Use Of Clevite® engine bearing, MAHLE Original® gasket, piston and piston ring, filter, turbocharger and thermostat products in aircraft or other specialty equipment may be a violation of Local, State or Federal Regulatory Agency laws, rules and regulations.

These products are intended solely for automotive applications. Under absolutely NO circumstances should these products ever be used in non-automotive applications including, without limitation, aircraft engines, medical equipment, atomic energy devices or reactors.

“Federal, State and local laws restrict the removal, rendering inoperative, or in some cases the modification of factory installed emission devices or systems. California restricts the use of parts which could increase emissions in vehicles designed for use on public streets or

highways. The sale or installation on emission controlled vehicles of certain emission control components not approved by the California Air Resources Board, which alter or modify the original design or performance of such vehicle's emission control system is prohibited. Some of the parts listed and offered for sale in this catalog may fall within the above restrictions. Such parts are intended only for use on off-road vehicles competing in competitive events or on other types of vehicles which are exempt from the applicable emission control laws. Installation of these parts on vehicles subject to emission control laws may be prohibited.

MAHLE Aftermarket recommends that the applicable emission control laws be reviewed before considering the installation of add-on or modified parts.”

How To Use This Catalog

The Master Gasket Catalog is listed in alphabetical order by manufacturer. Listings are arranged by liter size in ascending order in the main gasket and miscellaneous gasket sections.

Select the appropriate model from the model index and locate the applicable engine. Proceed to the applicable engine in the engine index, which precedes each vehicle listing. Refer to the block shown for that engine, check the "Engine Heading" and select the part type, the applicable year, the model and then the part number. Models are called out only noted when necessary.

VIN / Engine Codes

With this catalog you will find late model vehicle identification code listing (VIN Codes) with each catalog listing. These VIN codes will be helpful in identifying late model engines. The VIN codes may be easily identified from the vehicle identification plate located on the dashboard and may be viewed through the windshield on the driver's side of the vehicle.

Engine designations (Engine Codes) may be contained within the VIN which will be called out as VIN Code or may be not noted separately as Engine Code this may be found on the engine block, consult manufacturer specific materials for further detail.

With over 9,000 gasket part numbers fitting several thousand engines, it is extremely important that you do the following: 1) Know the exact year, make, model engine size and VIN code for the engine you are working on. 2) Read the foot notes and additional information listed for the particular gasket or gasket set you desire. The descriptions below are broadly accurate, but cannot take into account all the possible variations encountered from engine to engine and manufacturer to manufacturer.

Each engine listing is divided into the following:

Main gasket section includes major gasket sets and related items and is arranged by popularity.

Miscellaneous gasket section includes all engine gaskets and seals not listed in main section and is arranged in alphabetical order.

Each block has the following pertinent information to that part number:

1. Block no.
2. Engine Application Detail
3. Product Category
4. Product Description
5. Year Range
6. VIN and Engine Codes
7. Product and Application Notes
8. Part Number
9. Per Engine Quantity

What is a QR code and how do you use it?

What were originally developed in the early 1990's to track parts in vehicle manufacturing, Quick Response Codes (QR codes) can today be seen virtually everywhere, such as in this catalog and will soon be included on the labels of MAHLE Aftermarket products.

QR Codes are two-dimensional bar codes, but instead of a traditional bar code – consisting of a series of only vertical lines – QR codes are made up of a grid of tiny black squares on a white background in both vertical and horizontal, arranged in the form of a square pattern. QR Codes often direct users to product websites where they can then learn about a particular item or place. They can also be used to provide tracking information for products, routing data on a product label, or contact information on a business card. In order to translate the code, free QR code reader apps for Smartphone devices can

be downloaded and used to uncover the encoded information. Open the reader you downloaded and position your phone over the QR code. Scan it using the camera on your phone. Depending on the QR code reader installed, you will then be shown a link to the web address associated with the QR code, or directed to the page it is linked to.

MAHLE Aftermarket Inc. is committed to being at the forefront of electronic capabilities and the inclusion of QR codes on product labels is the latest of this initiative. Rather than simply taking the user to the MAHLE Aftermarket website, the QR codes placed on MAHLE Original and Clevite product packaging will automatically direct the end-user to a search page – here they can input a product part number to instantaneously retrieve specifications on that particular part.

