Not rated

Also known as candle wicking, this cotton yarn seal fits into tight spaces, such as in faucets. It resists water, salt water, and steam. It's furnished in a 2-oz. ball that contains approximately 78 ft. of random-cut lengths. Color is off-white.

0.036" Dia.	9484K1	$4.12

Packing Seal Tape for Pumps and Valves

- Temperature Range: –320° to 840°F
- Max. Temperature in Steam: 1200°F
- Max. Pressure: Not rated
- pH Resistance Range: 0 to 14

Made from high-purity graphite, this thin, flexible tape has no fibers, binders, or other additives that could contaminate your process. Graphite is self lubricating, plus it provides outstanding performance over a broad temperature range. This tape is resistant to most chemicals, including acids (except nitric and sulfuric), oil, grease, isopropyl alcohol, and hydraulic fluids. Color is dark gray.

Adhesive-back tape stays in place during installation.

Flexible-Shaft Packing Seal Extractors

Because the shank bends, these extractors can easily get into tight spaces for packing removal. They are made of steel and have a T-handle for a secure grip and a nonremovable corkscrew tip. All meet Fed. Spec. GGG-E-950A.

Tip Dia.	O'all Lg.

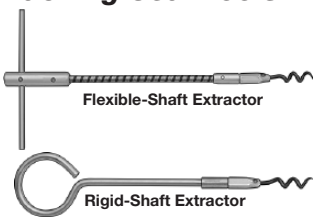
3-Piece Set—One each of 7 1/2", 10 5/8", and 14 1/2" long tools.

9492K19 ..... $38.90

8-Piece Set—One of each tool listed above, except the included 7" long tool has an 11/64" tip diameter.

9492K21 ..... $165.05

Packing Seal Tools with Interchangeable Tips



By swapping-out the tip, you can use one tool to remove compression packing, clean packing assemblies, and remove lubricating rings from pumps and valves. The extractors and all of the tips are made of steel. When choosing a tool, the tip diameter cannot be larger than the extraction hole on your cylinder or pump.

Flexible-shaft extractors bend slightly for access to packing in hard-to-reach places. **Rigid-shaft extractors** stay firm to grab dense packing that doesn't break up easily.

All extractor tools come with a replaceable corkscrew tip that screws into most types of packing for easy removal. Switch to one of the optional interchangeable tips for other applications. **Wood-screw tips** are for removing hardened packing. **Brush tips** are for cleaning packing assemblies. **Lubricating-ring tips** are for removing threaded lubricating rings.

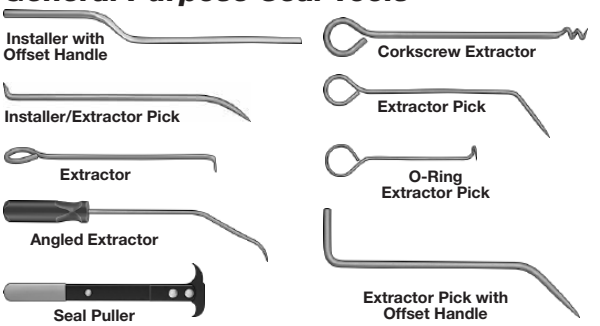
21-Piece Set—Contains six flexible-shaft extractors (two each of 7″, 11″ and 14″ lg.); nine corkscrew tips (three each of 1/4″, 5/16″, and 3/8″ dia.); three wood-screw tips (one each of 3/16″, 1/4″, and 5/16″ dia.); and three 10″ general purpose extractor picks (one each of 1/8″, 3/16″, and 5/16″ dia.).

9498K12 ..... $142.71

47-Piece Set—Contains six flexible-shaft extractors (two each of 7″, 11″, and 14″ lg.); six rigid-shaft extractors (two each of 6″, 10″, and 14″ lg.); 15 corkscrew tips (five each of 1/4″, 5/16″, and 3/8″ dia.); three wood-screw tips (one each of 3/16″, 1/4″, and 5/16″ dia.); four brush tips (one each of 7/32″, 5/16″, 5/8″, and 11/16″ dia.) with two adapters; six lubricating-ring tips (for 8-32, 10-32, 10-24, 1/4″-20, 1/4″-28, and 5/16″-18 thread sizes); three 10″ general purpose extractor picks (one each of 1/8″, 3/16″, and 5/16″ dia.); two 6″ lg. general purpose O-ring extractors; and a packing-cutting knife.

9498K13 ..... $254.00

General Purpose Seal Tools



Use these tools to install and remove compression packing and seals from pumps, engines, and cylinders.

Seal puller has two different hook sizes to remove most oil and grease seals.

Piston Ring Compressors

Easy-Adjust Spring-Clutch with Two Bands

Quick Release

Low Friction

By compressing the piston rings, these tools allow you to smoothly insert pistons into cylinders.

Flared End—The flared end prevents this compressor from following the piston into the cylinder.

Easy-Adjust Spring Clutch—The diameter adjusts in small increments for a secure fit.

Quick Release—Push the lever and this compressor instantly releases for easy removal. It has a spring clutch that adjusts the diameter in small increments for a secure fit.

Low Friction—Also known as a wrinkle-band compressor, this style has fewer points of contact than the other styles for less friction. It has a cam lock that holds the size once you set it.

Wool Felt Selector Pack—Includes seven samples; one 1¾″ × 1⅜″ piece of each of the following felts: F1, F3, F5, F7, F10, F13, and F26. Information about each felt is listed on the back side of the sample sheet.
9248K222 ..... $6.03

Hard Off-White S2 Felt

- Temperature Range: –80° to +200° F
- Vibration Absorption: Excellent
- Abrasion Resistance: Excellent

Made of 100% wool, this is the hardest felt we offer, yet it can still be used for polishing.
Grade S2-32—The hardest of these S2 grades, this material can be used as shock-absorbing bumpers, gaskets, and washers.
Grade S2-24—Slightly less firm than S2-32, this felt is commonly used for buffing, padding, in ink rollers, and in marking devices.
Grade S2-20—Use on polishing wheels for buffing lenses, mirrors, glass, marble, granite, metals, and wood.

Extra Firm White F1 Felt

- Temperature Range:
  Plain back and cord: –80° to +200° F
  Adhesive back: 0° to +180° F
- Vibration Absorption: Excellent
- Abrasion Resistance: Excellent

Composed almost entirely of pure wool, F1 is one of the most versatile graded felts. Its high density provides wear and abrasion resistance when used for polishing, wicking, cushioning, wiping, and gasketing. ***Adhesive-back*** sheets, strips, and discs have a rubber-based adhesive.

Wool Felt & Synthetic Felt

For information about graded wool felt, see page 3566.

Very Soft White F10 Felt

- Temperature Range: –80° to +200°F
- Vibration Absorption: Fair
- Abrasion Resistance: Fair

This material absorbs grease and oil even when compressed. **To Order:** For sheeting please specify length: 1, 2, 3, 4, 5, or 10 ft.

Thick.	12″×12″ Sheets	Each	72″ Wide Sheeting	Per Ft.

Cotton Fabric

Sheeting

Standard cotton sheets, also known as canvas and cotton duck, are often used as dust covers and drop cloths. Material is unbleached; color is off-white.

Flame- and water-resistant sheets are also mildew resistant and can be used as tarps. Color is olive green.

Water-repellent sheets have been saturated in wax and have a polyester coating on one side that resists corrosion and moisture. The fabric is extremely flexible and is excellent for protecting piping and wrapping irregularly shaped material. It adheres to itself but can be separated easily. Color is tan.

To Order: Please specify length.

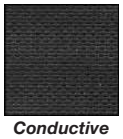
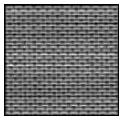
▲Has an open weave; openings are 3/16″×3/16″.



Conductive Sheeting



Tear-Resistant Sheeting

Lava Rock Fabric

Combining superior strength with temperature resistance, this material, commonly known as basalt fabric, is a good choice for insulation and pipe wrapping. Max. temperature is 1200° F. Color is brown.

To Order: Please specify length: 15, 25, 50, or 100 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.
1/16″	1″	28	1727T12	$1.05
1/16″	2″	28	1727T14	1.79

Fiberglass Fabric

Resistant to rot and mildew, this woven fiberglass fabric also provides good chemical resistance. Color is white. Maximum temperature is 1000° F, except 0.005″ thick strips have a maximum temperature of 300° F. ***Adhesive-back*** strips have an acrylic adhesive, which has a maximum temperature of 300° F.

Sheeting

Commonly used as curtains and welding blankets.

To Order: Please specify length: 1, 3, 5, 10, 15, 20, or 25 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.
0.070″	40″	30	8816K1	$7.50
0.125″	40″	64	8816K2	14.89

Strips

Often used in sealing applications.

To Order: Please specify length: 0.005″ thick strips are only available in 108-ft. rolls. 0.063″ and 0.125″ thick strips are available in 10, 25, 50, or 100-ft. lengths, unless noted.

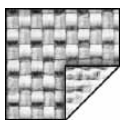
Aluminum Foil Backed Fiberglass Fabric

Protect your equipment from radiant heat. Often used to create curtains and screens, this sheeting has an aluminum foil backing that reflects heat and withstands temperatures up to 300° F. The fiberglass fabric base is off-white and has a maximum temperature of 1000° F. Foil backing is silver.



To Order: Please specify length: 1, 3, 5, 10, 15, 20, or 25 ft.

0.035″	6″	87905K6	1.27

Carbon Fiber Fabric

Sheeting

Strips

The heat-stabilized carbon fiber composition makes this material resistant to very high temperatures. Color is black.

Sheeting

Resistant to flames and molten metal splatter, sheeting will not ignite or melt when exposed for as long as 2 minutes to temperatures up to 2600° F. Maximum temperature is 800° F.

Thick.	Wd.	Density, oz./sq. yd.	Max. Length		Per Ft.
0.020″	60″	11	150 ft.	87113T31	$27.37

Strips

Use for high-temperature seals and heat insulation. Maximum temperature is 700° F when oxygen is present and 5000° F when oxygen is not present.

To Order: Please specify length: 1, 3, 5, 10, 25, 50, or 75 ft.

Sewing Awl Kit

Faster than hand sewing, this handy tool is the perfect choice for repetitive stitching of leather, canvas, and similar materials. Sewing awl kit is furnished with one spool of 12½ yards of black polyester thread; one 2⅛″ long straight sewing needle; one 1¾″ long curved sewing needle; and one wrench for changing the needles. One needle and wrench can be stored in the awl's hollow handle.

		Each
Sewing Awl Kit	6356K55	$26.84
Repl. Spool of Thread—Black Polyester (12½ yds.)	6356K91	6.87
Repl. Spool of Thread—White Polyester (12½ yds.)	6356K92	6.87
Repl. Straight Sewing Needle	6356K44	5.22
Repl. Curved Sewing Needle	6356K46	5.22

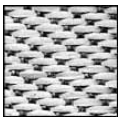
Acrylic-Coated Fiberglass Fabric

This abrasion-resistant fabric sheds molten splatter when placed at an incline of 15° or greater. Maximum continuous temperature is 1000° F. Color is black.

To Order: Please specify length: 1, 3, 5, 10, 20, or 25 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.
0.040″	40″	21	8838K2	$13.20
0.040″	60″	21	8838K4	19.66

Silica Fabric



Flexible

High Temperature

Containing 96% silica, the material resists the highest temperatures of any fabric we offer.

Flexible—Max. temp. is 1800° F. Color is tan. ***Adhesive-back*** strips have a rubber adhesive, which has a max. temperature of 275° F.

High Temperature—The fabric's thickness makes it resistant to higher temperatures than flexible sheeting and strips. Max. temp. is 2300° F. Color is off-white.

Sheeting

Commonly used as curtains, covers, insulation, and splash shields, this sheeting can be used to protect against welding splatter.

To Order: Please specify length: 1, 3, 5, 10, 20, or 50 ft.

Thick.	Wd.	Density, oz./sq. yd.		Per Ft.

Thread

Nylon Thread— Meets Fed. Spec. VT-295. Maximum temperature is 350° F. Color is white.
Polyester Thread— Meets Fed. Spec. VT-285. Maximum temperature is 400° F. Color is white.
Kevlar Thread— Five times stronger than steel wire and flame resistant. Meets MIL-T-87128. Maximum temperature is 600° F. Color is yellow.
PTFE-Coated Fiberglass Thread— The PTFE coating lets this thread slide easily. This thread has excellent chemical, ultraviolet, heat, and flame resistance and has a maximum temperature of 1000° F; coating has a maximum temperature of 500° F. Color is tan.
PTFE-Coated Quartz Thread— The coating provides a slippery surface. Quartz thread resists acids, alkalies, and the build up of contaminants. Thread is nonburning and has a maximum temperature of 2000° F; coating has a maximum temperature of 500° F. Color is tan.

Strips

Metal-free strips are also known as nonmetallic molded strips. ***High-strength*** strips, also known as semimetallic woven strips, have a brass wire woven into the material to increase strength and improve heat dissipation.
To Order: Please specify length: 1, 2, 3, 4, 5, 6, 10, or 15 ft. *High-strength* strips are also available in 20- and 25-ft. lengths.

About Selecting Thermal Insulation

A material's resistance to temperature and its ability to block heat are important factors to consider when choosing thermal insulation. *R-value* measures the material's capacity to slow heat flow; the higher the R-value, the better the material insulates. The chart below shows R-value for 1″ thick insulation. To calculate the R-value of additional thicknesses, divide the material's thickness by its K-factor. *K-factor* measures the heat flow rate from one side of the insulation to the other; the lower the K-factor, the better the material insulates.

Use the chart to find the insulation material that best suits your application. If insulating below 0° F, use polyethylene, foam rubber, aerogel, or polyimide insulation.

Insulation Material	Max Temp., °F	R-Value @ 1″ thick	Pages
PVC Foam	160°	4.5	3581
Polystyrene Foam	165°	3.9-5.0	3581
Polyethylene Foam	180°	4.0	3576, 3582
Spray Foam	200°	5.0	3581
Polyurethane	200°	5.3-6.2	3578, 3581
Foam Rubber	220°	3.7	3574-3575, 3582
Cork	265°	3.6	3582
Melamine	350°	4.0	3578, 3582
Fiberglass	350°-1000°	1.7-4.8	3575, 3577, 3583

Insulation Material	Max Temp., °F	R-Value @ 1″ thick	Pages
Silicone Foam	390°	2.6	3575, 3582
Aerogel	390°	9.5	3582
Polyimide	550°	4.2	3582
Cellular Glass	900°	3.4	3578
Mineral Wool	1200°	3.7-4.4	3577, 3581-3582
Calcium Silicate	1200°-1700°	1.0	3585
Millboard	1400°-2000°	1.0	3585
Ceramic	1500°-2730°	0.8-3.6	3584
Silica	2000°	1.3	3585

Selecting Insulation for Pipe and Fittings

Pipe and Tubing Application	Good	Better	Best
Hot and Cold Water (up to 200° F)	Polyethylene (pg. 3576)	Low-Temp. Polyethylene (pg. 3576)	Foam Rubber (pgs. 3574-3575)
Steam (up to 400° F)	Polyurethane (pg. 3578)	Melamine (pg. 3578)	Silicone (pg. 3575)
High Temperatures (up to 1200° F)	Fiberglass (pg. 3577)	Cellular Glass (pg. 3578)	Mineral Wool (pg. 3577)

To select the proper pipe insulation, measure the outside diameter (OD) of your pipe with a ruler to find the corresponding insulation ID. Pipe size is the accepted industry designation, not the actual size.

Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	2	2 1/2	3	3 1/2	4	6

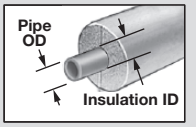
Insulation ID	3/8″	1/2″	5/8″	7/8″	1 1/8″	1 3/8″	1 5/8″	2 3/8″	2 7/8″	3 5/8″	4 1/8″	4 1/2″	6 5/8″



Ultra-Flexible Foam Rubber Pipe Insulation

- Temperature Range: –295° to 220° F, except Slit with Adhesive Strip is –295° to 180° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 3-6 lbs./cu. ft.
- Color: Black

The most flexible pipe insulation we offer, this soft Buna-N/PVC rubber flexes for easy installation over curved or irregular surfaces and recovers its shape well after compression. Use on chilled water and refrigeration lines and with hot water plumbing. Material has a closed-cell construction for moisture resistance. Insulation can be used outdoors when coated with latex paint; seal seams and joints with contact adhesive (both sold separately). Meets ASTM E84 25/50 for flame and smoke and ASTM C534.

Flexible Tear-Resistant Silicone Foam Pipe Insulation

- Temperature Range: –100° to 500° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.39
- Density: 40-50 lbs./cu. ft.
- Color: Black

Resistant to tearing, silicone stretches over pipe and tubing even when the temperature rises. Use on heating and cooling pipes and electrical components. Material has a closed-cell construction that provides moisture resistance. Can be used outdoors. Lengths are unslit. Seal and join lengths with a silicone adhesive/sealant (see pages 3472-3473).

Flexible Quick-Install Fiberglass Pipe Insulation

- Temperature Range: 1/8" thick: 40° to 250° F; 1/4" thick: 40° to 350° F
- Heat Flow Rate (K-Factor) @ 75° F: 1/8" thick: 0.60; 1/4" thick: 0.49
- Density: 30-40 lbs./cu. ft.
- Color: Gray

Hook-and-loop fasteners make it easy to install, remove, and reuse this insulation time and again. Use on steam and hot water pipes and fittings. Meets ASTM E84 5/55 for flame and smoke.

Semi-Flexible Polyethylene Foam Rubber Pipe Insulation

- Temperature Range: Standard: 0 to 180° F
  Low Temperature: –330° to 210° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 1-2 lbs./cu. ft.
- Color: Dark gray to black, unless otherwise stated

An economical choice for insulating pipe, this foam rubber has a water-resistant closed-cell construction. Use for hot and cold plumbing applications. Can be used outdoors if coated with latex paint; seal seams and joints with contact adhesive (both sold separately). Meets ASTM E84 25/50 for flame and smoke.

Rigid High-Temperature Fiberglass Pipe Insulation

- Temperature Range:
  Slit Insulation for Pipe and Tubing:
  Insulation: 0° to 850° F
  Jacketing: –20° to 150° F
  Slit Insulation for Fittings: 0° to 1000° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 3-6 lbs./cu. ft.

Our most popular choice for rigid pipe insulation, fiberglass resists high temperatures as well as corrosion. Use in steam applications as well as hot and cold piping systems. Can be used outdoors with metal jacketing (see page 3580). All meet ASTM E84 25/50 for flame and smoke and ASTM C585. Insulation for pipe and tubing also meets ASTM C547.

Slit insulation for pipe and tubing has a vapor-retardant all-service jacket (ASJ) constructed from kraft paper, reinforced fiberglass mesh, and aluminum foil. The jacket has an adhesive strip for sealing. Seal joints with ASJ tape (sold separately). Color is yellow with white jacketing.

Slit insulation for fittings installs with the included ties. Color is brown.

Rigid Very-High-Temperature Mineral Wool Pipe Insulation

- Temperature Range: 0° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 8 lbs./cu. ft.
- Color: Green-yellow

Insulate against the highest temperatures with the most temperature resistant pipe insulation we offer. The material is often used in mechanical and process piping systems for its low shrinkage. Can be used outdoors with metal jacketing (see page 3580). Insulation lengths are slit and install with metal bands (see page 3580). Meets ASTM E84 5/0 for flame and smoke and ASTM C547.

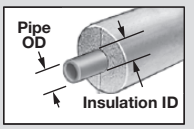
Thermal Insulation

For information about thermal insulation, see page 3574.

Measuring and Selecting Insulation ID for Pipe and Fittings

Measure the outside diameter (OD) of your pipe with a ruler to find the nearest corresponding insulation ID. Pipe size is the accepted industry designation, not the actual size.

Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	2	2 1/2	3	3 1/2
Pipe OD	3/8″	1/2″	5/8″	27/32″	1 1/16″	1 5/16″	1 5/8″	2 3/8″	2 7/8″	3 1/2″	4″
Insulation ID	3/8″	1/2″	5/8″	7/8″	1 1/8″	1 3/8″	1 5/8″	2 3/8″	2 7/8″	3 5/8″	4 1/8″



Rigid High-Strength Polyurethane Pipe Insulation

- Temperature Range: –295° to 300° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.17
- Density: 2 lbs./cu. ft.
- Color: Beige, except insulation for pipe and tubing has white jacketing

Stronger and more durable than other insulation, polyurethane is often used in chiller plants and low-pressure steam applications as well as with chilled water and refrigeration lines. Material has a closed-cell construction for moisture resistance. Can be used outdoors with additional jacketing. Meets ASTM E84 25/50 for flame and smoke.

Insulation for pipe and tubing has a kraft paper all-service jacket (ASJ) that resists mold and mildew by allowing moisture to evaporate. The jacket has a self-sealing adhesive strip.

Insulation for 90° elbows and ***for tees*** fits over threaded connections.

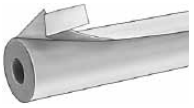
Rigid Lightweight Melamine Pipe Insulation



- Temperature Range:
  Insulation: –40° to 350° F
  Reinforced Jacketing: –40° to 240° F
  Clean Room Jacketing: 0° to 140° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 0.5 lbs./cu. ft.
- Color: Insulation: Light gray
  Jacketing: White

Melamine's lightweight construction allows for quick and easy installation. Use on cold and hot water piping and with refrigeration systems. Jackets have an easy-seal adhesive strip. Seal seams with a silicone sealant and join lengths with PVC tape (both sold separately). Meets ASTM E84 25/50 for flame and smoke. *Silicone sealant* is VOC compliant in all 50 states as of October 1, 2008.

Insulation with reinforced jacket has an all-service jacket (ASJ) made of kraft paper, fiberglass mesh, and aluminum foil and resists dents.

Insulation with class 100 clean room jacket has PVC jacketing suitable for sanitary and washdown applications.

Ultra-Rigid Chemical-Resistant Cellular Glass Pipe Insulation

- Temperature Range:
  Insulation: –450° to 900° F
  Jacketing: –40° to 240° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.29
- Density: 7.5 lbs./cu. ft.
- Color: Black, except insulation for pipe has white jacketing

Unaffected by corrosive environments, organic solvents, and nearly all acids, cellular glass is a good choice for underground-steam, chilled-water, and chemical-processing systems. Material is pure glass with a lightweight, brittle construction. Its closed-cell structure provides moisture resistance. Seal joints with tape (sold separately). Use insulation outdoors and underground with additional jacketing (sold separately). Meets ASTM E84 5/0 for flame and smoke.

Insulation for pipe lengths has a self-sealing jacket made of kraft paper. ***Insulation for 90° elbows*** and ***for tees*** is shaped to fit threaded or socket-weld fittings.

To Order: For 90° elbows and tees, please specify fitting style: threaded or socket-weld.

Condensation-Reducing Pipe Wrap

Prevent moisture from building up on pipe, tubing, and fittings made from copper, iron, and steel.
Butyl Rubber— For indoor use only.
Cork/Synthetic Rubber with Adhesive-Backing— For indoor use only.
Aluminum-Faced Vinyl Foam with Adhesive-Backing— The foam's closed-cell structure is nonabsorbent. Can be used outdoors.
Synthetic Rubber with Adhesive-Backing— Protect pipe from corrosion above and below ground. Material is bacteria and UV resistant and can be used outdoors.

Material	Thick.	Wd.	Lg., ft.	Temp. Range (°F)	Color		
Butyl Rubber	5/32″	2″	30	–30° to 175°	Black	4476K2	$14.16

Insulation Repair Wrap

- Max. Temperature: 900°F
- Color: White

Protect and repair insulation with this cotton fiber and resin mesh. For small sections, dip the wrap in warm water for five seconds then install. For large sections, apply dry to piping and spray with water. The wrap hardens in 10 minutes and achieves full strength in 24 hours. Once dry, wrap can be painted. Can be used outdoors. Meets ASTM E84-89A for flame and smoke.

Thick.	4″×9 ft.		6″×9 ft.		8″×9 ft.

Sweat-Stop Pipe Coating

- Temperature Range: Spray: 0° to 120°F
  Mastic: 0° to 150°F
- Color: Spray: White
  Mastic: Black

Condensation won't form on metal, PVC, and CPVC pipe used in cold water piping and refrigeration and air conditioning lines once this coating is applied.
Spray is for use indoors. ***Mastic*** can be used outdoors; apply with a brush or a trowel.

	Size	Coverage		
Spray	18 oz.	8 sq. ft. (2 coats)	6780K12	$18.21
Mastic	5 gal.	32 sq. ft. (1/4″ thick)	4588K2	146.28

Plastic Jacketing for Pipe Insulation

- Temperature Range: 0° to 140°F, except fiberglass insulation included with jacketing for fittings is 0° to 450°F
- Color: White

Durable PVC jacketing protects insulation from impact. Seal joints with tape or adhesive (sold separately). Meets ASTM E84 25/50 for flame and smoke. *Silicone adhesive* is compliant under all state VOC rules in effect on October 1, 2008.
Jacketing for pipe comes cut and curled for easy installation over your insulation. *0.030″ thick* jacketing can be used outdoors.
Jacketing for fittings comes with a removable 1½″ thick piece of fiberglass insulation with a heat flow rate (K-factor) of 0.28 @ 75°F. Use the included fiberglass insulation when covering bare fittings; remove when covering insulated fittings. Jacketing and fiberglass insulation can be used outdoors.

Metal Jacketing for Pipe Insulation

Weatherize your insulation with metal jacketing. Jacketing with a moisture barrier provides an extra layer of corrosion protection.

Aluminum Jacketing for Pipe and Tubing

Smooth

Stucco Embossed

Corrugated

- Maximum Temperature:
  Without moisture barrier: 300° F
  With moisture barrier: 200° F

Smooth jacketing is easy to clean; ***stucco-embossed jacketing*** conceals dents and scratches; and ***corrugated jacketing*** is extra strong. Jacketing is corrosion resistant and installs with banding (sold separately). **To Order:** Please specify length.

Aluminum Adhesive-Backed Jacketing for Pipe and Tubing

Smooth

Stucco Embossed

- Temperature Range: –10° F to 245° F

Adhesive backing provides a quick and easy way to install jacketing. Its reinforcing film blocks vapor from passing through. Meets UL 723 10/20 for flame and smoke.
Smooth jacketing is easy to clean; ***stucco-embossed jacketing*** conceals dents and scratches.

Very-High-Temperature Mineral Wool Insulation Fill

- Maximum Temperature: 800° F
- Heat Flow Rate (K-factor): 0.27 @ 75° F
- Color: White to gray

Small puffs of loose-fill insulation let you decide how densely to pack it. Pour or blow it into walls and ceilings, or mix it into insulating cements as a filler. Fibers are treated to minimize dust. Meets ASTM E84 0/5 for flame and smoke.

2.8 cu. ft., 30-lb. Bag ..... 9332K65 ..... $30.06

Gap-Sealing Spray Foam Insulation

- Temperature Range: –200° to 240° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.20
- Density: 1-1.4 lbs./cu. ft.

Fill cracks with this single-use can of expanding insulation. Foam expands two to three times its original size, can be cut after one hour, and reaches full strength in 24 hours. Includes one dispensing tube. Insulation can be used outdoors if painted or covered for UV resistance. Meets ASTM E84 25/50 for flame and smoke.

Low pressure expands with less force.

Quick-Cure Spray Foam Insulation

- Temperature Range: –40° to 175° F
- Heat Flow Rate (K-Factor): Not rated
- Density: 1.9 lbs./cu. ft.
- Color: Light blue

Expanding quickly to fill large voids, this foam insulation cures in four minutes and is hard enough to be cut within ten minutes. Spray can is for single use and includes two dispensing tubes. Can be used outdoors. Meets ASTM E84 25/210 for flame and smoke.

Size, oz.	Coverage, cu. ft.		
12.5	0.3	54315K51	$42.31

Lightweight Moisture-Resistant Polystyrene Foam Insulation

A good choice for packaging applications, this durable and lightweight foam has a closed-cell construction that keeps moisture at bay.

Low Density

- Temperature Range: –150° to 165° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 1 lb./cu. ft.
- Color: Uncoated: White
  Coated: White with gold facing

Meets ASTM E84 15/125 for flame and smoke.

Uncoated material meets UL 94HF1 for flame retardance.

Coated material has a polypropylene coating that blocks moisture from passing through. Can be used outdoors

Thick.	Pkg. Qty.	12″×12″	Pkg.	24″×48″	Pkg.

High Density

- Temperature Range: –150° to 165° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.20
- Density: 1.6 lbs./cu. ft.
- Color: Yellow

More rigid and compression resistant than low-density polystyrene. Sheets are scored for easy trimming. Can be used outdoors and below ground.

Thick.	48″×48″	
1″	9255K1	$29.00
1½″	9255K2	42.04
2″	9255K3	55.42

Void-Filling Spray Foam Insulation

- Temperature Range: –200° to 200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.16
- Color: Off-white to beige

Take care of large cavities immediately when this insulation's two parts combine to expand up to at least three times their original size. Foam can be cut after five minutes and reaches full strength in one hour.

The 1.8- and 3-lb. sizes are single-use and include two cans of foam and two fan spray nozzles. For all other sizes, foam is contained in two multi-use cylinders and comes with a trigger-style gun, five cone spray nozzles, and three fan spray nozzles. Insulation can be used outdoors if painted or covered for UV resistance.

Fire-rated foam meets ASTM E84 20/400 for flame and smoke.

Water-Resistant PVC Foam Insulation

- Temperature Range: –325° to 160° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.22
- Density: Low Density: 3 lbs./cu. ft.
  High Density: 5 lbs./cu. ft.

These lightweight PVC sheets have a closed-cell construction, which resists moisture absorption. They also have good impact resistance. Can be used outdoors. Color is tan.

Low-Temperature Polyethylene Foam Rubber Insulation

- Temperature Range: –330° to 210° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 1-2 lbs./cu. ft.
- Color: Black

The closed-cell construction of these flexible foam sheets controls condensation even at low temperatures. Can be used outdoors if coated with latex paint (sold separately). Install with contact adhesive (sold separately). Meets ASTM E84 25/50 for flame and smoke.

White latex paint is compliant under all state VOC rules in effect on November 1, 2011. *Contact adhesive* is compliant under all state VOC rules in effect on November 1, 2011.

Cork Insulation

- Temperature Range: –328° to 266° F
- Heat Flow Rate (K-Factor) @ 68° F: 0.28
- Density: 7-8 lbs./cu. ft.
- Color: Brown

Resistant to moisture and low temperatures, this semi-rigid insulation is a good choice for use in cold storage applications. It also controls noise and vibration.

Thick.	12″×36″		Thick.	12″×36″	
1/2″	9354K21	$5.82	3″	9354K33	$23.73

Abrasion-Resistant Silicone Foam Insulation

- Temperature Range: –65° to 390° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.39
- Density: 13 lbs./cu. ft.
- Color: White

Flexible even in high temperatures, these sheets have an aramid facing that protects against the most abrasive conditions and reduces tearing. Insulation can be used outdoors. Install with adhesive (sold separately). Foam, but not adhesive, meets UL 94HF1 and UL 94V0 for flame retardance.

Contact adhesive is compliant under all state VOC rules in effect on November 1, 2011.

Very-High-Temperature Mineral Wool Insulation

With Wire Mesh

- Temp. Range: 0° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: 8 lbs./cu. ft.
- Color: Green

When insulating in high temperatures such as in oven and power generating applications, durable mineral wool provides compression and moisture resistance. Sheets are semi-rigid and can be used outdoors with metal jacketing (see page 3580).

Plain sheets meet ASTM E84 25/50 for flame and smoke. ***Wire mesh*** reinforced sheets withstand extreme shock and vibration. Can be cut with wire-cutting pliers.

Thick.	Wd.	Lg.	Plain		Wire Mesh on One Side		Wire Mesh on Both Sides

Ultra-Flexible Foam Rubber Insulation

Plain Back

- Temperature Range:
  Plain back: –295° to 220° F
  Adhesive Back: 20° to 180° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.25
- Density: 3-6 lbs./cu. ft.
- Color: Black

Soft Buna-N/PVC foam creates an extremely flexible insulation sheet. The material is elastomeric and has a closed-cell construction for moisture resistance. Can be used outdoors if coated with latex paint (sold separately). Meets ASTM E84 25/50 for flame and smoke. Install plain-back insulation with contact adhesive (sold separately).

White latex paint is compliant under all state VOC rules in effect on November 1, 2011. *Contact adhesive* is compliant under all state VOC rules in effect on November 1, 2011.

Lightweight Melamine Insulation

With Facing

- Temperature Range:
  Insulation: –40° to 350° F
  Facing: 30° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 0.6 lbs./cu. ft.
- Color: Light gray

The lowest-density insulation sheets we offer, melamine's open-cell construction creates a lightweight and easy-to-install insulation. Can be used outdoors with jacketing or coating. Meets ASTM E84 25/50 for flame and smoke.

Sheets with facing have a white paper jacket reinforced with a fibrous layer of aluminum foil for impact resistance. Facing can be painted.

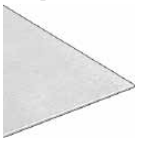
Super-Insulating Thin Aerogel



- Temperature Range: –290° to 390° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.105

Flexible, lightweight, and thin, aerogel maneuvers into the tight spaces that other insulation can't. Material is silica aerogel with reinforcing fibers and is often used for its temperature resistance in power generating applications. For increased insulation, it can be layered, laminated, or wrapped with foil.

Thick.	Density, lbs./cu. ft.	Color	12″×26″	
0.079″	10.7	Black	9590K8	$53.38

Flexible Fiberglass Insulation

A popular choice when flexibility is a must, fiberglass insulation can be layered for increased thermal efficiency, unless otherwise stated. For improved durability and extra moisture resistance, choose insulation with a vapor seal, wrapping, or facing.

Narrow Strips

- Temperature Range: –50° to 250° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.30
- Density: 0.6 lbs./cu. ft.
- Color: Insulation: Gold
  Vapor Seal: ½″ thick is clear
  1″ thick is gray

The wrap's vapor seal prevents heat loss from hot water pipes and condensation from forming on cold water pipes. Use electrical tape to secure ends of wrap to pipe. For indoor use only. Meets ASTM E84 25/50 for flame and smoke.

½″ thick insulation includes a separate 2″×40 ft. vapor seal; *1″ thick* has a vapor-seal backing.

Thick.	Wd.	Lg., ft.		
½″	3″	35	4478K1	$7.00
1″	3″	25	4478K4	10.44

Strips

- Temperature Range: Not rated
- Heat Flow Rate (K-Factor) @ 75° F:

  3½″ Thick: 0.27
- Density: 0.5 lbs./cu. ft.
- Color: Insulation: White
  Kraft Paper Facing: Tan
  Polyethylene Wrapping: White

In addition to good heat insulation, these strips, also known as batts, reduce the transmission of sound through walls, ceilings, and floors when installed inside standard framework. Strips provide corrosion resistance. For indoor use only.

Uncoated—Meets ASTM E84 25/50 for flame and smoke.

Kraft Paper Faced—Edges are extended to aid installation. Seal joints with ASJ tape (sold separately).

Polyethylene Wrapped—More moisture-resistant than kraft paper, polyethylene increases strength and reduces fiber dust. It's solid on the front, perforated on the back, and has extended edges for easy installation. Seal joints with FSK tape (sold separately). Meets ASTM E84 25/50 for flame and smoke.

- Temperature Range:
  Uncoated: 0° to 350° F
  Vinyl faced: Not rated
  Foil faced: 0° to 250° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26-0.30
- Density: 0.75-0.95 lbs./cu. ft.
- Color: Uncoated: Yellow
  Vinyl Faced: Yellow with white facing
  Foil Faced: Brown with silver facing

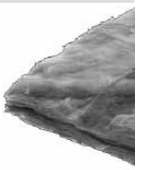
This double-duty sheeting insulates in high temperatures while reducing sound transmission. Sheeting provides corrosion resistance. For indoor use only.

Uncoated sheeting meets ASTM E84 25/50 for flame and smoke. ***Vinyl-faced*** sheeting has a tear-resistant facing with corners that extend to aid installation. Cannot be layered. ***Foil-faced*** sheeting has a foil-layer facing bonded to kraft paper. One edge is extended to aid installation. Cannot be layered. Meets ASTM E84 25/50 for flame and smoke.

Thick.	48″×10 ft.		48″×100 ft.	
Uncoated 2″	9346K38	$33.03	9346K28	$171.71
Vinyl Faced 2″	9330K82	39.99	9330K62	224.54
Foil Faced 1½″	9160K4	28.89	9160K2	181.42

Very-High-Temperature Sheeting

- Temperature Range: 0° to 1000° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.26
- Density: 2.4 lbs./cu. ft.
- Color: Gray to brown



Whether it's for industrial furnaces or other extreme-heat applications, lightweight fiberglass sheeting can handle the heat. Can be used outdoors with metal jacketing (see page 3580). Meets ASTM E84 25/50 for flame and smoke.

Thick.	24″×8 ft.	
1″	9356K11	$20.47
1½″	9356K12	29.45
2″	9356K13	38.46

Paper

- Temperature Range: –425° to 1200° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.21
- Density: 8.0 lbs./cu. ft.
- Color: White

Fiberglass paper won't shrink or lose shape in high-temperature applications, such as in air furnaces and hot water tanks. For indoor use only. Meets UL 94V0 for flame retardance.

Thick.	16″×10 ft.	
⅛″	9323K21	$33.08

High-Temperature Rigid Fiberglass Insulation

- Temperature Range:
  Insulation: 0° to 450° F
  Facings: 0° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.23
- Density: Medium: 3 lbs./cu. ft.
  High: 6 lbs./cu. ft.
- Color: Insulation: Yellow
  Foil Facing: Silver
  Kraft Paper Facing: White

Able to insulate in high-heat environments, these rigid sheets also reduce noise transmission. Sheets have vapor-retarding facings on one side. Seal foil-faced joints with FSK tape; seal kraft-paper-faced joints with ASJ tape (both sold separately). Can be used outdoors with metal jacketing (see page 3580). Meets ASTM E84 25/50 for flame and smoke. *High-density* sheets can withstand heavy use.

Foil facing is constructed from foil kraft paper.

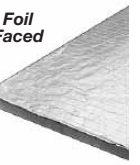
High-Temperature Fiberglass Wrap Insulation

- Temperature Range:
  Insulation: –60° to 450° F
  Facing: –40° to 150° F
- Heat Flow Rate (K-Factor) @ 75° F: 0.27
- Density: 3 lbs./cu. ft.
- Color: Insulation: Yellow
  Foil Facing: Silver
  Kraft Paper Facing: White



Also known as pipe and tank wrap, these strips are made of dense, thick fiberglass that provides excellent strength and flexibility. Seal foil-faced joints with FSK tape; seal kraft-paper-faced joints with ASJ tape (both sold separately). Strips have a facing on one side and can be used outdoors with metal jacketing (see page 3580).

Foil facing is constructed from foil kraft paper.

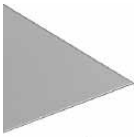
Thermal Insulation

For information about thermal insulation, see page 3574.

Ultra-Thin Flexible Paper Insulation



- Temperature Range: –4° to 266° F
- Heat Flow Rate (K-Factor): 0.003″ Thick: 0.15 @ 356° F; 0.015″ Thick: 0.25 @ 356° F
- Density: 0.003″ Thick: 87 lbs./cu. ft.; 0.015″ Thick: 93 lbs./cu. ft.
- Color: Off-white

Often used in high-humidity applications for its low-moisture absorption, this paper is made of inorganic materials. It meets UL 94V0 5VA for flame retardance and can be used as a flame barrier.

Thick.	Wd.	Lg.		
0.003″	36″	24″	9583T21	$6.72
0.015″	36″	24″	9583T22	27.18

Flexible Ceramic Insulation

The flexible option when insulating against extreme heat, this ceramic insulation can be used as a wrap and protects against molten metal sparks and splashes. It can also be used as a heat shield or to fabricate gaskets, line ovens and furnaces, and insulate hose and cables.

Extra High Temperature Strips

- Temperature Range: Insulation: –40° to 1500° F; Adhesive: Max. temp. is 300° F; low end not rated
- Heat Flow Rate (K-Factor): 0.82 @ 800° F
- Density: 35 lbs./cu. ft.
- Color: White

Strips are calcium aluminum silicate fiber and have an adhesive backing for easy installation.

Thick.	1″×25 ft.		2″×25 ft.		3″×25 ft.	
1/32″	4057K1	$25.13	4057K4	$41.87	4057K7	$64.80

Extra High Temperature Rigid Ceramic Insulation

Moisture-resistant sheets are silica ceramic insulation wrapped in polyethylene.

Thermal-shock-resistant sheets have excellent resistance to fluctuating temperatures. *Sheet with binder* is easier to handle at room temperature than sheet without binder, but contains a small amount of organic material that burns off and releases smoke at around 400° F. *Sheet without binder* won't produce smoke when heated.

Moldable sheets are rigid alumina silica that is formable when wet. Can be molded multiple times until exposed to heat.

Harsh-Environment Silica Insulation

- Temperature Range: 0° to 2000° F
- Heat Flow Rate (K-Factor): 0.78 @ 800° F
- Density: 10 lbs./cu. ft.
- Color: White

Commonly used in furnaces and engine compartments, these 100% silica sheets withstand the high temperatures and corrosive acids that others can't. Insulation can be used outdoors with PVC or metal jacketing (sold separately; see pages 3579-3580).

To Order: Please specify length: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 15, 20, or 25 ft.

Thick.	Wd.		Per Ft.

Firebricks and Accessories

Firebricks

- Maximum Temperature: See below
- Heat Flow Rate (K-Factor): 1.7-2.2 @ 1500° F
- Density: 42-48 lbs./cu. ft.
- Color: Off-white

Often used in furnaces, these bricks have been machined and fit together snugly to minimize heat loss. Cut with a brick saw and install with fire brick bonding mortar (both sold separately). For indoor use only.

Max. Temp., ° F	Thick.	Wd.	Lg.		
2300	2 1/2"	4 1/2"	9"	9355K2	$9.57
2600	2 1/2"	4 1/2"	9"	9355K1	11.68
Brick Saw				6914A61	$18.40

Firebrick Bonding Mortar

- Maximum Temperature: 3000° F
- Density: 129 lbs./cu. ft.
- Color: Gray

Apply with a trowel to lay, coat, and bond firebricks. One pail contains enough ready-to-use mortar to set approximately 40 bricks. For indoor use only.

15-lb. Pail		9368K6	$35.40

Refractory Sealing Compound

- Temperature Range: –50° F to 2350° F
- Density: 100 lbs./cu. ft.
- Color: Tan

Worn firebrick can be revitalized. Coat bricks with this high-strength compound for renewed heat resistance and performance. Apply with a brush or spray for a crack-free seal.

1-gal. Container—93 sq. ft.		9366K5	$133.38

Extreme Temperature Ready-Mixed Cement

- Maximum Temperature: 2700° F
- Density: 127 lbs./cu. ft.
- Color: Gray

Set and repair furnaces, heaters, stoves, and boilers with this ready-to-use cement. It experiences minimal shrinkage creating a permanent smokeproof and gasproof joint. Use on cast iron and steel. A minimum temp. of 500° F is needed to harden cement. Apply with a trowel or spatula. For indoor use only. Cut with a carbide-tipped saw.

	Coverage (approx. sq. ft. @ 1/8" thick)

Millboard Insulation

When insulating kilns, ovens, furnaces, and boilers, this millboard insulation acts as a high-temperature heat shield.

High temperature and ***extra high temperature*** sheets are made of rock wool mineral fibers, clay, and filler.

Ultra high temperature sheets are made of ceramic fibers, clay, and filler.

High Temperature Sheets

- Maximum Temperature: 1380° F
- Heat Flow Rate (K-Factor): 0.81 @ 750°F
- Density: 59 lbs./cu. ft.
- Color: Off-white

Thick.	39"x39"	
1/16"	9362K16	$21.50

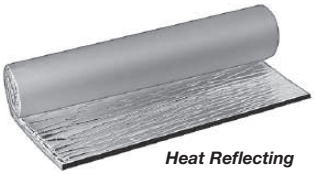
1/4"	9390K14	224.19

Sound Absorbers

Quiet noisy environments by reducing sound reflection off hard surfaces, such as walls and ceilings. Sound absorbers are also often used to line the inside of enclosures that have been built around loud machinery. For indoor use only, unless otherwise stated.

For information about hearing protection, please see page 1849.

Sheeting



Heat Reflecting

Standard

Water Resistant

Made of humidity-resistant polyurethane foam, this flexible sheeting resists dirt and dust. Color is gray, except water-resistant sheeting is black. All sheeting meets FMVSS-302.

Plain-back sheeting has a temperature range of –40° to 225° F. Meets UL 94HBF for flame retardance. ***Adhesive-back*** sheeting has a temperature range of –40° to 175° F.

Easy-to-clean sheeting has a skin on both sides. *Water-resistant* sheeting has a urethane coating that also protects against oil. *Heat-reflecting* sheeting has a foil facing. *Heavy-duty heat-reflecting* sheeting has a tear-resistant foil facing.

To Order: Please specify length up to 50 ft., except standard sheeting is available in lengths up to 25 ft.

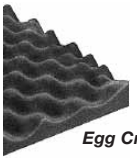
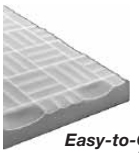
Sheets

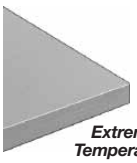


Egg Crate



Easy-to-Clean and Fire Retardant

Water Resistant



Extreme Temperature

Egg crate sheets are made of humidity-resistant, flexible polyurethane foam that has peaks and valleys to absorb more sound at high frequencies than flat-surface sheets. Color is gray. *Plain back* have a temperature range of –40° to 225° F and meet UL 94HF1 for flame retardance. 97″ long sheets meet California Flammability Requirements (CAL 117). *Adhesive-back* foam resists temperatures of –40° to 225° F; the adhesive has a maximum temperature of 175° F and is not rated for minimum temperature.

Easy-to-clean sheets are semi-rigid melamine foam with a gray coating that resists dust and dirt and can be wiped down. Sheets have one smooth and one peaked side for increased sound absorption. Temperature range is 0° to 300° F. Meet UL 94V0 for flame retardance and ASTM E84 10/55 for flame and smoke.

Fire-retardant sheets are made of semi-rigid melamine foam that has one smooth and one peaked side for increased sound absorption. Color is white. Temperature range is 0° to 300° F. Meet UL 94V0 for flame retardance and ASTM E84 5/20 for flame and smoke.

Water-resistant sheets will not degrade if used in areas occasionally splashed with salt water. Made of rigid polypropylene foam with a temperature range of –40° to 185° F. Color is gray. Can be used outdoors.

Extreme-temperature sheets are made of flexible polyimide foam, which has a temperature range of –235° to 400° F; adhesive backing has a temperature range of –60° to 250° F. Color is yellow. Meet UL 94HF1 for flame retardance.

Panels

Fire Retardant (Three Shown)

Fire-retardant panels are ideal for use in large open areas because they have two peaked sides for increased sound absorption. Made of semi-rigid melamine foam, these ceiling-mount panels install with the two included hangers. Temperature range is 0° to 300° F. Color is white. Meet UL 94V0 for flame retardance and ASTM E84 5/20 for flame and smoke.

Heavy-duty panels are made of quilted, flexible double-faced fiberglass with a vinyl coating that resists abrasion, oil, dirt, moisture, and most solvents. Panels have five ⅝″ grommets on one 48″ side for wall mounting, unless noted. Temperature range is –20° to 180° F. Color is gray.

★ Has two ⅝″ grommets on one 48″ side.

Ready-to-Hang Cylinder

Great for use in noisy indoor areas with high ceilings, this cylinder absorbs sound from all directions. Constructed of molded fiberglass with a gray nylon cover, it's equivalent to 10 to 15 sq. ft. of acoustical ceiling tile. Install horizontally using the two ½″ ID eyelets. Temperature range is –30° to 500° F. Meets ASTM E84 25/320 for flame and smoke.

Sound Absorbed	Dia.	Lg.	Wt., lbs.		
93%	12″	24″	6	53905T313	$149.09

Sound Barriers

Block noise from traveling to other parts of your facility. When sound hits these barriers, it's reflected back toward the source. *Curtains* have five 5/8" grommets on their top edge for hanging and hook-and-loop fasteners on their sides for joining multiple curtains.

Tear-resistant curtains are black and sheeting is gray. Temperature range is –20° to 180° F. Can be used outdoors.

See-through barriers are ideal for use as an enclosure window and wherever visibility is required. Temperature range is 0° to 150° F. For indoor use only.

See-Through Curtain (Four Shown)

				Curtains			Sheeting		
	Barrier Rating	Thick.	Wd.	Lg., ft.		Each	Max. Lg., ft.		Per Ft.
Tear Resistant	Good (26 dB)	0.090"	54"	8	6745T35	$192.10	60	6745T83	$23.46
See Through	Good (26 dB)	0.160"	48"	8	9639T82	210.96	60	9639T22	24.86
Curtain Hooks					54895T44	Pkg. of 10			$8.89

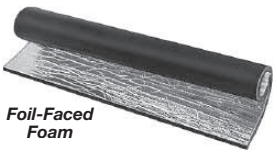
Sound Absorber-Barriers

Often used to line the inside of enclosures that have been built around loud machinery, this double-duty insulation reduces noise within an area and prevents the noise from escaping into other parts of your facility. For indoor use only, unless otherwise stated.

Sheeting

Foam sheeting has a vinyl barrier bonded to gray polyurethane foam sheets. It resists breaking down in humid environments. Temperature range is –20° to 180° F. *Foil-faced* sheeting resists dirt, grease, and water.

Fiberglass sheeting consists of a yellow fiberglass absorber, a vinyl barrier, and a corrosion- and tear-resistant reinforced aluminum foil facing. It's also known as lagging. Temp. range is –20° to 180° F. Can be used outdoors. Meets ASTM E84 15/20 for flame and smoke.



Foil-Faced Foam

Uncoated Foam

Sheets

Made of gray melamine foam with a vinyl barrier, these sheets are fire-resistant. Install with the thicker foam side facing the noise source. Temperature range is 0° to 250° F.

Flat-surface sheets are FDA compliant and meet ASTM E84 5/20 for flame and smoke.

Peaked-surface sheets have more surface area for sound absorption than flat-surface sheets. They also have an easy-to-clean vinyl-based coating. Meet ASTM E84 15/150 for flame and smoke.

Peaked Surface

	Sound Absorbed	Barrier Rating	Thick.	24"x48"	
Flat Surface	65%	Best (30 dB)	1 1/4"	54995T21	$67.22
Peaked Surface	85%	Better (28 dB)	1 3/8"	54995T22	89.25

Quilted Panels and Screens

Connect panels to panels or connect screens to screens with the included hook-and-loop fasteners. The insulation is flexible and made of a vinyl barrier sandwiched between quilted vinyl-coated fiberglass absorbers. Color is gray. Temperature range is –20° to 180° F.

Panels have five 5/8" grommets across the top for hanging and a 1.5 lbs./sq. ft. hanging weight. Meet ASTM E84 25/35 for flame and smoke. Only intended for hanging.

Screen acts as a partition from loud machinery and noisy areas. The included frame assembles without tools.

Sound and Vibration Dampers

Stop sound at its source. Dampers reduce the amount of noise emitted from a vibrating surface. For damping pads, see page 1444; for damping mounts, see page 1434.

Tape

Often used on panels and support structures, this damping tape is made of adhesive-backed aluminum foil. Thickness is 0.015". Temperature range is 35° to 140° F.

Vibration Reduced	Wd.	Lg., yds.		
5%	1"	5	6307A21	$17.64
5%	2"	5	6307A22	44.09

Coating

Control vibration of irregular shapes and large areas. Multiple coats can be applied to achieve desired noise reduction. Maximum temperature is 250° F.

18-oz. Aerosol—This product is compliant under all state VOC rules in effect on November 1, 2011.

	Approx. Coverage	Color		
18-oz. Aerosol	20 sq. ft.	Black	9545T5	$13.15
1-qt. Bottle	10 sq. ft.	Gray	9545T2	33.33

Adhesive-Back Sheets

Plastic resists oil and grease. Maximum temperature is 125° F. *9709T39* and *9709T57* sheets meet UL 94HB for flame retardance. *9709T26* meets UL 94HF1 and UL 94V0 for flame retardance.

Aluminum resists water and corrosion. Temperature range is –40° to 175° F.

About Rubber

Rubber compresses and bounces back to shape, so it is often used in sealing, cushioning, and shock-absorbing applications.

Applications Guide

Use the chart below to identify which materials have resistance to 11 common chemicals. Boxes with a • symbol indicate the chemical will have little or no effect on the material. Blank boxes indicate that the chemical is not recommended for that material. Information is intended for comparison only.

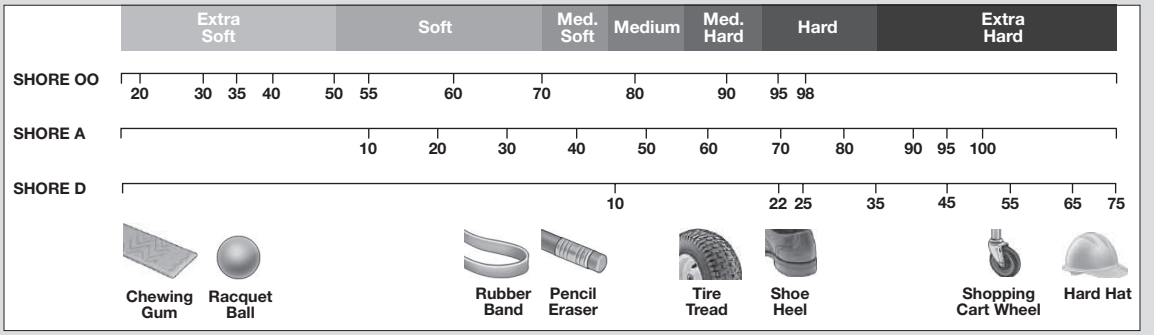
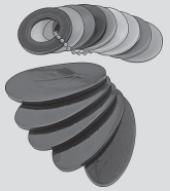
Material Selector Pack—Includes 15 pieces, one each of the following rubber materials: Buna-N, butyl, ECH, EPDM, latex, natural rubber, neoprene, polyethylene, polyurethane, soft polyurethane, Santoprene, SBR, silicone, vinyl, and Viton® fluoroelastomer. Each piece ranges in size from 4″×4″ to 6″×6″ and from 1/16″ to 1/8″ thick.

8450K2 ..... Pkg. $58.22

Durometer Hardness Scales

An international standard for measuring the hardness of rubber and plastic, a durometer rating indicates a material's resistance to surface penetration. There are several durometer scales and a material's durometer rating can fall across more than one scale. For example, a typical shoe heel rates 95 on the Shore OO scale, 70 on the Shore A scale, and 22 on the Shore D scale; all of these ratings indicate that a shoe heel has a relative hardness of hard. As a material gets harder, it generally offers more wear resistance but it becomes less flexible.





Durometer Hardness Selector Pack—Includes 14 pieces, one each of the following durometer hardnesses: 30OO, 40OO, 50OO, 60OO, 70OO, 30A, 40A, 50A, 60A, 70A, 80A, 90A, 95A, and 75D. Each piece is oval or ring shape and ranges in size from 1/8″ to 3/16″ thick.

8450K4 ..... Pkg. $24.93

For information about rubber and durometer hardness scales, see page 3588.

Multipurpose Neoprene Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 900 psi
- Temperature Range: -30° to 200° F, except buffed texture sheets are -20° to 170° F
- For use outdoors, except crisscross texture and buffed texture sheets

Neoprene is also known as chloroprene. It offers good oil and abrasion resistance. Softer durometer rubber has better conformability; harder durometer rubber is more wear resistant. A durometer of 30A is soft, 40A is medium soft, 50A is medium, 60A is medium hard, and 70A is hard. Durometer tolerance is ±5.

Strips and Sheets

The rubber meets ASTM D2000 BC. Strips, sheets, and cut-to-length sheets have a width tolerance of -0.125″ to +0.5″, except 1″×36″ strips have a width tolerance of ±0.125″ and 6″×6″ sheets have a width tolerance of +0.500″. Strips and sheets have a length tolerance of -0.125″ to +0.500″, except 6″×6″ sheets have a plus tolerance. **Rubber with material certification** comes with a traceable lot number and cure date. **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of -20° to 200° F.

Multipurpose Rubber

For information about rubber and durometer hardness scales, see page 3588.

Ultra-Strength Multipurpose Neoprene Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 2,500 psi
- Temperature Range: –40° to 212° F
- For use outdoors

Stronger and more durable than High-Strength Multipurpose Neoprene, this rubber can handle high-tension applications such as belting. Neoprene is also known as chloroprene. It has good oil and abrasion resistance. Softer durometer rubber has better conformability; harder durometer rubber is more wear resistant. A durometer of 50A is medium, 60A is medium hard, and 70A is hard. Durometer tolerance is ±5.

The rubber meets ASTM D2000 BC and MIL-R-3065. Strips and sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of +2″.

Rubber with material certification comes with a traceable lot number and cure date. **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of –20° to 212° F.

High-Strength Multipurpose Neoprene Rubber Sheets, Bars, and Strips

- Color: Black
- Tensile Strength: 1,500 psi, except square bars and 30A sheets and strips are 1,200 psi.
- Temperature Range: –20° to 212° F
- For use outdoors, except square bars

This rubber has better shock-absorbing qualities and will provide longer life than Standard Multipurpose Neoprene. Neoprene is also called chloroprene. It has good oil and abrasion resistance. Softer durometer rubber has better conformability; harder durometer rubber is more wear resistant. A durometer of 30A is soft, 40A is medium soft, 50A is medium, 60A is medium hard, and 70A is hard. Durometer tolerance is ±5.

Strips and Sheets

The rubber meets ASTM D2000 BC and MIL-R-3065. Strips and sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of +2″. **Rubber with material certification** comes with a traceable lot number and cure date. **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of –20° to 212° F.

For information about rubber and durometer hardness scales, see page 3588.

Super-Soft Multipurpose Neoprene Sheets and Strips

- Color: Black
- Tensile Strength: 450 psi
- Temperature Range: –30° to 225° F

Our most conformable neoprene rubber, these strips and sheets will bounce back after compression. All meet ASTM D2000 BC. Durometer tolerance for 10A is +10; for 20A it is ±5. Strips have a width tolerance of +0.250″. Sheets have a width tolerance of +0.500″. Both have a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″.

To Order: Please specify durometer: 10A (soft) or 20A (soft). Strips with a thickness of 1/16″ and greater are only available in 10A.

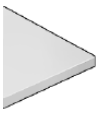
Food-Grade Multipurpose Neoprene Rubber Sheets



- Color: White
- Tensile Strength: 1,200 psi
- Temperature Range: 0° to 200° F
- For use outdoors

Made from FDA-listed material for use with food. Neoprene is also called chloroprene. Durometer is 55A (medium); durometer tolerance is ±5. 6″×6″ sheets have width and length tolerances of ±0.125″; 12″×12″ and 12″×24″ sheets have width and length tolerances of –0.125″ to +0.500″; 36″ wide sheets have width and length tolerances of -0.500″ to +1″.

