

HIGH-PRESSURE VALVES AND CONNECTORS

For use in High-Pressure Applications

Schrader Pacific high-pressure valves are constructed of stainless steel bodies and are intended for use in high-pressure air-charged units such as shock absorber struts, hydraulic pressure accumulators, surge cylinders, and pneumatic systems. These valves have a special feature which warns of unreleased air pressure when the valve is being separated from the outlet. Contact Schrader Pacific for further information on military and commercial adaptations. Valves have ½"-20 UNJF-3A threads for connection to container.

HIGH-PRESSURE VALVES AND CONNECTORS

These high-pressure inflating connections attach securely by hand or wrench to the valve cap threads of high-pressure valves. They can be fitted to gaging and inflating devices by a variety of methods. Various angles permit easy attachment to hard-to-reach valves.