A Step Above the Competition...

MAHLE Aftermarket employs application engineering to design engine gaskets as a system. This involves research and testing to apply the optimum mix of materials and technology to each engine application.

The Demand the Best flyers are designed to highlight the benefits MAHLE Original gaskets offer over the competition. Demand the best

from MAHLE Original, with their unmatched engineering resources and experience to being first in technical innovation and service information.

Demand the Best™ flyers are available from your local MAHLE Aftermarket Account Manager, or on the web at www.mahle-aftermarket.com.

MAHLE Original has a *Black Diamond™* coated 5-LAYER MULTI-LAYERED STEEL HEAD GASKET for the Ford Power Stroke® engine!

These MAHLE Original® head gaskets, with advanced Black Diamond™ coating technology are:

- Constructed of (5) five stainless steel layers
- Utilizing patented integrated push rod locators
- Coated with a fluoroelastomer (rubber) coating

MAHLE ORIGINAL	OE
The 6.4L MAHLE Original gasket has 5 layers.*	The 6.4L OE gasket has only 4 layers.

Pictured is part # 54657 (6.4L); 54450A/54579A (6.0L) are also available.

***The additional layer helps reduce cylinder head lift to maintain a superior combustion seal.**

For All Your Tough Sealing Problems...

MAHLE Aftermarket is devoted to providing you the most complete line of sealing products available in the aftermarket.

MAHLE Original® gaskets offer your Solution™ for all your tough sealing problems. Our one-page Solutions™ technical bulletins provide innovative resolutions to today's most difficult sealing problems.

Solutions™ bulletins:

- Define the problem
- Offer resolution
- Give you the part number and applications

If you are looking for the solution for your sealing problem, Solutions™ bulletins are available from your local MAHLE Aftermarket Account Manager, or on the web at www.mahle-aftermarket.com.

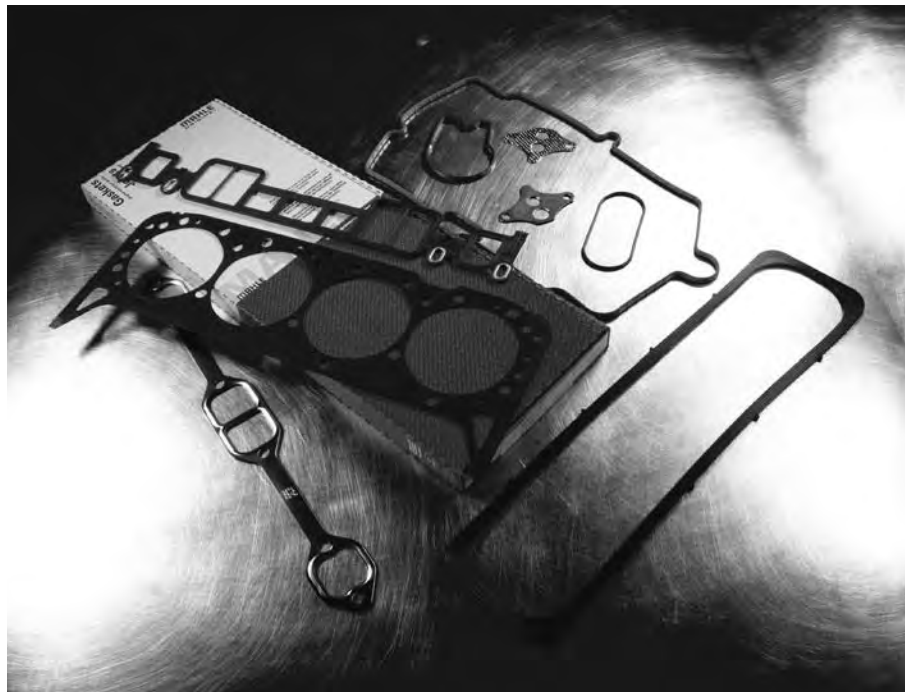

The Company That's Been Behind Your Gaskets is Now The Brand On Them

The gasket product team at MAHLE Aftermarket has worked for decades to bring gaskets to the independent aftermarket under the Victor Reinz brand. Most of this team pre-dates the acquisition of Dana's engine parts division in 2007. Since that 2007 transaction, and the commitment from MAHLE to develop the very best in gasket quality and coverage, the Victor Reinz brand (under license from Dana) surged to the forefront of the gasket aftermarket providing the best in product and service. As MAHLE moves on from the Victor Reinz brand, the expansion of the MAHLE Original brand to include gaskets brings with it all of the hallmarks that made MAHLE Aftermarket one of the top gasket suppliers in the industry. All of this intellectual property remains with MAHLE,