Plain-back sheets meet ASTM D2000 BC, except 6″×6″ and 1/64″ and 1/32″ thick sheets. **Adhesive-back** sheets have an acrylic adhesive and a temperature range of 0° to 200° F. **Crisscross** textured sheets have nonslip gripping surface on both sides with a plain back.

To Order: For 36″ wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., or 10 ft., unless noted.

★ Available in 1, 2, and 3 ft. lengths only.

Nonmarking Multipurpose Neoprene Rubber Sheets

- Color: Black
- Tensile Strength: 1,200 psi
- Temperature Range: –30° to 220° F

While other black rubber can leave a mark after use, these specially formulated neoprene sheets leave no evidence behind. Neoprene is also known as chloroprene. Sheets meet ASTM D2000 BC. Durometer is 50A (medium); durometer tolerance is ±5. Sheets have width and length tolerances of +0.500". Cut-to-length sheets have a width tolerance of +1".

		Sheets				Cut-to-Length Sheets 36″ Wide

Multipurpose Rubber

For information about rubber and durometer hardness scales, see page 3588.

Fabric-Reinforced Multipurpose Neoprene Rubber Sheets

These sheets are often used as flange gaskets, diaphragm packing, and anywhere heavy compression would squeeze nonreinforced neoprene out of place. The rubber meets ASTM D2000 BC. Durometer tolerance is ±5.

Medium-Strength Sheets

- Color: Black
- Tensile Strength: 1,000 psi
- Temperature Range: -30° to 200°F

Sheets have one layer of cotton/polyester fabric for every 1/16″ of thickness, so they maintain their size and shape under heavy compression better than the standard nonreinforced Multipurpose Neoprene. Durometer is 70A (hard). Sheets have a width tolerance of +0.500″ and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″.

		Sheets				Cut-to-Length Sheets	
		12″×12″		12″×24″		36″ Wide

High-Strength Sheets

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: -40° to 220°F
- For use outdoors

Sheets have one layer of nylon one-ply fabric for each 1/16″ of thickness. The rubber meets MIL-R-3065. Durometer is 70A (hard). Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of +2″.

		Sheets				Cut-to-Length Sheets	
		12″×12″		12″×24″		48″ Wide	
Thick.	Thick. Tolerance		Each		Each		Per Ft.

Ultra-Strength Sheets

- Color: Black
- Tensile Strength: 2,500 psi
- Temperature Range: -40° to 240°F
- For use outdoors

For every 1/4″ of thickness there is one layer of super-strong fiberglass cloth that stands up to high stress and flex. It has good oil and abrasion resistance. Durometer is 55A (medium). They have width and length tolerances of -0.500″ to +1″.

Thick.	Thick. Tolerance	6″×6″		12″×12″		12″×24″		12″×36″		12″×48″

Multipurpose Neoprene Rubber Balls

Let these balls bounce inside of vibrating sifters for an effective screen cleaner or use them as seals in pumps and check valves.

Balls

- Color: Black or white
- Tensile Strength: 2,000 psi
- Temperature Range: 0° to 212°F
- For use outdoors

These balls have a durometer of 55A (medium); durometer tolerance is ±5. All have a diameter tolerance of ±0.016″. **Black** balls meet ASTM D2000. **White** balls are made from FDA-listed material for use with food and beverage.

	Pkg.	Black		White	
Dia.	Qty.		Pkg.		Pkg.

Tight-Tolerance Balls

- Color: Black
- Tensile Strength: 1,450 psi (3/16″ dia.); 2,100 psi (1/4″-3/4″ dia.)
- Temperature Range: -15° to 200°F
- For use outdoors

Durometer is 70A (hard); durometer tolerance is ±5. All meet ASTM D2000 BC.

Dia.	Dia. Tolerance		Each
3/16″	±0.003″	1241T1	$2.75
1/4″	±0.003″	1241T2	1.91

3/4″	±0.004″	1241T8	7.76

Multipurpose Neoprene Rubber Rods

- Color: Black
- Tensile Strength: 1,050 psi, except 30A and 40A rods are 700 psi
- Temperature Range: -20° to 200°F
- For use outdoors (unless noted)

The cylindrical shape fits into channels and other narrow spaces for sealing and cushioning. Neoprene is commonly called chloroprene. All meet ASTM D2000 BC. Softer durometer rubber has better conformability; harder durometer rubber is more wear resistant. A durometer of 30A is soft, 40A is medium soft, 50A is medium, and 75A is hard. Durometer tolerance is ±5. Rods have a plus length tolerance, except those with 75A durometer are ±0.250″.

★ Not for use outdoors.

For information about rubber and durometer hardness scales, see page 3588.

Multipurpose Neoprene Rubber Tubes

- Color: Black
- Tensile Strength: 1,200 psi (square tubes); 1,100 psi (round tubes)
- Temp. Range: -20° to 200° F

Jackets, seals, and insulation are just a few of the many uses for these rubber tubes. Neoprene is also called chloroprene. All tubes meet ASTM D2000 BC. They have a durometer of 75A (hard); durometer tolerance is ±5. **Square tubes** have height and width tolerances of ±0.079″, except 3/4″ tubes have height and width tolerances of ±0.063″. ID tolerance is ±0.039″ for 1/4″ and 3/8″ IDs, ±0.051″ for 5/8″ ID, and ±0.063 for 7/8″ ID. All have a plus length tolerance. **Round tubes** have an OD tolerance of ±0.125″ and an ID tolerance of ±0.063″. Length tolerance is ±0.250″. Wall thickness tolerance is ±0.063″.

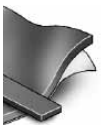
Super-Soft High-Temperature Silicone Rubber Sheets and Strips

Like other silicone, this rubber stays flexible over a wide temperature range, but its softness gives it better conformability.

Strips and Sheets



- Color: Red
- Tensile Strength: 200 psi
- Temp. Range: -40° to 300° F
- For use outdoors

All meet ASTM D2000 GE and MIL-A-A-59588. They are made from FDA-listed material for use with food and beverage. Durometer tolerance is ±5. **Strips** have a durometer of 10A (soft). They have a length tolerance of ±0.375″. 2″×36″ strips have a width tolerance of ±0.062″; 4″×36″ strips have a width tolerance of ±0.093″; and 6″×36″ strips have a width tolerance of ±0.125″. **Sheets** have width and length tolerances of ±0.125″, except 24″×24″ sheets have width and length tolerances of ±0.375″ and 36″×36″ sheets have width and length tolerances of ±0.500″. **Adhesive-back** sheets have an acrylic adhesive with a temp. range of -40° to 280° F.

To Order: For sheets, please specify durometer: 10A (soft), 20A (soft), or 30A (soft), except 6"×6" and 3/16" thick sheets are only available in 10A and 20A.

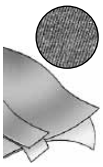
Adhesive-Back Strips and Sheets with Crisscross Texture



- Color: Gray
- Tensile Strength: 600 psi
- Temp. Range: -100° to 500° F
- For use outdoors

A crisscross texture provides a nonslip gripping surface on both sides. Durometer is 30A (soft); durometer tolerance is ±5. Adhesive is silicone and has a temperature range of -100° to 500° F. **Strips** have a width tolerance of ±0.031″ and a plus length tolerance. **Sheets** have a width tolerance of ±0.688″ and length tolerances up to ±1″, except 6″×6″ sheets have width and length tolerances of ±0.156″ and 12″×12″ sheets have a width and length tolerances of ±0.313″. **Cut-to-length sheets** have a width tolerance of ±0.313″.

High-Temperature Silicone Rubber Sheets, Bars, and Strips

Also known as polysiloxane, this silicone rubber offers good resistance to ozone and salt water. Softer durometer rubber has better conformability; harder durometer rubber is more wear resistant.

Strips and Sheets with Material Certification

- Color: Red
- Tensile Strength: min. 650 psi
- Temp. Range: min. -60° to 420°F
- For use outdoors

These strips and sheets include material certification with a traceable lot number and cure date. The rubber meets ASTM D2000 GE. They are made from FDA-listed material for use with food and beverage, except plain-back strips are made from FDA-listed material for use with food. Strips and plain-back sheets meet MIL-ZZR-765, except 4″×36″, 6″×36″, and 6″×6″ sizes. Strips, adhesive-back sheets, and 6″×6″ plain-back sheets meet MIL-A-A-59588. Durometer tolerance is ±5. **Strips** have a durometer of 50A (medium). They have length tolerances up to ±1″. 1″×36″ and smaller strips have width tolerances up to ±0.079″; all other strips have width tolerances up to ±0.125″. **Sheets** have a width tolerance up to +0.250″ and a plus length tolerance, except 6″×6″ sheets have width and length tolerances of ±0.125″. **Adhesive-back** strips and sheets have an acrylic adhesive. Adhesive temperature range is -40° to 300°F for strips and -65° to 250°F for sheets.

To Order: For sheets, please specify durometer: 40A (medium soft), 50A (medium), 60A (medium hard), or 70A (hard).

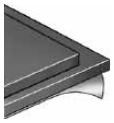
Cut-to-Length Sheets



- Color: Red
- Tensile Strength: 700 psi
- Temp. Range: -80° to 500°F
- For use outdoors

The rubber meets ASTM D2000 GE, AMS 3302, MIL-ZZR-765, and NSF/ANSI Standards. Durometer is 50A (medium); durometer tolerance is ±5. Width tolerance is +0.05″, except 6″ wide sheets have a width tolerance of +0.070″ and 36″ wide sheets have a width tolerance of +0.250″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of -65° to 250°F.

High-Temperature Silicone Rubber Sheets, Bars, and Strips *(Continued from previous page)*

Semi-Clear Sheets

- Color: Semi-clear white
- Tensile Strength: 700 psi
- Temp. Range: –80° to 450° F
- For use outdoors

All meet AMS 3302. They are made from FDA-listed material for use with food and beverage. Durometer is 50A (medium); durometer tolerance is ±5. Sheets have a width tolerance of +1″ and a plus length tolerance. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of –65° to 250° F.

Clear Sheets

- Color: Clear
- Tensile Strength: 800 psi
- Temp. Range: –80° to 425° F
- For use outdoors

These sheets are made from FDA-listed material for use with food and beverage. Durometer is 40A (medium soft); durometer tolerance is ±5. They have width and length tolerances of ±0.375″, except 12″×12″ sheets have width and length tolerances of ±0.125″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of –40° to 300° F.

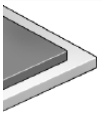
Colored Sheets



- Color: Black, blue, brown, gray, or white
- Tensile Strength: 700 psi
- Temp. Range: –80° to 400° F
- For use outdoors

All sheets meet ASTM D2000 GE and MIL-A-A-59588. They are made from FDA-listed material for use with food and beverage. Durometer is 50A (medium); durometer tolerance is ±5. They have width and length tolerances of ±0.250″, except 12″×12″ sheets have width and length tolerances of ±0.125″ and 36″×36″ sheets have width and length tolerances of ±0.500″.

Extra-Hard Sheets

- Color: Red
- Tensile Strength: 750 psi
- Temp. Range: –100° to 450° F
- For use outdoors

These sheets meet ASTM D2000 GE. They are made from FDA-listed material for use with food and beverage. Durometer is 90A (extra hard); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.125″.

Thick.	Thick. Tolerance	12″×12″

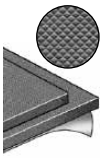
Sheets with Crisscross Texture



- Color: Red
- Tensile Strength: 700 psi
- Temp. Range: –80° to 450° F
- For use outdoors

A crisscross texture provides a nonslip gripping surface on both sides. The rubber meets ASTM D2000 GE, MIL-A-A-59588, and AMS 3302. These sheets are made from FDA-listed material for use with food and beverage. Durometer is 50A (medium); durometer tolerance is ±5. 12″×12″ sheets have width and length tolerances of ±0.125″; 24″×24″ have width and length tolerances of ±0.375″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of –40° to 300° F.

Bars

- Color: Red
- Tensile Strength: 700 psi
- Temp. Range: –80° to 400° F
- For use outdoors

All bars meet ASTM D2000 GE and MIL-A-A-59588. They are made from FDA-listed material for use with food and beverage. Durometer is 60A (medium hard); durometer tolerance is ±5. Thickness and width tolerances are ±0.040″.

To Order Please specify length: 3 ft., 5 ft., 10 ft., 25 ft., or 100 ft.

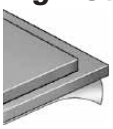
High-Temperature Rubber

For information about rubber and durometer hardness scales, see page 3588.

High-Strength High-Temperature Silicone Rubber Sheets



- Color: Gray or red
- Tensile Strength: 1,200 psi
- Temp. Range: -80° to 480° F
- For use outdoors

Greater strength than standard High-Temperature Silicone translates into better shock-absorbing qualities and longer life. Silicone, commonly called polysiloxane, offers good resistance to ozone and salt water. All sheets meet ASTM D2000 GE, MIL-A-A-59588, and MIL-ZZR-765. They are made from FDA-listed material for use with food and beverage. Durometer is 50A (medium); durometer tolerance is ±5. **Gray** sheets have width and length tolerances of ±0.125″, except 24″×24″ sheets have width and length tolerances of ±0.375″. **Red** 6″×6″ sheets have width and length tolerances of ±0.063″, 12″×12″ sheets have width and length tolerances of ±0.125″, and 24″×24″ sheets have width and length tolerances of ±0.375″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of -40° to 300° F.

Food-Grade High-Temperature Silicone Rubber Sheets and Strips

Made from FDA-listed materials for use with food. Silicone, also called polysiloxane, offers good resistance to ozone and salt water.

Strips and Sheets

- Color: White
- Tensile Strength: 650 psi
- Temp. Range: -60° to 420° F
- For use outdoors

The rubber meets MIL-A-A-59588. Durometer tolerance is ±5. **Strips** have a durometer of 50A (medium). They have a width tolerance of ±0.125″ and a length tolerance of ±1″, except 1/2″×36″ and 1″×36″ strips have a width tolerance of ±0.062″. **Sheets** have width and length tolerances of ±0.125″, except 24″×24″ sheets have width and length tolerances of ±0.500″ and 36″×36″ sheets have width and length tolerances of ±1″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of -35° to 250° F.

To Order: For sheets, please specify durometer: 40A (medium soft), 50A (medium), or 60A (medium hard).

Semi-Clear Sheets

- Color: Semi-clear white
- Tensile Strength: 1,000 psi
- Temp. Range: -80° to 400° F
- For use outdoors

All meet ASTM D2000 GE and NSF/ANSI Standards. Durometer is 50A (medium); durometer tolerance is ±5. 12″×12″ sheets have width and length tolerances of ±0.125″, 24″×24″ sheets have width and length tolerances of ±0.250″, and 36″×36″ sheets have width and length tolerances of ±0.500″.

High-Purity High-Temperature Silicone Rubber Sheets

- Color: Clear
- Tensile Strength: 1,250 psi
- Temp. Range: -65° to 400° F
- For use outdoors

These platinum-cured silicone rubber sheets meet the strict purity standards of USP Class VI. Silicone, also known as polysiloxane, offers good resistance to ozone and salt water. All meet ASTM D2000 GE. They are made from FDA-listed material for use with food and beverage. Durometer is 55A (medium); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.125″.

Thick.	Thick. Tolerance	6″×8″		12″×12″

For information about rubber and durometer hardness scales, see page 3588.

Glow-in-the-Dark High-Temperature Silicone Rubber Sheets

- Color: Glow-in-the-dark yellow
- Tensile Strength: 500 psi
- Temp. Range: -60° to 400° F
- For use outdoors

Expose these yellow sheets to light and they'll glow bright green in the dark. Use them to illuminate pathways. Silicone, also called polysiloxane, offers good resistance to ozone and salt water. Durometer is 60A (medium hard); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.125".

Thick.	Thick. Tolerance	6"×6"		12"×12"	
1/16"	±0.126"	1257N11	$15.38	1257N13	$51.25
1/8"	±0.126"	1257N12	$23.95	1257N14	$79.85

Fire-Retardant High-Temperature Silicone Rubber Sheets

- Color: Black
- Tensile Strength: 300 psi
- Temp. Range: -80° to 425° F
- For use outdoors

These sheets meet UL 94V0 for flame retardance and FAR 25.856. Silicone, commonly called polysiloxane, offers good resistance to ozone and salt water. Durometer is 65A (medium hard); durometer tolerance is ±5. 6"×6" sheets have width and length tolerances of ±0.156". 12"×12" sheets have width and length tolerances of ±0.313".

Thick.	Thick. Tolerance	6"×6"		12"×12"	
0.020"	±0.003"	1282N11	$10.80	1282N15	$33.75

1/8"	±0.008"	1282N14	36.77	1282N18	114.92

EMI/RFI Shielding High-Temperature Silicone Rubber Strips

- Color: Gray
- Tensile Strength: 700 psi
- Temp. Range: -85° to 390° F
- For use outdoors

Monel wires inside these strips conduct electricity to protect equipment from damaging static charges. They have a buffed texture with a rough surface on one side and are smooth on the other. Silicone, also called polysiloxane, offers good resistance to ozone and salt water. All meet ASTM D2000 GE, MIL-A-A-59588, and MIL-R-5847. Durometer is 40A (medium soft); durometer tolerance is ±5. Width and length have a plus tolerance.

Thick.	Thick. Tolerance	3"×36"		6"×36"		9"×36"	
1/32"	±0.010"	5831T21	$38.15	5831T31	$69.47	5831T41	$90.97

Thermally Conductive High-Temperature Silicone Rubber Sheets

- Color: Yellow
- Tensile Strength: 40 psi
- Temp. Range: -75° to 390° F
- For use outdoors

Commonly used in electronics applications, these sheets transfer heat better than any other silicone we offer. Thermal conductivity is 5 W/m-K. They are conformable with a slightly tacky surface that lightly adheres to both smooth and rough surfaces. Sheets meet UL 94V0 for flame retardance. Silicone, also known as polysiloxane, offers good resistance to ozone and salt water. Durometer is 45OO (extra soft); durometer tolerance is ±5. Width and length tolerances are ±0.156".

Thick.	Thick. Tolerance	4"×4"		8"×8"	
0.020"	±0.002"	1272N11	$15.24	1272N15	$38.10
0.040"	±0.004"	1272N12	22.87	1272N16	60.18
0.060"	±0.006"	1272N13	$29.84	1272N17	$82.90
0.080"	±0.008"	1272N14	38.95	1272N18	108.20

Fabric-Reinforced High-Temperature Silicone Rubber Sheets and Strips

- Color: Red
- Tensile Strength:
  1,100 psi (1/32" thick);
  1,300 psi (1/16"-1/8" thick)
- Temp. Range: -100° to 500° F
- For use outdoors

One layer of fiberglass cloth is inserted between two layers of silicone rubber to give these strips and sheets the strength to stand up to high stress and flex. Use them as flange gaskets and anywhere heavy compression would squeeze nonreinforced silicone rubber out of place. Silicone, commonly called polysiloxane, offers good resistance to ozone and salt water. All meet AMS 3320H, except 1/32" thick sheets meet AMS 3315. They are made with FDA-listed material for use with food and beverage. Durometer is 70A (hard); durometer tolerance is ±10. Strips and sheets have a width tolerance of +1" and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1". **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of -65° to 250° F.

		Strips					*Sheets*				*Cut-to-Length Sheets*

High-Temperature Silicone Rubber Tubes

- Color: Red
- Tensile Strength: 700 psi
- Temp. Range: -60° to 450° F
- For use outdoors

These tubes are often used as jackets, seals, and insulation in hot environments. Silicone, also known as polysiloxane, offers good resistance to ozone and salt water. All meet ASTM D2000 GE. Durometer is 60A (medium hard); durometer tolerance is ±5. 6" long tubes have a length tolerance of ±0.188", and 36" long tubes have a tolerance of ±1".

High-Temperature Rubber & Oil-Resistant Rubber

For information about rubber and durometer hardness scales, see page 3588.

High-Temperature Silicone Rubber 90° Angles and U-Channels

- Color: Red
- Tensile Strength: 700 psi
- Temp. Range: -60° to 400° F
- For use outdoors

Use these 90° angles and U-channels to seal and cushion edges. Silicone, also called polysiloxane, offers good resistance to ozone and salt water. All meet ASTM D2000 GE. Durometer is 50A (medium); durometer tolerance is ±5. Wall thickness tolerance is ±0.027″, except 2″ high U-channels have a wall thickness tolerance of ±0.016″.

High-Temperature Silicone Rubber Rods

Seal and cushion narrow spaces such as channels. Silicone, also known as polysiloxane, offers good resistance to ozone and salt water.

Rods

- Color: Black or red
- Tensile Strength: 350 psi (black); 650 psi (red)
- Temp. Range: -100° to 400° F (black); -60° to 420° F (red)
- For use outdoors

Durometer tolerance is ±5.
Black rods have a durometer of 20A (soft).
Red rods meet MIL-A-A-59588. Durometer is 40A (medium soft).

High-Temperature Silicone Rubber Balls

- Color: Semi-clear white
- Tensile Strength: 2,000 psi
- Temp. Range: -60° to 500° F
- For use outdoors

Use these balls as seals in pumps and check valves, or let them bounce inside of vibrating sifters as an effective screen cleaner. Silicone, commonly called polysiloxane, offers good resistance to ozone and salt water. All meet ASTM D2000 GE. They are made from FDA-listed material for use with food and beverage. Durometer is 60A (medium hard); durometer tolerance is ±5.

Oil-Resistant Buna-N Rubber Sheets, Bars, and Strips

Buna-N rubber is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease.

Strips and Sheets

- Color: Black
- Tensile Strength: 800 psi
- Temp. Range: -20° to 170° F

The rubber meets ASTM D2000 BF. Durometer tolerance is ±5. Strips and sheets have width and length tolerances of ±0.250″, except 1″×36″ sheets have a width tolerance of ±0.125″ and a length tolerance of -0.250″ to 1″. Cut-to-length sheets have a width tolerance of ±0.250″. **Adhesive-back** strips and sheets have an acrylic adhesive with a temp. range of -20° to 170° F.
To Order: Please specify durometer: 40A (medium soft) or 50A (medium). 1/32" thick cut-to-length sheets are only available in 50A.

Oil-Resistant Buna-N Rubber Sheets, Bars, and Strips *(Continued from previous page)*

Square Bars

- Color: Black
- Tensile Strength: 1,200 psi
- Temp. Range: -20° to 225° F

All meet ASTM D2000 BG. Durometer is 75A (hard); durometer tolerance is ±5. These bars have a plus length tolerance.

Thick.	Thick. Tolerance	Wd.	Wd. Tolerance		6″ Lg.	12″ Lg.	36″ Lg.

High-Strength Oil-Resistant Buna-N Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 1,500 psi
- Temp. Range: -40° to 212° F

These strips and sheets offer better shock-absorbing qualities and longer life than standard Oil-Resistant Buna-N. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease.

Strips and Sheets

All meet ASTM D2000 BG and MIL-R-3065. Durometer tolerance is ±5. Strips and sheets have width and length tolerances of ±0.25″. Cut-to-length sheets have a width tolerance of ±0.250″, except 1/64″ thick cut-to-length sheets have a width tolerance of +1″.
To Order: Please specify durometer: 40A (medium soft) or 50A (medium).

Sheets with Crisscross Texture

These sheets have a crisscross texture to provide a nonslip gripping surface on both sides. Durometer is 50A (medium); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

Chemical- and Steam-Resistant Aflas Rubber Rods

- Color: Black
- Tensile Strength: 1,650 psi
- Temp. Range: 0° to 400° F
- For Outdoor Use

Use these small-diameter rods to seal narrow spaces. Made of Aflas, these rods are a stronger, steam-tolerant alternative to Viton® fluoroelastomer. Aflas stands up to tough chemicals, such as acids, bases, bleach, and hydraulic fluids. Durometer is 75A (hard). Durometer tolerance is ±5.

Oil-Resistant Rubber

For information about rubber and durometer hardness scales, see page 3588.

Ultra-Strength Oil-Resistant Buna-N Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 2,500 psi
- Temp. Range: -40° to 212°F

With the greatest tensile strength of all our oil-resistant rubber, these super-strong Buna-N strips and sheets can handle high-tension applications such as belting. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease. Durometer is 50A (medium); durometer tolerance is ±5. Strips and sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of +2″, except 1/64″ thick sheets have a width tolerance of +1″.

Adhesive-back strips and sheets have an acrylic adhesive with a temperature range of -20° to 212°F.

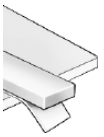
Food-Grade Oil-Resistant Buna-N Rubber Sheets and Strips

Made from FDA-listed material for use with food and beverage, these strips and sheets offer good resistance to animal and vegetable oils. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene.

Medium-Strength Strips and Sheets



- Color: White
- Tensile Strength: 1,000 psi
- Temp. Range: -20° to 220°F

Durometer is 60A (medium hard); durometer tolerance is ±5. Strips and sheets have width and length tolerances of -0.125″ to +0.500″, except 36″ wide sheets have a width tolerance of ±1″. **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of -20° to 220°F.

To Order: For 36" wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., or 10 ft.

High-Strength Strips and Sheets

- Color: White
- Tensile Strength: 1,500 psi
- Temp. Range: -20° to 200°F

Greater tensile strength than medium-strength Food-Grade Oil-Resistant Buna-N rubber gives these strips and sheets better shock-absorbing qualities and longer life. All meet ASTM D2000 BF. Durometer is 60A (medium hard); durometer tolerance is ±5. Strips have a width tolerance of ±0.125″ and a length tolerance of ±1″. Sheets have width and length tolerances of ±0.500″. 36″ wide sheets have a width tolerance of ±1″.

To Order: For 36" wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., or 10 ft.

Food-Grade Ultra-Strength Oil-Resistant Buna-N/Vinyl Rubber Sheets

- Color: White
- Tensile Strength: 2,000 psi
- Temp. Range: -20° to 220°F
- For use outdoors

The addition of vinyl makes these sheets the strongest Food-Grade Oil-Resistant rubber we offer. Use them for high-tension applications, such as belting. They're made from FDA-listed material for use with food and offer good resistance to animal and vegetable oils. This material is also known as nitrile-vinyl. All meet ASTM D2000 BK. Durometer is 70A (hard); durometer tolerance is ±5. All have width and length tolerances of ±0.250″.

To Order: For 36" wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., or 10 ft.

For information about rubber and durometer hardness scales, see page 3588.

Graphene-Filled Ultra-Strength Oil-Resistant Buna-N Rubber Sheets

- Color: Black
- Tensile Strength: 3,500 psi
- Temp. Range: 0° to 325° F
- For use outdoors

These sheets have graphene reinforcement for increased strength and temperature resistance. All meet ASTM D2240, ASTM D412, and ASTM D624. Durometer is 90A (extra hard); durometer tolerance is ±5. Width and length tolerances are ±0.250″.

Oil-Resistant High-Temperature Buna-N Rubber Sheets

- Color: Black
- Tensile Strength: 1,500 psi
- Temp. Range: -40° to 300° F

Because these sheets are made from peroxide-cured Buna-N rubber, they have better heat resistance than standard Oil-Resistant Buna-N rubber sheets. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease. All meet ASTM D2000 BG and MIL-R-3065. Durometer is 65A (medium hard); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

Thick.	Thick. Tolerance	Sheets 12″×12″ Each	Sheets 12″×24″ Each	Cut-to-Length Sheets 36″ Wide Per Ft.
1/32″	±0.012″	1861T21 $9.86	1861T31 $17.17	1861T41 $21.47

Fabric-Reinforced Oil-Resistant Buna-N Rubber Sheets

- Color: Black
- Tensile Strength: 1,500 psi
- Temp. Range: -40° to 220° F

To maintain their size and shape under heavy compression, these sheets have one layer of nylon fabric for every 1/16″ of thickness. Use them as flange gaskets and diaphragm packing. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease. All meet ASTM D2000 BG. Durometer is 60A (medium hard); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

Thick.	Thick. Tolerance	Sheets 12″×12″ Each	Sheets 12″×24″ Each	Cut-to-Length Sheets 48″ Wide Per Ft.

Oil-Resistant Buna-N Rubber Tubes

- Color: Black
- Tensile Strength: 1,200 psi
- Temp. Range: -20° to 225° F

Applications for these tubes include jackets, seals, and insulation. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease. All tubes meet ASTM D2000 BG. Durometer is 75A (hard); durometer tolerance is ±5. Length tolerance is +0.500″, except 36″ long tubes are +1″.

Oil-Resistant Buna-N Rubber Balls

- Color: Black
- Tensile Strength: 1,800 psi
- Temp. Range: -40° to 212° F

Use these balls as seals in pumps and check valves or let them bounce inside of vibrating sifters for an effective screen cleaner. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It offers good resistance to petroleum-based oils. All meet ASTM D2000 BF and ASTM D2000 BG. Durometer is 70A (hard); durometer tolerance is ±5.

Oil-Resistant & Chemical-Resistant Rubber

For information about rubber and durometer hardness scales, see page 3588.

Oil-Resistant Buna-N Rubber Rods

- Color: Black
- Tensile Strength: 1,200 psi
- Temp. Range: -20° to 220° F, except 75A durometer rods are -20° to 225° F.

Seal and cushion narrow spaces, such as inside channels and seams. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene. It resists fuel oil, hydraulic oil, ethylene glycol, and grease. All rods meet ASTM D2000 BG. A durometer of 50A is medium, 60A is medium hard, 70A is hard, and 75A is hard. Durometer tolerance is ±5. They have a plus length tolerance.

Chemical-Resistant Viton® Fluoroelastomer Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 1,000 psi
- Temp. Range: -20° to 400° F
- For use outdoors

Viton® fluoroelastomer stands up to tough chemicals, such as nitric acid, ethylene glycol, and isopropyl alcohol. It is also known as FKM. Durometer is 75A (hard); durometer tolerance is ±5. Strips and sheets have a plus length tolerance. The width tolerance is +0.250″ for strips, +0.500″ for sheets, and +1″ for cut-to-length sheets.

High-Strength Chemical-Resistant Viton® Fluoroelastomer Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 1,500 psi
- Temp. Range: 0° to 400° F
- For use outdoors

Offering higher tensile strength than standard Chemical-Resistant Viton® Fluoroelastomer, these strips and sheets provide greater tear resistance and longer life. Viton® fluoroelastomer, also known as FKM, stands up to harsh environments, such as those involving nitric acid, ethylene glycol, and isopropyl alcohol. All meet ASTM D2000 HK and MIL-R-83248A. Durometer is 75A (hard); durometer tolerance is ±5. Strips and sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of +1″. **Adhesive-back** strips have an acrylic adhesive with a temperature range of 0° to 220° F.

Chemical-Resistant Low-Temperature Fluorosilicone Rubber Sheets

- Color: Blue
- Tensile Strength: 900 psi
- Temp. Range: -65° to 450° F
- For use outdoors

Temperatures as low as -65° F have little effect on these fluorosilicone sheets. Use them with isopropyl alcohol, boric acid, and ethanol. Durometer is 60A (medium hard); durometer tolerance is ±5. All sheets have width and length tolerances of ±0.250″.

Chemical-Resistant Ultra-High Temperature Kalrez Rubber Sheets

- Color: Black
- Tensile Strength: 2,200 psi
- Temp. Range: 0° to 525° F
- For use outdoors

Even when temperatures rise to 525° F, these Kalrez sheets are resistant to virtually all classes of chemicals. They are not resistant to fluorinated solvents. Durometer is 75A (hard); durometer tolerance is ±5. All have a width tolerance of +0.250″ and a plus length tolerance.

Food-Grade Chemical-Resistant Viton® Fluoroelastomer Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 700 psi
- Temperature Range: -20° to 450° F
- For use outdoors

Resistant to the chemicals that are commonly used to clean and sterilize food-processing equipment, these strips and sheets are made from FDA-listed material for use with food and beverage. Viton® fluoroelastomer is also known as FKM. Durometer is 75A (hard); durometer tolerance is ±5. All have a length tolerance of -0.250″ to +1″. Width tolerance is ±0.250″, except 1″×36″ strips have a width tolerance of ±0.125″.

Chemical- and Steam-Resistant Aflas Rubber Sheets

- Color: Black
- Tensile Strength: 1,450 psi
- Temperature Range: 40° to 400° F
- For use outdoors

With similar chemical resistance to Viton® fluoroelastomer, Aflas provides a stronger, steam-tolerant alternative. Aflas stands up to tough chemicals, such as nitric acid, ethylene glycol, and isopropyl alcohol. Durometer is 75A (hard); durometer tolerance is ±5. All sheets have width and length tolerances of ±0.500″.

Chemical-Resistant Viton® Fluoroelastomer Rubber Rods

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: -20° to 400° F
- For use outdoors

These small-diameter rods provide a seal in narrow spaces. Made of Viton® fluoroelastomer, they are for use in harsh environments, such as those involving nitric acid, ethylene glycol, and isopropyl alcohol. Viton® fluoroelastomer is also known as FKM. All meet ASTM D2000 HK and MIL-R-83248C. Durometer is 75A (hard); durometer tolerance is ±5. Length has a plus tolerance.

Chemical-Resistant Viton® Fluoroelastomer Rubber Balls

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: 0° to 400° F
- For use outdoors

Clean screens in vibrating sifters with the bounce of these balls, or use them as seals in pumps and check valves. Also known as FKM, Viton® fluoroelastomer is for use in harsh environments, such as those involving ethylene glycol and isopropyl alcohol. All meet ASTM D2000 HK. Durometer is 70A (hard); durometer tolerance is ±5.

Super-Cushioning Abrasion-Resistant Polyurethane Rubber Sheets and Strips

Even after repetitive compression, these super-soft sheets and strips maintain their cushioning ability. Use them to dampen noise and isolate vibration. This material is also known as Sorbothane.

Strips and Sheets

- Color: Black
- Tensile Strength:
  80 psi (30OO durometer);
  100 psi (40OO-50OO);
  150 psi (60OO);
  200 psi (70OO)
- Temperature Range: -20° to 160° F

Durometer tolerance is ±5. Strips have a durometer of 50OO (soft). They have width tolerances up to -0.080″ to +0.090″. They have a length tolerance of ±0.250″. Sheets have a width tolerance of ±0.060″ and a length tolerance of ±0.063″, except 1/8″ thick 24″×24″ sheets have a width tolerance of ±0.025″ and a length tolerance of ±0.063″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of 50° to 140° F.

To Order: For plain-back sheets, please specify durometer: 30OO (extra soft), 40OO (extra soft), 50OO (soft), 60OO (soft), or 70OO (medium soft), unless noted. For adhesive-back sheets, please specify durometer: 40OO, 50OO, or 70OO.

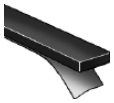
Abrasion-Resistant Polyurethane Rubber Sheets, Bars, and Strips

This polyurethane combines the shock absorbing qualities of rubber with the tear resistance of plastic. Use it for high-tension applications such as conveyor belts, as well as for high-wear applications such as cutting surfaces, bumpers, and liners.

Adhesive-Back Strips



- Color: Black
- Tensile Strength: 2,000 psi (40A durometer);
  4,400 psi (60A);
  7,300 psi (90A)
- Temperature Range: -20 to 190° F
- For use outdoors

Adhesive is acrylic and has a temperature range of -20° to 200° F. Durometer tolerance is ±5. Strips have width and length tolerances of +0.250″.

To Order: Please specify durometer: 40A (medium soft), 60A (medium hard), or 90A (extra hard).

Food-Grade Abrasion-Resistant Polyurethane Rubber Sheets and Strips

- Color: Semi-clear white
- Tensile Strength:
  3,000 psi (60A durometer);
  4,300 psi (70A);
  5,600 psi (80A);
  6,200 psi (90A)
- Temperature Range: -40° to 185°F
- For use outdoors

Use in food-processing environments for cutting surfaces, liners, and other high-wear applications. These strips and sheets are made from FDA-listed material for use with food and beverage. Durometer tolerance is ±5. Width and length tolerances are ±0.250″.

To Order: Please specify durometer: 60A (medium hard), 70A (hard), 80A (hard), or 90A (extra hard).

Super-Stretchable Abrasion-Resistant Natural Rubber Sheets and Strips

These natural rubber sheets and strips will stretch up to six times their length. Use them in dynamic applications, such as vibration isolators and shock mounts. Natural rubber is often called gum rubber and latex rubber.

Strips and Sheets

- Color: Tan or white
- Tensile Strength:
  3,000 psi (tan);
  2,800 psi (white)
- Temperature Range:
  -20° to 140°F (tan);
  -40° to 158°F (white)

All meet ASTM D2000 AA. Durometer is 40A (medium soft); durometer tolerance is ±5. **Tan** strips and sheets are made from FDA-listed material for use with food and beverage. Width and length tolerances are ±0.250″, except 36″ wide sheets have a width tolerance of ±1″ and a length tolerance of -0.500″ to +1″. **White** strips and sheets are made from FDA-listed material for use with food. Strips have a width tolerance of +0.250″ and a length tolerance of +1″. Sheets have width and length tolerances of +0.500″, except 36″ wide sheets have a width tolerance of +1″ and a length tolerance of +3″.

To Order: For 36″ wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., or 10 ft.

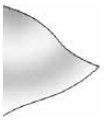
Ultra-Thin Sheets



- Color: Semi-clear amber
- Tensile Strength: 4,000 psi
- Temperature Range:
  -75° to 250°F

Sheets are made from FDA-listed material for use with food. Durometer is 40A (medium soft); durometer tolerance is ±5. Width tolerance is ±0.125″ for 6″ wide sheets and ±2″ for 42″ wide sheets.

Thickness Selector Pack—Includes seven 6″×6″ ultra-thin sheets, one of each thickness from 0.006″ to 0.030″, except 0.025″.

Economical Abrasion-Resistant SBR Rubber Sheets and Strips

Commonly used for tires, conveyor belts, and chutes, SBR (styrene butadiene rubber) is harder and offers better abrasion resistance than natural rubber. It is also known as skirtboard.

Medium-Strength Strips

- Color: Black
- Tensile Strength: 700 psi
- Temperature Range:
  -20° to 170°F

All meet ASTM D1330. Durometer is 75A (hard); durometer tolerance is ±5. Width and length tolerances are ±0.250″.

Thick.	Thick. Tolerance	2″×36″		4″×36″		6″×36″

For information about rubber and durometer hardness scales, see page 3588.

Economical Abrasion-Resistant SBR Rubber Sheets and Strips

(Continued from previous page)

Medium-Strength Sheets

- Color: Black or red
- Tensile Strength: 700 psi (black); 400 psi (red)
- Temperature Range: -20° to 170°F

All meet ASTM D1330. Durometer is 75A (hard); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

Red sheets meet ASTM D2000 AA. They are made from FDA-listed material for use with food and beverage, except cut-to-length sheets.

High-Strength Sheets

- Color: Black
- Tensile Strength: 1,000 psi
- Temp. Range: -20° to 180°F

All meet ASTM D2000 AA. Durometer is 60A (medium hard); durometer tolerance is ±5. Width tolerance is ±0.125″.

Thick.	Thick. Tolerance	6″ Wide	Per Ft.	12″ Wide	Per Ft.
1/4″	±0.031″	86335K17	$4.30	86335K13	$7.13

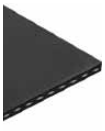
Fabric-Reinforced Abrasion-Resistant SBR Rubber Sheets



- Color: Black
- Tensile Strength: 400 psi (sheets); 1,300 psi (cut-to-length sheets)
- Temp. Range: -20° to 170°F (sheets); -30° to 170°F (cut-to-length sheets)

With one layer of polyester fabric for every 1/16″ of thickness, these sheets maintain their size and shape under heavy compression better than the nonreinforced abrasion-resistant SBR. Use them as flange gaskets. SBR (styrene butadiene rubber) is commonly called skirtboard.

Durometer tolerance is ±5. Sheets have a durometer of 70A (hard). They have width and length tolerances of ±0.250″. Cut-to-length sheets have a durometer of 65A (medium hard). They have a width tolerance of ±1″.

Abrasion-Resistant Polyurethane Rubber Balls

- Color: Black (unless noted)
- Tensile Strength: 5,600 psi
- Temp. Range: -20° to 200°F
- For use outdoors

Use these polyurethane balls as seals in pumps and check valves or let them bounce inside of vibrating sifters for an effective screen cleaner. They are made of polyurethane, which combines the shock absorbing qualities of rubber with the strength of plastic. Durometer is 95A (extra hard); durometer tolerance is ±5.

Abrasion-Resistant Rubber

For information about rubber and durometer hardness scales, see page 3588.

Food-Grade Abrasion-Resistant Natural Rubber Balls

- Color: White
- Tensile Strength: 3,000 psi
- Temperature Range: 0° to 180° F

Made from FDA-listed material for use with food and beverage, these balls serve as an effective screen cleaner when they bounce inside of vibrating sifters. Also use them as seals in pumps and check valves. Natural rubber is also known as gum rubber and latex rubber. All meet ASTM D2000 AA. Durometer is 45A (medium soft); durometer tolerance is ±5.

Dia.	Dia. Tolerance	Pkg. Qty.		Pkg.

2″	±0.016″	1	96385K68	5.76

Abrasion-Resistant Polyurethane Rubber Rods

Stronger than natural rubber, these polyurethane rods combine the shock-absorbing qualities of rubber with the tear resistance of plastic. Use them to seal narrow spaces such as channels.

Rods

- Color: Black or semi-clear amber
- Tensile Strength:
  min. 800 psi (40A durometer);
  min. 4,100 psi (60A);
  min. 6,350 psi (80A);
  min. 4,000 psi (90A);
  min. 5,600 psi (95A);
  min. 7,500 psi (75D)
- Temperature Range: -20° to 200° F
- For use outdoors

Durometer tolerance is ±5.
Black rods have a length tolerance of ±0.250″.
Semi-clear amber rods have a plus length tolerance.
To Order: Please specify durometer: 40A (medium soft), 60A (medium hard), 80A (hard), 90A (extra hard), 95A (extra hard), or 75D (extra hard),

Metric Rods

- Color: Semi-clear amber
- Tensile Strength: 5,500 psi
- Temperature Range: -10° to 200° F
- For use outdoors

Durometer is 80A (hard); durometer tolerance is ±5. Length has a plus tolerance.

Dia.	Dia. Tolerance	12″ Lg.	
5 mm	-0.250 mm to +0.500 mm	2656T57	$21.12
10 mm	-0.250 mm to +0.500 mm	2656T58	22.40

50 mm	-0.250 mm to +0.500 mm	2656T63	91.97

Super-Stretchable Abrasion-Resistant Natural Rubber Rods

- Color: Black
- Tensile Strength: 2,500 psi
- Temperature Range: -75° to 250°F

The thin profile seals narrow spaces such as channels and seams. Natural rubber will stretch up to six times its length. It is also known as gum rubber and latex rubber. Durometer is 40A (medium soft); durometer tolerance is ±5.

Abrasion-Resistant Polyurethane Rubber Tubes

- Color: Black or semi-clear amber
- Tensile Strength:
  2,000 psi (40A durometer);
  4,400 psi (60A);
  7,200 psi (80A);
  4,000 psi (90A);
  5,600 psi (95A);
  7,500 psi (75D)
- Temperature Range: -20° to 200°F
- For use outdoors

Use these tubes as jackets, seals, and insulation in areas where rubbing and scraping could cause wear. They are made of polyurethane, which combines the shock-absorbing qualities of rubber with the tear resistance of plastic.

Durometer tolerance is ±5. OD tolerance is -0.010″ to +0.020″ for 7/8″ to 2″ OD and up to -0.020″ to +0.040″ for 2 1/2″ to 4″ OD. ID tolerance is -0.020″ to +0.010″ for 1/4″ to 2″ ID and up to -0.030″ to +0.015″ for 2 1/4″ to 3″ ID . Length tolerance is +0.250″.

To Order: For 1″ long, 2″ long, 4″ long, and 12 1/2″ long tubes, please specify durometer: 80A (hard) and 95A (extra hard). For 6″ long and 36″ long tubes, please specify durometer: 40A (medium soft), 60A (medium hard), 80A (hard), 90A (extra hard), 95A (extra hard), or 75D (extra hard), unless noted.

■ Only available in 80A and 95A durometer.

Weather-Resistant EPDM Rubber Sheets and Strips

Sunlight, ozone, and water have little effect on these strips and sheets.

Strips

- Color: Black
- Tensile Strength: 1,000 psi
- Temperature Range: -40° to 225°F
- For use outdoors

The rubber meets ASTM D2000 BA. Durometer is 60A (medium hard); durometer tolerance is ±5. Strips have a width tolerance of +0.250″ and a plus length tolerance. **Adhesive-back** strips have an acrylic adhesive with a temperature range of -30° to 180°F.

Weather-Resistant EPDM Rubber Sheets and Strips *(Continued from previous page)*

Sunlight, ozone, and water have little effect on these strips and sheets.

Sheets

- Color: Black
- Tensile Strength: 1,000 psi
- Temperature Range: -40° to 225° F
- For use outdoors

All meet ASTM D2000 BA. Durometer is 60A; durometer tolerance is ±5. Sheets have a width tolerance of +0.500″ and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″. **Adhesive-back** sheets have an acrylic adhesive. Adhesive temperature range is -30° to 180° F, except 6×6″ sheets have an adhesive temperature range of -30° to 225° F.

Food-Grade Steam- and Weather-Resistant EPDM Rubber Sheets

- Color: Cream
- Tensile Strength: 800 psi
- Temperature Range: -40° to 220° F
- For use outdoors

Made from FDA-listed material for use with food and beverage, these EPDM sheets can be used in steamy environments. They resist sunlight, ozone, and water. Durometer is 40A (medium soft); durometer tolerance is ±5. Sheets have a width tolerance of +0.500″ and a plus length tolerance. 36″ wide sheets have a width tolerance of +1″.

To Order: For 36″ wide sheets, please specify length: 1 ft., 2 ft., 3 ft., 4 ft., 5 ft., 6 ft., 8 ft., or 10 ft.

Weather- and Chemical-Resistant Santoprene Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 600 psi
- Temperature Range: -50° to 275° F
- For use outdoors

A cross between plastic and rubber, Santoprene offers good resistance to weather and chemicals while retaining its stretchability. It is also known as thermoplastic and TPE. Durometer is 55A (medium); durometer tolerance is ±5. Strips have a width tolerance of +0.250″ and a plus length tolerance. Sheets have a width tolerance of +0.500″ and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″.

Weather-Resistant Airtight Butyl Rubber Sheets and Strips

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: -40° to 225° F
- For use outdoors

Often used as inner tubes, butyl rubber won't allow air, fumes, or gases to pass through. This butyl rubber, also known as isobutylene isoprene, resists sunlight, ozone, and water. All meet ASTM D2000 AA. Durometer is 60A (medium hard); durometer tolerance is ±5. Strips have a width tolerance of +0.250″ and a plus length tolerance. Sheets have a width tolerance of +0.500″ and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″. **Adhesive-back** strips and sheets have an acrylic adhesive with a temperature range of -30° to 180° F.

For information about rubber and durometer hardness scales, see page 3588.

High-Strength Weather-Resistant EPDM Rubber Sheets and Strips

With greater strength than standard Weather-Resistant EPDM Rubber, these strips and sheets provide better shock-absorbing qualities and longer life. They resist sunlight, ozone, and water.

Strips and Sheets

- Color: Black
- Tensile Strength:
  1,200 psi (40A durometer);
  1,500 psi (50A);
  1,800 psi (60A)
- Temperature Range: -55° to 300°F
- For use outdoors

Rubber is peroxide cured for increased temperature resistance. It meets ASTM D2000 CA. Durometer tolerance is ±5. Strips have a width tolerance of +0.250″ and a plus length tolerance. Sheets have a width tolerance of +0.500″ and a plus length tolerance. Cut-to-length sheets have a width tolerance of +1″.

To Order: Please specify durometer: 40A (medium soft), 50A (medium), or 60A (medium hard).

Sheets with Crisscross Texture

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: -40° to 240°F
- For use outdoors

A crisscross texture provides a nonslip gripping surface on both sides. All meet ASTM D2000 and MIL-R03065. Durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

To Order: Please specify durometer: 40A (medium soft), 60A (medium hard), or 80A (hard).

Fabric-Reinforced Weather-Resistant EPDM Rubber Sheets

- Color: Black
- Tensile Strength: 1,500 psi
- Temperature Range: -40° to 240°F
- For use outdoors

For every 1/16″ of thickness, there is one layer of super-strong fiberglass cloth that stands up to high stress and flex. Use these sheets as flange gaskets and anywhere heavy compression would squeeze nonreinforced EPDM out of place. EPDM resists sunlight, ozone, and water. All meet ASTM D2000 BA. Durometer is 50A (medium); durometer tolerance is ±5. Sheets have width and length tolerances of ±0.250″. Cut-to-length sheets have a width tolerance of ±0.250″.

Weather- and Chemical-Resistant Santoprene Rubber Rods

- Color: Black
- Tensile Strength: 750 psi
- Temperature Range: -75° to 250°F
- For use outdoors

Seal channels and other narrow spaces with these Santoprene rods. Santoprene, also known as thermoplastic and TPE, is a blend of rubber for stretchability and plastic for durability. It offers good resistance to sunlight, ozone, water, ethylene glycol, and detergent solutions. Durometer is 60A (medium hard); durometer tolerance is ±5.

Weather-Resistant EPDM Rubber Rods

- Color: Black
- Tensile Strength: 1,200 psi
- Temperature Range: -40° to 240°F
- For use outdoors

Resistant to sunlight, ozone, and water, these rods are sized to seal narrow spaces such as channels. All meet ASTM D2000 BA. Durometer is 60A (medium hard); durometer tolerance is ±5. Length tolerance is -0.250″ to +0.500″, except 36″ long rods have a length tolerance of ±1″.

About Foam

Foam is a rubber or plastic that is not completely solid—it contains cells of air. This makes it very lightweight and good for gasketing, sealing, and cushioning applications. Open-cell foam has cells that connect to one another, allowing gas, water, and air to be absorbed and pass through. Closed-cell foam has cells that are completely closed, restricting water, air, and gas from absorbing or passing through.

Material Sample Pack—Includes one individually marked piece of each of the materials marked with a ★ below. Each piece is approximately 4″×4″. Thicknesses range from 1/8″ to 1/2″.

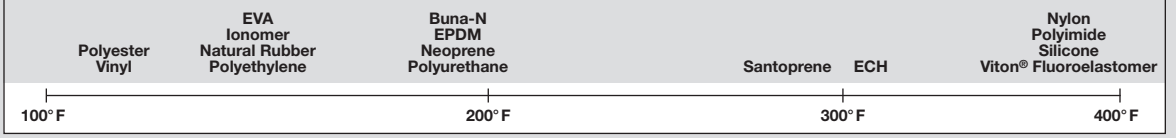
Maximum Temperature



Oil Resistance

A material's ability to maintain its physical properties when it comes in contact with petroleum-based fluids and resist absorption/swelling.

Excellent	Good
Blended Buna-N, Buna-N	ECH, EVA, Ionomer, Neoprene, Nylon, Polyethylene, Polyimide, Polyurethane, Viton® Fluoroelastomer

Weather Resistance

How well a material withstands exposure to sunlight, oxygen, and ozone without breaking down.

Excellent	Good
EPDM, Ionomer, Silicone	Blended Buna-N, Blended EPDM, ECH, EVA, Neoprene, Nylon, Polyethylene, Polyurethane, Santoprene, Vinyl, Viton® Fluoroelastomer

Recovery from Compression

The resilience of a material and its ability to return to its original shape after compression.

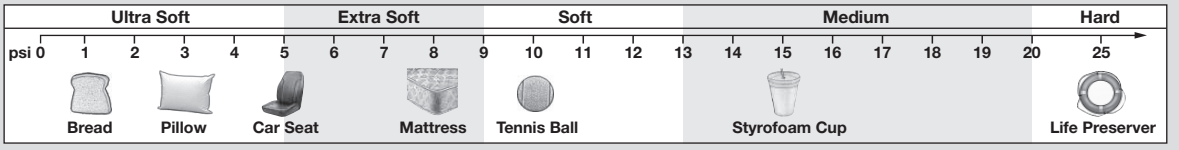
Excellent	Good
Ionomer, Natural Rubber, Polyurethane, Santoprene, Silicone	ECH, EPDM, EVA, Neoprene, Polyethylene, Polyimide, Viton® Fluoroelastomer

Hardness

The "Pressure to Compress 25%" rating is an indicator of material hardness. This rating is measured in pounds per square inch (psi). The higher the psi value, the harder the foam. Hardness is not a measure of how quickly foam will recover after compression.

Hardness Sample Pack—Includes six samples, one each of the following pressure to compress 25% ratings: 0.6 psi, 2-5 psi, 5-9 psi, 9-14 psi, 15-20 psi, and 30-60 psi. Sizes are 6″×6″. Thicknesses range from 1/32″ to 1/2″.

2172T11 ..... Pkg. $31.40



High-Temperature Foam

High-Temperature Super-Resilient Silicone Foam

- Color: Brown
- Temperature Range: -100° to 500° F
- Closed cell (restricts absorption)
- For use outdoors

This premium silicone is the most resilient foam we offer. It withstands repeated compression through a wide range of temperatures. It is equivalent to Cohrlastic and is also known as Norseal, polysiloxane, and silicone sponge.

Adhesive-Back Strips and Sheets—Crisscross Texture

- Pressure to Compress 25%: 9 psi (soft)
- Density: 29 lbs./cu. ft.

Foam meets ASTM D1056 2D3. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of 40° to 120° F. Width tolerance is ±0.063″. Length tolerance is ±1″.

For information about foam and foam hardness ratings, see page 3612.

Weather- and Abrasion-Resistant Blended EPDM Foam

- Color: Black
- Temperature Range: See below
- Closed cell (restricts absorption)
- For use outdoors

EPDM foam is blended with neoprene and SBR for good resistance to water, sunlight, and oxidation in areas where rubbing and scraping could cause wear on other foam.

Adhesive-Back Strips—Smooth Texture

- Temperature Range: -40° to 155° F
- Pressure to Compress 25%: 7 psi (extra soft)
- Density: 6 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2A2 and UL 94HF1. Material does not have a skin. Adhesive is rubber and has a temperature range of -10° to 150° F. Width tolerance is ±0.031″ for 1/4″ to 1″ widths, ±0.063″ for 1 1/4″ to 4″ widths, and ±0.094″ for 6″ width. Length tolerance is ±3″.

Weather-Resistant EPDM Foam

- Color: Black
- Temperature Range: See below
- Closed cell (restricts absorption), unless noted
- For use outdoors

Made of EPDM, this foam has the best resistance to water, sunlight, and oxidation of all the foam we offer.

Adhesive-Back Strips—Smooth Texture

- Temperature Range: -40° to 220° F
- Pressure to Compress 25%: 4 psi (ultra soft)
- Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2A1. Material does not have a skin. Adhesive is acrylic and has a temperature range of -20° to 200° F. Width tolerance is ±1/32″. Length tolerance is ±1 ft.

Thick.	Thick. Tolerance	Length	3/8″ Wide		1/2″ Wide		3/4″ Wide		1″ Wide

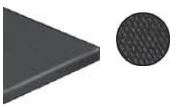
Sheets—Crisscross Texture



- Temperature Range: -20° to 200° F
- Open cell (absorbent)
- Pressure to Compress 25%: 7 psi (extra soft), 13 psi (medium)
- Density: Extra soft is 30 lbs./cu. ft. and medium is 35 lbs./cu. ft.

Material has a skin on the top and bottom. Sheets are 36″ wide. Width tolerance is +1″ for 1/8″ to 1/4″ thick foam and +3″ for 3/8″ and 1/2″ thick foam.

Thick.	Thick. Tolerance	Extra Soft		Medium	
			Per Ft.		Per Ft.

(Material continued on following page)

Weather-Resistant EPDM Foam *(Material continued from previous page)*

- Color: Black
- Temperature Range: See below
- Closed cell (restricts absorption)
- For use outdoors

Made of EPDM, this foam has the best resistance to water, sunlight, and oxidation of all the foam we offer.

Rods—Ultra-Smooth Texture

- Temperature Range: 0° to 165° F
- Pressure to Compress 25%: 11 psi (soft)
- Density: 21 lbs./cu. ft.

Foam meets ASTM D1056 2A3 and has a skin. Sold in 100-ft. lengths. Length tolerance is ±2 ft.

Dia.	Dia. Tolerance		
1/8"	±0.020"	8605K41	$17.31
1/4"	±0.032"	8605K42	23.52

Weather- and Oil-Resistant Neoprene Foam

- Color: Black
- Temperature Range: See below
- Closed cell (restricts absorption), unless noted
- For use outdoors

In addition to their good resistance to water, sunlight, and oxidation, these neoprene foam sheets and strips resist swelling when they come into contact with oil.

Strips—Ultra-Smooth Texture

- Temperature Range:
  Extra Soft: –40° to 212° F
  Medium: –70° to 200° F
- Pressure to Compress 25%:
  Extra Soft: 7 psi
  Medium: 13 psi
- Density:
  Extra Soft: 17 lbs./cu. ft.
  Medium: 16 lbs./cu. ft.

Material has a skin on the top and bottom.
Plain-back strips meet ASTM D1056 2C2. They have a width tolerance of ±0.080". Length tolerance is ±6".
Adhesive-back strips have an acrylic adhesive that has a temperature range of –30° to 212° F. Width tolerance for extra-soft strips is ±0.05"; for medium strips it is ±1/32". Length tolerance for extra-soft strips is ±1 ft.; for medium strips it is +10", -0".

Sheets—Crisscross Texture

- Temperature Range: –20° to 160° F
- Open cell (absorbent)
- Pressure to Compress 25%: 4 psi (ultra soft), 7 psi (extra soft)
- Density: Ultra soft is 27 lbs./cu. ft. and extra soft is 33 lbs./cu. ft.

Material has a skin on the top and bottom. **Plain-back** cut-to-length sheets meet ASTM D1056 1C1 and 1C2. They have a width tolerance of +3". **Adhesive-back** sheets have width and length tolerances of +3". Adhesive is acrylic and has a temperature range of 0° to 160° F.

Rods—Ultra-Smooth Texture

- Temperature Range: –40° to 150° F
- Density: 15 lbs./cu. ft.
- Pressure to Compress 25%: 10 psi (soft)

Use rods to seal and cushion narrow spaces, such as channels. Foam meets ASTM D1056 and has a skin for a sleek surface.

For information about foam and foam hardness ratings, see page 3612.

Weather-Resistant Ultra-Conformable Vinyl Foam

• Color: See below • Temperature Range: See below • Closed cell (restricts absorption) • For use outdoors

These vinyl foam sheets and strips are so conformable that once they're compressed they won't fully spring back. Use them to fill gaps and seal uneven surfaces. They offer excellent resistance to water, sunlight, and oxidation.

Adhesive-Back Strips—Ultra-Smooth Texture, unless otherwise stated

- Color: Black, gray, or yellow
- Temperature Range: -30° to 140° F, except yellow is 40° to 180° F
- Pressure to Compress 25%: Black is 4 psi (ultra soft), gray is 2.5 psi (ultra soft) for 25-, 50-, and 100-ft. lengths and 1.6 psi (ultra soft) for all other lengths, yellow is 2.5 psi (ultra soft)
- Density: Black is 12 lbs./cu. ft., gray and yellow are 7 lbs./cu. ft.

Thickness tolerance is ±20%. Width tolerance is ±1/32″ for 1/4″ to 1 1/4″ widths and ±3/32″ for 2″ to 6″ widths. Length tolerance is ±6″, except 3-ft. length has a tolerance of ±1/4″, and 60-ft. length has a tolerance of ±15″. Adhesive is acrylic and has a temperature range of 50° to 110° F. Material has a skin, except yellow does not have a skin and is smooth.

Food-Grade Adhesive-Back Strip—Wrinkled Texture

- Color: White
- Temperature Range: -15° to 160° F
- Pressure to Compress 25%: 0.5 psi (ultra soft)
- Density: 8 lbs./cu. ft.

Foam, but not adhesive, meets NSF/ANSI Standard 51 for food contact. Material has a skin. Adhesive is acrylic and has a temperature range of -15° to 160° F. Length tolerance is ±2″. Strip is 25 feet long.

Thick.	Thick. Tolerance	Width	Width Tolerance		
1/8″	±0.013″	3/8″	±0.038″	1812T21	$24.69

Sheets—Ultra-Smooth Texture

- Color: Gray
- Temperature Range: -30° to 160° F
- Pressure to Compress 25%: 5 psi (extra soft)
- Density: 9 lbs./cu. ft.

Material has a skin on the top. Width tolerance is ±2″. Length tolerance is ±1″. Adhesive is acrylic and has a temperature range of -20° to 160° F.

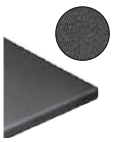
Wear-Resistant Natural Gum Foam

• Color: Black • Temperature Range: -20° to 160° F • Open cell (absorbent) • For use outdoors

Because this natural rubber foam readily bounces back to shape after compression, it's a good choice for repetitive sealing applications, such as on doors.

Sheets—Crisscross Texture



- Pressure to Compress 25%: 4 psi (ultra soft), 8 psi (extra soft), 13 psi (medium)
- Density: Ultra soft is 22 lbs./cu. ft., extra soft is 26 lbs./cu. ft., medium is 30 lbs./cu. ft.

Foam meets MIL-C-3133 and MIL-STD-670. Material has a skin on the top and bottom. Width tolerance is +3″.

To Order: Please specify length and hardness: ultra soft, extra soft, medium.

Thick.	Thick. Tolerance	36″ Wide Per Ft.		Thick.	Thick. Tolerance	36″ Wide Per Ft.

Wear-Resistant Foam

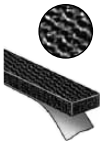
For information about foam and foam hardness ratings, see page 3612.

Wear-Resistant Natural Gum Foam *(Continued from previous page)*

• Color: Black • Temperature Range: -20° to 160° F • Open cell (absorbent) • For use outdoors

Because this natural rubber foam readily bounces back to shape after compression, it's a good choice for repetitive sealing applications, such as on doors.

Adhesive-Back Strips—Crisscross Texture



• Pressure to Compress 25%: 7 psi (extra soft) • Density: 26 lbs./cu. ft.

Material does not have a skin. Adhesive is acrylic and has a temperature range of -20° to 160° F. Width tolerance is ±0.03″ for 1/4″ to 1 1/2″ widths and ±0.09″ for 2″ to 6″ widths. Length tolerance is ±3″.

Wear-Resistant Quick-Recovery Polyurethane Foam

• Color: Black • Temperature Range: -40° to 190° F • Open cell (absorbent) • For use outdoors

Even after extended compression, these high-performance polyurethane foam sheets and strips bounce back to shape faster than any other foam we offer. Use them to seal out dust and particles.

Sheets and Strips—Ultra-Smooth Texture

• Pressure to Compress 25%: 3 psi (ultra soft), 6 psi (extra soft), 11 psi (soft), 18 psi (medium), 45 psi (hard)

• Density: Ultra soft, extra soft, and soft are 15 lbs./cu. ft., medium is 20 lbs./cu. ft., and hard is 30 lbs./cu. ft.

Foam, but not adhesive, meets UL 94HBF. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -40° to 190° F. Sheets have width and length tolerances of ±1″. Strips have a width tolerance of ±1/16″ and a length tolerance of ±1 ft.

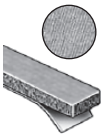
For information about foam and foam hardness ratings, see page 3612.

High-Temperature Resilient Silicone Foam

• Color: See below • Temperature Range: –60° to +390°F, unless noted • For use outdoors

These sheets and strips will bounce back to shape, even after extended compression. Made of silicone foam, also known as polysiloxane, they'll maintain their flexibility across a wide range of temperatures.

Adhesive-Back Strips—Crisscross Texture



• Color: Gray
• Pressure to Compress 25%: 4 psi (ultra soft)
• Open cell (absorbent)
• Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets UL 94V0. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -20° to 325°F. Width tolerance is ±1/16". Length tolerance is ±18", except length tolerance for 1/8" thick strips is ±36".

Thick.	Thick. Tolerance	Length	½" Wide		¾" Wide		1" Wide		2" Wide	
1/16"	±0.016"	30 ft.	93415K31	$44.05	93415K33	$60.81	93415K35	$81.48	93415K37	$138.89

Low-Absorbent Sheets and Strips—Ultra-Smooth Texture

• Color: Gray
• Temperature Range: -65° to 400°F
• Closed cell (restricts absorption)
• Pressure to Compress 25%: 7 psi (extra soft), 10 psi (soft), 16 psi (medium)
• Density: Extra soft is 18 lbs./cu. ft., soft is 24 lbs./cu. ft., medium is 29 lbs./cu. ft.

Soft foam, but not adhesive, meets AMS 3195. Medium foam, but not adhesive, meets AMS 3196. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -30° to 220°F. Width and length tolerances are ±5/16" for 12"×12" sheets, ±11/16" for 24"×24" sheets, and ±1" for 36"×36" sheets and all strips.

To Order: For sheets, please specify extra soft, soft, or medium. Strips are available only in extra soft.

Hardness Selector Pack—Includes three 6"×6" sheets, one of each hardness rating: extra soft, soft, and medium. Thicknesses range from 1/8" to 1/2".

Absorbent Sheets—Ultra-Smooth Texture

• Color: White • Open cell (absorbent) • Pressure to Compress 25%: 3 psi (ultra soft) • Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets UL 94HF1 and UL 94V0, except 1/16" and 3/32" thick foam, which only meet UL 94HF1. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -25° to 300°F. Width and length tolerances are ±1/8" for 6"×6" and 12"×12" sheets and +1", -1/4" for 24"×24" and 36"×36" sheets. Cut-to-length sheets have a width tolerance of ±1/4". **To Order:** For cut-to-length sheets, please specify length: 1, 2, 3, 4, 5, 6, 7, or 10 ft.

Sheets with Aluminized Face—Ultra-Smooth Texture

• Color: White • Open cell (absorbent) • Pressure to Compress 25%: 3 psi (ultra soft) • Density: 12 lbs./cu. ft.

A 0.004" thick piece of aluminized fiberglass on this silicone foam reflects radiant heat to protect sensitive equipment. These sheets have a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -25° to 300°F. Width and length tolerances are ±1/8" for 12"×12" sheets and +1", -1/4" for 24"×24" and 36"×36" sheets. Cut-to-length sheets have a width tolerance of +1", -1/4".

High-Temperature Foam

For information about foam and foam hardness ratings, see page 3612.

High-Temperature Silicone Foam

• Color: See below • Temperature Range: See below • Closed cell (restricts absorption) • For use outdoors

Made of silicone, also called polysiloxane, these foam sheets and strips maintain their flexibility across a wide range of temperatures.

Adhesive-Back Strips—Ultra-Smooth Texture

• Color: Orange
• Temperature Range: –100° to 400°F
• Pressure to Compress 25%: 10 psi (soft)
• Density: 39 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2D3. Material has a skin. Adhesive is acrylic and has a temperature range of -20° to 180°F. Width tolerance is ±0.15″. Length tolerance is ±3″ for 3-ft. lengths and ±6″ for 15-ft. lengths.

Thick.	Thick. Tolerance	Length	1/4″ Wide		3/8″ Wide		1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide

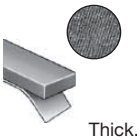
Adhesive-Back Strips—Crisscross Texture



• Color: Orange
• Temperature Range: –100° to 500°F
• Pressure to Compress 25%: 10 psi (soft)
• Density: 29 lbs./cu. ft.

Material has a skin on the top and bottom. Adhesive is silicone and has a temperature range of -100° to 500°F. Width tolerance is ±0.15″. Length tolerance is +6″.

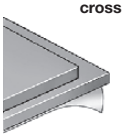
Sheets—Smooth and Crisscross Texture

Smooth

Crisscross



• Color: Red
• Temperature Range: –85° to 400°F
• Pressure to Compress 25%: 3 psi (ultra soft), 7 psi (extra soft), 12 psi (soft), 18 psi (medium)
• Density: Smooth texture: ultra soft is 12 lbs./cu. ft., extra soft is 20 lbs./cu. ft.;
Crisscross texture: extra soft is 32 lbs./cu. ft., soft is 35 lbs./cu. ft., medium is 45 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2D0, 2D1, and 2D2 for smooth texture and ASTM D1056 2D2, 2D3, and 2D4 for crisscross texture. Adhesive is acrylic and has a temperature range of –40° to 250°F. Width and length tolerances are ±1% for sheets with a smooth texture and ±1″ for sheets with crisscross texture. Sheets with crisscross texture have a skin on the top and bottom.

To Order: For smooth texture sheets, please specify ultra soft or extra soft. For crisscross texture sheets, please specify extra soft (except 1/16″ thick), soft, or medium.

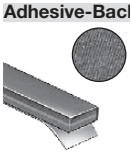
Fabric-Reinforced High-Temperature Silicone Foam

• Color: Gray • Temperature Range: -100° to 500°F • Closed cell (restricts absorption) • For use outdoors

Fiberglass fabric inside of this foam provides strength to handle high-stress applications, such as gaskets. Silicone, also known as polysiloxane, will maintain its flexibility across a wide range of temperatures.

Adhesive-Back Strips—Crisscross Texture



• Pressure to Compress 25%: 12 psi (soft)
• Density: 35 lbs./cu. ft.

Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -20° to 325°F. Width tolerance is ±1/16″. Length tolerance is +6″.

Thick.	Thick. Tolerance	Length	1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide

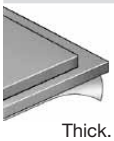
High-Temperature Food-Grade Silicone Foam

• Color: Gray • Temperature Range: –65° to 390° F • Open cell (absorbent) • For use outdoors

These silicone foam sheets are made from FDA-listed materials for use with food. Silicone, also called polysiloxane, maintains its flexibility across a wide range of temperatures.

Sheets—Ultra-Smooth Texture



• Pressure to Compress 25%: 10 psi (soft) • Density: 22 lbs./cu. ft.

Foam meets AMS 3195. Material has a skin on the top and bottom. Adhesive is acrylic and has a temperature range of -25° to 300° F. Width and length tolerances are ±1/8″ for 12″×12″ sheets, ±7/32″ for 24″×24″ sheets, and ±1/4″ for 36″×36″ sheets.

High-Temperature Fire-Retardant Silicone Foam

• Color: Gray • Temperature Range: –85° to 400° F • Closed cell (restricts absorption) • For use outdoors

Prevent the spread of flames with these self-extinguishing silicone foam sheets. Silicone, also called polysiloxane, maintains its flexibility across a wide range of temperatures.

Sheets—Smooth Texture

• Pressure to Compress 25%: 3 psi (ultra soft) • Density: 12 lbs./cu. ft.

Foam, but not adhesive, meets UL 945VA; it also meets UL 94V0, except 1/4″ thick sheets meet UL 94V1 instead. Adhesive is acrylic and has a temperature range of -50° to 275° F. Width and length tolerances are ±1%.

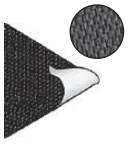
Fabric-Faced Wear-Resistant Natural Gum Foam

- Color: Black
- Temperature Range: –20° to 160° F
- Open cell (absorbent)
- For use outdoors

The original mouse pad material. These natural rubber foam sheets have a crisscross-textured skin on one side for a nonslip gripping surface with a layer of polyester fabric on the other side that allows objects to smoothly slide across it.

Sheet—Crisscross Texture



• Pressure to Compress 25%: 8 psi (extra soft)
• Density: 26 lbs./cu. ft.

Width tolerance is +3″.

Thick.	Thick. Tolerance	54″ Wide	Per Ft.
1/8″	±0.015″	1805T32	$13.33

Fabric-Covered Wear-Resistant Neoprene Foam

- Color: Black
- Temperature Range: 15° to 150° F
- Closed cell (restricts absorption)
- For use outdoors

Just like the material found in wetsuits, these neoprene foam sheets are encased in nylon fabric for additional protection from wear caused by rubbing and abrasion.

Sheets—Smooth Texture

• Pressure to Compress 25%: Not Rated
• Density: 11 lbs./cu. ft.

Width tolerance is -2 1/2″ to +5 1/8″. Length tolerance is ±4 1/4″ for 83″ long sheets and ±6 1/2″ for 130″ long sheets.

Thick.	Thick. Tolerance	51″ Wd. × 83″ Lg.		51″ Wd. × 130″ Lg.

0.260″	±0.020″	1580T4	142.55	1580T7	160.62

Chemical-Resistant & Oil-Resistant Foam

For information about foam and foam hardness ratings, see page 3612.

Ultra-Chemical-Resistant Viton® Fluoroelastomer Foam

• Color: Black • Temperature Range: -10° to 400°F • Closed cell (restricts absorption) • For use outdoors

Offering excellent resistance to corrosive environments, these sheets stand up to a wide range of chemicals, fuels, and oils at high temperatures. Viton® fluoroelastomer is also known as FKM.

Sheets—Ultra-Smooth Texture

• Pressure to Compress 25%: Not Rated • Density: Not Rated

Sheets have a skin on top and bottom. Width and length tolerances are ±0.250″, except 6″×6″ sheets have width and length tolerances of ±0.156″.

Thick.	Thick. Tolerance	6″×6″		12″×12″		12″×24″	
1/8″	±0.050″	3156T33	$47.36	3156T13	$157.87	3156T23	$263.11

Oil-Resistant Buna-N Foam

• Color: Black
• Temperature Range: -40° to 200°F
• Closed cell (restricts absorption)
• For use outdoors

These Buna-N foam sheets resist fuel, oil, and solvents. Buna-N is also known as nitrile, NBR, and acrylonitrile butadiene.

Sheets—Smooth Texture

• Pressure to Compress 25%: 4 psi (ultra soft) • Density: 14 lbs./cu. ft.

All meet ASTM D1056 2B1. Material does not have a skin. Width tolerance is ±1.250″, and length tolerance is ±2″.

Thick.	Thick. Tolerance	40″×68″	
1/16″	±0.030″	1887T32	$54.93

1″	±0.090″	1887T48	478.38

Oil-Resistant Fire-Retardant Blended Buna-N Foam

• Color: Black • Temperature Range: -40° to 200°F • Closed cell (restricts absorption) • For use outdoors

Buna-N is blended with neoprene and vinyl for an oil-resistant foam that will char when exposed to flames to prevent melting, dripping, and the possibility of spreading fire.

Adhesive-Back Strips—Coarse Texture

• Pressure to Compress 25%: 4 psi (ultra soft) • Density: 5 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2C1 and UL 94HF1. Material does not have a skin. Adhesive is acrylic and has a temperature range of -40° to 200°F. Width tolerance is ±0.063″. Length tolerance is ±18″.

Thick.	Thick. Tolerance	Lg., ft.	3/8″ Wide		1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide

Oil-Resistant High-Temperature ECH Foam

• Color: Black • Temperature Range: -20° to 300°F • Closed cell (restricts absorption) • For use outdoors

Equally resistant to oil as Buna-N foam, this ECH foam also stands up to hot environments.

Sheets—Smooth Texture

• Pressure to Compress 25%: 4 psi (ultra soft); 7 psi (extra soft); 11 psi (soft) • Density: 15 lbs./cu. ft. (extra soft and ultra soft); 18 lbs./cu. ft. (soft)

Material does not have a skin. Width and length tolerances are ±1.500″. **Ultra-soft** sheets meet ASTM D1056 2B1; **extra-soft** sheets meet ASTM D1056 2B2; and **soft** sheets meet ASTM D1056 2B3.

Thick.	Thick. Tolerance	37″×47″: Ultra Soft		Extra Soft		35″×45″: Soft

Oil-Resistant, High-Temperature & Super-Cushioning Foam

For information about foam and foam hardness ratings, see page 3612.

High-Strength Oil-Resistant Blended Buna-N Foam

- Color: Black, except soft strips are gray
- Temperature Range: See below
- Closed cell (restricts absorption)
- For use outdoors

A blend of Buna-N and vinyl gives these strips oil resistance with enhanced strength.

Adhesive-Back Strips—Coarse and Smooth Texture

- Temperature Range: –20° to 175° F
- Pressure to Compress 25%: 3 psi (ultra soft); 12 psi (soft)
- Density: 5 lbs./cu. ft. (ultra soft); 13 lbs./cu. ft. (soft)

Material does not have a skin. Adhesive is acrylic and has a temperature range of –20° to 175° F. Width tolerance is ±0.063″. Length tolerance is ±30″. **Ultra-soft** strips meet ASTM D1056 2C1. **Soft** strips meet ASTM D1056 2C3/2C4.

Weather- and Chemical-Resistant Santoprene Foam

- Color: Black
- Temperature Range: –50° to 275° F
- Closed cell (restricts absorption)
- For use outdoors

With good resistance to water, sunlight, and oxidation, these Santoprene foam rods offer better chemical resistance than EPDM foam. Use them to seal and cushion narrow spaces, such as channels.

Rods—Ultra-Smooth Texture

- Pressure to Compress 25%: 4 psi (ultra soft)
- Density: 28 lbs./cu. ft.

Foam has a skin. **To Order:** Please specify length: 5, 10, 25, 50, or 100 ft.

Dia.	Dia. Tolerance		Per Ft.	Dia.	Dia. Tolerance		Per Ft.
1/8″	±0.016″	6322K11	$0.21	3/8″	±0.027″	6322K13	$0.77

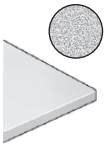
High-Temperature Lightweight Polyimide Foam

- Color: Yellow
- Temperature Range: –300° to 400° F
- Open cell (absorbent)

This polyimide foam is lighter in weight than silicone and remains soft and conformable across a broader temperature range.

Sheets—Coarse Texture



- Pressure to Compress 25%: 1.3 psi (ultra soft)
- Density: 0.4 lbs./cu. ft.

Foam meets ASTM E84 0/5 for flame and smoke. Material does not have a skin. Width and length tolerances are ±0.156″.

Thick.	Thick. Tolerance	24″ Wd. × 48″ Lg.		Thick.	Thick. Tolerance	24″ Wd. × 48″ Lg.

High-Temperature Weather-Resistant Silicone Foam

- Color: Red
- Temperature Range: –100° to 500° F
- Closed cell (restricts absorption)
- For use outdoors

Even after exposure to sunlight, oxygen, rain, and snow, these silicone foam strips remain flexible. Silicone is also known as polysiloxane.

Adhesive-Back Strips—Ultra-Smooth Texture

- Pressure to Compress 25%: 9 psi (soft)
- Density: 39 lbs./cu. ft.

Foam, but not adhesive, meets ASTM D1056 2D3. Strips have an ultra-smooth texture with a skin on the top and the bottom. Adhesive is acrylic and has a temperature range of –20° to 180° F. Width tolerance is ±1/2″, except 1/4″ wide strips have a width tolerance of ±0.063″ and 1/2″ wide strips have a width tolerance of ±0.188″. Length tolerance is ±6″ for 10-ft. lengths and ±3″ for 3-ft. lengths.

Super-Cushioning Polyester Foam Mesh

- Color: Black, white, or beige
- Temperature Range: –20° to 140° F
- Closed cell (restricts absorption)

There are hundreds of cushioning pillows in every foot of this pliable mesh. It's often used as a protective liner in drawers and cabinets and anywhere a nonskid surface is required. Sheets are washable and moisture and bacteria resistant. **To Order:** Please specify length in 5-ft. increments.

Thick.	Wd.	Black		White		Beige	
			Per Ft.		Per Ft.		Per Ft.

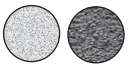
Super-Cushioning Polyurethane Foam

- Color: Gray, unless otherwise stated
- Temperature Range: -20° to 180°F, unless otherwise stated
- Open cell (absorbent)

This foam provides gentle cushioning support better than other types of foam. It is commonly used for packing and insulating.

Sheets—Smooth and Coarse Texture



Smooth Coarse

- Color: Gray or white (plain back); gray (adhesive back)
- Pressure to Compress 25%: Gray is 1.1 psi (ultra soft); white is 0.6 psi (ultra soft)
- Density: 2 lbs./cu. ft. (gray); 2.8 lbs./cu. ft. (white)

Material does not have a skin. Sheets have width and length tolerances of ±0.500″; cut-to-length sheets have a width tolerance of ±0.500″. **Adhesive-back** sheets have an acrylic adhesive with a temperature range of -20° to 180°F.

To Order: For plain-back sheets, please specify color: gray or white.

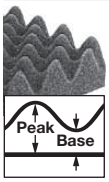
Egg-Crate Sheets—Smooth Texture



- Pressure to Compress 25%: 0.6 psi (ultra soft)
- Density: 1.5 lbs./cu. ft.

The contoured peaks gently cushion objects and damp vibration. This polyurethane foam is commonly used for packing and insulating. These sheets come nested together in a set of two. Material does not have a skin. Width and length tolerances are ±0.250″.

Peak Height	Base Height	18″×24″		24″×36″	
2″	1/2″	85365K43	$28.71	85365K47	$45.57

Cubed Sheets—Smooth Texture

- Pressure to Compress 25%: Not Rated
- Density: 1.6 lbs./cu. ft.

Also called plucking foam, these scored foam sheets allow you to pull out individual cubes for a custom-shaped cushion. Material does not have a skin. Thickness tolerance is ±0.125″. Cubes have width and depth tolerances of ±0.125″.

Thick.	Cube Wd.	Cube Dp.	No. of Cubes	12″×12″	
1″	5/8″	5/8″	361	3157T21	$6.77
				24″×24″

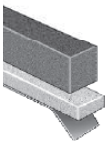
Square Bars and Strips—Smooth Texture



- Color: Gray (square bars); white (strips)
- Temperature Range: -20° to 180°F, except min. temperature for strips is not rated
- Pressure to Compress 25%: Square bars are 0.3 psi (ultra soft); strips are not rated
- Density: Square bars are 1 lb./cu. ft.; strips are not rated

Material does not have a skin. **Square bars** have a thickness and width tolerance of ±0.063″, and a length tolerance of ±0.250″. **Adhesive-back strips** have an acrylic adhesive with a maximum temperature of 110°F.

Rods—Smooth Texture

- Pressure to Compress 25%: 0.3 psi (ultra soft)
- Density: 1 lb./cu. ft.

Use these rods to gently cushion narrow spaces, such as channels. Material does not have a skin. Length tolerance is ±0.063″, except 36″ long rods have a length tolerance of ±0.250″.

Super-Cushioning Fire-Retardant Polyurethane Foam

- Color: Gray
- Temperature Range: See below
- Open cell (absorbent)

When these strips and sheets are exposed to flames, the surface chars to create a protective barrier that prevents melting, dripping, and the possibility of spreading fire. This foam provides gentle cushioning support better than other types of foam. It is commonly used for packing and insulating.

Strips—Smooth Texture

- Temperature Range: -20° to 200° F
- Pressure to Compress 25%: 0.8 psi (ultra soft)
- Density: 2 lbs./cu. ft.

The foam meets UL 94HF1. Material does not have a skin. Strips have a width tolerance of ±0.0313″ and a length tolerance of ±5″. **Adhesive-back** strips have a rubber adhesive with a temperature range of 0° to 140° F.

Cut-to-Length Sheets—Smooth Texture

- Temperature Range: -40° to 225° F
- Pressure to Compress 25%: 0.7 psi (ultra soft)
- Density: 2 lbs./cu. ft.

Foam, but not adhesive, meets UL 94HF1. Material does not have a skin. Width tolerance is ±2″. **Adhesive-back** sheets have a rubber adhesive with a temperature range of -20° to 180° F.

Thick.	Thick. Tolerance	Wd.	Plain Back Per Ft.		Adhesive Back Per Ft.

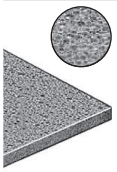
Super-Cushioning Ultra-Conformable Polyurethane Foam

- Color: Blue, green, pink, or yellow
- Temperature Range: 50° to 120° F
- Open cell (absorbent)

Commonly called memory foam and Confor, these sheets have the best cushioning qualities of all the foam we offer. They take several seconds to recover from compression, but maintain their resiliency over time.

Sheets—Coarse Texture



- Pressure to Compress 25%: Not Rated
- Density: 6 lbs./cu. ft.

Material does not have a skin. Width and length tolerances are ±0.250″.

To Order: Please specify color: blue, green, pink, or yellow.

Thick.	Thick. Tolerance	12″×12″		18″×20″		20″×36″	
1/4″	±0.062″	86195K31	$7.12	86195K51	$16.22	86195K11	$27.69

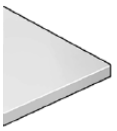
Super-Absorbent Polyurethane Foam

- Color: Blue
- Temperature Range: -20° to 180° F
- Open cell (absorbent)

Similar to a sponge, these open-cell foam sheets can absorb and hold up to 30 times their weight in liquid. This polyurethane material is also known as Aquazone.

Sheets—Smooth Texture



- Pressure to Compress 25%: 0.6 psi (ultra soft)
- Density: 1.8 lbs./cu. ft.

Material does not have a skin. Width and length tolerances are ±0.125″.

Thick.	Thick. Tolerance	12″×12″		24″×24″		48″×48″

Super-Cushioning Foam

For information about foam and foam hardness ratings, see page 3612.

Super-Cushioning Ultra-Conformable Antistatic Polyurethane Foam

- Color: Pink
- Temperature Range: -20° to 180° F
- Open cell (absorbent)

Protect sensitive equipment from damage. In addition to providing gentle cushioning support, these sheets conduct static electricity away with a surface resistivity of 10^{11} ohms. They are commonly used for packing and insulating.

Sheets—Smooth Texture

- Pressure to Compress 25%: 0.3 psi (ultra smooth)
- Density: 1.4 lbs./cu. ft.

Material does not have a skin. Thickness tolerance is ±0.031″ for 1/8″ and 1/4″ thick sheets, ±0.063″ for 3/8″ to 3/4″ thick sheets, and ±0.125″ for 1″ and 1 1/2″ thick sheets. Width and length tolerances are ±0.125″.

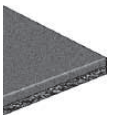
Super-Cushioning Laminated Polyurethane Foam

- Color: Black
- Temperature Range: -20° to 160° F
- Polyurethane face is open cell (absorbent); polyethylene backing is closed cell (restricts absorption)

Gently cushion shock and reduce vibration with this dual-material foam. These sheets are often used for packing and insulating.

Sheets—Smooth and Coarse Texture



- Pressure to Compress 25%: polyurethane side is 1 psi (ultra soft); polyethylene side is 9 psi (soft)
- Density: 2 lbs./cu. ft.

Material does not have a skin. Thickness tolerance is ±0.063″. Width and length tolerances are ±0.125″. The polyurethane side has a smooth texture; the polyethylene side has a coarse texture.

Thick.	12″ × 12″		24″ × 24″		24″ × 48″	
1″	85105K15	$11.92	85105K35	$39.75	85105K55	$66.25

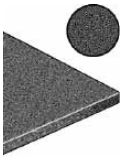
Super-Cushioning Chemical-Resistant Polyethylene Foam

- Color: See below
- Temperature Range: -20° to 160° F
- Closed cell (restricts absorption)
- For use outdoors

Cushion objects while protecting them from chemicals and moisture. This material, also known as Ethafoam, provides gentle cushioning support better than other types of foam. It is commonly used for packing and insulating.

Sheets—Coarse Texture



- Color: Blue, gray, or white
- Pressure to Compress 25%: Blue is 7 psi (extra soft); gray and white are 9 psi (soft)
- Density: Blue is 1.8 lbs./cu. ft.; gray and white are 2.2 lbs./cu. ft.

Material does not have a skin. Thickness tolerance is ±0.063″, except 48″ × 54″ sheets have a ±0.375″ thickness tolerance. Width and length tolerances are ±1″. **Laminated sheets** have a 1/4″ layer of soft, gray foam, so they hold their shape longer and bounce back faster than nonlaminated sheets.

Adhesive-Back Strips—Ultra-Smooth Texture

- Color: White
- Pressure to Compress 25%: 5 psi (extra soft)
- Density: 2 lbs./cu. ft.

Strips have a skin on the top with an ultra-smooth texture for a sleek surface. Adhesive is rubber and has a temperature range of 0° to 150° F. Thickness tolerance is ±0.019″, except 1/4″ thick strips have a ±0.025″ thickness tolerance. Width tolerance is ±0.313″. Length tolerance is +12″.

Super-Cushioning Antistatic Polyethylene Foam

- Color: Pink
- Temperature Range: -20° to 160° F
- Closed cell (restricts absorption)

These foam sheets divert static electricity with a surface resistivity of 10^{12} ohms. Use them to protect sensitive equipment from damage. This foam provides gentle cushioning support better than other types of foam.

Sheets—Smooth Texture

- Pressure to Compress 25%: 9 psi (soft)
- Density: 2.2 lbs./cu. ft.

Material does not have a skin. Width and length tolerances are ±0.125″.

Super-Cushioning Polyethylene Foam

- Color: See below
- Temperature Range: See below
- Closed cell (restricts absorption)
- For use outdoors

This foam provides gentle cushioning support better than other types of foam. It's commonly used for packing and insulating.

Food-Grade Sheets—Ultra-Smooth Texture

- Color: Black or white
- Temperature Range: -110° to 155° F
- Pressure to Compress 25%: 5 psi (extra soft); 9 psi (soft)
- Density: 2 lbs./cu. ft. (extra soft); 4 lbs./cu. ft. (soft)

Made from FDA-listed material for use with food and beverage. Sheets have an ultra-smooth texture with a skin on the top and the bottom for a sleek surface. Thickness tolerance is ±15% and width tolerance is ±1″. 24″×24″ and 36″×54″ sheets have a length tolerance of ±1″. **Adhesive-back** sheets have a rubber adhesive with a temperature range of 0° to 140° F.

To Order: Please specify color: black or white. For 54″ wide sheets, please also specify length: 2 ft., 4 ft., 6 ft., 8 ft., 10 ft., or 25 ft.

Ultra-Strength Wear- and Weather-Resistant Ionomer Foam

- Color: See below
- Temperature Range: -85° to 175° F
- Closed cell (restricts absorption)
- For use outdoors

Exceptionally strong, these lightweight ionomer foam sheets offer excellent resistance to impact, UV light, and water. They stand up to wear caused by rubbing and scraping and are often used as bumpers and buoys.

Sheets—Coarse Texture

- Pressure to Compress 25%: 11 psi (soft); medium not rated
- Density: 3 lbs./cu. ft. (soft); 4 lbs./cu. ft. (medium)

Material does not have a skin. Thickness tolerance is ±0.05″. Width and length tolerances are ±0.500″.

Hardness	Thick.	Color	24″×24″		48″×50″

Super-Cushioning High-Strength EVA Foam

- Color: Black
- Temperature Range: -70° to 160° F
- Closed cell (restricts absorption)
- For use outdoors

Often used as padding in helmets, gloves, and boots, these super-strong EVA foam sheets lessen impact and resist tearing better than other types of foam.

Sheets—Smooth Texture

- Pressure to Compress 25%: 4 psi (ultra soft)
- Density: 2 lbs./cu. ft.

Material does not have a skin. Width and length tolerances are ±0.125″.

Chemical-Resistant Nylon Foam

- Color: Gray
- Temperature Range: -40° to 400° F
- Closed cell (restricts absorption)
- For use outdoors

Made of nylon, these foam sheets offer good resistance to a wide range of chemicals, fuels, and oils at high temperatures.

Sheets—Smooth Texture

- Pressure to Compress 25%: 28 psi (hard)
- Density: 3 lbs./cu. ft.

Material does not have a skin. Thickness tolerance is ±0.033″. Width and length tolerances are ±0.125″.

About Plastics

Use the charts below to identify the best plastic for your application. Circles indicate that a majority of a material's shapes and sizes meet the applicable rating. Blank boxes indicate a poor rating or no rating. Information is intended for comparison only and is given without obligation or liability.

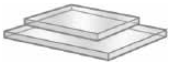
Impact-Resistant Polycarbonate

At only half the weight of glass, this material maintains excellent clarity and impact strength over a wide temperature range. It's comparable to Lexan, Hyzod, Tuffak, and Makrolon. Use it for windows, instrument gauge covers, machine guards, and signs.

Sheets



- Color: Clear
- Temp. Range: –40° to 180°F
- Tensile Strength: Good
- Impact Strength: Excellent

Sheets have greater impact strength than Plexiglas® acrylic and can be used in similar applications. Width and length tolerances are -1/4" to +5/8", except 6"x6" and 6"x12" are +1/4". Can be used outdoors (except FDA-compliant sheets, which are for indoor use only). All sheets are UL 972 rated as burglar resistant. 1/16" to 3/16" thick sheets meet UL 94V2 for flame retardance. 1/4" to 2" thick sheets meet UL 94V0 for flame retardance.

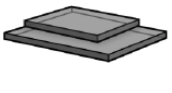
Tinted Sheets



- Color: Semi-clear bronze or gray
- Temp. Range: –40° to 180°F
- Tensile Strength: Good
- Impact Strength: Excellent

Tint reduces light transmission up to 50%. Width and length tolerances are -1/4" to +5/8". Can be used outdoors. All sheets are UL 972 rated as burglar resistant. 1/8" and 3/16" thick sheets meet UL 94V2 for flame retardance. 1/4" thick sheets meet UL 94V0 for flame retardance.

To Order: Please specify color.

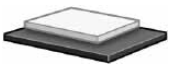
Colored Sheets



- Color: Black or white
- Temp. Range: –40° to 180°F
- Tensile Strength: Good
- Impact Strength: Good

Black sheets have width and length tolerances of +1/2", except 3"x3" and 6"x6" sheets are ±1/8". Meet UL 94HB for flame retardance.

White sheets have width and length tolerances of ±1/2". Can be used outdoors. They are UL 972 rated as burglar resistant.

(Material continued on following page)

Impact-Resistant Polycarbonate *(Material continued from previous page)*

At only half the weight of glass, this material maintains excellent clarity and impact strength over a wide temperature range. It's comparable to Lexan, Hyzod, Tuffak, and Makrolon. Use it for windows, instrument gauge covers, machine guards, and signs.

Film

- Color: Clear or semi-clear
- Temp. Range: Not rated
- Tensile Strength: Good
- Impact Strength: Excellent

Width and length tolerances are ±5/8″. Can be used outdoors. *Smooth sides* have a clear gloss finish. *Textured sides* have a semi-clear matte finish, which diffuses light and masks scratches, scuffs, and fingerprints.

Rectangular Bars

- Color: Clear
- Temp. Range: –40° to 180°F, except 3/64″ to 7/64″ not rated
- Tensile Strength: Good
- Impact Strength: Excellent

Width tolerance is ±1/32″. Length tolerance is +1/2″. Can be used outdoors. Bars have greater impact strength than Plexiglas® acrylic and can be used in similar applications.

Tight Tolerance Bars

- Color: Semi-clear gray
- Max. Temp.: 250°F
- Tensile Strength: Excellent
- Impact Strength: Good

All six sides are consistently flat, square, and parallel. Width and length tolerances are ±0.010″. Can be used outdoors. Meet UL 94HB for flame retardance.

Rods

- Color: Diameters up to 2″, semi-clear; all others, semi-clear gray
- Temp. Range: –40° to 240°F
- Tensile Strength: Good
- Impact Strength: Good

All rods are cut with a rough finish on the face. Meet UL 94HB for flame retardance and ASTM D3935. They are made from FDA-compliant resins.

(Material continued on following page)

Impact-Resistant Polycarbonate *(Material continued from previous page)*

Circles

- Color: Clear
- Temp. Range: –40° to 180°F
- Tensile Strength: Good
- Impact Strength: Excellent

Circles are cut from sheets for a clear, smooth face. Diameter tolerance is ±1/8". All are UL 972 rated as burglar resistant. 1/16" to 3/16" thick circles meet UL 94V2 for flame retardance. 1/4" to 1/2" thick circles meet UL 94V0 for flame retardance.

Dia.	1/16" Thick		1/8" Thick		3/16" Thick		1/4" Thick		3/8" Thick		1/2" Thick

Black Rods

- Color: Black
- Temp. Range: –40° to 240°F
- Tensile Strength: Good
- Impact Strength: Good

Length tolerance is +1/2". Rods meet UL 94HB for flame retardance, ASTM D3935, and ASTM D6098. They are made of FDA-compliant resins.

Polycarbonate

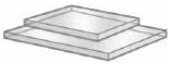
For comparative information about plastics, see page 3626.

Scratch- and UV-Resistant Polycarbonate

- Color: See below
- Temp. Range: –40° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

A clear coating provides exceptional abrasion resistance and protects against UV degradation. It allows these sheets to maintain clarity better than other polycarbonates and withstand harsh cleaners and solvents. All sheets can be used outdoors. 1/16" to 3/8" thick sheets meet UL 94HB for flame retardance. 1/2" thick sheets meet UL 94V0 for flame retardance.

Sheets



- Color: Clear

Width and length tolerances are -1/4" to +5/8", except for 6"x6" and 6"x12" are +1/4". Sheets have greater impact strength than Plexiglas® acrylic and can be used in similar applications.

High-Strength Glass-Filled Polycarbonate

- Color: Black
- Temp. Range: –40° to 265° F
- Tensile Strength: Excellent
- Impact Strength: Good

Material is 20% glass-filled to provide excellent tensile strength for use in structural applications. Meets UL 94HB for flame retardance, ASTM D3935, and ASTM D6098.

Sheets

Width and length tolerances are ±1/8" for 6" and 12" sides; +1" for 24" and 48" sides.

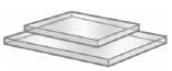
Antistatic Polycarbonate



- Color: Clear
- Temp. Range: –40° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Use these sheets for applications where static electricity is a concern. Width and length tolerances are –9/32". 1/8" and 3/16" thick sheets meet UL 94V2 for flame retardance. 1/4" to 1/2" thick sheets meet UL 94V0 for flame retardance.

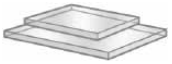
For comparative information about plastics, see page 3626.

Ultra-Impact-Resistant Polycarbonate



- Color: Clear
- Temp. Range: –40° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Often used as security glazing for doors and windows to protect against forced entry. Resists abrasion and UV degradation, making it good for machine guards. Has greater impact strength than Plexiglas® acrylic and can be used in similar applications. Width and length tolerances are +1/4″ for sizes 6″×6″ and 6″×12″; -1/2″ to +5/8″ for all other sizes. The **3/4″ thick sheets** are 3-ply with an acrylic inner layer and polycarbonate exterior layers. The **1 1/4″ thick sheets** are 4-ply polycarbonate laminates. All sheets can be used outdoors.

Thick.	Thick. Toler.	6″×6″		6″×12″		12″×12″		12″×24″		24″×24″		24″×48″	
3/4″	±0.065″	84805K21	$42.14	84805K22	$76.63	84805K31	$92.32	84805K32	$181.29	84805K33	$356.10	84805K34	$611.52

Mirrored Polycarbonate

- Color: Mirrored with gray back
- Temp. Range: –20° to 240° F
- Tensile Strength: Good
- Impact Strength: Excellent

When you need a reflective surface and vandalism is a concern, choose these break-resistant sheets. One side is coated with aluminum for a mirror finish and the other is painted gray. Sheets can be used outdoors. Width and length tolerances are ±1/16″.

Thick.	Thick. Toler.	3″×24″		6″×6″		6″×24″		12″×12″		24″×24″		36″×36″

Wear-Resistant Slippery PTFE

- Color: Dark gray
- Temp. Range: –325° to 500° F
- Tensile Strength: Poor
- Impact Strength: Not rated

Filled with carbon and graphite, these naturally slippery PTFE sheets stand up to wear. They are often fabricated into wear rings, wear pads, and rotational bearings. Width and length tolerances are +3/32″.

Thick.	Thick. Toler.	12″×12″		24″×24″		36″×36″

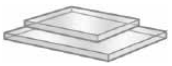
Easy-to-Form Clear PETG

- Color: Clear
- Temp. Range: –40° to 140° F
- Tensile Strength: Good
- Impact Strength: Good

You can form this material into complex shapes without sacrificing durability, but it has less impact resistance than polycarbonate. Applications include shelving, display racks, and signs. Made from FDA-compliant resins.

Sheets



Width and length tolerances are ±1/8″. Sheets have greater impact strength than Plexiglas® acrylic and can be used in similar applications. Meet UL 94HB for flame retardance.

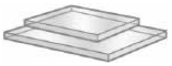
Optically Clear and Colored Cast Acrylic

All shapes offer excellent clarity over a wide temperature range. Comparable to Plexiglas® acrylic shapes and Lucite, this material can be used outdoors.

Sheets



- Color: Clear
- Temp. Range: –40° to 170°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Width and length tolerances are ±1/4". When heated, sheets will uniformly shrink 0.5 to 2% in width and 1 to 2% in length. Made from FDA-compliant resins.

Rectangular Bars

- Color: Clear
- Temp. Range: –40° to 180°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Width and length tolerances are ±1/8″. Bars meet UL 94HB for flame retardance and ASTM D4802. 1/16″ to 3/8″ thick bars are made from FDA-compliant resins.

Round Tubes

- Color: Clear
- Temp. Range: 0° to 150°F
- Tensile Strength: Good
- Impact Strength: Poor

Length tolerance is ±1″. Wall thickness tolerance is ±15%. Meet UL 94HB for flame retardance (except 14″ OD size). Tubes up to 8″ OD are also made from FDA-compliant resins.

Circles

- Color: Clear
- Temp. Range: –40° to 180°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Circles are cut from sheets for a clear, smooth face. Thickness tolerance is ±15%, except for 1/8″ and 1/4″ thick sheets it is –25%. Diameter tolerance is ±1/8″.

(Material continued on following page)

Optically Clear and Colored Cast Acrylic *(Material continued from previous page)*

All shapes offer exceptional resistance to scratches and scuffs over a wide temperature range. Comparable to Plexiglas® acrylic shapes and Lucite, this material can be used outdoors.

Rods

- Color: Clear
- Temp. Range: 0° to 150° F
- Tensile Strength: Good
- Impact Strength: Poor

Meet UL 94HB for flame retardance and are made from FDA-compliant resins. Rods have a rough finish on the face.

Dia.	Dia. Tolerance	Available Lengths, ft.		Per Ft.

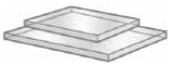
Antistatic Cast Acrylic



- Color: Clear
- Max. Temp.: 180° F
- Tensile Strength: Excellent
- Impact Strength: Poor

An antistatic surface provides excellent control of electrostatic discharge and does not attract dust and other contaminants. Comparable to Plexiglas® acrylic shapes. Width and length tolerances are ±1/32". Sheets meet UL 94HB for flame retardance.

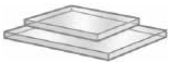
Scratch-Resistant Cast Acrylic



- Color: Clear
- Temp. Range: 0° to 175° F
- Tensile Strength: Excellent
- Impact Strength: Poor

A clear coating makes this material 45 times more scratch resistant than uncoated acrylic. Comparable to Plexiglas® acrylic shapes. Width and length tolerances are ±1/16". Can be used outdoors. Sheets meet UL 94HB for flame retardance.

Thick.	Thick. Tolerance	6"×6"		12"×12"		12"×24"		24"×24"		24"×48"		48"×96"

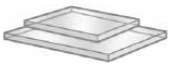
Strengthened UV-Resistant Acrylic



- Color: Clear
- Temp. Range: 32° to 170° F
- Tensile Strength: Good
- Impact Strength: Poor

Modified to be stronger than standard acrylic, this material also resists damage from UV rays. Often used for skylights, signage, and windows, it's suitable for outdoor applications. Width and length tolerances are ±1/8". It meets UL 94HB for flame retardance.

Clear Cellulose

- Color: Clear
- Max. Temp.: Film: 225° F; tubes: 170° F
- Tensile Strength: Poor
- Impact Strength: Good

When visibility is important, cellulose provides a clear view. It's often used for printing and packaging applications, such as shipping tubes.

Film (Acetate)

Width tolerance is ±1/32". Length tolerance is +2" for 4-ft. lengths; for all others it is ±1/32". Film with 0.005" thickness is also known as triacetate.

Thick.	Thick. Tolerance	42"×4 ft.		42"×25 ft.		42"×50 ft.

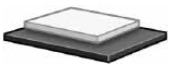
Formable Chemical-Resistant Kydex Acrylic/PVC



- Color: Black, gray, or white
- Temp. Range: –40° to 150° F
- Tensile Strength: Good
- Impact Strength: Excellent

Often used for vehicle interiors and equipment housings, this material maintains its shape after heating and forming. It resists corrosive chemicals and cleaning solutions. One side is textured and the other is smooth. Width and length tolerances are ±1/8". Sheets meet UL 94V0 for flame retardance. **To Order:** Please specify color.

Chemical-Resistant PVC

Often used for tanks, pipes, and in chemical-processing applications, PVC resists acids and alkalies. This material is also known as Type I PVC. *Bars* and *sheets* are excellent electrical insulators and meet UL 94V0 for flame retardance.

Rectangular Bars

- Color: Dark gray
- Temp. Range: 32° to 140° F
- Tensile Strength: Good
- Impact Strength: Poor

Width tolerance for 1/8″ to 3/4″ thick bars is ±0.030″; for 1″ to 2″ thick bars it is ±0.125″. Thickness tolerance for 1/8″ to 1″ thick bars is ±10%; for all others it is +20%.

Adhesive-Back Film

- Color: White
- Temp. Range: –10° to 150°F
- Tensile Strength: Poor
- Impact Strength: Poor

This film has a permanent acrylic adhesive on one side. It can be used outdoors. Width and length tolerances are ±1/32″.

Thick.	Thick. Tolerance	Wd.	Lg.		
0.0045″	±0.0005″	27″	20″	8590K21	$2.29
0.0045″	±0.0005″	27″	38″	8590K22	3.92

Tinted Rods

- Color: Clear with gray-blue tint
- Impact Strength: Poor
- Temp. Range: 32° to 140°F
- Tensile Strength: Good

These rods can be used outdoors.

Oversized Round Tubes

- Color: Dark gray
- Temp. Range: 32° to 140°F
- Tensile Strength: Good
- Impact Strength: Poor

These tubes can be used outdoors. OD is oversized and ID is undersized for finishing to sizes listed. Sold in 1-ft. increments; maximum length is 5 feet.

(Material continued on following page)

Chemical-Resistant PVC *(Material continued from previous page)*

Often used for tanks, pipes, and in chemical-processing applications, PVC resists acids and alkalies. This material is also known as Type I PVC.

Rectangular Tubes

- Color: Dark gray
- Temp. Range: 5° to 140° F
- Tensile Strength: Good
- Impact Strength: Poor

Strengthened Chemical-Resistant PVC

With greater impact strength than standard PVC, this material is used for parts that are subject to shock. Commonly referred to as Type II PVC, it is resistant to chemicals and meets UL 94V0 for flame retardance.

Rods

- Color: Light gray
- Temp. Range: –40° to 140° F
- Tensile Strength: Good
- Impact Strength: Excellent

Rods are excellent electrical insulators.

High-Temperature Chemical-Resistant CPVC

- Color: Gray
- Temp. Range: 32° to 200°F
- Tensile Strength: Good
- Impact Strength: Good

This material has greater heat resistance than PVC. It also resists many chemicals and is often used in piping and chemical-processing applications. All shapes are excellent electrical insulators and meet UL 94V0 for flame retardance.

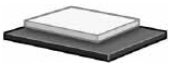
Lightweight Rigid Foam PVC



- Color: White or black
- Temp. Range: 15° to 130°F
- Tensile Strength: Poor
- Impact Strength: Poor

Paint, print, or mount photos on this material to create signs and partitions. Foam construction also makes it easy to cut and bond. Width and length tolerances are ±1/4". *White sheets* can be used outdoors and meet UL 94V0 for flame retardance.

Thick.	Thick. Tolerance	Available Colors	24"×24"		24"×36"		24"×48"

Polypropylene Low-Tack Adhesive-Back Film

- Color: Clear or semi-clear white
- Max. Temp.: 110°F
- Tensile Strength: Poor
- Impact Strength: Poor

Film has an acrylic adhesive, yet it can be removed without leaving a residue. Width tolerance is ±1/8". Length tolerance is +6". *Semi-clear white* film has a dull appearance.

Thick.	Thick. Tolerance	12"×12 ft. Clear		12"×12 ft. Semi-Clear		24"×30 ft. Clear		24"×30 ft. Semi-Clear	
0.002"	±0.0001"	7524T11	$13.30	7524T13	$13.30	7524T12	$45.00	7524T14	$45.00

Easy-to-Machine Chemical-Resistant Polypropylene

This material has a hard surface that won't bind or stick to cutting tools. It also resists many chemicals and solvents.

Rectangular Bars

- Color: Semi-clear white
- Max. Temp.: 225° F
- Tensile Strength: Poor
- Impact Strength: Good

Width tolerance is +1/8" and thickness tolerance is ±10%. Bars are excellent electrical insulators. Resin is FDA compliant and meets NSF/ANSI standards and UL 94HB for flame retardance.

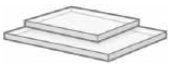
Sheets



- Color: Semi-clear or opaque white
- Temp. Range: 0° to 180° F
- Tensile Strength: Poor
- Impact Strength: Good

Sheets are stress relieved to resist warping and cracking during machining. They're excellent electrical insulators. Resin is FDA and USDA compliant, and meets UL 94HB for flame retardance. Width and length tolerances are +1/2" for *semi-clear white* and ±1/8" for *opaque white*.

(Material continued on following page)

Easy-to-Machine Chemical-Resistant Polypropylene *(Material continued from previous page)*

This material has a hard surface that won't bind or stick to cutting tools. It also resists many chemicals and solvents.

Oversized Black Tubes

- Color: Black
- Temp. Range: Not rated
- Tensile Strength: Poor
- Impact Strength: Excellent

These tubes can be used outdoors. OD is oversized and ID is undersized for finishing to the sizes listed.

OD	ID	Wall Thick.	Available Lengths, ft.		Per Ft.
1/4"	1/8"	1/16"	5	1859T11	$0.83
1/2"	1/4"	1/8"	5	1859T12	2.33
3/4"	1/4"	1/4"	1, 2, 3, 4, 5	1859T16	4.63
1"	1/2"	1/4"	1, 2, 3, 4, 5	1859T17	6.93
1 1/4"	3/4"	1/4"	1, 2, 3, 4, 5	1859T18	$8.53
1 1/2"	1"	1/4"	1, 2, 3, 4, 5	1859T22	9.57
2"	1 1/2"	1/4"	1, 2, 3, 4, 5	1859T23	13.06

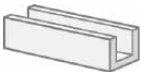
90° Angles

- Color: Semi-clear white
- Temp. Range: –40° to 180° F
- Tensile Strength: Poor
- Impact Strength: Good

These angles are excellent electrical insulators. Leg length tolerance is ±0.025". Length tolerance is ±1/4".

Outside Leg Lgs.	Wall Thick.	Wall Thick. Tolerance	5-ft. Lengths	
1 1/2" × 1 1/2"	1/4"	±0.010"	87215K35	$27.23
2" × 2"	1/4"	±0.010"	87215K37	31.22

U-Channels



- Color: White
- Temp. Range: 45° to 210° F
- Tensile Strength: Poor
- Impact Strength: Excellent

These U-channels are excellent electrical insulators. Meet UL 94HB for flame retardance. Base, leg, and wall thick. tolerances are ±0.020".

Outside Base	Outside Legs	Wall Thick.	Available Lengths, ft.		Per Ft.
2 1/2"	2 1/4"	3/16"	1, 2, 3, 4, 5	87495K41	$11.66
2 1/2"	3 1/4"	3/16"	1, 2, 3, 4, 5	87495K51	14.14

Solid Balls

- Color: Semi-clear white
- Max. Temperature: 180° F
- Tensile Strength: Poor
- Impact Strength: Poor

Diameter tolerance is ±0.002".

Dia.	Pkg. Qty.		Pkg.	Dia.	Pkg. Qty.		Pkg.

Hollow Balls

- Color: Semi-clear white
- Max. Temperature: 220° F
- Tensile Strength: Poor
- Impact Strength: Poor

Balls float to slow evaporation and cut heat loss in tanks.

Dia.	Dia. Tolerance	Pkg. Qty.		Pkg.

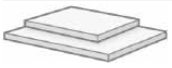
3.937"	±0.050"	1	3748K18	7.35

Flame-Retardant Polypropylene

Often used in semiconductor applications, this polypropylene meets multiple flame-retardance standards. It's also lightweight and easy to fabricate.

Sheets



- Color: White
- Temp. Range: 50° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

Meet UL 94V0, UL 94 5VA, and FM 4910 for flame retardance. Width and length tolerances are ±1/4", except 48"×96" sheets have tolerances of +1/2".

Thick.	Thick. Toler.	6"×6"		6"×12"		12"×12"		12"×24"		24"×24"		48"×96"

Film

- Color: Black
- Temp. Range: –40° to 200° F
- Tensile Strength: Poor
- Impact Strength: Good

An alternative to polycarbonate, polyester, PVC, and aramid paper, this film is an excellent electrical insulator and can be used outdoors. Film sheets meet UL 94V0 and rolls meet UL 94VTM0 for flame retardance. Width tolerance is ±1/4". Length tolerance for sheets is ±1/4" and for rolls it is +10 ft.

Thick.	Thick. Toler.	12"×12"	
Sheets			
0.017"	±0.004"	1451T11	$4.25

Electrically Conductive Flame-Retardant ABS/PVC

- Color: Black
- Temp. Range: Not rated
- Tensile Strength: Poor
- Impact Strength: Good

This material conducts electricity to remove static charge. It also meets UL 94V1 for flame retardance and ASTM D4673. One side is textured; the other is smooth. Width and length tolerances are ±1/8" for 6"×6" to 24"×48" sheets; they are ±1/2" for 48"×54" and 54"×96" sheets.

Thick.	Thick. Toler.	6"×6"		12"×12"		12"×24"		24"×48"		48"×54"		54"×96"

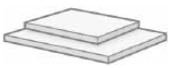
For comparative information about plastics, see page 3626.

Easy-to-Machine Polystyrene

This stiff plastic won't slow down cutting tools. It's economical and often used for signs and containers.

Sheets



- Color: Opaque to semi-clear white
- Temp. Range: 0° to 155° F
- Tensile Strength: Poor
- Impact Strength: Good

Width and length tolerances are ±1/8". Sheets meet UL 94HB for flame retardance, except 1/32" thick.

Thick.	Thick. Tolerance	12"×24"		36"×36"		40"×72"	
1/32"	±0.003"	8734K31	$2.42	8734K38	$9.33	8734K29	$17.28

Electrical Insulating Noryl PPO

- Color: Black
- Temp. Range: –40° to 220° F
- Tensile Strength: Good
- Impact Strength: Good

Use PPO for electrical insulating applications where moisture is a concern. This material has a dielectric strength of 500 volts/mil, it absorbs almost no moisture, and it resists most salt solutions, acids, and bases. It can be used outdoors.

Sheets

Width and length tolerances are ±1/8". Thickness tolerance for 1/16" to 1/8" thick sheets is ±10%; for 1/4" to 2" thick sheets it is +0.025". 1/16" to 1/8" thick sheets meet UL 94V1 for flame retardance; all others meet UL 94V0.

Thick.	6"×6"		12"×12"		12"×24"

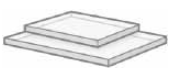
Ultra Electrical Insulating Rexolite Polystyrene

- Color: Semi-clear cream to yellow
- Temp. Range: –75° to 212° F
- Tensile Strength: Good
- Impact Strength: Good

With a dielectric strength of 2,000 volts/mil, Rexolite is the most electrically insulating plastic we offer. It is often used for cable connectors, electrical housings, and in microwave applications. Material meets MIL-LP-516A.

Sheets



Width and length tolerances are +1/4".

Easy-to-Machine Impact-Resistant ABS

ABS resists breaking upon impact and is often used in protective applications, such as equipment housings and machine guards. Its rigid surface won't slow down cutting tools.

Rectangular Bars

- Color: Beige or black
- Max. Temp.: 160°F
- Tensile Strength: Good
- Impact Strength: Excellent

Resin is FDA compliant and meets UL 94HB for flame retardance. Width and length tolerances are +1/8". **To Order:** Please specify color. Sold in 1, 2, and 4 ft. lengths.

Wear-Resistant Nylon

Also known as nylon 6/6, this general-purpose material resists wear and abrasion as well as gasoline, mineral oil, and refrigerants.

Rectangular Bars

- Color: Off-white or black
- Max. Temp.: 210°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Width tolerance is +1/8″, –0.010″. Maximum length for all bars is 4 feet. All bars meet ASTM D6779.

Off-white bars are made with resin that is FDA compliant, USDA compliant, and meets NSF/ANSI standards. The resin also meets 3-A sanitary standard requirements, UL 94V2 for flame retardance, and ASTM D5989. **Black bars** are made with resin that meets UL 94HB for flame retardance (unless noted).

★ Meets UL 94V2 for flame retardance.

Strips

- Color: Semi-clear off-white
- Temp. Range: –40° to 185°F
- Tensile Strength: Excellent
- Impact Strength: Good

Width tolerance is +0.015″, –0.002″. Thickness tolerance is ±0.003″ for 0.010″ to 0.040″ thick strips and ±0.005″ for 0.050″ to 0.125″ thick strips. All strips meet ASTM D6779.

Plain-back strips are made with resin that is FDA compliant and meets NSF/ANSI standards. 0.031″ to 0.062″ thick strips meet UL 94HB for flame retardance, and 0.125″ thick strips meet UL 94V2.

(Material continued on following page)

Wear-Resistant Nylon *(Material continued from previous page)*

Also known as nylon 6/6, this general-purpose material resists wear and abrasion as well as gasoline, mineral oil, and refrigerants.

Sheets

- Color: Off-white or black
- Temp. Range: –40° to 185°F
- Tensile Strength: Excellent
- Impact Strength: Good

Width and length tolerances are ±1/8″ for 6″ and 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides. All sheets meet ASTM D6779 and D5989. **Off-white sheets** are made with resin that is FDA compliant and meets NSF/ANSI standards. Resin for off-white sheets also meets UL 94V2 for flame retardance, except 1/32″ to 7/64″ thick meet UL 94HB.

Rods

- Color: Off-white or black
- Max. Temp.: 185°F
- Tensile Strength: Excellent
- Impact Strength: Good, except 1/16″ and 1/8″ dia. are poor

All rods meet ASTM D5989 and D6779. **Off-white rods** are made with resin that is FDA compliant and meets NSF/ANSI standards. Resin for 1/16″ dia. rod meets UL 94HB for flame retardance; for all other sizes it meets UL 94V2. **Black rods** meet UL 94V2 for flame retardance.