including product images, set contents (bills of materials), part numbers and UPC codes, even cataloging and other data management items remain within MAHLE Aftermarket and will be at the forefront of the MAHLE Original gasket line.

Exploration of the value proposition for MAHLE Original gaskets reveals many attributes important to all channel partners. While every one of them is important, the biggest focus is on the MAHLE Original Gasket core competencies:

- OE Form, Fit, and Function
- Coverage
- Set Contents
- Packaging

Gasket Terminology

Head Set

Contains all the gaskets necessary to remove and replace a cylinder head on an engine.

Lower Set

When combined with a Head Set, contains all the gaskets necessary to completely assemble an engine unless otherwise noted.

Engine Kit Gasket Set/Full Set

Contains all the gaskets necessary to completely assemble an engine.

Cylinder Head Gasket

OE style, replacement head gasket for the model years listed. Head gaskets are sold individually. Some engines use a left and right gasket and some engines require gaskets of a specific thickness, so be sure to have all the details when you spec the gasket part number.

Cylinder Head Bolt Set

Contains all the head bolts necessary to replace one cylinder head.

Valve Cover Set

Contains the valve cover gasket(s), spark plug tube seals when required and any grommets required to remove and replace the valve cover. One set does both valve covers on V6, V8, and V10 engines. On some popular engines, valve cover gaskets are sold individually. When sold individually, tube seals and grommets are not included.

Valve Stem Oil Seal, Exhaust/Intake

This kit contains enough valve stem seals to replace all the exhaust and/or intake seals on one engine.

Manifold Set, Exhaust/Intake

This set contains the gaskets needed to replace an exhaust/intake manifold for a V6, V8 or V10 engine.

Manifold Master Set, Intake

Also referred to as a Manifold Installation Set, this set contains premium intake manifold gaskets, valve cover gaskets and all associated and related gaskets needed to replace an intake manifold.

Intake Manifold Bolt Set

Original equipment style replacement manifold bolt set for engines requiring the technician replace the manifold bolts when removing the intake manifold.

Plenum Chamber Gasket

For engines having a plenum chamber (upper intake manifold), this is an original equipment style replacement gasket.

Oil Pan Gasket

Contains the gasket(s) required to remove and replace an oil pan.

Rear Main Seal Set

Contains both the rear main seal/rear main seal carrier and the rear main seal carrier gasket when required.

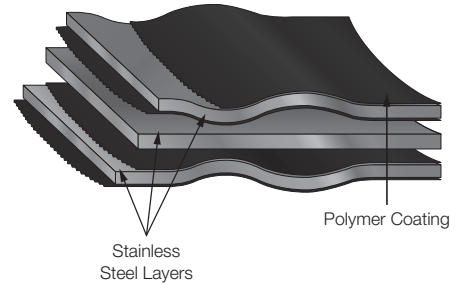

Timing Cover Set

Contains the timing cover seal and where required, the timing cover gasket(s). Many popular engines have the timing cover seal and gaskets available separately as well as in a set, so check your engine listing.

Head & Manifold Gaskets

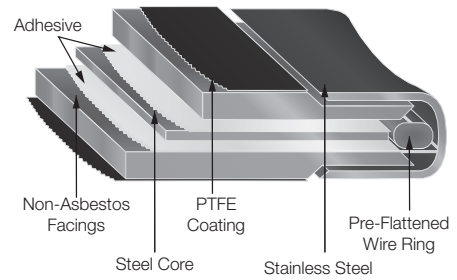

Multi-Layered Steel Head & Manifold Gaskets

- Maintains all OE tolerances and requirements
- Polymer coated for positive fluid seal
- Ultimate temperature resistance
- Lower clamping force means less bore distortion