Hex Bars

- Color: Off-white
- Max. Temp.: 185°F
- Tensile Strength: Excellent
- Impact Strength: Good

Hex bars are made with resin that is FDA compliant, meets NSF/ANSI standards, meets 3-A sanitary standard requirements, and meets UL 94V2 for flame retardance. Hex bars meet ASTM D5989 and D6779. Hex tolerance is –0.010″.

Hex Size	Available Lengths, ft.		Per Ft.

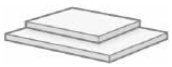
Wear- and Moisture-Resistant Nylon

- Color: Off-white
- Temp. Range: –40° to 200°F
- Tensile Strength: Good
- Impact Strength: Poor

Because it absorbs less moisture, this material holds its shape better than standard nylon. Also known as nylon 6/12, it's often machined into hose fittings and valve components. Meets ASTM D5989 and D6779.

Sheets



Width and length tolerances are ±1/8″ for 6″ and 12″ sides and +1/2″ for 24″ sides.

Nylon

For comparative information about plastics, see page 3626.

High-Strength Glass-Filled Nylon

- Color: Off-white
- Temp. Range: –40° to 230° F
- Tensile Strength: Excellent
- Impact Strength: Good

With 30% glass-fiber reinforcement, this material has twice the strength of standard nylon. It is an excellent electrical insulator and is used in high-stress applications, such as railway tie insulators and automotive parts. Material meets ASTM D4066, D5989, and D6779.

Sheets

Width and length tolerances are ±1/8″ for 6″ and 12″ sides and +1/2″ for 24″ sides.

Very-Wear-Resistant Kevlar-Filled Nylon

- Color: Yellow
- Temp. Range: –40° to 300° F
- Tensile Strength: Excellent
- Impact Strength: Good

With added Kevlar, this nylon stands up to applications requiring extreme wear resistance. Also known as Hydlar Z, it can last up to 20 times longer than unfilled nylon. It is used for parts under continual wear and abrasion, such as wear strips and bushings.

Self-Lubricating MDS-Filled Nylon

This material is modified with MDS for a more slippery surface than standard nylon. It reduces the need for lubricating products in high-friction applications, such as gears and bearings. Meets ASTM D6779.

Sheets

- Color: Black
- Temp. Range: –40° to 230° F
- Tensile Strength: Excellent
- Impact Strength: Good

Width and length tolerances are ±1/8″ for 12″ sides, +1/2″ for 24″ sides, and +1″ for 48″ sides. Sheets meet UL 94HB for flame retardance and ASTM D5989.

Wear-Resistant Easy-to-Machine Cast Nylon

- Color: Off-white
- Temp. Range: –20° to 200° F
- Tensile Strength: Excellent
- Impact Strength: Poor

Lightweight and stiff, cast nylon resists abrasion and is easier to machine than other types of nylon. It is an excellent electrical insulator, has a slippery surface, and meets ASTM D5989. Resin is FDA compliant and meets 3-A sanitary standard requirements and UL 94HB for flame retardance. This material is comparable to Nylatron and Nycast.

Rectangular Bars

Self-Lubricating Oil-Filled Cast Nylon

- Color: Green
- Temp. Range: 32° to 230° F
- Tensile Strength: Good
- Impact Strength: Good

This nylon stays slippery because it contains an oil lubricant. Use it to fabricate parts for applications where adding lubrication would be difficult, including harsh environments and hard-to-reach places. It's an excellent electrical insulator, can be used outdoors, and meets ASTM D5989.

Self-Lubricating MDS-Filled Cast Nylon

- Color: Black
- Max. Temp.: 230° F
- Tensile Strength: Excellent
- Impact Strength: Poor

The addition of MDS results in a nylon with exceptional wear resistance as well as self-lubricating properties. Often used for wear strips and bearings, it's an excellent electrical insulator, has a slippery surface, and can be used outdoors. Meets ASTM D5989.

Wear- and Water-Resistant Delrin® Acetal Resin

- Color: White or black
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Good

Considered the workhorse of plastics, Delrin® acetal resin combines moisture resistance and a slippery, wear-resistant surface with an ability to hold tight tolerances. Also known as acetal homopolymer, it's often used for gears, bushings, impellers, and other parts that require its strength and rigidity.

Rectangular Bars

Thickness tolerance for 1/8" to 1 3/4" thick bars is +0.025"; for 2" to 3" thick bars it's +0.050"; and for 4" thick bars it's +0.125". Width tolerance is +1/4". All bars are USDA compliant and meet NSF/ANSI standards. They also meet ASTM D6100. *White* bars are FDA compliant.

To Order Please specify length: 1, 2, 3, or 4 ft.

Strips

Thickness tolerance for 0.010" to 0.040" thick strips is ±0.003"; for 0.062" and 0.093" thick strips it's ±0.006". Width tolerance for 1" to 6" wide strips is ±0.020"; for 12" wide strips it's ±0.500". *White* strips are FDA compliant and meet NSF/ANSI standards; 0.062" and 0.093" thick white strips meet ASTM D6100.

(Material continued on following page)

Wear- and Water-Resistant Delrin® Acetal Resin *(Material continued from previous page)*

- Color: White or black
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Good

Considered the workhorse of plastics, Delrin® acetal resin combines moisture resistance and a slippery, wear-resistant surface with an ability to hold tight tolerances. Also known as acetal homopolymer, it's often used for gears, bushings, impellers, and other parts that require its strength and rigidity.

Adhesive-Back Strips

Adhesive is acrylic. Width tolerance is ±1/32". Length tolerance is ±1". FDA compliant.

Thick	Thick. Toler.	4" Wd. x 36" Lg. White		Thick	Thick. Toler.	4" Wd. x 36" Lg. White		Thick	Thick. Toler.	4" Wd. x 36" Lg. White	
0.020"	±0.002"	2556T12	$64.54	0.030"	±0.003"	2556T14	$75.65	0.040"	±0.004"	2556T16	$78.87

Sheets

Thick. tolerance for 1/32" and 3/64" thick sheets is ±0.006"; for 1/16" to 3/32" thick sheets it's ±0.010"; and for 7/64" to 4" thick sheets it's –0.016", +0.025". Width and length tolerances for 6" and 12" sides are ±1/8"; 24" sides are +1/2"; and 48" sides are +1". All sheets meet ASTM D6100. *White* sheets are USDA compliant and meet NSF/ANSI standards.

Delrin® Acetal Resin

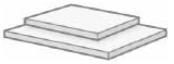
For comparative information about plastics, see page 3626.

Rigid Glass-Filled Delrin® Acetal Resin

- Color: White
- Temp. Range: –40° to 185°F
- Tensile Strength: Good
- Impact Strength: Poor

Composed of 20% glass for increased rigidity, this material is wear and water resistant as well as an excellent electrical insulator. Meets UL 94HB for flame retardance and ASTM D6100.

Sheets



Thickness tolerance is +1/8″. Width and length tolerances for 6″ and 12″ sides are ±1/8″; 24″ sides are +1/2″; and 48″ sides are +1″.

Ultra-Wear-Resistant PTFE-Filled Delrin® Acetal Resin

- Color: Brown
- Temp. Range: –40° to 185°F
- Tensile Strength: Good
- Impact Strength: Poor

The addition of PTFE to Delrin® acetal resin provides this water-resistant material with a more slippery, wear-resistant surface. Material is also known as Delrin® acetal resin AF.

Strips

Material contains 13% PTFE. Thickness tolerance for 0.020″ and 0.031″ thick strips is ±0.003″; for 0.062″ and 0.093″ thick strips it's ±0.006″. Width tolerance is ±0.020″.

Chemical- and Wear-Resistant Acetal

- Color: White or black
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Good

When you need resistance to moisture and chemicals, such as alcohols, solvents, and gasoline, as well as a low-friction surface, this material offers it all. Also known as acetal copolymer, it has good strength and rigidity for machining tight-tolerance parts, such as gears and rollers.

Rectangular Bars

Width tolerance is +1/4". Length tolerance for 1-ft. long bars is +1/2"; for 2- and 4-ft. long bars it's +1". Bars are FDA and USDA compliant and meet NSF/ANSI Standards. They also meet ASTM D6100.

Rods

Rods are FDA and USDA compliant and meet NSF/ANSI standards. They also meet UL 94HB for flame retardance and ASTM D6100.

Also Available: 3″, 6″, and 9″ long rods. Please ask for 8497K871 and specify diameter, length, and white or black.

Self-Lubricating Chemical-Resistant Turcite Acetal

- Color: Blue or red
- Temp. Range: –50° to 180° F
- Tensile Strength: Good
- Impact Strength: Poor

The silicone additive in this chemical-resistant material creates an ultra-slippery, self-lubricating surface that reduces friction to extend the life of your parts. FDA compliant. Meets UL 94HB for flame retardance.

Dia. tolerance for rods up to 1 3/4″ dia. is +0.010″; for rods 2″ dia. and larger it's +0.250″.

Blue, also known as Turcite A, is more wear resistant than red, making it a good choice for heavier loads at moderate speeds. **Red**, also known as Turcite X, is more slippery than blue, making it suitable for low-load applications at high speeds.

Dia.	Available Lengths, ft.	Blue	Per Ft.	Red	Per Ft.

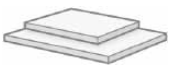
Antistatic Acetal

- Color: Off-white
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Good

When static is a concern, machine your conveyor components, rollers, and other moving parts from this antistatic material. It also has a slippery, wear-resistant surface for decreased friction and is resistant to moisture and chemicals, such as alcohols, solvents, and gasoline.

Sheets



Width and length tolerances are +1/16″. Meet UL 94HB for flame retardance and ASTM D6100.

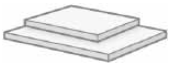
Moisture-Resistant Polyester

Also known as PET and PETE, this strong, rigid plastic has exceptional moisture and wear resistance. Commonly used for valves and barriers, it machines easily and holds its shape well even in moist environments.

Sheets



- Color: Off-white
- Temp. Range: –40° to 230° F
- Tensile Strength: Excellent
- Impact Strength: Poor

Sheets have a slippery surface and can be used outdoors. Width and length tolerances for 6″ and 12″ sides are ±1/8″; 24″ and 48″ sides are +1″. FDA compliant. Meet ASTM D6261.

High-Temperature Film

- Color: Semi-clear off-white
- Max. Temp.: 400° F
- Tensile Strength: Excellent
- Impact Strength: Not rated

Often used as a separator when heating parts in an oven or as a cover when etching or sanding, this film releases cleanly from rubber and most synthetic resins. Film should be larger than the piece it is releasing from. Thickness tolerance is not rated. Width and length tolerances are ±1/8″.

Thick.	Wd.	50-ft. Length	
0.0010″	20″	7594T11	$72.38
0.0015″	20″	7594T21	84.42

Adhesive-Back Film

- Color: Clear
- Temp. Range: –50° to 275° F
- Tensile Strength: Excellent
- Impact Strength: Not rated

Adhesive is acrylic. Width and length tolerances are ±1/32″. Film, but not adhesive, meets UL 94VTM2 for flame retardance.

Thick.	Thick. Toler.	27″×20″		27″×38″	
0.002″	±0.0002″	8689K42	$3.23	8689K44	$6.03

Static-Dissipative Adhesive-Back Film

- Color: Clear
- Max. Temp.: 150° F
- Tensile Strength: Excellent
- Impact Strength: Not Rated

Apply this film to reduce static buildup. Adhesive is acrylic. Thickness tolerance is ±0.0004″. Width and length tolerances are ±1/32″.

Thick.	24″×48″		48″×48″		48″×96″	
0.004″	8187K12	$121.47	8187K13	$207.89	8187K14	$366.56

Metallized Film

- Color: Silver or gold
- Temp. Range: –50° to 300° F
- Tensile Strength: Excellent
- Impact Strength: Not rated

Film has a thin aluminum coating on one side. Width and length tolerances are ±10%.

Thick.	Thick. Toler.	Wd.	12-ft. Length

Self-Lubricating Wear-Resistant Hydex Polyester

- Color: Off-white
- Temp. Range: –40° to 220° F
- Tensile Strength: Good
- Impact Strength: Poor

Fifty percent more abrasion resistant than standard polyester, Hydex rods combine moisture resistance and easy machinability with the PTFE additive's self-lubricating properties. Also known as PBT, they're often used for bearings, gears, and pistons. Can be used outdoors. Material is FDA and USDA compliant and meets 3-A sanitary requirements. It also meets ASTM D6261.

Moisture-Resistant LDPE Polyethylene Film

A good choice for packaging and construction applications, this film can withstand direct contact with moisture and can be used outdoors.

Multipurpose Film

- Color: Semi-clear white or opaque black
- Temp. Range: –60° to 150°F
- Tensile Strength: Poor
- Impact Strength: Not rated

These sheets have a slippery surface. Thickness tolerance is ±10%. Width and length have a plus tolerance. Meet ASTM D4397. Comparable to Visqueen.

Reinforced Film

- Color: Semi-clear white or opaque black
- Temp. Range: Not rated
- Tensile Strength: Not rated
- Impact Strength: Not rated

A polyester string reinforcement gives this film added strength and tear resistance. It's a good choice for use as window coverings, construction film, and vapor barriers. Finish is matte. Thickness tolerance is ±0.0005″. Width and length have a plus tolerance.

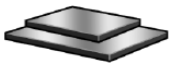
Lightweight Aluminum-Faced LDPE Polyethylene



- Color: Black on one side; silver on the other
- Temp. Range: 0° to 170°F
- Tensile Strength: Good
- Impact Strength: Not rated

These sheets offer the flexibility of LDPE with aluminum facing on both sides; one side is painted black. They are commonly used to create wall panels and canopies that will be used outdoors.

Width and length tolerances are ±5/32″. Sheets meet UL 94V0 for flame retardance and ASTM E84 5/15 for flame and smoke.

Thick.	Thick. Tolerance	12″×24″		24″×24″		24″×48″		48″×48″

Rigid HDPE Polyethylene

Often machined into plugs, seals, and low-load rollers, HDPE polyethylene offers the excellent moisture resistance of LDPE with a higher-density, firmer construction. It also resists many chemicals, such as alcohols and ethers.

Rectangular Bars

- Color: White
- Max. Temp.: 180°F
- Tensile Strength: Poor
- Impact Strength: Good

Width tolerance is +1/16″. These bars are an excellent electrical insulator and are FDA compliant. They also meet UL 94HB for flame retardance and ASTM D4976.

Marine-Grade Sheets

- Color: White or black
- Max. Temp.: 180° F
- Tensile Strength: Poor
- Impact Strength: Good

Also known as starboard, these sheets won't degrade when exposed to salt water, humidity, and UV light. They have a textured finish that won't show scuffs or scratches. Width and length tolerances are +1/16". These sheets are an excellent electrical insulator. They're also FDA compliant and meet UL 94HB for flame retardance and ASTM D4976.

Strips

- Impact Strength: Excellent
- Color: Semi-clear to opaque white
- Temp. Range: –40° to 150° F
- Tensile Strength: Poor

Thickness tolerance for 0.02" to 0.04" thick strips is ±0.003"; and for 0.05" to 1/8" thick it's ±0.005". Width tolerance is ±1/8". Length tolerance is +1". These strips are an excellent electrical insulator. They're also FDA compliant and meet ASTM D4976.

Rigid HDPE Polyethylene *(Material continued from previous page)*

Rods

- Color: Semi-clear to opaque white
- Temp. Range: –40° to 200°F
- Tensile Strength: Poor
- Impact Strength: Not Rated

These rods are FDA and USDA compliant. They also meet UL 94HB for flame retardance and ASTM D4976. Diameter has a plus tolerance.

Durable HDPE Polyethylene Film

Its high-density construction creates a durable plastic film that's resistant to moisture and chemicals, such as alcohols and ethers.

Tear-Resistant Film

- Tensile Strength: Not rated
- Impact Strength: Not rated
- Color: Semi-clear white or opaque black/gray
- Temp. Range: –10° to 120°F

A woven-fiber reinforcement makes this film tear and puncture resistant. It is commonly used for tarps and machine covers. Thickness tolerance is ±0.0005″. Width and length have a plus tolerance. Film can be used outdoors.

Opaque black/gray is black on one side, gray on the other.

Heavy Duty Film

Film with Peel-and-Stick Zipper

- Color: Black
- Temp. Range: Not rated
- Tensile Strength: Poor
- Impact Strength: Not rated

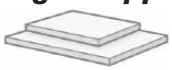
This extra-thick film is an excellent electrical insulator. Thickness tolerance is ±0.005″. Width tolerance is +1/4″. Can be used outdoors.

Thick.	Wd.	Max. Length, ft.		Per Ft.	Thick.	Wd.	Max. Length, ft.		Per Ft.
0.015″	47″	100	86255K61	$3.73	0.03″	47″	100	86255K71	$6.50

Peel-and-stick zipper adheres to the plastic film to create an entrance. Length is 7 ft. Temp. range is 20° to 150°F.

84645A58 ..... Each $10.41

Rigid Slippery VHMW Polyethylene



- Color: White
- Max. Temp.: 180°F
- Tensile Strength: Poor
- Impact Strength: Excellent

Ideal for use as chutes, liners, and gaskets, this durable, slippery plastic resists many chemicals (such as aqueous acids, alkalies, and salt solutions) and won't discolor or degrade during prolonged outdoor exposure. Width and length tolerances are +1/16″. These sheets are FDA and USDA compliant. They also meet ASTM D4976.

Thick.	Thick. Tolerance	12″ × 12″		24″ × 48″		48″ × 48″		48″ × 96″

Impact-Resistant Slippery UHMW Polyethylene

UHMW is tough enough to resist the scuffs, scrapes, and strikes that other plastics can't. In addition to excellent abrasion, wear, and impact resistance, it has a slippery surface that is good for bearings, bushings, machine guards, and chute and hopper liners.

Rectangular Bars

- Color White or black
- Temp. Range: –20° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

Thickness tolerance for 1/8" to 3/8" thick bars is ±0.030"; for 1/2" to 1" thick it's ±0.070"; for 1 1/4" to 2" thick it's ±0.120"; and for 2 1/4" to 4" thick it's ±5%. Width tolerance is ±1/16". Length tolerance is ±1/8". These bars are FDA and USDA compliant. They also meet ASTM D4020.

To Order: Please specify length: 1, 2, 3, 4, or 5 ft.

Oversized Rectangular Bars

- Color: White
- Temp. Range: –40° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

Bars are oversized for finishing to the sizes listed. Thickness tolerance is +0.015". Width and length tolerances are +0.020". FDA compliant.

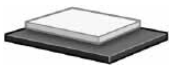
(Material continued on following page)

Impact-Resistant Slippery UHMW Polyethylene *(Material continued from previous page)*

Sheets



- Color: White or black
- Temp. Range: –40° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Width and length tolerances are ±1/8", except 24"×96", 48"×48", and 48"×96" sheets are ±1/2". All sheets meet UL 94HB for flame retardance.

White sheets are FDA and USDA compliant and meet 3-A sanitary standard requirements. They also meet ASTM D4020, D6712, and D4976. **Black** sheets meet ASTM D4020.

Adhesive-Ready Strips

- Color: Semi-clear white
- Temp. Range: –20° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

One side is etched for adhesive; the other side is smooth. Width tolerance is ±1/32". These strips are FDA and USDA compliant. They also meet UL 94V2 for flame retardance as well as ASTM D4020, MIL-B-17901, and MIL-P-23536.

(Material continued on following page)

Impact-Resistant Slippery UHMW Polyethylene *(Material continued from previous page)*

UHMW is tough enough to resist the scuffs, scrapes, and strikes that other plastics can't. In addition to excellent abrasion, wear, and impact resistance, it has a slippery surface that is good for bearings, bushings, machine guards, and chute and hopper liners.

Strips

- Color: Semi-clear white
- Temp. Range: –20° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

Width tolerance is ±1/32″. All strips are FDA compliant. They also meet UL 94V2 for flame retardance, as well as ASTM D4020 and MIL-P-23536.

Adhesive-back strips have a rubber-based adhesive.

Plain-Back Film

- Color: Semi-clear off-white
- Max. Temp.: 150° F
- Tensile Strength: Good
- Impact Strength: Not rated

Width tolerance is ±1/32″, except 0.004″ thick film has a width tolerance of ±1/8″. All are FDA compliant.

Thick.	Thick. Tolerance	Wd.	Available Lengths, ft.		Per Ft.
0.004″	±0.0004″	12″	1, 2, 3, 6, 10, 20	85655K11	$1.61

Adhesive-Back Film

- Color: Semi-clear to opaque off-white
- Max. Temp.: 200° F
- Tensile Strength: Not rated
- Impact Strength: Not rated

Adhesive is acrylic. Film, but not adhesive, is FDA compliant.

Sheeting has a width tolerance of ±1/32″ and a plus length tolerance. For indoor use only.

Sheets have a ±1/8″ width tolerance and a ±1/16″ length tolerance. They can be used outdoors and are USDA compliant. Also meet ASTM D4020.

Rods

- Color: White
- Temp. Range: –40° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

All have a plus diameter tolerance. Rods are FDA compliant and meet UL 94HB for flame retardance.

For comparative information about plastics, see page 3626.

Impact-Resistant Slippery UHMW Polyethylene *(Material continued from previous page)*

Tubes

- Color: White
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

OD and ID tolerances for tubes with a 7/8″ to 1 7/8″ OD are ±0.14″; 2″ to 4 1/2″ OD are ±0.32″; and 5″ to 8 5/8″ OD are ±0.4″. These tubes are an excellent electrical insulator. They are FDA and USDA compliant and meet 3-A sanitary standard requirements. They also meet UL 94HB for flame retardance and ASTM D4020.

To Order: Please specify length: 1, 2, 3, 4, or 5 ft.

OD	ID	Wall Thick.		Per Ft.
7/8″	1/4″	5/16″	8705K31	$6.94

90° Angles

- Color: White
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Leg length and wall thickness tolerances are ±0.060″. Inside and outside corners are rounded and leg edges are straight, unless noted. These angles are an excellent electrical insulator, are FDA and USDA compliant, and meet 3-A sanitary requirements. They also meet ASTM D4020.

Outside Leg Lgs.	Wall Thick.	Available Lengths, ft.		Per Ft.
1 1/2″ × 5/8″	1/4″	2, 5, 8	9852K61▲	$5.39
1 1/2″ × 1 1/2″	1/4″	2, 5, 8	9852K36	2.92
2″ × 2″	1/4″	2, 5, 8	9852K37	3.74
3″ × 3″	1/2″	2, 5, 8	9852K38	$8.12
3 1/2″ × 3 1/2″	1/2″	2, 5, 8	9852K62▲	12.43

▲ Inside and outside corners are square.

U-Channels

- Color: White
- Temp. Range: –20° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Base width and leg height tolerances are ±0.080″. Wall thickness tolerance is not rated. Inside and outside corners are square. These U-channels are an excellent electrical insulator, are FDA and USDA compliant, and meet 3-A sanitary standard requirements. They also meet ASTM D4020, D6712, and D4976.

Outside Base	Outside Leg	Wall Thick.	Available Lengths, ft.		Per Ft.
1″	3/4″	1/4″	2, 5, 8	9928K53	$2.64

4 1/4″	1 1/4″	3/8″	2, 5, 8	9928K63	6.81

Abrasion-Resistant Glass-Filled UHMW Polyethylene

- Color: Blue
- Temp. Range: –40° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

The addition of glass to UHMW creates an ultra-abrasion-resistant material with the same low-friction surface and impact resistance of standard UHMW. Often used as a liner for chutes and hoppers, this plastic's slippery surface and increased abrasion resistance keep materials, including metal, flowing freely. It's also known as Tivar 88.

Rectangular Bars

Width and length tolerances are ±1/8″. Meet ASTM D4020, D6712, and D4976.

Thick.	Thick. Tolerance	Lg., ft.	1/2″ Wide		3/4″ Wide		1″ Wide		2″ Wide		3″ Wide	
1/4″	±0.025″	5	9329K11	$11.84	9329K12	$15.98	9329K13	$18.98	9329K14	$35.00	9329K15	$49.23

UHMW Polyethylene

For comparative information about plastics, see page 3626.

Static-Dissipative UHMW Polyethylene

- Color: Black
- Temp. Range: –20° to 180° F
- Tensile Strength: Good, except rods are poor
- Impact Strength: Excellent, except film is not rated

Reduce static electricity in applications where it's a concern. Material has a slippery surface and excellent wear and impact resistance. Can be used outdoors.

Rectangular Bars

Thickness tolerance for 1/8" to 3/8" thick bars is ±0.020"; for 1/2" to 1" thick bars it's ±0.070"; and for 1 1/4" to 1 1/2" thick bars it's ±0.120". Width and length tolerances are ±1/8". Meet UL 94HB for flame retardance and ASTM D4020.

Electrically Conductive UHMW Polyethylene

- Color: Black
- Temp. Range: –200° to 180° F
- Tensile Strength: Poor
- Impact Strength: Excellent

The addition of carbon allows these sheets to conduct electricity. They are also self-lubricating with a slippery surface and have excellent abrasion resistance and impact strength. Width and length tolerances are –1/4". Can be used outdoors. Meet UL 94HB for flame retardance.

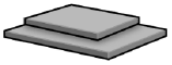
For comparative information about plastics, see page 3626.

Self-Lubricating Impact-Resistant UHMW Polyethylene

- Color: Gray
- Temp. Range: –450° to 180° F
- Tensile Strength: Good
- Impact Strength: Excellent

Often used for chain guides and rollers, this material is oil filled for self-lubrication. It also offers excellent impact strength and good wear resistance.

Sheets



Width and length tolerances are ±1/8". Excellent electrical insulator. Sheets are FDA compliant and USDA approved. They also meet UL 94HB for flame retardance.

Thick.	Thick. Tolerance	6"×6"		12"×12"		12"×24"		12"×36"		24"×48"		48"×60"

Oversized Rods

Diameters are oversized +0.060" to +0.187" to allow for finishing to the sizes listed. Rods meet NSF/ANSI standards. They also meet UL 94V2 for flame retardance, ASTM D4020, and MIL-P-21922.

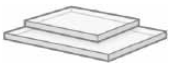
Mold- and Mildew-Resistant UHMW Polyethylene



- Color: Semi-clear off-white
- Temp. Range: –200° to 175° F
- Tensile Strength: Poor
- Impact Strength: Excellent

A silver-based additive protects these sheets from degradation caused by bacteria, algae, and fungus. Width and length tolerances are –1/4". Surface is slippery. Sheets are FDA compliant and meet UL 94HB for flame retardance.

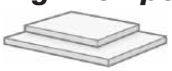
High-Temperature UHMW Polyethylene



- Color: White
- Temp. Range: –40° to 275° F
- Tensile Strength: Good
- Impact Strength: Excellent

Also known as Tivar H.O.T., these sheets last up to 10 times longer in high-temperature applications than standard UHMW. Along with excellent impact and wear resistance, they offer a slippery surface. Sheets are excellent electrical insulators and can be used outdoors. Width and length tolerances for 6"×6" sheets are +1/8"; all others are ±1/16". All are FDA and USDA compliant. They also meet ASTM D4020, D6712, and D4976.

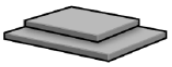
Metal-Detector-Grade UHMW Polyethylene

- Color: Blue-Gray
- Temp. Range: –235° to 175° F
- Tensile Strength: Poor
- Impact Strength: Excellent

Containing additives that allow it to be located by metal detectors, this material can be used in food-processing applications to reduce contamination risks. It is self-lubricating and has excellent wear and abrasion resistance. Resin is FDA compliant.

Sheets



Width and length tolerances are +0.06".

Thick.	Thick. Tolerance	6"×6"		12"×12"		12"×24"		24"×24"		24"×48"

Teflon® PTFE

For comparative information about plastics, see page 3626.

Shapes Made with Teflon® PTFE

- Color: White
- Temp. Range: –350° to 500° F
- Tensile Strength: Poor
- Impact Strength: Good

Made with virgin Teflon® PTFE resins, this material has a slippery surface and surpasses most plastics when it comes to chemical resistance and performance in extreme temperatures. It resists most solvents and is also an excellent electrical insulator. Can be used outdoors.

Rectangular Bars

Width tolerance is +1/16". These bars are FDA compliant and meet UL 94V0 for flame retardance. Widths 1/4" and smaller meet ASTM D3308; widths 5/16" and larger meet ASTM D3294.

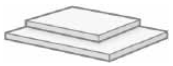
Shapes Made with Teflon® PTFE *(Material continued from previous page)*

White Sheets



For 2″×3″ to 4″×6″ sheets, width and length tolerances are +1/16″. For 6″×6″ to 48″×96″ sheets, width and length tolerances are ±1/4″. They are FDA compliant and meet UL 94V0 for flame retardance. 1/32″ to 1/4″ thick sheets meet ASTM D3308; 3/8″ to 2″ thick meet ASTM D3294.

Black Sheets

To Order: Please ask for 8545K881 and specify thickness, width, and length from the sizes above. Black sheets cost 10% more than the corresponding sizes in white.

Film

Width tolerance is ±1/16″. Film is FDA compliant and meets UL 94V0 for flame retardance and ASTM D3308.

(Material continued on following page)

Shapes Made with Teflon® PTFE *(Material continued from previous page)*

- Color: White
- Temp. Range: –350° to 500° F
- Tensile Strength: Poor
- Impact Strength: Good

Made with virgin Teflon® PTFE resins, this material has a slippery surface and surpasses most plastics when it comes to chemical resistance and performance in extreme temperatures. It resists most solvents and is also an excellent electrical insulator. Can be used outdoors.

Oversized Tubes

OD is oversized and ID is undersized for finishing to the sizes listed. These tubes are FDA compliant and meet UL 94V0 for flame retardance and ASTM D1710.

OD	ID	Wall Thick.	Available Lengths, ft.		Per Ft.

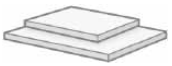
Extreme-Temperature Slippery PTFE

- Color: White
- Temp. Range: See below
- Tensile Strength: Poor
- Impact Strength: Good

This PTFE has a slippery surface and surpasses most plastics when it comes to chemical resistance and performance in extreme temperatures. It resists most solvents. This material is also an excellent electrical insulator and can be used outdoors.

Sheets



- Temp. Range: –350° to 500° F

Width and length tolerances are ±1/4″. Meet 3-A sanitary standards, made from resins that are FDA compliant, and meet UL 94V0 for flame retardance. 1/32″ to 1/8″ thick sheets meet ASTM D3308; 3/16″ and 1/4″ thick meet ASTM D3294.

Thick.	Thick. Tolerance	6″×6″		12″×12″		12″×24″		24″×24″		36″×36″		48″×48″

Tight-Tolerance Sheets

- Temp. Range: –350° to 500° F

These sheets are consistently flat, square, and parallel on all six sides. Width and length tolerances are ±0.010″. Made from resins that are FDA compliant and meet UL 94V0 for flame retardance. Sheets meet ASTM D3294, AMS 3667, and MIL-P-22241.

Thick.	Thick. Tolerance	2″×12″		12″×12″

(Material continued on following page)

Extreme-Temperature Slippery PTFE *(Material continued from previous page)*

- Color: White
- Temp. Range: –300° to 500°F
- Tensile Strength: Poor
- Impact Strength: Good

This PTFE has a slippery surface and surpasses most plastics when it comes to chemical resistance and performance in extreme temperatures. It resists most solvents. This material is also an excellent electrical insulator and can be used outdoors.

Cord

Length tolerance is ±1″. This cord is made from FDA compliant resin and meets UL 94V0 for flame retardance and ASTM D3295.

- Impact Strength: Good
- Tensile Strength: Poor

Used for applications where static electricity is a concern, this modified PTFE also offers a slippery surface with outstanding resistance to most solvents. Width and length tolerances are +1/4″, –1/16″. Sheets can be used outdoors. Meet UL 94V0 for flame retardance and ASTM D4745.

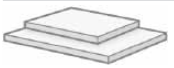
Ultra-Clean PTFE

- Color: White
- Max. Temp.: 500°F
- Tensile Strength: Poor
- Impact Strength: Good

All shapes are molded in a clean room environment, bagged, and labeled with lot and batch numbers for traceability. PTFE has outstanding chemical resistance and a very slippery surface. It's also an excellent electrical insulator. Can be used outdoors.

Sheets



Width and length have plus tolerances. These sheets are FDA compliant and meet UL 94V0 for flame retardance and AMS 3652, 3660, and 3667.

Thick.	Thick. Tolerance	6″×6″		12″×12″	
1/16″	±0.005″	1345T11	$26.47	1345T21	$85.96
1/8″	±0.01″	1345T12	53.93	1345T22	128.35

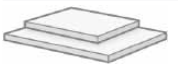
2″	+0.25″	1407T15	201.75

Weldable PTFE

- Color: White
- Max. Temp.: 500°F
- Tensile Strength: Poor
- Impact Strength: Good

Also known as NXT, this modified PTFE can be welded. It retains the outstanding chemical resistance and slippery surface of standard PTFE. Can be used outdoors.

Sheets



Width and length tolerances are +3/32″ for 6″×6″ sheets and +1/4″ for 12″×12″. These sheets are FDA compliant and meet UL 94V0 for flame retardance and AMS 3652, 3660, and 3667.

Thick.	Thick. Tolerance	6″×6″		12″×12″	
1/16″	±0.003″	1019T11	$22.06	1019T21	$71.64

Reprocessed PTFE

- Color: White
- Temp. Range: –330° to 500°F
- Tensile Strength: Poor
- Impact Strength: Not rated

Often called mechanical-grade PTFE, this material provides low friction at an economical cost. It is not for use as an electrical insulator. Rods can be used outdoors, and they meet ASTM D1710.

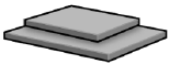
For comparative information about plastics, see page 3626.

Wear-Resistant Glass-Filled PTFE

- Color: Off-white to gray
- Temp. Range: –350° to 500° F
- Tensile Strength: Poor
- Impact Strength: Not rated, except sheets are good

The addition of glass provides increased durability for high-wear applications. This PTFE also has a slippery surface and excellent resistance to chemicals (except strong alkalies and hydrofluoric acid). It's commonly used for gaskets, seals, and valve components. Can be used outdoors. Meets UL 94V0 for flame retardance.

Sheets



Width and length tolerances are ±1/4″. Thickness tolerance is ±10%. Sheets are an excellent electrical insulator.

Thick.	6″×6″		12″×12″		12″×24″

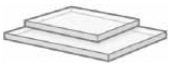
High-Strength Chemical-Resistant PVDF

- Color: Semi-clear white to off-white
- Temp. Range: –25° to 265° F
- Tensile Strength: Good
- Impact Strength: Good

Count on PVDF for long-lasting strength and chemical resistance. It resists most mineral and organic acids, hydrocarbons, and alcohols. Comparable to Kynar and Solef, it's often used for pump parts, tank liners, and seals. This material also has a slippery surface and can be used outdoors. Resin is FDA compliant.

Sheets



Width and length tolerances are ±1/8″. Sheets meet UL 94V0 for flame retardance.

Thick.	Thick. Tolerance	6″×6″		12″×12″	
1/4″	+0.025″	8688K711	$27.83	8688K621	$92.43

2″	1, 2, 3, 4, 5	8683K57	124.36

Ultra-Moisture-Resistant CTFE

- Color: White
- Max. Temp.: 245° F
- Tensile Strength: Poor
- Impact Strength: Good

Often used for gaskets and bearings, CTFE absorbs almost no moisture and has a slippery surface. Resin is FDA compliant. Also known as Kel-F, PCTFE, and Neoflon, this material is an excellent electrical insulator and can be used outdoors. Rods have a diameter tolerance of +0.005″.

Dia.	Available Lengths, ft.		Per Ft.
1/8″	1, 2, 3, 4, 5, 6	85415K16	$6.21
3/16″	1, 2, 3, 4, 5, 6	85415K26	10.64

1 1/2″	1, 2, 3, 4, 5, 6	85415K86	634.89

Self-Lubricating High-Temperature Rulon PTFE

Manufactured from PTFE modified with epoxy-coated fibers, Rulon has a very slippery surface that rarely needs lubrication. It also withstands extreme temperatures.

Sheets

- Color: Gold, maroon, or blue-green
- Temp. Range: –400° to 550°F
- Tensile Strength: Poor
- Impact Strength: Excellent

Width and length tolerances are ±1/4". Thickness has a plus tolerance, except 1/32" and 1/16" thick sheets are ±0.003" and 1/8" to 1/4" thick sheets are ±0.016".

Gold (Grade J)—The most slippery of the Rulon materials, this grade can be used to create gaskets and wear strips.

Maroon (Grade LR)—Use for sleeve, flange, and linear bearing applications.

Blue-Green (Grade 142)—This bronze-filled material can be used for linear slides and piston rings.

	6"×6"				
Thick.	Gold		Maroon		Blue-Green

Rigid Chemical-Resistant Polysulfone

- Color: Semi-clear amber
- Temp. Range: –40° to 285°F
- Tensile Strength: Excellent
- Impact Strength: Good

A very hard plastic, polysulfone also resists chemicals such as mineral acids, alkalies, salt solutions, and hydrocarbons. Resin is FDA compliant, meets NSF/ANSI standards, and meets UL 94V0 for flame retardance. This material can be used in food-service applications.

Sheets

For comparative information about plastics, see page 3626.

High-Temperature High-Strength PFA

Even in demanding environments, PFA delivers exceptional performance. It handles severe temperatures, is an excellent electrical insulator, and can be used outdoors. It's often used to line pumps and insulate cables from wear and damage.

Film

- Color: Clear
- Temp. Range: –320° to 500°F
- Tensile Strength: Poor
- Impact Strength: Not rated

Width tolerance is ±1/16″.

Thick.	Thick. Tolerance	Max. Length, ft.	24″ Wide	Per Ft.

Ultra-Chemical Resistant PPS

- Color: Off-white
- Max. Temp.: 425°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Because of its chemical resistance to strong bases, acids, and fuels, PPS can be used in chemical production applications. Also known as Techtron and comparable to Ryton, it's an excellent electrical insulator and meets ASTM D6358. Resin is FDA compliant.

Ultra-Machinable Radel PPSU

- Color: Semi-clear amber
- Max. Temp.: 320°F
- Tensile Strength: Excellent
- Impact Strength: Excellent

This PPSU offers excellent machinability for fabricating wear-resistant parts. Machine with high-speed steel tooling. It's often used for food applications. Resin is FDA compliant and meets UL 94V0 for flame retardance. Rods meet ASTM D6394.

High-Strength Electrical Insulating Ultem PEI

- Color: Semi-clear amber
- Temp. Range: –20° to 335°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Offering durability and excellent electrical insulating properties, this material is used for circuit-breaker housings, manifolds, and semiconductor components. Resin is FDA compliant. *Bars, sheets,* and *rods* are USDA compliant and meet NSF/ANSI standards. They meet UL 94V0 for flame retardance. *Film* 0.003″ to 0.040″ thick meets UL 94VTM0 for flame retardance.

Rectangular Bars

Width and length tolerances are ±1/2″. Thickness tolerance is +0.003″. Bars meet ASTM D5205 and D7293.

Thick.	2″×12″		2″×24″		4″×12″

High-Strength High-Temperature PEEK

Often a lightweight substitute for metal parts in high-temperature and high-stress applications, PEEK resists chemicals, wear, and moisture.

Rectangular Bars

- Color: Tan
- Temp. Range: –20° to 480° F
- Tensile Strength: Excellent
- Impact Strength: Good

Length and width tolerances are +1½″ and thickness tolerance is +0.025″. Bars are excellent electrical insulators and can be used outdoors. Meet MIL-P-46183. Resin is FDA compliant and meets UL 94V0 for flame retardance.

Very-High-Strength Glass-Filled PEEK

- Color: Tan
- Temp. Range: –20° to 480° F
- Tensile Strength: Excellent
- Impact Strength: Poor

With 30% glass content, these rods offer superior hardness. They are excellent electrical insulators and meet UL 94V0 for flame retardance.

Dia.	Dia. Tolerance	Available Lengths, ft.		Per Ft.
½″	+0.025″	1, 2, 3, 4	8678K11	$33.04

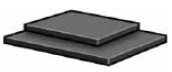
Ultra-Strength High-Temperature Torlon PAI

Capable of maintaining its shape and strength across a range of temperatures, Torlon PAI is often used in high-friction applications, such as non-lubricated bearings, seals, and compressor parts.

Sheets



- Color: Black
- Temp. Range: –320° to 500°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Width and length tolerances are +1″. Sheets have a slippery surface and are made from Torlon 4301 resin. Meet UL 94V0 for flame retardance.

Thick.	Thick. Tolerance	6″×6″		12″×12″	
1/4″	+0.05″	8563K421	$320.21	8563K521	$776.27

1/2″	+0.05″	8563K451	476.94	8563K551	1,120.03

Electrically Insulating Sheets

- Color: Yellow
- Temp. Range: –320° to 500°F
- Tensile Strength: Excellent
- Impact Strength: Good

Suitable for use as electrical connectors, these sheets are excellent electrical insulators. Width and length tolerances are +1″, and thickness tolerance is +0.05″. Made from Torlon 4203 resin. Meet UL 94V0 for flame retardance.

Thick.	6″×6″		Thick.	6″×6″

Ultra-High-Temperature Kapton® and Vespel® Polyimide

Even at high temperatures, polyimide provides outstanding hardness. Kapton® is an excellent electrical insulator and meets UL 94V0 for flame retardance, except **Kapton® polyimide electrically conductive film** is not an electrical insulator. Vespel® meets MIL-R-46198, AMS 3644C, ASTM D6456, and UL 945V for flame retardance.

Kapton® Polyimide Film and Sheeting

- Color: Semi-clear amber
- Temp. Range: –450° to 750°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Also known as Type HN. *Film* has width and length tolerances of ±1/16″. *Sheeting* has a width tolerance of +2.5″.

		Film		*Sheeting*		
Thick.	Thick. Toler.	12″×12″	Each	Max. Length, ft.	24″ Wide	Per Ft.
0.001″	±0.0001″	2271K1	$11.40	20	2271K4	$19.84
0.002″	±0.0002″	2271K2	14.94	20	2271K5	27.30
0.005″	±0.0005″	2271K3	28.53	20	2271K6	55.42

Kapton® Polyimide Adhesive-Back Film

- Color: Semi-clear amber
- Temp. Range: –40° to 500°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Width and length tolerances are ±1/16″. Adhesive is silicone.

Thick.	Thick. Tolerance	12″×12″	
0.001″	±0.0001″	2271K71	$16.38
0.002″	±0.0002″	2271K72	20.10
0.005″	±0.0005″	2271K73	36.12

Kapton® Polyimide Heavy Duty Film

- Color: Brown to black
- Temp. Range: –450° to 660°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Suitable for mechanical seals and electrical connectors, this film can also be used outdoors. Width and length tolerances are –1/8″ to +5/8″.

Thick.	Thick. Tolerance	13″×23″	
0.010″	±0.0005″	7161T11	$140.74
0.020″	±0.001″	7161T21	260.63

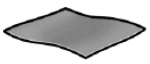
Kapton® Polyimide Electrically Conductive Film

- Color: Semi-clear black
- Temp. Range: –450° to 460°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Film conducts electricity, removing static charge. Width and length tolerances are ±1/8″.

Thick.	Thick. Tolerance	12″×12″	
0.001″	±0.0001″	2271K69	$32.02

Kapton® Polyimide Thermally Conductive Film



- Color: Amber
- Temp. Range: –450° to 750°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Because this film dissipates heat, it's often used for printed circuit boards and power supplies. Width and length tolerances are ±1/8″.

Thick.	Thick. Tolerance	12″×12″	
0.002″	±0.0002″	2271K24	$27.00

Vespel® Polyimide Rods

- Color: Amber
- Temp. Range: –425° to 550°F
- Tensile Strength: Excellent
- Impact Strength: Poor

Use these rods to make valve components and seal rings.

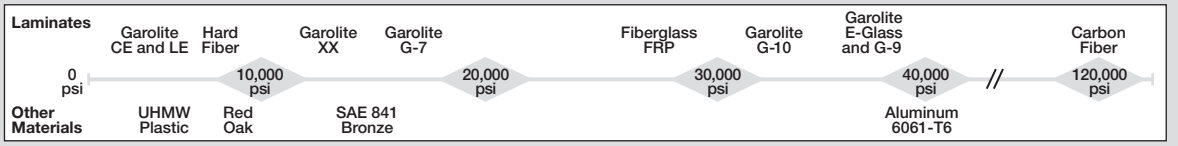
About Plastic Laminates

Hard fiber, fiberglass, Garolite, and carbon fiber (also referred to as plastic laminates and composites) are usually created by combining fiber, paper, or fabric with epoxy or resin. Commonly called thermosets because they are created by setting under heat, they have very different properties than more common plastics such as polyethylene and nylon. They are not designed to be heated, so you cannot bend and form them.

Fiberglass and Garolite Material Selector Pack—Includes one individually marked piece of electrical-grade fiberglass (GPO3) and the following grades of Garolite: XX, CE, LE, G-9, G-10, G-11, and G-7. Each piece is 2″×2″×1/16″.
5331K3 ..... $21.68

Tensile Strength—Refers to the amount of stretching a material can withstand before breaking. E-glass and glass carbon are not rated for tensile strength.



Electrical Insulation—All plastic laminates have some electrical insulating capabilities. Ratings are based on their relative insulating (dielectric) strength, which is the maximum voltage the material can withstand. E-glass, glass carbon, and carbon fiber do not have an electrical insulation rating.

Excellent	Good	Poor
G-11	G-10, G-10/FR4, G-9, XX, G-7, GPO3	Hard Fiber, FRP, CE, LE

Machinability—Plastic laminates are difficult to machine; carbide or diamond-tipped tools are generally required when machining to achieve the best results. The machinability ratings below are based on speed, life of the tooling, and the level of ease to attain a satisfactory finish.

Good	Fair	Difficult
Hard Fiber, XX, CE, LE, Glass Carbon	GPO3, E-glass, Carbon Fiber	FRP, G-9, G-10, G-10/FR4, G-11, G-7

Moisture Resistance—The base material affects the amount of moisture absorbed into the laminates. Cloth-based laminates have a higher absorption rate than laminates with other base materials. E-glass, glass carbon, and carbon fiber are not rated for moisture resistance.

Excellent	Good	Fair	Poor
G-10, G-10/FR4, Carbon Fiber, G-11, GPO3	G-7, G-9	FRP	Hard Fiber, CE, LE, XX

Hard Fiber

Hard Fiber

- Color: Opaque gray, unless noted
- Max. Temperature: 235° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor, except electrical-grade sheets are good
- Machine: Use high-speed steel tooling
- Hardness: Rockwell R70-R80

Also known as vulcanized fiber, this material has a cotton-fabric base that has been chemically treated to produce a hard, dense substance that is also lightweight. Meets UL 94HB for flame retardance, MIL-F-1148A, and MIL-F-10336A, except *electrical-grade sheets* meet UL 94HB and MIL-I-695A.

Sheets—Smooth Finish

Width and length tolerances are ±1/8″ for 12″×12″ sheets, ±1″ for 24″×39″ sheets, and ±2″ for 39″×48″ sheets. Flatness tolerance is not rated.

Thick.	Thick. Tolerance	12″×12″		24″×39″		39″×48″

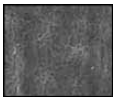
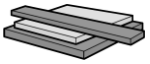
Structural Fiberglass (FRP)



- Color: See below
- Max. Temperature: 140° F, unless noted
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Barcol 40-45, except high-temperature sheets are Barcol 10

Nonconductive, lightweight, and stronger than wood, fiberglass-reinforced polyester (FRP) is ideal for structural applications.

Strips and Sheets—Smooth Finish



- Color: *Standard:* Opaque green; *Fire-Retardant:* Opaque dark gray

Standard sheets have a ±3/16″ width tolerance and +1/2″ length tolerance. Flatness tolerance is 0.008″ per inch. UV resistant. FDA compliant.

Fire-retardant sheets have a ±1/4″ width and length tolerance. Flatness tolerance is 0.008″ per inch. UV resistant. Made with a flame-retardant resin.

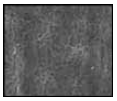
(Material continued on following page)

Fiberglass

For information about fiberglass, see page 3678.

Structural Fiberglass (FRP) *(Material continued from previous page)*



- Color: Opaque green
- Max. Temperature: 140° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Barcol 40-45

Nonconductive, lightweight, and stronger than wood, fiberglass-reinforced polyester (FRP) is ideal for structural applications.

U-Channels—Smooth Finish

Base and leg tolerances are ±3/32″. Length tolerance is +1/2″. Straightness tolerance is 0.050″ per foot. FDA compliant.

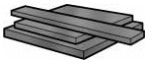
Electrical-Grade Fiberglass (GPO3)

- Color: Opaque red, except tubes are black
- Max. Temperature: 265° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Barcol 50-55

Combining good electrical insulation with arc resistance and high strength, GPO3 fiberglass is a good choice for use in electrical applications. Made of fiberglass-reinforced polyester, this material is also known as polyester-grade industrial laminate. Meets UL 94V0 for flame retardance, except tubes, rods, and 1/32″ thick sheets do not.

Sheets—Smooth Finish



Width and length tolerances are ±1/32″, except 36″ and 72″ sides are ±9/16″ and 96″ sides are ±1″. Flatness tolerance is 0.6″ for 12″ and 24″ lengths, 1.8″ for 36″ and 72″ lengths, and 2.4″ for 96″ lengths.

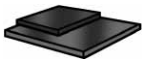
Hard and Strong Garolite (XX)

- Color: Opaque tan to brown, except sheets are also offered in opaque black
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Poor
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M105

Lighter than metal but dense and strong, this paper-based material absorbs less moisture than Impact-Resistant CE Garolite. Sometimes called paper-grade industrial laminate, phenolic, or Bakelite, it is often used for gasketing and gears. All meet MIL-I-24768/11. *Sheets, strips,* and *rods* also meet UL 94HB for flame retardance.

Sheets—Smooth Finish



Width and length tolerances are ±1″, except 6″×6″ sheets are ±½″. Flatness tolerance is not rated.

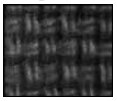
Impact-Resistant Garolite (CE)



- Color: Opaque tan to brown, except graphite-filled sheets are black
- Max. Temperature: 235° F
- Tensile Strength: Good
- Impact Strength: Good
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Rockwell M90-M105

This general-purpose laminate is used primarily for mechanical applications, such as bushings, gears, and rollers. Material has a cotton-cloth base and is sometimes called canvas-grade industrial laminate, phenolic, and Bakelite. *Sheets* and *rods* meet UL 94HB for flame retardance. *Sheets*, *tubes*, and *rods* meet MIL-I-24768/14. *Graphite-filled sheets* do not meet a UL or MIL specification.

Sheets—Smooth Finish

Width and length tolerances are ±1″. Flatness tolerance is not rated. Hardness for 4″×6″ sheets is Barcol 50-60.

Wear-Resistant Slippery Sheets—Smooth Finish

The addition of graphite to CE Garolite acts like a lubricant to reduce surface friction. Often used for bearings and wear pads, this material is a good choice for high-friction applications. Thickness tolerance is ±15% for thicknesses up to 1/4″; +10% for 1/2″ to 1″ thick. Length and width tolerances are ±1″, except 12″×12″ sheets are ±1/4″. Flatness tolerance is not rated.

Thick.	12″×12″		18″×39″		39″×39″	
1/16″	2547K11	$7.60	2547K12	$29.84	2547K13	$54.26

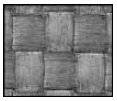
Ultra-Impact-Resistant Garolite (E-Glass)



- Color: Opaque reddish brown
- Max. Temperature: 160° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Rockwell M110

An alternative to our ultra-impact-resistant polycarbonate, E-glass Garolite provides outstanding protection from impact and punctures, making it ideal for use as machine guards. Length and width tolerances are ±1/8″. Flatness tolerance is not rated. Finish is smooth. Meets UL 752.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×24″		24″×48″	
0.283″	±0.026″	3819K65	$36.41	3819K66	$53.82	3819K67	$91.81	3819K68	$158.30

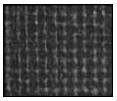
Machinable Garolite (LE)



- Color: Opaque tan to brown
- Max. Temperature: 235° F
- Tensile Strength: Excellent, except tubes are good
- Impact Strength: Poor
- Electrical Insulator: Poor
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M105

A fine-weave cotton-cloth base gives LE Garolite good machinability and wear resistance. It is sometimes referred to as industrial laminate, phenolic, or Bakelite. Meets UL 94HB for flame retardance and MIL-I-24768/13, except tubes and thick sheets do not meet UL 94HB.

Sheets—Smooth Finish

Width and length tolerances are ±1″. Flatness tolerance is not rated.

Electrically Conductive Garolite (Glass Carbon)

- Color: Opaque black
- Max. Temperature: 290° F
- Tensile Strength: Not rated
- Impact Strength: Not rated
- Not an electrical insulator
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M110

The graphite-carbon portion of this glass-based material conducts electricity, removing static charges. Material is sometimes called industrial laminate or phenolic. Width and length tolerances are ±1″, except 12″×12″ sheets are ±1/4″. Flatness tolerance is not rated. Finish is smooth.

Thick.	Thick. Tolerance	12″×12″		12″×24″		24″×42″

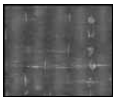
Electrical-Grade Garolite (G-9)



- Color: Opaque brown to gray
- Max. Temperature: 280°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M90-M115

Often used as arc barriers and switchboard panels, this high-strength material has excellent arc resistance. Sometimes called melamine-grade industrial laminate, phenolic, and Bakelite, G-9 Garolite has a woven fiberglass fabric base. Meets UL 94V0 for flame retardance, except 1/32" thick sheets do not.

Sheets—Smooth Finish

Width and length tolerances are ±1". Flatness tolerance is not rated.

Multipurpose Garolite (G-10)

- Color: Opaque yellow to green
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M100-M110

Combining good electrical insulating properties with high strength and low moisture absorption, this fiberglass-cloth based material is sometimes called epoxy-grade industrial laminate and phenolic. *Sheets* and *tubes* meet MIL-I-24768/2. *90° angles* meet MIL-I-247681/27.

Flame-Retardant Multipurpose Garolite (G-10/FR4)

- Color: Opaque yellow-brown to green, unless noted
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M110-M115

This flame-retardant version of G-10 Garolite offers excellent strength, low water absorption, and good electrical insulating qualities in dry and humid conditions. Material is fiberglass-cloth with a flame-retardant resin. Meets MIL-I-24768/27. Meets UL 94V0 for flame retardance, except tubes do not.

Flame-Retardant Multipurpose Garolite (G-10/FR4) *(Material continued from previous page)*

- Color: Opaque yellow-brown to green
- Max. Temperature: 265°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use carbide tooling
- Hardness: Rockwell M110-M115

This flame-retardant version of G-10 Garolite offers excellent strength, low water absorption, and good electrical insulating qualities in dry and humid conditions. Material is fiberglass-cloth with a flame-retardant resin. Meets MIL-I-24768/27. Meets UL 94V0 for flame retardance, except tubes do not.

Copper-Clad Sheets—Smooth Finish

Sheets are 24″×36″. Copper is 0.0014″ thick. Width and length tolerances are ±1″. Flatness tolerance is not rated.

High Temperature Garolite (G-11)

- Color: Opaque green to greenish brown
- Max. Temperature: 335°F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Excellent
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M110-M115

Suitable for continuous use in elevated temperatures, this fiberglass-based material retains at least 50% of its structural strength at temperatures above 300°F. It is sometimes called epoxy-grade industrial laminate and phenolic. Meets UL 94HB for flame retardance and MIL-I-24768/3.

Sheets—Smooth Finish

For information about Garolite, see page 3678.

Ultra High Temperature Garolite (G-7)

- Color: Opaque off-white to light green
- Max. Temperature: 425° F
- Tensile Strength: Excellent
- Impact Strength: Excellent
- Electrical Insulator: Good
- Machine: Use diamond-tipped tooling
- Hardness: Rockwell M67-M105

Not only heat- and arc-resistant, this material also has good electrical insulating properties. It has a fiberglass-fabric base and is sometimes called silicone-grade industrial laminate, phenolic, and Bakelite. Meets MIL-I-24768/17 and UL 94V0 for flame retardance.

Sheets—Smooth Finish

Width and length tolerances are ±1″, except 4″×6″ sheets are ±½″. Flatness tolerance is not rated.

High Temperature Compressible Graphite

- Color: Opaque dark gray
- Max. Temperature: 975° F
- Tensile Strength: Nonreinforced: Fair Reinforced: Good
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

Use these graphite sheets as seals and gaskets in high-temperature environments. They are softer than conductive graphite and can compress by as much as 35% their thickness for a tight seal. When oxygen is not present, the maximum temperature of this material is 4500° F.

Sheets—Smooth Finish

Thickness tolerance is ±0.031″ for the 1/32″ and 1/16″ thick sheets; it is ±0.047″ for the 1/8″ thick sheets. Width and length tolerances are ±1″ for the 12″×12″ sheets; ±2″ for the 12″×24″ sheets; and ±3″ for the 36″×36″ sheets. ***Reinforced*** sheets have a 0.002″ thick Type 316 stainless steel insert for additional strength.

Thick.	12″×12″		12″×24″		36″×36″	
Nonreinforced

High Temperature Conductive Graphite

- Color: Opaque black
- Max. Temperature: 800° F
- Tensile Strength: Good
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

The very fine grain of this graphite adds strength and density to this conductive, heat-resistant material. It is often used in applications that require resistance to high temperatures, such as fabricating furnace parts, and to manufacture crucibles or ingot molds because it does not adhere to metal. When oxygen is not present, the maximum temperature of this material is 5000° F.

Rectangular Bars—Smooth Finish

Grain size is 0.0004″. Thickness tolerance is ±0.005″. Width and length tolerances are +1/8″.

High-Strength Lightweight Carbon Fiber

- Color: Opaque black
- Max. Temperature: 150° F
- Tensile Strength: Excellent
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

The carbon-fiber base of this material creates a strong, lightweight laminate with a sleek, attractive finish.

Also Available: Adhesive for use with carbon fiber. Please ask for 1813A243.

Rigid Rectangular Bars—Smooth Finish

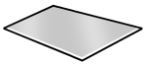
Ultra-Conductive Graphene Sheets

- Color: Silver
- Max. Temperature: 750° F
- Tensile Strength: Excellent
- Impact Strength: Not rated
- Electrical Insulator: Poor
- Hardness: Not rated

This highly conductive graphene material is often used in electronic devices, such as cell phones, laptop computers, digital cameras, and LEDs. Graphene is 97% carbon. It can be folded without tearing or damaging the sheet, and can be cut into smaller pieces with scissors. Thickness, width, and length tolerances are not rated.



Thick.	Wd.	Lg.		
0.001″	8″	8″	1334N1	$34.00

Carbon Foam

- Color: Opaque charcoal gray
- Max. Temperature: 600° F
- Tensile Strength: Poor
- Impact Strength: Not rated
- Electrical Insulator: Not rated
- Machine: Use carbide tooling
- Hardness: Not rated

Often used in insulating, filtering, and electrical applications, this brittle foam resists high temperatures and chemicals. Sheets have an open-pore construction that allows fluid and air to flow through—the fewer pores per square inch (PPI), the greater the flow. Finish is textured. In oxygen-free environments, max. temperature is 6300° F.

To Order: Please specify flow rate: low flow (100 PPI), medium flow (60 PPI), or high flow (20 PPI).

Very High Temperature Mica

- Color: Opaque silver with brown spots, except clear film
- Max. Temperature: 930° F
- Electrical Insulator: Excellent
- Machine: Use carbide tooling
- Hardness: Not rated

Often used in thermal and electrical insulation, this material is also known as muscovite mica and is composed of laminated aluminum silicate and potassium, except clear film is not laminated. *Sheets* and *opaque film* meet UL 94V0 for flame retardance.

Sheets

Width and length tolerances are ±0.375″ for 10″ × 12″ sheets and ±0.437″ for 20″ × 24″ sheets.

Ultra High Temperature Mica

- Color: Opaque green with brown spots
- Max. Temperature: 1290° F
- Electrical Insulator: Excellent
- Machine: Use carbide tooling
- Hardness: Not rated

Use this material in circuit breakers, heating elements, and other applications that require resistance to extremely high temperatures. Also known as phlogopite and amber mica, material is made of aluminum silicate with magnesium and a high-temperature silicone-based binder. Meets UL 94V0 for flame retardance.

Fire- and Safety-Rated Wire-Reinforced Glass

- Color: Clear
- Temperature Range: Not rated
- Machine: Use glass-cutting tools
- Annealed

Coated with a safety film that increases the glass's impact resistance, allowing it to meet Consumer Product Safety Commission Cat. I and II. Also meets UL 9, 10B, and 10C, as well as NFPA 80, 252, and 257. Glass is 5/16″ thick. Thickness, width, and length tolerances are ±1/16″. Edges are cut.

Heat-Resistant Borosilicate Glass

- Color: Clear
- Max. Temperature: 445° F, except tempered pressure-rated discs are 500° F
- Machine: Use glass-cutting tools
- Annealed, unless noted

Also known as Pyrex and Schott glass, this glass resists clouding and pitting and is highly chemical and heat resistant. With a low rate of thermal expansion, it also stays dimensionally stable during changes in temperature. Meets MIL-G-47033, except balls do not.

Sheets

Edges are cut. Width and length tolerances are ±0.062″. Thickness tolerance is ±0.008″ for 1/8″ to 1/4″ thick sheets, ±0.011″ for 3/8″ thick sheets, and ±0.019″ for 5/8″ and 3/4″ thick sheets. **To Order:** Please specify thickness.
Also Available: Other sheet sizes. Please ask for 8476K999 and specify thickness, width, and length.

Ultra-Tough Gorilla Glass

- Color: Clear
- Max. Temperature: 570° F
- Machine: Not recommended

Ultra-thin yet extremely durable, this glass has been chemically strengthened to maximize toughness and scratch resistance. Often used for display and touch-screen applications, such as smartphones and tablets, it is lightweight and cleans easily. Width and length tolerances are ±0.010″.

Very High Temperature Heat-Resistant Glass Ceramic

- Color: Transparent light rose
- Max. Temperature: 1255° F
- Machine: Use diamond tooling
- Annealed

Combining the transparency of glass with the high heat resistance of ceramics, this material offers good resistance to rapid temperature changes. Edges are cut. Thickness tolerance is ±0.016″, and width and length tolerances are ±0.062″.

Extreme Temperature Quartz Pure Glass

- Color: Clear
- Max. Temperature: 2100° F
- Machine: Use diamond tooling
- Annealed

Containing 99.995% silicon dioxide, this glass provides excellent UV transmission, as well as high transmission in the visible and infrared ranges. Use in high-intensity lighting, fiber-optic production, and optical lens systems. All sides are ground and polished. Diameter tolerance is ±0.010″; thickness tolerance is +0.005″.

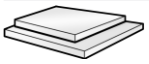
Easy-to-Machine Glass-Mica Ceramic

- Color: See below
- Max. Temperature: See below
- Machine: Use carbide tooling
- Electrical Insulator: Excellent, except very high temperature sheets are good
- Porosity: Nonporous
- Compressive Strength: 32,000 to 50,000 psi

Machine complicated shapes and precision parts from this material, which doesn't require firing before use, in a fraction of the time it would take using fired ceramics. Use standard metalworking tools to machine. Its good electrical and thermal resistance make it a common choice for heating and soldering fixtures.

High Temperature Sheets



- Color: Opaque light gray
- Max. Temperature: 930° F

Also known as Mykroy/Mycalex. Thickness tolerance is ±0.015″, and width and length tolerances are ±1/8″.

Electrical-Insulating Boron-Nitride Ceramic

- Color: Opaque white
- Max. Temperature: 1020° F
- Machine: Use carbide tooling
- Electrical Insulator: Excellent
- Porosity: 7%
- Compressive Strength: 16,000 to 18,000 psi

Used primarily in high-power electrical applications for its excellent electrical insulating properties, this material also resists changes in temperature and is often used in arc welding and semiconductor equipment. Also known as white graphite, this ceramic has a slippery feel due to its low coefficient of friction.

High Temperature Machinable Alumina Bisque Ceramic

- Color: Opaque white
- Max. Temperature: 2475° F
- Machine: Use carbide tooling
- Electrical Insulator: Poor
- Porosity: 36%
- Compressive Strength: 9,000 psi

Often used to create prototype components, this ceramic is chemical and temperature resistant and comes semifired so it can be machined using conventional metalworking tools. Material can be fully fired to create a denser, harder material with increased electrical and mechanical properties. Shrinks 15% to 18% when fired.

Sheets

Thickness tolerance is +0.031″. Width and length tolerances are +1″.

Alumina Silicate Ceramic

- Color: Opaque light gray
- Max. Temperature: 2010° F
- Machine: Use carbide tooling
- Electrical Insulator: Poor
- Porosity: 2% to 3%
- Compressive Strength: 25,000 psi

Also known as lava and wonderstone, this material is often used in applications that require corrosion resistance and low thermal expansion, such as in standoffs and welding jigs. Material is unfired but can be fully fired to increase strength and hardness if the sheets have been machined to 1/4″×6 1/2″×6 1/2″ or smaller and if rods or square bars have been machined to 1/2″×12″ or smaller.

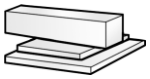
Very High Temperature Nonporous High-Alumina Ceramic

- Color: Opaque white
- Max. Temperature: 3075° F, except balls are 2000° F
- Machine: Use diamond grinding wheel
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 300,000 psi

Seal out air and gas in high-temperature and high-wear applications. This ultrahard ceramic can also be used in applications that require superior strength and corrosion resistance. Even after machining, no additional firing is required.

Rectangular Bars and Sheets



Width tolerance is ±0.008″ for rectangular bars and ±10% for sheets. Length tolerance is ±1/4″, except 6 1/4″ and 8 1/2″ lengths are ±7/16″.

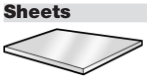
Very High Temperature Machinable High-Alumina Ceramic

- Color: Opaque white
- Max. Temperature: 3000° F
- Machine: Use carbide tooling
- Electrical Insulator: Excellent
- Porosity: 48%
- Compressive Strength: 4,350 psi

Commonly used in induction furnace components and hot glass handling, this high-alumina ceramic combines excellent machinability with high temperature resistance and strength. The 99% alumina content makes it ideal for use in high-vacuum applications. Material comes fired and is unaffected by water.

Sheets



Width and length tolerances are ±0.100″.

Wear-Resistant Zirconia Ceramic

- Color: Opaque ivory
- Max. Temperature: 1000° F
- Machine: Use diamond grinding wheel
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 254,000 psi

As fracture-resistant and durable as many metals, this ceramic has been fired to obtain a high hardness and can be used in high-wear applications. Length tolerance is ±0.015″.

Dia.	Dia. Tolerance	12″ Length		Dia.	Dia. Tolerance	12″ Length	
1/16″	±0.003″	8750K31	$51.02	1/4″	±0.008″	8750K37	$70.39

Fracture-Resistant Silicon Nitride Ceramic

- Color: Translucent black
- Max. Temperature: 1470° F
- Machine: Use diamond tooling
- Electrical Insulator: Poor
- Porosity: Nonporous
- Compressive Strength: 580,000 psi

Often used to create bearings, silicon nitride ceramic is harder than many common bearing steels but is lightweight and can be easily polished. Balls have a 0.000005″ sphericity.

Recycled Plastic Lumber

- Color: Opaque brownish gray
- Max. Temperature: 120° F
- Machine: Use carbide tooling

Get the look of wood without having to worry about splintering or rotting. This UV-resistant high-density polyethylene (HDPE) material can be used in direct sunlight and high traffic applications, such as marine decking. Width and thickness tolerances are ±0.100″. Length tolerance is +0.25″, –0.10″.

Wood

- Color: *Balsa* is light yellow; *Birch* is white to light brown; *Oak* is white to red; *Maple* is white to brown

Balsa is the lightest and softest of all woods but is still very strong. The surface is sanded and has either a straight or wavy grain.

Birch is softer than maple and oak. The surface is smooth and has a straight grain.

Oak is a heavy wood with high wear resistance and is much harder than birch. The surface is less smooth than birch and typically has a straight grain.

Maple is a heavy wood with high wear resistance and is much harder than birch. The surface is smooth and has a straight grain.

Strips

Material is balsa. Thickness, width, and length tolerances are not rated.

Modeling Clay

Clay stays workable when stored in a plastic bag. Sizes are approximate.

General Purpose Clay—Sold in packages of four 1/4-lb. sticks of the same color; each stick is 3/4" Thick.×1" Wd.×5" Lg.

To Order: Please specify color: blue, brown, gray, green, red, or yellow.

1334T2 ..... **Pkg.** $5.93

Shrink-Resistant Clay—Smooth and nonhardening, clay will not shrink or crack. Sold in a 2-lb. block; 2 1/2" Thick.×2 3/4" Wd.×5 1/4" Lg. Color is green-gray.

6102T11 ..... **Each** $34.52

Soft Sculpting Clay—The formula is sulfur-free, which reduces its potential to corrode metals. Often used when working with silicone rubber, the clay is smooth and can be melted and poured at 185° F. Sold in a 2-lb. block; 2 3/4" Thick.×2 3/4" Wd.×5" Lg. Color is green-gray.

6102T21 ..... **Each** $19.34

Hard Styling Clay—Carve or extrude this crack-resistant clay or heat it to approximately 120° F for easier sculpting. Sold in a 2-lb. block; 2 3/4" Thick.×2 3/4" Wd.×5" Lg. Color is brown.

6102T31 ..... **Each** $17.61

Extra-Hard Styling Clay—30% to 40% lighter than similar clays, this clay is crack and shrink resistant. It's also sulfur-free, which reduces its potential to corrode metals. Excellent for milling, it can be heated to 135° F for easier sculpting. Sold in a 1 3/4-lb. rod; 2 1/2" Dia.×10" Lg. Color is dark brown.

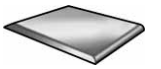
6102T41 ..... **Each** $17.65

Hard Natural Wax

Hard but brittle, this carnauba wax is the hardest natural wax available. It is wear resistant and often used as a polish because of its lustrous appearance. This wax is also used as a mold-release agent for wax blends. Softening temperature is 177° F. Hardness is not rated. Color is yellow. Sold in 1-lb. packages of wax flakes.

7259T22 ..... **Pkg.** $26.30

Sheet Lining Wax



Flexible enough to conform to angles, bends, and detailed surfaces, lining wax is even bendable at room temperature. Use it as lining in stamping prototypes and to produce castings of die patterns. Hardness is not rated. Thickness tolerance is ±0.002". Sheets are approximately 12"×24".

Standard Sheets—Softening temperature is 180° F. Color is brown.

High Temperature Sheets—The 220° F softening temperature is suitable for use with casting and laminate resins. Color is tan. *Tacky-back sheets* have adhesive on one side and adhere to most oil-free surfaces.

Thick.	STANDARD SHEETS Plain Back		HIGH TEMPERATURE SHEETS Plain Back		Tacky Back

Bonding Wax

Protect small or fragile items from vibration. This wax has good surface adhesion that holds temporarily. Remove wax with hot water. ***1-lb. tray*** is 1" Thick.×5" Wd.×8" Lg.

	Melting Temp., °F	Color		
6-oz. Jar	165° to 175°	White	1129K14	$4.75
1-lb. Tray	140° to 150°	Yellow	1129K11	15.45

Sealing and Lubricating Wax

Seal your containers against water seepage or lubricate your tools. Hardness is not rated. Sizes are approximate.

Beeswax

Melting temperature is 160° F. Color varies from cream to yellow.

1-lb. block is 1 1/4" Thick.×3 1/2" Wd.×6 3/4" Lg.

Candle is 1 1/4" Dia.×6" Lg.

Plugs are sold in packages of 16. Each plug weighs 1 oz. and is 1 3/8" Dia.×1 1/4" Lg.

Beads come in a 1-lb. package containing 14,700 beads.

	Each		Pkg.	
1-lb. Block	1100K92	$20.59		
Candle	1100K95	9.25		
Plugs			1100K97	$23.06
Beads			1100K89	10.02

Paraffin Wax

Melting temperature is 140° F. Color is white.

Blocks are FDA compliant. *1-lb. block* is 1 1/2" Thick.×2 1/2" Wd.×9" Lg. *10-lb. block* is 1/2" Thick.×12" Wd.×19" Lg.

Candles are also known as plumbers' candles. Sold in packages of 3; each candle is 1 1/8" Dia.×4 1/2" Lg.

Beads are FDA compliant. Sold in a 1-lb. package of 17,000 beads.

	Each		Pkg.

10-lb. Block	1085K92	53.44		
Candles			1085K96	$5.66
Beads			1085K91	4.42

Machinable Wax

Although this wax is hard and tough, it can be turned, milled, drilled, tapped, carved, and sawed easily without tool wear.

Nonabrasive Wax

Check CNC setups with this nonabrasive wax. Softening temperature is 214° F. Hardness is Shore 50D-52D. All dimensions have a ±1/8" tolerance. **To Order:** Please specify color: blue, green, or purple.

Resin Fillers

Add these hollow spheres to epoxy, urethane, or polyester resins to reduce weight and shrinkage. Sold in 2-qt. containers.

Glass microspheres are a good choice when water resistance or sanding is required. Sphere diameter is 0.00236″. Color is clear.
1414T36 ..... $20.55

Ceramic spheres act as a thickening agent. Sphere diameter is 0.0055″. Color is gray.
1414T48 ..... $21.76

Casting Compounds

Capture intricate details when creating prototypes, molds, and linings with these easy-to-mix two-part compounds. For release agents, see page 2196. For hardness information, see page 3588.

Compounds cure at room temperature, except FDA-compliant urethane cures at 120° F. They shrink 1.5% or less during cure, except see-through urethane, FDA-compliant urethane, and foam urethane shrink 5%.

Hard (Shore 80A) General Purpose Black Urethane Sample—Contains 4 ounces. 8644K57 $17.50

High Temperature Ceramic Casting Compounds

These two-part compounds harden in 20 minutes and cure in 16-24 hours at room temperature. Shrinkage rate is 1.5%.

Corrosion-resistant silicon carbide has a high heat transfer rate, making it ideal for use in metal casting molds. It has the added benefit of excellent erosion and oxidation resistance.

Shock-resistant silica withstands rapid changes in temperature without cracking and has a low rate of thermal expansion.

Ultra high temperature zirconium oxide is often used in metal handling applications. In addition to its high temperature resistance, it's also chemical resistant.

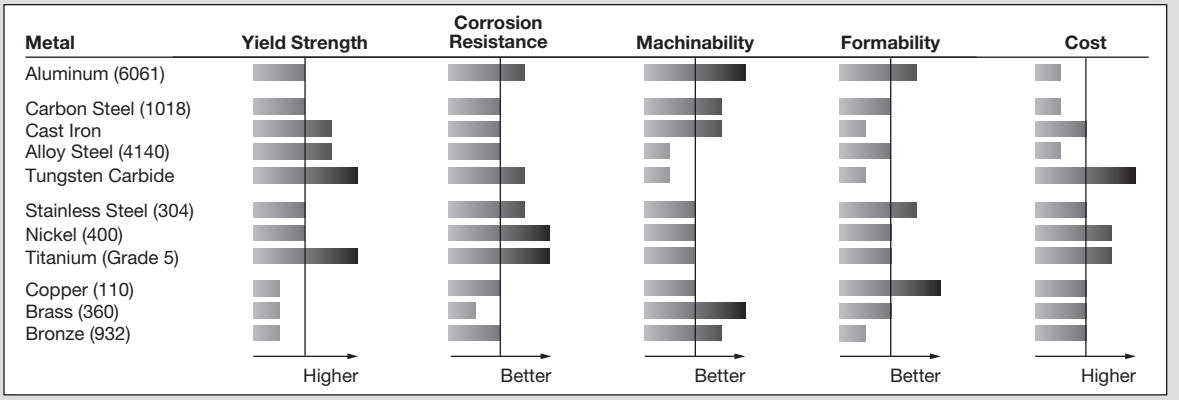
About Metals

If you are not sure which metal is right for your application, use the charts below to compare the 11 most common types. The information provided is for use as a general guideline; the properties will vary among the different alloys and grades within each material. For more details about these metals, please see the pages listed below.

Compare Types of Metals



Features and Uses of Metals

		Pages
Aluminum	This general-purpose material is lightweight, corrosion resistant, easy to machine, and a good conductor of heat and electricity. It's often used for pipe fittings, vehicle bodies, and lightweight fasteners.	3699-3727
Carbon Steel	Offers good machinability and weldability at an economical cost but lacks corrosion resistance. This type of steel is used for a variety of structural applications.	3728-3741
Cast Iron	Provides good machinability and strength. It absorbs vibration so finished parts, such as gears and rollers, run more quietly than those made of carbon steel.	3744-3745
Alloy & Tool Steel	When compared to carbon steel, these steels offer greater strength, hardness, and wear resistance. Alloy steel will stand up to high-stress applications. Tool steel is used to make drill bits, punches, chisels, and similar cutting tools.	3745-3768
Tungsten	One of the hardest metals, tungsten is very wear resistant and can withstand extremely high temperatures. It's used to make long-lasting cutting tools.	3768-3769
Stainless Steel	This metal contains at least 10% chromium to increase corrosion resistance. It's used in chemical- and food-processing equipment. Stainless steel is typically not as strong as steel and can be more difficult to machine.	3770-3800
Nickel	It can handle many aggressive chemicals and acids. While nickel is more corrosion resistant than stainless steel, it is also more costly. Nickel is often used in marine applications and chemical-processing equipment.	3801-3802
Titanium	This premium metal is extremely strong yet relatively lightweight. Titanium has excellent resistance to corrosion, pitting, and stress cracking. It's often used for chemical-processing equipment and in marine environments.	3803-3804
Copper, Brass & Bronze	Commonly called red metals, each of these alloys has a high copper content that provides good weather resistance. Copper is an excellent conductor of heat and electricity, while brass and bronze offer good machinability and wear resistance. These metals are commonly used for piping, wire, valves, and bearings.	3805-3825

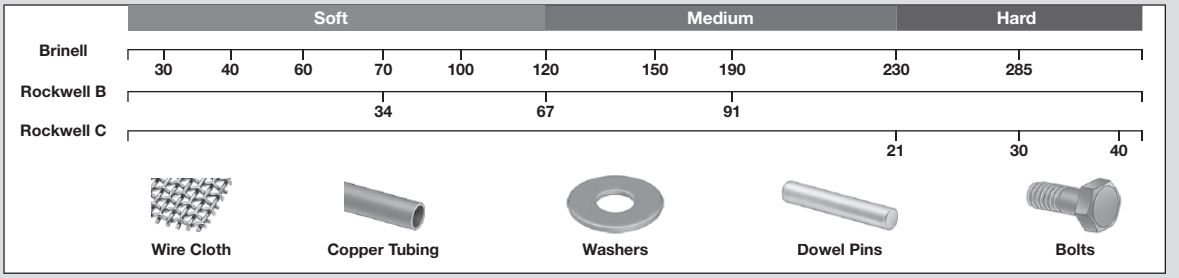
About Aluminum

A lightweight and economical metal, aluminum is a good conductor of heat and electricity. Depending on the alloy, it can either be heat treated or cold worked to increase its strength, but it will typically not be as strong as steel.

A corrosion-resistant layer forms naturally on its surface, so aluminum offers good corrosion resistance to salt water and chemicals. Clean this layer for improved weldability.

Hardness

As hardness increases, metals become more wear resistant, but they can also be less malleable. The chart below shows hardness measured on different scales.



(Continued on following page)

More About Aluminum

Alloy Comparison

Use the chart below to identify the best aluminum for your application. Circles indicate that a majority of a material's shapes and sizes meet the applicable rating. Yield strength is approximate and may vary by size and shape.

Temper

Temper indicates the processing done to aluminum alloys for strength and hardness.

Heat Treated (T)— Material has been heat treated for added strength, and it can be heat treated further. These tempers are useful for parts requiring machining, such as fittings and fasteners.

Cold Worked (H)— Material has been cold worked or strain hardened for added strength and cannot be heat treated. Cold-worked aluminum is best for decorative structural components, chemical-processing equipment, and heat exchangers.

Softened (O)— Material has been annealed (heat treated) for softness and bendability and is stress relieved. Use softened aluminum for forming and bending applications that require a very malleable material.

Multipurpose 6061 Aluminum

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

Rectangular Bars— Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6511, unless noted)
- Meet ASTM B221

Width tolerance for 1/4" to 1 3/4" wide bars is ±0.014"; for 2" to 5" wide bars it is ±0.034"; for 6" to 12" wide bars it is ±0.084". Length tolerance for 1/2-ft. to 6-ft. lengths is ±1".

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below (except cubes) for an additional $10. Please ask for 1614T995 and specify thickness, width, and length.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

Rectangular Bars—Unpolished (Cont.)

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6511, unless noted)
- Meet ASTM B221

Width tolerance for 1/4" to 1 3/4" wide bars is ±0.014"; for 2" to 5" wide bars it is ±0.034"; for 6" to 12" wide bars it is ±0.084". Length tolerance for 1/2-ft. to 6-ft. lengths is ±1".

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below (except cubes) for an additional $10. Please ask for 1614T995 and specify thickness, width, and length.

Miniature Tight-Tolerance Rectangular Bars—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B221

These bars also meet AMS 4150 and AMS-QQ-A200. Thickness and width tolerances are ±0.003″. Length has a plus tolerance.

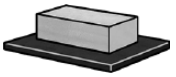
(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300°F.

Anodized Rectangular Bars and Sheets—Clear or Black Coating



- Yield Strength: 40,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6511, unless noted)
- Meet ASTM B221, unless noted

In addition to a uniform finish, the anodized coating provides increased abrasion resistance. Thickness tolerance for 1/16" thick bars and sheets is ±0.004"; for 1/8" to 1/2" thick it's ±0.009". Width tolerance for 3/8" to 1 1/2" wide bars and sheets is ±0.014"; for 2" to 12" wide it's ±0.044". Length tolerance is +1/8".

Hard Anodized Rectangular Bars—Gray

- Yield Strength: 40,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6511)
- Meet ASTM B221

The anodized coating increases surface hardness for improved wear and corrosion resistance. The harder surface also makes these bars more difficult to machine. The coating is about 0.001" thick and forms a bond with the aluminum. Bars have a width tolerance of ±0.014". Length tolerance is ±1/16".

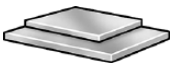
Sheets—Unpolished



- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B209

Sheets meet AMS 4027. Width tolerance is ±1/16". Length tolerance is ±1/8".

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 9015T777 and specify thickness and size.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

Thick Sheets—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6511)
- Meet ASTM B221

Flatness tolerance is 0.010″ per inch of width. Width tolerance for the 2″ and 4″ wide sheets is ±0.034″; for the 6″, 8″, and 12″ wide sheets it is ±0.084″. Length tolerance is ±1/16″.

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 8812T666 and specify thickness and size.

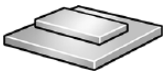
Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on All Sides



- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T651, except 1/8″ and 3/16″ are T6)
- Meet ASTM B209

All six sides are precision ground and parallel to 0.005″, so these bars and sheets are ready to use in your CNC machine. They are also known as blanks. Each comes with a traceable lot number and material test report. Thickness tolerance is ±0.002″, except 3/16″ thick sheets have a thickness tolerance of +0.004″. Width and length tolerances are ±0.002″. Flatness tolerance is not rated.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

Tight-Tolerance Cubes—Precision Ground on All Sides

- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T651)
- Meet ASTM B209

Also known as blanks, these cubes are ready for use in your CNC machine. Square tolerance is ±0.002″. Flat and parallel tolerances for 1″ to 3″ cubes are 0.002″; for 4″ to 7½″ cubes they are 0.005″. Each comes with a traceable lot number and material test report.

Sq. Size			Sq. Size			Sq. Size

Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on Top and Bottom

- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T651, except ⅛″ and 3⁄16″ are T6)
- Meet ASTM B209

The top and bottom are ground flat and parallel to 0.002″, while the sides have a saw-cut or mill edge. Each piece comes with a traceable lot number and material test report. Thickness tolerance is ±0.002″. Width and length have a plus tolerance.

Metric Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on Top and Bottom

- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T651)
- Meet ASTM B209

These bars and sheets are ground flat on the top and bottom. The sides have a saw-cut or mill edge. They meet AMS 4027. Each piece comes with a traceable lot number and material test report. Thickness tolerance is ±0.05 mm. Width and length have plus tolerances.

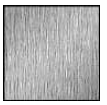
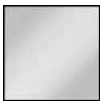
Polished Sheets—Brushed and Mirror-Like Finishes



Brushed



Mirror-Like

- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6, except 0.375″ is T651)
- Meet ASTM B209

Sheets are polished on one side then covered with a protective peel-off film. Width and length tolerances are ±1⁄16″. Flatness tolerance is 0.125″.

Brushed sheets have grain lines running in one direction. **Mirror-like** sheets have no grain lines.

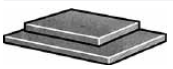
Hard Anodized Sheets—Gray



- Yield Strength: 35,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T651, except 0.063″ to 0.190″ are T6)

The anodized coating increases the surface hardness for improved wear and corrosion resistance. The harder surface also makes these sheets more difficult to machine. The coating is about 0.001″ thick and forms a bond with the aluminum. Width and length tolerances are ±1⁄16″. The 0.250″ to 1.000″ thick sheets meet ASTM B209.

Thick.	Thick. Tolerance		6″×6″	6″×12″	12″×12″	24″×24″

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

Rectangular Tubes—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (80 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B221

Height and width tolerances are ±0.085″. Length tolerance is ±1/4″.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

Round Tubes—Unpolished (Cont.)

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6511, unless noted)
- Meet ASTM B241, unless noted

OD tolerance for 1/4″ to 7/8″ dia. tubes is ±0.010″; for 1″ to 8″ dia. tubes it is ±0.035″; for 10″ and 12″ dia. tubes it is ±0.065″. Straightness tolerance for 1/4″ dia. tubes is 0.500″ per foot; for 3/8″ to 12″ dia. tubes it is 0.020″ per foot. Length tolerance for 1/2-ft. lengths is ±1/2″; for 1-ft. to 6-ft. lengths it is ±1″; for 1″ and 3″ lengths it is +1/8″.

Anodized Round Tubes—Clear or Black Coating

- Yield Strength: 38,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6)
- Meet ASTM B221

The inside, outside, and ends are anodized for a uniform finish and increased abrasion resistance. OD tolerance for 1″ to 3″ dia. tubes is ±0.015″; for 4″ dia. tubes it is 0.025″. Length has a plus tolerance.

OD	ID	Choose a Color		1/2 ft.	1 ft.	3 ft.

Hard Anodized Rods—Gray

- Yield Strength: 35,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6511, except 1/8″ to 3/8″ are T6)
- Meet ASTM B221

The anodized coating increases the surface hardness for improved wear and corrosion resistance. The harder surface also makes these rods more difficult to machine. The coating is about 0.001″ thick and forms a bond with the aluminum. Rods have a length tolerance of ±1/16″.

Chrome-Coated Rods—Matte Gray

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6/T651)

The flat-finish coating, sometimes called industrial chrome, offers good wear resistance.

Choose a Diameter	Choose a Length	
1/8″, 3/16″, 1/4″, 5/16″, 3/8″, 1/2″, 5/8″, 3/4″, 1″	1 ft., 3 ft.	7830K21

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

For information about aluminum alloys, see pages 3698-3699.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

Rods—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6511, unless noted)
- Meet ASTM B221, unless noted

Diameter tolerance for 1/8″ to 1 7/8″ dia. rods is ±0.006″; for 2″ to 5 3/4″ dia. rods it is ±0.034″; and for 6″ to 16″ dia. rods it is ±0.104″. Length tolerance for 1/2″ to 1/2-ft. lengths is +1/8″, –0.015″; for 1-ft. to 6-ft. lengths it is ±1″.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same diameters listed below (except short rods that are 1/2″ to 3″ long) for an additional $10. Please ask for 1615T45 and specify diameter and length.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

Metric Rods—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (80 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B221

Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1/4″.

Hard Anodized Hexagonal Bars—Gray

- Yield Strength: 35,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6511)
- Meet ASTM B221

The anodized coating increases surface hardness for improved wear and corrosion resistance. The harder surface also makes these bars more difficult to machine. The coating is about 0.001″ thick and forms a bond with the aluminum. Hex tolerance is ±0.003″. Length tolerance is ±1/16″.

Hex Size		1 ft.	3 ft.

90° Angles with Material Certification—Unpolished

- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B308

Each comes with a traceable lot number and physical test report. Inside corner and leg edges are rounded; outside corner is squared. Thickness tolerance is ±0.008″. Leg length tolerance for 3/4″ to 1 1/2″ leg lengths is ±0.014″; for 2″ to 4″ leg lengths it is ±0.034″. Length has a plus tolerance.

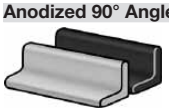
Anodized 90° Angles—Clear or Black Coating



- Yield Strength: 40,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B308

The anodized coating provides a uniform finish and increased abrasion resistance. Inside corner and leg edges are rounded; outside corner is squared. Thickness tolerance is ±0.008″. Straightness tolerance is 0.0125″ per foot. Leg length tolerance for 3/4″ to 1 1/2″ leg lengths is ±0.012″; for 2″ and 3″ leg lengths it is ±0.034″. Length tolerance is ±1/16″.

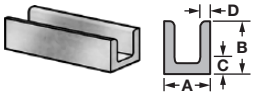
(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 6061 Aluminum *(Material continued from previous page)*

The most widely used aluminum, Alloy 6061 is a popular choice for vehicle parts and pipe fittings. It has better corrosion resistance and weldability than Alloys 2024 and 7075, but it's not as strong. It is nonmagnetic, heat treatable, and resists stress cracking. Temperature range is –320° to 300° F.

U-Channels—Unpolished



- Yield Strength: 35,000 psi
- Hardness: Soft (95 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B221 and B308

Inside corners and leg edges are rounded; outside corners are squared. Base width tolerance is ±0.084″. Leg length tolerance is ±0.044″. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±½″.

Metric Multipurpose 6060 Aluminum

- Yield Strength: 23,000 psi
- Hardness: Soft (70 Brinell)
- Temper: Heat Treated (T66)

Offering good machinability and corrosion resistance, 6060 is often used for light structural and architectural applications. It is nonmagnetic and heat treatable, plus its unpolished finish is good for anodizing. Temperature range is not rated. These rods have a length tolerance of ±10 mm.

Dia., mm		1 meter
3	1681T21	$8.17
4	1681T22	8.94

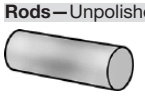
25	1681T31	$74.09
30	1681T33	96.08

Strengthened Multipurpose 6013 Aluminum

Compared to Alloy 6061, this multipurpose Alloy 6013 offers the same good corrosion resistance and weldability with increased strength, hardness, and machinability. It is also nonmagnetic and heat treatable. Temperature range is not rated.

Rods—Unpolished



- Yield Strength: 52,000 psi
- Hardness: Medium (125 Brinell)
- Temper: Heat Treated (T8)

Meet AMS-QQ-A225. Diameter tolerance is ±0.006″. Length tolerance is ±1″.

Machinable Multipurpose MIC6 Cast Aluminum

This stress-relieved cast alloy stands up to high-speed machining while maintaining tight tolerances. Also known as cast tool and jig plate, MIC6 is often used for precision machine tables, tooling, and machinery. It is nonmagnetic and not heat treatable. Temperature range is not rated.

Rectangular Bars—Precision Ground

- Yield Strength: 15,000 psi
- Hardness: Soft (65 Brinell)

The top and bottom of these bars are ground to a flatness of 0.015″ then covered with a protective film. The sides are saw cut. Width tolerance is ±0.030″. Length tolerance is ±0.060″.

Metric Sheets—Precision Ground

- Yield Strength: 15,000 psi
- Hardness: Soft (65 Brinell)

The top and bottom of these sheets are ground to a flatness of 0.015″ then covered with a protective film. The sides are saw cut. Thickness tolerance is ±0.127 mm. Width and length tolerances are ±0.030″.

Choose a Thickness, mm	Choose a Size	
6, 10, 15, 20, 25, 30	6″×6″, 6″×12″, 6″×24″, 12″×12″, 12″×24″, 24″×24″	7627T58

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Machinable Multipurpose MIC6 Cast Aluminum *(Material continued from previous page)*

This stress-relieved cast alloy stands up to high-speed machining while maintaining tight tolerances. Also known as cast tool and jig plate, MIC6 is often used for precision machine tables, tooling, and machinery. It is nonmagnetic and not heat treatable. Temperature range is not rated.

Discs—Precision Ground

- Yield Strength: 15,000 psi
- Hardness: Soft (65 Brinell)

The top and bottom are ground to a flatness of 0.015″ then covered with a protective film. The circumference is saw cut. Length tolerance is ±0.005″.

Highly Corrosion-Resistant Architectural 6063 Aluminum

With superb corrosion resistance and good weldability, Alloy 6063 is perfect for outdoor use as architectural trim, railings, and door frames. It is nonmagnetic and heat treatable. Temperature range is –320° to 212°F.

Rectangular Bars—Unpolished

- Yield Strength: 16,000 psi
- Hardness: Soft (55 Brinell)
- Temper: Heat Treated (T5)
- Meet ASTM B221

Flatness tolerance is 0.006″ per inch of width. Length tolerance is ±1″.

Anodized Round Tubes—Clear Coating

- Yield Strength: 16,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T5)
- Meet ASTM B221

The anodized coating provides a uniform finish and increases abrasion resistance. Straightness tolerance is 0.010″ per foot. Length tolerance is ±1/4″.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Highly Corrosion-Resistant Architectural 6063 Aluminum *(Material cont. from previous page)*

With superb corrosion resistance and good weldability, Alloy 6063 is perfect for outdoor use as architectural trim, railings, and door frames. It is nonmagnetic and heat treatable. Temperature range is –320° to 212° F.

90° Angles—Unpolished

- Yield Strength: 16,000 psi
- Hardness: Soft (55 Brinell)
- Temper: Heat Treated (T5, unless noted)
- Meet ASTM B221

Edges are squared. Leg length tolerance for 1/4" to 1 3/4" leg lengths is ±0.014"; for 2" to 4" leg lengths it is ±0.034". Straightness tolerance is 0.0125" per foot. Length tolerance is ±1".

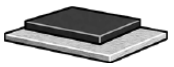
Color-Anodized 5005/5205 Aluminum



- Yield Strength: 15,000 psi
- Hardness: Not rated
- Temper: 1/2 Hard (H34)

When appearance matters, these anodized sheets offer an attractive finish with good corrosion resistance. They're made of either Alloy 5005 or 5205, which are both non-magnetic and not heat treatable. Temperature range is not rated. Width and length tolerances are ±3/32".

Black sheets have one side that is color anodized with a matte finish then covered with a protective film. **Gold** and **silver** sheets are color anodized on both sides; one side has a brushed finish that is covered with a protective film.

Corrosion-Resistant Formable 3003 Aluminum

Often used for tanks, heat exchangers, and general sheet metal work, Alloy 3003 offers excellent corrosion resistance with good formability and weldability. It is nonmagnetic and not heat treatable. Temperature range is –300° to 300°F, unless otherwise stated.

Rectangular Bars with Material Certification—Unpolished

- Yield Strength: 21,000 psi
- Hardness: Soft (40 Brinell)
- Temper: 1/2 Hard (H14)
- Meet ASTM B209

Bars are saw cut. Each comes with a traceable lot number and physical test report. Width tolerance is ±1/16". Length tolerance is ±1/2".

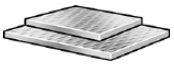
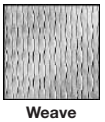
Textured Sheets—Unpolished





Weave

Diamond

Tread

- Yield Strength: 17,000 psi
- Hardness: Soft (40 Brinell)
- Temper: 1/2 Hard (H14)
- Meet ASTM B209

The textured surface on these sheets increases rigidity and hides fingerprints and dents. Thickness tolerance is ±0.004". Width and length have plus tolerances. Not rated for temperature.

Texture selector pack includes one 1 1/2"×3"×0.032" thick piece each of weave, diamond, and tread textures.

Thick.	Choose a Texture	12"×12"	12"×24"	24"×24"	24"×36"	24"×48"	48"×48"

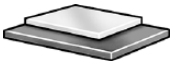
Texture Selector Pack							9058K1 2.05

Painted Sheets—White on one side; choose a color on the other side



- Yield Strength: 17,000 psi
- Hardness: Not rated
- Temper: 1/2 Hard (H14 or H24)
- Meet ASTM B209

One side of these sheets is painted gloss white, while the other side is painted a gloss color of your choosing. Sheets may be either Alloy 3003 or 3105. Width and length tolerances are ±3/32".

Thick.	Thick. Tolerance	Choose a Color	12"×12"	12"×24"	24"×24"	24"×36"
0.040"	±0.004"	Black, Orange, Red, White, Yellow	4279T11 $18.78	4279T12 $29.19	4279T13 $50.35	4279T14 $68.14

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Corrosion-Resistant Formable 3003 Aluminum *(Material continued from previous page)*

Often used for tanks, heat exchangers, and general sheet metal work, Alloy 3003 offers excellent corrosion resistance with good formability and weldability. It is nonmagnetic and not heat treatable. Temperature range is –300° to 300° F, unless otherwise stated.

Foil

- Yield Strength: General Purpose: 21,000 psi; PTFE Coated: 5,000 psi
- Hardness: Not rated
- Temper: General Purpose: ½ hard (H14); PTFE Coated: Softened (O)

Foil is cold rolled. Width tolerance is ±1/8″. Length tolerance for the 5-ft. and 10-ft. rolls is ±6″; for the 25-ft. rolls it is ±3 ft.; for the 50-ft. rolls it is ±5 ft.

General purpose foil is unpolished. The 0.012″ thick foil is Alloy 3105 and has a thickness tolerance of ±0.0015″, while the 0.016″ thick foil is Alloy 3003 and has a thickness tolerance of ±0.002″. Temperature range is -18° to 300° F.

PTFE-coated foil is Alloy 3003 with a green PTFE coating on one side. Thickness tolerance is ±0.001″.

Yield strength is approximate and may vary based on size and shape.

For information about aluminum alloys, see pages 3698-3699.

Rigid Aluminum Foam

Small Cell Large Cell

- Yield Strength: Not rated
- Hardness: Not rated
- Temper: Not rated
- Meets ASTM B557, E9, and E72

With good compression strength for its light weight, this Alloy A356 rigid foam can be used in place of aluminum honeycomb. Also use it for sound insulation and as architectural facades. Carbide- or diamond-tipped blades and bits are required for machining. Temp. range is not rated. Flatness toler. is 0.06″ per foot. Width and length tolerances are ±0.08″.

Thick.	Thick. Tolerance		4″×4″	6″×6″	12″×12″
Small Cell					
1/2″	±0.039″	9236T61	$13.00	$22.89	$73.84

1.7″	±0.039″	9236T51	24.96	80.51

High-Strength 2024 Aluminum

Alloy 2024 is often used when a material with a high strength-to-weight ratio is required, such as for wheels, gears, shafts, and bolts. It is nonmagnetic and heat treatable. Temperature range is –320° to 300° F.

Rectangular Bars—Unpolished

- Yield Strength: 45,000 psi
- Hardness: Soft (120 Brinell)
- Temper: Heat Treated (T351, except 1/8″ to 3/8″ thick are T4)
- Meet ASTM B211

Width tolerance for 1/4″ to 3″ wide bars is ±0.008″; for 3 1/2″ to 6″ wide bars it is ±0.020″. Length tolerance for the 1/2-ft. lengths is ±1/8″; for 1-ft. to 6-ft. lengths it is ±1″.

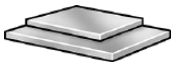
(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

High-Strength 2024 Aluminum *(Material continued from previous page)*

Alloy 2024 is often used when a material with a high strength-to-weight ratio is required, such as for wheels, gears, shafts, and bolts. It is nonmagnetic and heat treatable. Temperature range is –320° to 300° F.

Sheets—Unpolished



- Yield Strength: 41,000 psi
- Hardness: Soft (120 Brinell)
- Temper: Heat Treated (T3, except 0.250″ to 1.500″ thick are T351)
- Meet ASTM B209

Width and length tolerances are ±1/16″.

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 7846T13 and specify thickness, width, and length.

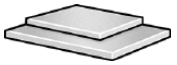
Clad Sheets—Corrosion-Resistant Coating



- Yield Strength: 45,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T3)
- Meet ASTM B209

Sheets meet AMS 4041 and AMS-QQ-A-250/5. Width and length tolerances are ±1/16″.

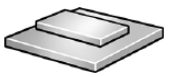
Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on Top and Bottom



- Yield Strength: 47,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T351)
- Meet ASTM B209

These bars and sheets are ground flat to 0.002″ on the top and bottom, while the sides have a saw-cut or mill edge. They meet AMS QQ-A-250/4 and AMS 4035. Each piece comes with a traceable lot number and material test report. Thickness tolerance is ±0.002″. Width and length have plus tolerances.

Rods—Unpolished

- Yield Strength: 45,000 psi
- Hardness: Soft (120 Brinell)
- Temper: Heat Treated (T351, except 3/16″ to 3/8″ dia. rods are T4)
- Meet ASTM B211

Rods also meet AMS QQ-A-225/6 and AMS 4120. Dia. tolerance for 3/16″ to 5″ dia. rods is ±0.012″; for 5 1/2″ to 6″ dia. rods it is ±0.020″. Length tolerance for 1/2″ to 1/2-ft. lengths is ±1/8″; for 1-ft. to 6-ft. lengths it is ±1″.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 37,000 psi
- Hardness: Soft (120 Brinell)
- Temper: Heat Treated (T351, T3511, or T4)
- Meet ASTM B211

Rods also meet AMS QQ-A-225. Diameter tolerance is –0.0005″. Straightness tolerance is 0.005″ per foot. Length tolerance is ±⅛″.

Tubes—Unpolished

- Yield Strength: 42,000 psi
- Hardness: Soft (120 Brinell)
- Temper: Heat Treated (T3)
- Meet ASTM B210

Thickness tolerance is ±12%. OD tolerance for ¼″ to 1″ dia. tubes is ±0.008″; for 1½″ to 6″ dia. tubes it is ±0.020″. Length tolerance is ±1″.

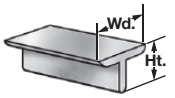
(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

High-Strength 2024 Aluminum *(Material continued from previous page)*

Alloy 2024 is often used when a material with a high strength-to-weight ratio is required, such as for wheels, gears, shafts, and bolts. It is nonmagnetic and heat treatable. Temperature range is –320° to 300° F.

T-Bars—Unpolished



- Yield Strength: 42,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T3511)
- Meet ASTM B221

These T-bars also meet AMS QQ-A-200/3. Edges are rounded. Thickness tolerance is ±0.007″. Height tolerance is ±0.024″. Width tolerance for 1 3/8″ and 1 1/2″ wide bars is ±0.014″; for 2″ to 3″ wide bars it is ±0.024″. Flatness tolerance is ±0.012″. Straightness tolerance is 0.050″ per foot. Length tolerance is ±1″.

Hard High-Strength 7075 Aluminum

Originally developed for aircraft frames, uses for Alloy 7075 now include keys, gears, and other high-stress parts. It is nonmagnetic and heat treatable. Temperature range is –320° to 210° F.

Rectangular Bars—Unpolished

- Yield Strength: 56,000 psi
- Hardness: Medium (130 Brinell)
- Temper: Heat Treated (T7351, unless noted)
- Meet ASTM B211

Width tolerance is ±0.010″. Length tolerance for 1/2-ft. lengths is +1/8″; for 1-ft. to 6-ft. lengths it is ±1″.

Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on Top and Bottom

- Yield Strength: 73,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T651)
- Meet ASTM B209

These bars and sheets are ground flat to 0.002″ on the top and bottom, while the sides have a saw-cut or mill edge. They also meet AMS QQ-A-250/12. Each comes with a traceable lot number and material test report. Thickness tolerance is ±0.002″. Width and length have plus tolerances.

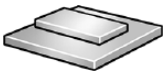
Tight-Tolerance Rectangular Bars and Sheets—Precision Ground on All Sides



- Yield Strength: 73,000 psi
- Hardness: Medium (150 Brinell)
- Temper: Heat Treated (T651)
- Meet ASTM B209

All six sides are precision ground and parallel, so these bars and sheets are ready to use in your CNC machine. They are also known as blanks. Each comes with a traceable lot number and material test report. Thickness, width, and length tolerances are ±0.002″. Flatness tolerance is 0.002″.

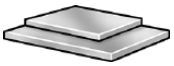
Sheets—Unpolished



- Yield Strength: 61,000 psi
- Hardness: Medium (150 Brinell)
- Temper: Heat Treated (T6 for 0.032″ to 0.190″ thick sheets; T651 for 0.250″ to 3″ thick sheets)
- Meet ASTM B209

Width and length tolerances are ±1/16″.

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 9810T88 and specify thickness, width, and length.

Hard High-Strength 7075 Aluminum *(Continued from previous page)*

Originally developed for aircraft frames, uses for Alloy 7075 now include keys, gears, and other high-stress parts. It is nonmagnetic and heat treatable. Temperature range is –320° to 210° F.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 73,000 psi
- Hardness: Medium (150 Brinell)
- Temper: Heat Treated (T6 or T651)
- Meet ASTM B211

Diameter tolerance is –0.0005″. Straightness tolerance is 0.005″ per foot. Length tolerance is ±1/8″.

Metric Tight-Tolerance Rods—Precision Ground

- Yield Strength: 73,000 psi
- Hardness: Medium (150 Brinell)
- Temper: Heat Treated (T6 or T651)
- Meet ASTM B211

Diameter tolerance is –0.0127 mm. Straightness tolerance is 0.005″ per foot. Length tolerance is ±1/8″.

Choose a Diameter, mm	Choose a Length, ft.	
4, 5, 6, 8, 10, 12, 15, 20, 25, 30, 40	1, 3, 6	9403T111

90° Angles—Unpolished

- Yield Strength: 70,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T6511)
- Meet ASTM B221

Inside corner and legs are rounded. Outside corner is squared. Angles meet AMS QQ-A200/11. Straightness tolerance is 0.050″ per foot. Leg length tolerance for 1/2″ to 7/8″ leg lengths is ±0.010″; for 1″ to 2 1/2″ leg lengths it is ±0.024″. Length tolerance is ±1/8″.

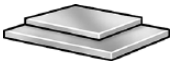
Very High-Strength 7050 Aluminum



- Yield Strength: 68,000 psi
- Hardness: Not rated
- Temper: Heat Treated (T7451)
- Meet ASTM B594

With higher strength and better corrosion resistance than Alloy 7075, this Alloy 7050 is preferred for applications requiring resistance to fatigue and stress cracking. These sheets meet AMS 4050 and are ultrasonically inspected (USI) for defects below the surface material. They are unpolished, nonmagnetic, and heat treatable. Temperature range is not rated. Width and length tolerances are ±1/16″.

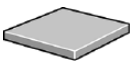
Porous Mold-Quality Aluminum



- Yield Strength: Not rated
- Hardness: Not rated
- Temper: Not rated

Use this aluminum alloy to create molds for vacuum-forming and thermoforming applications. Also known as Metapor, it is porous to let air and moisture escape, which prevents bubbles and blemishes in your piece. Sheets must be milled to expose the pores; average pore diameter is 0.0006″ with a total porosity of 15%. It is nonmagnetic and not heat treatable. Maximum temperature is 225° F; minimum temperature is not rated. Thickness, width, and length tolerances are ±2 mm.

Thick., mm		150×150 mm	250×250 mm	500×500 mm

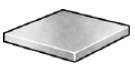
Mold-Quality High-Strength QC-10 Aluminum



- Yield Strength: 74,000 psi
- Hardness: Medium (150 Brinell)
- Temper: Not rated

Offering high strength, surface hardness, and thermal conductivity, QC-10 is suitable for use in production injection molds and blow molds. These sheets are unpolished, nonmagnetic, and heat treatable. Maximum temperature is 275° F; minimum temperature is not rated. Width and length tolerances are ±1/16″.

Thick.	Thick. Tolerance		3″×3″	6″×6″	12″×12″

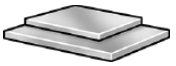
Yield strength is approximate and may vary based on size and shape.

Highly Corrosion-Resistant 5086 Aluminum

Alloy 5086 offers excellent corrosion resistance with good formability, so it is commonly used in marine applications, such as in ships, oil rigs, tanks, and pressure vessels. It is nonmagnetic and not heat treatable. Temperature range is not rated.

Sheets—Unpolished



- Yield Strength: 17,000 psi
- Hardness: Not rated
- Temper: 1/4 Hard (H32)
- Meet ASTM B209

Width and length tolerances are ±1/4″.

Easy-to-Weld Highly Corrosion-Resistant 5052 Aluminum

When a combination of weldability and resistance to salt water is required, Alloy 5052 stands up to the challenge. It is commonly used for the bodies of boats, buses, trucks, and trailers, as well as for chemical drums. It is nonmagnetic and not heat treatable. Temperature range is –300° to 300° F.

Tubes—Unpolished

- Yield Strength: 10,000 psi
- Hardness: Not rated
- Temper: Softened (O)
- Meet ASTM B210

OD and ID tolerances are ±0.004″. Straightness tolerance for the 1/4″ dia. tubes is 0.500″ per foot; for 3/8″ to 1″ dia. tubes it is 0.010″ per foot. Length tolerance is ±1/4″.

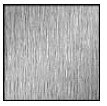
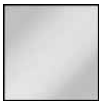
Sheets—Brushed and Mirror-Like Finishes



Brushed



Mirror-Like

- Yield Strength: 20,000 psi
- Hardness: Soft (60 Brinell)
- Temper: ¼ Hard (H32)
- Meet ASTM B209

One side is polished and covered with a protective peel-off film. Width and length tolerances are ±1/16″. Flatness tolerance is 0.375″.

Brushed sheets have grain lines running in one direction. **Mirror-like** sheets have no grain lines.

Finish selector pack includes one 1¾″×3″×0.032″ thick piece each of unpolished, brushed, and mirror-like finishes.

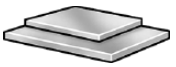
Finish Selector Pack									1115T11	18.94

Yield strength is approximate and may vary based on size and shape.

For information about aluminum alloys, see pages 3698-3699.

Strengthened Highly Corrosion-Resistant 5083 Aluminum



- Yield Strength: 28,000 psi
- Hardness: Not rated
- Temper: 1/8 hard (H116)
- Meet ASTM B209 or B928

When it comes to marine applications, corrosion-resistant Alloy 5083 is the strongest aluminum we offer. It is often used around salt water and in drilling rigs and communication towers. Sheets are unpolished, nonmagnetic, and not heat treatable. Temperature range is not rated. Width and length tolerances are ±1/4".

Highly Conductive Corrosion-Resistant 6101 Aluminum

- Yield Strength: 28,000 psi
- Hardness: Soft (71 Brinell)
- Temper: Heat Treated (T61)
- Meet ASTM B317

An economical alternative to copper, Alloy 6101 is often used in electrical applications, such as bus bars in switchboards and battery banks. These bars are unpolished and have rounded edges. Maximum temperature is 300°F; minimum temperature is not rated. Width tolerance for 3/4" to 3" wide bars is ±0.024"; for 4" to 6" wide bars it is ±0.044". Flatness tolerance is 0.004" per inch. Length tolerance is ±1/2".

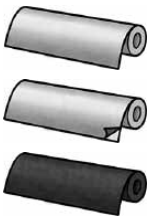
Ultra-Corrosion-Resistant 1100 Aluminum

With 99% aluminum content, Alloy 1100 offers superior corrosion resistance, weldability, formability, and conductivity. Use it for sheet metal work where strength and hardness are not required, such as heat exchangers, chemical equipment, and decorative trim. It is nonmagnetic and not heat treatable. Temperature range is –20° to 200°F.

Foil



- Yield Strength:
  Softened: 2,500 psi;
  Hardened: 20,000 psi
- Hardness:
  Softened: 23 Brinell;
  Hardened: 45 Brinell
- Temper:
  Softened (O);
  Hardened (H19)

General purpose foil varies between Alloys 1100, 1145, and 1235. Use it for a wrap, cover, mask, or patch. It has a thickness tolerance of ±10%, a width tolerance of ±1/16", and a length tolerance of +5 ft.

Adhesive-back foil varies between Alloys 1100, 1145, and 1235; the adhesive is acrylic. Use it for a wrap, cover, mask, or patch. It has a thickness tolerance of ±10%, a width tolerance of ±1/16", and a length tolerance of –1 ft., +5 ft.

Black foil is Alloy 1100. The black color soaks up light and eliminates reflections. Use it for a wrap, cover, mask, or patch. It has a thickness tolerance of ±10%, a width tolerance of ±1/16", and a length tolerance of ±1 ft.

Hardened foil varies between Alloys 1100, 1145, and 1235. Use it as EMI/RFI shielding of electronics. It has a thickness tolerance of ±10%, a width tolerance of ±1/8", and a length tolerance of +5 ft.

Soft Sheets—Unpolished

- Yield Strength: 5,000 psi
- Hardness: Soft (23 Brinell)
- Temper: Softened (O)
- Meet ASTM B209

These pliable sheets are annealed to the softest state possible, which is sometimes called “dead soft.” Width and length tolerances are ±1/16″.

Very Easy-to-Machine 2011 Aluminum

Alloy 2011 has the best machinability of all aluminum alloys. It is the most widely selected aluminum for screws, tube fittings, hose parts, and other items that require extensive machining. It is nonmagnetic and heat treatable. Maximum temperature is 212° F; minimum temperature is not rated.

Rods—Unpolished

- Yield Strength: 18,000 psi
- Hardness: Soft (115 Brinell)
- Temper: Heat Treated (T3)
- Meet ASTM B211

Length tolerance for the ½-ft. rods is ±1/8″; for the 1-ft. to 6-ft. rods it is ±1″.

Dia.	Dia. Tolerance		½ ft.	1 ft.	2 ft.	3 ft.	6 ft.

Strengthened Easy-to-Machine 2017 Aluminum

- Yield Strength: Not rated
- Hardness: Not rated
- Temper: Heat Treated (T4)

As a stronger alternative to Alloy 2011, use this Alloy 2017 for items that require extensive machining such as fittings. Balls have a reflective finish and are weldable and heat treatable. They are nonmagnetic. Diameter tolerance is ±0.001″. Temperature range is not rated.

Dia.	Pkg. Qty.		Pkg.

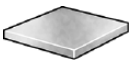
High-Strength Corrosion-Resistant Coated 2014 Aluminum



- Yield Strength: 57,000 psi
- Hardness: Soft (135 Brinell)
- Temper: Heat Treated (T6)
- Meet ASTM B209

Both sides of these Alloy 2014 sheets are clad in a thin layer of Alloy 6063 aluminum for increased corrosion resistance. Use them as an economical alternative to high-strength Alloy 2024 for applications such as heavy duty forgings, fittings, and tanks. These sheets are unpolished. Width and length tolerances are ±3/32″. Temperature range is –320° to 212°F.

Thick.	Thick. Tolerance		12″×12″
0.032″	±0.002″	1204N11	$36.69
0.050″	±0.002″	1204N12	44.00

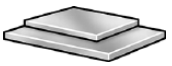
0.125″	±0.004″	1204N14	71.69

High-Strength Marine-Grade 5456 Aluminum



- Yield Strength: 33,000 psi
- Hardness: Soft (90 Brinell)
- Temper: Hardened (H116)
- Meet ASTM B928

Offering excellent weldability, Alloy 5456 is often used for pressure vessels and storage tanks in salt-water environments. These sheets are unpolished, nonmagnetic, and not heat treatable. Width and length tolerances are ±0.250″. Temperature range is not rated.

Thick.	Thick. Tolerance	12″×12″		24″×24″

3/4″	±0.031″	1306N16	89.74	1306N26	296.55

Corrosion-Resistant Easy-to-Machine 6020 Aluminum

- Yield Strength: 39,000 psi
- Hardness: Soft (100 Brinell)
- Temper: Heat Treated (T8, except 7/8″, 1 3/8″, and 1 1/2″ dia. rods are T9)

Compared to other easy-to-machine aluminum, Alloy 6020 offers the best corrosion resistance. Use it for screw machine products, valves, and hydraulic parts. This material has an excellent surface finish and responds well to anodizing. These rods are unpolished, nonmagnetic, and heat treatable. Length tolerance is ±1″. Temperature range is not rated.

Dia.	Dia. Tolerance		1 ft.	3 ft.	6 ft.

About Steel

Carbon steel is an economical choice for machining and structural applications, and it can be surface hardened.

Alloy steel has greater strength and hardness than carbon steel, making it useful for high-stress applications. Heat treating can further enhance strength and hardness.

Tool steel is used to make cutting tools, and it can be heat treated for extreme hardness.

● Excellent
◓ Good
○ Poor

Use the charts below to identify the best steel for your application. Circles indicate that a majority of a material's shapes and sizes meet the applicable rating. Information is intended for comparison only and is not guaranteed.

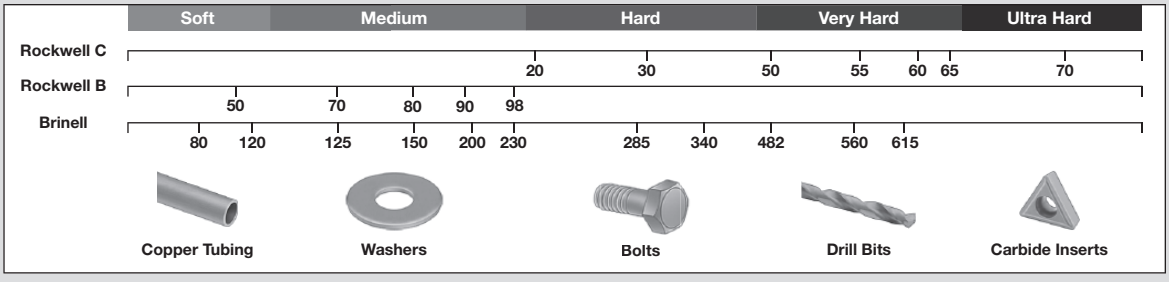
Hardness

As hardness increases, metals become more wear resistant but they may be less malleable. The chart below shows hardness on different scales.