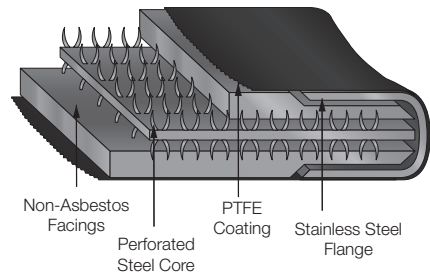

Solid Core Composite Head and Exhaust Manifold Gaskets

- Made of PTFE coated non-asbestos facing material
- Chemically bonded to a solid steel core
- Solid steel core provides superior radial strength
- Pre-flattened wire ring withstands higher cylinder pressures

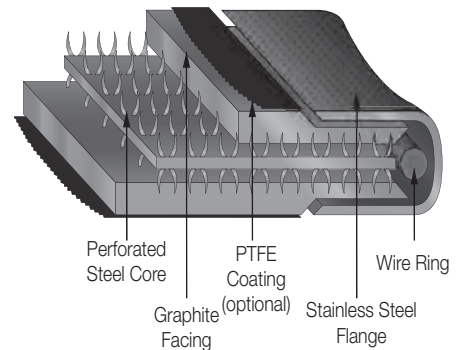

Composite Manifold Head Gaskets

- PTFE coating ensures a secure seal through thermal expansion
- Removes clean from block without sticking
- Never need to re-torque
- Stainless steel core available for marine applications

Graphite Head and Manifold Gaskets

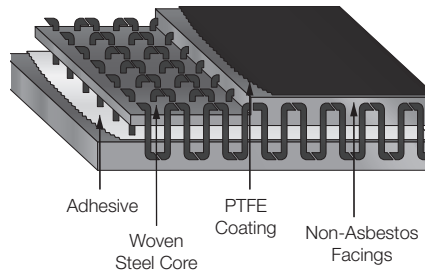

- Stays cool at temperature up to 1800° F
- Designed to seal minor surface irregularities
- No re-torque required
- PTFE coating optional

Valve, Timing Cover, Oil Pan & Other Gasket

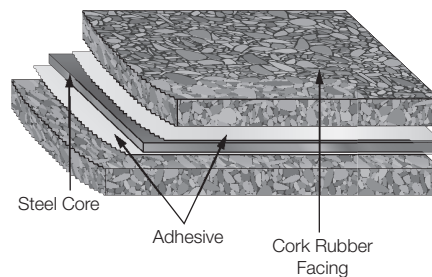

Performance Composite Timing Cover, Water Pump and Differential Gaskets

- Contains a woven, perforated steel core
- Chemically and mechanically secured to composition facing
- Provides superior strength for sealing irregular surfaces
- PTFE coated to resist fretting

Cork Oil Pan, Valve Cover and Differential Gaskets with Metal Carrier

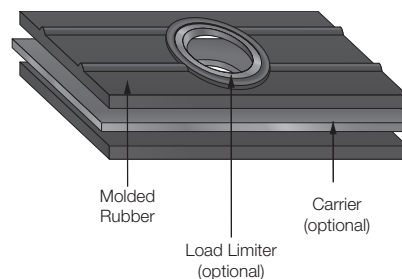

- Prevents over-tightening
- Improves torque retention
- Simplifies installation
- Highly chemical resistant

Molded Rubber Valve Cover and Oil Pan Gaskets

- No joints means increased durability
- Sealants not required*
- Compression limiters prevent over-tightening
- No torque loss or shrinkage

*Except at t-joints

Multiple Pack vs. Set Packs

For example:

Supersedes to

MAHLE Aftermarket Inc. is updating 118 part numbers to eliminate the “multiple pack (individual) quantity” priced finished goods (valve stem seals, and other miscellaneous seals). These part numbers are established in all major eCatalog system providers and have been published in our new number announcements and price sheets.