General Purpose Low-Carbon Steel

One of the most widely used types of steel, low-carbon steel is weldable, machinable, and can be surface hardened by heat treating. It is suitable for a variety of applications, such as structural and power transmission components.

Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 54,000 psi
- Hardness: Medium (Rockwell B70)
- Can be surface hardened to Rockwell C60
- Meet ASTM A108

Material is 1018 carbon steel. Thickness and width tolerances are –0.006″ for 1/8″ to 4″ wide bars; they are –0.010″ for 4 1/2″ to 6″ wide bars; and they are –0.013″ for bars 7″ and wider. Length tolerance is ±1/8″ for 1/2-ft. lengths, ±1″ for 1-ft. lengths, ±2″ for 2-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

General Purpose Low-Carbon Steel *(Material continued from previous page)*

One of the most widely used types of steel, low-carbon steel is weldable, machinable, and can be surface hardened by heat treating. It is suitable for a variety of applications, such as structural and power transmission components.

Rectangular Bars (Cont.)—Unpolished (Cold Drawn)

- Yield Strength: 54,000 psi
- Hardness: Medium (Rockwell B70)
- Can be surface hardened to Rockwell C60
- Meet ASTM A108

Material is 1018 carbon steel. Thickness and width tolerances are –0.006″ for 1/8″ to 4″ wide bars; they are –0.010″ for 4 1/2″ to 6″ wide bars; and they are –0.013″ for bars 7″ and wider. Length tolerance is ±1/8″ for 1/2-ft. lengths, ±1″ for 1-ft. lengths, ±2″ for 2-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Metric Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 34,000 psi
- Hardness: Medium (Rockwell B90)

Material is Grade S235 carbon steel, which is comparable to 1008-1018. Width tolerance for 6 mm wide bars is –0.075 mm; for all others it is –0.16 mm. Length tolerance is ±2″.

Tight-Tolerance Rectangular Bars—Precision Ground

- Yield Strength: 36,000 psi
- Hardness: Not rated

Material is either 1018 carbon steel or meets ASTM A36. Width tolerance is ±0.005″.

(Material continued on following page)

General Purpose Low-Carbon Steel *(Material continued from previous page)*

One of the most widely used types of steel, low-carbon steel is weldable, machinable, and can be surface hardened by heat treating. It is suitable for a variety of applications, such as structural and power transmission components.

Metric Tight-Tolerance Rectangular Bars—Precision Ground

- Yield Strength: 36,000 psi
- Hardness: Not rated
- Can be surface hardened to Rockwell C65

Material is either 1018 carbon steel or meets ASTM A36. Width tolerance is ±0.127 mm.

Rectangular Bars with Rounded Edges

- Yield Strength: 35,000 psi
- Hardness: Soft (Rockwell B50)
- Can be surface hardened to Rockwell C60

Material is 1008-1010 carbon steel. Width tolerance is ±0.008″ and length tolerance is ±0.020″. 1/16″ thick bars are cold rolled; all others are hot rolled.

Nickel-Coated Rectangular Bars

- Yield Strength: 45,000 psi
- Hardness: Hard (Rockwell C45)
- Meet ASTM B733

Bars are 1018 carbon steel with a nickel coating for increased wear and corrosion resistance. Coating meets AMS 2404 and MIL-C-26074. Width tolerance is ±0.004″.

Zinc-Galvanized Rectangular Bars

- Yield Strength: 30,000 psi
- Hardness: Soft (Rockwell B66)
- Meet ASTM A108

Bars are 1010-1018 carbon steel with a zinc coating for increased corrosion resistance. Width tolerance is ±0.010″, and length tolerance is ±1/8″.

Zinc-Galvanized Perforated Rectangular Bars

- Yield Strength: Not rated
- Hardness: Medium (Rockwell B85)

Material is 1006-1026 carbon steel with a zinc coating for increased corrosion resistance. All holes are 3/8″ diameter on 3/4″ centers. 1 3/8″ wide bars have one row of holes; all others have two rows. Length tolerance is ±1/8″. Width tolerance for 1 3/8″ and 2 1/4″ wide bars is ±0.005″, and for 2 3/4″ wide bars it is +0.065″.

Sheets—Ground

- Yield Strength: 36,000 psi
- Hardness: Not rated
- Can be surface hardened to Rockwell C65

Material is either 1018 carbon steel or meets ASTM A36. These ground sheets are decarb free, improving the surface for heat treating. For 1/16″ to 3/16″ thick sheets, width and length tolerances are –1/16″, +1/2″. For 1/4″ and thicker sheets, width and length tolerances are ±1/8″.

Sheets with Mold- and Mildew-Resistant Coating

- Yield Strength: 40,000 psi
- Hardness: Soft (Rockwell B55)
- Meet ASTM A653

A coating is applied to one side of these sheets to protect from degradation caused by bacteria and fungi. Coating is blue. Width and length tolerances are ±0.031″.

(Material continued on following page)

General Purpose Low-Carbon Steel *(Material continued from previous page)*

One of the most widely used types of steel, low-carbon steel is weldable, machinable, and can be surface hardened by heat treating. It is suitable for a variety of applications, such as structural and power transmission components.

Zinc-Galvanized Sheets

- Yield Strength: 40,000 psi
- Hardness: Soft (Rockwell B55 with coating)
- Meet ASTM A653

Material is CS Type B carbon steel. Sheets have a zinc coating for increased corrosion resistance. Width and length tolerances are ±1/16″.

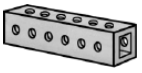
Zinc-Galvanized Perforated Square Tubes



- Yield Strength:
  1″ to 1 1/2″ wide tubes: not rated;
  1 3/4″ to 2 1/2″ wide tubes: 60,000 psi
- Hardness: Not rated
- Meet ASTM A653

Tubes have a zinc coating for increased corrosion resistance. Each size tube fits inside the next largest size so you can create custom lengths. 1″ to 1 1/2″ tubes are 1006-1026 carbon steel, and 1 3/4″ to 2 1/2″ tubes are Grade 50 carbon steel. Width and height tolerances are not rated.

(Material continued on following page)

***Warning!** Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.*

General Purpose Low-Carbon Steel *(Material continued from previous page)*

Round and Angled Round Tubes—Unpolished

- Yield Strength: Cold drawn tubes: 45,000 psi; hot rolled tubes: 38,000 psi
- Hardness: Cold drawn tubes: medium (Rockwell B55-B68); hot rolled tubes: soft (Rockwell B55-B62)
- Meet ASTM A513

Round Tubes—Material is 1005-1026 carbon steel. Tubes are cold drawn unless noted. Wall thickness tolerance is not rated. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Angled Round Tubes—These tubes are hot rolled 1026 carbon steel, except 0.250″ wall thick. is cold rolled. Length tolerance is –1/8″.

Rods—Unpolished (Cold Drawn)

- Yield Strength: 54,000 psi
- Hardness: Medium (Rockwell B70)
- Can be surface hardened to C60
- Meet ASTM A108

Material is 1018 carbon steel. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths; all others have a length tolerance of ±1/16″.

(Material continued on following page)

General Purpose Low-Carbon Steel *(Material continued from previous page)*

One of the most widely used types of steel, low-carbon steel is weldable, machinable, and can be surface hardened by heat treating. It is suitable for a variety of applications, such as structural and power transmission components.

Metric Rods—Unpolished (Cold Drawn)

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B85)
- Meet ASTM A108

Material is 1018 carbon steel. Length tolerance is ±2″.

Chrome-Coated Rods—Dull Finish

- Yield Strength: 45,000 psi
- Hardness: Very hard (Rockwell C60 with coating)

These rods are 1018 carbon steel with a dull chrome coating for increased wear and corrosion resistance. Coating meets AMS QQ-C-320 and AMS 2406. Length tolerance is ±1/8″.

Zinc-Galvanized Rods

- Yield Strength: 30,000 psi
- Hardness: Soft (Rockwell B66 with coating)
- 3/16″ to 3/4″ dia. rods meet ASTM A108; 7/8″ to 1″ dia. rods meet ASTM A36.

Rods are 1006-1035 carbon steel with a zinc coating for increased corrosion resistance. They are cold drawn, unless noted. Length tolerance is ±1/8″.

Zinc-Galvanized 90° Angles

- Yield Strength: 36,000 psi
- Hardness: Medium (Rockwell B68)

Material meets ASTM A36. Angles have a zinc coating for increased corrosion resistance. Wall thickness tolerance is ±0.008″. Length tolerance is ±1/8″.

Outside Leg Lgs.	Leg Lg. Tolerance	Wall Thick.		1 ft.	3 ft.	6 ft.

Hardened Balls—Reflective Finish

- Yield Strength: 44,000 psi
- Hardness: Very Hard (Rockwell C60)
- Meet ASTM A29

Balls are 1010-1020 carbon steel. They are case hardened for a very strong surface.

High-Strength 1045 Carbon Steel

This economical material is stronger than low-carbon steel. It's often used for bolts, studs, and shafts.

Square Bars—Unpolished (Cold Drawn)

- Yield Strength: 77,000 psi
- Hardness: Medium (Rockwell B88)
- Can be surface hardened to Rockwell C60
- Meet ASTM A29 and A108

Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Square Size	Square Tolerance		1 ft.	3 ft.	6 ft.
1/2″	–0.004″	6545K1	$6.83	$15.83	$27.30

Rods—Ground

- Yield Strength: 65,000 psi
- Hardness: Medium (Rockwell B86)
- Can be surface hardened to Rockwell C62
- Meet ASTM A108

These ground rods are decarb free, improving the surface for heat treating. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Dia.	Dia. Tolerance		1 ft.	3 ft.	6 ft.

Shaft-Quality 1060 Carbon Steel

With a hardened surface for increased strength, this 1060 carbon steel is suitable for making shafts and components for linear bearing systems. Also known as clean steel, it has few imperfections on or below the surface so components work smoothly with roller and ball bearings.

Hardened Rods—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Very Hard (Rockwell C60)
- Meet ASTM A576

Straightness tolerance for 1/4″ to 3/8″ diameter rods is not rated; for all others it is 0.002″ per foot.

Dia.	Dia. Tolerance		1/2 ft.	1 ft.	3 ft.	6 ft.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

High-Strength Easy-to-Machine 1144 Carbon Steel

This medium-carbon steel offers high yield strength and hardness, even without further heat treating. Its composition also results in fast, reliable machining and increased tool life.

Rods—Unpolished (Cold Drawn)

- Yield Strength: 100,000 psi
- Hardness: Hard (Rockwell C23)
- Meet ASTM A29, A108, A311

Commonly called Stressproof, these rods are stress-relieved to minimize warping during machining. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Dia.	Dia. Tolerance		1 ft.	3 ft.	6 ft.

Extra-Strength Rods—Unpolished (Cold Drawn)

- Yield Strength: 125,000 psi
- Hardness: Hard (Rockwell C30)

Also known as Fatigueproof, these rods have enhanced strength and resistance to breaking from repeated impact compared to Stressproof rods. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Very Easy-to-Machine 1215 Carbon Steel

For excellent machinability without lead, 1215 carbon steel can substitute for 12L14. It contains added sulfur and phosphorus to speed up machining. Use it for shaft couplings, studs, and pins.

Square Bars—Unpolished (Cold Drawn)

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B85)
- Meet ASTM A108

Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Ultra-Machinable 12L14 Carbon Steel

When superior machinability is needed, 12L14 is the steel of choice. Lead added to the material acts as a lubricant for very fast machining and excellent surface finish. It's used to fabricate a wide variety of machine parts.

Square Bars—Unpolished (Cold Drawn)

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B84)
- Can be surface hardened to Rockwell C60
- Meet ASTM A108

These bars are annealed. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Abrasion-Resistant AR400 Carbon Steel

This material withstands abrasion and wear from sliding and gouging because of its uniform hardness and the addition of elements such as nickel and molybdenum. It's suitable for use as wear strips, liners, and deflector plates.

Hardened Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 140,000 psi
- Hardness: Hard (Rockwell C38)

Length tolerance is ±1/8″. Width tolerance is ±0.020″.

Impact-Resistant A516 Carbon Steel

- Yield Strength: 38,000 psi
- Hardness: Medium (Rockwell B78)
- Meet ASTM A516

Even in low temperatures, A516 resists breaking upon impact. Also known as pressure vessel quality steel (PVQ), it can be used for boilers, storage tanks, and pressure vessels. These sheets are ground. Width tolerance is +1/8″.

General Purpose 1074/1075 Spring Steel

Often used for springs and shims, this material is easier to form and bend than 1095 spring steel, but it has a lesser degree of bounce-back when heat treated. *Annealed sheets* can be formed and heat treated for spring properties.

Annealed Sheets—Unpolished (Cold Rolled)

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B88)
- Can be hardened up to Rockwell C64
- Meet ASTM A684

Thickness tolerance is ±0.003″. Width tolerance for 8″ widths is ±1/64″ and for 17″ widths it is +3″, –2″. Length tolerance for 12″ and 24″ lengths is ±1/16″ and for 48″ lengths it is ±1/2″. Flatness tolerance is 3/8″.

Wear-Resistant 1095 Spring Steel

A high carbon content gives this spring steel good wear resistance and hardness for demanding applications. Use it to fabricate parts that will be used under continual stress, such as spring clips and washers. *Annealed sheets* can be formed and heat treated for spring properties.

Annealed Sheets—Unpolished (Cold Rolled)

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C66

Thickness tolerance for sheets up to 0.050″ thick is ±0.002″; for all others it is ±0.003″. Width tolerance for 8″ widths is ±0.016″ and for 15″ widths it is +5″. Length tolerance for 12″ and 24″ lengths is ±1/16″; for 48″ lengths it is ±1/2″. Flatness tolerance is 3/8″.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

Easy-to-Machine Gray Cast Iron

Gray iron machines faster with less wear on cutting tools than most types of steel. This material also absorbs vibration, resulting in finished parts that run quieter than those made of steel. It's often used for gears, pulleys, rollers, and bushings.

Oversized Rectangular Bars—Unpolished

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C22)
- Can be hardened up to Rockwell C50
- Meet ASTM A247

Thickness and width tolerances are +0.250″.

Warning! *Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.*

For information about the comparisons between iron and steel, see page 3728.

Impact-Resistant Ductile Cast Iron

With graphite to make it strong and resilient, ductile cast iron withstands repeated stress without breaking. It is light and absorbs vibration for finished parts that run quieter than those made of steel. It's often used in place of medium-carbon steel.

Oversized Rectangular Bars—Unpolished

- Yield Strength: 55,000 psi
- Hardness: Hard (Rockwell C20)
- Can be hardened up to Rockwell C60
- Meet ASTM A536

High-Strength A514 Alloy Steel

- Yield Strength: 100,000 psi
- Hardness: Hard (Rockwell C21)
- Meet ASTM A514

A high yield strength makes A514 suitable for structural applications and supporting heavy loads. Also known as high-strength low-alloy (HSLA) steel, this material has been heat treated for enhanced strength and hardness. These unpolished sheets are hot rolled. Width and length tolerances are –1/8″.

Wear-Resistant 4150 Alloy Steel

- Yield Strength: 65,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C63
- Meet ASTM A29 and A108

With more carbon than 4140/4142 alloy steel, 4150 resists wear from friction and abrasion. It's often used for gears, shafts, and ball screws. These unpolished rods are cold finished. Diameter tolerance for ½″ to 1½″ dia. rods is –0.004″; for 1¾″ to 2½″ dia. rods it is –0.005″; and for 3″ dia. rods it is –0.006″. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Easy-to-Machine 41L40 Alloy Steel

- Yield Strength: 85,000 psi
- Hardness: Medium (Rockwell B96)
- Can be hardened up to Rockwell C34
- Meet ASTM A108

Although its strength and wear resistance are similar to 4140/4142 alloy steel, 41L40 has added lead for fast machining. These rods are cold drawn. Diameter tolerance for 5/16″ to 1½″ dia. rods is –0.003″ and for 2″ to 2½″ dia. rods it is –0.004″. Straightness tolerance is 3/16″ per 10 feet.

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

Multipurpose 4140/4142 Alloy Steel

Also known as chrome-moly steel, this versatile material is used for many parts, such as gears, axles, shafts, collets, and dieholders. It resists fracturing from repeated stress. When hardened, it offers increased abrasion and impact resistance.

Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C60
- Meet ASTM A29 and A108

Bars are annealed. Width tolerance for 3/8″ to 1 1/2″ wide bars is –0.008″; for 1 3/4″ bars and wider it is –0.012″. Straightness tolerance for 1/4″ to 5/8″ thick bars is 1/4″ per 10 feet, and for 3/4″ to 3 1/2″ thick bars it is 3/16″ per 10 feet. Length tolerance is ±1/8″ for 1/2-ft. lengths, ±1″ for 1-ft. lengths, ±2″ for 2-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Hardened Oversized Rectangular Bars—Ground

- Yield Strength: 95,000 psi
- Hardness: Hard (Rockwell C26)
- Meet ASTM A304 and A322

Bars are decarb free, improving the surface for heat treating. Width tolerance is +1/8″.

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Hardened Tight-Tolerance Rectangular Bars—Precision Ground

- Yield Strength: 85,000 psi
- Hardness: Hard (Rockwell C26)
- Meet ASTM A29 and A322

Width tolerance is +0.005″. Flatness tolerance for lengths up to 3 feet is 0.015″ and for 6-ft. lengths it is 0.03″. Length tolerance for 3″ and 6″ lengths is ±1⁄8″; for 1-ft. lengths it is ±1⁄4″; and for 1 1⁄2-ft. to 6-ft. lengths, length has a plus tolerance.

(Material continued on following page)

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Also known as chrome-moly steel, this versatile material is used for many parts, such as gears, axles, shafts, collets, and dieholders. It resists fracturing from repeated stress. When hardened, it offers increased abrasion and impact resistance.

Hardened Rectangular Bars—Ground

- Yield Strength: 93,000 psi
- Hardness: Hard (Rockwell C28)
- Meet ASTM A322

These hardened bars are ground on all four sides for a smooth surface. Width tolerance is +0.015″.

Oversized Sheets—Ground

- Yield Strength: 115,000 psi
- Hardness: Hard (Rockwell C22)
- Can be hardened up to Rockwell C37
- Meet ASTM A829

Sheets are annealed. They are also decarb free, improving the surface for heat treating. Width and length tolerances are +⅛″.

(Material continued on following page)

Multipurpose 4140/4142 Alloy Steel *(Material continued from previous page)*

Also known as chrome-moly steel, this versatile material is used for many parts, such as gears, axles, shafts, collets, and dieholders. It resists fracturing from repeated stress. When hardened, it offers increased abrasion and impact resistance.

High-Strength Rods—Unpolished (Cold Drawn)

- Yield Strength: 130,000 psi
- Hardness: Hard (Rockwell C32)
- Meet ASTM A108

Commonly called ETD-150, this modified version of 4140 alloy steel has been drawn at high temperatures for excellent strength. Diameter tolerance is –0.006″. Straightness tolerance is 3/16″ per 10 feet. Length tolerance is ±1″.

High-Strength Impact-Resistant 4340 Alloy Steel

- Yield Strength: 68,500 psi
- Hardness: Hard (Rockwell C27)
- Can be hardened up to Rockwell C53

Use this material for power transmission and structural applications involving extreme impact, heat, and wear. 1/2″ and 3/4″ diameter rods are cold drawn; all others are hot rolled. Straightness tolerance is 0.050″ per foot. Length tolerance is ±1/8″.

Very High-Strength 300M Alloy Steel

- Yield Strength: 230,000 psi
- Hardness: Hard (Rockwell C23)
- Can be hardened up to Rockwell C54
- Meet ASTM A579

A modified version of 4340 steel, 300M is used in applications requiring high yield strength, such as torsion bars and drive shafts. This material has been normalized for consistent hardening and machining. These unpolished rods are hot rolled.

Dia.	Dia. Tolerance		½ ft.	1 ft.	3 ft.

Ultra Impact-Resistant C300 Alloy Steel

- Yield Strength: 110,000 psi
- Hardness: Hard (Rockwell C30)
- Can be hardened up to Rockwell C55

Also known as maraging steel and VascoMax, C300 has excellent resistance to cracking from impact and compression. It's often used for dies and tooling applications. These unpolished rods are hot rolled.

Easy-to-Weld 4130 Alloy Steel

Its carbon content is low enough for good weldability but high enough to give this steel abrasion and impact resistance. 4130 is often used for gears, fasteners, and structural applications.

Sheets with Material Certification—Unpolished

- Yield Strength: 50,000 psi
- Hardness: Medium (up to Rockwell B85)
- Can be hardened up to Rockwell C60

Meet AMS 6350-6351. Each sheet comes with a traceable lot number and material test report. All sheets are annealed. 0.025″ to 0.125″ thick sheets are cold rolled; 0.160″ and thicker are hot rolled. Width and length tolerances are ±1/16″.

Rods

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C20)
- Can be hardened up to Rockwell C54
- Meet ASTM A108

Meet AMS 2301 and AMS 6348. These rods are normalized for consistent hardening and machining. Rods with diameters ⅜″ to 1″ are cold drawn; diameters 1⅛″ to 3″ are turned and polished. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Rectangular Tubes—Unpolished (Cold Drawn)

- Yield Strength: 75,000 psi
- Hardness: Hard (Rockwell C19)
- Can be hardened up to Rockwell C49

Meet AMS-T-6736 and MIL-T-6736B. All tubes are annealed. Height and width tolerances are ±0.020″. Straightness tolerance is 0.075″ per 3 feet. Length tolerance is ±1″.

(Material continued on following page)

Easy-to-Weld 4130 Alloy Steel *(Material continued from previous page)*

Its carbon content is low enough for good weldability but high enough to give this steel abrasion and impact resistance. 4130 is often used for gears, fasteners, and structural applications.

Round Tubes—Unpolished (Cold Drawn)

- Yield Strength: 70,000 psi
- Hardness: Hard (Rockwell C19)
- Can be hardened up to Rockwell C49

Meet AMS-T-6736 and MIL-T-6736B. Wall thickness tolerance is ±15%. Straightness tolerance is 0.030″ per 3 feet. Length tolerance is ±1″.

(Material continued on following page)

Easy-to-Weld 4130 Alloy Steel *(Material continued from previous page)*

Round Tubes with Material Certification—Unpolished (Cold Drawn)

- Yield Strength: 70,000 psi
- Hardness: Hard (Rockwell C19)
- Can be hardened up to Rockwell C49

Each tube comes with a traceable lot number and material test report. All meet AMS-T-6736 and MIL-T-6736B. Wall thickness tolerance is ±15%. Straightness tolerance is 0.030″ per 3 feet. Length tolerance is ±1″.

Hardened Round Tubes

- Yield Strength: 110,000 psi
- Hardness: Hard (Rockwell C30)
- Meet ASTM A519

Wall thickness tolerance is not rated. All are unpolished (cold drawn), except 0.313″ and 0.344″ thick tubes are hot rolled.

Stress-Resistant 5160 Alloy Steel

- Yield Strength: 97,000 psi
- Hardness: Hard (Rockwell C24)
- Can be hardened up to Rockwell C63
- Meet ASTM A689

Similar to spring steel, this material handles repeated cycles of stress without breaking. It's often used for flat springs. These unpolished bars are hot rolled. Width tolerance for 1¾″ to 2½″ wide bars is +0.030″; for 3″ and wider it is +0.045″. Straightness tolerance is ⅛″ per 5 feet. Length tolerance is ±⅛″.

Easy-to-Weld Wear-Resistant 8620 Alloy Steel

- Yield Strength: 55,000 psi
- Hardness: Medium (Rockwell B85)
- Can be hardened up to Rockwell C60
- Meet ASTM A29 and A108

A low carbon content makes 8620 weldable, and it contains nickel, chromium, and molybdenum for abrasion resistance. ¼″ to ⅞″ diameter rods are cold drawn; 1″ diameter and larger are turned and polished for a smooth surface. Diameter tolerance is –0.005″. Length tolerance is +⅛″ for lengths less than 1 ft., ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Bearing-Quality E52100 Alloy Steel

Also known as chrome steel, E52100 is an extremely hard and wear-resistant material. It's used for parts such as bearings, bushings, and punches.

Rods—Ground (Cold Drawn)

- Yield Strength: 62,000 psi
- Hardness: Hard (Rockwell C24)
- Can be hardened up to Rockwell C60
- Meet ASTM A108 and A295

These rods are annealed. Straightness tolerance is 3/16″ per 10 feet. Length tolerance is ±1″ for 1-ft. lengths, ±3″ for 3-ft. lengths, and ±6″ for 6-ft. lengths.

Warning! Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.

Ultra-Machinable W1 Tool Steel

With lower amounts of alloy elements than other tool steels, W1 offers excellent machinability. This is a water-hardening tool steel that is often used for hammers, files, taps, and reamers.

Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 55,000 psi
- Hardness: Medium (Rockwell B88)
- Can be hardened up to Rockwell C65
- Meet ASTM A686

Bars are annealed. Thickness and width tolerances are ±0.0015″.

Rods—Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B96)
- Can be hardened up to Rockwell C65
- Meet ASTM A686

Also known as drill rods, these rods are decarb free, improving the surface for heat treating. Diameter tolerance for 0.0625″ to 0.4844″ dia. rods is ±0.0005″, and for 0.5000″ to 2.000″ dia. rods it is ±0.0010″. Straightness tolerance is 0.005″ per foot. Length tolerance for 1- and 3-ft. lengths is ±1/4″; for 6-ft. lengths it is ±1/2″.

Multipurpose O1 Tool Steel

Commonly used for dies, punches, and gauges, O1 is a popular tool steel that resists wear and abrasion. It is an oil-hardening material.

Oversized Flat Stock—Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B91)
- Can be hardened up to Rockwell C64
- Meet ASTM A681

Oversized flat stock is decarb free, improving the surface for heat treating. Width tolerance is +0.090″.

Tight-Tolerance Flat Stock—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B85)
- Can be hardened up to Rockwell C65
- Meet ASTM A681

Width tolerance for 10″ and 12″ wide flat stock is +0.015″; for all other sizes it is +0.005″.

Tight-Tolerance Flat Stock with Material Certification—Precision Ground

- Yield Strength: 70,000 psi
- Hardness: Medium (Rockwell B85)
- Can be hardened up to Rockwell C64
- Meets ASTM A681

Each piece of flat stock comes with a traceable lot number and material test report. Material type (O1) is stamped on the material for identification. Thickness tolerance is ±0.001″. Width tolerance is +0.005″. Flatness tolerance is 0.006″.

Tight-Tolerance Sheets—Precision Ground

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B88)
- Can be hardened up to Rockwell C62

These sheets are annealed. Thickness tolerance is ±0.001″. Width tolerance is +0.005″. Length has a plus tolerance.

Rods—Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B96)
- Can be hardened up to Rockwell C62

All rods are decarb free, improving the surface for heat treating. They are either rough turned or ground. Diameter tolerance for 1/2″ to 2 3/4″ dia. rods is +0.051″; for 3″ to 4″ dia. rods it is +0.083″; and for 6″ and 8″ dia. rods it is +0.16″. Straightness tolerance is 1/8″ per 5 feet.

Warning! **Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.**

Multipurpose O1 Tool Steel *(Material continued from previous page)*

Commonly used for dies, punches, and gauges, O1 is a popular tool steel that resists wear and abrasion. It is an oil-hardening material.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B89)
- Can be hardened up to Rockwell C65
- Meet ASTM A681

These rods are annealed. Also known as drill rods, the diameter tolerance for 0.0625″ to 0.4844″ dia. rods is ±0.0005″; for 0.5000″ and larger rods, it is ±0.001″. Length tolerance for 1- and 3-ft. lengths is ±1/4″, and for 6-ft. lengths it is ±1 1/2″.

Metric Tight-Tolerance Rods—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B89)
- Can be hardened up to Rockwell C62
- Meet ASTM A681

These rods are annealed. Also known as drill rods, the diameter tolerance for 2 mm to 12 mm rods is ±0.013 mm; for 13 mm and larger rods it is ±0.025 mm.

Wear-Resistant A2 Tool Steel

Compared to O1 tool steel, A2 has better wear resistance and keeps a sharper cutting edge. It's often used for punches, broaches, and dies. This is an air-hardening tool steel.

Tight-Tolerance Flat Stock—Precision Ground

- Yield Strength: 51,000 psi
- Hardness: Medium (Rockwell B89)
- Can be hardened up to Rockwell C65
- Meets ASTM A681

All sizes are annealed. Width tolerance is +0.005". 1/16" and thicker sizes meet MIL-QQT-570A.

(Material continued on following page)

Warning! ***Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.***

Wear-Resistant A2 Tool Steel *(Material continued from previous page)*

Compared to O1 tool steel, A2 has better wear resistance and keeps a sharper cutting edge. It's often used for punches, broaches, and dies. This is an air-hardening tool steel.

Flat Stock—Ground

- Yield Strength: 55,000 psi
- Hardness: Medium (Rockwell B89)
- Can be hardened up to Rockwell C62
- Meets ASTM A681

Meets MIL-QQT-570A. This flat stock is annealed. Width tolerance is +0.015". Flatness tolerance is 0.010" per foot.

(Material continued on following page)

Warning! *Hardness and yield strength are not guaranteed and are intended only as a basis for comparison.*

Wear-Resistant A2 Tool Steel *(Material continued from previous page)*

Compared to O1 tool steel, A2 has better wear resistance and keeps a sharper cutting edge. It's often used for punches, broaches, and dies. This is an air-hardening tool steel.

Oversized Rods—Ground

- Yield Strength: 55,000 psi
- Hardness: Medium (Rockwell B95)
- Can be hardened up to Rockwell C64

All rods are decarb free, improving the surface for heat treating. Diameter tolerance for ½″ to 1¾″ dia. rods is +0.045″; for 2″ to 4″ dia. rods it is +0.095″; and for 6″ and 8″ dia. rods it is +0.213″. Straightness tolerance for 1- to 6-ft. lengths is ⅛″ per 5 feet; for all other lengths, straightness tolerance is not rated.

High-Temperature H13 Tool Steel

- Yield Strength: 52,000 psi
- Hardness: Medium (Rockwell B94)
- Can be hardened up to Rockwell C53
- Meets ASTM A681

Commonly used in die-casting applications, H13 resists cracking from repeated heating and cooling. It maintains its strength and abrasion resistance up to 1000°F. This flat stock is decarb free, improving the surface for heat treating, and it is an air-hardening tool steel. Width tolerance is +0.015″.

Ultra Wear-Resistant D2 Tool Steel

A high content of carbon and chromium gives D2 excellent wear resistance, which makes it a popular choice for long-run dies and shear blades. This is an air-hardening tool steel.

Tight-Tolerance Flat Stock—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B97)
- Can be hardened up to Rockwell C62
- Meets ASTM A681

This flat stock is annealed. Width tolerance is +0.005″. Flatness tolerance is 0.015″ per 3 feet. Length tolerance for ½-ft. lengths is ±⅛″; all other lengths have a plus tolerance.

Shock-Resistant S7 Tool Steel

Capable of withstanding repeated shock and impact without fracturing, S7 is suitable for chisels, rivets, and punches. This material is an air-hardening tool steel.

Flat Stock—Ground

- Yield Strength: 55,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C58
- Meets ASTM A681

This flat stock is annealed. Width tolerance is +0.015". Flatness tolerance is 0.015" per 3 feet. Length tolerance for 1½-ft. lengths is ±¼"; for 3-ft. lengths it is a plus tolerance.

Hardened Shock-Resistant S2 Tool Steel

- Yield Strength: 290,000 psi
- Hardness: Very Hard (Rockwell C55)
- Meet ASTM A681

An extremely strong tool steel, S2 offers excellent impact resistance. These balls have been through hardened yet retain a tough core that resists breaking under shock loads. They are ground and polished to a reflective finish.

Hardened Easy-to-Machine P20 Tool Steel

- Yield Strength: 101,000 psi
- Hardness: Hard (Rockwell C26)

P20 is supplied in a hardened condition that is ready for machining. It has the wear resistance and highly polishable surface needed to fabricate long-lasting molds and dies.

These rods are ground for a smooth surface. Diameter tolerance for 1/2" to 3" dia. rods is +0.047"; for 4" to 8" dia. rods it is +0.157"; and for 10" dia. rods it is +0.250". Straightness tolerance is 3/16" per foot.

Tough Wear-Resistant PM Tool Steel

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C24)
- Can be hardened up to Rockwell C64

Excellent resistance to wear, abrasion, and chipping makes this material useful for punches and stamping tools. These rods are decarb free, improving the surface for heat treating. Diameter tolerance for 1/4" and 3/8" dia. rods is +0.020"; for 1/2" to 1 1/2" dia. rods it is +0.040"; and for 2" dia. rods it is +0.060".

High-Speed M2 Tool Steel *(Material continued from previous page)*

A high molybdenum content allows this material to maintain sharp cutting edges even at elevated temperatures. It's used to fabricate high-speed cutting tools.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 105,000 psi
- Hardness: Hard (Rockwell B110 maximum)
- Can be hardened up to Rockwell C66
- Meet ASTM A600

Also known as drill rods. All sizes are annealed. Diameter tolerance for 1/16" to 7/16" dia. rods is ±0.0005"; for 1/2" dia. and larger rods, it is ±0.001". Straightness tolerance is 0.005" per foot.

Hardened Oversized Rods—Precision Ground

- Yield Strength: Not rated
- Hardness: Very Hard (Rockwell C62)

Also known as reamer blanks. Diameter tolerance is +0.0002". Straightness tolerance is 0.001". Length tolerance is ±1/32".

Also Available: Fractional sizes from 1/64" to 1" (×1/64"), letter sizes A to Z, and wire gauge size Nos. 1 to 80. Please ask for 3023A71 and specify size.

High-Speed M2 Tool Steel *(Material continued from previous page)*

Hardened Undersized Rod Sets—Precision Ground

Each set is supplied in a metal indexed case with fold-out panels. Also known as drill rods, they are hardened to Rockwell C62. Diameter tolerance is –0.0002″. Straightness tolerance is 0.001″. Length tolerance is ±1/32″.

Size Range	Rods per Set		
1/16″-1/2″ (×1/64″)	29	2952A5	$161.38
A-Z	26	2952A8	161.38

Size Range	Rods per Set		
1-60	60	2952A6	$139.37
61-80	20	2952A7	47.68

Metric Hardened Undersized Rods—Precision Ground

- Yield Strength: Not rated
- Hardness: Very Hard (Rockwell C62)

Diameter tolerance is –0.005 mm. Also known as drill rods, they have a straightness tolerance of 0.001″. Length tolerance is ±1/32″.

Bearing Quality High-Temperature M50 Tool Steel

- Yield Strength: 320,000 psi
- Hardness: Very Hard (Rockwell C60)

M50 maintains its strength and wear resistance at high temperatures. These hardened tight-tolerance balls are precision ground and then polished for a reflective finish.

Ultra-Hard High-Speed M42 Tool Steel

- Yield Strength: Not rated
- Hardness: Ultra Hard (Rockwell C66)

Also known as cobalt steel, this material is capable of cutting extremely hard metals. It maintains its hardness in high-speed cutting applications that generate intense heat. These precision-ground rods have been hardened. Diameter tolerance is –0.0002″.

Ultra Wear-Resistant High-Speed M4 Tool Steel

Made from powdered metal, M4 has a consistent microstructure that gives it outstanding resistance to wear and abrasion. Comparable to CPM Rex M4, this material is used for punches, dies, and high-speed cutting tools.

Oversized Flat Stock—Ground

- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B97)
- Can be hardened up to Rockwell C65

This flat stock is decarb free, improving the surface for heat treating. Width tolerance is +0.015″.

Ultra-Hard Tungsten Carbide

Commonly referred to as carbide, tungsten carbide is harder than tool steel. With excellent wear resistance, it's used to machine tools such as end mills and inserts that last longer than those made of steel. All shapes are C2 tungsten carbide.

Flat Stock—Unpolished

- Yield Strength: 319,000 psi
- Hardness: Ultra Hard (Rockwell C79)

Thickness tolerance for 1/16″ and 1/8″ thick is +0.040″; for 1/4″ and 1/2″ thick it is +0.060″. Width tolerance for 1/16″ and 1/8″ widths is +0.030″; for 1/4″ and larger widths it is +0.060″.

High-Strength Durable Tungsten

- Yield Strength: 80,000 psi
- Hardness: Hard (Rockwell C24)
- Meet ASTM B777

Also known as chatter-free tungsten, this material is used for boring bars and grinding tools that dampen noise and vibration while machining. The addition of copper and nickel makes this a rigid, high-density tungsten alloy.

About Stainless Steel

When you need a corrosion-resistant metal, stainless steel is a practical choice. It contains chromium, which makes it more corrosion resistant than other types of steel. The designation 18-8 refers to stainless steel that has approximately 18% chromium and 8% nickel; it generally applies to types 301, 302, 303, and 304.

Hardening—Some types of stainless steel harden by cold working, and others can be heat treated. The 300 series hardens by cold working, many in the 400 series can be hardened by heat treating, and those designated "PH" can be heat treated by the process of precipitation hardening. All hardness values given below are in the unhardened condition.

Corrosion Resistance—An invisible film forms on the surface of stainless steel when it's in contact with oxygen. This allows it to withstand damage from corrosives including many acids, bases, and detergents, as well as salt water.

Formability—Stainless steel is generally formable and bendable, but types that harden by cold working can require more force to bend than carbon steel.

Machinability—During machining, stainless steel can become gummy and stick to cutting tools, making it typically more difficult to machine than steel.

Weldability—Take care to clean stainless steel before and after welding operations. Contaminants, such as lubricants and particles from grinding tools, will reduce corrosion resistance at welded points.

● Excellent
◓ Good
○ Poor

Use the chart below to identify the best stainless steel for your application. Circles indicate that a majority of a material's shapes and sizes meet the applicable rating. Yield strength is approximate and may vary based on size and shape.

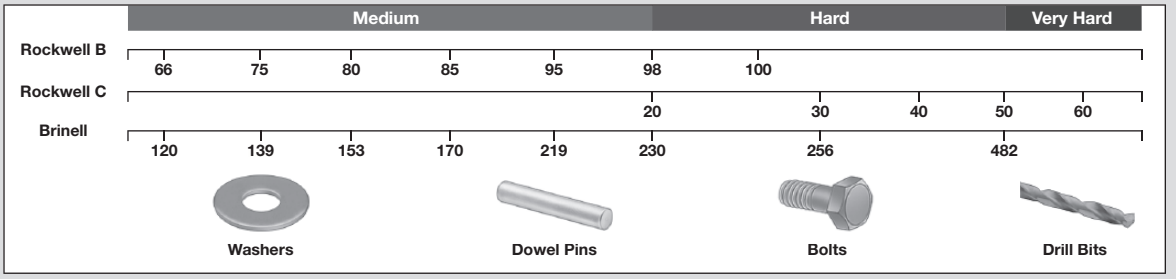
Hardness

As hardness increases, metals become more wear resistant, but they may be less malleable. The chart below shows hardness on different scales.



Finish

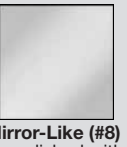
Stainless steel does not always have a shiny finish. In fact, stainless steel is available in a number of finishes, ranging from an unpolished, dull surface to a reflective mirror-like shine.

Unpolished
Not reflective

Ground
Smooth, matte finish

Brushed (#3 Satin)
Shiny with grain lines in one direction

Fine Brushed (#4 Satin)
Shiny with very thin grain lines in one direction



Mirror-Like (#8)
Highly polished with no grain lines

Multipurpose 304 Stainless Steel

From cookware to chemical-processing equipment, 304 is the most commonly used stainless steel. It maintains its corrosion resistance up to 1500°F. It is not heat treatable and may become slightly magnetic when worked.

Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B75)
- Bars up to 1″ thick: Meet ASTM A276 and A479, unless noted;
  1½″ to 5″ thick bars: Meet ASTM A240

Width tolerance for ½″ to 3½″ wide bars is +0.094″, –0.031″; for 4″ to 6″ wide bars it is ±⅛″. Length tolerance is ±1″ per foot. Material up to 1″ thick is true bar, which is rolled for a more precise edge than bars that are sheared from plate, unless noted.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes as bars up to 1″ thick listed below for an additional $15. Please ask for 1250T1 and specify thickness, width, and length.

Tight-Tolerance Rectangular Bars—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Not rated
- Meet ASTM A276 and A484

Thickness and width tolerances are ±0.012″. Length tolerance is ±1″ per foot. Bars from ¼″ to ⅞″ thick are cold drawn; 1″ to 2″ thick bars are hot rolled.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 5382T78 and specify thickness, width, and length.

Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

From cookware to chemical-processing equipment, 304 is the most commonly used stainless steel. It maintains its corrosion resistance up to 1500° F. It is not heat treatable and may become slightly magnetic when worked.

Rectangular Bars—Brushed Finish (#4 Satin)

- Yield Strength: 30,000 psi
- Hardness: ¼″ thick bars: Medium (Rockwell B92); ½″ and 1″ thick bars: Not rated
- ¼″ thick bars: Meet ASTM A240; ½″ and 1″ thick bars: Meet ASTM A479

Bars are annealed. Width tolerance for ¼″ thick bars is +0.094″, –0.031″; for ½″ and 1″ thick bars it is +0.062″, –0.031″. Length tolerance is ±1″ per foot.

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

Foil—Bright Finish (Cold Rolled Annealed)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B80)
- Meets ASTM A240

This foil can be used as a wrap or liner. Width tolerance for 6″ and 12″ wide foil is ±1/8″; for 24″ wide foil it is ±1/2″. **Adhesive-back** foil has an acrylic adhesive.

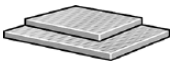
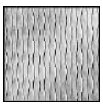
Textured Sheets—Unpolished



- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B80)
- Meet ASTM A480

Textured sheets provide traction and hide fingerprints and dents. All sizes are cold finished. Width and length tolerances are ±1/32″.



Weave

Diamond

Honeycomb

Texture Selector Pack—Includes one piece each of the weave, diamond, and honeycomb textures. Each piece is approximately 1 5/8″×3 1/8″×0.024″ thick.

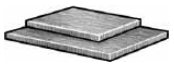
(Material continued on following page)

***Warning!** Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.*

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

From cookware to chemical-processing equipment, 304 is the most commonly used stainless steel. It maintains its corrosion resistance up to 1500° F. It is not heat treatable and may become slightly magnetic when worked.

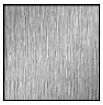
Sheets—Brushed and Mirror-Like Finishes



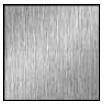
- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B80)
- Meet ASTM A240

All sheets are annealed and have a peel-off protective masking on the polished side. 0.024″ to 0.180″ thick sheets are cold rolled; 0.250″ and 0.375″ thick sheets are hot rolled. Width and length tolerances are ±1/4″.

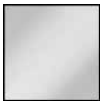
Brushed #3 Satin Finish—Grain lines in one direction.
Brushed #4 Satin Finish—Fine grain lines in one direction.
Mirror-Like #8 Finish—Polished with no grain lines.



Brushed #3 Satin



Brushed #4 Satin



Mirror-Like #8

Finish Selector Pack—Includes one piece each of the three finishes listed above and one unpolished piece. Each piece is approximately 1 3/4″ × 3″ × 1/32″ thick.

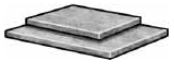
Machinable Sheets—Unpolished (Hot Rolled)



- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B92)
- Meet ASTM A240 and A480

Also known as Prodec, this material can be machined faster with less wear on cutting tools than standard 304 stainless steel. All sheets are annealed. Width and length tolerances are +1/2″, –1/8″.

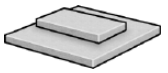
Tight-Tolerance Blanks with Material Certification—Precision Ground



- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B84)
- Meet ASTM A240

These blanks are consistently flat, square, and parallel on all six sides. Each comes with a traceable lot number and material test report. All are annealed. Thickness, width, and length tolerances are ±0.002″.

(Material continued on following page)

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

From cookware to chemical-processing equipment, 304 is the most commonly used stainless steel. It maintains its corrosion resistance up to 1500° F. It is not heat treatable and may become slightly magnetic when worked.

Small-Diameter Round Tubes—Unpolished (Cold Rolled)

- Yield Strength: 35,000 psi
- Hardness: Not rated
- Meet ASTM A269

This material is 304/304L stainless steel. It contains less carbon than standard 304 for better weldability. Tubes are welded. Length tolerance is ±1/32″.

Round Tubes—Unpolished (Cold Drawn)

- Yield Strength: Not rated
- Hardness: Not rated
- 0.083″ & 0.120″ Wall Thick.: Meet ASTM A269; 0.188″ to 0.750″ Wall Thick.: Meet ASTM A511

These tubes are annealed. OD tolerance for 1/2″ to 1 1/4″ OD tubes is ±0.005″; for 1 1/2″ to 5″ OD tubes it is ±0.015″; and for 5 1/2″ and 6″ OD tubes it is ±0.030″. Straightness tolerance is 0.045″ per foot. Length tolerance is ±1″ per foot.

Also Available: Round tubes with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $15. Please ask for 5362T1 and specify wall thickness, OD, and length.

Metric Round Tubes—Polished (Cold Drawn)

- Yield Strength: 24,500 psi
- Hardness: Medium (Rockwell B70)
- Meet ASTM A213 and A269

These tubes are annealed. They have a polished surface with minimal grain lines. Length tolerance for 1-ft. lengths is ±1″; for 3-ft. and 6-ft. lengths it is ±2″.

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

Textured Round Tubes—Unpolished (Cold Rolled)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B90 maximum)
- Meet ASTM A554

Often used for handrails, these welded tubes have a diamond texture that hides fingerprints and dents. Length tolerance is ±1⁄8″.

Rods—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B76)
- Meet ASTM A276 and A479

All sizes are annealed. Straightness tolerance is 1⁄8″ per 5 feet. 1⁄8″ to 1⁄2″ dia. rods are cold drawn; 9⁄16″ to 3 1⁄2″ and 3 3⁄4″ dia. rods are cold finished; and 3 5⁄8″ and 4″ to 8″ dia. rods are hot rolled.

1⁄2-ft. to 6-ft. Lengths—This material is 304/304L stainless steel. It contains less carbon than standard 304 for better weldability. Length tolerance is ±1⁄2″ per foot.

1⁄4″ to 4″ Lengths—Length tolerance is ±1⁄16″.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes as 1⁄2-ft. to 6-ft. lengths listed below for an additional $10. Please ask for 1301T16 and specify diameter and length.

Machinable Rods—Unpolished

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B84)
- Meet ASTM A276 and A479

Also known as Project 70+, this 304/304L stainless steel can be machined faster with less wear on cutting tools than standard 304. It also offers better weldability because of its low carbon content. Rods meet AMS 5639 and AMS 5647. All sizes are annealed.

5⁄16″ to 3⁄4″ dia. rods are cold drawn; 7⁄8″ to 2″ dia. rods are cold finished. Straightness tolerance is not rated. Length tolerance is ±1″ per foot.

***Warning!** Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.*

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

From cookware to chemical-processing equipment, 304 is the most commonly used stainless steel. It maintains its corrosion resistance up to 1500° F. It is not heat treatable and may become slightly magnetic when worked.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B80)
- Meet ASTM A276 and A479

All sizes are annealed. Diameter tolerance is ±0.0005″. Straightness tolerance is 1/16″ per 5 feet.

Hexagonal Bars—Unpolished (Cold Drawn)

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B100)
- Meet ASTM A276 and A479

Hex bars meet AMS 5639. This material is 304/304L stainless steel. It contains less carbon than standard 304 for better weldability. All sizes are annealed. Hex tolerance for 3/8″ to 1″ sizes is ±0.004″; for 1 1/8″ to 3″ sizes it is ±0.008″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ per foot.

Multipurpose 304 Stainless Steel *(Material continued from previous page)*

Half-Round Bars—Unpolished (Cold Drawn)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B80)
- Meet ASTM A276 and A479

Half rounds meet AMS 5639. All sizes are annealed. Length tolerance is ±1″ per foot.

Dia.	Dia. Tolerance		1 ft.	3 ft.	6 ft.
1/4″	±0.004″	1267T49	$10.19	$21.85	$36.41
1/2″	±0.004″	1267T56	12.34	22.50	37.50

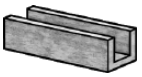
3/4″	±0.004″	1267T58	19.82	43.57	72.61

U-Channels—Unpolished (Hot Rolled)



- Yield Strength: 30,000 psi
- Hardness: Not rated
- Meet ASTM A276 and A479

These annealed U-channels meet AMS 5639. Base tolerance for 1 1/2″ to 4″ bases is ±3/64″; for 5″ and 6″ bases, it is ±1/16″. Leg length tolerance is ±3/64″. Thickness tolerance is ±0.020″. Length tolerance for 1/2-ft. lengths is ±1″; for 1-ft. to 7-ft. lengths it is ±1″ per foot.

90° Angles—Unpolished (Hot Rolled)

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B79)
- Meet ASTM A276 and A479

All sizes are annealed. Inside corner and leg edges are rounded and outside corner is square, unless noted. Leg length tolerance is ±1/8″. Thickness tolerance is not rated. Length tolerance is ±1″ per foot.

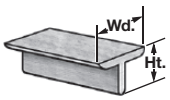
★ Inside corner, outside corner, and leg edges are square.

T-Bars—Unpolished



- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B92)
- Meet ASTM A276 and A479

T-bars are annealed and have rounded edges. Thickness tolerance is not rated. Length tolerance is ±1″ per foot.

High-Strength Multipurpose 301 Stainless Steel

Able to withstand repeated stress and wear, 301 provides the strength required for applications such as springs and fasteners. It maintains its corrosion resistance up to 1550° F. This material is not heat treatable and may be slightly magnetic.

Spring-Tempered Strips and Sheets—Unpolished (Cold Rolled)

- Yield Strength: 142,000 psi
- Hardness: Hard (Rockwell C42)
- Meet ASTM A666

Length tolerance is ±1/4″.

Sheets—Unpolished (Cold Rolled)

- Yield Strength: 1/4 hard sheets: 75,000 psi; 1/2 hard sheets: 110,000 psi; full hard sheets: 140,000 psi
- Hardness: 1/4 hard sheets: Rockwell C25; 1/2 hard sheets: Rockwell C32; full hard sheets: Rockwell C43
- Meet ASTM A240

Width and length tolerances are ±1/16″. **1/4 hard sheets** are used for molding and light duty applications. Meet AMS 5517. **1/2 hard sheets** are suitable for door trim and food-service equipment. Meet AMS 5518. **Full hard sheets** are often used for disc springs and hose clamps. Meet AMS 5519.

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same thicknesses and sizes listed below for an additional $15. Please ask for 3543T1 and specify temper (1/4 hard, 1/2 hard, full hard), thickness, and size.

For information about stainless steel, see page 3770.

High-Temperature Multipurpose 309 Stainless Steel

Often used in heat exchangers and furnaces, 309 provides good corrosion resistance at elevated temperatures because of its high levels of chromium and nickel. It maintains its corrosion resistance up to 1500°F, is not heat treatable, and may become slightly magnetic when worked.

Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 35,000 psi
- Hardness: Medium (Rockwell B95)
- Meet ASTM A240

Bars are annealed. Width tolerance is +1/8", –1/16". Length tolerance is ±1/2" per foot.

Foil—Unpolished (Cold Rolled)

- Yield Strength: Not rated
- Hardness: Medium (Rockwell B75)
- Meets ASTM A240

Use this foil as a heat-treating wrap in temperatures up to 2250°F. It includes a crimping tool. All sizes are annealed. Width tolerance is +0.75", –0.01". Length tolerance is ±3/4".

Thick.	Thick. Tolerance	Wd.		10 ft.	25 ft.	50 ft.	100 ft.

Rods—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B82)
- Meet ASTM A276 and A479

These rods are cold finished and annealed, and they meet AMS 5650. Straightness tolerance for 1/2" to 2" dia. rods is 1/16" per 5 feet; 1/4" and 3/8" dia. rods are not rated. Length tolerance is ±1" per foot.

Economy-Grade 430 Stainless Steel

Use 430 for decorative and light-duty applications, rather than outdoors or in extreme temperatures. This material maintains its corrosion resistance up to 1250°F. It is magnetic and not heat treatable.

Strips—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B88 maximum)
- Meet ASTM A240

Strips have a peel-off protective masking on one side. All sizes are annealed. Width tolerance is ±0.005". Length tolerance is ±1/32".

Thick.	Thick. Tolerance	1/2"×12"		3/4"×12"		1"×12"

Super-Corrosion-Resistant 316 Stainless Steel

Molybdenum gives 316 excellent corrosion resistance for use in a variety of marine and chemical-processing applications. This material maintains its corrosion resistance up to 1500°F. It is not heat treatable and may become slightly magnetic when worked.

Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B92)
- Meet ASTM A276 and A479

All sizes are true bar, which is rolled for a precise edge. This 316/316L stainless steel contains less carbon than standard 316 for better weldability. Bars are annealed. Width tolerance for ½″ to 1″ wide bars is ±0.015″; for 1¼″ to 2″ wide bars it is ±0.031″; and for 3″ and 4″ wide bars it is ±0.062″. Length tolerance is ±1″ per foot.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $15. Please ask for 5368T88 and specify thickness, width, and length.

Tight-Tolerance Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B90)
- Meet ASTM A276

This 316/316L stainless steel contains less carbon than standard 316 for better weldability. All sizes are annealed. Thickness tolerance for 3/16″ to 9/16″ is ±0.006″; for 5/8″ to 1¾″ thick bars it is ±0.012″; for 2″ and 2½″ thick bars it is +0.032″. Width tolerance is ±0.008″. Length tolerance is ±1″ per foot.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $15. Please ask for 5381T1 and specify thickness, width, and length.

Super-Corrosion-Resistant 316 Stainless Steel *(Material continued from previous page)*

Sheets—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B93)
- Meet ASTM A240

All sizes are annealed. Width and length tolerances are ±1/8″.

0.024″ to 0.120″ Thick Sheets—Material is 316 stainless steel. These cold rolled sheets meet MIL-S-5059. They have a protective peel-off masking on one side.

0.188″ to 0.500″ Thick Sheets—This 316/316L stainless steel contains less carbon than standard 316 for better weldability. Sheets are hot rolled.

Also Available: Sheets with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 5359T88 and specify thickness, width, and length.

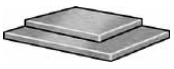
Sheets—Brushed and Mirror-Like Finishes (Cold Rolled)



Brushed Finish (#4 Satin)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B95 maximum)
- Meet ASTM A240

Material is 316 stainless steel. All sizes meet MIL-S-5059. Sheets are annealed and have a peel-off protective masking on the polished side. Flatness tolerance is 13/32″. Width and length tolerances are +1/16″. **Brushed #4 satin finish** has fine grain lines in one direction. **Mirror-like #8 finish** is polished with no grain lines.

Finish Selector Pack—Includes a brushed #4, a mirror-like #8, and an unpolished piece. Each piece is approximately 1 3/4″×3″×1/32″ thick.

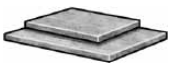
Machinable Sheets—Unpolished (Hot Rolled)



- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B95 maximum)
- Meet ASTM A240

Also known as Prodec, this 316/316L stainless steel can be machined faster with less wear on cutting tools than standard 316. It also offers better weldability because of its low carbon content. Width and length tolerances are ±1/8″.

(Material continued on following page)

Super-Corrosion-Resistant 316 Stainless Steel *(Material continued from previous page)*

Molybdenum gives 316 excellent corrosion resistance for use in a variety of marine and chemical-processing applications. This material maintains its corrosion resistance up to 1500°F. It is not heat treatable and may become slightly magnetic when worked.

Rectangular Tubes—Unpolished

- Yield Strength: Not rated
- Hardness: Medium (Rockwell B88)
- Meet ASTM A554

This 316/316L stainless steel contains less carbon than standard 316 for better weldability. Also known as hollow bar, these tubes are cold formed and welded. Outside and inside corners are rounded. Straightness tolerance is 0.075″ per 3 feet. Length tolerance is ±1″ per foot.

⌐ Outside ¬ Ht.	Wd.	Ht./Wd. Tolerance		½ ft.	1 ft.	3 ft.	6 ft.

Round Tubes—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B79)
- 0.035″ to 0.120″ wall thickness: Meet ASTM A213 and A269; 0.188″ to 0.500″ wall thickness: Meet ASTM A511

Material is 316 stainless steel. All sizes are annealed. 0.035″ to 0.120″ wall thicknesses are cold drawn; 0.188″ to 0.500″ wall thicknesses are hot rolled. OD tolerance for ¼″ to 1″ OD tubes is ±0.010″; for 1¼″ to 2½″ OD tubes it is ±0.023″; and for 3″ to 5″ OD tubes it is ±0.031″. Straightness tolerance is 0.045″ per 3 feet. Length tolerance is ±1″.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B76)
- Meet ASTM A276

Material is 316/316L stainless steel, which contains less carbon than standard 316 for better weldability. These rods meet AMS 5648. All sizes are annealed. Diameter tolerance is ±0.0005″. Straightness tolerance is 1/8″ per 6 feet. Length tolerance is ±1″ per foot.

(Material continued on following page)

***Warning!** Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.*

Super-Corrosion-Resistant 316 Stainless Steel *(Material continued from previous page)*

Rods—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B74)
- Meet ASTM A182, A193, A276, A479, and A484

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes as ½-ft. to 6-ft. length listed below for an additional $10. Please ask for 1305T99 and specify diameter and length.

All sizes are annealed. Straightness tolerance is 1/8″ per 5 feet. 1/8″ to 3 5/8″ and 3 7/8″ dia. rods are cold finished; 3 3/4″ and 4″ to 8″ dia. rods are hot rolled. Diameter tolerance for 1/8″ to 2 7/8″ dia. rods is ±0.003″; for 3″ to 3 7/8″ dia. rods it is ±0.063″; and for 4″ to 8″ dia. rods it is ±0.188″.

½-ft. to 6-ft. Lengths—Material is 316/316L stainless steel, which contains less carbon than standard 316 for better weldability. Length tolerance is ±1/2″ per foot.

¼″ to 5″ Lengths—Material is 316 stainless steel. Length tolerance is ±1/16″.

Metric Rods—Unpolished (Cold Drawn)

- Yield Strength: 29,000 psi
- Hardness: Medium (Rockwell B80)

Material is 316 stainless steel. These rods are annealed. Straightness tolerance is 1.0 mm. Length tolerance for 1-ft. and 1½-ft. lengths is ±1″; for 3-ft. lengths it is +5 3/8″.

Machinable Rods—Unpolished

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B80)
- Meet ASTM A276 and A479

This material is also known as Project 70+. It can be machined faster with less wear on cutting tools than standard 316. This 316/316L stainless steel also contains less carbon for improved weldability. Rods are annealed and meet AMS 5648 and AMS 5653.

Diameter tolerance is ±0.003″. Straightness tolerance is not rated. Length tolerance is ±1″ per foot. 5/16″ to 1″ dia. rods are cold drawn; 1 1/8″ to 2″ dia. rods are cold finished.

Super-Corrosion-Resistant 316 Stainless Steel *(Material continued from previous page)*

Molybdenum gives 316 excellent corrosion resistance for use in a variety of marine and chemical-processing applications. This material maintains its corrosion resistance up to 1500°F. It is not heat treatable and may become slightly magnetic when worked.

Passivated Rods—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Hard (Rockwell B95)
- Meet ASTM A276, A479, and A484

Material is 316 stainless steel. These rods have been passivated for enhanced corrosion resistance. They meet AMS 5648 and AMS-S-7720. All sizes are cold finished and annealed. Diameter tolerance is ±1/16″. Length tolerance is ±1/16″.

Hexagonal Bars—Unpolished (Cold Drawn)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B93)
- Meet ASTM A276, A479, and A484

This 316/316L stainless steel contains less carbon than standard 316 for better weldability. These hex bars also meet ASTM A182 and A314, and AMS 5648 and AMS 5653. All sizes are annealed.

Hex tolerance for 7/16″ to 1″ sizes is –0.004″; for 1 1/8″ to 2 1/2″ sizes it is –0.008″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ per foot.

90° Angles—Unpolished (Hot Rolled)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B79)
- Meet ASTM A276 and A479

These annealed angles are 316 stainless steel. Inside corner, outside corner, and leg edges are rounded. Leg length tolerance is ±1/8″. Thickness tolerance is not rated. Length tolerance is ±1″ per foot.

Strengthened Corrosion-Resistant A286 Stainless Steel

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C38

Combining the corrosion resistance of 316 with titanium for added strength, A286 is often used to make fasteners and engine components. It maintains its corrosion resistance up to 1500° F and can be heat treated for hardness. It is nonmagnetic. These unpolished sheets are cold rolled and annealed. Thickness tolerance is ±0.003″. Width and length tolerances are ±1/16″.

Thick.		6″×6″	12″×12″	12″×24″	24″×24″	24″×48″

Easy-to-Machine 303 Stainless Steel

For fabricating fittings and fasteners, 303 machines quickly without sticking to cutting tools. It maintains its corrosion resistance up to 1500° F, is not heat treatable, and may become slightly magnetic when worked.

Rectangular Bars—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B95)
- Meet ASTM A314 and A582

These annealed bars meet AMS 5640. 1/8″ and 3/16″ thick bars are cold drawn; 1/4″ and 5/16″ thick bars are cold drawn or hot rolled; and 3/8″ to 4″ thick bars are hot rolled.

Width tolerance for 1/2″ to 2″ wide bars is ±0.031″; for 2 1/2″ to 6″ wide bars it is +0.093″, –0.062″. Straightness tolerance is 1/8″ per 5 feet. Length tolerance is ±1/2″ per foot.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 3366T1 and specify thickness, width, and length.

(Material continued on following page)

Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

Easy-to-Machine 303 Stainless Steel *(Material continued from previous page)*

For fabricating fittings and fasteners, 303 machines quickly without sticking to cutting tools. It maintains its corrosion resistance up to 1500°F, is not heat treatable, and may become slightly magnetic when worked.

Tight-Tolerance Rectangular Bars—Unpolished (Cold Drawn)

- Yield Strength: 35,000 psi
- Hardness: Medium (Rockwell B83)
- Meet ASTM A484 and A582

All sizes are annealed. These bars also meet AMS 5640. Width tolerance is ±0.015″. Length tolerance is ±1″ per foot.

Also Available: Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 1237T97 and specify thickness, width, and length.

Easy-to-Machine 303 Stainless Steel *(Material continued from previous page)*

Rods—Unpolished

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B76)
- Meet ASTM A582

All sizes are annealed. Straightness tolerance is 1/8″ per 5 feet. Rods from 3/32″ to 3″ in dia. are cold finished with a diameter tolerance of ±0.003″. Rods from 3 1/8″ to 8″ in dia. are hot rolled with a diameter tolerance of –0.063″, +0.188″. Length tolerance for 1/2-ft. to 6-ft. lengths is ±1″ per foot; for 1/4″ to 5″ lengths it is ±1/16″.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes as 1/2-ft. to 6-ft. lengths listed below for an additional $10. Please ask for 5343T78 and specify diameter and length.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 35,000 psi
- Hardness: Medium (Rockwell B83)
- Meet ASTM A314, A581, and A582

These annealed rods meet MIL-S-52263, MIL-S-862, and AMS 5640. Diameter tolerance is –0.0005″. Straightness tolerance is 1/16″ per foot. Length tolerance for 1/2-ft. lengths is ±1/8″; for all other lengths it is ±1″ per foot.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $15. Please ask for 1732T1 and specify diameter and length.

Easy-to-Machine 303 Stainless Steel *(Material continued from previous page)*

For fabricating fittings and fasteners, 303 machines quickly without sticking to cutting tools. It maintains its corrosion resistance up to 1500° F, is not heat treatable, and may become slightly magnetic when worked.

Metric Rods—Unpolished (Cold Drawn)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B83)

All sizes are annealed. Straightness tolerance is 1 mm. Length tolerance for 1-ft. and 1½-ft. lengths is ±1″; for 3-ft. lengths it is +5⅜″.

Weldable 321 Stainless Steel

When an application requires welding, 321 is the stainless steel of choice because its titanium content preserves corrosion resistance around the welded area. It maintains its corrosion resistance up to 1500° F, is not heat treatable, and may become slightly magnetic when worked.

Sheets—Unpolished

- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B95 maximum)
- Meet ASTM A240

All sizes are annealed and meet AMS 5510. Width and length have a plus tolerance. Sheets from 0.016″ to 0.125″ thick are cold rolled and have a flatness tolerance of 0.40″. Sheets from 0.188″ to 0.250″ thick are hot rolled and have a flatness tolerance of 0.90″.

Foil—Unpolished (Cold Rolled)

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B95 maximum)
- Meets ASTM A240

Use this foil as a heat-treating wrap in temperatures up to 2000° F. It includes a crimping tool. Meets AMS 5510. All sizes have a soft temper. Width tolerance is ±0.010″. Length tolerance is ±3⁄4″.

Wd.		10 ft.	25 ft.	50 ft.	100 ft.
0.002″ Thick (±0.0002″)

Rods—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B76)
- Meet ASTM A276 and A479

These annealed rods meet AMS 5645. Length tolerance is ±1″ per foot. Dia. tolerance for ½″ to 2″ dia. rods is ±0.003″; for 3″ dia. rods it is +0.047″. Rods from ½″ to 2″ in dia. are cold finished with a straightness tolerance of 1⁄16″ per 5 feet. 3″ dia. rods are hot rolled with a straightness tolerance of 1⁄8″ per 5 feet.

Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

Wear- and Corrosion-Resistant Nitronic 60 Stainless Steel

- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B86)
- Meet ASTM A276 and A479

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 3609T1 and specify diameter and length.

Offering outstanding resistance to surface wear and corrosion, Nitronic 60 is used for fasteners, valves, and shafts. This material is nonmagnetic and cannot be heat treated. Its maximum temperature for corrosion resistance is not rated. These unpolished rods are hot rolled and annealed, and they meet AMS 5848. Diameter tolerance for 1/4″ to 2″ dia. rods is ±0.003″; for 2 1/2″ and 3″ dia. rods it is +0.047″. Straightness tolerance is 1/8″ per foot.

Ultra-Corrosion-Resistant Alloy 20 Stainless Steel

- Yield Strength: 35,000 psi
- Hardness: Medium (Rockwell B95 maximum)
- Meet ASTM B473

Alloy 20 can withstand harsh acids and caustic environments. It also contains columbium to maintain corrosion resistance around welded points. It is nonmagnetic and cannot be heat treated. Max. temp. for corrosion resistance is not rated. These unpolished rods are cold finished and annealed. Straightness tolerance is 1/16″ per 5 feet.

Very Easy-to-Machine 416 Stainless Steel

One of the most machinable stainless steels available, 416 contains sulfur for fast machining without clogging cutting tools. It's used for gears, screws, and shafts. 416 maintains its corrosion resistance up to 1200° F. It is magnetic and can be heat treated for hardness.

Square Bars—Unpolished (Cold Drawn)

- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B93)
- Can be hardened up to Rockwell C40
- Meet ASTM A582

These bars are annealed. Square tolerance for 3/8″ to 1″ sizes is –0.004″; for 1 1/4″ to 2″ sizes it is –0.006″. Straightness tolerance for 1/2″ to 2″ sizes is 1/8″ per 5 feet; 3/8″ sizes are not rated. Length tolerance is ±1″ per foot.

Square Size		1 ft.	3 ft.	6 ft.

Very Easy-to-Machine 416 Stainless Steel *(Material continued from previous page)*

One of the most machinable stainless steels available, 416 contains sulfur for fast machining without clogging cutting tools. It's used for gears, screws, and shafts. 416 maintains its corrosion resistance up to 1200° F. It is magnetic and can be heat treated for hardness.

Tight-Tolerance Rods—Precision Ground

- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B82)
- Can be hardened up to Rockwell C38
- Meet ASTM A582

These annealed rods meet AMS 5610. Diameter tolerance is ±0.0005″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ per foot.

Hardened Tight-Tolerance Rods—Precision Ground

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C26)
- Meet ASTM A582/A582M

Diameter tolerance is ±0.0005″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″.

Hardened Tight-Tolerance Metric Rods—Precision Ground

- Yield Strength: 138,000 psi
- Hardness: Hard (Rockwell C32)
- Meet ASTM A582

Also known as Project 70+, this material can be machined faster with less wear on cutting tools than standard 416. Diameter tolerance is –0.0127 mm. Straightness tolerance is 1/16″ per foot. Length tolerance is ±1″ per foot.

Hexagonal Bars—Unpolished

- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B81)
- Can be hardened up to Rockwell C41
- Meet ASTM A484 and A582

All sizes are cold finished and annealed. Hex tolerance for 3/8″ sizes is –0.003″; for 1/2″ to 2″ sizes it is –0.006″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1″ per foot.

Wear-Resistant 410 Stainless Steel

Often used for fasteners and valves, 410 withstands abrasion and can be heat treated for greater hardness. It maintains its corrosion resistance up to 1200° F and is magnetic.

Sheets—Unpolished

- Yield Strength: 30,000 psi
- Hardness: Medium (Rockwell B90)
- Can be hardened up to Rockwell C45
- Meet ASTM A240

These sheets are annealed and meet AMS 5504. Width and length tolerances are ±1/8″. Sheets from 0.029″ to 0.090″ thick are cold finished with a thickness tolerance of ±0.005″. Sheets from 0.188″ to 1.000″ thick are hot rolled with a thickness tolerance of +0.075″, –0.010″.

Rods—Unpolished

- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B81)
- Meet ASTM A276 and A479

All sizes are annealed. Straightness tolerance is 1/16″ per 5 feet. Rods from 1/2″ to 2″ in dia. are cold finished with a diameter tolerance of ±0.003″. Rods from 2 1/4″ to 4″ in dia. are hot rolled with a diameter tolerance of +0.063″. Length tolerance for 1/2-ft. lengths is +1/8″; for 1-ft. to 6-ft. lengths it is ±1″ per foot.

Mold-Quality Wear-Resistant 420 Stainless Steel

This hard material can be finely polished to a very smooth surface, making it suitable for fabricating molds. 420 stainless steel maintains its corrosion resistance up to 1150° F, is magnetic, and can be heat treated.

Tight-Tolerance Rectangular Bars—Precision Ground

- Yield Strength: 50,000 psi
- Hardness: Hard (Rockwell C25)
- Can be hardened up to Rockwell C55

These bars are annealed. Width tolerance is +0.015″. Length tolerance is ±1/8″ for 1/2-ft. lengths, ±1/4″ for 1-ft. lengths, and +1/2″ for 2-ft. lengths.

Very Wear-Resistant 420V Stainless Steel

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C28)
- Can be hardened up to Rockwell C59

The addition of vanadium and carbon gives 420V excellent wear resistance. It can replace tool steels in highly abrasive applications. This material is magnetic and can be heat treated. Minimum temperature for corrosion resistance is not rated. These unpolished strips are hot rolled and annealed. Width tolerance is +1/8″.

Hardened Hollow Ball—Reflective Finish

- Yield Strength: Not rated
- Hardness: Very Hard (Rockwell C54)

Found in floats and ball valves, this ball meets AMSQQ-S-763B.

Dia.	Dia. Tolerance		Each
1″	±0.005″	9327K33	$10.37

Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

Ultra-Hard Wear-Resistant 440C Stainless Steel

One of the hardest stainless steels after heat treating, 440C offers excellent wear and abrasion resistance. It's often used for bearings, valves, and knife blades. This material maintains its corrosion resistance up to 800° F and is magnetic.

Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C29, maximum)
- Can be hardened up to Rockwell C60
- Meet ASTM A276

All sizes are true bar, which is rolled for a precise edge. These bars also meet AMS 5630. Width tolerance for ½″ to 2″ wide bars is ±0.031″; for 3″ and 4″ wide bars it is +0.062″, –0.031″. Straightness tolerance is ⅛″ per 5 feet. Length tolerance is ±1″ per foot.

Ultra-Hard Wear-Resistant 440C Stainless Steel *(Material continued from previous page)*

One of the hardest stainless steels after heat treating, 440C offers excellent wear and abrasion resistance. It's often used for bearings, valves, and knife blades. This material maintains its corrosion resistance up to 800° F and is magnetic.

Oversized Rectangular Bars (Cont.)—Ground

- Yield Strength: 65,000 psi
- Hardness: Hard (Rockwell C20)
- Can be hardened up to Rockwell C60
- Meet ASTM A276

These bars are annealed. Thickness and width tolerances are +0.015". Length tolerance is ±1/8" for 1/2-ft. lengths; ±1/4" for 1-ft. lengths; and +1/2" for 2-ft. lengths.

Rods—Unpolished

- Yield Strength: 65,000 psi
- Hardness: Hard (Rockwell C20)
- Can be hardened up to Rockwell C60
- Meet ASTM A276

All sizes are annealed and meet AMS 5630. Rods from 1/4" to 2" in dia. are cold finished; 2 1/8" to 5" dia. rods are hot rolled. Diameter tolerance for 1/4" to 2" dia. rods is ±0.003"; for 2 1/8" to 3 1/2" dia. rods it is +0.047"; and for 3 3/4" to 5" dia. rods it is +0.078". Straightness tolerance is 0.075" per 6 feet. Length tolerance for 1/2-ft. and 1" to 4" long rods is +1/8"; for 1-ft to 6-ft. rods it is ±1" per foot.

Ultra-Hard Wear-Resistant 440C Stainless Steel (Material continued from previous page)

Hardened Balls—Reflective

- Yield Strength: Not rated
- Hardness: Very Hard (Rockwell C58)
- Meet ASTM A276 and A756

All sizes meet AMS 5630.

Hardened Metric Balls—Reflective

- Yield Strength: Not rated
- Hardness: Very Hard (Rockwell C58)
- Meet ASTM A276 and A756

These balls meet AMS 5630. Diameter tolerance is ±0.0025 mm.

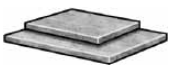
High-Strength Corrosion-Resistant 2205 Stainless Steel

Often used in caustic, high-pressure applications, 2205 resists cracking even when faced with a combination of tensile stress, corrosive chemicals, and heat. It maintains its corrosion resistance up to 600° F and is not heat treatable. Material is magnetic.

Sheets—Unpolished



- Yield Strength: 65,000 psi
- Hardness: Hard (Rockwell C31, max.)
- Meet ASTM A240 and A923

All sheets are annealed. Width and length tolerances are ±1/16″. Sheets from 0.060″ to 0.135″ thick are cold rolled and have a thickness tolerance of ±0.006″. Sheets from 0.188″ to 1.000″ thick are hot rolled and have a thickness tolerance of –0.010″.

Rods—Polished

- Yield Strength: 65,000 psi
- Hardness: Hard (Rockwell C30)
- Meet ASTM A182 and A276

These rods are cold finished and annealed. Diameter tolerance is ±0.003″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1/2″ per foot.

Dia.		1/2 ft.	1 ft.	2 ft.	3 ft.	6 ft.

Blade-Quality Wear-Resistant S30V Stainless Steel

- Yield Strength: 95,000 psi
- Hardness: Hard (Rockwell C25)
- Can be hardened up to Rockwell C62

With excellent strength and wear resistance, S30V is a preferred material for knives and cutlery. It can be heat treated for increased hardness and maintains its corrosion resistance to 200° F. Material is magnetic. These sheets are hot rolled and annealed. They have a ground finish. Thickness tolerance is +0.005″. Width and length tolerances are +1/8″. Flatness tolerance is 1/8″ per 5 feet.

Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

High-Strength 13-8 PH Stainless Steel

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C39, maximum)

13-8 PH can be hardened at lower temperatures than other heat-treatable types of stainless steel. It maintains its corrosion resistance up to 1100° F. These unpolished rods are cold finished and annealed, and they meet AMS 5629. Material is magnetic. Straightness tolerance is 0.0125″ per foot. Length tolerance is ±1″ per foot.

Dia.	Dia. Tolerance		½ ft.	1 ft.	3 ft.

Very High-Strength 15-5 PH Stainless Steel

- Yield Strength: 145,000 psi
- Hardness: Hard (Rockwell C35)
- Can be hardened up to Rockwell C45

Offering outstanding strength, 15-5 PH is used for gears and shafts, and it can be hardened further by low-temperature heat treating. It maintains its corrosion resistance up to 1100° F. These unpolished rods are cold finished and annealed. Material is magnetic. All sizes meet AMS 2300 and AMS 5659. Diameter tolerance is ±0.003″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance for ½-ft. lengths is +1/8″; for 1-ft. to 6-ft. lengths it is ±1″ per foot.

Corrosion-Resistant High-Strength 17-4 PH Stainless Steel

With a higher chromium content than 15-5 PH, 17-4 PH offers better corrosion resistance as well as high strength. Also known as 630 stainless steel, this material can be hardened by low-temperature heat treating. It maintains its corrosion resistance up to 1100° F. Material is magnetic.

Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 110,000 psi
- Hardness: Hard (Rockwell C32)
- Can be hardened up to Rockwell C44
- Meet ASTM A564

All sizes are annealed and meet AMS 5643. Width tolerance for 3/4″ to 2″ wide bars is ±0.031″; for 2 1/4″ to 4″ wide bars it is ±0.062″. Straightness tolerance is 1/8″ per 5 feet. Length tolerance is ±1″ per foot.

Also Available Bars with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 3375T1 and specify thickness, width, and length.

Corrosion-Resistant High-Strength 17-4 PH Stainless Steel *(Cont. from previous page)*

Hardened Rectangular Bars—Unpolished (Hot Rolled)

- Yield Strength: 190,000 psi
- Hardness: Hard (Rockwell C44)
- Meet ASTM A564

All sizes are true bar, which is rolled for a precise edge. Thickness tolerance for 1/4″ to 3/4″ thick bars is ±0.020″; for 1″ and 1 1/2″ thick bars it is ±0.031″. Width tolerance is +0.062″, –0.031″. Length tolerance is ±3″.

Strips—Unpolished (Cold Rolled)

- Yield Strength: 145,000 psi
- Hardness: Hard (Rockwell C30)
- Can be hardened up to Rockwell C38
- Meet ASTM A693

Strips meet AMS 5604. All sizes are annealed. Width tolerance is ±0.010″. Length tolerance is ±0.015″.

Thick.	Thick. Tolerance		4″×60″
0.003″	±0.00015″	3254T11	$48.11

Sheets—Unpolished

- Yield Strength: 160,000 psi
- Hardness: Hard (Rockwell C36)
- Can be hardened up to Rockwell C47
- 0.031″ to 0.125″ thick sheets: Meet ASTM A693

All sheets are annealed. Width and length tolerances are +1/4″, –1/16″. Sheets from 0.031″ to 0.125″ thick are cold rolled with a thickness tolerance of ±0.008″; they meet AMS 5604. Sheets from 0.188″ to 0.500″ thick are hot rolled with a thickness tolerance of +0.055″, –0.010″.

Rods—Unpolished

- Yield Strength: Not rated
- Hardness: Hard (Rockwell C28)
- Can be hardened up to Rockwell C44
- Meet ASTM A564

All sizes are annealed and meet AMS 5643. Diameter tolerance is ±0.003″. Straightness tolerance is 1/16″ per 5 feet. Length tolerance is ±1/2″ per foot. 3/16″ to 5/16″ dia. rods are cold drawn; 3/8″ to 3 1/2″ dia. rods are cold finished.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $10. Please ask for 3393T1 and specify diameter and length.

Corrosion-Resistant High-Strength 17-4 PH Stainless Steel *(Cont. from previous page)*

With a higher chromium content than 15-5 PH, 17-4 PH offers better corrosion resistance as well as high strength. Also known as 630 stainless steel, this material can be hardened by low-temperature heat treating. It maintains its corrosion resistance up to 1100° F. Material is magnetic.

Rods—Unpolished

- Yield Strength: 110,000 psi
- Hardness: Hard (Rockwell C35)
- Can be hardened up to Rockwell C44
- Meet ASTM A564

All sizes are annealed and meet AMS 5643. Rods with a 3″ and 3½″ dia. are cold finished; 4″ to 6″ dia. rods are hot rolled. Diameter tolerance for 3″ dia. rods is ±0.003″; for 3½″ to 4½″ dia. rods it is +1/16″; and for 5″ and 6″ dia. rods it is +1/8″. Length tolerance is ±1/16″.

Tight-Tolerance Hardened Rods—Precision Ground

- Yield Strength: 170,000 psi
- Hardness: Hard (Rockwell C40)
- Meet ASTM A484 and A564

These rods meet AMS 5643 and are hardened to H900 temper. Diameter tolerance is –0.0005″. Straightness tolerance is 1/16″ per foot. Length tolerance for ½-ft. lengths is ±1/8″; for 1-ft. to 6-ft. lengths it is ±1″ per foot.

Also Available: Rods with certification. Each comes with a traceable lot number and material test report. Offered in the same sizes listed below for an additional $15. Please ask for 3413T1 and specify diameter and length.

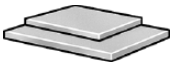
Warning! ***Yield strength and hardness are not guaranteed and are intended only as a basis for comparison.***

Low-Expansion Invar 36

Because Invar holds its size and shape when temperatures rise, this nickel-iron alloy is the go-to metal when dimensional stability is required. It is commonly used when precision is a priority, such as for scientific instruments and optical devices.

Sheets—Unpolished



- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B90 max.)
- Temper: Soft (Annealed)
- Meet ASTM F1684

Width and length have plus tolerances.

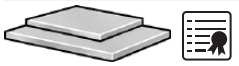
Low-Expansion Machinable Kovar

This nickel-iron-cobalt alloy expands at the same low rate as glass when heated. It offers better machinability than Invar and is often used anywhere a dependable glass-to-metal seal is required, such as in diodes and microwave tubes. All come with a traceable lot number and material test report.

Sheets with Material Certification—Unpolished



- Yield Strength: 50,000 psi
- Hardness: Medium (Rockwell B82 max.)
- Temper: Soft (Annealed)
- Meet ASTM F15

Width and length have plus tolerances.

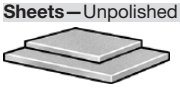
Multipurpose 400 Nickel

Comparable to Monel, this nickel-copper alloy is known for its high strength, excellent corrosion resistance, and good weldability and formability. It is widely used in chemical-processing equipment and marine hardware, and in highly corrosive environments such as those involving salt water, sulfuric acid, and alkalies.

Sheets—Unpolished



- Yield Strength: 25,000 psi
- Hardness: Medium (Rockwell B68)
- Temper: Soft (Annealed)
- Meet ASTM B127

Width and length tolerances are ±1/4″.

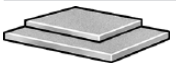
High-Strength 625 Nickel

A blend of nickel, chromium, and molybdenum gives 625 nickel the strength, weldability, and corrosion resistance necessary for use in expansion joints, exhaust systems, and marine components. It is comparable to Inconel 625 and Haynes 625. These sheets and rods come with a traceable lot number and material test report.

Sheets with Material Certification—Unpolished



- Yield Strength: 60,000 psi
- Hardness: Medium (Rockwell B94)
- Temper: Soft (Annealed)
- Meet ASTM B443

These sheets also meet AMS 5599. Width and length tolerances are ±1/16″.

High-Strength Extreme-Temperature 718 Nickel

Whether the temperature dips to –300° F or rises to 1200° F, 718 nickel will maintain its high strength, even after long-term exposure. It is comparable to Inconel 718. Unlike 625 nickel, this alloy can be further strengthened by heat treating. It has good weldability and is often used for cryogenic tanks, fasteners, and gas turbine engine components. These sheets and rods come with a traceable lot number and material test report.

Sheets with Material Certification—Unpolished

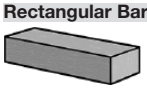
Yield strength is approximate and may vary based on size and shape.

High-Strength Grade 5 Titanium

While titanium is known for its high strength-to-weight ratio, Grade 5's high aluminum content makes it the strongest. This is the most widely used titanium, offering a versatile mix of good corrosion resistance, weldability, and formability. It's often used for turbine blades, fasteners, and spacer rings.

Rectangular Bars—Ground



- Yield Strength: 120,000 psi
- Hardness: Hard (Rockwell C30)
- Temper: Soft (Annealed)
- Meet ASTM B265

Straightness tolerance is 1/8" per 5 feet. Length has a plus tolerance. Width and length have plus tolerances.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

High-Strength Grade 5 Titanium *(Material continued from previous page)*

While titanium is known for its high strength-to-weight ratio, Grade 5's high aluminum content makes it the strongest. This is the most widely used titanium, offering a versatile mix of good corrosion resistance, weldability, and formability. It's often used for turbine blades, fasteners, and spacer rings.

Balls—Reflective Finish

- Yield Strength: 120,000 psi
- Hardness: Hard (Rockwell C30)
- Temper: Soft (Annealed)

These balls are made to Grade 200 tolerances. Diameter tolerance is ±0.001″.

Dia.	Pkg. Qty.		Pkg.
1/32″	5	9288K27	$6.25
1/16″	5	9288K29	8.04
1/8″	5	9288K31	$10.55
5/32″	5	9288K33	11.10
3/16″	5	9288K35	$12.20

3/8″	1	9288K42	$23.42
1/2″	1	9288K43	25.79

Highly Corrosion-Resistant Grade 2 Titanium

Because Grade 2 is 99% pure titanium, it is more corrosion resistant than Grades 5 and 9, but it is not as strong. It has good formability and weldability. Common uses include chemical processing equipment, heat exchangers, and marine hardware.

Rectangular Bars—Unpolished

- Yield Strength: 40,000 psi
- Hardness: Medium (Rockwell B68)
- Temper: Soft (Annealed)
- Meet ASTM B265

Width and length have plus tolerances.

High-Strength Weldable Grade 9 Titanium

- Yield Strength: 105,000 psi
- Hardness: Not rated
- Temper: Stress Relieved

Grade 9 titanium has less aluminum than Grade 5, so it offers better weldability but it is not as strong. These tubes have an unpolished finish. OD tolerance is +0.004″. ID tolerance is ±0.003″. Straightness tolerance is 0.025″ per foot. Length tolerance is ±1″.

Wall Thick.	OD	ID		1 ft.	3 ft.	5 ft.

About Copper, Brass, and Bronze

Although copper, brass, and bronze are distinct alloys, they're often collectively called red metals because they share many common characteristics. These alloys have a high copper content that provides inherent corrosion resistance as well as an attractive russet coloring. Red metals are worked (wrought) or cast into shape and are commonly joined by soldering or brazing; however, some can be welded.

Copper alloys have a minimum of 99.3% copper content. They are an excellent conductor of heat and electricity and are commonly used for bus bars and wire connectors in electrical applications.

Brass alloys consist primarily of copper, but they can contain as much as 40% zinc, which increases their machinability. They are often used for nuts, rivets, hinges, and locks.

Bronze alloys, while mostly copper, contain small amounts of tin, iron, and sometimes zinc. The alloys designated as bearing bronze have a good combination of low friction and high wear resistance, making them the best choice for use as bearings. The other bronze alloys are widely used for gears, valves, and pump parts.

Use the charts below to identify the best material for your application. Circles indicate that a majority of a material's shapes and sizes meet the applicable rating. Yield strength is approximate and may vary based on size and shape.

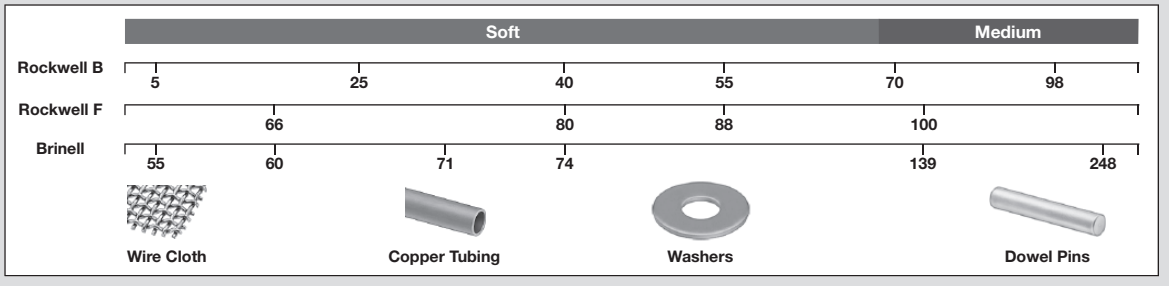
Hardness

The chart below compares the hardness of metals using different scales; the larger the number, the harder the material. As metal gets harder, it becomes more wear resistant, but may also become less malleable. Red metals generally fall onto the soft end of the spectrum.



For information about copper alloys, see page 3805.

Multipurpose 110 Copper

Offering high electrical conductivity and formability, 110 copper is 99.90% pure. Also known as electrolytic tough pitch (ETP) copper, it is often used in electrical applications, such as for bus bars and wire connectors, as well as for flashing, gaskets, and rivets. This material can be soldered and brazed. It is not heat treatable.

Rectangular Bars—Unpolished

- Yield Strength: Not rated
- Hardness: Rockwell F65
- Temper: 1/2 Hard (H02)
- Meet ASTM B187

Width tolerance for 1/4″ to 2″ wide bars is ±0.008″; for 2 1/2″ to 6″ wide bars it is ±0.018″. Straightness tolerance is 1/4″ per 5 ft. Length tolerance is ±1/4″.

Rectangular Bars with Rounded Edges—Silver Plated

- Yield Strength: 33,000 psi
- Hardness: Rockwell F65
- Temper: Hard (H04)
- Meet ASTM B187

A thin layer (0.000003″ thick) of silver makes these copper bars slower to tarnish than unplated bars for low electrical resistance at contact points over time. Thickness tolerance is ±0.004″. Width tolerance for 1″ to 2″ wide bars is ±0.008″; for 2 1/2″ to 6″ wide bars it is ±0.012″. Straightness tolerance is 1/8″. Length tolerance is ±1/8″.

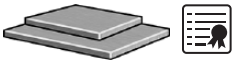
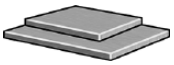
Soft and 1/8 to 1/4 Hard Temper Sheets with Material Certification—Unpolished



These sheets come with a traceable lot number and material test report. They are available in the same sizes as the soft and 1/8 to 1/4 hard sheets above for an additional $15. Please specify thickness, width, and length when ordering.

Soft and 1/8 to 1/4 Hard Temper Sheets with Material Certification **1012N01**

1/2 Hard Temper Sheets—Unpolished



- Yield Strength: 37,000 psi
- Hardness: Rockwell F77
- Temper: 1/2 Hard (H02)
- Meet ASTM B152

Width and length tolerances are ±1/16″.

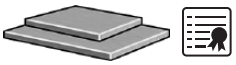
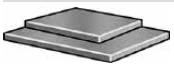
1/2 Hard Temper Sheets with Material Certification—Unpolished



Furnished with a traceable lot number and material test report, these sheets are available in the same sizes as the 1/2 hard sheets above for an additional $10. Please specify thickness, width, and length when ordering.

1/2 Hard Temper Sheets with Material Certification **1234N56**

Sheets—Brushed and Mirror-Like Finishes



- Yield Strength: 36,000 psi
- Hardness: Rockwell B40
- Temper: 1/4 Hard (H01)
- Meet ASTM B152

Sheets are finished on one side. The finished side is covered with a protective peel-off film. Width and length have plus tolerances. Flatness tolerance is 1/8″.

Brushed sheets have grain lines running in one direction. **Mirror-like** sheets have no grain lines.

Finish Selector Pack—One sheet each of 1 1/2″×3″×0.032″ thick unpolished, brushed, and mirror-like **1127T15** 22.96

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Multipurpose 110 Copper *(Material continued from previous page)*

Offering high electrical conductivity and formability, 110 copper is 99.90% pure. Also known as electrolytic tough pitch (ETP) copper, it is often used in electrical applications, such as for bus bars and wire connectors, as well as for flashing, gaskets, and rivets. This material can be soldered and brazed. It is not heat treatable.

Foil—Unpolished

- Yield Strength: 10,000 psi
- Hardness: Not rated
- Temper: Soft (Annealed)
- Meet ASTM B152

Width tolerance for the rolls is ±1/64″; for the sheets it is ±1/8″. Length tolerance for 50-ft. rolls is +5 ft.; for 100-ft. rolls it is ±8 ft.; for the sheets it is ±1/8″.

Super-Conductive 101 Copper

With 99.99% copper content, 101 copper has higher purity than 110 copper, resulting in superior electrical conductivity. It's commonly called oxygen-free electronic (OFE) and oxygen-free high-conductivity (OFHC) copper. Use it in electrical applications, such as for coaxial cables and terminal lugs, and also in high-temperature and vacuum environments. This material can be welded, soldered, and brazed. It is not heat treatable.

Soft Temper Sheets—Unpolished

- Yield Strength: 10,000 psi
- Hardness: Rockwell F65 max.
- Temper: Soft (Annealed)
- Meet ASTM F68

Thickness tolerance is ±0.007″. Width and length tolerances are ±1/16″.

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

For information about copper alloys, see page 3805.

Super-Conductive 101 Copper *(Material continued from previous page)*

With 99.99% copper content, 101 copper has higher purity than 110 copper, resulting in superior electrical conductivity. It's commonly called oxygen-free electronic (OFE) and oxygen-free high-conductivity (OFHC) copper. Use it in electrical applications, such as for coaxial cables and terminal lugs, and also in high-temperature and vacuum environments. This material can be welded, soldered, and brazed. It is not heat treatable.

Rods—Unpolished (Cont.)

- Yield Strength: Not rated
- Hardness: Rockwell F75, except 6″ dia. are not rated
- Temper: Hard (H04), except 6″ dia. are extruded
- Meet ASTM B187 and F68

Length tolerance is ±1/16″.

Easy-to-Machine 145 Copper

The addition of tellurium makes this copper easy to machine while maintaining good corrosion resistance and high electrical conductivity. Also called tellurium copper, 145 copper is often used for transformer and circuit-breaker terminals, welding torch tips, and fasteners. This material can be soldered and brazed. It is not heat treatable.

Rectangular Bars—Unpolished

- Yield Strength: 18,000 psi
- Hardness: Not rated
- Temper: Hard (H04)
- Meet ASTM B301

Thickness tolerance is ±0.005″. Width tolerance for 2″ wide bars is ±0.010″; for 4″ wide bars it is ±0.012″; for 6″ wide bars it is ±0.300″. Length tolerance is ±1/4″.

High-Strength 182 Copper

This 182 copper is stronger, harder, and more wear resistant than 110 copper. Also known as RWMA Class 2 chromium copper, it is commonly used in resistance welding, for circuit-breaker parts, and for molds to make plastic parts. This material cannot be soldered, brazed, or welded. It can be heat treated.

Rods—Unpolished

Weldable 122 Copper

- Yield Strength: Not rated
- Hardness: Not rated
- Temper: 1/2 Hard (H02)
- Meet ASTM B251

The addition of phosphorus makes 122 copper easier to weld and braze than 110 copper. It has excellent resistance to corrosion caused by water, soil, and weather, making it the go-to material for plumbing and underground applications. It's also used for storage tanks and chemical equipment. It is not as electrically conductive as other copper and it is not heat treatable. These tubes are unpolished. You can create telescoping tubes by fitting a tube inside the next larger size. OD tolerance is ±0.002″. Length tolerance is ±1/32″.

For additional sizes and longer lengths, see 122 copper tubing on pages 157-158.

Ultra-Machinable 360 Brass

The standard by which machinability is measured for all red metals (copper, brass, and bronze), the lead content in 360 brass results in minimal tool wear during high-speed machining operations. Often called free-machining and free-cutting brass, it stands up to drilling, milling, and tapping operations. It is commonly used for gears, pinions, and lock components. This material can be soldered and brazed. It is not heat treatable.

Rectangular Bars—Unpolished

- Yield Strength: 15,000 psi
- Hardness: Rockwell B35
- Temper: 1/2 Hard (H02)
- Meet ASTM B16, except 1/16″ thick meet ASTM B121

Thickness tolerance for 1/16″ to 7/8″ thick bars is ±0.009″; for 1″ to 3″ thick bars it is ±0.014″. Width tolerance is ±0.020″. Length tolerance for 1/2-ft. to 3-ft. lengths is ±1/2″; for 6-ft. lengths it is ±3″.

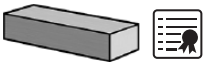
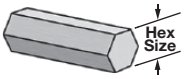
Rectangular Bars with Material Certification—Unpolished



These bars come with a traceable lot number and material test report. They're available in the same sizes as the rectangular bars on page 3811 and above for an additional $15. Please specify thickness, width, and length when ordering.

Rectangular Bars with Material Certification 2569T95

Metric Hexagonal Bars—Unpolished



- Yield Strength: 23,000 psi
- Hardness: Rockwell B75
- Temper: 1/2 Hard

Made from Alloy CuZn36Pb3, the European equivalent of 360, these bars conform to EN 12164. Hex size tolerance for 4 to 8 mm bars is ±0.09 mm; for 10 to 17 mm bars it's ±0.11 mm; for 19 to 24 mm bars it's ±0.13 mm. Length tolerance is ±51 mm.

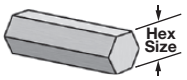
24	1452N63	250.46

(Material continued on following page)

Yield strength is approximate and may vary based on size and shape.

Ultra-Machinable 360 Brass *(Material continued from previous page)*

Hexagonal Bars—Unpolished



- Yield Strength: 44,000 psi
- Hardness: Rockwell B25
- Temper: 1/2 Hard (H02)
- Meet ASTM B16

Hex size tolerance for 1/8″ to 1 1/4″ bars is ±0.006″; for 1 3/8″ to 2 1/2″ bars it is ±0.009″. Length tolerance is ±1/2″.

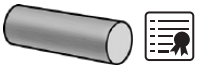
Rods with Material Certification—Unpolished



Furnished with a traceable lot number and material test report, these rods are available in the same sizes as the 1/2-ft. to 6-ft. length rods above for an additional $15. Please specify diameter and length when ordering.

Rods with Material Certification 2572T777

Metric Rods—Unpolished

- Yield Strength: 23,000 psi
- Hardness: Rockwell B75
- Temper: 1/2 Hard

Made from Alloy CuZn36Pb3, the European equivalent of 360, these rods conform to EN 12164. Diameter tolerance for 2 to 5 mm dia. rods is ±0.05 mm; for 6 to 25 mm dia. rods it is ±0.08 mm. Length tolerance is ±51 mm.

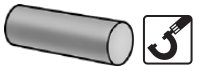
Yield strength is approximate and may vary based on size and shape.

For information about brass alloys, see page 3805.

Ultra-Machinable 360 Brass *(Material continued from previous page)*

The standard by which machinability is measured for all red metals (copper, brass, and bronze), the lead content in 360 brass results in minimal tool wear during high-speed machining operations. Often called free-machining and free-cutting brass, it stands up to drilling, milling, and tapping operations. It is commonly used for gears, pinions, and lock hardware. This material can be soldered and brazed. It is not heat treatable.

Tight-Tolerance Rods—Precision Ground



- Yield Strength: 25,000 psi
- Hardness: Rockwell B60
- Temper: 1/2 Hard (H02)
- Meet ASTM B16

Diameter tolerance is ±0.0002″. Straightness tolerance is 1/16″ per 5 ft. Length tolerance is ±1/8″.

Dia.		1 ft.	3 ft.	6 ft.

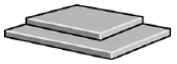
Formable Easy-to-Machine 353 Brass

With less lead than 360 brass, this 353 brass is more formable while maintaining good machinability. Commonly called engraver's brass, it's well suited for fabrication processes such as knurling and threading. Use it to make nuts, gears, drawer pulls, and hinges. This material can be soldered and brazed. It is not heat treatable.

Sheets—Unpolished



- Yield Strength: 50,000 psi
- Hardness: Rockwell B65
- Temper: 1/2 Hard (H02)
- Meet ASTM B121

Width and length tolerances are ±1/4″.

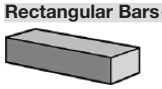
Easy-to-Machine Architectural 385 Brass

Often called architectural bronze, this 385 brass is easy to machine and has excellent formability when heated. It is typically used for handrails, ornamental trim, and hardware, such as hinges and lock bodies. This material can be soldered and brazed. It is not heat treatable.

Rectangular Bars—Unpolished



- Yield Strength: 16,000 psi
- Hardness: Rockwell B42
- Temper: 1/2 Hard (H02), except 1/8″ Thick. × 1 1/4″ Wd. are extruded
- Meet ASTM B455

Thickness tolerance is ±0.010″. Width tolerance is ±0.045″. Length tolerance for 2-ft. and 4-ft. lengths is ±1/2″; for 8-ft. lengths it is ±3″.

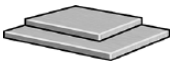
Easy-to-Form 260 Brass

A combination of copper and zinc makes 260 brass the most formable brass we offer. It provides good corrosion resistance but is not as machinable as 300 series brass. Sometimes called cartridge brass, it is commonly used for ammunition casings, radiator components, and decorative door hardware. This material can be welded, soldered, and brazed. It is not heat treatable.

Sheets—Unpolished



- Yield Strength: 52,000 psi
- Hardness: Rockwell B50, except 0.010″ to 0.016″ thick. are not rated
- Temper: 0.010″ to 0.250″ thick. are ½ Hard (H02); 0.500″ to 1.000″ thick. are ⅛ Hard (H01)
- Meet ASTM B36

Width and length tolerances are ±1/4″.

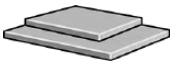
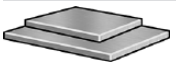
Sheets with Material Certification—Unpolished



These sheets come with a traceable lot number and material test report. They are available in the same sizes with the same specifications as the sheets above for an additional $15. Please specify thickness, width, and length when ordering.

Sheets with Material Certification 1026N1

Sheets—Brushed Finish



- Yield Strength: 40,000 psi
- Hardness: Rockwell B43
- Temper: ¼ Hard (H01)
- Meet ASTM B134 and B36

Sheets are brushed on one side with grain lines running in one direction. The brushed side is covered with a protective peel-off film. Width and length have plus tolerances. Flatness tolerance is ⅛″.

Thick.	Thick. Tolerance		12″×12″	12″×24″	24″×24″

For information about brass alloys, see page 3805.

Machinable and Formable 330 Brass

- Yield Strength: 60,000 psi
- Hardness: Rockwell B73
- Temper: Hard drawn (H80)
- Meet ASTM B135

The low lead content in this 330 brass gives it a good balance between workability and machinability. It is used as fire station poles, pump cylinder lines, and plumbing accessories. This material can be soldered and brazed. It is not heat treatable. These tubes are unpolished. OD tolerance is ±0.004″. Length tolerance for 1-ft. and 3-ft. lengths is ±1/2″; for 6-ft. lengths it is ±3″.

Weldable 464 Naval Brass

Known for its high corrosion resistance in saltwater environments, 464 brass also offers good weldability, strength, and wear resistance. It's widely used for marine hardware, pump and propeller shafts, and rivets. This material can be welded, soldered, and brazed. It is not heat treatable.

Rectangular Bars—Unpolished

- Yield Strength: 22,000 psi
- Hardness: Rockwell B55
- Temper: 1/2 Hard (H02)
- Meet ASTM B21

Width tolerance for 1/2″ to 1 1/4″ wide bars is ±0.006″; for 1 1/2″ to 4″ wide bars it is ±0.014″. Straightness tolerance is 1/2″ per 10 feet. Length tolerance is ±1/2″.

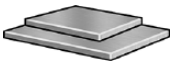
Sheets—Brushed and Mirror-Like Finishes



- Yield Strength: 58,000 psi
- Hardness: Rockwell B82
- Temper: 1/4 Hard (H01)
- Meet ASTM B171

Sheets are finished on one side. The finished side is covered with a protective peel-off film. Width and length have plus tolerances. Flatness tolerance is 1/2″ per 24″.

Brushed sheets have grain lines running in one direction. **Mirror-like** sheets have no grain lines.

Machinable 485 Naval Brass

- Yield Strength: 25,000 psi
- Hardness ; Rockwell B60, except 3/16″ to 7/16″ dia. rods are not rated
- Temper: 1/2 Hard (H02), except 3″ dia. is as hot extruded (M30)
- Meet ASTM B21

485 brass offers the same strength and corrosion resistance as 464 brass with the addition of lead for improved machinability. Also known as high-leaded naval brass, it is commonly used for marine hardware, valve stems, and screw-machine products. This material can be soldered and brazed. It is not heat treatable. These rods are unpolished. Length tolerance for 1-ft. and 3-ft. lengths is ±1/2″; for 6-ft. lengths it is ±3″.

Machinable 936 Bearing Bronze

An easier-to-machine alternative to 932 bronze, this 936 bronze also has better corrosion resistance. It is also known as modified SAE 64. Use it to machine bearings and bushings for oil pumps and gasoline engines. This material can be soldered and brazed. It is not heat treatable.

Oversized Tubes—Unpolished

- Yield Strength: 21,000 psi
- Hardness: Rockwell B26
- Temper: As cast (M07)
- Meet ASTM B505

OD is oversized +1/32″ to +3/32″ and ID is undersized –1/32″ to –3/32″ to allow for finishing. Straightness tolerance is 3/8″ per 5 feet. Length has a plus tolerance.

Wear- and Corrosion-Resistant AMPCO 18 Bearing Bronze

- Yield Strength: 37,000 psi
- Hardness: Rockwell B88
- Temper: As cast (M07)
- Meet ASTM B505

This aluminum-bronze material offers superior wear resistance, higher strength, and better corrosion resistance than 954 bronze. Use it for bearings and gears in operations where it's essential to avoid unnecessary downtime. This material can be welded and is heat treatable. These rods are unpolished. Diameter tolerance is oversized +0.052″ to +0.072″ to allow for finishing. Length has a plus tolerance.

Corrosion-Resistant High-Strength 863 Bronze

While technically a bronze, 863 bronze is frequently called manganese brass. This material offers good corrosion resistance and can handle heavy loads at high speeds when properly lubricated. It's often used for heavy-load bearings, hydraulic cylinder parts, and large valve stems. It's not heat treatable.

Oversized Tubes—Unpolished

- Yield Strength: 62,000 psi
- Hardness: Rockwell B97
- Temper: As cast (M07)
- Meet ASTM B505

OD is oversized +0.0525″ to +0.109″ and ID is undersized –0.0505″ to –0.165″ to allow for finishing. Straightness tolerance is 1/4″ per 5 feet. Length has a plus tolerance.

For information about bronze alloys, see page 3805.

High-Strength 544 Bearing Bronze

- Yield Strength: 50,000 psi
- Hardness: Not rated
- Temper: Hard (H04)
- Meet ASTM B139

Known for its ability to resist stress cracking and fatigue, 544 bronze also offers excellent machinability and good formability. It's commonly called phosphor bronze and is widely used for shafts, gears, and valve parts. This material can be soldered and brazed. It is not heat treatable. These rods have an unpolished finish. Length tolerance for ½-ft. to 2-ft. lengths is ±¼"; for 3-ft. and 6-ft. lengths it is ±½".

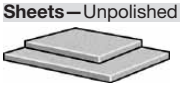
Self-Lubricating Oil-Filled SAE 840 and 841 Bearing Bronze

Powdered bronze is pressed and then impregnated with SAE 30 oil to make this material self-lubricating and corrosion resistant. It is often used for parts in hard-to-reach areas that would be difficult to access for lubrication, such as well pumps and turbine blades. It is not heat treatable.

Sheets—Unpolished



- Yield Strength: SAE 840: 7,000 psi; SAE 841: 11,000 psi
- Hardness: Not rated
- Temper: As pressed
- Meet ASTM B438

The 5"×6" sheets are SAE 841; the 6"×12" sheets are SAE 840, except the 1/8" thick sheets are SAE 841. Width and length have plus tolerances.

High-Temperature Graphite-Filled SAE 841 Bearing Bronze

An excellent alternative to oil-filled bronze, this graphite-filled bronze provides dry lubrication in temperatures as high as 700° F. It is frequently used for self-lubricating bearings, sleeves, and bushings. This material is not heat treatable.

Oversized Tubes—Unpolished

- Yield Strength: 8,500 psi
- Hardness: Not rated
- Temper: As pressed
- Meet ASTM 438

OD is oversized and ID is undersized to allow for finishing. Length has a plus tolerance.

High-Strength 630 Bronze

- Yield Strength: 50,000 psi
- Hardness: Rockwell B90
- Temper: HR50
- Meet ASTM B150

The addition of nickel gives this material strength while maintaining the ductility, wear resistance, and corrosion resistance for which bronze is known. Also called aluminum-nickel-bronze, 630 bronze is an excellent choice for heavy-load applications, such as hydraulic valve parts and pump shafts. This material can be welded. It is not heat treatable. These rods are unpolished. Diameter tolerance is ±0.004″. Length tolerance is ±1/4″.

Machinable High-Strength 642 Bronze

- Yield Strength: 42,000 psi
- Hardness: Rockwell B65
- Temper: HR50
- Meet ASTM B150

642 bronze is a lead-free alternative to 316 bronze that offers the same good machinability with reduced strength and corrosion resistance. Also called aluminum-silicon-bronze, it's used for valve bodies, gears, and bolts. It is not heat treatable. These rods are unpolished. Diameter tolerance is ±0.004″. Length tolerance is ±1/4″.

Easy-to-Weld Corrosion-Resistant 655 Bronze

- Yield Strength: 43,000 psi
- Hardness: Rockwell B75, unless noted
- Temper: Hard (H04)
- Meet ASTM B98

Commonly called high silicon bronze, this 655 bronze contains more silicon than other bronze alloys, so it is suitable for all types of welding. With excellent formability and corrosion resistance, it is often used to make parts for use in marine applications as well as in pumps and boilers. It is not heat treatable. These rods are unpolished. Diameter tolerance for 1/4″ to 1/2″ dia. rods is ±0.002″; for 5/8″ to 1 1/2″ dia. rods it is ±0.004″. Straightness tolerance is 1/4″ per 10 feet. Length tolerance is ±1/2″.

Machinable Corrosion-Resistant 316 Bronze

- Yield Strength: 28,000 psi
- Hardness: Rockwell B70
- Temper: 1/2 Hard (H02)
- Meet ASTM B140

Just like 220 bronze, 316 bronze offers excellent corrosion resistance and can be used outdoors; however, the addition of lead makes it more machinable. Also known as leaded commercial bronze, it's used for cable clamps, hardware, and fasteners. This material can be soldered and brazed. It is not heat treatable. These rods are unpolished. Diameter tolerance is ±0.0025″. Straightness tolerance is 1/4″ per 10 feet. Length tolerance is ±1/2″.

Dia.		1 ft.	3 ft.	6 ft.

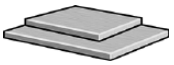
Corrosion-Resistant Easy-to-Form 220 Bronze



- Yield Strength: 33,000 psi
- Hardness: Rockwell B56
- Temper: 1/2 Hard (H02), except 0.187″ sheets are 1/4 Hard (H01)
- Meet ASTM B36

Excellent formability along with corrosion resistance makes 220 bronze a great choice for weatherstripping, trim, and decorative hardware. This material is commonly called commercial bronze. It can be welded, soldered, and brazed. It is not heat treatable. These sheets are unpolished. Thickness tolerance for 0.020″ to 0.050″ thick sheets is ±0.002″; for 0.064″ to 0.187″ thick sheets it is ±0.008″. Length and width tolerances are ±3/16″.

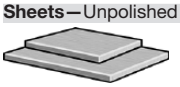
Very High-Strength 510 Bronze

Because this material is very strong and formable, it is the best choice for applications involving repetitive motion, such as springs, bellows, switches, and electrical contacts. This material can be welded, soldered, and brazed. It is not heat treatable.

Sheets—Unpolished



- Yield Strength: 80,000 psi
- Hardness: Rockwell B92
- Temper: Spring (H08)
- Meet ASTM B103

Width tolerance is ±0.016″. Length tolerance is ±1/4″.

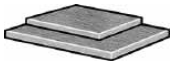
Lead & Zinc

Lead

With a minimum of 98% pure lead content, this material is soft with good corrosion resistance and excellent formability. Applications for lead include radiation shields, sound barriers, and vibration dampers.

Sheets



These sheets are cold rolled. Width and length tolerances are ±1/8". They meet Fed. Spec. QQL-201F.

Shot and Balls

All are precision manufactured to ±0.010" to ensure size and a smooth finish. Those sizes with a trade number are classified as lead shot; all others are classified as lead balls.

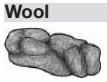
Wool



Pack lead wool into joints to create a watertight seal in pipe and plumbing connections. It can be cut with scissors.

5-lb. Bag	9021K11	$33.72

Insulating Lead Wire

This bend-and-stay (soft temper) wire is 99.9% pure lead. It is often used for bearing alignment and caulking. Diameter tolerance is +0.001", –0.005". Tensile strength is 1,100 psi. Maximum temperature is 621°F. Wire has a matte finish. It meets ASTM B29 and B749.

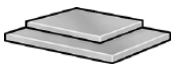
Zinc



Considered commercially pure, this material is 99% zinc and the softest of all the zinc alloys. It is nonsparking and corrosion resistant, and has excellent formability. Use it instead of lead for sound barriers and vibration dampers, as well as for EMI/RFI shields and architectural sheeting. These sheets are unpolished. Thickness tolerance is ±0.003".

Casting Metals

Indium Alloy Bar

Lead Ingot

Tin Bar

Bismuth Alloy—When melted, bismuth alloys expand slightly as they solidify, pushing into the crevices of a mold to produce detailed replicas. These alloys are useful for repairing dies, creating fusible links, and holding delicate parts for machining.
Indium Alloy—Similar in composition to bismuth alloys, but the addition of indium lowers the melting temperature to allow casting in molds made from glass, quartz, mica, and ceramic.
Lead—Use as caulking, castings, and hot-dipped coatings. Meets ASTM B29.
Lead-Base Babbitt—Cast light-load bearings with this soft alloy. It has superior antifriction properties.
Lead-Base Coppered Babbitt—Use this alloy to cast bearings for low-speed, heavy-load applications. It is able to withstand shock and vibration and requires less lubrication than other types of babbitt.
Lead Hammer Metal—Commonly used to cast nonmarring hammer heads, this ductile material is hard and won't chip.
Lead-Free Pewter Alloy—Use as an alternative to lead. This alloy has less copper than standard pewter, which makes it easier to pour when melted.
Tin—After melting, tin is generally alloyed with other metals such as lead, silver, and copper to make solder and babbitt.
Tin-Base Babbitt—Cast bearings for high-speed, high-wear applications. It withstands higher temperatures than lead-base babbitt and withstands heavy, sustained loads.
Zinc Alloy—Nonshrinking and corrosion resistant, use this alloy in casting applications that require easy machinability.
Silicon-Bronze Alloy—Often used to cast gears, propellers, bells, and plaques, this alloy renders an excellent surface finish.
Babbitt Paste—An integral component of casting babbitt bearings, apply a thin coat of this paste to bronze, cast iron, and steel bearing housings before casting to prevent separation.

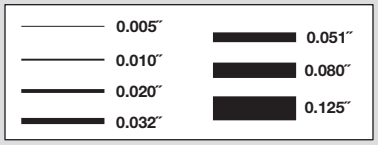
About Wire

Bend-and-stay wire bends easily and retains its new shape when released. It is also known as soft-temper and annealed wire. It is commonly used as tying and locking wire.

Spring-back wire resists bending and generally returns to its original shape when released. It is also known as spring-temper wire. It is often used to construct springs and wire rope.



The sizes above are some of the wire diameters we offer.

For a wire gauge conversion chart, go to mcmaster.com and search for **9896KAC**.

Flat Stainless Steel Wire

- Bend-and-stay wire (soft temper)
- Tensile Strength: 90,000 psi

The flat surface helps prevent this wire from rolling and slipping, plus it provides a tight, secure wrap around pipes, rods, and other round surfaces. Wire is 304 stainless steel. Thickness tolerance is ±0.0005″. Width tolerance is ±0.002″. Maximum temperature is 500° F. Wire has a matte finish.

Stainless Steel Wire

A good choice for use around chemicals and in food-processing environments, stainless steel wire is known for its corrosion resistance.

Bend-and-Stay 302/304 Stainless Steel—Matte Finish

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM A555 and A580
- Tensile Strength: 75,000 psi

Diameter tolerance for 0.002″ to 0.032″ dia. wire is ±0.0005″; for 0.038″ to 0.162″ dia. wire it is ±0.001″. Maximum temperature is 550° F.

Stainless Steel Wire *(Material continued from previous page)*

Spring-Back 302/304 Stainless Steel—Bright Finish

- Spring-back wire (spring temper)
- Meets ASTM A313 and A555
- Tensile Strength: 205,000 psi

Diameter tolerance for 0.005″ to 0.032″ dia. wire is ±0.0005″; for 0.040″ to 0.162″ dia. wire it is ±0.001″. Maximum temperature is 570° F.

Spring-Back 304 Stainless Steel—Coated with PTFE

- Spring-back wire (spring temper)
- Meets ASTM A313
- Tensile Strength: Not rated

The PTFE coating makes the surface slippery. Wire diameter includes the coating; diameter tolerance is ±0.0005″. Length has a plus tolerance. Maximum temperature is 500° F.

Bend-and-Stay 316L Stainless Steel

- Bend-and-stay wire (soft temper)
- Meets ASTM A555 and A580
- Tensile Strength: 75,000 psi

Choose this 316L stainless steel wire over 302/304 stainless steel for superior corrosion resistance. Diameter tolerance is ±0.001″. Maximum temperature is 400° F. Wire diameters 0.015″ to 0.064″ have a bright finish; 0.080″ to 0.125″ have a matte finish.

Spring-Back 316 Stainless Steel

- Spring-back wire (spring temper)
- Meets ASTM A313 and A555
- Tensile Strength: 222,000 psi

316 stainless steel is more corrosion resistant than 302/304 stainless steel. Diameter tolerance is ±0.001″. Maximum temperature is 570° F. Wire diameters 0.015″ to 0.032″ may have either a matte or bright finish; 0.040″ to 0.125″ have a matte finish.

Bend-and-Stay 410 Stainless Steel—Matte Finish

- Bend-and-stay wire (soft temper)
- Meets ASTM A580
- Tensile Strength: 70,000 psi

410 stainless steel is magnetic. Diameter tolerance is ±0.001″. Maximum temperature is 300° F.