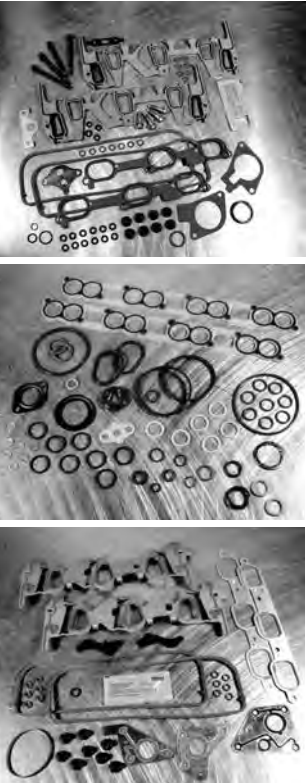

MAHLE Aftermarket Inc. has superseded the ‘single priced’ SKUs to the ‘new set priced’ SKUs.

Please note: the set UPC code is different from the individually priced package.

All the Gaskets Needed to Replace the Intake Manifold

When servicing the intake manifold on late model engines, technicians often need to buy additional gaskets that are not normally found in traditional intake manifold gasket sets. These may include valve cover gaskets, injector o-rings, water and

emissions connections, and other miscellaneous gaskets. MAHLE Original MIS kits include all of the gaskets and seals needed for a technician to properly re-install the intake manifold.

MA54F SMALL GASKET SERVICE CENTER

- Easy to stock - easy to use
- Stocks all your small gaskets
- Extra heavy duty construction
- P & W series gaskets can be stocked in the easy to use rack on the bottom shelf
- Drawers are mounted on rollers (with stops) for your convenience

MA54F MINI CENTRE DE SERVICE

- Facilite l'utilisation et l'entreposage
- Organiser tout vos petits joints d'étanchéité
- Construction durable et solide
- Joints de série P et W peuvent être rangés facilement sur la tablette du bas
- Tiroirs montés sur roulement (avec arrêts) pour usage facile et sécuritaire

CENTRO DE SERVICIO PARA JUNTAS PEQUEÑAS MA54F

- Fácil de colocar - fácil de usar
- Almacena todas sus juntas pequeñas
- Construido de manera resistente
- Las juntas de series P & W pueden ser almacenadas de manera sencilla en la parte inferior
- Para su comodidad los cajones estan montados sobre rodamientos (con escalones)

MA159 WIRE STOCKING RACK

Perfect for stocking larger flat gaskets like valve cover, manifold and head gaskets. Organize your inventory, maximize space and keep popular stock numbers in an easy-to-access file system. Consists of five enameled wire racks.

Color - Gray

Dimensions - 5" H x 12-1/8" W x 46" L

MA159 SUPPORT MÉTALLIQUE

Idéal pour entreposage de joints en empaquetage plat tels que joint de culasse, collecteurs etc. Garder votre inventaire en ordre. L'ensemble comprends 5 supports.

Dimensions: 5" H x 12 P x 46" L

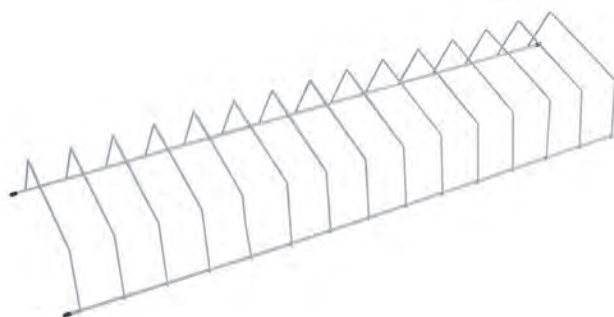

RACK DE ALAMBRE MA159

Perfecto para el almacenaje de juntas largas como para tapa de punterías, múltiples o cabezas. Organiza su inventario, maximiza el espacio y mantiene un inventario de los números más populares con un sistema de fácil acceso. Consiste de cinco bastidores de alambre esmaltado.

Color - Gris

Dimensiones:

5" Alto x 12-1/8" Ancho x 46" Largo

JV-1

An assortment of cork/rubber, paper with rubber binder, and paper gasket materials in small, easy-to-use sheets. Its perfect for homeowners' DIY projects or for small repair jobs in auto shops.

JV-1

Un assortiment de liège / caoutchouc, papier avec un liant en caoutchouc, et les joints de papier dans de petites feuilles faciles à utiliser. Il est parfait pour les projets de bricolage de propriétaires ou pour les petits travaux de réparation dans les magasins d'automobiles.