Wire Dia.	¼-lb. Spools Ft./Spool			1-lb. Coils Ft./Coil

Bend-and-Stay 430 Stainless Steel—Matte Finish

- Bend-and-stay wire (soft temper)
- Meets ASTM A580
- Tensile Strength: 70,000 psi

In addition to being magnetic like 410 stainless steel, this 430 stainless steel contains more chromium for better corrosion resistance. Diameter tolerance is ±0.001″. Maximum temperature is 300° F.

Wire Dia.	¼-lb. Spools Ft./Spool			1-lb. Coils Ft./Coil

Lightweight Aluminum Wire

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM B211
- Tensile Strength: 11,000 psi

With 99% aluminum content, this 1100 aluminum wire is lightweight with fair corrosion resistance and good electrical conductivity. Diameter tolerance for 0.013″ to 0.032″ dia. wire is ±0.0005″; for 0.040″ to 0.126″ dia. wire it is ±0.002″. Maximum temperature is 200° F. Finish is matte.

Steel Wire

An economical alternative to stainless steel, steel offers similar strength without the inherent corrosion-resistant properties. Use steel wire for bundling and as tag wire.

1006-1008 Carbon Steel—Zinc Galvanized

Spool

- Bend-and-stay wire (soft temper)
- Meets ASTM A641
- Tensile Strength: 70,000 psi

Galvanizing provides better corrosion resistance than the matte and oil finishes on steel. Diameter tolerance is ±0.003″. Maximum temperature is 300° F.

1006-1008 Carbon Steel—Matte Finish

Coil

- Bend-and-stay wire (soft temper)
- Meets ASTM A853
- Tensile Strength: 70,000 psi max.

Also known as black-annealed wire, this wire ranges in color from dark gray to brown. It is typically used for bailing. Diameter tolerance is ±0.003″. Maximum temperature is 300° F.

1065 Carbon Steel—Oil-Coated Matte Finish

- Spring-back wire (spring temper)
- Meets ASTM A229
- Tensile Strength: 165,000 psi

This wire is lubricated for corrosion resistance. It meets MIL-W-21425B Type 1. Diameter tolerance is ±0.002″. Length has a plus tolerance. Maximum temperature is 250° F. Color is black.

Steel Wire *(Material continued from previous page)*

1065 Carbon Steel—Oil-Coated Matte Finish (Cont.)

- Spring-back wire (spring temper)
- Meets ASTM A229
- Tensile Strength: 243,000 psi

This 72-piece assortment includes 18 each of 0.062″ diameter wire; 12 each of 0.072″, 0.080″, 0.091″, and 0.105″; and 6 each of 0.120″. Each piece is 18″ long; length tolerance is ±1/16″.

8919K27 ..... $38.89

1008 Carbon Steel—PVC Coated

- Bend-and-stay wire (soft temper)
- Meets ASTM A853
- Tensile Strength: 45,000 psi

Use this wire outdoors—a black PVC coating protects it from corrosion. The coating is approximately 0.007″ thick. Meets Fed. Spec. QQ-W-461. Maximum temperature is 385° F.

1080 Carbon Steel—Phosphate-Coated Matte Finish

Coil

- Spring-back wire (spring temper)
- Meets ASTM A228
- Tensile Strength: 261,000 psi

Also known as music wire, this strong steel wire is coated for corrosion resistance and lubricity. Diameter tolerance for 0.006″ to 0.080″ dia. wire is ±0.0005″; for 0.091″ to 0.187″ dia. wire it is ±0.001″. Maximum temperature is 300° F.

Easy-to-Form Brass Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B134
- Tensile Strength: 50,000 psi

Made from the most formable brass alloy, this 260 brass wire offers good strength, corrosion resistance, and electrical conductivity. Diameter tolerance is ±0.0008″. Maximum temperature is 400° F. Wire has a bright finish.

High-Strength Bronze Wire

- Spring-back wire (spring temper)
- Meets ASTM B159
- Tensile Strength: 130,000 psi

Offering higher tensile strength than brass wire, this 510 bronze wire has good corrosion and fatigue resistance. Diameter tolerance is ±0.001″. Maximum temperature is 250° F. Wire has a bright finish. The 0.025″ and 0.032″ dia. wire comes in a ¼-lb. coil; the 0.051″ to 0.081″ dia. wire comes in a 1-lb. coil.

Conductive Copper Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B3
- Tensile Strength: 29,000 psi

Offering excellent electrical conductivity and good corrosion resistance, this wire is 99.9% pure copper. It's often used as grounding wire and in marine environments. Diameter tolerance for 0.003″ to 0.013″ dia. wire is ±0.0001″; for 0.016″ to 0.040″ dia. wire it is ±0.0004″; for 0.051″ and 0.064″ dia. wire it is ±0.0006″.

Tin-coated copper wire provides a higher level of corrosion resistance and is easier to solder than uncoated copper wire.

High-Temperature Conductive Nickel-Clad Copper Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B355
- Tensile Strength: 80,000 psi

Nickel is bonded to copper wire, which provides excellent corrosion resistance at temperatures up to 1200° F while maintaining high electrical conductivity. The nickel cladding accounts for 27% of the diameter. Wire has a bright finish.

Ultra-High-Temperature Tungsten Wire

- Spring-back wire (spring temper)
- Meets ASTM F288
- Tensile Strength: Not rated

Able to withstand temperatures up to 5000° F, tungsten wire is often used in electrical and heating applications. Diameter tolerance is ±1.5%. Wire has a matte finish.

Ultra-Corrosion-Resistant Titanium Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM B863
- Tensile Strength: 50,000 psi

Because this Grade 2 titanium wire is 99% pure, it has excellent corrosion resistance along with a good strength-to-weight ratio. Diameter tolerance is ±0.003″. Maximum temperature is 500° F. Wire has a matte finish.

Shape-Memory Nitinol Wire

- Bend-and-stay wire (soft temper)
- Meets ASTM F2063
- Tensile Strength: 157,500 psi

Bend this nickel-titanium wire and it will hold its shape until you heat it. Diameter tolerance is ±0.0003″. Maximum temperature is 250° F. Wire has a black-oxide finish.

Super-Elastic Nitinol Wire

- Spring-back wire
- Tensile Strength: 181,000 psi

This soft-temper wire bounces back to its original shape after bending, stretching, and twisting. Made of nickel-titanium, it's used to make eyeglass frames and antennas. Diameter tolerance for 0.003″ to 0.030″ dia. wire is ±0.0004″; for 0.040″ to 0.060″ dia. wire it is ±0.0005″. This wire has a black-oxide finish.

High-Temperature Nickel Wire

Nickel wire withstands high temperatures and has excellent corrosion resistance in harsh environments.

400 Nickel—Matte Finish

- Bend-and-stay wire (soft temper)
- Meets ASTM B164
- Tensile Strength: 70,000 psi

Comparable to Monel, this 400 nickel wire is frequently used as safety lock wire. Diameter tolerance for 0.010″ to 0.025″ dia. wire is ±0.0005″; for 0.032″ to 0.125″ dia. wire it is ±0.001″. Maximum temperature is 700° F.

600 Nickel—Matte Finish

Can

- Bend-and-stay wire (soft temper)
- Meets ASTM B166
- Tensile Strength: 80,000 psi

Able to withstand temperatures up to 1000° F, this 600 nickel wire is often used as safety lock wire in high-temperature applications. It is comparable to Inconel. Diameter tolerance is ±0.002″.

Nickel Chromium—Bright Finish

- Bend-and-stay wire
- Meets ASTM B267 and B344
- Tensile Strength: 100,000 psi

This nickel chromium wire, often called Chromel C, is the wire of choice for heating elements, resistance windings, and hot wire cutters. Due to its nickel content, this hard-drawn wire acts like a soft bend-and-stay wire. Diameter tolerance is ±5%. Maximum temperature is 1800° F.

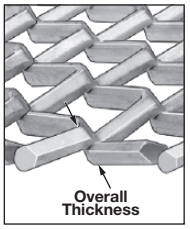
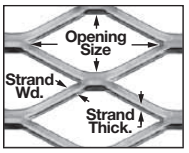
Temperature ratings are not guaranteed and are intended only as a basis for comparison.

Metal Sheets with Diamond-Shape Openings

Commonly called expanded metal, these rigid sheets are lightweight and allow light and air to pass through.

Raised-Mesh Sheets





The strands overlap to provide a skid-resistant surface. These sheets are excellent for use as safety guards for equipment and machinery. They can be formed and welded; however, the raised design makes them difficult to cut.

For information about durometer hardness, see page 3588.

Round Caps

Flexible Vinyl

Standard—Caps have a durometer of 75A and a maximum temperature of 180° F. Color is black.
High Temperature—Withstand temperatures up to 445° F for 15 minutes. Durometer is 86A. Color is black.
FDA Listed—Caps are made of FDA-listed vinyl and have a durometer of 70A. Maximum temperature is 200° F. Color is white.

Round Caps *(Continued from previous page)*

Static-Control Plastic

Protect your electrical connectors from static. Caps meet the static requirements of MIL-PRF-81705D, and fit connectors with straight threads as well as unthreaded bayonet-type connectors. Maximum temperature is 140° F.

Conductive—With a surface resistivity less than 10^5 ohms, caps not only dissipate electrical charges, but can be used as an electrical shield. Durometer is 46D. Color is black.

Antistatic—Keep equipment safe from electrical currents. Surface resistivity is less than 10^{12} ohms. Durometer is 55A-65A. Color is pink.

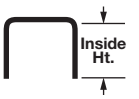
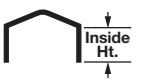
Rectangular and Square Caps

Rectangular with Flat End

Rectangular with Round End



Square with Flat End



Square with Tapered End

All caps are black.

Rectangular—Caps are vinyl with a durometer of 75A. Maximum temperature is 180° F.

Square—Caps with a *flat end* are plastic with a durometer of 54D. Maximum temperature is 160° F.

Caps with a *tapered end* are vinyl with a durometer of 60A-80A. Maximum temperature is 200° F.

For information about durometer hardness, see page 3588.

High-Visibility Caps

Vibrant colors make these caps stand out. Use them to cover sharp ends of material such as rebar. They are plastic and have a maximum temperature of 120° F.

Dome and **round** caps have a durometer of 52D. **Square** caps meet OSHA 1926.701(b) requirements. They have a steel insert and a 4″ × 4″ top. Not rated for hardness.

Caps for Screw Heads

Conceal and protect screw heads with these plastic caps.

Hinged caps are UV-resistant and have a Rockwell hardness of R100. Maximum temperature is 250° F. The inside height listed is with the top closed.

Snap caps are not rated for hardness or temperature. The inside height listed is with the two parts snapped together.

Socket-head caps fit into the head of the screw to keep out dirt and debris. Durometer is 41D-46D. Maximum temperature is 150° F.

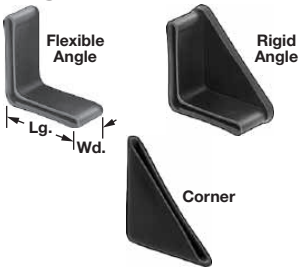
Angle and Corner Caps



Caps are black.

Angle caps protect ends of angle iron. Maximum temperature is 180° F. *Flexible angle* caps are vinyl. Durometer is 65A. *Rigid angle* caps are polyethylene. Durometer is 54D.

Corner caps guard the corners of glass and mirrors. They are polyethylene. Durometer is 49D. Maximum temperature is 120° F.

Round Plugs for Panels

Rigid Plastic

Snap In

Locking

Vented Locking

All are nylon with a Rockwell hardness of R120. **Vented** plugs allow air circulation and permit heat and fumes to escape.

Snap In— Tapered prongs snap into the hole to snugly hold the plugs in place. Maximum temperature is 185° F.

Locking— Plugs have wings that expand against the sides of the hole to lock them in place. Maximum temperature is 220° F.

Plastic with Liquid-Tight Seal

Wings on the plugs expand against the sides of the hole to form a tight seal.

Pierce the plugs with round wire, cable, or tubing and they function as a grommet to create insulated holes.

Plugs are nylon and thermoplastic. Durometer is 55A. Maximum temperature is 210° F. Color is black.

9563K14 **Each** $139.75

Static-Control Round Plugs

Protect your electrical connectors. Plugs meet static requirements of MIL-PRF-81705D. They are polyethylene and fit connectors with straight threads as well as unthreaded bayonet-type connectors. Maximum temperature is 140° F.

Conductive plugs dissipate electrical charges and can be used as an electrical shield. Surface resistivity is less than 10^5 ohms. Durometer is 46D. Color is black.

Antistatic plugs keep equipment safe from electrical currents. Surface resistivity is less than 10^{12} ohms. Durometer is 55A-65A. Color is pink.

Flexible Vinyl with Flange

Tapered for easy insertion and flanged for easy removal, these plugs fit small openings.

Standard plugs have a durometer of 60A-70A. Maximum temperature is 200° F.

High-temperature plugs withstand temperatures up to 475° F for 15 minutes. Durometer is 89A.

Tapered Round Plugs *(Continued from previous page)*

Trade-Sized Expandable Rubber

Place a plug into an opening and tighten the wing nut—the sides expand to create a seal. Nut is stainless steel.
General purpose plugs are a blend of natural and SBR rubber for good resistance to impact and abrasion. Durometer is 48A. Maximum temperature is 180° F. Color is black.
High-temperature plugs are silicone and withstand temperatures up to 500° F. Durometer is 55A. Color is orange.

Finishing Plugs for Tubing

Smooth Square

Ribbed Rectangular

Ribbed Round

Give your square, rectangular, and round tubing finished ends. Plugs are polyethylene with a durometer of 41D-54D, except smooth rectangular plugs with OD of 1/2" x 1 1/2" and 5/8" x 1 1/2" are ABS plastic with a Rockwell hardness of R112. Maximum temperature is 150° F. Color is black.
Ribbed plugs have flexible ridges that allow them to fit a range of tubing sizes.

Threaded Round Plugs

Protect threaded ports and connections.

Raised Head

Square-head and **serrated round-head** plugs are polyethylene with a durometer of 60D-70D. Maximum temperature is 165° F. Color is red. They meet MIL-C-5501/5.

Metric hexagon-head plugs are nylon with a durometer of 54D. Maximum temperature is 155° F. Color is yellow.

Recessed Head

For JIC/SAE Fittings—Plugs are polyethylene and have a 37° flare. Durometer is 40D. Maximum temperature is 150° F. Color is red.

For JIC/SAE Fittings and Straight-Thread Ports—Plugs are aluminum and have a 37° flare. Maximum temperature is 650° F.

For SAE Straight-Thread O-Ring Ports—Use these polyethylene plugs on fluid power components. Durometer is 60D-70D. Maximum temperature is 165° F. Color is red.

For Straight Tube and Hose Assemblies—Form a low-pressure seal on straight tube ends. Plugs are aluminum. Maximum temperature is 650° F.

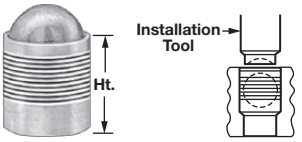
Tool-Installed Round Sealing Plugs



Permanently seal unthreaded holes with these stainless steel plugs. An installation tool (sold separately) is required. Insert the plug into a hole and use a hammer (or arbor press) with the installation tool to set the ball bearing in place.

Wrap-On Grips

Wrap grips onto handles to create a nonslip surface. Grips can be cut with scissors and come with finishing tape to fasten the ends.

Thin grip is absorbent, polyurethane-coated nylon fabric. Temperature range is 0° to 120°F.

Adhesive-back cushioned grip is closed-cell EPDM foam with a temperature range of –20° to 150°F.

Thick-cushioned grip is closed-cell EPDM foam. Temperature range is –65° to 250°F.

5	3/4"	0.13"	Black	1	32765K41	9.81

Wrap-Around Grips with Open Ends

Hook-and-loop closure secures grips anywhere on a handle. The loop strip has an adhesive back so you can attach it to the handle and then wrap the hook strip around it. Grips are made of vinyl and nitrile. Temperature range is –20° to 150°F. Color is black.

Fits OD	O'all Lg.		Pkg. of 2
1/2"-3/4"	4 1/4"	9445K21	$10.48

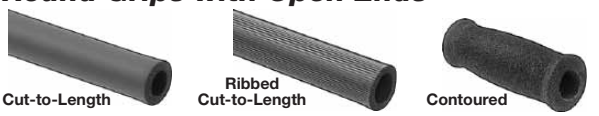
1 1/16"-1 3/8"	4 1/4"	9445K23	10.48

Round Grips with Open Ends



Two open ends mean these grips slide anywhere along a round handle to insulate and cushion vibration. Temperature range is –20° to 220°F. Color is black. **Cut-to-length** and **ribbed cut-to-length** grips are closed-cell vinyl foam; **contoured** grips are open-cell vinyl foam.

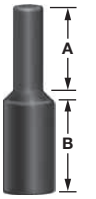
Pull-Through Round Plugs



Use the smaller end of the plug to pull the larger end into a through hole to form a tight seal.

Standard plugs are EPDM rubber with a durometer of 60A. They are not rated for temperature. Color is black.

High-temperature plugs are silicone and withstand temperatures up to 600°F for 15 minutes. Durometer is 25A-80A.

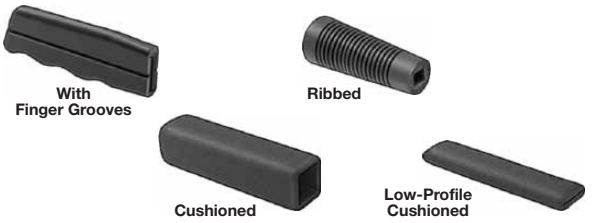
Mold-Your-Own Grips

Place these white plastic pellets in hot water (155° to 180°F) until they soften and become pliable. Then mold the material directly to your handle to create a custom grip. Grips become rigid when cool. Material can be cut with scissors when warm and with a rotary tool when cold. Material is reusable.

1-lb. Jar	6225T11	$29.17

Rectangular and Square Grips



Slide grips onto your rectangular, square, or flat handles. All have one closed end.

Grips with finger grooves and **ribbed** grip are heavy duty vinyl. Temperature range is –20° to 180°F.

Cushioned and **low-profile cushioned** grips are closed-cell vinyl foam with 0.125" to 0.15" wall thickness to insulate and cushion vibration. Temperature range is –40° to 225°F.

Round Grips

Grips slide onto round handles and have one closed end.

Standard grips are heavy duty vinyl for strength and durability. Temperature range is –20° to 140° F.

High-temperature grips are made of silicone with a temperature range of –40° to 400° F.

Cushioned grips are closed-cell vinyl foam with a wall thickness of 0.12″ to 0.15″ to insulate and cushion vibration. Temperature range is –40° to 225° F.

Round Grips with Hanger Eye

Add a grip to your round tool handle and use the eye to hang it. Grips slide on and have finger grooves. Temperature range is –10° to 150° F. Color is black.

Standard grips are vinyl for durability.

Cushioned grips are flexible closed-cell vinyl foam with a wall thickness of 0.05″ to 0.07″ to insulate and cushion vibration.

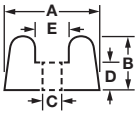
Bumpers



1
With Washer

2

3

4

Also known as recessed bumpers, these are often used as feet and spacers and can be installed with the fastener of your choice. Color is black (unless noted). *Bumpers with washer* have an embedded metal washer for added strength and reinforcement.

Rubber bumpers are abrasion-resistant SBR rubber. They are for indoor use only; temperature range is 0° to 180° F. Material is marking. Durometer is 65A-80A. **Polyurethane** bumpers are abrasion and ozone resistant. They can be used outdoors; temperature range is –10° to 175° F. Material is nonmarking. *Hard* durometer is 70A-88A; *medium-hard* durometer is 60A. **Plastic** bumpers won't dry out and become brittle. They can be used outdoors; temperature range is 0° to 150° F. Material is nonmarking. Not rated for durometer. **Vinyl** bumper is load rated to 15 lbs. It can be used outdoors; temperature range is 55° to 105° F. Material is nonmarking. Durometer is 56A.

Adhesive-Back Bumpers

Round

Recessed

Dome

Conical

Square

Tapered

The convenient adhesive back lets you press these bumpers into place for use as feet, pads, and spacers. Comparable to Bumpon bumpers.

Polyurethane bumpers are abrasion resistant. They can be used outdoors (unless noted); temperature range is 65° to 150°F. Material is nonmarking. *Medium-hard* durometer is 60A-70A; *soft* durometer is 45A-55A.

Nonslip urethane bumpers keep objects from sliding when used as feet. They are for indoor use only; temperature range is 0° to 155°F. Material is nonmarking. Durometer is 80 OO.

Vinyl bumpers resist solvents. They are for indoor use only; temperature range is 50° to 100°F. Material is nonmarking. Durometer is 55A-65A.

Foam bumpers provide slip protection. They are for indoor use only; temperature range is –20° to 150°F. Material is nonmarking. Not rated for durometer.

High-temperature foam bumpers withstand temperatures up to 300°F. They can be used outdoors; temperature range is –25° to 300°F. Material is nonmarking. Not rated for durometer.

Cork bumpers are an alternative to felt for protection from scuffs. They can be used outdoors; temperature range is –20° to 200°F. Material is nonmarking. Durometer is 75 OO.

Cork rubber bumpers are sturdier than cork bumpers. They are for indoor use only; temperature range is –20° to 180°F. Material is marking. Durometer is 60A.

Felt bumpers protect surfaces from scuffs and scrapes. They are for indoor use only; temperature range is 0° to 140°F. Material is nonmarking. Durometer is 15A-25A.

Adhesive-Back Slippery Bumpers

Easily slide these low-friction, wear-resistant bumpers across surfaces. All press into place and are commonly used as pads and feet. Color is white. Can be used outdoors. Materials are nonmarking.

UHMW polyethylene bumpers won't dry out and become brittle. Temperature range is 0° to 180° F. All are hard with a 65D durometer.

PTFE bumpers have better temperature and chemical resistance than plastic bumpers. Temperature range is 20° to 250° F. All are hard with a 51D durometer.

Load-Rated Adhesive-Back Bumpers

Press into place to create pads and feet that protect electronics and other sensitive items from impact and vibration. Materials are nonmarking.

Polyurethane bumpers are abrasion resistant. Color is black. They are for indoor use only; temperature range is –20° to 160° F. *Soft* durometer is 30 OO-50 OO; *medium-hard* durometer is 70 OO.

Vinyl bumpers resist solvents. Color is blue. They can be used outdoors; temperature range is 55° to 105° F. Durometer is 56A.

Cut-to-Size Adhesive-Back Bumpers

Make bumpers the size and shape you need and press them into place. Often used as pads, these bumpers are made of polyurethane and offer excellent cushioning and abrasion resistance, as well as vibration damping. They are for indoor use only; temperature range is 0° to 150° F. Material is marking. All are soft with a 72-75 Shore M durometer.

Mil. Spec. Bumpers

Bumpers meet MIL-G-3036. They are made from abrasion-resistant Buna-N rubber and have a metal washer embedded at their base for added strength and reinforcement. Use a screw (not included) for installation. Color is black. They are for indoor use only; temperature range is –45° to 250° F. Material is marking. All are medium-hard with a 50A durometer.

Load-Rated Heavy Duty Bumpers

Also called crane bumpers, these are made of oil- and grease-resistant polyurethane and have a steel mounting plate. Color is black except bumpers with a retaining loop are red. They can be used outdoors; temperature range is –60° to 225° F. Material is nonmarking. All are hard with a 90A durometer. Meet OSHA and ANSI requirements.

Bumpers with a retaining loop let you add a cable or lanyard for additional security in mounting.

Push-In Bumpers

Press the stem into a hole for quick installation. These bumpers are also known as stem or grommet bumpers and are commonly used as feet and spacers. All are black.

Rubber bumpers are abrasion-resistant SBR rubber. They are for indoor use only; temperature range is –25° to 180°F. *Hard* durometer is 70A and material is nonmarking. *Medium-hard* durometer is 55A-65A and material is marking. *Soft* durometer is 40A and material is marking.

Plastic bumpers won't dry out and become brittle. They can be used outdoors; temperature range is –50° to 255°F. Material is nonmarking. *Hard* durometer is 65A-75A; *medium-hard* durometer is 45A-65A.

Polyurethane bumpers are abrasion and tear resistant and offer vibration damping. They are for indoor use only; temperature range is –10° to 160°F. Material is nonmarking. *Hard* durometer is 70A; *medium-hard* durometer is 70 OO; *soft* durometer is 50 OO.

Bumper Assortments

This 93-piece assortment contains four each of 3/4" dia. and 13/16" dia. black rubber bumpers; four 7/16" dia. black rubber bumpers with 6-32 threaded stud; ten 9/16" dia. and five 1" dia. black rubber push-in bumpers; twelve 13/16" square black adhesive-back bumpers; and four 1/2" dia. white plastic and fifty 1/2" dia. black felt adhesive-back bumpers. Comes in a plastic case.

3338T1 ..... $29.71

Bumpers with Threaded Stud

A built-in stud eliminates the need for an additional fastener. These bumpers are often used as stops and guides.

Rubber bumpers are abrasion-resistant SBR rubber. Color is black. They are for indoor use only; temperature range is –25° to 180° F. Material is nonmarking. *Hard* durometer is 70A; *medium-hard* durometer is 55A-65A.

Polyurethane bumpers resist abrasion and ozone. Color is red. They can be used outdoors; temperature range is –10° to 200° F. Material is marking but nonstaining. Durometer is 70A-88A.

Metal-Core Bumpers with Threaded Stud

A steel core surrounded by cushioning material makes these bumpers able to withstand impact. A built-in stud means no additional fastener is required for installation. Can be used outdoors. Materials are marking. *Hard* durometer is 70A-80A; *soft* durometer is 40A-45A.

Rubber bumpers are made of gasoline- and oil-resistant neoprene. Color is black. Temperature range is –40° to 200° F.

Polyurethane bumpers resist abrasion and ozone. Color is red. Temperature range is –65° to 200° F.

Load-Rated Bumpers with Threaded Stud

Dampen vibration and shock in load-rated applications. Bumpers have a steel plate for added reinforcement and a built-in stud.

Rubber bumpers are abrasion-resistant synthetic rubber. Color is black. Material is marking. Temp. range is –10° to 155° F. *Medium-hard* durometer is 50A-55A. For indoor use only. *Soft* durometer is 21A. Can be used outdoors. **High-temperature rubber** bumpers are silicone rubber. Can be used outdoors; temp. range is –80° to 300° F. Material is nonmarking. *Hard* durometer is 70A. Color is orange. *Soft* durometer is 30A. Color is black. **Polyurethane** bumpers resist abrasion and tearing. Color is black. For indoor use only; temp. range is 55° to 160° F. *Medium-hard* durometer is 58A and 70 OO. *Soft* durometer is 50 OO. Bumpers are slightly tacky.

Also Available: Bumpers with a stainless steel stud in sizes marked with a ★. Ask for 93115K99 and specify the McMaster-Carr part number.

Load-Rated Bumpers with Threaded Hole

Dampen vibration and shock in applications that require load ratings. A steel plate at the base of the bumper adds reinforcement.

Rubber bumpers are abrasion-resistant black synthetic rubber. Temperature range is –20° to 155° F. Material is nonmarking. *Medium-hard* durometer is 55A. For indoor use only. *Soft* durometer is 21A. Can be used outdoors.

High-temperature rubber bumpers are silicone rubber. They can be used outdoors; temperature range is –80° to 300° F. Material is nonmarking. *Hard* durometer is 70A. Color is orange. *Soft* durometer is 30A. Color is black.

Polyurethane bumpers are black. They are for indoor use only; temperature range is 55° to 105° F. Material is marking. Style 1 are abrasion and ozone resistant; Style 3 are impact resistant. *Medium-hard* durometer is 58A and 70 OO. *Soft* durometer is 50 OO; bumpers are slightly tacky.

Also Available: Bumpers with a stainless steel plate in sizes marked with a ★. Please ask for 93115K88 and specify the corresponding part number below.

Heavy Duty Bumpers

Often used as stops, these bumpers have a metal plate at the base for added reinforcement. They can be used outdoors; temperature range is –40° to 200° F. Bumpers are hard with an 80A durometer. Bumpers have two mounting holes (unless noted).

Rubber bumpers are gasoline- and oil-resistant black neoprene. Material is marking. **Polyurethane** bumpers resist abrasion and ozone. Material is nonmarking. Color is red.

■ Plate has two 5/16″-18 threaded holes. ▲ Has one mounting hole.
♣ Has four mounting holes.

Wear Plates

Protect equipment in demanding applications. Plates can be machined to size and drilled for mounting.

Corrosion-resistant plates are made of Type 410 stainless steel and can be used outdoors.

Impact-resistant plates are made of air-hardened S7 tool steel and can be heat treated for maximum strength. For indoor use only.

Self-lubricating plates are made of oil-impregnated bronze so no additional lubrication is necessary. Can be used outdoors.

Low-friction plates are UHMW polyethylene. Made from FDA-compliant resins. Material is USDA compliant. Suitable for use with food-processing equipment. Color is opaque white. For indoor use only; temperature range is –40° to 180° F. Material is nonmarking and has a hard durometer of 66D.

2

3

4

5

6

7

8

9

Prevent damage and absorb shock and vibration on your docks and vehicles. Bumpers are made of weather- and abrasion-resistant SBR rubber, except Style 6 is SBR/EPDM rubber. Color is black (unless noted). Can be used outdoors; temperature range is –20° to 120° F. Material is marking.

Reinforced rubber bumpers are fiber-reinforced for increased impact resistance. 2239T6 has one reflector; 2239T13, 2239T3, and 2239T4 have two reflectors. *Hard* durometer is 75A-85A.

Rubber bumper *Styles 4* and *8* have a steel washer above the mounting holes for added reinforcement. *Style 6 without mounting holes* let you drill your own holes. *Hard* durometer is 75A-80A; *medium-hard* durometer is 60A-75A.

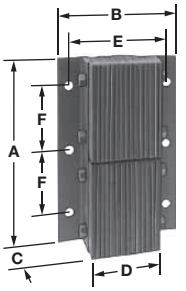
Laminated Dock Bumpers

Horizontal Mount with Steel Face



Vertical Mount

Multiple shock-absorbing layers of weather- and abrasion-resistant black laminated rubber withstand impact up to 5,000 psi. Layers are strung on rods and bolted together at both ends with steel angle brackets. Can be used outdoors; not rated for temp. Material is marking. All are hard with a 75A-85A durometer. Bumpers **with steel face** have a ⅜″ thick steel plate covering the laminated rubber for added strength.

Tubing and Rod Guards

For Round Tubing

For Square Tubing

Guards are hard rubber and fit round or square tubing and rods; a concealed bolt holds the guard together. Color is gray. They can be used outdoors; temperature range is –40° to 180° F. Material is nonmarking. Durometer is 75A-80A.

11

12

Get more give during impact with these guards. All are black and can be used outdoors.

Rubber and **vinyl** guards have a raised surface that flexes more during impact than guards with a flat surface. Drill holes and mount with fasteners.

Rubber guards are EPDM rubber, which is more abrasion resistant than vinyl. They resist UV rays and salt water. Temperature range is –30° to 200° F. Material is marking. Durometer is 65A-75A.

Vinyl guards resist corrosion and salt water. Temperature range is 40° to 110° F. Material is marking. Durometer is 77A-83A.

End caps for vinyl guards (sold separately) are soft black foam and provide a finished look. Durometer is 25A-35A.

Foam guards have adhesive on the back for easy mounting. Temp. range is –10° to 175° F. Material is nonmarking. Durometer is 25A-30A.

Often used to protect walls in offices, hospitals, and schools. *Adhesive-back* guards provide easy installation. *Screw-mount* guards have mounting holes and include fasteners, except 1103A7, 1103A8, and Style 12 need to be drilled and secured with fasteners.

Polycarbonate guards are for indoor use only; not rated for temperature. Material is nonmarking; not rated for durometer.

Style 9 guards have a 135° angle.

PETG guards adjust from 45° to 135° to conform to irregular corners. Material is hard and nonmarking. Not rated for temperature or durometer.

Vinyl guards are for indoor use. Style 12 can also be used outdoors.

Style 11 guards have a temperature range of 55° to 120° F. Material is hard; not rated for durometer.

Style 12 guards have a raised surface for extra cushioning. Temperature range is 35° to 120° F. Mounting flanges are hard with a 100A durometer; surface is hard with a 65A-70A durometer.

Corner and Surface Guard Systems with Metal Core

Reinforced with a metal insert for additional strength, these corner guards, surface guards, and end caps create a system that protects your equipment and carts from impact and wear. Materials are nonmarking. *Corner guards* and *end caps* have mounting holes (fasteners not included). *Surface guards* need to be drilled and secured with fasteners.

Synthetic rubber guards are more impact and abrasion resistant than vinyl. Can be used outdoors; temperature range is –40° to 180°F. Material is hard with a 65A-80A durometer.

Vinyl guards conform to contours. For indoor use only; temperature range is 40° to 110°F. Material is hard with an 80A durometer.

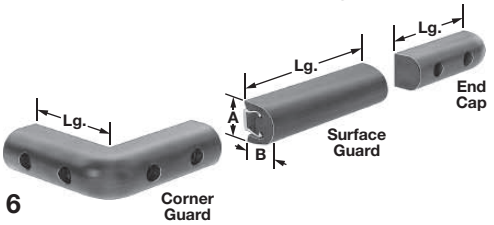
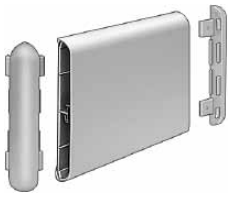
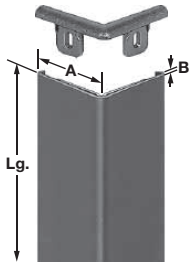
Corner and Surface Guard Systems







Commonly used in office areas, these systems team up corner guards, surface guards, and end caps to protect your walls from bumps and scrapes. All are made of vinyl. For indoor use only; temperature range is 40° to 110°F. Material is nonmarking and hard with an 80D durometer, except Style 6 has an 80A durometer.

Corner Guards and **End Caps**—*Styles 6-9* have 1/4″ dia. mounting holes (fasteners not included). *Style 10* includes two end caps to drill and secure with fasteners.

Surface Guards—Slide onto the included aluminum base, which needs to be drilled and secured with fasteners.

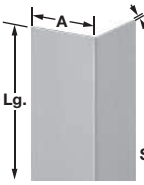
Metal Corner Guards



Stainless Steel

Aluminum

Strong and corrosion resistant, these guards are the choice for your toughest applications. All are for indoor use only.

Stainless steel guards provide excellent corrosion resistance. Type 304 stainless steel is more corrosion resistant than Type 430 stainless steel. *Aluminum* guards offer good corrosion resistance.

Adhesive-back guards allow for easy installation. Temperature range is 55° to 120° F.

Plain-back guards mount with contact adhesive.

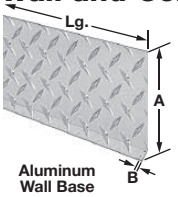
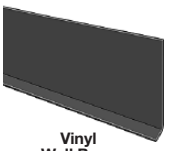
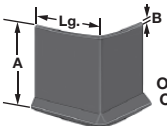
Wall and Corner Bases



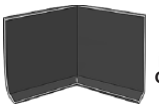
Aluminum Wall Base



Vinyl Wall Base



Vinyl Outside Corner Base



Vinyl Inside Corner Base

Create a finished look where the wall meets the floor. Bases are for indoor use only.

Aluminum—Offers corrosion resistance. Mount wall base with contact adhesive (sold separately).

Vinyl—Material is nonmarking. Meets ASTM F1861. Temperature range is 65° to 85° F.

Adhesive-back wall bases offer easy installation. They can be formed into outside or inside corners.

Plain-back wall bases and *corner bases* mount with contact adhesive (sold separately). Durometer is 90A.

Color selector pack for plain-back bases contains one 1 1/8" × 2" sample of each color.

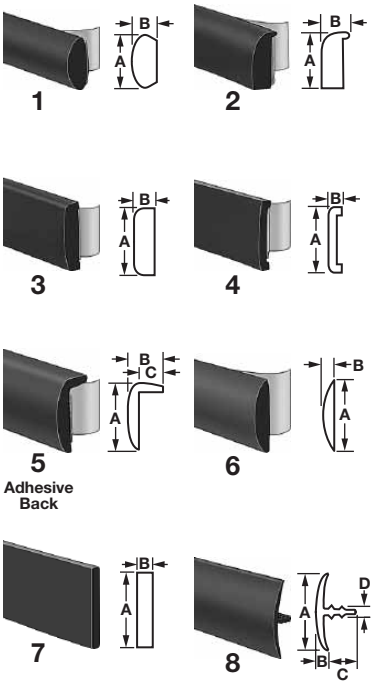
Plastic Trim



Adhesive-back trim offers easy installation. *Styles 1-5* are made of hard vinyl. They can be used outdoors; temperature range is –20° to 150° F. Styles 1 and 5 are nonmarking; Styles 2, 3, and 4 are marking. Durometer is 90A-97A. *Style 6* is made of hard polypropylene/polyolefin. It is for indoor use only; not rated for temperature. Material is nonmarking. Durometer is 70A.

Plain-back trim is made of hard vinyl. Mount with contact adhesive. *Style 5* can be used outdoors; temperature range is –20° to 150° F. Material is marking. Durometer is 90A. *Style 7* is for indoor use only; temperature range is 50° to 90° F. Material is nonmarking. Durometer is 74D-78D.

Push-in stem trim is made of hard polyethylene and has a barbed stem for a snug fit into grooves or openings that are slightly smaller than the stem thickness. It is for indoor use only; temperature range is –10° to 150° F. Material is nonmarking. Durometer is 95A.

For information about durometer hardness, see page 3588.

Slippery Plastic Trim

Minimize friction when you place this durable trim over conveyor rails and guides. *Screw-mount* trim lets you drill your own holes and secure with fasteners. *Push-on* trim has a tight grip that holds it in place.

UHMW trim has excellent wear resistance and is made of resins that meet FDA requirements for direct food contact. It is for indoor use only; temperature range is –22° to 180° F. Material is nonmarking and is hard with a 66D durometer.

PTFE trim is chemical resistant. It can be used outdoors; temperature range is –350° to 500° F. Material is nonmarking and is hard with a 55D durometer.

MDS nylon trim is resistant to ammonia and oils and provides better abrasion and wear resistance than regular nylon. It is for indoor use only; temperature range is –40° to 225° F. Material is nonmarking. Not rated for durometer.

Nylon trim offers some wear resistance and is made of resins that meet FDA requirements for direct food contact. It is for indoor use only; temperature range is –40° to 200° F. Material is nonmarking and is hard with an 88D durometer.

Vinyl trim meets FDA requirements for direct food contact. It is for indoor use only; temperature range is –45° to 165° F. Material is nonmarking and is hard with an 80A durometer.

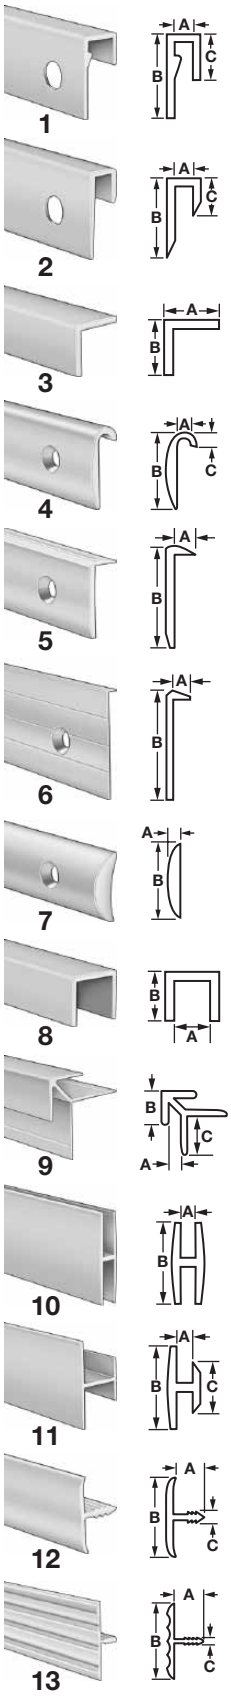
Metal Trim



Tough metal trim gives your surfaces maximum protection. Commonly used for panels, boards, signs, and mirrors. *Aluminum* trim is lightweight and offers good corrosion resistance. *Stainless steel* trim offers excellent corrosion resistance.

Screw-mount trim does not include fasteners. Trim that does not have mounting holes allows you to drill your own holes and secure with fasteners. *Styles 4-7* have countersunk mounting holes.

Push-on trim has a tight grip that holds it in place. *Style 8* is for outside surfaces. *Styles 9-11* are for connecting panels.

Push-in stem trim has a barbed stem for a snug fit in grooves or openings that are slightly smaller than the stem thickness (dimension C).

★Longest leg is not beveled.

For information about durometer hardness, see page 3588.

Adhesive-Back Slippery Plastic Trim

Also known as wear strips, the slick surface of this trim minimizes friction and keeps things moving along in packaging and conveying applications. Adhesive on the back makes it easy to install. For indoor use only. All materials are nonmarking.

Impact-resistant trim is 0.022″ thick UHMW polyethylene. Color is semi-clear. Temperature range is 0° to 120°F. Material is hard with a 65D durometer.

Conformable trim is 0.005″ thick PTFE that stretches and conforms to uneven surfaces. Color is tan. Temperature range is –40° to 500°F. Not rated for durometer.

Wear-resistant trim is made of 0.007″ thick PEEK. Color is tan. Temperature range is –40° to 300°F. Not rated for durometer.

Tear-resistant trim is made of 0.007″ thick fiberglass. Color is tan. Temperature range is –100° to 500°F. Not rated for durometer.

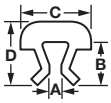
Flexible Metal Edge Trim

Standard



Cushioned

Protect wire, cable, and hose from sharp edges. Trim pushes into place and its tight grip secures it on flat, round, or irregular-shaped edges. Use the metal-cutting shears (sold separately) to cut trim to desired length.

Trim is made of black nylon-coated stainless steel. Can be used outdoors. Material is nonmarking. Meets UL 94V0 flammability rating.

Standard trim has a temperature range of –40° to 285°F.

Cushioned trim has extra cushioning on top for additional protection. Temperature range is –40° to 185°F.

Plastic Edge Trim

1

Push this flexible trim onto an edge and its tight grip holds it in place. It is for indoor use only. Materials are nonmarking. Polyethylene and nylon are hard with an 88A-102A or 46D-70D durometer; vinyl is medium-hard with a 60A-70A durometer.

Standard—*Styles 1-5* are made of polyethylene; *Style 6* is vinyl. *Styles 1-3* have a temperature range of 30° to 120°F. *Styles 4-6* have a temperature range of –15° to 175°F.

Trim with Adhesive Strip—Offers additional grip thanks to a strip of adhesive inside. Made of polyethylene; temperature range is 30° to 120°F.

Conductive Trim—Protect electronic equipment from electrostatic discharge (ESD). Resistivity is less than 1×10^5 ohms. Made of polyethylene; temperature range is 30° to 120°F.

Mil. Spec. Trim—Meets MS-21266. Made of nylon; temperature range is –40° to 185°F.

Cover exposed or unfinished edges. Trim pushes into place and its tight grip holds it on the edge. Materials are medium-hard with a 45A-70A durometer.

Standard trim is neoprene rubber and offers good fuel, water, and ozone resistance. It can be used outdoors; temperature range is –40° to 155°F. Material is nonmarking.

Weather-resistant trim is EPDM rubber with excellent weather and ozone resistance. It can be used outdoors; temperature range is –50° to 300°F. Material is marking.

High-temperature trim is silicone rubber that withstands temperatures from –80° to 450°F. It can be used outdoors. Material is nonmarking.

Abrasion-resistant trim is made of SBR rubber. For indoor use only; temperature range is 0° to 225°F. *Styles 1-2* are marking and *Style 9* is nonmarking.

Conductive trim has a surface resistivity of 1.4 ohms and is made of EPDM rubber. It can be used outdoors; temperature range is –20° to 250°F. Material is nonmarking.

Also Available: High-temperature trim made of silicone foam rubber in sizes marked with a ★. Please ask for 4869A9 and specify the corresponding part number and color below.

For information about durometer hardness, see page 3588.

Plastic and Rubber Edge Trim with Metal Core

A metal core adds strength and stability. As you push this trim into place, its flexible tabs grip the edge to keep it secured. Can be used outdoors. Materials are nonmarking and hard with a 65A-90A durometer.

Plastic trim has a temperature range of –20° to 150°F. Meets FMVSS (Federal Motor Vehicle Safety Standards) 302 flammability requirements.

Flame-retardant plastic trim meets FMVSS 302 flammability requirements along with UL 94HB flame requirements and NFPA (National Fire Protection Agency) standards. Temperature range is –20° to 150°F.

Rubber trim is more abrasion resistant than plastic. Temperature range is –40° to 350°F. Meets FMVSS 302 flammability requirements.

High-temperature silicone rubber trim has a temperature range of –50° to 400°F.

6-Piece Assortment—Includes a 4″ length of items marked with a ★. Color is black. **8451A5** $5.00

High-Visibility Heavy Duty Foam Edge Trim

Draw attention to obstructions and add a layer of cushion with this trim. Color is black and yellow. Push trim onto an edge and its tight grip secures it. For indoor use only. Foam is nonmarking and medium-hard with a 55A durometer.

Round edge trim temperature range is –30° to 176°F. **Rectangular** edge trim has adhesive on the inside surfaces for additional grip. Temperature range is –30° to 100°F.

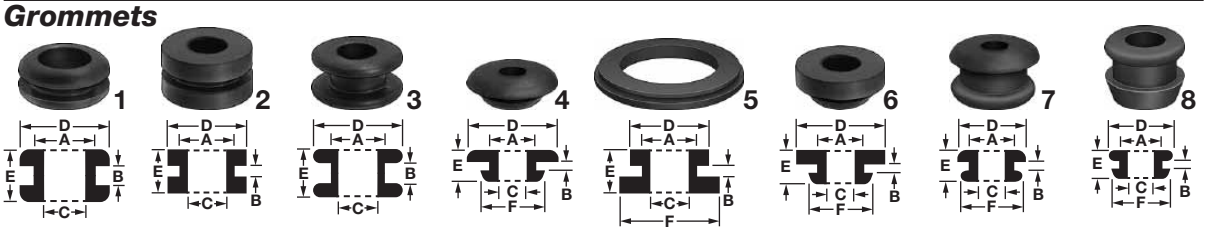
Grommets



Insulate and seal around holes in panels, while damping vibration and minimizing abrasion. Grommets are flexible and push into place. Color is black. **Standard** grommets are SBR rubber with a durometer of 45A-65A. Temperature range is –30° to 175° F. **High-temperature** grommets are fluoroelastomer with a temperature range of –40° to 450° F. Durometer is 65A.

For information about durometer hardness, see page 3588.

Mil. Spec. Grommets

All grommets meet MIL-G-3036. Most meet MS-35489 and are AN 931 approved (dash numbers 1, 2, 3, and 4 are AN 930 approved). Grommets are flexible and push into place to insulate and seal around holes in panels, as well as dampen vibration and minimize abrasion. Durometer is 50A.

Standard grommets are Buna-N rubber. They are for indoor use only; temperature range is 0° to 250°F. Color is black. **High-temperature** grommets are silicone with a temperature range of –60° to 500°F. They can be used outdoors. Color is red-orange.

Other Standard MS-35489 Grommets— Please specify dash number 1-156 ..... 9307K92

Expandable Grommets

The center hole has fingers that expand to hold cables and cords.

Flexible grommets are plastic and install by squeezing the sides and pressing them into place. Durometer is 60A. They are for indoor use only; temperature range is 5° to 250°F.

Rigid locking grommets snap into place and have wings that expand against the sides of the hole to lock them in place. They're nylon with a Rockwell hardness of R120. They can be used outdoors; temperature range is –40° to 250°F.

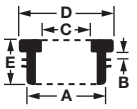
Locking Grommets



Grommets snap into place and have wings that expand against the sides of the hole to lock them in place. They protect cables, cords, and tubing by turning rough-edged and uneven holes into smooth, insulated holes. They are rigid nylon and can be used outdoors. Rockwell hardness is R120. Temperature range is 0° to 220°F.

Split grommets are for holes where cables, cords, or tubing are already installed.

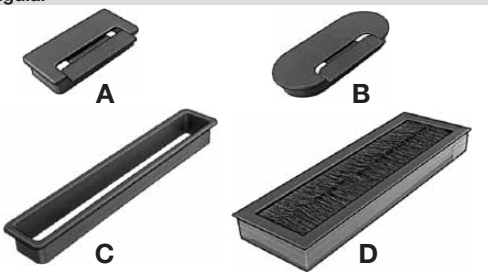
Grommets with Flange

Eliminate clutter and keep your cables and cords organized.

Rectangular



Grommets are for indoor use only. Color is black.

(A&B) Slot cover is removable. Grommets are plastic. Temperature range is 50° to 150°F.

(C) Grommets are plastic with a temperature range of 50° to 150°F.

(D) Bristles in the center allow cables and cords to pass through yet keep out dust and debris. Grommet is PVC with a temperature range of 50° to 120°F.

Round

(E) Slot cover is removable. Grommets are plastic and can be used outdoors. Maximum temperature is 185°F.

(F) Made of plastic, grommet can be used outdoors. Maximum temperature is 190°F.

(G) Designed for use in the floor, grommets are plastic, have a swivel cover, and withstand foot traffic. For indoor use only; temperature range is 50° to 150°F.

(H) Use for large groups of cords. Grommets are stainless steel and can be used outdoors. The optional cover for 6" dia. grommets (sold separately) slants downward to allow materials to pass through.

Shrink-to-Fit Sealing Grommets

Apply heat and grommet shrinks around wires and cables. A water-resistant rubber adhesive on the inside makes the bond tight, while the flange covers imperfect holes. Grommets are polyolefin and shrink at 255°F. Durometer is 45D. They can be used outdoors; temperature range is –40° to 210°F. Color is red.

ID (A) Before Shrinking	ID (A) After Shrinking	Flange OD (B)	Ht. (C)

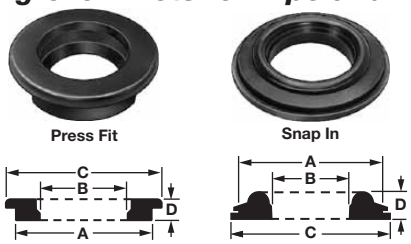
2 5/8"	1 7/32"	5 5/8"	15/16"	5277T13	10.53

For information about durometer hardness, see page 3588.

Sealing Grommets for Pipe and Tubing



Tightly seal the gap between pipe or tubing and a panel to keep liquids from leaking through the seams. Grommets are flexible vinyl and can be used outdoors. Color is black.

Press-fit grommets have a tapered inner wall that expands when pipe is inserted. Durometer is 75A. Temperature range is –20° to 160° F.

Snap-in grommets bend and move to compensate for misalignment and movement of pipe or tubing. Durometer is 60A. Temperature range is –40° to 200° F.

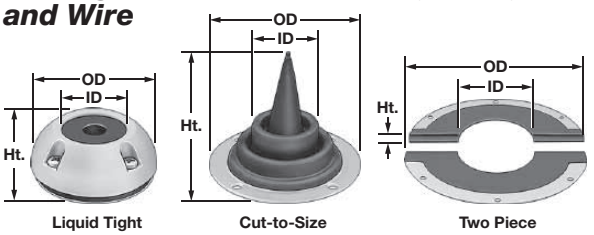
Sealing Grommets for Cable, Hose, and Wire



Form tight seals around cable, hose, and wire with these black rubber surface-mount grommets. They can be used outdoors.

Liquid Tight—Grommets sit inside a protective mounting base (fasteners are included). Durometer is 50A. Temperature range is 15° to 120° F. *Plastic base* is gray.

Cut-to-Size—Trim to the size you need. Grommets have an aluminum mounting flange with four 1⁄8″ dia. holes (fasteners not included). Not rated for durometer. Temperature range is –40° to 220° F.

Two Piece—Use for cable, hose, and wire that is already installed. Grommets have an aluminum mounting flange with six 0.14″ dia. holes (fasteners not included). Durometer is 55B. Temperature range is –40° to 220° F. *Cut-your-own-hole* lets you create a hole at the size you need.

Easy-Install Two-Piece Grommets

No setting tools required—snap the two parts together in a hole you've cut to size (hole cutters sold separately). Grommets are plastic and can be used outdoors. They are not rated for durometer. Temperature range for grommet with 1⁄4″ ID is –150° to 250° F; for grommets with 1⁄2″ ID it's 30° to 180° F.

Self-Piercing Tool-Installed Two-Piece Grommets

The sharp neck on these brass grommets cuts the material as you set them. To install, use a die set (with an adapter, where required) and a bench press (all sold separately). Grommets are for indoor use only. Trade size refers to the grommet's hole size once set.

Rolled-rim grommets with extended-neck teeth washer are also known as rolled-rim grommets with spur washer. The rolled rim provides added grip while the elongated neck and teeth on the washer add extra reinforcement for thicker materials and keep woven material from loosening and rotating.

Grommet with Extended-Neck Washer

Rolled-Rim Grommet with Extended-Neck Teeth Washer

Reinforce holes in fabric, tarps, and other materials with these metal grommets. Trade size refers to the size of installation tool needed and the hole size to be cut into the material before setting. To install grommets, use the hole cutter and installation tools sold separately on this page. Grommets can be used outdoors. *Brass* and *nickel-plated brass* grommets meet MIL-G-16491D, NASM-20230, and AN-230 (Army-Navy).

Grommets with teeth washer keep woven material from loosening and rotating.

Grommets with extended-neck washer add extra reinforcement to holes in thicker materials.

Rolled-rim grommets with extended-neck teeth washer are also known as rolled-rim grommets with spur washer. The rolled rim provides added grip while the elongated neck and teeth on the washer add extra reinforcement for thicker materials and keep woven material from loosening and rotating. Trade size is stamped on the grommet.

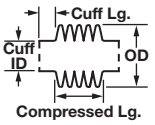
Bellows with Cuff Ends

Keep chips, dust, and liquids away from machinery rods and shafts. Slide bellows into place and secure the cuff ends with hose clamps (not included).

Ultra Flexible—Sealed



Made from tear-resistant polyurethane with a wall thickness of 0.01″, bellows are extra flexible and resist abrasion and oils. Venting is recommended. Temperature range is –60° to 225° F. Color is black.

Tapered Bellows

Protect machinery rods and shafts with these slide-on neoprene and latex bellows that resist abrasion, light oils, and ozone. They are molded, so venting is recommended. Wall thickness is 0.02″ to 0.04″. Temperature range is 0° to 220° F. Color is black.

Cuff ends mount with hose clamps (not included). *Flange ends* can be drilled and attached directly to your machine (fasteners not included).

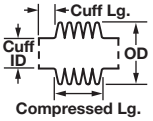
FDA-Listed Bellows with Cuff Ends



Bellows are rigid FDA-listed neoprene for use with food and beverage. They resist abrasion, coolants, and oils. Slide them over machinery rods and shafts and secure the cuff ends with hose clamps (not included). They are molded, so venting is recommended. Color is off-white.

Wall thickness is 0.06″ and temperature range is 5° to 155° F, except bellows with 1″ and 1½″ cuff IDs have 0.03″ wall thickness and –50° to 165° F temperature range.

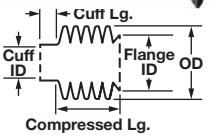
Bellows with Cuff End and Flange End



One cuff end and one flange end offer mounting versatility. Slide bellows onto machinery rods and shafts, then secure the cuff end with a hose clamp (not included) and attach the flange end to your machine (fasteners not included).

Bellows are flexible neoprene and latex that resists abrasion, light oils, and ozone. They are molded, so venting is recommended. Wall thickness is 0.03″. Temperature range is 0° to 220° F. Color is black.

Cuff ID	Cuff Lg.	OD	Flange ID	Extend. Lg.	Comp. Lg.

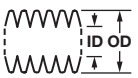
Bellows with Interchangeable Cuff Inserts



Slip cuff inserts (sold separately) inside the flange ends of the bellows and change out as needed to fit your ID connections. Temperature range is –30° to 250° F. Color is black.

Bellows are flexible rubber and resist abrasion, coolants, oils, ozone, and weathering. They are molded, so venting is recommended. Wall thickness is 0.03″.

Cuff inserts are ¾″ long and made of polyethylene. Use a hose clamp (not included) to secure them.

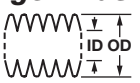
Wrap-Around Bellows with Flange Ends



No need to disassemble your equipment—bellows wrap around machinery rods and shafts. To install, add mounting flanges (sold separately) to the flange ends of the bellows, then drill to accommodate your mounting requirements (fasteners not included).

Bellows are tear- and abrasion-resistant neoprene-coated nylon sewn along the edge. Wall thickness is 0.018″. Temperature range is –40° to 220° F. Color is black.

Mounting flanges are aluminum and split for ease of installation. They have the same OD as the bellows and a ¾″ larger ID.

Roll-Up Covers

Similar to flat bellows, covers offer protection for equipment in tight spaces. Covers include two mounting brackets with four 9/32″ dia. holes (fasteners not included).

Standard cover is black neoprene-coated nylon for resistance to abrasion, coolants, and oils. Temperature range is –40° to 220° F.

Food-grade cover is white FDA-listed Buna-N. Temperature range is –40° to 220° F.

High-temperature cover is chemical-resistant beige PTFE-coated fiberglass that withstands temperatures of –100° to 500° F.

Bellows with Flange Ends

Add mounting flanges (sold separately) to the flange ends of these bellows, then drill to accommodate your mounting requirements (fasteners not included). Bellows slide over machinery rods and shafts and are sewn along the edge.

Flexible bellows are neoprene-coated nylon and resist abrasion, coolants, and oils. Wall thickness is 0.018″. Temperature range is –40° to 220° F. Color is black.

High-temperature bellows withstand temperatures from –65° to 450° F. They are silicone-coated fiberglass that resists abrasion, coolants, and oils. Wall thickness is 0.016″. Color is gray.

Mounting flanges are aluminum and provide rigid end support for the bellows.

Rectangular Bellows with Flange Ends

Slip these bellows over square and rectangular rods and shafts. Add mounting flanges (sold separately) to the flange ends of the bellows, then drill to accommodate your mounting requirements (fasteners not included). Bellows are molded, so venting is recommended.

Ultra-flexible bellows are polyurethane and resist abrasion, tearing, oils, and weather. Wall thickness is 0.02″. Temperature range is –60° to 225° F. Color is black.

Flexible bellows are rubber-coated polyester and resist abrasion, acids, cutting fluids, and oils. Wall thickness is 0.02″. Temperature range is –30° to 260° F. Color is black.

Mounting flanges are aluminum and provide rigid end support for the bellows.

Flat Bellows

Guard the flat moving surfaces of your machinery against chips, dust, liquids, and mist.

Three-Sided Cover

Bellows are neoprene-coated nylon with PVC stiffeners along the edges of the folds for enhanced rigidity. Wall thickness is 0.02″. Temperature range is –40° to 225° F. Color is black. **Mounting flanges** are aluminum.

Bridgeport Cover Set

Guard 9″- and 12″-travel Bridgeport machines. Set includes an upper column cover, a rear knee cover, a front knee cover, and mounting hardware. Do not use with Series II Bridgeport machines.

Bellows are rubber-coated fabric. Wall thickness is 0.02″. Temperature range is –30° to 260° F. Color is black.