JV-1

Un surtido de corcho / caucho, papel con la carpeta de caucho y materiales de junta de papel en hojas pequeñas y fáciles de usar. Es perfecto para proyectos de bricolaje de propietarios de viviendas o para pequeños trabajos de reparación en talleres de automóviles.

JOBBER STOCKING BOXES

These sturdy, white corrugated display/stocking boxes are made to organize small gaskets on stockroom shelves or in retail displays. The chart below will help you determine the sizes you need.

JV8 - Aluminum Silicone Sealant

JV8 is a high temperature resistant, low volatile RTV-gasket material developed specifically for use on engines. It meets the low volatility specifications required of engines equipped with oxygen sensors. The temperature rating for JV8 is -75° to 500° intermittent service. JV8 can be used as a supplement to conventional gaskets, such as oil pan and manifold end seals. Or it can be used as a replacement for most paper type gaskets, such as timing cover and water outlet gaskets. Its aluminum color more closely matches today's engine components while providing higher temperature capabilities. JV8 is an 80ml tube that can be hung for display or it can stand up right on it's cap for display in your retail sales area. Sold in a 12 pack.

JV8 - Le scellant

JV8 est un scellant à haute température, faible volatilité, conçu pour utiliser avec les moteurs. Il rencontre les normes de volatilité requise pour les sondes à oxygène. Résiste aux températures entre -75F à 500F et service à intermittence. Le JV8 peut être utilisé comme supplément aux joints conventionnels tels que les carter d'huile, et collecteurs, couvercles de distribution, ou il peut être utilisé comme substitut au joints de papier. Sa couleur est aluminium et s'harmonise avec les composantes moteur. 80ml peut être accroché ou placé sur une tablette pour présentation. Vendu en paquet de 12.

Sellador de Silicón tipo Aluminio - JV8

El JV8 es resistente a altas temperaturas, baja volatilidad del material de la junta-RTV desarrollado específicamente para uso en motores. Cumple con las especificaciones requeridas por los motores equipados con sensores de oxígeno. El rango de temperatura para el JV8 es de -75° a 500° de servicio intermitente. El JV8 puede ser utilizado como suplemento de juntas convencionales, como cárter y los sellos finales de múltiples. También puede ser utilizado como un reemplazo para las juntas de papel más populares, como tapa de distribución y tomas de agua. Su color aluminio es más compatible con los componentes de los motores actuales mientras que proporciona una mayor resistencia a temperaturas. El JV8 es un tubo con 80ml que puede ser manejado a través de un display o de forma directa en su anaquel. Es vendido en un paquete de 12 piezas.

SYSTÈMES D'INJECTION À ESSENCE POUR VÉHICULES DOMESTIQUES ET IMPORTÉS
SISTEMAS DE INYECCIÓN DE COMBUSTIBLE NACIONALES E IMPORTADOS

Illustrated here are typical 4 cylinder, V6 and V8 fuel injection systems. Most fuel injection systems consist of the following:

- A. Plenum Chamber
- B. Plenum Chamber Gasket
- C. Intake Manifold
- D. Intake Manifold Gasket
- E. Throttle Body
- F. Throttle Body Gasket

There are some fuel injection systems that also have a center intake manifold gasket or have intake manifold tube gaskets. These are not illustrated.

Les systèmes d'injection typiques de 4 cylindres, V6 et V8 consistent des parties suivantes:

- A. Collecteur primaire
- B. Joint de collecteur primaire
- C. Collecteur d'admission
- D. Joint de tubulure d'admission
- E. Corp de papillon
- F. Joint de corp de papillon

Il existe aussi certains systèmes d'injection équipé d'un collecteur d'échappement central, ou d'un joint de tubulure. Ils ne sont pas illustrés ici.

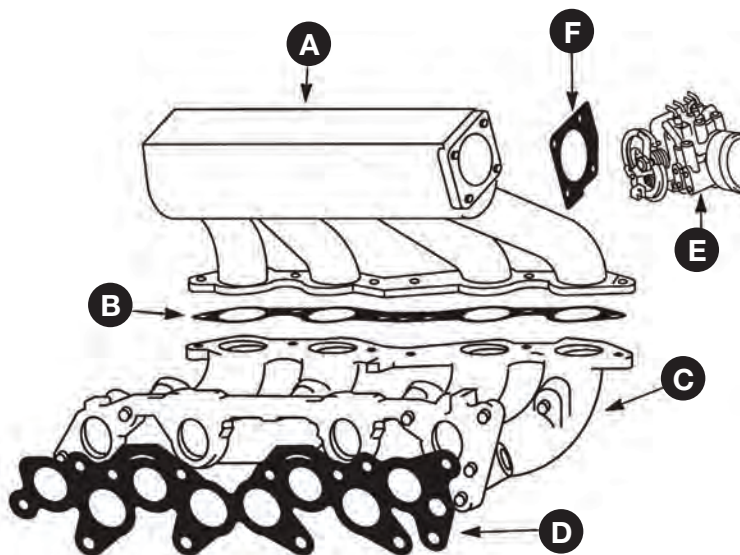

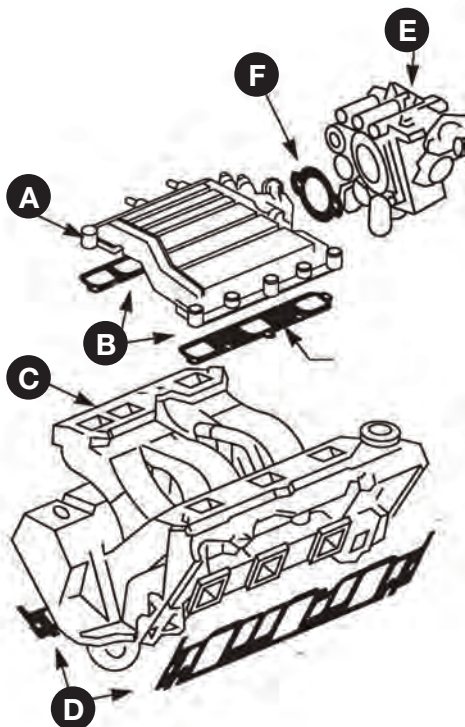

Se ilustran sistemas típicos de inyección para motores de 4 cilindros, V6 y V8. La mayoría de los sistemas consisten en lo siguiente:

- A. Cámara del Pleno
- B. Junta para Cámara del Pleno
- C. Múltiple de Admisión
- D. Junta para Múltiple de Admisión
- E. Cuerpo de Aceleración
- F. Junta para Cuerpo de Aceleración

Existen algunos sistemas de inyección que tienen integrada una junta intermedia o juntas para los tubos de admisión. Estos no se ilustran.

The proper gaskets can be determined by counting the number of bolt holes or studs, measuring the inside diameter, outside diameter, bolt hole circle and measuring the bolt hole or stud. Read down the columns until correct size is located. The proper gasket number will be found on the same line in the adjoining column.

Note: Gaskets without bolt holes are generally used on oil bath hub cap applications. Some materials have a natural tendency to shrink or distort. This should be taken into consideration when measuring. Caution should be exercised to match the material and thickness being replaced.

This chart is arranged by the number of bolt holes, then in size sequence by diameter. For those applications that are different than the typical axle shaft gasket as illustrated to the left, special illustrations have been provided for visual identification.

Cette chartre est arrangée par nombre de trous de boulons, ensuite par diamètre. Des images sont fournies pour les applications qui sont différentes des arbres typiques illustrés à gauche. Des illustrations sont fournies pour vous aider à les sélectionner.

Il est possible de déterminer le bon joint en comptant les trous de boulons en mesurant le diamètre intérieur et le diamètre extérieur, le cercle des boulons et en mesurant le trou des boulons. Lire les colonnes jusqu'à l'obtention du bon numéro sur la même ligne et colonne.

Note: Les joints sans trous sont utilisés avec certaines applications. Ils ont tendance naturelle à rétrécir ou se déformer. Prenez en considération en prenant la mesure, et assurez-vous de remplacer par du matériel de la même épaisseur et de même catégorie.

Las juntas adecuadas pueden determinarse contando el número de orificios, midiendo el diámetro interior, diámetro exterior, distancia entre orificios y el diámetro de los mismos. Revise la columna hacia abajo hasta encontrar la medida adecuada. El número de la junta correcta será encontrado en la misma línea en las columnas adjuntas.

Nota. Las juntas sin orificios son generalmente utilizadas en aplicaciones de housing del tipo baño de aceite. Algunos materiales tienen la tendencia natural a deformarse o encogerse. Esto debe de tomarse en consideración cuando se dimensionen. Se debe de tener la precaución de que coincida el material y espesor.

O-RING SEALING FLUID COMPATIBILITY GUIDE

The chemicals in many fluids used in the industry can have a harmful effect upon the synthetic compound in an o-ring. To guide you in the use of o-rings, check the type of fluid you will be sealing against this list.

MAY BE USED TO SEAL

- Aceyltene
- Air oxygen
- Alcohols - methyl and ethyl
- Chemical salt solutions
- Coolant fluids, ethylene glycols
- Formaldehyde
- Freon 12, 14
- Gases (inert, ammonia, L.P.)
- Glucose
- Glycerol
- Greases
- Linseed oil
- Mild acids/mild alkalies

SHOULD NOT BE USED TO SEAL

- Petroleum hydrualic fluids
- Petroleum lubricating fluids
- Soap and detergent solutions
- Turpentine
- Acids over 10% concentration
- Castor oil based automotive brake fluids
- Chlorinated solvents
- E.P. lubricants containing additives which liberate free sulfur or chlorine (use with caution)
- Furfural
- Lacquers
- Nitric acid (any concentration)
- Organic ester based fluids
- Pydraul
- Skydrol
- Organic acid technology (OAT) coolants
- Fuel-injection applications

MAHLE®
ORIGINAL

Les composants chimiques de nombreux liquides utilisés dans l'industrie peuvent avoir des effets néfastes sur l'intégrité des joints toriques. Pour vous aider, veuillez utiliser la liste ci-dessous et assurer vous de la compatibilité.

PEUT ÊTRE UTILISÉ POUR SCELLER

- Acétylène
- Oxygène
- Alcool méthylique et éthylique
- Solution chimique saline
- Liquide de refroidissement, éthylène et glycol.
- Formaldéhyde
- Fréon de type 12 ou 14
- Gaz (inertes, ammoniac, pressurisé)
- Glucose
- Glicérol
- Graisses
- Huile de lin
- Liquides acides ou alcalins

NE DOIT PAS ÊTRE UTILISÉ

- Fluides hydrauliques
- Lubrifiants à base de pétrole
- Savon et détergents
- Térébenthine
- Acides concentrés à plus de 10%
- Solvants au chlore
- Lubrifiants contenant des additifs sulfuriques ou chloriques
- Furfural
- Laques
- Acide nitrique
- Huile organique à base d'ester
- Pydraul
- Skydrol
- Liquides de refroidissement organique
- Applications reliés à l'injection de carburant

GUÍA DE COMPATIBILIDAD PARA SELLADO DE FLUÍDOS

Los componentes químicos en muchos fluidos utilizados en la industria pueden tener un efecto perjudicial sobre el compuesto sintético en un o-ring. Para guiarlo en el uso de o-rings, verifique el tipo de fluido que va a sellar contra esta lista.

NO DEBE SER USADO PARA SELLAR

- Fluidos Derivados del Petróleo
- Fluidos Lubricantes Derivados del Petróleo
- Soluciones de Jabón y Detergentes
- Aguarrás
- Ácidos con una Concentración Mayor al 10%
- Líquido de Frenos
- Solventes Clorados
- Lubricantes con Aditivos que Liberan Azufre o Cloro (utilícelos con precaución)
- Furfural (Azúcar pentosa)
- Lacas
- Ácido Nítrico (cualquier concentración)
- Fluidos Orgánicos con Base de Ester
- Pydraul
- Skydrol
- Refrigerantes con Ácidos Orgánicos (RAO)
- Aplicaciones en Inyección de Combustible

PUEDE SER USADO PARA SELLAR

- Acetileno
- Oxígeno
- Alcohol - Metil y Etil
- Sal Química
- Glycol Etileno, Refrigerantes
- Formaldehído
- Freón 12, 14
- Gases (inertes, amoníaco, LP)
- Glucosa
- Glicerol
- Grasas
- Aceite de Linaza
- Ácidos Suaves/Alcalinos Suaves
